## CURRENT LABOUR CONDITIONS

*This article summarizes the latest employment and labour information available at January 10, as the LABOUR GAZETTE went to press. It was prepared by the Economics and Research Branch, Department of Labour.*

**I**N spite of the larger number of job seekers registering in the National Employment Service offices during November and December, employment continued high. Seasonal increases in unemployment, intensified by the growth in the labour force and by the special employment problems of some industries and areas, resulted in a total of 274,000 unplaced applicants at the first of the new year. The most recent surveys of the Canadian labour force estimated employment at just under five million, some 2 per cent above that of last year. Total labour income in October was \$663,000,000; by November, average weekly salaries and wages in leading Canadian industries had reached an all-time peak of \$43.78, and in manufacturing had risen to \$45.07.

Among the factors responsible for the current high levels of employment and income is the continuance of heavy investment expenditures. There is less spending on new plants and new machinery in manufacturing, but more on housing and public utilities. The construction industry completed one of its most successful years. With the volume of business well above that of 1948, and contracts awarded for the first ten months totalling \$900 million, this industry provided employment for over 350,000 workers at its seasonal peak.

Consumer demand in general continues sufficiently strong to absorb most goods currently being produced. Retail sales in the first eleven months of 1949 were 6.1 per cent above those in the same period a year ago. Motor vehicle sales in October showed an increase of over 14 per cent above the same month last year, and demand is expected to continue at the present level well into 1950.

During November, the total value of exports was close to the peacetime record of November, 1948. Exports to the United States increased some \$8 million during November to reach an all-time high of \$173 million.

Nevertheless, the efforts of overseas countries to solve their exchange problems have resulted in marked decline in exports of such commodities as secondary agricultural products and lumber; trade in basic commodities like wheat has been little affected. The lumber industry, however, is able to find alternative markets at home, and in the United States.

On balance, therefore, the increase in job seekers by the first of the new year can hardly be said to reflect a general decline in the economy. It is usual for unemployment to increase during November and December, as agriculture and construction release a substantial number of workers during this period of reduced activity. But this year, the logging industry, which normally absorbs a large portion of these workers, has reduced its labour requirements by an estimated 35,000 men. There are several factors responsible for these lower requirements. Among them are the large inventories of logs built up during recent years, increased mechanization of cutting operations, and a reduction of exports in some areas.

The unemployment totals have been increased by layoffs in a few industries. Among these are primary textiles, which have to meet increased British competition at a time when the domestic market is less active. The Canadian merchant marine, already hard hit by falling ocean freight rates, is faced with further problems as a result of devaluation.

At this season of the year, new entrants to the labour force are not readily absorbed by Canadian industry. Between November, 1948 and November, 1949, it is estimated that the labour force increased by some 236,000, with Newfoundland contributing some 114,000. Over the same period, the number employed increased by 195,000, again including Newfoundland. As a result, workers have found it more difficult to obtain jobs, and employers, after years of labour shortages, are being more selective in their hiring.

The existence of special problems in different industries and regions throughout Canada means that unemployment is distributed unevenly throughout the country. The Maritime region is probably facing the most serious employment adjustments. In Quebec, the scarcity of jobs in the woods, and lower employment in the textiles and leather products industries have been important factors in the recent increases in unemployment in many of the rural areas and some urban centres. In Ontario and the Prairie region, the employment situation is generally good, except for those areas such as the Head of the Lakes district, which depend to a large extent on the logging industry. In the Pacific region, recent storms have disrupted logging and construction in certain districts. But with the new British

(a) Estimated on basis of sample labour force survey. Only those who did not do any work in the survey week are here classified as persons without jobs.

(b) Some of these "unplaced applicants" registered at the National Employment Service Offices are persons with a job who are seeking other work. On the other hand, there are persons without jobs and seeking work who do not come to the NES offices.

(c) These percentages calculated on basis of 1949 figures excluding Newfoundland.

(d) These percentages compare the cumulative total to date from first of current year with total for same period previous year.

Data in this table are preliminary figures from regular reports compiled by various government agencies, including Dominion Bureau of Statistics, the Unemployment Insurance Commission, the Immigration Branch, Department of Mines and Resources, and the Economics and Research Branch, Department of Labour. Detailed information can be found in the Labour Statistics section of the LABOUR GAZETTE.

OF  
THE HONOURABLE  
HUMPHREY  
MITCHELL  
MINISTER  
OF LABOUR**

As we enter another New Year, I extend warmest greetings to the workers of Canada.

We can look back on 1949 with thankful hearts. For the third successive year, employment topped the five million mark and, at the peak period in September, stood at five and one-quarter million. Export demands and domestic needs sustained the general level of production. Actually the physical volume of production exceeded the previous year by about three per cent.

One of the most important factors supporting a high level of production and employment was the absence of serious industrial strikes. Both labour and management are to be

congratulated for settling their problems in the common interest.

In addition, Canadians in all walks of life are indebted to responsible trade unionism for the step taken to deal with Communistic elements.

Predicting what the future has in store for us is always difficult but, when we consider the tremendous world consumer demand still unsatisfied and relate this to the productive capacity of Canada, we should be optimistic. This is a grand country in which we live. Let us do everything we can in 1950 to maintain our progress.

My earnest hope is that the New Year will be a happy one for all our people.

# NEW YEAR'S MESSAGES OF LABOUR LEADERS

During the holiday season, New Year's messages were issued to the people of Canada by the leaders of the three major Canadian labour organizations.

## **Percy R. Bengough** **Trades and Labour Congress of Canada**

Mr. Percy Bengough, President of the Trades and Labour Congress gave assurance in his message that Canadian workers would co-operate fully with government and industry in making 1950 a productive year. He pointed out, however, that fear of unemployment is still a disturbing factor in some sections of Canada and that "organized labour cannot do its full share in establishing industrial peace and stability unless gainful employment is available for all who are able and willing to work."

Mr. Bengough declared that the objectives of the Trades and Labour Congress of Canada were "for full social security on a contributory basis . . . protection for all against unemployment, sickness and old age. . . ." He drew attention to "the plight of our aged citizens on fixed pensions" and deplored the fact that to qualify "for the sub-standard allowance, known as the old-age pension, the applicant must prove first that he is a pauper in a land of plenty." He urged that Governments should abolish the means test for applicants for old age pensions early in 1950.

The Trades and Labour Congress, he said, desired "to improve the conditions of the workers through the orderly processes of negotiating and reaching mutual agreements between employees and employers" and in international relationships, the Congress will continue to direct its efforts to "the strengthening of true democracy and world peace."

## **A. R. Mosher** **Canadian Congress of Labour**

Mr. A. R. Mosher, President of the Canadian Congress of Labour in his New Year's message stressed "the menace of Communism." He pointed out that "one of the chief fields of activity of the Communists has been the labour movement" and that "in many countries both individual unions and national centres are controlled by Communists." He declared that during the past year Communism has suffered severe setbacks in both the national

and international fields. "Quite apart from the attacks and exposures of Communism made at meetings of the United Nations, the most noteworthy event of the year (1949) was the withdrawal of the labour movements in most of the free countries from the Communist-dominated World Federation of Trade Unions and the establishment of . . . the International Confederation of Free Trade Unions." In Canada and the United States "there can be no question as to the determination of the vast majority of Canadian and American workers to destroy the influence of Communism in their ranks."

Discussing Canadian economic conditions, Mr. Mosher criticized the Government, for taking off rent controls and devaluing the dollar; and also called for steps to remedy the housing situation and to increase old age pensions without a means test.

While there had not been any serious stoppage of production as a result of labour disputes in 1949, Mr. Mosher asserted that there had been "a very definite opposition on the part of certain groups of employers to granting increases in wages and improvements in working conditions." He believed, however, that "essentially, there is no reason why, in a country so richly endowed as Canada, the various economic groups should not learn to work together, each contributing its share towards producing the goods and services which are necessary to the well-being of the people as a whole."

## **Gérard Picard** **Canadian and Catholic** **Confederation of Labour**

Mr. Gérard Picard, President of the Canadian and Catholic Confederation of Labour, recalled that the year 1949 had been an eventful one for the CCCL. He looked forward hopefully to 1950, which had been "proclaimed a Holy Year", during which all men of goodwill would have opportunities for reflection that would enable them to approach, and to find proper solutions, for the perplexing problems of the day.

It was his earnest wish that the New Year would witness a re-awakening of productive peace in all relationships; that it would mark the beginning of an era in which, "enlightened by conquering Christianity," men would devote their energies to building a better society and restore harmony among all classes.

# NOTES OF CURRENT INTEREST

## **New world labour organization established**

Early in 1949, several of the world's free trade unions, including the British Trades Union Congress, the U.S. Congress of Industrial Organizations and the Canadian Congress of Labour, withdrew from the Communist-dominated World Federation of Trade Unions.

In June, labour delegates from 33 countries, who were attending a meeting of the International Labour Organization at Geneva, took the initial steps to create a new world labour body, to be entirely free from totalitarian pressures and influence. A preparatory committee was set up to make preliminary arrangements for a general meeting in London, England, late in November and to draft a constitution for the new body.

Invitations to the London conference were issued to 63 national centres, 43 other national organizations and 18 international trade secretariats, making in all 124 organizations in 55 countries and 19 colonies.

More than 260 representatives of almost 50,000,000 workers in 53 countries attended the London meeting from November 28 to December 9, and formally established a new organization to be known as the International Confederation of Free Trade Unions. At the request of the Preparatory Committee the British Trades Union Congress acted as conveners of the conference and Mr. H. L. Bullock, Chairman of the TUC General Council presided. Delegations were present from the American Federation of Labour (which had remained aloof from the World Federation of Trade Unions), the Congress of Industrial Organizations, the Trades and Labour Congress of Canada (which had also remained aloof from the WFTU) and the Canadian Congress of Labour.

The TLC was represented by: President Percy Bengough; Vice-President Claude Jodoin; Sam Finlay, Vice-President of the International Brotherhood of Boilermakers; and George Erasmusson of the International Chemical Workers' Union.

The CCL representatives were: Secretary-Treasurer Pat Conroy; Fred Dowling, District Director, United Packinghouse Workers' Union; J. E. McGuire, Secretary, Canadian Brotherhood of Railway Employees and Other Transport Workers; and Sam Baron, Canadian Director, Textile Workers' Union of America.

Presidents William Green (AFL), Philip Murray (CIO), and Percy Bengough (TLC) and Secretary-Treasurer Pat Conroy (CCL)

were elected to the executive of the new body. Permanent headquarters will be in Brussels and the first President is Paul Finet of Belgium.

The new General Secretary chosen by the Confederation is Jacob Oldenbroek of the Netherlands who for some years has been the General Secretary of the International Transport Workers' Federation, the most powerful of the international trade union secretariats which will become an affiliate of the new Confederation.

According to newspaper reports the constitution pledged the Confederation to: (1) co-ordinate the defence of free trade unions against any campaign "aiming at their destruction or at the restriction of their rights . . . by totalitarian or other anti-labour forces;" (2) "enhance the dignity of labour;" (3) assist in developing the growth of trade unions in economically and socially under-developed countries; (4) aid the economic, social and cultural interests of countries suffering from the aftermath of war; (5) protect the system of free labour and "eliminate forced labour" throughout the world; (6) work for a world system of collective security and, through the medium of the United Nations Organization, support all measures for assuring the defence of world democracy against any totalitarian aggression.

A fuller report of the Conference will be published in a subsequent issue of the **LABOUR GAZETTE**.

**CCL accepts new union of electrical workers** Suspension of District 5, United Electrical, Radio and Machine Workers of America, for non-payment of per capita dues, was announced on December 5 by the President of the Canadian Congress of Labour, Mr. A. R. Mosher. The suspension became effective December 1.

The Executive Council of the Congress, in July last, took disciplinary action against the union's five top officers, for statements considered to be a reflection on the officers of the Ontario Federation of Labour. This action was approved by the annual convention of the Congress in October (L.G., Nov., 1949, p. 1367).

At the annual convention of the Congress of Industrial Organizations, held at Cleveland, Ohio, on October 31-November 4 last, the United Electrical Radio and Machine Workers of America were expelled from the Congress on the charge of following the Communist party line in detriment to its members. (See p. 49 of this issue.)

Following this action, the CIO Executive Board chartered a new union to organize workers in the jurisdictional field formerly allotted to the UE. The union is known as the International Union of Electrical, Radio and Machine Workers.

The union held its first convention at Philadelphia on November 28-December 1, under the chairmanship of the CIO's secretary-treasurer, Mr. James B. Carey, who is chairman of the IUE's administrative committee. Over 400 delegates, from 133 locals and representing 220,000 members, attended the four-day convention, according to the *CIO News*.

"The convention adopted, section by section, a constitution framed to provide maximum protection of the membership's democratic rights," the *CIO News* reports. "But it held off election of officers until a future convention, when the union is 'over the hump' of organizing, Labour Board elections and legal tests." Meanwhile, the union will function under the leadership of an administrative committee, headed by Mr. James B. Carey.

The IUE, it is stated, has set itself a double task—"the 'negative' job of ridding the industry of Communist union leadership, and the positive goal of winning wage and security advances for its members." The union will seek adjustments to bring up the pay of electrical union workers to the status of those in steel, auto and aircraft; a minimum pension of \$100 a month for workers over 65 who have 25 years of service; severance pay for those leaving jobs; death benefits for widows and other survivors; and a system of medical care benefits.

In his statement on the Canadian situation, Mr. Mosher said the Canadian Congress of Labour has affiliated the Canadian locals of the new CIO International Union of Electrical Workers. "The leadership of this union is above suspicion," he declared, adding that he "has been informed that the new union is rapidly taking over former UE locals in Canada whose membership have no sympathy with the policy which UE has been following in recent years."

**Social  
security  
benefits  
for farm  
workers  
advocated**

Extension of workmen's compensation and unemployment insurance benefits to agricultural workers was advocated by the Deputy Minister of Labour, Dr. A. MacNamara, in an address before the Dominion-Provincial Agricultural Conference at Ottawa on December 12. Working conditions in agriculture must be improved if

youth and experienced workers are to be kept on the farm, he told the convention.

"If working conditions on farms are so unattractive that the farmers' sons leave, how can we expect the paid workers to stay with the work?" he said. Is it not uneconomic, as well as a definite handicap to agriculture to keep pumping in relatively inexperienced workers, while well-skilled and enterprising workers are leaving?"

With farm wage rates at about three times what they were in 1940, it is not so much a difference in wage rates that makes urban industry more attractive than agriculture to many people, Dr. MacNamara stated, "it is rather the other conditions which often prevail in agriculture—the lack of adequate housing, long hours of work, seasonality of employment, and the absence of social security measures." Some of these conditions can only be properly met by action on the part of the farmer himself, he said, "but there is also a considerable field in which governments will have to co-operate."

The problem of off-season unemployment is becoming increasingly serious, the Deputy Minister said. In many other industries, with the exception of mining and construction, employment is more stabilized than formerly, and openings for seasonal workers are fewer. In the logging camps—the traditional source of supplementary income for the farm workers—jobs are fewer than formerly, and the average duration of employment may be shorter. "Farmers should be thinking about this fact and be giving consideration to it. If the farmer wants paid labour in the future he will need to carry men on a less intermittent basis than heretofore."

Speaking on government co-operation in dealing with this problem, Dr. MacNamara said, "I do not know of any insurmountable reason why farm workers should not have the protection of unemployment insurance. I advocate unemployment insurance for farm workers because one of the most difficult problems demanding some solution is that of the seasonality of employment on farms."

Workmen's compensation should also be available to farm workers, just the same as in other industry, he said. "When a man is hurt on a farm, what a relief it would be to the farmer and to everyone if it were known that the injured would have adequate care."

While the improvement in working conditions of farm labour since the depression years must not be lost sight of, "right now is the time to work for continued improvement," the Deputy Minister declared. "Only

by a recognition of the problems of this group by the employer and by government, and by complete co-operation of these groups, can we hope to raise the standards of this large segment of the Canadian labour force."

In reviewing the achievements of the past year, Dr. MacNamara referred to the entry of Newfoundland into Confederation, and welcomed the Newfoundland delegates.

The total Canadian labour force has been increasing since the war by about 100,000 annually, he said. With the inclusion of Newfoundland, the total labour force reached almost 5,400,000 in August, 1949. Nearly one-quarter of this number were employed in agriculture.

In line with the general tendency towards equilibrium, the supply of farm labour has come into better balance with demand, Dr. MacNamara stated. Even at the peak season no shortages occurred, nor were any large surpluses experienced. This has resulted in a stabilization of farm wage rates, he said, which showed less seasonal increase in August, 1949, than at the same time in 1948, although they were higher for the year as a whole.

#### **Annual Report of Dominion Department of Labour**

The Annual Report of the Federal Department of Labour covering the fiscal year ending March 31, 1949, was issued early in December.

A concise summary of the administrative functions of the Department is given in the first section of the report. The remaining sections provide more detailed descriptions of the work performed by the several branches of the Department during the fiscal year. These include: Industrial Relations (industrial conciliation proceedings, statistics of strikes and lockouts, fair wages and labour-management co-operation); Canada Labour Relations Board; the Unemployment Insurance Commission and National Employment Service; Canadian Vocational Training; Government Annuities; Agriculture, Forestry and Placement of Immigrant Workers; Technical Personnel Division; Research and Statistics; Special Services (including the LABOUR GAZETTE, Information Branch, Labour Legislation Branch and the Departmental Library); Re-establishment of Ex-Service Personnel; Re-establishment of Japanese in Canada; International Labour Organization.

During the fiscal year the Department administered the following statutes: the Industrial Relations and Disputes Investigation Act; Conciliation and Labour Act; the Fair Wages and Hours of Labour Act;

Government Annuities Act; the vocational Training Co-ordination Act, 1942; and the Reinstatement in Civil Employment Act. The Fair Wages Orders in Council relating to Government contracts for equipment and supplies were enforced by the Department, which was also responsible for the administration of a number of other measures.

#### **Canada's fair wages policy**

Canada's Fair Wages Policy originated in March, 1900, when the House of Commons passed a resolution which, in later years, was

amended and expanded by various Orders in Council. These were all consolidated into P.C. 1206 of June 7, 1922. This consolidated Fair Wages Policy was divided into two parts. The "A" conditions were to be observed on all forms of construction and made provision for a schedule of current fair wages to be inserted into the contract setting forth the hours of labour fixed by the custom of the trade in the district. The "B" conditions were to be observed in contracts for the manufacture and supply of fittings and equipment and required the payment of current wages, or if there be none, then fair and reasonable rates; and also required the customary or fair and reasonable hours in the district.

P.C. 605 of April 9, 1924, amended the Fair Wages Policy by enlarging the "A" conditions to take care of special circumstances, repayments and to void certain powers of the Minister where there is a collective agreement. P.C. 3271 of December 31, 1934, amended the "B" conditions by providing minimum rates of 30 cents for males and 20 cents for females.

Parliament then passed the Fair Wages and Hours of Labour Act, 1935, which repealed an earlier statute, the Fair Wages and Eight-Hour Day Act, 1930. The new statute required that on all contracts for construction, remodelling, repair or demolition all persons engaged on the project shall be paid fair wages and the working hours shall not exceed 8 hours per day nor 44 in the week.

The Act and the Policy were brought into conformity by P.C. 1272 of May 2, 1949, which amended the "A" conditions by making them subject to the provisions of the Fair Wages and Hours of Labour Act 1935; and amended the "B" conditions by removing the schedule of minimum rates, but provided that in no event shall the wages be less than those established by statute or regulation of the province in which the work is being performed.

P.C. 5547 of November 3, 1949, is a consolidation of the foregoing Orders in Council.

**Commons  
passes  
amendments  
to Housing  
Act of 1949**

construction and Supply.

In addition to the three major changes in the National Housing Act of 1944 which Mr. Winters discussed in his earlier statement (L.G., Nov., 1949, p. 1334), the new legislation also increases the amount of the loan that may be guaranteed for home improvement or home extension purposes by 25 per cent over the amount specified in the Act prior to amendment.

**Study of  
family  
budgets  
in Canada**

In the Fall of 1948, the Dominion Bureau of Statistics conducted a survey of family expenditures which covered a cross-section of Canadian families and single individuals. Detailed information about income and expenditure in the 12 months ending August 31, 1948, was collected from approximately 6,000 families and single persons across Canada.

During November and December, 1949, the Bureau issued preliminary summary figures on family budgets in five Canadian cities (Montreal, Halifax, Toronto, Winnipeg and Vancouver). These preliminary figures show the average income of the families and their average expenditure on food, housing, clothing and other items.

At a later date, when a more complete tabulation of the results of the survey is available, it is planned to publish an analysis of the findings in the *LABOUR GAZETTE*.

**1950 class  
of engineers  
will be  
largest in  
history**

Mr. Mitchell stated that the 3,500 new engineers who would be available to employers next spring would allow many employers to carry out plans for recruitment which had previously been restricted by the inadequate supply of graduates.

He explained that the 3,200 engineering graduates in 1949 had gone far towards taking up a backlog of openings, but that the needs of many employers had still not been met, especially in the smaller firms, many of whom were only now considering the possibility of using engineering graduates on their staffs.

Mr. Mitchell reported that a survey, made in 1946, had produced the information that an estimated 2,000 new engineering graduates in each of the five years from 1947 to 1951 inclusive would be required to meet the demand by Canadian industry for engineers. These estimates were being reviewed with the same employers, with particular reference to prospective needs in 1950 and 1951. While all of these employers have not yet been covered, the net results to date showed an increase of slightly more than 10 per cent in the combined estimates made three years ago.

In both 1947 and 1948, the actual demand for engineering graduates was between 2,000 and 2,200, while graduating classes in these two years amounted to 1,100 and 1,700 respectively. Thus, there was a considerable backlog of openings to add to the normal demand of 1949. This backlog was partially taken care of by the graduating class of 1949, which numbered about 3,200.

There were special factors which facilitated the placement of the class of 1949. One was a number of large scale employers who had restricted their recruiting programs in 1947 and 1948 in anticipation of a better supply of graduates in 1949. Another was a substantial number of "company undergraduates", these being students who were attending university on leave-of-absence from their regular employment. A third factor was a recruiting program for the Armed Services which accounted for more than 200, a large proportion of whom were engineering graduates.

The Minister explained that the bulk of the employment available for new engineering graduates had always been concentrated in the establishments of a relatively small number of large employers. Surveys on which estimates could be based were necessarily made almost entirely through these larger employers. Employment officials believed, however, that there was a substantial latent demand among medium-sized and smaller employers. Even if this prospective field of employment averaged only one graduate per company, the demand for engineering graduates would be increased by several hundreds.

In former years, the Minister said, shortage of supply had been mainly responsible for the rapid absorption of inexperienced graduates into the more widely publicized openings where there had been well organized recruiting programs. In 1950, it would be rather a case of seeking out the openings, including the substantial number believed to exist in smaller operations.

**Campaign to find jobs for university graduates and students**

Hon. Humphrey Mitchell, Minister of Labour, announced early in December that questionnaires had been forwarded to about 10,000 employers in Canada

in an effort to uncover permanent job openings for university graduates and temporary summer employment for undergraduates in the spring of 1950.

Mr. Mitchell stated that it was necessary to undertake this campaign early since, although many war veteran students had already graduated, there would still be exceptionally large classes in 1950 and 1951, due to the numbers of veterans taking university training. (For example, as noted above, the engineering class will be the largest in Canadian history.)

The Minister explained that the job involved several months' work, and that the full resources of the Department of Labour and the National Employment Service would be used to assist in filling employers' requirements and finding positions for the students. He stated that a large proportion of the jobs needed would be turned up by the questionnaire, but these would be supplemented by the openings uncovered by the direct efforts of employer relations personnel of the National Employment Service. At the prairie universities full time NES offices are operated on the campuses throughout the academic year, while at other universities the NES liaison officers work in co-operation with university staffs to provide a liaison service between students and employers.

Mr. Mitchell stated that in all probability the university graduate would experience a little more difficulty next spring in obtaining employment than in the spring of 1949. In 1949 a backlog of openings was in existence. This backlog did not exist to the same extent now, but he stated placement officials were optimistic regarding next year's classes due to the fact that a great number of small firms had still to recruit university personnel valuable to their enterprises. He urged the smaller firms, which might not receive a copy of their questionnaire, to bring their openings to the attention of the National Employment Service as soon as possible.

**Conciliation and arbitration in Canada**

A bulletin of 68 pages entitled "The Conciliation and Arbitration of Labour Disputes in Canada", another in the series of studies published by the

Department of Industrial Relations of Queen's University, has recently been issued. This bulletin (No. 13) is a study of the

procedures which are commonly used to settle disputes between employers and employees.

The first chapter traces the development of public policy regarding labour disputes in Great Britain, United States and Canada. It is noted that Canada has gone much farther than either Great Britain or the United States in requiring the use of conciliation and arbitration and in limiting the right to strike.

Pointing out that disputes between employers and their employees fall into two broad categories, "contract-negotiation disputes" and "contract-observance disputes", the bulletin devotes a chapter to each type of dispute and discusses the use of conciliation and arbitration as methods of settlement.

With respect to contract-negotiation disputes, the bulletin discusses the nature of conciliation, sets out the statutory requirements and practice regarding conciliation, and outlines several criticisms of the conciliation system as it stands today.

This section concludes with the statement,

In spite of the fact that there is some valid criticism of the conciliation systems administered in this country at both federal and provincial levels of government, the work of Conciliation Officers and Conciliation Boards has been outstanding. Their services have been recognized not only in Canada, but in the United States and Great Britain as among the most effective and successful in existence.

The brochure deals similarly with arbitration in the settlement of contract-observance disputes, pointing out its characteristics and the situations in which it may appropriately be used.

After discussing the whole process of grievance procedure and arbitration, the author states that it is difficult to reach any conclusion regarding the arbitration process as a practical solution of labour-management disputes. The greater part of Canadian industry, where collective bargaining is a comparatively new process, has not developed permanent arbitration facilities. In a few instances arbitration procedures have been in effect for a number of years, notably on the railways, in the garment trades, in the printing trades and in some firms in the automobile industry. The author asserts that

it would be impossible to support the view that arbitration is *the* way to settle disputes in Canada. Experience, generally, is too limited to warrant any such sweeping conclusion. However, there is the strong presumption that arbitration is a desirable procedure in that it can effect settlements without the loss of production to the employer or wages to the employee; that arbitration is therefore at least worth a trial.

In conclusion, it is stated that conciliation and arbitration provide the best devices so far devised to reach settlements. "If better are found . . . they will be developed by those who would use and need them. The first step in the direction of improvement is an understanding and an effective use of the processes now available."

**Comparison of workmen's compensation laws**

The 1949 edition of the bulletin, *Workmen's Compensation in Canada, A Comparison of Provincial Laws*, is now available. This pamphlet, which is revised annually by the Department of Labour, shows the legislative changes made in 1949. These include the enactment of a new Workmen's Compensation Act in Prince Edward Island, effective July 1, 1949, and amendments to the Acts of Nova Scotia, Ontario, Quebec and Saskatchewan. The Newfoundland Workmen's Compensation Act is summarized.

It is pointed out in the introduction that in all Canadian provinces there is now a law providing compensation for industrial accidents, but that the Newfoundland Act is unlike that of the other provinces in that it makes employers individually liable for injuries to their workmen occurring in the course of employment. In the other provinces, the statute is of the collective liability type.

Under the new Prince Edward Island Act, benefits for disability are two-thirds of earnings and the maximum earnings on which compensation is reckoned are \$2,500 a year. A widow is entitled to receive \$40 a month, with \$10 a month for each child under 16.

Provision was made during the year for the payment of increased amounts of compensation in cases of total disability in Saskatchewan. Children's benefits were raised in Nova Scotia, and the maximum annual earnings on which compensation is reckoned were raised from \$2,000 to \$2,500.

In Ontario, from January 1, 1950, the basic rate of compensation for disability was increased from 66 $\frac{2}{3}$  to 75 per cent of average earnings, and the maximum yearly earnings on which compensation is reckoned from \$2,500 to \$3,000. By an amendment effective from July 1, 1948, the monthly compensation payable in death cases, exclusive of burial expenses and the lump sum of \$100, may not exceed the workman's average earnings, instead of two-thirds of such earnings, as formerly. Where the total sum payable would exceed average earnings, the compensation must be reduced but the reduction is not to affect the payment of

\$50 to a widow, with \$12 to each child or \$20 to each orphan child, unless the total benefits to such dependants exceed \$100 a month.

The list of industrial diseases to be compensated was greatly extended by regulation in British Columbia.

Copies of the bulletin may be obtained from the Legislation Branch, Department of Labour, Ottawa.

**Improved productivity in Canadian coal mines**

Productivity improved in all coal mining areas in Canada during 1948, according to the annual survey of operating costs and revenues of Canadian coal mines conducted by the Dominion Coal Board.

For the first time in the 18 years during which the survey has been conducted, a profit was made in all coal mining areas, the average being 38 cents per net ton.

While total production costs have risen from the low point in 1940 of \$3.40 per net ton to a high in 1948 of \$5.71, total revenues have similarly increased from the low of \$3.43 in 1936 to the highest point on record of \$6.09 per net ton in 1948.

Increases in total revenues over those reported in 1947 ranged from 12 cents per net ton for Saskatchewan to 95 cents per ton for British Columbia.

Nova Scotia showed the most noteworthy change; from a loss of 49 cents in 1947 to a profit of 34 cents per net ton this year. The 1947 result in Nova Scotia was probably influenced by the strike in that area.

The main element of cost remains that of labour which, at \$3.47 per net ton, increased 33 cents over the 1947 cost, total labour costs being \$60,460,000. Labour costs per ton ranged from a high of \$4.72 in Nova Scotia to 71 cents in Saskatchewan, where 97 per cent of the production consists of strip mined coal.

Production per man-day showed improvement in all areas, the greatest increases over 1947 being: British Columbia 19 per cent, Alberta (subbituminous) 15 per cent and New Brunswick 12 per cent.

**Eighth Report Unemployment Insurance Commission**

"Definite progress in a widening field of activity" was noted by the Unemployment Insurance Commission in its Eighth Annual Report covering the fiscal year ending March 31, 1949.

During the fiscal year, 1948-49 revenue from contributions by employers, employees and government totalled \$119,505,573.69.

Interest on investments and other miscellaneous items increased the total revenue to \$131,627,250.33. Unemployment insurance benefit paid totalled \$49,826,752.16, leaving a net balance in the fund at March 31, of \$529,535,437.38.

The raising of the limit of insurability from \$2,000 to \$3,120 in 1948, coupled with a general increase in wages during previous years, disturbed the overall balance between employer and employee contributions which were intended to be approximately equal. Accordingly, the contribution rates were readjusted late in 1948 to restore approximate parity to employer and employee contributions. In addition, another class was added to the contribution schedule to provide for insurable persons in the higher income group.

The report indicates that "the addition of a new contribution class automatically resulted in a higher maximum rate of benefit for persons in the top earnings bracket". For a claimant with a dependent, the maximum weekly amount was raised from \$14.40 to \$18.30. For a claimant without dependents the maximum weekly amount was raised from \$12.30 to \$14.40.

The total Canadian labour force was estimated to number 4,964,000 at November 20, 1948, including both employed and unemployed persons, but excluding persons keeping house, attending school, or too old or infirm to work. The total insured population was estimated at 2,447,000, or almost 50 per cent of the total of gainfully employed persons.

During the later months of the fiscal year the Commission made arrangements for insuring workers in Newfoundland, following the entrance of the new province into Confederation on April 1, 1949. Offices were opened at St. John's, Grand Falls and Corner Brook. These offices were placed under the Maritime region. It was estimated that of a working force of approximately 112,000 in Newfoundland, rather more than 40,000 were in insurable employment.

In accordance with the policy of the Commission to extend coverage to previously uninsured groups of workers as circumstances made that possible, employment in the lumbering and logging industries in British Columbia and employment in stevedoring were brought under the Act during the year.

The Commission administered 295 insurance and employment offices scattered across Canada in 1948-49. In August, 1948, a branch of the National Employment Service was opened in London, England, staffed by employees of the Commission.

To this office, the report states, was extended the Canadian clearance system, thus making it possible for a Canadian employer desiring to obtain workers from the United Kingdom, to place his order with a local office of the Commission in Canada and have it filled.

The National Employment Service continued to play an important part in youth employment and vocational guidance, vocational training for unemployed persons, the employment of older workers, the placement of handicapped workers, war veterans and displaced persons from Europe. Improvements were made during the year in the machinery for the placement of applicants in technical, scientific, professional and business categories. This work was done largely in the five regional offices, but closer co-operation was established with the universities in all provinces.

The National Employment Committee held four regular meetings during the year and the five regional committees, whose work is co-ordinated by the national body, were reported to have functioned successfully. Regional and local employment committees dealt with matters and made studies referred to them by the National Committee, as well as having contributed valuable recommendations of their own.

The report states that "unemployment insurance is now generally accepted in Canada as an important and beneficial social security plan." Not only the general public, but employers and labour unions "have shown growing interest" in the provisions of the Act. "Both in its insurance and employment phases (the Commission), has become an essential part of Canadian economy."

#### **TLC writes history of labour movement in Canada**

A history of the Trades and Labour Congress of Canada and of the Labour Movement in the Dominion is appearing currently in serial form in the Trades and Labour Congress Journal. The first instalments were published in the September and November issues of the Journal and the history is to be continued in subsequent issues.

It is being written by Mr. L. E. Wismer, TLC's Director of Publicity and Research.

#### **Old age and blind pensioners in Canada**

The number of persons receiving old age pensions in Canada increased from 257,485 at June 30, 1949 to 265,372 as at the end of the quarter September 30, 1949.

The Federal Government's contributions under the Federal-Provincial scheme totalled

\$22,618,926.50 for the quarter ended September 30, 1949, as compared with \$18,190,538.31 in the preceding quarter. Since the inception of the Act the Federal Government has contributed \$585,896,316.93.

As at September 30, 1949, all provinces had not completed the review of pensioners' files in order to make adjustments under the amendments to the Act increasing the maximum pension to which the Government of Canada would contribute from \$30 to \$40 a month. There was, therefore, considerable variation in the average pension paid in the different provinces. In only three provinces was the number of pensioners higher than three per cent of the total population.

In addition to the above, pensions were being paid to 9,948 blind persons as at September 30, 1949, as compared with 9,743 at June 30, 1949.

The cost of pensions in respect of blindness to the Federal Government was \$939,125.49 for the quarter ended September 30, 1949, and \$727,727.17 in the preceding quarter. Since the inception of the Act, Federal payments have totalled \$17,154,986.09. The average monthly pension was between \$37.87 and \$39.09 in nine provinces. In Newfoundland, where the maximum pension payable is \$30 the average was \$29.33.

**ILO study on strike statistics**

The International Labour Office announced in November that time lost by strikes and lockouts has increased sharply since the war but is still "almost negligible" by comparison with normal unemployment. A study published in the *International Labour Review* gives comparative statistics for time lost in certain industries in a number of countries during the war and post-war years. The industries covered are mining, manufacturing, construction and transport.

The statistics, therefore, are not complete and do not represent the situation for all non-agricultural industries as a whole, or in relation to other countries. In Canada, for example, most of the time lost during the survey period was recorded in these four industries (1945-1947, 94 per cent) although they employed only slightly more than one-half of all wage and salary earners. When account is taken of workers in all industries, the average number of man-days lost annually in Canada through all disputes was about 197 days per thousand workers in the period 1940 to 1944, and 920 days during the period 1945 to 1947.

According to the ILO release the average number of man-days lost annually by industrial disputes per thousand workers varied as follows:—

	1940-1944	1946-1947
Canada .....	313	1,477
United States.....	509	2,899
India .....	337	601
Denmark .....	47	1,062
Hungary .....	94	46
Ireland .....	288	669
Sweden .....	108	3,685
Switzerland .....	12	123
United Kingdom....	179	228
Australia .....	922	1,563
New Zealand.....	135	228

The statistics for some countries include persons who were made idle by strikes and lockouts in the same establishments but who were not actually on strike themselves. In the case of the United Kingdom, over a 21-year period, it was found that this group accounted for about one-fifth of the lost man-days.

The study concluded:—

"From the figures of the table, it is clear that the loss from disputes is of very minor importance in relation to the total time worked. A rate of 1,000 days lost per 1,000 employees per year means one day per employee per year or, if the year comprises 300 working days, only one-third of one per cent of the year's working time.

"Only four countries had time-loss rates from strikes and lockouts as high as this figure. On an average, the time-loss from strikes and lockouts is half a day per employee per year, or less than two-tenths of one per cent. In comparison with unemployment, therefore, for which a rate of three per cent is low and one of ten per cent not unusual, the loss from industrial disputes appears almost negligible."

**United Nations sponsors study on employment**

Problems of employment and economic stability were discussed recently by the United Nations General Assembly, and on November 25 a resolution on full employment was adopted.

The resolution begins by approving the action of Secretary-General Trygve Lie in inviting a group of experts to report on national and international measures required to achieve and maintain full employment. (This action was taken in accordance with a resolution of the Economic and Social Council. Those participating in the study are: E. Ronald Walker, from Australia; Pierre Uri, of the General Commissariat of the Economic Plan for France; Nicholas Kaldor, from Cambridge University, United

Kingdom; and two United States economists, J. M. Clark, from Columbia University, and Arthur Smithies, from Harvard University.)

Continuing, the General Assembly Resolution expresses its belief that national and international action to promote and maintain full employment is a basic requirement for the achievement of a stable and expanding world economy.

It notes with satisfaction that the plans of various governments for increasing purchasing power and for promoting full employment include such measures as the extension of unemployment insurance, the expansion of social services generally, public works programs including low-cost housing and natural resources development projects, measures affecting the level and methods of taxation, and incentives for the encouragement of private capital investment.

It recommends "that each Government consider, as a matter of urgency, its international responsibility under Articles 55 and 56 of the Charter to take action, as the need arises, designed to promote and maintain full and productive employment, through measures appropriate to its political, economic and social institutions."

(A survey of the plans formulated by various nations to maintain full employment appeared on page 1228 of the October LABOUR GAZETTE.)

### **TUC appeals to affiliates to postpone wage claims**

The General Council of the Trades Union Congress, on November 23, called on all affiliated unions to postpone until January 1, 1951, claims for higher wages as

long as the price index remains below 118. At the time of the TUC's announcement the index stood at 112.

The TUC's statement followed nearly two months of discussion between labour and Government leaders. The problem has been made more difficult because of a large number of "important and justifiable" claims for wage increases pending by individual unions, the United Kingdom Information Office bulletin *Economic Record*, states.

"In addition," the report continues, "there is the problem of the unions whose contracts have a sliding-scale arrangement based on the cost-of-living index. If their wages rose automatically through an increase in the cost of living, the other unions could hardly be expected to hold back. Finally, there is the problem in wages of encouraging increases for higher output while keeping wage rates stable."

Although recognizing the problem of the lowest paid workers, the TUC urged the

necessity of "rigorous restraint" even in these cases, and recommended that "incentive plans" should be developed for raising earnings that are too low.

In return for recommending acceptance of an increase in prices up to five per cent, without asking for more pay, the General Council has been assured by the Government that the unions will not be expected to accept any wage reductions should prices fall within the limit of five per cent.

The General Council can only recommend, it is pointed out. "While it is the responsibility of unions themselves to operate the wages policy, unions nevertheless must pay regard to the realities of the economic situation in framing their policy, and act loyally in conformity with the policy now recommended by the General Council," the TUC recommendation states.

The Council pledged itself to "intensify" its campaign for increased productivity and greater efficiency, and recommended study in each industry with a view to extending the "system of payment by results."

The TUC announcement followed the Government's decision last September to devalue the pound. "The dangerous inflationary tendencies which devaluation inevitably intensifies must be counteracted by rigorous restraints upon all increases of wages, salaries and dividends," it states.

### **British personnel management advisory service**

One of the specialized services provided by the Ministry of Labour and National Service in the United Kingdom is to help firms in working out a progressive personnel policy.

The purpose is to stimulate attention to the human relationships in industry; and an account of the functions of the Personnel Management Advisory Service appears in the October issue of the British *Ministry of Labour Gazette*.

The Service seeks to foster an attitude on the part of management towards its employees which, the article states, might be expressed as follows:—

"It is the objective of this company to establish such relationships with its employees of all ranks as will encourage them to feel a satisfaction in their employment and so enable them to collaborate to the full in promoting the company's efficiency and prosperity. In pursuance of this objective, the company will maintain constantly under review:—

Its methods of recruitment, selection, training, education and promotion;

Its administration of industrial agreements relating to its terms of employment, methods and standards of remuneration, and working conditions;

Its provisions for workshop amenities and employees' services;

Its facilities for consultation on all appropriate matters with its employees and with their trade union representatives; and

Its procedures for the settlement of differences and the avoidance of disputes."

The article goes on to point out that the implementation in practice of such a declaration of policy would involve, among other things:—

The use of adequate and objective methods of selection for engagement;

The placing of employees in the available work most suited to their abilities;

The provision of training and educative facilities to enable employees to perform their duties competently and to fit them for promotion as opportunity offers;

The consideration of the employee, as well as of the company, before transferring him from one job to another;

The filling of vacancies from within the company, so long as suitable candidates are available;

The development and maintenance of methods for the regular assessment of employees' qualities and services and the use of these recorded assessments as a means of selecting employees for promotion;

The recognition of the right of the employees, assisted if they so wish, by their union representative, to examine and check methods and calculations on which payment by results proposals are based; and

The maintenance of the highest practicable standard of workshop conditions and amenities, regarding statutory legislation on the subject merely as a minimum.

The article states that the Advisory Service helps firms to apply these various points in their day-to-day administration. It does so by direct advice, or by putting the firms into touch with an appropriate specialist organization.

The handicap under which so many firms are suffering, the article continues, is the dearth of trained personnel officers to put in charge of the administration of their personnel policies and to advise them in general on those policies. "One of the most important functions of the Advisory Service is to help untrained or inexperienced personnel officers both directly and by arranging lecture courses in co-operation with the educational authorities and the Institute of Personnel Management. These Courses have proved of great advantage both to the individuals and to the firms by which they are employed.

"The Advisory Service does not, of course, restrict its activities to the larger firms which can establish special personnel departments and employ specialist personnel officers. Much of the Advisers' work is with the small firm which, despite its smallness, wants to put its personnel

management on a sound footing but obviously cannot justify a specialist department. The Advisers explain how the job can be done in those cases, by allocating the various personnel functions to appropriate members of the existing staff.

Another of the functions of the Advisory Service is to organize or help in organizing conferences of employers on personnel management so that advantage can be gained from the pooling of experience."

### **Long-term decline in jobs for unskilled workers**

A long-term decline in the number of job opportunities available for labourers, coupled with an increase in jobs for skilled workers, was noted in a study of employment by industry and occupations

conducted by the University of Pennsylvania and summarized in the *New York Times*.

Whereas non-farm labourers were 11.3 per cent of the total persons employed in all occupations in 1910 they accounted for only 5.6 per cent in 1948, according to the report.

Under high level employment, however, jobs for craftsmen increased relative to the population. Gains in employment by "white collar" workers relative to the population were substantial from 1910 to 1940 and were even greater in the period to 1948, particularly for clerical workers. Relatively smaller increases were made by non-farm proprietors, managers and officials, operatives and service workers. By 1948 the number of women in jobs was double that of 1910, and, relative to population, it had increased 47 per cent, the survey found.

### **CIO pamphlet explains government and finances of unions**

A pamphlet entitled, *The CIO—What it is and what it does*, has recently been issued by the Research and Education Department of the CIO at Washington.

Its purpose is to make available to the public accurate and up-to-date information concerning the practices and background of the CIO and "in the light of the present disputes between unions and industry in this country . . . to give a better understanding of the total picture."

The pamphlet contains a brief history of the organization from the time of its inception up to the present, an analysis of its present program, and information concerning the financial practices and government of CIO unions, together with a chart showing the structure of the CIO.

### **Training workers to lift**

*Teach Them To Lift* is the title of a bulletin (No. 110) which was issued recently by the Bureau of Labour Standards of the United States Department of Labour for the use of supervisors and foremen in training workers in the safe lifting and carrying of heavy objects. This is the second in a new series of safety pamphlets for industrial supervisors.

The bulletin emphasizes the supervisor's responsibility for safe production and suggests how he can help workers to prevent the large number of injuries, such as hernias, sprains and strains, which result annually from faulty lifting habits. By training workers in *safe lifting*, the bulletin states, the supervisor or foreman is making an improvement in work methods beneficial to both his workers and his employers.

It is recommended that mechanical devices should be substituted, wherever possible, for manual lifting. Where such mechanical aids are not practical or suitable, however, the supervisor is advised, before assigning workers to lifting or carrying jobs, to determine from physical examination records the physical condition of the workers, especially of women. The strain of lifting is dangerous to workers who are underweight or overweight and to persons with deformities of the spine, arthritis, weak hearts, high blood pressure and lung diseases.

It is suggested also that the foreman be familiar with any State regulation there may be limiting the amount of weight that women workers are permitted to lift or carry, the usual limitation being 25 pounds for lifting and 15 pounds for carrying.

Where the load or material is too much for one person to handle safely, the foreman is advised to train workers in team lifting. More effective training will result, it is stated, from an analysis of the various lifting or carrying jobs to determine which workers need instruction. A number of rules are enumerated to aid the foreman in demonstrating the proper way to lift. Cartoons illustrate the application of these rules.

### **Formation of Asian labour federation**

In an effort to produce an effective counter-balance to the activities of the World Federation of Trade Unions in the Eastern hemisphere, labour representatives from a number of Asiatic countries recently established the Asian Federation of Labour.

The October issue of *Labour Abroad*, issued by the United States Bureau of Labour Statistics states that the Federation was conceived by Asian trade union dele-

gates, in particular those representing the Indian National Trade Union Congress, to the June, 1948, International Labour Conference in San Francisco. With the appointment of a preparatory committee at a meeting of the Indian labour body in December, 1948, the proposed organization entered its first stage of formation.

Organizational meetings were held in Geneva in June, 1949, at the time of the 32nd ILO Conference, and were attended by delegates representing labour groups from India, China, Iran, Indonesia, the Philippines, Thailand and Lebanon. Pakistan delegates participated in the initial meetings but later withdrew. Turkey, Japan, Australia and the United States were invited to send observers.

At the Geneva gathering, a constitution and four-point program were adopted and a provisional committee was created. The executive committee was to be composed of two representatives from India, two from China, two from Pakistan and one from each of the other affiliating countries. The four-point program outlines plans for concerted action by Asian workers to "(1) prevent the return of foreign exploitation; (2) raise living standards by raising national incomes; (3) fight the Communist menace; and (4) make the voice of Asian workers heard at international conferences."

*Labour Abroad* further states that the first plenary session of the Federation is scheduled to take place in Colombo, Ceylon, in January, 1950, at the time of the ILO's First Asian Regional Conference.

### **Trade unionism in India**

Registered trade unions in India continue to increase. The *Indian Labour Gazette* reports that at the end of March, 1948, there were 2,766 trade unions on the registers—more than half as much again as for the previous year. This does not include unregistered unions, as registration is not compulsory.

Membership reported by 1,628 unions reached a record total of 1,662,929 at the end of the year. Of this, 102,299, or 6.2 per cent, were women.

Union federation made considerable advance also. Seventeen federations were registered during the year, as compared with seven in the previous year.

The large increase in the number of unions is attributed mainly to "the desire on the part of the workers to organize themselves with a view to securing improvement in their working conditions, wages and general standard of living." Mentioned as a further cause is "the enactment of labour laws conferring special privileges on registered unions."

# THE CANADIAN LABOUR FORCE

*The labour force is constantly changing, as new workers enter and old ones leave. Moreover, economic and social trends make constant new demands on the worker, changing the skills required, and forcing shifts between occupations, industries, and regions.*

*The following article<sup>1</sup> analyses the broad composition of the Canadian labour force, and indicates some of the factors influencing its structure, and the special problems applying to some large groups.*

All problems of labour, welfare, or economic security are closely related to some part, or the whole, of the labour force. In order to measure the relative importance of these problems, and to see the relationship of each of them to the economy as a whole, it is therefore helpful to study the labour force, its size, its component parts, and the effects upon it of economic and social changes.

First of all it is important to state what is meant by the term "labour force". Then, we shall endeavour to present a brief picture of the broad composition of the labour force as it is at present. This will be followed by a short discussion of the

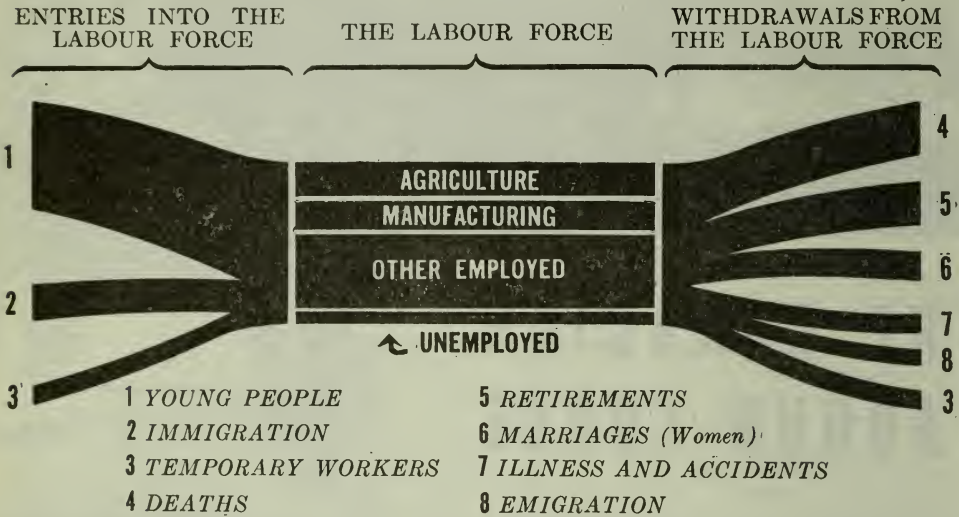

principal economic and social trends which affect the labour force mainly from without. The discussion will then turn to a consideration of the chief shifts in its internal structure. The last main section will deal with a number of special groups within the labour force. Throughout, an attempt will be made to focus attention on the labour force itself.

<sup>1</sup> This article, by George V. Haythorne, Director, Economics and Research Branch, Department of Labour, was presented in a substantially similar form as a paper at the Round Table on Economic Security at the University of Toronto, May 23 to 30, 1949. Assistance in preparing the article has been given by F. W. Burton, J. T. Montague and other officials of the Economic and Research Branch.

# THE CANADIAN LABOUR FORCE

## SCHEMATIC PRESENTATION OF ENTRIES AND WITHDRAWALS

The labour force consists of persons at work or available for work. . . . It is not a fixed body of persons; there is a constant flow into and out of the labour force.

N.B.—THE PROPORTIONS SHOWN ARE NOT BASED ON ACTUAL STATISTICS OWING TO THE ABSENCE OF COMPLETE INFORMATION.

Here and there special labour problems will be mentioned, although our main purpose is rather to help give a broad background for a consideration of such problems generally.

### The Labour Force Defined

There are many ways of defining the labour force. For present purposes, we may define it as the total of those people at work plus those available for work. "Work" in this sense means types of effort for which economic remuneration is normally received. Thus, a coal miner or a shopkeeper is considered to be in the labour force, but a housewife or a student is not.

"Those available for work" is a vague phrase, but it is intentionally so, since no hard and fast limit can be placed on this category. For statistical purposes, the category is usually limited to those persons actively seeking employment. There are no doubt many other persons not actively seeking employment who would nevertheless accept suitable jobs if they were offered, and who may be considered, at least, potentially in the labour force.

Although our Canadian statistics on the labour force have improved during recent years, since a quarterly survey was begun by the Dominion Bureau of Statistics, it is

not easy, owing to such circumstances as are mentioned above, to obtain adequate data on all parts of the labour force. In fact, it can be seen that practically every adult in the country may become a member of the labour force at one time or another during his life. The labour force is, therefore, not a fixed body of persons. Rather, it is a stream through which most individuals flow for a longer or shorter period. This dynamic concept is illustrated in Chart 1, which shows the principal tributary streams by which people enter the labour force, and the principal streams by which they leave it.

This flow into and out of the labour force is well illustrated by our wartime experience. What happened is shown in a broad way in Chart 2.<sup>2</sup> It will be seen that the increase in total employment, including both civilian workers and the armed services, was out of proportion to the increase in population. Where did these additional workers come from? They came from two sources: first, from the unemployed; second, from those not previously in the labour force. Many in this second group would, in normal times, have continued in their existing

<sup>2</sup> Data from Special Surveys Division, Dominion Bureau of Statistics.

status as housewives, students, or retired workers. In other words, there was at this time a great expansion in the stream of "temporary workers" shown in Chart 1, under "entries into the labour force".

### Present Composition of Labour Force

At the present time the Canadian labour force numbers about five million people, or approximately forty per cent of the population.<sup>3</sup> About four workers out of five are male. Almost half of the labour force are aged 25 to 44 years inclusive. The average female worker is considerably younger than the average male worker, as is shown in Chart 3.<sup>4</sup> Occupationally, one worker out of five is in agriculture.

Geographically, three out of five members of the labour force live in Ontario or Quebec. The percentage of the total population included in the labour force is lower in Quebec and in the Maritime Provinces than in the rest of the country. This is particularly true for females.

It is difficult to divide the labour force precisely into groups based on the degree of skill, but according to Census definitions, almost one-third of the labour force is at present included in unskilled occupations.

<sup>3</sup> Data in this section from Labour Force Survey, Dominion Bureau of Statistics.

<sup>4</sup> Data for Chart 3 from 1941 Census.

Members of the labour force who are actually employed can be divided by occupational status, into paid workers, employers, own-account workers, and unpaid family workers. The distribution of total employed between these categories is not the same for women as for men, nor the same in agriculture as in other industries.

In non-agricultural industries, which employ nearly four million people, of whom almost one-quarter are women, about 80 per cent of the men and about 90 per cent of the women are paid employees.

In agriculture, on the other hand, which employs about one million workers, paid employees form a relatively small element, including hardly more than one worker in eight even at the harvest season. Farmers without paid workers make up over 50 per cent of the agricultural labour force. Unpaid family workers make up about 30 per cent.

There are today in Canada about four million people, 14 years of age and over, who are not included in the labour force. This means that for every 5 persons in the labour force, there are 4 outside; of the latter group about five out of every six are women and of these close to 85 per cent are keeping house. Students number about 600,000, and about the same number of people are too old to work, or voluntarily idle. Except for housekeepers, all these classes are about equally divided between males and females.

## WARTIME CHANGES IN THE CANADIAN LABOUR FORCE

(as at June 1 each year)

Chart 3

# AGE AND SEX COMPOSITION OF THE LABOUR FORCE, 1941, CENSUS

## MALE

*From ages 20 to 64, almost the entire male population is in the labour force*

## FEMALE

*But most females are in the labour force only during youth*

## Economic and Social Trends Affecting the Labour Force

In examining the nature and composition of the labour force, it is helpful to keep in mind the principal economic and social trends which are constantly changing the environment in which the people of Canada, and of other countries, must live and work. Economic and social changes, as we all know, have been extensive during the past forty or fifty years.

Technological progress, including the mechanization of production, is obviously among the most fundamental causes of these changes. It has been accompanied by profound changes in the structure of our economy, including the labour force. It is easy to think of examples, such as the introduction of electric power, with all its effects on industry and labour.

Another important development in Canada, closely connected with technological progress, has been the rapid opening of new territories and the utilization of new natural resources. A third influence has been the widening and narrowing, at different times, of the streams of international trade.

These economic changes and others have not only altered the conditions under which the labour force must work but have had important effects on the character of the labour force itself. Moreover, these changes are still in progress and their results have become so much of a commonplace, that sometimes we fail to give them the consideration they deserve. One result, for example, has been the steady rise, over the last century, in real income of the average worker. Another result is that the types of work required of the members of the labour force have been greatly altered, and, in particular, there has been a rapid growth of secondary industries, in comparison with the slower growth of the primary or extractive industries.

These trends which have been mentioned are economic. In addition, there have been other trends, parallel and related to the preceding, which are social. Examples are the growth of the modern business corporation and of large trade unions. Other rather different examples are the emancipation of women, the decline in the birth rate, and the development of our modern educational system. We cannot measure the effects of each of these trends in any precise way, nor can we discuss them fully here, but we do know that they have important influences upon the labour force, upon its total size and its composition, upon its wages and its general welfare, and upon its own quality and its efficiency.

## Shifts Within the Labour Force

One of the principal responses by members of the labour force to economic and social trends, is to be seen in the shifting structure and composition of the labour force itself. These shifts are chiefly of three types: occupational, industrial, and geographic. They are all closely linked with economic security or insecurity.

### Occupational Shifts

Occupational shifts are of two main types: they may involve a change in the nature of the job itself, or the worker may move from one occupation to another.

With reference to the first type it is sometimes said that increased mechanization of production has diminished the amount of skill demanded of the worker. This has no doubt occurred in some cases, but in many others our more complicated productive processes have demanded new kinds of skill. In place of the old handicraft skills, the emphasis now lies on familiarity with the machines and with the materials handled. Today greater skill and adaptability are demanded than in the past of entrants to many occupations, including those of professional rank and the higher types of manual work. Census data indicate a substantial increase over the last thirty years in the number of skilled tradesmen. The information on the relative degrees of skill of all members of the labour force, however, is incomplete, and it is therefore impossible to determine at present whether the increase of skilled workers over this period has been greater or less than that of unskilled workers.

One of the main economic security problems posed by this trend towards more complicated and varied skills required of workers is the provision of adequate training and vocational guidance. Although the average worker nowadays has had more years of formal education than his predecessors, he is not always better equipped for his work, especially in the case of skilled manual labour.

Turning now to the second type of occupational change, namely, movements of workers, younger persons are again usually most affected. While in the process of training, they are seeking out the most advantageous fields of work. On the other hand, older workers, once in the labour force, build up vested interests in their occupations, as a result of familiarity, or through seniority or other institutional ties. The longer one has followed a certain occupation, the more reluctant one is to move. From the limited information available it appears that when older workers

## Geographic Shifts

The third important change within the labour force has been the geographic movement of workers. This type of shift raises greater problems in Canada than in many other countries, owing to the distances involved. These migrations of workers are due chiefly to two causes: first, the development of new natural resources, and second, the differing rates of growth of the industries predominating in various areas.

In addition to the large rural-urban migration, already mentioned, there are migrations between rural areas of different types. There are also of course migrations for many reasons between different urban areas. While the greater part of these geographic migrations in Canada take place within a single province, interprovincial movements are also important. The most obvious example of interprovincial migration in Canada has been the shift following Confederation into the Canadian West. Large numbers of these workers left farms in the Maritime and Central provinces. More recently, especially during the drought years of the thirties there has been a movement from the Prairies to Eastern Canada, mainly Ontario, and to British Columbia.

While more data regarding these movements are available today than earlier we still do not have a complete picture of their character and extent. An over-all estimate from census data places the number of Canadians who move from the locality of their birth at around one-third of the total.

The movements of workers into and out of Canada are basically similar to those which we have just discussed. Immigrants come chiefly from Europe, while emigrants go chiefly to the United States. Both these streams tend to increase in periods of prosperity and to decrease in periods of depression, but the stream into Canada appears to vary much more than the other. For example, in 1946, immigrants into Canada numbered 72,000, and there were 28,000 recorded emigrants to the United States. But in 1936, relatively a year of depression, immigrants to Canada were only 12,000, one-sixth the 1946 figure, and slightly below the number of emigrants to the United States in the same year.<sup>7</sup>

## Those Who Do Not Shift

Up to this point our attention has been focussed primarily on those workers who participate in these various movements. Many of the problems of economic security, however, are more closely connected with those workers who do not move. In spite of greater economic opportunities elsewhere, many workers feel bound to a particular locality or to a particular type of work by family or community ties, by language or culture, by preference for a special way of life, by specialized skills, or lack of skill, or by plain inertia.

As a result, certain groups of workers may be left in occupational, industrial or geographic backwaters, even though there

<sup>7</sup> Canada Year Book.

Chart 5

## INDUSTRIAL DISTRIBUTION OF THE LABOUR FORCE, 1891-1946

A half century's census figures illustrate the changing industrial structure of the labour force, showing the movement of workers from primary to secondary industries.

may be prosperity elsewhere. One of the largest of these groups consists of persons on subsistence farms. At our last decennial census there were over 200,000 farms which sold either less or only slightly more than one-half of their produce. When allowance is made for the families of these subsistence farmers, it will be realized that the total number of persons in this "backwater" group approximates one million. There are several other such groups of which perhaps the most important are the casual unskilled workers and the seasonal workers in the fishing areas. These groups suffer from low incomes, and frequently from unemployment or underemployment. In time of depression, the burden has usually fallen more heavily upon them than upon others.

### Special Groups in the Labour Force

So far we have described the broad outline of the labour force, spoken of some of the trends within the economy which have an effect on the labour force, and have discussed some of the significant shifts within the labour force. Now we shall discuss certain groups within the labour force which warrant special treatment. These groups are: younger workers, older workers, women, and seasonal workers.

Chart 6

## CHANGING AGE PATTERNS IN THE LABOUR FORCE

On the average, persons now enter the labour force at a later age than formerly and retire younger. Census figures show that between 1921 and 1941 . . .

*The percentage of boys aged 14-15 who were gainfully employed declined from*

*While the percentage of men aged over 65 who were gainfully employed declined from*

thus, although the average length of life of the population is increasing, the percentage gainfully employed is diminishing at both ends of the age scale.

### Younger and Older Workers

Both younger and older workers constitute significant segments of the labour force. There are today close to 1,300,000 or about one-quarter of the labour force in the younger group, from 14 to 24 years. Slightly more, roughly 1,500,000 or one-third of the labour force are in the older group, 45 years and over. These proportions are shown in Chart 3.

As is well known, in recent generations the birth rate has fallen and average life expectancy has risen. The average age of the population is therefore tending to increase, although the tendency may be interrupted by heavy immigration or a rise in the birth rate.

Partly as a consequence of these factors there is a long-run downward trend in the proportion of younger workers in the labour force.<sup>8</sup> The gradual increase in the age at which young people leave school has contributed to this trend. For example, of all boys aged 14 and 15, 29 out of every hundred were gainfully occupied in 1921, while in 1941 only 17 out of one hundred were gainfully occupied.<sup>9</sup>

<sup>8</sup> See Chart 6.

At the other end of the age scale, among people of 65 and over, the percentage at work has been reduced in recent years by a trend toward earlier retirement. Of males in this age-group, 58.4 per cent were gainfully occupied at the time of the 1921 census, but this had fallen to 47.4 per cent by 1941. For females, there was a decline from 6.3 to 5.6 per cent during the same period. However, owing to the great increase in the total number of older people, the absolute number gainfully occupied increased by about 50 per cent, both for men and for women, between these two dates.<sup>9</sup>

Summing up these broad trends, it seems clear, that while the average age of the population is increasing, the percentage gainfully employed is diminishing at both ends of the age scale. The labour force, in other words, is composed more and more of people aged from 18 to 64 years. The task of supporting the whole community, in other ways, is falling to a larger extent on these "middle" aged workers.

Looked at from the standpoint of economic security, the youth group is important, not only in numbers, but also because every worker passes through this group in the earliest and most critical stage of his working career. This period is a critical one because it is at this time that the young worker, who frequently has had little opportunity for training, practical experience, or even vocational guidance, faces serious problems of adjustment to his employment. It is perhaps to be expected that over 40 per cent of the unemployed in March, 1949, were under 25 years of age.<sup>10</sup>

From the long term point of view, the problem of the older worker is less critical than that of the younger worker. If the problems of youth can be alleviated, so that most people get a good start in life, the problems of all other age groups should be greatly diminished. This, however, is not to minimize the special problems of the older members of the labour force.

Unemployment among older workers has a different significance from that among younger workers. The younger worker, due to lack of experience and seniority, is more likely to lose his job, but his chance of obtaining a new job is constantly improving. The older worker is less likely to lose his job, but his chance of obtaining a new job is poorer and constantly becoming worse.

Another matter of peculiar importance to older workers and to the community as a whole is that of retirement. There is likely

to be a decrease in the labour force as a result of any extension of the present compulsory retirement plans, for example the railway plans effective at age 65, or as a result of the lowering of the age requirement of the present general old-age pension scheme from 70 years. Indications are that the number of workers covered by pension plans in Canada is increasing. Already, it is estimated, close to 1,000,000 workers are covered by such plans. This means that by about 1965, more workers in the older age group will be eligible for pensions and may therefore be less interested in steady employment than is the case today. On the other hand, with shorter hours per day and fewer days per week in many industries, and with increased mechanization, employment may in the future be more attractive to older workers.

### Women Workers

Women workers today make up about 21 per cent of the labour force. This proportion, which is shown in Chart III, has increased gradually since the beginning of the century, when it was around 13 per cent. During the war, of course, the proportion of women employees in manufacturing increased rapidly, but it has now reverted approximately to the pre-war level.<sup>11</sup>

As might be expected, most of the women in the labour force are young. Over 40 per cent of the employed women in June, 1949, were under 25 years of age; almost double the similar proportion for men. It is of interest to note that during the post-war years the proportion of married women to single women in the labour force has increased moderately. In June, 1946, there were, according to the Labour Force Survey, in non-agricultural employment, 597,000 single women and 199,000 married women. At the same date in 1949, there were 627,000 single and 243,000 married.

It is well known that the average earnings of female workers are considerably lower than the average earnings of males. This may be only a minor problem to many women who marry and thereafter remain outside the labour force, but it is important to women who never marry, and to those who have to return to work after marriage. It is especially important to women who support dependants.

The lower level of female earnings is accounted for partly by the lower average age of female workers in comparison with male workers. Being younger, female

<sup>9</sup> Census of Canada, Occupations, 1921 and 1941.

<sup>10</sup> Quarterly Labour Force Survey, Dominion Bureau of Statistics.

<sup>11</sup> Census of Canada, 1901-1941; Census of Industry, 1939-1945; Annual Review of Employment and Payrolls, 1945-1948; Labour Force Survey, 1945-1949; all from Dominion Bureau of Statistics.

workers are also, on the average, less skilled than males. The difference in earnings between male and female workers of equal skill is therefore less than the difference in earnings between the average male and the average female worker.

It is also true that women have not generally entered some highly-paid occupations, especially many types of skilled manual labour. Consequently, a large percentage of the total female labour force is crowded into a relatively narrow range of lower-paid occupations, of which leading examples may be found in personal service, in retail trade, in clerical work, or in the textile and clothing industries. The total number of women in the professions, according to census figures, appears impressive, until one discovers that school teachers and nurses make up approximately 80 per cent of this total.<sup>12</sup> This lack of alternative opportunities is one of the chief factors depressing women's earnings.

### Seasonal Workers

The fourth group in the labour force which deserves special attention is that composed of seasonal workers. It is difficult to determine the size of this group, partly because it contains many part-time workers who move in and out of the labour force, but mainly because no complete record is maintained of those persons who shift from seasonal jobs in one industry to those in another. The best figure we have been able to arrive at, and it is at most only an estimate, is that, of the total Canadian labour force, some 16 per cent are seasonal workers.

The largest groups of seasonal workers are to be found in the primary industries and in the secondary industries associated with them. There are, however, other important smaller groups located in various types of manufacturing, for example, automobiles and textiles, construction, transportation and the service industries.

Seasonal workers do not form a homogeneous group. Many of them enter the labour force only for a part of the year, such as the summer holidays or perhaps only the harvest season, and are occupied for the rest of the year as students, as housewives, or as retired persons. Others, probably equally or more numerous,<sup>13</sup> are

permanent members of the labour force and they and their families are dependent upon their ability to find a succession of suitable seasonal jobs at the various seasons of the year. Examples of this second group are the men who work in agriculture or fishing in the summer, and in logging or elsewhere in the winter. It is in connection with the second group that serious problems arise.

One economic security problem for many of these seasonal workers is the almost inevitable loss of time involved between jobs. This is particularly serious, of course, for workers who depend entirely on a sequence of such jobs for their livelihood.

Another problem is the uncertainty of employment which accompanies this work. There is nearly always a risk involved as to whether or not a job will be available at the end of the season. Changes in employment, even though they are of a recurring nature, make it more difficult for workers to become highly proficient in one occupation. There is also the necessity still in many cases for the worker to be away from his family for extended periods.

### Conclusion

There are two final comments which might be made. Both of these are of a general nature. In the first place, it seems clear from this analysis that there is something to be gained from examining the labour force from the standpoint of the whole economy as well as from the standpoint of each part of the economy separately. By obtaining this total picture first, one is more apt to see the various segments in their proper perspective.

Secondly, it is important also to discuss economic security problems from the standpoint of society as a whole as well as from the standpoint of individual workers, or groups of workers. If steps are taken to encourage a proper balance of manpower between essential industries, if the skills of workers are well developed and if measures are taken to maintain employment at a high level, economic security problems are likely to be at a minimum. There will always be certain groups in society requiring special economic security measures to supplement their income but such measures should be seen in this broader setting so that they will help rather than hinder the development of a healthy economy and the achievement of improved economic security for all.

<sup>12</sup> Census of Canada, 1941, Vol. VII.

<sup>13</sup> For estimates, see "Seasonality of Employment in Canada", (L.G., Oct. 1949, p. 1210) where the following approximate figures are given: Seasonal workers not full-time members of labour force... about 350,000; seasonal workers who are full-time members of labour force... about 500,000.

# SEMI-ANNUAL MEETING OF VOCATIONAL TRAINING ADVISORY COUNCIL

*The thirteenth semi-annual meeting of the Vocational Training Advisory Council devoted much of its time to the study of apprentice training, youth training and student aid, the peace-time programs in vocational schools, and the continuance of Dominion-provincial co-operation in the extension of vocational training privileges to an ever-widening circle of Canadian youth.*

Educationists from every province in Canada, including Newfoundland, attended the thirteenth semi-annual meeting of the Vocational Training Advisory Council, held in Ottawa, November 15 and 16, 1949.

The agenda for the meeting covered studies of the problems connected with vocational training for unemployed workers, youth and apprentice training, student aid, vocational correspondence courses and vocational training for inmates of penal institutions. Reports were received with respect to vocational training for discharged members of the Armed Services, and the erection and equipment of new vocational schools in some of the provinces. Recommendations were made regarding the continuance of federal aid to promote vocational education in the several provinces, as well as the organization of additional guidance and placement councils in centres across Canada.

The Vocational Training Advisory Council includes in its membership representatives of employers, labour, war veterans, women's organizations and vocational authorities. Its function is to assist the Federal Minister of Labour in formulating the policy and administrative procedure in the promotion of vocational education in Canada.

The following members were present: Dr. G. Fred McNally (Chairman), Edmonton; Mr. T. D. Anderson, General Secretary of the Canadian Legion, British Empire Service League, Dominion Command, Ottawa; Mr. L. S. Beattie, Director of Vocational Education for Ontario, Toronto; Dr. F. T. Fairey, Deputy Minister of Education for British Columbia, Victoria; Mr. E. K. Ford, Director of Vocational Education for Nova Scotia, Halifax; Mr. E. V. Gage, President, Byers Construction Co., Montreal; Captain H. G. Gonthier, Past President, Quebec Command, British Empire Service League, St. Lambert; Miss Marion Graham, Saskatoon; Mr. N. C. MacKay, Director of Extension, Department of Agriculture for Manitoba, Winnipeg; Mrs. R. J. Marshall, President of the National Council of Women, Agincourt, Ont.; Mr. G. Poisson,

Deputy Minister, Department of Youth and Welfare, Quebec; Dr. L. W. Shaw, Director of Education for Prince Edward Island, Charlottetown.

Others present included: Mr. J. W. McNutt, Regional Director, CVT, Fredericton; Mr. W. A. Ross, Regional Director, CVT, Regina; Dr. G. A. Frecker, Deputy Minister of Education for Newfoundland, St. John's; Mr. A. W. Crawford, Director of Training and Counselling, Department of Veterans Affairs, Ottawa; Mr. H. W. Jamieson, Superintendent of Educational Training, DVA; Mr. J. A. McLaughlin, Assistant Commissioner of Penitentiaries, Department of Justice, Ottawa; Mr. G. G. Cushing, General Secretary, Trades and Labour Congress of Canada, Ottawa; Mr. H. C. Hudson, Special Placements Officer, National Employment Service, Ottawa; Dr. G. V. Haythorne, Director, Economics and Research Branch, Department of Labour, Ottawa; Mr. R. F. Thompson, Director of Training, Department of Labour, Ottawa; Brigadier J. E. Lyon, Assistant Director of Training, Department of Labour; Mr. C. R. Ford, Supervisor of Technical Training, Department of Labour, Ottawa; Dr. J. E. Robbins, Dominion Bureau of Statistics, Ottawa; Major A. E. Wood, Unemployment Insurance Commission, Ottawa; Dr. MacGregor Easson, Ottawa, and Messrs. J. M. Wyatt and H. O. Gudgin, Department of Labour, Ottawa.

## **Comments by the Minister of Labour**

In a brief address at the opening session of the meeting, Hon. Humphrey Mitchell, Minister of Labour said that he thought that the economy of the country depended to a great extent upon men and women who had been vocationally trained and were skilled in the use of their hands as well as their heads. He felt that Canada must provide training for its artisans, inasmuch as the country could not count greatly on an adequate supply of skilled workers

through immigration in the future. For the same reason, he was anxious to see the development of apprenticeship. He stressed the value and importance of co-operation between the Dominion and the provinces in promoting vocational training programs and stated that, as long as he continued to be Minister of Labour, he would take an active and sympathetic interest in the work of the Vocational Training Advisory Council.

## Report of the Director of Training

Mr. R. F. Thompson, Director of Training, stated that a total of 134,570 veterans of the Armed Services had enrolled in vocational training courses up to the end of September, 1949. At that date, 195 veterans were still under training, all of them in provincially-operated schools. It is the intention at present, Mr. Thompson said,

### EXPANSION OF VOCATIONAL EDUCATION

Vocational education, in the sense of technical and practical training as a basis for gainful employment, is an institution of comparatively recent growth in Canada, and it is still not equally available in all parts of the country.

Under the constitution education is within the jurisdiction of the provinces. The Dominion Government, however, has the responsibility to the country as a whole of ensuring an adequate supply of workers to maintain and increase the output of our industries. This, coupled with a vital interest in furthering equality of opportunity for everyone, regardless of the province in which they live, suggested contributions of Dominion funds to the establishment and upkeep of vocational schools on the general basis of the distribution of the youthful population.

Dominion assistance has been provided under a series of Federal Acts, the first of which was passed in 1913. The latest and most comprehensive of these is the Vocational Training Co-ordination Act, passed in 1942 and amended in 1948. Among its provisions is one authorizing the Minister of Labour to enter into an agreement with any province to provide financial assistance for the development of vocational training up to the secondary school level. Under this section of the Act the provinces and the Dominion entered into Vocational Schools Assistance Agreements in 1945, by which the Dominion was to provide the sum of \$30,000,000, over ten years, for vocational education.

This sum is being distributed in three ways—as an outright grant of \$10,000 annually to each province, as an annual

allotment of \$1,910,000, divided among the provinces in proportion to the size of their populations in the 15-19 age group, and as a special allotment of \$10,000,000 for capital expenditures on buildings and equipment. All expenditures except the outright grant are matched dollar-for-dollar by the provinces.

During the five years they have been in effect, these Agreements have given a marked impetus to the development of vocational school facilities. Projects have been approved for 34 new buildings and for 71 building extensions, while under the annual allotment of the Agreement contributions are being made to 190 vocational schools—37 in British Columbia, 3 in Alberta, 21 in Saskatchewan, 7 in Manitoba, 49 in Ontario, 56 in Quebec, 15 in New Brunswick and one in each of Nova Scotia and Prince Edward Island.

At the beginning of October the total enrolment in Canada in day vocational schools was about 60,000 and in evening classes about 65,000, and both totals are increasing rapidly as new schools are opened. Subjects are taught in about sixty fields, ranging from aeronautics to upholstery and including the building trades, agriculture, commercial work, home economics and service occupations. The funds from the annual allotment are generally used for operating costs such as teachers' salaries, expendable items of equipment and vocational supplies, administrative costs and bursaries to students.

The Vocational Training Advisory Council meets semi-annually to review the progress of vocational education in Canada; and an account of its most recent meeting appears in these pages.

for CVT to pay school charges on behalf of veterans up to June, 1950, after which the Department of Veterans Affairs would probably take over all further payments.

**Service Personnel.**—The cost of training service personnel (active forces) was being met by refunds from the Department of National Defence on a per capita per diem basis. From the beginning, 892 trainees have been enrolled in these courses, the Director said, and on September 30, 1949, 109 were still under training in New Brunswick, Ontario, Manitoba and Saskatchewan.

Brigadier Lyon, Assistant Director, stated that during the past 12 months, training of service personnel had been carried out only for the Army. Training was given in various building trades and in such army trade classifications as driver mechanic, vehicle mechanic, draughtsman, clerk administrative, radio mechanic, stationary engine mechanic, shoemaker and kitchen organizer. Recently a course in English for French-speaking soldiers had been approved, to commence in the technical school in Three Rivers at the end of November and will continue for 16 weeks. It was stated that the Army was in the process of organizing courses of its own and it seemed probable that the training of service personnel by CVT will end during the summer of 1950.

Mr. Thompson presented a final report on Dominion-owned vocational training equipment which showed that out of total purchases of approximately \$4,000,000, all equipment, with the exception of some \$58,000 had been accounted for. He commended the school administrative officials and the teachers for the manner in which they had taken care of the equipment that had been supplied to them.

**New Schools.**—It was reported that gratifying progress was being made in the construction of new vocational schools and additions to older ones. The total Dominion payments for the construction and equipment of such schools have been:—

Capital fund for buildings....	\$ 3,715,903.84
Capital fund for equipment....	880,626.55
Annual allotment .....	6,868,311.32
<b>Total .....</b>	<b>\$11,464,841.71</b>

**Unemployed Workers.**—Classes for unemployed workers have been in operation in Nova Scotia, New Brunswick and the four western provinces, Mr. Thompson said. However, the enrolment had been small, the total up to the end of September being 1,872, of whom 424 were in training at that date.

**Apprentice Training.**—Mr. Thompson reported that there was a growing interest in all the provinces in the training of apprentices, both practical and technical. Pre-employment classes for apprentices had been started in Nova Scotia, New Brunswick, Manitoba and Alberta. The total number of apprentices registered at the end of September, 1949 was given as 10,575 as compared with 10,686 at June 30, 1949.

**Apprentice Agreements.**—Amendments to the Apprenticeship Training agreement covering pre-employment training had been accepted by seven of the provinces, but pre-employment training so far had been developed only in the building trades, "where great shortages exist, particularly in the trowel and painting trades," Mr. Thompson said. It was stated that the number of apprentices who failed to complete their training had been discouraging. Some of the reasons for this that were suggested were the low wages paid apprentices as compared with helpers and journeymen, the long periods of apprenticeship required for many of the trades, and the probable need for a better screening of apprentices before indentureship.

It was revealed that pre-employment training had been recognized in Ontario and that this training should be extended in a number of vocational schools in the province for the building trades. In Quebec all the arts and crafts schools are available for apprentice training and apprentices are indentured to the union instead of the employer in that province.

The following statement with respect to the registration of apprentices was presented to the Council:—

	March 31, 1948	March 31, 1949	Sept. 30, 1949*
<b>Building trades:</b>			
Veterans ....	3,866	2,646	1,862
Civilians ....	2,424	3,039	3,401
<b>Motor mechanics:</b>			
Veterans ....	2,456	1,772	1,510
Civilians ....	1,623	2,278	2,631
<b>Other trades:</b>			
Veterans ....	363	265	241
Civilians ....	1,159	956	930
<b>All trades:</b>			
Veterans ....	6,685	4,683	3,613
Civilians ....	5,206	6,273	6,962

\* Saskatchewan registrations are for June 30, 1949.

**Guidance Councils.**—The CVT Advisory Council approved a resolution recommending to the Minister of Labour that he request the provincial Ministers of Education to lend their support and leadership to the formation of additional guidance and placement councils, wherever they may be required.

## Occupational Monographs

Dr. G. V. Haythorne, Acting Director of the Economics and Research Branch of the Department of Labour presented a progress report on the production of occupational monographs, for the use of counsellors in advising students and other young persons in their choices of vocations. Monographs entitled "Careers in the Natural Sciences and Engineering" and "Carpenters" have already been given wide circulation and others on some of the building trades were being prepared, Dr. Haythorne said. The members of the Council were of the opinion that the monographs would prove very useful to counsellors and students alike. It was suggested that monographs on the radio trades and motor mechanics and related trades would be equally useful. It was revealed that the Canadian Manufacturers' Association was interested in having published a job manual covering industrial trades. The Council suggested that Dr. Haythorne investigate the CMA proposal and, if possible, take necessary action.

## Youth Training

Dr. L. W. Shaw presented a report for the committee appointed by the Council to study the problem of "student aid". The committee made the following recommendations:—

- (1) that the committee place itself on record as being in favour of the establishment of a revolving loan trust fund at the earliest possible moment in each of the provinces which want it;
- (2) that in view of the fact that the Royal Commission on Arts and Letters is now giving consideration to the whole matter of Dominion-provincial aid to students, the committee recommend that the present agreement (on Student Aid between the Dominion and the provinces) be renewed for a further period of three years.

The Chairman of Council asked Dr. J. E. Robbins, a member of the Royal Commission, to comment on the resolution. Dr. Robbins stated that he did not think the Commission's draft report on student aid would be ready before March, 1950. He thought it would be unfortunate if the present student aid program was interrupted to await the Royal Commission's report.

Dr. Shaw's resolution was approved by the Council.

## Vocational Correspondence Courses

Mr. C. R. Ford, Supervisor of Technical Training, Department of Labour, presented the report of the Correspondence Course

Committee which met in Ottawa in September with provincially-appointed representatives from eight provinces in attendance.

The committee suggested that the Advisory Council recommend to the Minister of Labour that special provision be made to assist the provinces financially in preparing new courses or in the revision of existing ones. The Council so recommended. The Council agreed upon the terms that would apply to the reciprocal use of courses that originated in any of the provinces.

## Report on Vocational Schools

In a report on vocational schools, Mr. C. R. Ford stated that during the past summer 16 building projects had been completed, class-rooms equipped and training programs started. In addition, three other buildings were completed, wherein it had not yet been possible to start vocational programs. Six other buildings were under construction. He pointed out however, that the emphasis was gradually shifting from construction work "to the business of getting vocational programs into operation at new centres".

Mr. Ford made reference to certain "vocational experiments" of interest, such as the three-semester plan that is being tried out by the composite school at Red Deer, Alberta; the attempt to establish vocational agricultural instruction at Kindersley, Saskatchewan, along lines similar to those in operation in some of the schools in New Brunswick. Under this plan, students meet in classes for about five months. They then return to their homes and carry on some form of agricultural project during the next seven months, under the supervision of their instructors. It was announced too, that the Alberta Department of Education had authorized a vocational course in mining to be used in a limited number of high schools.

## Vocational Training in Penitentiaries

Mr. J. A. McLaughlin, Assistant Commissioner of Penitentiaries, Department of Justice, presented to the Advisory Council a progress report on the vocational training provided for prisoners in Canadian penitentiaries (L.G., Dec., 1948, p. 1391 and July, 1949, p. 855). The project was undertaken experimentally in two institutions late in 1947. The results obtained in reclaiming prisoners have warranted the extension of the program to other provincial penitentiaries as well as providing instruction in several additional trades.

Mr. McLaughlin was careful to explain, however, that "the penitentiary training program is still in its infancy." Consequently, only a relatively small number of trainees had, so far, been "released into the stream of employment." The total number of graduate trainees, both those released and those still serving sentences up to the end of October, 1949, was 102. Of these 64 were released and of this number 38 were placed in employment in the trade in which training had been given in the penitentiary, eight found other employment, eight did not accept help in getting employment and seven were known to have reverted to crime. This, he pointed out, indicated that some 89 per cent of those trained "have resisted the pull of former criminal ways."

Mr. McLaughlin asserted that "if there are grounds for optimism in the early statistics, then a major share of the credit is due to the placement assistance which has developed with welfare societies, National Employment Service, Directors of Apprenticeship and Apprenticeship Commissions, unions and others interested in the rehabilitation of convicts." He referred specifically to the John Howard Society in

Montreal, the Prisoners Aid Society and the Société d'Orientation et Réhabilitation Sociale and NES, as being "first in the field" and as "doing yeoman service."

In conclusion, Mr. McLaughlin declared that "the job has only started but each year we have gained new friends and supporters whose aid has lightened our task. With their continued help, we are confident of a marked degree of success in our rehabilitative efforts."

### Special Reports

Reports were presented to the Advisory Council by Mr. J. W. McNutt, Regional Director, CVT, on Vocational Education in New Brunswick; Dr. L. W. Shaw, Director of Education, Prince Edward Island; describing the vocational school at Charlottetown; Mr. Gustave Poisson, on the General Organization of Specialized Schools in the Province of Quebec; and by Col. F. T. Fahey, Deputy Minister of Education for British Columbia, with respect to the new Vancouver Vocational Institute, its cost, form of administration and the scope of its work.

The Council decided to hold its next meeting in Ottawa on May 22, 1950.

---

## CURRENT LABOUR CONDITIONS Concluded

lumber contract and continuing favourable markets for lumber in the United States, the general employment level in the logging industry in this region is not expected to be markedly below that of last year.

Although the steel strike in the United States resulted in some temporary layoffs in the automobile industry, only a small part of the unemployment recorded in recent months can be traced to Canadian strikes. Preliminary reports indicate that during December relatively little time was lost through industrial disputes. No significant strikes likely to involve a substantial number of workers began during the month, and some lengthy disputes were ended.

Three strikes which had accounted for over four-fifths of the total time lost during November were settled by the end of December. Automobile workers in Oshawa, rubber factory workers in Toronto, and lithographers in all but five Toronto firms had returned to work.

Two federal conciliation boards have been appointed in the current railroad dispute. The most important issues are a five-day, forty-hour week, with no reduction in take-home pay, and wage increases ranging from seven to ten cents an hour.

## IN BRIEF

Largely as a result of sharply lower prices for eggs, and slight decreases in the price of meat, the cost-of-living index declined fractionally from 161.7 at November 1, to 161.5 at December 1. This marked the fourth successive fractional decline from the August peak of 162.8. . . . For the first 10 months of 1949, immigration was 19.8 per cent below the total for the corresponding period in 1948.

# NATIONAL EMPLOYMENT COMMITTEE MEETS IN HALIFAX

*Consisting of representatives of employers, workers and other groups, the National Employment Committee reviewed the current employment situation and the work of the National Employment Service, and held a discussion of the functions of employment committees.*

In accordance with its practice of holding joint meetings from time to time with one or another of the five Regional Employment Committees, the National Employment Committee met in association with the Maritime Regional Committee at Halifax, October 27 and 28, 1949.

The agenda covered many phases of the current activities of the National Employment Service of the Unemployment Insurance Commission, discussed measures designed to make the work of the Committee more effective, received reports on industrial and employment conditions and dealt with a wide range of resolutions and recommendations sent forward by Regional and Local Employment Committees.

## **Organization and Duties of Committees**

The functions of the National Employment Committee as defined in Section 90 of the Unemployment Insurance Act are to advise and assist the Unemployment Insurance Commission in carrying out the purposes of the Employment Service. The Committee includes in its membership representatives of employers and labour, chosen after consultation with their respective organizations and, in addition, representatives of agricultural interests, women's organizations and welfare groups.

In like manner and for like purposes, a regional committee is established in each of the regions into which the country has been divided for purposes of administering the Unemployment Insurance Act, namely, the Maritimes, Quebec, Ontario, Prairies (with which is included a portion of north-western Ontario) and British Columbia (including the western portion of the Northwest Territories and the Yukon). Where considered advisable by the Unemployment Insurance Commission and when requested by local groups, local committees have been established at centres where there are local unemployment insurance offices.

## **Attendance Register**

The following members of the National Committee attended the meeting in Halifax: Judge W. J. Lindal, Winnipeg (Chairman); Mr. T. D. Anderson, General Secretary, Dominion Command, Canadian Legion, Ottawa (Vice-Chairman); Mrs. G. D. Finlayson, Corresponding Secretary, National Council of Women, Ottawa; Mr. A. R. Mosher, President, Canadian Congress of Labour, Ottawa; Mr. Carl Berg, M.B.E., Vice-President, Trades and Labour Congress of Canada, Edmonton; Mr. J. B. White, Vice-President, The Aluminum Company of Canada, Montreal; Mr. G. S. Hougham, General Manager, Canadian Retail Federation, Toronto; Mr. R. E. G. Davis, Executive Director, Canadian Welfare Council, Ottawa; Mr. Roy Grant, Moncton (proxy for Mr. R. A. Stewart, Executive Member, Canadian Federation of Agriculture); Mr. Ward Stewart, Moncton (proxy for Mr. A. L. Lott, Director, Industrial Relations, Steel Company of Canada), and Mr. E. Norman Mitchell, Secretary, National Employment Committee, Ottawa.

Members of the Maritime Regional Committee who were present included: Judge W. F. Lane, Moncton (Chairman); Miss Leslie Pickett, Coverdale, N.B.; Messrs. R. A. Macaulay and Angus MacLeod, Saint John, N.B.; Messrs. H. Adamson, G. W. R. Myles and Major T. O'Brien, Moncton, N.B.; Mr. J. R. MacDonald, Glace Bay, N.S.; and Mr. J. J. Trainor, Bedford, P.E.I.

Among others who attended were: Mr. C. A. L. Murchison, Unemployment Insurance Commissioner and Mr. W. K. Rutherford, Director, National Employment Service, Ottawa; Mr. R. P. Hartley, Superintendent, Maritime Region, Unemployment Insurance Commission, Moncton; and a number of representatives of the Halifax Local Employment Committee and Regional and Local officers of the Unemployment Insurance Commission.

## Preliminary Statements

In a brief introductory address, the Chairman, Judge W. J. Lindal, welcomed the members. He expressed his regret that there was no representative from Newfoundland present and hoped that the matter of representation from Canada's newest province would be dealt with in the near future.

Judge Lane and other members of the Maritime Regional Committee reviewed the work of their committee during recent months and presented brief statements covering the economic, industrial and employment conditions in the Maritimes.

Following a lengthy discussion of the functions of the National, Regional and Local Employment Committees the meeting passed a resolution recommending certain modifications in the functions of the Committees for the consideration of the Minister of Labour.

## Older Workers in the Civil Service

Correspondence with the Civil Service Commission concerning age limits applicable to the employment of older workers in the Civil Service was presented to the meeting. It was agreed that the Civil Service Commission was endeavouring in many instances to extend the age limit for entrance to employment in the Civil Service.

After some discussion, a resolution was adopted for presentation to the Civil Service Commission, commending the Commission on the action it had taken in recent months with respect to age limits for persons desiring to enter the Civil Service. The National Employment Committee was of the opinion, however, that there were other categories of employment in the Government that could accept older workers. It was held that the Civil Service Commission was thus in an excellent position to show an example to other employers in the matter of employing older workers.

## Problems of Unemployables

A report of the sub-committee on "unemployables" was presented by Mr. R. E. G. Davis, Executive Director of the Canadian Welfare Council. He stated that local employment offices across Canada had reported to the Special Placements Division

of the National Employment Service over 8,000 unplaced, handicapped applicants registered. Of this number only 306 were considered to be unemployable.

Of the latter group, 181 were found to be unemployable because of advanced age, coupled with ill-health or disability. A study of these cases led to the conclusion that very little could be done to obtain employment for them. The Advisory Committee was of the opinion that the small number of unemployables that had reported to local employment offices could not be considered as sufficient to determine the extent of the problem created by them. It was suggested that possibly a survey made by public welfare agencies might give a better indication of the actual number of unemployables. This, however, was considered to be beyond the purview of the National Employment Service.

## Moulding Public Opinion

The Chairman, Judge Lindal, expressed the opinion that the Unemployment Insurance Commission had a responsibility in finding jobs for the unemployed and, in some degree, for creating employment where necessary. He stressed the value of the National Employment Committee in creating public opinion favourable to the creation of employment-making projects. While it was admitted that the Unemployment Insurance Commission "cannot manufacture jobs", it can assist by recommending certain action to the government and this can be supported by not only the National Committee, but by the Regional and Local Committees as well.

## Technically Qualified DP's

The question of the part that might be played by the National Employment Service in the placement of technically qualified displaced persons from Europe was discussed. The Chairman outlined some of the difficulties that had been encountered in overcoming the objections of professional organizations to the granting of recognition in Canada to qualifications obtained in certain foreign institutions of learning. Some progress has been made, it was stated, but it was decided to defer making definite recommendations until the next meeting of the National Employment Committee, which will be held in Ottawa late in January, 1950.

# COLLECTIVE AGREEMENTS IN FRANCE

*During recent months one of the factors threatening political stability in France has been the demands of organized labour. French workers have asked the Government to remove wage control, to raise minimum wages and cost-of-living bonuses, and to permit a return to the free negotiation of collective agreements. The Government has been disinclined to grant these requests, citing the danger of a new inflationary cycle.*

*The following study of the system of forming collective agreements in France under Government supervision has been supplied by the French Information Service, and will help readers of the LABOUR GAZETTE in following recent political developments in France.*

The collective agreement is of relatively recent origin, and has undergone, in France, several phases of evolution.

It originated with simple wage schedules, applying to employers in specific trades and particular districts. However, the subject matter of the agreement tended to expand; and at the time of the Second Republic (1848), a real blossoming forth of agreements occurred, specifying various working conditions in addition to wages.

Among these early agreements were the settlements reached between the contractors and the cab-drivers of the City of Paris the agreements concerning the printers of Lyons and Marseilles and those relating to pavers, longshoremen, zinc-workers and stone-cutters.

These agreements, however, were short-lived, and it was not until the end of the 19th century that collective agreements were found again—in the most diverse industries: mines, weaving, metallurgy, docks. The best known were the Arras Conventions, which dominated the history of the coal mines in the Departments of Nord and Pas de Calais for many years.

Prior to 1919 the validity of the collective agreement was not contested, but it was still without legal status. It was then that the legislator made his first appearance, with an Act, dated March 25, 1919.

## **Act of 1919:**

### **Contractual Nature of Agreements**

This Act upholds the contractual nature of agreements relating to working conditions. In principle, an agreement applies only to those who have accepted it voluntarily, i.e., in actual fact, to the signatories, or, where the signatory is a duly authorized

organization, to its members. However, the legislator is already departing, to a certain extent, from the field of individual right. Indeed, he presupposes the application of the clauses of the agreement to the existing relations between a party bound by it and a third party.

This mild innovation was insufficient to satisfy the interested parties. Employers bound by agreements complained of being placed at a disadvantage as compared with those who had retained their freedom. Wage-earners, on the other hand, wanted the terms of the agreement applied to all employers who might hire them. Employers and wage-earners, in effect, concurred in their demand for agreements that would be binding on all parties. Considerable progress was made towards this end through an Act adopted on June 24, 1936.

## **Act of June 24, 1936:**

### **Legislative Extension of Agreements**

This Act upholds the Act of March 25, 1919, but provides a new type of agreement subject to application, through legislation, to those concerned who are not parties to it.

Under its terms, agreements are drafted by joint committees called together through the Minister of Labour or his representative, at the request of an interested union, employer or labour organization. The joint committee is made up of delegates of union, employer or labour organizations which are the most representative of the branch of industry or business for the area concerned. The agreements concerned are subject to legislative extension only if they include a certain number of required clauses concerning the following:—

- (1) Freedom of association and freedom of opinion on the part of the workers;
- (2) Appointment of shop stewards in all establishments employing more than 10 persons;
- (3) Minimum wages by occupation and area;
- (4) Notice of termination;
- (5) Organization of apprenticeship;
- (6) (Act of March 4, 1938.) Conciliation and arbitration proceedings for settling all disputes which may arise between persons who are subject to the terms of an agreement;
- (7) Procedures for the revising and amending of agreements;
- (8) Determination of the time allowed for settling labour disputes;
- (9) (Act of October 11, 1940.) Conditions for applying the prohibition of "black labour".

The Act stipulates that agreements may contain provisions that are more advantageous than those prescribed by current legislation.

The prescribed rule for the extension of agreements consists of an Order issued by the Minister of Labour following the fulfilment of various formalities, and more especially following an advice from the National Economic Council. The Order makes the provisions of the agreement binding on all employers and employees of all occupations and areas under the coverage of the agreement. The extension is made for the duration of the agreement and according to the provisions thereof.

Thus employers' objections based on unfair competition fell through and agreements increased in numbers. From June, 1936, to August, 1939, 5,620 agreements were registered with the Department of Labour. There is no doubt that agreements actually signed were much more numerous. Of the number mentioned above, close to seven hundred agreements were the subject of extension decrees published in the *Journal Officiel*.

During the war, the provisions of collective agreements in force on September 1, 1939, were continued applicable. However, it must be noted that wages, which constitute the fundamental issue of the agreements concerned, were the subject of special legislation under the terms of Orders in Council of November 12, 1938, October 27 and November 10, 1939. The last mentioned, while freezing wages at their level of September 1, 1939, suspended all action on the subject by the interested parties: wage rates could henceforth be modified only through legislation.

## The Post-War Situation

The policy of collective labour agreements was completely revised by an Act of December 23, 1946.

From the beginning of hostilities (1939), wages and working conditions were determined by order of the Minister of Labour by virtue of powers conferred upon him for the duration by the Order in Council of November 10, 1939. This policy, after being extended several times after the Liberation, was due to expire on December 31, 1946. A new policy was consequently necessary under which working conditions and wages could henceforth be discussed and determined.

What were the needs facing the legislators in this respect?

On the one hand, the advisability of reverting to free negotiation of collective agreements between the most representative organizations of employers and wage-earners could not be questioned, and this would symbolize in a way, the return to freedom after the Liberation. Besides, conscious of their responsibilities and the part they were called upon to play in the nation's recovery, the trade unions were calling for a return to free negotiation of working conditions and wages between the parties concerned.

On the other hand, however, the requirements of economic recovery and the application of the modernization and equipment plan appeared to require the State to direct, for years to come, the essential working of the economy.

Faced with a necessary price control policy, it did not seem advisable to the legislator to allow wages to find their own level freely in terms of the labour market and the classic interplay of economic forces. In fact, in an economic system where price control had been insufficiently effective, the rise in wages would have brought to labour only an illusion of nominally high wages, which would have been quickly dispelled by a greater rise in the cost of living, itself, engendering further inflation.

It was likewise advisable to maintain a sound relation between the wage scales of various occupations so as to prevent labour from being attracted to non-essential occupations with more favourable economic conditions, at a time when labour shortage was one of the most serious impediments to the carrying out of the modernization and equipment plan. In order to control wages, the State therefore resolved to remain in control of the distribution of the labour force, which can be attracted with certain concessions to sectors of the economy considered essential at a given time.

## Act of December 23, 1946: Government Supervision of Agreements

In view of these various considerations, it was decided to adopt a new procedure for the negotiation and ratification of collective agreements and to set two periods of transition intended to ensure the changeover from wartime policy to normal peacetime policy while taking into consideration general economic conditions. The first of these two transition periods is over, and the second period is still in effect.

1. During the first period, subject to their containing no provision on wages or minor wage benefits, collective agreements could become effective immediately.

Wage orders continued in force. However, all new wage orders issued by the Minister of Labour must be referred to a Superior Board of Collective Agreements established by the same Act.

2. During the second period of transition, to be terminated by legislation, wages are fixed by orders adopted on the proposal of the Minister of Labour and the Minister of National Economy, after advice from the Superior Board of Collective Agreements. These orders establish:—

- (a) The minimum wage applicable to the lowest paid wage-earning or salaried employee of normal capacity;
- (b) The rules governing the grading of occupational categories;
- (c) The conditions for fixing maximum average wage rates for the purpose of fixing prices.

Collective agreements must conform, as regards wages, to these orders. Only when this second period of transition has expired may collective agreements again set labour and wage conditions without limitation.

However, considering the changes in the very structure and operation of the national economy since the war, the legislator has intended to build a more methodical collective agreement system, one which will, in fact, result in the establishment of real occupational codes.

To this end, he has repealed the provisions of the 1919 Collective Agreement Act, and has provided that no regional, local or company collective agreements may come into being until national collective agreements have been signed and put into effect, and that their provisions shall not run counter to those of the national collective agreements.

Furthermore, due to the increasingly statutory nature of the new collective agreements, which will apply to all establishments in a given profession or industry, they may henceforth come into effect only after approval by the Minister of Labour.

The procedure for drawing up national agreements is through joint committees, which are convened by the Minister of Labour. The joint committee is made up of delegates from organizations of employers and employees which are the most representative of the branch of industry concerned and of the whole area. If the committee fails to agree, the Minister must intervene, upon request of one of the parties, in order to help towards the settlement of the dispute. When conciliation appears to be impossible, an order under the form of a public administration ruling, issued after consultation with the employer and employee organizations, temporarily sets the wage rates and working conditions of the branch of industry concerned.

National agreements must carry clauses concerning: freedom of association and freedom of opinion; hiring and dismissal conditions; notice of termination and vocational training. They may also carry optional provisions concerning: staff delegates, production committees, general conditions with regard to the payment of piece-work, premiums for seniority and attendance, for risks and unhealthy working conditions, compensation for transfers and paid holidays.

Regional or local agreements are signed with a view to adopting the national agreement to the particular working conditions of the region or locality. They can only be negotiated following previous intervention of the national agreement for the relevant industry; they are also drawn up in joint committees, but the representative character of the signing organizations is not, in this case, the whole of a territory, but simply the area or locality concerned.

Company agreements are limited in scope to one or more establishments; they may be signed between an employer or a group of employers, on the one hand, and delegates from the unions which are the most representative of the establishment or establishments concerned, on the other hand. These agreements set, within the limits prescribed by national, regional or local agreements, the working conditions of the establishment, and more particularly the conditions of hiring and dismissal, the definitions and classifications of the occupations peculiar to the establishment concerned, the conditions for assigning and the method of calculating individual and collective incentive bonuses.

The Act achieves an innovation with the question of a Superior Board of Collective Agreements. This Board is called upon to give its advice to the Minister of Labour concerning the collective agreements which are submitted for its approval, considering

in particular whether they are compatible with the prices policy, and it may suggest to the Government any measure tending to increase purchasing power within the limits of this Governmental policy.

Such are the essential characteristics of the present Act concerning collective labour agreements, which proposes to take into account at the same time social and economic requirements and the reconstruction of the economy, and to permit an increase in the real purchasing power of the workers by giving them every possible benefit from reviving production.

To summarize, the Act of December 23, 1946, brings, on the one hand, a return to the free determination of working conditions by representative organizations and, on the other hand, the repeal of the wartime system which was exclusively State-controlled and which had been in force since 1939. However, the Act keeps the important question of wages outside the scope of the Act for the time being. Wages will still be controlled as during the war, in accordance with the provisions of the Order dated November 10, 1939, and subsequent documents, that is through Orders in Council.

### **Conclusion**

The progressive decontrol of prices has created in the country a parallel tendency in favour of a return to the free determination of wages, that is, a return to the possibility of determining wages as before

the war, by collective agreements. The question is being brought to the attention of the public by labour organizations and political parties. Draft bills have been tabled in Parliament promoting, under various forms, a revision of the stipulations of the Act of December 23, 1946, and more particularly the ending of the transition period.

The system of graded agreements under the Act of 1946 (national, regional and local) is also being questioned in some quarters.

The drafting of elaborate national agreements to serve as a basis for the whole structure planned by the legislator has proven to be a heavy task. As the various difficulties encountered automatically affect the whole nation, they are obviously harder to solve than those that may be encountered in the drafting of a local agreement. The number of agreements and of additions thereto which have so far been approved by Order in Council, under the Act now in force, is very small.

The question arises whether trade organizations should not be again allowed to conclude local agreements in a specified occupation even before the national agreement in that occupation has been concluded.

The question of collective agreements, with regard to their general status and the method under which they are drafted as well as the subjects they may deal with, especially wages, is therefore more than ever a question of present interest.

---

## **WORKMEN'S COMPENSATION UNDER REVIEW IN THREE PROVINCES**

Workmen's compensation legislation has been the subject of inquiry in three provinces during the autumn.

Hon. W. D. Roach of the Supreme Court of Ontario and Chief Justice Gordon M. Sloan of British Columbia were appointed special Commissioners in their respective provinces to conduct inquiries and to make recommendations with respect to the revision of the two provincial Acts.

In Saskatchewan, an amendment to the Compensation Act of that province, passed more than three years ago, provided for the naming of a Committee of Review to study matters pertaining to the Act and its regulations every four years. This year the Committee of seven members met for the first time under the Chairmanship of Mr. O. W. Valleau.

Briefs were submitted to these courts of inquiry in each of the three provinces by the respective Provincial Federations of Labour (CCL) requesting various changes designed to "liberalize the Acts." The *LABOUR GAZETTE* has also received information concerning a brief presented to the Saskatchewan Committee by a group of TLC labour councils.

### **Ontario Federation of Labour (CCL)**

The Ontario Federation, in its submission to the Commissioner, Justice W. D. Roach, made the claim that "there are certain limitations (in the Ontario Compensation Act) that should be removed," as for example, florists, wholesale and retail mercantile business, junk yards and busi-

nesses with fewer than six workmen in some cases, or fewer than four workmen in others. It was urged that "all employers, regardless of size," including farm hands and domestics, be brought under the Act.

Referring to the matter of compensation, it was held that neither sixty-six and two-thirds per cent of average earnings at present used as a base, nor the proposed seventy-five per cent were adequate. The claim was made that under the present plan an injured workman was forced to accept a reduced income at the very time, more income, rather than less, is needed. It was claimed further that "the employer is responsible for whatever happens to his employees." For these reasons, "the request of labour for one hundred per cent compensation for time lost due to accidents and industrial diseases is reasonable and necessary." It was urged, too, that the maximum rate of average earnings on which compensation payments are computed cause injustices to workers in the higher wage brackets. "The complete abolition of any ceiling on the amount of wages on which compensation is payable," and also of the initial "waiting period", was recommended.

A plea was made for an upward revision of pensions that have been awarded to disability pensioners, in view of the increase in the cost of living in recent years. In addition, it was suggested that such pensions should be adjusted periodically, so as to keep them "in line with broad changes in living standards in the Province."

Recommendations covering other features in workmen's compensation legislation included:—

(1) pension payments to widows and foster mothers "in the same manner as are total disability payments. . . .";

(2) increases in compensation benefits payable to dependent children;

(3) proof that a worker's injury was due to his "wilful and intentional action" before compensation is denied;

(4) making obligatory the payment of "the whole cost of the accident or illness at double the rate" in the case of minors who have been illegally employed;

(5) retention in the present Act of the provision that "deals with the compensation for accidents occurring beyond the borders of this Province (Ontario), but in the course of usual employment;"

(6) opposing the inclusion in the Act of a "merit rating" for employers;

(7) that benefit claims be computed on average earnings for the four weeks immediately preceding the accident;

(8) prevention of the practice of some employers in compelling injured workers

who are not confined to bed to report for work, "especially when reporting to the plant may aggravate their injuries;"

(9) making it compulsory to conduct chest examinations of workmen "in all industrial plants" at least once in every two years and at the employers' expense, to check on dust exposure and as a preventive of silicosis;

(10) the inclusion of a clause in the Act providing for an increase in number of factory and mine inspectors, and a general tightening up of the inspection system;

(11) opposing appeals to the Courts from the decisions of the Compensation Board;

(12) opposing any increase in the number of medical members on the Board;

(13) amalgamation of Schedule 1 (covering private business undertakings) and Schedule 2 (covering public and semi-public enterprises).

## Saskatchewan Federation of Labour (CCL)

The Saskatchewan Federation of Labour (CCL) in its brief submitted to the 1949 Committee of Review, stressed labour's demands for 100 per cent compensation, increased pensions for the dependents of workmen who had been fatally injured, the extension of coverage to include "all possible groups" of workers and the perfecting of measures for the prevention of accidents.

The brief cited many reasons why an injured workman's income should be at least as high as "when he is well and working on the job." It was urged, therefore, that the present 75 per cent level of compensation should be increased to 100 per cent of the injured workman's wage rate, and that the restriction on the payment of compensation to workers disabled for three consecutive days or less should be removed. For similar reasons, it was claimed that 100 per cent compensation should be provided for injuries resulting in completely permanent, or partly permanent incapacity. In support of the claim in the latter case several "hypothetical examples" were given to illustrate the alleged insufficiency of the pensions paid.

With respect to the monthly pension payments to widows and dependents the "CCL unions believe that the floor of \$50 for widows' pensions should be raised to \$75 per month, with a further payment of \$25 per month for each child up to three in a family." The children's pensions, it was held, should be continued until they reached their majority and not discontinued at age 16.

While admitting that progress had been made in recent years in the extension of coverage for more classes of workers, it was felt that "coverage should be as universal in Saskatchewan as it is possible to make it."

It was suggested that compensation be paid workers injured while going to, or returning from work. This was, it was asserted, especially necessary for workers in the transportation business.

The schedule of occupational diseases for which compensation was made was, it was asserted, too restricted, and should include any illness traceable to working conditions. If the Committee of Review decided that it could not recommend so general a coverage, it was requested that the Compensation Board be given greater discretionary powers in the adjustment of such cases.

The brief declared that the Federation heartily supported "genuine measures which will reduce accidents," such as a more efficient inspection service, "to root out accident hazards and create safety in industry." Changes were suggested in the methods followed in setting up advisory committees in industry with a view to obtaining better co-operation between employers and employees.

It was urged that the word "disability," replace the word "accident" wherever the latter is used in the Act, inasmuch as "disability" included not only accidents, but ailments and disabilities "which cannot actually be called accidents."

The suggestion was made that the Act be amended to provide for the replacement of workers' glasses, glass eyes, etc., which were broken or lost in accidents.

## **British Columbia Federation of Labour (CCL)**

The British Columbia Federation of Labour (CCL) in its memorandum submitted to Commissioner Mr. Justice G. M. Sloan, registered several complaints concerning the administration of the Workmen's Compensation Act in that province.

In the first place attention was drawn to the alleged lack of comforts and conveniences for injured workmen and women at the Compensation Board headquarters. It was suggested that new, properly equipped quarters be arranged for as soon as possible.

Complaint was made of the procedure followed in the presentation of grievances. It was asserted that at present, claimants who feel that they have a grievance, present their cases in person, or with the assistance

of union officials, to a single member of the Board who relays the grievance to the full Board. It was urged that in the event of an adverse decision, the claimant should be given the right to present his case to the full Board and to hear the evidence against his claim.

It was asserted that there were too many delays in the payment of compensation claims, the reason being attributed generally to the failure of medical men to submit reports regularly. The suggestion was made that the Compensation Board devise ways and means of penalizing physicians who offend in this regard. It was urged, too, that when an injured workman required treatment by a specialist, the workman should have the right to choose the specialist and not be compelled to accept treatment from the Board's appointee.

In view of "the rapid increase in the cost of living since the lifting of wartime controls," the Federation asked that special consideration be given to wholly and partly disabled workmen's compensation pensioners whose pensions had been awarded prior to 1946. This consideration, it was claimed, was especially needed by such of these pensioners as were unable to supplement their incomes and by orphan children of industrial fatalities.

It was proposed that pensions paid to permanently and totally disabled workmen should be 100 per cent of their average earnings, instead of the present rate of sixty-six and two-thirds per cent, with the minimum compensation being fixed at \$25 per week, instead of \$12.50 as at present. In addition, the Federation believed it advisable to eliminate the ceiling of \$2,500 upon which maximum pensions were based, as such a restriction placed a hardship on workmen, who through their superior skill and experience, had been receiving wages in excess of the ceiling.

It was suggested that the monthly payment made to a dependent widow, or an invalid widower, with or without children, should be increased from \$50 to \$100. Further, the allowance for children under 18 years in such cases should be increased from \$12.50 to \$17.50 per month, to be continued after age 18 for children desiring to complete their education. This was justified, it was asserted, by the increase in the cost of living, increased productivity of workmen and greater financial returns obtained by industry.

The daily subsistence allowance to injured workmen undergoing treatment "in a place other than the place wherein he resides" should be increased from \$3.50 to \$4.50, the Federation claimed.

In cases of permanent partial disability, it was suggested that compensation to the injured workman should be increased to 100 per cent of the difference between his average earnings before the accident and the average amount which he earns, or may be able to earn, in suitable employment after the accident.

The deletion from the Act of the six weeks' limit on the payment of compensation following operations for hernia, was urged, inasmuch as "few workmen, particularly those employed in heavy labour, are fit to return (to work) within six weeks."

The Federation recommended that the Act be amended "to include blanket coverage of all accidents and all industrial diseases for all workmen." It was suggested further that the Safety Inspection staff be strengthened and that the use of safety devices and conditions in all industries be strictly enforced.

## **Saskatchewan Trades and Labour Councils (TLC)**

On behalf of the Trades and Labour Councils (TLC) of Regina, Moose Jaw, Saskatoon and Prince Albert, officers of the Regina Council presented a brief to the Workmen's Compensation Board of Saskatchewan early in November.

At the outset, the delegation declared that the Workmen's Compensation Act was designed to recompense workmen injured in industrial accidents for loss of wages and medical and other expenses incurred to bring about full recovery. In the event of the recovery being incomplete, compensation should be provided to enable the injured worker to maintain his customary standard of living. Should death follow as the result of an accident, a monthly pension should be paid to dependents of the worker.

The delegation requested that the basis of compensation should be increased from 75 per cent of the injured worker's average income to 100 per cent. This, it was asserted, was necessary inasmuch as the injured worker's expenses would probably be heavier following his injury and, too, it would be impossible for him to meet any financial obligations he might have assumed

before his injury, if his income was cut by 25 per cent. Consequently, payment of full compensation was urged until such time as full employment could be resumed in his regular occupation.

The practice in many instances of having medical officers certify that convalescing workmen were fit for light work, so as to have the compensation reduced, was viewed with disfavour by the delegation. It was asserted that in the majority of cases lighter work was not available. If, however, lighter work was obtained that the worker was able to do, it was held that sufficient compensation should be paid to maintain the worker's income at the pre-accident level. The suggestion was made that no individual should receive less compensation than the amount provided by workers under minimum wage legislation.

Referring to the question of coverage, the delegation asked that the Act be extended to cover all workers from the time they left their homes for work until they returned to their homes, and also for all of the time they were working with property belonging to their employer. In the case of a minor who sustained a permanent, or partly permanent, disability his compensation should be revised when he became of age to a basis paid in similar cases to older workers.

The delegation requested that in all cases where an unmarried son or daughter was killed in industry, a sum of at least \$1,500 should be paid into a fund for the benefit of the parents, whether or not the parents were dependent on the deceased son or daughter at the time of the accident. Should the parents, or other relatives, be dependent the money should be paid to them at once.

It was pointed out that workers incapacitated through the loss of an eye were often unable to obtain employment, as employers feared such workers would be more likely to meet with an accident. It was suggested, therefore, that in the event of a worker losing one eye, the Government should relieve the employer by paying all costs over \$50 and thus make it easier for such a worker to obtain employment.

Among other things, the delegation asked that the word "injury" be substituted for the word "accident" wherever the latter appears in the Act; that there be an upward revision of the monthly payments to widows; that there be increased allowances for funeral expenses; and that compensation payments by the Board at regular intervals be made compulsory.

# LEGISLATIVE PROPOSALS OF LABOUR ORGANIZATIONS IN SASKATCHEWAN

*Late in November, delegations representing unions affiliated with the Canadian Congress of Labour and the Trades and Labour Congress of Canada, presented their legislative proposals to the Government of Saskatchewan. Summaries of these proposals appear below.*

## Saskatchewan Federation of Labour (CCL)

Extensive changes in provincial legislation affecting labour were requested by a deputation from the Saskatchewan Federation of Labour (CCL) in its annual presentation to the Government of the province on November 29, 1949.

Before proceeding with its submission, the deputation reminded the Government that a total of 81 unions and labour councils in Saskatchewan were affiliated with the Federation. These, it was stated, had a total membership of roughly 10,000 and were bargaining agents for employees in a wide variety of trades and industries. It was further explained that the requests to be made were based on resolutions passed at the provincial convention of the Federation held earlier in the month.

### **Hours of Work Act and 40-Hour Week.**

—It was held that a number of exemptions under the Hours of Work Act should be eliminated. "Especially in the 83 town areas," it was urged, "that the usual requirements in the Hours of Work Act, namely, time and one-half payment for overtime beyond eight hours per day and 44 hours per week, be instituted immediately."

The deputation reiterated a previous request that the application of labour regulations covering hours of work should be made uniform throughout the province. It was claimed that the present lack of uniformity not only discriminated against and caused hardship to a large number of urban businesses in the province, but also failed to protect labour in a considerable number of communities. It was submitted that the need for the 40-hour week with no deductions in take-home pay "was becoming more apparent than ever" and should be initiated "in a time of relative prosperity in order to avoid the worst effects of depression." If, however, the Government considered the present time inopportune for bringing in the 40-hour week, it was urged that enabling legislation be enacted to make it possible for the Government to implement the reduction in

hours of work whenever economic conditions warranted such action.

**Minimum Wage Act and Orders.**—The Federation commended the Minimum Wage Board for extending its Orders "to a further 83 towns and villages in the Province," but expressed the hope that the Government and the Board would decide upon a general application of the Regulations in 1950.

Asserting that the expressed object of the Minimum Wage Act was to provide wage rates "to furnish the necessary cost-of-living to employees," the Federation was of the opinion that a minimum wage rate of 75 cents an hour should be established throughout the province. The Government was requested to set up a Committee to study the Act with a view to "plugging the loopholes," which, it was alleged had been taken advantage of by "certain employers and their hirelings."

The deputation suggested that "a committee of the Federation meet with a committee chosen by the Government" for the purpose of detailed study of alleged defects in the Minimum Wage Act.

**Legal Injunctions.**—It was claimed that certain employers had continued "to use injunctions as a weapon against trade unions on strike." The Government was asked, therefore, "to broaden the 1949 amendment to the King's Bench Act by terminating the jurisdiction of the Courts to grant an injunction, whether interim or permanent, and secured *ex parte* or otherwise, against a trade union or employee in any dispute involving an employer and one or more of his employees, or a trade union representing such employees."

**Workmen's Compensation Act and Regulations.**—The Federation repeated requests it had already submitted to the Workmen's Compensation Board (see p. 40).

**Fair Wage Act.**—The enactment of a provincial Fair Wage Act was asked for, to be administered by a Board having equal

employer-employee representation. The proposed Board, it was suggested would (1) create "fair wage floors" in the trades and industries; (2) assist in stopping unfair business competition resulting from low wages; (3) prevent sub-standard wage rates.

**Hospitalization and Medical Care.**—The delegation urged that legislation be provided for the collection of hospitalization taxes (or assessments) on a payroll deduction plan, "similar to the method employed by the Federal Government for the payment of income tax."

**Housing.**—The provincial Government was requested "to explore the amendments to appropriate legislation respecting federal housing, with a view to making more homes available to the citizens of this province. . . ."

**Government Contracts.**—It was asked that "in future all Government contracts and work be handled by existing bureaus or corporations wherever possible and the present method of tendering this work be abolished."

**Enumeration—City Act.**—Weaknesses were claimed for current methods of compiling municipal voting lists and the Government was urged to amend the City Act to provide for regular door-to-door enumeration of voters at the expense of the municipalities.

## Provincial Executive Committee (TLC)

Led by Chairman W. Browne and other members of the Provincial Executive Committee (TLC), a large delegation from international unions and members of trades and labour councils in the province, presented a legislative memorandum to the Government of Saskatchewan on November 30.

The following members of the Cabinet received the delegation: Hon. C. M. Fines, Acting Premier; Hon. C. C. Williams, Minister of Labour; Hon. J. W. Corman, K.C., Attorney-General; Hon. J. A. Darling, Minister of Public Works; Hon. W. S. Lloyd, Minister of Education; Hon. J. H. Sturdy, Minister of Social Welfare; and Hon. L. F. McIntosh, Minister of Municipal Affairs.

The delegation commended the Government for amending the Trade Union Act and for the inauguration of health services that it was felt would be an important step in social progress.

Appreciation was also expressed with respect to the Government's policy requiring all Provincial Government Departments and Crown corporations in the

**Highways.**—The Federation favoured an extension of the program providing for the hard-surfacing of main roads from the United States border and connecting the main cities of the province.

The Government was urged to inaugurate a general safety program to prevent traffic accidents. Among the "obvious measures" which, it was suggested might be included in such a program were: (1) providing driving tests to prove that applicants for drivers' licences were properly qualified drivers and had no physical defects that would interfere with safe driving; (2) the use of safety-demonstration vehicles; (3) the adoption of uniform traffic regulations throughout the province.

**Other Suggestions.**—Other matters presented by the deputation were considered to be mainly under the administrative jurisdiction of the Federal Government, but the provincial Government was urged to give its support to the Federation in obtaining the desired action. These included: unemployment relief; works projects; extending the coverage and increasing the benefit payable under the Unemployment Insurance Act; the abolition of the Winnipeg Grain Exchange; and keeping a close watch on the effects of currency devaluation, "with a view to taking all possible action in overcoming any adverse effects occasioned by it."

province to purchase goods and engage services from establishments having collective bargaining agreements with *bona fide* trade unions; and also that all contracts for services, etc., shall stipulate that only Union labour shall be employed and Union conditions of employment prevail.

**Trade Union Act.**—Although certain objectionable features in the Trade Union Act had been corrected, still further amendments were again requested. In the first place, it was asked that the employment of legal counsel should not be permitted by either party to collective bargaining negotiations or for making representations before the Labour Relations Board, except when agreed to by both parties. It was asked too, that "employee" be defined in the Act as "one employed to do skilled, or unskilled, manual or clerical or technical work, but does not include any other person who, in the opinion of the (Labour Relations) Board is employed in a confidential capacity in matters relating to labour relations."

The delegation requested that provision be made in the Trade Union Act covering

cases in which a business or an industry is sold, leased or transferred, requiring that the sale, lease or transfer be made subject to the terms of any collective agreement that is in force at the time of the transaction.

**Minimum Wage Board.**—Discussing orders of the Minimum Wage Board, the delegation reiterated previous requests that split-shifts be abolished and that the spread where eight hours are worked be not more than ten hours. It was also asked that the public holiday clause in all orders of the Minimum Wage Board be made applicable to all employees on the same basis, namely, time and one-half. Other requests included provision that no employee shall be charged for breakages or replacements and that the Flin Flon area of Saskatchewan be included in Minimum Wage Board Orders.

**Fair Wage Act.**—The delegation contended that the time was opportune for the Government to consider the enactment of a Fair Wage Act to replace the present Minimum Wage Act and Orders thereunder. It was held that such an Act should make provision for (1) fair wages in industries and trades; (2) the granting of authority to set such wages after consideration of all representations made by those concerned; and (3) that the Board set up to administer the proposed Act should be composed of five members—two representing employers, two representing employees and a neutral chairman.

**Hours of Work Act.**—It was requested that all workers in Saskatchewan be brought under the provisions of the Hours of Work Act; that the 40-hour week be instituted, with no exemptions for such workers as milk-delivery salesmen, lay employees in hospitals and fire fighters not covered by the three-platoon system; and further, that the Act be made applicable to all communities with populations in excess of 300.

**Holidays-with-Pay Act.**—The delegation asserted that experience with the Holidays-with-Pay Act in Saskatchewan had shown that the present system of collection of holiday funds from employers had not been satisfactory and that the main purposes of the Act were being held in check in many cases. It was recommended, therefore, that a holiday-with-pay stamp system be instituted similar to that in force in some of the other provinces.

**Old Age Pensions.**—The following amendments to the Old Age Pensions Act were requested: (1) that the pension age be reduced to 65 years for male persons and to 60 years for female persons; (2) that the Act be made applicable to all citizens

on a contributory basis; (3) that the only residential qualification necessary be 15 years' residence in Canada; (4) that no deduction be made on account of other income; (5) that the same pensions be made available to the blind at 18 years of age and also to the totally disabled; (6) that the practice of combining the Old Age Pensions Act and the Parents' Maintenance Act be discontinued; (7) that the placing of liens on the homes of pensioners be discontinued; (8) that pensions be increased to \$60 per month; (9) that the means test be abolished; (10) that community homes for the aged be established with adequate provision for married couples to live together. It was held that these community homes should be under Federal supervision and that hospital facilities and full medical care be included.

**Housing and Rent Control.**—The delegates asked that the Government use whatever powers it had under provincial legislation to control rentals in the best interests of the people of the province. If the Government considered it necessary, a fact-finding board, made up of representatives of labour, management and the Government, should be appointed at once to make a study of the problem of rentals in the province, the Board's findings to form the basis of Government action. It was recommended too, that the provincial Government co-operate actively with the Dominion on the low-rental housing plan formulated by the Federal Minister of Reconstruction.

**Apprenticeship.**—The delegation claimed that the administration of the Apprenticeship Act, as presently constituted, was inadequate. It was requested that the Apprenticeship Board be composed of five members, two of whom were representatives of employers, two of employees and a chairman, all members to be qualified tradesmen. This Board, it was suggested, should have authority to set up examining boards in designated trades. Each of the examining boards should be made up of five members who should also be qualified tradesmen and should be empowered to set examinations and issue certificates of classification and qualification.

**Other Suggestions.**—Among other recommendations and suggestions made by the delegation were the following: (1) that the Flin Flon-Nipawin highway be completed immediately, as a "most necessary public work;" (2) that the City Act be amended to provide that a ballot cast by a voter in a civic election should be valid if the voter marks his ballot for at least one of

the candidates, but not in excess of the number of vacancies, and that civic employees be not barred from running for any elective office; (3) that the Government increase the number of free scholarships for deserving students and that the education tax be removed; (4) that the Government amend the Hospital Act, so as to relieve disabled industrial pensioners and their families receiving less than \$60 a

month, of certain specified hospitalization fees; (5) that in the interests of public safety, special legislation be enacted covering hours of work, mileage, wages and physical examinations of truck and taxi drivers; (6) that the Industrial Standards Act be amended to provide that if a majority in any trade shall make application to come under the Act, the application shall be granted.

## **AFL AND CIO HOLD ANNUAL CONVENTIONS**

*During the fall of 1949, the American Federation of Labour and the Congress of Industrial Organizations held their annual conventions, meeting at St. Paul and Cleveland respectively. The CIO took determined action against Communism among certain of its affiliated unions; the AFL, which has long maintained an anti-Communist position, renewed its opposition to Communism at home and abroad. Both organizations passed a series of resolutions setting forth their policy on various topics of labour interest. The CIO's action in expelling the United Electrical Workers has already been paralleled in Canada by the Canadian Congress of Labour, which had previously taken disciplinary action against the UE.*

### **American Federation of Labour**

More than 600 delegates, representing 93 national and international unions, four departments, 44 state branches, 130 central bodies and 57 local trade and federal unions, reported as having a combined paid-up membership in excess of 7,200,000. attended the 68th Annual Convention of the American Federation of Labour at St. Paul, Minnesota, October 3 to 10, 1949.

Political action by organized labour in the United States was a dominant theme considered by the Convention. This was revealed in recurring demands for the repeal of the Taft-Hartley Act, in pointed references to the 1950 Congressional elections, in frequent hostile references to Communism, both at home and abroad, and in the appeals and counter appeals with respect to the union of national labour organizations designed to further labour's political and legislative program.

#### **Presidential Address**

President William Green, in his keynote address, called for united action to elect "a liberal Congress which will repeal the Taft-Hartley Act." He pledged a con-

tinuing fight against Communism, full AFL support for a new world labour organization "free of domination by any government," and policies to get additional social legislation passed at the next session of the United States Congress. Mr. Green asserted that one of the problems of the convention was "to determine how our Labour's League for Political Education can develop strength and administrative ability," so as "to elect our friends to the Congress of the United States and bring about an early repeal of that reprehensible law." He declared that the AFL will never "waive our right to demand increases in wages for the workers of the nation" and the restoration of full rights to engage in collective bargaining, "without any restrictions of any kind whatsoever."

To the four freedoms—speech, assembly, religion and press—Mr. Green added "the freedom of contract, to sell across the table all we have to sell . . . under the most advantageous circumstances and the best conditions obtainable." He declared that this freedom of contract is closely inter-related with the economic philosophy of

the AFL. He said that the AFL stands "an uncompromising force around, behind and beside this government against the threat at home and abroad from ideological experimentations. . . . We shall reaffirm our former position of standing steadfastly against the invasion and infiltration of those who represent those 'isms' that mean governmental control and governmental domination of the lives of the individual". . . . "What we want," he said, "is less of government, freedom from government control, freedom to act, freedom to organize, the right to enjoy the liberties to which we are entitled."

Reverting to the workers' right to demand increases in wages, Mr. Green said: "We have never in any official statement said that we had reached the point where we will waive our right to demand increases in wages for the workers of the nation and we are not going to do that. . . . We don't want government boards. . . . We are opposed to government boards setting our wage standards anywhere or any place." The AFL, he declared, "is united as we have never been before. . . . There is no left wing and right wing. We think as one, we walk as one, and we act as one."

### Report of Executive Council

Reviewing economic developments during the past year, the report of the Executive Council asserted that the recent business slump in the United States "has been a corrective process, not an industrial depression." It conceded, however, that "for more than four million workers (in USA) it has meant unemployment, and several hundred thousand of them have been out of work longer than the unemployment benefit period, so that their benefits have been exhausted. . . . For business, the recession has meant a 14 per cent reduction in total profits (after taxes) for the second quarter of 1949, compared to the peak 1948 levels, and an 80 per cent increase in business failures."

**National Problems.**—In a survey of national and international problems during the preceding year the Executive Council stated that "at home, labour's major struggle has been to repeal the Taft-Hartley Act with its un-American discrimination against wage-earners as a group of citizens and its restrictions upon their right to free contract to promote their economic welfare." It declared that "our economy is only now adjusting to more normal production orders with competition developing in buyers' markets. . . . The process of reducing costs to facilitate price declines makes for better management and

more economical production with co-operation between management and labour." It asserted, however, that "profits are still at high levels, some prices have dropped, wage rates and earnings have remained at high levels and the employed labour force (in the United States) is still close to 60,000,000."

It was claimed, however, that "important progress has been made in correcting these maladjustments." Besides a "general downward price adjustment," inventories were in much better balance and production was reported to be rising until it was "close to normal." Worker's "real wages" were more nearly in line with commodity prices and it was recognized that "the corrective process now going on is essential to restore economic health. . . ."

The Executive Council called for a quickening of "devotion and dedication to the cause of labour" as the best defence against "the twin evils" of totalitarian communism and regimentation of the lives of individuals.

**World Trade Unions.**—In reviewing the past year's activities in the international field, the Council referred to "the relentless fight waged by the AFL against the creation, organization and continuation of the World Federation of Trade Unions," branding it as "the Kremlin's monstrous military espionage agency." The AFL was "highly gratified" that the free trade union organizations "are now ready for a fundamental and sound re-alignment leading to the organization of a genuine world organization of the *bona fide* trade unions," for which the groundwork was laid at a preliminary conference in Geneva in June, attended by 119 delegates representing "some 47,000,000 workers throughout the free world."

**Wages, Prices and Security.**—The Council held that the time had arrived to campaign for a shorter standard work day and work week. It asserted that a cut in working time "may very well be desirable" as an alternative to higher income, unless both are obtainable through collective bargaining. While admitting that a cut in hours without a reduction in take-home pay would raise unit costs, the Council declared that it was striving for a share in the rising rate of productivity and did not want to cause higher prices. It contended that the wage increases won by affiliated unions in 1949, while possibly smaller than in previous post-war years, brought more benefit to union workers because they had not been offset by price rises.

It was claimed that the benefits provided under existing social security laws were too small and coverage too limited. In regard to health insurance the Federation reaffirmed its support for "a national compulsory health insurance program as the only practical means of meeting the health needs of wage-earners and others in the middle income groups."

### **Political Action by Labour**

Political action by labour was a recurring theme during the Convention. President Truman, in his message to the delegates renewed his pledge to fight for the repeal of the Taft-Hartley Act. He declared that "many additional Americans need the protection of adequate minimum wages, of agricultural price supports, of more and better housing and of greater educational opportunities. . . . Be assured your unions and all progressive Americans will have my full support in rounding out much-needed programs to insure the Fair Deal goal for the benefit of all the people of our nation."

### **Address by Hon. M. J. Tobin**

Secretary of Labour for the United States, Hon. Maurice J. Tobin, predicted at the outset of his address that "if not in the 81st, positively in the early days of the 82nd Congress, there will be a repeal of the Taft-Hartley law." He was confident "that when we have written into the laws of this country a just, a fair and an equitable labour-management law we will then see greater and better labour-management relations than we have seen for quite some time in the past." He thought that "there is a need in the United States of America for a unification of every segment of American labour. I am not going to propose to you any definite recommendation or plan, but I merely say to you that I believe that all labour should band together for the purpose of selling to the American people the contribution that has been made by organized labour down through the years." But "there are many problems yet to be solved in this country," he said. Among those that he enumerated were "a sound health program," the development of the country's natural resources to the fullest possible extent, "the strengthening of the free nations on this side of the 'Iron Curtain'" and "the elevation of the living standards of those in the low living standard areas of the world." In the solution of each of these problems, he asserted, the AFL "can be very helpful."

### **Senator Humphrey Urges Political Action**

Senator Hubert H. Humphrey of Minnesota urged Labour's League for Political Action to intensify its work. He said that effective political participation must go hand in hand with the growth and maintenance of a strong labour movement. "The acid test of its effectiveness will be in the election year of 1950. . . . If the Fair Deal program is to be passed, if the Taft-Hartley Act is to be repealed, if the people of this country are to get the legislation that they were promised, it is the responsibility of the labour movement, of every liberal and democratic group, to forget personal pride and petty differences and to unite behind candidates and around a program between now and 1950," the Senator declared.

### **Labour and the Marshall Plan**

Hon. Paul G. Hoffman, Administrator, Economic Co-operation Administration, paid tribute to the AFL as "one of the very first organizations to understand the vital part the Marshall Plan could play in the winning of an enduring peace." He expressed his gratitude for the support he had received from AFL officials who had been appointed as his advisers in labour matters connected with the European Recovery Program, and presented "a very quick progress report" on the work of his administration in "the development of international peace and security throughout the world."

### **Addresses by Fraternal Delegates**

The fraternal delegate from the Trades and Labour Congress of Canada was Mr. Robert Rintoul, Vice-President of the Calgary Trades and Labour Council and President of the Calgary Civic Employees' Association. In addition to conveying a message of goodwill to the convention, Mr. Rintoul described in some detail the objectives and achievements of the TLC.

Canada's federal labour code, he said, has been copied in some of the provinces, and in other provinces there are "laws governing union recognition and collective bargaining. . . . None of these laws is perfect, but none is repressive. . . . the fundamental rights of unions and union members are, to a large extent protected in all of these laws. It is no small satisfaction to our officers and members to hear Ministers of the Crown reiterate the statement that no Taft-Hartley law will be enacted in Canada," he declared.

Mr. Lincoln Evans, Honorary Secretary of the British section of the International Metal Workers' Federation and Mr. Tom Williamson, M.P., a member of the Anglo-American Council on Productivity brought greetings from the British Trades Union Congress. They sketched in some detail the economic, social and political problems which confront Great Britain and expressed appreciation and gratitude for American assistance in carrying out the austere measures necessary for their solution. In a brief concluding reference to trade unionism Mr. Williamson said: "The free trade union world is faced with a powerful Communist-dominated organization which is committed to propagate an ideological philosophy repulsive and repugnant to those who believe in freedom and democracy. The World Trade Union Organization, launched with sincere enthusiasm four years ago, has failed. . . . Free trade unions, with all their glorious traditions cannot live in the stifling atmosphere of totalitarian confinement. Great responsibility, therefore, rests on the American and British trade unions to rally and organize free trade unions everywhere and in this task our two great organizations will not fail."

### Other Guest Speakers

Among the other special speakers who addressed the Convention were: Mr. David A. Morse, Director-General, International Labour Office; Hon. Louis A. Johnson, Secretary of Defence; Mr. Jerry Voorhis, Executive Secretary of the Co-operative League; Oscar R. Ewing, U.S. Federal Security Administrator; U.S. Senators James E. Murray of Montana, George W. Malone of Nevada and John J. Sparkman of Alabama and Mr. Boris Shishkin, Director, European Labour Division, Economic Co-operation Administration.

### Resolutions Approved

The resolutions presented to the convention covered a wide range of international and national, social, economic and political problems. Among them were the following:—

## Congress of Industrial Organizations

Over 600 delegates representing more than 300 affiliated international, national and state labour union bodies reported as having a combined membership of more than 6,000,000 workers, attended the eleventh annual meeting of the Congress of Industrial Organizations at Cleveland, Ohio, October 31 to November 4, 1949.

Preparations for an all-out battle for the repeal of the Taft-Hartley Act, the issue to be taken to the electors during the election of members for the United States Congress in 1950, if the present Congress failed to take action in the meantime;

Setting the stage for a nation-wide "register-and-vote" campaign for the 1950 Congressional election;

Making preparations for a drive to be launched early in 1950 to obtain 1,000,000 new members to commemorate the 100th birthday of the late Samuel Gompers, one of the founders and the first President of AFL;

Urging the U.S. Federal Government to provide the Department of Labour with adequate funds to enforce the new minimum wage at 75 cents an hour;

Pledging full moral and material support in making the new international organization of free trade unions "a most powerful force for peaceful social progress, social justice, human freedom and lasting peace";

Re-affirming the Federations's reliance on collective bargaining as an agency to serve effectively "alike the interests of management, the workers and the public";

Opposing any health legislation that requires the means test in any form;

Urging a continuance of rent controls until the supply of low-priced houses equalizes the demand;

Demanding that the Social Security Act (U.S.) be amended to (a) increase the present contributions of both employers and workers from one per cent to five per cent; (b) include all workers under the Act; (c) lower the age of eligibility from 65 to 60 for both male and female workers; (d) provide minimum benefits of 75 dollars a month;

Promising active support for President Truman's Civil Rights report and program;

Ratifying the Executive Council's action in arranging for regular weekly labour broadcasts over a national radio system.

The paid-up membership of the Federation, as of August 31, 1949, was stated to be 7,241,290 and actual membership approximately 8,000,000.

### Election of Officers

President William Green was re-elected for his twenty-sixth consecutive term. Secretary-Treasurer, George Meaney and the entire group of thirteen Vice-Presidents were also re-elected.

The outstanding feature of the Convention was the determined action taken against Communism. This included three important constitutional changes:—

(1) To bar "Communists, Fascists, or their consistent followers" from holding the post of officer or Executive Board member in the CIO;

(2) To give the Executive Board power, by a two-thirds vote, to remove any officer or Board member who follows the Communist party line;

(3) To allow the Board to expel any union for pro-Communist actions.

In accordance with the authority thus granted to it, the CIO Executive Board met during the course of the Convention and expelled the United Electrical, Radio and Machine Workers of America, which was charged with following the Communist Party line in detriment to its members. The Board chartered a new union, the International Union of Electrical, Radio and Machine Workers, to organize workers in the jurisdictional field formerly allotted to the UE. (Expulsion of the UE has had repercussions in Canada—see p. 8 of this issue.)

The CIO Board also expelled the United Farm Equipment and Metal Workers of America, which had earlier in the year refused to obey an order to merge with the United Automobile Workers and had instead voted to merge with UE.

Finally, it set up trial boards to try nine Board members and ten unions on charges of having consistently followed the Communist Party line.

By resolution, the Convention expressed its support for the Marshall Plan and the Atlantic Pact, and its opposition to aggression, wherever it occurs.

The Convention also pledged the active assistance of the CIO in the formation of a new international federation of free trade unions to replace the World Federation of Trade Unions.

On domestic issues the Convention adopted a series of resolutions calling for improved social security and other legislation, and repeal of the Taft-Hartley Act.

## Presidential Address

In his annual report to the Convention, President Philip Murray re-asserted the CIO's interest in the economic, legislative and political progress of the United States, "developed through the democratic process." He attacked Communist leaders in the CIO and charged that the "left-wing program" was promoted by a party interested in the "establishment of a retrogressive dictatorship in our life." He asserted that the CIO's left wing, which "speaks for less than ten per cent of the organization's membership," had "created a dangerous division," which "no self-respecting organization can long tolerate. . . . The CIO has the power to confer affiliation upon labour unions which wish to join our organization; it obviously has the power of disaffiliation of those organizations whose

leaders' policies, statement and actions demonstrate their contempt and their hostility toward our general policies," he declared.

Turning to legislative problems, Mr. Murray expressed approval of legislative advances made by the U.S. Congress, but claimed that greater progress would have been made had it not been for reactionary elements in the Government. He praised the work of the CIO Political Action Committee and predicted that it would play an important role in the Congressional elections to be held in 1950.

President Murray pledged continued support for the European recovery program and criticized "certain American economic interests" for alleged interference in the policies of democratic labour union groups in England, France and other countries. He gave his approval to the new international labour federation to be formally established in London at the end of November. "It offers," he said, "a practical basis for working toward solution of the many problems that confront workers in every section of the world." He expressed his satisfaction that the CIO had been able to have "friendly and harmonious working relations" with representatives of the AFL in establishing the new international labour body.

In an analysis of current economic conditions, President Murray emphasized that "we must refuse to accept unemployment and lost production and, above all, the loss of human dignity as permanent features of our society. . . . We must master the intricacies of the business cycle and build permanent and lasting prosperity for all American people."

## President Truman's Message

In a written message to the Convention, President Harry S. Truman declared that the working men and women of the United States have shown "that they place the national interest above any particular interest, even their own." He felt confident that the CIO "will continue to be . . . a dynamic and constructive element in our national life, and that it will co-operate with other groups and citizens and the Government in formulating and supporting farseeing liberal measures to promote the general welfare of all the American people."

## Secretary of Labour

Hon. Maurice Tobin, Secretary of Labour, warned the Convention that "organized labour will have to be more active than ever on the political front." He urged labour to get away from factionalism on

State and local levels, so that they could co-operate politically. It was his opinion that "labour united must see to it that the promise to repeal the Taft-Hartley Act . . . will be regarded as a binding commitment by a majority of both houses of Congress."

Mr. Tobin gave credit to labour for its share in having the Fair Labour Standards Act amended to raise the minimum wage to 75 cents an hour. He asserted that this amendment "is a godsend to 'little people' among our wage-earners," as well as being "a bulwark for unions affected by cut-throat competition which comes from plants with low wages" and that it "protects and benefits honest an enlightened management." In conclusion, he said that "American trade unions are their own masters, but only as long as they speak for their members and so long as their members put ahead of all else their support of American institutions."

### **Address by Hon. Dean Acheson**

The Secretary of State, Hon. Dean Acheson, addressed the Convention on the foreign policy of the United States and the contributions that American labour had made to that policy. He pointed out that labour had supplied able personnel from its ranks to assist the Government and that "all of these contributions have been vital to the promotion of our interests."

He described in detail the maladjusted conditions in under-developed countries and the steps that the American Government was taking to raise living standards in such countries. "In the age-old struggle of man with nature for daily bread," Mr. Acheson said "there are many places where the battle is going against him," so that he has "no time or energy to develop the things of the mind and the spirit." It was the purpose of the Government "to aid these people in winning that struggle . . . that they may be free men and not slaves of the State. . . ."

Mr. Acheson contrasted this plan with "the Communist talk of organizing great masses of people in five-year plans. . . . They promise the hungry, distressed people food and material comforts, if only they will accept slavery to the state in return." And to people who have always been miserable "who have never known the protection of a Bill of Rights, these spurious promises sound real," Mr. Acheson asserted.

### **Other Guest Speakers**

A number of other high government officials and leading citizens addressed the Convention, including U.S. Federal Security Commissioner Oscar Ewing; General Omar

Bradley, Chief of the United States armed services; Murray T. Lincoln, of the Ohio Farm Bureau Federation, and Roy Wilkins of the National Association for the Advancement of Coloured People.

### **Canadian Fraternal Delegate**

Bringing greetings from CIO members in Canada, Secretary-Treasurer Pat Conroy of the Canadian Congress of Labour said that Canadian organized labour believed that merely achieving economic security was not enough. "Side by side with the establishment of material progress, we must insist on maintaining the spiritual and individual freedom of every human being," he said. Conversely, he held "that it was not enough to have spiritual, political and individual freedom," if the physical requirements of human beings are not supplied also. Each of these factors must be had in due proportion to lay the foundation for "a healthy community, a healthy country, and a healthy world."

### **Action Against Communism**

The action taken by the Convention against Communism was bitterly opposed by a small minority. However the United Electrical Workers' delegation was absent on the second day of the Convention, and announced that it was withholding per capita tax from the CIO. The Farm Equipment union sent no delegation.

Speaking in support of the Constitution Committee's recommendations regarding Communism, Walter Reuther, President of the United Automobile Workers, declared: "I say brothers, this is a matter of simple decency. You cannot work with people who are dishonest, who are devoid of the elemental simple elements of decency and integrity, and these people by the record prove that they are bankrupt morally and that they are not interested in working honestly and sincerely and constructively with other decent trade union elements.

"We have no choice."

Following is a list of the unions and individuals charged with following the Communist Party Line: International Longshoremen's and Warehousemen's Union and President Harry Bridges; National Union of Marine Cooks and Stewards and President Hugh Bryson; International Fishermen and Allied Workers of America and President J. F. Jurich; Food, Tobacco, Agricultural and Allied Workers Union of America and President Donald Henderson; American Communications Association and President Joseph Selly; United Furniture Workers of America and President Morris Pizer; United Public Workers of America and

President Abram Flaxer; International Union of Mine, Mill and Smelter Workers and President John Clark; United Office and Professional Workers of America and President James Durkin; International Fur and Leather Workers Union (in the last case, the President, Ben Gold, was declared to be ineligible for a seat on the Board as he was an avowed Communist).

### **Policy on Social Security and Pensions**

Two resolutions—one dealing with wages and security, the other with security and other collective bargaining objectives—called attention to the necessity for constant improvements in these factors as part of a full employment program “designed to prevent serious recessions and depressions.” It was held that wage increases and improved security benefits “can and must be paid by corporations without increasing prices.”

Further, the claim was made that “a disproportionately larger share of our national income has been and is going to corporations and business and professional people and a lesser share to wage and salary earners.”

It was stated in the preamble to one of the resolutions that “pensions and health and welfare benefits must be considered an integral part of operating costs solely financed by the employer.” It was resolved, therefore, that such non-contributory programs should be sought by unions in collective bargaining.

On the other hand the Convention also adopted a resolution calling for improved social security to be achieved by amendment of existing legislation.

### **Taft-Hartley Act**

Repeal of the Taft-Hartley Act continued as one of the CIO's major objectives. A resolution was adopted calling for repeal of this legislation and re-enactment of the Wagner Act with improving amendments. “We stand solidly against any

provisions which would impose the use of injunctions to break strikes or which would impinge on other basic principles.”

### **Other Resolutions**

The Convention asked that the U.S. Federal Department of Labour be given a larger appropriation and greater authority in the settlement of labour disputes, manpower problems, unemployment compensation, the setting up of standards of safety and occupational health, guidance of the respective State Departments of Labour, immigration and naturalization and other problems affecting labour.

The Convention urged the support of all CIO affiliates for the Council of Co-operative Development to co-ordinate the efforts of the Co-operative League of the USA and the American labour movement in developing co-operative enterprises.

Other resolutions included demands for:—

- the passage of a Fair Employment Practices Bill;

- legislation that would outlaw poll taxes and other restrictions on the right to vote;
- the setting up by government action of industrial councils “for the application of economic democracy;”

- the enactment of safeguards against racial discrimination in federal appropriations for State aid;

- the extension of rent controls for the period of housing shortage;

- improvements in the Fair Labour Standards Act to provide a minimum wage of at least one dollar an hour;

- loans to housing co-operatives;

- a national unified health insurance plan;

- federal aids for education;

- the extension of the Government's displaced persons' program;

- direct federal regulation of timber cutting on all timberlands;

- farm credits, soil conservation and improvement of rural living standards;

- approval of the St. Lawrence Seaway and Power project;

- the development and maintenance of an adequate United States merchant marine service.

### **Election of Officers**

President Philip Murray and Secretary-Treasurer James B. Carey were re-elected.

# INTERNATIONAL LABOUR ORGANIZATION

*Of particular interest among the accomplishments of a series of recent ILO meetings, is the adoption of a Model Code of Safety Regulations for Underground Work in Coal Mines, by a tripartite technical conference.*

*This Code is not a binding document, and does not require the ratification of member governments; it is intended to serve as a guide to those who are working to reduce the heavy toll of accidents in the coal mines of the world.*

*Problems of "white collar" workers, facilities for workers' recreation, and the protection of mother and child through social security measures, are among other matters dealt with recently by the ILO.*

*The structure of international standards for labour, built up at ILO Conferences during the past thirty years, will shortly be strengthened by the coming into force—through ratification by member countries—of three recent International Labour Conventions, thus raising to 59 the total of ILO Conventions that are in force.*

## Model Code of Safety Regulations for Underground Work in Coal Mines

A model code of safety regulations for underground coal mining was approved in September by a tripartite technical conference convened by the ILO.

The code consists of twenty-four chapters and close to a hundred regulations. It is not a binding document, and does not require ratification by governments as do ILO Conventions. It is "designed to be of service to all who are working to reduce the heavy toll of accidents in the coal mines of the world".

Following its submission to the ILO Governing Body, it will be distributed throughout the world for the guidance of governments and the coal mining industry in the framing of safety measures.

The project of preparing a safety code for coal mines was originally undertaken by the ILO in 1938, but was interrupted by the war. It was resumed early in 1949 by a committee of experts nominated by seven governments. This committee, on which Canada was represented by Mr. John Crawford, Chief Inspector of Mines for Alberta, reached agreement on most provisions for inclusion in the code, and thus made it ready for submission to the tripartite technical conference. Subsequently a small group of specialists qualified to deal with electrical questions revised the electrical provisions of the code.

More than 60 government, worker and employer delegates attended the tripartite technical conference, representing the following fifteen countries: Belgium, Canada, Chile, China, Czechoslovakia, France, India, Italy, Mexico, Netherlands, Norway, Poland, Turkey, the United Kingdom and the United States.

The Canadian Government representative was Mr. J. F. MacKinnon, of the London, England, office of the Department of Labour, while Mr. W. A. MacIsaac of Glace Bay, N.S., Provincial Inspector of Electricity for the Nova Scotia Department of Mines, was his technical adviser.

Mr. F. W. Gray of Victoria, B.C., formerly of the Dominion Steel and Coal Corporation, represented employers; while Mr. Freeman Jenkins of Glace Bay, N.S., President of District 26 of the United Mine Workers of America, was the workers' representative.

Mr. A. M. Bryan, Chief Inspector of Mines of the United Kingdom and also the Government delegate for U.K., was unanimously chosen Chairman of the Conference acting in that capacity competently and with general acclaim. Mr. Bryan had been a member of the Committee of Experts which met in January.

## Commentary on the Model Code

The need for an international model code of safety regulations in coal mines is set forth by the International Labour Office in its commentary on the draft of the code.

"It is a well-known fact," the Office points out, "that in all countries with a coal-mining industry the accident risk in the coal mines is far higher than in any other major industry. That this should be so is not surprising in view of the conditions under which coal mining has to be carried on. Unlike nearly all other industries, the coal-mining industry has to contend with a series of natural phenomena, such as the occurrence of harmful and explosive gases, falls of ground, inrushes of water, etc., that are extremely difficult to guard against.

"Moreover, accident risks in coal mines are exceedingly numerous and spring from an immense variety of sources. An explosion, for instance, may be caused by sparks produced by picks or coal-cutters striking pyritic enclosures in the coal, by a badly fired shot, a defective flame-proof enclosure, a broken lamp, spontaneous combustion of the coal; a man may be killed or injured by falling rock or coal, by runaway tubs, collapsing props, a descending cage and so on.

"It is no wonder, therefore, that coal-mining safety regulations are found everywhere to be both voluminous and minutely detailed. In spite of their bulk and complexity, however, they do cover much the same ground. This similarity of range can be explained by the fact that, while physical and technical conditions differ from country to country, from district to district, and even from mine to mine, the main groups of accident causes are seen to be everywhere the same—falls of ground, haulage, firedamp and coal-dust explosions, falls of persons and objects, etc. Thus all regulations contain provisions respecting ventilation, explosives and shotfiring, haulage, travel, winding, gases, lighting and electricity, to give a few examples.

"In fact, the regulations in force in the various coal-producing countries differ not so much in their scope as in what might be called their make-up. Some contain detailed and up-to-date provisions on certain matters, and others on other matters, according perhaps to the particular conditions prevailing in each country when the regulations were drafted and also to the views taken by the experts responsible for their preparation.

"On the whole, there may be held to be a sufficient degree of uniformity in these various national regulations to justify an

attempt to improve them by a combined effort on the part of the countries concerned through the International Labour Organization."

The code is intended, the Office explains, not as "a mere catalogue of abstract principles," but as far as possible as a set of practical working rules. Having regard, however, to the "very wide diversity of conditions and practice prevailing in different countries and districts, and even in different mines in one and the same district," it was considered inadvisable to regulate in great detail every one of several hundred points.

"While, therefore, the essential requirements of safety are set out explicitly, in many instances the actual means of achieving safety are left to the discretion of the countries concerned."

It was decided that a code applicable to all coal-producing countries must to some extent be a compromise between the essential minimum and the conceivable maximum of safety regulations. "It may be expected," the Office says, "that in many cases the national authorities will be able to go beyond the minimum requirements laid down in the code, if, indeed, they have not already done so."

The code deals with every aspect of underground coal mining under the following chapter headings: general provisions; means of access and egress; maps and plans; explosives; shotfiring; supports; haulage of material; travel and transportation of workers on roads and inclines; winding of men and materials; ventilation; precautions against firedamp; precautions against coal dust; miners' lamps; precautions against inrushes of water; prevention and extinction of mine fires; shaft sinking or deepening; electricity; machinery and plant; qualifications and duties of managing officials, supervisory officials and miners; notification, investigation and recording of accidents and dangerous occurrences; first aid and rescue; general inspections by managers and supervisory officials; safety organization; miscellaneous.

Following the conclusion of the Conference, Mr. MacIsaac has informed the Labour Department that the standards of Canadian regulations "are equal to, if not superior to, the Model Code".

## Problems Considered by the Conference

The Canadian Employers' Delegate, Mr. Gray, has submitted to the Labour Department an interesting account of some of the points of interest dealt with at the Conference.

The ILO Model Code of Safety Regulations for Underground Mining sets international standards for the protection of workers in this hazardous industry. Shown above, a coal miners' rescue team at Coal Creek, B.C., equipped with oxygen masks and tanks, goggles, Wolfe safety lamps and ropes, rehearses artificial respiration.

Mr. Gray notes that the work of the Conference was limited to dealing with underground conditions in coal mines.

"This limitation," he says, "raised some difficulties where the distinction between underground and surface operations is hard to make, as in the elaborate provisions of surface works serving the deep mines of Holland, Belgium and Northern France: in the combination of underground and surface mining operations in 'mountain' coal mines in Canada and the United States along the Rockies, and in the combined surface

and underground authority given to coal mine certificated managers in the United Kingdom, Canada and other countries of the British Commonwealth, based upon and in the main following the provisions of the Coal Mines Regulation Act of the United Kingdom. It is probable that the code will be enlarged to include surface operations, for the reasons adduced.

"The position of Canada is a minor one in respect to magnitude of coal production as will be gathered from the following approximation:—

	Annual Production Millions of Tons	Millions Population	Production Per Capita
Canada .....	18	14	1.3 tons
U.S.A. ....	600	120	5.0 tons
United Kingdom .....	200	50	4.0 tons

"In annual fatality rate, the United Kingdom is the lowest, Canada coming next and the U.S.A. is high. While in the Conference no reference was made to statistics of this kind, attention being paid solely to the practical problems of underground safety in coal mines; the delegates were fully aware of the lower fatality rates in Britain and the still lower rates attained in France, Belgium and Holland. The hazards of coal mining employment may be related in the main to two causes: first to the physical conditions of coal mining, chiefly geological conditions of depth, seam-inclination and gaseous emission, and to the adequacy of the safety regulatory laws to which, of course, must be added the extent to which these laws are observed. The Conference, constituted as it was, stuck firmly to its task of framing regulatory provisions which all who participated in the discussions recognized provided only for minimum care, reasonable care that is, knowing well that perfection of safety regulation is but an ideal and secondary in beneficial results to the spread of a desire among all groups concerned for safety. The inculcation of such a desire, of a spirit of enthusiasm, not less, is the chief benefit hoped for from the free and earnest discussion of ways and means of achieving safety in underground work that took place at the Conference.

"The Canadian and American viewpoint of statutory coal mine regulation is necessarily similar inasmuch as the form of government is federal in each case and there is not a single national authority such as obtained in Britain, France and the Low Countries. The Coal Mines Regulation Acts of British Columbia, Alberta, Saskatchewan, New Brunswick and Nova Scotia, all modelled on the British Act, differ in detail but not in general principle. Such difference as exists between them is in process of being minimized by the annual Conferences of Provincial Ministers of Mines and their staffs now held annually for several years past. These Conferences, while uniformity of regulation has been sought, have had as a main object the advantages accruing from exchange of views and of operating experiences as guides to achievement of a common standard of excellence in mine safety legislation. No provision in the 'Model Code' preserved at Geneva was considered by the Canadian delegation as higher than the standard set in the several provincial coal mining regulation acts now in the Statutes.

"The onus of enforcing statutory safety regulations in Canada, as in the majority of countries represented at the Conference, rests on the Mines Inspectorate appointed

by and reporting to the 'competent authority' under 'national laws or regulations'. The existence of such an authority is assumed, and the provisions of the code do not deal with authority higher than the Mine Manager and supervisory officials reporting to and under his sole authority. The 'competent authority' in Canada is the Provincial government in question. . . .

"One result of the Conference was a widening of the knowledge of the delegates as to mine techniques in various parts of the world, and a clearer appreciation of technical attainments leading to a greater respect for the other fellow's achievements, especially, it may be noted, for the deep mining technique of Northern France and the Low Countries.

"One notable achievement of the Conference, was the formulation—involving re-writing of the Draft of the chapter on 'Electricity', unanimously adopted by the Conference. The use of electricity in coal mines, especially at the coal-face, is not yet 50 years old. It is a much debated matter, and national practice varies between the extended usage of electricity in the United States, the conservative attitude of the United Kingdom, and the middle ground taken in Canada. Particularly in respect to locomotive haulage is there divergence in national practice. In Britain trolley locomotive haulage is not permitted underground under existing regulations, but diesel locomotives are favoured. In the United States, electric trolley-locomotive haulage is employed on the greatest scale anywhere, but diesel locomotives are not used. This curiously contrasted attitude is probably founded on pre-judgment and one-sided actual experience. Canada employs both electric locomotive haulage and diesel locomotives. The Conference attempted no judgment on this controversial matter, except to recommend that permission of the 'competent authority' be obtained, as is Canadian procedure.

"The problems of coal dust in coal mines, the behaviour in the presence of inflammable gases, the use of stone dust as a means of limiting by dilution, the inflammability of coal dust accumulations, especially in blasting operations, received the detailed consideration the gravity of these problems demands.

"The definitions of 'dangerous coal dust;' the percentage of stone dust required for effective neutralization of coal dust and the renewal of stone dust, were left to the discretion of the 'competent authorities' to determine and legislate upon, but the text of the code indicates the importance of the coal dust problem as seen by the Conference.

"The British Workers group brought up the serious inroads of silicosis into coal mine labour, especially in South Wales and the Chairman announced the probability of a Conference being called in 1950 at the instance of the British authorities to consider all questions arising out of inhalation of dust in coal mines, coming under the blanket term of pneumoconiosis. Mr. Bryson proposed that the Conference should be composed of technical mining men (not including doctors) whose task would be prevention of the forming of dusts of injurious nature in coal mines. . . .

## Problems of "White Collar" Workers Studied by Advisory Committee

The basis of a program of international action to improve the working conditions of "white collar" workers was laid down at a meeting of the ILO Advisory Committee on Salaried Employees and Professional Workers, held at Geneva from October 24 to 29. This meeting was the first to be held by the Advisory Committee, which was reconstituted recently to replace two expert committees which functioned before the war.

The member countries of the Committee include: Brazil, China, Czechoslovakia, Egypt, France, India, Italy, Peru, Poland, Sweden, the United Kingdom, the United States, and Uruguay. The Chairman for the first session was Niilo A. Mannio, Secretary-General of the Finnish Ministry of Social Affairs, who represented the ILO Governing Body at the meeting.

The committee adopted eleven resolutions, including three on weekly and daily rest periods in commerce and offices and the rights of performers in broadcasting, television and the mechanical reproduction of sound.

Two resolutions asked that the questions of daily and weekly rest in commerce and offices be placed on the agenda of an early session of the International Labour Conference with a view to the adoption of international conventions or recommendations. They also requested the ILO to continue

"Of interest to all concerned with coal mine regulations is the systematic grouping of the provisions. The Commentary stated that an ideal system of grouping with a subject so complex as safety in coal mines, was impossible to devise. But the draftees made a good attempt. A *de novo* arrangement by a group of technical experts is bound to produce a more logical arrangement of provisions than the addition of annual legislative amendments to Coal Mines Regulation Acts, and the subject index of the code as it will shortly be published is worthy of attention."

its study of the questions and to consult governments on a series of specific points.

The resolution on performers' rights proposed that the ILO enter into consultation with the International Union for the Protection of Literary and Artistic Workers and other appropriate international organizations to secure the adequate protection of performers' rights. It also asked that the entire problem be reviewed at the next session of the committee.

Additional resolutions asked the ILO Governing Body (1) to invite States Members to report on the position of the law and practice in regard to unratified conventions on the age of admission of young persons to non-industrial occupations; (2) to ask the Office to examine means to aid the study of unemployed professional workers and students; (3) to include within the scope of the ILO's migration program salaried employees and professional workers; (4) to study the rights of the employed inventor; and (5) to study the question of extending the scope of the ILO convention on maternity protection to cover salaried employees and intellectual workers in commerce and offices.

Other resolutions asked that more comprehensive statistical and other studies be undertaken on employment conditions and work for salaried employees and professional workers.

## Committee on Workers' Recreation

Fourteen experts from various countries attended the meeting of the ILO Committee on Workers' Recreation, held at Geneva from October 31 to November 3.

The agenda was composed of two points: (a) the present situation and most important problems in the field of leisure time activities; and (b) facilities for the leisure time

activities of young persons, including holiday camps for young workers.

On point (a) the Committee adopted four resolutions. One of them requests the ILO Governing Body to have the Office make a thorough study of the following questions with a view to their inclusion in the agenda of future meetings of the Com-

mittee: workers' education, especially with regard to education for industrial relations; training of organizers and recreation leaders; popular travel, especially on an international basis; organization of national and international festivals of the arts; recreation for rural workers; industrial recreation; promotion of games and sports, also on the international level; promotion of facilities for the prevention of illness, especially industrial diseases.

Another resolution states the principle that "all organizational activities in the field of recreation should respect the complete freedom of the individual who desires to benefit from the facilities which may be available." The Committee also stresses the usefulness of recreation activities as a way for the development of family life, and

recommends that the organization of such activities should be co-ordinated closely with programs of health, education and welfare for the workers.

On point (b) the Committee decided that the beneficial utilization of leisure time of young persons depends upon favourable conditions of work and life, liberty of the individual and adequate leadership by qualified persons. It also recommends that the public authorities should provide adequate accommodation and facilities for leisure time activities of young persons.

It recommends finally that attention should be given to the needs of special groups of young persons, such as the unemployed, rural workers, domestic workers and others.

## **International Social Security Association Seeks Protection of Mother and Child**

The protection of mother and child through social security measures was one of the main topics discussed at the ninth general assembly of the International Social Security Association, which met at Rome from October 3 to 8. The meeting adopted a series of recommendations designed, according to the Association's objectives, to "strengthen efforts toward the extension, the protection, technical and administrative improvement of social security."

The assembly was attended by 140 delegates and observers representing social security institutions and government departments of 24 countries. It was held under the auspices of the International Labour Office, which provides the Association's secretariat.

The discussions were held on the basis of four technical reports which were prepared by experts of the Association, and which will be published.

In a unanimously-approved resolution, the Association recommended to its members that they take or promote appropriate action with a view to bringing their social security schemes into accordance with a series of principles governing the protection of mother and child through social security.

Among the principles enumerated in the resolution were:—

1. Measures for the protection of mother and child should be applied to all potential beneficiaries under a social security scheme.

2. Social security schemes should guarantee an appropriate livelihood to working women during an effective rest period of at least six weeks before and six weeks after confinement.

The assembly also agreed that the Association should promote further the exchange of information concerning the operation of the systems of collecting social security contributions adopted by various countries. It decided further that the ISSA should encourage the exchange of information on the financing of social security in various countries and promote the establishment of international statistics to facilitate an international comparison of social security costs.

The meeting was held under the chairmanship of P. J. Keady, chairman of the Irish National Health Insurance Society.

At a meeting of the Association's executive, it was decided to hold the next general assembly in Austria in 1951.

Renato Morelli, president of the Accident Insurance Institute of Italy, was elected chairman of the Association for a two-year term, and Edgardo Rebagliati, general director of the Peruvian Social Insurance Institute, and Friis Olsen, director of the Danish Federation of Sickness Funds were named vice-chairmen.

## **Co-operative Movement Studied by ILO**

The ILO Advisory Committee on Co-operation, meeting at Geneva from October 17 to 22, adopted a series of recommenda-

tions designed to further collaboration between the co-operative movement and the ILO in promoting their common objectives.

The Committee's conclusions on the four questions on its agenda were embodied in five resolutions.

One resolution suggested a number of points for consideration by the ILO's Governing Body in developing ILO programs to enlist the aid of the co-operatives in providing technical assistance for under-developed countries.

The resolution said the co-operative movement was capable of "taking a most effective part in the preparation and application of plans for national economic development". It added that co-operative institutions could play a useful part in the organization and full development of manpower for productive purposes, and was a valuable means of disseminating knowledge and inculcating new methods of work and production in less developed economies.

Another resolution proposed a number of points as a basis for a program which would seek the extension of social security measures generally and of insurance for

independent workers in particular. The resolution said that co-operative organization offered "an element of practical value" which countries might use in developing social security and protection against the special risks of these workers.

The Committee also suggested a number of points as a basis for joint action between the ILO and the co-operative movement in furthering the development of vocational training throughout the world.

It decided, in addition, to establish a working party to study the development of relations between different forms of co-operation.

The meeting was held under the chairmanship of T. H. Gill of the United Kingdom, president of the International Co-operative Alliance. The Committee is composed of a delegation of the ILO's Governing Body, sixteen co-operative experts, and a representative of the Food and Agriculture Organization.

## Three Recent ILO Conventions Come into Force

Three important Conventions adopted at recent ILO Conferences will come into force shortly as a result of ratifications by certain member countries of the ILO.

The Conventions deal with freedom of association, employment service organization, and labour inspection. The first two were adopted at the 31st Session of the International Labour Conference, held in San Francisco in 1948 (L.G., Sept., 1948, p. 972) and the third at the Thirtieth Session, held at Geneva in 1947 (L.G., Nov., 1947, p. 1592).

Under the ILO Constitution, the adoption of a Convention at the International Labour Conference entails on member countries the obligation of bringing the Convention before the appropriate national authorities with a view to possible ratification. A Convention becomes binding only on such countries as ratify it.

All three of the above-mentioned Conventions contain a clause providing that they shall come into force twelve months after the date on which the ratifications of two member countries have been registered.

The Freedom of Association and Protection of the Right to Organize Convention, 1948 (Convention No. 87) has been ratified

by the United Kingdom and Norway. Their ratifications were registered on June 27 and July 4, 1949, respectively. The Convention will accordingly come into force for these countries on July 4, 1950.

Ratifications of the Employment Service Convention, 1948 (Convention No. 88) were registered by Norway on July 4 and by the United Kingdom on August 10, 1949. The Convention will accordingly come into effect for these countries on August 10, 1950.

Ratifications of the Labour Inspection Convention, 1947 (Convention No. 81) were registered by Norway and India on January 5 and April 7, 1949, respectively; and the Convention will therefore come into force for these countries on April 7, 1950.

Of the 98 Conventions that have so far been adopted at the 32 Sessions of the International Labour Conference held since 1919, 56 are now in force; the three which will come into force next year will raise the total to 59.

During the months of June, July and August, 29 ratifications, applying to 20 Conventions, were registered with the ILO. This brings to 1,040 the total number of ratifications of ILO Conventions.

This section covers proceedings under two federal statutes, the Industrial Relations and Disputes Investigation Act and the Conciliation and Labour Act, involving the administrative services of the Minister of Labour, the Canada Labour Relations Board and the Industrial Relations Branch of the Department.

## INDUSTRIAL RELATIONS AND CONCILIATION

*Boards of Conciliation were fully constituted during November to deal with disputes affecting various railways and railway labour organizations.*

*The Canada Labour Relations Board issued Reasons for Judgment rejecting an application for the provision of arbitration procedure in disputes between the Brotherhood of Locomotive Engineers and the Canadian Pacific Railway Company on the ground that an adequate procedure already existed.*

### Introduction

On December 9 the Hon. Humphrey Mitchell, Minister of Labour, announced the personnel of the Conciliation Boards which had previously been established to deal with disputes between a number of Canadian railways and two groups of international and national railway labour organizations.

The Hon. Mr. Justice J. O. Wilson, of the Supreme Court of British Columbia, was appointed as Chairman of each of the Conciliation Boards. The Chairman was appointed by the Minister in the absence of joint recommendations from the other members of the two Boards.

In the dispute affecting the group of twelve international unions representing non-operating railway workers and the Canadian National Railways, Canadian Pacific Railway Company, Ontario Northland Railway and the Toronto, Hamilton and Buffalo Railway Company, the Minister stated that he had appointed Mr. Isaac Pitblado, K.C., of Winnipeg, and Mr. Alfred J. Wickens, K.C., of Moose Jaw, upon the nominations of the employers and unions respectively.

In the dispute affecting the two major railway systems and the Ontario Northland Railway and the Canadian Brotherhood of Railway Employees and Other Transport Workers and the Brotherhood of Express Employees, the members appointed to

represent the parties were Mr. T. R. Meighen, K.C., and Mr. J. A. Coote, both of Montreal, who were nominated by the employers and unions respectively.

At its session on November 15, the Canada Labour Relations Board approved Reasons for Judgment denying a request that the Board prescribe a provision for the final settlement of differences concerning the meaning or violation of the collective agreement between the Brotherhood of Locomotive Engineers and the Canadian Pacific Railway Company. The Board's Reasons for Judgment are reproduced elsewhere in this section.

In rejecting the application, the Board found that there was a subsisting agreement between the Railway Association of Canada, of which the Canadian Pacific Railway Company is a member, and six railway unions, of which the Brotherhood of Locomotive Engineers is one, which is binding on both the applicant union and the respondent company and which provides for the establishment of the joint board known as Canadian Railway Board of Adjustment No. 1. The Canada Labour Relations Board found that the functions of Canadian Railway Board of Adjustment No. 1 for the settlement of disputes arising out of wage agreements between the parties were adequate and that no additional arbitration procedure needed to be established.

The Brotherhood of Locomotive Firemen and Enginemen intervened in the case, which was of widespread interest to employees engaged in the running trades of the various Canadian railways.

In the December issue of the *LABOUR GAZETTE* (p. 1551) it was reported that the Canada Labour Relations Board in October rejected an application from the Canadian Brotherhood of Railway Employees and Other Transport Workers for certification as the bargaining agent for a unit of employees of the Canadian National Railways employed in the Regional Staff Record

Bureau of the company at Winnipeg. At the November sitting of the Board, the four members representing organized labour tabled a dissenting opinion, which is reproduced below. The dissenting opinion took issue with the decision of the majority of the Board that clerical employees engaged in the handling of staff records are employed in a confidential capacity in matters relating to labour relations. The dissenting members indicated that they believed the principle involved was of such importance as to justify the filing of a dissenting opinion.

***The following statement concerns the scope and administration of the Industrial Relations and Disputes Investigation Act and the Conciliation and Labour Act.***

Conciliation services under the Industrial Relations and Disputes Investigation Act and under the Conciliation and Labour Act are provided by the Minister of Labour through the Industrial Relations Branch. The Branch also acts as the administrative arm of the Canada Labour Relations Board under the former Act.

The Industrial Relations and Disputes Investigation Act came into force on September 1, 1948. It revoked the Wartime Labour Relations Regulations, P.C. 1003, which became effective in March, 1944, and repealed the Industrial Disputes Investigation Act, which had been in force from 1907 until succeeded by the Wartime Regulations in 1944.

Proceedings begun under the Wartime Regulations are continued in so far as the services involved in such proceedings are authorized under the new Act. Likewise, decisions, orders and certifications given by the Minister of Labour and the Wartime Labour Relations Board are continued in force and effect by the new Act.

The Act applies to industries within Dominion jurisdiction, i.e., navigation, shipping, interprovincial railways, canals, telegraphs, interprovincial and international steamship lines and ferries, aerodromes and air transportation, radio broadcasting stations, and works declared by Parliament to be for the general advantage of Canada or two or more of its provinces. Additionally, the Act provides that provincial authorities, if they so desire, may enact similar legislation for application to industries within provincial jurisdiction and make mutually satisfactory arrangements with the Dominion Government for the administration of such legislation.

The Minister of Labour is charged with the administration of the Act and is directly responsible for the appointment of Conciliation Officers, Conciliation Boards, Industrial Inquiry Commissions, for the consideration of complaints that the Act has been violated or that a party has failed to bargain collectively, and of applications for consent to prosecute.

The Canada Labour Relations Board is established under the Act as successor to the Wartime Labour Relations Board to administer provisions concerning the certification

of bargaining agents, the writing of provisions—for incorporation into collective agreements—fixing a procedure for the final settlement of disputes concerning the meaning or violation of such agreements and the investigation of complaints referred to it by the Minister that a party has failed to bargain collectively and to make every reasonable effort to conclude a collective agreement.

Copies of the Industrial Relations and Disputes Investigation Act and the Rules of Procedure of the Canada Labour Relations Board are available upon request to the Department of Labour, Ottawa.

Conciliation services are also provided by the Industrial Relations Branch under the provisions of the Conciliation and Labour Act. This statute empowers the Minister of Labour to inquire into the causes and circumstances of a dispute, to take such steps as seem expedient for the purpose of bringing the parties together, and to appoint a conciliator or arbitrator when requested by the parties concerned.

Proceedings under the Industrial Relations and Disputes Investigation Act are reported below under two headings: (1) Certification and other Proceedings before the Canada Labour Relations Board, and (2) Conciliation and other Proceedings before the Minister of Labour. From time to time, as required, a third article under this section will cover Conciliation Proceedings under the Conciliation and Labour Act.

Industrial Relations Officers of the Department of Labour are stationed at Vancouver, Winnipeg, Toronto, Ottawa, Montreal, Fredericton and St. John's, Newfoundland. The territory of two officers resident in Vancouver comprises British Columbia and Alberta; two officers stationed in Winnipeg cover the provinces of Saskatchewan and Manitoba and Northwestern Ontario; three officers resident in Toronto confine their activities to Ontario; two officers in Montreal are assigned to the province of Quebec, and two officers resident in Fredericton and St. John's represent the Department in the Maritime Provinces and Newfoundland. The headquarters of the Industrial Relations Branch and the Director of Industrial Relations and staff are situated in Ottawa.

# Certification and Other Proceedings Before the Canada Labour Relations Board

The Canada Labour Relations Board met for one day during the month of November. During the month the Board received eight applications for certification, held one hearing, issued two certificates designating bargaining agents, allowed the withdrawal of two applications, and refused two requests for the consent of the Board to make application for certification before the expiry of ten months of the terms of existing collective agreements.

## Applications for certification Granted

1. The Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees for a unit of employees of the Canadian Pacific Railway Company, comprising clerical employees in the office of the District Accountant, Calgary, Alta. (L.G., Dec., 1949, p. 1552).

2. Local 342, United Packinghouse Workers of America, for a unit of employees of Robin Hood Flour Mills, Limited, comprising hourly-paid employees of the company in its plant at Saskatoon, Sask. (L.G., Dec., 1949, p. 1552).

## Applications for Certification Withdrawn

1. Local 987, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America and Dench of Canada, Limited (Trucking Operations in Alberta and British Columbia) (L.G., Oct., 1949, p. 1234). The Board allowed the withdrawal of the application on the request of the applicant union at the public hearing conducted by the Board.

2. The Canadian Brotherhood of Railway Employees and Other Transport Workers and Dench of Canada, Limited (Trucking Operations in Saskatchewan, Alberta, and British Columbia) (L.G., Nov., 1949, p. 1402).

## Requests Under Section 7 (4) of Act Refused

During the month the Board refused requests for consent to make applications for certification as bargaining agents before the expiry of ten months of the terms of existing collective agreements in the following cases:—

1. The National Catholic Syndicate of Longshoremen of Sorel, Inc., for longshoremen employed by ten employers at Sorel, P.Q.

2. The Brotherhood of Locomotive Firemen and Enginemen for a unit of employees of the Canadian National Railways (Newfoundland District, Atlantic Region).

Both requests were refused for the reason that no special circumstances existed which would warrant the granting of consent by the Board.

## Application Under Section 19 of Act Rejected

The Board rejected an application made by the Brotherhood of Locomotive Engineers for the prescription of a provision for the final settlement without stoppage of work of differences between the Brotherhood and the Canadian Pacific Railway Company concerning the meaning or violation of their collective agreement. (See Reasons for Judgment below.)

## Applications for Certification Received

1. The Hull City Transport Employees' Syndicate on behalf of garage employees and bus drivers employed by Hull City Transport, Limited, Hull, P.Q. (Investigating Officer: R. H. Taber.)

2. The Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees on behalf of crew clerks, elevator operator, and red caps employed by the Canadian Pacific Railway Company at its Winnipeg Depot. (Investigating Officer: R. H. Hooper.)

3. The Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees on behalf of clerical employees employed by the Canadian Pacific Railway Company in the office of the District Accountant, Vancouver. (Investigating Officer: G. R. Currie.)

4. The Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees on behalf of red cap porters employed by the Canadian Pacific Railway Company at its Vancouver Depot. (Investigating Officer: D. S. Tysoe.)

5. Regional Council No. 2, International Brotherhood of Electrical Workers on behalf of employees of the Canadian National Railways employed on the electrical staffs of the m/v *Abegweit* and the m/v *Prince Edward Island*, operating on the Ferry Service between New Brunswick and Prince Edward Island. (Investigating Officer: L. Pepin.)

6. Division 279, Amalgamated Association of Street, Electric Railway and Motor Coach Employees of America for a unit of employees of the Ottawa Transportation Commission, comprising foremen, dispatchers, amusement park superintendent, barn clerks, and store clerks. (Investigating Officer: N. G. Price.)

7. The Canadian Brotherhood of Railway Employees and Other Transport Workers on behalf of unlicensed personnel

employed by the Canadian National Railways on ships in its Newfoundland Steamship Service. (Investigating Officer: B. H. Hardie.)

8. The Canadian Brotherhood of Railway Employees and Other Transport Workers on behalf of mates employed by the Canadian National Railways on ships in its Newfoundland Steamship Service. (Investigating Officer: B. H. Hardie.)

## REASONS FOR JUDGMENT

**Brotherhood of Locomotive Engineers, *Applicant,*  
and  
Canadian Pacific Railway Company, *Respondent,*  
and  
Brotherhood of Locomotive Firemen and Enginemen, *Intervener.***

This is an application made under the provisions of Section 19 (2) of the Industrial Relations and Disputes Investigation Act (hereinafter referred to as "the Act"), requesting this Board to prescribe a provision for the final settlement without stoppage of work of all differences between the Applicant and the Respondent and the employees covered thereby concerning the meaning or violation of a collective agreement to which the Applicant and the Respondent are parties.

This collective agreement governing rates of pay and working conditions for locomotive engineers on Eastern lines of the Respondent was signed on February 6, 1929, and has been subsequently amended from time to time as to rates of pay and rules. The agreement is of indefinite duration, and is subject to change on thirty days' notice.

The Applicant alleges in its application that "there presently exists a dispute between the parties to the agreement relating to the methods employed in compiling the engineers' seniority lists, and general grievances concerning the meaning or violation of Article 3 of the said agreement." The Applicant further states that the agreement does not contain a provision for the final settlement of differences concerning the meaning or violation of the agreement, as required by Section 19 (1) of the Act.

The Respondent in opposing the application states that in addition to the collective agreement referred to above, there is a subsisting agreement between the Railway Association of Canada, of which the Respondent is a member, and six railway unions, of which the Applicant is one, dated August 7, 1918, and amended by a further agreement dated April 15, 1921, hereinafter referred to as the "Board of Adjustment agreement", and binding on

The Board consisted of Messrs. Best, Complin, D'Aoust, Deschamps, Mosher, Picard and Taylor. The judgment of the Board was delivered by the Vice-Chairman as Acting Chairman of the Board.

both Applicant and Respondent, which provided for the establishment of a joint board of adjustment, known as the Railway Board of Adjustment No. 1, consisting of six members selected by the Railway Association of Canada and six members selected by the executive officers of the employee organizations who are parties to the agreement. The functions of this board of adjustment are set out in Section 8 of the Board of Adjustment agreement, as follows:—

"8. All disputes, including personal grievances, or controversies arising or pending under interpretation of wage agreements between officials of a railway and its employees covered by this agreement are to be handled in the usual manner by general committees of the employees up to and including the chief operating officer of the railway (or someone officially designated by him), when if an agreement be not reached, the Chairman of the general committee of employees may refer the matter to the executive officer of the organization concerned, and if the contention of the employees' committee is approved by such executive officer, then the chief operating officer of the railway and the executive officer of the organization shall refer the matter with all the supporting papers to the Board, which shall promptly hear and decide the case, giving due notice to the chief operating officer of

the railway and to the executive officer of the organization of the time set for hearing.”

Sections 13 and 14 thereof are:—

“13. All decisions of the Board shall be approved by a majority vote of all members of the Board, except that in the event of a member of the Board presenting a case, such member shall not vote upon the decision of the case, and in order that the voting strength of each side may be equal, a member of the opposite side of the Board shall refrain from voting.”

“14. After a matter has been considered by the Board, in the event a majority vote cannot be obtained, any six members of the Board may elect to refer the matter upon which no decision has been reached to a referee to be unanimously agreed upon by the Board, and in case of failure to agree, application shall be made to the Minister of Labour of the Dominion of Canada for appointment of a referee.”

The Respondent claims that the provisions of the Board of Adjustment agreement and the collective agreement between the Applicant and the Respondent of February 6, 1929, are complementary. The Respondent submits that the provision for the reference of disputes arising out of the wage agreement to the Board of Adjustment provides a procedure for the final settlement of differences between the Applicant and the Respondent and employees covered by the collective agreement arising out of the meaning or violation of the collective agreement of February 6, 1929, as fully and effectively as though this procedure was in fact written in as a term of the collective agreement of February 6, 1929, itself. The Respondent, therefore, asks for the dismissal of the application.

At the hearing before the Board, the Applicant's representatives agreed that disputes arising out of the collective agreement of 1929 have under past practice been referred to and dealt with by the Board of Adjustment No. 1 in accordance with the provisions of the Board of Adjustment agreement. The Applicant's representatives nevertheless contended that the procedure established by the Board of Adjustment agreement does not constitute a procedure for final settlement of differences between the parties to the agreement as required by Section 19 (1) of the Act. The Applicant pointed out that, where a dispute which has not been settled is sent forward by the Chairman of the General Committee of Employees to the Executive Officer of the employees' organization for submission to the Board of Adjustment, if the Executive Officer does not approve of the contention of the Committee of Employees, the Execu-

tive Officer may refuse to send it forward to the Board of Adjustment. Applicant's representative contended that the discretion thus vested in the Executive Officer of the union destroyed the effectiveness of the procedure as a provision for final settlement of differences.

The Applicant illustrates this objection by reference to a specific grievance relating to the seniority of an employee covered by the agreement which was pending at the time this application was made, arising out of the application of Section 3 of the collective agreement. Applicant's representative stated that this grievance had not been sent forward to the Board of Adjustment and had not, therefore, been disposed of because the Chief Executive Officer of the Applicant had refused to send that grievance forward to the Board of Adjustment for disposition. Applicant's representatives further indicated at the hearing that the Applicant would be quite satisfied if this Board established a procedure to dispose of this specific outstanding grievance, and that if this were done the Applicant would not press for the establishment of a general grievance procedure.

Subsections (1) and (2) of Section 19 of the Act are as follows:—

“19. (1) Every collective agreement entered into after the commencement of this Act shall contain a provision for final settlement without stoppage of work, by arbitration or otherwise, of all differences between the parties to or persons bound by the agreement or on whose behalf it was entered into, concerning its meaning or violation.”

“(2) Where a collective agreement, whether entered into before or after the commencement of this Act, does not contain a provision as required by this section, the Board shall, upon application of either party to the agreement, by order, prescribe a provision for such purpose and a provision so prescribed shall be deemed to be a term of the collective agreement and binding on the parties to and all persons bound by the agreement and all persons on whose behalf the agreement was entered into.”

It will be observed that the effect of subsection (1) of Section 19 is to place upon the parties to the completion of a collective agreement the duty to include therein a provision for final settlement of all differences between the parties concerning its meaning or violation. The necessity for such provision will be recognized in view of the provisions of Section 22 of the Act, which prohibit strikes or lockouts while a collective agreement is in effect.

It is only where there has been a failure to include in a collective agreement the

provision required by subsection (1) of Section 19 that the Board is authorized by subsection (2) of that section to prescribe a provision for this purpose upon the application of a party to the agreement.

Subsection (2) of Section 19 gives this Board no authority to prescribe a provision in substitution of an existing provision which is in compliance with the requirements of subsection (1). If that existing provision is unsatisfactory to either or both parties, the matter rests with the party or parties to move for appropriate revision of the same in accordance with the provisions of the agreement which are applicable to the opening of the agreement for the revision of the grievance procedure.

In the present instance the Board is of opinion that the provision in the Board of Adjustment agreement for settlement of disputes arising out of wage agreements between the parties to that agreement or any of them has application to the settlement of differences of the parties to the collective agreement between the Applicant and Respondent of February 6, 1929, as amended, as fully as though incorporated in the latter agreement. Both parties in the Board of Adjustment agreement stipulate that it shall so apply, and have in the administration of the agreement so applied it.

The Board is unable to agree with the contention of the Applicant that the procedure provided by Section 8 of the Board of Adjustment agreement is not a provision for final settlement of differences arising under the collective agreement of February 6, 1929, within the meaning of subsection (1) of Section 19 because it leaves discretion to the Chief Executive Officer of the employee organization, which has brought forward an employee grievance, to refuse to refer that grievance to the Board of Adjustment, where he does not approve of the contention of the Committee of Employees.

An employee grievance may be disposed of by (a) a settlement thereof by agreement between the employee representatives and the railway representatives; (b) by withdrawal of the grievance from negotiation or the dropping of the grievance by the employee representatives; or (c) by referral to and disposition by the Board of Adjustment in accordance with the provisions prescribed in the Board of Adjustment agreement.

Even if the Board had authority to prescribe a provision under subsection (2)

of Section 19 for final settlement of differences under this collective agreement, it would be difficult to envisage a situation which would warrant the Board in prescribing a procedure which would deprive the employee representatives responsible for bringing forward employee grievances of the exercise of a discretion to withdraw or drop any such grievance at any stage of the grievance procedure prior to the submission thereof to final arbitration.

With regard to the proposals put forward by the Applicant at the hearing for the establishment of a procedure for final arbitration of a specific pending grievance, it is pointed out that this Board has no authority under Section 19 of the Act to prescribe such a procedure. The Board's authority under Section 19 (2) extends solely to the establishment of a provision having general application for settlement of all differences between parties to an agreement or persons bound thereby concerning its meaning or violation.

The Applicant in its submission made reference to a decision of the Wartime Labour Relations Board establishing provision for settlement of differences arising under a collective agreement between the Wabash Railway and certain railway unions (DLS 7-624) as a precedent supporting the present application. The Wabash Railway was not a party to the Board of Adjustment agreement. In consequence, the provisions of that agreement for disposition of grievances did not apply to the collective agreements between the Wabash Railway and the applicant unions in that case. As there was no provision in the Wabash agreement for settlement of differences, the Board prescribed one. The decision in that case is therefore not relevant to the disposition of the present application.

For the above reasons, the application is rejected.

## Dissenting Opinion

### Canadian Brotherhood of Railway Employees and Other Transport Workers, *Applicant*, and Canadian National Railways, *Respondent*.

This is an application by the Canadian Brotherhood of Railway Employees and Other Transport Workers for certification of a group of employees of the Staff Record Bureau employed by the Canadian National Railways at Winnipeg, Manitoba.

Several objections were raised by the company against the certification of the Brotherhood as bargaining agent for the employees affected by this application, but, as we see it, the principal objection is that the proposed unit is not appropriate for certification on the ground that the employees involved are employed in a confidential capacity in matters relating to labour relations. At any rate, this is the decision of the majority of the Board. We regret that we cannot concur in this decision, and we wish to state our reasons therefor, as we regard this as of considerable importance.

Section 2 (1) (i) defines an employee as "A person employed to do skilled or unskilled manual, *clerical* or technical work, but does not include a manager or superintendent, or any other person who in the opinion of the Board exercises management functions or is employed in a confidential capacity in matters relating to labour relations."

The company contends that the employees in question are "employed in a confidential capacity in matters relating to labour relations." Both the company and the Brotherhood agree that the employees in question perform *clerical* functions only. The parties also agree that the employees in question are employed on the *administrative* branch of the company's functions rather than on the *policy* branch. Their work savours as being "confidential" only in the sense that at the time that an employee is taken on, or in the event of any subsequent change in his status, he must complete certain forms which reveal certain confidential information about the man, such as age, legitimacy of birth, or otherwise, etc. The most that can be said for the company's argument is that these employees have access to information concerning the background of the company's employees which are personal to the employees. It is a fact, however, that none of this information enters into the picture in any sense whatever in formulation of labour relations policy. In fact, the labour relations policy of the company has nothing whatever to

On October 13, 1949, the Canada Labour Relations Board rejected an application from the Canadian Brotherhood of Railway Employees and Other Transport Workers for certification as bargaining agent for a unit of employees of the Canadian National Railways employed in the Regional Staff Record Bureau at Winnipeg (L.G., Dec., 1949, p. 1551). The application was rejected for the reason that the bargaining unit proposed in the application was inappropriate. The Board did not issue written Reasons for Judgment, but at the next meeting of the Board, held on November 15, 1949, four members of the Board tabled the Dissenting Opinion which is reproduced herewith.

do with these records. This is a finding of fact based upon the evidence at the hearing. It is indisputable.

It is important to study the context of the exclusionary portion of the definition of "employee". The definition after including a broad and wide gamut of employable persons excludes "a manager, superintendent, or any other person who, in the opinion of the Board, exercises management functions or is employed in a confidential capacity in matters relating to labour relations." A study of the above exclusions indicates that Parliament intended clearly to exclude employees who have supervisory or management functions and in deciding whether or not a person is employed in a confidential capacity in matters relating to labour relations, his position in respect of the supervisory or management aspect of the business is wholly relevant. We believe that the expression "employed in a confidential capacity in matters relating to labour relations" must be read together with the preceding words in the exclusionary portion of the subsection.

This Board, in our opinion, must move very carefully before depriving any employee from the benefits of this Act. These employees do not have *anything whatever* to do with labour relations of the company, that is to say, with the relationship between the company and the employees. The clerks in question are employees of the company and are entitled to the benefits and privileges of the Act.

As they do not have the remotest connection with labour relations matters in the Canadian National Railways, which is handled by a separate department entirely, and which deals with matters that are entirely foreign to the work of the unit of employees in question, we cannot see how this Board can possibly regard them as being "confidential employees in matters relating to labour relations". Their work has nothing to do whatever with negotiation of collective agreements; their records have never been consulted in the past in relation to the formation of collective agreements. If one of these employees should betray his trust and divulge confidential information, the company clearly can dismiss him; membership in a labour union does not conflict, in any conceivable manner, with an employee's duties or responsibilities to his employer.

Many other employees of the company, who are members of the Brotherhood and on whose behalf collective agreements have

been concluded for many years, handle information on behalf of the Canadian National Railways which is extremely confidential. Such information may not have anything to do with employees, but it is, nevertheless, of equal importance to the Company. The simple fact of the matter is that these employees do work of a clerical, mechanical, administrative type, and it is stretching the meaning of the exclusionary provision of the Act completely beyond its context to suggest that these employees are employed in a confidential capacity in matters relating to labour relations. We believe that this was never intended by Parliament.

We dissent, therefore, from the majority decision and are of the opinion that this application should have been allowed.

## Conciliation and Other Proceedings Before the Minister of Labour

### Conciliation Officer Appointed

On November 25, 1949, the Minister of Labour appointed a Conciliation Officer to deal with a dispute between the Railway Express Agency, Inc., New York, N.Y., and the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, affecting employees of the company in Canada. (Conciliation Officer: R. Trépanier.)

### Agreement Facilitated by Conciliation Officer

On November 21, 1949, the Minister of Labour received a report from G. R. Currie, Conciliation Officer, indicating the settlement of matters in dispute between the British Columbia Towboat Owners'

Association, Vancouver, and the Canadian Merchant Service Guild, Inc. (L.G., Dec., 1949, p. 1554).

### Conciliation Board Appointed

On November 24, 1949, the Minister of Labour appointed a Board of Conciliation and Investigation to deal with a dispute between the National Harbours Board and the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, affecting employees in the general maintenance forces and grain elevator system of the Board at Quebec, P.Q. The Conciliation Board was appointed following receipt of the report of R. Trépanier, Conciliation Officer (L.G., Dec., 1949, p. 1554). Constitution of the Board had not been completed at the end of the month.

## Recent Decisions of Canadian Railway Board of Adjustment No. 1

The Canadian Railway Board of Adjustment No. 1 has released its findings in cases heard on August 9 and September 13, 1949.

**Case No. 582.**—Canadian National Railways (Atlantic Region), *ex parte*, versus the Order of Railway Conductors and the Brotherhood of Railroad Trainmen, *ex*

*parte*, with respect to the assessment of discipline against a conductor, baggageman, brakeman and flagman, members of the crew of a passenger pool train operating between Campbellton and Moncton, which was involved in a head-on collision with a light engine at Barnaby River, roughly ten miles from Newcastle, on July 26, 1948.

The company contended that these members of the train crew were discharged from the service because of "pronounced carelessness, lack of interest, and rule violations, in the handling of this important train" in that they failed (1) to obey a "run-late order" handed to the conductor at Newcastle on the morning of the accident; (2) the conductor neglected to have the other crew members read the orders; (3) each of the four men were careless in comparing their watches with the standard clock at Campbellton (there was a variation of two minutes and two seconds between the clock and the conductor's watch; he had registered his watch as correct at the beginning of the run); (4) the conductor, the baggageman and the flagman took no action to ascertain if the train was approaching or passing Barnaby River ahead of time; (5) the brakeman failed to observe the rule under which "he should have taken precautions for the train's protection."

The employees in presenting their case referred to certain incidents that occurred on the train, notably between Newcastle and Barnaby River, which had diverted the attention of the conductor and his assistant a few minutes before the collision occurred. These incidents, it was claimed, should lessen the blame for the infraction of some of the rules.

"The accident," they asserted, "was definitely the result of an oversight." They contended that "having regard for their many long years of faithful service with the railway and their previous good records, the permanent discharge of these four employees with the loss of retiring allowances . . . is entirely too severe a penalty for their part in the accident. . . ." They asked to be reinstated in their former positions with full seniority rights.

Both parties to the dispute submitted further oral and written evidence to the Board.

The decision of the Board was that the contention of the employees was not sustained. However, the Board strongly recommended that the case be further considered by the railway with a view to the reinstatement of the men in some capacity in train or yard service.

**Case No. 583.**—Concerning National Railways (Western Region), *ex parte*, and the Brotherhood of Locomotive Engineers, the Brotherhood of Railroad Trainmen, the Order of Railway Conductors of America and the Brotherhood of Locomotive Firemen and Enginemen, *ex parte*, in a dispute with respect to the assessment of discipline assessed train and engine crew of passenger

train No. 3 as the result of a head-on collision at Zelma, Sask., on August 17, 1948.

According to the company's statement to the Board, "the accident was thoroughly investigated after which the men involved were properly dismissed." The employees took exception to the finality of the discipline assessed, but not to its quality; "in other words, their submission is simply a plea for leniency." The company claimed further, "that the assessing or withdrawing of employees' discipline is a matter that should rest solely with the railway. . . ."

The employees contended that "one reason for the mishap appears to have been partial confusion in the minds of members of the crew as to the requirements for the proper movement of their train at Zelma in accordance with the rules and orders held." There were indications, it was held, that some members of the crew were convinced that the other train involved in the accident had right over all trains except No. 3, which they were operating; while others interpreted the signals displayed as indicating "a change of meet" between the two trains.

In requesting leniency, the representatives of the employees stated that "personal injury and property damage resulting from the collision was not excessive" and the employees concerned all had excellent records with the railway, were men of outstanding character and "would prove to be valuable employees if given further opportunity for service." They pointed out that as a result of the discipline they had already lost approximately one year's earnings with the railway, had suffered "great mental distress", and the continuance of their dismissal would cause "further hardship to them and their dependents in the curtailment of all future right or benefit in pension. . . ."

The parties to the dispute presented further written and oral evidence.

In its decision the Board disclaimed any desire or intention of overruling the administration of discipline based upon a proper and complete investigation by the company. While not sustaining the contention of the employees, the Board felt that having regard to all the circumstances, the time out of service already sustained was adequate discipline in this case and recommended that the railway give consideration to the reinstatement of the men, effective on or before August 16, 1949.

**Case No. 584.**—Concerning the Canadian National Railways (Atlantic Region) and the Brotherhoods of Locomotive Engineers, *ex parte*, in connection with the discharge

of a locomotive engineer following a head-on collision near Bic Station on September 7, 1947.

The accident occurred on Rimouski S.D., extending between Rivière du Loup and Mont Joli, P.Q., 83.44 miles, a single track line, over which trains are operated by timetable and train orders. Train 2/744, engine 6103, in charge of the engineer in the case, collided head-on with freight extra 6132 west, resulting in injury to three employees, demolition of engines 6103 and 6132, derailment of 13 cars on 2/744 and four on extra 6132 west, and damage to track, rendering it impassable for over 22 hours.

Following investigation, the engineman was discharged for "failure to have his brakeman and fireman read aloud and know the contents of the train orders, in accordance with Rule 214, his serious exceeding of speed restrictions by a wide margin, and his approaching Bic, where yard limits are in effect, without train under control."

The employees on several occasions requested the Railway to consider reinstatement of the engineer but the Railway declined to do so. The discharge was "warranted and justified," it claimed, contending that the accident was "purely the result of flagrant disobedience to the rules," and that the engineer did not "merit consideration for re-employment with the Railway as engineman or in any other capacity."

The employees contended that the engineer "got confused in the orders which he held," and that the accident was "purely a mistake, not being done deliberately." He was a young engineer with limited experience, they stated, and if given a further opportunity would "prove himself worthy." They felt that under the circumstances the penalty imposed was excessive, and requested the Board's "favourable consideration towards his reinstatement."

The Board ruled that the "contention of the employees be not sustained," but recommended that the Railway give further consideration to the reinstatement of the employee in engine service.

**Case No. 585.**—The Canadian National Railway (Central Region) versus the Brotherhood of Locomotive Engineers, *ex parte*, concerning the discharge of a locomotive engineer.

In the "statement of fact" submitted to the Board by the Railway, it was stated that an "extra" collided with a yard engine in the Mimico terminal on June 13, 1948. The engineman of the "extra" was discharged from the service for his responsibility in connection with the accident and for violation of rules 93, 501 (d) and 504.

These rules cover certain of the detailed instructions for trainmen handling trains moving in multiple-track terminals.

The Railway in its argument to the Board explained that the "extra" was a train consisting of 63 loads, 19 empties, 4,597 tons, drawn by a diesel locomotive, Belleville to Mimico. The claim was made that the engineer in charge approached the end terminal at too great a speed and in partial disregard of the signals displayed. As a result, he was unable to stop the train before passing a "stop and proceed" signal.

The Railway pointed out further that the engineer of the "extra" had received an intensive course of training in the operation of diesel locomotives, which, coupled with 27 years experience as an engineer in charge of steam locomotives, qualified him to operate diesel locomotives safely. It was shown also that the engineer had signed "the appearance sheet certifying his knowledge of the road, that he had had sufficient rest and that he was in every way fit for duty." Finally, the Railway quoted the rules governing appeals from disciplinary decisions requiring that such appeals be made within 15 days of the receipt of the decision. It was claimed that in this case the first request for a reconsideration was not received until nearly three months later, and that it did not suggest that the discharge of the engineman was not justified, but asked that he be given another chance and reinstated in the service.

The statement presented by the Brotherhood claimed that "some delay" had been caused by brake trouble while the extra was en route to Mimico; that the engineer had followed the instructions of the diesel engine instructor in controlling the speed of the train, and that the brakes did not hold the train sufficiently to stop the train before it passed the "stop and proceed" signal.

The Brotherhood contended that the engineer had not had previous experience on diesels drawing heavy trains and that it was reasonable to assume that he misjudged the speed of his train. It was pointed out too, that the engineer had entered the service of the railway in 1916 as a fireman, had been promoted to engineer in 1921 and that his service previous to the accident had been satisfactory. He was now 60 years of age and unsuited for other types of employment. His reinstatement into the service effective so as to restore his former service for pension purposes was, therefore, requested.

The parties to the dispute presented additional oral evidence to the Board.

The Board decided that the contention of the employee was not sustained, but strongly recommended reinstatement of this engineer in some capacity in engine service.

**Case No. 586.**—Concerning the Canadian National Railways (Western Region) and the Brotherhood of Railroad Trainmen in a dispute regarding the discharge of a trainman in connection with a rear-end collision.

The "joint statement of facts" explained that the lead train involved in the collision was running approximately nine hours late on July 3, 1948. It was stopped in emergency on account of the engine breaking away from the train. This involved a further loss of time of more than an hour while repairs were being made. Engine whistle signal had sounded calling in trainman (flagman). While he was returning to his train another freight train collided with the rear end of the standing train.

An investigation of the accident resulted in the assessment of discipline against various employees, and the trainman (flagman) of the standing train was discharged for failure to provide rear protection for his train, as required by the rules.

The Brotherhood contended that the trainman (flagman) had performed his duties as prescribed by the rules and that this was proved by statements made by other crew members involved. The request was made that the discharged flagman be reinstated in the company's service with full seniority rights unimpaired, and that he be paid for all time out of service subsequent to the accident.

The Railway held that the full investigation had indicated that the trainman (flagman) had not provided full protection for the rear of his train and, consequently, had been discharged.

Both parties to the dispute presented additional evidence to the Board.

The Board decided that the trainman be reinstated in the service with seniority rights unimpaired, but without pay for time out of service.

**Case No. 587.**—Canadian Pacific Railway Company (Pacific Region) versus the Brotherhood of Railroad Trainmen concerning a dispute relative to compensation applicable to passenger crews who were required to handle carload lots on certain trains between Vancouver and Nelson.

The "joint statement of facts" stated that since October, 1946, the company had handled continuously carload lots of l.c.l. freight under car movement waybills (slip bills) on certain trains running between Vancouver and points in the interior of British Columbia. Passenger crews on these trains claimed freight rates for handling these cars on regular passenger trains.

The employees contended that trains handling a combination of freight and passenger traffic came under the category of mixed train service and, consequently, the train crews that handled such trains should be compensated at mixed train rates, retroactive to October, 1946.

The company claimed that the crews operating such trains were not entitled to freight rates inasmuch as the cars in which these freight shipments were handled were equipped for passenger train service and were handled on passenger train schedules. Moreover, waybills were forwarded under cover direct to destination, the cars moving on slip bills, and the crews were not required to handle the contents of the cars in any manner.

The parties in the dispute appeared before the Board and presented additional evidence.

The Board decided that the employee's contention was not sustained.

# COLLECTIVE AGREEMENTS AND WAGE SCHEDULES

## Recent Collective Agreements

A file of collective agreements is maintained in the Economics and Research Branch of the Department of Labour. These are obtained directly from the parties involved and from the Industrial Relations Branch of the Department. A number of those recently received are summarized below.

Agreements made obligatory under the Collective Agreement Act in Quebec, are summarized in a separate article following this.

### Manufacturing

#### Vegetable Foods

TORONTO, ONT.—CHRISTIE, BROWN AND COMPANY LIMITED AND CHRISTIE'S BREAD LIMITED AND THE BAKERY AND CONFECTIONARY WORKERS' INTERNATIONAL UNION OF AMERICA, FACTORY BAKERS' LOCAL 264.

Agreement to be in effect from May 1, 1949, to April 30, 1950, and thereafter from year to year until a new agreement has been signed or until this agreement has been cancelled or terminated by either party upon 30 days' notice. The company recognizes the union as the sole collective bargaining agent for all eligible employees. There shall be no discrimination, interference, restraint or coercion exercised or practiced by either of the parties in respect to the employees' right to membership or non-membership in the union.

*Check-off:* the parties agree to establish a voluntary revocable check-off for the collection of union dues.

*Hours of work:* biscuit department—9 hours per day Monday through Friday, a 45-hour week; cake department—8½ hours per day Monday through Friday, 5½ on Saturday, a 48-hour week; bread department—8 hours per day Sunday through Friday, a 48-hour week; biscuit department shipping—8 hours per day Monday through Friday, a 40-hour week; bread and cake shipping—8 hours per day, 6 days a week; bread—Sunday through Friday, cake—Monday through Saturday. *Overtime:* time and one-half shall be paid for all time worked in excess of the regular daily or weekly hours, "whichever is greater, but not both", and for all work performed above 40 hours in the bread and cake departments and above 36 hours in the biscuit department during a week in which either one of the 8 *paid holidays occurs*. Any employees working two hours or more overtime on any day shall be allowed a paid lunch period not to exceed 20 minutes; if not advised of such overtime the previous day the employee shall be entitled to a lunch ticket of 45 cents. All overtime shall be on a voluntary basis. *Rest periods:* all employees will be granted a rest period of 15 minutes for each 4 or 4½ hour shift.

The company will provide at least two new *uniforms* for each employee per year, the uniforms to be paid for and maintained by the company.

*Jury duty pay:* the company agrees to pay a full days' pay at straight time for each working day an employee serves on any jury, but the employee will be required to turn in to the company the jury fees.

*Vacations with pay:* one week for employees with one years' service, two weeks for employees with three or more years' service, and three weeks for employees with 20 or more years' service.

*Hourly wage rates* for certain classes: biscuit department—girls (new) 59 cents, boys (new) 68 cents, men (new) 78 cents; soda bakeshop, mixing—dough mixer \$1, helper 95 cents; baking—machine captain; bakers \$1.03, peelers, extra oven men 98 cents, drawmen, sweeper 93 cents, rollerman 90 cents, stackers 88 cents; soda packing (female)—66 to 69 cents; sweet bakeshop, mixing-head mixer \$1.08, mixer 98 cents, flat brakemen and mixer 95 cents, flour dumper 96 cents, Ritz mixer 93 cents, baking—machine captain, baker (gas oven) 98 cents, upright and flat brakeman, pan feeders, oven feeders, oven take out 90 cents, oven feeders (Ritz), pan greaser 93 cents; sandwich and enrobing department, female—s and w i c h machine operator 74 cents, assistant 72 cents, sandwich packers 69 cents, bundlers, service and supply, carton formers (hand) 66 cents, truckers 78 cents; male—icing and marshmallow mixer, enrober man 98 cents, floormen 88 cents; maintenance department—electrician \$1.30, helper \$1.05, apprentices 86 cents; painters \$1.05, helpers 98 cents, engineers third class \$1.15, fourth class \$1.05, carpenters \$1.15; cake department, assembly—assemblymen 93 cents, assembly helpers 88 cents; fruit cleaning (male) 83 cents; (female) 66 cents; mixers 95 cents; scalers, bakers, icing mixers 93 cents, donut machine operator \$1.03, cleaners 92 cents, wrapping belt feeders 78 cents; icing—belt feeder and take off 66 cents, icing machine operator, hand icers 68 cents, cake decorators 70 cents; jam room—jam makers 95 cents, helpers 91 cents; bread department—girls (new) 61 cents, boys (new) 71 cents, men (new) 81 cents; dough mixers \$1.03, helpers \$1 and 98 cents; sponge mixer \$1, assembly man, divider operators, moulder operators, wrapper operators first 98 cents; wrapper operators second, bakers' helpers 96 cents; dough panners 90 cents, oven supervisors \$1.03, checkers 93 cents, wrapper feeders, conveyor men, cleaners 92 cents, relief man \$1.01; females doing light men's work 83 cents, carton formers, wrappers and packers 73 cents. For most classifications the above rates represent a 5 cent per hour increase over the previous rates.

New, inexperienced employees will be advanced 3 cents per hour every month until they reach the maximum of their classification not later than 3 months from the date of their employment.

Provision is made for *seniority rights, grievance procedure, and safety and health.*

VERNON, B.C.—BULMANS LIMITED AND FRUIT AND VEGETABLE WORKERS' UNION, LOCAL 6.

Agreement to be in effect from August 14, 1949, to August 13, 1950, and thereafter from year to year, subject to notice. The employer recognizes the union as the sole collective bargaining agency for all eligible employees.

**Union security:** the employer will give preference to members of the union in good standing for continued employment, promotion, and transfer and in the hiring of new employees. No union member may be laid off until all non-members have been laid off and no non-members may be re-employed until all competent members of the union have been offered re-employment. This provision shall not apply to employees listed on seniority lists, prior to August 14, 1949. Any employee who at the date of this agreement is, or who hereafter during the life of this agreement becomes, a member of the union shall, as a condition of continued employment, maintain membership in good standing during the life of this agreement, provided that he may withdraw from the union between July 15 and August 14 of any year, that this agreement is in force.

**Check-off:** the "Rand Formula" is part of the agreement.

**Hours of work:** from June 1 to November 30, any 8 or any 9 hours between 7 a.m. and 6 p.m. for a day shift and between 7 p.m. and 5 a.m. for a night shift. **Overtime:** between June 1 and November 30 all overtime in excess of 9 hours shall be paid for at the rate of time and one-half, and all time in excess of 11 hours at double time; between December 1 and May 31 all overtime in excess of 8 hours in any one day or 44 hours in any one week shall be paid for at the rate of time and one-half and all time worked in excess of 10 hours at double time; time and one-half will be paid for work on Sundays and on 7 specified holidays. **Rest period:** optionally at the request of the company, an individual or collective 10 minutes' rest period, morning and afternoon, with pay for all workers except those engaged in piece work, shall be allowed.

**Vacation with pay:** permanent employees shall qualify for one week after working for one year (not less than 250 days); seasonal employees shall qualify for vacation, or pay in lieu of vacation, on completing 6 days work, pay in lieu of vacation to be computed at the rate of one-eighth of a days pay for each week worked.

**Hourly wage rates: male**—scaleman or receiver 87 to 94 cents, mechanics 87 to 98 cents; mechanics helpers, dumpers, pulp makers, ketchup makers, retort man, tunnel man, label machine operator, fireman, truck drivers 82 to 87 cents; canco man (certified) 87 to 93 cents, line man 93 to 98 cents, warehouseman and shipper 82, to 94 cents, engineers third class and millwrights \$1.01 to \$1.07, engineers fourth class 96 cents to \$1.01, mobilift drivers 82 to 90 cents, general labour 74 to 82 cents, labour under 18, 61 to 67 cents; female—ticket punchers and inspectors, mould counters 72 cents, canco operators 66 to 82 cents, tray spreaders 66 to 72 cents, general help 66 cents, new help —2 weeks 60 cents, filling machine operators 66 cents; machine operators, apples—peeling and coring 66 cents, tomatoes 9 cents per pan. With one exception, the rates are the same as in the previous agreement. All female workers placed on any job or any

classification usually occupied by a male worker, must receive the rate for the male classification, provided she renders equal service. **Night shift bonus:** a premium of 3 cents per hour shall be paid to all workers on a night shift; 5 cents extra will be paid for working in freezing temperatures for 3 hours or more continuously. First-aid workers with an unexpired industrial certificate shall be employed when necessary and paid 5 cents per hour over their regular rate of pay.

Provision is made for *grievance procedure, seniority rights and safety and health.*

### Pulp, Paper and Paper Products

QUEBEC, P.Q.—ANGLO-CANADIAN PULP AND PAPER MILLS, LIMITED, AND THE QUEBEC PROVINCIAL COUNCIL OF PAPER MILLS UNION, THE INTERNATIONAL BROTHERHOOD OF PAPER MAKERS, AND THE INTERNATIONAL BROTHERHOOD OF PULP, SULPHITE AND PAPER MILL WORKERS.

Agreement to be in effect from May 1, 1949, to April 30, 1950, and thereafter from year to year, subject to notice. The company recognizes the unions as the sole bargaining agencies for all employees that come under their jurisdiction. New employees shall become members of the union within 30 days and all employees shall, as a condition of continued employment, maintain such membership in good standing.

**Hours of work:** 8 per day, a 48-hour week for both day and shift workers. **Overtime:** day workers—time and one-half for work performed between 5 p.m. and 8 p.m. (except when stagger crews are formed for special jobs), on Sundays and when called in for work on their day off; in the latter case and in the case where an employee, after having completed his shift and punched out, is called in for repair work between 5 p.m. and 6.30 a.m., they will receive a minimum of 4 hours' time. Four workers—time and one-half for Sunday work and if, after completing their shift and having been replaced by their mate, they are asked to work overtime on work other than regular shift work. When ordered to report for work and then sent home they are to receive not less than 2 hours pay. All hourly paid employees obliged to work on 4 specified *paid holidays* will be entitled to time and one-half for the time worked on such holiday and to one day off with pay for 8 hours.

**Vacations with pay:** one week after one year's service, two weeks after 5 years' service and three weeks after 20 years' service; the provision for an additional week after 20 or more years' service is a new one.

**Sick leave with pay:** after one year's service 6 days per year at equivalent of group insurance benefits, less normal income tax deductions, if sick for not less than 12 consecutive working days.

**Hourly wage rates for certain classes:** paper mill department—machine tender \$2.33, back tender \$2.13, third hand \$1.74, fourth hand \$1.35, fifth hand \$1.25, sixth hand \$1.08, rewinder man \$1.35; control department—newsprint moisture tester, newsprint quality tester, pulp quality tester \$1.11, consistency tester \$1.04, sulphite moisture tester \$1.08, freeness tester \$1.06; stores department—electric trucker, general helper \$1.01, truck driver \$62.50 per week; mixing

room department—meter man \$1.09, beater man \$1.01; steam plant department—heating and ventilating man \$1.27, turbine room operator \$1.22, electric boiler operator \$1.14, others \$1.01 to \$1.09; news sheet cutter operator department—operators, inspectors \$1.12, others \$1.01 to \$1.07; wood handling department—\$1 to \$1.05; sulphite mill—cooks \$1.49, stock runner \$1.27, helpers \$1.01 to \$1.24, blow pit man \$1.07, limestone and sulphur man \$1.04, others \$1 and \$1.01; yard department—loco engineer \$1.22, brakeman \$1.09, labourers \$1; electrical department—electricians \$1.28 to \$1.50, winderman \$1.37, sub-station operator \$1.23; mechanical departments—machinists \$1.21 to \$1.37, paper mill millwrights \$1.24 to \$1.43; other millwrights, welders, blacksmiths, pipefitters \$1.21 to \$1.31; tinmiths \$1.21 to \$1.35; carpenters, riggers \$1.21 to \$1.29; pipecoverers \$1.29 and \$1.31; painters \$1.05 to \$1.15, painter helpers \$1.02; other helpers \$1.13; apprentices \$1.02; oiler millwrights \$1.12 to \$1.27, inside labourers \$1.01. Some of the above rates represent an increase of from 1 to 3 cents per hour over the rates previously in effect. A premium of 5 cents per hour will be paid for handling dry sulphur by hand in the hold of a vessel or in a railway car to bulk storage.

Provision is made for *seniority rights* and *grievance adjustments*.

### **Non-Metallic Minerals, Chemicals, etc.**

NEW GLASGOW, N.S.—STANDARD CLAY PRODUCTS LIMITED AND UNITED STEELWORKERS OF AMERICA, LOCAL 1231.

Agreement to be in effect from August 8, 1949, to August 7, 1950, and thereafter from year to year, subject to 30 days' notice. The company recognizes the union as the sole collective bargaining agency for those employees of the company who are members of the union. The company and the union agree that there shall be no discrimination, interference, intimidation or coercion because of membership or non-membership in the union.

*Check-off:* the company shall deduct union dues weekly from the pay of all union members and remit same to the union.

*Hours of work:* the standard working time shall be 8 hours per day Monday through Friday, 5 hours on Saturday, a 45-hour week; for shift workers—8 hours per shift, 6 days a week. *Overtime* at the rate of time and one-half shall be paid for work in excess of the standard working time and for work on Sundays and 8 specified statutory holidays (except to kiln burners, watchmen and contract workers), provided that continuous shift employees shall be paid at overtime rates only for the hours worked in excess of 6 standard shifts in any one week; in the case of those who are regularly paid for more than 8 hours per shift the time credited shall be 8 hours for the day that is paid at the rate of time and one-half.

*Vacation with pay:* the plant will be closed down for a period of one week during the summer months and employees with over 6 months' service prior to June 30 will be granted vacation with pay, the pay to equal 2 per cent of their earnings for the calendar year ending December 31 of the preceding year. Employees with seniority of 5 years or more will be paid 3 per cent of their earnings.

*Hourly wage rates:* dryers 72 to 76 cents; man clinking kilns, man unloading boiler

coal, elevator operator 71½ cents; first dry pan, moulder, night watchman, boiler firemen, men pipe turners, men pipe setters, men pipe finishers, truck drivers 76 cents; engineer, first wet pans 80 cents; second wet pans 73½ cents; repairman 84 cents; carpenter 82 cents; kilns: draw 4½ hours, set 5½ hours, 85 cents to \$1.02; kiln firemen 79 cents; man greaser 78 cents; men lifting off at press 73 cents; yard men 72 cents; tractor operator 85 cents; labour 71 cents; unloading fire-brick \$1.22 per M. The above rates are 3 cents per hour higher than in the previous agreement.

An employee may have deductions made for payment to a doctor of his own choosing, provided that at least 10 employees choose the same doctor and that the doctor has signed an agreement with the union stating the services to be rendered.

Provision is made for *seniority rights* and *grievance procedure*.

NIAGARA FALLS, ONT.—LIONITE ABRASIVES LIMITED AND INTERNATIONAL CHEMICAL WORKERS' UNION, LOCAL 175-F.

Agreement to be in effect from June 26, 1949, to December 15, 1950, and thereafter from year to year, subject to notice, except that the question of wage rates may be re-opened again after the original term of this agreement shall have been in effect for a period of nine months and after five months of any renewal period of one year shall have elapsed. The company recognizes the union as the exclusive collective bargaining agency for all eligible employees. There shall be no discrimination, intimidation, restraint or coercion because of membership or non-membership in the union.

*Check-off:* the company agrees to deduct union dues from the pay of all employees and to remit same to the union. Each new employee hired after the date of this agreement shall authorize such deduction in writing as a condition of employment and deductions shall commence within eight weeks of the starting date.

*Hours:* the standard work week shall be an average of 42 hours for all employees, to be worked on such days and between such hours as the company shall, from time to time, appoint. A 15 minute *rest period* at 11 a.m. 6 p.m. and 2 a.m. for all employees shall be continued.

*Overtime:* time and one-half shall be paid (a) for all hours worked in excess of 8 hours in any day or 42 hours in any week; weekly overtime for all employees, other than maintenance department, will apply to all hours worked in excess of 40 for three-quarters of the weeks and 48 for one-quarter of the weeks and the schedule of the work crew in which the employee finishes the payroll week shall govern; (b) for all hours worked by a day worker on payroll days starting on Sunday; (c) for all hours worked by a shift worker on the seventh consecutive payroll day, worked by an individual in a payroll week. Double time will be paid for all work performed on 7 specified *paid holidays*.

*Vacation with pay:* one week to employees with one year's seniority, 2 weeks to employees with 3 years' seniority and 3 weeks to employees with 15 years' seniority prior to September 15 in the current year, with pay equal to 2 per cent, 4 per cent and 6 per cent respectively of the employees' gross earnings during 52 weeks ending immediately before April 1 of the current year.

*Hourly wage rates* for certain classes: general labour \$1.06 to \$1.10; lionite plant—abrasive selectors \$1.10 to \$1.20; furnace preparation man, feed man \$1.13; screen man \$1.10; crusher operator \$1.12; crane man \$1.18; mix man \$1.14; ingot breaker \$1.16; furnace operator \$1.21; carbonite plant—furnace attendant \$1.21; mix man, drier operator \$1.15; car loader and unloader \$1.12; helpers \$1.10; crane man \$1.18; electricians, mechanics, machinists and welders—mechanical leader \$1.36, class A \$1.31, class B \$1.22; class C \$1.13, helper \$1.10, helper and storekeeper \$1.12. An *off-shift premium* of 5 cents per hour will be paid for the first 8 hours of work started between 12 noon and 7.59 p.m., and of 7 cents per hour for the first 8 hours of work started between 8 p.m. and 3.59 a.m.

Provision is made for *seniority rights* and *grievance procedure*.

**HAMILTON, ONT.—THE SOVEREIGN POTTERS LIMITED AND NATIONAL UNION OF POTTERY WORKERS, LOCAL 4 (CCL).**

Agreement to be in effect from May 1, 1949, to April 30, 1950, and thereafter from year to year, subject to notice. *Union shop*: effective 30 days after signing this agreement or, in the case of new employees, after being employed for 30 days all employees are required to become members of the union and to remain in good standing for the duration of this agreement as a condition of employment.

*Check-off*: the company agrees to a compulsory irrevocable dues-deduction arrangement and all union initiation fees, monthly dues, assessments or levies shall be deducted monthly from the first pay of all eligible employees.

*Hours*: 9 per day, 5 days a week, a 45-hour week, except in the case of boilermakers, decorating kiln, kiln firemen, etc., when the hours of work shall be 8 per shift, 6 shifts a week. *Overtime*: all time worked in excess of standard working hours in any one shift and on Saturdays (except in the case of watchmen, boilermakers and continuous shifts) shall be paid for at the rate of time and one-half for the first four hours and at double time thereafter. All time worked on Sundays (except in the case of watchmen, etc.) and on 8 *paid statutory holidays* shall be paid for at the rates of double time and double time and one-half respectively. Overtime shall be optional with the employee unless given 24 hours' notice. On statutory holidays it shall be entirely at the option of the employee (except in the case of watchmen, etc.). All employees required to work two hours or more overtime before or after completing a standard work shift shall be given a meal allowance. There shall be a 10 minute *rest period* in the first and last half of all shifts.

*Vacations with pay*: one week to employees with less than 2 years' service as of June 30, two weeks to employees with 2 or more years' service, with pay equal to 2 per cent and 4 per cent respectively of gross annual earnings.

*Hourly wage rates*: minimum hiring rate for all male employees 93 cents, for female employees 72 cents; minimum after completion of probationary period for male employees \$1, for female employees 80 cents; charge hands 10 cents above maximum rate for class of work under his direction. A *shift bonus* of 5 cents and 7 cents per hour

shall be paid for time worked on afternoon and night shifts respectively. The principle of equal pay for equal work shall apply, regardless of sex or age.

*Accident compensation*: when an employee is injured in the performance of duties during working hours, the company shall pay such employee the difference between the Workmen's Compensation Board payment and his regular wage rate.

A *group retirement plan* is part of this agreement. The costs of this plan are to be shared between the employer and the employee. The normal retirement age is 60 for females and from 65 to 70 for males. Males become eligible after 3 years of service and age 25 or over, females after 5 years of service and age 25 or over. A *life insurance and health plan* shall become part of this agreement. Its cost is to be borne jointly by the employees and the employer. The plan includes: (a) *Group Life Insurance* covering death and permanent disability prior to age 60. In the event of leaving employment an individual life or endowment contract may be obtained within 31 days without medical examination; (b) *Sickness and Accident Insurance*: Weekly Income Benefit provides a weekly income to employees unable to work because of accident or sickness, provided they are under the care of a legally licensed physician or surgeon. Hospital, Surgical and Medical Benefits for employees and their dependents provide for reimbursement within specified limits, for charges made by the hospital, for fees charged for surgical operations and for medical treatment.

Provision is made for *seniority rights*, *grievance procedure* and *health and safety*.

**ST. MARY'S, ONT.—ST. MARY'S CEMENT COMPANY LIMITED AND THE AMALGAMATED BUILDING AND CONSTRUCTION WORKERS OF CANADA, LOCAL 15.**

Agreement to be in effect from August 1, 1949, to July 31, 1950, and thereafter from year to year, subject to notice. The company recognizes the union as the exclusive bargaining agency of all eligible employees.

*Union security*: all present members and all new employees who may become members of the union shall, as a condition of employment, maintain their membership during the life of this agreement. There will be no discrimination, intimidation, interference, restraint or coercion either by the company or the union because of membership or non-membership in the union.

*Check-off*: the company agrees to deduct union dues from the pay cheque of union members, who authorize the company to do so during the life of this agreement, and to remit same to the union.

*Hours*: for day workers—from May 1 to October 31, 9 hours per day Monday through Thursday, 8 hours on Friday and 4 hours on Saturday; from November 1 to April 30, 8 hours per day Monday through Saturday, for shift workers—8 continuous hours per day, eating their lunch when they may; a 48-hour week in either case. *Overtime*: time and one-half shall be paid for all work in excess of 48 hours a week and for all work on 5 specified statutory holidays, provided that an employee will forfeit his right to overtime rates of pay for one statutory holiday for each day or part thereof which he is absent without authorization in excess of two days a year.

**Vacation with pay:** one week to employees with one year's service; employees with 5 or more years' service shall have the choice of taking either one week between April 1 and November 30, or two weeks between December 1 and March 31. The company may direct that all vacation be taken during a shut down period between May 1 and October 30. Vacation pay for employees entitled to one week's vacation will be equal to 2 per cent, and for employees with over 5 years' service to 4 per cent of their earnings for the 12 months preceding their vacation.

The company agrees that seniority will be given due consideration in making promotions, lay-offs and rehiring, together with the relative skill, merit and ability of the employee concerned.

**Hourly wage rates and differentials:** new employees 80½ cents, basic rate 83 cents, shift worker (unclassified) 85½ (5) cents, mill operator 88 (5) cents, kiln burner \$1.01 (5), brusher 94 cents, drills and hoists 88 cents; electric shovel, big \$1.12, small \$1.05; Diesel shovel \$1.05, dozer Diesel 93 cents, trucks Diesel 88 cents, trucks petrol 85½ cents, sub. foreman repairs 93 cents, repairman 88 (5) cents, repair helper 83 cents; sub station—operators 90½ (5) cents; repairs first class 95 (5) cents, second class 90½ (5) cents, third class 84 (5) cents; motor cleaner 83 cents; machine shop—sub. foreman \$1; machinist first class 95½ cents, second class 88 cents; welder first class 98 cents, second class 88 cents; blacksmith 93 cents; carpenter first class \$1.03, second class 93 cents; painter 88 cents. **Cost of living bonus:** to the above basic rates will be added one-half cent per hour for every increase of one point which the Dominion Bureau of Statistics "Cost of Living Index" rises above 154 and similarly for every point decrease in the "Cost-of-Living Index" one-half cent per hour will be deducted, but deductions will not move below 154 during the life of this agreement.

Provision is made for *grievance procedure*.

## Construction

VANCOUVER, B.C.—CERTAIN SHEET METAL AND ROOFING FIRMS OF THE CITY OF VANCOUVER AND THE SHEET METAL WORKERS INTERNATIONAL ASSOCIATION, LOCAL 280.

Agreement to be in effect from September 1, 1949, to August 31, 1950, and thereafter from year to year, subject to 90 days' notice. The contractors agree to employ union members when available and the union agrees to work only for firms who agree to comply with the working rules and wage scales as set out in this agreement. The contractors will not request members of the union to install any material that is considered unfair unless same is covered by patent rights.

**Hours:** 8 hours per day between 8 a.m. and 5 p.m. Monday through Friday, a 40-hour week. No work shall be performed between 5 p.m. Friday and 8 a.m. Monday, except in case of emergency. **Overtime:** time and one-half for the first 4 hours immediately following the regular quitting time, and double time thereafter; time and one-half for work done on Saturday morning and double time for work done on Saturday afternoon, Sunday and 9 specified legal holidays. However, for domestic automatic heating equipment, one man in each shop may work on service calls Saturday morning at straight

time. In special cases a night shift may be worked at straight time, provided that it is continued for three consecutive working days or more, and that it is paid for at the rate of 8 hours' pay for 7½ hours work. If a third shift is necessary it shall be arranged with the business representative.

**Vacation with pay:** one week as provided by provincial law. It shall be a violation of union rules for an employee to forego this vacation or to work for wages during the vacation period.

**Wage rates:** commencing October 1, 1949, the minimum rate of wages for journeymen shall be \$1.70 per hour. This is an increase of 5 cents per hour over the previous rate.

**Out-of-town jobs:** all employees required on out-of-town jobs shall receive transportation to and from the job and board and lodging at the usual standard rates shall be paid. Standard meals while travelling shall be paid and in the case of night travel, sleeper shall be provided. Travelling time shall be paid but not more than 8 hours in a 24-hour day. On any job over 90 days' duration the contractor shall provide first class transportation to the city every 3 months. Where an employee is requested to use his own car to and from the job the contractor shall provide the necessary protective insurance and pay mileage at the rate of 10 cents per mile.

**Apprentices:** all apprentices shall be employed in accordance with the provisions of the British Columbia Apprenticeship Act. Each contractor shall be allowed one apprentice for the shop and one additional apprentice for each four qualified journeymen regularly employed. For the first four years all apprentices shall be under the supervision of journeymen on all work outside the shop.

Provision is made for *grievance procedure*.

## Transportation and Public Utilities

### Electricity and Gas

TORONTO, ONT.—THE CONSUMERS' GAS COMPANY OF TORONTO AND THE INTERNATIONAL CHEMICAL WORKERS' UNION, LOCAL 161.

Agreement to be in effect from July 8, 1949, to July 7, 1951, and thereafter subject to notice. The company recognizes the union as the sole collective bargaining agency for all eligible employees.

**Union security:** all employees who are members of the union as of February 1, 1949, or who become members thereafter, must, as a condition of employment, remain members in good standing. New employees who enter the company's service on or after February 1, 1949, shall, as a condition of continued employment, become members of the union on the completion of 3 months' employment. There shall be no discrimination, intimidation, or coercion by the company or the union because of membership or non-membership in the union.

**Check-off:** the company agrees to deduct union dues weekly from the wages of all union members and to remit same to the union. It also agrees to deduct an initiation fee from the wages of all new employees and one special assessment during the term of this agreement.

**Hours:** with a few exceptions, employees are to work a basic 42-hour week, a reduction of 2 hours from the previous agreement. The hours of work vary with the

different departments: in some, employees work rotating 8-hour shifts averaging 42 hours per week in each 8-week period, in others they work alternating 5 and 6 days per week averaging 42 hours per week in each 4 week period, etc. Hours of work may be changed by mutual agreement. Sixty days prior to the expiration of the first year of this agreement the union may require the company to establish a 40-hour week at the same basic hourly rate.

**Overtime:** time and one-half for work beyond the regularly assigned hours in any one day or in any one week, except in the case of employees in the meter reading division and the fitting department emergency crew who will be paid straight time for such extra time. An employee who has to work on his regular day off will be given equivalent time off without pay in lieu thereof. Employees called upon to change their day or night off on less than 48 hours' notice shall receive double time for that day or night. Except for work regularly performed on Saturdays, Sundays and holidays, all work on these days is to be paid for at time and one-half. Employees required to work 3 or more hours of overtime, continuous with their regular working days will be paid a meal allowance. Eight specified *paid holidays* (or alternative days) will be granted to employees with 3 or more months' service.

**Vacation with pay:** one week after one year's service, two weeks after 2 years' service, 3 weeks after 25 years' service. One day's leave with pay will be granted to an employee in case of a death in his immediate family.

**Basic hourly wage rates** for certain classes: Fitting Department—special fitters \$1.27, fitters \$1.10 to \$1.22, helpers 80 cents to \$1.05, emergency crew fitters \$53.34 per week, emergency crew drivers \$51.24 per week. Meter Repair Department—meter repairers and testers \$1.10 to \$1.27, helpers 80 cents to \$1.05, meter preparers and painters \$1.15. Stores Department—stock-keepers, appliance adjusters and testers, yard man \$1.16, truck drivers \$1.13, helpers \$1.08. Mechanical Department—carpenters, painters, automobile mechanics \$1.20 to \$1.30, plumber, blacksmith \$1.30, tire man \$1.25, welder \$1.35, general utility man \$1.16, watchmen \$44.78 per week (48 hours). Street Department—syphon men \$51.45 per week, night repairmen \$1.22, gasmen \$1.17 to \$1.30, labourers \$1.03. Meter Reading

Department—meter readers \$42.66 to \$48.30 per week. Manufacturing Department—retort house operators \$1.23, main cleaners, flue cleaners \$1.18, cesspool cleaners \$1.13, tar mains cleaner \$1.16; retort house cleaners, washroom attendant \$1.08; water gas makers \$1.23, helpers \$1.16; water gas rake-out men \$1.13. Engine and Boiler Rooms—engineers \$1.20 to \$1.35, valve house booster operators, firemen and oilers (no certificate) \$1.18, trimmers and ashmen \$1.13, condensing house operators \$1.24, helpers \$1.15; boiler maintenance men \$1.20, helpers \$1.08. Yard Department—\$1.03 to \$1.18. Distribution Division maintenance men when working on mains suspended under bridges will be paid at the rate of time and one-half. With a few exceptions the above basic rates are 6 cents per hour higher than the basic rates previously in effect (the cost-of-living bonus granted under the terms of the previous agreement amounted to 6 cents per hour as of August 1, 1948). The company will pay a *cost-of-living bonus* of 3 cents per hour effective from February 1, 1949. This bonus will be automatically increased or decreased by 1½ cents per hour for each rise or fall of 2 points in the official cost-of-living index, the adjustments to be measured from the index figure of 159.5.

**Sick benefits:** an employee who is absent from work on account of illness for not less than 3 work days shall be paid half his basic pay for a period of not more than 8 weeks for any one illness, or in each 12 months' period of the term of this agreement. For employees with more than 10 years' continuous service this payment will be extended to a maximum of 13 weeks in each 12 months' period. When a veteran is called before a medical board by the Department of Veterans Affairs he shall receive the difference in pay between that which is paid him by the DVA and his regular pay for the day of absence. If an employee receives benefits under the Workmen's Compensation Act or the Post Discharge Re-establishment Order of 1941, as amended, benefits will not be paid him under the company plan. However, if his absence is too short to entitle him to benefits under the Act or Order he will be granted sick pay under the plan. Eligible employees living in the area supplied with gas by the company, shall be entitled to medical attention by a doctor appointed by the company in consultation with the union.

Provision is made for *seniority rights and grievance procedure*.

## Collective Agreement Act, Quebec

Recent proceedings under the Collective Agreement Act, Quebec,\* include the extension of one first and one new agreement and the amendment of ten others. In addition to those summarized below, they include: the amendment of the agreement for grocers and butchers at Joliette published in the *Quebec Official Gazette*, issue of November 5.

\* In Quebec, the Collective Agreement Act provides that where a collective agreement has been entered into by an organization of employees and one or more employers or associations of employers, either side may apply to the Provincial Minister of Labour to have the terms of the agreement which

concern wages, hours of labour, apprenticeship, and certain other conditions made binding throughout the province or within a certain district on all employers and employees in the trade or industry covered by the agreement. Notice of such application is published and 30 days are allowed for the filing of objections, after which an Order in Council may be passed granting the application, with or without changes as considered advisable by the Minister. The Order in Council may be amended or revoked in the same manner. Each agreement is administered and enforced by a joint committee of the parties. References to the summary of this Act and to amendments to it are given in the *LABOUR GAZETTE*, January, 1949, page 65. Proceedings under this Act and earlier legislation have been noted in the *LABOUR GAZETTE* monthly since June, 1934.

Requests for amendments to the agreements for the sheet metal manufacturing industry at Montreal and for the building trades at Sherbrooke were gazetted October 22; requests for the amendment of the agreements for garages and service stations at Montreal, for wholesale food stores at Quebec and for tannery employees for the province were gazetted October 29. Requests for amendments to the agreements for the wholesale fur industry and for building trades, both at Montreal, for retail stores at Granby, at Richmond and Melbourne and at Windsor, for the building materials industry for the province, for barbers and hairdressers at Quebec and Sherbrooke and requests for new agreements for bakers, pastry-workers and salesmen at Granby and for the printing trades at Chicoutimi, were published in the *Quebec Official Gazette*, issue of November 12.

Orders in Council were also published approving or amending the constitution and by-laws of certain joint committees and others approving the levy of assessments on the parties.

## Manufacturing

### *Fur and Leather Products*

#### SHOE INDUSTRY, PROVINCE OF QUEBEC.

Orders in Council, dated October 27, and gazetted October 29 and November 5, amend the previous Orders in Council for this industry (L.G., Jan.-Feb., 1948, p. 50, April, p. 331, Nov., p. 1245; Jan., 1949, p. 65, and previous issues).

This agreement is to remain in effect until September 1, 1950, and thereafter from year to year, subject to notice.

The description of operations and classifications is amended by the addition of several new operations.

*Vacation:* the method of computing the 2 weeks vacation with pay for all employees with one year's service is changed.

There are also new provisions governing claims and readjustments in wages.

### *Textiles and Clothing*

#### LADIES' CLOAK AND SUIT INDUSTRY, PROVINCE OF QUEBEC.

An Order in Council, dated October 13, and gazetted October 22, amends the previous Orders in Council for this industry (L.G., Jan., 1947, p. 48; June, 1948, p. 619; Aug., 1949, p. 987, and previous issues).

*Holidays:* two additional holidays with pay, Good Friday and Dominion Day, increasing the number of specified legal paid holidays to 5.

Provisions governing the contracting system have been instituted whereby in cases where work is sent out to be done by outside shops, contractors, etc., the employer who sends out such work shall supply to the Joint Committees of the Ladies' Cloak and Suit Industry, not later than the day it is sent out, information covering the quantity of

garments sent, style numbers of each, date on which the work is sent, the name of the person or persons to whom it is sent, the price per each garment and the prevailing rates of pay for comparable garments made in the employer's shop.

All piece-work prices and rates and all week work wages and rates paid by the outside shops, contractors, etc. shall not be lower than those paid by the employer who sends out such work.

#### DRESS MANUFACTURING INDUSTRY, PROVINCE OF QUEBEC.

An Order in Council, dated October 27, and gazetted November 5, amends the previous Orders in Council for this industry (L.G., May, 1946, p. 627, July, p. 930, Sept., p. 1249, Nov., p. 1583; April, 1948, p. 332; May, 1949, p. 604, and previous issues).

*Vacation:* employees who have not completed one year's continuous service are entitled to a continuous annual vacation with pay, having a minimum duration of as many 5-12's of working days as the number of calendar months during which they have been continuously employed.

This amendment also effects certain changes in the regulations relative to necessary information with which the employers and homeworkers must furnish the "Joint Commission" for the Dress Industry for the Province of Quebec.

#### FASHION ACCESSORIES INDUSTRY, MONTREAL.

An Order in Council, dated October 27, and gazetted November 5, amends the previous Order in Council for this industry (L.G., April, 1948, p. 332).

In this amendment the words "Fashion Accessories Industry" are substituted for the words "Embroidery Industry" wherever the latter are mentioned in the agreement and its amendments for this industry.

*Minimum hourly wage rate* for apprentice Bonnaz operators is increased by 5 cents to 35 cents per hour during the first 6 months and by 10 cents to 85 cents per hour during eighth 6 months; apprentice frozen handle Bonnaz operators receive 35 cents per hour during the first 6 months to 53 cents per hour during the fourth 6 months after which period they shall be considered skilled operators and receive a minimum rate of 60 cents per hour.

*Vacation:* the vacation period for this industry is specified as the first 2 weeks in July and all employees with one year of continuous service are entitled to 7 days vacation with pay.

### *Metal Products*

#### MECHANICAL CONSTRUCTION AND REPAIR INDUSTRY, QUEBEC DISTRICT.

An Order in Council, dated October 27, and gazetted November 5, amends the previous Orders in Council for this industry (L.G., Nov., 1948, p. 1247; Jan., 1949, p. 67, Oct., p. 1247).

Apprenticeship regulations are amended by providing that at the end of his apprenticeship period every apprentice is entitled to a 10 per cent increase on the wages of a fourth year apprentice and to a second 10 per cent increase after an additional period of not less than 6 months. According to the result of an examination held at that time and which may be repeated if necessary after

each additional apprenticeship period of one year, an apprentice is classified as journeyman or remains fourth class apprentice, second 10 per cent.

#### GARAGES AND SERVICE STATIONS, RIMOUSKI.

An Order in Council, dated November 10, and gazetted November 19, makes obligatory the terms of a new agreement between The Retail Merchants of Canada (Quebec), "Section de l'Auto-Voiture, Succursale de Rimouski" and "Le Syndicat Catholique des Employés de Garages de Rimouski inc."

This agreement to be in effect from November 19, 1949, until August 31, 1950, and thereafter from year to year, subject to notice.

The agreement governs employers, professional employers, artisans and employees of garages, service stations, parking grounds, scrapping yards, machine shops and automobile parts or accessories establishments. It does not cover industrial establishments operating accessorially a garage, machine shop, a service station or a gasoline station, inasmuch as they limit exclusively their services to their own needs and do no work for public customers.

*Territorial jurisdiction* comprises the town of Rimouski and within a radius of 3 miles from its limits.

*Hours*: 10 per day, 6 days in a week. Working hours to be distributed between the hours of 7 a.m. and 11 p.m., Monday to Friday inclusive and on Saturday between 7 a.m. and 6 p.m.

*Overtime*: all work in excess of 60 hours in any one week shall be paid for at the rate of time and one-half. For work on Sunday, double time, in accordance with provisions of the Weekly Day of Rest Act, to all employees except service men who shall receive their regular rate increased by 10 per cent.

*Specified holidays*: all employees shall be granted 2 specified holidays with pay, St. John the Baptist Day and Labour Day. Provision is made for 6 other specified holidays without pay.

*Minimum hourly wage rates*: mechanic, fitter, machinist, electrician, body-man, wheelwright, welder, painter, upholsterer, glazier and vulcanizer class "A" 95 cents, class "B" 80 cents and class "C" 65 cents; service man from 35 cents per hour during first year to 60 cents during the fourth year; stock room clerk during first year 28 cents per hour to 34 cents per hour in the second year, class "A" 68 cents per hour, class "B" 54 cents per hour and class "C" 44 cents per hour; apprentices from 35 cents per hour during first year to 60 cents per hour during fourth year.

In the case of the second shift, from 7 p.m. to 7 a.m., the regular day rate shall be increased by 10 per cent. Work commenced before 6 p.m. which must not be interrupted, may be performed at the regular rate until 7 p.m.

*Vacation*: employees with one continuous year's service are entitled to 7 days, comprising 6 working days, vacation with pay. This vacation may consist of 6 non-consecutive working days upon mutual consent of the employer and employee.

*Special provisions*: any employee called to work less than the regular working day shall be entitled to 4 hours pay per call at the regular rate; when called for a given time

and required to wait to be put to work he shall be paid at the regular rate for such waiting time.

No employee in the trades of the automobile industry shall ply his trade in an establishment other than those defined in this agreement.

Any employee working on Sunday is entitled to a complete day of rest during 6 days preceding or following such Sunday.

Provision is made for apprenticeship regulations.

#### Non-Metallic Minerals and Chemicals

##### PAINT MANUFACTURING INDUSTRY, PROVINCE OF QUEBEC.

An Order in Council, dated October 27, and gazetted November 12, amends the previous Order in Council for this industry (L.G., Oct., 1948, p. 1127).

This amendment deletes the provision governing minimum wage rate for female employees in all factory departments and substitutes the following in its place.

*Minimum hourly wage rate* for boys under 18 in all factory departments is set at 50 cents per hour.

The number of boys shall not exceed 1 to every 8 employees in each plant.

#### Construction

##### MECHANICAL CONSTRUCTION AND REPAIR INDUSTRY, QUEBEC DISTRICT.

See above, under "Manufacturing: Metal Products".

##### BUILDING TRADES, SOREL.

An Order in Council, dated November 2, and gazetted November 12, amends the previous Orders in Council for this industry (L.G., Oct., 1946, p. 1446, Dec., p. 1773; April, 1947, p. 544, Dec., p. 1804, Jan.-Feb., 1948, p. 51, and previous issues).

*Territorial jurisdiction*: the town of Boceïl is not governed by the provisions of the present agreement in so far as repair or maintenance work on its own buildings, construction, rebuilding and maintenance on aqueducts, sewers, etc. are concerned unless such operations are carried out by contractors or sub-contractors under control of or by contract for said town.

##### BUILDING TRADES, HULL.

An Order in Council, dated November 10, and published in the *Quebec Official Gazette*, issue of November 12, makes obligatory the terms of a new agreement between "L'Association des Entrepreneurs du District de Hull, inc.," and certain other employers and "Le Conseil des Métiers de la Construction du diocèse d'Ottawa, inc."

This agreement becomes effective November 12, 1949, and shall remain in force for one year, and thereafter from year to year, subject to notice.

It applies to all construction, engineering construction and building operations, demolitions and repairs excepting such operations performed by municipal and railway employees.

*Territorial jurisdiction* comprises the county of Hull and cities and towns in the counties of Gatineau, Papineau, Pontiac, Labelle and Temiscamingue. This area is divided into

two zones: zone I, the city of Hull and territory included in a 10 mile radius from its limits; zone II comprises the balance of the territorial jurisdiction.

**Hours:** for qualified tradesmen, 8 per day, 4 on Saturday, a 44 hour week; for labourers 9 per day, 5 on Saturday, a 50 hour week. In zone II duration of labour is 55 hours per week, 10 per day and 5 on Saturday. In both zones 2 or more shifts may be allowed provided each shift works 7 or more hours per day.

**Overtime:** time and one-half until midnight, thereafter and for all work on Sundays and 9 specified legal holidays including church holy days, double time.

**Vacation:** employees continuously in the service of one employer during vacation-with-pay credit period, May 1 of one year to April 30 of next, are entitled to 7 consecutive days vacation. All employees are to receive credit for vacation pay equal to 2 per cent of their wages during the year, which is redeemable from the Commission after April 30 each year.

Minimum Hourly Wage Rates for the Building Trades, Hull

	Rates per hour	
	Zone I	Zone II
Bricklayer .....	\$1.55	\$1.10

	Rates per hour	
	Zone I	Zone II
Terrazzo polishing machine operator (wet polishing)...	.75	.65
Welder .....	.95	.95
Stonemason .....	1.55	1.00
Ornamental iron worker.....	.85	.85
Glazier .....	1.10	.90
Painter (structural steel)....	1.25	1.25
Structural steel erector and welder (all categories)....	1.35	1.35
Construction boiler maker, steam generator erector and mechanics and welder <sup>1</sup> ....	1.35	1.35
Helper to construction boiler maker, steam generator erector and mechanics and welder .....	1.00	1.00

<sup>1</sup> Workers installing stokers in furnaces with a horizontal heating surface of 20 feet or less work 55 hours per week and are paid a minimum of \$1.05 per hour and their helpers a minimum of 80 cents per hour.

Wage rates shown for lathers (wood) and stonemasons are increased by 50 cents per hour in zone I and by 10 cents per hour in zone II; lathers, metal, by 40 cents per hour in zone I and by 10 cents in zone II; bricklayers, masons, and sheet metal workers (erection) by 30 cents per hour in zone I and all 3 classifications by 10 cents in zone II; bulldozer operators, divers, screen (wood and metal), sash, window, steel partitions erectors, weatherstrippers and painters (structural steel) by 25 cents per hour in zones I and II excepting bulldozer operators, whose rate in zone II is increased by 10 cents per hour; structural steel erectors and welders (all categories), construction boiler makers, steam generator mechanics and welders by 24 cents per hour in both zones. All other classifications are increased from 5 cents to 16 cents per hour in zone I (predominant increase 5 cents), while in zone II rates for all other classifications are increased by from 5 cents to 15 cents per hour (predominant increase 10 cents per hour); weekly wage rates for watchmen are increased by \$5 per week to \$30; monthly wage rates for material checker and time-keeper by \$10 to \$125 per month.

Maintenance repair work done in buildings by journeymen painters, carpenter-joiners and plasterers not requiring more than one 8-hour day are exempted from the provisions of this agreement. All urgent or special work which, for sufficient reason cannot be performed during regular working periods may be done at other periods of the day; such work to be paid at the regular hourly rates increased by 10 cents per hour. Carpenter-joiners, bricklayers, masons, plasterers, painters, concrete steel or rod reinforcing workers and common labourers usually dwelling in zone I, shall be paid the rate fixed for this zone, if they are hired to perform work in zone II.

**Apprenticeship:** one apprentice is allowed to every 6 journeymen for most trades; however, for bricklayers the number of apprentices is restricted to one for each 3 journeymen and for the structural steel trade the quota is one apprentice to each 5 mechanics; in zone II the percentage shall be one apprentice to each 2 journeyman or fraction thereof. The period of apprenticeship for most trades is 4 years but for

cement finishers and wood lathers it is 3 years and for ornamental iron workers 2 years.

*Apprentices' wages* are based on a percentage of the journeymen's minimum wages: in zone I, from 30 per cent of journeymen's rate for first year, in those trades with an apprenticeship of 4 years, from 45 per cent, for first year, for those with a 3 year apprenticeship to 75 per cent of journeymen's rate for last year of apprenticeship; in zone II, the percentages are 10 per cent higher in all instances cited above; for structural steel workers 70 per cent of journeymen's rate in the first year and 85 per cent in the second year.

*Maintenance workers:* this section of the agreement applies to all maintenance men permanently employed in churches, colleges, convents, hospitals, etc., or in public or office buildings, dwellings, hotels, manufacturing establishments or stores.

*Hours:* 48 per week with no daily limitation.

*Overtime:* all such work shall be paid in accordance with the hourly rate specified in

the particular classification concerned; the exceptions are maintenance men whose yearly salary is \$1,560 or over, such workers need not be paid overtime for emergency calls.

*Minimum weekly wage rates* for tradesmen in zone I, \$24.40, for labourers \$19.40 per week; in zone II, \$22.40 for tradesmen and \$17.40 per week for labourers. These rates remain unchanged in both zones.

## Trade

### HARDWARE AND PAINT STORES, QUEBEC.

An Order in Council, dated October 27, and gazetted November 12, amends the previous Orders in Council for this industry (L.G., July, 1946, p. 931; Jan., 1947, p. 50, Sept., p. 1308; April, 1948, p. 335, Nov., p. 1248; Dec., 1949, p. 1559, and previous issues).

*Overtime* for all work on Saturday after 1 p.m., from June 15 to September 15, is increased from time and one-half to double time.

# FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

The Fair Wages Policy of the Dominion Government has the purpose of ensuring that all government contracts contain provisions to secure the payment of wages generally accepted as current in each trade for competent workmen in the district where the work is carried out.

There are two sets of conditions applicable to government contracts, those which apply to building and construction work, and those which apply to contracts for the manufacture of various classes of government supplies and equipment.

The practice of the different departments of the Government, before entering into contracts in the first group, is to obtain from the Department of Labour schedules setting forth the current wage rates for the different classifications of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon included by the department concerned in the terms of the contract.

Fair wages schedules are not issued in respect of contracts for supplies and equipment. Contracts in this group are awarded in accordance with a policy which provides that wage rates must equal those current in the district.

A more detailed account of the Dominion Government's Fair Wages Policy is given in the *LABOUR GAZETTE* for July, 1946, p. 932.

## Schedules Prepared and Contracts Awarded During October

### (1) *Works of Construction, Remodelling, Repair or Demolition.*

During the month of October the Department of Labour prepared 151 fair wages schedules for inclusion in building and construction contracts proposed to be undertaken by various departments of the Government of Canada in different parts of the Dominion.

During the same period a total of 98 construction contracts was awarded by the various Government departments. Particulars of these contracts appear in the accompanying table.

Copies of the relevant wages schedules are available to trade unions or other *bona fide* interested parties, on request.

The labour conditions of each of the contracts listed under this heading, besides stipulating working hours of not more than eight per day and forty-four per week, provide that "where, by provincial legislation, or by agreement or current practice, the working hours of any class of workers are less than forty-four per week, such lesser hours shall not be exceeded on this work except in cases of emergency as may be approved by the Minister of Labour and then only subject to the payment of overtime rates as specified by the Minister of Labour", and also specify that the rates of wages set out therein are "*minimum* rates only" and that "nothing herein contained shall be considered as exempting contractors and subcontractors from the payment of higher rates in any instance where, during the continuance of the work such higher rates are fixed by provincial legislation, by agreements between employers and employees in the district or by changes in prevailing rates".

### (2) *Contracts for the Manufacture of Supplies and Equipment.*

Contracts for supplies and equipment were awarded as follows, under the policy that wage rates must equal those current in the district:—

Department	No. of contracts	Aggregate amount
Agriculture. . . . .	1	\$ 90,399.00
Canadian Commercial Corporation. . . . .	6,279	6,301,868.79
Post Office. . . . .	14	54,090.62
Public Works. . . . .	3	80,315.23
R.C.M.P. . . . .	6	129,402.00

**CONTRACTS CONTAINING FAIR WAGES SCHEDULES AWARDED DURING OCTOBER**

Location	Nature of Contract	Name of Contractor	Amount of Contract	Date of Wages Schedule
Minnedosa, Man.	Construction of the Minnedosa Dam.	Stratton Engineering Co. Ltd., Winnipeg, Man.	\$ 91,118 70	April 1, 1949

\*The labour conditions of these contracts contain the General Fair Wages Clause providing for the observance of current or fair and reasonable rates of wages and hours of labour, and also empower the Minister of Labour to deal with any question which may arise with regard thereto.

# LABOUR LAW

## Recent Regulations Under Dominion and Provincial Legislation

*In British Columbia and New Brunswick, several new groups of workers are covered by Minimum Wage Orders. In New Brunswick, the first Order to be made for men fixes a daily minimum of \$4.50 for workers producing pulpwood, pitprops and logs. A general Order for women establishes a weekly rate of \$14.40 in factories, offices and certain other workplaces. In British Columbia, hospital workers of both sexes must be paid at least \$20 a week. Men and women in shops are now covered by a single Order which sets a minimum of \$18 a week. ¶Holidays with pay by means of a stamp system are now provided for construction workers in the Montreal district. ¶The Order limiting hours of work in Alberta coal mines to 40 in a week has been rescinded.*

### DOMINION

#### Fair Wages and Hours of Labour Act

##### *Fair Wages Policy*

A consolidation of the Orders in Council setting forth the Fair Wages Policy of the Government of Canada with respect to Government contracts, P.C. 5547, was issued on November 3, and gazetted November 23. The original Order in Council embodying the Fair Wages Policy, P.C. 1206 of June 7, 1922, and subsequent amendments are rescinded.

### PROVINCIAL

#### Alberta Labour Act

##### *Hours of Work in Coal Mines*

The Hours of Work Order (No. 14) made on August 4, 1949, which limited hours in or about coal mines to eight in a day and 40 in a five-day week until March 31, 1950 (L.G., Nov., 1949, p. 1438) has been rescinded by an Order in Council (O.C. 1245/49) made on October 24, gazetted November 15.

#### British Columbia Factories Act and Shops Regulation and Weekly Holiday Act

Proclamations declaring Monday, December 26; Tuesday, December 27; and Monday, January 2, 1950, public holidays for the purposes of the Factories Act and

the Shops Regulation and Weekly Holiday Act were issued on September 27, and gazetted October 6.

#### British Columbia Male and Female Minimum Wage Acts

##### *Hospitals*

For the first time men and women employed in hospital institutions are covered by a Minimum Wage Order (No. 16). The new Order, made on November 4, became effective when gazetted on November 10. Graduate nurses, student nurses in an approved school of nursing, and employees who perform professional, supervisory or managerial duties are exempted. For the purpose of this Order, "hospital institutions" are defined as those designated by the Lieutenant-Governor in Council as hospitals required to furnish general hospital services under the Hospital Insurance Act.

The minimum rate is \$20 for both male and female workers working 40 hours or more a week. Part-time workers, whose work-week consists of less than 40 hours, must be paid 50 cents an hour. Unless the Board permits otherwise, workers must receive at least two hours' pay in any day on which they are called to work if no work is provided, and four hours' pay when they are put to work.

Lower rates are fixed for three two-month learning periods for workers for whom a permit has been issued by the Board. For full-time learners the rates are \$14 a week for the first two months, \$16 for the second

and \$18 for the third, and for those who work part time the rates are 35, 40 and 45 cents an hour.

No deductions may be made from wages for accidental breakages of articles belonging to the employer.

For all time worked after eight hours in a day and 44 in a week a permit must be obtained from the Board and time and one-half the worker's regular rate must be paid.

A weekly rest of 32 consecutive hours must be given to every employee except in cases where this is unsuitable and other arrangements have been approved by the Board.

Suitable restroom, lunchroom, toilet and wash-room facilities must be provided for the use of employees. Where these are not provided, the Board, after investigation, may notify the employer in writing setting out in detail the necessary changes and fixing a time limit for these to be made.

The usual provisions regarding semi-monthly payment of wages, posting of orders and keeping of records are included in the new Order.

### *Shops*

The Board of Industrial Relations has issued a Minimum Wage Order (No. 24) covering both men and women employed in the mercantile industry. Order 24, which was made on November 4, and gazetted December 1, will take effect on January 1, 1950. This Order replaces No. 59 (1938) for men and No. 24 (1946) for women (L.G., 1938, p. 1235; 1946, p. 1104).

The minimum rate now fixed for both sexes is \$18 a week, which represents an increase of \$1 a week for women but is the same as before for men. The new \$18 rate applies to a work-week of from 39 to 44 hours.

Workers whose work-week consists of less than 39 hours must be paid at least 47 cents an hour and, except with the written permission of the Board, they must receive not less than four hours' pay at the regular rate in any one day. This represents an increase of two cents an hour over the former rate for women. The part-time rate for men since July 1, 1946, has been 48 cents an hour.

Learners working full-time must receive \$12, \$14 and \$16 weekly for three successive two-month learning periods. Inexperienced workers working part-time must be paid 32, 37 and 42 cents an hour, respectively, for the same three periods. The increase over the former learners' rate for women is \$1 a week or for hourly paid workers two cents an hour. Rates for inexperienced male workers were formerly fixed according to age groups.

For bicycle-riders and foot-messengers employed exclusively on delivery, a minimum rate of 35 cents an hour is fixed. In addition, where the employee provides his own bicycle, all reasonable costs in connection with its upkeep must be borne by the employer.

Time and one-half the regular rate must be paid for all hours worked beyond eight and 44. For overtime a permit from the Board is required.

All employees are now entitled to a weekly rest of 32 consecutive hours. The rest period granted under the earlier Order for men was 24 hours. Provision is made, as in other Orders, for different arrangements with respect to the weekly rest, on the approval of the Board.

The Order also contains the usual provision with regard to the daily guarantee. An employee who reports for work on the call of the employer must be paid at the regular rate for the entire period spent at the place of work, with a minimum of two hours' pay if there is no work and of four hours' pay if he is put to work.

### **British Columbia Minimum Wage Acts and Hours of Work Act**

The annual permission for overtime in the mercantile industry during the Christmas season has been granted by Orders issued on October 26, gazetted November 3.

In the Hours of Work Order, the city of New Westminster has this year been added to the list of larger cities and towns, namely Vancouver and district, Victoria, Esquimalt, Oak Bay and Saanich, in which workers in retail stores may work two hours in excess of the statutory eight on both December 22 and December 23. Elsewhere in the Province shop workers may work two extra hours on December 23 only. The annual supplementary Orders under the Minimum Wage Acts (Nos. 59 and 24) require time and one-half to be paid for the hours worked in excess of eight on December 22 and 23 in the places specified above, and on December 23 in the remainder of the Province.

For temporary workers taken on between December 5 and December 31, inclusive, special rates are fixed. No male worker may be paid less than 45 cents an hour, and no woman working 39 hours or more in a week may be paid less than \$17, or less than 45 cents an hour if she works less than 39 hours in a week. The regular daily guarantee of four hours' pay to both men and women workers is removed during this period.

## New Brunswick Minimum Wage Act

Two new Orders have been issued by the Minimum Wage Board, one governing male workers engaged in forest operations, the first Order for males in the Province, and the other a general Order for women workers fixing a minimum wage in factories, offices and certain other workplaces of \$14.40 a week. This rate is the same as that already established for women in wholesale and retail stores.

Effective from October 24, 1949, to April 30, 1950, male workers employed in the production of pulpwood, pitprops and logs, excluding those engaged in transporting these products, must receive at least \$4.50 a day. For workers handicapped by old age or loss of a limb, and for chore-boys and cookees a minimum rate of \$3.50 a day is set. An employer may charge \$1.05 a day if he furnishes board and lodging.

Effective December 1, 1949, a minimum wage of \$14.40 for a week of 48 hours or less is fixed for female workers in the Province *except* (1) those covered by two earlier Orders, that is, workers in wholesale and retail stores, hotels, restaurants and other places of public accommodation where meals are served (L.G., 1948, pp. 492, 1137); and (2) those employed in hospitals, nursing homes, and religious, charitable or educational institutions. Also excluded are apprentices, persons employed in a confidential capacity and those employed in domestic service, in agriculture or by the Crown. Overtime in excess of 48 hours a week must be paid for at the rate of 45 cents an hour. Part-time workers who regularly work less than 30 hours a week must receive at least 30 cents an hour.

## Quebec Minimum Wage Act

### *Holidays with Pay in the Construction Industry*

A stamp system of holiday with pay credits for workers in the construction industry in Montreal and vicinity was approved by Order 3A (O.C. 1161), gazetted October 29 and effective from that date until May 1, 1951. This system is already in effect for construction workers in Alberta, Manitoba (Greater Winnipeg) and Ontario. Because of the usually short duration of employment with one firm, construction workers were specifically excluded from Order 3 which provides for an annual holiday with pay of one week after one year's employment for most workers in Quebec (L.G., 1946, pp. 1105, 1464; 1947, p. 380).

The new regulations apply to workers governed by the Minimum Wage Act who are employed by employers carrying out

building construction work or having a place of business on the Island of Montreal or within a fifteen-mile radius, excluding the counties of St. John and Iberville. The Order does not cover workers who are governed by collective agreements or those whose habitual occupation is not connected with the building construction industry.

The Order provides that a workman whose employment with one employer is *not* continuous throughout the vacation-with-pay credit period, that is, from May 1 to April 30, is entitled to a vacation-with-pay credit of 2 per cent of his earnings from each employer, and requires the employer to affix credit stamps on each pay day in the workman's vacation-with-pay stamp book.

Stamps and stamp books are to be purchased by the employer from the Minimum Wage Commission before the beginning of a vacation-with-pay period. The employer may deduct 25 cents from the workman's wages to cover the cost of his stamp book. At the end of the vacation-with-pay period the workman is to receive from the Commission the value of the stamps affixed to his stamp book.

A vacation of at least one week with pay must be granted to a worker whose employment with one employer is continuous throughout the vacation-with-pay period. The holiday must be given within 12 months from the end of the vacation-with-pay period.

The Order prohibits any agreement for the purpose of granting to an employee less favourable conditions.

An amendment to the general Annual Vacation with Pay Order (No. 3), 1946, permits the stamp system to be used by agreement between the employer and the employee to pay the remuneration or vacation indemnity provided for by with pay under Order 3. This amendment was approved by an Order in Council (O.C. 1162) made and gazetted on the same dates as No. 3A.

## Saskatchewan Electrical Inspection and Licensing Act

The first regulations under the Electrical Inspection and Licensing Act, 1949 (L.G., 1949, p. 742), were made by an Order in Council (O.C. 2017/49) on October 28, gazetted November 5. These regulations, which are effective from December 1, 1949, set out a schedule of fees for the inspection of all types of electrical installations and electrical equipment installed by electrical contractors, employers and other persons. Schedule B sets out the fees to be paid for restricted journeymen's, contractors' and

supply house licences. All these fees are the same as before. A fee of \$10 has now been set for an employer's licence which is a new requirement laid down in the Act. All regulations made under the former Act are rescinded.

Other provisions of the regulations are unchanged. These include the stipulation that the Chief Inspector may decide not to accept the approval of the Canadian Standards Association as regards any specific type of electrical equipment. The Electrical Inspection Branch may inspect all electrical wiring and installations whenso-

ever done or made. Installations must conform to the latest authorized edition of the Canadian Electrical Code but the Code is to be interpreted as specifying minimum safety standards and the Branch may require that higher standards than those specified in the Code be imposed in the interest of safety. If, on inspection, the Branch finds that existing conductors and accessories are not of sufficient capacity for the current which they must carry, it may, by written order, require the owner or occupier of the premises to make the necessary changes.

## UNEMPLOYMENT INSURANCE

### Selected Decisions of Umpire Under the Unemployment Insurance Act

*Digest of selected decisions in appeals heard by the Umpire under the provisions of the Unemployment Insurance Act. Published in two series (1) Benefit cases, designated CU-B, and (2) Coverage cases, CU-C.*

**Held that the claimant voluntarily left employment without just cause but that she was available for work within the meaning of the Act.—CU-B 433 (May 11, 1949).**

#### MATERIAL FACTS OF CASE:

The claimant, married, 46 years of age, registered for work as a winder and spooler, was employed as a winder by a textile manufacturer from 1943 until November 12, 1948. She made claim for benefit on November 17, 1948, and gave as her reason for separation that she had been working part-time from 7:00 p.m. to 12:00 p.m. and had been laid off, but was on call. The employer reported that when she was asked to work full shift, she left of her own accord, as she could not arrange to work from 3:30 p.m. to 12:00 p.m. The Insurance Officer disqualified the claimant for non-availability (27 (1) (b) of the Act), and also imposed a disqualification for a period of six weeks under the provisions of Section 41 (1) of the Act.

In her appeal to the Court of Referees, the claimant contended that the reason for her discharge was that the employer had brought displaced persons into the mill. Subsequently she declared that she could not accept work for a full shift because she had to be home to prepare a main dinner for the men in her family, although

she was willing to accept any textile work at a rate of pay not under 60 cents an hour provided the shift was from 8:00 a.m. to 3:00 p.m. or from 7:00 p.m. to 12:00 p.m. The Local Office commented that these hours were not presently available in the textile industry and that the rate for beginners was 54 cents an hour.

The union's representative gave evidence at the hearing to the effect that the claimant did not leave her employment voluntarily but rather that she was forced to do so because the company was unable to employ her during the hours she had worked since 1945. The employer's representative, on the other hand, stated that it was the company's policy to hire employees on a full-time basis, that since the beginning of her employment the claimant had been given the opportunity of working full time but had always refused; in October, 1948, the claimant, with ten others, was formally requested to accept full-time work, but she along with three others refused.

Considering that the claimant should have arranged her domestic responsibilities so as to enable her to accept full-time employment, the Court, in accordance with CU-B 247, confirmed the Insurance Officer's disqualification imposed under the provisions of Section 41 (1). The Court was also of the opinion that, since the claimant had unduly restricted her availability, the

Insurance Officer's disqualification imposed under the provisions of Section 27 (1) (b) should also be confirmed.

From the unanimous decision of the Court of Referees, the union of which the claimant is a member appealed to the Umpire.

#### DECISION:

The evidence indicates that the claimant refused to continue her employment with the ..... Cotton Company on revised terms. There can be no doubt therefore, that her separation from the employ of that company was of a voluntary nature.

Has the claimant shown just cause for having voluntarily left her employment within the meaning of Section 41 (1) of the Act?

After a careful study of all the facts and submissions of the case, I consider that the Court of Referees has rightly applied decision CU-B 247 to the present case. The following quotation from that decision is material to the present issue:—

"Had any unemployed person been offered employment of the same kind as that held by the claimant at the (Textile Company) and under the circumstances had refused, she would have been deemed to have refused suitable employment within the meaning of the Unemployment Insurance Act."

The claimant, therefore, has not shown just cause for having voluntarily left her employment.

Has the claimant proved that she was available for work within the meaning of Section 27 (1) (b) of the Act?

As I pointed out in a recent case, availability for work is primarily a subjective matter which must be considered in the light of a claimant's intention and mental attitude towards accepting employment. Viewed objectively, it might be determined by a claimant's prospects of employment in relation to a certain set of circumstances beyond his control or which he has deliberately created.

The evidence indicates that the claimant has been employed as a part-time worker for several years. It further indicates that she has to work "due to financial trouble". Under the circumstances, I consider that when she filed her claim for benefit on November 17, 1948, she was available for work and should have been given a reasonable period of time to find work of a pattern to which she had been accustomed.

For these reasons, the finding of the Court of Referees, under Section 41 (1) of the Act is upheld but their finding under Section 27 (1) (b) is reversed.

**Held that the claimant was not available for work within the meaning of the Act.**  
—CU-B 435 (May 11, 1949).

#### MATERIAL FACTS OF CASE:

The claimant, married, aged 26 years, was employed as a marker by a variety store from June, 1944, until July 31, 1948. Upon termination of employment, her salary was \$22 a week. She made claim for benefit on August 4, 1948, declaring that she had left her employment voluntarily because the atmosphere of the basement in which she worked was "too damp and smelly".

On October 14, 1948, the Local Office notified her of permanent employment as a packer with a candle manufacturer. The salary offered was \$16 for a 40-hour week, the prevailing rate of pay for that type of work in the district. The claimant refused to apply and gave as her reasons: "I do not want packing, I want to mark the same as the job before". The Insurance Officer disqualified her for a period of six weeks under the provisions of Section 40 (1) (a) of the Act in regard to her refusal and also imposed a disqualification for non-availability (Section 27 (1) (b)) because she had unduly restricted the type of employment which she would accept.

The claimant appealed to the Court of Referees on the grounds that the salary offered was \$20 a month less than that which she had earned in her previous occupation and that the type of work was different and would give her no chance of advancement in her usual line of work. The Court of Referees unanimously maintained both decisions.

The Chairman refused the claimant leave to appeal from the decision under the provisions of Section 40 (1) (a) of the Act, but granted leave to appeal from the decision on the question of availability.

#### DECISION:

According to the evidence, the claimant, on October 14, 1948, refused employment as a packer at the prevailing rate of pay in the district for that type of work because she did not want to accept employment other than in her usual occupation as a marker and at a salary corresponding to that which she had previously received with the ..... Company. Furthermore, she specified that she would not work "in a basement".

The records also reveal that the claimant, on September 21, 1948, refused three offers of employment, one of which was in her own line of work, stating that the salaries were too low and "the hours of work were such as to interfere with her domestic life".

Taking into consideration all the facts and submissions before me, I find that the Court of Referees, in upholding the disqualification imposed by the Insurance Officer under Section 27 (1) (b), has rendered a decision which is in accordance with the meaning of the Act and previous decisions of the Canadian Umpire.

Notwithstanding that the only question I had to decide in this case is that of the claimant's availability for work, I wish, in view of the claimant's apparent misapprehension of the term "suitable employment" under the Act, to draw her attention to the following comments of the Umpire in decision CU-B 59:—

"Employment (in a claimant's usual occupation) may be suitable employment even though the wages are less than the claimant has recently been receiving if the wages offered are in line with those observed by agreement between employers

and employees or than those recognized by good employers."

As to the claimant's reference to paragraph (c) of subsection (2) of Section 40 of the Act, I would like to point out that that paragraph is qualified by subsection (3) of the same section, which reads as follows:—

"After a lapse of such an interval from the date on which an insured person becomes unemployed as, in the circumstances of the case, is reasonable, employment shall not be deemed to be not suitable by reason only that it is employment of a kind other than employment in the usual occupation of the insured person, if it is employment at a rate of wages not lower and on conditions not less favourable than those observed by agreement between employees and employers or, failing any such agreement, than those recognized by good employers. For these reasons, the appeal is dismissed.

## Unemployment Insurance Statistics October, 1949\*

The monthly report prepared by the Dominion Bureau of Statistics on the operation of the Unemployment Insurance Act states that during October, 1949, a total of 77,091 claims for Unemployment Insurance benefit was filed in local offices of the Unemployment Insurance Commission as compared to 59,080 in September and 43,620 during October, 1948. Included in these are 7,742 revised claims (that is, reconsiderations of existing claims) during October, 1949, 7,145 in September, and 5,516 in October last year. Initial and renewal claims, representing mainly new cases of recorded unemployment among insured persons, totalled 69,349 in October, 1949, 51,935 in September, 1949, and 38,104 in October, 1948.

At October 31, 1949, ordinary claims on the live unemployment register numbered 105,934 (76,464 male and 29,473 female) as against 83,525 (59,567 male and 23,958 female) at September 30 and 55,384 (36,881 male and 18,503 female) at October 31, 1948. In addition to ordinary claims there were at October 31, 9,492 (7,078 male and 2,414 female) other claims, that is, mainly claims registered by persons working on short time, compared with 11,570 (9,116 male and 2,454 female) at September 30, 1949 and 4,460 (3,487 male and 973 female) at October 31, 1948.

Claimants on the live unemployment register at October 31, are classified according to the number of days they have been

continuously on the register since the last initial or renewal claim was filed in each case. For purposes of establishing the number of days on the register, only days of proven unemployment are counted.

During October, 1949, of 71,459 claims handled at adjudicating centres 56,827 claims were allowed, 14,240 were disallowed and 392 special requests were not granted. In addition, 802 claims were referred to Courts of Referees and the Umpire. Chief reasons for non-entitlement to benefit in order of number of cases were: "insufficient contributions while in insurable employment" 5,685 cases, "voluntarily leaving employment without just cause" 4,035 cases, and "refusal of offer of work and neglect of opportunity to work" 918 cases.

The number of persons receiving benefit, number of benefit days paid and amount of benefit paid by province for the week of October 15 to 21, inclusive, are presented in Table E-6. A total of 41,811 persons commenced receipt of benefit during October, 1949 as compared to 34,414 in September and 21,331 in October, 1948. In October, 1949, benefit payments amounted to \$3,845,541 for 1,675,017 compensated unemployed days as against \$3,671,773 for 1,611,461 days in September and \$1,763,559 for 878,430 days during October last year.

During the week of October 15 to 21, 1949, 71,838 persons received benefit for 400,350 days in respect of which \$921,686 were paid, as compared to 65,443 persons receiving

\* See Tables E-1 to E-7.

benefit for 372,196 days in the amount of \$848,957 during the week of September 10 to 16. The average duration of benefit for persons receiving benefit during the week of October 15 to 21, was 5.6 days as compared to 5.7 days for the week of September 10 to 16. The average amount of benefit per day for the former period was \$2.30 as compared to \$2.28 for the latter. During the two weekly periods mentioned the average amount of benefit paid was \$12.83 and \$12.97, respectively.

## Insurance Registrations

Reports received from local offices of the Unemployment Insurance Commission for the month ending October 31, 1949, showed 3,594,352 employees were issued with insurance books and had made contributions to the Unemployment Insurance Fund at one time or another since April 1, 1949, an increase of 73,757 since September 30, 1949.

As at October 31, 1949, 223,457 employers were registered representing an increase of 271 since September 30, 1949.

# WAGES, HOURS AND WORKING CONDITIONS IN THE LUMBER AND ITS PRODUCTS INDUSTRY, OCTOBER 1948\*

*There were 48,100 mill or factory workers and 3,000 office workers reported employed in the 628 establishments whose returns are analysed in this article. Fifty-seven per cent of the workers were affected by collective agreements. The five-day week was reported in less than one-third of the establishments but they included one-half the workers. Time and one-half was the most common overtime rate. Forty-five per cent of the workers were in 187 establishments which gave a vacation of two weeks, mainly after five years. Ninety-seven per cent of the workers were in establishments observing statutory holidays and 24 per cent received pay for some or all of those observed.*

In making this analysis, the industry was divided into four parts, namely Sawmill Products; the Planing Mill, Sash and Door Industry; Wooden Furniture; and Baskets and Wooden Boxes. Each section will be dealt with separately.

Index numbers of wage rates for the industries shown on p. 92 are based on comparable rates in 1939 and indicate that in all but the Planing Mill, Sash and Door Industry, average rates had more than doubled by 1948.

## The Sawmill Products Industry

Returns from 228 sawmills throughout Canada employing 24,000 mill and 1,000 office workers were used in analysing this industry (Table 1). Thirty per cent of the workers were in 164 mills employing less than 100 workers, 22 per cent were in 38 mills employing between 100 and 200, another 22 per cent were in 18 mills with 200 to 400 workers and the remaining eight mills, employing more than 400, averaged 757 workers each.

*Collective Agreements.*—Collective agreements in writing were reported by 105 mills employing 16,900 workers. The great majority of workers were under agreement with the International Woodworkers of

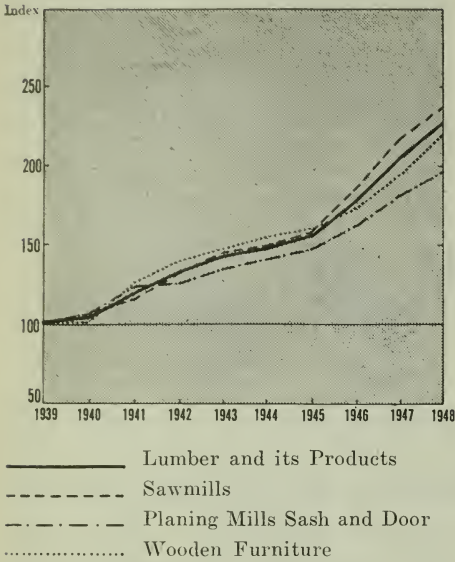

\* Information in this article was prepared from data obtained in the general annual survey of wage rates and hours of labour for 1948 made by the Economics and Research Branch of the Department of Labour. Employers were asked to report on certain conditions of work as well as to give, by occupation, their straight-time earnings of employees on piece work during the last pay period preceding October 1, 1948. Information on wage rates for 1948 in Logging and Construction was published in the April Labour Gazette and for Civic Employees in the May issue. Information comparable with this article dealing with other industries for 1948 has been published monthly since the June 1949 issue of the Labour Gazette.

For information on wage rates in the industry, see Report No. 31 "Wage Rates and Hours of Labour in Canada, 1948", issued by the Department as a supplement to the November Labour Gazette.

For a summary of provincial legislation on working conditions see *Provincial Labour Standards Concerning Child Labour, Holidays, Hours of Work, Minimum Wages, Weekly Rest-Day and Workmen's Compensation*, an annual publication of the Department of Labour.

# INDEX NUMBERS OF WAGE RATES IN THE LUMBER AND ITS PRODUCTS INDUSTRY, 1939-1948

(Base 1939 = 100)

America (CIO-CCL) and the remainder reported agreements with other international or with national unions.

*Standard Weekly Hours of Work, Table 2.*—Weekly hours of work ranged from 40 to 60. Seventy-one per cent of the workers were in 142 mills operating on a 40, 44 or 48-hour week and the remainder worked longer than 48 hours.

The five-day week was reported by 74 mills employing more than half the total number of workers. They were all located in Ontario and British Columbia with hours reported for Ontario either 48 or 50 and for British Columbia, 40 or 44 with 52 per cent of all workers on a five-day 40-hour week.

*Overtime Rates of Pay, Table 3.*—All but two of the mills which paid an overtime rate providing premium pay reported a rate of time and one-half for overtime, either after daily or weekly hours had been worked. The two exceptions reported either time and one-half after a specified number of hours of work per month or a premium of ten cents per hour after weekly hours had been worked.

For work on Sunday and statutory holidays, time and one-half was the most

(1) Includes one mill (53 workers) giving an additional week after eighteen months of service.

(2) Includes one mill (71 workers) giving two weeks and another (41 workers), three weeks vacation after twenty-five years' service.

common rate. However, some 2,400 workers received double time and in one case double time and one-half was reported.

*Vacations with Pay, Table 4.*—Of the 228 mills covered in this survey, 165 employing 89 per cent of the workers, reported giving a vacation with pay of at least one week after a year or less of service. Fifty-seven per cent of the workers were in 77 mills reporting a maximum vacation of two weeks after one to five years of service, mainly after five years. Two mills gave three weeks, after 18 months in one case and after 25 years in the other.

*Statutory Holidays, Table 5.*—Eighteen mills reported observing no holidays and of the 210 mills which reported observing some statutory holidays, 190 employing 84 per

cent of the workers, did not pay for any of the holidays observed. Payment was made for one holiday in seven mills, two to four holidays in eight mills and the other five mills paid for five to eight holidays.

*Shift work, Table 6.*—Some 3,400 workers were reported on shift work in this industry during the survey period with 83 per cent of these receiving a wage differential of four, five, six or 14 cents per hour, most of the workers receiving six cents.

*Sick Leave with Pay.*—Sick leave with pay was negligible in this industry with only 17 mills reporting a sick leave policy. Thirteen of these mills employing 2,141 workers had a group insurance or sick benefit plan and the remainder reported varying provisions covering paid sick leave.

**TABLE 5.—STATUTORY HOLIDAYS OBSERVED AND PAID FOR IN THE SAWMILL PRODUCTS INDUSTRY, 1948**

NOTE.—Eighteen mills (1,145 workers) gave no information on holidays.

## The Planing Mill, Sash and Door Industry

In analysing this industry, returns from 203 mills employing 9,800 mill workers and 1,300 office workers during the survey period were used (Table 7).

Of the 203 mills, 139 employed less than 50 workers each, averaging 27 workers per mill, and only two mills employed more than 200 workers.

*Collective Agreements.*—Of the 203 mills, 59 reported having collective agreements in writing covering 39 per cent of the workers.

Twenty-two per cent of the workers under agreement were in 35 mills reporting agreements with either the United Brotherhood of Carpenters and Joiners of America (AFL-TLC) or the International Woodworkers of America (CIO-CCL). Two mills reported employees' associations and the remainder reported agreements with either a national or international union.

*Standard Weekly Hours of Work, Table 8.*—Weekly hours ranged between 40 and 60 with the largest groups of workers including 22 per cent of the total number in mills reporting a 44-hour week and another 21 per cent in 36 mills reporting a 48-hour week.

### The Five-Day week

The five-day week was in effect in another 35 mills (1,929 workers). There were 17 British Columbia mills on a 40-hour week and the remaining mills operating five days per week were all located in Ontario. Eight mills (519 workers) reported a 45-hour week, three worked 47 or 47½ hours (157 workers) and seven (403 workers) were on a 48-hour work week.

The five-day week was reported by only 35 mills of which 19 were on a 40-hour week.

*Overtime Rates of Pay, Table 9.*—Time and one-half was the most common overtime rate providing premium pay which was reported. Sixty-four per cent of the workers received this rate after daily or weekly hours had been worked; for Sunday and Holiday work, more than one-third of the workers were eligible for this rate.

Double time was paid for Sunday work by 33 mills employing 20 per cent of the workers. For work on statutory holidays this same rate was paid in 38 mills employing 23 per cent of the workers; in two cases a rate of double time and one-half was reported.

*Vacations with Pay, Table 10.*—Of the 183 mills reporting information on vacations with pay, 160 employing 87 per cent of the workers reported an initial vacation of one week and another eight mills gave two weeks, in every case after one year of service.

One week was the longest vacation given by 128 mills, employing 6,300 workers. A vacation of two weeks was reported by 56 mills (2,900 workers) requiring from one to

20 years of service; 85 per cent of these workers were in mills requiring five years or less.

*Statutory Holidays, Table 11.*—Of the 201 mills which reported observing some statutory holidays, 80 employing more than one-third of the workers paid for one to 12 of those observed. Twenty-one of the mills, employing 32 per cent of the workers in those mills paying for some holidays, reported payment for two of those observed and another 40 per cent were in 37 mills which paid for six to eight.

*Sick Leave with Pay.*—Only 43 mills employing some 2,400 mill workers reported sick leave with pay. Twenty-five mills employing 1,600 workers reported a Group Insurance or Sick Benefit Plan. The remainder had various provisions, covering length of service, number of days allowed per year or in special cases only.

## The Wooden Furniture Industry

In analysing this industry returns from 147 factories employing 10,600 factory workers and an office staff of 1,000 were used (Table 12). One-half the workers were

(1) One mill (24 workers) on a five-day week paid double time after the first three hours, from Monday to Friday and double time after eight hours on Saturday.

(2) Includes two mills (45 workers) paying double time and one-half for work on holidays.

(3) Includes mills paying straight time or having no overtime policy.

in 104 factories employing less than 100 workers. The remaining 33 factories employing more than 100 and less than 400 averaged 160 workers each.

*Collective Agreements.*—Of the 147 factories, 61 reported having collective agreements in writing affecting some 4,600 workers. The majority of workers were reported under agreement with either the International Woodworkers of America (CIO-CCL), the Upholsters' International Union of North America (AFL-TLC), the United Brotherhood of Carpenters and

Joiners (AFL-TLC), or unions affiliated with the Canadian Catholic Confederation of Labour.

*Standard Weekly Hours of Work, Table 13.*—Weekly hours ranged from 40 to 50 with 89 per cent of the workers in 116 mills operating either on a 40, 45, 49 or 50-hour week.

The five-day week was in effect in 105 of the 147 factories employing 75 per cent of the workers. Forty-four per cent of the total number of workers were on a five-day, 45-hour week.

**TABLE 10.—VACATIONS WITH PAY FOR MILL WORKERS IN THE PLANING MILL, SASH AND DOOR INDUSTRY, 1948**

NOTE.—Of the 203 mills covered in this survey 19 mills (613 workers) did not report any information on vacations with pay.

(1) Includes one mill (49 workers) with a single provision of one week after three months of service.

(2) Includes three mills (54 workers) on seasonal work allowing 1/26 of total earnings.

*Overtime Rates of Pay, Table 14.*—Time and one-half was the only premium rate reported for the work week either after daily or weekly hours had been worked and the majority of workers received this same rate for Sunday and holiday work. Double time was paid in 17 and 20 instances respectively for Sunday and holiday work and in another three cases double time and one-half was reported for work on statutory holidays.

*Vacations with Pay, Table 15.*—Only two factories did not give any information on vacations with pay and all those reporting gave at least one week after a year or less of service.

One-third of the workers were in 38 factories which reported a maximum vacation of two weeks after a service requirement ranging from two to twenty years with

the great majority of workers in factories requiring five years. Two factories gave three weeks, after 25 years in one case, and after 30 years in the other.

*Statutory Holidays, Table 16.*—All the factories in this industry reported observing some statutory holidays and 53 of these, employing some 4,000 workers, paid for some or all of the holidays observed. Payment was made for four to six holidays in 44 factories employing 51 per cent of the workers receiving pay for some holidays.

*Sick Leave with Pay.*—Of the 33 factories reporting sick leave with pay, 28 employing some 2,800 workers had a group insurance plan and the remainder reported varying provisions, such as, "employees own fund", "part pay after six months"; another reported allowing sick leave with no definite policy.

**TABLE 11.—STATUTORY HOLIDAYS OBSERVED AND PAID FOR IN THE PLANING MILL, SASH AND DOOR INDUSTRY, 1948**

NOTE.—Of the 203 mills covered in this Survey two (150 workers) did not observe any holidays.

(1) Includes one factory (27 workers) reporting a flat rate providing a premium of five cents per hour.

(2) One factory (29 workers) reported double time for Saturday work and another (50 workers) gave its carpenters and painters double time for overtime during the week and on observed statutory holidays.

(3) Includes factories paying regular rates or having no overtime policy.

## The Basket and Wooden Box Industry, 1948

In analysing the industry, returns from 50 factories across Canada employing approximately 3,700 factory workers and 200 office employees were used (Table 17). Of the 50 factories, 38 employed less than 100 workers, averaging 43 workers per factory and only two employed more than 200 workers.

*Collective Agreements.*—Collective agreements in writing were reported by 21 factories, covering 54 per cent of the workers. The most prominent unions were the United Brotherhood of Carpenters and

Joiners of America (AFL-TLC) and the International Woodworkers of America (CIO-CCL). There were three other unions affiliated with the Canadian Catholic Confederation of Labour and another eight were under agreement with either an international union or an Employees' Association.

*Standard Weekly Hours of Work, Table 18.*—Weekly hours of work ranged between 40 and 60 with 71 per cent of the workers in 36 factories reporting either a 44, 45, 48 or 50-hour week. Twenty per cent of the workers were in the ten factories which reported working longer than 50 hours per week.

**TABLE 15.—VACATIONS WITH PAY FOR FACTORY WORKERS IN THE WOODEN FURNITURE INDUSTRY, 1948**

NOTE.—Four factories employing 123 workers gave no information on vacations.

Total Factories and Workers....	143	10,484	101	6,654	42	3,830

(1) One factory (75 workers) gave an additional week after thirty years' service.

(2) One factory (113 workers) gave an additional week after twenty-five years' service.

The five-day week, with hours varying between 40 and 50, was in effect in only 13 of the factories which employed 29 per cent of the workers.

*Overtime Rates of Pay, Table 19.*—More than half the factories reported paying a premium rate of time and one-half after either daily or weekly hours had been worked. Thirty-nine per cent of the workers received the same rate for Sunday work and 29 per cent received double time. For work on observed Statutory holidays nearly one-third of the factories, employing 40 per cent of the workers, reported paying a rate of time and one-half; double time was reported in 12 instances accounting for 16 per cent of the workers. The factories in Saskatchewan reported a rate of double time and one-half.

*Vacations with Pay, Table 20.*—All but four factories had some provision for paid vacations, reporting a vacation of at least

one week after six months or a year of service.

Sixteen factories, employing more than one-third of the workers, reported a maximum vacation of two weeks with a service requirement of from one to ten years; one of these gave three weeks after 18 months of service.

*Statutory Holidays.*—In this industry all the factories reported observing from two to 11 holidays, although only nine, employing one-quarter of the workers, paid for some or all of the holidays observed.

*Sick Leave with Pay.*—Of the 50 factories used, only seven with 585 workers reported giving sick leave. Four factories employing 77 per cent of these workers reported group insurance plans, one reported giving one-half day per month, another stated paid sick leave was at the discretion of the management and the remaining establishment did not give any details of its plan.

An analysis of the current employment situation prepared by the Economics and Research Branch, Department of Labour, on the basis of returns from the National Employment Service, reports from the Dominion Bureau of Statistics, and other official information. For a brief summary of more recent information, see the opening pages of this issue.

## EMPLOYMENT CONDITIONS DURING NOVEMBER, 1949

*Seasonal and other factors brought about an increase in unemployment during November. Employment was much lower in logging this year in most areas, but was at approximately the same level as last year in manufacturing. The Maritime region indicated several areas of considerable unemployment. Claims for unemployment insurance were increasing markedly.*

The arrival of winter weather in most parts of Canada during November meant that many workers became unemployed as their seasonal jobs terminated. Outdoor work in agriculture had drawn to a close in practically all areas. Construction activity had been curtailed and inland water transportation industries had released most of their workers. The number involved in these lay-offs was larger than in the past six or seven years when production in these industries was at its height. It indicated, in most cases, a return to the seasonal pattern of employment of the pre-war years. Probably about 200,000 workers will be released from the seasonal industries during the winter months.

As well as seasonal disturbances, changing market conditions were beginning to affect employment levels. The main development here was the loss of export markets and the most decided effect on employment to date was in the logging industry. In the Maritime and Quebec regions, particularly, sharp declines in woods employment were indicated and, as a result, unemployment in these regions was considerably higher than at this time last year. Loss of markets in some manufacturing industries, notably those producing aluminum and farm implements, had also brought about employment declines.

In addition to cut-backs in specific industries, there was a general tendency for employers to lay off extra or inefficient workers in order to cut costs and thus improve their position in the increasingly competitive domestic market. Highly skilled help was still being hired but most of the workers being released were not able to meet these qualifications. By December 8, some 234,000 applicants were looking for work at employment offices and registrations were expected to increase until the

spring. Despite these increases, however, unemployment is still at a relatively lower level than in the United States at the present time.

Most of these workers are protected during short periods of unemployment by unemployment insurance. Over two-thirds of all paid workers in Canada are insured. Those not insured are mostly in the service industries, where there is little unemployment, or are salaried workers being paid more than \$3,120 per annum. There are, however, some 225,000 to 250,000 paid workers in the primary industries who are not covered by unemployment insurance, although a number of these persons work in construction or other insured employment in the summer and thus may be able to draw some benefits during the winter. At the middle of November, 54 per cent of the unplaced applicants were in receipt of unemployment insurance benefits, and this percentage may increase as the winter progresses.

### Industrial Analysis

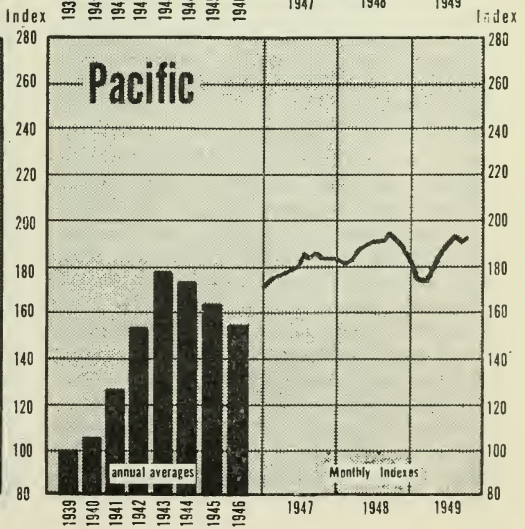

In **agriculture** the demand for workers was light during November as Fall work was finished on most farms. For the first time in several years, local help was reported as available for this type of work. The number of applicants was not large, but all vacancies were promptly filled.

The usual seasonal movement of workers out of the industry was under way during November, but it was reported that larger numbers of farmers were staying at home this winter, as employment opportunities in other industries were fewer. In fact, one or two areas reported that experienced farm workers were going back into agriculture after spending some time in industrial employment.

# REGIONAL EMPLOYMENT TRENDS

Average: 1939 = 100

Seasonally Adjusted

The demand for farm workers on the Prairies was cut down by the reduction in the number of livestock on farms. Mild weather during most of the month permitted farmers to keep their livestock outside. When feed hauling becomes necessary, an increase in the demand for farm workers was expected. Wages offered, reported as varying from \$40 to \$65 per month plus board, were not high enough to attract a surplus of workers to the industry.

**Logging** activity in the east was in full swing in November with conditions generally ideal for cutting. There had been considerable unemployment among loggers this year as requirements in most areas were well below the 1948-49 season. This was keenly felt by seasonal farm workers who count on woods work as a supplementary source of income.

It is expected that most of the cutting will be completed by the end of December this year. Many areas reported that 75 per cent of the cut had been finished early in December. Snow conditions indicated that hauling may start earlier this year, but the peak of these operations will not come until January. This will result in short lay-offs for some workers.

In British Columbia, rain and storms during the latter part of November washed out roads, culverts and bridges, making trucking impossible. Only a few camps were closed, however, and the larger operators were continuing with full crews.

Employment in the **manufacturing** industries remained at approximately the same level as in 1948, in spite of the effect of such adverse factors as a lower volume of export trade and a reduction in forward buying. Other factors, such as continued high consumer spending and capital investment, have been operating as sustaining factors on employment and production. Manufacturing remains the largest employer of labour among the major Canadian industries, with a paid-worker labour force of nearly 1,100,000.

Employment opportunities offered by manufacturing plants have been fewer in total during 1949, however. New industrial building has slowed down; the labour force has been more stable; new production methods and machinery have in some cases reduced labour requirements and short-time and lay-offs have become more prevalent. Job-seekers, as a result, have tended to be taken on in other expanding industries, such as construction, transportation and communications.

Toward the end of the year, an increasingly large number of workers in manufacturing were registered as unplaced applicants at local employment offices, most of

whom are claiming unemployment insurance. Unskilled workers have been especially hard hit by this periodic unemployment. At November 3, 1949, there were 15,000 persons registered under unskilled manufacturing occupations, with another 30,000 in unspecified unskilled occupations. There were considerable numbers of skilled workers registered: 7,000 in metalworking occupations; 4,000 in secondary textiles; 2,500 in primary textiles; 1,400 in leather and leather products; and about 1,000 in food products occupations. The duration of unemployment for many of these was short but on the whole an increase in seasonal unemployment among manufacturing employees occurred this Fall.

The Canadian **construction** industry completed its most successful year in history in 1949, during which it provided employment for over 350,000 workers. The volume of business was well above that of 1948, with contracts awarded for the first ten months totalling \$900 million, as compared to \$815 million during the same period in 1948.

The industry was quite active early in the month but gradually slackened off as weather conditions became increasingly unfavourable. Highway, bridge and street construction projects closed down early but inside work on housing and commercial and institutional building maintained employment. Large gangs were employed during the month on big projects such as railway track-laying and hydro construction.

Lay-offs which took place as the various projects were completed affected general labourers first. Most skilled workers, such as first-class carpenters and bricklayers, were still working at the end of the month. Employment offices reported large increases in the number of unemployment insurance claims from construction workers and expected that many of these would be carried on throughout the whole winter.

The labour market in **trade** establishments was slow during November with hirings in anticipation of Christmas sales being slightly below 1948 levels. The seasonal increase in sales was late in starting because of mild weather conditions but both mail order and store sales were reported as picking up rapidly in the last week of the month.

The supply of workers was ample to meet demands arising out of the Christmas rush. More applicants, both male and female, were available for sales work and employers were interested chiefly in experienced help. Considerable demand was reported from department stores in larger cities such as Toronto, Montreal and Winnipeg. Younger

men were being taken on in some cases, as trainees to be added to the permanent staffs. Most stores were reluctant to make estimates of their employment requirements for 1950 but indicated that there might be reductions in some cases of permanent staffs as well as the usual lay-offs of seasonal help.

## Regional Analysis

The decline of employment in the *Maritime* region during November was more than seasonal according to all indications, and the employment level was probably lower than last year at the same period.

Seasonal curtailment of activity in construction, agriculture and fishing had displaced thousands of workers, but the usual expansion in logging which absorbs many of them, had not occurred this year. The result had been a rapidly mounting labour surplus. However, although pulp and pitwood operations had been at a greatly reduced level so far, the long lumber industry was still hopeful of supplying a good proportion of the United Kingdom's softwood requirements for 1950. Negotiations for the new contracts had not yet started, but some operators were planning to open camps shortly. Orders for hardwood lumber had been placed by the United Kingdom both for delivery this year and in 1950.

The coal mining industry was maintaining a high level of production and prospects were that steady employment would continue throughout the winter. Employment in heavy manufacturing remained normal, but a slight decline was indicated in the next few months.

In northern New Brunswick, further unemployment may be expected as the short logging season draws to a close. A poor season for the trade and service industries was also indicated. In St. John's, Newfoundland, the provincial government announced that 4,829 men were employed throughout the province on public work projects. An average of two or three months' work for each man was indicated. In the Grand Falls area, the sharp reduction in logging operations had created considerable unemployment both in this industry and amongst pulp and paper workers.

Employment in the *Quebec* region has declined slightly from last year's high level according to all indications. Chief cause of the decline has been the reduction of logging operations and the effect of foreign competition on manufacturing production.

Seasonal unemployment mounted as construction activity tapered off—only

advanced construction with inside work will continue for the next few months. The transportation industry released workers as the port of Montreal closed. By the end of the month, unplaced applicants at Employment Service offices amounted to 67,300, about 29,000 more than at the same time in 1948.

Labour turnover in woods operations, contrary to expectations, has been heavy because of the lower wages being paid in some areas. Although this development will mean employment for a great number of workers, the average wage earned will be less. Furthermore, most operators plan to complete cutting schedules before the end of December, which will displace several thousand additional workers.

Activity in manufacturing industries decreased slightly during November. Pulp and paper production and clothing production were at a lower level than last month. The textile industry reported some loss of orders because of British competition.

The most significant feature of the *Ontario* regional economy is the wide diversification of its industry. This diversification had enabled the maintenance of a high level of employment in the face of adverse developments for several sectors of the economy. Thus in spite of the loss of certain export markets as a result of international exchange problems, and the shortages created by the United States steel strike, indications were that the level of employment has risen above the high level of last year.

During the month, employment in heavy manufacturing industries increased as a result of greater production in the automobile and agricultural implements industries. The construction industry continued active throughout November and new projects were still being started; thus the level of winter employment should be relatively high.

The wholesale and retail trade industry reported declines in sales and continued evidence of price consciousness, particularly in luxury and novelty goods.

Employment in the *Prairie* region is subject to wide seasonal fluctuations since primary industries are so important to the economy. Stormy weather and heavy snowfalls during early November speeded up the usual decline in many seasonal activities at this time of the year. Employment was still at approximately the same level as last year, however, according to all indications.

During the next few months as further declines occur in construction, transportation and logging, the number of unplaced applicants registering at employment offices

will undoubtedly increase. Basically, however, conditions in this region, especially in the western section, compared favourably with the other sections of the country.

The level of employment in the logging industry, which normally supports a major segment of total winter employment for the region, has been well below last year's. Furthermore, indications were in several areas that the cutting season would end before Christmas, instead of continuing well into the New Year, as usual.

On the other hand, the coal mining industry was in full operation in most areas since this is its seasonally active period. Similarly, meat packing plants were working at capacity; cattle and hog shipments were in good volume and prices were high owing to the favourable market in the U.S.

Employment conditions in the *Pacific* region during November followed the normal pattern until sudden stormy weather struck towards the end of the month. Heavy rains and flash floods hastened the usual seasonal decline in construction and disrupted logging employment.

In the logging industry, employment conditions were stable in all areas except Prince George, until the heavy rains halted some operations. Damage to roads and bridges was widespread. The worst impact was felt in the areas surrounding Nanaimo and Duncan, where approximately 2,000 workers were thrown out of work. With this disruption of activity and the nearness of the annual Christmas shut-down, the immediate outlook for the industry was clouded with uncertainty. Previous indications were that employment would continue at a good level until at least the end of January. From then on, it was hoped that new United Kingdom commitments would result in further improvement. Under present conditions, however, it would not be possible to determine trends until the middle of January.

Conditions in the sawmill industry were good and most mills were operating at capacity. Since devaluation, exports to the United States had increased considerably. Indications were that the level of operations would remain stable until January or February when the United Kingdom contract now open for tender would probably be settled. If a good part of any United Kingdom order goes to British Columbia producers, a further increase in mill employment can be expected.

### Employment Service Activities

Some 50,000 persons were added to the number unplaced during November. This was an unusually large increase for the time

of year. Starting about the middle of October, two weeks earlier than in 1948, the influx of applicants into employment offices began to quicken, with each week showing a larger rise than the week before. An advance of 11,000 over the previous week was registered in the last week in November; by the first week in December, 14,000 were being added in one week. The latest figure shows 234,000 unplaced applicants at employment offices at December 8.

When assessing these unplaced applicants as an indicator of employment conditions, however, it must be realized that the applicants' total includes a number of persons already employed who are seeking other work. On the other hand, there may be some unemployed who have not registered in National Employment Service offices and who, therefore, are not included.

The pattern which registrations were following are to some extent evident in the statistical information available for October. At the end of that month, over one-third of the applicants on file were registered in unskilled occupations, and the majority of these were looking for general labouring jobs. Most of the winter increase in unemployment occurs among this category of workers; this year, however, there is likely to be a sharper than usual increase in the number of skilled and semi-skilled workers seeking jobs. Already the proportion in this latter group is larger than at the same time last year (31 per cent of all applicants as compared with 26 per cent in 1948).

About one-half of all unplaced applicants were receiving unemployment insurance benefits at the middle of November. In addition, a number were putting in their nine days' waiting period required by the Act before payment can begin.

About 60 per cent of all applicants had signed the live unemployment register at the beginning of the month. The proportion seeking benefits is expected to increase steadily during the winter months, probably exceeding the 80 per cent who signed the register during February of last winter. Twenty to 25 per cent of those claiming may be disqualified because they cannot meet the necessary requirements laid down by the Act. The chief reason for non-entitlement will be insufficient contributions, although some will be disqualified because of not being unemployed, leaving work without just cause and other reasons. Generally, however, it would appear that relatively fewer workers are being disqualified this year from receiving benefits. About 79 per cent of all claims adjudicated in October, 1949, were allowed compared with 71 per cent in October, 1948.

The outlook for job possibilities during the coming winter months is not bright. Already vacancies registered are at a lower point than in the trough of the winter slump last year. Of the openings on file, over one-quarter are in the service industries. Hirings are currently being activated

by the Christmas trade and, while workers are still at a premium in the stenographic occupations and in some skilled trades, jobs for unskilled or semi-skilled workers, which account for the majority of unplaced applicants, will probably not be available in any number until the spring opening of activity.

## EMPLOYMENT AND PAYROLLS IN CANADA, 1948

*Industrial employment and payrolls reached record levels in 1948, according to the annual survey of the Dominion Bureau of Statistics. There was a falling-off in the proportion of women workers employed.*

Employment in Canada in 1948, as reported by leading establishments in the eight major industrial divisions, showed a further upward movement. The index number for the year exceeded the all-time maximum of 1947 by 4.2 per cent, and the wartime peak recorded in 1943 by 6.4 per cent. An even greater advance occurred in the weekly salaries and wages index, which rose by 15.6 per cent.

A detailed review of the situation in 1948 in the nine leading industrial groups—manufacturing, logging, mining, transportation, communications, construction and maintenance, services, trade, and finance—is presented in the *Annual Survey of Employment and Payrolls in Canada, 1948*, released recently by the Dominion Bureau of Statistics. The report also contains information relating to the distribution of employees, industrially and geographically, and by sex, and discusses the changes that have occurred in the employment of women.

### Employment

The higher level of industrial activity reported in 1948 brought the index of employment for the year to an all-time high of 195.8 per cent of the 1926 average. The previous maximum was in 1947, when the annual average reached 187.9.

At the beginning of 1948 the index number of employment was seven per cent higher than at January 1, 1947. As the year progressed the rate of increase diminished and by December 1, the index was only 2.4 per cent above that indicated at the same date in the preceding year.

Improvement recorded in 1948 was, as in 1947, generally greater in the non-manufacturing classes than in manufacturing, thus continuing a trend evident since the

termination of hostilities. There were two exceptions, logging and transportation. In the former, employment declined by seven per cent, as a result partly of unfavourable weather, and partly of export market conditions; apart from 1947, the average, however, was higher than in any earlier year.

Rather higher levels of industrial activity were indicated in all provinces in 1948 as compared with 1947. The increases in the index numbers of employment varied from 1.2 per cent in New Brunswick and 2.1 per cent in Saskatchewan, to 6.4 per cent in Alberta, 8.4 per cent in Nova Scotia, and 11.3 per cent in Prince Edward Island. The gains in Quebec, Ontario and British Columbia amounted to 3.2 per cent, 4.6 per cent, and 4.6 per cent, respectively.

### Trends in Employment of Women

Information available respecting sex distribution is of comparatively short duration, and relates to a period which has been affected by many unusual factors, it is explained, and it is not yet possible to determine the extent to which fluctuations in the employment of men and women result from seasonal or other causes.

During 1948, there was an increase of nearly three per cent in reported employment of women, while the reported number of men rose by 4.5 per cent. In large part, the disparities in the rates of gain resulted in variation in the level of employment in the different industries included in the surveys: considerable expansion, for instance, took place during the year in construction, in which the personnel is largely male. In several of the industrial groups the ratios of women were somewhat

lower than during 1947. As compared with the war years, declines in the proportions of women were indicated in practically all cases.

Month to month changes indicated for workers of both sexes in 1948 were on ten occasions in the same direction, although not necessarily of the same magnitude. At September 1 and again at December 1, the trends were at variance, the reported number of men declining and the number of women rising. Seasonable movements were largely responsible for these differences. In spite of the moderate advances in the employment of women in the year under review, there was a slight falling-off in their proportion per 1,000 workers of both sexes on the payrolls of leading establishments.

### Payrolls

The index number of weekly salaries and wages in the eight leading industries rose in 1948 by 15.6 per cent as compared with 1947, previously the maximum in the record dating from June 1, 1941. The rise in the index in 1948 as compared with earlier years was due to the payment of higher wage and salary rates in most branches of industry, together with a rather greater volume of employment than in 1947. The losses in employment, working hours and earnings as a result of industrial disputes in the year under review were less than in immediately preceding years, the

improvement in this respect being particularly marked as compared with 1947 and 1946. In the nine leading industries, including financial institutions, the general index of payrolls was 199.0, as compared with 172.5 in 1947, previously the maximum in the record.

In the period for which monthly statistics of weekly payrolls are available, the disbursements of the larger firms in the eight leading industries have mounted by 99.6 per cent; the accompanying increase in the index of employment in 1948 was 28.2 per cent. The following factors are cited as being mainly responsible for the materially larger advance in the index of aggregate payrolls: (1) the payment of higher wage-rates in very large numbers of industries and establishments, in addition to the general increases due to the mandatory payment of cost-of-living allowances during the war to the majority of workers; (2) the progressive up-grading of employees as they gained experience in their work; and (3) reductions in the proportions of women workers.

### Average Weekly Earnings

Weekly earnings of salaried employees and wage-earners on the staffs of leading employers in the eight major industrial groups averaged \$40.11 in 1948, before deductions for income tax, unemployment insurance contributions, etc., exceeding by 11 per cent the 1947 figure of \$36.15.

Highest averages were reported in steam railway operation (\$54.61), pulp and paper mills (\$54.24), and metallic ore mining (\$51.12). The average in automobile manufacturing was also high.

In the lower categories of earnings, computed from data furnished by the larger establishments, fell the hotel and restaurant, hosiery and knitting, laundry and dry-cleaning, leather footwear, and garment and personal furnishing divisions, in which per capita figures varied from \$24.43 in the first-named to \$29.86 in clothing factories. In these industries, the proportions of women workers are high, while the average hours worked are frequently below the general level. In the case of the hotels and restaurants group, board and lodging

are often provided the workers; no allowance is made in the current data for the value of such perquisites. This is also the case in the logging industry, in which the collection of material on employment and payrolls is unusually difficult, largely due to the methods of payment used in many camps.

### Average Work Week

Although the changes were not marked, there was a general trend in 1948 towards shorter hours in most industries. Reduction in the standard hours of work in some establishments was a factor, as was a diminution in the amount of overtime work in certain instances. These factors operated to a greater extent in the comparison

### INDEX NUMBERS OF EMPLOYMENT IN THE EIGHT MAJOR INDUSTRIAL GROUPS: ANNUAL AVERAGES

(1926=100)

<sup>1</sup> Comprises iron and steel, non-ferrous metals, electrical apparatus, lumber, musical instruments and clay, glass and stone products. The non-durable group includes the remaining manufacturing industries with the exception of electric light and power.

with 1946 and 1945. Changes in the industrial distribution of the wage-earners reported in manufacturing also had an important effect in the comparison of the 1948 figures with those reported on the final year of the war and the immediate post-war period.

In some instances the averages were higher, largely due to the fact that, in general, the losses in working time in 1948 resulting from labour-management disputes were decidedly lower than in either 1946 or 1947. The higher average in building in 1948 was associated with continued improvement in the supply situation. In

the pulp and paper and dairy products industries, the averages of 49.0 and 47.0 respectively were considerably above the general averages. This was due in part to the fact that most establishments in these groups are situated in smaller centres, and that the staffs are largely male. Average hours, on the other hand, were relatively short in the garment and personal furnishings, fruit and vegetable preserving, and leather footwear plants, in which considerable numbers of women are employed. These are shown to be 36.6, 38.9 and 38.9 respectively.

# PRICES AND THE COST OF LIVING\*

## Cost-of-Living Index

The Dominion Bureau of Statistics cost-of-living index receded 0.5 points to 161.7 between October 1 and November 1, 1949. This marked the third successive monthly decline and lowered the index 1.1 below the August peak of 162.8. Easier food quotations again were primarily responsible for the decrease, although the clothing index moved down fractionally.

The food index dropped 1.7 points to 203.3 during October, due mainly to seasonal weakness for meats coupled with lower prices for eggs and fresh and canned vegetables. These outweighed increases for oranges, lemons and coffee. Clothing, the only other group to register a decline, receded from 184.1 to 183.7 due mainly to decreases for men's overcoats and suits and women's topcoats. Higher quotations for coal and coke imported from the United States were reflected in a further advance in the fuel and light index from 134.1 to 135.1. Home furnishings and services moved up 0.2 to 167.4 when higher prices for certain furniture items overbalanced decreases for dishes and glassware. The group indexes for miscellaneous items at 130.2 and rentals at 123.9 remained unchanged.

From August, 1939 to November, 1949, the increase in the cost-of-living index was 60.4 per cent.

## Cost of Living in Eight Cities

Cost-of-living indexes for six of the eight regional centres moved lower during October, while two were higher. As in previous months, food changes were primarily responsible although clothing prices were easier at most cities. Home furnishings and services registered little change while miscellaneous items were steady; where United States coal prices were used the fuel and light index was firmer, while at other centres the index declined because of lower domestic fuel costs. Rents, which are based on quarterly surveys, remained unchanged.

Composite city index changes between October 1 and November 1 were as follows: Saint John -1.1 to 157.9; Montreal -1.1 to 164.3; Halifax -0.8 to 154.2; Toronto -0.7 to 157.2; Winnipeg -0.5 to 155.7; Vancouver -0.5 to 162.3; Saskatoon +0.4 to 162.8 and Edmonton +0.3 to 157.1.

## Wholesale Prices, October, 1949

The general level of wholesale prices rose 1.7 points to 157.1 between September and October, 1949. When compared with October, 1948, a drop of 2.2 has occurred. Of the eight major groups, six were higher led by a gain of 6.4 points to 188.1 for wood, wood products and paper. Non-metallic minerals rose 4.9 to 138.9, while non-ferrous metals rose 2.9 to 141.2; iron products 1.7 to 173.5; chemical products 0.9 to 122.0, and vegetable products 0.7 to 142.6. Animal products dropped 2.3 to 164.5, while fibres, textiles and textile products remained unchanged at 158.9. Principal increases among individual commodities were as follows: steel scrap 25.0 per cent, corn meal 17.8 per cent, green coffee 15.1 per cent, fluid milk, Halifax 14.7 per cent, calf leather 12.9 per cent, western rye 10.9 per cent, sulphur 10.5 per cent, dyeing materials 10.1 per cent, red cedar shingles 10.0 per cent, newsprint 9.0 per cent. Among commodity decreases were quinine sulphate 23.8 per cent, molasses 19.6 per cent, ham, Montreal 17.5 per cent, canned corn 12.5 per cent, worsted cloth 10.3 per cent, zinc, sheet 9.3 per cent, cotton seed oil 8.7 per cent, canned peas 8.3 per cent, spruce lath 7.1 per cent.

The index of Canadian farm product prices at wholesale eased 0.7 to 145.0 between September and October. The decline was due entirely to weakness in animal product prices. An index for this series dropped 2.0 to 181.7. Field products were unchanged at 123.0.

\* See Tables F-1 to F-6.

# COST OF LIVING AND WHOLESALE PRICES IN CANADA FROM JANUARY 1914 TO DATE

(Base 1935-39=100)

# STRIKES AND LOCKOUTS\*

## Canada, November, 1949

The number of disputes between workers and employers which resulted in work stoppages was little changed from the previous month. The number of workers involved was substantially lower but the time loss increased sharply, being almost double that for October, 1949. Three strikes which accounted for 87 per cent of the total time loss were rubber factory workers at Toronto, Ont., lithographers at London, Hamilton, Ottawa, Toronto, Ont., and Montreal, P.Q., and motor vehicle factory workers at Oshawa, Ont. Preliminary figures for November, 1949, show 20 strikes and lockouts in existence, involving 8,904 workers, with a time loss of 135,526 man-working days, as compared with 19 strikes and lockouts in October, 1949, with 16,008 workers involved and a time loss of 69,479 days. In November, 1948, there were 21 strikes and lockouts, with 3,452 workers involved and a time loss of 17,000 days.

For the first eleven months of this year, preliminary figures show 122 strikes and lockouts, involving 47,362 workers, with a time loss of 1,036,671 man-working days. In the similar period in 1948 there were 150 strikes and lockouts, with 41,025 workers involved and a loss of 865,028 days.

Based on the number of wage and salary workers in Canada, the time lost in November, 1949, amounted to 0.17 per cent of the estimated working time, as compared with 0.09 per cent in October, 1949; 0.02

per cent for November, 1948; 0.12 per cent for the first eleven months of 1949; and 0.10 per cent for the first eleven months of 1948.

Of the 20 strikes and lockouts recorded for November, 1949, two were settled in favour of the workers, three in favour of the employers, two were compromise settlements and five were indefinite in result, work being resumed pending final settlement. At the end of the month eight strikes and lockouts were recorded as unterminated.

The record does not include minor strikes such as are defined in another paragraph nor does it include strikes about which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Strikes of this nature which are still in progress are: composers, etc., at Winnipeg, Man., which commenced on November 8, 1945, and at Ottawa and Hamilton, Ont., and Edmonton, Alta., on May 30, 1946; coal miners, Edmonton district, Alta., January 13, 1948; optical lens factory workers at Edmonton, Alta., April 9, 1949; and textile products factory workers at St. Lambert, P.Q., August 29, 1949. As no reports have been received for some time on the strike of seamen, Great Lakes and St. Lawrence River, which commenced on June 6, 1948, it is considered to have lapsed.

## Great Britain and Other Countries

The latest available information as to strikes and lockouts in various countries is given in the *LABOUR GAZETTE* from month to month. Statistics given in the annual review, issued as a supplement to the *LABOUR GAZETTE* for April, 1949, and in this article are taken, as far as possible, from the government publications of the countries concerned.

### Great Britain and Northern Ireland

The British *Ministry of Labour Gazette* publishes statistics dealing with disputes involving stoppages of work and gives some details of the more important ones.

The number of work stoppages beginning in September, 1949, was 133 and 12 were

still in progress from the previous month, making a total of 145 during the month. In all stoppages of work in progress in the period there were 34,600 workers involved and a time loss of 143,000 working days was caused.

Of the 133 disputes leading to stoppages of work which began in September, ten, directly involving 17,400 workers, arose out of demands for advances in wages, and 52, directly involving 3,700 workers, on other wage questions; two, directly involving 200 workers, on questions as to working hours; 23, directly involving 3,900 workers, on questions respecting the employment of particular classes or persons; 36, directly involving 1,800 workers, on other questions respecting working arrangements; and seven directly involving 1,200 workers, on ques-

\* See Tables G-1 and G-2.

tions of trade union principle. Three stoppages, directly involving 1,400 workers, were in support of workers involved in other disputes.

### New Zealand

For the second quarter of 1949, figures show 33 strikes, involving, directly and indirectly, 12,360 workers and causing a time loss of 124,869 man-days.

### United States

Preliminary figures for October, 1949, show 250 strikes and lockouts beginning in the month, in which 600,000 workers were involved. The time loss for all strikes and lockouts in progress during the month was 19,000,000 man-days. Corresponding figures for September, 1949, are 275 strikes and lockouts, involving 510,000 workers, with a time loss of 6,350,000 days.

## SELECTED PUBLICATIONS RECEIVED IN LIBRARY OF THE DEPARTMENT OF LABOUR, OTTAWA\*

The publications listed below are not for sale by the Department of Labour. Persons wishing to purchase them should communicate with the publishers. Publications listed may be borrowed, free of charge, by making application to the Librarian, Department of Labour, Ottawa. Applications for loans should give the number (numeral) of the publication desired and the month in which it was listed in the LABOUR GAZETTE. Students should apply for material through their institutional library.

Immigration.....No.		7,552	13,083	4,760	899	1,036
Adult males.....No.		2,831	4,920	869	196	318
<b>Earnings and Hours—</b>						
Total labour income.....\$000,000		663	633	471	†	†
Per capita weekly earnings.....\$	43.78	43.60	41.80	33.15	31.48	†
Average hourly earnings.....cents	99.5	99.3	94.6	71.4	†	†
Average hours worked per week.....	42.8	42.7	43.0	42.9	†	†
Average real weekly earnings, index (4).....	107.7	106.9	104.3	98.8	†	†
<b>National Employment Service—</b>						
Unplaced applicants (5).....000	164.0	172.4	87.3	142.2	†	†
Unfilled vacancies (5).....000	65.0	31.2	64.3	139.7	†	†
Placements, weekly average.....000	11.0	14.2	15.8	18.6	†	†
<b>Unemployment Insurance—</b>						
Claims.....000	105.9	83.5	44.8	57.7	1.0	†
Balance in fund.....\$000,000		576.9	499.8	343.9	157.1	†
<b>Price Indexes—</b>						
Wholesale (6).....	157.0	157.1	159.3	111.0	101.9	79.6
Cost of living (6).....	161.7	162.2	159.6	125.8	118.4	102.7
Residential building materials (6).....	226.3	227.0	288.9	156.3	(10) 139.1	(10) 102.3
<b>Production—</b>						
Industrial production index (6).....		185.9	185.4	157.6	197.1	117.8
Mineral production index (6).....		145.0	102.2	100.9	109.6	120.8
Manufacturing index (6).....		194.5	188.4	167.8	217.4	117.7
Electric power.....000,000 k. w. h.	3,914	3,975	3,774	3,550	3,459	2,590
Construction—						
Contracts awarded.....\$000,000	117.2	89.3	70.8	73.3	19.2	14.2
Dwelling units, started.....000		9.0	7.4	†	†	†
Completed.....000		9.1	8.2	(8)67.3	†	†
Under construction.....000		61.0	62.9	†	†	†
Pig iron.....000 tons		166.0	186.4	75.0	146.8	85.8
Steel ingots and castings.....000 tons		258.9	281.9	123.8	272.0	149.9
Inspected slaughterings, cattle.....000	168.5	155.6	165.3	208.6	97.7	98.4
Hogs.....000	537.8	418.1	321.2	379.3	644.7	425.9
Flour production.....000 bbl.	1.95	1.86	1.96	2.43	2.12	2.09
Newsprint.....000 tons		435.7	392.6	376.4	259.3	281.0
Cement, producers' shipments.....000,000 bbl.		1.5	1.4	1.2	0.8	0.7
Automobiles and trucks.....000	19.7	28.1	25.1	15.0	13.8	11.3
Gold.....000 fine oz		365.3	306.9	241.0	280.0	433.1
Copper.....000 tons		22.3	20.4	15.0	24.4	25.5
Lead.....000 tons		13.1	16.0	14.7	17.6	17.8
Nickel.....000 tons		10.7	10.3	8.7	11.5	9.4
Zinc.....000 tons		21.9	22.1	18.3	23.4	14.9
Coal.....000 tons	2,056	1,901	1,810	1,627	1,547	1,748
<b>Distribution—</b>						
Wholesale sales index, unadjusted (6).....		314.5	321.9	276.8	176.5	132.0
Retail sales.....\$000,000		696.4	681.6	†	†	†
Imports, excluding gold.....\$000,000	239.6	234.3	243.4	186.4	162.9	79.1
Exports, excluding gold.....\$000,000	292.3	269.1	307.0	204.2	259.8	90.4
<b>Railways—</b>						
Revenue freight, ton miles.....000,000		5,523	5,907	5,467	5,815	3,753
Car loadings, revenue freight.....000	327.1	341.4	358.0	331.3	290.5	250.5
<b>Banking and Finance—</b>						
Common stocks, index (6).....	118.2	114.3	116.4	101.8	86.4	96.6
Preferred stocks, index (6).....	150.0	145.1	143.7	153.6	118.2	107.4
Bond yields, Dominion, index (6).....	89.2	89.1	96.3	85.0	97.3	111.9
Cheques cashed, individual accounts.....\$000,000	8,540	8,328	7,654	6,313	4,654	2,899
Bank loans, current, public.....\$000,000		2,213	2,011	1,302	955	952
Money supply.....\$000,000		4,377	4,208	4,041	(9) 3,153	(9) 1,378
Circulating media in hands of public.....\$000,000		1,187	1,201	1,063	(9) 990	(9) 281
Deposits.....\$000,000		3,190	3,007	2,948	(9) 1,877	(9) 1,089

NOTE.—Many of the statistical data in this table are included in the *Canadian Statistical Review* issued by the Dominion Bureau of Statistics.

† Comparable statistics are not available. (1) Labour Force survey figures given are as of Aug. 20, 1949, Sept. 4, 1948 and Nov. 9, 1946. (2) Base 1926=100. (3) Figures are as at end of quarter ending Sept. 30, 1949, 1948, 1946, 1943 and 1939 respectively. (4) Real earnings computed by dividing index of average weekly earnings of wage-earners in manufacturing by the cost-of-living index; base: average for 1946=100. (5) First of month. (6) Base 1935-1939=100. (7) Figures are for four week periods. (8) Annual figures; monthly not available. (9) Year-end figures. (10) Annual index.

\* Includes retroactive wage payments to railway system employees.

All totals are rounded to the nearest million independently. Therefore, the final total does not necessarily agree with the sum of the individual estimates.

## C—Employment, Hours and Earnings

### TABLE C-1.—EMPLOYMENT AND EARNINGS BY PROVINCE, CITY AND INDUSTRY

(The latest figures are subject to revision)

SOURCE: *The Employment Situation, D.B.S.*

Tables C-1 to C-5 are based on reports from employers having 15 or more employees—At October 1, 20,572 employers in the eight leading industries reported a total employment of 2,106,724 and total payrolls of \$91,848,329

**TABLE C-6.—HOURS AND EARNINGS IN MANUFACTURING**

(Hourly-Rated Wage-Earners)

SOURCE: *Average Hours Worked and Average Hourly Earnings, D.B.S.*

Tables C-6 to C-9 are based on reports from a somewhat smaller number of firms than Tables C-1 to C-5. They relate only to wage-earners for whom statistics of hours of work are also available, whereas Tables C-1 to C-4 relate to salaried employees as well as to all wage-earners of the co-operating firms.

Week preceding	Average Hours Worked			Average Hourly Earnings		
	All Manufactures	Durable Goods	Non-Durable Goods	All Manufactures	Durable Goods	Non-Durable Goods

<sup>1</sup> Industries classed in the durable manufactured goods industries.

<sup>2</sup> Since 1941, the Dominion Bureau of Statistics has prepared current indexes of average hourly earnings of the employees of eight establishments producing heavy electrical apparatus. Based upon the hourly earnings at June 1, 1941, as 100 p.c., the latest figures are as follows:—Aug. 1, 1949, 228.8; Sept. 1, 1949, 228.1; Oct. 1, 1949, 230.9; at Oct. 1, 1948, the index was 217.5.

<sup>3</sup> Chiefly street and electric railways.

Above food prices are simple averages of prices reported. They are not perfectly comparable in all cases with price averages for earlier years. Changes in grading, trade practices, etc., occur from time to time.

(a) Rental ranges shown above are indicative of prevailing rents being paid. They should not be used as a measure of change in rents paid for the same quality of living accommodation over long periods of time.

(b) Averages include prices for cuts with bone-in.

(c) Prices quoted since November 1, 1949, are not comparable with those shown previously, because of changes in description and sample size.

\* Preliminary figures.

† Strikes un-terminated at the end of the previous year are included in these totals.

‡ The record of the Department includes lockouts as well as strikes but a lockout, or an industrial condition which is undoubtedly a lockout, is not often encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout included as such in the records of the Department is a cessation of work involving six or more employees and lasting at least one working day. Strikes of less than one day's duration and strikes involving less than six employees are not included in the published record unless ten days or more time loss is caused but a separate record of such strikes is maintained in the Department and these figures are given in the annual review. The records include all strikes and lockouts which come to the knowledge of the Department and the methods taken to obtain information preclude the probability of omissions of strikes of importance. Information as to a strike involving a small number of employees or for a short period of time is frequently not received until some time after its commencement.

**TABLE G-2.—STRIKES AND LOCKOUTS IN CANADA, NOVEMBER, 1949 (1)**

Industry, Occupation and Locality	Number Involved		Time Loss in Man-Working Days	Particulars(2)
	Establish-ments	Workers		
<b>Strikes and Lockouts in Progress Prior to November, 1949</b>				
<i>MANUFACTURING— Tobacco and Liquors— Soft drink factory workers, Windsor, Ont.</i>	1	10	250	Commenced August 5; for a union agreement providing for increased wages, payment for empties, check-off, seniority, etc., following reference to conciliation board; un-terminated.
<i>Rubber and Its Products— Rubber factory workers, Toronto, Ont.</i>	1	925	20,000	Commenced October 12; for a new agreement providing for increased wages, Rand formula for union dues, pay for two additional statutory holidays (one retroactive), following reference to conciliation board; un-terminated.

**TABLE G-2.—STRIKES AND LOCKOUTS IN CANADA, NOVEMBER, 1949 (1)**

Industry, Occupation and Locality	Number Involved		Time Loss in Man-Working Days	Particulars(2)
	Establishments	Workers		
<b>Strikes and Lockouts in Progress Prior to November, 1949</b>				
<i>Animal Foods—</i>				
Meat packing plant workers, Hamilton, Ont.	1	152	3,300	Commenced October 26; for a new agreement providing for certain changes in hours of work, seniority, payment for statutory holidays, etc., as recommended by conciliation board, and wage increase granted to be retroactive to Mar. 1-49; untermintated.
<i>Printing and Publishing—</i>				
Lithographers, London, Hamilton, Ottawa, Toronto, Ont., Montreal, P.Q.	41	(3) 859	(3) 18,000	Commenced June 29; for a new agreement providing for increased wages, reduced hours, insurance and welfare plan, etc., following reference to conciliation board; untermintated
Web pressmen, Toronto, Ont.	1	5	75	Commenced October 18; dispute over placement of pressmen on the day shift, following discontinuance of the night shift; terminated by November 24; replacement; in favour of employer.
<i>Metal Products—</i>				
Radiator foundry workers, Plessisville, P.Q.	1	33	500	Commenced October 21; for a new agreement and seniority in re-employment of workers, following alleged lockout; terminated November 21; negotiations; in favour of employer.
Motor vehicle factory workers, Oshawa, Ont.	1	5,400	80,000	Commenced October 21, 25, 26; against alleged speed-up and resulting dismissal of four workers following work stoppage on October 21; terminated November 21; negotiations; compromise, dismissals changed to suspensions.
<i>TRANSPORTATION—</i>				
<i>Electric Railways and Local Bus Lines—</i>				
Bus drivers, mechanics, etc., St. John's, Nfld.	1	80	160	Commenced September 23; for time and one-half for over-time and against dismissal of president of union; exclusive franchise of company terminated November 2; indefinite.
<i>TRADE—</i>				
Department store clerks, New Westminster, B.C.	1	59	1,400	Commenced August 27; for a union agreement providing for increased wages and other changes, as recommended by majority report of conciliation board; untermintated.
<b>Strikes and Lockouts Commencing During November, 1949</b>				
<i>MINING—</i>				
Coal miners, Drumheller, Alta.	1	140	140	Commenced November 1; protest against penalty deductions from wages of haulage workers for failure to complete an 8-hour shift; terminated November 1; return of workers; in favour of employer.
Coal miners, Drumheller, Alta.	1	85	255	Commenced November 1; to have "holiday lists" posted monthly instead of yearly; terminated November 3; negotiations; in favour of workers.
<i>MANUFACTURING—</i>				
<i>Tobacco and Liquors—</i>				
Brewery workers, Regina, Sask.	1	100	900	Commenced November 9; for a new agreement providing for increased wages; terminated November 19; negotiations; compromise.

TABLE G-2.—STRIKES AND LOCKOUTS IN CANADA, NOVEMBER, 1949 (1)

Industry, Occupation and Locality	Number Involved		Time Loss in Man-Working Days	Particulars(2)
	Establishments	Workers		
<b>Strikes and Lockouts Commencing During November, 1949</b>				
<b>MANUFACTURING—</b>				
<i>Rubber and Its Products—</i>				
Rubber products factory workers, Drummondville, P.Q.	1	189	3,400	Commenced November 10; for a new agreement providing for increased wages retroactive to Apr. 23-49, two weeks' vacations with pay, and revision of hours of work; untermi- nated.
<i>Animal Foods—</i>				
Meat packing plant workers, Windsor, Ont.	1	(4) 38	300	Commenced November 18; for a union agreement providing for in- creased wages, reduced hours, and other changes, under consideration by conciliation board; untermi- nated.
<i>Pulp, Paper and Paper Prod- ucts—</i>				
Paper products factory workers, Montreal, P.Q.	1	42	700	Commenced November 1; for imple- mentation of award of arbitration board for increased wages retro- active to Jan. 1-49, in new agree- ment under negotiations; termi- nated November 21; conciliation, provincial; in favour of workers.
<i>Miscellaneous Wood Products—</i>				
Wood products factory workers, Megantic, P.Q.	1	202	5,000	Commenced November 2; for imple- mentation of award of arbitration board for increased wages, reduced hours, time and one-half for over- time, two weeks' vacations with pay, in new agreement under negotiations; untermi- nated.
<i>Metal Products—</i>				
Metal factory workers, Galt, Ont.	1	150	400	Commenced November 8; alleged infraction of seniority in dismissal of nine workers when staff reduced; terminated November 10; return of workers pending further negoti- ations; indefinite.
<i>Non-Metallic Minerals, Chemi- cals, etc.—</i>				
Automotive parts factory workers (asbestos), Peterborough, Ont.	1	120	66	Commenced November 4 and 10; refusal of union to accept recom- mendation of conciliation board against wage increase in new agree- ment under negotiations; termi- nated November 11; return of workers pending settlement; in- definite.
<b>CONSTRUCTION—</b>				
<i>Buildings and Structures—</i>				
Carpenters, Victoria, B.C.	1	15	80	Commenced November 17; juris- dictional dispute as to whether lathers or carpenters should instal wallboard; terminated November 24; return of workers pending reference to arbitration; indefinite.
<b>TRANSPORTATION—</b>				
<i>Other Local and Highway—</i>				
Taxi drivers, Toronto, Ont.	12	300	600	Commenced November 15; dispute over seniority of a worker reinstated after dismissal; terminated November 16; negotiations and return of workers pending reference to arbitration; indefinite.

(1) Preliminary data, based where possible on reports from parties concerned, in some cases incom-  
plete; subject to revision for the annual review.

(2) In this table the date of commencement is that on which time loss first occurred and the date of  
termination is the last day on which time was lost to an appreciable extent.

(3) Workers involved in Ontario—569, time loss 12,000 days; workers involved in Quebec—290,  
time loss 6,000 days. (4) 12 indirectly affected.

## CURRENT LABOUR CONDITIONS

• • • • •

*This article summarizes the latest employment and labour information available at February 10, as the LABOUR GAZETTE went to press. It was prepared by the Economics and Research Branch, Department of Labour.*

**B**Y THE last week in January, there were 362,000 job-seekers registered at National Employment Service offices. This total which amounted to 7 per cent of the labour force, was 88,000 higher than a month earlier.

A sharp increase in the number of jobless persons is usual in Canada during the winter when outdoor activity is curtailed. About one-third of the Canadian labour force is employed in industries, such as agriculture, transportation, and construction, where many of the jobs are seasonal. Most of these seasonal jobs terminate in the winter months and unemployment consequently rises. During January and early February, this increase is particularly marked as employment in the logging industry declines after the first of the year when cutting is completed and logging begins.

This winter unemployment has been more extensive than in recent years. Unfavourable weather has been in part responsible. In addition, some industries are returning to their pre-war practice of reducing operations in the winter. During the war the urgent demand for goods meant that production was maintained at capacity as far as possible throughout the whole year. However, recently there has been a reduction in forward buying, and an increasing concern with costs as markets have become more competitive.

The cumulative effect of a number of special developments has also had an important influence on employment in recent months. These special developments include the impact of devaluation on certain industries, readjustments of certain foreign market outlets and some decline in the domestic demand for many goods.

It should be emphasized that the impact of these developments has not been uniform across the country. As a result, there are important variations in the extent of unemployment between different areas. The proportion of job-seekers registered at National Employment Service offices to the labour force ranges from about 15 per cent in British Columbia to about 5 per cent in Ontario. On a local basis such variations are even wider.

During January, unfavourable weather conditions completely reversed expectations of a high level of employment in the British Columbia lumber industry. Although markets for British Columbia are excellent in both Canada and the United States, storms during January closed many of the logging camps and sawmills which usually operate throughout the winter. Thus unemployed loggers and sawmill workers moved into Vancouver and increased the total number of jobless workers in that city where unemployment was already high, due to the enforced suspension of construction activity.

In the industrial centres of Southern Ontario and Quebec, the effect of the special developments is indicated by divergent employment trends. Industries such as those producing food products, heavy electrical equipment and automobiles have increased their employment over last year. On the other hand, industries producing agricultural implements, machine tools and some textiles have been laying off workers.

Many important manufacturing industries are facing quite different market situations at present. The automobile industry, for example, is still producing at capacity levels because of the continuing strong demand. The agricultural implement industry, on the other hand, now is experiencing some decline in effective demand both in Canada and abroad. There is a definite possibility that declines in farm income as a result of the termination of some of the British food contracts and of lower prices at which others have been negotiated will further reduce the domestic demand for farm equipment.

In the iron and steel industry, the primary iron and steel producers continue to operate at a high level. Production in the machine tool industry has declined, however, largely as a result of the slackening in plant expansion. The producers of transportation equipment have reduced their staffs due to the drop in orders for railway rolling stock, both from foreign and Canadian

While the devaluation of the pound sterling has increased competition from British manufacturers in the case of several Canadian industries, this development has been felt particularly by certain sections of the primary textile industry as it came at a time when the domestic market itself was slackening.

Workers laid off this winter are finding it generally more difficult to find alternative jobs than at any time since the end of the war. Although employment remains high, labour demand is not very active. With staffs adequate to meet production schedules, and with a plentiful supply of labour, employers are being quite selective in their hirings. Increasingly severe competition in most industries has made employers very conscious of labour costs. Many are anxious to build up permanent staffs rather than to hire casual workers whom they will have to train and whose rate of turn-over is high. Thus, most job openings are for skilled workers rather than for the type of casual labour which is employed in seasonal industries.

No serious work stoppages have been caused as a result of Canadian strikes this month. The strike at the Chrysler Corporation in the United States, however, threatens to cause layoffs in that company's branch plants in Canada if it is not settled in the near future. The sporadic strikes in United States coal mines have already had some influence on the employment picture in Canada, especially in the case of railroads. The dispute between Canadian railways and their respective unions is still being considered by conciliation boards and no decision has yet been announced.

(Continued on page 198)

# CURRENT LABOUR STATISTICS

(Latest available statistics as of February 10, 1950)

Principal Items			Percentage change from

- (a) Estimated on basis of sample labour force survey. Only those who did not do any work in the survey week are here classified as persons without jobs.
- (b) Some of these “unplaced applicants” registered at the National Employment Service Offices are persons with a jobs who are seeking other work. On the other hand, there are persons without jobs and seeking work who do not come to the N.E.S. offices.
- (c) These percentages calculated on basis of 1949 figures excluding Newfoundland.
- (d) These percentages compare the cumulative total to date from first of current year with total for same period previous year.

Data in this table are preliminary figures from regular reports compiled by various government agencies, including Dominion Bureau of Statistics, the Unemployment Insurance Commission, the Immigration Branch, Department of Mines and Resources, and the Economics and Research Branch, Department of Labour. Detailed information can be found in the statistical appendix of the Labour Gazette.

# NOTES OF CURRENT INTEREST

**Dominion-Provincial Constitutional Conference** The Dominion-Provincial Constitutional Conference, which met for three days, January 10-12, achieved agreement in principle as regards methods of amending the Canadian Constitution.

The Conference agreed in the first place, that Canada should have power to amend the Constitution without going outside the country. It was decided that the provisions of the British North America Acts (1867-1949) and other constitutional measures, should be grouped under a series of headings. The most important features of this plan are: that certain constitutional matters, which are purely federal, would be amendable by the Parliament of Canada without reference to the provinces. Others could be amended by Parliament and a majority of the provinces; while certain provisions concerning fundamental rights should not be amended without the consent of Parliament and every one of the provinces.

A committee of the various delegations was assigned to meet within the next few months to decide under which of these categories each provision of the Constitution should be placed.

(Proposals calling for the amendment of the BNA Act in respect of the authority to legislate on certain labour and social matters have from time to time been made by Canadian labour organizations.)

**Canada resumes membership in ECOSOC** On January 1 Canada again became a member of the Economic and Social Council of the United Nations. The Council is composed of 18 countries elected by the General Assembly for a period of three years. Canada was one of the original members and served until the end of 1948. After an absence of one year, Canada now returns to the Council for a second three-year term ending December 31, 1952.

The 10th Session of the Council opened in New York on February 7. The Canadian Delegation was announced on January 19 by the Hon. Brooke Claxton, Acting Secretary of State for External Affairs, to be as follows:—

*Representative.*—Mr. Raymond Eudes, M.P.

*Alternate Representatives.*—Dr. George Davidson, Deputy Minister of Welfare, Department of National Health and Welfare; Mr. S. D. Pierce, Associate Deputy Minister, Department of Trade and Commerce.

*Principal Adviser.*—Mr. John W. Holmes, Head of the United Nations Division, Department of External Affairs.

**Labour bodies ask Government action on unemployment** Concern with regard to the unemployment situation was expressed by the heads of the two major Canadian labour organizations in a joint letter sent on December 30 to the Prime Minister and members of the Cabinet.

The letter was signed by Percy R. Bengough, President of the Trades and Labour Congress of Canada and by A. R. Mosher, President of the Canadian Congress of Labour. It urged that the Government "take appropriate steps to meet what has become a national emergency," and asserted that "on the basis of reports received by our respective headquarters, we have every reason to believe that over 300,000 workers are now unemployed in Canada, representing more than six per cent of the entire labour force.

"It is evident," the letter continued, "that certain Communist groups, following their usual destructive tactics, are endeavouring to exploit the situation. The fact that this is being done, however, does not in any way lessen the seriousness of the situation or justify any attempt to minimize it."

The letter requested that the Government put into effect its plans for taking care of any substantial increase in unemployment. It also asserted that certain information on the employment situation was being withheld from the public.

On January 7, the Hon. Humphrey Mitchell, Minister of Labour, issued a factual statement in respect to employment and unemployment in Canada. (A factual statement giving substantially the same information appeared in the article *Current Labour Conditions* of last month's **LABOUR GAZETTE**; while a statement based on information available at February 10 appears in the present issue, along with a considerable number of statistical tables.)

The Minister pointed out that the number of persons actually working in December

(estimated at just under five million) was the highest number of employed persons for December in the history of Canada.

Regarding the 261,000 persons who on December 22 were registered as looking for jobs with local offices of the National Employment Service, Mr. Mitchell's statement said:—

"Some of these are persons with jobs who would like to make a change, while others may be workers who have located jobs but who have not informed the local office. On the other hand, there are persons desiring work who do not come to the local National Employment Service offices. This occurs especially in rural areas where the coverage of unemployment insurance is not large. It might be added," the statement continued, "that the latest quarterly labour force sample survey conducted by the Dominion Bureau of Statistics indicated that there were around 150,000 persons in Canada early in November who were seeking regular jobs and who did no work during the survey week. At that same date the number of persons registered for jobs through local National Employment Service offices was around 170,000. These figures," the statement pointed out, "indicate that the reports from the National Employment Offices are not out of line.

"In addition to the usual seasonal influences and the special circumstances already mentioned, a considerable portion of the current unemployment results from the continuing growth of the Canadian labour force rather than from any decline in employ-

ment. Over the past year the growth of the total labour force has amounted to around 120,000, while the number actually at work has increased by close to 100,000.

"Many more Canadian workers are now eligible for unemployment insurance benefits," the statement noted, "than was the case a few years ago. As a result the percentage of workers seeking jobs through the National Employment Service, who are also claiming benefits, increased from 60 per cent at the beginning of December, 1948, to 71 per cent at the same date this winter. The actual number of ordinary claimants for benefits at December 1, 1948, was 84,000. This year the figure, including Newfoundland, was 157,000."

Following the publication of Mr. Mitchell's statement, the two labour leaders issued a further joint statement renewing their request that the Government take action to relieve the existing unemployment situation.

**Federal Government expenditures on social services, 1948-49**

The Federal Government in the fiscal year 1948-49 spent \$700 million on social services, the Minister of Labour, the Hon. Humphrey Mitchell, stated in the House of Commons during a debate on Labour Department estimates on December 3.

Later, when asked for details, Mr. Mitchell gave the following breakdown showing major expenditures which can come under the broad heading of social services:—

	Actual Expenditures Fiscal Year 1948-1949 (\$ millions)
<i>Department of Health and Welfare</i>	
Family allowances payments.....	270.9
Old age pensions and pensions for blind persons.....	66.8
Health grants .....	19.1
<i>Department of Veterans Affairs</i>	
Veterans' pensions .....	103.0
Veterans' allowances .....	19.7
Post-discharge rehabilitation benefits.....	44.8
Re-establishment credits .....	35.1
Treatment services .....	34.2
Miscellaneous grants .....	14.8
<i>Department of Labour</i>	
Government contribution to UIC Fund.....	20.1
Administration cost, UIC.....	19.0
Vocational training (including Veterans' Training).....	6.3
Government contribution to Annuities Fund to maintain reserve.....	11.4
<i>Department of Mines and Resources</i>	
Indian Affairs .....	10.3
<i>Department of Finance</i>	
Government contribution to Superannuation Fund.....	4.1
<i>Department of Agriculture</i>	
Amount transferred to meet deficit in Prairie Farm Emergency Fund.....	8.6
<i>Department of Transport</i>	
Workmen's Compensation Payments.....	.7
Total .....	688.9

The figures were derived from the Public Accounts of Canada. Costs of administration are excluded except in the case of the Unemployment Insurance Commission, whose functions—in particular, the National Employment Service—are in large measure a direct social security service, the Minister explained. The breakdown was not all-inclusive. There might be some question as to the inclusion of certain items, but the Minister felt that in all cases they bear a close relation to Social Security. Federal Government contributions for food subsidies or price stabilization measures had not been included.

### **Appeal in Empress Hotel case dismissed**

A Privy Council decision of November 21, 1949, upheld the judgment of the Supreme Court of Canada that regulation of the hours of work of employees of the Empress Hotel, operated by the Canadian Pacific Railway Company in Victoria, is within the exclusive jurisdiction of the provincial legislature. The argument hinged mainly on whether the Empress Hotel could be considered an integral part of the railway system, and within the definition of "railway" in the BNA Act and the Canadian Pacific Railway Act. Their Lordships held that it could not. The judgment is reported in full on p. 217 of this issue.

### **Counselling booklets on skilled construction trades**

The distribution of three new occupational publications, dealing with skilled construction trades, was announced recently by the Hon. Humphrey Mitchell, Minister of Labour. The crafts dealt with are those of Bricklayer and Stone-mason, Plasterer, and Painter.

Mr. Mitchell expressed himself as gratified by the reception of the first numbers in this series. The fact that the Department had received so many requests for both English and French editions of these publications, from all strata of Canadian economic life, necessitating an increase in the number of copies printed, is ample evidence that the demand for information on occupations is even greater than had been estimated, the Minister said.

Mr. Mitchell voiced his appreciation of the ready co-operation received from officers of the craft unions, and from the Canadian Construction Association, in reviewing manuscripts and contributing constructive suggestions.

The booklets in this occupational series are prepared by the Economics and Research Branch of the Department of Labour.

### **Chemical union locals asked to remove Communists**

An interesting feature of the November meeting of District Council 4 of the International Chemical Workers' Union (AFL-TLC) was an address by International President H. A. Bradley dealing with the subject of Communism within the ranks of the Canadian District of the Union.

Mr. Bradley's speech was printed in the *Canadian Chemical Worker*, which has resumed publication following a reconstitution of its editorial board.

Mr. Bradley said that in the last year "the thing that has caused the greatest disturbance in your ranks has been the question of Communism in Canada. Unfortunately, until this visit I have been in the position of trying to separate the goats from the sheep and trying to be fair with all persons involved. . . . I am here today informed beyond any reasonable doubt."

Mr. Bradley recalled that at the Calgary Convention of the TLC (L.G., Nov., 1949, p. 1350), a resolution was adopted calling on affiliated organizations to "purge from their ranks, and from within the local unions, all Commies. So I am reminding you that this is a policy of the Trades and Labour Congress and the International Union expects your compliance.

"The Vice-President of your District is evidently aware of the seriousness of your situation. I gain this from his report to you this morning, where he pointed out to you that the International Union is beyond question opposed to Communism in any form."

Mr. Bradley said further: "I certainly was amazed to learn that right here in Niagara Falls our office, was, until a recent date, used by the Communist party. Their mimeograph sheets were in our office, you could secure the Communist Manifesto by applying at our office, Communist books (a veritable library) were on the shelves in our office and the *Canadian Tribune* was shipped to our office in bundles for distribution. I certainly cannot understand how men who are, or were, on our payroll could have possibly been unaware of what was taking place. . . .

"Why am I so concerned?" Mr. Bradley continued. "I am concerned because I think by and large you are a mighty fine group of people, morally and otherwise. I do not think it is proper that so many people point fingers at us simply because we have a stinking, rotten apple in our midst. As I told the Trades and Labour Congress in Calgary, nine thousand, nine hundred and ninety of the approximate ten thousand

Canadian members are wonderful people and should not be smeared because of the ten others who are Communists. . . .

"I ask you now to clean out these few and I call upon you to exercise your autonomous right to throw them clear out."

**CCL plans to provide union for unemployed**

Action to provide an organization for Canadian unemployed was taken by the Executive Council of the Canadian Congress of Labour in mid-January. The

CCL Executive announced that it had appointed a committee to frame methods for the organization of unemployed and their direct affiliation with the recognized trade union movement. "This is the first time that an established labour organization in any country has taken such a step," the announcement said.

The committee is under the chairmanship of Sam Baron, Montreal, Canadian director of the Textile Workers Union of America; other members are: Alex McAuslane, Vancouver, United Oil Workers; Murray Cotterill, United Steelworkers; Joseph Mackenzie, Ontario Federation of Labour; and Donald MacDonald, Canadian Congress of Labour.

The announcement said that the Canadian Congress of Labour would seek co-operation from the Trades and Labour Congress of Canada, the Canadian and Catholic Confederation of Labour and "any other legitimate agency sincerely interested in the welfare of the unemployed."

**CCL seeks co-operation with farm groups**

The Executive Council of the Canadian Congress of Labour on January 19 directed its officers to hold consultations with appropriate agricultural bodies, as

a means of seeking closer co-operation with farm groups. It was proposed that there should be co-operation between labour and farmers in an effort to obtain adequate farm prices and wages.

The Congress Executive stated that both labour and farmers were experiencing the effects of current economic conditions. Their basic interests were common and close co-operation would be mutually beneficial.

The Executive decided that the 1950 convention of the Congress will be held in Winnipeg commencing September 25.

Support was voted to the United Nations International Children's Emergency Fund. Affiliated unions were also urged to assist European trade unionists by sending CARE parcels.

**CCL gives Steelworkers new jurisdiction**

The Executive Council of the Canadian Congress of Labour on January 19 granted the United Steelworkers of America the jurisdiction in Canada formerly held by the International Union of Mine, Mill and Smelter Workers in the mining and smelting industry. The Mine-Mill union was suspended by the Executive Council January 21, 1949, with a recommendation for expulsion. This action was upheld and the union was expelled at the CCL convention in Ottawa, October 7, 1949 (L.G., Nov., 1949, p. 1374).

Since that time a number of groups formerly under the jurisdiction of Mine-Mill have been chartered directly by the Canadian Congress of Labour.

In a statement explaining the action granting jurisdiction to the United Steelworkers, A. R. Mosher, President of the Congress, said: "It is the feeling of a large majority of our Executive that the United Steelworkers of America is the proper group to have this jurisdiction. At the time of the expulsion of the International Union of Mine, Mill and Smelter Workers it was decided that the jurisdiction should be held by the Congress itself pending a final decision. The time for that decision has now been reached.

"The change in jurisdiction is subject to confirmation by the membership of the locals affected.

"As part of the United Steelworkers of America the workers in the jurisdiction formerly held by the International Union of Mine, Mill and Smelter Workers will continue to have the full support of the Canadian Congress of Labour, as well as the support of the 950,000 members of the United Steelworkers in Canada and the United States.

"This is very important, particularly so far as workers in the Timmins area are concerned. The Timmins gold miners at one time were members of the International Union of Mine, Mill and Smelter Workers and enjoyed collective bargaining agreements. All of those agreements were subsequently lost. Since that time these miners have been organized by the Congress and they are now negotiating for new contracts. Although those concerned will, under today's decision, become part of the United Steelworkers, they will continue to have our fullest support.

"The Canadian Congress of Labour is confident that the United Steelworkers, as one of Canada's foremost unions, will provide strong and efficient service to the men in the mines, smelters and plants which were

at one time under the jurisdiction of the International Union of Mine, Mill and Smelter Workers."

**Policies of Canadian Chamber of Commerce**

*The Platform of the Canadian Chamber of Commerce* is the title of a booklet, issued by The Chamber's Policy Department late in the autumn. It presents in

concise form the policy declarations and resolutions approved by the twentieth annual meeting of the Chamber which was held in Montreal in October (L.G., Dec., 1949, p. 1526).

The declarations cover many phases of current business, commercial and social problems, ranging from Communism and freedom of enterprise to double taxation and the single alternative vote and from labour relations and immigration to international trade and the United Nations.

**B.C.'s oldest labour council marks 60th anniversary**

British Columbia's oldest labour council, the Vancouver, New Westminster and District Trades and Labour Council (AFL-TLC) celebrated its sixtieth anniversary on December 6.

The Council, which was organized by 14 men, held its charter meeting on December 5, 1889. Nine unions attended the first gathering. At the present time, 118 unions are affiliated with the Council.

Representatives of 32,000 trade unionists attended an anniversary banquet held in honour of the occasion. Among the guests invited to attend were Senator J. W. deB. Farris, first B.C. Minister of Labour, J. H. Cates, Minister of Labour, Premier Byron Johnson and Vancouver Mayor Charles Thompson.

**Guide to diagnosis of occupational diseases**

A reference manual on occupational diseases in Canada has recently been published. Compiled jointly by the staffs of the industrial health division of the

Department of National Health and Welfare and the division of industrial hygiene of the Ontario Department of Health, *A Guide to the Diagnosis of Occupational Diseases* is published by the King's Printer, Ottawa.

In recent years many new materials and processes which constitute sources of potential or actual health hazards for the worker have been added to industry. The control of the working environment and the supervision of workers' health call for a wider knowledge of the potential health hazards in all industries and for enhanced skill in recognizing occupational diseases. In addition

to the plant physician and nurse the modern industrial hygiene team includes many scientific and technical experts. The general medical practitioner is an important member of this team because many of his patients may be industrial workers.

This reference manual includes a list of occupations with their potential health hazards which serves as a reference key. Each health hazard is then separately described. Harmful chemicals are discussed under various headings. A brief discussion of occupational diseases and dermatoses and a summary of the various provincial workmen's compensation acts are also included.

It is expected that copies of the book can be distributed to all physicians in Canada interested in industrial medicine as well as to the teaching staffs of medical schools and all medical libraries. Other interested persons may obtain copies from the King's Printer at the price of \$1.

**Industrial relations in Newfoundland, quarter July-September**

The quarterly review of the Newfoundland Labour Relations Office, reports that in the three-month period July-September, 1949, seven labour disputes were recorded, five of which resulted in work stoppages.

The organization of three trade unions is reported, and there is a list of newly-completed working agreements.

The Bus Drivers' Unit of the Transport and Other Workers' Union was involved in three disputes, with work stoppages occurring in two cases. The first dispute arose out of a demand for wage increases and resulted in an Order prescribing minimum rates of pay for bus service employees in St. John's. This was the first Order to be made under the Labour (Minimum Wage) Act of Newfoundland (L.G., Nov., 1949, p. 1440). Another dispute arose over the union's claim that some of its members had been unfairly dismissed. A strike was called on September 23 and at the end of the quarter was still in progress.

Working hours and dismissals were causes of two disputes involving miners on Bell Island. After work stoppages lasting three days and one day respectively, settlement was reached, with the union demands being met.

A dispute over demands for a wage increase of 20 cents an hour for all classes of carpenters engaged in construction and shop work caused the United Brotherhood of Carpenters and Joiners of America, Local 579, to call a strike on August 31. Agreement was reached on September 21 with the granting of a general increase of ten cents an hour to all classes.

Discrimination in the matter of wages between local and non-resident workers was charged by members of the recently formed Association of Aviation Employees, employed by the various airlines operating at Gander. The union has applied for certification as bargaining agent for the employees under the Industrial Relations and Disputes Investigation Act (L.G., Dec., 1949, p. 1552) which became operative in Newfoundland on September 19 last.

Among the new working agreements reported is one entered into by the Buchans Workmen's Protective Union, No. 24521 (AFL), and the Buchans Mining Company in July, which provides that the wages question may be reopened every three months.

An increase of six cents an hour, retro-active to May 1, and an eight-hour day were features of an agreement negotiated in July between Local 4121 of the United Steel Workers of America at Bell Island and the Dominion Steel and Coal Corporation.

Rates for painters were increased to 85 cents an hour for Class A men, and 80 cents an hour for Class B men, with the completion of an agreement in August between Local 1679 of the International Brotherhood of Painters, Decorators and Paper Hangers of America and painting contractors in St. John's. Class C, which existed in previous agreements, was abolished. A 54-hour work week was also established, and a weekly half-holiday on Saturdays.

The Newfoundland Federation of Labour held its thirteenth annual convention at Corner Brook in August. The Federation, the report states, has submitted a draft of a new trade union act to the Government for consideration.

The formation of three new trade unions is reported: (1) the Association of Aviation Employees (AFL), an organization of employees of the various airline companies at Gander; (2) Local 1621 of the Retail Clerks International Association, at Bell Island—the membership of which is entirely female; (3) Local 1615 of the National Brotherhood of Electrical Workers, comprising employees of the Avalon Telephone Company and the United Towns Electric Company.

The Labour Legislation Advisory Committee, formed for the purpose of studying labour legislation and making recommendations for the consideration of the Minister of Labour, held its first sittings in July. According to the *Review*, it was expected that the Board would complete its recommendations in October.

The report also discusses in detail the current employment situation in Newfound-

land, and indicates that in many parts of the Province "a great scarcity of employment is being felt," particularly where fishing is the only source of income.

**Cash income of farmers slightly below 1948 peak**

Cash income of Canadian farmers from the sale of farm products in 1949 amounted to \$2,490,165,000, according to an advance preliminary estimate by the Dominion Bureau of Statistics. This figure is slightly below the 1948 peak of \$2,449,900,000, but substantially above the 1947 total of \$1,962,276,000.

The Bureau points out that Canadian Wheat Board participation payments to western producers on previous years' crops were substantially larger in 1948 and 1949 than in any year up to that time. Since August 1, 1949, western producers of coarse grains have received only an initial payment per bushel as provided under the terms of the compulsory coarse grain marketing scheme which entitles them to share in any surpluses accumulated by the Canadian Wheat Board through the sale of these grains.

In addition to the receipts in the first nine months of this year, supplementary payments amounting to \$17,628,000 were paid out under the provisions of the Prairie Farm Assistance Act, to farmers in the drought-stricken areas of the Prairie Provinces. This figure compares with totals of \$11,577,000 and \$20,746,000 paid out during 1947 and 1948.

The advance estimates of cash income indicate lower returns in 1949 than in 1948 in all provinces except Saskatchewan and Alberta. Ontario had the largest total of \$641,350,000 compared with \$668,353,000, followed by Saskatchewan at \$540,638,000 compared with \$520,563,000, Alberta at \$452,384,000 compared with \$448,997,000, and Quebec \$343,604,000 compared with \$352,153,000.

Manitoba was next with \$234,530,000 against \$242,882,000, British Columbia \$97,068,000 (\$101,144,000 in 1948), New Brunswick \$42,206,000 (\$44,905,000), Nova Scotia \$36,507,000 (\$36,626,000), and Prince Edward Island \$20,878,000 (\$22,505,000). Estimates for Newfoundland are not available.

**The Catholic Church and economic changes**

On November 21 and 22, 1949, at Montmorency Falls, near Quebec, the Faculty of Social Sciences of Laval University sponsored a round-table conference on "The Church and Economic Changes" for English speaking employers of the Province of Quebec. Eighty representatives of

the most important industries in the province were present. Industrial executives from other provinces also attended the meetings. The attendance was by special invitation only, and the press was not allowed.

The purpose of these closed meetings, according to the official Industrial Relations Bulletin of Laval University, "was to bring representatives of the important non-Catholic group of industrialists together with some teachers of the Catholic social doctrine to give these members of management an opportunity to learn the basic tenets of this social teaching and to clear away doubts and misunderstandings."

Rev. Gérard Dion, industrial relations department director at Laval University, who presided at the Conference, expressed the opinion that the Church considers all capital invested in the Province of Quebec, from whatever source it may come, local or foreign, as having a strict right to a just revenue in proportion to the services rendered and the risks involved.

"By the same principles," he said, "this capital must be subordinated to the requirements of natural morality, respect of the character of the institutions in this Province, and become an integral part of it.

"That is why the Church cannot approve or accept as normal that capitalists, wherever they may be, invest capital in the Province solely in the hope of finding here a docile and not-too-exacting labour force on which could be imposed unjust wages and working conditions inferior to the standards in the United States and other parts of Canada.

"Her principles do not allow the Church, either to admit the exploitation of the natural wealth of the country to the prejudice of the physical and moral well-being of the population.

"Finally, for the benefit of all those who desire to invest capital in the Province of Quebec, we believe we should like to point out a unique advantage.

"Because of the great number of her faithful and the institutions inspired by her," stated Rev. Dion, "the Catholic Church exercises a profound influence in the Province of Quebec. Now, wherever it is located, the Catholic Church is, in the eyes of all, the greatest moral force able to fight effectively against communist and socialist doctrines. We can therefore conclude that those who wish to invest capital in the Province of Quebec are assured of meeting more security and protection than in any other place in the world."

### **Annual meeting of Quebec industrialists**

The *Association Professionnelle des Industriels* (Professional Association of Industrialists) held its fifth annual congress in Quebec City on November

14 and 15, 1949. The association comprises executives of nearly 300 industries of the Province of Quebec.

The central theme studied during the congress was "The Employer and his Enterprise". Guest speaker was Dr. Vittorio Vaccari, of Rome, general secretary of the Christian Union of Employers of Italy, whose subject was the social directives of Pope Pius XII.

Addresses were delivered by Mr. Gilbert Ayers, of Lachute, on employer-employee co-operation, by Mgr. Maurice Roy, Archbishop of Quebec, on the social doctrine of the Church, by Father Louis Lachance, O.P., on the rights of ownership, by Mr. Marcel Clément on industrial organization and by Mr. François-Albert Angers on reforms of structure in the enterprise.

The Hon. Maurice Duplessis, Premier of the Province of Quebec, delivered the closing address.

Resolutions adopted by the Conference were as follows: —

*Strikes.*—That the necessary Dominion and Provincial legislation be adopted to provide that "no strike can be declared or effectuated unless a majority of the workers of the firm concerned have freely voted by secret ballot, under the surveillance of a representative of the State, and the motive or motives for the strike have been explained clearly and in detail to the workers concerned".

*Employer-employee collaboration.*—Expressing satisfaction with the progress so far made, and recommending joint committees as "an efficient means of realizing and intensifying this collaboration".

*Social Security.*—Recommending that social security plans "take account of the normal role which employers, employees, and the State respectively, should play in this sphere;" and asking governments and others concerned "to proceed with all necessary prudence in order not to undertake anything which could conduce directly or indirectly to collectivism".

*Collaboration with Italian Employers.*—Proposing the founding of an Italo-Canadian employers' association "which will have the task of developing social relations, of furnishing information—industrial and otherwise—and of establishing a closer collaboration between the two countries".

*International Affiliation.*—Reiterating the Association's "entire union with the *Union internationale des associations patronales catholiques*," and its desire of "collaborating with the other Christian employers of all countries toward the realization of Christian social doctrine," and expressing its entire adherence "to the directives of the Holy Father in his address to the employers of all countries which is considered the charter of Christian employers".

**Welfare  
writer urges  
part-time  
work for  
tuberculous**

Part-time employment during the period of rehabilitation is one of the most vital factors in complete recovery of the tuberculous, according to an article in November's *Industrial Welfare*, issued by the British organization, Industrial Welfare Society.

However light the work, the article states, sanatoria patients are not usually able to assume full-time employment after completion of treatment. Under ideal conditions, intensity of work would be increased gradually from a few hours a day to normal full-time employment. Unfortunately, the greatest placement difficulty is experienced during that period when part-time work is so vital to recovery.

At present, the British Government offers one scheme which provides this gradual process of employment. This is the sheltered workshop where the patients commence work in a suitable craft for four hours a day, complete training at a technical college and proceed to full-time employment.

A common difficulty encountered in placing the tuberculous is the prejudice of employers against part-time workers. While most employers are willing to provide suitable light work it is almost always on a full-time basis. Fellow workers remain aloof usually because of fear of infection. The writer here stresses the importance of sanatorium treatment which is designed to make the patient non-infectious and to discipline him in avoiding the infection of others.

A survey conducted in an industrial area of London where most employment required manual labour showed that the former employments of 50 persons treated for respiratory tuberculosis were unsuitable. Only three of the people covered in the survey returned to their old jobs, and of these one had to abandon it as it was "too heavy."

From experience in dealing with tuberculous patients, the writer concluded that part-time employment was the only method

which could bridge the transition period between clinic treatment and a full life. The part-time work must, however, give the worker a "pride of achievement and a sense of growing economic independence."

**Unemployment  
declines in  
U.S. areas  
receiving  
federal aid**

The first progress report concerning United States federal aid to depressed industrial areas states that successful efforts have been made in the initial alleviation of unemployment. Within three months this has been accomplished by channelling \$72,842,508 in federal purchases, construction contracts and business loans into 35 critical areas in 14 states.

Plans for federal assistance to areas of unemployment were first announced by President Truman in his mid-year economic report, and at first were to be confined to areas where unemployment had reached 12 per cent or more of the total labour force (L.G., Oct., 1949, p. 1204).

Dr. John R. Steelman, assistant to the President, submitted the progress report in which he pointed out that in September, at the close of the trial period, thirty of the thirty-five areas reported declines in unemployment and twenty-six actual employment increases. In eleven of these areas the increases were 3.5 to 14.3 per cent.

The report showed that during the corresponding period unemployment through the country fell off from an estimated peak of 4,095,000 during the week ending July 9 to 3,576,000 during the week ending October 8 as conditions in the labour market registered a general improvement.

The federal construction aid, amounting to \$47,960,058, combined with state contributions, went into projects which contributed \$65,404,070 to the assistance scheme. Procurement spending reached a total of \$22,787,550, and loans amounted to \$2,094,900.

**500,000 in  
U.S. exhaust  
right to  
unemployment  
benefits**

About 500,000 persons exhausted their right to further unemployment-compensation payments during the July-September quarterly period of 1949, according to figures compiled by the Bureau of Employment Security of the United States Labour Department, and released in December. The persons involved were still without employment after benefits were exhausted.

Unemployment in November was estimated by the Census Bureau at 3,409,000 compared with 1,831,000 in November, 1948.

The figures for exhausted benefits in 1948 were from 200,000 to 250,000 each quarter for the country as a whole. For 1939 they stood at 369,000 for the January-March quarter, 423,000 for the April-June and at 500,000 for the third quarter.

The duration of unemployment compensation benefits varies among the states. Some states provide payments having a uniform duration; in other words, the same fixed period of weeks for each claimant. Other states have variable benefit years determined on the basis of the individual's previous employment record. In this way, a worker who exhausts his maximum benefits in one year may be eligible for more benefits once a new benefit year starts.

The Labour Department had earlier announced its intention of seeking federal legislation in 1950 to require states to have minimum standards in amount and duration of benefits.

**Survey shows trend for longer vacations in U.S.A.** The liberalizing of terms in connection with paid vacations, one of the outstanding features in the development of labour-management relations in the last decade, has been made possible by greater efficiency, improved technology, and increased productivity of American industry, according to an article in the November edition of the U.S. *Monthly Labour Review*.

Maximum vacation periods of two weeks or more have become widely accepted, as indicated in a survey of collective bargaining agreements made by the United States Bureau of Labour Statistics. During the survey 1,473 agreements in effect in late 1948 or early 1949 were analyzed and of these 93 per cent or 1,374 granted workers some type of vacation with pay. Out of every ten agreements having vacation provisions, nine stipulated two weeks or more as the maximum time allowed and 30 per cent contained provisions for more than two weeks after specified periods of service.

Progress made in the sphere of paid-vacation benefits is brought into relief by contrasting this recent survey with an earlier study in 1944 which revealed that only 1.5 per cent of the unionized plants covered gave maximum vacations of over two weeks. The present survey showed that fewer than five per cent of the agreements provided maximum vacations of one week or less; in the earlier study, 63 per cent of the agreements contained such a provision.

In choosing the type of plan, employers and employees may agree upon the "graduated" type or as an alternative, the "uniform" type. The former provide for a varying number of days or weeks, depending on the individual worker's length of service. The latter provide "flat" or equal vacations of the same duration for all employees who qualify.

As a rule, employers and employees have tended to be more favourable to graduated vacations. Employers consider them to be one means of reducing turn-over in the plants and as a reward to those who remain in their employ over a longer period of time. For their part, unions regard this type of plan as a means of increasing the total vacation time which employers are willing to grant. The Bureau survey revealed that more than 80 out of every 100 agreements analyzed provided for graduated plans.

The length of service required for vacation granted was not tabulated for all agreements included in the survey. However, on the basis of a sample 100 contracts, it was learned that among the 87 agreements providing a maximum three-week vacation 37 required 15 years' service. In the remainder of agreements, 10 stipulated less than 15 years, 20 required 20 years and 20 required 25 years.

Four weeks of paid vacation was provided by 11 agreements, nine of which required 25 years' service for qualification and two of which required 20 years' service. Of the two agreements providing for less than three but more than two weeks maximum leave, one stipulated eight years of service, the other 13 years.

With regard to vacation leave below the maximum, 78 of the contracts required one year's service for one week, and 60 called for five years of service for two weeks.

Employees were not called upon in any of the 1,184 agreements involving graduated vacation periods to accept less compensation than their regular earnings. On the other hand, the article points out, 13 agreements provided for greater pay during holiday leave than during the equivalent working period. In the case of the 130 uniform plan contracts, 30 provided greater vacation pay than normal earnings.

**Profit sharing enlists further support in 1949** Evidence of greater interest in profit sharing in the United States was reported by the Council of Profit-Sharing Industries at its annual conference in

December, the largest held since its formation in 1947.

The Council is a national non-profit organization of companies that have or plan profit-sharing programs. Membership has shown substantial increases within the last year. In 1948, the Council reported only 90 members with 90,000 employees. This year it lists 155 members representing 240,000 employees.

*Business Week* (December 10, 1949), states that the history of profit sharing in the United States has been long but unspectacular. After a brief success about a generation ago it fell into decline, a process initiated by the depression and accelerated by the rise of trade unionism. Distrust for profit sharing developed early among unions which regarded it as paternalistic and anti-union.

Member companies of the Council state that profit sharing is an economically sound substitute for employer-financed pensions. These claims were directed to smaller firms which had expressed concern about company-paid pensions: (1) their lack of flexibility, so that even though business may decline the company must maintain its pension financing; (2) absence of a link between them and productivity.

Profit-sharing plans are flexible, the Council maintains, since they call for payments only when the employer shows a profit. Furthermore, the system provides for labour-management co-operation leading to increased productivity and greater cash return to workers.

Many employers find that profit sharing gives workers a new incentive to produce and that it is an effective weapon against socialism. The council, in addition, reports that only one profit-sharing company in the country has had a work stoppage in the last two years.

However, most firms warn that to be successful a plan should (1) include all workers in the company; (2) be "a real, honestly conceived plan (in which) the percentage of earnings to be distributed must be known and guaranteed at the start of a year;" and (3) give employees a feeling of sharing in management's functions too.

George Baldanzi, vice-president of the Textile Workers Union (CIO), who attended the meeting said that profit sharing could be considered acceptable to labour only in those unionized plants where basic wages and working conditions were satisfactory and where profit sharing was the result of negotiations between the employer and the union. He was of the belief that, in certain carefully controlled instances, the scheme might be one way by which industry could share some of its profits with the workers.

## **Studies of methods of communication in industry**

Recognition of the importance of effective methods of communications to good industrial relations has resulted in considerable attention being directed to this problem.

The Industrial Relations Section of the Department of Economics and Social Institutions, Princeton University, has recently completed two "on the spot" studies of the effectiveness of various methods, having particular regard to the functions of management and union in the total process of communications. The Section's findings are published in a report entitled, *Transmitting Information Through Management and Union Channels*.

The first case study was carried out in the New Brunswick, N.J., plant of Johnson and Johnson, large producers of surgical dressings and a variety of other products. The workers in this plant were represented by Local 630 of the Textile Workers' Union of America. The Bayway refinery of the Esso Standard Oil Company, with the Independent Petroleum Workers representing the employees, was selected for the second study.

"A study of two situations cannot pretend to offer a definitive answer to the question of what makes good communications," the report states, "nevertheless, the findings reveal certain elements common to successful efforts in communications." In both establishments the report notes the "efforts of all parties concerned to maintain peaceful and constructive union-management relations, and the recognition of the importance of satisfactory communications to the total operation of the plant or refinery."

In methods, the outstanding points in common were the use of the line organization as the core of communications and the acceptance of the union as of equal importance in getting certain types of information to and from the employees.

The communication systems of the two unions and managements revolved to a marked degree around meetings. Both companies have used printed media extensively and have issued periodically, or as occasion warranted, publications commonly considered to be the principal tools of an informational program—employee magazines, handbooks, annual reports, and supervisory manuals. But in spite of the fairly elaborate printed media, company executives stressed their greater reliance upon direct individual contact and meetings to gain understanding among management personnel, and upon personal relationships

among the first-line supervisors, union representatives, and the employees to gain understanding among the rank and file.

The two unions, with limited funds for printed materials, put even more stress upon person-to-person contacts.

The two studies, it is stated in the conclusion, "highlight the need for more careful consideration of methods of communications which can, in the process of communicating, test the degree to which the recipient understands what he is being told." In particular, they point up "the need of bringing the lowest levels of the management and the union more fully into the series of meetings which have proved to be an effective means of communication among upper management and union executive personnel."

An interesting article on the subject of informational programs for employers appeared in the November 5 issue of *Business Week* under the heading, "Safeguard against Rumours: Information." It tells of the steps taken by the Ford Motor Company to acquaint its employees with the new pension program, and also reports on the methods used by other companies in keeping their employees informed. "More and more companies are telling employees what management is doing, what it's going to do, and why," the article declares. "There is less room for rumour, and more room for good relations, when employers tell workers what's going on in the plant."

### **Cost of meals held a mandatory bargaining issue**

The area in which an employer must bargain collectively was further extended in the United States when the National Labour Relations Board ruled that the cost of meals in company-operated dining rooms is a mandatory bargaining issue, when no other eating places are available.

In the case of a timber company, the Board held that the distance of camp operations from the nearest town, and the lack of available public or company transportation, obliged the employees to eat at the company-owned facilities, and that the price of meals thus constituted "a condition of employment" within the meaning of the Taft-Hartley law.

### **Union radio stations to broadcast Kaiser-Frazer programs**

The first major contract for a commercial program on a small network of union-controlled frequency-modulation stations has been signed by Kaiser-Frazer Corporation and six radio stations. Of these American stations

two are owned and operated by the International Ladies Garment Workers Union (AFL) and two are owned by United Auto Workers (CIO).

*Business Week* (December 17, 1949), reports that the contract calls for a year-long series of daily 15 minute programs beginning in early January. Some members of major unions see in the contract the beginning of what someday may be a national radio network, the article states.

The reason behind labour's interest in its own radio stations is the belief that only a labour broadcaster will present a fair analysis of labour matters.

At present about 75 FM stations are either owned and operated by unions or run by people sympathetic to labour, the article states. From time to time they co-operate on joint coverage of news. At the time of the CIO convention last year, for example, the stations worked together to make available to listeners portions of each day's proceedings.

Before the advent of FM, unions found it almost impossible to go into the radio business for two reasons. Broadcasting in the standard AM band is costly and the number of channels in that band is limited. FM with its lower equipment costs and more plentiful channels is giving labour its opportunity to enter the business and bring the hope of a national radio network closer to reality.

### **Machinists advertise in radio, press to sell company's products**

To assure "continuity of employment and economic security", a United States local of the International Association of Machinists launched a pre-Christmas advertising campaign to sell its company's product, electric shavers, to union members. In an article of December 17, *Business Week* states that the local undertook the promotion drive in the belief that good labour relations and close co-operation mean good, secure jobs.

Several weeks before Christmas, *The Machinist*, IAM's nationally-circulated weekly paper, printed a double-page picture story of the local's machinists at work in their plant. The theme dealt with the workers' pride in the product they make and the "better than average" wages and working conditions.

In a radio broadcast, the local's officers expressed the conviction that "co-operation with fair-minded managements is to the mutual advantage of everyone." The president of the company and the Governor of Connecticut also appeared on the program.

The LABOUR GAZETTE in an earlier issue (L.G., Nov., 1949, p. 1343) described a similar union venture—an advertising campaign sponsored by a local of the Retail Clerks International Association on behalf of a New York department store.

**Court protects Negro firemen from discrimination**

The principle that railroad employees may apply for an injunction against racial discrimination practised by unions, in violation of the Railway Labour Act, has been reaffirmed by the United States Supreme Court, according to *Labour Relations Reporter*.

The decision followed court action brought against the Brotherhood of Locomotive Firemen and Enginemen by twenty-one Negro firemen who sued the union because of certain agreements which it made with the southern railroads. The agreements classified Negro firemen as “non-promotable” and so deprived them of seniority rights. A federal district court had granted the firemen an injunction to restrain these agreements. The decision was later reversed by an appellate court.

**Italian legislation designed to benefit unemployed**

With the object of improving opportunities for employment and alleviating hardships familiar to the unemployed, the Italian Government has revised public employment office procedures, expanded vocational training facilities and increased unemployment benefits during 1949. The changes are elaborated in an article in the October issue of *Notes on Labour Abroad*, issued by the United States Bureau of Labour Statistics.

With the reorganization of the public employment service, a process underway during the past year, new procedures for registration and placements of applicants have been adopted. This service, controlled in large part by trade union groups until 1948, is now administered by the Government’s provincial labour offices.

More effective placement and improved statistical data on the unemployed have

been made possible as a result of the new legislation, the article states. Employers are required, in selecting applicants, to hire exclusively through public employment offices except in such cases as the hiring of relatives living in their households, and to observe priorities based on the applicant’s residence, seniority on the employment offices register, training and other factors.

In the field of vocational training, existing programs for adult workers were expanded and an apprentice training program was introduced. Courses for adult workers are available to the involuntarily unemployed and to certain employed groups who may be released temporarily to take the training. By July, plans had been completed for courses offering 100,000 unemployed workers training in occupations such as carpentry, radio repair, stenography, tailoring and agriculture.

Establishments offering apprenticeship training may be subsidized to the value of one-third the expense incurred in the training courses. The subsidies apply specifically to training given to persons under 18 years of age by artisan shops and by enterprises with less than five employees.

Under the new legislation compulsory unemployment insurance is extended to a substantial group of agricultural and clerical workers, previously outside the scope of the system. The maximum benefit period, formerly 120 days per year is increased to 180 days.

**Agricultural labour inquiry in India**

An inquiry into living and working conditions of agricultural workers, with a view to their improvement, has been undertaken by the Ministry of Labour of the Government of India, in co-operation with the Provincial and State Governments, the *Indian Labour Gazette* reports.

The inquiry will be carried out by means of questionnaires, designed to collect information on the general economic conditions of the villages to be covered, and on the employment and income structure, and size and earning strength of families in the villages selected.

# FREE TRADE UNIONS OF THE WORLD UNITE IN NEW CONFEDERATION

*As its name implies, the International Confederation of Free Trade Unions will have as a major objective resistance to Communism and totalitarianism in any form. The inaugural meeting of the new organization was marked by an impressive display of unity on the part of delegations from over fifty countries. Labour leaders from Canada played an active part in the proceedings of this first free World Labour Congress.*

Delegates from non-Communist trade union organizations in over 50 countries, with a combined membership of nearly 500,000,000 workers, met in London, England, November 28 to December 9, 1949, and set up a new international trade union organization—the "International Confederation of Free Trade Unions."

The permanent headquarters of the Confederation will be in the city of Brussels, Belgium. Paul Finet, Secretary of the Belgian General Federation of Labour was elected President and J. H. Oldenbroek, General Secretary of the International Transport Workers was elected General Secretary.

By coincidence, the meeting was held in the same room in London County Hall that saw the birth of the World Federation of Trade Unions just over four years earlier.

The post-war years saw the failure of attempts at united action towards trade union objectives, on the part of Communist and democratic labour organizations; and early in 1949 the leading free trade unions of the world severed their connection with the WFTU.

This break left the free trade unions without an organized international voice. At the same time, the Communist-dominated remnant worked aggressively to rebuild its losses, and had taken active measures to gain control of organized unions in Asia, particularly in China.

A preparatory International Trade Union Conference, attended by free trade union officials from over 30 countries, was held in Geneva, in June, 1949, at which initial steps were taken to organize a free trade union international. A Preparatory Committee was appointed with Paul Finet, General Secretary of the Belgian Trade Union Congress, as Chairman and Vincent Tewson of the British Trades Union Congress as Secretary. The duties assigned to this Committee were to draw up a constitution for the proposed new body and to summon the free and

anti-Communist trade unions of the world to a meeting in London on November 28, 1949. At the request of the Preparatory Committee, the British Trades Union Congress acted as convenors of the London conference and assisted in completing local arrangements.

The American Federation of Labour had remained aloof from the WFTU from its inception, taking exception to the inclusion in its membership of unions from Communist countries. While representatives of the Trades and Labour Congress of Canada attended the initial meeting of the WFTU, this organization withdrew its support early in 1946.

The Congress of Industrial Organizations and the Canadian Congress of Labour were charter members of the Federation and, together with members from other free and democratic countries, worked to reconcile the opposing elements in its membership. A meeting of the Executive Council in Rome in May, 1948, brought relations close to the breaking point. Pat Conroy, who had attended this meeting as representative of the Canadian Congress of Labour, reported later to the national convention of the CCL that an attitude of suspicion and distrust had pervaded almost all groups at the meeting (L.G., 1948, p. 1356).

A basic problem was the bitter opposition of the Communist majority within the WFTU to the Marshall Plan of aid to promote European recovery. Early in 1948 an international trade union conference was held—outside the WFTU—which issued a declaration of support for the European Recovery Program. To this meeting, both the AFL and the CIO sent delegates. The deterioration of relationships was hastened

*The LABOUR GAZETTE acknowledges the kind assistance of Messrs. Percy Bengough and Pat Conroy in supplying documentary material used in the preparation of this article.*

by the breakdown of negotiations between the WFTU and the international trade secretariats.

By the end of the year, it had become apparent that attempts at co-operation were futile; and early in 1949 the various free national labour organizations withdrew their memberships in the WFTU (L.G., 1949, March, p. 251; May, pp. 527, 535).

There were eight official Canadian delegates and 21 from the United States at the Conference. The latter was the largest single national group.

The personnel of the two national groups follows:—

**Trades and Labour Congress of Canada.**

—Percy R. Bengough, President; Claude Jodoin, Vice-President; Sam Finlay, Vice-President of the International Brotherhood of Boilermakers, Iron Shipbuilders and Helpers of America; and George Erasmus of the International Chemical Workers' Union.

**Canadian Congress of Labour.**—Pat

Conroy, Secretary-Treasurer; Fred Dowling, District Director, United Packinghouse Workers of America; Sam Baron, Canadian Director of the Textile Workers' Union of America; and J. E. McGuire, National Secretary-Treasurer of the Canadian Brotherhood of Railway Employees and Other Transport Workers.

**The Canadian and Catholic Confederation of Labour** did not send any delegates, but the President, Gérard Picard, sent a

message expressing his regret that he was unable to be in London in time for the sessions of the Conference.

**American Federation of Labour.**—

President William Green; Secretary-Treasurer George Meany; Vice-Presidents Matthew Woll, George Harrison, David Dubinsky, Charles MacGowan, William Doherty and George Delaney, Henry Rutz and Irving Brown.

**Congress of Industrial Organizations.**—

Vice-Presidents Walter P. Reuther and Allan S. Haywood, and David McDonald, Michael Ross, Mrs. E. Peterson, Michael Quill, M. Kyne, H. W. Payne, I. Katz, Elmer Cope, Jay Krane and Guy Nunn.

**United Mine Workers of America.**—

Paul K. Read.

Sinking their differences in regard to their respective national labour policies and organization, the American Federation of Labour and the Congress of Industrial Organizations, along with the Trades and Labour Congress and the Canadian Congress of Labour, united to achieve a common objective in the formation of the new international confederation.

The conference was called to order by Paul Finet, Chairman of the Preparatory Committee and the following conference officers were duly elected: Chairman, Paul Finet, Belgium; Vice-Chairmen, F. Aguirre, Cuba; K. Nordahl, Norway; and G. M. Adams, Barbados; Secretary, Vincent Tewson, Great Britain.

Photographed at first Congress of new world labour body, TLC delegates: George Erasmus of the International Chemical Workers' Union; Claude Jodoin, Vice-President, TLC; Sam Finlay, Vice-President, International Brotherhood of Boilermakers; Percy Bengough, President, TLC.

Canada was represented on the conference working committees as follows: **Credentials**, James E. McGuire (CCL); **Constitution**, Percy Bengough (TLC) and Pat Conroy (CCL); **Standing Orders**, Sam Finlay (TLC); **Economic and Social Demands**, Claude Jodoin (TLC), and Sam Baron (CCL).

### Addresses of Welcome

Brief addresses of welcome were given by the Rt. Hon. the Chairman of the London County Council, Mr. J. W. Bowen, CBE, and by Mr. H. L. Bullock, Chairman of the General Council of the British Trades Union Congress.

Welcoming the delegates, Mr. Bowen recalled that "the first steps towards international trade union organization" were taken in London, where, in 1864, the "International Association of Working Men" was founded. "Its fundamental aim was, like yours, the union of working men of all countries for the emancipation of labour," he said.

Referring to the disappointment caused by the breakdown of the WFTU, Mr. Bowen said that at its inaugural meeting in London in 1945, there was enthusiastic support for its declared intentions. "Your assembly here today indicates that you are disappointed and dissatisfied with developments since that time."

### An Historic Milestone...

*"I consider that the outstanding feature of the London Conference was the prevailing spirit of international brotherhood. Divergent views were considered and harmonized in a most friendly manner. Differences generally became of less importance to the desire and intent to establish an International Trade Union Centre in the interests of freedom.*

*"I feel that the establishment of the Confederation of Free Trade Unions will prove an historic milestone in the progress of the workers throughout the world."*

**Percy R. Bengough,**  
President,  
Trades and Labour Congress  
of Canada.

January 24, 1950.

On behalf of his colleagues of the British TUC, General Council, and the members of the Conference Preparatory Committee, Mr. H. L. Bullock extended a welcome to the representatives of organized labour from "so many countries where the institutions of free citizenship, freedom of association, democratic rule, the right of free speech, and the independence of trade unions are acknowledged and enforced by law and custom and long tradition." Mr. Bullock pointed out that "standards of employment, methods of collective bargaining and trade union programs of reform, naturally vary from country to country." Nevertheless, he was convinced that universal economic well-being and labour's ideals of social justice and security find their ultimate sanction in the organization of free labour. "Denial or restriction of the elementary rights of free labour is an affront to human dignity, a threat to peace, and a source of totalitarian tyranny which we shall always and everywhere resist and strive to counteract. Forced labour anywhere is a menace to free labour everywhere," he asserted.

### Chairman's Opening Address

The Conference Chairman, Mr. Paul Finet, sketched briefly the circumstances leading up to the conference. He referred to the high hopes that had been entertained by the supporters of "international trade union solidarity" when the WFTU was founded in 1945. "Never had circumstances looked so propitious for realizing unity of action in the trade union movement," he declared.

The interdependence of economic interests among the Allied nations during the war years proved the necessity for a similar unity among the workers, which the war had helped to promote and which, it was felt, peace could not disrupt, and which would result in the maximum of freedom and well-being for all workers. "Such was the general expectation when the first talks were started which were to lead to the establishment of the WFTU," Mr. Finet asserted.

"But . . . no international working class action can be effective unless the workers' representatives are able to meet freely, to compare views free from constraint or from any pressure external to their organizations, and can pursue in reciprocal good will and confidence solutions acceptable to all and adapted to the existing circumstances," he continued.

When this concept came into conflict with an ideology "more absolute in its claims to universality than even Hitlerism had been, the workers' faith in the WFTU dissolved

like smoke." In less than four years, "a hundred proofs," indicated that "the WFTU was to serve as a propaganda instrument for an ideology which could never . . . be accepted by the free citizens of the Western democracies."

In the countries controlled by the USSR and the so-called "peoples' democracies," the action of the unions is limited to carrying out orders issued by the governments, Mr. Finet continued.

He declared that the attitude assumed by these states in connection with the European Recovery Program "marked the final failure of the attempt at collaboration launched in October, 1945." But, while admitting failure in attempts to co-operate with organized workers from the so-called "peoples' democracies," it was realized that men of goodwill could apply anew "the principle of complete democracy" in areas still open to trade union activity. Confidence and faith in that realization led to the decision to organize a confederation of free trade unions.

"Through this organization," Mr. Finet declared, "we shall help the workers to attain freedom in those countries," where economic progress has been backward. New methods to protect workers from exploitation will be speeded up. Workers will be helped to learn the difference between a so-called "people's democracy and real democracy;" how to "reject the former and cultivate the latter. . . . We shall seek to create everywhere the conditions of social life without which society would be no better than a herd. . . . We shall resist war, and . . . not make the emancipation of the workers in our own countries dependent on the slaughter of the workers in neighbouring countries. We are supporters of international co-operation in all fields and we are prepared to give practical study to all methods of mutual aid. . . . The welfare of the workers will be our sole criterion and will determine our ultimate choice. . . . We are waging a struggle against reaction. . . either from the right or from the left. . . . In the new International of Free Trade Unions we shall endeavour not to tarnish the name and to honour the idea more devotedly. . . . By creating a trade union international whose activities are inspired by the principles of democracy, we shall serve effectively the causes of liberty, social justice and peace."

### Christian Trade Unions

Opinions clashed on the question of admitting to memberships the Christian (mainly Roman Catholic) trade unions of

some European countries. It was described by Walter Reuther, leader of the CIO delegation, as "the one explosive issue" of the Conference.

The dispute had its origin in the failure of the Preparatory Committee to send invitations to any of the National Christian trade union centres, except that of France. The Committee felt that a greater measure of authority to deal with this question would rest in the full Conference.

### Sound and Progressive...

*"The Canadian Congress of Labour not only regards the formation of the International Confederation of Free Trade Unions as the first organized break in Communist expansion throughout the world in the trade union field, but also accepts it as a needed instrument in a positive sense—one that will be applied in the interests of workers everywhere. Its chief task will lie in the sphere of bringing about fundamental changes in conditions of life for workers in all countries, and particularly in the backward areas. In this field of activity its greatest work must be accomplished."*

*"We believe that with the organized trade union movement in Canada solidly behind the Confederation, the contribution of Canada to its progress will be substantial. Both the Trades and Labour Congress of Canada and the Canadian Congress of Labour are at one in their desire to lend all possible support in developing a sound and progressive international trade union organization that will truly represent the best interests of the workers the world over."*

**P. Conroy,**

*Secretary-Treasurer,  
Canadian Congress of Labour.*

*January 20, 1950.*

This action was challenged on the first day of the Conference by a leader of the Italian delegation, who threatened the withdrawal of his federation from the new international unless the decision was reversed.

Supported by William Green and Walter Reuther, leaders of the American Federation of Labour and the Congress of Industrial Organizations respectively, a resolution was proposed by David Dubinsky (AFL) and seconded by H. W. Payne (CIO), which asked that a special committee be set up to inquire into the eligibility of national centres that had not been invited. This proposal was supported by the CCL and TLC; and J. E. McGuire, of the CCL delegation, was named as head of the special committee. Eventually, it was agreed that the terms of reference of the credentials committee be extended to include this decision, with the proviso that the problem should be discussed again when the Credentials Committee made its report.

The compromise put forward by the Credentials Committee in its report was that the Christian centres concerned should be invited to attend the conference and constituent congress, with full and equal rights and responsibilities, on the understanding that before the next congress in two years' time, they should accept and give effect to the principle of one trade union international.

As these Christian centres were, at the time of the London conference, affiliated to the International Federation of Christian Trade Unions, the resolution was understood to mean that if some or all of them join the new international (ICFTU) and decide to remain in it after two years, they will have to leave or disband the Christian international.

Following the adoption of the Credentials Committee's proposal, an invitation was sent by cable to Mr. Gérard Picard, President of the Canadian and Catholic Confederation of Labour, to attend the Conference. At that late date Mr. Picard was unable to make the long trip to London; but he sent a cable expressing his regret that it was impossible for him to be present.

### **Attitude on Communism**

The anti-Communist, anti-totalitarian spirit of the conference was summed up in the following resolution, directed specifically to the workers who are under Russian domination.

The Congress declares that the so-called trade unions of the countries of Central and Eastern Europe under the domination of Communist-totalitarian regimes imposed

against the will of those peoples are not free, independent and democratic organizations which defend the interests of the workers, but governmental instruments designed for the organized exploitation of workers for the benefit of a State capitalism serving the USSR, the principal beneficiary.

The Congress protests against the system of workers' exploitation and the concentration camps, forced labour camps and military organization of workers' units and against the suppression of civil rights.

The Congress demands the right of free association, the right to formulate demands regarding conditions of work, the right to strike and the restoration of civil rights. The Congress demands an investigation of the status of workers in countries under Communist dictatorship to be undertaken by a competent international organization.

The Congress affirms its solidarity with all the oppressed workers of the countries of Central and Eastern Europe that are under Communist dictatorship and expresses the hope that in the future these workers will collaborate within the new free Labour International through their own free, independent and democratic trade unions, together with the other free trade unions of the entire world.

The resolution was endorsed unanimously.

### **Relations with International Trade Secretariats**

There were 17 active International Trade Secretariats in 1949. Of these, much the largest was the International Transport Workers. Its headquarters were moved from Amsterdam to London at the beginning of the second world war. It has 145 affiliated unions in 52 countries and maintains branch offices in New York, Bombay, Rome and Singapore. The Secretary is J. H. Oldenbroek, who was elected General Secretary of the ICFTU at the London conference.

The Secretariats were reported to be willing to co-operate with the WFTU when it was founded in 1945, provided they could be assured of their own essential independence in dealing with matters which were their own special concern. However, they subsequently decided that their independence was threatened, particularly by the attitude of the Soviet unions. As a result, in order to strengthen their position they set up a permanent co-ordinating committee of their own.

The Constitution Committee presented the following resolution designed to establish close working relationships with the Trade Secretariats:—

*This Congress* believing that the full success of the International Confederation of Free Trade Unions can only be achieved by closest possible relationship between all free trade union organizations whose aims are directed towards achieving for their members freedom, social and economic justice and universal peace.

**CCL delegates to the London Conference of the ICFTU: Fred Dowling, District Director, United Packinghouse Workers of America; Pat Conroy, Secretary-Treasurer, CCL; J. E. McGuire, National Secretary-Treasurer, Canadian Brotherhood of Railway Employees and Other Transport Workers; Sam Baron, Canadian Director, Textile Workers' Union of America.**

*Reaffirms* the desire expressed by the Preparatory International Trade Union Conference in Geneva for the closest possible consultation and collaboration between the International Confederation of Free Trade Unions and the International Trade Secretariats and welcomes the sentiments expressed to this end by the International Trade Secretariats at their conference in Paris on 8th and 9th of November, and

*Authorizes* the Executive Board to enter into early consultation with the International Trade Secretariats with a view to concluding such arrangements as will insure the most effective collaboration and reciprocal representation on a consultative basis between the International Confederation of Free Trade Unions and the International Trade Secretariats and the conclusion of arrangements for mutual assistance in the field of trade union organization.

The resolution was approved.

### **Participation of Canadian and U.S.A. Delegates**

#### **Canadian Labour Versus Communism.**

—Speaking on behalf of the Trades and Labour Congress of Canada, President Percy Bengough declared that he and his fellow delegates from TLC were proud to

take their places in the formation of the new confederation. He stated that the TLC had remained aloof from the WFTU because "we did not like the look of it. We did not believe that it was possible to have a true expression of the workers through the mouths of puppets from State-owned and controlled institutions, irrespective of the title under which they were masquerading."

He stated that the workers of Canada were fully aware of the menace of Communism and the difficulties encountered in combating them. While loath to adopt totalitarian methods, the TLC, Mr. Bengough said, had "very definitely decided that for the preservation of our (Labour) movement," it was necessary to apply restrictive measures against those who seek to use and in the end destroy it. Having recognized the Communist purpose in fomenting general strikes during political crises, the TLC had carried on "a more or less continuous campaign among its members stressing the need of living up to employee-employer agreements and the fallacy of participating in any type of sympathetic strike." He said that the

Canadian Congress of Labour was also "taking very active measures to eliminate Communists from the ranks of their organization."

In conclusion, Mr. Bengough said that "the organized workers of Canada are of one mind on the issue of Communism. They want no more of it. The freedoms that we cherish have been used and abused by these wreckers to such degree that we want no more and will have no more of them and their works. Such being the fixed belief based on experience at home, it follows automatically that we welcome the advent of this international organization. I pledge our full support to this International Confederation of Free Trade Unions."

#### **Plea for Unity Among National Bodies.**

—During the debate on the aims of the new confederation, Pat Conroy, Secretary-Treasurer of the Canadian Congress of Labour, appealed to the delegates to close their ranks at home in order to present a united front in international councils. Organized labour in every country should strive for "joint thinking and joint action," he said.

"It seems to us," he continued, "that it is obvious that it is not enough to come here and plead for international unity, if, at the same time, there existed disunity at home." He admitted that there was a measure of disunity in the ranks of Canadian organized labour, and claimed that "if we had a united trade union movement in Canada, its influence in the (international) movement would be much greater than it has been."

Mr. Conroy asserted that "on the North American continent we have not come to the full implication of joint political and economic thinking. Every one of us representing a nation where disunity in the trade union field exists has a moral obligation to workers everywhere to make a maximum contribution to the elimination of obstructions." He felt that the declaration of "aims" was an historic document because it presents the objectives of "free" unions from many countries and unless workers and their organizations were free, they could not have permanent social security.

Mr. Conroy stressed the need for efficient regional organization. Backed by the Confederation, the regional bodies could the better work for the removal of specific inequalities and injustices that were peculiar to their respective areas.

#### **Mr. Green Pledges AFL Support.**

William Green, President of the American Federation of Labour, said that the winning and expansion of the economic rights of the working people of all countries must be the

basic aim of the confederation. Without full economic citizenship and democracy there can be no lasting social security or social justice. Without such healthy and growing economic citizenship there can be no enjoyment of genuine democracy throughout the world, he said.

Mr. Green defined *bona fide* economic democracy from the workers' standpoint as, first of all, the right to organize into unions free from controls, manipulation or domination by governments, political parties or employers—whether the latter be private or State. He emphasized the right of labour to free choice of employment, the right to collective bargaining and an adequate voice in the economic policies and economic life of every nation. He declared that the right to strike was an inalienable right and that social security was an indispensable duty of every democratic society. This implies, he said, the right of labour to share adequately in the benefits of increased productivity. To attain these, free labour throughout the world must meet the challenge and defeat the growing menace of forced labour—"no matter in what country this deadly evil manifests itself".

He asserted that "we want to use our technical knowledge and industrial strength to help the weak become stronger, not to exploit them. We want to help the weak become far more prosperous and completely free as sovereign independent nations, enjoying all democratic rights. . . . That is why we want a strong, militant International Confederation of Free Trade Unions. We are ready to give our all to such a movement."

#### **CIO's Attitude on World Affairs.**

Walter Reuther, Vice-President of the Congress of Industrial Organizations and head of the CIO delegation to the conference, said that the hope of world peace and prosperity depended on a free international labour movement and asserted that workers in the United States were equally opposed to all imperialism "whether it is from the Kremlin or from any other country, or whether it has the dollar sign upon it".

He declared that the Communists were "a phoney left" and that it was the job of free trade unionists to convince their fellow citizens of this. He admitted that the CIO had disagreed with the United States State Department's foreign policy on a number of matters. It must be made very clear, he said, that the CIO will support the State Department only so long as its policies were in keeping with what the CIO regarded as the basic needs of the peoples overseas.

Mr. Reuther viewed the world's problems primarily in terms of distribution. They had learned, he said, "how to produce abundance, but had not geared that knowledge to systems for the fair distribution of abundance".

### Social and Economic Demands

As the reporter for the Preparatory Committee, Mr. Irving Brown, European Representative of the American Federation of Labour, outlined the Committee's stand on social and economic demands, by presenting, what he termed, "a general economic survey".

He enumerated several of the economic problems that are confronting the world at present: (1) reconstruction after the ravages of war; (2) expansion of production to higher levels than in pre-war years; (3) re-opening and expansion of world markets, to achieve a world economic balance; (4) attainment and expansion of high standards of living, as a humanitarian goal as well as an important factor in high production; (5) elimination of unemployment, and economic and social insecurity, while, at the same time, maintaining freedom of labour; (6) overcoming the conscious, deliberate forces of economic disruption in the world.

These issues, Mr. Brown declared, "take form as national, regional or continental tasks," and it was in the light of these regional experiences in meeting them, that the problems may be fully appreciated. He reviewed the current economic situation in three of the main world areas; "Europe," "underdeveloped areas" and "the Americas" from the standpoint of the workers. The maladjustments, political and commercial barriers between eastern and western Europe, forced labour in Soviet dominated areas and severe unemployment in portions of western Europe, the effects of the Marshall Plan for European recovery, were some of the phases of Europe's economic problems sketched by Mr. Brown. He held that "the breaking down of frontiers, removal of customs' barriers and other restrictions to the free flow of men and materials remain as the way out of this dilemma". In any case, labour must stress its determination to eliminate unemployment and attain full employment, "*but only in a system which guarantees free labour*". "We are striving for security, but not economic slavery," he declared.

In contrast with "highly industrialized" Europe, the problems of "underdeveloped areas" of portions of the world, Mr. Brown pointed out, were not so much of repairing and reconstructing as of the creation of industrial organization. Capital investment

and technical assistance were needed to eliminate poverty and misery. "Labour unions," he declared, "must play a role in seeing to it that the expansion of industry in these areas is a human thing and not merely a form of outside domination in the interests of a few."

Mr. Brown stated that "the United States came out of the war with over 50 per cent of the industrial resources of the world. This," he admitted, "posed certain problems as well as responsibilities." He declared that in spite of differences in historical backgrounds, traditions and industrial development, working men throughout the world have common goals in fighting for economic and social security and human rights." He contended that the trade unions must share increasingly with such agencies as UNO, ILO and related bodies in promoting human welfare.

### Introductory Comments on the Constitution

The personnel of the Constitution Committee was selected from representatives of trades unions in Sweden, Grenada, St. Lucia, Chile, India, Japan, The Netherlands, the United States, Germany, Great Britain, Belgium, Canada, Brazil, Austria, and Cuba. The Canadian members were Percy Bengough (TLC) and Pat Conroy (CCL).

The Committee elected Arthur Deakin of Great Britain, Chairman; Isodore Smets, Belgium, Vice-Chairman and J. H. Oldenbroek of the International Trade Secretariat, Adviser.

Mr. Deakin presented the charter for the new Confederation as drafted by the Preparatory Committee. He stated that the broad outlines of aims and purposes had been set out at the conference in Geneva in June and the Committee had tried to fill in those outlines—to define those aims and to present proposals—that would make it possible to achieve them. He emphasized the necessity of restricting membership to *bona fide* trade union bodies. "The company union in its various forms" and the "State stooge" unions were unable freely to determine trade union policy independently of their employers or their Governments as the case might be. Thus, agreement with them, he pointed out, would have to be on their terms, to the disadvantage of the free trade unions.

Similarly, it was essential to exert great care in establishing relationships with other associations outside the trade union movement. "Trade unions," he said, "are bound to have relations with political parties, with

other units in a free society, with Governments. But the trades unions must manage their own affairs." He continued, "they elect their own officers and executive bodies; they make their own rules; they conduct, and are responsible for, their own negotiations. They do not await instructions from employers or political parties. They are not beholden to Governments for the right to operate, or for the prescription of the area within which they may function."

The test of the *bona fide* trade union, therefore, Mr. Deakin asserted, "is on the one hand, freedom from interference by employers, and on the other freedom publicly to criticize the Government of the day, to organize to change the policy of that Government and to change by the known and constitutional processes of democracy the Government itself, without fear of individual reprisals." He referred briefly to other phases of the draft constitution, among them, the problems of poverty; countries in which industrial development had been retarded; conditions in non-self-governing countries; the abolition of forced labour; the menace of Communism; the maintenance of full employment; repairing the ravages of war; the establishment of regional agreements: financial obligations to be met by affiliated bodies; administrative machinery and its function in the new body; and the relationships with international secretariats.

## The Constitution

**Preamble.**—The preamble proclaims the right to social justice; to work and to choice of employment; to security of that employment and of the workers' persons; the right of all peoples to full national freedom and self-government and to the progressive realization of this where it was not enjoyed; to democratic means of changing governments; to champion the cause of democracy and to combat direct and indirect totalitarian aggression.

**Aims.**—Among the aims of the organization are: "to establish a powerful and effective international organization composed of free and democratic trade unions, independent of any external domination and pledged to the task of promoting the interests of working people throughout the world and of enhancing the dignity of labour;" to protect, maintain and expand the system of free labour and to eliminate forced labour everywhere.

**Membership.**—All *bona fide* trade union centres accepting the aims and constitution of the International Confederation of Free

Trade Unions shall be eligible for membership. The autonomy of affiliated organizations is guaranteed.

An organization shall have the right to withdraw from the Confederation subject to giving three months' notice, but must not be in arrears financially at the time the notice is submitted. The Executive Board shall have the right to expel a member organization after charges have been preferred for action deemed to be in contravention of the constitution, or against the interests of world labour. Provision shall be made for a hearing on charges before a decision is rendered.

Individual *bona fide* trade union organizations, which accept the aims and constitution of the Confederation may be admitted into affiliation, provided that the Executive Board, following consultation and agreement with the affiliated national centre, or national centres of the country concerned, is satisfied that such affiliation is desirable.

**World Labour Congress.\***—In the interpretation of the constitution and in the determination of the policy and program of the Confederation, the supreme authority shall be the World Labour Congress. Representation at that "Congress" shall be of affiliated national centres and individual trade unions on the following basis:—

Up to 100,000 members—one delegate.

Between 100,000 and 250,000 members—two delegates.

Between 250,000 and 500,000 members—four delegates.

Between 500,000 and 2,000,000 members—six delegates.

Between 2,000,000 and 5,000,000 members—eight delegates.

Over 5,000,000 members—ten delegates.

Representatives of other international trade union organizations shall attend the World Labour Congress subject to such arrangements as the Congress General Council, or Executive Board may authorize. All delegates shall have the right to speak at Congress meetings with respect to matters on the agenda of the Congress. Delegates of affiliated national centres and individual trade unions shall have the right to vote.

The Congress shall be convened every two years. It shall consider and decide upon the nomination and election of the General Council, Executive Board and other bodies as shall be required to conduct or supervise the business of the Confederation; receive financial reports and budgetary proposals.

\* The biennial meetings of the Confederation. Alternative titles are under consideration.

**General Council.**—The General Council shall be comprised of representatives of each affiliated organization. They shall be elected by the World Labour Congress, the basis of representation being:—

Up to 1,000,000 members—one member.

Between 1,000,000 and 3,000,000 members—two members.

Between 3,000,000 and 5,000,000 members—three members.

Over 5,000,000 members—four members.

Nominations for the General Council shall be submitted by affiliated trade union organizations concerned, which shall be entitled to appoint a deputy to replace a member unable to attend a meeting.

The General Council shall meet in the years between two World Congresses. It shall receive reports of the Executive Board and the statement of accounts for the preceding year; approve the budget for the year following; consider (in the light of the report of the Executive Board, action that may be necessary to give effect to decisions of Congress; and by election, fill any vacancies in the Executive Board and offices of the Confederation.

**Executive Board.**—There shall be elected by Congress an Executive Board of 18 members nominated by the respective areas as follows: Africa, one; Asia and Middle East, three; Australia and New Zealand, one; Europe, three; Great Britain, two; Latin America, two; North America, four; West Indies, one. In addition, the General Secretary shall be an ex-officio member of the Board. In the event of a member being unable to attend a meeting of the Executive, he shall invite one of the substitutes elected for his area to attend in his place.

The Executive Board shall meet not less often than twice a year. It shall be responsible for directing the activities of the Confederation and giving effect to the decisions and recommendations of the General Council and Congress. It shall also have the authority to act on behalf of the Confederation, its decisions being subject to ratification by the next following meeting of the General Council or Congress. In addition, it shall prepare draft agenda for each Congress and each meeting of the General Council and shall transmit them to each affiliated organization at least four months in advance of the respective meetings.

The agenda for the Executive Board meetings shall be prepared by the General Secretary and circulated, with appropriate documents, to reach members of the Board not less than two weeks in advance of the meetings.

The Executive Board shall fix the dates and places of the meetings of the Congress and General Council of the Confederation from proposals made by the National Centres.

Immediately following its election by the Congress, the Executive Board shall elect from amongst its members a Chairman, who shall officiate as President of the organization at all meetings of the Executive Board, the General Council and the Congress. It shall also elect five of its members as Vice-Chairmen.

The General Secretary shall be elected by the Congress from nominations received from affiliated organizations.

**Regional Machinery.**—With a view to giving special attention to problems affecting workers in single areas or regions, and in order to seek to further the aims and objects of the Confederation, regional machinery shall be established for such continents or areas as may be determined by the Congress or General Council.

Affiliation fees shall be on the following scale:—

Up to 5,000,000 members—three pounds sterling per annum per one thousand members or part thereof. For additional members over 5,000,000—two pounds sterling per thousand members or part thereof.

### **Memorandum on Regional Machinery**

The affiliated bodies represented at the London conference recognized that the establishment of regional machinery would be essential to the satisfactory administration of the Confederation. This problem was fully canvassed by the constitution committee which prepared a special memorandum on the subject for consideration by the conference.

In it, the Committee stated that "there should be no fears that it (the Confederation) will seek to create a central organization trying to dominate its affiliated organizations. . . . In fact it will be the duty of the Confederation to develop its machinery so as to secure a decentralization of activity on matters which regional machinery can undertake and which are not the prime and constitutional prerogatives of the central organization."

The memorandum reviewed at length some of the complexities involved in setting up regional machinery. In the first place, it was pointed out that in various areas of the world national trade union centres have already established their own consultative machinery to discuss questions of mutual interest and to determine common policies. However, the scope of

these relationships vary considerably. In some cases they include sub-continent, in others three or four countries only. There are too, wide areas with no trade union groupings.

In its attempts to work out some general regulations under which regional machinery might operate the committee decided that circumstances differed so widely from region to region, as to make it impractical for the time being, "to commit the Confederation to the precise form which its regional organization should take".

The Constitution Committee, therefore, recommended that "in order to secure the necessary flexibility in the early stages of regional operation", Congress should charge the Executive Board to:—

- (a) proceed with all speed to assist those national centres in greatest need of help by arranging personal contact . . . for the purpose of building up free trade union organization.
- (b) establish contact with those regional trade union groupings already functioning. . . .
- (c) ascertain the views of all affiliated national centres on the area to be included in a region . . . on the form of machinery. . . .
- (d) take preliminary steps necessary to institute provisional regional machinery in certain areas . . . as an integral part of the Confederation.

It was suggested that the Executive Board should be charged also with the task of examining the information and experience so gained with a view to formulating draft regulations for a world-wide system of regional machinery to be presented to the General Council or the Congress for consideration as soon as possible.

The discussion on the constitution indicated that the new Confederation will strive to obtain a wide measure of agreement in reaching conclusions, rather than relying on simple majority votes. Provision was made for ordinary and card votes, depending upon requirements or necessity. Motions for the admission, suspension or expulsion of an organization must secure a two-thirds majority.

A resolution was unanimously adopted opposing the participation of Franco Spain in either the Marshall program for European recovery, or the Atlantic Pact. All trade union centres were urged to support the efforts of the anti-totalitarian

forces in Spain and to refuse assistance of any kind to the Franco regime, until full trade union rights have been restored to Spanish workers.

The 18 member Executive Board includes Percy Bengough, President of the Trades and Labour Congress of Canada; Pat Conroy, Secretary-Treasurer, Canadian Congress of Labour; William Green, President of the American Federation of Labour; and Philip Murray, President of the Congress of Industrial Organizations.

## Manifesto of ICFTU

The Conference issued a manifesto urging the "workers of all countries, races, creeds—workers in factory, field and office, and all other groups" to unite with the ICFTU:—

(1) "to achieve a world in which men can be both free and secure and in which peoples of all nations may live in peace with each other."

(2) to gain a world "in which people are free from the tyranny of Communist-Fascist, Falangist and any other form of totalitarianism, as well as from the domination and exploitation of concentrated economic power in the hands of cartels and monopolies."

(3) to support with all their strength "the efforts of the peoples suffering under police-state rule . . . to free themselves from totalitarian oppression."

The manifesto declared that human dignity depended upon: (1) freedom of thought and speech and assembly; (2) freedom to organize in trade unions, to bargain collectively with employers—with the right to strike when necessary; (3) freedom of all peoples (including those in colonial or semi-dependent status) to determine or change their political, economic, or social institutions by democratic means.

It asserted that "economic and political democracy were inseparable" and demanded "full participation of worker organizations in economic decisions affecting planning production and distribution."

It maintained that when "vested economic interests block the road to human progress, private planning for profit must yield to public planning for people."

It held that "a movement of free and democratic peoples—united in a common effort to achieve economic security, social justice and political freedom—is the only basis on which lasting peace can be established."

# International Study of EQUAL PAY FOR WORK OF EQUAL VALUE

*Equal remuneration for men and women workers for work of equal value is one of the questions to be considered at the 33rd Session of the International Labour Conference which will meet in Geneva next June. The Conference will seek to determine whether international regulations on this subject are appropriate and if so what they should be. In preparation for the discussion, the International Labour Office has issued a preliminary report<sup>1</sup> setting out the law and practice in the different countries and developing questions which member nations are requested to answer as a basis for discussion at the Conference.*

The ILO Report on equal pay for work of equal value undertakes to outline the problem and to develop certain basic questions out of a study of existing data. These questions are: what exactly is meant by the terms used; what action may be contemplated in the fields where governments may determine, control or influence conditions of remuneration; what complementary measures would help to solve some of the problems of women workers in the employment market and thus indirectly raise the relative level of their remuneration.

The Constitution of the International Labour Organization as originally adopted in 1919 proclaimed the "special and urgent importance" of "the principle that men and women should receive equal remuneration for work of equal value". The principle was repeated in the amended constitution of 1948. So far it has not been embodied in a convention binding upon the member states, but it has been reiterated in various recommendations, as in 1944 in the Employment (Transition from War to Peace) Recommendation. This Recommendation urged that "in order to place women on a basis of equality with men in the employment market . . . steps should be taken to encourage the establishment of wage rates on the basis of job content, without regard to sex". The Preamble to the United Nations Charter reaffirmed "faith . . . in the equal rights of men and women", and the Universal Declaration of Human Rights adopted by the United Nations General Assembly on December 10, 1948 formally states that "every one, without any discrimination, has the right to equal pay for equal work". It is clear that the principle has gained general acceptance but differentials between men's and women's wage

rates still prevail. The extent of the differential is often unwarranted by the respective efficiency and capacity of the two groups of workers, but arises from historical developments and traditional attitudes towards women's work.

Women represent an integral and substantial part of the labour force. In France they represent about one-third of the gainfully employed. Statistics back to 1866 in France show that there has been little change in the proportion of women employed although there is considerable change in the range of occupations in which they work. In the United Kingdom, 5,627,000 women were in civil employment in June, 1948 as compared to 4,837,000 in June, 1939. In the United States there has also been an increase in the employment of women in the past ten years, so that in January, 1949 women accounted for 28.2 per cent of the total civilian labour force. In the USSR in November, 1939 women composed 43.4 per cent of all wage-earners.\* These facts indicate the large group of people directly concerned. Primarily there was support for equal pay so as to support men's wages and prevent their being levelled down by the employment of women at lower rates. The Report points out that non-discrimination between men and women workers should be achieved not only as a measure of social justice but to promote rational utilization of the available labour supply in the interests of production.

A considerable body of national laws and regulations and of decisions of wage-fixing

*During the war years women were successful in many occupations previously barred to members of their sex; on the principle that they should receive the same pay as men for work of equal value women are increasingly accepted.*

bodies shows that some experience has already been gained in an effort to apply the principle of equal pay for equal work. Some countries, including France, Italy, Mexico, Brazil, have embodied it in their constitutions along with other basic principles of social policy. Some legislation such as the Equal Pay Law of 1944 in New York State attempts to set out and enforce specific requirements. Workers' organizations generally favour it; employers' organizations do not seem generally to challenge the principle but some employers' groups maintain that differential rates are justified on the ground that the over-all value of work done by women is less for employers than of work done by men, in view of the special costs to the employer resulting from particular factors in the employment of women. The Report concludes, after reviewing the prevailing situation, that the time is ripe for the Conference to consider international regulations.

The first question which member nations are asked to answer is, assuming that they favour international regulations on this subject, whether the regulations should take the form of a Recommendation presenting

comprehensive practical suggestions, or a Convention with certain strict obligations upon Member States, accompanied by a Recommendation covering points on which strict obligations are not considered feasible. The question has been placed on the Conference agenda for "first discussion" under the ILO "double discussion procedure;" which means that final decisions will not be taken until "second discussion" at the 1951 Conference.

### Definition

The second important question for discussion will be what is meant by "equal remuneration for men and women workers for work of equal value". Studies of attempts to deal with actual conditions in implementing the principle lead to three general conclusions. First, remuneration should be interpreted as including not only the wages or wage rates but also the various bonus or other allowances and seniority systems which are a part of the remuneration. Second, by implication, remuneration should be proportionate to the value of the work. Differentials in wages would con-

## International Labour Conference to Consider Adopting Convention on Equal Pay.....

In considering whether to adopt a Convention on the subject of equal pay for work of equal value, the International Labour Conference will study various methods by which governments might make the principle effective, such as the following—

Application of the equal pay principle to all government employees, or workers in state-controlled enterprises;

Application of the principle in regard to work executed under the terms of public contracts;

Equalization of statutory minimum wage standards for men and women workers;

Legislation to apply the principle to industry generally;

Encouragement of voluntary application of the principle through collective bargaining;

Encouragement of the establishment of job evaluation standards so as to facilitate application of the equal pay principle.

The Conference will also seek to evolve a precise definition of the equal pay principle, giving due emphasis to the need for specifying that the principle applies only where work of equal value is performed. The objective is that rates of pay should be based on job content and not on the sex of the workers.

form to the principle if they were based on an evaluation of the work including any discrepancy, if such appears, between the value of the work of women and that of men. Third, occupations should not be compared which are different in character. It would be irrelevant to raise the question of the relative value of the work of a woman weaver and a man solderer since various economic, social or historical conditions determine wage rates in different occupations. Comparison should be made only where remuneration is established by the same procedure.

The different interpretations that have developed of what constitutes "equal remuneration for work of equal value" fall broadly into three classes: (1) remuneration based upon the relative job performance of men and women on the same or similar jobs; (2) remuneration based on the value defined with reference to cost of production or over-all value to the employer; and (3) wage rates based on job content without regard to sex.

The first interpretation has developed where men and women are employed indifferently on the same kind of work and the value of the work is based on an appraisal of the job performance of women as compared to men. The situation during the war, when it was necessary to recruit women workers to replace men who had been drafted into the armed forces, provided the most typical cases of this kind. In Australia the Women's Employment Board had the responsibility of assessing the rates of pay of certain groups of women by comparing the efficiency of women in the performance of the work with the efficiency of men. The rates of pay were required to lie between 60 and 100 per cent of the rates paid to men on "substantially similar" work. In a variety of metal trades and engineering jobs a differential of 10 per cent was established between men's and women's wage rates. Among the reasons given for the lesser productivity of women were lesser physical strength, the statutory limitations on weight lifting, making it necessary either to increase the number of women employed or to engage a man to assist a group of women, and the higher absenteeism among women workers.

In Canada, the National War Labour Board dealt with the matter in a somewhat different way. Women workers were considered together with youths and less experienced or less capable men who had to be engaged to perform work done before the war by experienced men. The Board was prepared to deal with applications made by employers for the establishment of new and

lower paid classifications within an occupation for which classifications had already been made. Two principles were established: each application was considered on its merits without wholesale consideration of the relative value of women's performance in general; and the skill and ability required for the new job were assessed in relation to the skill and ability required for the existing classification.

The important notion introduced thus by the Canadian War Labour Board was that, while the rates were in all cases based on an evaluation of the work done by women as compared to man's performance, they called also for an evaluation of the relative skill and ability required in connection with a new and lower paid classification.

The second interpretation is where value of work is defined with reference to the cost of production or over-all value to the employer. "Over-all value to the employer" attempts to distinguish between the value of the service rendered in relation to a given unit of work, and the over-all value of the employee's services over the whole period during which he or she remains in employment. In considering costs of production, special costs of production entailed in the use of women's as compared to men's labour may be specific factors immediately related to particular jobs, or general permanent factors claimed to affect both cost of production on a unit of work and the over-all costs. The Report recounts the experience of the National War Labour Board in the United States. The Board was prepared to consider claims that additional labour costs were incurred where additional supervision or service was required, but differentials were only permitted where it could be established that there were ascertainable and specific added costs to the company resulting from the use of women.

The general factors are those which are deemed to increase costs of production and to involve special overhead costs, thus reducing in the long run the over-all value of women's work even when their efficiency and output is equal to that of men on a unit of work. Experience relating to these factors is considered in detail in the Report. The first of these is physical strength. The Report holds that the lesser physical strength of women tends obviously to exclude them from heavy industries and work involving strenuous muscular effort. This consideration therefore affects the utilization of the labour force rather than the remuneration of women. In any case, experience has shown also that it is not easy to reach agreement as to the relative value of the strength factor. It has been contended that such qualities as dexterity,

speed and precision should be rated as highly as sheer physical strength.

It is sometimes held that statutory restriction upon employment of women is another factor increasing labour costs where women are employed. Overtime is sometimes limited by statute, and in practice weekly or daily hours of work of women are less than those of men. Women may not be available to work beyond normal hours in time of pressure, and for this reason their value to the employer has been considered to be reduced. There may also be night work restrictions. However the Report indicates that it has been considered a fair wage practice to pay a premium rate for night work and overtime, and that it does not therefore seem appropriate that women should receive lower rates for work during normal working hours.

Another general factor claimed to reduce the value of women's work is the higher rate of absenteeism, but it is difficult to evaluate the effect of this upon costs of production because of a continually changing situation. Social schemes to relieve the burden of the housewife who is employed are increasing. The cost of these is more and more being borne by the state.

Another general factor claimed to affect costs of production is the need to provide special welfare amenities in the plant for women workers. The British Employers' Confederation, in their written evidence before the Royal Commission on Equal Pay (L.G., 1946, pp. 1717-1721), stated "that the provision of additional welfare arrangements in the case of women involved additional costs which did not arise in the case of men and therefore reduced the net value to the employer of the women's work". The Royal Commission, however, concluded that it did not "feel able to attach great quantitative importance to this point especially in view of the growing tendency to assimilate the standards of welfare arrangements provided for the two sexes."

The other characteristic of women workers considered as affecting the over-all value of their work to the employer arises from "lesser vocational training or experience, whether due to higher incidence of turnover among women workers, to shorter industrial life or to a narrowly specialized training." The Report maintains that "satisfactory means of assessing the cost of such differences have not been found. It is more practical to determine the value of the skill and experience required for a particular job, as proposed by the third definition of equal remuneration for work of equal value.

This third interpretation, that remuneration should be the rate for the job and not for the individual who does it, and that the rate should take into account the skill and qualifications required, is the one that the Report advances as sound. It involves job analysis and classification which practically amounts to setting up minimum standards which a worker must meet in performing his job. Trade unions generally favour it, as do some employers' groups, including the National Association of Manufacturers in the United States, and there are a substantial number of cases in which collective agreements have been negotiated including a special clause providing for the classification of jobs regardless of sex. It has been followed also to a large extent by wage fixing boards. Accordingly the questionnaire asks member states to consider whether the term "equal remuneration for men and women workers for work of equal value" should be defined as signifying that wage rates should be established on the basis of job content without discrimination based on sex.

### **Opportunities for Government Action In Applying the Principle**

The Report points out that the government of each member country is in a position to influence directly the implementation of equal pay for men and women. Collective bargaining also has an important role to play in establishing this principle.

The Report examines the areas where governments have the opportunity of taking direct action and suggests methods by which such action could be carried out. The four areas are: (1) the civil service, including to a large extent the teaching profession; (2) industries and services where wage rates are fixed under public authority; (3) industries and undertakings operated under public ownership or control; and (4) work executed under the terms of public contract.

The first field, the civil service, is a sphere in which governments may exercise direct control and take direct action to implement the principle, since civil servants are paid out of public funds. Moreover, the various occupations in the civil service seem to lend themselves to classification according to the skill required for the job rather than classification by sex. An examination of civil services in various countries shows that "substantial progress" has been made in this respect. For instance, the principle of "the rate for the job" has been formally accepted and applied in the international civil service (e.g., in the Secretariat of the United Nations and the International Labour Office). Further, a substantial number of

countries, including Canada, have adopted salary policies which make no distinction as to sex; a single scale of salaries has been established whereby men and women in the same grade are paid at the same rate. However, the Report points out that although the principle of single salary scales is applied in the civil services of a large number of countries, the principle of equal remuneration for work of equal value is not so generally applied and the relative level of women's remuneration is affected. For instance, there are cases of inequalities in treatment which take the form of fewer promotion opportunities, exclusion from certain grades, posts or branches of the service, unequal pension rights, and various penalizations because of marriage. The article states that in Canada certain civil posts are not open to women.\* In many countries, women have no access to posts in police or military forces, in the diplomatic service, in legal or financial government departments. Married women are barred from permanent posts in some countries including Canada, The Netherlands and New Zealand. In the central government services of the United Kingdom, sex differentiation in pay is the rule. In commenting on the report of the Royal Commission on Equal Pay, 1944-46, the Chancellor of the Exchequer stated that the government accepted the broad principle but that because of the inflationary effects which would result, it could not be applied immediately.

The teaching profession may be considered with the civil service as a field for direct government action in implementing the principle, since education has been coming more and more under state responsibility and control. A large number of countries have accepted the principle of equal remuneration for men and women teachers, particularly in state schools. However, in some of the Canadian provinces, as well as in the United Kingdom, Australia and other countries, differentials in the salary rates between men and women teachers exist.† The marriage bar still holds in some countries (e.g., in Australia and The

\* But in fact the policy of the federal Civil Service Commission is to provide equal opportunity for men and women workers, both in entrance examinations and promotions, for all positions except those in which it is considered that physical conditions would not be suitable for a female employee. The Civil Service Regulations state: "Unless the requirements of the position demand otherwise, applicants of both sexes may be admitted to any examination."

† Legislation in each of the Canadian Provinces sets a minimum rate for teachers' salaries—the same for women as for men. However, rate of salaries above the minimum is determined to a large extent by local authorities.

Netherlands). In Canada, some local school boards prefer not to engage married women teachers if their husbands are able to support them. However, the Report concludes that there seems to be a definite tendency towards the lifting of the marriage bar. In recent years, Austria, New Zealand and the United Kingdom have abolished it.

The second area where governments may give an influential lead in applying the equal pay principle is where wage rates are determined under public authority, such as by a minimum wage board. Wage rates thus determined are usually minimum wage rates except in the case of collective agreements which are extended by statute to cover specified industries and trades. To a large extent, the whole wage structure in a number of countries is based on their minimum wage rates since other wage rates are set in relation to the minima. It is pointed out that where minimum wage rates are fixed at the same rate for both men and women it tends to promote the principle of "the rate for the job". The Report then examines the history of minimum wage regulations in certain Canadian provinces. Here the minimum wage rates were applied first only to women workers in specified occupations. Later they were extended to include men when it was found that the provisions were being evaded by the employment of men to replace women at lower wages than could legally be paid to women. Finally, the rates were made applicable in some provinces to all industry and commerce. However, there are still some instances of minimum wage rates which differ for men and women in the same occupation. "Public authorities", states the Report, "are becoming increasingly aware of the depressing effect of women's relatively cheap labour on wages in general and the consequent unfair competition that prevails among workers of both sexes".

In respect to the third field for government intervention, namely, in industries and undertakings under public control or ownership, the Report recognizes the increase in wage costs which may result from equating women's wages with those of men. These costs may have to be met entirely, or to a large extent, out of public funds since many industries under public control have to sell their products in national and foreign markets in competition with other industries who may not apply the equal pay principle. In the United Kingdom, the Royal Commission on Equal Pay was against the introduction of equal pay for women in public industries until it had been recognized and applied by private employers. However, the Report states that in countries where industry has been largely national-

ized, it has not been found that an undue financial burden results from the application of the principle.

The fourth area for government action, is in work executed under public contract. The Report finds that in regulations governing conditions of work under public contracts there are few specific provisions regarding the observance of the equal remuneration principle although in a number of countries, general statutory or conventional provisions might cover it in a general way. One of the few cases where public contract laws provide specifically for the principle of equal pay, particularly in regard to minimum wages is the Public Contracts (Walsh-Healey Act) in the United States. In some cases, the standard for work under public contract is tied to the terms of collective agreements or arbitration awards, or is based on the "prevailing" standards, or is set by reference to the general existing labour standards. This tends to limit the intervention of public authorities.

The Report then discusses the cost to a country of applying the equal remuneration principle. In France, it was estimated in 1945, that to bring women's wage rates up to men's would mean an increase of at least 4 per cent in the payrolls. From the few other figures that are available, the Report concludes that equalization schemes would mean a sizeable financial item in any country's budget. For this reason and also since some countries are in a difficult financial position, it is considered that a gradual application of the principle would be expedient.

Steps are suggested as to how to begin equalizing wages. First, statutory legislation might be passed to limit the existing differential (as in Australia). Secondly, where a system of increases is provided under statutory regulations, the same increases might be granted to women as are to men in the same occupational grades (as was done in France). Thirdly, where women are hired at lower rates than men, periodic increases might be granted to women workers until their rates reach the full male rates. This latter method was used during the war, and also in private firms where job evaluation showed that certain employees were underpaid.

In addition to the workers in the four areas where governments may take some direct action, there remain in any country other workers who would be unaffected by such action. The Report suggests two methods by which the application of the principle of equal pay would cover these other workers; the two methods are legal enactment and collective bargaining. In a number of countries, legal enactments have

sought to establish equal men's and women's wage rates and to provide means of enforcement. Such legal provisions may be included in general labour laws (as in the Australia Industrial Conciliation and Arbitration Act) or may be specific laws or regulations on the very point of equal pay for equal work (as in nine States in the United States) (L.G., 1944, p. 938). The scope of the laws is usually extensive, excluding in many cases, however, agriculture and/or domestic service. Devices for enforcing the law include labour inspection, claims of competent authorities, a system of individual work books and provision for penalties.

In respect to collective bargaining there are collective agreements in many countries in which the principle of equal pay has been recognized and implemented. It is suggested that, although public authorities abstain from intervening in the collective bargaining discussions for equal pay, they may promote the recognition of the principle and encourage its voluntary application. The influence of collective bargaining in this regard is illustrated by findings in the State of New York in December 1943. Of the 143 plants which were visited, 98 had union agreements covering occupations in which women had replaced men; 73 of these contracts provided for equal pay for equal work or for specified job rates without mention of the sex of the worker; equal entrance rates were paid to men and women for comparable work in two-thirds of the plants having union agreements and in less than one-half of the plants with no union agreement.

The Report then deals with the necessity of precise job evaluation standards, and the role of public authorities in this connection. In order to apply the principle of equal remuneration for work of equal value, it is essential to have a standard by which to measure each job's value. In analyzing job content, various techniques are used; usually definite elements in the job such as physical effort, judgment, responsibility, working conditions, manipulative skill, etc. are set out and rated. The total of the rating points represents the value of the job. Wage scales can thus be set in accordance with the classification of the job.

Definite criteria for job evaluating were developed in the equal pay laws, both general and specific, and also in the practices which have grown up in connection with vocational training, placement, redistribution of manpower, etc. The latter development has taken place as a result of social and economic and technological changes, rather than from a conscious effort to implement the equal pay principle. In

the United States, a survey showed that while in 1939 only 13.3 per cent of the companies covered were using job evaluation, by 1946, 57 per cent were using it.

The role of the public authorities in this matter of job evaluation may be considerable. They may use job evaluation in the rating system for remuneration of their own employees. They may set up advisory bodies specializing in job analysis techniques. Further, public agencies can develop a system of job classification for the purposes of vocational training and apprenticeship, distribution of manpower or migration of labour.

The final proposal which the Report makes to member states in regard to the implementing of the equal pay principle is for close co-operation between the public authorities on one hand and the employers' and workers' organizations on the other. This co-operation should, the Report suggests, be effected not only in the four areas where the public authorities can take direct action, but also in other general situations as a means of lessening the traditional resistance to the equal pay principle. The most noticeable progress in implementing the principle has been made in countries where there is tripartite and bipartite co-operation. In the State of New York, a tripartite committee was set up to assist the Industrial Commissioner in preparing the plan for the administration of the Equal Pay Law. This committee dealt with such questions as types of occupations for classifications, programs of education and methods of enforcing the provisions.

Following this discussion of the responsibility of public authorities, the Report asks the member states to consider whether international regulations should include the following points: (1) that governments should take the appropriate action to ensure application of the principle in the four areas where public authorities can intervene; (2) that governments should undertake to apply the principle elsewhere by legal enactment or by collective agreement; (3) that governments should take action to establish objective standards of job evaluation; (4) that governments should maintain a close co-operation with workers' and employers' organizations in all efforts to apply the principle.

## Complementary Social Measures

Experience has shown that social measures forming part of the general program of improvement of social conditions may tend to reduce difficulties which frequently confront women workers, the Report points out. Such measures as vocational training, guidance and placement, maternity protection, welfare facilities for working people, and child care facilities, could both increase the vocational capacity of women workers and reduce the handicaps that maternity and home-making constitute for the working woman. With this in mind, member states are asked to consider whether the regulations should require that each member take all necessary and appropriate measures to raise the productive efficiency and capacity of women workers and to limit the effects of the factors accounting for the relatively low level of the remuneration of women workers.

Vocational training is held to be of special importance. Training opportunities for women have tended to be limited to those which prepare for occupations which are traditionally women's. Under the stress of labour shortages during the war, barriers to women's employment were lowered, training was made available, and it was established that a wide range of skilled and semi-skilled occupations were suitable to women. Accordingly, member states are asked to consider whether workers of both sexes should have equal access to vocational training facilities, and should be encouraged to use such facilities as are "appropriate to the aptitudes, capacities and interests of the individual and the needs of the economy".

The need for thorough objective study of the situation in regard to remuneration of women is being recognized in a number of countries. One illustration is the appointment of the Royal Commission on Equal Pay in the United Kingdom, and the Commission's report. The last question therefore raises the advisability of member states undertaking such investigations as may be desirable "with a view to the application of the principle of equal remuneration for men and women workers for work of equal value, and publishing the results, so as to promote public understanding of the equity and usefulness of the principle."

# TYPES OF PENSION AND RETIREMENT PLANS IN CANADIAN INDUSTRY

*To provide information on the cost and adequacy of employee pension and retirement plans in Canadian industry, the Dominion Bureau of Statistics made a study of plans in operation in 29 companies. The Bureau's findings are published in a reference paper, of which the following is a summary.*

"There is little information available on the cost and the adequacy of protection provided by employees' pension plans in Canadian industries," the Dominion Bureau of Statistics states in its reference paper, *Employees' Pension and Retirement Plans*. A survey of industrial pension and welfare plans was carried out by the Bureau at the end of 1947, but was concerned mainly with the extent of coverage and certain other characteristics, and did not include data on amount of contributions and benefits (L.G., June, 1949, pp. 694-700). With a view to providing such information, the Bureau has made a supplementary study of existing plans.

The information presented in the reference paper was compiled from 29 booklets prepared by companies for the use of their employees, which were attached to completed questionnaires submitted in connection with the 1947 survey. The Bureau explains that it is not possible to determine how many firms and employees are actually covered, as no request had been made for such material and, also, not all firms have information in printed form available. However, because of a certain amount of uniformity in some of the features, it is felt that the information is of interest.

Ten of the plans studied were found to be non-contributory, i.e. plans where the employees do not contribute to the cost, and one contributory for salaried employees and non-contributory for hourly-paid employees. Several firms have contributory annuity plans supplemented by company-financed pensions. In one case an annuity plan is financed by employees only, but supplemented by company-paid pensions.

Only in some instances does the fact of a plan being contributory make for higher benefits than the usual formula described below.

In most cases the company bears the entire cost of contributions for past service. Only in one case is the cost for past service borne entirely by the employees.

The amount of employers' contributions is generally not stated; by some it is given

as "not less" than a certain percentage (ranging from 1 to 5). In one case employees' and employers' contributions are equal. The amount of employees' contributions is usually a fixed percentage of earnings (3 to 7); in one case it varies also with the age at joining the plan, younger employees paying a lower percentage. In all cases the employees' contributions are deducted from the wages.

The most frequent formula for the calculation of benefits is one per cent (in some cases up to 1½ per cent) of the average annual earnings, based on the last ten or the highest paid ten years of service, for each year of service. In some plans the percentage for years of past service is slightly lower than for years of future service. Under one plan benefits are 13 per cent lower for women in view of their higher life expectancy. One company reports benefits as a fixed amount, instead of a percentage of earnings, for each year of service; another sets an annual benefit of 1/60 of the total earnings since joining the plan, and under one contributory plan the annual pension is 45 per cent of the employee's total contributions.

In some cases a minimum benefit is guaranteed, mostly an amount of from \$240 to \$360 a year, but under one plan it increases according to length of service. A few non-contributory plans also set an upper limit ranging from \$900 to \$2,500 a year, or a certain percentage of earnings.

Where a pension plan is administered by the Annuities Branch of the Government of Canada, benefits are in accordance with the schedules. As annuities are limited to \$1,200 a year, they are in some cases supplemented by another pension plan.

One contributory plan provides that pensions from other sources may be deducted, but generally it is provided under company-paid plans that other income is not deductible except if derived from a competitive business.

One non-contributory plan provides slightly reduced benefits for married males in order to cover also survivors.

In cases where the employee leaves the employment before qualifying for pension the usual provision is that he is entitled to the benefits resulting from his own contributions. Under one plan an employee gets the benefits also from a certain percentage of the employer's contribution after at least five years' service.

The normal retirement age is generally fixed at 65 years but many plans provide for a lower age—55 or 60 years—for female employees. One plan extends the maximum up to five years for male employees who join the plan at a higher age.

Another plan sets the normal retirement age at 70 for male employees and 60 for female, but voluntary retirement is possible at 65 at lower benefits. Under this plan benefits are based on 1½ per cent of average earnings for each year of service. Under the remaining plans provision is made for earlier or later retirement in certain circumstances.

Several plans, among them most of the non-contributory plans, require a certain length of service, ranging from 15 to 25 years, to establish eligibility for benefit. After 30 years' service, age requirements are sometimes reduced. Some plans provide for

pensions regardless of age in cases of disability after 15 years of service.

Eligibility for participation in the plan in many cases is conditional upon a stated length of service, varying from three months to five years. In one case the period is three years for male employees and five years for female. Age appears also as a determining factor in some plans, the upper limit being the retirement age or other ages ranging from 40 to 65 years. In some cases this limit is 5 to 10 years lower for females. Where a minimum age is required, it is between 20 to 34½ years; in some instances it is 4 to 5 years higher for females.

Under some plans part-time and temporary employees, or those paid on a commission basis only, are excluded from participation.

Under all contributory plans participation is voluntary for employees on the staff at the time the plan is instituted. Under some plans participation is compulsory for new employees; one is compulsory for new male employees only.

The plans are administered by commercial companies or a trust fund, and by the Annuities Branch of the Federal Department of Labour.

---

## FARM LABOUR OFFICIALS CONFER IN OTTAWA

*The Conference made a studied appraisal of the farm labour program carried out during 1949 under the Dominion-Provincial Farm Labour Agreements. It was the consensus of the opinions of the delegates that the agreements should be continued and preliminary plans were laid for conducting activities in 1950.*

The Seventh Annual Dominion-Provincial Farm Labour Conference was held in the Board Room of the Department of Labour, Ottawa, December 15 and 16, 1949. Mr. W. W. Dawson, Supervisor, Immigration and Farm Labour Branch of the Dominion Department of Labour presided.

The following farm labour officials and observers attended the Conference:—

**Provincial Directors of Farm Labour:**  
S. C. Wright, Prince Edward Island; S. E. Lewis, Nova Scotia; E. M. Taylor, New Brunswick; Alex. J. Rioux, Quebec; R. S. Duncan, Ontario; H. R. Richardson, Manitoba; L. J. Hutchison (proxy for E. E. Brocklebank), Saskatchewan; F. H. Newcombe, Alberta; W. MacGillivray, British Columbia.

**National Employment Service Officials:**

C. A. L. Murchison, Commissioner, Unemployment Insurance Commission, Ottawa; W. K. Rutherford, Director of Employment Service, UIC, Ottawa; A. L. Tosland, Veterans Placement Division, UIC, Ottawa; J. V. Argyle, Supervisor, General Placements Division, UIC, Ottawa; M. C. Crosbie, General Placements Division, UIC, Ottawa; and the following Regional officials, D. W. Hay, Maritimes; Armand Theriault, Quebec; W. Davison, Ontario; J. F. Kristjansson, Prairies; F. C. Hitchcock, Saskatchewan; H. E. Cave, Alberta; W. Horrobin, British Columbia.

**Federal Department of Labour Officials:**

A. MacNamara, Deputy Minister; R. Ranger, Assistant to Deputy Minister.

*Immigration and Farm Placements Branch*; W. W. Dawson (Supervisor), A. D. MacDonald (Secretary), F. M. Hereford, and G. H. McGee. *Economic and Research Branch*; G. V. Haythorne, Acting Director, A. Cowan, F. W. Burton, J. H. Dickson, I. Bernolak and J. D. Forbes. *London, England, Office*; J. F. MacKinnon.

Others in attendance were: Hon. A. C. Taylor, Minister of Agriculture, New Brunswick; Hon. C. C. Baker, Minister of Agriculture, Prince Edward Island; S. H. Parsons, Deputy Minister of Labour, Newfoundland; J. E. Dubé, Department of Agriculture, Quebec; K. G. Laver, Department of Agriculture, Ontario; M. Hartnett, Deputy Minister of Agriculture, Saskatchewan; D. W. Fessenden and A. Gillespie, United States Employment Service; R. Innes and C. K. Wicks, International Refugee Organization; P. Habib, U.S. Embassy, Ottawa; J. F. Booth and F. Shefrin, Department of Agriculture, Ottawa; H. R. Hare, Department of Veterans Affairs, Ottawa.

Included on the agenda were: (1) the presentation of reports by the Provincial Directors of Farm Labour and Agricultural Advisers concerning their activities for 1949; (2) addresses by R. I. Innes on the work of "the International Refugee Organization"; D. W. Fessenden of the United States Employment Service on "the Federal-State Farm Labour Program in the United States"; Dr. George V. Haythorne, Acting Director, Economics and Research Division of the Federal Department of Labour and Dr. J. F. Booth, Associate Director of the Marketing Service of the Federal Department of Agriculture on "Some Long-run Farm Labour Trends"; (3) prospective demand for farm labour in 1950; (4) the continuance of the Dominion-Provincial Farm Labour Agreements; (5) immigration in its relation to the supply of farm workers and the movements of farm labour between Canada and the United States.

### Chairman's Introductory Comments

In his introductory remarks, the Chairman welcomed the new provincial representatives and expressed his appreciation of the high degree of co-operation that the Department of Labour was receiving from provincial officials, the national employment service and others who had had a share in carrying out the farm labour program.

Referring to the farm labour situation throughout Canada in 1949, Mr. Dawson said that there was not the same degree of urgency as there had been during the war years, and the farm labour supply had been supplemented somewhat by workers from Europe. He was of the opinion that

the movements of harvesters from eastern to western Canada would likely fall off in 1950, due, in part at least, to the increasing use of harvesting machinery. On the other hand, the movement of workers from the Prairies to Ontario to help with hay harvesting had been substantial. It should be noted too, that some 4,000 agricultural workers had been brought from European DP camps to Canada during the year. These together with the heads of some "1,500 Dutch families accompanied by 3,200 dependents, made a considerable extension to the agricultural force in the country," Mr. Dawson stated.

Viewed in retrospect, the Chairman thought that the movement of some 4,500 Polish war veterans had been "a magnificent success." They had been brought in at a time when "there was a very real demand for farm workers and they fitted into the agricultural picture very well." Many of them were continuing to work in agriculture and, with very few exceptions, all of them "are in good health and in the employment stream in Canada."

### Address by Dr. MacNamara

In a brief address at the opening session of the Conference, Dr. Arthur MacNamara, Deputy Minister of Labour, welcomed the official representatives of the several provinces as well as those of the United States Employment Service and the International Refugee Organization, all of whom had been "partners" with the Federal Department of Labour in handling farm labour problems in Canada during the year.

On behalf of the Minister of Labour and officials of the Department, Dr. MacNamara made appropriate acknowledgment of "the happy relationships that have prevailed during the seven years of our partnership with the provinces under the Dominion-Provincial Farm Labour Agreement." He pointed out that Canada's farm labour requirements during the 1949 season had been held in virtual balance. "We did not have any shortage to speak of and there was no occasion where men wanted farm jobs and could not get them," he said.

Dr. MacNamara suggested two subjects which he thought merited a place on the agenda of the Conference. These were: the need for improving working conditions on farms, and ways and means to provide workmen's compensation and unemployment insurance coverage for farm labourers.

Dr. MacNamara was of the opinion that the results so far obtained under the Dominion-Provincial Farm Labour agreements warranted their continuance. If, however, any of the delegates felt that the

agreements should be dropped he urged them to state their opinions before the Conference ended.

### Provincial Directors' Reports

The reports of the Provincial Directors of the farm labour program revealed a number of problems that were more or less common to all of the provinces. Among these were: (1) questions involved in bringing in European displaced persons for employment on farms; (2) the present status of the Polish veterans who were brought to Canada after the war; (3) maintaining a better ethnical balance by securing more immigrants from the British Isles; (4) providing better living and working conditions on many Canadian farms (including housing for married workers and their families); (5) finding solutions for seasonal unemployment on farms; (6) appreciation of the value of the co-operative efforts to solve farm labour problems under the Dominion-Provincial Farm Labour Agreements.

**Newfoundland.**—Although no Farm Labour Agreement had yet been made between the Dominion and Newfoundland, the new province was invited to send a representative to the Conference. In response to the invitation, Mr. Selby H. Parsons, provincial Deputy Minister of Labour, attended and was welcomed on behalf of the delegates by Dr. A. Mac-Namara, Federal Deputy Minister of Labour and by the Chairman, Mr. W. W. Dawson.

In a brief address, Mr. Parsons pointed out that there were few people in Newfoundland who have had experience in farming. "Newfoundlanders," he said, "were mostly fishermen, loggers and miners" and would probably prefer to do fishing and logging rather than come to the mainland to do farm work. These factors, he felt, would present difficulties to moving workers from Newfoundland to relieve farm labour shortages in the other nine provinces.

Mr. Parsons admitted, however, that there was a surplus of workers in Newfoundland for the time being, which would likely be taken up with the opening up of mining operations on the Labrador peninsula. It was possible that some of this surplus might be used in the meantime, for farm work in the eastern provinces. He was not very optimistic concerning the possibility of transferring domestic helpers from Newfoundland. "The supply of women is not so great as the supply of men for farm labour," he said.

**Prince Edward Island.**—Mr. S. C. Wright, Director of Farm Labour Service

for the province, reported that more farmers in Prince Edward Island were providing better living quarters for married couples in their employ.

He stated that in 1949 about 50 men had been brought from Nova Scotia to harvest the hay crop and more than 700 workers came from Nova Scotia and 300 from New Brunswick for the potato crop. Including local workers, a total of 1,234 men were employed for the potato harvest.

He reported that of the 32 Polish veterans brought to the Island after the war, all but six had moved on to other provinces and of 121 displaced persons employed on farms, there were left 42 single workers and 11 married couples at the end of November, 1949. Some of the displaced persons were not suitable for farm work and in other cases, their marital status presented obstacles to fulfilling their contracts with the Government. It was suggested that, in future, the selection of displaced persons for farm work should be restricted as far as possible to those "who come from areas where agriculture dominates the thinking and life of the people".

Mr. Wright stated that the small number (about 20) of farm workers brought from Holland had proved to be "very satisfactory and seem to adapt themselves very readily to farm conditions as found in the province".

**Nova Scotia.**—Mr. S. E. Lewis, of the Nova Scotia Land Settlement Board asserted that "the biggest single requirement for farm labour" in 1949, had come from the apple growers of the Annapolis valley. Under the Dominion-Provincial agreement, transportation was paid for 250 apple pickers, but many more arranged for their own transportation.

The supply of other farm labour in the province during the year very nearly equalled the demand. Although there was some unemployment in other lines, very few of the unemployed were competent or willing to do farm work. Some 46 farm workers, 11 married couples and 14 domestic helpers came from European displaced persons camps. Approximately 50 Estonians were placed in Pictou county and were employed chiefly in handicrafts. They were looked upon as good potential settlers, rather than as farm labourers. During the year, the Provincial Land Settlement Board established seven immigrants on farms of their own.

Some of the Polish veterans had left farm employment, others had purchased farms of their own. They "are going their separate ways without (Government) interference".

Mr. Lewis stated that current slack conditions, notably in the forest products industries, would indicate that there would be a surplus of labour for the 1950 crop season.

**New Brunswick.**—Mr. E. M. Taylor, Provincial Director of Farm Labour, reported that the supply of farm labour in 1949, had been greater than for several years due, in large part, to unemployment resulting from the curtailment of pulpwood cutting during the summer months. A total of 561 potato pickers were sent from New Brunswick to help with the potato harvest in Maine.

Mr. Taylor stated that 14 single and eight married displaced persons were given employment on New Brunswick farms in 1949. Most of these were not primarily interested in farming and several of them had left farm jobs for other employment. The provincial Farm Settlement Board had planned to extend financial assistance to qualified immigrants to enable them to purchase farms in the province. He was of the opinion that there might be a limited demand for single farm workers and farm household helpers in 1950. Lack of adequate housing on farms would make it difficult to place married couples.

**Quebec.**—Mr. Alex. J. Rioux, Director of the Farm Labour Supply Bureau, Quebec, made especial reference in his report to the recruitment of workers for sugar beet growers. Transportation was provided for 494 farmers' sons to assist in thinning sugar beets in June and to 54 others for harvesting in October. He stated that there were indications that a much larger number of workers would be required during the 1950 crop season.

Approximately 300 farm workers from western Quebec proceeded to the Prairie provinces to assist in the grain harvest, Mr. Rioux said. Adverse weather conditions in Ontario during the fruit picking season greatly reduced the number of Quebec students sent forward for this work. Of the 125 students that Ontario had first asked for, only about a score were engaged in this project.

Replacements were found during the year for 237 Polish veterans and 255 displaced persons whose contracts with the Government had expired. The Quebec Farm Loan Bureau had settled 14 Polish veterans on farms and a survey was being conducted to find other areas where land could be purchased at moderate prices for other similar settlements. The Polish Combatants Association of Canada had taken an active interest in this scheme.

**Ontario.**—Mr. R. S. Duncan, Ontario Provincial Director of Farm Labour Services, stated that the demand for farm labour had been met fairly satisfactorily in 1949, in spite of the eccentric weather conditions that had prevailed, especially in the spring and early summer.

The "very considerable service" rendered to the farmers of Ontario by displaced persons was acknowledged by Mr. Duncan, but, he said, this was considerably discounted by many who left their employers at the end of their contract years, even when the contracts ended in mid-summer. He urged that, in future, DP's be brought in early in the spring, if possible. In all, 1,289 unattached displaced persons were given employment on Ontario farms in 1949, and more could have been placed had they been available. In addition, 130 female domestics, 103 farm families and 135 farm couples were placed on farms.

Classes in English and citizenship had been set up for Polish veterans and displaced persons by the Provincial Department of Education. During October, 1948, there were 291 classes at centres outside Toronto with a total enrolment of 6,600 students. A year later, there were 319 classes with a total enrolment of 7,350 students, Mr. Duncan said.

Although 1,250 harvest helpers had been requisitioned from the Prairies, only 546 were received. However, 537 were recruited in the Maritimes for work in Ontario, several of whom were not qualified to do farm work. On the other hand a number made good and decided to remain permanently on Ontario farms. To relieve an unemployment situation in the mining camps of northern Ontario, 81 men were brought to southern Ontario for farm work. Mixed results were obtained from this venture, as the screening had not been done carefully.

Late in August, 658 men were sent to assist in harvesting grain on the Prairies.

The annual movement of tobacco curers and primers from the United States resulted in 2,144 entry permits being granted—1,671 for curers and 473 for primers.

"Excellent work" was reported to have been done by the Ontario Farm Service Force in recruiting and placement of student workers in Farm Labour camps, to assist with the fruit harvests. The camps were operated under the general supervision of the Farm Labour Service by Farm Labour Co-operatives and a number of the larger private growers. There were 13 co-operative camps that housed 1,170 girls and four similar camps for men and boys, that accommodated 363 workers. In addition, there were eight private camps for 277 girls

and seven for housing 201 men and boys. In all, 432 farmers were provided with workers from the camps. The students were recruited from secondary schools, colleges and universities and also from points outside the province, including Quebec, the Maritimes, the Western provinces, the United States and France.

**Manitoba.**—Mr. H. R. Richardson, Director of Farm Help for Manitoba reported that local farm help was more plentiful in Manitoba in 1949 than it had been in recent years. This, together with increased use of combines, made it possible to complete harvesting operations “under very favourable circumstances”.

About 250 unattached displaced persons arrived in June to work in the sugar beet fields. They were housed in camps and hostels. They “worked well” and gave promise of “eventually becoming desirable Canadian citizens”.

**Saskatchewan.**—Mr. L. J. Hutchison, Assistant Director of Agricultural Representatives for Saskatchewan, stated that farm labour requirements were more stable in that province in 1949 than for several years. He attributed this to (1) increased use of farm machinery (which it was claimed had been brought about in some degree by the rising scale of wages for farm labour) and (2) the emphasis that was being placed, in mixed farming areas, on the production of livestock that required only a minimum of hired help. These factors, he said, were changing the farm labour supply in the province from one of shortages to one of surplus, except in the peak seasons of seeding and harvesting.

Mr. Hutchison asserted that “the greatest overall shortage of farm help in Saskatchewan is probably of domestics”.

There was a marked falling off in the demand for berry pickers in British Columbia. Only 99 workers were sent from Saskatchewan in 1949, as compared with 250 in 1948 and 449 in 1947.

Of 500 workers requisitioned for the hay crop in Ontario, 335 were dispatched, as compared with 451 in 1948 and 703 in 1947.

Described as “the highlight” in the movement of farm labour in Saskatchewan in 1949, was the recruitment and transfer of 580 workers in the drought areas of the southwestern portion of the province to other more favoured sections. In addition to these, an estimated 1,685 others arranged their own transportation to areas that had better crops.

A small movement of workers, most of them treaty Indians, crossed to Montana to help with the sugar beet crop there.

It was stated that about 50 per cent of the Polish veterans brought to the province after the war, were still employed in agriculture.

**Alberta.**—Mr. F. H. Newcombe, Director of Farm Labour for Alberta, stated that owing to poorer crops and reduction in the number of livestock in Alberta, farm labour activities in 1949 experienced an overall decrease, as compared with those of 1948. Sugar beet workers were an exception, however, but even in this instance, increasing mechanization was reducing the number of workers required per unit of sugar beets harvested.

The Polish veterans brought to the province after the war appeared to have adapted themselves fairly well to Canadian life, it was stated, but the percentage that had continued in farm employment was not known.

About 4,000 British immigrants were brought to Alberta during the first ten months of 1949 under the auspices of the provincial Department of Economic Affairs, as compared with 7,000 in the 12 months of 1948.

A total of 1,132 displaced persons were brought to Alberta in 1949. Of these, 997 were employed in sugar beet production. Church groups (Lutheran, Mennonite and Catholic) sponsored 18 married couples, nine single males and 13 domestic helpers.

The very light grain crop in 1949, resulted in a reduced demand for harvest helpers and only 430 were brought to Alberta, as compared with 967 in 1948. The number of farm workers sent to Ontario fell from 437 in 1948 to 304 in 1949. The demand for fruit pickers in British Columbia covered only about 10 days and about 50 women were sent forward.

**British Columbia.**—Mr. W. MacGillivray, Director, Agricultural Development and Extension for British Columbia, reported that following a long, cold winter and late spring, sufficient farm help was available at all points to meet early requirements in the province. Adverse weather conditions caused some confusion in estimating the probable demand for labour later in the season however. At first, the fruit growers in the Fraser valley stated that no extra workers would be required. Later on, this statement was revised and an order for 250 women and girls from the Prairies was placed with the Regional office of the National Employment Service. Before this order was filled “a grave situation” was developing in the small fruit areas. Growers were in danger of losing highly perishable crops for lack of sufficient fruit pickers. Urgent calls were made to the Prairie Regional NES Office and about the middle

of June the position was relieved by the arrival of 159 women and girls from the Prairie provinces.

Mr. MacGillivray stated that "a higher than average quality of worker was available, with less turnover and more men seeking employment" for the apple harvest. "Although well over 8,000,000 boxes of apples were packed, sufficient labour was available at all times." The report indicated that the farm labour outlook in British Columbia had improved by fall. There were fewer openings for general farm workers and "not too many demands for skilled dairymen". Mr. MacGillivray suggested that greater emphasis be placed on immigration of farm workers from the United Kingdom.

### **International Refugee Organization**

The Conference heard a statement by Wing Commander R. Innes, on behalf of the thousands of refugees still detained in European displaced persons' camps.

He commended Canada for being one of the first nations to accept displaced persons. Up to December 15, 1949, the Dominion had accepted 72,892, or rather more than ten per cent of those that have been placed in one or another of the 18 countries included in the IRO. Canada's quota represented some 48,000 workers and their dependents; the remainder were sponsored by relatives already in Canada.

Wing Commander Innes said that by the end of June, 1950, when the IRO program was expected to end, there will still be 300,000 DP's who will not have been moved from their camps. He stated that many of these had declared their desire to come to Canada and he suggested that farm family groups, particularly those who were experienced in sugar beet cultivation, might be of interest to Canadian farmers. He could provide records of 500 such families scattered over Germany and Austria, he said.

With respect to obtaining domestic helpers from among the DP's still in Europe

it was stated that there were 5,150 females in the age group 45 to 59 who had no dependents. Wing Commander Innes suggested that many of these females "would render very useful service" in Canada. He pointed out that it was important that they should be requisitioned for not later than the end of January in order to have them arrive in Canada in time for early spring operations on Canadian farms.

### **Some Long-run Farm Labour Trends**

Dr. George Haythorne, Acting Director, Economics and Research Branch, Federal Department of Labour and Dr. J. F. Booth, Associate Director, Marketing Division, Federal Department of Agriculture, addressed the Conference on some factors that affect the employment of farm helpers.

The increasing use of farm machinery and the development of improved farming methods were factors in reducing labour requirements. It was pointed out that work simplification studies would assist, not only in decreasing the need for hired labour, but should add to the farmer's profits. On the other hand, too many farmers were working inferior land or were themselves unfitted for agriculture, it was claimed. The statement was made that there were about 200,000 farms in Canada which consumed more goods and services than they produced.

To encourage farm labour to remain in farm employment, it was urged that working and living conditions stood in great need of improvement on very many farms; and that unemployment insurance and workmen's compensation coverage for farm workers should be provided.

### **Dominion-Provincial Agreements**

The advisability of renewing the Dominion-Provincial Farm Labour Agreements was discussed and their renewal was approved, subject to ratification by the responsible provincial administrative officials.

## **Annual Convention of Alberta Federation of Labour (TLC)**

The Twenty-ninth convention of the Alberta Federation of Labour (TLC) was held in the city of Lethbridge, October 12 to 15, 1949. There were 130 delegates in attendance, representing 109 affiliated organizations.

There were 52 resolutions brought before the convention. Among the more important were:—

(1) that union security provisions be granted to a union by legislation, if 66 per cent of the membership of the union, or the affected employees vote in favour of union shop provisions;

(2) that unions be allowed to keep their foremen in membership, if they desired to do so and that legislation that would bar foremen from such membership should be opposed;

(3) that the Dominion Bureau of Statistics be urged to develop a more accurate system for the compilation of the statistics used in making up the cost-of-living index;

(4) that a maximum work-week of 40 hours be established at once in Alberta and that this be progressively reduced, if necessary, to maintain full employment;

(5) that a closer check be made on those who apply for and those that receive chauffeurs' licences and that the use of safety flares on all vehicles, as provided by existing legislation, should be continued;

(6) that the CBC should remain in control of broadcasting in Canada, but that every effort be made to prevent any increase in licence fees for receiving sets;

(7) that the export of natural gas from Alberta should not be permitted unless approved by the Alberta Conservation Board and that Labour be represented on the Board;

(8) that beer parlours be permitted for ladies in the cities of Edmonton and Calgary.

Mr. K. A. Pugh, Chairman of the Board of Industrial Relations for Alberta, addressed the convention. He reviewed recent new orders of the Board and also the amendments to the Alberta Labour Act, which it was proposed to present at next year's session of the Legislature.

Mr. Pugh stated that Government statistics showed that 33 per cent of all industrial workers in Alberta were organized in trade unions. This, he said, was a much higher percentage than in any other province in the Dominion. He asserted that, in future,

procedure used in examining applications for certification and the certifying of unions would be speeded up. Commencing on October 1, 1949, construction workers in the province would accumulate holiday pay at the rate of four per cent of their earnings. This, he said, would give them two weeks' vacation during the summer of 1950.

Other workers had been held at one week after one year and two weeks after two years of service. However, the provision requiring a worker to work 275 days in order to qualify for summer vacation had been discontinued and in future holidays would be based on one-half day credit for each 23 days worked.

Mr. Pugh claimed that Alberta had a higher male minimum wage rate than any of the other provinces. Consequently, it would not be possible at present to raise the minimum rate for male workers. He pointed out that rates for female workers had been increased.

Other guest speakers who addressed the convention included, Hon. J. L. Robinson, Minister of Industries and Labour for Alberta, Mr. Paul W. Graham of the Industrial Development Board of the Federal Department of Labour and Mr. Fred J. White, Regional Superintendent (Prairie Region) of the Unemployment Insurance Commission.

The election of officers resulted as follows:—

President, Harry Boyse, Lethbridge; Vice-President, Robert Scott, Calgary; Vice-President in charge of union label work, Charles Gilbert, Edmonton; Secretary-Treasurer, Herbert G. Turner, Edmonton.

## CURRENT LABOUR CONDITIONS—Continued

A drop of 16 cents in the average retail price of eggs was a major factor in a decline in the cost-of-living index, from 161.5 at December 1 to 161.0 at January 3. There were also scattered decreases in clothing prices. Rents were not surveyed during January. . . . Canadian exports to the United States reached an all-time peak value of \$1,503,459,000 in 1949, but exports to Europe were down sharply, though there was a rise in sales to Britain. . . . Average weekly earnings in the eight leading Canadian industries were \$43.82 at December 1, two cents above the record level of November 1. . . . Immigration to Canada in 1949 totalled 95,217, as compared with 125,414 in 1948. . . . The number of strikes and lockouts recorded in Canada in 1949 was the lowest recorded for any year since 1939, although the number of workers involved and time loss was higher than the year previous.

This section covers proceedings under two federal statutes, the Industrial Relations and Disputes Investigation Act and the Conciliation and Labour Act, involving the administrative services of the Minister of Labour, the Canada Labour Relations Board and the Industrial Relations Branch of the Department.

## INDUSTRIAL RELATIONS AND CONCILIATION

*Loss of time through strikes dwindled almost to the vanishing point as the year 1949 closed. The railway dispute continued to hold the spotlight in industrial relations as the New Year began.*

### Introduction

What is believed to be a spot record of peace and harmony in industrial relations was established in the closing days of the year 1949. Out of a total estimated working force of 5,200,000, of which upwards of 3,500,000 are non-agricultural wage and salary earners, only 145 persons were reported idle as a result of industrial disputes during the week ending December 31, according to the list of strikes and lockouts in Canada maintained by the Department of Labour.

The two Conciliation Boards appointed to deal with the current railway disputes, which were fully constituted on December 8 with the appointment of the Hon. Mr. Justice J. O. Wilson, of the Supreme Court of British Columbia, as the chairman of each Board, met in Montreal later in the month for a preliminary discussion of matters of procedure. The Boards then adjourned until the week of January 9, 1950, when they resumed hearings, at which briefs were submitted by the various parties. A further adjournment until February was then granted at the request of the railway companies, in order to allow time for the preparation of rebuttals.

The settlement of a dispute between the Yukon Consolidated Gold Corporation, Ltd., and the Dawson Miners' Union, Local No. 564 of the International Union of Mine, Mill and Smelter Workers, was reported during December by Mr. G. R. Currie, Industrial Relations Officer, of Vancouver, who had been appointed as Conciliation Officer under Section 16 of the Industrial Relations and Disputes Investigation Act (L.G., Dec., 1949, p. 1554). The dispute affected about 400 employees of the Company at Dawson, Y.T. Earlier, in direct negotiations between the parties, the union had presented a lengthy list of proposals including demands for substantial across-the-board wage increases. After trying without success to secure an agreement by mediating between representatives of the

parties located in Vancouver, the Conciliation Officer made a trip by air to Dawson and held daily meetings with those most directly concerned over a period of six days. The agreement which was reached provided for a bonus of \$1.50 per shift to married employees not living in company camps. This was granted in recognition of the fact that living costs for such employees are very high in the Yukon, while other employees living in company camps continue to be subject to a charge of \$2.25 for board, which is provided at a cost to the Company of about \$4 per day. The Company also agreed to the payment of a transportation allowance of \$100 per year to all employees and the adoption of three paid holidays. A majority of the union's membership voted in favour of the settlement.

\* \* \*

During the calendar year 1949 the Canada Labour Relations Board had before it a total of 85 applications for certification, of which 69 were received during the year and 16 were carried over from 1948. Of these, 40 applications were granted, 18 were rejected, 16 were withdrawn and 11 were still under investigation at the close of the year. A total of 8 representation votes was ordered during the year.

The reasons for rejection in the 18 applications which were denied were in most instances either that the applicant union did not have a majority of the employees affected enrolled as members in good standing, or that the proposed unit of employees for which certification was sought was not appropriate for collective bargaining purposes in the opinion of the Board. Other reasons for rejection were that the operations of the employer did not come under the jurisdiction of the Board, that the application was made within six months after the date of a previous rejection by the Board, or that the application was made prior to the expiry of ten months of the term of an existing collective agreement.

A total of 37 conciliation cases were handled, either by Conciliation Officers or Conciliation Boards during 1949.

Settlements were effected by Conciliation Officers in 14 cases and by Board in 7 cases. Three cases lapsed; and 9 were still pending at the end of the year.

In only 4 cases were no settlements effected. In 3 of these there were strikes,

two of which (involving the Canadian Seamen's Union) terminated without a settlement; while the third (involving garage employees of the Quebec Railway) ended in an agreement.

Following is a tabular analysis of the conciliation proceedings which took place in 1949 under the Industrial Relations and Disputes Investigation Act.

### *The following statement concerns the scope and administration of the Industrial Relations and Disputes Investigation Act and the Conciliation and Labour Act.*

Conciliation services under the Industrial Relations and Disputes Investigation Act and under the Conciliation and Labour Act are provided by the Minister of Labour through the Industrial Relations Branch. The Branch also acts as the administrative arm of the Canada Labour Relations Board under the former Act.

The Industrial Relations and Disputes Investigation Act came into force on September 1, 1948. It revoked the Wartime Labour Relations Regulations, P.C. 1003, which became effective in March, 1944, and repealed the Industrial Disputes Investigation Act, which had been in force from 1907 until succeeded by the Wartime Regulations in 1944.

Proceedings begun under the Wartime Regulations are continued in so far as the services involved in such proceedings are authorized under the new Act. Likewise, decisions, orders and certifications given by the Minister of Labour and the Wartime Labour Relations Board are continued in force and effect by the new Act.

The Act applies to industries within Dominion jurisdiction, i.e., navigation, shipping, interprovincial railways, canals, telegraphs, interprovincial and international steamship lines and ferries, aerodromes and air transportation, radio broadcasting stations, and works declared by Parliament to be for the general advantage of Canada or two or more of its provinces. Additionally, the Act provides that provincial authorities, if they so desire, may enact similar legislation for application to industries within provincial jurisdiction and make mutually satisfactory arrangements with the Dominion Government for the administration of such legislation.

The Minister of Labour is charged with the administration of the Act and is directly responsible for the appointment of Conciliation Officers, Conciliation Boards, Industrial Inquiry Commissions, for the consideration of complaints that the Act has been violated or that a party has failed to bargain collectively, and of applications for consent to prosecute.

The Canada Labour Relations Board is established under the Act as successor to the Wartime Labour Relations Board to administer provisions concerning the certification of bargaining agents, the writing of provisions—for incorporation into collective agreements—fixing a procedure for the final settlement of disputes concerning the meaning or violation of such agreements and the investigation of complaints referred to it by the Minister that a party has failed to bargain collectively and to make every reasonable effort to conclude a collective agreement.

Copies of the Industrial Relations and Disputes Investigation Act and the Rules of Procedure of the Canada Labour Relations Board are available upon request to the Department of Labour, Ottawa.

Conciliation services are also provided by the Industrial Relations Branch under the provisions of the Conciliation and Labour Act. This statute empowers the Minister of Labour to inquire into the causes and circumstances of a dispute, to take such steps as seem expedient for the purpose of bringing the parties together, and to appoint a conciliator or arbitrator when requested by the parties concerned.

Proceedings under the Industrial Relations and Disputes Investigation Act are reported below under two headings: (1) Certification and other Proceedings before the Canada Labour Relations Board, and (2) Conciliation and other Proceedings before the Minister of Labour. From time to time, as required, a third article under this section will cover Conciliation Proceedings under the Conciliation and Labour Act.

Industrial Relations Officers of the Department of Labour are stationed at Vancouver, Winnipeg, Toronto, Ottawa, Montreal, Fredericton and St. John's, Newfoundland. The territory of two officers resident in Vancouver comprises British Columbia and Alberta; two officers stationed in Winnipeg cover the provinces of Saskatchewan and Manitoba and Northwestern Ontario; three officers resident in Toronto confine their activities to Ontario; two officers in Montreal are assigned to the province of Quebec, and two officers resident in Fredericton and St. John's represent the Department in the Maritime Provinces and Newfoundland. The headquarters of the Industrial Relations Branch and the Director of Industrial Relations and staff are situated in Ottawa.

## Certification and Other Proceedings Before the Canada Labour Relations Board

The Canada Labour Relations Board met for two days during the month of December. During the month the Board received three applications for certification, held four hearings, issued thirteen certificates designating bargaining agents and rejected two applications for certification.

### Applications for Certification Granted

1. The International Union, United Automobile, Aircraft and Agricultural Implement Workers of America, for a unit of employees of the Detroit and Canada Tunnel Corporation, comprising employees of the Corporation who work solely in Canada and employees resident in Canada who are engaged in the Corporation's international service (L.G., Aug., 1949, p. 975).

2. Labourers' Protective Union No. 9568, for a unit of employees of Buntain and Bell Company, Charlottetown, P.E.I., engaged in the loading and unloading of ships (L.G., Dec., 1949, p. 1552).

3. Labourers' Protective Union No. 9568, for a unit of employees of Horace B. Willis, Inc., Charlottetown, P.E.I., engaged in the loading and unloading of ships (L.G., Dec., 1949, p. 1552).

4. Labourers' Protective Union No. 9568, for a unit of employees of The Island Fertilizer Company, Charlottetown, P.E.I., engaged in the loading and unloading of ships (L.G., Dec., 1949, p. 1552).

5. The Hull City Transport Employees' Syndicate for a unit of employees of Hull City Transport Limited, Hull, P.Q., comprising bus drivers and garage employees (L.G., Jan., 1950, p. 62).

6. The Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, for a unit of employees of the Canadian Pacific Railway Company comprising clerical employees in the office of the District Accountant, Vancouver, and timekeepers at Field and Cranbrook, B.C. (L.G., Jan., 1950, p. 62).

7. The Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, for a unit of employees of the Canadian Pacific Railway Company comprising red cap porters in the Winnipeg depot of the company (L.G., Jan., 1950, p. 62).

8. The Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, for a unit of employees of the Canadian Pacific Railway Company comprising red cap porters in the Vancouver depot of the company (L.G., Jan., 1950, p. 62).

9. Division 279, Amalgamated Association of Street, Electric Railway and Motor Coach Employees of America, for a unit of employees of the Ottawa Transportation Commission comprising the classifications of carpenter foreman, painter foreman, pitman foreman, assistant barn foreman, track subforeman, lineman-in-charge, barn clerk (night and day), bus despatcher, chief stores

clerk, bus storekeeper, assistant storekeeper (barn and bus garage), stores supervisor, and maintenance records clerk (L.G., Jan., 1950, p. 63). The certificate issued by the Board enlarged the bargaining unit for which the applicant union was previously certified (L.G., Jan., 1949, p. 45).

10. The Canadian Brotherhood of Railway Employees and Other Transport Workers for a unit comprising uncertificated personnel employed on vessels owned and operated by the Canadian National Railways in its Newfoundland Service (L.G., Jan., 1950, p. 63).

11. The Canadian Brotherhood of Railway Employees and Other Transport Workers for a unit comprising uncertificated personnel employed on vessels owned by the Government of the Province of Newfoundland and operated by the Canadian National Railways (L.G., Jan., 1950, p. 63).

12. The Canadian Brotherhood of Railway Employees and Other Transport Workers for a unit comprising mates employed on vessels owned and operated by the Canadian National Railways in its Newfoundland Service (L.G., Jan., 1950, p. 63).

13. The Canadian Brotherhood of Railway Employees and Other Transport Workers for a unit comprising mates employed on vessels owned by the Government of the Province of Newfoundland and operated by the Canadian National Railways (L.G., Jan., 1950, p. 63).

### **Applications for Certification Rejected**

1. Labourers' Protective Union No. 9568 and the Prince Edward Island Industrial Corporation, Charlottetown, P.E.I. (L.G., Dec., 1949, p. 1552). The application was rejected for the reason that the Board, having been informed that the respondent

was a provincial Crown Corporation, was of the opinion that the provisions of the Industrial Relations and Disputes Investigation Act are not applicable to its operations.

2. Regional Council No. 2, International Brotherhood of Electrical Workers and the Canadian National Railways (motor vessels *Abegweit* and *Prince Edward Island*, operated on the Company's Ferry Service between Cape Tormentine, N.B., and Borden, P.E.I.) (L.G., Jan., 1950, p. 62). The Board rejected the application for the reason that the proposed bargaining unit was not appropriate for collective bargaining.

### **Applications for Certification Received**

1. The Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees on behalf of employees of the Canadian Pacific Railway Company employed in the office of the District Accountant, Windsor Station, Montreal, and on behalf of employees under the jurisdiction of the District Accountant who are employed at Glen Yards, Outremont, and Hochelaga, all in Montreal, and at Farnham, Quebec, P.Q., Sherbrooke, and Ottawa (Investigating Officer: L. Pepin).

2. The Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees on behalf of employees of the Canadian Pacific Railway Company employed in the office of the Auditor of Passenger Receipts, Windsor Station, Montreal (Investigating Officer: L. Pepin).

3. The Brotherhood of Maintenance of Way Employees on behalf of employees of the Canadian Pacific Railway Company employed in the company's shops at Saint John, N.B., Montreal, Toronto, North Bay, Ont., and Sudbury, Ont. (Investigating Officer: R. Trépanier).

## **Conciliation and Other Proceedings Before the Minister of Labour**

### **Conciliation Officers Appointed**

1. On December 14, 1949, the Minister of Labour appointed a Conciliation Officer to deal with a dispute between Canadian Pacific Air Lines Limited and the Canadian Air Line Pilots Association (Conciliation Officer: R. H. Hooper).

2. On December 19, 1949, the Minister of Labour appointed a Conciliation Officer to deal with a dispute between the Gatineau Bus Company, Limited, Hull, P.Q., and Division 591, Amalgamated Association of Street, Electric Railway and Motor Coach

Employees of America (Conciliation Officer: R. Trépanier).

### **Settlement Facilitated by Conciliation Officer**

On December 7, 1949, the Minister of Labour received a report from G. R. Currie, Conciliation Officer, indicating the settlement of matters in dispute between the Yukon Consolidated Gold Corporation, Limited, and Dawson Miners' Union (Local No. 564, International Union of Mine, Mill and Smelter Workers) (L.G., Dec., 1949, p. 1554).

## Conciliation Boards Fully Constituted

1. The Board of Conciliation and Investigation appointed to deal with the dispute between the Canadian National Railways, the Canadian Pacific Railway Company, the Ontario Northland Railway, and the Toronto, Hamilton and Buffalo Railway Company, on the employers' side, and a group of twelve international non-operating railway labour organizations (L.G., Dec., 1949, p. 1554), was fully constituted on December 8, 1949, with the appointment of the Hon. Mr. Justice J. O. Wilson, of the Supreme Court of British Columbia, Vancouver, as Chairman. Mr. Justice Wilson was appointed by the Minister of Labour in the absence of a joint recommendation from the other two members of the Board, Isaac Pitblado, K.C., Winnipeg, and Alfred J. Wickens, K.C., Moose Jaw, who had previously been appointed on the

nominations of the companies and unions, respectively.

2. The Board of Conciliation and Investigation appointed to deal with the dispute between the Canadian National Railways, the Canadian Pacific Railway Company, and the Ontario Northland Railway, on the employers' side, and the Canadian Brotherhood of Railway Employees and Other Transport Workers and the Brotherhood of Express Employees (L.G., Dec., 1949, p. 1554), was fully constituted on December 8, 1949, with the appointment of the Hon. Mr. Justice J. O. Wilson, of the Supreme Court of British Columbia, Vancouver, as Chairman. Mr. Justice Wilson was appointed by the Minister of Labour in the absence of a joint recommendation from the other two members of the Board, T. R. Meighen, K.C., and J. A. Coote, both of Montreal, who had previously been appointed on the nominations of the companies and unions, respectively.

# COLLECTIVE AGREEMENTS AND WAGE SCHEDULES

## Recent Collective Agreements

A file of collective agreements is maintained in the Economics and Research Branch of the Department of Labour. These are obtained directly from the parties involved and from the Industrial Relations Branch of the Department. A number of those recently received are summarized below.

Agreements made obligatory under the Collective Agreement Act in Quebec and schedules under Industrial Standards Acts, etc., are summarized in separate articles following this.

### Mining

#### *Metal Mining*

STEEP ROCK LAKE, ONT.—STEEP ROCK IRON MINES LTD. AND UNITED STEELWORKERS OF AMERICA, LOCAL 3466.

Agreement to be in effect from August 1, 1949 to July 31, 1950, and thereafter from year to year, subject to notice during the month of June. Any eligible employee of the company may become a member of the union. There shall be no discrimination, intimidation, interference, restraint or coercion because of membership or non-membership in the union.

*Check-off:* the company shall deduct monthly from the pay of each employee who is or during the currency of the agreement shall become a member of the bargaining unit his union dues and remit same to the union.

Variation annually of basic wage rates with changes in the selling price of the product and unit production costs is provided in the industry-wide agreement between certain Fruit and Vegetable Packers and Shippers and the Federation of Fruit and Vegetable Workers' Unions (TLC) in British Columbia, summarized this month. The agreement is to be in effect for 4 years or more, the wages after the first year to be computed for each year in accordance with a Wage Formula based on the wage schedule in effect during the second half of the first year, the f.o.b. price of apples, and the total costs to the grower.

An employee shall have the right to require the union to refund the first deduction from his pay and to cease making deductions from his pay for union dues provided that notice is given the union, with a duplicate to the company, within 15 days of such deduction; the company, in accordance with such notice, shall cease making the deduction until further notice. The check-off is subject to the provisions of the "Rand Formula" with respect to penalties for unauthorized strikes and picketing.

*Hours of work:* 8 per day Monday through Saturday, a 48-hour week (to be reduced to a maximum of 40 hours when housing condi-

tions become more favourable in general). **Overtime:** time and one-half for work in excess of 8 hours in any one day or in excess of 8 continuous hours and for work performed on an employees' regular day off; double time for work on 6 specified *paid holidays*.

**Vacation with pay:** 6 days after one year's service, 8 days after 2 years' service, 10 days after 3 years' service and 12 days after 4 years' service.

**Hourly wage rates** (minimum) for certain classes: electricians \$1.10 to \$1.43, mechanics \$1.08 to \$1.34, shovel operators \$1.36 and \$1.47, machinists \$1.22 and \$1.37, welders \$1.17 and \$1.33, carpenters \$1.20 and \$1.30, churn drillers \$1.18 and \$1.26, blacksmiths \$1.19 and \$1.30, plumbers \$1.29, dredge operators \$1.26, unit repairmen \$1.43, bulldozer operators \$1.25, crushermen, painters, scalers \$1.24, pneumatic drillers \$1.19, linemen, hydraulic miners, riggers \$1.22, powdermen \$1.21, truck drivers (heavy), road grader operators \$1.20, stationary engineers fourth class, shovel oilers \$1.15, dumpmen \$1.14, pipefitters \$1.13, pumpmen \$1.11, tractor operators, truck drivers (light), warehousemen \$1.09, monitor operators \$1.08, burners \$1.06, helpers \$1.03, laboratory crushermen \$1.07, car samplers \$1.05, labourers \$1. Labourers are eligible at the end of 30 working days to helpers' rate subject to their being qualified. For most classifications the above rates represent a 5 cent per hour increase over the previous rates. **Off-shift premium:** 5 cents per hour extra will be paid employees regularly working on shift work for any time worked on other than day shift in excess of 2 consecutive weeks.

Provision is made for *seniority rights, grievance procedure* and a *safety committee*.

## Manufacturing

### Vegetable Foods

BRITISH COLUMBIA—CERTAIN FRUIT AND VEGETABLE PACKING AND SHIPPING FIRMS AND FEDERATION OF FRUIT AND VEGETABLE WORKERS UNION (I.L.C.) IN THE PROVINCE OF BRITISH COLUMBIA.

Agreement to be in effect from May 1, 1949, to April 30, 1953, and thereafter from year to year, subject to notice. If, at any time, extraordinary conditions should arise making the operation of this agreement impractical or impossible, either party may notify the other party of its intention to commence negotiations to have the agreement amended and such negotiations are to commence within 15 days from the giving of such notice. The employer recognizes the union as the sole authorized bargaining agency for all eligible employees.

**Union security:** the employer will give preference to members of the union in good standing for continued employment, promotion, and transfer and in the hiring of new employees. No union members may be laid off until all non-members have been laid off, and no non-members may be re-employed until all competent members of the union have been offered re-employment. This provision shall not apply to employees listed on the seniority list prior to May 1, 1949. Any employee who at the date of this agreement is, or who hereafter during the life of this agreement becomes, a member of the union shall, as a condition of

continued employment, maintain membership in good standing during the life of this agreement.

**Check-off:** the provisions of the "Rand Formula" are part of the agreement.

**Hours:** from June 1 to November 30 any 8 or any 9 hours between 7 a.m. and 6 p.m. for a day shift and between 7 p.m. and 5 a.m. for a night shift. From December 1, to May 31, 8 per day, 44 per week. **Overtime:** between June 1 and November 30 all overtime in excess of 9 hours shall be paid for at time and one-half, and all time in excess of 11 hours at double time; between December 1, and May 31, all overtime in excess of 8 hours in any one day or 44 hours in any one week shall be paid for at time and one-half and all time worked in excess of 10 hours at double time; time and one-half will be paid for work on Sundays and on 7 specified holidays. **Rest periods:** an individual or collective 10 minutes' rest period, morning and afternoon, with pay for all hourly workers, shall be granted.

**Vacations with pay:** permanent employees shall qualify for one week after working for one year (not less than 250 days) and for two weeks after working for 5 consecutive years. Seasonal employees shall qualify for vacation, or pay in lieu of vacation to be computed at the rate of one-eighth days' pay for each week worked and to be paid at termination of employment.

**Wages:** from May 1, 1949, to August 31, 1949, the 1948 wage schedule was to be in effect with a few additions; from September 1, 1949, to April 30, 1950, the wage schedule, attached to the agreement, shall apply. For the year commencing May 1, 1950, and for each year thereafter, during the life of the agreement, the 1949 schedule, as amended in accordance with the Wage Formula, shall be in effect. The *Wage Formula* is based on two main factors: (a) changes in the average f.o.b. price of apples per box, and (b) changes in the total costs to growers per box. The average f.o.b. price of apples in 1947 is taken as the base price and the total costs to growers in 1947 as the base cost. According to the formula the basic wage for 1948 of 82 cents per hour (for adult male workers) will be changed in proportion to changes in the price of apples and the costs to growers. Labour's portion of any change will be 36 per cent of the increase or decrease from the base price per box plus or minus 16 per cent of the decrease or increase in Total Costs to Grower per box from the base cost. For example, if both the price of apples and the total costs to growers increase, 36 per cent of the increase in price will be added to the basic wage of 82 cents per hour, while 16 per cent of the increase in costs will be deducted from it. The Total Cost to Grower includes: orchard costs (average per box of apples), packinghouse and cold storage costs (average per wrapped box of apples) and selling costs (average per box of apples). "36 per cent" represents the relationship of base wage in 1948 to base price in 1947. "16 per cent" represents the relationship of packinghouse labour's portion in 1948 to total costs to grower in 1948. The maximum increase or decrease in the basic male wage rate in any one year shall not exceed 5 cents per hour, or proportionately on piece-work rates. With a few exceptions, each female worker placed on any job or classification formerly occupied by a male

worker must receive the rate for the male classification, provided she renders equal service.

**Hourly wage rates** for certain classes: sorting—sorters, experienced 66 cents, inexperienced 60 cents; lidding—nailer operators 82 and 87 cents, hand pressmen 87 and 90 cents; labellers—labelling crew, over 18 years of age, male 82 cents, female 76 cents; labellers, under 18 60 cents; checkers—checkers, stampers and count stampers, male 82 cents, female 76 cents; shipping—warehouse shipper l.c.l. shipper and assistant shipper 94 cents; stackers, car bracing 82 cents; wiring and stacking 87 cents; cold storage—help, engine operators 87 cents, junior engine operators 82 cents, wiring and stacking 92 cents; maintenance—maintenance men 87 cents (10 cents extra if they supply own tools), helpers 82 cents, box repairing or treating 84 cents; general—truck drivers 87 and 94 cents; truckers, stackers and skidmen, experienced 82 cents, inexperienced 74 cents; employees, 17 and 18 years 73 cents, 16 years and under 60 cents; dumpers (2 section grader), swampers, night watchmen 82 cents; dumpers (3 section grader), dispatchers 87 cents; lift-truck operator, 2 weeks 87 cents, thereafter 93 cents; towmotor operator 93 cents; packing—minimum rate for females, experienced 66 cents, inexperienced 60 cents. Rates for workers 18 years of age and under are subject to Grievance Committee. A 5 per cent *night shift premium* shall be paid to all workers with the exception of night watchmen and engine operators.

Provision is made for *seniority rights, grievance procedure, Labour-Management Production Committees* and the *safety and health* of employees.

### **Metal Products**

HAMILTON, ONT.—THE FROST STEEL AND WIRE COMPANY LTD. AND UNITED STEELWORKERS OF AMERICA, LOCAL 3561.

Agreement to be in effect from July 22, 1949, to June 1, 1950, and thereafter from year to year as long as the union is the certified agency, subject to notice; it is provided, however, that the question of wage rates may be brought up for discussion after 6 months from the date of signing of the agreement but no change is to be made unless agreed upon by both parties. There shall be no discrimination, intimidation or coercion because of membership or non-membership in the union.

**Check-off:** the parties agree to establish a voluntary but irrevocable check-off for the collection of union dues.

**Hours of work** for day workers: starting August 15, 1949, 9 hours per day Monday through Friday, a 45-hour week; these hours are subject to reverting on November 15, 1949, to the 48-hour week in effect before August 15, 1949, if storage problems from the shift working departments are found too costly or if production is lagging; daytime workers attached to the Draw or Galvanizing Mills will continue to work 8 hours per day, 6 days a week, a 48-hour week; watchmen will maintain their previous hours. For shift workers the standard hours shall be an average of 45½ hours spread over 3 weeks.

**Overtime:** time and one-half for time worked in excess of the standard working day or in the case of shift workers, the standard working week, on Sunday or the alternative

day of rest, and on 8 specified legal holidays, except where an employee receives pay for a statutory holiday, in which case he will be paid double time. **Paid holidays:** employees who have been with the company for 90 days will receive pay for 7 specified holidays (the previous agreement provided for 6 paid holidays) provided that the holiday falls on a regularly scheduled work day and that employees work the work days preceding and following the holiday.

**Vacation with pay:** one week after one year's service, two weeks after 5 years' service, and 3 weeks after 25 years' service; an employee with less than one year's but more than 3 months' service shall receive 2 per cent of his earnings as vacation pay.

**Wages:** both parties agree to the scale of wages in effect immediately prior to the date of this agreement plus an increase of 8 cents per hour to piece workers and 10 cents per hour to day workers, such increase to become effective from July 25, 1949. Retroactive pay will be paid to those employees still on the payroll on July 25, 1949, on the basis of 5 cents per hour for all clock hours in June and 10 cents per hour for all clock hours from July 1 to July 25, 1949. Current hourly base rate for certain classes: shipping department—wire shipper, checker, truck driver 90 cents, checkers, grade 1 and 2, 88 cents, truckers 85 cents. Hot dip galvanizing: large pans—pan men, picklers, fluxmen 88 cents, dipper pickler, crane operator 90 cents; small pans—handler, pickler 89 cents, pan men 91 cents. Galvanizing mill—blockers, reels 86 cents, wipers 87 cents, firemen 90½ cents, sweepers, general labourers 84 cents. Fabricating department—bench hand special, attach fittings and web 88 cents, farm gate makers, press operators 90 cents, bundler 83 cents, painter, labourer 89 cents, gate turner 94 cents, arc welders 94 and 97 cents. Loom department—loom operator, barb wire operator 92 cents, general labour 83 cents, heavy fence operator 96 cents, helper 88 cents, staple feeders 87 cents, bale tie operator, bag tie, stapler, lawn fence operator 91 cents. Draw mill—wire drawers regular single 94 cents, continuous \$1.03; muffler operator 86 cents, helper 83 cents, die reamer and toolmaker 94 cents, crane operators 90 cents. Current hourly day rate for certain classes: Service department—electrician grade 1 \$1.25, grade 2 \$1.15, stockroom keeper, boilermen helpers \$1.05, carpenter \$1.13; firemen third class \$1.10, fourth class \$1.05, maintenance oiler \$1.11. Fabricating department—head shipper \$1.12, operator on special layout and experience \$1.14, helper \$1.07, chain link inspector, maintenance painter \$1.04, experimental work \$1.06. Machine shop—toolmaker \$1.25, machinists \$1.19, machinist welder \$1.17, blacksmiths \$1.12, machinist apprentice \$1.11.

Provision is made for *grievance procedure, seniority rights, and health and safety.*

### **Shipbuilding**

VANCOUVER AND NEW WESTMINSTER, B.C.—CERTAIN BOAT BUILDING AND BOAT REPAIRING FIRMS AND MARINE WORKERS' AND BOILERMAKERS' INDUSTRIAL UNION, LOCAL 1.

Agreement to be in effect from November 1, 1949, to October 31, 1951, with the proviso that wages only shall be subject to negotiation at any time after one year from the effective date upon 60 days' notice given by

either party. The company recognizes the union as the collective bargaining agency for all eligible employees.

**Union security:** any employee who at the date of this agreement is or who hereafter during the time of this agreement becomes a member of the union shall, as a condition of continued employment, maintain membership in good standing. In the event of a vacancy occurring the union will be given a reasonable opportunity to provide a qualified man; if it fails to provide, within a reasonable time, a man acceptable to the company, the latter shall be free to hire any one available.

**Check-off:** the company agrees to deduct from the wages of employees who so authorize union fees and dues and to remit same to the union.

**Hours of work:** 8 per day either Monday through Friday or Tuesday through Saturday, a 40-hour week. **Overtime:** time and one-half shall be paid for work done on either Saturday or Monday morning and double time for work done on either Saturday or Monday afternoon depending on whether the regular working shift is Monday through Friday or Tuesday through Saturday; time and one-half will also be paid for the first 4 hours worked in excess of the regular shift and double time after 12 hours of continuous work and for work on Sundays and on 9 specified statutory holidays, 3 of them *paid holidays* (the previous agreement did not provide for any paid holidays). Where an employee works overtime for more than 2 hours immediately following a regular 8-hour shift he shall be allowed a paid 30-minute lunch period.

**Vacation with pay:** each employee shall receive vacation allowance of an amount equal to 3 per cent of his straight time earnings for any period worked.

**Hourly wage rates:** caulkers (wood) \$1.48, shipwrights, joiners and carpenters \$1.45, helpers \$1.22, handymen \$1.20, labourers \$1.10, lead hands trade rate plus 10 cents; these rates are 4 cents per hour higher than the previous rates. Occupational classifications not listed above shall be paid 4 cents per hour more than the previous basic rate. On new construction work and where it is in conformity with general practice the recognized Field Scale of 20 cents per hour in addition to the basic rate shall be paid. On *out-of-town jobs* which require an employee to be absent from his home he shall be paid 8 hours' pay in each 24 hours of travelling time, fare, and first class board and room.

Provision is made for *grievance procedure*.

### **Non-Metallic Minerals and Chemicals**

BRANTFORD, ONT.—THE BRANTFORD ROOFING COMPANY LTD. AND FEDERAL UNION 24006 (AFL).

Agreement to be in effect from June 1, 1949, to May 31, 1950, and thereafter from year to year, subject to 30 days' notice. The company recognizes the union as the sole bargaining agency for all eligible employees and agrees not to discriminate against any employee because of his or her membership in the union. **Union security:** all new employees shall have a period of 30 days in which to become a member of the union; they shall remain in good standing during the term of this agreement.

**Check-off:** the company agrees to deduct the monthly dues and to remit same to the union.

**Hours of work:** 9 per day Monday through Friday, a 45-hour week. **Overtime:** time and one-half shall be paid for the first 4½ hours in excess of the regular hours and for work performed on Saturday before noon, double time thereafter and also for work performed on Sundays and on six specified *paid holidays* (the agreement previously in effect provided for only 3 paid holidays).

**Rest periods:** all employees working standard hours shall have rest periods of 10 minutes twice a day and also a 5 minute wash period before noon and before quitting time.

**Vacation with pay:** one week after one year's service; after 2 years' service employees shall receive 2 extra days, after 3 years' service 3 extra days, after 4 years' service 4 extra days, after 5 years' service one extra week; the additional days are to be taken between Christmas and New Year's Day.

**Hourly wage rates: male**—skilled machine operators, premium jobs 98 cents, semi-skilled 95 cents, finishers 92 cents; **female**—skilled operators 83 cents, semi-skilled 82 cents; shipping (male) 95 cents, unloading 92 cents. The minimum starting rate for new employees shall be 85 cents for male and 70 cents for female employees with an advance of 5 cents per hour per month until the regular rate of wages is reached. At the end of the second month males are to be paid a minimum of 92 cents and females a minimum of 82 cents. Where female employees are performing work equal to men's they shall receive the same rate of wages.

Provision is made for *seniority rights and grievance procedure*.

NOBEL, ONT.—CANADIAN INDUSTRIES LIMITED AND UNITED MINE WORKERS OF AMERICA, DISTRICT 50, CANADIAN CHEMICAL DIVISION, LOCAL 13031.

Agreement to be in effect from November 25, 1949, to November 25, 1950. Either party may, on 10 clear days' notice in writing, require the other party to enter into negotiations for the renewal of the agreement within the period of 2 months prior to the expiry date and both parties shall thereupon enter into such negotiations in good faith. The company recognizes the union during the term of this agreement as the exclusive bargaining agent of all eligible employees. There shall be no discrimination, intimidation, interference, restraint, coercion or attempted coercion because of membership or non-membership in the union.

**Check-off:** the company agrees to deduct monthly union dues from the wages of all employees who so authorize and to remit same to the union.

**Hours:** for day workers—9 hours per day Monday through Thursday, 8 on Friday, a 44-hour week; for shift workers—8 hours per day, either 6 or 5 days a week, in accordance with a schedule to be established from time to time. **Overtime:** time and one-half for work in excess of the normal daily hours; double time for work performed on the assigned day of rest and, in the case of permanent employees, on 8 specified *paid holidays* (an increase of 2 from the previous agreement), provided they work the scheduled working day immediately preceding and

following the holiday; employees who are not entitled to paid holidays will be paid time and one-half for all work performed on any of the 8 holidays. *Rest and wash-up periods:* a 10-minute rest period will be scheduled for certain production employees during the first half of the shift throughout the year and during the second half of the shift throughout the months of June, July and August. All day workers will be granted a 5-minute wash-up period before luncheon and a 10-minute (where employees are required to take a shower, a 15-minute) wash-up period at the end of the shift.

The application of the Industrial Relations Plans shall continue in respect of the employees in conformity with their general application throughout the company.

Hourly wage rates for certain classes, effective October 11, 1949: high explosives department: powder repairs—powder line repairman, first class \$1.34 (3 cents less until Nov. 25, 1949), second class \$1.25, helper \$1.12; mixing—operator, first \$1.25, second \$1.18, powder shoveller \$1.12; gelatin and dynamite cartridge—operators, first \$1.28 (3 cents less until Nov. 25, 1949), second \$1.22, third (gelatin cartridge) \$1.15; hand pack—operators \$1.08 and \$1.18; truckers, locomotive drivers \$1.05 and \$1.08; hand truckers \$1.05; box pack house—operator, first \$1.18, second \$1.12, box packer \$1.08; dope house—operators \$1.08 and \$1.18, ingredient handler \$1.05; box factory—operators \$1.12 and \$1.18, machine attendant \$1.05; magazines—operator \$1.15, helper \$1.08; shell house—operator \$1.12, machine attendant, wax room operator \$1.02; pulp dry—operator \$1.08, helper \$1.02; nitroglycerine department—first operator \$1.25, nitrator operator \$1.22, separator operator, neutralizer \$1.18, glycerine-acid man \$1.15; acid department—acid first operator \$1.25 (3 cents less until Nov. 25, 1949), acid repairman \$1.28, acid second operator, acid shifter \$1.15, ammunition dry operators \$1.05 and \$1.12, soda dry operator \$1.05, helper \$1.02; light, heat and power department—shift engineer \$1.28 (3 cents less until Nov. 25, 1949), power house repairman \$1.15, firemen \$1.12; maintenance and construction departments—machinist, joiner, welder, electrician, pipefitter, motor mechanic, lead-burner \$1.31; millwright, carpenter, blacksmith \$1.28; tradesman, second class \$1.18, helper \$1.05; signwriter \$1.18; painters \$1.05 and \$1.15, helper \$1.02; brick repairmen \$1.15, cement finisher \$1.08; labour department—labour, inexperienced 94 cents, trained 99 cents; track repairman \$1.12, helper 99 cents; teamster \$1.02, watchman \$1.08, janitor 99 cents. The above rates represent a general increase of 6 cents per hour over the previous rates.

Provision is made for a *Plant Advisory Committee, seniority rights, grievance procedure and safety and health.*

NOBEL, ONT.—CANADIAN INDUSTRIES LIMITED AND UNITED MINE WORKERS OF AMERICA, DISTRICT 50, CANADIAN CHEMICAL DIVISION, LOCAL 13372 (CLERICAL WORKERS).

Agreement to be in effect from August 5, 1949, to August 5, 1950. Either party may, on 10 clear days' notice in writing, require the other party to enter into negotiations for the renewal of the agreement within the period of 2 months prior to the expiry date, and both parties shall thereupon enter into

such negotiations in good faith. The company recognizes the union during the term of this agreement as the exclusive bargaining agent of all eligible employees.

*Check-off:* both parties agree to the establishment of a voluntary and revokable check-off of union membership dues.

*Hours:* 40 hours per week scheduled from Monday through Friday. Eight specified days will be recognized as holidays.

The application of the Industrial Relations Plans including the rules governing them, and the practices governing the granting of vacations and leave of absence shall continue in respect of the employees in conformity with their general application to clerical and office personnel throughout the company.

*Monthly salary range:* Group No. 1—junior typists, stenographers and clerks \$90 to \$120. Group No. 2—typist, typist and telephone operator, stenographer, grade 1, shipping clerk, general clerk, grade 1 \$120 to \$160. Group No. 3—grade 2 general clerks and stenographers \$150 to \$180. Group No. 4—general clerks, grade 3, stores clerk, department clerk \$170 to \$220. Group No. 5—payroll clerk, raw materials clerk \$200 to \$260. Group No. 6—cost clerk, storekeeper \$225 to \$275.

Provision is made for *seniority rights and grievance procedure.*

JAMES ISLAND, B.C.—CANADIAN INDUSTRIES LIMITED, JAMES ISLAND WORKS, AND THE CANADIAN CHEMICAL AND EXPLOSIVES WORKERS' INDUSTRIAL UNION, FEDERAL UNION No. 128 (TLC).

Agreement to be in effect from June 1, 1949, to May 31, 1950. Either party may, on 10 clear days' notice in writing, require the other party to enter into negotiations for the renewal of the agreement within the period of 2 months prior to the expiry date and both parties shall thereupon enter into such negotiations in good faith. The company recognizes the union during the term of this agreement as the exclusive bargaining agent of all eligible employees. There shall be no discrimination, intimidation or coercion because of membership or non-membership in the union.

*Check-off:* the company agrees to deduct initiation fees and union dues from the wages of employees who so authorize and to remit same to the union.

*Hours:* 8 per day 5 days a week, a 40-hour week. *Overtime:* time and one-half for the first 4 hours worked in excess of the normal daily hours, double time thereafter; time and one-half for work performed on the regularly assigned day of rest and on 4 specified holidays; double time for work on 4 specified *paid holidays*, provided employees work their regular working day immediately preceding and following the holiday.

*Hourly wage rates* for certain classes: high explosives department: powder repairs—helper, first \$1.32, second \$1.14; mixing and cartridge houses—operators, first \$1.29, second \$1.21, third \$1.14, helpers \$1.09; truckers \$1.09; box packing house—operators \$1.14 and \$1.21, helpers \$1.09; dope house—box factory operators \$1.12 and \$1.19, helpers \$1.07; magazines—helpers \$1.07 and \$1.14; shell house—operators \$1.14 and \$1.29, helpers \$1.07; pulp dry—operators \$1.12, helpers \$1.07; nitroglycerine department—operators \$1.21 and \$1.29, glycerine and acid

man \$1.18; acid department—operators \$1.11 and \$1.18, helpers \$1.07; black powder department—operators \$1.09 and \$1.14, helpers \$1.08; power house—shift engineer \$1.35, repairman and trained fireman \$1.21, fireman \$1.14; mechanical department—machinists, pipefitters, electricians, first class \$1.35, second class \$1.18, helpers \$1.10; blacksmiths \$1.26, helpers \$1.07; carpenters \$1.22 and \$1.35, helpers \$1.10; bricklayers \$1.35, helpers \$1.07; painters, first class \$1.21, second class \$1.09, apprentices \$1.07; welder and leadburner \$1.21 and \$1.35, welder helper \$1.10; labour department—labourer, watchman, janitor, laboratory boy \$1.04; track repairman, laundryman, laboratory assistant trained \$1.09; motor truck operator, tractor driver, locomotive driver \$1.12;

stores helper \$1.07, boat attendant \$1.14. The above rates are from 7 to 9 cents higher than in the previous agreement. An *off-shift premium* of 5 cents an hour shall be paid for work on regularly scheduled evening or night shifts commencing between the hours of 3 p.m. and 5 a.m. Employees required to do work ordinarily performed by stevedores on scows, barges or other vessels which are not self-propelled, shall receive stevedores' rate of pay for such work.

It is agreed that the application of the Industrial Relations Plans and the rules governing them shall continue in respect of the employees in conformity with the general application throughout the company.

Provision is made for *seniority rights, grievance procedure and safety and health.*

## Collective Agreement Act, Quebec

Recent proceedings under the Collective Agreement Act, Quebec,\* include the amendment of nine agreements. In addition to those summarized below, they include: the amendment of the agreement for the sheet metal manufacturing industry at Montreal published in the *Quebec Official Gazette*, issue of December 3.

A request for the amendment of the agreement for wholesale and retail stores at Rimouski was gazetted November 26; a request for the amendment of the agreement for clockmakers in the counties of Drummond, Arthabaska, etc. was gazetted December 3. Requests for amendments to the agreements for the railway and bus manufacturing industry at Montreal, for the uncorrugated paper box industry and for the work glove and fine glove industries in the province, for building trades at Hull and a request for a new agreement for bakers, retail stores and hotels at Magog were published in the *Quebec Official Gazette*, issue of December 17.

\*In Quebec, the Collective Agreement Act provides that where a collective agreement has been entered into by an organization of employees and one or more employers or associations of employers, either side may apply to the Provincial Minister of Labour to have the terms of the agreement which concern wages, hours of labour, apprenticeship, and certain other conditions made binding throughout the province or within a certain district on all employers and employees in the trade or industry covered by the agreement. Notice of such application is published and 30 days are allowed for the filing of objections, after which an Order in Council may be passed granting the application, with or without changes as considered advisable by the Minister. The Order in Council may be amended or revoked in the same manner. Each agreement is administered and enforced by a joint committee of the parties. References to the summary of this Act and to amendments to it are given in the *LABOUR GAZETTE*, January 1949, page 65. Proceedings under this Act and earlier legislation have been noted in the *LABOUR GAZETTE* monthly since June, 1934.

Orders in Council were also published approving or amending the constitution and by-laws of certain joint committees and others approving the levy of assessments on the parties.

## Manufacturing

### Fur and Leather Products

TANNERY EMPLOYEES, PROVINCE OF QUEBEC.

An Order in Council, dated December 7, and gazetted December 17, amends the previous Orders in Council for this industry (L.G., Jan., 1947, p. 48, Aug., p. 1174; April, 1948, p. 331, Aug., p. 871 and previous issues).

*Minimum hourly wage rates*—employees working on an hourly basis:—

	Zones		
	I	II	III
Class A (not less than 60% of employees) ..	\$0.80	\$0.76	\$0.70
Class B (not more than 25% of employees) ..	0.65	0.62	0.56
Class C (not more than 15% of employees) ..	0.50	0.50	0.45

the above rates represent an increase of 5 cents per hour for all classes in the 3 zones.

Employees working on a piece-work basis:—

	Zones		
	I	II	III
Class A (not less than 60% of employees) ..	\$0.80	\$0.836	\$0.77
Class B (not more than 25% of employees) ..	0.715	0.682	0.616
Class C (not more than 15% of employees) ..	0.55	0.55	0.495

Furthermore, the piece-work rates in force on September 1, 1949, are increased by 7 per cent.

During the first year of their operation, new establishments in zone III benefit by a reduction of 20 per cent on the minimum rates shown, during the first 6 months; this percentage is reduced to 10 per cent during second 6 months.

*Vacation*: as in the previous agreement, one week with pay to employees with one year's service; the second week's vacation with pay is now granted to employees with three years' service instead of after five years' service as previously provided.

## **Pulp, Paper and Paper Products**

### **CORRUGATED PAPER BOX INDUSTRY, PROVINCE OF QUEBEC.**

An Order in Council, dated November 17, and gazetted November 26, amends the previous Orders in Council for this industry (L.G., March, 1947, p. 369; Aug., 1948, p. 871; Aug., 1949, p. 987, Dec., p. 1558, and previous issues) by the addition of the "Champlain Paper Box Ltd., Corrugated Paper Division of Quebec" as co-contracting party.

## **Metal Products**

### **RAILWAY CAR AND BUS MANUFACTURING, MONTREAL.**

An Order in Council, dated November 17, and gazetted November 26, amends the previous Orders in Council for this industry (L.G., Sept., 1947, p. 1307; Nov., 1948, p. 1246, and previous issues) by substituting the name "Montreal Car Builders Union, Areas A and B" for the name "Employees' Association of the Canadian Car and Foundry Company Limited, Turcot and Dominion Plants" as contracting party.

## **Construction**

### **BUILDING TRADES, ST. HYACINTHE.**

An Order in Council, dated November 17, and gazetted November 26, amends the previous Orders in Council for this industry (L.G., July, 1947, p. 1002, Sept., p. 1308; May, 1948, p. 488; Oct., 1949, p. 1247, and previous issues) by providing that notwithstanding any other provisions, cities and towns and the municipal corporations of zone II are not governed by the present agreement inasmuch as repair or maintenance work on their own buildings, construction, rebuilding or maintenance work on aqueducts, sewers, pavings, sidewalks, etc. under their immediate control are concerned. The exemption does not apply to contractors or sub-contractors carrying on the same operations under control of or by contract for the said cities, towns, etc.

Municipal corporations of zone I do not benefit by the provisions of the foregoing paragraph; however they may pay their employees 5 cents per hour less than the minimum wage rate set for building trades workers or \$3 per week less in the case of permanent maintenance men. In addition the provision governing the number of handicapped workers that may be employed does not apply to municipal corporations of zone I.

### **BUILDING TRADES, SHERBROOKE.**

An Order in Council, dated November 24, and gazetted December 3, amends the previous Orders in Council for this industry (L.G., Nov., 1947, p. 1661; Dec., 1948, p. 1421; Feb., 1949, p. 178).

*Minimum hourly wage rates* for building trades workers, except labourers (whose rate remains unchanged) and except plumbers and sheet metal workers in Sherbrooke, are increased by 5 cents per hour in the 3 zones. In the city of Sherbrooke and within a 2 mile radius of its limits, minimum rates for plumbing and steamfitting contractor (personal services), journeyman plumber and steamfitter, pipe welder, tinsmith, sheet metal worker and roofer and junior journeyman (first year) are unchanged. For each

increase or decrease of 10 points in the Federal cost-of-living index (160 point mark as of July 15, 1948) the minimum hourly rates payable shall be 5 cents per hour higher or lower as the case may be. Adjustments to be made each 3 months, reckoning from July 15, 1949. This provision does not apply to pipe mechanics, steamfitters, welders, tinsmiths and roofers employed in Sherbrooke and within a radius of 2 miles from its limits.

Apprenticeship regulations are also affected by this amendment.

### **BUILDING TRADES, THREE RIVERS.**

An Order in Council, dated November 17, and gazetted November 26, amends the previous Orders in Council for this industry (L.G., March, 1947, p. 370, Nov., p. 1661; Jan., 1948, p. 51, Aug., p. 873; Sept., 1949, p. 1116, and previous issues) by providing that all operations governed by Ordinance number 39 of the Minimum Wage Commission, including construction of roads, camps and other improvements required in forest operations as dikes, dams, piers, booms, etc. are not governed by the present agreement.

## **Trade**

### **RETAIL STORES, COATICOOK.**

An Order in Council, dated November 17, and gazetted November 26, amends the previous Orders in Council for this industry (L.G., Sept., 1941, p. 1162; July, 1944, p. 868).

*Hours:* 52 per week; Monday, Tuesday, Thursday and Friday: 8 a.m. to 6 p.m.; Wednesday: 8 a.m. to 12 noon; Saturday: 8 a.m. to 10 p.m. When a holiday falls in a week the working hours on Wednesday may be extended until 6 p.m. One-quarter hour is allowed after closing time for cleaning store, without remuneration.

*Minimum weekly and hourly rates:* group A, comprising 10 per cent of employees \$25 per week; group B, 35 per cent \$18; group C, 45 per cent \$15; group D, 10 per cent \$13 per week. Rates are increased by from \$5 to \$7 per week. Minimum wage rate for delivery employees (without bicycle) \$8 per week or 15 cents per hour; (with bicycle) \$11 per week or 20 cents per hour (hourly rates when time worked is less than 9 consecutive hours). Rates in first case (without bicycle) represent an increase of \$2 per week or 2½ cents per hour; in second instance (with bicycle) is an added classification. For office employees the minimum rate per hour is 20 cents after the first 6 months to 30 cents per hour after 2 years of service; seamstresses 30 cents per hour, an increase of 7½ cents.

*Vacation:* all regular employees after one year of continuous service are entitled to 7 days continuous vacation with pay.

### **GROCERS AND BUTCHERS, SHERBROOKE.**

An Order in Council, dated September 7, and gazetted December 17, amends the previous Orders in Council for this industry (L.G., July, 1940, p. 734, Aug., p. 868; June, 1941, p. 706; Oct., 1943, p. 1382; Nov., 1945, p. 1679; Jan., 1946, p. 52, Dec., p. 1774).

*Overtime* shall be paid only for work other than that concerned with the sale of goods, such work being forbidden outside regular weekly working period.

**Minimum weekly and hourly wage rates:** for all employees (male and female) class A, comprising 75 per cent \$18 per week; class B, 25 per cent \$16. Previously there were 4 classes of employees 25 per cent in each, from A to D, with rates ranging from \$8 to \$15 per week. **Minimum wage rates** for apprentices (first 6 months) \$14 per week; for delivery employees (without bicycle) \$8.50 (with bicycle) \$11 per week (increases of from \$3.50 to \$6 per week); extra delivery employees (without bicycle) 15 cents per hour; (with bicycle) 20 cents (increases of 5 and 10 cents per hour).

Extra or supernumerary employees shall not receive less than 35 cents per hour.

**Vacation:** employees with less than one year's continuous service are entitled to vacation with pay of one half-day per month of service equivalent to 2 per cent of wages earned during service period.

The employer shall pay for the rental and cleaning of clerks' uniforms.

A charge for board and room not exceeding \$4 per week or \$1.25 per week for room only, may be made if the employer lodges or boards employees.

## Industrial Standards Acts, Etc.

### Schedules of Wages and Hours Recently Approved by Provincial Orders in Council in New Brunswick, Ontario, Saskatchewan and Alberta

Recent proceedings under the Industrial Standards Acts, etc.\* include, in addition to those summarized below: the amendment of the schedule for carpenters in the Fort Frances zone, published in *The Ontario Gazette*, issue of October 22 and a new schedule for the barbering industry in the Blyth, Brussels, Lucknow, Teeswater and Wingham zones in the issue of November 26.

**Hours:** 8 per day, Monday through Friday, a 40-hour week. Work performed at night which because of its nature cannot be done during the regular working period is restricted to 7 hours on any night shift, and such work will be known as *night work*.

**Overtime** is payable at the rate of time and one-half for all work between 5 p.m. and 8 p.m. on regular working days and between 8 a.m. and 5 p.m. on Saturdays; double time for all other work and on Sundays and 7 specified holidays. No overtime work to be done on Saturdays, Sundays, or 7 specified holidays without the permission of the advisory committee.

**Minimum hourly wage** for work performed during regular working periods and for night work, \$1.35 per hour. Employees on *night work* shall receive 8 hours' pay for 7 hours work. The advisory committee may fix a lower minimum rate for an employee who is handicapped.

## NEW BRUNSWICK

### Construction

CARPENTERS, SAINT JOHN.

An Order in Council, gazetted October 19, makes binding the terms of a new schedule for carpenters at Saint John and within a radius of 15 miles excepting that part of the area lying north of the Kennebecasis River. Schedule to be in effect until April 1, 1950.

**Hours:** 8 per day, Monday through Friday, 4 on Saturday, a 44-hour week.

**Overtime rate** is payable at \$1.65 per hour for the first 4 hours, \$2.20 thereafter and for work on Sundays and 8 specified holidays.

**Minimum wage rate:** \$1.10 per hour. Work which cannot be performed during the regular working period may be carried out at other periods of the day for which a minimum rate of \$1.26 per hour shall be paid.

## ONTARIO

### Construction

PAINTERS AND DECORATORS, TORONTO.

An Order in Council, dated November 17, and published in *The Ontario Gazette*, December 3, makes binding the terms of a new schedule for painters and decorators in the Toronto zone, to be in effect from December 13, 1949, during pleasure.

### PLUMBERS, WINDSOR.

An Order in Council, dated October 13, and gazetted October 22, makes binding the terms of a new schedule for plumbers in the Windsor zone, to be in effect from November 1, 1949, during pleasure.

The terms of this schedule are similar to the terms of the one previously in effect and summarized in the *LABOUR GAZETTE*, issue of October, 1947, p. 1476, and October, 1948, p. 1130, with the following exception:—

**Minimum hourly wage rates** are further increased, by 10 cents to \$1.75 per hour.

\*In six provinces—Ontario, Alberta, Nova Scotia, Saskatchewan, New Brunswick and Manitoba—legislation provides that, following a petition from representatives of employers and employees in any (or specified) industries, the provincial Minister charged with the administration of the Act may himself, or through a government official delegated by him, call a conference of representatives of employers and employees. This conference is for the purpose of investigating and considering the conditions of labour in the industry and of negotiating minimum rates of wages and maximum hours of work. A schedule of wages and hours of labour drawn up at such a conference, if the Minister considers that it has been agreed to by a proper and sufficient representation of employers and employees may on his recommendation be made binding by Order in Council in all zones designated by the Minister. The Minister may also establish an advisory committee for every zone to which a schedule applies to assist in carrying out the provisions of the Act and the regulations. Reference to the summaries of these Acts and to amendments to them are given in the *LABOUR GAZETTE*, December 1948, page 1422.

## SASKATCHEWAN

### Manufacturing

#### Vegetable Products

BAKERS AND BAKERY SALESMEN, REGINA.

An Order in Council, dated October 11, and gazetted October 22, amends the previous Orders in Council for this industry (L.G., Oct., 1948, p. 1130; April, 1949, p. 451). This order shall be in force from June 6, 1949.

*Hours:* the number of hours per week for all inside employees is reduced from 44 to 42. Overtime is payable for all hours worked in excess of 42 hours in any one week.

*Minimum wage rates:* the words "regular salesmen, \$21 basic pay, plus 5 per cent on wholesale and 10 per cent retail on cakes and pastry, and  $\frac{1}{2}$  cent wholesale and 1 cent retail on bread; guaranteed weekly wage, \$35 per week" are substituted for "\$20 guaranteed wage per week plus 5 per cent wholesale and 10 per cent retail on all sales of cakes and pastry and  $\frac{1}{2}$  cent wholesale and 1 cent retail per loaf on all bread sales." Rates for female employees, performing duties of a male, with assistance, are increased by 10 per cent, from 80 per cent to 90 per cent of the classification of such work.

## ALBERTA

### Manufacturing

#### Vegetable Foods

BAKERS, LETHBRIDGE.

An Order in Council, dated September 26, and gazetted October 15, makes binding the terms of a new schedule for bakers in Lethbridge to be in effect from October 25, 1949, during pleasure.

*Hours:* 8 per day, a maximum of 46 in a week for all employees (male and female).

*Overtime rates* for male and female employees for all time worked in excess of maximum weekly hours and for all work performed on 8 statutory holidays, when one day in lieu thereof is not allowed within 7 days, is payable at the rate of time and one-half. This rate also applies to time worked during a rest period of not less than 24 hours in every consecutive 7 days, with not less than 12 consecutive hours between shifts. No overtime to be worked without permission of the advisory committee.

*Minimum weekly wage rates:* ovenmen, doughmen, cake baker \$43.50 per week; dividerman, moulderman and bench hands \$42; bakers' helper (male) bread or cake shop \$31 per week during first 3 months to a maximum of \$37 after sixth 3 months period; helpers (female) in bread shop, rackers and hand wrappers \$26 during first 3 months to \$28 per week after second 3 months; helpers (female) in cake shop or shipping room \$24.50 during first 6 months to \$31.50 per week after seventh 6 months period; shipper \$37.50 per week, assistant \$32.50; bread wrapper \$35.50 per week, assistant \$29.50 during first 6 months to \$33.50 after fourth 6 months; janitors (male) \$31.50 per week during first 6 months to \$33.50 after second 6 months; maintenance

man \$34.50 during first 6 months to \$37.50 after third 6 months period. Three new classifications are added: night doughman \$46 per week; receiver \$34.50 during first 6 months to \$37.50 after third 6 months and janitors (female) \$29.50 during first 6 months to \$31.50 per week after second 6 months; *apprentices* (16-21 years of age) \$25.50 during first 6 months to \$39.50 per week during eighth 6 months. thereafter \$42 per week as baker. A graduated scale of increases by \$1 per week to the maximum rate is in effect where minimum and maximum rates are shown and is based on completed 3 or 6 months periods of service from original date of employment. Average weekly increases over the 1947 schedule (LABOUR GAZETTE, of June, 1947, p. 827), range from \$3.50 to \$7.50 per week in most cases. Minimum rate for jobbers, temporary or part-time employees (male or female) employed on an hourly or daily basis shall be 10 cents per hour over the single hourly rate of weekly employees. These employees shall be given 4 hours' pay for any consecutive hours worked less than 4. An employee required to do the work of a classification entitled to a higher rate of pay than he is receiving, after one day's work in such classification at his regular rate, shall be paid the rate applicable to the classification in which he is actually employed.

*Vacation:* one week with pay after one year's continuous service, 2 weeks with pay after 2 years' service.

Apprenticeship regulations are also included in the schedule.

BAKERY SALESMEN, LETHBRIDGE.

An Order in Council, dated September 26, and gazetted October 15, makes binding the terms of a new schedule for bakery salesmen in Lethbridge to be in effect from October 25, 1949, for 12 months and thereafter during pleasure.

*Hours:* 9 per day, 48 in a week, distributed daily till 6 p.m., except on Wednesdays when work shall not extend beyond 2 p.m. unless Saturday is given in lieu thereof.

*Overtime:* for all time worked in excess of 9 per day or 48 in a week (when a statutory holiday occurs in a calendar week such week shall be considered a 40-hour week) is payable at the rate of \$1.17 per hour; work on any of 8 paid statutory holidays (where one day in lieu thereof is not allowed within 7 days) double time or \$1.56 per hour will be paid. No overtime to be worked without the permission of the advisory committee.

*Minimum weekly wage rates:* salesmen (experienced) \$37.50 per week basic wage plus  $\frac{1}{2}$  per cent on bread and hard rolls, 5 per cent on total sales of sweet dough and wholesale cakes and 10 per cent on retail cakes; (inexperienced), first 3 months \$33; stableman \$29.50 during first 3 months, thereafter, \$32.50 per week.

*Vacation:* one week with pay after one year's continuous service, 2 weeks with pay after 2 years' service.

If uniforms are worn by the employees they are to be supplied on a 50 per cent basis.

# FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

The Fair Wages Policy of the Dominion Government has the purpose of ensuring that all government contracts contain provisions to secure the payment of wages generally accepted as current in each trade for competent workmen in the district where the work is carried out.

There are two sets of conditions applicable to government contracts, those which apply to building and construction work, and those which apply to contracts for the manufacture of various classes of government supplies and equipment.

The practice of the different departments of the Government, before entering into contracts in the first group, is to obtain from the Department of Labour schedules setting forth the current wage rates for the different classifications of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon included by the department concerned in the terms of the contract.

Fair wages schedules are not issued in respect of contracts for supplies and equipment. Contracts in this group are awarded in accordance with a policy which provides that wage rates must equal those current in the district.

A more detailed account of the Dominion Government's Fair Wages Policy is given in the *LABOUR GAZETTE* for July, 1946, p. 932.

## Schedules Prepared and Contracts Awarded During November

### (1) *Works of Construction, Remodelling, Repair or Demolition*

During the month of November the Department of Labour prepared 157 fair wages schedules for inclusion in building and construction contracts proposed to be undertaken by various departments of the Government of Canada in different parts of the Dominion.

During the same period a total of 103 construction contracts was awarded by the various Government departments. Particulars of these contracts appear in the accompanying table.

Copies of the relevant wages schedules are available to trade unions or other *bona fide* interested parties, on request.

The labour conditions of each of the contracts listed under this heading, besides stipulating working hours of not more than eight per day and forty-four per week, provide that "where, by provincial legislation, or by agreement or current practice, the working hours of any class of workers are less than forty-four per week, such lesser hours shall not be exceeded on this work except in cases of emergency as may be approved by the Minister of Labour and then only subject to the payment of overtime rates as specified by the Minister of Labour", and also specify that the rates of wages set out therein are "*minimum* rates only" and that "nothing herein contained shall be considered as exempting contractors and subcontractors from the payment of higher rates in any instance where, during the continuance of the work such higher rates are fixed by provincial legislation, by agreements between employers and employees in the district or by changes in prevailing rates."

### (2) *Contracts for the Manufacture of Supplies and Equipment*

Contracts for supplies and equipment were awarded as follows, under the policy that wage rates must equal those current in the district:—

Department	No. of contracts	Aggregate amount
Canadian Commercial Corporation. . . . .	6,956	\$7,085,330.68
Post Office. . . . .	14	90,116.81
Public Works. . . . .	1	20,662.00
R.C.M.P. . . . .	2	76,541.40

# LABOUR LAW

## Legal Decisions Affecting Labour

*The Privy Council has ruled that the regulation of hours of work of employees of the Empress Hotel (owned by the C.P.R.) is within provincial jurisdiction. ¶A union member who claimed wrongful expulsion has been awarded \$5,000 damages and reinstatement in the union. ¶Picketing of ss. Seaboard Star by CSU members was held illegal. ¶In a case of split in a certified union, the minority group remaining in the union was held entitled to union dues collected under the check-off.*

**Privy Council holds regulation of hours of Empress hotel employees is within exclusive jurisdiction of B.C. Legislature—C.P.R. appeal dismissed.**

On November 21, 1949, the Judicial Committee of the Privy Council dismissed the appeal of the Canadian Pacific Railway Company and upheld the judgment of the Supreme Court of Canada that the British Columbia Hours of Work Act is applicable to employees of the Empress Hotel owned and operated in Victoria by the Canadian Pacific Railway Company.

In 1946, the legislature of British Columbia amended the Hours of Work Act to provide that the working hours of an employee in any industrial undertaking shall not exceed eight in the day and 44 in the week, and the definition of industrial undertaking in the Act is such as to include a large number of the Company's employees who work in the Empress Hotel. The Company contended that it is not within the power of the Provincial legislature to regulate the hours of work of these employees and that the hours of such workers must be determined by a collective agreement between the Company and the authorized bargaining agent of the employees which provided for a 48-hour week. The Lieutenant-Governor of British Columbia on September 21, 1946, referred to the Court of Appeal for British Columbia the question whether the British Columbia Hours of Work Act was applicable to the Canadian Pacific Railway in respect of its employees employed at the Empress Hotel. On March 27, 1947, the Court of Appeal answered the question affirmatively with one judge dissenting (L.G., 1947, p. 700). On appeal, the Supreme Court of Canada unanimously decided on April 27, 1948, that the judgment of the British Columbia Court should be affirmed and the appeal

dismissed (L.G., 1948, p. 648). From that judgment an appeal was taken to the Privy Council.

Lord Reid who gave the Privy Council judgment said that the determination of the appeal depended on the application to the facts of the case of the provisions of sections 91 and 92 of the British North America Act, 1867. He quoted the relevant sections which may be summarized briefly, as follows:—

Section 91 gives general authority to the Parliament of Canada to make laws for the peace, order and good government of Canada in relation to all matters not exclusively assigned to the Provinces, and enumerates classes of subjects that are within the exclusive legislative authority of the Parliament of Canada. Besides these specifically enumerated subjects it is provided that the Parliament of Canada shall also have authority in classes of subjects expressly excepted in section 92 from exclusive provincial authority. The final sentence is: "And any matter coming within any of the classes of subjects enumerated in this section shall not be deemed to come within the class of matters of a local or private nature comprised in the enumeration of the classes of subjects by this Act assigned exclusively to the legislatures of the provinces".

Section 92 lists subjects of exclusive provincial jurisdiction. These include "property and civil rights in the province"; "generally all matters of a merely local or private nature in the province"; and "local works and undertakings"—other than ships, railways, canals, telegraphs and other undertakings extending beyond the bounds of any province and works within the Province which have been declared by the Parliament of Canada to be for the general advantage of Canada or of two or more Provinces.

Lord Reid then pointed out that certain principles concerning the inter-relation of sections 91 and 92 have emerged from previous cases. He stated these as follows:—

- (1) The legislation of the Parliament of the Dominion, so long as it strictly relates to subjects of legislation expressly enumerated in s. 91, is of paramount authority, even though it trenches upon matters assigned to the provincial legislatures by s. 92: see *Tenant v. Union Bank of Canada* ((1894) A.C. 31).
- (2) The general power of legislation conferred upon the Parliament of the Dominion by s. 91 of the Act in supplement of the power to legislate upon the subjects expressly enumerated must be strictly confined to such matters as are unquestionably of national interest and importance, and must not trench on any of the subjects enumerated in s. 92 as within the scope of provincial legislation, unless these matters have attained such dimensions as to affect the body politic of the Dominion: see *Attorney-General for Ontario v. Attorney-General for the Dominion* ((1896) A.C. 348).
- (3) It is within the competence of the Dominion Parliament to provide for matters which, though otherwise within the legislative competence of the provincial legislature, are necessarily incidental to effective legislation by the Parliament of the Dominion upon a subject of legislation expressly enumerated in s. 91: see *Attorney-General for Ontario v. Attorney-General for the Dominion* ((1894) A.C. 189); and *Attorney-General for Ontario v. Attorney-General for the Dominion* ((1896) A.C. 348).
- (4) There can be a domain in which provincial and Dominion legislation may overlap, in which case neither legislation will be *ultra vires* if the field is clear, but if the field is not clear and the two legislations meet the Dominion legislation must prevail: see *Grand Trunk Ry. of Canada v. Attorney-General of Canada* ((1907) A.C. 65).

The first claim on behalf of the Company was that its transportation system is one integrated system including ocean services, passenger and freight trains, inland and coastal steamship services; airplane and telegraph services; stations; a chain of transcontinental hotels, freight sheds, wharfs, warehouses, grain elevators and other activities, and that this unified system is a national undertaking which cannot reasonably be viewed as a conglomeration of local works and undertakings. Accordingly, the Company claimed that its undertakings do not come within the class of matters of a local or private nature comprised in the enumeration of the classes of subjects assigned by s. 92 exclusively to the legislatures of the provinces. Therefore, it

was contended, the whole Canadian Pacific Railway system, including its hotels, is within the legislative authority of the Parliament of Canada under its power to make laws in relation to all matters not coming within the classes of subjects assigned exclusively to the legislatures of the provinces.

In discussing this claim, their Lordships stated:—

The basis of this argument must be that the Canadian Pacific Railway Company's activities have become such an extensive and important element in the national economy of Canada that the Canadian Parliament is now entitled under the general powers conferred by the first part of s. 91 to regulate all the affairs of that Company, even where this involves legislating in relation to matters exclusively reserved to the Provincial Legislatures by s. 92.

Their Lordships did not consider this argument valid, pointing out that there were many companies besides the appellant whose businesses extended over most of the provinces and that it was not and could not be suggested that the Parliament of Canada could regulate the hours of work of employees of all such companies. Dealing with the appellant's argument that there were overriding considerations in its case, their Lordships continued:—

The appellant claims that its undertaking is not of a local or private nature. Let it be admitted for the purpose of this argument that that is so. But in dealing with this general question the position of the employees affected and of those who use the hotel is not irrelevant. From the point of view of an employee who resides in British Columbia, the regulation of his hours of work is as much a matter of civil right in the Province whether he is employed by the appellant or by some other corporation. It is true that many matters which from one aspect are local and fall within the scope of s. 92 are nevertheless withdrawn from the competence of the Provincial Legislature, but that is by virtue of the terms of the last sentence of s. 91. That provision makes it clear that a matter which is truly one of civil rights in the Province will be withdrawn from the Provincial Legislature and come within the competence of the Parliament of Canada if it comes within or is necessarily incidental to any of the subjects enumerated in s. 91 or expressly excepted from s. 92. But their Lordships can find neither principle nor authority to support the competence of the Parliament of Canada to legislate on a matter which clearly falls within the enumerated heads in s. 92 and cannot be brought within any of the enumerated heads in s. 91 merely because the activities of one of the parties concerned in the matter have created a unified system which is widespread and important in the Dominion.

The Company's second argument was that the Empress Hotel should properly be considered to come within section 92 (10) (a): "Lines of steam or other ships, railways, canals, telegraphs, and other works and undertakings connecting the Province with any other or others of the Provinces, or extending beyond the limits of the Province." These classes of subjects are excepted from those within the exclusive authority of the Provincial legislature.

The question for decision was, in their Lordships' view, whether the Empress Hotel is a part of the Company's railway works and undertakings connecting the Province of British Columbia with other Provinces or is a separate undertaking. They pointed out that a company may be authorized to carry on and may in fact carry on more than one undertaking. Because a company is a railway company it does not follow that all its works must be railway works or that all its activities must relate to its railway undertaking. The Canadian Pacific Railway Act 1902, authorizes the Company to build and operate hotels, to engage in mining and other activities, to construct and operate electric generating stations and to exercise the powers of an irrigation company. The section dealing with hotels reads:—

The company may for the purposes of its railway and steamships and in connection with its business . . . acquire . . . for hotels and restaurants such buildings as it deems advisable and at such points or places along any of its lines of railway . . . and may carry on business in connection therewith for the comfort and convenience of the travelling public . . .

Their Lordships did not read the authority to carry on business "for the comfort and convenience of the travelling public" as requiring the Company to cater exclusively or specially for those who are travelling on its system. The Company is free to enter into competition with other hotel keepers for general hotel business, and in fact does so. It may be that a hotel conducted solely or even principally for the benefit of travellers on a particular railway system would be a part of the railway undertaking, just as provision of meals and rest for travellers in trains or at stations is, but there is little to distinguish the Empress Hotel from an independently-owned hotel in a similar position. The fact that the hotel is of service to the railway undertaking is not enough to make it a part of the undertaking. Their Lordships also held that a chain of hotels by itself is not an undertaking connecting one province with another.

The Company's third argument was that the Empress Hotel comes under the section

92 (10) (c) which excepts from provincial authority "such works as, although wholly situate within the Province, are before or after their execution declared by the Parliament of Canada to be for the general advantage of Canada or for the advantage of two or more of the Provinces."

If this argument were to succeed, their Lordships stated that it would be necessary to find that the hotel or something which includes the hotel had been declared by the Parliament of Canada to be for the general advantage of Canada or for the advantage of two or more of its provinces. There is no declaration by the Parliament of Canada which specifically mentions this hotel or the Company's hotels generally, but the Company contended that the declaration contained in section 6 (c) of the Railway Act, 1927, which declares "every railway or portion thereof" to be a work for the general advantage of Canada, is wide enough to cover the Company's hotels including the Empress Hotel. The Railway Act defines "railway" as

any railway which the company has authority to construct or operate, and includes all branches, extensions, sidings, stations, depots, wharves, rolling stock, equipment, stores, property real or personal and works connected therewith, and also any railway bridge, tunnel or other structure which the company is authorized to construct; and, except where the context is inapplicable, includes street railway and tramway.

In their Lordships' judgment this cannot include the hotel. The fact that it was thought necessary to specify such things as sidings, stations, railway bridges and tunnels as being included in the definition of "railway" indicates that the word "railway" by itself cannot have been intended to have a very wide signification, and there is nothing to indicate that "railway" was intended to include anything which is not a part of or used in connection with the operation of a railway system. "Property real or personal and works connected therewith" refers back to the preceding words and, therefore, property which is not connected with the railway system is not included. *Canadian Pacific Railway Company v. The Attorney-General of British Columbia. The Attorney-General of Canada and others intervening.* P.C. Appeal No. 13 of 1949.

### ***B.C. Supreme Court Awards Damages for Wrongful Expulsion from Union.***

For the second time Myron Kuzych, a member of Local No. 1 of the Boilermakers' and Iron Shipbuilders' Union of Canada, has been awarded damages in the

British Columbia Supreme Court for wrongful expulsion from the union (L.G., 1946, p. 102). During the trial of the first action, the union executive admitted that the expulsion procedure had been faulty and reinstated Kuzych in the union. However, on March 19, 1945, he was again expelled. The main cause of disagreement between Kuzych and the union has been the closed shop agreement under which the union operates.

On September 22, 1949, Mr. Justice Whittaker held that Kuzych had been unlawfully expelled from the union and granted an injunction restraining the defendants from carrying out the resolution which purported to expel him. In delivering the judgment, the Judge affirmed that the Court had jurisdiction to interfere at the instance of a union member to prevent his wrongful expulsion from the union on the basis of the right of property vested in him as a member of the union.

The plaintiff was and claimed still to be, a member of the defendant union. Certain charges were preferred against him on or about February 1, 1945, and the press and investigating committee of the union purported to investigate these charges. As a result of an unfavourable report from the committee, the union, by resolution passed at a meeting held on March 19, 1945, purported to expel the plaintiff. He contended that he was wrongly expelled and claimed reinstatement and damages.

Mr. Justice Whittaker's decision reversed the previous judgment given in the Supreme Court of British Columbia on January 20, 1947, by Mr. Justice MacFarlane (L.G., 1947, p. 554) who dismissed the action with costs. The case was appealed by the plaintiff. On June 3, 1948, the Court of Appeal ordered a new trial because the defendants had amended their statement of defence to contend that their union was an illegal association having objects in restraint of trade and that therefore the contract of membership could not be enforced. The defendants alleged that the plaintiff had no cause of action and the Court no jurisdiction to grant the relief claimed.

In dealing first with the question of illegality, Mr. Justice Whittaker held that the defence of illegality had not been sufficiently established. Where illegality is pleaded, facts must be stated to show what the illegality is. The union constitution and by-laws were put in evidence but the plaintiff had had no intimation of the particular provisions in the objects and by-laws which were relied on by the defendants in support of their contention.

The plaintiff was entitled to know the specific rules relied on in order that he might bring evidence to show that these objects or by-laws were not oppressive or unreasonable. Neither the plaintiff nor the defendants gave evidence on the illegality defence. The Judge quoted *Osborne v. Amalgamated Soc. of Ry. Servants* (1911): "Illegality cannot be presumed or inferred."

The defendant's counsel later cited two provisions in the constitution and by-laws of the union which he contended were unreasonably in restraint of trade: those providing for closed shop agreements and disciplinary action on members who report for work during a strike or lockout. However, in the Court's view, the plaintiff should have been warned that the defendants intended to rely on these objects of the union, so that he might have been able to produce evidence to controvert them. Mr. Justice Whittaker continued:—

Even if I am wrong in so holding and it can be said that the defence of illegality is properly in issue, I am unable, unassisted by evidence other than the rules themselves, to hold that the two provisions in the objects and rules above referred to, are contrary to public policy as being unreasonably restrictive of trade.

Entering into a closed shop agreement is declared not to be an offence under the British Columbia Industrial Conciliation and Arbitration Act and there is a similar provision in P.C. 1003 which was the legislation in force when the cause of the action arose. No evidence was given as to whether a closed shop agreement was beneficial or otherwise to employees as a whole, or to society in general. In respect of the other rule which the defendants contended was in restraint of trade, namely, the disciplinary actions against members who report for work during a strike or lockout, Mr. Justice Whittaker cited as precedent the judgment of Duff, J. in *Chase v. Starr* (1924) that he could not hold such a rule to be oppressive or unreasonable.

Mr. Justice Whittaker continued:—

Even if it could be held that some of the rules are in restraint of trade, I do not think that would be a bar to this action. All the objects of the defendant union cannot be considered unlawful. The plaintiff is not seeking to enforce those rules which the defendants claim offend against public policy, nor was the plaintiff expelled because of a breach of such rules.

His Lordship then dealt with the question of whether the Court had jurisdiction to interfere at the instance of a member of a society to prevent his being wrongly

expelled. He quoted the statement given by Jessel, M.R. in 1880 in *Rigby v. Connol*:—

I have no doubt whatever that the foundation of the jurisdiction is the right of property vested in the member of the society, and of which he is unjustly deprived by such unlawful expulsion.

The Court pointed out that the by-laws of the union vested its members with certain rights of property, namely: sick and death benefits, the right to vote, the right to all the advantages of membership, and in particular, because of the closed shop agreement, a preferred position in the matter of employment. The judgment concluded that these rights of property vested in the plaintiff were sufficient to give the Court jurisdiction to entertain the action.

The plaintiff had amended his statement of claim during the trial to contend that the committee which tried him was not constituted in accordance with the by-laws. If this contention were correct, the plaintiff was improperly expelled.

In dealing with this point, the Court reviewed the relevant articles of the union constitution and found that the trial committee was improperly constituted, because its members had been wrongly nominated for election and because its secretary was not chosen in accordance with the by-laws. Mr. Justice Whittaker quoted: "A power of expulsion must be exercised in strict conformity with the rules by which it is given." *Murphy v. Synnott* (1925); *Rogers v. Council of the College of Physicians and Surgeons of B.C.* (1942). The Judge ruled that since the plaintiff was not expelled in conformity with the by-laws of the union, the defendant's contention that the plaintiff was obliged to exercise his right of appeal within the union before taking civil action was not valid. Therefore, the plaintiff was entitled to succeed in the action.

Also, His Lordship considered that the plaintiff should succeed on the merits as well since "it cannot, by any stretch of the imagination, be said that the trial within the union was one that was free from prejudice and bias". Evidence was given which showed that a determined effort had been made to influence members against the plaintiff before his trial and a biased article about the plaintiff had been printed in the union paper. In the light of these facts the Judge was of the opinion that "the purported expulsion of the plaintiff was contrary to natural justice".

Mr. Justice Whittaker then raised the question:—

Ought a trade union which has a closed shop agreement with an employer under

any circumstances (other than for non-payment of dues) have the right to expel a member?

His Lordship, in answer to this question, stated:—

Even where there is no closed shop agreement, expulsion in the words of Younger, L.J. in the *Braithwaite* case . . . means "little less than a sentence of industrial death". These words have added force where the workman is in danger not only of being ostracized by his fellow workmen but of necessity by the employer as well.

The Judge referred to the closed shop as a powerful weapon which confers duties as well as privileges; e.g. the duty not to revoke membership which may have been acquired solely because employment could not otherwise have been obtained. Unions have other less drastic methods of disciplining their members.

In awarding damages and reinstatement, the Court stated that the plaintiff was entitled to a declaration that the resolution purporting to expel him was illegal and void and that he is a member in good standing of the union. In respect to damages, the judgment followed the ruling given in 1944 in the case of *Kuzych v. Stewart* to the effect that a union member illegally expelled is not bound, in order to mitigate damages, to seek employment other than as a union man during the intervening period. Allowing for unemployment insurance benefits and possible loss of wages through illness, damages were set at \$5,000 and the plaintiff was granted costs in this and the preceding trial. *Kuzych v. White et al.* (No. 3) 1949 2 W.W.R.—558.

\* \* \*

For refusing to comply with the Court order to reinstate Kuzych, two officers of the union were jailed recently for contempt of court. They were released pending an appeal which will be heard shortly by the B.C. Court of Appeals. Further details will appear in a forthcoming issue of the *LABOUR GAZETTE*.

#### **Picketing of ss. Seaboard Star by CSU members held illegal—application to dissolve injunction dismissed.**

On June 8, 1949, Mr. Justice Manson in the Supreme Court of British Columbia dismissed a motion to dissolve or vary an interim injunction restraining members of the crew of the ss. *Seaboard Star* and officers and members of the Canadian Seamen's Union from picketing the ship in Vancouver. The injunction which was granted on May 10, 1949, restrained the defendants from trespassing or continuing

to trespass on board or in or about the *Seaboard Star*, from watching or besetting or causing to be watched or beset the ship, wharves and approaches thereto, and from preventing access to and from the ship, and directed them to vacate the portions of the ship occupied by them.

In rejecting the motion to dissolve the injunction, Mr. Justice Manson stated that the picketing carried on was unlawful in that its purpose was not to obtain or communicate information but "to intimidate the officers and crew of the ship and others who had lawful business with the ship".

The plaintiff company had an agreement with the Canadian Seamen's Union which went into effect on October 15, 1947, and was to remain in force for one year. The defendant union served notice on August 2, 1948 of the termination of the agreement and shortly afterwards the company also served notice of the agreement's termination on its expiry date. Steps were taken under the Industrial Relations and Disputes Investigation Act to negotiate a settlement. The Conciliation Board appointed under the Act failed to obtain a settlement but made a recommendation for settlement which was submitted to both parties on February 19, 1949 (L.G., 1949, pp. 432-442). The Company accepted the recommendation; the union rejected it. The prohibition in the Act against strikes and lockouts became ineffective seven days after the receipt of the Conciliation Board report. Further efforts of the Department of Labour to bring about a settlement failed and were discontinued about the end of March. At this time the plaintiff company entered into a new agreement, effective from March 28, 1949, with the Seafarers' International Union. No application was made, in respect of this agreement, to the Canada Labour Relations Board under section 61 of the Industrial Relations and Disputes Investigation Act. The judgment stated that this is a subsisting agreement which binds the plaintiff company. It was pointed out that all contractual relations between the Company and the CSU were at an end prior to the incidents which gave rise to the case.

On the arrival of the ship in Vancouver on May 2, 1949, the defendant crew members went on strike. Sailing articles between the Company and crew members were legally terminated as of midnight of the same day, but crew members failed to attend at the office of the shipping master to collect their wages and refused to vacate the ship. On May 4, officers and members of the defendant union established a picket line on the approaches of the *Seaboard Star*.

Placards were exhibited at the approach to the ship upon which appeared the words, "200 seamen jailed without trial by jury"; and "*Seaboard Star* on strike". The plaintiffs claimed that the ship was being effectively prevented from delivering her cargo or from fulfilling contracts of affreightment and asked for an injunction, stating that there was no real grievance as between the crew members and the Company or the master of the ship upon the ship's arrival in Vancouver.

In giving his decision, Mr. Justice Manson stated that the true purpose of the strike was to compel the abandonment of the contract between the Company and the Seafarers' International Union and to compel the entering into of a contract between the Company and the CSU. In addition, the defendants were seeking to further the strike by misleading and untruthful publicity as some of the circulars distributed by them were in contempt of court, inflammatory in character and calculated to bring about breaches of the peace.

The Judge ruled that:—

The conduct of the defendants has amounted to a conspiracy to immobilize the ss. *Seaboard Star* and other ships, by divers methods, and to compel a breach of a legal contract. Misleading or untruthful publicity is not permissible to further a strike nor yet publicity which is in contempt of the Courts.

In declaring the picketing illegal, Mr. Justice Manson stated:—

The picketing here, I am satisfied, was calculated to intimidate the officers and crew of the ship and others who had lawful business with the ship and was so intended. The conduct of the defendants in the circumstances and more particularly in light of the fact that contractual relations between the parties had ended, constituted a common law nuisance.

The Judge did not see that the purpose of the defendants' conduct fell within the exceptions to section 501 of the Criminal Code. Subsection (g) of section 501 of the Code exempts "attending at or near or approaching to such house or other place as aforesaid, in order merely to obtain or communicate information" from the prohibition against watching and besetting. Thus, the Judge continued:—

The conduct of the defendants was not in its real purpose to obtain or communicate information. . . . It was calculated and intended to compel another person to do that which he had a right to abstain from doing. . . .

As regards the status of the strike, Mr. Justice Manson held:—

Conduct cannot amount to a strike by the mere assertion that a strike prevails. Those who would strike must have a status

upon which to found a strike. In my view no such status existed here on May 2 for the reasons stated. It is inconceivable that a strike, so called, should be permitted to tie up a substantial portion of the shipping of a country despite the termination of the relationship of the shipping company and its employees.

The judgment concluded that the plaintiff company had suffered serious damage which might be irreparable. The motion to dissolve the injunction was dismissed. *Seaboard Owners Limited and Thomas Quinn v. Cross et al.—members of the crew of the ss. Seaboard Star, and Davis et al.—on behalf of themselves, members of the Canadian Seamen's Union and as officers and trustees of the said Canadian Seamen's Union and the said Union, and others unknown to the plaintiffs—pickets at or near the berth of the ss. Seaboard Star.* (1949) 2 W.W.R.—305.

***In case of a split in a certified union, the group remaining in the original union, even if a minority, held to be entitled to union dues.***

On September 15, 1949, Mr. Justice Gale of the Ontario High Court of Justice held that the local union and not its constituent members is the party certified as the collective bargaining agent, and the union, not its members, is a party to the collective agreement and that it consequently is entitled to the property, rights and other benefits arising from the agreement.

The case arose when the International Nickel Company applied to the Court for advice with respect to the disposition of union dues deducted from the employees' wages, in accordance with the Rand formula, pursuant to a collective agreement with Local 637 of the International Union of Mine, Mill and Smelter Workers of America, CIO.

In October, 1948, a majority of the Local including the executive, being dissatisfied with policies and conduct of their international officers, voted in favour of withdrawing from the International and affiliating directly with the CCL. On November 5 a letter was written by Shedden, the president of the Local, to an officer of the International advising him that the Local had "withdrawn from its affiliation" with the International and enclosing a cheque for *per capita* dues. On January 25 the majority group of employees instructed the executive to obtain a charter as a local of the CCL, which was later granted.

The minority group, in the meantime, expelled the executive and elected a new one. This group endeavoured to function in all respects as the Local.

The Company remained neutral throughout the proceedings and continued to collect dues until the end of the term of the agreement at which time it had nearly \$16,000 in its possession. When the Company applied to the Court regarding disposition of this money, the issue was directed to be tried to determine which of the groups was a party to the collective agreement and who was entitled to the money in the Company's hands. Both groups claimed the union dues deducted after the split. The non-union employees contended that there should be declared a resulting trust with respect to the dues collected from them and that an order should be issued for the return of the money to the individuals from whose wages it had been deducted.

His Lordship held that the minority group constituted and always had constituted Local 637 of the International and was the group that was a party to the collective bargaining agreement from and after October 22, 1948. He agreed with the decision in *re Patterson and Nanaimo Dry Cleaning and Laundry Workers Union Local No. 1 (1947)* (L.G., 1947, pp. 1337, 1500; 1948, p. 343), that, by virtue of certification as a bargaining agent under the appropriate labour relations legislation, a local union chartered by an international had acquired a statutory identity. Accordingly, Local 637 as distinct from its members was the party to the contract and entitled to the property, rights and other benefits arising from it. It followed that the local union could be identified only by reference to the charter issued to it and the rules and regulations governing it. Therefore, since the Local and not its membership was the party certified as the collective bargaining agency and was the party to the collective agreement, it was entitled to continue as such while composed of the persons empowered to carry out the enterprise pursuant to the constitution and rules of the International.

It seemed to His Lordship that the minority group had continued the existence of Local 637 as a local of the International, and had properly installed a new slate of officers. Shedden and the majority of the members who left the International did so as individual members and not as a body which could be recognized by the Court.

While it is true that in conducting the affairs of an unincorporated body the will of the majority prevails, Mr. Justice Gale pointed out that the principle of majority rule did not apply where the group or association was going outside its powers by seeking to bring an end to its existence or

to sever the cord through which it derived its being where the entire membership must be in favour of the move.

Mr. Justice Gale maintained that there could be no declaration of a resulting trust for the non-union employees because there was no evidence of lack of performance

under the bargaining agreement, nor could there be any resulting trust on the ground that the contract was void because of the Company's uncertainty as to the persons with whom it should deal. *Re the International Nickel Company of Canada, Ltd. Shedden v. Kopinak* (1949) O.W.N. 667.

## Recent Regulations Under Dominion and Provincial Legislation

*Under the Canada Shipping Act the first pilotage by-laws for the Pilotage District of Prince Edward Island were approved. ¶Manitoba has revised apprenticeship rules for another trade, that of sheet metal workers. ¶In Saskatchewan, the first regulations were made under the new Passenger and Freight Elevator Act. Employees of co-operative purchasing associations and wholesale distributors engaged in the distribution of gasoline and petroleum products are brought under the Workmen's Compensation Act.*

### DOMINION

#### Canada Shipping Act

The first pilotage by-laws for the Pilotage District of Prince Edward Island were approved by an Order in Council (P.C. 5760), on November 10, gazetted December 14. The district covers the coastline of Prince Edward Island and all harbours or rivers and their tributaries within the coastline. The by-laws provide for the licensing of pilots, set out their duties, and fix pilotage dues and moorage rates.

A candidate for a pilot's licence must be a British subject, 21 years of age and over, resident in Prince Edward Island, who has shown on examination that he has a thorough knowledge of local conditions. He must have good eyesight and be physically and mentally fit. Licences may be renewed biennially until the pilot reaches 65 and thereafter annually until he is 70 years of age. The Pilotage Authority may at any time require a pilot to have a physical and mental examination, including eyesight and hearing tests, at his own expense.

Every licensed pilot must report in writing to the Pilotage Authority when, from any physical cause, including defective hearing or eyesight, he is unable to perform his duties efficiently.

The pilot's licence must be carried with him at all times when on duty. Every pilot must be civil and strictly sober on duty and exercise the utmost diligence for the safe conduct of the vessel under his charge. He must report in writing on or before March 31 each year the name, nationality, and registered tonnage of each

ship piloted by him during the fiscal year and furnish any other information required by the Pilotage Authority.

In case of any dispute between pilots, or between the pilot and the master of the vessel with regard to pilotage, or extra remuneration in a case of any extraordinary nature, the matter must be referred to the Pilotage Authority whose decision is final and binding on all parties. If a pilot refuses to appear before the Pilotage Authority after 24 hours' notice that his attendance is required, he may be suspended.

#### Prevailing Rates Employees

New general regulations for prevailing rates employees made under an Order in Council (P.C. 6190) were issued on December 6, 1949, in substitution for those made under P.C. 4840 of September 20, 1949 (L.G., Dec., 1949, p. 1571). For the most part, changes made are of a minor nature. The regulations extend coverage to include casual employees; add new sections regarding vacation leave when an employee is absent with leave and without pay for more than seven days, and where an employee terminates his employment before six months' service; and make provision for sick leave for credits accrued before April 1, 1949. The regulations are effective from October 1, 1949, except for the provisions dealing with vacations with pay, which are retroactive to April 1, 1949.

The new regulations apply to persons employed in the public service of Canada whose remuneration is based on rates of pay prevailing in the area of their employment for the class of work they do or on rates

prevailing in any area in Canada for comparable work. Casual employees, previously excluded, are now covered. The regulations do not apply to persons in receipt of a stated annual salary nor, by a new provision, to persons employed part time in civil service classifications whose rate, although not a stated annual salary, is determined by reference to the annual salary established for such classifications.

As before, during the first year the worker is entitled to a vacation leave credit of one-half day for each month of employment; for the second year, three-quarters of a day for each month; and for the third year and afterwards, to one day for each month. A new subsection provides that an employee absent with leave and without pay for a period longer than seven days will not be entitled to a leave credit during the month or months in which the whole or any part of the period of absence occurs. Where a worker's employment is terminated before he has completed six months of service he will now be given in lieu of vacation leave credits a gratuity of two per cent of his wages during the period of employment plus normal pay for the vacation credits accruing to him for work done on the specified public holidays on which he has been required to work. The new regulations also provide a method of determining an hourly rate of pay for holidays or leave for employees who are paid by the day, week or month. This is calculated by dividing the daily or weekly rate by the normal number of hours worked in the day or week, and in the case of a month, by  $4\frac{1}{2}$  times the number of hours in the standard work-week.

A new section provides for sick leave for credits accrued before April 1, 1949. The deputy head may give sick leave up to 30 days to an employee to whom sick leave credits accrued before April 1, 1949, under the authority of a previous Order in Council (P.C. 272/1050 of March 22, 1947), departmental regulations or some other competent authority. The Treasury Board may authorize the extension of leave beyond 30 days, but not in excess of the sick leave earned. If an employee has been absent through illness for not more than three consecutive days he must sign a declaration of inability to work. If his absence is longer than three days, he must produce a medical certificate. During sick leave, the employee must receive wages at his normal rate of pay.

Other provisions regarding public holidays granted with pay, special leave, hours of work, rates of pay and overtime rates are the same as those set forth in the earlier regulations.

## PROVINCIAL

### Alberta Public Service Vehicles Act

New general regulations (R5-49) under the above Act were made by an Order in Council (O.C. 1143-49), on September 26, and gazetted on October 15. There has been no change in the provisions limiting working hours of drivers of public service or commercial vehicles, requiring medical certificates for drivers of passenger-carrying vehicles, and setting fees for chauffeurs' licences. There is, however, no longer any provision for issuing temporary chauffeurs' permits to employees of specified employers.

Hours of drivers of commercial vehicles and public service vehicles carrying passengers are limited to the maximum hours permitted by the Alberta Labour Act—eight in a day and 48 in a week—or those allowed by regulations made by the Board of Industrial Relations under that Act. Hours of inter-urban truck drivers must be recorded daily in a log-book carried by the driver. Owners of passenger-carrying vehicles or holders of a liveryman's certificate may be required to file lists of their drivers with the Highway Traffic Board and to notify the Board of all dismissals and the reasons therefor.

Drivers of school vans must be at least 18 years old and must hold a chauffeur's certificate and a medical certificate.

Candidates for a chauffeur's licence are required to furnish medical certificates. A fee of \$3 a year is required for a chauffeur's licence, but it is reduced to \$1 for employees of the Alberta government, and drivers of school vans are exempt from the fee.

### British Columbia Hospital Insurance Act

A new regulation, issued on December 3 and gazetted on December 22 under the Hospital Insurance Act, allows students and professional technicians before leaving the Province in order to take postgraduate or special training to renew their insurance premium for the ensuing hospital insurance year. They must, however, give a definite assurance in writing that they are returning to the Province as soon as they have finished their training.

### Manitoba Apprenticeship Act

Revised rules for apprenticeship in the sheet metal workers' trade which were filed on December 9 (Reg. 58/49), gazetted and effective December 17, include provisions for pre-apprenticeship training and the indenturing of apprentices to a local union or

employers' association. Similar provisions are already in effect for apprentices in the building trades (L.G., 1949, p. 1574).

On the recommendation of the trade advisory committee, applicants for apprenticeship in the trade of sheet metal work may enrol in a six to eight months' pre-apprenticeship course at the Manitoba Technical Institute. The course must terminate in the spring following its commencement.

Where there is not sufficient work in an establishment to maintain continuous employment and training for apprentices, the trade advisory committee may approve the indenturing of apprentices to a local union, employers' association or a joint committee of such organizations, the number of apprentices so indentured to be determined by the committee according to the number each trade is able to assimilate.

Apprentices in this trade must now attend full-time educational classes, given by a technical school approved by the Board, for eight weeks during each of the first two years and for at least four weeks of each subsequent year. If the apprentice has completed six months in a pre-apprenticeship course, he may be excused from attendance during the second and third years of apprenticeship. Under the earlier regulations which are now repealed, apprentices were required to attend full-time classes of at least two months' duration during each year for the first two years of apprenticeship, after which attendance at part-time classes was compulsory for a period of not less than 140 hours in any one year.

The wage rates are now fixed as a percentage of the journeyman's prevailing rate, beginning at 30 per cent for the first six months of the five-year apprenticeship period, then rising by 5 per cent for the next seven half-year periods and thereafter by 10 per cent until in the last six months of the fifth year the rate is 85 per cent of the mechanic's rate. Formerly, the starting rate was 25 cents an hour, increasing each six months until the apprentice received 70 cents an hour during the last six months.

Every person who has been employed in the trade for seven years or more (formerly five) before these rules became effective, may, on the recommendation of the trade advisory committee, be granted a certificate of qualification without examination. A new provision entitles persons who have been in the trade for five years but less than seven to a certificate of qualification upon passing such examinations as may be determined by the Board on the recommendation of the trade advisory committee. No certificates, however, may be issued

without examination after six months following the effective date of the new regulations.

The Minister of Labour, in conjunction with the Minister of Education, may now make any necessary provisions for conducting evening classes for this trade in addition to, or as a substitute for, full-time classes.

The age requirement is still 16 to 21 with certain exceptions for persons over 21. No change has been made in the ratio of apprentices to journeymen. An employer is permitted to employ one apprentice for one journeyman and one apprentice for every four additional journeymen employed.

### **Prince Edward Island Electrical Inspection Act**

Amendments to the regulations under this Act were approved by Order in Council on December 20 and gazetted on December 24. The more important changes have to do with the licensing of journeymen electricians and radio repair operators.

As before, to qualify for a journeyman's licence, an applicant must have had four years' experience in electrical work. The amendment provides, as an alternative requirement, that he must have passed the vocational training course in electricity or an equivalent course from a recognized institution and have had, as well, apprenticeship training of a stated duration. For a person with Grade A standing, two years' apprenticeship is required; Grade B, two years and four months; Grade C, two years and eight months; and Grade D, three years' training as an apprentice.

A new provision states that in order to be eligible for journeyman status, Grade 8 education or its equivalent is required.

A journeyman's licence is issued on examination set by the Electrical Inspection Department. The stipulation is now added that such examination may include a practical examination at some place designated by the Department.

Licences must be renewed annually. If a journeyman allows two years to elapse without having his licence renewed, he must again write an examination.

An applicant for a contractor's licence must furnish with the inspector a guarantee bond of \$2,000. Formerly, the amount of the bond required was \$200.

All electrical installations are to be in accordance with the Canadian Electrical Code, and not only with Part I of the Code, as previously (L.G., 1940, p. 926; 1945, p. 1533).

A further new section requires radio repair operators to be licensed after they have shown on examination that they are qualified to work on radios. The annual licence fee for a radio repair shop is \$3 and for a radio repair helper, \$1.

### **Saskatchewan Passenger and Freight Elevator Act**

The first regulations under the new Passenger and Freight Elevator Act were issued by an Order in Council (O.C. 2191/49) on November 25, and gazetted December 10. The new Act, which is effective from December 1, 1949, was summarized in the *LABOUR GAZETTE* for June, 1949, at page 741. The regulations, also effective from December 1, deal with standards for construction, installation and repair of elevators; electrical wiring and inspection; licences and licence fees for elevators, contractors and elevator operators; and requirements for construction, operation and inspection of belt manlifts.

The regulations apply to all elevators which are subject to the legislative authority of the Province except inclined or vertical freight conveyors; mine or skip hoists, power shovels or draglines, stage lifts, tiering or piling machines or similar apparatus; manlifts in grain elevators when operated by hand or by gravity; certain hand-operated dumbwaiters; elevators or hoists used only for handling building material and mechanics during construction, unless specifically included by the Chief Inspector.

The Safety Code for Passenger and Freight Elevators of the Canadian Standards Association must, where required by the regulations, be complied with as if it were regulations issued under the Act. The design, construction, and installation of elevators and their testing previous to operation must conform to the requirements of this Code.

No one under 18 years of age may hold a licence to operate a passenger elevator. The minimum age for operating a freight elevator is 16 years. A licence for each operator must be obtained from the Department of Labour by every person, firm or corporation having responsibility as owner or agent for the operation of a passenger elevator. Only the holder of an operator's licence may operate a passenger elevator unless it is automatically controlled.

The licence, issued upon the recommendation of the Chief Inspector, is valid for one year, subject to immediate cancellation if the operator is found to be incompetent or deliberately violates the Act or regulations. The operator must at all times either carry his licence with him or post it in the elevator car. Failure to produce the licence on demand of an inspector or authorized officer will be taken as evidence that the person concerned has no licence.

### **Saskatchewan Workmen's Compensation (Accident Fund) Act**

From January 1, 1950, all employees of co-operative purchasing associations and wholesale distributors who are commission men or commission agents engaged in the distribution of gasoline, oils, greases and other petroleum products are brought within the Act by an amendment to the General Regulations (L.G., 1943, p. 1419) made by an Order in Council, dated November 18 and gazetted November 26. Previously, such associations and distributors could be admitted to Part I of the Act (which provides for a collective liability system) at the discretion of the Board on the application of the employer.

Executive officers of co-operative purchasing associations in this group may elect for compensation coverage at a salary rate not in excess of \$3,000 per year nor less than \$400.

# UNEMPLOYMENT INSURANCE

## Selected Decisions of Umpire Under the Unemployment Insurance Act

*Digest of selected decisions in appeals heard by the Umpire under the provisions of the Unemployment Insurance Act. Published in two series (1) Benefit cases, designated CU-B, and (2) Coverage cases, CU-C.*

**Held that the claimant had not neglected to avail herself of an opportunity of suitable employment within the meaning of Section 40 (1) (b) of the Act.—CU-B. 439 (May 11, 1949).**

### MATERIAL FACTS OF CASE:

The claimant, married, 34 years of age, worked as a silk spotter for a dry cleaning firm from June, 1944 until June 12, 1948, when she was laid off. Her rate of pay was 75 cents per hour. She worked as a sales clerk in a temporary position at a wage of 55 cents per hour from June 21 to June 26, 1948. On November 4, 1948, she made claim for benefit which was allowed.

On December 3, 1948, she reported that she had been employed by another dry cleaning firm as a silk spotter from November 29, 1948 to December 2, 1948, and that her separation was due to shortage of work. The employer stated that her services were dispensed with for the following reasons: "She could work half-days only whereas a full-time spotter is needed. An operator for full time (employment) was obtained on December 3, 1948." The Local Office reported: "We have no openings nor is it customary to have openings for part-time in this work." The Insurance Officer disqualified her from the receipt of benefit for a period of six weeks because she had neglected to avail herself of an opportunity of suitable employment (Section 40 (1) (b) of the Act).

The claimant appealed to the Court of Referees on the grounds that she had been hired on a part-time basis, that she had contributed to the fund for four and a half years while employed on part-time work and that, when she was replaced by a full-time operator, it could not be said that she neglected to avail herself of an opportunity of suitable employment.

The question of the claimant's availability for work within the meaning of the Act, was also referred to the Court of Referees for decision.

The claimant and two representatives from the Local Office gave evidence at the hearing. The Court unanimously decided that the claimant had not restricted her availability to a point where she must be considered to be not available for work and that therefore she had not neglected to avail herself of an opportunity of suitable employment.

The Insurance Officer appealed to the Umpire.

### DECISION:

I am asked to decide whether the claimant has neglected to avail herself of an opportunity of suitable employment within the meaning of Section 40 (1) (b) of the Act.

The answer to that question, as rightly pointed out by the Court of Referees, depends upon the answer to the question of whether the claimant was, at the time the employment was offered, available for work within the meaning of Section 27 (1) (b) of the Act.

In determining this case, I must first bear in mind that the Court of Referees, after they had the opportunity of hearing the claimant and the Commission's representatives, stated in their unanimous decision: "There is not the slightest doubt that in the ordinary case, such a restriction (availability for work from 8 a.m. to 12 noon only) would place the claimant within the provisions of the Act and justify a finding that she was not available for work. But this appears to be an exception to the rule".

In a previous decision (CU-B. 430) I commented that "availability for work is primarily a subjective matter which must be considered in the light of a claimant's intention and mental attitude towards accepting employment. Viewed objectively, it might be determined by a claimant's prospects of employment in relation to a certain set of circumstances beyond his control or which he has deliberately created".

The claimant, a few weeks after she registered for work, showed her willingness

to accept morning employment in her usual occupation, but there is no indication as to what was her attitude towards accepting the same pattern of work in a line other than that of her usual occupation. As to her possibilities of obtaining employment in relation to her restricted availability, the Court felt that sufficient time had not elapsed to warrant a finding that she could not be "placed" in her usual occupation. There is no information on file, however, as to whether or not there were "openings" for her in part-time employment in other occupations.

Taking into consideration all the circumstances of the case, I find that the unanimous decision of the Court of Referees should not be disturbed and that, consequently, the claimant has not neglected to avail herself of an opportunity of suitable employment within the meaning of the Act.

I wish to point out, however, that claimants who are unable or unwilling to accept full-time employment, should not be allowed, after a reasonable period of time, to further restrict their field of availability by insisting upon taking work in their usual occupation only.

The appeal is dismissed.

***Held that the claimant had neglected to avail herself of an opportunity of suitable employment within the meaning of Section 40 (1) (b) of the Act.—CU-B. 444 (May 25, 1949).***

#### MATERIAL FACTS OF CASE:

The claimant, single, 23 years of age, was employed by the Dominion Government as a clerk from February, 1948 until May, 1948 when, she left voluntarily because she considered her monthly wage of \$85 was too low. From then until November 1, 1948, she was continuously unemployed and also made two renewal claims for benefit. On the latter mentioned date she secured temporary employment as a clerk which lasted until November 10, 1948.

On November 12, 1948, the claimant was offered temporary box-folding work of five weeks' duration by a large departmental store. The salary offered was \$21 for a 40-hour week, the prevailing rate of pay in the district for that kind of work varying between \$20 and \$23 a week. The claimant refused stating that she "was not looking for factory work". The Local Office commented that the claimant had originally been referred to that departmental store on November 12, 1948 for catalogue work; but as all vacancies in this type of employment had been filled when she presented herself, the prospective employer had offered her

box-folding work. The Insurance Officer disqualified the claimant from the receipt of benefit for a period of five weeks, because she had neglected to avail herself of the opportunity of suitable employment within the meaning of Section 40 (1) (b) of the Act.

The claimant appealed to the Court of Referees which unanimously reversed the Insurance Officer's decision.

The Insurance Officer appealed to the Umpire.

#### DECISION:

I agree with the Insurance Officer that "a short period of temporary or casual employment during a long period of unemployment does not nullify the operation of Section 40 (3) of the Act". Any other interpretation placed thereon would create discrimination and invite abuses. (Section 40 (3) reads:—

"after a lapse of such an interval from the date on which an insured person becomes unemployed as, in the circumstances of the case, is reasonable, employment shall not be deemed to be not suitable by reason only that it is employment of a kind other than employment in the usual occupation of the insured person, if it is employment at a rate of wages not lower and on conditions not less favourable than those observed by agreement between employees and employers or, failing any such agreement, than those recognized by good employers.")

The claimant, who is registered as a switchboard operator and also as an office clerk, had been unemployed, save for a short period of temporary work, for more than five months, when on November 12, 1948, she was offered temporary work in "box folding" at a salary which was not only in accordance with the prevailing rate of pay in the district for that type of work but similar to that which "she had earned in any occupation she had followed since October 31, 1947". She refused that offer, stating that she was "not looking for factory work".

Taking all the circumstances into consideration, I find that the provisions of Section 40 (3) must apply in this case and that the claimant has neglected to avail herself of an opportunity of suitable employment within the meaning of the Act.

The decision of the Court of Referees is reversed and the appeal of the Insurance Officer is allowed. The claimant is disqualified from the receipt of benefit for a period of five weeks as from the date that this decision is communicated to her.

# Revision of Unemployment Insurance Commission Regulations

*Several of the changes made in the Unemployment Insurance Regulations recently were made for the purpose of clarity only. Others involved matters of procedure.*

The Unemployment Insurance Commission Regulations, 1948, as amended, were recently revised and consolidated. The new Regulations were approved by Order in Council P.C. 6126, dated December 13, 1949, to have effect from December 28, 1949, under the title "The Unemployment Insurance Commission Regulations, 1949." Explanations of the main additions and amendments in connection with coverage, contributions and benefit are given below.

## Coverage Regulations

**Wage Ceiling.**—A clause has been added to the method of predetermining earnings for exception or insurability by reason of the "ceiling" of earnings under the Act. This clause provides that where an employed person's rate of remuneration is a fixed weekly amount not exceeding \$60, his yearly remuneration will be deemed not to exceed \$3,120. This amendment has been made under the authority of Section 14 (1) of the Act, to remove the possibility of anomalies arising between persons who are paid at monthly and weekly rates, in view of the fact that it can be argued that there are slightly more than fifty-two weeks in a calendar year. Another amendment provides that if the employed person is not satisfied with the predetermination of his earnings made by his employer for the purpose of the "ceiling", he may apply to the Commission to have such predetermination reviewed, but if he does not apply within six months the employer's predetermination will stand. However, the Commission may on its own initiative review any predetermination that has been wrongly made, for example by collusion between the employer and employee.

**Insurance Agents.**—The exception from coverage of life insurance agents solely paid on a commission basis has been extended to all insurance agents whether life, casualty, fire, etc., since it appears that there is no valid reason for excepting only certain types of insurance agents. The anomalies which were found in respect of life insurance agents apply equally to other insurance agents.

**Canadian Ships Operating Between Foreign Ports.**—As regards a vessel of Canadian registry which regularly operates

between ports outside of Canada with a crew mainly or wholly domiciled outside of Canada, the Regulation now provides that employment in such vessel is excepted without the necessity for the Commission to pass a special order. All that is necessary is for the Commission to be satisfied, through the report of its officers, as to the facts in the case.

**Tradesmen Employed on Farms.**—This Regulation requires a farmer to insure any skilled tradesman whom he employs in his regular trade for more than six days in a period of thirty consecutive days. Employment for a period of six days or less is excepted as being casual employment otherwise than for the purpose of the employer's trade or business. It might be argued that where a farmer employs a tradesman for more than six days in a month such employment could hardly be described as employment in agriculture, but in order to remove any possibility of doubt a regulation has been made so as to remove such anomalies.

**Tradesmen Employed by Hospitals and Charitable Institutions.**—Employment by hospitals and charitable institutions is excepted by paragraph (g) of Part II of the First Schedule to the Act. When such institutions engage a contractor to make renovations or repairs, the contractor is required to insure his employees, but if the institution itself employed tradesmen for such work it did not insure them. The amended Regulation is designed to remove this anomaly by providing that the institution must insure any such workers employed on a temporary or casual basis. The Regulation does not change the status of employees other than those engaged in construction, renovation or repairs. It does not apply to the permanent maintenance or clerical staff of a hospital or charitable institution.

## Contribution Regulations

An amendment in the Contribution Regulations clarifies the procedure for contributions upon separation or lay-off as regards particularly payments for accrued holiday credits not taken at time of lay-off. Another amendment provides that contributions shall not be recorded for any days prior to the date the employment commenced.

The Regulation respecting minimum records to be kept by an employer has been amended to require the employer (1) to keep the minimum records in respect of all his employees whether insurable or not; (2) when an employee is not being insured only because he is insured by another employer to keep a record of the insurance number and name of the employee concerned and of the name and address of the insuring employer; (3) to keep a record of the serial number of the certificate of exemption held by any of his employees.

### Benefit Regulations

**Farmers.**—A new Regulation provides that, to prove entitlement to benefit during the months October to March, both inclusive, a claimant whose main employment is the operation of a farm must establish that he either does no work on the farm or does so little during the off-season that he is not prevented from accepting full-time employment. In addition he must prove that in the two off-seasons (October to March) preceding the off-season in which he makes his claim, a total of at least 180 daily contributions were paid on his behalf. This latter proviso will serve as a test as to his being genuinely in the labour market.

## Unemployment Insurance Statistics November 1949\*

The monthly report of the Dominion Bureau of Statistics on the operation of the Unemployment Insurance Act states that during November, 1949, a total of 124,889 claims for Unemployment Insurance benefit was filed in local offices of the Unemployment Insurance Commission as compared to 77,091 in October and 73,119 during November, 1948. Included in these are 10,001 revised claims (that is, reconsiderations of existing claims) during November, 7,742 in October, and 6,693 in November, 1948. Initial and renewal claims representing mainly new cases of recorded unemployment among insured persons, totalled 114,888 in November, 1949, 69,349 in October, 1949, and 66,426 in November, 1948.

At November 30, 1949, persons on the live unemployment register numbered 152,269 (116,911 male and 35,358 female) as against 105,937 (76,464 male and 29,473 female) at October 31, 1949, and 83,710 (62,806 male and 20,904 female) at November 30, 1948. In addition to ordinary claims there were at November 30, 20,105 (17,213

**Benefit Payable While on Relief.**—Another new Regulation provides that a claimant who is required to work for the purpose of obtaining relief or in respect of relief already obtained, will be deemed to be unemployed as well as available on the days on which such work is performed, if the relief agency certifies that his performance would not prevent him from accepting other work.

**Seasonal Regulations.**—The revised seasonal regulations class as "seasonal" a claimant who has spent more than nine of the last thirty-six days of insurable employment in a seasonal occupation in a seasonal industry, and reduce the two-year contribution requirement to 360 (from 420) and the two previous off-seasons requirement to 40 (or 80) in the complete quarters falling in the off-seasons in the past two years. An additional means of relief from disqualification is afforded the claimant. If he has less than the 360, or the 40 (or 80) contributions required at the time of determination, he may overcome the disqualification if and when he proves that in the current off-season he has made up the shortage to meet either the 360 or 40 (or 80) contributions. However, if the shortage is less than twenty days, at least twenty contributions are required in the current off-season.

male and 2,892 female) other claims, that is, mainly claims registered by persons working on short time, compared with 9,492 (7,078 male and 2,414 female) at October 31, 1949 and 4,143 (3,264 male and 879 female) at November 30, 1948.

Persons on the live unemployment register at November 30, were classified according to the number of days they have been continuously on the register since the last initial or renewal claim was filed in each case. For purposes of establishing the number of days on the register only days of proven unemployment are counted. The number of persons signing the live register for seven days or more provides a rough measure of the number of benefit recipients during the month.

During November, of 109,234 claims handled at adjudicating centres, 89,725 were allowed, 18,816 were disallowed and disqualified and 693 special requests were not granted. In addition, 982 claims were referred to Courts of Referees and to the

\* See Tables E-1 to E-7.

Umpire. Chief reasons for non-entitlement to benefit in order of number of cases were: "insufficient contributions while in insurable employment" 9,366 cases; "voluntarily left employment without just cause" 4,969 cases; "discharged for misconduct" 849 cases; "not capable of and not available for work" 832 cases.

The number of persons commencing the receipt of benefit on initial and renewal claims, by province, during November, 1949, is shown in Table E-4. Table E-6 presents the number of days and the amount of benefit paid during the month. A total of 63,702 persons commenced receipt of benefit during November, 1949 as compared to 41,811 in October and 37,953 in November, 1948. In November, benefit payments amounted to \$5,048,373 for 2,178,130 compensated unemployed days as against \$3,845,541 for 1,675,017 days in October and \$2,283,383 for 1,106,864 days during November last year.

The number of persons receiving benefit, by province for the week of November 12 to 18 inclusive, is presented in Table E-6. During the said week, 104,320 persons received benefit for 597,596 days in respect of which \$1,372,591 were paid, as compared to 71,838 persons receiving benefit for 400,350 days in the amount of \$921,686 during the week of October 15 to 21. The average duration for persons receiving benefit during the week of November 12 to 18 was 5.7 days as compared to 5.6 days for the week of October 15 to 21. The average amount of benefit per day for both these periods was \$2.30 while the average amount of benefit paid was \$13.16 and \$12.83 respectively.

## Insurance Registrations

Reports received from local offices of the Unemployment Insurance Commission for the month ending November 30, 1949 showed 3,664,130 employees were issued with insurance books and had made contributions to the Unemployment Insurance Fund at one time or another since April 1, 1949, an increase of 69,778 since October 31, 1949.

As at November 30, 1949, 224,331 employers were registered representing an increase of 874 since October 31, 1949.

## Renewal of Unemployment Insurance Books

The renewal of unemployment insurance books this year will follow the practice introduced in 1949, whereby employers in large centres who have fifty or more insurable employees and those with twenty-five or more in smaller centres may have insurance books renewed at their premises. These employers will receive a letter from the Commission's local office asking that that office be advised of the date most suitable to the employer for the renewal of books. Employers with fewer than 50 insurable employees will be required to renew their books at the local office of the Commission nearest to them. If, however, the distance is too great, it will be necessary for them to renew their books by mail through their local office.

The insurance books have been designed so that contributions for a short period after April 1 may be recorded in either the old or the new books. This will permit the local offices to call in books as required, and will do away with the long wait for new books experienced in previous years when all books were renewed on March 31.

Employers are particularly requested to keep a record of the date of the last contribution in the old book, to avoid duplication of contributions in the new book.

# WAGES, HOURS AND WORKING CONDITIONS IN THE CLOTHING INDUSTRY, OCTOBER, 1948\*

*Some 18,700 factory workers were employed in the 182 establishments whose 1948 returns have been used in this analysis of the three main divisions of the men's clothing industry. More than half the establishments, employing 55 per cent of the workers, were under written collective agreements. The five-day week was reported by 149 establishments employing 85 per cent of the workers. Time and one-half was the most common over-time rate. Fifty-eight per cent of the workers were in establishments which provided for a paid vacation of two weeks. More than 7,100 workers received payment for five or six statutory holidays.*

The following industries were included in the Labour Department survey of the Manufacture of Clothing; Men's and Boys' Suits and Overcoats, Work Clothing, Men's Shirts, Women's and Misses' Suits and Coats, and Dresses. The first three industries named are dealt with in this article and the latter two, Women's and Misses' Suits and Coats, and Dresses, will appear in the March issue of the *LABOUR GAZETTE*.

By 1948 average wage rates in the Clothing industry had increased 105.9 per cent over the base year, 1939. This is indicated by the composite wage rate index shown below for the five divisions of the clothing industry. In each successive year since 1939 an increase was recorded. In 1941 and 1946 the annual increases were more than 12 per cent while in 1948 the advance recorded over the preceding year was 8.7 per cent.

Year	Index	Annual Percentage Increase
1939.....	100.0	—
1940.....	105.3	5.3
1941.....	118.0	12.1
1942.....	129.0	9.3
1943.....	139.3	8.0
1944.....	144.3	3.6
1945.....	156.3	8.3
1946.....	176.2	12.7
1947.....	189.5	7.5
1948.....	205.9	8.7

\*The information in this article was prepared from data obtained in the general annual survey of wage rates and hours of labour for 1948 made by the Economics and Research Branch of the Department of Labour. Employers were asked to report their straight-time wage or salary rates or the average straight-time earnings for workers on piecework for the last pay period preceding October 1, as well as certain working conditions within their establishments. Information on wage rates for 1948 in Logging and Construction was published in the April

For information on wage rates by occupations in the industry, see "Annual Report on Wage Rates and Hours of Labour in Canada, October, 1948", issued by the Department as a Supplement to the *LABOUR GAZETTE*, November, 1949.

## Men's and Boys' Suits and Overcoats

Index numbers of wage rates in this industry have shown an increase each year since the base year, 1939. The largest annual percentage increase took place between 1942 and 1943, while large increases were also apparent in 1946 and 1947. By 1948 the increase in rates over 1939 had reached 114.8 per cent.

Year	Index	Annual Percentage Increase
1939.....	100.0	—
1940.....	107.2	7.2
1941.....	117.9	10.0
1942.....	129.8	10.1
1943.....	146.6	12.9
1944.....	151.9	3.6
1945.....	164.1	8.0
1946.....	182.1	11.0
1947.....	203.0	11.5
1948.....	214.8	5.8

*LABOUR GAZETTE* and for Civic employees in the May issue. Information on other industries for 1948 along the line of this present article has been published monthly since the June, 1949, issue of the *LABOUR GAZETTE*.

For a summary of provincial legislation on working conditions see Provincial Labour Standards Concerning Child Labour, Holidays, Hours of Work, Minimum Wages, Weekly Rest-Day and Workmen's Compensation, an annual publication of the Department of Labour.

**TABLE 1.—DISTRIBUTION OF ESTABLISHMENTS AND EMPLOYEES IN THE MEN'S AND BOYS' SUITS AND OVERCOATS INDUSTRY, 1948**

	Canada	Quebec	Ontario	Western Provinces
Number of Establishments.....	81	50	27	4
Employees:				
Wage Earners—				
Male.....	4,472	2,592	1,851	29
Female.....	5,682	3,890	1,685	107
Total.....	10,154	6,482	3,536	136
Office Employees.....	1,200	483	701	16
Total.....	11,354	6,965	4,115	152

In analysing this industry, returns from 81 establishments employing some 10,200 factory and 1,200 office workers were used (Table 1). Nineteen per cent of the workers were in 25 establishments employing less than 100 workers, 33 per cent were in 21 establishments employing between 100 and 300 workers, the remaining 10 establishments employing more than 300, averaged 483 workers each.

**Collective Agreements.**—Collective agreements in writing were reported by 53 establishments employing 7,200 workers. Most of the workers under agreement in this industry were represented by the Amalgamated Clothing Workers of America (CIO-CCL), and the National Federation of Clothing Workers (CCCL). Other agreements were negotiated with employees' associations or other national or international unions.

**Standard Weekly Hours, Table 2.**—Weekly hours ranged from 40 to 46. Ninety-four per cent of the workers were in 72 establishments operating on a 40- or 44-hour five-day week. Of the remaining nine establishments, four worked longer than 44 hours.

**Overtime Rates of Pay, Table 3.**—Time and one-half was the most common overtime rate in this industry. Double time was reported in a few instances for work on Sunday. For work on observed statutory holidays, four establishments paid double time and two paid double time and one-half.

Operating an electric cutter, the worker shown at top left can cut many pieces of material at once. Average wage for cutters in Canada in 1948 was \$1.26 per hour. Women sewing machine operators (as shown below) average 69 cents per hour. The typical clothing factory employee worked a 40-hour five-day week and enjoyed a vacation of at least one week after one year's service.

## INDEX NUMBERS OF WAGE RATES

(Base 1939=100)

**Vacations with Pay, Table 4.**—All the establishments in this industry reported an initial vacation with pay of one or two weeks, after a service requirement of two years or less. Twenty-two per cent of the workers were in 18 establishments which gave a two week vacation initially.

A maximum vacation of two weeks was reported by 33 establishments (5,090 workers) usually after one or two years. Two establishments (734 workers) gave three weeks after 30 years, another with 40 workers gave four weeks after a service of 25 years.

**Statutory Holidays, Table 5.**—All but one establishment reported observing between two and 15 holidays and 56 of the 81 establishments employing 72 per cent of the workers paid for some or all of the holidays observed.

Payment was made for five or six holidays in 44 establishments, employing 63 per cent of the workers covered in the industry.

The most common number of holidays observed and paid for was five, which was

(1) Includes one factory (22 workers) on a five day week paying time and one-quarter after weekly hours and time and one-half on Saturday.

(2) Includes two factories (411 workers) paying double time and one-half.

(3) Includes factories paying straight time or not reporting overtime policy.

reported by 14 establishments employing some 1,600 workers. Ten establishments with 1,235 workers observed and paid for six days.

**Sick Leave with Pay.**—Twenty-two establishments employing one-third of the workers reported having a policy covering sick leave with pay. Various plans were listed, such as, “group insurance”, “sick benefit plan”, “employers discretion”, “union fund”, “after three days”, “part pay after six months”, “one week with Doctor’s certificate”, “after seven days”. In a few instances no details of sick leave policy were given.

## Work Clothing

By 1948 the index of wage rates in the manufacture of work clothing showed an increase of 97.1 per cent over the base year, 1939. The largest annual increase during the ten-year period was recorded between 1947 and 1948, when the index indicated a rise of 24.1 points or 13.9 per

Year	Index	Annual Percentage Increase
1939.....	100.0	—
1940.....	106.0	6.0

1946.....	160.3	8.3
1947.....	173.0	7.9
1948.....	197.1	13.9

Returns from 66 establishments employing some 4,500 factory and 100 office workers were used in the analysis of this industry (Table 6). The great majority of workers in the factories were female. The number of employees per establishment ranged from 15 to 432, with 55 per cent of the workers in 55 establishments employing less than 100 workers and nine establishments, employing between 100 and 200, accounting for 28 per cent of the workers.

**Collective Agreements.**—Written collective agreements were reported by 27 establishments, employing more than half the workers in the industry. All the workers under agreement were represented either by the, United Garment Workers Union of America (AFL-TLC), the Amalgamated Clothing Workers of America (CIO-CCL), or the National Federation of Clothing Industry Workers (CCCL).

**Standard Weekly Hours, Table 7.**—Weekly hours ranged from 37½ to 49, with

## INDEX NUMBERS OF WAGE RATES

(Base 1939=100)

very few at less than 40 hours or above 48. More than two-thirds of the establishments and workers were on a five-day week and in most cases on a 40-hour schedule. Eighteen establishments employing one-quarter of the workers reported working longer than 45 hours.

**Overtime Rates of Pay, Table 8.**—Time and one-half was the most common rate paid for overtime either after daily or weekly hours had been worked. In several instances time and one-quarter was the rate paid after daily hours, Monday through Friday, and in one case after weekly hours, another paid double time for work on Saturday.

Although 12 of the 22 establishments reported time and one-half for work on Sunday, the majority of workers receiving premium pay for Sunday work, were in 10 establishments, which paid double time.

Time and one-half and double time were the only overtime rates paid for statutory holidays. Double time was reported by 13 of the 25 establishments employing 30 per cent of all workers in the industry.

**Vacations with Pay, Table 9.**—All but one establishment in this industry reported giving vacations with pay of at least one week, after a year or less of service, and in nine instances an initial vacation of two weeks was reported after a year of service.

Thirty-seven establishments reported giving no more than one week's vacation. Fifty-five per cent of the workers were in 26 establishments reporting a maximum vacation of two weeks, after a service of one to eight years and in two instances a provision of three weeks after 25 years was reported.

(1) Includes one factory (17 workers) working 44½ hours.

## INDEX NUMBERS OF WAGE RATES

(Base 1939=100)

**Statutory Holidays, Table 10.**—All but one establishment reported observing from two to 15 statutory holidays and 34 employing 60 per cent of the workers, paid for some or all of those observed. The most common number of holidays observed and paid for was eight and one respectively.

**Sick Leave with Pay.**—Only 11 of the 66 establishments employing 800 workers reported a policy covering sick leave with pay. Group insurance plans were reported in a few cases and the remainder reported various provisions.

### Men's Shirts

The 1948 wage index for this industry based on average rates in 1939 as 100, reached 209.4. The indices below show a steady rise each year, the percentage increases varying from 2.4 in 1940 to more than 14 per cent in 1942 and 1947.

Year	Index	Annual Percentage Increase
1939	100.0	—
1940	102.4	2.4
1941	107.0	4.5
1942	122.6	14.6
1943	135.9	10.8
1944	146.5	7.8
1945	157.0	7.2
1946	171.7	9.4
1947	196.6	14.5
1948	209.4	6.5

All the establishments reporting for this survey were located in the provinces of Ontario and Quebec:—

In analysing this industry returns from 35 establishments employing approximately 4,000 factory and 200 office workers were used. Eighty-six per cent of the factory workers were women (Table 11).

Nearly three-quarters of the establishments employed less than 100 workers each, seven employed between 100 and 300.

Although only three establishments, employed more than 300 workers each, they accounted for one-third of the workers.

**Collective Agreements.**—More than one-half the workers in the industry, who were employed in 14 establishments, were reported under written agreement. Of the workers under agreement the majority were under agreements with the Amalgamated Clothing Workers of America (CIO-CCL).

**Standard Weekly Hours, Table 12.**—Weekly hours ranged from 40 to 48. The 28 establishments on a five-day week accounted for 74 per cent of the workers covered in the industry. Twelve establishments employing 37 per cent of the

workers operated on a 44-hour week and 15 (1,577 workers) worked longer than 44 hours.

**Overtime Rates of Pay, Table 13.**—Time and one-half and double time were the only rates paid, for any overtime work in the industry, the latter being applicable only to Sunday and holiday work. Three establishments with 561 workers paid double time for work on Sunday and five employing more than 1,000 workers paid this rate for work on statutory holidays.

**Vacations with Pay, Table 14.**—All the establishments covered in this survey reported giving an initial vacation of one

(1) Includes one factory (35 workers) working 47½ hours per week.

week after a service requirement of six months or one year.

Twenty-four of the 35 establishments gave no more than a paid vacation of one week and the remainder employing 58 per cent of the workers reported a maximum vacation of two weeks after a service of two to ten years.

**Statutory Holidays.**—All but one establishment reported the observance of some statutory holidays. Some 3,900 employees were in 34 establishments observing between four and 15 holidays.

Payment was made for some or all of the holidays observed by 23 establishments employing 2,600 workers. Forty-seven per cent of these workers were in 13 establishments paying for one to five holidays, another 51 per cent were in nine establishments paying for six and in one instance payment was made for seven.

**Sick Leave with Pay.**—Six establishments employing 13 per cent of the workers had group insurance schemes and in one case a sick benefit plan was reported.

An analysis of the current employment situation prepared by the Economics and Research Branch, Department of Labour on the basis of returns from the National Employment Service, reports from the Dominion Bureau of Statistics, and other official information.

## EMPLOYMENT CONDITIONS DURING DECEMBER, 1949

*Unemployment during December was rising as the winter season advanced. The number of jobless workers was appreciably higher than at this time last year in a number of areas, especially in the Maritime and Quebec regions. This reflected, among other things, the sharp decline in logging operations this year. A greater proportion of the unemployed than ever before have been benefiting from unemployment insurance during the past few months.*

Employment declined slightly and unemployment rose as the usual winter climatic conditions came into effect throughout the country. By the end of December most outdoor work had come to a stop, and lay-offs followed in the construction, fishing, water and highway transportation, agriculture and railway industries. In addition, activity slackened in food processing plants and, apart from Christmas operations, in trade establishments. Out of a labour force of about 5,200,000 workers, some 323,000 persons were registered for work at National Employment Service offices at January 12. Not all of these applicants were seasonal workers, however. Some had been unable to obtain winter jobs in logging this year. This was particularly so in the Quebec and Maritime regions and in the Lakehead district in Ontario. Others had been laid off from manufacturing plants, such as the shipbuilding and textile industries.

The unusual winter weather experienced in Canada this season also had a disturbing effect on employment. Mild weather in Eastern Canada held up logging operations and the resulting lack of snow meant that the usual snow removal jobs did not materialize. Low temperatures, high snowfalls and flash floods in some areas of British Columbia seriously affected employment in logging, construction and sawmill industries. Current unemployment increases have been concentrated to a great extent in localized areas, however. The over-all buying power of the Canadian worker continues high and again retailers in Canada reported a record value of Christmas sales.

### Industrial Analysis

Hauling operations in the eastern Canada **logging** industry were held up this season by lack of snow and mild weather, although

cutting was generally completed during December. As well, about one-quarter of the loggers usually go home for a few days at Christmas. These factors together with a general reduction in cutting operations, combined to keep year-end activity in the bush at a low level. It was estimated that employment was about one-third less than in the 1948-9 season.

Surpluses of labour continued to exist in all logging areas. The demand for workers was slight and easily filled locally. About 1,500 loggers in the East were registered as unplaced at National Employment Service offices at December 1, with many others contacting the operators directly in search of work. Wages offered were usually about the same as last year, although a few areas reported a drop in the wage level.

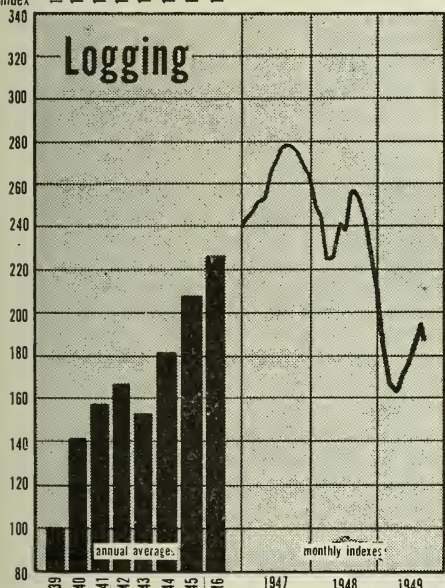

In British Columbia, heavy snowfalls aggravated existing snow conditions, making work in the woods almost impossible. Unemployment among loggers was heavy during December, with entire staffs being laid off in some companies. Some operations were re-opened in January but in many cases the shutdown will continue during February and March. As in the East, employment this winter has been below 1948-9 levels. The Dominion Bureau of Statistics employment index at November 1, 1949 (June 1, 1941=100) was 154.0 compared to 187.0 at November 1, 1948.

Employment in **mining**, which totalled 87,000 at November 1, was at its highest point since 1941. The Dominion Bureau of Statistics index of mining employment at that date was 184.9 (1926=100), as against 181.5 one year previous. Demand for additional workers was not strong at the end of the year, although fully experienced men were generally readily placed in employment. Labourers were in ample supply with little demand.

# EMPLOYMENT TRENDS IN CANADIAN INDUSTRIES

Average: 1939 = 100

Seasonally Adjusted

Several factors combined to limit employment expansion during December. Weather conditions brought prospecting and diamond drilling to a halt and stone quarries were also closed for the season. Power shortages curtailed operations in some northern Ontario gold mines. Drilling in western oil fields was held up by lack of transportation facilities and markets. Outside work on the main pipe line from Edmonton to Regina will not get under way until spring.

With a coal shortage resulting from a slowdown in the industry in the United States, coal mining was active on the east coast. Western coal mines were also generally operating at capacity, although some companies in the Edmonton area were on a three-day week. Employment and production were increasing in the Quebec asbestos field, where 2,000 workers in the three major companies had signed a new contract for 1949 and 1950 providing for a 10-cent an hour retroactive wage increase.

A review of the year 1949 shows the expansion which characterized **manufacturing** employment since 1946 giving way to a period of stabilization. Although some segments of the industry were forced to cut staffs during the past year, increases in employment in other groups offset this trend and, on the aggregate, employment remained just fractionally below 1948 levels. Latest data showed employment of paid workers in manufacturing at 1,075,000, or 9,000 below the level one year previously.

A greater irregularity in employment became apparent during 1949. Seasonality was of increasing importance in several industries, notably in the textile division. Short-time and lay-offs also occurred more frequently as output was brought into line with demand.

At the year-end, losses in employment in comparison with the previous year, were registered in animal, fur, lumber, tobacco, clay, glass, and stone, non-ferrous metal and iron and steel industries. In the iron and steel industry, which is the largest of the major manufacturing divisions and employs 285,000 workers, a decline was registered at both primary and secondary levels. In the latter group, capital goods industries, such as agricultural implements and shipbuilding, were the most affected.

These losses were almost balanced by gains in other industries, especially in the consumer durable group. Employment in the automobile, electrical apparatus, furniture, leather and furniture industries was above 1948 levels. Gains were also registered in plant products, textiles, chemicals and electric power. A variety of changes were recorded in the textile industries, which now have a labour force of more than 163,000. Employment in woollen and hosiery and knit goods factories is falling off, with cotton also down slightly. On the other hand, silk and clothing establishments have added workers, resulting in a net gain of 2,000 in the textile group.

Employment in **construction** work was tapering off during December, although completion of projects left over from the record billion-dollar construction season in 1949 was expected to maintain a better than average level of employment during the winter. It was probable, however, that about one-third of the peak labour force of 350,000 would not be required in the off-season.

Generally speaking, most first-class tradesmen were at work, but unskilled and semi-skilled labour was feeling the effect of seasonal lay-offs. Rough carpenters, painters,

## LABOUR FORCE, EMPLOYMENT AND UNEMPLOYMENT

▲ Newfoundland totals included for the first time at October 29, 1949.

cement finishers, bricklayers and workers with similar occupations were hampered by weather conditions, but finishing carpenters were being kept busy on inside work. In railway and highway construction work, seasonal unemployment was also extensive.

Weather was more of a limiting factor than usual in British Columbia, with heavy snowfalls and cold weather halting work during December. A certain amount of employment was provided in repairing damage done by flash floods and heavy rains earlier in the month, however.

Employment in the *transportation* industries has been declining, both seasonally and in comparison with the previous year. Latest data, which referred to November, 1949, give the number employed in all types of transportation work as 369,000, about 20,000 less than the same month in 1948.

Temporary lay-offs occurred in both water transportation and railway transportation during December. Shipping companies had suspended operations with the end of the season and some 1,800 unemployed seamen registered for other work with the National Employment Service. In some sections of the railway industry, staffs were being reduced while other departments were taking on men. Reduction in passenger schedules by the Canadian National Railways resulted in lay-offs in the running trades in January, with the total to be released estimated at 500 by railway officials. Construction crews had finished their season's work and in the mechanical trades in the Montreal and Winnipeg shops 400 men were affected by lay-offs. On the other hand, some rehiring was in progress as a result of heavy holiday business. Snowfalls

early in December resulted in the employment of crews for short periods.

The long-term outlook for the Canadian merchant marine was not bright. The volume and price of cargoes has fallen off in comparison with the immediate postwar period. In part this has been due to a drop in the volume of trade but increased competition from foreign ships has also been an important factor. The subsidization program planned by the Dominion government would enable about 40 ships to keep operating; two years ago the fleet was comprised of 250 vessels. The loss in employment as a result was estimated at approximately 5,000.

### Regional Analysis

Employment levels in the *Maritime* region declined further during December, as the winter season advanced. Unplaced applicants were at the highest point on record, due largely to the curtailment of woods activity this winter. A further steady seasonal increase in applicants could be expected until March.

The mild weather during the month made it possible to extend building construction in several areas. Work continued on projects nearing completion with skilled tradesmen busy on inside finishing work. In general, however, construction work was over until spring. At that time, jobs should again be plentiful judging from the numerous public and private projects being scheduled.

Activity and employment in the pulpwood cutting industry has been slight because of high inventories at the mills. Most of the winter cut has been com-

## PER CENT OF THE LABOUR FORCE WHO WERE UNPLACED APPLICANTS JANUARY 5, 1950

pleted already. Operators hoped that by next season, operations would be back to normal. The recent United Kingdom allocation of \$2,500,000 for eastern Canadian spruce, for delivery in the first six months of 1950, would stimulate cutting activity in the lumber industry very shortly as inventories of sawn and dried lumber were low.

The 25 per cent cut in Canadian National Railways passenger schedules as a result of coal shortages will have considerable effect on employment in the running trades and a number of lay-offs were expected at Campbellton, Moncton, Halifax, Truro and other points early in January. The new policy of shipping all freight for eastern Newfoundland through Halifax to St. John's will provide extra employment for long-shoremen in both ports.

The unseasonable lack of snow throughout the *Quebec* region curtailed employment in many normal winter occupations. Most widespread in its effect was the reduction in logging employment; the cut was completed in many areas but hauling could not start until snow conditions were suitable. Since logging, usually a major winter industry, has been operating this year well below normal levels of employment, this new development was aggravating regional unemployment.

Manufacturing production showed the customary seasonal fluctuations as many plants closed for two weeks at the holiday season. Labour demand was at a very low level. Employment in secondary textiles was reflecting buyers' resistance. Shoe factories continued to operate below capacity.

Mining production in western Quebec was steadily increasing. Expansion programs were under way in many cases, creating additional employment on surface jobs, but the local supply of unskilled and semi-skilled workers was sufficient for requirements. Railway crews have been reduced; a cut in railway services as a result of the coal shortage has affected employment substantially. Construction employment was at a low midwinter level.

The nature and diversification of industry in the *Ontario* region has enabled greater stability of employment, even in the seasonally inactive winter months, than elsewhere in Canada. Despite the loss of export markets for some industries, the ability of the domestic market to absorb accumulated surpluses and the continued expansion of new industries, have sustained manufacturing employment.

Where cut-backs in production have been necessary because of lack of orders or materials, it has been observed during

## UNPLACED APPLICANTS BY OCCUPATION

*This chart shows the occupation of job-seekers registered with the National Employment Service. A more detailed classification of the latest figures is given in Table D-3 on page 270.*

December that many employers have resorted to a reduced work week where possible instead of lay-offs. This has greatly lessened the loss of time and wages for their workers.

In the automobile industry of Oshawa, the change-over from the 1949 to 1950 models has caused a short lay-off of some 2,500 workers, scheduled from the first week of January until not later than January 15. In Windsor, employment in the automobile industry and its feeder plants was very uncertain, since raw material supplies were on a day-to-day basis as a result of the recent United States steel and coal strikes.

During December, construction employment declined where weather forced closures, but in general the level was high for the time of year.

The seasonal decline in employment in the *Prairie* region continued during December but conditions, on the whole, were normal for the time of year. In the eastern sections of the region, the curtailment of logging held down the level of employment, but in the western section the oil boom continued to stimulate business.

Reports on woods operations in the Lake-head indicated that cutting was almost completed, and hauling operations have started in some areas; hauling will be general by the middle of January. Some reduction in employment has already occurred and heavy lay-offs will take place shortly.

Meat packing plants seemed to have passed the seasonal peak, and lay-offs have been occurring. Employment in this industry will be reduced steadily in the next two months. Most flour mills reported continuous operations.

Coal mining was progressing well, and demand for certificated miners continued. At Lethbridge, this demand has been eased considerably by bringing in workers, however. Construction was practically at a standstill throughout the region, although inside finishing work was in progress on closed-in projects.

The seasonal problem of unemployment in the *Pacific* region has been more severe this winter than in normal winters, as a result of blizzards and heavy snow. This unusual weather, which also occurred last year and disrupted employment at that time, held up the re-opening of logging camps and sawmills, and adversely affected construction employment.

Logging camps throughout all forest areas have been closed as a result of snow conditions. The opening of high level camps will probably be delayed in some instances for many weeks. Lower level operations,

however, may re-open quickly if rain or higher temperatures occurred to facilitate snow removal. In this case several thousand woods workers will return to work.

There has also been a large surplus of sawmill workers during the past weeks as a result of the weather. Market conditions are firm for this industry, however, and full operations will be resumed when weather permits.

Pulp and paper, coal and base metal mining industries have continued at a high level of employment with no signs of slackening.

## Employment Service Activities

The influx of job-seekers continued strong as the winter reached more advanced stages. During December, Christmas activity provided numerous jobs, but these were mostly filled by students and women workers. Thus, while the number of women unplaced declined slightly during December, the number of men unplaced mounted steadily at a rate of about 14,000 a week. Lay-offs following Christmas and the usual year-end taking of stock, over-hauling machinery and re-tooling added considerable numbers in the last week of December and early January. By January 12, the total number unplaced had reached an unexceeded post-war record of 323,000 (259,000 men and 64,000 women).

Jobs provided by the Christmas trade boosted placements during December to a level above both that of November, 1949 and December, 1948. This year almost all hirings for the postal service were done through the Employment Service. Apart from these temporary jobs, however, vacancies on file had been reduced to an all-time low. One reason for the few jobs reported is the tendency for employers to hire "at the gate" at this time when many jobless workers are contacting employers directly. However, it also reflects the general scarcity of jobs available. This situation has resulted mostly from the curtailment of outdoor activity although also from other factors, such as the dollar difficulties of overseas countries, greater competition in the domestic market and more efficient production techniques.

The seasonal nature of the increase in job-seekers is indicated in the types of workers affected. Up to the beginning of December, 39 per cent of the increase in unplaced applicants occurred in the unskilled group. The skilled and semi-skilled categories this year are showing more rapid increases than in other years, and by the December date accounted for 38 per cent of the rise. In

both classes, the construction occupations showed the most predominate gain. Sales, clerical and service workers, while equal in number to the other major groups, are less affected seasonally and accounted for only 22 per cent of the gain in unplaced applicants. Much of this rise resulted from the registration of students and married women for Christmas work. The chart included in this section shows the month to month changes in these major occupational groups.

Increasing numbers of the applicants are filing claims for unemployment insurance benefits. By the beginning of December, 78 per cent of all applicants were seeking benefits, as against 67 and 63 per cent one month and one year before respectively. These include casual and short-time claimants. Despite the decided increase in unemployment insurance activity over the year—there were 85,000 more persons seeking benefits this year than last at the beginning of December—the claims are remaining on file for approximately the same length of time as in 1948. Just under one-half of all those seeking benefits have been registered

for one to two weeks; about one-quarter have remained on file for two months or over, while the remainder have been registered two weeks to two months.

Of the 172,000 live claims reported at December 1, 20,000 were short-time, casual or postal claims. This latter group is four times greater than at the same period in 1948, which has resulted mostly from the increase in short-time claims. Many firms have adopted the policy of working several days a week or reduced hours rather than close down the plant. In such cases, provision is made under the Unemployment Insurance Act for workers to be compensated for the period of unemployment.

Over 80 per cent of the claims adjudicated during November were entitled to receive benefits. This represented the highest proportion yet recorded. The main disqualification continues to be insufficient contributions which accounted for over one-half of those not entitled to benefit during the month. The number receiving benefits for the mid-week in November totalled 104,000.

## PRICES AND THE COST OF LIVING\*

### Cost-of-Living Index

The Dominion Bureau of Statistics cost-of-living index declined from 161·7 at November 1 to 161·5 at December 1. This marked the fourth consecutive fractional decline from the August peak of 162·8, and placed the index 2·6 points above December 1, 1948. This latest decrease was almost entirely due to the food index which dropped from 203·3 to 201·9. Sharply lower prices for eggs and slight decreases in meats overbalanced considerably higher quotations for coffee. Home furnishings and services registered the only other decrease moving from 167·4 to 167·1, while the clothing index remained unchanged at 183·7. Fuel and light increased 0·1 points to 135·2 and the index of miscellaneous items 0·3 points to 130·5. The results of the November quarterly survey of rents moved the rent index from 123·9 to 125·0.

From August, 1939 to December, 1949 the increase in the cost-of-living index was 60·2 per cent.

### Cost of Living in Eight Cities

Changes in cost-of-living indexes for the eight regional cities were mixed between November 1 and December 1. Food price indexes were lower at all centres, but in certain cities these declines were over-

balanced by rental increases. Indexes for home furnishings and services recorded small decreases, except in Saint John where an advance of 4·7 points reflected an increase in telephone rates. Group indexes for fuel and light, clothing and miscellaneous items all moved narrowly.

Composite city index changes between November 1 and December 1, 1949, were as follows: Edmonton -0·7 to 156·4; Halifax -0·6 to 153·6; Vancouver -0·4 to 161·9; Montreal -0·2 to 164·1; Saskatoon -0·1 to 162·7; Toronto +0·2 to 157·4; Saint John +0·1 to 158·0. The Winnipeg index remained steady at 155·7.

### Wholesale Prices, November, 1949

The wholesale price index recorded a decline of 0·1 to 157·0 between October and November. Three of the eight major groups moved down also, led by a decline of 2·8 to 119·2 for chemical products. Non-metallic minerals receded 0·8 to 138·1 while Animal Products moved down 0·5 to 164·0. Four groups moved higher; Vegetable Products rose 0·4 to 143·0, while Textile Products rose the same amount to 159·3. Increases of 0·2 each were recorded for Iron and Its Products at 173·7 and

\* See Tables F-1 to F-6.

# COST OF LIVING AND WHOLESALE PRICES IN CANADA FROM JANUARY 1914 TO DATE

(Base 1935-39 = 100)

Non-ferrous Metals at 141.4. Wood, Wood Products and Paper remained unchanged at 188.1. Among the more important commodities to show a decrease between October and November were Rice 25.5 per cent, Arsenious Oxide 19.1 per cent, Lemons 16.3 per cent, Corn Meal 16.0 per cent, Lard 15.9 per cent, Quebracho Extract 15.8 per cent, Oranges 15.6 per cent, Eggs 12.8 per cent, English China Ware 11.1 per cent, Corn (Ontario, Yellow) 10.2 per cent, Zinc Sheet 7.4 per cent. Commodities recording increases during the same interval were as follows: Green Coffee 54.5 per cent, Sheep Skins 26.3 per cent, Cocoa Beans 18.7 per cent, Cocoanut Oil 12.7 per cent, Sulphate of Ammonia 12.0 per cent, Calf Skins 10.0 per cent, Lamb Carcass 7.5 per cent, Cedar Shiplap 5.9 per cent, Superphosphate 5.2 per cent.

The index of Canadian farm products was unchanged in November from 145.0. A decline of 0.4 to 122.6 for Field Products was balanced by an increase of 0.8 to 182.5 for Animal Products.

### World Price Movement in First Half of 1949

Living costs moved higher in most countries during the first half of 1949, while reductions predominated in the levels of wholesale prices. In the majority of countries, advances in cost-of-living indexes were not over five per cent, while declines in wholesale prices ranged up to eight per cent.

Improved supplies of certain commodities permitted the decrease or discontinuance of subsidies in some countries, and a number of prices reacted buoyantly. Exchange diffi-

culties still plagued world markets, although further attempts were made to lower barriers and promote a better balance of trade between countries.

The consumers' price index of the United States moved within narrow limits to show a net decline of one per cent for the six months, foods being little changed, but sizeable reductions occurring in clothing and housefurnishings. The cost-of-living index for the United Kingdom rose by one per cent in the same interval. Subsidy payments on some important articles of food were reduced, and the rationing of clothing and all kinds of textiles ended March 15. Living costs were one per cent higher in Canada, with increases fairly widespread, while in Australia and South Africa they were up five per cent and three per cent, respectively. In France a higher point was touched in January by the index of retail prices in Paris, but by June it had dropped by slightly over 10 per cent.

In the case of wholesale prices, the index for France declined eight per cent; Italy seven per cent; Belgium, seven per cent; Switzerland and the United States, five per cent; and Canada, two per cent. All groups included in the United States index moved lower, as chemicals and drugs led the way with a 10 per cent decrease. Among the countries in which wholesale prices advanced, the index for Peru rose over 32 per cent; Chile, eight per cent; the United Kingdom, five per cent; Mexico, four per cent; South Africa, four per cent; and Australia, two per cent. In the United Kingdom, the index remained fairly steady through March, but mounted sharply in April, and again in May with a fractional increase in June establishing a high for this index.

## STRIKES AND LOCKOUTS\*

### Canada, December, 1949

Industrial disputes between workers and employers which resulted in work stoppages declined during 1949, as compared with 1948, the number, 127, being the lowest recorded for any year since 1939. The workers involved showed an increase of 5,000 over the previous year, and the time loss was greater by 175,000 days. Preliminary figures for 1949 show 127 strikes and lockouts, involving 47,973 workers, with a time loss of 1,060,338 man-working days, as compared with 154 strikes and lockouts in 1948, with 42,820 workers involved and a loss of 885,793 days. In 1946, the peak year, there were 228 strikes and lockouts, with

139,474 workers involved and a loss of 4,516,393 days.

In 1949, about 70 per cent of the total loss was caused by four work stoppages, involving asbestos miners and mill workers in various centres in Quebec, railway car factory workers at Hamilton, Ont., lithographers in various centres in Ontario and Quebec, and motor vehicle factory workers at Oshawa, Ont.

The demand for increased wages, often linked with questions involving unionism and working conditions, was an important

\* See Tables G-1 and G-2.

issue in more than 60 per cent of the strikes and lockouts, involved 55 per cent of the workers, and caused over 80 per cent of the total time lost.

The month of December, 1949, followed the usual trend at this season of the year. Only five strikes commenced during the month and a total of 13 were in existence, involving 3,041 workers, with a time loss of 23,667 days, as compared with 20 strikes and lockouts in November, 1949, with 8,904 workers involved and a loss of 135,526 days. In December, 1948, there were 12 strikes and lockouts, with 2,566 workers involved and a loss of 20,765 days.

Based on the number of non-agricultural wage and salary workers in Canada, the time lost in 1949 was 0.11 per cent of the estimated working time, as compared with 0.09 per cent in 1948; 0.26 per cent in 1947; 0.50 per cent in 1946; 0.03 per cent in December, 1949; 0.17 per cent in November, 1949; and 0.03 per cent for December, 1948.

Of the 13 strikes recorded for December, 1949, one was settled in favour of the

employer, five were compromise settlements, and five were indefinite in result, work being resumed pending final settlement. At the end of the year two strikes were recorded as unterminated, namely, department store clerks at New Westminster, B.C., and fishermen at Burin, Newfoundland.

The record does not include minor strikes such as are defined in another paragraph nor does it include strikes about which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Strikes of this nature which are still in progress are: composers, etc., at Winnipeg, Man., which commenced on November 8, 1945, and at Ottawa and Hamilton, Ont., and Edmonton, Alta., on May 30, 1946; and textile products factory workers at St. Lambert, P.Q., August 29, 1949. The strikes of coal miners, Edmonton district, Alta., January 13, 1948, and of optical lens factory workers at Edmonton, Alta., April 9, 1949, are considered to have lapsed.

## Great Britain and Other Countries

The latest available information as to strikes and lockouts in various countries is given in the *LABOUR GAZETTE* from month to month. Statistics given in the annual review issued as a supplement to the *LABOUR GAZETTE* for April, 1949, and in this article are taken, as far as possible, from the government publications of the countries concerned.

### Great Britain and Northern Ireland

The British *Ministry of Labour Gazette* publishes statistics dealing with disputes involving stoppages of work and gives some details of the more important ones.

The number of work stoppages beginning in October, 1949, was 110 and 12 were still in progress from the previous month, making a total of 122 during the month. In all stoppages of work in progress in the period there were 14,300 workers involved and a time loss of 60,000 working days was caused.

Of the 110 disputes leading to stoppages of work which began in October, eight, directly involving 1,000 workers, arose out of demands for advances in wages, and 36, directly involving 3,600 workers, on other wage questions; six, directly involving 400 workers, on questions as to working hours; 23, directly involving 2,500 workers, on questions respecting the employment of partic-

ular classes or persons; 31, directly involving 3,600 workers, on other questions respecting working arrangements; and four, directly involving 800 workers, on questions of trade union principle. Two stoppages, directly involving 100 workers, were in support of workers involved in other disputes.

### Australia

Figures for the first quarter of 1949, show 308 industrial disputes with 76,335 workers directly involved and a time loss, for workers directly and indirectly involved, of 272,781 man-working days.

For the fourth quarter of 1948, the figures were 162 industrial disputes, 69,981 directly involved workers and a time loss of 325,383 working days for workers indirectly as well as directly involved. During the year 1948 there were 1,133 industrial disputes involving 298,913 workers directly. The time loss given was 1,655,338 man-working days for all workers, whether directly or indirectly involved.

### United States

Preliminary estimates prepared by the United States Bureau of Labor Statistics, for the year 1949, show 3,600 strikes and lockouts involving about 3,100,000 workers and causing a time loss of 53,000,000 man-days. Comparable figures for 1948, are 3,419 strikes and lockouts with 1,960,000 workers involved and a time loss of 34,100,000 days.

# SELECTED PUBLICATIONS RECEIVED RECENTLY IN LIBRARY OF DEPARTMENT OF LABOUR\*

The publications listed below are not for sale by the Department of Labour. Persons wishing to purchase them should communicate with the publishers. Publications listed may be borrowed, free of charge, by making application to the Librarian, Department of Labour, Ottawa. Applications for loans should give the number (numeral) of the publication desired and the month in which it was listed in the *LABOUR GAZETTE*. Students must apply through the library of their institution.

NOTE.—Many of the statistical data in this table are included in the *Canadian Statistical Review* issued by the Dominion Bureau of Statistics.

† Comparable statistics are not available. (1) Labour Force survey figures given are as of October 29, 1949, Nov. 20, 1948 and August 31, 1946. (2) Base 1926=100. (3) Figures are as at end of quarter ending Sept. 30, 1949, 1948, 1946, 1943 and 1939 respectively. (4) Real earnings computed by dividing index of average weekly earnings of wage-earners in manufacturing by the cost-of-living index; base: average for 1946=100. (5) First of month. (6) Base 1935-1939=100. (7) Figures are for four week periods. (8) Annual figures; monthly not available. (9) Year-end figures. (10) Annual index.

**TABLE C-6.—HOURS AND EARNINGS IN MANUFACTURING**

(Hourly-Rated Wage-Earners)

 SOURCE: *Average Hours Worked and Average Hourly Earnings, D.B.S.*

Tables C-6 to C-9 are based on reports from a somewhat smaller number of firms than Tables C-1 to C-5. They relate only to wage-earners for whom statistics of hours of work are also available, whereas Tables C-1 to C-4 relate to salaried employees as well as to all wage-earners of the co-operative firms.

Week preceding	Average Hours Worked			Average Hourly Earnings		
	All Manu- factures	Durable Goods	Non- Durable Goods	All Manu- factures	Durable Goods	Non- Durable Goods

Personal (chiefly laundries).....	41-0	40-9	41-2	67-1	66-9	62-0	27-51	27-36	25-54

<sup>1</sup> Industries classed in the durable manufactured goods industries.

<sup>2</sup> Since 1941, the Dominion Bureau of Statistics has prepared current indexes of average hourly earnings of the employees of eight establishments producing heavy electrical apparatus. Based upon the hourly earnings at June 1, 1941, as 100 p.c., the latest figures are as follows:—Sept. 1, 1949, 228-1; Oct. 1, 1949, 230-9; Nov. 1, 1949, 231-1; at Nov. 1, 1948, the index was 219-2.

<sup>3</sup> Chiefly street and electric railways.

Above food prices are simple averages of prices reported. They are not perfectly comparable in all cases with price averages for earlier years. Changes in grading, trade practices, etc., occur from time to time. (a) Rental ranges shown above are indicative of prevailing rents being paid. They should not be used as a measure of change in rents paid for the same quality of living accommodation over long periods of time. (b) Averages include prices for cuts with bone-in.

\* Preliminary figures.

† Strikes un-terminated at the end of the previous year are included in these totals.

‡ The record of the Department includes lockouts as well as strikes but a lockout, or an industrial condition which is undoubtedly a lockout, is not often encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout included as such in the records of the Department is a cessation of work involving six or more employees and lasting at least one working day. Strikes of less than one day's duration and strikes involving less than six employees are not included in the published record unless ten days or more time loss is caused but a separate record of such strikes is maintained in the Department and these figures are given in the annual review. The records include all strikes and lockouts which come to the knowledge of the Department and the methods taken to obtain information preclude the probability of omissions of strikes of importance. Information as to a strike involving a small number of employees or for a short period of time is frequently not received until some time after its commencement.

TABLE G-2.—STRIKES AND LOCKOUTS IN CANADA, DECEMBER, 1949 (1)

Industry, Occupation and Locality	Number Involved		Time Loss in Man-Working Days	Particulars(2)
	Establishments	Workers		
<b>Strikes and Lockouts in Progress Prior to December, 1949</b>				
<b>MANUFACTURING—</b>				
<i>Tobacco and Liquors—</i>				
Soft drink factory workers, Windsor, Ont.	1	10	200	Commenced August 5; for a union agreement providing for increased wages, payment for empties, check-off, seniority, etc., following reference to conciliation board, employment conditions no longer affected by the end of December; indefinite.
<i>Rubber and Its Products—</i>				
Rubber factory workers, Toronto, Ont.	1	925	8,000	Commenced October 12; for a new agreement providing for increased wages, Rand formula for union dues, pay for two additional statutory holidays (one retro-active), following reference to conciliation board; terminated December 13; conciliation, provincial; compromise.
Rubber products factory workers, Drummondville, P.Q.	1	189	3,950	Commenced November 10; for a new agreement providing for increased wages, retroactive to Apr. 23-49, two weeks' vacations with pay, and revision of hours of work; terminated December 24; conciliation, provincial; compromise.
<i>Animal Foods—</i>				
Meat packing plant workers, Hamilton, Ont.	1	152	2,500	Commenced October 26; for a new agreement providing for certain changes in hours of work, seniority, payment for statutory holidays, etc., as recommended by conciliation board, and wage increase granted to be retroactive to Mar. 1-49; terminated December 23; negotiations; compromise.
Meat packing plant workers, Windsor, Ont.	1	38	340	Commenced November 18; for a union agreement providing for increased wages, reduced hours, and other changes, under consideration by conciliation board; terminated December 12; return of workers pending further negotiations; indefinite.
<i>Printing and Publishing—</i>				
Lithographers, London, Hamilton, Ottawa, Toronto, Ont., Montreal, P.Q.	41	(3) 859	(3) 4,550	Commenced June 29; for a new agreement providing for increased wages, reduced hours, insurance and welfare plan, etc., following reference to conciliation board; terminated by December 14 at all but five establishments (see footnote 3); negotiations, compromise.
<i>Miscellaneous Wood Products—</i>				
Wood products factory workers, Megantic, P.Q.	1	202	1,800	Commenced November 2; for implementation of award of arbitration board for increased wages, reduced hours, time and one-half for over-time, two weeks' vacations with pay, in new agreement under negotiations; terminated December 10; return of workers; in favour of employer.
<b>TRADE—</b>				
Department store clerks, New Westminster, B.C.	1	55	1,000	Commenced August 27; for a union agreement providing for increased wages and other changes as recommended by majority report of conciliation board; un-terminated.

TABLE G-2.—STRIKES AND LOCKOUTS IN CANADA, DECEMBER, 1949 <sup>(1)</sup>

Industry, Occupation and Locality	Number Involved		Time Loss in Man-Working Days	Particulars <sup>(2)</sup>
	Establishments	Workers		
<b>Strikes and Lockouts Commencing During December, 1949</b>				
FISHING AND TRAPPING— Fishermen, Burin, Nfld.	4	50	250	Commenced December 27; for increased prices for fish; un-terminated.
MANUFACTURING— <i>Textiles, Clothing, etc.</i> — Worsted textile factory workers, Trenton, Ont.	1	118	400	Commenced December 7; for a new agreement providing for increased wages and reduced hours; terminated December 16; return of workers pending further provincial conciliation; indefinite.
Shirt factory workers, Hamilton, Ont.	1	56	230	Commenced December 9; alleged discrimination in dismissal of female worker; terminated December 15; return of workers pending further negotiations; indefinite.
CONSTRUCTION— <i>Buildings and Structures</i> — Plumbers, Ottawa, Ont.	37	375	375	Commenced December 28; for a new agreement providing for increased wages, two weeks' vacations with pay, double time on Saturdays, etc.; terminated December 28; return of workers; indefinite.
SERVICE— <i>Recreation</i> — Moving picture projection- ists, Calgary, Alta.	5	<sup>(4)</sup> 12	72	Commenced December 19; for a greater increase in wages than granted by arbitration board, following change in regulations for shifts from two men to one; terminated December 24; negotiations; compromise.

<sup>(1)</sup> Preliminary data, based where possible on reports from parties concerned, in some cases incomplete; subject to revision for the annual review.

<sup>(2)</sup> In this table the date of commencement is that on which time loss first occurred, and the date of termination is the last day on which time was lost to an appreciable extent.

<sup>(3)</sup> Workers involved in Ontario—569, time loss 3,400 days; workers involved in Quebec—290, time loss 1,150 days; work resumed by: Montreal and Hamilton, Dec. 7; London, Dec. 8 and Dec. 12; Ottawa, Dec. 14; Toronto, Dec. 7, at all but 5 establishments, and all but one by Dec. 31; employment conditions considered to be no longer affected by the end of the year.

<sup>(4)</sup> 15 indirectly affected.

## CURRENT LABOUR CONDITIONS

*This article summarizes the latest employment and labour information available at March 10, as the LABOUR GAZETTE went to press. It was prepared by the Economics and Research Branch, Department of Labour.*

**B**Y THE beginning of March, the employment situation was showing signs of improvement throughout most of the country. At March 3, there were 375,900 job seekers registered at National Employment Service offices, as compared with 380,900 at February 9. These figures do not provide an exact count of the number unemployed, since they include some persons who have found jobs and have not so notified the National Employment Service, and exclude others who are unemployed and not registered. They do reflect changes in the employment situation, however.

At first, the decline in the number of registered job seekers was most marked in the Pacific region; as the unusual snow conditions disappeared, loggers, sawmill and construction workers returned to their jobs in large numbers. By February 23, a drop in the number of registered job seekers was evident in almost all provinces, and most local National Employment Service offices were reporting similar trends in their areas. During the next week, the number of registered job seekers increased slightly in all regions except the Pacific, as workers began to apply for supplementary unemployment insurance benefits.

The relatively heavy unemployment this winter has emphasized the problem of seasonal displacement of workers in Canada, where employment in logging, construction, transportation and agriculture is so dependent on the weather. In the war and early postwar years, these workers were quickly re-employed in other industries where the need for labour was great. This winter, although employment levels generally have remained high, labour requirements have not been large, and jobs have been harder to find.

In recognition of the special seasonal unemployment problem in Canada, Parliament has amended the Unemployment Insurance Act to provide benefits for many more of those out of work in the winter. Briefly, unemployment insurance is to cover the highly seasonal logging industry in eastern Canada, and supplementary benefits are to be paid to certain classes during the period January 1 to March 31. The supplementary benefits will amount to 80 per cent of normal benefits, and will

be payable on application to those who have exhausted their benefit rights, and to those who have built up benefit rights by working a minimum of 90 days in the previous 12 months.

Although official figures on registered job seekers may show a temporary rise during March as a result of amendments to the Act, job openings over the next month or two will increase, as farmers, contractors and other employers prepare for their spring and summer work. Continuing high levels of investment are expected to result in a heavy program of house building, construction of roads, and public utilities. Employment in the construction industry is expected to match last year's record level.

Another factor supporting employment is the continuing strong consumer demand, based in part on a total labour income which has been consistently above that of 1948. This reflects the fact that in the great majority of Canadian industries, average weekly salaries and wages were increasing during 1949. For the eight leading industries, average weekly salaries and wages for 1949 were \$45.03, as compared with \$40.11 for 1948. Average hourly earnings, particularly in manufacturing, show a similar upward trend, though increases during 1949 were in many cases not as great as in the previous year.

This consistently upward movement of earnings is in contrast to the uneven employment trends. Employment increases in industries such as automobiles and clothing have almost balanced declines in others like shipbuilding and agricultural implements, to give an average employment in manufacturing just slightly below that of the record level of 1948.

Trends in hours worked per week also show a considerable variation about the average. Although for all manufacturing industries average hours worked have remained almost stable since the decrease from 1945 to 1946, this stability is the result of increases in some industries and declines in others. Almost half of the manufacturing groups reported by the Dominion Bureau of Statistics show a decline in hours of work during 1949.

No large scale Canadian strikes have disrupted employment in Canadian industry this last month. The recent coal strike in the United States resulted in curtailment of some railway services. The layoff of 3,500 workers in the Chrysler Corporation plant in Windsor was due to a material shortage resulting from the prolonged work stoppage in the parent company in the United States.

An event of importance to labour during February was the decision of an Ontario conciliation board in favour of a \$55 per month pension for automobile workers: the union had requested a \$100 monthly pension. The Ontario government has introduced a proposed new labour code to replace the one passed in 1948.

## **IN BRIEF . . .**

Average hourly earnings in manufacturing rose above \$1 for the first time in Canada's history. . . . Unemployment in the United States reached a nine-year peak of 4,684,000 in February, 1950 according to the U.S. Census Bureau. . . . Canada entered the year 1950 with an estimated population of 13,728,000, an increase of 149,000 in the six months from July 1, 1949. . . . Increases in food prices caused a rise in the cost-of-living index at February 1, the first since August, 1949. At 161.6 the index remains below the August peak of 162.8.

# CURRENT LABOUR STATISTICS

Exports.....	Jan.	\$221,180,000	-22.6	- 6.7
Imports.....	Jan.	\$211,900,000	- 0.7	-5.3 (e)

- (a) Estimated on basis of sample labour force survey. Only those who did not do any work in the survey week are here classified as persons without jobs.  
 (b) Some of these "unplaced applicants" registered at the National Employment Service Offices are persons with a job who are seeking other work. On the other hand, there are persons without jobs and seeking work who do not come to the N.E.S. offices.  
 (c) These percentages calculated on basis of 1949 figures excluding Newfoundland.  
 (d) Real weekly earnings adjusted for holidays.  
 (e) Preliminary figures.

Data in this table are preliminary figures from regular reports compiled by various government agencies, including Dominion Bureau of Statistics, the Unemployment Insurance Commission, the Immigration Branch, Department of Mines and Resources, and the Economics and Research Branch, Department of Labour. Detailed information can be found in the statistical appendix of the LABOUR GAZETTE.

# NOTES OF CURRENT INTEREST

## Scope of unemployment insurance to be widened

In the Speech from the Throne, read at the opening of the Second Session of the Twenty-First Parliament by the Governor General, Viscount Alexander, on February 16, the following reference was made to the employment situation in Canada and to unemployment insurance:—

“Employment and prosperity remain at a high level in Canada. The prospects are good for continued private investment in construction and capital development throughout the present year. The demand for consumer goods of all kinds continues to be strong. However, seasonal and local factors have given rise to a significant amount of temporary regional unemployment during the past few months and the security provisions established under unemployment insurance legislation have been called upon to meet the first important test since they were brought into effect.

“Although a high proportion of persons temporarily unemployed are actually in receipt of unemployment insurance benefits, you will be asked to give consideration to a bill to widen the scope and extend the benefits of unemployment insurance.”

## Deputy Minister speaks on industrial relations in retrospect

In an address to the Kiwanis Club of Montreal on January 19, 1950, Dr. A. MacNamara, Deputy Minister of Labour, spoke on industrial relations in retrospect over the past fifty years.

“I know of nothing,” he said, “that has a greater impact on our national economy and national well-being than the maintenance of good labour-management relations and a high standard of living across the board.”

Fifty years ago, he pointed out, the question of industrial relations did not loom so large in the Canadian economy. “In an economy emerging from our rugged pioneer setting, it is not surprising to find labour unions in a comparatively minor position to bargain for better living standards. . . . The population of Canada was around five million, included in which total were approximately 10,000 organized workers in the Trades and Labour Congress, under the presidency of Ralph Smith.” Workers and employers dealt with one another for the most part on an individual basis.

“But the whole basis of employer-employee relationship was soon to be changed by two factors as Canada experienced its industrial growing pains. These were (1) the disappearance of the direct personal relationship between the owner and his workers; (2) the advent of mechanized industry and the assembly line. To which might be added (somewhat later) a third factor—the mushrooming of the big industrial unions.”

Referring to the development of existing federal labour relations legislation, Dr. MacNamara said:—

“This Federal legislation requires employers and employees alike to undertake collective bargaining in good faith. It does not say what the bargain shall be; it leaves that to the parties. It does list what are prohibited unfair labour practices and applies restrictions to both employers and employees.

“I am aware that the legislation, or Federal Labour Code, does not completely satisfy either organized labour or management. I doubt if there will ever be complete unanimity on any legislation touching industrial relations. Our function, in the Department, is to hold the balance evenly to prevent giving either party an undue advantage.

“I am happy to say that one result is that collective bargaining is becoming a humanized process, with labour and management taking their places as equals around the conference table in recognition of their rights and tacit partnership in industry.

“The Federal legislation—which you had a lot to do with framing, because you were all consulted through your associations, has become the pattern for provincial laws. We now have pretty nearly uniformity across Canada.”

## Supreme Court upholds validity of rent control

The question of the validity of Federal control over rentals was referred by the Governor in Council to the Supreme Court of Canada by an Order in Council (P.C. 5840) of November 16, 1949. The question put to the Supreme Court “for hearing and consideration” was:—

Are The Wartime Leasehold Regulations *ultra vires* in whole or in part and if so in what particulars or to what extent?

The hearings began before seven Supreme Court justices, with Chief Justice Rinfret presiding, on Monday, January 30, and concluded on February 3.

The Chief Justice made it clear at the beginning of the hearing that the Court's responsibility was to decide solely whether or not the Parliament of Canada had constitutional power to pass and extend rental regulations.

Supporting the validity of Federal rent controls were Mr. F. P. Varcoe, Deputy Minister of Justice, speaking for the Federal Government; Hon. Dana Porter, Attorney-General of Ontario; Mr. J. J. Robinette, representing tenants; Mr. Maurice Wright, counsel for the Canadian Congress of Labour; and Mr. O. F. Howe for the Canadian Legion.

Contending that Federal rent controls are *ultra vires*, Mr. L. Emery Beaulieu represented the Province of Quebec and Mr. R. M. Willes Chitty presented the case of the Property Owners' Association of Canada.

On March 1 the Supreme Court ruled unanimously that the Wartime Leasehold Regulations were not *ultra vires* either in whole or in part. The seven justices issued separate opinions, which were in agreement on the basic point at issue.

Chief Justice Rinfret said in part: "This court may not doubt that Parliament may competently maintain the regulations it has adopted to meet the emergency and its continuance. . . . Parliament is entitled and empowered to maintain such control as it finds necessary to ensure the orderly transition from war to peace."

(A statement by the Minister of Finance setting forth Government policy with respect to rent control was published in the December, 1949, *LABOUR GAZETTE*, page 1529.)

**Annual meeting of Canadian Construction Association**

Approximately 1,000 delegates, representing the construction industry in every province of the Dominion, attended the thirty-second annual general meeting of the Canadian Construction

Association in Montreal, January 16 to 18, 1950.

Speaking at the Annual Dinner of the Association, the Prime Minister, Rt. Hon. Louis S. St. Laurent, discussed the role of the construction industry in maintaining a high level of employment throughout the country. "It would be wrong to assume," he said, "that the construction industry alone can be an adequate instrument to stabilize the whole economy," although "there is no question that the maintenance

of a high level of construction will greatly help to keep up the general level of employment." In general terms, however, "the level of employment and income depends upon the level of our export trade, upon the demand at home for consumer goods, upon private investment in capital goods, and only to a limited degree upon public investment and government construction," the Prime Minister said. He asserted that notwithstanding that "the prospects for private construction in 1950 are bright," the Government intended "to go on maintaining a backlog of postponable public projects to be available as a 'floor' whenever it may be required."

In a statement of wage policy for 1950, the Association urged that "to avoid any further inflationary trend . . . wage rates should remain stationary for the year 1950," and that "labour and management should work together to produce more, thereby reducing construction costs."

Among many matters included in a formal statement of policy approved by the meeting were a re-affirmation of a belief that "free enterprise, founded on liberty of the individual, will operate to the greatest advantage and best interests of our country;" and advocacy of the fullest possible co-operation among management, labour and government to improve efficiency and reduce costs through increasing productivity.

The Association also called for increased apprenticeship and immigration programs; and suggested co-operation among federal, provincial and municipal governments in providing housing for low-income families, through the establishment of a national long-term, low-rental housing program.

**Authorization for training agreement with Newfoundland** Hon. Humphrey Mitchell, Minister of Labour, announced in January that an Order in Council had been passed authorizing the Dominion to enter into an agreement with Newfoundland to provide financial assistance to Canada's tenth province for vocational training at the secondary school level.

The Minister explained that the Order gave authorization for an agreement similar to those now in existence with the other provinces.

The agreement with Newfoundland will provide:—

- (a) An annual allotment of \$10,000, not matched by the province, commencing with the present fiscal year starting April 1, 1949, and continuing for each fiscal year up to and including the year ending March 31, 1955;

(b) An annual allotment of \$55,800, to be matched by provincial expenditures of equal amount commencing with the present fiscal year and continuing for each year up to and including the fiscal year ending March 31, 1955;

(c) An amount of \$292,250, to be matched by provincial contributions of equal amount for capital expenditures for vocational school buildings and vocational school equipment. At least 25 per cent of this is to be used for purchase of equipment. For this allotment to be used, projects must be approved by the Minister of Labour prior to March 31, 1952, and expenditures must be incurred prior to March 31, 1955.

The Minister explained that the annual grants, mentioned in paragraphs (a) and (b), could be used by the province to pay expenditures for administrative and supervisory vocational staff, vocational instruction and vocational guidance, salaries of vocational teachers, training vocational school teachers, maintenance and repair of equipment, preparation of vocational correspondence courses, machinery, equipment, hand tools, supplies and materials, and bursaries for students attending vocational schools.

The Minister stated that it would be difficult to gauge precisely the beneficial effects of this assistance, but experience had shown that the fact that Dominion funds had been available had encouraged other provinces and municipalities to make large expenditures themselves. It had provided a real stimulus to the development of vocational training which, due to its expensive nature, could normally be made available to a comparatively small proportion of the population. Mr. Mitchell said that many new vocational wings or departments had been constructed or were under construction as additions to existing schools in the larger towns of Canada and a real attempt was being made in all provinces to bring good vocational training to a larger proportion of the population.

**Immigration to Canada in 1949** Immigration to Canada totalled 95,217 during the year 1949, as compared with 125,414 in 1948, a decrease of 24.1 per cent.

The number of immigrants from the British Isles totalled 22,201, a decrease of 51.8 per cent. There were 12,233 Polish immigrants, a decrease of 1,566. Other major categories were as follows (1948 figures in parentheses): Dutch 7,782 (10,169); United States 7,744 (7,381); Italian 7,742 (3,202); Ukrainian 6,570 (10,011); German

5,988 (3,051); Hebrew 4,499 (9,386); Estonian 2,945 (1,903); Lettish 2,847 (3,073); Lithuanian 2,248 (4,336); Czechoslovakian 2,076 (1,433); Magyar 1,633 (1,130); French 1,021 (1,074).

Occupational categories of the immigrants were as follows: farming class 32,849; unskilled workers 15,745; trading class 6,979; mining class 1,355; female domestic servants 4,551; and other classes 22,440.

Ontario received 48,607 of the newcomers, more than all the other provinces combined. Quebec took 18,005, the Prairies 17,904, British Columbia 7,874, the Maritimes 2,777, and the Yukon and Northwest Territories 50.

**Displaced persons help solve domestic help problems**

As of January 14, 1950, 10,282 persons from European displaced persons camps had been admitted to Canada for domestic employment. Of this number, 1,180 were married and 200 were widows accompanied by 207 children; 1,131 were placed in rural homes and 9,151 in urban homes. Although these figures might appear to indicate that the domestic employment situation in Canada had been met, the Department of Labour had still some 1,200 unfilled approved applications for domestic workers in mid-January.

Before their admission to Canada for employment as domestic workers, displaced persons agreed to work for a term of one year in such employment. Upon the satisfactory completion of this requirement, each displaced person receives a certificate signed by Dr. A. MacNamara, Deputy Minister of Labour and Chairman of the Inter-Departmental Immigration-Labour Committee. These certificates provide displaced persons with an honourable discharge from their one-year obligation and gives them freedom to seek the employment of their choice.

In most instances, the presentation of certificates is made to groups of displaced persons at more or less formal ceremonies arranged by local citizens' committees in the larger cities. The Chairman of the Inter-Departmental Committee, or his representative, is usually present to extend to the recipients official commendation for having faithfully fulfilled their contracts and to explain the rights, privileges and duties of Canadian citizenship. If circumstances make it impossible to make group presentations, the certificates are mailed to those who have earned them.

**Foreign  
trade at  
high level  
in 1949**

Canada's foreign commodity trade was maintained at high levels during 1949. Trade returns for the 12 months show total exports down only slightly in value

from the all-time peak established in 1948, while imports into Canada reached a new record value.

Total exports—domestic and foreign—to all countries were valued at \$3,022,500,000 as compared with the record value of \$3,110,000,000 in 1948, the moderate decline in the total being due mainly to a reduction in the aggregate value of exports to dollar-short European countries. Total merchandise imports were valued at \$2,761,200,000, up \$124,300,000 or 4.7 per cent over the previous peak of \$2,636,900,000 for 1948. Most of the rise in imports was in the earlier part of the year. During the latter months there were appreciable declines in the volume of imports as well as some declines in value.

Total exports to the United States last year also set a new record at \$1,524,100,000, up slightly from \$1,522,200,000 in 1948, when the value increased nearly 50 per cent over the previous year, the movement of goods across the border being particularly buoyant in the last two months of the year. Imports from the United States increased \$146,100,000 from \$1,805,800,000 in 1948 to \$1,951,900,000, but at the latter level were still short of the exceptionally high total of \$1,974,700,000 in 1947 when prices were lower.

Increases in purchases from the United States over the previous year were largest in the first seven months of 1949 and tapered off from August to October. In November and December there were decreases, indicating a decline in volume since the values were in terms of devalued Canadian dollars.

In trade with the United Kingdom, both exports and imports were higher in value last year than in 1948. Total shipments to the United Kingdom were valued at \$709,300,000 as against \$688,700,000 the previous year, and imports from the United Kingdom at \$307,400,000 as compared with \$299,500,000. Values of imports from the United Kingdom were generally higher during the first eight months of the year, and lower in the last four. Volume of imports in the closing months of the year, however, was greater than the value figures indicate because of the effect of the devaluation of sterling on the Canadian dollar value.

Canada's overall credit balance on commodity account, due to the rise in imports,

declined last year to \$261,200,000 as compared with \$473,100,000 in 1948, but was above the credit balance of \$237,800,000 in 1947. Most of the decline in the export balance from the previous year occurred in the earlier months of the year. November and December saw large export balances, totalling \$130,800,000, or approximately one-half the year's total balance.

Due to the greater increase in imports than exports, Canada's debit balance with the United States increased in 1949 to \$427,800,000 from \$283,600,000 the previous year—accounting for about two-thirds of the decrease in the overall credit balance—but was less than half the adverse balance of \$918,100,000 in 1947. There were adverse balances with the United States during each of the first 10 months last year, but this trend was reversed in November, when Canada had an export surplus of \$10,900,000, which was followed by a further credit balance of \$10,700,000 in December.

As a result of the greater rise in exports than imports, the favourable trade balance with the United Kingdom increased slightly last year to \$401,800,000 as compared with \$389,200,000 in 1948. These compare with the 1947 balance of \$564,300,000.

**Report of  
Industrial  
Health  
Division's  
Activities,  
1948-49**

Improving the health and working environment of Canada's expanding industrial population is an objective of the Industrial Health Division, whose various activities have been described in the Annual

Report of the Department of National Health and Welfare for the fiscal year ending March 31, 1949.

Established in 1938, the division serves in a consultative and advisory capacity to agencies which operate in the interests of public health. Through its own medical, laboratory and information services it has supplemented the industrial health activities of governmental and voluntary health agencies as well as industrial and labour organizations with which it works in continued liaison.

Throughout the year, medical and nursing consulting services were provided to improve and promote plant medical programs and to appraise industrial health problems. Because sickness and absenteeism represent an estimated annual loss of \$600,000,000 to industry, the division's medical staff carried out a continual educational campaign to inform industry of the benefits of a plant medical service. Over the year, numerous smaller firms showed interest in the division's suggestion

that medical services and facilities can be shared between a group of plants in one area.

Following requests by provincial departments of health, the division conducted further health surveys in such industries as foundries, coal mines, fertilizer plants, machine shops and quarries, in order to study new or changed occupational exposures. Special attention was paid to the silicosis hazard, which is common to industries that employ dust-producing processes. Where hazards were found to exist, control measures were recommended.

In answer to many requests from governmental and industrial sources the division also provided technical assistance and information. Provincial health departments and industries submitted numerous problems including the disposal of fluorescent lamps, control of dermatitis, use of explosives in wells, occupational diseases in the petroleum industry and control measures required in the use of various toxic substances.

The division continued its practice of providing information on industrial health practices to management and labour and to professional personnel concerned with the health of workers. The division's monthly *Industrial Health Bulletin*, containing articles on aspects of industrial health was supplied to all Canadian establishments having more than fifteen employees, to 2,000 trade union bodies and to governmental and professional agencies. Started in 1948, the new semi-annual periodical *Industrial Health Review* is designed to meet the need for a more thorough knowledge of technical information on industrial medicine and hygiene. To date 4,000 physicians have requested the *Review* indicating a wide interest in this new publication.

The division's laboratory service devoted the year to discovering further technical solutions to health problems originating in the working environment. The laboratory's Geiger-counter X-ray spectrometer was standardized for estimation of silicosis-producing properties in industrial dusts and manufacturing materials. Of the more than 800 samples of mine and foundry dust analysed, many were found to contain high percentages of free silica. This information enabled provincial authorities to work out protective measures based on authentic knowledge of environment conditions. Successful trials were given to a device for testing factory air for methyl bromide.

The facilities of the division were also extended to the Civil Service Health Divi-

sion. Among the services offered were a survey of lighting in railway mail cars and information on hazards associated with the handling of pesticides.

At the end of 1949 a total **Registration of 10,517 apprentices were registered in the seven provinces with which the Department of Labour has Apprenticeship Agreements.** Of these apprentices, 5,247 were in the building trades.

These totals show an increase since the end of 1946, when there were 7,470 apprentices, including 4,783 in the building trades. However they are below the peaks reached subsequently. The peak of registration of apprentices in all trades was 11,902, at March 31, 1948. In the building trades a peak of 6,405 was reached at December 31, 1947.

The totals for all trades in the various provinces (with the totals for the building trades in parentheses) are as follows: Ontario, 5,105 (2,406); Alberta, 1,869 (965); British Columbia, 1,482 (638); Manitoba, 811 (528); Saskatchewan, 491 (244); New Brunswick, 397 (263); Nova Scotia, 362 (203).

(An historical and descriptive article on apprenticeship in Canada appeared in the February, 1949, issue of the *LABOUR GAZETTE*, pp. 146-52.)

#### **Convention of Industrial Accident Prevention Associations**

It has been announced that the Annual Meeting and Convention of the Industrial Accident Prevention Associations will be held in the Royal York hotel, Toronto, on April 24 and 25, 1950.

The annual meetings of the ten class Associations, representing 17 classes of industry under workmen's compensation will be held on the first day of the convention. About 3,300 delegates are expected to attend.

#### **Report on taxation statistics, 1949**

The Department of National Revenue has issued *Taxation Statistics 1949*, the fourth annual report of the Taxation Division. Detailed information concerning the amount of taxes collected by the Dominion Government from corporations and individuals from 1917 to 1949 is contained in this comprehensive report.

A table classifying taxpayers by occupation reveals that the legal profession was the highest-paid, 3,886 lawyers receiving an

average income of \$7,822. Some of the groups classified are included in the following table:—

Occupation	Number	Average Income
Lawyers .....	3,886	\$7,822
Medical doctors and surgeons	7,442	7,666
Engineers and architects...	1,114	7,452
Dentists .....	3,557	5,713
Osteopaths and chiropractors	480	4,348
Business partners .....	44,026	4,267
Investors .....	52,859	4,197
Sole business proprietors...	96,971	3,891
Salesmen .....	20,800	3,847
Forestry operators .....	1,329	3,771

The "employee" class of taxpayers who totalled 2,060,946 had a total income of approximately \$4,404 million and an average income of \$2,137. They contributed \$402,700,000 in taxes or 64.7 per cent of the total.

The "employee" class is subdivided into a number of groups, some of which are as follows:—

	Number	Average Income
Armed Services .....	19,430	\$2,171
Municipal Governments.	52,040	2,157
Business Enterprises ...	1,737,898	2,156
Provincial Governments.	46,401	2,132
Dominion Government..	93,686	2,093
Educational Institutions.	60,540	2,075

With the coming into force of legislation in Newfoundland on January 31, all provinces in Canada now have in operation legislation making statutory provision for the payment of mothers' allowances.

In 1948, a total of \$12,804,057 was paid out in mothers' allowances benefits in nine provinces of Canada, the Department of National Health and Welfare reports in the January issue of *Canada's Health and Welfare*. Altogether, 32,669 families and 87,013 children were assisted. This is an increase over the previous year, during which payments totalling \$11,009,889 were paid out in respect of 29,540 families and 75,138 children.

Mothers' allowances are paid to needy mothers, subject to means test and residence requirements, to enable them to remain at home to care for their dependent children. This form of social assistance is a provincial responsibility and the total cost is paid out of provincial treasury funds, except in Alberta where the municipalities contribute 20 per cent. The legislation is administered by public welfare authorities.

In addition to providing monthly allowances for a mother and her dependent children, several provinces allow an additional amount for a disabled father at home. Some provinces also make supplementary grants in the form of assistance

for rent, fuel and winter clothing, and for extraordinary expenditures such as needed repairs to the home. Additional allowances are also made in case of inability to work caused by sickness.

Some form of medical care and hospitalization is provided by most provinces in addition to cash payments. British Columbia, Alberta and Saskatchewan provide complete medical, surgical, dental, pharmaceutical and hospitalization services for recipients and their dependents.

### Potential supply of engineers in balance with demand

The report of the Bureau of Technical Personnel for the quarter ending December 31 presents an analysis of the annual statement of the Engineering Institute of Canada on the registration in engineering at Canadian universities and its relation to the long-term supply of engineers.

It is indicated that the registration of war veterans in engineering courses fell sharply from 1946 to 1949. Of the 4,643 veteran students enrolled in all years in 1949, slightly more than one-half were in the graduating year and only 150 were in the freshman year. It is anticipated that by 1954 "graduating classes may be expected to assume an entirely civilian character." Taking the ordinary enrolment direct from the secondary schools for the years 1947, 1948, 1949, it was concluded that "we are thus approaching a point where we may expect to see about 1,200 graduates per annum from our engineering colleges."

The annual graduations over a period of 30 years indicate that the growth in membership has been fairly regular and gives a further measure of validity to the estimate of "about 1,200 graduates per annum" in the foreseeable future.

Concerning the actual and potential demand for engineering graduates, it is stated that "the general picture is that employers, as a group, are not contemplating any abrupt cessation of recruiting." Based on current industrial activity, as well as past experience, a number of employers have submitted tentative estimates as far ahead as 1954. An examination of these and other relevant factors, indicates that "it now appears quite possible that the cumulative supply of new graduates, which caught up to the apparent cumulative demand in 1949, may remain somewhat above it for a short period." But "it seems equally possible that the sharp drop in the size of graduating classes by 1954 will result in a close balance at that time, and it would not be surprising if some shortages

of supply began to appear." Thus, while the students who will graduate during the next three or four years may not have the wide choice of initial opportunities enjoyed by graduates in recent years, "their prospects on a slightly longer term basis, appear to be at least equally favourable."

**Platform of Chamber of Commerce submitted to Cabinet**

The *Platform of the Canadian Chamber of Commerce* for 1950, to which reference has already been made in the *LABOUR GAZETTE* (Feb., 1950, p. 164), was presented to the Prime Minister and some members of his Cabinet on January 6 by officials of the Chamber.

The *Platform* includes a statement of policy on employer-employee relations.

**Study of labour relations in Canada**

*Labour Relations and Precedents in Canada* is the title of a book compiled by Mr. A. C. Crysler, B.A., LL.B., and published in 1949 by the Carswell Company of Toronto. The purpose of the book is "to digest the great development in labour relations in Canada which occurred at the national level during the second world war and post-war period down to the enactment of the Dominion Industrial Relations and Disputes Investigation Act in 1948, and to link this material to the Act."

The author points out that with the enactment of the Wartime Labour Relations Regulations (P.C. 1003) of February 17, 1944, compulsory collective bargaining became established in Canada and has since become "a national institution of great size and power".

The author observes that the National Wartime Labour Relations Board which was set up to administer P.C. 1003 had to interpret the Regulations on many occasions in cases before it. As a result, the work of the Board under the Regulations has developed an extensive labour relations jurisprudence on the procedures of collective bargaining. This body of decisions forms a valuable background of precedent and practice for operation under the Industrial Relations and Disputes Investigation Act.

Chapter I traces the historical development of labour laws and practices in Canada, discussing briefly the division of legislative power between the Dominion and the Provinces and citing the principal cases in which courts have determined whether or not particular subject matters are within the legislative competence of the Dominion or of a Province.

Chapter II classifies under appropriate headings decisions of the National War Labour Board under the Wartime Wages Control Orders, with particular reference to those which have a continuing value in wage negotiations and in the work of conciliation boards and arbitrators in wage disputes.

Chapters III and IV set out the decisions of the National Wartime Labour Relations Board and recommendations of Boards of Conciliation appointed under the Wartime Labour Relations Regulations to deal with the conciliation of disputes.

These four chapters set out what is required by law or what was decided or recommended by the administering boards. In order to show actual practice, Chapter IV also contains a chart of prevailing clauses in some 90 collective agreements in force during the last half of the year 1947.

The text of P.C. 1003, and of the Industrial Relations and Disputes Investigation Act are set out as appendices. Appendix C shows the legislation and regulations by which Ontario has applied the provisions of Part I of the Dominion Act in the provincial labour relations field. A table of court cases may be conveniently consulted.

The author's source for this material, with the exception of the section on collective agreements, is the *LABOUR GAZETTE*. In organizing and classifying this already published material, Mr. Crysler has made it more easily available and his book should be a useful source of reference.

**Trade union membership in United Kingdom, 1948**

For the third year in succession, trade union membership in the United Kingdom reached a new high level. A total membership of 9,301,000 at the end of 1948 is reported by the Ministry of Labour and National Service. This is an increase over the previous year of 1.7 per cent. The female membership totalled 1,669,000.

At the same time, the number of separate unions fell to 706 from the 1947 figure of 733, thus continuing the trend towards amalgamation that has persisted throughout the present century.

Seventeen unions had a membership of 100,000 or more, and accounted for two-thirds of the total membership. More than half of the unions (406) had a membership of less than 1,000—most of them with fewer than 500 members, but together they represented only slightly more than one per cent of the total.

The group of unions with the largest membership, both male and female, was that of road, dock and transport workers and general labour, which had 2,140,560 members. The metal trades, engineering, shipbuilding and electrical goods group was next, with a membership of 1,666,860. Coal mining was third, with 784,730 members. These three groups together represented almost one-half of the aggregate membership of all unions.

**TUC wages policy endorsed by small margin**

The British Trades Union Congress General Council's recommendations for wage stabilization was endorsed by a majority of 657,000 at a special conference of trade union executives on January 12. On a card vote, the poll was 4,263,000 for, and 3,606,000 against the proposal.

The General Council's plan provided for the suspension of all wage claims and sliding-scale agreements, except for claims for very low-paid workers, until January 1, 1951, unless the retail prices index should rise to 118 (L.G., Jan., 1950, p. 16).

Criticism of the policy centered mainly on the question of the lower-paid workers, and the urgency of reducing profits and prices. Acceptance of the General Council's policy, some delegates declared, was conditional on government action in bringing down prices and profits.

**British WEA report on activities, 1948-49**

Workers' Educational Association classes reached a high record in 1948-49, according to the report presented to the annual conference of the WEA, held

in London on October 22-23. Classes numbered 6,380, with a total enrolment of students of 111,351, as compared with 5,767 classes and 103,757 students in 1947-48.

Social Study courses included such subjects as economics, political and social science, current affairs, town and country planning, agriculture and nutrition. Other courses were provided in philosophy and religion, science, and literature and arts.

A two-weeks' summer school for colonial students, for the study of adult education, was organized at the invitation of the Colonial Office.

The steady increase of the past few years in the number of affiliated societies continued. In the year under review there were 2,927 organizations affiliated with the WEA. Both branch and district membership, however, showed a decline. At the end of the year the actual paid-up membership was 39,632, as compared with 43,364

in 1947-48—a decrease of 3,732. The falling-off in branch membership is attributed to the increased membership fee imposed by the 1947 annual conference.

In addition to the publication of *The Highway*, the WEA's official monthly journal, and a number of pamphlets in the two series "Topics" and "Study Outlines", the Association, early in the year, inaugurated on an experimental basis a monthly service of syndicated articles, dealing with subjects of special interest to trade union members, and to editors of trade union journals, for free publication.

One of the most significant developments during the year was the increased activity of the Association in the international field of workers' education, the president stated in his address. "The International Federation of Workers' Educational Associations, of which our General Secretary, Mr. Green, is the President, and our new Deputy Secretary, Mr. Harry Nutt, is the Secretary, is now officially recognized by UNESCO as a non-governmental agency for consultative purposes."

**Accident prevention in Britain**

The Factory Department of the British Ministry of Labour and National Service has resumed the quarterly publication of a series

of illustrated pamphlets entitled *Accidents: How They Happen and How to Prevent Them*. Volume I (October, 1949) in the new series describes the cause and prevention of accidents which occur in factories, at docks, and on building operations and works of engineering construction in connection with lifting and suspension ropes, hoists and lifts, processing and lifting machinery, building and structural work, wood-working machinery, chemicals, the wearing of jewellery by women workers and sitting on machines.

Similar pamphlets were issued quarterly before the war under the title, *How Factory Accidents Happen*, but regular publication was discontinued after September, 1939. A subsequent issue in 1941 dealt with types of accidents most common in war time (L.G., 1942, p. 701).

*A Short Guide to The Factories Acts, 1937 and 1948* has been issued in a 16-page pamphlet by the British Ministry of Labour and National Service.

The pamphlet does not purport to cover all the requirements of the Acts or of the numerous Regulations, Rules and Orders made under them which prescribe special precautions for particular kinds of work or plants. It merely summarizes, briefly, the main provisions in the Factories Act of

1937, as amended in 1948, for the safety, health and welfare of workers in factories and the legal restrictions imposed by the Acts on the hours of women and young persons in such workplaces.

**Safety  
in use of  
derrick  
cranes**

An illustrated pamphlet entitled *The Use of Derrick Cranes* which was recently issued by the Factory Department of the British

Ministry of Labour and National Service as Safety Pamphlet No. 15 (Third Edition), recommends safety measures to be observed principally in the use of Scotch and Guy Derrick cranes, but the points dealt with in the pamphlet are applicable also to other types of jib crane.

It is pointed out in the pamphlet that many of the crane accidents which occur through the improper use, careless handling or failure on the part of users to carry out necessary maintenance work could be prevented by periodic, thorough examinations with replacement of defective parts and by proper use. Such examinations and some of the other recommendations in the pamphlet are already required by law in factories, warehouses, at docks, in shipbuilding yards and on building operations.

Useful information is given for the guidance of purchasers of new and second-hand cranes, the purchase of the latter requiring much more care than that of new cranes.

Safe practices in the use at different times of jibs of different lengths, for the erection of a crane and its testing after erection, and for ensuring the stability of a crane by means of adequate methods of anchorage are recommended.

Crane users are cautioned against overloading, a condition which is generally unknown to the driver. Each crane, it is suggested, should therefore be equipped with suitable, automatic safe load indicators by which the driver can see when the safe load is being approached. Sound signals, it is pointed out, are intended primarily to warn persons other than the driver when the crane is overloaded and should seldom be used, and then only momentarily.

Methods of preventing accidents which result from falling jibs, fractures of parts of cranes and faulty wire ropes used for the hoisting and derricking motions of cranes, are described.

The pamphlet emphasizes the necessity for guarding all dangerous parts of the crane machinery as required under the Factories Acts and Regulations. Such dangerous parts include flywheels, gear

wheels, couplings, belt and chain drives, revolving shafts, keys, set screws, etc.

Other sections deal briefly with the effective control of reversing mechanism, fire hazards in crane cabins, the crane driver's qualifications, the employment of signallers, the avoidance of shock loads, the provision of safe platforms for drivers, operators or signallers, the construction of the driver's cabin, and stress the importance of frequent inspections with repairs or replacements of defective parts.

Specific references to cranes in the Factories Acts and Regulations and to the Factories Act Forms required for use in the inspection, testing and examination of cranes, are listed in an Appendix to the pamphlet.

**President  
Truman's  
State of  
the Union  
and economic  
reports**

In his State of the Union address to the United States Congress on January 4, President Truman predicted that the year 2000 A.D. would see the average U.S. family receiving a real income of three times the amount it receives today. If the country's productive power continues to increase at the same rate that it has in the past 50 years, total national production at the turn of the century will be nearly four times greater, Mr. Truman said.

These gains can not be made, he continued, unless business men maintain their present spirit of initiative and enterprise, workers and unions increase productivity and secure a fair share of economic benefits for labour, agriculture achieves stability and prosperity, and government and private enterprise develop the country's natural resources in the interest of the public.

Given a proper environment, hundreds of thousands of new and independent businesses will appear as national production grows, Mr. Truman said. If this does not occur, the constantly expanding economy will come under the control of a few dominant groups. The danger of monopoly must be curbed, he said, so that independent business may compete in a system of free enterprise. He recommended that Congress complete action during the session on a bill "to close the loopholes in the Clayton Act which now permits monopolistic mergers".

On January 6, in his annual economic report, President Truman told Congress that the 1949 period of recession had been successfully combated. Within five years, he predicted, the country will have raised

its annual total production from \$259 billion to \$300 billion. At the same time as boosting the average family income by \$1,000 this rise in output would provide employment opportunities for about 64,000,000 workers.

Total civilian employment in 1949, he stated, averaged 58,700,000 which, compared with the average figure of 59,400,000 in 1948, reflects the recession that occurred during the first half of 1949. Unemployment was at its worst in July, 1949 when 4,100,000 were out of work. By December, this number had been reduced to 3,500,000 which was 1,600,000 more, however, than the total unemployed in the same month of 1948.

While total production of goods and services amounted to 259 billion dollars, this was considered to be 10 to 13 billion dollars short of maximum production. Industrial production suffered most with a drop of nine per cent below 1948, while agriculture declined about one per cent.

Consumer prices dropped two per cent from the 1948 level and a smaller number of workers received wage increases than in earlier post-war years. The number of strikes was about the same as in 1948, but the strikes in the major coal and steel industries involved a 50 per cent increase in the loss of man-days.

During the course of his speeches the President asked Congress for a repeal of the Taft-Hartley law, which he maintained was inconsistent with true collective bargaining. He also requested a revision in the tax system in order to secure a moderate increase in revenue. He advocated mandatory price supports for farm commodities which are not yet covered by legislation. Turning to the housing situation, he recommended that rent control be retained another year and that Congress pass legislation to enable co-operatives and other non-profit groups build houses for the lower and middle-income groups.

Other legislation which he requested concerned an increase in the benefits and extension in coverage of old age and survivors' insurance; strengthening of the unemployment compensation law; remedying the shortage of doctors and nurses; establishment of a system of medical insurance available to all Americans; provision of Federal assistance to the states for the maintenance of adequate schools and the passage of the civil rights bill which has been under Congress' consideration since February, 1948.

### **Industrial Relations Research Association**

Three publications of the recently established Industrial Relations Research Association have been received in the Department of Labour.

The Association was founded in 1947 as a learned society in the field of industrial relations. Its membership, which includes a number of Canadians, consists of university economists, members of industrial relations institutes, government employees, union officials and research workers, business executives and personnel directors, arbitrators, attorneys, and labour relations consultants.

Its purposes are:—

"1. the encouragement of research in all aspects of the field of labour—social, political, legal, economic, and psychological relations, personnel administration, social security, and labour legislation;

"2. the promotion of full discussion and exchange of ideas regarding the planning and conduct of research in this field;

"3. the dissemination of the significant results of such research; and

"4. the improvement of the materials and methods of instruction in the field of labour."

According to its constitution, the Association "will take no partisan attitude on questions of policy in the field of labour, nor will it commit its members to any position on such questions."

The first annual meeting of the Association was held in Cleveland, Ohio, December 29-30, 1948, and its proceedings have been published. They comprise a series of papers and discussions of such subjects as collective bargaining, wages and the price level; disputes that create a public emergency; developments in social security; and collective bargaining and management rights.

The Association has also published a Membership Directory, dated October, 1949; and the proceedings of a meeting held in Denver, Colorado, September, 1949, on the Psychology of Labour-Management Relations.

### **North American unions join metalworkers federation**

The Canadian Edition of the *United Automobile Worker* for January, 1950, states that three important unions having membership in the United States and Canada, have affiliated with the International Metalworkers' Federation.

The three unions are the United Automobile Workers (CIO), the United Steelworkers (CIO), and the International Association of Machinists (independent in the United States but affiliated with the TLC in Canada).

The Metalworkers' Federation is one of seventeen international trade secretariats, composed of groups of trade unions covering the same industries in different countries (L.G., Feb., 1950, p. 176).

The *United Automobile Worker* states that the Federation has six million members in 15 countries. UAW affiliation was formally accomplished by President Walter Reuther during his recent visit to Europe as a delegate to the first congress of the new International Confederation of Free Trade Unions.

According to the article, "UAW affiliation was formalized at the Zurich, Switzerland, meeting of the IMF Central Committee, of which President Reuther is now a member. Elected unanimously by the conference as President of the Automobile Division of IMF, Reuther is now laying the groundwork for the first international conference of union representatives from all automobile plants in the free world. In this connection, President Reuther during his brief trip to Europe visited and made a study of wages and working conditions in auto plants and met with auto union groups in Great Britain, France and Germany.

"Addressing the IMF governing body for the first time, Reuther pledged aggressive support by the UAW of the IMF program to improve and equalize auto worker wage and working standards in all countries, to provide a channel for mutual aid in strikes and lockouts, and to act as a clearing house for information of benefit to metalworkers in member nations.

"IMF is directly represented in the new ICFTU, to which the UAW is also affiliated through membership in the CIO. Thus the UAW is represented in the World Confederation on two levels. The Trade Secretariats of which IMF is now the largest and most influential, will be the main props and working arms of the over-all Confederation."

**AFL seeks international reduction of working hours**

The American Federation of Labour has asked the Economic and Social Council of the United Nations to place on its agenda the item, *International Reduction of*

*Working Hours as Consequence of Rising Labour Productivity.*

In a memorandum supporting its proposal for international action to reduce working hours, the AFL notes that the I.L.O., at its general conference in 1935, adopted a Convention approving "the principle of the forty-hour week applied in such a manner that the standard of living is not reduced in consequence." The memorandum points out that this Convention was considered to be "in substance a proclamation of future policy," but adds that fifteen years later "the advocated change is still far from being translated into effective action."

The memorandum argues that technological changes and rising productivity provide the basis for greater amounts of leisure time which in turn permit nations to consume the greater output made possible by advanced technology. It asserts that when hours are reduced, management as well as labour gain from the resulting higher output per man-hour.

The memorandum concludes as follows:—

"Labour today is in no way opposed to the introduction of modern machinery and modern production methods. However, they have the legitimate desire to share in the benefits which human and technical progress bestow on humanity. They want to share in the form of improved welfare; in other words, in the form of improved income (necessary purchasing power for the increased production); of reduction of working hours with the result of increased leisure time, so that they may participate in the enjoyment of the arts and sciences and not be excluded from the benefits of advancing culture.

"Thus the moment has been reached when the 40-hour Convention of the International Labour Organization of 1935 should cease to be a proclamation of future policy. It should become the goal to be realized in the present. To what extent a further reduction of the working hours can be proclaimed as the goal for the International Labour Organization policy, ought to be examined.

"The American Federation of Labour believes in the improvement of the standard of the working men and women by the efforts of genuinely free trade unions and by collective bargaining. However, in our closely knit modern world they are also aware of the necessity for internationalization of human progress and of agreement reached for the purpose of securing the continuation of improvements reached by trade union efforts.

"The American Federation of Labour therefore respectfully suggests that the Economic and Social Council decide:—

- (a) To have the necessary measures prepared for the gradual establishment of the 40-hour week;
- (b) To begin a study on the question of an agreement for a further reduction of working hours, especially in the economically more advanced countries with the goal of a 30-hour week.

"Both tasks to be undertaken in co-operation with the International Labour Organization."

### Celebrate centenary of birth of Samuel Gompers

Samuel Gompers, one of the founders, and for 41 years President, of the American Federation of Labour, was born in London, England, on January 27, 1850. His parents had emigrated from Amsterdam and settled in the east end of London a few years earlier, where his father followed the trade of a cigar-maker. The future labour leader received four years of formal education in a small east London school and at the age of ten was apprenticed to the trade of shoe-making. He found this work not to his liking and after a short time became a cigar-maker's apprentice.

Three years later, in 1863, the Gompers family emigrated to New York where young Gompers completed his apprenticeship and became a member of the English-speaking cigar-makers' union in New York City. He was keenly interested in union activities, especially their humanitarian projects, and quickly gained prominence successively in his local union, in city-wide labour projects, and then in the International Union of Cigar Makers. As a leader in his own International, he took an active part in forming a federation of craft unions, which culminated in the founding of the American Federation of Labour in 1882. He was made President of the newly organized Federation, and with the exception of one year, 1895, he held that position until his death in 1924.

Although opposed to war, Mr. Gompers resisted pacifist tendencies in his unions, when the United States entered the first world war in 1917. It was said to be largely due to his influence that labour stood unitedly behind the war effort. He represented the AFL at the Peace Conference in Paris in 1918-19 and was elected Chairman of the Peace Conference Committee on Labour Legislation whose deliberations brought about the formation of the International Labour Organization. He took an active part in organizing the Pan-

American Federation of Labour of which he was elected President shortly before his death in December, 1924.

"The Gompers' Centennial year" is being marked by a series of year-long, nationwide activities by the American Federation of Labour. The celebrations opened with a dinner in New York early in January, at which President Truman, Vice-President Barkley and other high government and labour officials paid tribute to Mr. Gompers as a citizen, humanitarian, and labour leader.

The AFL leaders re-dedicated the 8,000,000-member organization to Mr. Gompers' principles and his drive to "agitate, educate and organize." The Federation has set an objective of 1,000,000 new members in 1950. A series of labour rallies has been arranged to work for the election of a "liberal Congress" in November, for the specific purpose of securing the repeal of the Taft-Hartley Act and the Government of the United States issued a special three-cent Gompers' postage stamp in January.

### Mr. Ching emphasizes progress in industrial relations

A suggestion that statistics of industrial disputes fail to give a balanced picture of the progress of industrial relations was made recently by Cyrus S. Ching, Director of the U.S. Federal Mediation and Conciliation Service.

"The number of strikes in any given period of time or the number of man-days lost to national production by reason of stoppages is no reliable indication of improvement or deterioration of such relations," said Mr. Ching, as quoted in the *New York Times*.

"There are too many economic and political factors beyond the control of employers or unions to warrant reliance upon such a crude standard of measurement.

"A high incidence of strikes in one year may mean that the industrial atmosphere is being cleared of troublesome issues and give promise of pacific relations once they are removed."

Mr. Ching cited the strike in the U.S. steel industry last fall as an example of a case in which the settlement "resolved that issue, it is believed for a substantial period of time."

Instead of looking at the number of strikes and the man-hours lost, Mr. Ching suggested comparing the conduct of the steel companies and the employees in the 1949 strike with the Homestead steel strike killings in 1892 and the violence of the Nineteen Thirties.

The 1949 steel dispute, he said, "was carried on with economic weapons exclusively; both sides refrained from using physical force in any form and from indulging in provocative acts which might result in violence. As a result the relations developed in recent years between employer and the union were unimpaired; there is every reason to believe that such relations will continue, in the future, to be further cultivated, enriched and improved by both sides."

Mr. Ching pointed out that "there appear to be many people, particularly during a period of strikes in important industries, who view the future of industrial relations in our country with foreboding.

"The editorials they write, the speeches they make, the letters they send, express apprehension and a conviction that industrial relations are deteriorating rather than improving. These people do not see the present clearly and either have forgotten the past or never knew it.

"It is understandable that the press should give prominence in news reports to labour disputes featuring dramatic episodes. The tens of thousands of agreements which result from the realistic collective bargaining of intelligent and co-operative management representatives and trade union leaders and which do not result in strikes, have little news value.

"There appears to be nothing particularly newsworthy in the tens of thousands of settlements of grievances achieved every year through the processes of collective bargaining or voluntary arbitration under the terms of management-labour agreements.

"Contrary to an impression held by many, industrial relations in this nation, generally, are not governed by existing statutory regulations or by board or court orders. Industrial relations, rather, are carried on through negotiation and a system of voluntary jurisprudence by representatives of the parties who have learned to respect each other's good faith and intelligence and who are willing to accommodate the needs and desires of their constituents and principles to the common good."

**Further case study of successful labour relations**

A twelve-year labour-management relationship that handled 30,000 grievances without a strike is analysed in a case study made by the National Planning Association, of

Washington, D.C. The Association's findings are available in a published report.

For the sixth in the series of studies into the causes of industrial peace under collec-

tive bargaining (L.G., June, 1949, pp. 703-8), the National Planning Association selected the Lockheed Aircraft Corporation, at Burbank, Calif., and Lodge 727 of the International Association of Machinists. The experience of Lockheed and the IAM "demonstrates how a collective bargaining system can be faced by enormously difficult and complicated problems and emerge, though by a narrow margin, without any resort to force," the report states.

The relationship is described as a changing one, developing since 1937 through five clearly delineated periods.

Changed conditions and new problems brought about by the war, the report states, transformed the harmonious relationship which had existed between a small company and a small union at a time when other companies in the area were openly and vigorously opposing unionism. The company expanded enormously and "became largely staffed by green supervisors." The union "grew into a mass movement with mostly untried leaders." Aggressive day-to-day bargaining which the union undertook as a means of selling itself to new and inexperienced industrial workers was countered by the company's becoming protective about managerial rights.

In the immediate post-war year good will re-entered the relationship. When industry was slashing payrolls the company maintained its employment at a higher level than competing companies, and led the industry in making a 15 per cent increase in wages.

By 1947, however, the business prospects on which the good feeling was partly founded had deteriorated gravely and the company feared for its survival. The surpassing of 1947 and 1948 wage settlements by other companies and unions in the industry subjected the IAM to criticism by its members and by its major rival union. Internal dissension developed. A union election resulted in a new leadership pledged to bargain more aggressively.

In 1949, the parties entered negotiations with deteriorated relations, but the basic situation was changed. Business conditions showed a decided improvement. Eventually the parties concluded an agreement viewed as satisfactory by the union. Wages were raised considerably more than by the rest of the Southern Californian airframe industry.

Throughout its relations with the company the union was perpetually faced with the problem of rival unionism.

"The preservation of peace between Lockheed and the International Association of Machinists has been, in the light of all the difficulties, a substantial achievement," the report declares.

In this analysis, it is pointed out, the central question has been: "How have these parties been able to resolve their many problems, without resort to force, when others quite similarly situated have not been so fortunate?"

The main answers, it is stated, "lie clearly in the leaders and policies of the company and the union." In its relations with the union the company has been generally "progressive and flexible," and the two sides have "developed an unusual measure of joint participation," as in the safety program, the joint discussion of welfare provisions, and the development of the internal wage structure.

The findings in the Lockheed-IAM study, it is pointed out, reveal "significant parallels" to some of those in the earlier reports of the series:—

There is full acceptance by management of the collective bargaining process and of the union as an institution. The company considers a strong union an asset to management.

The union fully accepts private ownership and operation of the industry; it recognizes that the welfare of its members depends upon the successful operation of the business.

The union is strong, responsible, and democratic.

The company stays out of the union's internal affairs; it does not seek to alienate the workers' allegiance to the union.

Mutual trust and confidence exist between the parties. There have been no serious ideological incompatibilities.

Neither party has adopted a legalistic approach to the solution of problems in the relationship.

Negotiations are "problem centered"—more time is spent on day-to-day problems than on defining abstract principles.

There is widespread union-management consultation and highly developed information-sharing.

**Record housing construction in U.S.A.**

An all-time record of 1,019,000 new non-farm dwelling units started was set in 1949, the U.S. Labour Department's Bureau of Labour Statistics reported recently in releasing preliminary totals for the year. This total is almost 9 per cent above the previous high mark of 937,000 units established in 1925. The over-a-million mark was achieved because housing activity, which reached a peak in September with 102,900 starts, maintained a record breaking pace throughout the fall and winter months. The preliminary December figure of 79,000 units was the highest on record for the month since 1939, and 34 per cent greater than the previous December high set in 1947.

The 983,700 privately financed units started in 1949 (96 per cent of the total)

represent a rise of about 8 per cent from 1948. Public housing, financed largely by State and local agencies, almost doubled between 1948 and 1949; 17,800 public units were begun in 1948 compared with 35,300 in 1949.

The average construction cost of all privately financed 1-family houses started during the third and peak quarter of last year (the latest period for which data are available) was \$7,625, \$400 below the figure for the same months in 1948. This decline reflects a drop in costs as well as construction of somewhat less expensive dwellings.

**Problem of low-income families studied in U.S.A.**

Because low-income families "have been left behind in the economic progress of America," and since their low purchasing power "retards the future rate of economic progress of the nation," their circumstances and the effects thereof have recently formed the subject of a study undertaken by a sub-committee to the Joint Committee on the Economic Report of the United States Congress, entitled *Low-Income Families and Economic Stability*.

"Some low-income families live at levels below even the most conservative estimate of the minimum necessary for health and decency," the report states. "These families would buy a larger quantity of the goods produced by the economic capacity of the nation, if their needs were backed by ability to buy."

The report concentrates attention on the numbers and circumstances of urban families having less than \$2,000 of money income and of farm families having less than \$1,000 of money income. The Bureau of Census estimates that in 1948 there were 38.5 million families and about eight million "single individuals not in families." Almost 10 million or one-fourth of the families received total cash incomes of less than \$2,000 in that year. About 3.3 million lived on farms, and 6.3 million in urban centres.

Among the factors which were found to contribute to low incomes among non-farm families was that of the age of the family head. From the survey, it was learned that almost 30 per cent (1.8 million) of all these families were headed by persons who were under 21 years old or 65 years and over.

Another factor contributing to low incomes is the sex and colour of the family head who, as a general rule, is the principal earner. Families headed either by a woman or a non-white male between 21 and 64

comprised about 40 per cent of all non-farm families with incomes under \$2,000. Broken families, headed by women because of widowhood, desertion or divorce, constituted about 1.5 million of the low-income families.

Family income is largely determined by the occupation of the family head and the survey showed that among families with incomes over \$3,000, the occupational skills of the chief earners were much higher than among those families with low incomes.

Education and training also influence the earning power of heads of low-income families. Among families with incomes less than \$2,000, only 38 per cent of the heads had advanced beyond elementary school in their education, while 60 per cent of heads of families in the \$3,000 bracket had received more than elementary school. If education can influence income the reverse is also true, the report states. "Educational opportunity in the United States, at least above the grammar school level, still depends upon income status in marked degree."

People handicapped by permanent disability are nearly always in the low-income group. The report estimates that about 1,500,000 disabled persons in the United States are in need of rehabilitation services. Under the 1948 Federal-State program 53,000 disabled persons were rehabilitated. At the time of application, the average earnings for the entire group were \$320 a year. After rehabilitation, 47,000 of the 53,000 persons were in jobs with average earnings of \$1,830 per year.

Furthermore, the report states, "there will always remain in our form of society a sizable group of individuals who for one reason or another cannot be made producing members. These non-earners, however, are still consumers and their consumption is maintained, at least partially, through social insurance and public assistance programs."

The 138-page report contains considerable statistical and descriptive material concerning low-income groups.

**Consumer income, saving and spending in the U.S., 1945-49**

December, 1949 issue of the U.S. *Monthly Labor Review*.

The importance of consumer spending for a high level of employment is demonstrated by the fact that expenditures for personal consumption approach 70 per cent

of the gross national product. "Falling off in consumer buying is soon reflected in reduced production and employment in consumer goods and service industries," the article states.

The article cites statistics to show that consumer income declined slightly for a few months after V-J day following the decrease in aggregate wages and salaries as manufacturing industries reverted to peacetime production and government payroll expenditures declined. The durable group of industries, which were directly affected by reductions in the armaments programs, was the manufacturing area in which the decline in employment and earnings was concentrated.

Immediately after V-J day, many wartime controls were removed bringing about a rapid conversion of the economy to the production of consumer goods. Consumer demand for all types of commodities was backed by strong purchasing power in the form of liquid saving accumulated during wartime, a high level of current income and a high potential volume of consumer credit. A period of "free spending" resulted, with the sellers' market in full swing. Consumer expenditures rose from an annual rate of 121 billion dollars in the second quarter of 1945, to a rate of 130 billion dollars in the last quarter of the year. Personal savings decreased from an annual rate of 33 billion dollars in the second quarter of 1945 to an annual rate of 19 billion dollars in the last quarter.

The sellers' market for most consumer goods and services lasted for the next three years. With slight exceptions, the statistics of income and expenditure show a continuous and sometimes rapid growth. For the three years 1946 through 1948, personal consumption expenditures rose from an annual rate of 138 to 181 million dollars. The increase from 169 billion dollars, annual rate, in the first quarter of 1946 to 217 million in the last quarter of 1948—a rise of 48 billion dollars—was due to the uninterrupted increase in aggregate wages and salaries and the rise in earnings from business and investment.

Reaching a post-war low rate in the last quarter of 1947 of 0.7 billion dollars, personal savings rose to an annual rate of 15 billion dollars in the last quarter of 1948, for several reasons. The backlog of consumer demand had largely been met by peacetime production, rising prices discouraged some sales and purchasing power had diminished.

The decline in personal income during the economic downtrend commencing in early 1949, has been relatively slight, according

to the article. In the last quarter of 1948, personal income reached the post-war peak of 217 billion dollars and declined to 213 billion dollars in the second quarter of 1949. Although unemployment rose sharply and the number of hours worked showed a reduction, aggregate wages and salaries decreased by little more than two per cent in the first half of 1949.

During the same period the upward trend in expenditures for consumer durable goods was halted, and expenditures for such articles declined in relation to disposable income to about the level of the second half of 1946.

There was a slight increase again in personal saving as the relative decline in consumption expenditures exceeded the decline in income. With the exception of wartime and the immediate post-war period, consumers were saving a larger share of their income in the first part of 1949 than at any other time.

### Unemployment among the teen-aged in the U.S., 1947-49

Young persons require aid and guidance when they first enter the labour market if their early experiences there are to "enable them to make the best of themselves as individuals and as workers," according to an

article on the teen-aged unemployed in the December issue of the U.S. *Monthly Labor Review*. Even in times of high-level employment for adults, youth unemployment is a large and serious problem, as shown in studies made by the Census Bureau and the U.S. Department of Labour's Bureau of Labour Standards.

The Census Bureau estimates that adolescents 16 through 19 years old constitute about seven per cent of the labour force in the United States during school months and about nine per cent during vacation months. In April, 1949, there were 8,201,000 young persons 16 through 19 and 4,141,000 of 14 or 15, totalling 12,342,000 as compared with 14,740,000 in April, 1940. The lower birth rate of the 1930's accounts for the 2-4 million decrease in nine years.

Nonetheless, the number of adolescents who entered the labour market—that is, in employment or looking for work—increased from 4,300,000 to 4,556,000 between April, 1940 and April, 1949. Approximately half of the 16-through-19-year old group was in the labour market. In April, 1940, young people in the 14-through-17-year old group who were employed full or part time totalled 1,060,000. In the same month of 1949, the number of adolescents of the same age in the labour market was 1,971,000,

roughly twice as many as in 1940. Recorded in the number employed during April were young people working outside school hours as well as those not attending school.

Unemployment for both adults and the teen-aged increased seriously in the spring and early summer months of 1949. In August and September, however, the more-than-seasonal increase in employment in the manufacturing industries brought a moderate reversal of the unemployment trend.

The number of employment certificates issued to adolescents going to work gives an indication of the drop in work opportunities for minors during the spring and early summer of 1949. The figures represent persons newly hired, not the total number of young people at work at a specified time, and refers to non-agricultural industries since certificates are not usually required for agricultural work. Certificates issued in April, May and June of 1949 for minors 16 and 17 years of age decreased by 26 per cent, 34 per cent and 36 per cent respectively as compared with the number issued in the corresponding months of 1948.

### Garment Workers establish "labour college"

The first "labour college" in the United States to provide "new leadership" has been established by the International Ladies Garment Workers' Union (AFL),

reports the *New York Times*. The Training Institute, which is scheduled to open on May 1, is offering a free one-year course in labour relations to qualified persons who wish to make a career in the labour movement.

Labour legislation, economics, history, collective bargaining and arbitration procedures are courses which will be covered in the curriculum.

Arthur A. Elder, director of the institute, announced that over 300 applications from young men and women in all parts of the United States were received up to December 31 of last year. His statement, as reported on January 15 in *Justice*, the ILGWU newspaper, revealed that approximately 150 applicants are either union members or have union associations of one type or another. An equal number are college or university graduates who have specialized in economics or labour relations. Only those students interested in employment in the ILGWU with a view to making it their life work are being enrolled.

The initial training session of three months in New York City will be followed by a three-month period of union work in

the field. A second three-month training period will be followed by two months in the field, concluding with a final month at the institute.

**Sick benefits of \$10-\$26 a week for workers in N.Y. State** Disability Benefits law, passed in March, 1949, came into effect on January 1 of this year. Approximately 175,000 employers and 6 million workers come within its scope, it is estimated.

For the first six months, until June 30, workers will contribute at the rate of one-tenth of one per cent of their weekly pay, and employers will match this amount, up to a total contribution of 12 cents a week for each worker. These temporary contributions will go into a special fund which will provide benefits for disability during unemployment. Thereafter this fund will be maintained by certain fines and penalties and, if necessary to maintain a specified balance, by an assessment against all carriers.

From July 1, employees will contribute one-half of one per cent of their wages, up to a limit of 30 cents a week, and the employer will pay the entire excess of the cost to finance benefits for non-occupational illness during employment. The employer may provide for payment of benefits by insuring with the state insurance fund, with a private insurance company, or through approved self-insurance. Under the law, benefits will range from \$10 to \$26 a week for thirteen weeks in a consecutive period of fifty-two weeks. The amounts and duration of benefits for disability during employment and unemployment are the same, but eligibility requirements differ.

**Labour clauses in Constitution of India**

Described by the London Times as "the most elaborate declaration of human rights yet framed by any state" and as influenced by "the ideals for which Gandhi

lived and died," the Constitution of India, adopted on January 26, contains a number of labour clauses.

These clauses set forth the objectives of state policy in regard to labour. Embodied in Articles 31 to 34 of Part IV of the Constitution, they are as follows:—

31: *Certain principles of policy to be followed by the State:*

The State shall, in particular, direct its policy towards securing—

(i) that the citizens, men and women equally have the right to an adequate means of livelihood;

(ii) that the ownership and control of the material resources of the community are so distributed as best to subserve the common good;

(iii) that the operation of the economic system does not result in the concentration of wealth and means of production to the common detriment;

(iv) that there is equal pay for equal work for both men and women;

(v) that the strength and health of workers, men and women and the tender age of children are not abused and that citizens are not forced by economic necessity to enter avocations unsuited to their age or strength;

(vi) that childhood and youth are protected against exploitation and against moral and material abandonment.

32: *Right to work, to education and to public assistance in certain cases:*

The State shall, within the limits of its economic capacity and development, make effective provision for securing the right to work.

33: *Provision for just and humane conditions of work and maternity relief:*

The State shall make provision for securing just and humane conditions of work and for maternity relief.

34: *Living wage, etc. for workers:*

The State shall endeavour to secure, by suitable legislation or economic organization or in any other way, to all workers, industrial or otherwise, work, a living wage, conditions of work ensuring a decent standard of life and full employment of leisure and social and cultural opportunities.

Speaking on the role of labour under the new Constitution, India's Labour Minister Mr. Jagjivan Ram said: "The history of labour legislation in India during the past two years is enough to show that we are not oblivious of our duties and responsibilities towards our workers. We now have a Factories' Act which will stand comparison with factories' acts of most advanced industrial countries of the world."

He added that the Government was taking steps to modernize the Indian Mines' Act and to fix wages in sweated industries and in agriculture. In its Employees' State Insurance Scheme, the Government was moving towards a system of social security. In plantations and mines, he said, tripartite negotiations have effected improvements in conditions of employment which are a credit to both employers and workers.

**Finland regulates domestic employment conditions**

Hours of work, weekly and public holidays, and contracts of employment for domestic workers in Finland are now subject to regulation by law. An act governing conditions of employment for domestic workers was passed early in 1949 and came into force later in the year.

The act specifies that the normal working day may not exceed 10 hours, inclusive of meal times. In case of sickness in the employer's home a worker can be required to work during off-duty time. Provision is made for compensation for overtime, which may be either in the form of time off or in cash. When in excess of 24 hours, it must be paid for at double rates. In case of sickness of a worker the employer must provide the necessary care for the first two weeks. (*Industry and Labour*, International Labour Office, July, 1949.)

### **Eire's proposed social security plan**

One comprehensive scheme of social security, to replace all existing schemes, is proposed by the Minister of Social Welfare for Ireland.

Details of the plan are contained in a White Paper entitled *Social Security*, recently published by the Irish Department of Social Welfare. It is expected that the enabling legislation will be introduced in the Dail during the present year.

The proposed scheme will be compulsory for every person over the age of 16, with the exception of such classes as civil servants and certain municipal employees, regarding which no decision had been taken. Agricultural and forestry workers, and private domestic servants, not covered under existing schemes, will be brought within its scope.

Benefits under the scheme will be payable to contributors without any means test.

The benefits proposed include:—

*Disability Benefit*, payable during sickness at a basic weekly rate for adults over 18 years of age of 24s. for a single person, with an additional 12s. for a married man with a dependent wife, and 7s. for each of two children up to the age of 16.

*Unemployment Benefit*, at the same rates as for Disability Benefit but at a lower scale of payments for those whose wages do not exceed £3 10s. a week.

*Retirement Pension* of 24s. a week at age 65 for a man and 60 for a woman, with an additional 12s. for a dependent wife or husband.

*Widow's Pension* of 24s. a week, together with 7s. a week for each of two children.

*Orphan's Benefit* of 10s. a week, payable to the guardian, in respect of an orphan both of whose parents are dead.

*Maternity Benefit*, for an insured woman a lump sum grant of £5 and a weekly payment of 24s. during the six weeks before and the six weeks following confinement; for the wife of an insured man, a lump sum

grant of £5 and a weekly benefit of £1 during the four weeks following confinement.

*Death Grants*, payable on death of a contributor or a member of his family, varying from £6 for a child under three years of age to £20 for a person over 18.

*Additional non-cash benefits* as at present available through the National Health Insurance Society, including part payment of dental treatment, free hospital treatment, part payment of cost of medical and surgical appliances, optical treatment, and specialized medical and surgical treatment.

The weekly rate of contribution will be 3s. 6d. for men and 2s. 2d. for women, with equal amounts being paid by the employer. Those in the low wage group (earning less than £3 10s. a week) will pay 1s. less but the employer's contribution will remain at the normal rate of 3s. 6d. and 2s. 2d. respectively.

The cost of the new scheme is estimated at £10,500,000 for the first year, rising to £12,600,000 by the fifth year. The State's annual share will be £4,000,000. During the early years, it is explained, there will be an excess of income over expenditure, but when the number of beneficiaries under the Retirement Pension and Widows' Pension plans increases, there will be a deficit. This, it is proposed, the State will meet from year to year as it arises, with a review of this method of financing after the five-year period.

### **Bank training program enters second year**

The training program of the International Bank for Reconstruction and Development was resumed for its second successive year in Washington on January 16. Eight persons were selected from as many countries for this year's training. They come from Ecuador, India, Iran, Italy, Lebanon, Norway, the United Kingdom and the United States.

The training program is designed partly to help recruit and train persons from the Bank's 48 member countries for junior, professional and administrative jobs; and also to acquaint young men and women interested in international finance with the purposes and organization of the Bank so that upon return to their native countries they will have a more thorough knowledge of world financial problems.

The trainees undergo the year's training at the Bank's headquarters in Washington, with time being devoted to classroom study and to practical work in the various departments. At the end of this time, they are considered for appropriate positions on the Bank's staff.

# TECHNICAL AID TO UNDERDEVELOPED COUNTRIES

*The United Nations is instituting a program to provide technical assistance to countries in need of economic development.*

*Canada has approved the principle of this program. To the extent that it raises standards of living in underdeveloped countries, it may stimulate world trade and thus help to provide jobs for Canadians.*

At an international conference which is to meet shortly, a program aimed at raising the standard of living and furthering the social and economic progress of two-thirds of the world's population living in economically underdeveloped areas will be set in motion.

To be operated through the United Nations and its specialized agencies, the program is designed, broadly, to benefit countries in Asia, Africa, and Latin-America where large proportions of the inhabitants live at a bare subsistence level. It will consist of a variety of special projects, for which the United Nations will supply advice, expert assistance, and aid in training workers.

The program does not, in its present form, provide for actual capital investment to the countries concerned. The recipient country will be responsible for providing the capital; the United Nations will supply advice and technical assistance.

However it is expected that the assistance program will serve to create in underdeveloped countries a suitable investment climate, thus lending encouragement to private capital. Some of the capital needed may also be supplied through governmental loans, and through the International Bank for Reconstruction and Development.

The intention of the technical assistance program is to help underdeveloped countries to help themselves, by making available to them the techniques and knowledge of Western civilization. Each project will be initiated by the recipient country, which will have full responsibility and control. The United Nations will participate only at the request and invitation of the country concerned.

## Need for the Program

Desire for a technical assistance program has been repeatedly expressed by delegates from underdeveloped countries at meetings of the United Nations and its agencies.

Although conditions vary in the different countries concerned—some combining a quite high degree of industrial development in certain localities with low standards in other, more widespread sections—the prevailing need for technical assistance, expressed in general terms, has been well described in a publication of the United States Department of State, entitled *Point Four*.\*

Noting that two-thirds of the world's population live in so-called underdeveloped areas, this publication points out that the average annual income of the people in these areas has been less than one-tenth of that of the people in the more highly developed areas. "The economic situation of most of the people of the underdeveloped areas is far from good," the report continues. "The situation of many is dire.

"Primitive agricultural conditions and inadequate transportation so limit the growth and distribution of food that the average food intake for people in these areas is only 2,000 calories per day—barely enough to support life—and the diet is usually lacking in food elements essential to health. As a result, malnutrition is general and starvation frequent. Lack of basic public health programs, of doctors and nurses skilled in modern medical science, and of hospitals and drugs, leaves many large sections of the human family prey to preventable or curable diseases. Their ability to produce the necessities of life is consequently reduced. Their life expectancies are no more than 30 years—far short of the span of which the human body is capable and of the more than 60 years which modern medicine makes possible in advanced areas. The vocational skills of many of them are limited to handicrafts

\* The title, *Point Four*, has reference to the fact that President Truman, in his Inaugural Address, outlined four courses of action to be emphasized by the United States in its international relations, of which "point four" was a program of aid to areas needing development.

**Above: A typical Bengal farmer**

Poverty, and lack of technical "know-how" and facilities, are joined in a self-perpetuating vicious circle in many underdeveloped countries. The technical aid program aims to break this circle and help bring about higher standards of living and wider horizons of knowledge and opportunity.

**Below: A survey team clearing bush for mechanized farm production**

assisted by primitive implements. The skills which others have are made unproductive by lack of modern equipment.

"The peoples of such areas are unable to produce the raw materials and finished goods which their physical well-being requires, which are needed by people in other countries, and which they would be capable of producing if assisted by great technical knowledge and capital equipment. For most of these people the horizon of knowledge is limited to their own small community, and their opportunity for material advancement is no greater than its elementary and meagre resources."

Following this description of the conditions of people in the underdeveloped areas, the U.S. State Department report goes on to stress that these people in recent years "have been stirred by a growing awareness of the possibilities of human advancement. They are seeking a fuller life and striving to realize their full capabilities. They aspire toward a higher standard of living, better health and physical well-being. Under present circumstances their poverty is not merely a handicap to themselves. By leaving them unable to fulfil their reasonable aspirations, their misery makes them fertile ground for any ideology which will hold out to them promise, however false, of means toward a better life.

"The United States and other free nations of the world," the report continues, "have a common concern for the material progress of these people, both as a humanitarian end in itself and because such progress will further the advance of human freedom, the secure growth of democratic ways of life, the expansion of mutually beneficial commerce and the development of international understanding and good will. The material progress of these people can best be promoted by the co-operative endeavour of all interested nations to help them meet their deficiencies. It is in the interest of the United States as well as in the common interest that such co-operative endeavour be undertaken at once and in sufficient magnitude to be effective.

"As the situation now stands, poverty and lack of the knowledge and facilities needed for production are joined in a self-perpetuating vicious circle. It is possible to break this circle by assisting the people of underdeveloped countries in their efforts to bring about economic development which will lead to higher standards of living and wider horizons of knowledge and opportunity."

## Canadian Participation in the Program

Canada's support for the technical assistance program was expressed by the Canadian Delegation to the United Nations General Assembly.

The extent and nature of Canada's financial contribution to the program will probably be announced at the Technical Assistance Conference when the size and scope of the program as a whole will be determined. Expenditures of the order of \$15-\$25 million for the program's first year of operation have been tentatively proposed by United States and British representatives. Contributions made during the first year may, however, be committed for expenditure over a period of three years.

When the program is initiated, the procedure will be for a country desiring assistance to approach the appropriate United Nations agency, which will take the necessary steps to provide the services required and to approach various member countries for such expert help as they may be specially fitted to supply.

Thus, Canada may be called upon to assist underdeveloped countries in such ways as:—

- (a) Sending members of missions to survey the country and to recommend how its natural resources can best be developed and utilized;
- (b) Giving technical training in Canada to personnel from the underdeveloped countries;
- (c) Assisting in the creation of teaching facilities and, where necessary, of technical services in the underdeveloped countries;
- (d) Assisting in the erection and operation of pilot projects in the underdeveloped countries.

The United Nations agencies which are to participate in the technical assistance program are: the Food and Agriculture Organization (FAO), the World Health Organization (WHO), the United Nations Educational, Scientific and Cultural Organization (UNESCO), the International Labour Organization (ILO), and the International Civil Aviation Association (ICAO). Technical aid activities which are not the special responsibility of any of these agencies will be undertaken by the United Nations itself through its Economic section.

In Canada, various Government departments and private industry and the universities may be called on by one or other of these agencies to render assistance.

The interest of the Department of Labour in the technical assistance program will be directed mainly to projects undertaken by the International Labour Organization.

## The ILO and the Technical Assistance Program

Recognizing that a major objective of the technical assistance program is to raise industrial productivity in underdeveloped areas, the ILO is prepared to give expert help in dealing with the wide range of labour problems that are necessarily involved.

The need for skilled workers to man new industries implies training programs.

It also implies the recruitment of labour, and the matching of men to jobs—and thus the development of employment service organization.

If the program is to redound to the advantage of the working populations, legislation will probably be needed covering such matters as minimum wages, maximum hours, and protection from unsafe working conditions. There must also be administrative machinery on a scale that is adequate to take such legislation out of the realm of pious aspiration and make it genuinely effective.

As the program develops, the countries concerned will find they have a need for conciliation services to aid in the settling of labour disputes; and for procedures to provide for the recognition of trade unions, which, it is hoped, will develop as free and democratic institutions rather than as state-controlled or Communist-dominated organizations.

The ILO drafted its proposals for participation in the United Nations Technical Assistance Program at its most recent General Conference, held at Geneva in June and July, 1949.

In the past, the primary function of the ILO has not been in the "operational" field. The ILO has instead devoted most of its effort to the creation of draft international labour standards, in the form of Conventions and Recommendations, and to research and publications.

However, the ILO has always had as one of its functions the sending of missions and advisors to countries which wished for help in building up their labour legislation. Canada has received such assistance itself on occasion. During recent months, even before the announcement of the technical assistance idea, the ILO has embarked on an expanded manpower program, aimed partly at aiding Asian and Latin-American countries in the recruitment and training of labour. As part of this project, an Asian Manpower Committee and an Asian Field Office on Technical Training have been established.

However the United Nations technical assistance program is something on a much broader scale than anything the ILO has as yet undertaken in the operational field.

During the discussions at the Geneva Conference, the ILO developed a scheme of priorities in regard to the various types of assistance that it is specially equipped to render.

The Conference considered particularly that high priority should be given to two items, training, and employment service organization.

It was also felt that "the improvement of labour standards, including the enforcement of labour legislation and the framing and application of suitable wage policies, designed to assure improved levels of consumption" would require attention from the early stages of the program.

In view of the rural character of the economies of the less developed countries, technical assistance concerned with the development of co-operatives and handicrafts, and of working conditions in agriculture, was considered important.

A lesser priority was given to labour statistics, industrial safety, occupational health, social security and industrial relations—the principal other matters falling within the ILO's sphere.

Establishment of new industries means that skilled workers must be trained to man the machines. The photo shows a cigarette-making machine in operation in the Belgian Congo.

In order to carry out its share of the technical assistance program, the ILO contemplates increasing its staff of experts, calling on persons with experience in government, business, unions, and education circles. (The Director-General has estimated that during the program's first year it will be necessary to recruit and utilize the equivalent of 127 man-years of services of technicians, and 159 man-years of assistants.)

Teams of experts would be available on request, to aid the governments concerned in the organization of training programs, and in the development of administrative facilities for other labour policies.

The supervisory training programs, such as were developed during wartime in Canada and the United States for use in war industry and government employment, have been cited as one means whereby ILO experts can aid in providing workers with the necessary skills.

As part of the program, the ILO also contemplates channelling experts on loan from industrialized countries to underdeveloped regions. As a corresponding measure, industrialized countries may be expected to accept trainees from underdeveloped areas.

Organization of local training, preparation of instructional materials and operational manuals, and assistance in the early stages of actual operations, are also mentioned as part of the ILO contribution.

The voluntary character of the assistance has been repeatedly emphasized. Experts from the ILO will participate only on request from the governments concerned; and will operate primarily in an advisory capacity. They may suggest the administrative lines along which a particular project might be developed, and the principles that might be considered; but the actual decisions remain always with the recipient government.

This is in line with the basic philosophy of the program as a means of helping underdeveloped countries to help themselves.

In its approach to the program the ILO is stressing the broad objectives of steady employment and rising income to the mass of the people. In line with its own tripartite structure, the ILO cites the advantages of co-operation with employers' and workers' groups in the development of the program. The ILO has emphasized that the assistance given should correspond with the needs and resources of the countries concerned, and should not result in developments which the countries would be unable to maintain when the assistance comes to an end.

The Geneva ILO Conference authorized the Governing Body of the ILO to take such action as was necessary to initiate the technical assistance program, once it had been formally set in motion by the UN.

A few weeks later Director-General David Morse presented the ILO proposals to the Economic and Social Council. At this time the representatives of the other specialized agencies also made their submissions.

The ILO proposals were debated by the Council, and in general were favourably received. A number of suggestions were made, and the Director-General made a further speech of clarification of the ILO proposals.

ECOSOC did not pass judgment on the specific proposals of the specialized agencies. Instead, it took decisions as to the broad administrative framework within which the technical assistance program would operate, and as to the tentative allocation of funds to the various specialized agencies. (The ILO will probably receive 11 per cent.)

ECOSOC's decisions were debated and approved, with minor changes, by the UN Second Committee and General Assembly.

In accordance with the authority granted it by the ILO Conference, the ILO Governing Body, which met at Mysore, India, December, 1949-January, 1950, reviewed the action taken by ECOSOC and the UN, and voted to inform the United Nations that the ILO is willing to participate in the technical assistance program under the conditions set forth by the UN General Assembly.

Thus the ILO has taken the necessary decisions in preparation for the commencement of operations as soon as the technical assistance program is finally formally launched.

### **Technical Assistance Conference**

The Technical Assistance Conference, to be held soon, and which is to set the technical assistance program in motion, has two basic functions:—

To ascertain the total amount of contributions available from participating governments for the execution of the program during the first period of its operation.

To give final consent to the proportionate shares of the total contributions to be allotted to the various participating organizations.

There are several cogent reasons for Canadian support of the technical assistance program. While in its early stages the program will involve the expenditure of Canadian funds, Canada will benefit in the long run in that the improvement of the economic and social conditions of

recipient countries will enable them to participate more effectively in world trade—a factor which will help to assure more jobs for Canadians. It is hoped also that, in raising the standards of living, education and culture of the peoples of underdeveloped areas, the program will also encourage their political growth along democratic rather than totalitarian lines.

But beyond any mere weighing of debits and credits is the growing awareness that this program can in some measure help to realize the idealistic purposes for which the United Nations was founded—that in its broad imaginative scope it can foster closer ties and better understanding among those peoples of the world who sincerely wish for international co-operation and peace.

---

## INTERNATIONAL LABOUR ORGANIZATION

### International Commission on Trade Union Rights

*The ILO Governing Body has authorized the appointment of a nine-man international commission which will have power to examine complaints alleging violation of trade union rights.*

Procedures for establishing an international fact-finding and conciliation commission on freedom of association were approved by the ILO Governing Body, at its 110th Session in Mysore, India, in January.

Canada was represented at the Governing Body meeting by the Hon. R. W. Mayhew, Minister of Fisheries, Paul Bridle, First Secretary of the Office of the High Commissioner for Canada in India, and A. H. Sager, secretary to Mr. Mayhew.

Selection of members of the nine-man commission to examine infringements of trade union rights was scheduled for the 111th Session of the Governing Body, to be held at Geneva in March.

Members are to be chosen for their personal qualifications, and will be "expected to discharge their duties with complete independence."

Establishment of such a commission was approved in principle by the Governing Body last June (L.G., Sept., 1949, p. 1091.)

Last August, the Economic and Social Council of the United Nations requested the ILO to proceed with the commission's establishment on behalf of the United Nations as well as on behalf of the ILO.

The Governing Body at its Mysore meeting established the commission on the ILO's behalf, and at the same time agreed that the new body should also act on behalf of the United Nations.

The terms of reference and procedure of the commission, as fixed by the Governing

Body, define the commission as "essentially a fact-finding body," but it also will be authorized to discuss situations with the government concerned "with a view to securing the adjustment of difficulties by agreement."

Under the commission's procedure, complaints alleging the violation of trade union rights can be referred to the commission either by the Governing Body or the general Conference of the ILO.

Any government against which a complaint is made may also ask the commission to investigate.

In addition, proposals for the reference of cases to the commission may be made by trade unions and by organizations of employers, but these proposals and those of Governments must first be examined by the

### Ratifications of ILO Conventions

The number of ratifications of International Labour Conventions by member countries of the ILO increased recently to 1,085. During recent weeks Finland ratified six Conventions, Bulgaria 33, and Australia and Syria one each.

On January 1, 1949, the number of ratifications was 1,004.

officers of the Governing Body who will decide whether or not to circulate them to the Governing Body as a whole.

When the proposals are circulated any member of the Governing Body may request that the Governing Body refer them to the commission.

After long discussion it was decided that complaints could not be referred to the commission for investigation and conciliation without the consent of the government concerned.

In cases where this consent is refused by a government, the Governing Body will consider appropriate alternative action to safeguard the rights involved in the case, including measures to publicize it.

## Agenda of Next Session of International Labour Conference

The Thirty-third Session of the International Labour Conference will be held at Geneva, Switzerland, opening on June 7, 1950.

The agenda consists of eight items, as follows:—

- I. The Director-General's Report.
- II. Financial and budgetary questions.
- III. Information and reports on the application of Conventions and Recommendations.
- IV. Industrial Relations, comprising Collective Agreements, Conciliation and Arbitration, and Co-operation between Public Authorities and Employers' and Workers' Organizations.

The commission will report to the Governing Body, which will then consider what further action should be taken in each case.

The Governing Body also approved suggestions for the procedure for making the commission's services available to the United Nations with respect to those member countries of the United Nations which are not members of the ILO. According to these proposals, it would be open to the General Assembly and the Economic and Social Council to refer complaints to the commission through the Governing Body.

The Polish Government delegate opposed the decisions on terms of reference and procedure.

- V. Equal remuneration for men and women workers for equal work of equal value (first discussion).
- VI. Agricultural labour: General Report.
- VII. Minimum wage regulation in agriculture (first discussion).
- VIII. Vocational training of adults, including disabled persons (single discussion).

Reports on most of these items, prepared by the International Labour Office as a basis for discussion at the Conference, have been received in the Department of Labour. The Report on Item V was summarized in last month's *LABOUR GAZETTE* (p. 183); and summaries of reports on some of the other items will be printed in forthcoming issues.

## ILO Announces Program of Fellowships and Study Grants

The International Labour Organization has announced a program of fellowships and grants for study limited to \$75,000 during the year 1950.

The program was approved by the Governing Body at its recent meeting in Mysore, India.

Under Director-General David A. Morse's proposals, the fellowships would be offered for study in the fields of employment organization, vocational training and guid-

ance, social security administration, industrial relations, labour inspection, and industrial health, safety and welfare.

The fellowships would be awarded for three to six months in a country different from that of the applicant and restricted in number to a total of 18, one to a country.

Under the grants for study of the ILO, a maximum of 12 persons would be chosen to work in Geneva for periods up to two months each.

## Third Session of Metal Trades Committee

*Proposals for the simplification of job classifications in the metal trades, and for better organized training of workers, were made by the ILO Metal Trades Committee at its third session.*

Problems of wage calculation and vocational training for the metal trades were the main items on the agenda of the third session of the Metal Trades Committee of the International Labour Organization, which met during November, 1949, in Geneva, Switzerland.

The Committee recommended that job classification should be simplified and minimum rates established for each classification, with clearly understood rules for bonus and piece rates and for wage payments, to minimize employer-worker friction on these matters.

Another important recommendation urged more aid from member countries to the Program for Technical Assistance for Economic Development of Underdeveloped Countries, including the vocational training of skilled mechanics from such countries.

The meeting was attended by Government, worker and employer representatives of Belgium, Canada, Denmark, Finland, France, India, Italy, Netherlands, Norway, South Africa, Sweden, Switzerland, the United Kingdom and the United States. Australia and Czechoslovakia are also members of the Committee, but did not send delegations.

The Chairman was H. Altman of the Polish Ministry of Labour and Social Welfare.

The Government delegates from Canada to the Metal Trades Committee Session were J. E. Matthews, M.P., of Brandon, Manitoba, and F. J. Ainsborough, Industrial Relations Officer of the Federal Department of Labour. The Workers' delegates were G. P. Schollie of the International Association of Machinists, and L. Lavallee of the Montreal Machine Shop Workers Union. The Employers' delegates were A. R. Lawrason of the Eureka Foundry and Manufacturing Company, Woodstock, Ontario, and S. C. Evans of Taylor Forbes Ltd., Guelph, Ontario.

Mr. Ainsborough was elected Chairman and Reporter of the Wage Calculation Subcommittee.

### Agenda

The Committee considered a General Report prepared by the International Labour Office, which outlined action taken in the various countries in the light of the conclusions of the Second Session, and

developments and social trends in the metal trades during the last few years, based on information received from member countries.

In addition, the delegates discussed at some length the subjects of wage calculation and vocational training and promotion in the metal trades, both of which are felt to be of increasing interest and importance to all metal workers.

### Systems of Wage Calculation

The discussions of this subcommittee, of which Mr. Ainsborough was Chairman, and on which Messrs. Lawrason and Schollie were substitute members, was based on a report prepared by the International Labour Office. Delegates representing Governments, employers and workers agreed on the general principle that simplification in wage calculation was necessary, although some workers' delegates thought that a guaranteed minimum wage was a more pressing question at the present time. The Canadian Employers' delegate felt that numerous differences in wage calculation in the metal trades of different countries presented a serious obstacle to adoption of any universal system; but the Workers' delegates pointed out that although conditions differed greatly from country to country it should be possible to formulate some general principles on the subject.

Discussion followed on possible methods of simplification. The members agreed that an important first step was the classification of all jobs in the industry, on a national, regional and local basis, by agreement between the employers' and workers' organizations concerned. The matter of having single minimum and maximum time rates for each category of worker and the related question of cost-of-living bonuses, revealed many differences of opinion. In general the members were unanimous in favouring a reduction in the number of supplementary bonuses paid, except extra payments for night-work, dirty work or dangerous work. It was felt that as many existing bonuses as possible should be absorbed in the basic wage rate. Another point on which representatives of employers and workers concurred was the need for adoption of simpler systems of payment by results. Finally, unanimous agreement was given to the recommendation that payslips

received by workers should give all the information necessary to enable the individual worker to understand how his wages are calculated.

The Subcommittee embodied its conclusions in a resolution which was later adopted by the Committee in plenary session. The operative clauses of the resolution are as follows:—

1. The Governing Body of the International Labour Office is invited to request the Governments of States Members of the International Labour Organization to draw the attention of employers' and workers' organizations in the metal trades to the following principles:—

- (a) a classification of jobs in each branch of the metal trades should in each case where it is possible be made and these jobs should be placed in a limited number of separate wage-rate categories on a plant-to-plant basis by agreement between employers and workers concerned, and on a regional or national basis by agreement between organizations of employers and workers;
- (b) a minimum rate should be established and secured for each category;
- (c) the variety of bonuses should be limited as much as possible, on condition that any reduction in their number does not result in the elimination of social benefits provided by legislation or by agreement;
- (d) simpler systems of payment by results in the metal trades should be studied;
- (e) all guaranteed minimum rates for piece and bonus workers should be fixed on the basis of the minimum rates mentioned in paragraph (b) above;
- (f) all piece and bonus rates should be set on the basis of rules agreed by the employers and workers concerned in the case of bargaining on a plant-to-plant basis and by the employers' and workers' organizations concerned in the case of bargaining on a regional or national basis;
- (g) (i) the payslips which workers receive should be as simple as possible consistent with the inclusion of all the information necessary to enable workers readily to understand how their wages are calculated; and  
(ii) more particularly, at the time of engagement, the method of calculation of wages should be explained by the manager of the undertaking or his deputy to the workers concerned in such a manner as to avoid subsequent friction between employers and workers.

2. The Governing Body is requested to convene, at a date which would enable a report to be presented to the next session of the Committee, a meeting of technical experts chosen from the metal trades to examine the problems of systems of payment by results in the metal trades with special reference to the desirability of simplifying such systems to the greatest extent compatible with equity and efficiency.

## Vocational Training and Promotion

This Subcommittee based its deliberations on a Report of the International Labour Office outlining conditions in the member countries dealing with vocational guidance and selection, general principles of training, apprenticeship, training of adult workers, training of supervisors, methods and programs of training, promotion, and international co-operation. Reference was also made to the 1949 ILO Recommendation on Vocational Guidance, and the two Recommendations on Vocational Training and Apprenticeship.

In the discussion on Vocational Training, emphasis was given to the great importance of such training as a means of building up a force of adequately trained workers and supervisors on systematic lines specially adapted to the characteristics and problems of the metal trades. In addition, the situation in less-developed countries differs greatly from that in highly industrialized countries, for in the former there is a serious shortage of skilled labour which hampers industrial development; the Asian Regional Conference in September, 1949 discussed this problem at some length.

Considerable discussion took place on the co-operation of employers' and workers' organizations in vocational training, and their relations with the public authorities. It was generally agreed that the public authorities should limit themselves to general supervisory functions in this field except for the organization and operation of technical schools giving vocational courses. With regard to in-plant training, all delegates concurred in the desirability of close co-operation between employers' and workers' organizations to avoid any misunderstanding or friction. Generally, it was felt the ideal was a balanced program of theoretical and practical training during apprenticeship, consisting partly of technical school courses and partly of in-plant training.

The discussion on apprenticeship also brought out the importance of working toward an international classification of trades and occupations in the metal trades, to reduce the confusion caused by differences both internationally and often within individual countries. The first step, it was suggested, was for each country to prepare a simplified classification defining and indicating the various trades and the jobs within each; this is a task on which the ILO is already working. Another important need was for each country to have uniform rules for various crafts and occupations in the metal trades concerning such matters as

the contract of apprenticeship, the duration and supervision of apprenticeship courses, the organization of examinations and the issuance of certificates. On the last subject, the issuance of certificates, there was considerable difference of opinion as to whether this was a matter for a tripartite body, for the employers only, or for government authorities.

The other matters briefly discussed by the Subcommittee were: training of adults, training of supervisors and instructors, training methods and programs, promotions, and international co-operation. It was recognized that supervisors and instructors should, in addition to technical competence, have special training in the techniques of supervision and instruction. Concerning promotion, consideration was given to the extent to which employers and workers should co-operate in drawing up rules and procedures while safeguarding the employers' responsibility for ensuring the efficiency of their undertakings. On the international level, the Subcommittee concurred in recommending the promotion of facilities for the training in advanced countries of officials and instructors from underdeveloped countries, under the co-ordination of the ILO.

A Resolution embodying these views was adopted by the Subcommittee and later by the Committee.

### Other Resolutions

Three other Resolutions were adopted by the Committee, after some discussion:—

- (1) Asking the International Labour Office to approach the Governments of countries represented on the Metal Trades Committees which are highly industrialized to provide technical

assistance for underdeveloped countries which will increase both production and employment in such countries;

- (2) Suggesting that the International Labour Office in its technical assistance to underdeveloped countries should pay particular attention to the vocational training of mechanics skilled in general mechanical maintenance work;
- (3) Recommending that the International Labour Office study measures to abolish the dangers in the use of sand-blasting and to develop better alternative methods.

The Committee also decided to transmit to the ILO's Governing Body a proposal adopted by the workers' members of the Committee which invited the Governing Body to re-examine the question of the relationship of the ILO with international non-governmental organizations.

Four such organizations now have a consultative relationship with the ILO. They are the World Federation of Trade Unions, the Inter-American Confederation of Labour, the International Federation of Christian Trade Unions, and the International Co-operative Alliance.

Under the terms of this relationship, the WFTU was represented at the meeting by H. Jourdain, secretary of the WFTU's international secretariat for the metal and mechanical industries. During the session, an effort was made on behalf of a majority of the workers' delegates to exclude Mr. Jourdain from the Committee. It was ruled by the chairman, however, that the question lay within the competence of the Governing Body. The worker delegates subsequently adopted the resolution which the full Committee today decided to transmit to the Governing Body.

## Draft Agreements on Conditions of Rhine Boatmen

At a tripartite meeting held at Geneva last December under ILO auspices, two draft agreements were reached concerning the conditions of Rhine boatmen.

A proposed agreement on social security provides for a measure of co-ordination among the systems of the countries bordering the Rhine. It would mean that Rhine boatmen will no longer be liable to social security taxation by more than one country. Instead each employee would be covered by the laws of the country in which the employing company has its head office.

The agreement would provide benefits in the event of sickness, maternity, death, invalidity, old age, employment injury, and

unemployment. It would also establish family allowances.

The second proposed agreement concerns working conditions. It would require the parties to it to assure to Rhine boatmen minimum employment standards covering rest at night, hours of work in port and at loading and unloading places, overtime pay, holidays, weekly rest day, annual holidays with pay, and special allowances.

The conclusions of the meeting are being transmitted by the ILO to the interested governments. A further conference is expected to be held by these governments, with a view to approving the agreements in final form.

# INCREASE IN NUMBER OF LABOUR-MANAGEMENT PRODUCTION COMMITTEES

*The Labour-Management Co-operation Service reports continued progress in fostering the development of joint consultation in Canadian industry. . . .*

Labour-Management Production Committees continue to show an increase in Canadian industry as a result of the efforts of the Labour-Management Co-operation Service of the Industrial Relations Branch.

These committees—composed of representatives of management and representatives of labour—are formed in plants for the purpose of improving production efficiency by means of joint consultation. They also make recommendations on product quality, safety, tool conservation, plant housekeeping, employee welfare and many other items.

As of September 30, 1949, the Service had on record a total of 631 committees. This compares with a total of 250 at the end of 1944, when a record of committees was first maintained, and of 346 at the end of the war.

Distribution by provinces was: Prince Edward Island, 2; Nova Scotia, 40; New Brunswick, 19; Quebec, 128; Ontario, 295; Manitoba, 52; Saskatchewan, 30; Alberta, 19; British Columbia, 46. A breakdown by industries and trade unions is given in the accompanying tables.

A new booklet was recently distributed by the Service under the title, "Joint Consultation in Service Industries." This publication details the accomplishments of LMPC's in service industries such as transportation and communication companies,

hospitals, restaurants, hotels, newspapers and laundries. It also outlines the methods of establishing and carrying on committees in such industries.

Evidence of the widespread interest in the publications of the Service was recently indicated in a request from the Central Labour College of Japan, Tokyo, for permission to translate and publish all its booklets and pamphlets. These had been recommended to the College by the Economic and Scientific Section, GHQ, SCAP.

A new series of posters and pay envelope stuffers presenting various phases of committee activities and based on the theme, "Co-operate with Your LMPC" has been prepared. Distribution of the initial set will commence shortly.

Work is well advanced on a new 16 mm. animated film being produced for the Service by the National Film Board. It is entitled, "Teamwork—Today and Yesterday" and traces the history of industrial advance through co-operation from pre-historic times to the present era.

The assistance of field representatives of the Service in a number of the Dominion's principal industrial centres is available to both managements and trade unions in setting up labour-management production committees and in helping them after they become established.

*. . . Since the Service was established in 1944, the number of registered production committees has increased as follows. . . .*

1944 . . . . .	250
1945 (end of war) . . . . .	346
1949 (September 30) . . . . .	631

## ACTIVITIES OF PROVINCIAL LABOUR ORGANIZATIONS

*During recent weeks the Ontario Provincial Federation of the Trades and Labour Congress of Canada held its annual Convention, and submitted proposals to the Commission which has been inquiring into workmen's compensation legislation in Ontario. Affiliates of the TLC in Alberta and British Columbia made submissions to their provincial Governments, the brief of the B.C. organization being devoted entirely to suggested changes in the Conciliation and Arbitration Act.*

### Fourth Annual Convention of Ontario Provincial Federation of Labour (TLC)

The Fourth Annual Convention of the Ontario Provincial Federation of the Trades and Labour Congress of Canada was held in the Royal York Hotel, Toronto, January 13 to 15, 1950. There were 425 delegates in attendance representing a total of 230 organizations affiliated with the Federation having a combined membership of 45,318, an increase of 4,436 during 1949.

In his presidential address at the opening session of the convention, A. F. MacArthur criticized provinces which blocked federal legislation for improved social security measures. He warned that labour faces the prospect of a growing resistance against

wage increases and declared that it was essential that workers organize solidly to protect gains made and, where possible, improve them.

Secretary-Treasurer Hugh Sedgwick presented a review of the activities of the Executive Board during 1949. These included representations to the Ontario Government with respect to legislation of interest to labour (L.G., May, 1949, p. 571). A special representation was made to the enquiry Commissioner, Hon. Justice W. D. Roach, concerning the Workmen's Compensation Act (see this issue of the LABOUR GAZETTE, p. 325).

More than 100 resolutions were presented to the convention by the Resolutions Committee, the more important relating to housing, labour-management relations, taxation, unemployment, education, the control and management of Ontario forests and provincial working conditions.

Gordon G. Cushing, Secretary-Treasurer of the Trades and Labour Congress of Canada, addressed the Federation. He stressed the "serious unemployment problem" confronting Canadian workers and urged all local unions to assist their unemployed members. "Let the labour movement look after the interests of the unemployed worker," he said. "We don't need any other organization, possibly inspired by those with ulterior motives, to care for the unemployed worker—we will do it ourselves," he asserted.

### Resolutions Approved

**Apprenticeship.**—Resulting from complaints that the administration of the Apprenticeship Act in Ontario was unsatisfactory, the Convention approved of a resolution asking that the Ontario government through the Minister of Labour, be petitioned "to enforce and police the Apprenticeship Act to a standard that will provide the greatest benefit to the apprentice." The re-introduction of the Assessment Regulations of 1928-32 was urged "as a means of restoring individual employer responsibility to the apprentice for on-site job training" during the life of apprenticeship contracts. Resolutions were also passed urging the government to retain the present ratio of one apprentice-in-training to every five journeymen.

**Unemployment.**—Asserting that "growing unemployment in many industries is having an adverse influence on conditions of employment," the Convention demanded "a maximum 40-hour week or less if need be, to maintain full employment with no reduction in take-home pay and at wages adequate to maintain comfort and decency." The government was asked also to undertake immediately a public works program designed to provide jobs at wages established by the trade union movement.

**Housing.**—Declaring that "the lack of adequate housing in Canada has become a tremendous problem" and that the Dominion government's action in permitting landlords "to increase rents by another 18 to 22 per cent" has added to the housing crisis, the federation went on record "to adopt means of demanding that the three

levels of government shoulder their responsibilities on the question of adequate low-rental housing," and unite to subsidize low-rental housing "to enable workers to purchase their homes with interest free money." It was urged further that the proposed increases in rents be rescinded by the federal government, or that the provincial government take action to ban all rent increases.

**Labour-Management Relations.**—Claiming that the cost of individual arbitration cases has risen in recent years to such an extent as to be, in many instances, "beyond the financial resources of many locals" and that, in any case, arbitration proceedings should be handled by those who have gained full familiarity with the subject, the Convention asked that "a permanent panel of arbitrators be established." It was urged that chairmen for arbitration boards be drawn from this panel, instead of from members of the judiciary "whose approach to industrial relations is along the pathway of legal technicality rather than through human relationship."

**Education and Taxation.**—The Federation urged the provincial government to make public immediately the report of the Royal Commission on Education and also to implement the promise that, it was claimed, was made in 1943, that the provincial government would assume at least 50 per cent of school taxes charged against real estate as a relief to municipalities.

**Forest Management.**—Strong criticism of the administration of Ontario's natural resources was presented. It was alleged that "all of our accessible resources on public crown land have been gradually alienated into the hands of a few large corporations who despoil these resources," giving in return dues and taxes that were too small to pay costs of administration. The Convention passed a resolution which, among other suggestions, recommended the appointment of a forestry commission, the chief function of which would be to make sure that the forests of Ontario would be harvested in such a manner as to provide adequate supplies of timber in perpetuity.

### Officers Re-elected

President A. F. MacArthur and Secretary-Treasurer Hugh Sedgwick were re-elected by acclamation and H. J. Green of Toronto and A. W. Godfrey and Bruce A. Magnuson of Fort William were elected Vice-Presidents.

# Ontario Provincial Federation of Labour (TLC) Presents Views on Workmen's Compensation

At a hearing held by Inquiry Commissioner, Hon. Justice W. D. Roach, late in December, the Ontario Federation of Labour (TLC) presented a brief setting forth the Federation's views on workmen's compensation legislation in Ontario.\*

The brief admitted that, broadly speaking, the Workmen's Compensation Act had been fairly satisfactory and that the Board had administered the law in a commendable manner. It was held, however, that "it had been found in practice that certain gaps were evident in the scope of the Act" which, if closed, "would make the Act an even better and more useful measure."

Included among the amendments suggested by the Federation were the following:—

(1) that compensation benefits be paid at the rate of 100 per cent of the highest prevailing wage for the injured workman's occupation in the period from the time of his accident or disability to the time of final settlement;

(2) that blanket coverage be provided for all occupational diseases, or diseases attributable to the nature of the employment;

(3) that the waiting period be abolished and compensation paid from the date of injury or disability;

(4) that supervision of accident or disability preventive measures be placed under the Workmen's Compensation Board;

(5) that uniform coverage be provided for all occupations and the diseases or injuries peculiar to such occupations;

(6) that measures be taken to prevent undue delays in the filing of claims;

(7) that temporary increases be allowed in payments of compensation to widows, invalid husbands and orphans, and that the cases of widows and orphans already receiving pensions be reviewed with a view to eliminating cases of hardship;

(8) that the maximum compensation payable be increased from \$3,000 to \$3,600 and that the scale of payment for burial expenses be increased from \$125 to \$175;

(9) that assessments be paid on the full payrolls of all employers, "so that a full income will be obtained to provide for those who need the benefits most;"

(10) that provision be made to check the proneness of some examiners to refer convalescent workers to "light work," which, it was claimed, frequently aggravated initial injuries; and also, that convalescent workmen receive, not only financial compensation for wages lost, but an adequate time allowance for the satisfactory healing of an injury or disability;

(11) that the Workmen's Compensation Board provide more medical examiners to take care of cases of a more serious nature in unorganized territories in Northern Ontario, and that "a workman's choice of medical examiner should be optional in cases of injury or disability, apart from the services provided directly by the Workmen's Compensation Board."

The Federation placed itself on record as endorsing the following fundamental principles of the Workmen's Compensation Act:—

(1) that it is not damages but compensation that is provided for the injured workman and his dependents;

(2) that the Act should be considered as providing for injured workmen rather than as penalizing employers;

(3) that it should not be necessary to prove, either that the employer was guilty of negligence, or that the workman was at fault;

(4) that the Workmen's Compensation Act provides a relatively simple and inexpensive method of dealing with compensation cases and avoids the expense, delays and annoyances inherent in the old Employers' Liability Act;

(5) that the collective liability system followed in Ontario for raising funds to defray costs of compensation is the most economical method for providing such funds;

(6) "that it must be forever kept in mind that the Workmen's Compensation Act was adopted to expedite the humane handling of cases which are worthy of compensation;" and

(7) that "a workman would infinitely prefer to work for wages at his usual occupation rather than incur an accident for the sake of receiving compensation."

\* Views of the Ontario Federation of Labour (CCL) were summarized on page 39 of the January LABOUR GAZETTE.

# Alberta Federation of Labour (TLC) Presents Legislative Proposals to Government

Legislative proposals approved by the convention of the Alberta Federation of Labour (TLC) in October, 1949 (L.G., Feb., 1950, p. 197), were formally presented to the government of the province by the Executive of the Federation early in January.

While expressing a large measure of approval of existing labour legislation in Alberta, and commending the government for amendments that it proposed to make in the Alberta Labour Act at the next session of the legislature, the Federation was of the opinion that other changes were essential, among them the following:—

**Union Security.**—It was recommended that provision be made in the Act for the taking of a vote at an employer's place of business by the Board of Industrial Relations, when requested by a Trade Union, to ascertain the wishes of the bargaining unit in regard to union security. If 66 per cent voted in favour of union security, then union shop conditions should become part of the signed agreement.

**Hours of Work.**—The Government was again urged to adopt regulations to reduce the work week in the province to forty hours. It was pointed out that this had already been accomplished in the building trades and that certain municipalities were operating on a five-day work week. Special reference was also made to female workers in hospitals and nursing homes, who were excluded from the Female Minimum Wage Order and were compelled to work long hours.

**Pensions.**—The Federation held that old age pensions were inadequate and requested that the Dominion government be approached with a view to securing legislation to provide old age pensions of \$60 per month, payable at age 60, without the means test. In addition, it was urged that (a) "adequate pensions" be provided for the blind, or otherwise totally disabled, regardless of age; (b) that "free hospitalization" be granted for those in receipt of old age or disability pensions; and (c) that in cases of employees who have worked for 20 years in an industry and are found to be unfit to continue their customary employment, the responsibility for maintaining them, "either with a decent pension or suitable employment" should be placed on the industry concerned.

**Unemployment Insurance.**—It was requested that temporary employees in the provincial civil service be brought under the terms of the Unemployment Insurance Act.

**Workmen's Compensation.**—The Alberta Federation was of the opinion that the Alberta Workmen's Compensation Act "is second to none on the North American continent." However, it was requested that in view of the higher cost of living, the government review compensation paid to injured workmen and their dependents. Attention was drawn to annual increases in the number of industrial accidents since 1945 and an official inquiry was urged to disclose the causes and the best methods of prevention. It was also asked that the number of inspectors be increased.

**Fire Fighters' Legislation.**—The Federation claimed that, as organized fire fighters in the province were not permitted to go on strike, the Labour Act should be amended so that arbitration awards concerning fire fighters should be binding on both parties involved in a dispute.

**Industrial Relations.**—While conceding that the Board of Industrial Relations had been fair in its dealings with labour and management, the Federation was of the opinion that there were too many delays in the appointment of conciliators and/or the taking of votes. This was attributed to a shortage of staff and the request was made that the Board's staff be enlarged and the salaries of its employees increased.

**Other Recommendations.**—Among other questions raised by the Federation were (1) that the payment for overtime in the provincial civil service be set at a rate of time and one-half; (2) that the export of natural gas from the province be prohibited until sufficient reserves have been developed to provide adequate supplies for the citizens of Alberta; (3) that all vehicles should be required to carry flares or other safety devices to be used when stopping on the highways, and that chauffeurs should be required to undergo competency tests and health examinations; (4) that regulations covering split shifts be tightened up; (5) that holidays-with-pay regulations be made applicable to all provincial public service employees; (6) that all steam boilers of 20 h.p. or over, irrespective of pressure, should be under the supervision of certified engineers; (7) that the whole field of industrial health and welfare in the province be made the subject of official inquiry, with a view to the prevention of much of the physical and mental ill-health of workers and their families.

## B.C. Executive (TLC) Urges Changes in Conciliation and Arbitration Act

Suggested amendments to the Industrial Conciliation and Arbitration Act were presented to Hon. J. H. Cates, Minister of Labour, British Columbia, by the Provincial Executive of the Trades and Labour Congress of Canada on January 4, 1950.

It was requested that the Act be broadened to cover all workers, specifically, municipal and provincial government employees. The only exclusion, it was asserted, should be a person having authority to hire and fire, or one who acts regularly in a confidential capacity for the employer. "Conflicting legislation should be amended accordingly," it was urged.

The Executive took objection to the certification of company unions as bargaining agencies which, it was claimed, was permitted under the Act. It was asked that "only *bona fide* Trade Unions should be certified."

It was held that there should be provision in the Act which would prohibit an employer from dismissing any employee from service following the granting of certification to a trade union, until the procedure for a collective agreement had been carried out and the conciliation Board had submitted its report, except in cases where there was mutual agreement to the dismissal.

It was requested, further, that the definition of a bargaining unit be amended to read:—

for the purpose of this Act, a unit means a group of employees the majority of which are members of a Trade Union. Appropriate for "collective bargaining" with reference to a unit means appropriate for such purposes, whether the unit is an employer unit, craft unit, professional unit, plant unit, or a subdivision of a plant unit or any other unit, and whether or not the employees therein are employed by one or more employers.

The Executive recommended that the Act should be amended to provide that "no employees bound by a collective agree-

ment, . . . shall strike during the term of the collective agreement, and no person shall declare or authorize a strike of such employees, except where the agreement has been violated."

Inasmuch as the constitutions of "the vast majority of affiliated organizations" make provision for taking strike ballots, the Executive felt that there was no need for Government-supervised strike votes as required by the Act. It was asserted that such Government supervision was an interference with "the constitutional rights of citizens and the operation of legitimate Trade Unions. At no time should employees who are not members of the Union be permitted to vote on the strike question." Neither should employers be permitted a scrutineer at such ballot, and all such votes should be taken in a neutral place, rather than on the employer's premises.

It was recommended that provision be made in the Act for the inclusion of the following union security clause in a collective bargaining agreement, if requested by the Trade Union representing a majority of the employees in the bargaining unit:—

Every employee who is now or hereafter becomes a member of the union shall maintain his membership in the union as a condition of his employment; and every new employee whose employment commences hereafter shall, within thirty days after the commencement of his employment, apply for and maintain membership in the union as a condition of his employment.

The Executive claimed that the time lapse between the breakdown of collective bargaining and the taking of final action, such as a strike vote, was too long, thus permitting "stalling tactics". It was suggested that this time could be shortened by adding a section to the Act "permitting the by-passing of the conciliation officer, upon the request of either party," and secondly, by cutting down the times specified in the Act.

### CORRECTION . . .

On page 1353 of the November, 1949, issue of the LABOUR GAZETTE, the statement that prevailing rate employees of the Federal Government had been granted

"nine statutory holidays with pay per year with two additional statutory holidays at the option of the Minister of the Department concerned," should read: "seven statutory holidays . . .", etc.

# INDUSTRY AND LABOUR IN BRITISH COLUMBIA AND NOVA SCOTIA

## Annual Report of the Department of Labour of British Columbia

*Improved labour conditions is the keynote of the British Columbia Department of Labour's Annual Report for 1948 which describes the administration of labour laws throughout the Province. The Report discusses welfare, health and safety conditions in factories, and makes certain recommendations.*

The Annual Report of the Department of Labour of British Columbia for 1948 records a year of industrial prosperity as well as considerable improvement in labour conditions. The Report stated that it was the best year in the history of the Province. Earnings, payrolls and employment figures continued to climb while the number of working hours decreased slightly.

Earnings increased in every one of the industrial groups covered by the Report. An all-time high of \$47.30 was established in the average weekly wage for all male industrial workers, an increase of \$3.81 over the 1947 figure. The largest increase was in the coal mining industry where average weekly earnings in 1948 went up to \$54.40, \$8.86 more than in 1947. Clerical workers' average earnings also increased in most cases. Male clerical employees in all industries were paid an average weekly wage of \$48.39 in 1948 compared to \$44.85 in 1947, and female clerical workers were paid an average weekly wage of \$30, an increase of \$2.17 over 1947. Out of the 25 industrial groups covered, 20 reported that a decreasing number of their employees were to be found in the lower wage brackets.

The Provincial payroll total for 1948 reached a new peak and 23 of the 25 industrial groups covered showed an increase in their payrolls. The only major decrease was in the ship and boat-building industry which has continued to decline since the war. The greatest increases were noted in the lumber industries (up \$20,000,000 over the 1947 payroll figures), construction (up \$9,500,000) and metal industries (up \$5,000,000). Continued demand for goods and services and the greater availability of labour and supplies were responsible for the increased productive capacity noted in most industries.

While there were some decreases in employment, the over-all employment figures in British Columbia in 1948 con-

tinued to rise, increases being noted in the lumber industry, the construction industries, building materials, metal trades, pulp and paper manufacturing and smelting and concentrating. The highest monthly figure for employment was in August, 1948 with a total of 160,002 employees as compared to the 1947 high in the same month of 153,994.

The Report also pointed out that the average weekly working hours of all wage-earners declined fractionally from 42.24 hours per week in 1947 to 42.21 in 1948. Figures show that only 18.41 per cent of the 165,411 wage-earners reported on in the Province work more than 44 hours a week, while 81.59 per cent work 44 hours or less.

### Legislation

Except for amendments to the laws relating to apprenticeship and municipal employees' pensions, few laws affecting labour were passed at the 1949 Session of the Legislature. A review of this legislation appeared in the *LABOUR GAZETTE* for May, 1949, p. 611.

### Board of Industrial Relations

In its fifteenth annual report, the Board of Industrial Relations summarizes its work for the year. This includes revising minimum wage orders, granting overtime and learners' permits and approving special arrangements of hours of work under the Hours of Work Act.

The Board held 95 sessions during the year. Public hearings were held in connection with the occupation of first-aid attendants and the plumbing and pipe-fitting industry. Four new minimum wage Orders were issued for the automotive repair and gasoline service-station industry, for radio technicians, for radio broadcast technicians and for the sheet metal trade and five Orders were revised to improve wage rates and working conditions in the

transportation industry, manufacturing, offices, first-aid attendants, and amusement places. All but two of these nine Orders apply to both men and women workers. The Board made minor changes in six other Orders. Regulations permitting or continuing exceptions from the eight and 44-hour limits set by the Hours of Work Act were made during the year governing engineers, operators, firemen and oilers or greasers, the baking industry, the construction industry on certain highways, bartenders, waiters and utility men, and the mercantile industry.

**Women and Girl Employees.**—The Report presents a comparative statement, over a five-year period, of the employment, earnings and hours of work of female workers in those occupations and businesses covered by Board Orders. Domestic workers, farm labourers and fruit pickers are not covered by the Minimum Wage Act and federal workers and bank employees are also excluded from Provincial legislation of this kind.

During 1948, 7,984 employers reported a total of 61,528 female employees, the highest employment figure for women workers recorded in the history of the Department of Labour. The comparative figure for 1947 was 61,442 and for 1946, 55,332. Offices continue to employ a larger number of women workers (15,721) than any other group included in the survey.

In each of the 11 industries or occupations for which statistics are set out, an increase is noted in the average weekly earnings of women workers. The highest average weekly wages were paid in the fishing industry (\$30.30), the fruit and vegetable industry (\$29.52) and in offices (\$29.34). The lowest wages were paid in public places of amusement (for part-time work), in hotels and catering and in laundries, \$14.97, \$21.81 and \$22.01, respectively. The greatest increases in wages were noted in manufacturing (up \$3.24 a week over the 1947 figure of \$24.12) and in the transportation industry (an increase of \$4.95 over \$19.27 in 1947). The average weekly earnings in *all* occupations was \$25.98 (compared to \$23.52 in 1947) a figure well above the statutory minimum wages for females which range from \$17 to \$20.16 a week. These tables show that there has been a slight rise in the average number of hours worked in a week: 38.61 hours in 1948 as compared to the low figure of 38.33 hours established in 1947.

**Male Employees.**—The Board reported that since separate statistics for all occupations covered by Male Minimum Wage Orders were not available, the tables on

wages and employment of male workers served only to indicate the general trend in some of the more important occupations covered. Employment figures for male wage-earners declined in seven of the ten occupations listed; the biggest drops being noted in the fruit and vegetable industry and in logging. However, substantial increases in numbers employed are shown in the construction industry and in sawmills. Wages increased in every occupation covered and fractional decreases in hours worked per week were noted in six of the ten groups.

**Inspections and Wage Adjustments.**—The Board reported that the amount of arrears of wages and holiday pay collected on behalf of employees in 1948 was \$109,389.55 as compared to \$84,907.36 in 1947. The large amount of wage collections made, 10 times that of the figure for 1946, resulted from the prevailing high level of employment and from the increased number of investigations made, since several new inspectors were added to the inspection staff; (18,699 investigations were carried out in 1948 as compared to 13,912 in 1947). There were 64 court cases brought under the Annual Holidays with Pay Act, the Male and Female Minimum Wage Acts, the Hours of Work Act, the Semi-Monthly Payment of Wages Act and the Factories Act when employers failed to co-operate with the Department in its job of enforcing the legislative provisions. The main offences under these Acts were failure to pay wages semi-monthly, failure to pay the minimum wage, failure to keep true and correct records, failure to post Orders and to notify employees of schedules of hours and rest periods, and the operation of a factory before 7 a.m. and after 7 p.m.

The Board granted only 427 licences in 1948 (compared to 1,067 in 1947) permitting a graduated scale of wages during the learning period for inexperienced workers until, usually after six months, they are qualified to receive the minimum wage. Of these, 190 licences were for the manufacturing industry.

### Employment of Children

Under the Control of Employment of Children Act, 1944, unless permission has been granted to the employer by the Minister of Labour, children under 15 may not be employed in certain industries and occupations. The Report stated that a total of 328 permits (301 for boys and 27 for girls) were in effect at the end of the year. Of these, 35 were for employment in factories, 14 for catering, 26 for amuse-

ment places, 243 for the mercantile industry, 6 for service stations, 3 for transportation and 1 for construction. In commenting on child employment, the Chief Inspector of Factories reported that except in a few cases, permits were being issued only during the summer school holidays.

### Labour Disputes and Conciliation

The first annual report of the Labour Relations Board of British Columbia appointed on January 13, 1948, under the Industrial Conciliation and Arbitration Act, 1947, describes the year's activities in the labour relations field.

In keeping with the Board's policy of promoting industrial peace, every opportunity was made to give delegations a hearing by the full Board or by its committees. It was arranged that a Vancouver Committee of two members of the Board and a Victoria Committee of two members and the chairman should hold meetings in order to expedite the work of the Board. It was noted that 639 delegations were heard during 1948; the majority being separately representative of both management and employees. The Board considered that these conferences have helped to avert strikes on many occasions by dissipating the friction and misunderstanding existing between the two parties.

The Board was pleased to report only 10 disputes in 1948 in British Columbia, eight strikes and two lockouts. This is a record unequalled in the past seven years. Of the ten disputes affecting 3,216 employees and involving a time-loss in working days of 106,230, the coal mining strike accounted for 2,087 employees and 90,128 man-days. A strike in the Okanagan fruit-packing industry at harvest time was narrowly averted by the Board's intervention in time to save thousands of dollars daily to producers and wage-earners. In addition, the Board intervened with success in the lumber, boat-yard, biscuit and confectionery, welding and wire-fabricating industries.

The Board dealt with a total of 1,266 cases during 1948, 61 cases more than in 1947. Of the 864 applications made for certification, 670 were granted, 126 were rejected and 68 withdrawn. There were 109 others being dealt with at the close of the year.

Thirty-three representative votes were conducted during the year, 212 Conciliation Officers appointed, 90 Conciliation Boards established, 24 prosecutions instituted, 34 strike votes supervised, 4 grievance procedures instituted, 2 Industrial Inquiry Commissions established and 3 referees appointed.

### Employers' and Employees' Organizations

Membership in organized labour ranks in British Columbia in 1948 increased 5.7 per cent over the previous year. The increase was not as large as the 13.5 per cent rise in 1947. There has been a gain of over 300 per cent in the reported membership since December 31, 1939, when the membership stood at 44,867 compared to 142,989 at the end of 1948. This is the highest figure for labour organization ever recorded in British Columbia and it constitutes 31.85 per cent of the total provincial labour force.

The largest organized group, "wood and wood products," contains 21.54 per cent of the total number of trade unionists in the Province. The "services" group is next with 20.99 per cent. This group includes municipal and Provincial employees such as firemen, policemen and letter carriers, Provincial Government employees and teachers. Other large trade union groups are the construction group, the mining and quarrying group, the steam railway transportation group and the metals group.

Employers' organizations have numbered 37 since 1945.

### Factory Inspection

The work of the Factory Inspection Branch includes the inspection of passenger and freight elevators and cleaning establishments, as well as of factories. During 1948, 2,214 inspections of factories were made.

*Welfare.*—In commenting on the increasing welfare measures being taken for workers in factories, the Chief Inspector of Factories stated,

Not only has the safety and health, and even comfort, of the workers attained greater significance, but there is a more general realization that they are very closely related to efficiency and production.

The Report went on to contrast the modern factory, constructed and designed for the manufacture of a particular product, and provided with the most advanced devices for improving working conditions which science, engineering and the industrial psychologist can suggest, with the old factory premises with their small rooms, narrow stairways, poor, restricted natural lighting and obsolete sanitary arrangements. Managers and executives, as well as workers, are appreciating the value and need of factories with welfare facilities and superior amenities.

Special mention was made of measures for increasing employees' welfare, such as morning and afternoon rest periods (which are now general practice throughout many industries), the installation of the

most modern sanitary conveniences, facilities for drying clothes for employees who work in unsheltered occupations, dining and reading rooms, and well-equipped industrial lockers. In addition to the many new and modern premises required, the Chief Inspector considered that the prime need, apart from matters of safety and health, was a general spring tidying-up, repairing and refitting to bring factories up to post-war standards.

**Safety and Health.**—Methods of preventing accidents in factories were reviewed. These include the instruction and supervision of new, inexperienced employees, the use of the safety devices provided, the use of personal protective equipment such as safety shoes, goggles and proper work clothing, the marking of clear passage ways in brightly coloured floor lines and the coloured marking of machinery to indicate hazards.

The Chief Factory Inspector commended the co-operation of the employer and employees' safety committees with the Factory Inspectors in eliminating hazards and promoting safety consciousness.

In discussing the need for ample light as an essential for a safe, healthy and comfortable place in which to work, the Report points out that the standard type of tubular fluorescent units is being increasingly used. However, the hazard in the disposal of the fluorescent tubes was emphasized. In order to prevent inhalation of the dangerous dust of beryllium compound, the tubes should be broken up under water to prevent the dust from escaping into the air. The fragments of glass should then be gathered in a mesh basket and buried in waste ground.

The Report discusses the need for adequate ventilation, removal of dust and fumes, proper temperatures and a proper standard of cleanliness in factories. Regulation of women workers in regard to lifting, stacking and protective clothing is also being enforced by the Factory Inspectors.

**Industrial Homework.**—During 1948, 10 employers and 25 workers were granted home-work permits, a slight increase over the 1947 figures of seven and 22, respectively.

The Factory Inspectors, in their home investigations, have found that the homes were generally very clean, the workers healthy and that there were no signs of contagious disease.

**Elevators.**—In order to safeguard the thousands of people using elevators daily, elevator equipment in the Province is subjected to a rigid safety inspection. There were 1,601 inspections of freight and passenger elevators in 1948. A fatal accident was reported, the first in a number of years. The accident occurred when a 17

year-old boy was attempting to operate a modern freight elevator. The Chief Inspector stated that if landing doors, interlocks and car-gate contacts were maintained in proper working order, fatal elevator accidents would be virtually eliminated. Further, injuries occurring at landings would decrease if the operator would make sure that the doors are closed or locked before he or she leaves the floor.

During the year, 15 elevators were suspended from future use as elevators or until such time as they conform to the rules governing installation, operation and maintenance of passenger and freight elevators.

**Cleaning Establishments.**—The Factory Inspection Branch found that a large cleaning establishment was operating before 7 a.m. and after 7 p.m. without permission from the Chief Inspector in writing. The establishment was fined accordingly.

## Apprenticeship

In its annual report, the Apprenticeship Branch stated that there were 1,677 apprenticeship contracts in existence on December 31, 1948. Out of a total of 2,404 workers who have completed their apprenticeship training, 676 were in the building and construction trade, 652 in the metal trades, and 1,076 in miscellaneous trades.

It was reported that the educational standard of the new apprentices was improving. This may be due to the better commencing wage and the greater opportunities for rapid advancement in the basic trades. Training facilities are being increased by the opening of new vocational schools. The regular attendance of the majority of apprentices at night school set an all-time record for the Province. It was considered that the over-all opportunities are now for fully qualified workers rather than for the specialist and semi-skilled.

The Report spoke of the value of the trade advisory committees set up under the Apprenticeship Act in accordance with the Dominion-Provincial Apprenticeship Agreement. A great deal has been accomplished in the up-grading of war-time semi-skilled mechanics of the improver and helper class, and if this continues, the Director of Apprenticeship stated that the industry will have nothing to fear for its future labour supply.

## Safety Branch

According to the annual report of the Safety Branch, there was a decrease in the number of fatal accidents in logging and in the saw-mill industry, 92 in 1948 as compared to 98 in 1947. It is encouraging to note that accidents in the logging and lumbering industries are gradually decreasing.

# Annual Report of the Department of Labour of Nova Scotia

*An increase in the average weekly wage in industries other than agriculture, good labour relations, fewer industrial accidents and greater attention to safety in factories were highlights of the Annual Report of the Nova Scotia Department of Labour for 1948.*

The Annual Report of the Nova Scotia Department of Labour for the fiscal year ending November 30, 1948, contains a general report by the Minister of Labour, followed by a summary of the activities of the various Branches of the Department. Reports are made on the work done during the year with respect to Statistics, Minimum Wage Board, Labour Relations, Factories Inspection, University Students Loan Fund, Industrial Apprentice Training and Canadian Vocational Training. Much information is given which has not hitherto been included in annual reports of the Department.

The Minister of Labour reviewed changes made in labour legislation during the 1948 session of the Legislative Assembly. He noted eight new schedules of wages and hours of labour approved under the Industrial Standards Act which now applies to the construction industry in Sydney as well as in Halifax and Dartmouth. The rates of wages fixed by these schedules for construction workers in Halifax and Dartmouth now include .03 cents per hour in lieu of vacation with pay for the regular work week. This vacation pay, however, is not counted when calculating overtime rates. The Minister recounted the results of three check-off votes taken on application of the union local concerned under the provisions of the Trade Union Act, 1947. The form of the ballot used is included. The Minister reported also the number of plants registered (278) and operators' certificates (169) issued under the Engine Operators' Act; gave statistical and other information regarding youth training classes in Glace Bay, Sydney and North Sydney; and noted that stenography, typewriting and book-keeping had in 1948 been designated as trades under the Trade Schools Regulation Act.

## Legislation

An important feature of the 1948 labour legislation was the amendment to the Trade Union Act bringing it more in line with the federal Industrial Relations and Disputes Investigation Act. Among the

chief changes was the reduction from 14 to seven days in the "cooling-off period" before a strike vote may be taken. Amendments were also made in the laws relating to workmen's compensation and apprenticeship. The *LABOUR GAZETTE* for November, 1948 (p. 1264), reviewed this legislation.

## Employment and Earnings

The index of employment in industry in Nova Scotia rose moderately from 120.0 in 1947 to 122.7 in 1948, with the greatest demand for workers in the construction industry. Employment in manufacturing was slightly lower. Unemployment resulting from seasonal work and strikes was less than in 1947. The number of unemployed was 2,077 less than the previous year, representing an overall figure of 3.5 per cent of the labour force. The comparative figure of unemployed for the whole of Canada was 2.5.

Payrolls and average weekly earnings (a table with comparative figures from 1945 to 1948 is given) rose more rapidly than employment. The average weekly wage of workers in industries other than agriculture showed a decided rise, reaching \$37.15, as compared with \$33.47 in 1947.

## Statistics

The Statistics Branch reported that an annual industrial survey of the Province was made in 1947 and 1948. One concrete result of the survey is a directory of products manufactured in Nova Scotia.

In order to promote the establishment of a contributory pension scheme for coal miners in the Province, the Department of Labour and the Nova Scotia Research Foundation undertook to make a study of the problem, and submitted estimates of the cost of various pension plans to the coal companies and the union. In addition, the Government offered to contribute part of its annual receipts from coal royalties as a financial contribution to such a scheme.

## Strikes

During the year 1948 the record shows exceptionally good labour relations with

only 10,761 man-working days lost compared with 1,284,782 in 1947. An analysis of the strikes by industry, duration, number of workers involved and time loss is given in the Report. Of the 15 strikes which occurred during the year, seven were in the coal mines.

### The Minimum Wage Board

In Nova Scotia, minimum wage orders apply only to women. Tables setting out the minimum rates for experienced workers (\$15, \$14, and \$13 in Zones I, II and III, respectively), currently in effect are appended to the report of the Minimum Wage Board. Also set out in tabular form are the average weekly wages and hours of women in industries covered by minimum wage orders. Figures covering the years 1944 to 1948 make a comparison possible.

There was an increase in all minimum wage rates for women, effective from the first of the year. In a number of cases, inspections by the Minimum Wage Board resulted in adjustments and payment of back wages. The Board reports that a number of new businesses, mainly in connection with seasonal trades, are being set up outside of the cities and the incorporated towns of the Province, and are therefore exempt from the Minimum Wage Orders. In this connection the Board may recommend to the Government an extension of the Orders to protect the workers in all such industries.

Progress and stability were reported in the textile trades and the fish industry, the average earnings in the latter being about \$18 a week and from \$81 to \$86 a month. The apple industry had an unfavourable year. The average daily wage paid was \$3 for 10 hours and the weekly wage from \$18 to \$26.

The average weekly wage in all 10 classes of industries covered by Board Orders was higher than that for 1947 and in one case shorter hours are noted. Average weekly hours of women range from 43 to 50. Textile employees and telephone operators received the highest average weekly wage: \$19.56 and \$19.93 respectively (in 1947 these wages were \$18.98 and \$15.04). Considerable increases are noted in the average weekly wages paid to women working at laundering and dry cleaning (\$16.43 compared to \$13.15 in 1947), and to women employed in restaurants, hotels and similar places (\$13.37 compared to \$10.82 in 1947). Beauty parlour operators worked an average of 50 hours a week, two hours less than in 1947. Women in offices worked an average of 43 hours a week, one hour more than in 1947.

### Labour Relations

During the year ending November 30, 1948, the Labour Relations Board reported that 50 applications were received under the Trade Union Act. Of these, 42 were granted and eight rejected. Thirty-one unions were certified as bargaining agents; grievance procedure was established in eight cases and in one case certification was revoked by the Board.

The Board reported a heavy demand for the Conciliation Service. Fifteen collective bargaining agreements were successfully negotiated with the assistance of the Department of Labour, and five were concluded by Conciliation Boards under the Trade Union Act.

### Factories Inspection

Five hundred inspections were made during the year, covering the conditions of work of approximately 25,000 employees.

In step with the safety promotion activities of the Department, many plants have adopted measures such as improved lighting, guarding of machinery, fire protection and colour dynamics. A fully guarded automatic slab saw, a power-driven log-loading machine and a device for safely unloading logs were developed by an employer in the woodworking industry, illustrating the field for fuller co-operation of employers in accident prevention work. It is pointed out that, although guards are being put on each piece of new equipment by the manufacturers, these guards are only aimed to prevent specific accidents at the point of operation. The problem of maintaining the guards and instructing the employee in their use falls upon the employer.

Although there were two more fatal accidents in 1948 than in 1947 (9 as compared to 7), the total number of accidents reported during 1948 was less than in 1947. (923 to 1,110). A new feature of the report is the full description of the circumstances which led to these fatalities, and measures necessary to prevent similar accidents are indicated. The Department points out that if the same careful attention were given to "run of mine" or minor accidents as is given to fatal accidents, the cause of many of the fatalities would be discovered and corrected before fatal accidents could occur. The use of hard hats to prevent head damage from falling missiles is one of the important safety devices which should be used by all workers on reconstruction or similar jobs.

Only a few violations of the provisions of the Factories Act with respect to child labour were discovered and they were settled promptly without prosecution.

Twelve violations of the specified rates of pay and hours of labour under the Industrial Standards Act were investigated and settled.

Films, posters, well lighted bulletin boards for displays and a pamphlet entitled "Your Safety News" were methods used by the Department to promote its safety education program during the year. The aim of the Department is to make each individual worker more safety conscious by direct appeal.

### Boiler Inspection

In Nova Scotia, new boilers are inspected twice before leaving the manufacturer and again after they are installed before being used. The number of internal, external and general inspections made on existing installations was greatly in excess of those made in previous years. There was only one serious boiler explosion resulting in a death and the demolishing of an entire saw mill; this boiler had been neither insured nor inspected as it had never been reported to the Boiler Inspection Branch.

Progress in the formulation of a uniform code of boiler laws for all the Canadian provinces was made at the Conference of Provincial Chief Boiler Inspectors in Montreal in December, 1948.

### Apprenticeship and Vocational Training

The apprenticeship training program of the Province, begun in 1935, has been growing steadily and is now widely supported by employer groups and the public in most of the towns and cities. Apprenticeship enrolment on November 30, 1948, numbered 371. Apprenticeship training in the building trades in Halifax was particularly successful with 244 apprentices. The classification of all motor mechanics in the Province was completed. A total of 2,147 applications were received and 1,461 certificates granted.

In addition to the training of apprentices, provision for the training of unemployed men and women was made during the year. A new Vocational Training agreement between the Federal Government and the Province came into effect in April, 1948. The cost of training, including the living allowance, is shared equally by the two Governments except in the case of veterans' training where the Dominion pays the entire cost. Unemployed men and women over 16 (with preference to those over 18), previously gainfully employed, were offered training in nine different trades under the new scheme.

---

## CREDIT UNIONS IN CANADA CONTINUE TO EXPAND

*Credit unions continue to show consistent growth in Canada. During recent years they have become entrenched in every province, including Newfoundland. In 1948, their combined assets were more than a quarter-billion dollars, and membership was over 850,000.*

The Annual Report on "Credit Unions in Canada, 1948", prepared and issued recently by the Economics Division of the Federal Department of Agriculture, includes an historical review of the growth and development of credit unions in Canada from 1900 to 1948.

The first credit union in North America was established in Quebec in 1900. For thirty years expansion of the movement was slow. Until 1922, the only Canadian credit unions were in Quebec province. In that year, however, legislation providing for their incorporation was passed in Ontario. After 1930 growth was more rapid following the

organization in Quebec of a federation designed to promote and organize credit unions throughout the province. In Nova Scotia, the idea was sponsored by the Extension Department of St. Francis Xavier University and was soon taken up in the other Maritime provinces. By 1939, credit unions had been organized in all provinces, and the total number had increased to 844 having a combined membership of 151,554 and assets of over \$20,000,000. In 1948 there were 2,608 credit unions chartered in Canada. These had total assets of more than \$253,000,000 and a combined membership of 850,608.

**Work of Leagues and Federations.**—The report states that “this record of growth and expansion has been due largely to the work of the credit union leagues and federations which are now in existence in every province.” These federations and leagues encourage and assist new credit unions to obtain charters; direct them in procedure, policy and accounting methods; aid them in the co-operative purchase of supplies; provide insurance protection for their savings and loans, as well as bonding insurance for credit union treasurers; sponsor local credit union chapters; and, in some of the provinces, publish credit union newspapers and magazines.

**Official Inspection.**—It is pointed out in the report that most of the provincial governments provide official government inspectors to insure adherence to legislation and to report annually on the operations of credit unions. In Quebec and Prince Edward Island, however, inspection is carried out by the federations aided by grants from the respective governments.

**Central Credit Unions in 1948.**—Every province in Canada has at least one central credit union; Quebec has eight such centrals

and Ontario has three. These central unions act as depositories for surplus and reserve funds of members from which loans may be made. Membership in these central unions is usually confined to local unions, but some provinces permit co-operative associations to become members, and at least one allows certain individual members of local credit unions to make loans from the central, the report states. The total assets of the central unions in 1948 amounted to \$30,595,011, almost 65 per cent of which was in the form of investments, and some 24 per cent in loans to members and mortgages. The other assets consisted of cash, accrued interest, fixed assets, etc.

**Lending Operations, 1948.**—A total of \$130,285,237 was loaned to members of reporting credit unions in 1948. Only five provinces and the Quebec Credit Union League reported the number of loans made. The average size of loan made by these six groups was stated to be \$233.75. Ontario reported the greatest number of loans and the largest total. Members in Saskatchewan borrowed a total of \$6,143,444, an average of \$408.34 per loan. This average was higher than the average in any of the

## Combined Balance Sheet of Credit Unions in Canada, 1948

ASSETS			LIABILITIES		
	Dollars	Per Cent		Dollars	Per Cent
Cash .....	36,534,498	14.3	Shares .....	45,013,098	17.7

			Other Liabilities .....	9,605,896	3.8
<b>Total Assets .....</b>	<b>255,017,193</b>	<b>100.0</b>	<b>Total Liabilities ....</b>	<b>255,017,193</b>	<b>100.0</b>

other provinces. The Quebec League reported the smallest average loan—\$110.80. The loans were made for many purposes, among them being: the purchase of farm machinery; making payments on land and mortgages; the construction and the improvement of buildings; the consolidation of debts; the purchase of furniture, clothing and livestock; and the payment of medical, dental and hospital expenses.

**Recent Growth.**—There was a net increase of 92 credit unions in the nine provinces in 1948. Membership increased by 71,409 and total assets increased by \$32,500,000 over 1947. Quebec maintained its lead in all departments of credit union activity. Of the 2,608 unions in the nine provinces in 1948, 1,078 were chartered in Quebec; Ontario was in second place with 371. The assets of Quebec credit unions amounted to \$205,644,398 in 1948, while the total for the other eight provinces stood at \$47,939,884.

**Credit Unions in Newfoundland.**—Inasmuch as Newfoundland did not enter Canadian confederation until April 1, 1949, returns for that province were not included in the report, "Credit Unions in Canada, 1948".

The following information was obtained from *The Co-operative Consumer* of January 13, 1950.

It is stated that "in 1938, Newfoundland had nine credit unions with 503 members and assets of \$5,833. In 1944, there were 50 credit unions with 4,255 members and \$205,105 in assets. In 1948, the 72 registered credit unions had a total of 5,140 members and assets of \$368,595. Only one credit union had assets exceeding \$25,000." Loans in good standing at the end of 1948 amounted to \$202,689, while overdue loans were \$44,924. It is pointed out that "many of these overdue loans may be regarded as withdrawal of capital, since overdue loan balances are more or less equal to the value of shares held by such borrowers."

This section covers proceedings under two federal statutes, the Industrial Relations and Disputes Investigation Act and the Conciliation and Labour Act, involving the administrative services of the Minister of Labour, the Canada Labour Relations Board and the Industrial Relations Branch of the Department.

## INDUSTRIAL RELATIONS AND CONCILIATION

*The Canada Labour Relations Board certified bargaining agents during January in respect of ground crew and other station personnel employed at Gander, Newfoundland, by six aviation companies and denied two similar applications for certification.*

### Introduction

Widespread interest attached to the proceedings during January before the Canada Labour Relations Board which resulted in the certification of the Association of Aviation Employees, Federal Labour Union No. 24609, AFL, at Gander, Nfld., as the bargaining agent for separate units of ground operations personnel of five non-Canadian airline companies operating into Gander Airport and one aircraft maintenance and servicing company located at the same field. At the same time the Board rejected applications for certification received from the same union affecting two other foreign airline companies for the reason that they were not supported by a majority of the employees in the proposed bargaining units.

Approximately 225 employees were involved in the six cases in which the Association of Aviation Employees was certified. They comprised flight dispatch personnel, crew chiefs, mechanics, fleet service and commissary personnel and other miscellaneous classifications. Various supervisory and confidential employees were excluded by the Board from the scope of the bargaining units.

The companies affected by the granting of certification were Compagnie Nationale Air France, British Overseas Airways Corporation, Transcontinental and Western Air, Inc., American Overseas Airlines, Inc., Pan American World Airways, Inc., and the Allied Aviation Service Company (of Newfoundland), Limited. The companies in respect of which certification was denied

were the Scandinavian Airlines System, Inc., and K.L.M. Royal Dutch Airlines.

The decisions of the Board followed hearings which occupied much of the time of two days' sittings. An interesting feature of the cases was that a sizable number of the foreign nationals affected by the granting of certification belonged to trade unions in their native countries and were protected by the provisions of collective agreements between such unions and some of the employing companies. In this connection the Board decided that neither membership in a trade union other than the applicant nor the nationality of an employee should constitute grounds for exclusion from a bargaining unit.

\* \* \*

A new application for certification received by the Canada Labour Relations Board during January also promised to attract considerable interest. It was made by the American Newspaper Guild on behalf of editorial employees employed within Canada by the Canadian Press. The application was contested by the Canadian Press and was set down for a hearing at the February sessions of the Board.

\* \* \*

The two Conciliation Boards under the chairmanship of the Hon. Mr. Justice J. O. Wilson, of Vancouver, which met during January for preliminary hearings in connection with the current railway disputes and then adjourned until mid-February, postponed resumption of their hearings until the end of the month of February with the mutual consent of the interested parties.

***The following statement concerns the scope and administration of the Industrial Relations and Disputes Investigation Act and the Conciliation and Labour Act.***

Conciliation services under the Industrial Relations and Disputes Investigation Act and under the Conciliation and Labour Act are provided by the Minister of Labour through

the Industrial Relations Branch. The Branch also acts as the administrative arm of the Canada Labour Relations Board under the former Act.

The Industrial Relations and Disputes Investigation Act came into force on September 1, 1948. It revoked the Wartime Labour Relations Regulations, P.C. 1003, which became effective in March, 1944, and repealed the Industrial Disputes Investigation Act, which had been in force from 1907 until succeeded by the Wartime Regulations in 1944.

Proceedings begun under the Wartime Regulations are continued in so far as the services involved in such proceedings are authorized under the new Act. Likewise, decisions, orders and certifications given by the Minister of Labour and the Wartime Labour Relations Board are continued in force and effect by the new Act.

The Act applies to industries within Dominion jurisdiction, i.e., navigation, shipping, interprovincial railways, canals, telegraphs, interprovincial and international steamship lines and ferries, aerodromes and air transportation, radio broadcasting stations, and works declared by Parliament to be for the general advantage of Canada or two or more of its provinces. Additionally, the Act provides that provincial authorities, if they so desire, may enact similar legislation for application to industries within provincial jurisdiction and make mutually satisfactory arrangements with the Dominion Government for the administration of such legislation.

The Minister of Labour is charged with the administration of the Act and is directly responsible for the appointment of Conciliation Officers, Conciliation Boards, Industrial Inquiry Commissions, for the consideration of complaints that the Act has been violated or that a party has failed to bargain collectively, and of applications for consent to prosecute.

The Canada Labour Relations Board is established under the Act as successor to the Wartime Labour Relations Board to administer provisions concerning the certification of bargaining agents, the writing of provisions—for incorporation into collective agreements—fixing a procedure for the final settlement of disputes concerning the mean-

ing or violation of such agreements and the investigation of complaints referred to it by the Minister that a party has failed to bargain collectively and to make every reasonable effort to conclude a collective agreement.

Copies of the Industrial Relations and Disputes Investigation Act and the Rules of Procedure of the Canada Labour Relations Board are available upon request to the Department of Labour, Ottawa.

Conciliation services are also provided by the Industrial Relations Branch under the provisions of the Conciliation and Labour Act. This statute empowers the Minister of Labour to inquire into the causes and circumstances of a dispute, to take such steps as seem expedient for the purpose of bringing the parties together, and to appoint a conciliator or arbitrator when requested by the parties concerned.

Proceedings under the Industrial Relations and Disputes Investigation Act are reported below under two headings: (1) Certification and other Proceedings before the Canada Labour Relations Board, and (2) Conciliation and other Proceedings before the Minister of Labour. From time to time, as required, a third article under this section will cover Conciliation Proceedings under the Conciliation and Labour Act.

Industrial Relations Officers of the Department of Labour are stationed at Vancouver, Winnipeg, Toronto, Ottawa, Montreal, Fredericton and St. John's, Newfoundland. The territory of two officers resident in Vancouver comprises British Columbia and Alberta; two officers stationed in Winnipeg cover the provinces of Saskatchewan and Manitoba and Northwestern Ontario; three officers resident in Toronto confine their activities to Ontario; two officers in Montreal are assigned to the province of Quebec, and two officers resident in Fredericton and St. John's represent the Department in the Maritime Provinces and Newfoundland. The headquarters of the Industrial Relations Branch and the Director of Industrial Relations and staff are situated in Ottawa.

## Certification and Other Proceedings Before The Canada Labour Relations Board

The Canada Labour Relations Board met for two days and held eight hearings during the month of January. The Board issued six certificates designating bargaining agents, rejected two applications for certification, and ordered one representation vote. During the month the Board received four applications for certification and one application for the prescription of a provision for the final settlement of differences concerning the meaning or violation of a collective agreement.

### Applications for Certification Granted

1. Association of Aviation Employees (Federal Labour Union No. 24609, AFL) for a unit of employees of Compagnie

Nationale Air France employed at Gander, Nfld., comprising fleet dispatch personnel, mechanics, traffic and ground operations personnel and fleet service and commissary personnel (L.G., Dec., 1949, p. 1552).

2. Association of Aviation Employees (Federal Labour Union No. 24609, AFL) for a unit of employees of the British Overseas Airways Corporation employed at Gander, Nfld., comprising flight control personnel, traffic and ground operations personnel, building maintenance and service personnel, mechanics, office personnel, Supplies Branch and Motor Transport Branch personnel, and fleet service and commissary personnel (L.G., Dec., 1949, p. 1552).

3. Association of Aviation Employees (Federal Labour Union No. 24609, AFL)

for a unit of employees of Transcontinental and Western Air, Inc. (otherwise known as Trans World Airlines), employed at Gander, Nfld., comprising station administration personnel, flight dispatch personnel, food unit personnel and building maintenance and service personnel (L.G., Dec., 1949, p. 1552).

4. Association of Aviation Employees (Federal Labour Union No. 24609, AFL) for a unit of employees of American Overseas Airlines, Inc., employed at Gander, Nfld., comprising flight dispatch personnel, maintenance personnel, building maintenance and service personnel. The application had been received during the month of October, but was inadvertently omitted from the December, 1949 issue of the *LABOUR GAZETTE*.

5. Association of Aviation Employees (Federal Labour Union No. 24609, AFL) for a unit of employees of Pan American World Airways, Inc., employed at Gander, Nfld., comprising employees in the departments of operations, traffic handling dispatch, and building maintenance (L.G., Dec., 1949, p. 1552).

6. Association of Aviation Employees (Federal Labour Union No. 24609, AFL) for a unit of employees of the Allied Aviation Service Company of Newfoundland, Limited, employed at Gander, Nfld., comprising the manager of commissary stores, equipment-auto maintenance supervisor, ticket counter supervisor, crew chiefs, mechanics, transportation agents, lead fleet servicemen, fleet service personnel, equipment-auto maintenance personnel, weight and balance personnel, ticket counter personnel, and storekeeper personnel (L.G., Dec., 1949, p. 1552).

### **Applications for Certification Rejected**

1. Association of Aviation Employees (Federal Labour Union No. 24609, AFL) and Scandinavian Airlines System, Inc., Gander, Nfld. (L.G., Dec., 1949, p. 1552). The Board rejected the application for the reason that it was not supported by a majority of the employees affected.

2. Association of Aviation Employees (Federal Labour Union No. 24609, AFL)

and K. L. M. Royal Dutch Airlines, Gander, Nfld. (L.G., Dec., 1949, p. 1552). The Board rejected the application for the reason that it was not supported by a majority of the employees affected.

### **Representation Vote Ordered**

The Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees and the Canadian Pacific Railway Company (District Accountant's Office, Montreal) (L.G., Feb., 1950, p. 202). Following an investigation of the application, the Board ordered a representation vote of the employees affected (Returning Officer: L. Pepin).

### **Applications for Certification Received**

1. Local 1440, International Brotherhood of Electrical Workers, on behalf of certain employees of the Ottawa Hydro Electric Commission, Ottawa, Ont. (Investigating Officer: N. G. Price).

2. The American Newspaper Guild, on behalf of editorial employees of the Canadian Press employed in Canada (Investigating Officer: R. L. O'Neill).

3. Hotel and Restaurant Workers' Local 779, Hotel and Restaurant Employees' and Bartenders' International Union, on behalf of employees of the Canadian National Railways, employed in the Newfoundland Hotel, St. John's, Nfld. (Investigating Officer: J. R. Kinley).

4. Radio and Cables Department, Local No. 6, Canadian Communications Association, on behalf of clerical employees of the Pacific Cable Board (Investigating Officer: L. Pepin).

### **Application under Section 19 Received**

During the month the Board received from the National Catholic Brotherhood of Quebec Transport Employees, Inc., an application for the prescription of a provision for the final settlement of all differences concerning the meaning or violation of the collective agreement between the Brotherhood and the Quebec Railway, Light and Power Company, Quebec, P.Q.

## **Conciliation and Other Proceedings Before the Minister of Labour**

### **Conciliation Officer Appointed**

On January 25, 1950, the Minister of Labour appointed a Conciliation Officer to deal with a dispute between De Luxe

Transportation Limited, North Bay, Ont., and the Canadian Brotherhood of Railway Employees and Other Transport Workers (Conciliation Officer: H. Perkins).

## Settlement Facilitated by Conciliation Officer

On January 13, 1950, the Minister of Labour received a report from Raoul Trépanier, Conciliation Officer, indicating the settlement of matters in dispute between the Gatineau Bus Company, Limited, Hull, P.Q., and Division 591, Amalgamated Association of Street, Electric Railway and Motor Coach Employees of America (L.G., Feb., 1950, p. 202).

## Conciliation Board Fully Constituted

The Board of Conciliation and Investigation appointed to deal with the dispute

between the National Harbours Board (General Maintenance Forces and Grain Elevator System, Quebec, P.Q.), and the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees (L.G., Jan., 1950, p. 67), was fully constituted on January 11, 1950, with the appointment of His Honour Judge Edouard Tellier, Montreal, as Chairman. Judge Tellier was appointed by the Minister of Labour in the absence of a joint recommendation from the other two members of the Board, Paul LeBel, Quebec, P.Q., and Marcel E. Francq, Montreal, who had previously been appointed on the nominations of the company and union, respectively.

# COLLECTIVE AGREEMENTS AND WAGE SCHEDULES

## Recent Collective Agreements

A file of collective agreements is maintained in the Economics and Research Branch of the Department of Labour. These are obtained directly from the parties involved and from the Industrial Relations Branch of the Department. A number of those recently received are summarized below.

Agreements made obligatory under the Collective Agreement Act in Quebec are summarized in a separate article following this.

### Logging

**NORTHWESTERN ONTARIO.—CERTAIN PULP AND PAPER MANUFACTURERS AND OTHER PULPWOOD CUTTING OPERATORS AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS OF AMERICA (LUMBER AND SAWMILL WORKERS' UNION).**

Agreements negotiated jointly but signed by individual companies, to be in effect from the date of signature by each company to August 31, 1950, and thereafter from year to year, subject to notice. The company recognizes the union as the sole collective bargaining agency for all eligible employees. The union agrees to discourage union members from moving from camp to camp and from company to company. The company agrees to encourage its employees covered by this agreement to become members of the union.

**Check-off:** the company agrees to deduct union fees from the pay of all employees who so authorize and to remit same to the union.

**Hours of work:** for day workers (except cooks, cookees, chore boys, watchmen, barn bosses, raftsmen, inland waters logmen) 8 per day, 6 days a week, a 48-hour week. Walking

distance up to one and one-half miles each way or riding time up to one-half hour each way shall not be included in the above hours. **Overtime:** any time worked in excess of 8 hours per day or 48 hours per week shall be paid for at the regular rate of pay. During the driving and the ice and snow hauling seasons men will work as many hours during the week as may be necessary to do the work in hand.

**Vacations with pay:** every employee covered by this agreement shall receive, in lieu of vacations with pay, vacation credits of 2 per cent of his gross earnings during his period of employment to be paid in the form of vacation with pay credit stamps, provided that the employee has worked a minimum of 75 days within a 4-month period with the same company during each vacation year, or from July 1 of one year to June 30 of the next year. This time limit shall not apply if work is discontinued or if the employee is laid off. Upon completion of 5 years of continuous service (one year to be not less than 250 days of work) all employees shall receive 2 weeks' vacation with pay effective September 1, 1949.

**Wage rates** for certain classes, per day—cookees \$5.75 to \$6.30, cooks \$7.70 to \$9.10, bull cooks or chore boys, general labourers \$7.15, watchmen \$6.25 and \$6.55, barn boss \$7.35 and \$7.70, loaders and unloaders, hand drillers, sorters, sluicers, jackladder feeders \$7.35, skidders and rollers \$7.45, teamsters \$7.35 to \$7.70, blacksmiths \$7.70 to \$9.10, handymen \$7.45 to \$8.45, mechanics \$7.70 to \$9.40, construction workers \$7.15 to \$8.25, tractor drivers, truck drivers \$7.40 to \$9.40, compressor operator \$8.30 to \$8.85, jackhammer drillers \$7.50, river drivers \$7.75 and \$8.05, raftsmen, inland waters logmen \$8.25, storage ground logmen \$7.75, tank men icing roads, pump men for water pump, men working on jammer \$7.40, top loaders on jammer \$7.65, saw filers \$7.40 to \$8.45, powder men

\$7.70. Cutting pulpwood, rate per single cord, spruce and balsam, rough, 50 inches \$4.95, 100 inches \$4.35, peeled, 50 inches \$7.45, 100 inches \$6.65; rough jackpine 50 inches \$4.35, 100 inches \$3.80; poplar, rough, 50 inches \$3.50, peeled, 50 inches \$5.25, 100 inches \$4.40. Cutting fuelwood (split), per cord: 4-foot poplar \$3.50, jackpine \$4.05, birch and tamarac \$4.60. In addition to above, strip roads are to be paid for at the rate of one cent per foot for 7-foot road, and  $\frac{1}{2}$  cents per foot for 10-foot road. Strip width shall not exceed 66 feet. Rates per cord for loading and hauling and changing sleighs at spotting grounds, or where unloading is done by mechanical means: from 80 cents for peeled wood and 90 cents for rough wood for haul up to one-quarter mile, up to \$1.95 for peeled wood and \$2.20 for rough wood for haul of 3 miles. When wood is unloaded by hand add 16 cents per cord to above rates for rough wood and 13 cents per cord for peeled wood. The above daily rates are the same as were in effect previously. While the above rates for cutting wood are also the same, the previous agreement provided that "when a man has cut and piled 75 cords of rough pulpwood or 37 cords of peeled pulpwood in any one camp, he will be paid a bonus of 55 cents per cord"; this bonus has been discontinued under the present agreement. The rates for loading, hauling and unloading have been decreased by 10 cents per cord for the shorter hauls and left unchanged for the longer hauls.

**Working conditions:** all camps shall have single beds. Pieceworkers shall be provided with scale slips after each scale, the scaling to be done as expeditiously as possible. The charge for board and lodging shall be \$1.65 per calendar day. All tools will be made available by the company to pieceworkers and others.

Provision is made for *grievance procedure* and *seniority rights*.

## Manufacturing

### Textiles and Clothing

HAMILTON, ONT.—GLENDALE SPINNING MILLS LIMITED AND TEXTILE WORKERS UNION OF AMERICA, LOCAL 1070.

Agreement to be in effect from June 13, 1949, to June 12, 1950, and thereafter for a further period of one year, subject to notice. The company recognizes the union as the sole collective bargaining agency for all eligible employees.

**Union security:** all employees who are now or who become union members shall, as a condition of employment, remain members in good standing. New employees shall apply for membership at the time of their hiring. Both parties agree that they will not discriminate against, coerce, restrain or unlawfully influence any employee.

**Check-off:** the company agrees to deduct monthly union dues from the pay of all employees who so authorize and to remit same to the union.

**Hours:** first shift—8 per day Monday through Friday, 5 hours on Saturday, second shift—9 hours per day Monday through Friday, a 45-hour week in either case; third shift—7 hours per day, 6 days a week, a 42-hour week; engineers—8 hours per day, 6 days a week, a 48-hour week. **Overtime** at time and one-half the hourly rate in the case

of hourly rated employees and the average hourly earnings in the case of pieceworkers will be paid for all hours worked in excess of the regularly assigned hours per day or week; double time and one-half for work on 8 specified *paid holidays*.

**Vacations with pay:** the company shall grant all eligible employees with 3 or more months' continuous service a vacation period and may close the plant at a time between July 1 and August 31. Payment will be calculated on the following basis: after 3 months employees will receive 2 per cent of their earnings for the previous 12 months ending June 30; after 2 years  $2\frac{1}{2}$  per cent, after 3 years 3 per cent, after 4 years  $3\frac{1}{2}$  per cent, and after 5 years 4 per cent. **Rest periods:** both parties agree to the principle of organized rest periods and will endeavour to work out a schedule having regard to overall production in the various departments.

**Health and Welfare:** the company agrees to maintain for the duration of this agreement a *hospitalization and sick benefit plan* for its employees and to pay the full cost of same; the plan includes life insurance, accidental death and dismemberment, sickness and accident, hospitalization, and surgical benefits. The company also agrees to provide a *retirement income* for qualified permanent employees and to contribute to this plan an amount not less than that contributed by the employee.

Provision is made for *grievance procedure* and *seniority rights*.

GUELPH, ONT.—BILTMORE HATS LIMITED AND THE UNITED HATTERS, CAP AND MILLINERY WORKERS INTERNATIONAL UNION, LOCAL 82.

Agreement to be in effect from January 1, 1949, to December 31, 1950. The company recognizes the union as the sole and exclusive bargaining agent for all eligible employees. There shall be no discrimination, interference, restraint, coercion or intimidation because of membership or non-membership in the union. The union agrees not to solicit or extend union membership to any new employee, who is not a member in good standing, until after 60 days' continuous employment with the company.

**Check-off:** both parties agree to a compulsory check-off upon all employees who have completed 60 days of continuous employment, except those who have worked for the company in a supervisory capacity. The check-off shall not include entrance fees or any special assessments and shall not exceed \$2 per month for employees between the ages of 17 and 65 years, or 75 cents for employees under 17 and over 65 years of age. It is subject to suspension if the union does not repudiate any work stoppage or fails to declare any picket line illegal and not binding on the employees.

**Hours:** 9 per day Monday through Friday, a 45-hour week, except for truck drivers and maintenance employees, whose working hours shall be as required by the company from time to time. **Overtime:** time and one-half for all work in excess of 45 hours per week and on 7 specified holidays in the case of maintenance employees and, in the case of all other employees, for work in excess of the regular daily hours and on the 7 holidays, provided, however, that the employees during the overtime hours produce work of a quantity and quality consistent with their usual

standard; otherwise they shall be paid at regular rates only. The agreement provides for 2 *paid holidays* in 1949 and 4 *paid holidays* in 1950.

*Vacations with pay:* after 5 years of continuous service two weeks; employees with less than 5 years' service shall be entitled to vacations with pay as provided by the Hours of Work and Vacations with Pay Act. The agreement provides for the closing down of the plant for one week in May, 1949.

*Wages:* except in the case of new employees, rates which were in effect on December 31, 1949, shall apply. The company agrees to pay in addition to such rates and any new rates which may be established a cost-of-living bonus which will incorporate the amount paid under the 1948 agreement and a further amount, together totalling the following amount per hour: Pieceworkers, male—hand finishers 8 cents, all other operations—if average hourly earnings are \$1.04 or less 14 cents, if \$1.05 to \$1.15 12½ cents, if \$1.16 to \$1.24 11 cents and if \$1.25 and up 8 cents; female—all operations 10 cents. Timeworkers: (a) whose hourly rate was established prior to December 1, 1947—over 17 and under 65 years, male 16 cents, female 11 cents; under 17 and over 65 years 9 cents; (b) whose hourly rate was established between November 30, 1947, and December 1, 1948—over 17 and under 65 years, male 8 cents, female 5 cents; under 17 and over 65 4 cents. This bonus is not payable for any overtime. The Cost-of-Living Bonus shall vary with the Cost-of-Living Index (Dominion Bureau of Statistics) after the latter rises or falls 3 points from 158.9. For every rise of 1.3 points above 161.9 or every fall of 1.3 points below 155.9 an adjustment in the bonus of 1 cent per hour up or down shall be made. If the Cost-of-Living Index decreases below 146.8 or increases above 171.0 there shall be no further adjustment of wages during the period of the agreement. The Cost-of-Living Bonus shall not be payable to machine finishing operators and finish slickers or trimming room apprentices. The rate for new unskilled male employees shall not be less than 60 cents per hour. Any employee who works a full week on a night shift, except in the case of sickness or lack of work, shall be paid a *night shift differential* of 10 per cent of his regular earnings.

Every male employee shall, as a condition of employment, wear a hat while going to and from his work.

Provision is made for *grievance procedure*, a *Labour-Management Committee* and *seniority rights*.

### **Wood Products**

VANCOUVER, B.C.—PACIFIC LUMBER INSPECTION BUREAU, INC., AND THE LUMBER INSPECTORS' UNION, BRITISH COLUMBIA DIVISION, LOCAL 1 (CCL).

Agreement to be in effect from October 1, 1949, to October 1, 1950, and thereafter from year to year, subject to 60 days' notice. The Bureau recognizes the union as the sole collective bargaining agency for all eligible employees in British Columbia.

*Check-off:* the Bureau agrees to deduct monthly from the pay of all inspectors, who so authorize, union dues and to remit same to the union.

*Hours of work* shall be in accordance with the "Hours of Work Act" as amended, and

any provincial statutes governing working hours, or as agreed upon between the two parties; the work week shall be 40 hours. *Overtime:* time and one-half shall be paid for time worked outside an inspector's regular shift (except that figuring time performed off the job, if not excessive, shall be paid at the prevailing rate), on Saturdays, Sundays and on legal holidays, provided, however, that an inspector who is absent from his job during the work week for any personal reason whatsoever shall not receive overtime for work performed on Saturday or Sunday.

*Vacation with pay:* 2 weeks after an inspector has completed one year's continuous service, provided he has served 5 years or more in the Lumber Industry of the Pacific Coast.

*Wages,* effective October 16, 1949, for steady inspectors \$1.55 per hour; for transient inspectors \$13.76 per day; the apprentice rate shall not exceed 5 cents per hour less than regular rate.

*Travelling expenses:* inspectors required to travel shall receive reasonable compensation for travelling; when it is necessary that they use their own car, they shall be allowed 8 cents per mile for car expenses.

Provision is made for *grievance procedure* and *seniority rights*.

### **Metal Products**

GUELPH, ONT.—FEDERAL WIRE AND CABLE COMPANY AND UNITED STEELWORKERS OF AMERICA, LOCAL 3021.

Agreement to be in effect from September 1, 1949, to August 31, 1950, and thereafter from year to year, subject to notice. The company recognizes the union as the sole collective bargaining agency for all eligible employees. There shall be no discrimination, intimidation or coercion because of membership or non-membership in the union.

*Hours of work:* 8 per day, a 48-hour week, except that all employees on the regular 8-hour day shift may work 8¼ hours from Monday through Friday and 4¼ hours on Saturday morning at straight time rates. *Overtime* to be paid at time and one-half for all work in excess of above hours and for work on 8 specified statutory holidays, 6 of which are *paid holidays* (an increase of one from the previous agreement).

*Vacations with pay:* one week for employees who have completed one year, 2 weeks for employees who have completed 5 years and 3 weeks for employees who have completed 15 years of continuous service as of June 30; employees with less than one year's service as of June 30 will receive 2 per cent of their earnings.

*Hourly wage rates,* effective August 1, 1949 (minimum and maximum): diemaker \$1.06 to \$1.36; drawing, tinning, stranding, enamel operators, heavy magnet operators, banbury or mill operator, extruding machine operator, rubber press operator, braider mechanics, wax and lacquer room, store keeper 96 cents to \$1.06; annealing, bunching, light magnet operator, extruding machine assistants, taper, locate and vulcanizer, braider operators, coiling, packing, shipping and receiving 96 cents to \$1.01; rewind and inspection (f), cotton wrapping (f), assembly and cord set (f), first aid attendant (f), lunch room attendant (f), youths and females 75 to 80 cents; harness lacquering, labourer, janitor 91 to 96

cents; machinists \$1.16 to \$1.36, maintenance 96 cents to \$1.16, welder \$1 to \$1.20, truck drivers 91 cents to \$1.01. Minimum hiring rates, male 81 cents, females and youths 64 cents; after 60 days the above schedule shall apply. The above rates are 7 or 8 cents per hour higher than the rates previously in effect. An *offshift bonus* of 5 cents per hour will be paid.

Provision is made for *grievance procedure*, *seniority rights* and the *health and safety* of employees.

#### WINNIPEG, MAN.—MOTOR COACH INDUSTRIES LIMITED AND MOTOR COACH WORKERS UNION, FEDERAL LOCAL 147 (TLC).

Agreement to be in effect from October 1, 1949, to September 30, 1950, and thereafter from year to year, subject to 60 days' notice. No employee shall be discriminated against or discharged for any union activities.

*Check-off*: the company shall deduct from the pay of all union members, who so request, the amount covered by such request and remit same to the union.

*Hours*: 48 hours shall constitute a week's work for all employees. *Overtime* (hourly rated employees only) at time and one-half shall be paid for all work done after the regular weekly hours; double time for work on Sundays and on 7 specified holidays. *Paid holidays*: employees employed before May 1 in any year will be granted 2 paid statutory holidays in the first subsequent year, 4 in the second, and 7 in the third; if employed after May 1 but before September 1 they will be granted 1 paid holiday in the first subsequent year, 3 in the second, 5 in the third, and 7 in the fourth.

*Vacations with pay*: after one year's service one week, after 10 years' service two weeks.

*Hourly wage rates*: leading hand \$1.05; tradesmen, first class \$1, second class 95 cents, third class 90 cents; general helper, first class 85 cents, second class 80 cents; ordinary labourer 75 cents, leading storeman 90 cents; storeman, first class 85 cents, second class 80 cents; janitor and watchman \$135 (per month), truck driver \$160 (per month). Starting rate for ordinary labourers and storemen 60 cents, for boys under 18 years of age 45 cents, for janitors and watchmen \$125 (per month), for truck drivers \$140 (per month). The ratio of boys under 18 years of age employed is never to exceed that of 1 boy to 5 first class tradesmen.

Provision is made for *grievance procedure* and *seniority rights*.

## Transportation and Public Utilities

### Water Transport

#### BRITISH COLUMBIA.—THE B.C. TOWBOAT OWNERS' ASSOCIATION AND THE CANADIAN MERCHANT SERVICE GUILD, INC.

Agreement to be in effect from October 1, 1949, to September 30, 1951, except that at the request of either party wage rates may be reviewed one year from the effective date. The Guild is recognized as the collective bargaining agency of the masters and mates of the companies signing this agreement. Preference in hiring new employees will be given to members of the Guild in good standing or who have an application before the Guild, provided suitable men are available.

*Hours*: both parties subscribe to the principle of the 8-hour day in industry, but recognizing the impracticability of the 8-hour day in the B.C. towboat industry agree that equitable compensation for any time worked over and above 8 hours per day shall be made by time off. It is therefore agreed that the establishment of a working month of 20 days on and 10 days off shall go into effect on the following time schedule: from October 1, 1949, to December 31, 1949, the monthly work schedule shall be 23 days on, 7 days off; on and after January 1, 1950, 22 days on, 8 days off; on and after October 1, 1950, 21 days on, 9 days off; on and after September 30, 1951, 20 days on, 10 days off. This monthly leave shall be granted exclusive of annual vacation. In the case of employees on outside tugs the days off will be allowed within a 3-month period, at least 5 of them to be allowed consecutively. When necessary for harbour tugs to work over 12 consecutive hours in any one day in intermittent cases, additional time off will be allowed. Pay in lieu of leave shall not be tendered or accepted except in the case of temporary officers or as mutually agreed upon between the Guild and the company. When a towboat is tied up for repairs, overhaul or for other cause, watches shall be broken and mates assigned to day work on the basis of 8 hours per day. As a general rule, repair work will not be carried out on Saturday mornings during overhauls, except on the day of arrival and the day of departure. If a master or mate performs duties such as handling freight or boomchains, other than to other of the companies' vessels, he shall be paid at the rate of \$1.10 per hour for such work in addition to his regular pay. In compensation for statutory holidays worked each man shall be given 3 days with pay free from the ship, one of them Christmas Day, if possible.

*Vacations with pay*: after one year's continuous service 12 days, after two years' 14 days; after 60 days' continuous service an employee shall be granted annual leave proportionately on the above basis.

*Basic monthly wage rates* for masters and mates: Class 1 \$372.90 (masters) and \$261.03 (mates), Class 2 \$348.04 and \$237.30, Class 3 \$329.40 and \$231.65, Class 4 \$304.54 and \$220.35, Class 5 \$292.11 and \$209.05, Class 6 \$279.68 and \$197.75, Class 7 \$273.46 and \$186.45, Class 8 \$267.25 and \$186.45, Class 9 \$254.82 and \$186.45, Class 10 \$237.30 and \$186.45. If required to service the engine when no engineer is carried, \$20 per vessel per month shall be awarded for this service in addition to the above basic rates.

No towboat carrying a total crew of 3 men or less shall be dispatched on any job which will not permit its return to base port within 12 hours from the time the employees were required to report for work. On all other operations the minimum total crew shall be 4 men.

Provision is made for *grievance procedure*.

#### BRITISH COLUMBIA.—THE B.C. TOWBOAT OWNERS' ASSOCIATION AND THE NATIONAL ASSOCIATION OF MARINE ENGINEERS OF CANADA, INC.

Agreement to be in effect from October 1, 1949, to September 30, 1951, except that at the request of either party after due notice wage rates may be reviewed one year from the effective date. This agreement is similar to the one between the B.C. Towboat Owners'

Association and the Canadian Merchant Service Guild, Inc., summarized above, with the following differences:—

This agreement states that the time schedule as outlined in the above summary applies only to vessels operating on a two-watch system. On tugs operated on the 3-watch system engineers shall be allowed time off free from the ship on the basis of one day in 7 in lieu of time off as outlined in the time schedule. Days off so earned shall be cumulative and allowed within a 3-month period, at least 5 of them to be allowed consecutively.

*Basic monthly wage rates* for chief and second engineers: Class 1 \$348.04 (chief engineer) and \$261.03 (second engineer), Class 2 \$323.18 and \$237.30, Class 3 \$304.54 and \$231.65, Class 4 \$279.68 and \$220.35, Class 5 \$267.25 and \$209.05, Class 6 \$254.82 and \$197.75, Class 7 \$242.95 and \$186.45, Class 8 \$237.30 and \$186.45, Class 9 \$226 and \$186.45, Class 10 \$209.05 and \$186.45.

## Service

### Business and Personal

VANCOUVER, B.C.—CERTAIN HOTELS AND THE HOTEL AND RESTAURANT EMPLOYEES' INTERNATIONAL UNION, LOCAL 28.

Agreement to be in effect from September 29, 1949, to April 30, 1951, and thereafter from year to year, subject to 60 days' notice, provided that at any time after March 31, 1950, either party may require the other to enter into negotiations for a revision of wage rates. The employer agrees to recognize, and bargain collectively, exclusively with the union.

*Union security:* all employees who are now or who may later become members of the union shall, as a condition of employment, remain members in good standing. New employees must apply for membership within 30 days from date of employment. There shall be no discrimination against any employee for being a member or an officer of the union.

*Hours of work:* not more than 8 per day or 44 in any one week, except in case of an emergency. Where the employer has entered into an agreement with the union regarding hours of work, same having been approved by the provincial Department of Labour,

such hours shall remain in effect. *Overtime* at time and one-half shall be paid for work in excess of the regular hours and for work on 4 specified holidays.

*Vacations with pay:* one week for all employees with one year's continuous service, 2 weeks for those with 2 or more years' continuous service.

Any employee working 6 or more hours per day shall be allowed on his own time not less than one-half hour as a meal period, if possible between the fourth and fifth hours of work. Meals are supplied except to cashiers (front office), mail and information clerks.

All *uniforms, smocks, etc.*, which the employee is required to wear shall be supplied and kept clean and in repair without cost to the employee.

*Minimum hourly wage rates:* room clerks 83 cents (any clerk receiving a rate in excess of 83 cents per hour, shall receive an increase of 5 cents per hour, and the lowest rate above the minimum rate paid by the employer hereunder shall be the basic wage rate for room clerks who have completed 6 months' service; and beginning clerks shall be increased up to such basic rate as their increasing experience and ability may warrant), switchboard operators 67½ cents, assistant and working housekeepers 71 cents, linen room assistants and seamstresses 66 cents, maids 62½ cents, cashiers 77½ cents, mail and information clerks 67½ cents, cooks 70 cents to \$1.05, assistant cooks 65 to 90 cents, butcher 96½ cents, assistant butcher 83½ cents, butcher's helper 65 cents, pastry chef \$1.05; head pantryman 90 cents, first assistant 80 cents, helper 65 cents; icemen and day porters 65 cents, night porters 70 cents, vegetable cleaners 65 cents; dishwashers, male 62 cents, female 60 cents, waiters 65 cents, waitresses 60 to 65 cents, bus boys (banquet floor) 60 cents, bus girls and bus boys (main floor) 57½ cents. Waiters regularly employed or steady bus boys or girls required to work as waiters or waitresses on a function shall be paid a bonus of 80 cents per function. Short shift employees (any shift less than 6 hours) shall be paid on an hourly basis with a minimum of 4 hours' pay at the above rates plus 5 cents per hour, except when otherwise agreed between the employer and the union.

Provision is made for *seniority rights* and *grievance procedure*.

## Collective Agreement Act, Quebec

Recent proceedings under the Collective Agreement Act, Quebec,\* include the extension of two new agreements and the amendment of eight others. These include, in addition to those summarized below, the amendment of the agreements for retail

stores at Granby, at Richmond and Melbourne and at Windsor and the extension of a new agreement for bakers, pastry-workers and salesmen at Granby, published in the *Quebec Official Gazette*, issue of December 24.

\* In Quebec, the Collective Agreement Act provides that where a collective agreement has been entered into by an organization of employees and one or more employers or associations of employers, either side may apply to the Provincial Minister of Labour to have the terms of the agreement which concern wages, hours of labour, apprenticeship, and certain other conditions made binding throughout the province or within a certain district on all employers and employees in the trade or industry covered by the agreement. Notice of such application is published and 30 days are allowed for the filing of

objections, after which an Order in Council may be passed granting the application, with or without changes as considered advisable by the Minister. The Order in Council may be amended or revoked in the same manner. Each agreement is administered and enforced by a joint committee of the parties. References to the summary of this Act and to amendments to it are given in the *LABOUR GAZETTE*, January, 1949, page 65. Proceedings under this Act and earlier legislation have been noted in the *LABOUR GAZETTE* monthly since June, 1934.

Requests for amendments to the agreements for building trades at Sherbrooke and for barbers and hairdressers at Joliette were published December 24, a request for an amendment of the agreement for retail food stores at Quebec and a request for a new agreement for garages and service stations at Montreal were gazetted December 31, a request for the amendment of the agreement for tavern employees at Quebec and a request for a new agreement for retail stores at Asbestos were gazetted January 7. A request for the amendment of the agreement for the fur industry at Quebec was published in the *Quebec Official Gazette*, issue of January 14.

Orders in Council were also published approving or amending the constitution and by-laws of certain joint committees and others approving the levy of assessment on the parties.

## Mining

### *Non-Ferrous Smelting and Quarrying*

BUILDING MATERIALS, PROVINCE OF QUEBEC.

See below under "Manufacturing: Non-Metallic Minerals, Chemicals, Etc."

## Manufacturing

### *Fur and Leather Products*

WHOLESALE FUR INDUSTRY, MONTREAL.

An Order in Council, dated December 14, and gazetted December 24, amends the previous Orders in Council for this industry (L.G., March, 1947, p. 368; June, 1948, p. 619, Dec., p. 1421; May, 1949, p. 604, and previous issues) by providing that when Christmas and New Year's Day fall on Sunday, the first working day following Christmas and the one following New Year's Day shall be considered as holidays with pay.

### *Printing and Publishing*

PRINTING TRADES, QUEBEC.

An Order in Council, dated January 4, and gazetted January 14, amends the previous Order in Council for this industry (L.G., Feb., 1949, p. 178) by extending the terms of this agreement until March 15, 1950.

PRINTING TRADES, CHICOUTIMI.

An Order in Council, dated December 14, and gazetted December 24, makes obligatory the terms of an agreement between "L'Association des Maitres-Imprimeurs, Saguenay-Lac St-Jean" and "Le Syndicat national des Imprimeurs de Chicoutimi inc."

Agreement to be in effect from December 24, 1949, to June 1, 1950, and thereafter from year to year, subject to notice.

*Territorial jurisdiction* includes the counties of Chicoutimi, Roberval, Lake St. John, Charlevoix and Saguenay. This jurisdiction is divided into 2 zones: zone I, the counties of Chicoutimi, Roberval and Lake St. John; zone II, the counties of Charlevoix and Saguenay.

*Hours:* 44 per week; between 8 a.m. and 6 p.m. the first 5 days of the week and between 8 a.m. and 12 (noon) Saturday. *Night shift* employees work 44 hours per week.

*Overtime* for all work performed in excess of the regular or standard work week is payable at time and one-half. The number of working hours of the standard work week is reduced in proportion to the holidays and absences for illness or other justifiable reasons. When any one of 7 specified paid holidays fall on Sunday, the following Monday is observed and employees working on that day shall receive double time. Two additional days, Ascension Day and Good Friday till noon are observed but not paid for.

*Minimum hourly wage rates:* in zone I, journeymen in establishments having 8 or more employees \$1.15 per hour; in other establishments \$1.05 per hour; bookbinding, female employees during the first 6 months (1,100 hours) 34 cents, to 51 cents per hour during the sixth 6 months (6,600 hours); in zone II, minimum rates are 10 per cent less than the rates for zone I. *Night shift* employees shall receive 10 per cent more than the minimum hourly rates of day shift workers. Minimum hourly wage rates for apprentices during the first 6 months 35 cents to 80 cents per hour during the tenth 6 months.

*Vacation:* one week with pay after one year's service; after 2 years' service employees are entitled, each year, to an additional day of vacation with pay, to the extent of 2 weeks.

Apprentice typographers, pressmen and bookbinders shall serve an apprenticeship of 5 years; bookbinding female employees 3 years.

An employer may hire an apprentice if he has one journeyman (typographer, pressman or bookbinder) and another apprentice if he has 2 journeymen in any one of the trades. Moreover, for each additional 2 journeymen in his employ, he may have one apprentice.

### *Non-Metallic Minerals, Chemicals, Etc.*

BUILDING MATERIALS INDUSTRY, PROVINCE OF QUEBEC.

An Order in Council, dated December 21, and gazetted December 31, amends the previous Orders in Council for Part III of this agreement which applies to the *marble industry* in zone I (L.G., Nov., 1947, p. 1660; Nov., 1948, p. 1246; March, 1949, p. 302, and previous issues) by extending the present terms of working conditions and wage rates to February 28, 1951. However wage rates are subject to revision by reason of increases in the cost-of-living index.

*Hours* to be in effect from March 1, 1950: for marble cutters and apprentice marble cutters, 8 per day, Monday through Friday, a 40-hour week; a reduction of 5 hours per week; for other qualified tradesmen, 9 per day, Monday through Friday, 45 hours per week, reduction of 10 hours per week.

*Overtime:* time and one-half until midnight, double time between midnight and 7 a.m. However, if an employee is requested to work outside regular working hours and work starts before noon, working conditions are the same, 8 hours at the regular rate and all overtime at the rate of time and one-half; if the work commences after 12 noon and at whatever time it starts in the afternoon or

evening, the first 5 hours shall be paid at the regular rate, the following 2 hours at time and one-half and thereafter double time. Any work done after midnight shall be paid at time and one-half excepting the eighth and succeeding hours which shall be paid at double rate. Employees requested to work Dominion Day or Labour Day will be paid triple rate.

*Minimum hourly wage rates* for employees governed by the provisions of Part III of this agreement (in zone I) are increased by a 5 per cent bonus, both for regular and overtime work, to be in effect from November 21, 1949, until February 28, 1950.

Effective March 1, 1950, the minimum wage rates as amended above are replaced by the following: marble cutters and setters are increased by 14 cents per hour to \$1.54 (this rate governed by the agreement relating to building trades and not to be reduced when employees are required to work temporarily in the shop); hand cutters \$1.32 (an increase of 12 cents per hour); carborundum machine operator, terrazzo caster \$1.26 (an increase of 11 cents per hour); machine cutter, hand and machine polisher, compressormen, saw setter, bed rubber face, bed rubber end, and craneman \$1.10; sawyer men on gang saws—first 3 months 95 cents per hour, thereafter \$1.10 (all classifications increased by 10 cents per hour); helpers and labourers rates are increased by 8 cents per hour to 88 cents; apprentice marble cutters from 88 cents during the first year to \$1.21 per hour during the fourth year; apprentice carborundum machine operators from 95 cents during the first 6 months to \$1.10 during the third 6 months; apprentice polisher 95 cents during the first 3 months, thereafter \$1.10 (increases for apprentices range from 8 to 11 cents per hour); watchmen's rate at \$30 per week remains unchanged.

Increases mentioned for the minimum wage rates shown above are based on the rates previously summarized in the *LABOUR GAZETTE*, issue of March, 1949, p. 302.

Furthermore, the wage rates shown above shall remain in force until February 28, 1951. However if on September 1, 1950, there is an increase of at least 3 points or more in the index of cost of living (index published by the Bureau of Statistics of the federal Government for Montreal City) taking as a base the index as of September 1, 1949, the wage rates will be raised by one cent for each point of increase (decimal fractions omitted).

Apprenticeship regulations are also affected by this amendment.

## Construction

### BUILDING TRADES, MONTREAL.

An Order in Council, dated December 21, and gazetted December 31, amends the previous Orders in Council governing Part "C" of this agreement as it applies to the marble, tile and terrazzo trades in this industry (L.G., Sept., 1948, p. 993, Nov., p. 1247; Jan., 1949, p. 67, Feb., p. 178, March, p. 302, May, p. 605, Aug., p. 989, Nov., p. 1420).

*Hours* for qualified tradesmen to be in effect from March 1, 1950: 8 per day, Monday through Friday, 40 per week.

*Overtime*: all work done in addition to the regular day's work shall be paid at the rate of time and one-half; between midnight and 8 a.m., double time. If an employee is

requested to work outside regular working hours and starts before noon, working conditions are the same, 8 hours at regular rate, thereafter time and one-half; if the work starts after 12 noon and at whatever hour it starts in the afternoon or evening, the first 5 hours at regular rate, the 2 following hours at time and one-half, thereafter double time. Any work executed after midnight shall be paid at time and one-half excepting the eighth and succeeding hours which shall be paid at double rate. Employees requested to work Dominion or Labour Day shall be paid triple rate.

*Minimum hourly wage rates* for employees governed by the provisions of Part "C" of the present agreement are increased by a 5 per cent bonus over and above the rates previously summarized in the *LABOUR GAZETTE*, issue of January, 1949, p. 67, for both regular and overtime work, to be in effect from November 21, 1949 to February 28, 1950.

Effective March 1, 1950, the minimum wage rates amended as above are replaced by the following: rates for marble setters, tile setters and terrazzo setters are increased by 14 cents to \$1.54 per hour; hand marble polishers \$1.21; terrazzo polishing machine operator (dry) \$1.35; (wet machine) \$1.15; increases range from 10 to 12 cents per hour. Minimum rates for apprentices: marble, tile and terrazzo setters 95 cents per hour during the first year to \$1.35 during the fourth year; terrazzo polishing machine operator (dry) \$1.05 during the first 3 months to \$1.35 after 6 months; (wet machine) during the first 3 months \$1 per hour, thereafter \$1.15. Rates for apprentices represent increases ranging from 10 to 12 cents per hour.

Increases mentioned for the minimum wage rates shown above are based on the rates previously summarized in the *LABOUR GAZETTE*, issue of January, 1949.

Apprenticeship regulations are also affected by this amendment.

## Trade

### WHOLESALE AND RETAIL STORES, RIMOUSKI.

An Order in Council, dated January 4, and gazetted January 14, amends the previous Order in Council for this industry (L.G., March, 1949, p. 303).

*Hours*: in drugstores a standard work week of 54 hours distributed as the employer chooses.

*Minimum wage rates*: accountant \$41 per week; section head-clerk, butcher-clerk \$36; store clerk and office employee—(male) from \$18 per week during the first 6 months to \$31 per week during the third year; (female) from \$14.75 per week during the first 6 months to \$20.75 during the third year; delivery man—truck \$28, horse drawn vehicle \$19; delivery man's helper \$19 and \$24; assistant butcher-clerk from \$18 during the first 6 months to \$31 during the third year; general worker (under 19 years of age) \$19; (19 and over) \$28; messenger—\$10 per week when bicycle supplied by employers and \$12 per week when supplied by the employee; occasional and extra employees—(males) 52 cents per hour; (female) 37 cents per hour. In most cases the rates shown above represent increases at \$1 per week. Bookkeepers—(male) \$19 during the first 6 months to \$33 in the third year; (female) \$16 during the first 6 months to \$23 in the third year are an added classification.

# FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

The Fair Wages Policy of the Dominion Government has the purpose of ensuring that all government contracts contain provisions to secure the payment of wages generally accepted as current in each trade for competent workmen in the district where the work is carried out.

There are two sets of conditions applicable to government contracts, those which apply to building and construction work, and those which apply to contracts for the manufacture of various classes of government supplies and equipment.

The practice of the different departments of the Government, before entering into contracts in the first group, is to obtain from the Department of Labour schedules setting forth the current wage rates for the different classifications of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon included by the department concerned in the terms of the contract.

Fair wages schedules are not issued in respect of contracts for supplies and equipment. Contracts in this group are awarded in accordance with a policy which provides that wage rates must equal those current in the district.

A more detailed account of the Dominion Government's Fair Wages Policy is given in the *LABOUR GAZETTE* for July, 1946, p. 932.

## Schedules Prepared and Contracts Awarded During December

### (1) *Works of Construction, Remodelling, Repair or Demolition.*

During the month of December the Department of Labour prepared 100 fair wages schedules for inclusion in building and construction contracts proposed to be undertaken by various departments of the Government of Canada in different parts of the Dominion.

During the same period a total of 78 construction contracts was awarded by the various Government departments. Particulars of these contracts appear in the accompanying table.

Copies of the relevant wages schedules are available to trade unions or other *bona fide* interested parties, on request.

The labour conditions of each of the contracts listed under this heading, besides stipulating working hours of not more than eight per day and forty-four per week, provide that "where, by provincial legislation, or by agreement or current practice, the working hours of any class of workers are less than forty-four per week, such lesser hours shall not be exceeded on this work except in cases of emergency as may be approved by the Minister of Labour and then only subject to the payment of overtime rates as specified by the Minister of Labour", and also specify that the rates of wages set out therein are "*minimum rates only*" and that "nothing herein contained shall be considered as exempting contractors and subcontractors from the payment of higher rates in any instance where, during the continuance of the work such higher rates are fixed by provincial legislation, by agreements between employers and employees in the district or by changes in prevailing rates".

### (2) *Contracts for the Manufacture of Supplies and Equipment.*

Contracts for supplies and equipment were awarded as follows, under the policy that wage rates must equal those current in the district:—

Department	No. of contracts	Aggregate amount
Canadian Commercial Corporation. . . . .	6,539	\$11,694,793.13
Post Office. . . . .	16	160,759.66
Public Works. . . . .	7	66,185.00
R.C.M.P. . . . .	3	8,529.50

CONTRACTS CONTAINING FAIR WAGES SCHEDULES AWARDED DURING DECEMBER

Location	Nature of Contract	Name of Contractor	Amount of Contract	Date of Wages Schedule
Summerside, P.E.I.	Installation of bulk gasoline storage and pumping equipment, R.C.A.F. Station.	Curran & Briggs Ltd., Summerside, P.E.I.	\$ 29,176 25	Oct. 26, 1949
Halifax, N.S.	Construction of chain link fence around D.N.D. property accommodating No. 15 R.O.D. and No. 6 Coy., R.C.E.M.E.	Frost Steel & Wire Co. Ltd., Montreal, P.Q.	14,604 50	Dec. 14, 1949

# LABOUR LAW

## Legal Decisions Affecting Labour

*The Exchequer Court of Canada awarded damages to an injured Federal employee already receiving Workmen's Compensation. ¶The Supreme Court of New Brunswick interpreted the coverage of the carpentry trade schedule under the Industrial Standards Act. ¶The Montreal Superior Court upheld the validity of the Minimum Wage Ordinances.*

### **Government employee, injured during employment, awarded \$10,000 damages from Federal Government in addition to workmen's compensation.**

On March 12, 1949, Mr. Justice Thorson of the Exchequer Court of Canada awarded a former Federal Government employee \$10,000 damages under the Exchequer Court Act for injuries received when testing gun barrels. In determining the amount of the award, Mr. Justice Thorson pointed out that consideration must be given to the compensation (\$54.16 monthly) which the man was already receiving under the Government Employees Compensation Act.

In a previous judgment handed down on August 2, 1946, Mr. Justice Thorson had held that the employee was not barred from pursuing a claim for damages under the Exchequer Court Act merely because he was already receiving compensation for his disability under the Government Employees Compensation Act. This decision was affirmed by a ruling of the Supreme Court of Canada on an appeal.

The Judge pointed out that if the claim for damages under the Exchequer Court Act were to be valid, it was essential to prove that the injuries arose because of the negligence of an officer or servant of the Crown. Under the Government Employees Compensation Act, an employee of the Crown is entitled to compensation for injuries suffered by accident arising out of and in the course of his employment without having to show that they resulted from negligence. Section 19 (1) (c) of the Exchequer Court Act R.S. 1927 as amended in 1938 reads:—

- 19 (1) The Exchequer Court shall also have exclusive original jurisdiction to hear and determine the following matters:
- (c) Every claim against the Crown arising out of any death or injury to the person or to property resulting from the negligence of any officer or servant of the Crown while acting within the scope of his duties or employment.

At the time of the accident, June 7, 1941, the suppliant was employed as a day labourer by the Inspection Board of the United Kingdom and Canada at its artillery proving grounds at Valcartier, P.Q. He was being trained as a gunner. The accident occurred when he, as a member of the gun-testing crew, used a defective ramrod on a jammed gun. He was very seriously injured; his right arm was cut off just below the elbow, he lost all the fingers on the left hand except the thumb, and the vision of his left eye was 90 per cent impaired.

The Court examined the facts surrounding the accident and found that both the proof officer on duty at the time and the No. 1 gunner were guilty of negligence. Mr. Justice Thorson stated that the proof officer:

knowing the defective and dangerous condition of the ramrod should have taken steps either to prevent its use by an inexperienced man like the suppliant or, at any rate, to warn him of the danger involved in such use. But he did neither.

His Lordship found that there was even greater negligence on the part of the No. 1 gunner whose failure to pull the lever breech mechanism down to the safety notch before giving any orders to use the ramrod was "the prime cause of the suppliant's injuries".

The Court did not agree with the contention of the respondent that the suppliant had acted too quickly. He had acted as he had previously and was entitled to assume that the lever breech mechanism had been pulled down.

The Judge then dealt with the question of whether the proof officer and the No. 1 gunner were officers and servants of the Crown on the day of the accident. On this point, His Lordship ruled that the Inspection Board of the United Kingdom and Canada was "the servant of the Government and its employees were just as much servants of the Crown as if they had been employed by one of the Departments of the

Government". Thus, the proof officer and the No. 1 gunner were servants of the Crown within the meaning of Section 19 (1) (c) of the Exchequer Court Act.

His Lordship then considered what he referred to as the "interesting" point raised by the suppliant in regard to damages. The suppliant claimed that the amount of damages to which he would be entitled under the Exchequer Court Act ought not to be reduced by the amounts of compensation he has received or will receive under the Government Employees Compensation Act. He contended that the latter compensation was really statutory insurance of Government employees against the risk of accident arising from their employment. The Court pointed out that the suppliant was basing his contention on the clearly established principle that accident insurance is never taken into account when the amount of damages a plaintiff is entitled to receive for injuries resulting from a defendant's negligence is being computed, and continued:

The reason for the rule is that neither the injury done by a wrongdoer as a result of his negligence, nor his liability to pay damages for it is diminished by the fact that the injured party has received money from a third party under a contract of insurance for which he has himself paid the premium or other consideration. A wrongdoer is not entitled to the benefit of a policy of insurance for which he has paid nothing.

However, the Judge ruled that the considerations in the present case were quite different.

The employee does not receive his compensation under a contract for which he has paid a premium but by reason of a statutory obligation which Parliament has imposed upon the Crown in his interest, and without any payment on his part. . . . Here the person responsible for damages for the wrongdoing is one and the same person as the statutory insurer of the injured person.

The Court considered, therefore, that account should be taken of the amount of compensation the suppliant was already receiving under the Government Employees Compensation Act. In the Court's view, the injured man was to be compensated under the Government Employees Compensation Act, if he so desired, but he was also entitled to damages under Section 19 (1) (c) of the Exchequer Court Act if it were shown that he came within the scope of this section, to the extent that his entitlement under it was greater than the amount of compensation to which he was restricted under the Government Employees Compensation Act.

His Lordship stated further:

It is clear therefore from what I have said that the suppliant's rights under Section 19 (1) (c) of the Exchequer Court Act are greater in extent than under the Government Employees Compensation Act.

In assessing the amount of the damages, Mr. Justice Thorson pointed out that the injured man was entitled to substantial damages since he had not only been permanently disabled but had undergone pain and suffering and had lost opportunity for advancement in his former job:

Such matters as pain and suffering, loss of health and loss of opportunities of advancement were not the subject of compensation in the [Government Employees Compensation] Act. They were not within the scope of the Act. Under Section 19 (1) (c) of the Exchequer Court Act there is no such restriction.

The Court fixed the amount of the damages at \$10,000, together with costs of the action. *Bender v. The King* (1949) 2 D.L.R. p. 318.

***Lack of skill in a person "employed to do carpentry" does not exempt him from the carpentry trade schedule under the New Brunswick Industrial Standards Act.***

In the Supreme Court of New Brunswick, on March 26, 1949, Chief Justice Richards in affirming a lower court decision held that the term "carpenter trade" in the schedule of wages and hours under the Industrial Standards Act refers generally to the type of work carried on by the employer and not to the measure of skill of the employee. The case was a review of a conviction made by the Police Magistrate of the Parish of Lancaster on January 7, 1949 who imposed on the defendant a fine of \$50 and costs.

The Industrial Standards Act, 1948, provides for the formulation of a schedule of wages, hours and days of labour by the representatives of employers and employees in any trade in any area of the province and for the approval of the schedule by the Governor in Council, whereupon it becomes binding on all the employers and employees in the trade and zone specified. The schedule for the carpentry trade in the construction industries in the Saint John zone formulated under the Act was approved on July 8, 1948, and set a minimum rate of 95 cents per hour to be paid to employees for work performed during a regular working period.

An employee was hired by the defendant, a construction company, to do rough carpentry work during regular working periods. From November 1-11, 1948, he

had been paid at a rate of wages less than that set by the schedule for the carpentry trade. The charge had been laid by an Industrial Standards Act inspector.

The counsel for the defence contended that by Section 2 of the Act the application of the Schedule is limited to the carpentry trade. The term "trade" is a word of established meaning denoting and confined to persons of recognized skill. The worker in question, according to the defendant, was employed as a general handyman and was clearly not a skilled carpenter.

The counsel for the industrial standards inspector (the informant) stated that he was not concerned as to the degree of skill of the employee. He relied on the provision of the Schedule which states "employee" means an employee employed to do carpentry work, but does not include an apprentice as defined in the Apprenticeship Act, 1944." The employee was clearly not an apprentice. He was employed to do carpentry work, therefore the Act applied, and he must be paid according to the Schedule as a carpenter.

His Lordship stated that he was unable to accept the argument that the Schedule is limited to a person skilled in the carpentry trade. The basis of employment is the determining factor and not the measure of skill of the worker.

The exclusion of apprentices from the terms of the Schedule may suggest that only those with considerable degree of skill as carpenters are referred to but there is no positive statement to that effect. The Schedule makes no provision for varying the degree of skill in carpenter work.

There is nothing in the Act or Schedule to prevent the employment of ordinary labourers at such rates as may be agreed upon but the Schedule does provide specifically for employment in the carpentry trade. If the employee, whether skilled or unskilled, was "employed to do carpenter work" then he is entitled to be paid as a carpenter. The evidence showed that, although the man during his employment with the company did some work as an ordinary labourer, he also did work which would be classed as carpentry work.

His Lordship therefore found that the employee was employed to do carpentry work and was therefore entitled to be paid as a carpenter. As had already been stated by the Magistrate at the previous hearing, and as seemed to be clearly confirmed by the evidence, Chief Justice Richards found that the error on the part of the defendant was not made intentionally or with a view to depriving any of the employees of their

fair wages. *The King, on the information of Tonner v. Teed-McCarthy Construction Limited* (1949) 23 M.P.R. 113.

**Montreal firm ordered to pay wages required under minimum wage ordinances. Charges of invalidity dismissed.**

On August 26, 1949, Mr. Justice Salvais in the Montreal Superior Court sentenced a Montreal industrial firm to pay to the Quebec Minimum Wage Commission wages and vacation indemnity amounting to \$620.30 due to twelve employees under the terms of minimum wage ordinances.

The Minimum Wage Commission brought the action against the employer on behalf of thirteen workmen. The claim was that they had not received overtime pay as required by Ordinance No. 2 or vacation indemnity as required by Ordinance No. 3.

As regards overtime, Ordinance No. 2, which applies to employees paid by the hour and not governed by a collective agreement, states in paragraph 3:—

Notwithstanding the provisions of any other ordinance, every employee governed by the present ordinance is entitled, for this overtime, to the wage rate of time and one-half, i.e. to the rate of wages he is paid for his regular hours of work, increased by one-half of the said rate, even when such rate is higher than the minimum wage rate to which he is entitled by an ordinance of the Commission.

Ordinance No. 3, paragraph 13, dealing with vacation with pay, provides that

at the time of the cancellation of his labour contract, the employee himself is entitled to an indemnity . . . consisting of two per cent (2%) of the wages earned after the 1st of May preceding the date of his departure.

The defendant company claimed that the overtime requirement of time and one-half the regular rate is outside the jurisdiction of the Minimum Wage Commission, arguing that the Minimum Wage Act gives the Commission authority to set only basic minimum rates, and payment for overtime based on those minimum rates. The company claimed that the Commission did not have authority to establish overtime rates based on the actual wage rate agreed to between the parties and higher than the minimum. It was contended that paragraph 3 of Ordinance No. 2 constitutes an impediment to the freedom of the parties to make agreements providing for a wage higher than the minimum rate, an impediment not justified by the spirit or the letter of the Minimum Wage Act.

The defendant contended also that paragraph 13 of Ordinance No. 3, providing for a vacation indemnity in case of the cancellation of a labour contract, is outside the

powers of the Minimum Wage Commission, because the Commission has authority under the Act to determine only wage rates and working conditions, and a vacation indemnity on cancellation of contract is inherent neither in wages nor working conditions within the meaning of the Act.

The Court held that the defendant's contention that the Commission had no authority under the Act for its overtime and vacation indemnity requirements was not justified. The main objective of the Minimum Wage Act is the protection of the employee, and while the Act must be strictly interpreted since it derogates from the common law, it should nevertheless, in accordance with the Interpretation Act of the Province, be given such interpretation "as will ensure the attainment of its objects and the carrying out of its provisions, according to their true intent, meaning and spirit." Section 14a of the Minimum Wage Act does not concern the setting of a minimum wage but specifically gives the Commission authority to regulate the *rate*

*of increase* in wages for overtime work, and this applies to wages in general. The Court held that the contested section of Ordinance No. 2, being based on this legislation, is valid.

The judgment further stated that Section 14 of the Act permitting the Commission to set a minimum wage rate on the basis of remuneration "by the hour . . . or on any other remuneration basis" gave sufficient authority for the Ordinance requiring payment of a vacation indemnity.

After dismissing the charges of invalidity, the Court found that the thirteen employees came within the coverage of the Ordinances. The claim of one of the thirteen men was found to be groundless, since he had in fact received more than the amount of wages required. The company was ordered to pay the claims of the other twelve, with interest from October 15, 1947, and costs of the action.—*Minimum Wage Commission v. Duke Equipment Company Limited* (1949) Rappports Judiciaires de Québec, Cour Supérieure, 319.

## Recent Regulations Under Dominion and Provincial Legislation

*The scheme providing vocational training for merchant seamen has been extended to admit eligible persons applying on or before September 30, 1950, in order to assist seamen who will be unemployed as a result of a proposed reduction in the merchant fleet.*

*¶In Ontario, nurses and other workers in hospitals and sanatoria will now be eligible for workmen's compensation if they contract tuberculosis. ¶New regulations under the Prince Edward Island Workmen's Compensation Act place outside the Act industries employing less than three workmen.*

### DOMINION

#### Department of Veterans Affairs Act.

The Merchant Seamen Vocational Training Order was re-issued, by P.C. 6227 of December 13, 1949, gazetted January 11, to make provision for vocational training for merchant seamen who become unemployed as a result of a plan to transfer Canadian ships to British registry. The Order was first issued at the end of 1948 to extend to merchant seamen the vocational training courses with appropriate allowances and fees which are provided for veterans under the Veterans Rehabilitation Act, 1945. The earlier order is revoked (L.G., 1949, p. 309).

As before, to become eligible for benefits under the Merchant Seamen Vocational Training Order, a merchant seaman must

be under 30 years of age, resident in Canada, and must have received, or have been eligible to receive, a bonus under The Merchant Seamen Special Bonus Order, 1945, or under The Merchant Seamen War Service Bonus Order, 1944 (L.G., 1944, p. 674; 1945, p. 913). Application for training must be made on or before September 30, 1950. Training must begin within six months after an application is approved or before January 31, 1951, whichever is later, unless the Minister of Transport grants a deferment.

In order to assist seamen who are compelled to find shore employment, the Minister of Transport and the Minister of Veterans Affairs are now given discretionary power to provide vocational training allowances and other benefits in exceptional cases to unemployed merchant seamen over 30,

notwithstanding the fact that they have previously received a grant for courses under the Merchant Seamen Special Bonus Order.

### **Workmen's Compensation for Handicapped Veterans**

The regulations under which the Government of Canada assumes the cost of compensation in the case of an industrial accident to a war veteran who is in receipt of at least 25 per cent war disability pension have been re-issued with only minor changes by P.C. 6221, made on December 8, 1949 and gazetted December 28. This policy was adopted after the first World War to encourage the employment of ex-service men (L.G., 1944, p. 1179; 1948, p. 491).

The Department of Veterans Affairs is authorized to reimburse a Workmen's Compensation Board, or an employer who is individually liable to pay compensation, for any compensation paid with respect to an accident suffered by the pensioner, upon receiving a certificate from the Board or employer setting forth the payments made.

## **PROVINCIAL**

### **British Columbia Hospital Insurance Act**

Effective January 1, 1950, changes have been made in the form of the hospital insurance card which is issued to every person who pays the required premium, and which must be presented to the hospital when hospitalization is required. The certificate entitles the holder and *bona fide* dependants to necessary services provided by hospitals on a public ward basis.

### **Ontario Workmen's Compensation Act**

Workers employed in hospitals, sanatoria or sanatoria who contract tuberculosis will now be eligible for compensation under the Act. The disease was added to the schedule of industrial diseases by an Order in Council (O. Reg. 7/50) approved on January 5, gazetted January 21.

Compensation will only be paid if the employee has undergone a medical examination and has been found free from tuberculosis. Compensation is not payable, however, where a workman shows evidence of tuberculosis within three months after the first medical examination unless he was in the continuous employ of the hospital for three months prior to the first examination. In order to obtain compensation, a worker must file a claim within three months from the time he ceases his employment in the hospital.

### **Prince Edward Island Workmen's Compensation Act**

The first regulations made under the new Workmen's Compensation Act (L.G., 1949, p. 1430) were approved by the Lieutenant-Governor in Council on December 20, and gazetted December 31. The regulations govern the exclusion and inclusion of industries, minimum assessments and special assessment for employers of owner-driver truckmen and safety and first aid, and provide penalties for contravention of the Act and regulations.

The Act provides that the Workmen's Compensation Board may, by regulation, exclude from the scope of Part I any industry in which fewer than a stated number of workmen are employed. The regulations, accordingly, exclude industries employing less than three workmen.

At least 200 workers must be employed on ships, tugs, dredges, or vessels owned or controlled in the Province, which are engaged in any business which takes them outside the Province. This regulation, however, does not apply to ships owned or controlled by the Government of Canada or by the Government of Prince Edward Island.

The industry of aviation and aerial transportation is excluded from coverage unless 100 workers are employed. In the scavenging industry, there must be at least 10 workers in order to come under the Act.

The mayor and other officers of a city, town or municipality are excluded from Part I as well as the president, vice-president, directors and other officers of a company.

Industries excluded from Part I merely because less than three workers are employed may, on written application of the employer or of a workman, be brought under the Act by the Board by the mailing of an assessment notice to the employer. An industry which has been brought under Part I by application of an employer will be covered from the time stated in the certificate of admission or the assessment notice, and unless otherwise stated, will continue to be covered unless excluded by the Board.

Regarding assessments, the Board is given power to assess and levy rates on industries within the scope of Part I based on the provisional rates for New Brunswick for 1948. The minimum assessment to be levied on resident employers is \$5 and on non-resident employers \$10, unless otherwise ordered by the Board. An employer of workmen who drive their own trucks and who are paid by the cubic yard, ton, or on an hourly scale will be assessed on 40 per cent of the overall amount paid to

these workmen at the rate for trucking. If an employer hires truckmen with their own horses, he will be assessed on 60 per cent of the overall amount paid to the workmen at the rate for trucking.

With regard to safety, if an employer disregards the recommendations of the safety officer or other person authorized by the Board to inspect his premises in order to ascertain if proper precautions are taken for the safety of the workmen, he will be liable to have his assessment rate raised according to the hazard. If the hazard continues after the inspection, the employer's operations will be prohibited until the hazard is removed.

The employer must comply with the first-aid requirements as laid down by the Board and first-aid appliances must at all times be in easy access to the workmen.

A penalty not exceeding \$25 may be imposed on an employer who deducts from the wages of his workmen any part of a sum for which he is himself liable under Part I. In addition, he must repay to the workman the money illegally deducted from wages.

#### **Saskatchewan Health Services Act**

By an Order in Council (O.C. 55/50) made on January 10, gazetted January 21, persons, other than widows and orphans, who, at the beginning of the calendar year

are recipients of the War Veterans' Allowance, will be exempt from the personal tax levied in the health region, municipality or local improvement district in which they are residing, and also from the benefits of the Act. Those who are excluded during the calendar year may be required to pay a *pro rata* tax for the balance of the year.

An earlier Order exempted from the personal tax and benefits under the Act classes of persons designated by the Lieutenant-Governor in Council for whom the Minister of Public Health may pay part or the whole of the cost of providing health services (L.G., 1949, p. 1129).

#### **Saskatchewan Hours of Work Act**

All bread salesmen are now exempted from the Hours of Work Act, instead of only retail bread salesmen who deliver their products to householders, as formerly. This change was made by an Order in Council (O.C. 7/50) on January 3, gazetted January 14, amending Hours of Work Order No. 4 (L.G., 1947, p. 1187) which relaxed somewhat the provision for a 44-hour week with respect to creameries and poultry-processing plants. Order 4 permits the 44-hour week to be averaged over a month for these employees, and exempts retail milk and bread salesmen and employees delivering carbonated beverages entirely from the provisions of the Act.

---

## **UNEMPLOYMENT INSURANCE**

### **Selected Decisions of Umpire Under the Unemployment Insurance Act**

*Digest of selected decisions in appeals heard by the Umpire under the provisions of the Unemployment Insurance Act. Published in two series (1) Benefit cases, designated CU-B, and (2) Coverage cases, CU-C.*

***Held that the claimant had not shown just cause within the meaning of Section 41 (1) of the Act for having voluntarily left her employment.—CU-B 425 (February 12, 1949).***

#### **MATERIAL FACTS OF CASE:**

The claimant was employed in the large city of T....., her working hours being 8.30 a.m. to 5 p.m. For three weeks after moving to the adjacent town of I..... she was able to obtain private transportation to and from work, and in order to do this she received permission to change her working hours, to commence at 7.30 a.m.

and to leave at 4 p.m. When this arrangement was discontinued, she left her employment (which was located 9 miles from her residence) because, she claimed, her health was being ruined by travelling 1½ hours by bus, in addition to 15 minutes' walk, each way. She was disqualified by the Insurance Officer from the receipt of benefit for a period of six weeks on the ground that she had voluntarily left her employment without just cause. The claimant appealed to a Court of Referees and submitted that, in order to reach her work at 8.30 a.m., she would have to leave her home at 6.30 a.m. to travel on the 6.45 bus. The Court, before

which she appeared, unanimously reversed the decision of the Insurance Officer.

The Insurance Officer appealed to the Umpire.

**DECISION:**

When the claimant filed her claim for benefit, she gave as reasons for having voluntarily left her employment that travelling to and from her place of work was "ruining her health" and that "bus connections were very difficult." From her later statement, dated June 2, 1948, it seems however that the question of her health "had nothing to do with her reason for leaving her position at all."

The Court of Referees unanimously decided that the claimant, on account of her transportation difficulties, had shown just cause for having voluntarily left her employment, within the meaning of Section 41 (1) of the Act. I do not agree with this finding of the Court of Referees.

I....., where the claimant now resides, is regarded as part of greater T....., being approximately nine miles from the heart of the city. It is not uncommon for people residing in I..... to work in T....., and it is indicated that there are reasonable means of transportation between those two points.

As a matter of illustration, I wish to point out that, under the same circumstances, the claimant would not have been entitled under the Act to decline as unsuitable her work with ..... Press, had it been offered to her while unemployed.

For these reasons and in accordance with principles already laid down in similar cases, the decision of the Court of Referees is reversed and the appeal of the Insurance Officer is allowed. The claimant is disqualified for a period of six weeks, as from the date that this decision is communicated to her.

**Held that the claimant had shown just cause within the meaning of Section 41 (1) of the Act for having voluntarily left his employment.—CU-B 490 (October 3, 1949).**

**MATERIAL FACTS OF CASE:**

The claimant, married, 47 years of age, registered as a carpenter, was employed as a machine operator by a wood working firm in a small town in Eastern Ontario, from January 20, 1949 to February 23, 1949, at a rate of pay of 60 cents an hour, on which latter date he voluntarily left because the wages were too low and the "work too dusty." In his two previous employments he worked as a carpenter at a wage of \$1.30 an hour.

The Insurance Officer disqualified the claimant from the receipt of benefit for a period of six weeks on the ground that he had voluntarily left his employment without just cause.

In his appeal to the Court of Referees the claimant stated that when he asked the manager for a raise in pay it was refused on the ground that he was not satisfactory to the employer and that the latter could get younger men at a lower wage than he was paying him. He further stated that the manager had told the timekeeper "to make out his time and let him go." The claimant and the superintendent of the firm appeared before the Court of Referees. At the hearing the superintendent informed the Court that when the claimant asked for a raise in pay he reminded him that as he had stated that he was a finished carpenter, he would soon be leaving his present employment for better wages, and if he wished to continue with the firm at the present rate of pay he could do so, with the result that the claimant expressed his dissatisfaction and it was then that payment of the claimant's time was authorized.

The majority of the Court upheld the decision of the Insurance Officer.

The claimant appealed to the Umpire.

**DECISION:**

After being unemployed for approximately one month and having abstained from applying for benefit, the claimant rather than remain idle, found, through his own efforts, employment with the....., at a rate of pay of 60 cents an hour, in an occupation other than that in his regular line, viz: carpenter. That hourly wage was less than half what he had been paid in his previous employment which was \$1.30 an hour. After what I consider a fair trial, he found the employment unsatisfactory and voluntarily left.

In my opinion, had the Local Office referred him to this employment so soon after his previous separation he would have been justified in refusing it as not suitable within the meaning of the Act.

If a claimant can refuse to accept unsuitable employment, then he should be permitted to voluntarily leave it, otherwise he would be penalized for having accepted the employment on the chance that the work would prove suitable or that the conditions would subsequently improve, thereby having an adverse effect on his incentive to accept, on trial, employment where in his opinion, doubtful conditions of work exist.

Under the circumstances, the majority decision of the Court of Referees is reversed and the appeal of the claimant is allowed.

## Unemployment Insurance Statistics, December 1949\*

According to the monthly report prepared by the Dominion Bureau of Statistics on the operations of the Unemployment Insurance Act there were, during December, 1949, a total of 150,480 (150,358 excluding Newfoundland) claims for Unemployment Insurance benefit filed in local offices of the Unemployment Insurance Commission, as compared to 114,506 in December, 1948 and 124,889 (124,785 excluding Newfoundland) for November, 1949. Included in these are 11,074 revised claims (11 in Newfoundland) during December, 1949, 8,567 in December, 1948 and 10,001 in November, 1949 (6 in Newfoundland). Initial and renewal claims representing mainly new cases of recorded unemployment, rose sharply from 105,939 in December, 1948 and 114,888 in November, 1949 (114,790 excluding Newfoundland) to 139,406 (139,295 exclusive of Newfoundland) in December, 1949.

The number of persons on the live unemployment register on the last working day of the month provides an indication of the volume of unemployment among insured persons at a particular time. On the last working day of December, 1949, ordinary claimants on the live unemployment register numbered 222,064 persons (including 103 in Newfoundland). This represents an increase from 144,058 for December 31, 1948 and 152,269 for November 30, 1949 (including 86 in Newfoundland). Other claimants, that is, mainly claimants working on short time numbered 20,846 (no claimants of this type were registered in Newfoundland) on the last working day of December, 1949, as compared to 6,866 for the last working day of December, 1948. Other claimants on the last day of November, 1949, numbered 20,105 (no claimants of this category were registered in Newfoundland).

Persons on the live unemployment register by number of days continuously on the register are shown in Table E-2. The number signing the register for more than seven days provides a rough measure of beneficiaries during the month. For example, of a total of 242,910 persons on the live register at December 31, 177,531 or 73 per cent were on the register for seven days or more.

Table E-4 relates to the disposition of claims during December. Of 133,181 claims handled at adjudicating centres, 109,892

were allowed and 22,404 were disallowed and disqualified and 885 special requests were not granted. In addition, 924 claims were referred to Courts of Referees and the Umpire. Chief reasons for non-entitlement to benefit in order of number of cases were (Table E-5): "insufficient contributions while in insurable employment" 12,781 cases; "voluntarily left employment without just cause" 3,915 cases; "discharged for misconduct" 815 cases; "not capable of and not available for work" 757 cases.

In Table E-6 is shown the number of persons commencing the receipt of benefit on initial and renewal claims. For December, 1949, persons in this category totalled 89,823 (including 40 in Newfoundland) as compared to 55,940 for the same month in 1948.

The number of days' benefit paid and the amount of benefit paid in December, 1949 show very considerable increases over the totals for December, 1948. Thus in December, 1949, in respect of 3,066,888 days \$7,181,001 was paid (3,065,233 days and \$7,176,717 excluding Newfoundland) as compared to 1,687,804 days and \$3,592,155 for December, 1948.

In addition, the number of persons receiving benefit, by province for the week of December 10 to 16 inclusive, is presented in Table E-6. This table shows that for the aforementioned week 125,225 persons received benefit, as compared to 104,320 beneficiaries, in the week of November 12 to 18, 1949. The average duration for persons receiving benefit was 5.7 days both in the week ending December 16, 1949 and the week ending November 18, 1949. The average amount of benefit per day for the former period was \$2.35 as compared with \$2.30 for the latter, while the average amount of benefit paid was \$13.43 and \$13.16 respectively.

### Insurance Registrations

Reports received from local offices of the Unemployment Insurance Commission for the month ending December 31, 1949, showed 3,719,243 employees were issued with insurance books and had made contributions to the Unemployment Insurance Fund at one time or another since April 1, 1949, an increase of 55,113 since November 30, 1949.

As at December 31, 1949, 224,899 employers were registered representing an increase of 568 since November 30, 1949.

\* See Tables E-1 to E-7.

# WAGE RATES, HOURS AND WORKING CONDITIONS IN THE CLOTHING INDUSTRY, OCTOBER 1948\*

Returns from 167 establishments employing 7,600 factory workers were analysed in this report on the Women's Clothing Industry. More than 80 per cent of the factories reported having collective agreements affecting two-thirds of the workers. Seventy-two per cent of the workers were in 137 factories operating on a five-day 40-hour week. Time and one-half was the most common overtime rate. All but two factories gave an initial vacation of at least one week after a year or less of service. Forty-four per cent of the workers were in 97 factories paying for three statutory holidays.

The February issue of the LABOUR GAZETTE contained a similar article covering the manufacture of Men's Clothing, under the headings, Men's and Boys' Suits and Overcoats, Work Clothing, and Men's Shirts. The present article contains an analysis of the Women's Clothing Industry under two sections, the Dress Industry and the Women's and Misses' Suits and Coats Industry.

As shown in the previous issue of the LABOUR GAZETTE, the wage rate index for the clothing industry as a whole had reached 205.9 by October, 1948, over rates in the base year 1939 as 100. In 1941 and 1946 the annual increases were more than 12 per cent while in 1948 the advance recorded over the preceding year was 8.7 per cent.

## The Dress Industry

The index of wage rates in this industry in 1948 was 11 per cent higher than in 1947 and 96.9 per cent higher than in 1939. The largest annual increase was in 1946 when wage rates rose 17.5 per cent above the preceding year.

Year	Index	Annual Percentage Change
1939.....	100.0	—
1940.....	106.1	6.1
1941.....	118.8	12.0
1942.....	127.5	7.3
1943.....	133.2	4.5
1944.....	138.9	4.3
1945.....	152.2	9.8
1946.....	179.2	17.5
1947.....	178.5	-0.4
1948.....	196.9	11.0

In this study of the Dress Industry, returns from 101 factories, employing about 4,800 factory and 400 office employees were used (Table 1). Seventy-nine per cent of the workers were in 70 factories located in Quebec, 19 per cent were in 28 factories in Ontario and the remainder were located in the Prairie Provinces.

## Index Numbers of Wage Rates

(Base 1939=100)

\* Information in this article was prepared from data obtained in the annual survey of wage rates and hours of labour for 1948 by the Economics and Research Branch of the Department of Labour. Employers were asked to report on certain conditions of work as well as to give, by occupation, the wage or salary rates or straight-time earnings of employees on piece work during the last pay period preceding October 1, 1948. Information on wage rates for 1948 in Logging and Construction was published in the April LABOUR GAZETTE and for Civic Employees in the May issue. Information comparable with this article dealing with other industries for 1948 has been published monthly since the June 1949 issue of the LABOUR GAZETTE.

For information on wage rates in the industry, see the *Annual Report on Wage Rates and Hours of Labour in Canada, October 1948*, issued by the Department as a supplement to the November, 1949, LABOUR GAZETTE.

For a summary of provincial Legislation on working conditions see *Provincial Labour Standards Concerning Child Labour, Holidays, Hours of Work, Minimum Wages, Weekly Rest-Day and Workmen's Compensation*, an annual publication of the Department of Labour.

Forty-three per cent of the workers were in 72 factories employing less than 50 workers each, another 32 per cent were in 23 factories employing between 50 and 100 workers. The remaining six factories averaged about 200 workers each.

The industry was similar to the Men's Clothing divisions in that the factory workers were predominantly women, in this case comprising approximately 84 per cent of the factory workers.

**Collective Agreements.**—Collective agreements in writing were reported by 82 establishments employing some 3,400 workers. Practically all the workers under agreement were represented by the International Ladies Garment Workers Union (AFL-TLC).

**Standard Weekly Hours, Table 2.**—Weekly hours ranged from 40 to 48 and in all but three instances the five-day week was reported. Seventy-one factories employing 68 per cent of the workers were on a five-day 40-hour week schedule, while 24 factories employing 21 per cent of the workers reported a work week of 44 or 45 hours.

A 44-hour week was reported by the three factories operating six days per week.

**Overtime Rates of Pay, Table 3.**—Nearly one-third of the workers were in 37 factories which reported paying straight time or having no overtime policy. Time and one-half was the only premium rate paid for overtime, either after daily or weekly hours had been worked.

Sunday work is not common in this industry and very few factories reported overtime. In 12 factories work on statutory holidays was paid for at a rate of time and one-half, and at a rate of double time in two others.

**Vacations with Pay, Table 4.**—All the factories in this industry reported a vacation of one week or more after a service of one year or less. Ninety-four factories employing 94 per cent of the workers gave one week after one year or less of service. The other seven gave two weeks initially, in one case after nine months of service and in the remainder after a service requirement of one year.

In 87 factories the vacation did not exceed one week regardless of the length of

Production in the Canadian dress industry, with its continually changing styles, is dependent upon the skilled hands of the sewing machine operator (shown at left). Women sewing machine operators in this industry, who are mainly paid by the piece, averaged 89 cents per hour in 1948.

service. In the remainder the maximum vacation was two weeks, except in one large factory which granted a third week's vacation with pay after 25 years.

**Statutory Holidays, Table 5.**—All the factories reported observing between three and 15 statutory holidays with 81, employing 4,000 workers, paying for some or all of those observed. More than one-half the factories employing 43 per cent of the workers paid for three holidays.

**Sick Leave with Pay.**—Sick leave with pay was reported by 14 factories employing some 1,000 workers. Although eight factories reported a sick benefit plan they accounted for only 200 workers. Four factories employing more than 400 workers stated that employees were covered by a union fund.

## The Women's and Misses' Suits and Coats Industry

The wage rate index in this industry has shown an increase each year and by 1948 had advanced to 206.3 over the base year 1939 as 100. The largest annual increase occurred in 1941 when a 24.8 per cent rise was recorded. An annual increase of more than 10 per cent was also recorded in 1945, 1946 and 1948.

Year	Index	Annual Percentage Change
1939.....	100.0	—
1940.....	101.7	1.7
1941.....	126.9	24.8
1942.....	131.8	3.9
1943.....	134.5	2.0
1944.....	137.5	2.2
1945.....	152.7	11.1
1946.....	176.2	15.4
1947.....	186.2	5.7
1948.....	206.3	10.8

### Index Numbers of Wage Rates

(Base 1939 = 100)

In analysing this industry returns from 66 factories located in Montreal, Toronto, Winnipeg and Vancouver, employing some 2,800 factory and 300 office workers, were used (Table 6).

Fifty-nine factories employed less than 50 workers, and six factories employing more than 100 averaged about 140 workers each.

In the other divisions of the Clothing Industry female employees predominated, but this industry employed slightly more male than female workers in the factories.

**Agreements.**—Collective written agreements were reported by 56 factories affecting some 2,200 workers. In nearly all cases

this from only six factories. Of the factories paying a premium for work on statutory holidays the majority paid time and one-half. The only other rates reported were time and one-quarter, and double time.

**Vacations with Pay, Table 8.**—All but two factories reported an initial vacation of one or two weeks. Sixty factories gave one week after a service of one year or less and four, employing about 200 workers, gave two weeks after a year of service.

Six factories initially giving one week's vacation had a further provision for a two week vacation with pay. Two of these

provided for three weeks' vacation after 25 and 30 years employment.

**Statutory Holidays, Table 9.**—All but one factory observed some statutory holidays. Eighty-six per cent of the workers were in 60 factories paying for up to 11 statutory holidays, of which two-thirds were in 44 factories paying for three days.

**Sick Leave with Pay.**—Sick leave with pay was reported by 20 factories employing some 900 workers. Nearly two-thirds of the workers were in 15 factories which had either a group insurance or sick benefit plan.

An analysis of the current employment situation prepared by the Economics and Research Branch, Department of Labour, on the basis of returns from the National Employment Service, reports from the Dominion Bureau of Statistics, and other official information.

## EMPLOYMENT CONDITIONS DURING JANUARY, 1950

*The number of job-seekers registered at employment offices increased sharply during January. Cutting operations were largely completed in logging during the month. Employment in manufacturing was expected to remain stable during the first half of 1950. The regional distribution of persons without work varied from 16 per cent of the labour force in the Pacific region to 5 per cent in Ontario. Proportionately more of the applicants at employment offices are either skilled or semi-skilled industrial workers than ever before.*

In the five-week period covering December 29 to February 2, the number of persons seeking work through National Employment Service offices increased by 100,000. This brought the number on file to 376,000 at February 2, or 7 per cent of the labour force. Approximately 80 per cent of these were claiming unemployment insurance benefits.

Seasonal unemployment was heavy this year not only in construction, transportation, and agriculture but also in trade and some of the manufacturing industries. Unusual weather was an important factor in this development, especially in British Columbia. In addition, during January the logging industry in Eastern Canada was laying off men as cutting was completed and hauling operations got under way. Apart from these developments, which in general would disappear with the change in weather conditions, the adverse effects of dollar shortages in many countries and decline in domestic demand had also created a surplus of workers in some industries. On the other hand, production and employment was expanding in other industries such as artificial silk, clothing and mining.

The effect of these developments on the employment scene varied from area to area. British Columbia, the Lakehead and the Gaspé areas all reported large numbers of jobless workers. The situation in these areas, however, was largely seasonal. On the other hand, northern New Brunswick and some areas of Quebec, in particular the districts around the Saguenay River and Quebec City, were faced with a more permanent problem since the increase in job-seekers was due more to loss of markets by certain industries. In Ontario, as a

whole, unemployment was relatively low. There has been, however, an increase in the number of unemployed transient workers moving from city to city.

### Industrial Analysis

Further deterioration took place in the employment situation in the **logging** industry in the early part of 1950, due chiefly to unfavourable weather conditions. This was particularly evident in British Columbia where activity was almost at a standstill as a result of abnormally heavy snowfalls and cold weather. A heavy increase in unemployment resulted, with nearly 5,000 loggers in that province registered as unplaced applicants with the National Employment Service at the end of January.

The opposite situation existed in the East, where lack of snow and mild weather during January curtailed operations. Most of the cutting had been completed by the end of the year but the lack of frost in the ground made hauling difficult. Labour requirements for the hauling season were smaller and spread over a longer period.

The **mining** industry continued to operate at a high level with an expansion in employment of about 2 per cent during 1949. The total labour force of 86,000 in the industry is distributed among the three main divisions as follows—metal mining, 44,000; coal mining, 25,000; and non-metallic mining, 17,000. The metal mining industry has added some 1,500 employees during the past year. There have been only minor shifts in the other groups.

Both gold and base metal mines benefited from the devaluation of the Canadian dollar, since the United States is their

# REGIONAL EMPLOYMENT TRENDS

(8 Leading Non-Agricultural Industries)

Average: 1939=100

Seasonally Adjusted

biggest market. In addition, subsidy payments under the Emergency Gold Mining Assistance Act have assisted marginal gold mines. Demand is also strong in the asbestos and petroleum industries but the consequent employment expansion has not been great.

A small surplus of labour in the industry was indicated by registrations with the National Employment Service during January. At the end of the month, there were 1,400 unplaced applicants registered in all offices.

**Manufacturing** employment in 1949 was sustained at a level only slightly below the previous year as decreases in some groups within the industry were offset by gains in other sectors. The labour force in the industry, currently estimated at approximately 1,300,000, is expected to remain stable during the first half of 1950. As a result of seasonal inactivity and a slowdown in the rate of industrial expansion, there were few job openings in manufacturing plants during January, with a surplus of about 75,000 applicants in manufacturing occupations registered with the National Employment Service at the end of the month. The following summaries outline the employment situation in the main groups:—

**Food products:** Post-war employment followed an upward trend until the early part of 1949, apart from the marked seasonal fluctuations which characterize the industry. Improvement in the industry's positions in the latter part of 1949, however, resulted in the highest employment level on record, a peak of 110,000 being reached. The outlook for the first half of 1950 is for no definite change in the volume of the labour force, although meat packing employment was definitely moving downward and the flour milling industry was in an uncertain position following losses in the British market.

**Textiles:** Employment in the primary group has remained stable at 65,000 with indications of a return to a sharper seasonal pattern. Woollen mills have felt the effect of keener competition, partly resulting from devaluation, and have been forced to reduce staffs in some instances. The labour force in artificial silk and silk goods division, on the other hand, has been expanding. Production of cotton goods during 1949 was about equal to the 1948 total, with correspondingly little change in employment.

In the clothing industry, employment continued to expand. The index of employment at December 1, 1949, was 128·0 (June 1, 1941=100), as against 123·1 one

year previously. Strong consumer resistance was being experienced by the industry and there was an element of competition with United Kingdom goods, particularly knitted wear.

**Pulp and paper:** A moderate decline in the number employed in this industry has resulted from increased efficiency and technological improvements, as well as a slight drop in demand. Reported employment at December 1 was 69,000, less than 2 per cent below the level one year ago. Large-scale lay-offs have occurred in plants producing for the United Kingdom market; this has affected the employment situation in Newfoundland particularly. The main market in the United States remains firm. Production, of newsprint, which has now caught up with demand, has expanded substantially since the end of the war. In 1945, the output was 3·6 million tons; in 1948, approximately 5 million tons; and in 1949 an estimated 5·1 million tons.

**Iron and steel:** The iron and steel industry in Canada employed some 284,000 persons at December 1, 1949, a loss of 15,000 from the previous year. The primary industry continued to produce at capacity, generally speaking, although lay-offs in two large firms producing special types of steels have reduced employment in total.

Production and employment have been steady in firms producing for the consumer market. In the automobile industry, Canadian production for 1949 of an estimated 192,000 cars and 100,000 trucks, marked a new peak. Employment, expanding correspondingly, was reported at 47,000 at the year-end. The heating appliance industry expanded employment by about 6 per cent during 1949, to more than 9,000.

Among certain producers goods industries, however, sharp reduction in production schedules have been necessary. The decline in some segments of business capital investment and in export sales, has reduced employment in machine tool companies. Employment in agricultural implement factories has been declining steadily since early 1949; the reported employment of 15,000 at December 1 represents a loss of some 15 per cent in the previous twelve months. In the railway rolling stock industry, the shift to diesel locomotives by Canadian railways will result in fewer job opportunities, as it is mainly assembly work and does not require the large number of man-hours needed in producing steam locomotives. Firms manufacturing generating equipment for hydro-electric plants are in the best position in this group, with an assured market in the immediate future.

**Sawmills:** Employment in this industry remained steady over 1949, although production was down seven per cent in British Columbia and two per cent in the East for the first 11 months. Canadian demand for lumber remains strong in view of the heavy construction program and reduction in United Kingdom exports has been offset to some extent by increased exports to the United States. At the peak last year, 53,000 persons were working in the industry.

**Household furnishings:** Demand for consumer durables remains strong, with a stable employment outlook for the first half of 1950. The market for furniture is highly competitive and, though employment has not declined in total, lay-offs have been taking place among smaller plants. Little change in employment has occurred in the electrical appliance sector, which has a labour force of 53,000.

**Rubber:** The sharp drop in exports is the most serious problem facing the industry and has resulted in a downtrend in employment since 1948. Employment, at 21,000, was down 8 per cent during 1949. The entry of rubber products from other countries at prices below the Canadian cost of production was also causing some concern.

### Regional Analysis

About 10 per cent of the labour force in the *Maritime* region was without work at the end of January. To a great extent this reflected the usual seasonal declines in trade, construction, food and fish processing, and the change-over from cutting to hauling in logging. But in addition, greater unemployment has resulted from the lower level of woods operations, a poor fishing season, and decreased port activity this year.

In most areas, however, the present unemployment problem will be alleviated when spring expansion begins. In Sydney, for example, the seasonal slackness in heavy industry marked a return to the pre-war production pattern, and current unemployment will decline rapidly in the spring. In this area as in many others, about 25 per cent of applicants are from rural districts, and some will have supplementary means of support such as small farms or holdings.

In northern New Brunswick areas, however, the financial resources of many workers have been low this year, and although the recent United Kingdom lumber orders have stimulated woods employment to some extent, the level has remained below normal. Further seasonal declines have occurred in trade and fish processing, but construction projects will shortly stimulate employment in this section. Newfoundland offices report about 10,000 workers employed under the provincial government's work program. The number of persons registered at employment offices, however, remained heavy. This appears to be a normal seasonal occurrence, although it has been augmented this year by reduced logging employment.

Other local areas have been faced with unemployment in varying degrees. In all areas, construction workers account for a large proportion of the unemployed. The coal mining districts have benefited from a high level of employment in the mines this year as a result of the coal strike in the United States.

The seasonal decline in employment in the *Quebec* region this winter has been accentuated by absence of snow and reduction in logging. The lack of snow alone has disrupted winter ski resort activity and its

accompanying trade, service and transportation employment, eliminated snow removal employment in urban areas, and adversely affected manufacturers and dealers in sporting goods and winter clothes. Woods operations have nearly ended throughout the region, although hauling has been delayed in some areas by lack of snow. As a result, unemployment this winter has been heavier than usual, particularly for casual workers, and applicants at the end of January formed 8 per cent of the regional labour force, slightly above the national average.

On the other hand, manufacturing activity picked up during the month in leather, clothing and textile firms, although some were operating on a short-time basis. In Quebec City and Levis, some re-hiring in the boot and shoe, shipbuilding and clothing industries was taking place on a short-time basis. The decline in logging, however, was causing a further movement of rural workers into these areas, adding to the already large numbers of job-seekers. Logging inactivity has similarly affected the Gaspé area and this, along with a poor fishing season, has created an unemployment problem.

In Montreal, the level of employment remained high. However, the normal winter displacement of longshoremen, seamen and construction workers has not been offset this year by snow removal activity, and a large movement of transients from rural areas has added to the number without jobs. The Eastern Townships have not had a large degree of unemployment. Mining activity continues at a high level throughout this area.

Employment in the *Ontario* region has been maintained above last year's level. Unemployment was relatively slight at the end of January, about 5 per cent of the labour force, well under the national average. Any increase over last year's unemployment was due primarily to three factors: namely, more extensive seasonal lay-offs in manufacturing as competition forces employers to return to the pre-war practice of producing in low-cost periods; lay-offs of inefficient workers to reduce labour costs; and the re-appearance of transient workers who move from city to city, and register as unemployed at each employment office.

No serious unemployment problem has developed in the region. In most areas, unemployment was due to the normal closing of construction, which has displaced an enlarged labour force this year. The suspension of inland navigation and other outdoor industries was also a factor. In Hamilton, London, Kitchener-Waterloo,

Toronto, Windsor and Ottawa employment was close to last year's level. Lay-offs which occurred in manufacturing resulted from the release of yard labour or the normal drop in demand in industries such as building products, clothing, etc.

The automobile industry, which largely determines the employment situation in Windsor and Oshawa, was planning further expansion of employment in 1950. One plant extension now under construction will provide employment for 1,000 workers. However, the labour dispute in the United States automobile industry, if prolonged, may affect supplies for the Canadian affiliation and cause lay-offs in the immediate future.

Employment in the *Prairie* region has expanded steadily over last year's level. Unemployment was largely seasonal and confined to a few areas. Unplaced applicants formed 5 per cent of the regional labour force at the end of January, which was below the national average. Attention was already turning to the outlook for spring. As logging activity declined workers were registering for jobs in construction. Farm employment will remain near last year's level this coming season, according to indications.

Unemployment has been concentrated fairly heavily in the Lakehead area as a result of reduced logging, and the seasonal drop in transportation employment. The heavy logging lay-offs expected during January were avoided, however, when several large producers extended cutting schedules. Hauling operations were under way and smaller contractors were reducing their staffs.

In the western section of the region, severe weather has affected employment temporarily. In the Regina area, blocked road conditions have held up deliveries of livestock to packing plants and resulted in lay-offs; all construction work, even on closed-in buildings has also been forced to halt. Calgary reported a similar situation. In the Alberta oil area, the great exploration and construction program for the year is starting. Work is about to begin on the Edmonton-Regina section of the pipeline to the Great Lakes.

Employment in the *Pacific* region had been maintained near last year's level until a number of unusual storms disrupted activity. Heavy snowfalls during the past two months has halted all logging and construction work, and held up sawmill and transportation operations. Trade and service employment has also been affected. At the end of January, 16 per cent of the labour force were registered as unplaced

applicants. Occupationally, loggers and sawmill workers, truck drivers and construction workers, accounted for almost half of all male applicants. As a result, most of the unemployed will be absorbed immediately upon improvement of the weather.

In the Vancouver-New Westminster area, sawmills and shingle mills were forced to close several times during January because of ice conditions which froze logs and conveyor systems. Ice pressure has destroyed numerous small fishing craft and others will probably suffer damage when the ice breaks up. The fishing season was poor this year, and many owners will find it financially difficult to repair extensive damages. The unemployment situation has been complicated by the influx of unemployed from interior points.

In interior points such as Prince George only a few sawmills were operating and production was being carried on under very difficult conditions; in Vernon, a shortage of hydro power added to the difficulties of this industry. On Vancouver Island, heavy unemployment was reported as a result of logging and sawmill closures. However, it was emphasized in almost all reports that the situation was temporary, although the danger of soft roads during the thaw may further delay logging operations in some areas.

### Employment Service Activities

By the beginning of February, 376,000 persons were registered for work at employment offices throughout Canada. This was 114,000 more than the number reported one year before. As usual, the sharpest increase occurred during the month of January when about 100,000 persons were added to the number unplaced. The advances were slightly smaller each week, however, and by the last week in January the rate of increase had dropped to 4 per cent. Weather conditions will probably determine the date when registrations begin to fall, but it is interesting to note that last year the turning point was reached in the last week of February.

Skilled and semi-skilled workers were most affected during January; these occupations accounted for 40 to 45 per cent of the increase in unplaced applicants during the month. More skilled or semi-skilled applicants are now registered—both in number and in proportion to total unplaced applicants—than ever before. The three seasonal groups of industries—construction, lumbering and logging, and transportation—accounted for most of the increase over the years, as well as during January. In the

current month almost two-thirds of the additional skilled and semi-skilled workers in this group were in these seasonal industries. Most of these were construction tradesmen. Registrations in other skilled occupations have been increasing, especially in textiles, leather and metalworking, although during January only moderate gains took place.

There was also, of course, a large increase in unskilled workers during the month. The number in unskilled occupations accounted for 33 per cent of the January gain. Compared with previous years, however, the proportion was small. For example, in 1948, over half of the increase during January took place in the unskilled groups. Most of the unskilled workers added during the current period were either general labourers or construction workers, although substantial gains also took place among workers in food plants and the lumber and logging industries. The chart on the next page indicates the number registering in some of these occupations.

Female unplaced applicants increased at the same rate as males during January; at the first of February, 75,000 applications from women were on file. Except for January, however, when lay-offs of Christmas help from stores were heavy, the seasonal increase in applicants is much smaller for women than for men. During January, over 25 per cent of the advance in female applicants occurred in the sales occupations; lay-offs in retail trade this year have been the heaviest in many years. Clerical, service and unskilled workers added approximately equal numbers during the month, each accounting for about 20 per cent of the monthly rise. Many married women are registering for jobs in these occupations, especially in areas of unemployment where their husbands are either without jobs or working short-time.

Placement operations were generally inactive with an average of about 8,000 each week during January. Low labour turnover, unfavourable weather developments and a slower seasonal pickup in some industries had reduced winter hiring activity more than usual this year. Unfilled vacancies had fallen to the low level of 18,000 at the middle of January. Hiring was most active in the women's field where 10,000 of the vacancies and over 40 per cent of the placements were recorded; many of these were in the service trades where both a larger number and a better type of applicant was available. The situation for men began to improve by the end of the month, when both vacancies and placements increased.

## PERSONS REGISTERED AT EMPLOYMENT OFFICES IN SELECTED OCCUPATIONS

Seventy-nine per cent of all unplaced applicants were claiming unemployment insurance by the beginning of February, compared with 81 per cent one month before and 77 per cent a year earlier. Many of the new workers in the labour market—the skilled and semi-skilled workers in most industries and sales clerks, for

example—have built up substantial contributions for unemployment insurance and when unemployed, were immediately placing a claim for benefits. Various disqualifications prevented some from receiving benefits—probably about one in five—but payments to workers totalled \$11,780,000 in January.

## Unemployment in Trade Unions, December 31, 1949\*

Trade union unemployment in Canada stood at 4.8 per cent at the end of December, 1949; this figure was the highest percentage since the 5.2 recorded at the end of 1941. In the previous quarter the percentage was 2.2 while it was 3.4 in the last quarter of 1948.

The percentage of trade union unemployment is based on reports from local unions. As the number of reporting unions varies from quarter to quarter with consequent variations in the membership upon which the percentage of unemployment is based, it should be understood that the figures refer only to organizations reporting. For the last quarter of 1949, reports were received from 2,693 locals with a combined membership of 530,553; in the previous quarter, reports were received from 2,599 with 498,093 members; while in the fourth quarter of 1948, reports were received from 2,676 locals with 538,153 members.

At the end of the quarter under review, unemployment in trade unions increased in all the industrial groups. In this analysis

unemployment refers only to involuntary idleness due to economic causes. Persons who are without work because of illness, a strike or a lockout, or who are engaged in work outside their own trade are not considered as unemployed.

Table C-11 shows the percentage of union unemployment at certain dates in each province. As compared with the previous quarter the percentage rose in all the provinces; in Nova Scotia and Prince Edward Island from 5.2 to 7.7, in New Brunswick from 2.3 to 5.0, in Quebec from 3.2 to 5.5, in Ontario from 1.8 to 3.6, in Manitoba from 0.3 to 2.2, in Saskatchewan from 0.3 to 3.1, in Alberta from 0.3 to 3.7, and in British Columbia from 2.7 to 7.6. With the exception of New Brunswick and Saskatchewan the latest figures were higher than at the end of December, 1948.

Returns were received from 1,113 locals in the manufacturing industries. These reported 260,505 members of whom 11,418 were unemployed at the end of December. At the end of the previous quarter, 1,075 locals reported 261,249 members including 6,345 who were without work. At December

\* See Tables C-11 and C-12.

### PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADE UNIONS

Percent

31, 1948, reports were received from 1,090 locals with 285,885 members of whom 9,944 were unemployed.

In the transportation group, reports were received from 862 locals with a total of 107,708 members of whom 2,384 were unemployed at the reporting date. Three months earlier 933 members of a total of 100,875 had been unemployed; at the end of December, 1948, there were 1,606 unemployed of a total of 111,150.

Unemployment in mining rose from 0.5 to 1.0 per cent. Reports were received from 71 locals with 33,747 members. In non-metallic mining 9 locals reported 158 out of 2,563 members unemployed while in coal mining 184 of a reported membership of 17,351 were out of work. Little unemployment was reported in the metal mining industry as indicated by reports from 11 locals with 13,833 members.

Unemployment among union members in the building and construction trades

reflected a marked seasonal advance to 15.0 per cent from 4.6 in the previous quarter. Reports were received from 237 local unions with 54,603 members of whom 8,180 were unemployed at the end of December. As compared with the previous quarter the percentage increased among bricklayers from 0.3 to 8.2, carpenters, from 6.5 to 19.8, electrical workers, from 1.0 to 4.3, painters, from 2.4 to 20.2, plumbers, from 3.6 to 5.4, and miscellaneous building workers, from 4.4 to 17.3. At December 31, 1948, the percentage of trade union unemployment in the construction group was 7.9.

In public and personal services, the percentage of unemployment rose to 2.3 from 1.3 in the previous quarter.

In the lumbering and logging industry of Ontario and British Columbia, five locals with 8,679 members reported 1,627 as unemployed.

## PRICES AND THE COST OF LIVING\*

### Cost-of-Living Index

The Dominion Bureau of Statistics cost-of-living index declined 0.5 point between December 1, 1949 and January 3, 1950. This placed the index at 161.0 as compared to 159.6 a year ago, and 148.3 for January, 1948. As has been the case for several months, the largest contribution to the decrease in the total index was made by foods which dropped 2.5 points to 199.4. This marked the first time the food index has been under 200 since May, 1949. Within the food group, a drop of 16 cents in the average retail price of eggs accounted for most of the change. Among other food items, a 2.0 cents average decrease in pork prices was partially offset by a 0.7 cent increase in beef and veal. Lamb increased nearly 2.0 cents while lard and shortening declined 0.5 cent on average. Fresh vegetables rose fractionally, sugar increased 0.5 cent and coffee 5.4 cents. The clothing index declined from 183.7 to 183.3, reflecting slight but scattered decreases. Home furnishings and services dropped 0.1 point to 167.0 as decreases in blankets, dishes and laundry soap overbalanced increases in telephone and laundry rates. Fuel and light increased 0.4 point to 135.6 following moderate rises in coke prices in some Ontario centres. The index of miscellaneous items showed the largest change,

except for foods, in advancing 1.1 points to 131.6. This increase largely reflected the results of annual surveys of certain commodities and services which are characteristically stable in price. Prices and rates of this nature contributing to the rise were drugs, hospital charges, doctors' and dentists' fees, newspaper rates and barbers' fees. In addition, tobacco costs were up slightly. Rents were not surveyed during January and the index remained unchanged at 125.0.

From August, 1939 to January, 1950 the increase in the cost-of-living index was 59.7 per cent.

### Cost of Living in Eight Cities

Six of the eight regional city cost-of-living indexes moved lower in December. Continued easier prices for foods, notably eggs, were mainly responsible. Clothing prices were slightly lower at most centres while home furnishings and services indexes were mixed. Increases were registered for the miscellaneous items index at all cities, reflecting the result of annual surveys for items which are generally stable in price. These included drugs, hospital charges, doctors' and dentists' fees, newspaper rates and barbers' fees. Rents were not surveyed in January and consequently no index changes were recorded.

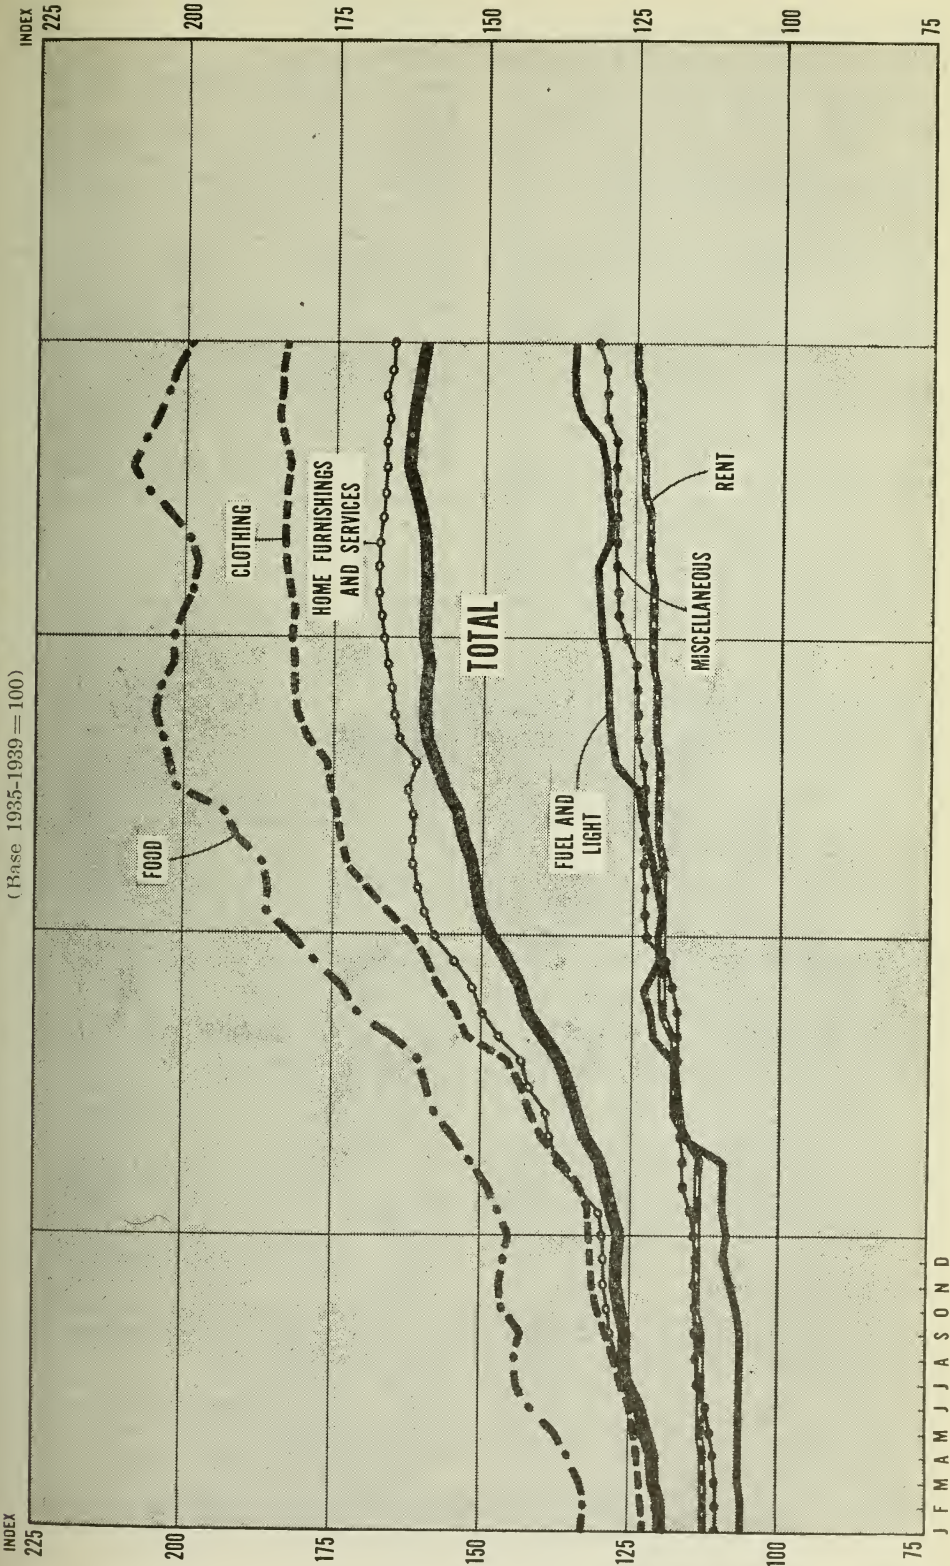

Composite city index declines between December 1, 1949 and January 3, 1950,

\* See Tables F-1 to F-6.

# COST OF LIVING IN CANADA FROM JANUARY 1946

(Base 1935-1939 = 100)

1946      1947      1948      1949      1950  
 J F M A M J J A S O N D

were as follows: Halifax -0.9 to 152.7; Saint John -0.9 to 157.1; Winnipeg -0.7 to 155.0; Toronto -0.5 to 156.9; Saskatoon -0.5 to 162.2; Edmonton rose 0.5 to 156.9 in the same interval while the Vancouver index remained unchanged at 161.9.

### Wholesale Prices, December, 1949

The general index of wholesale prices registered a decline of 0.2 point to 156.8 between November and December, 1949. When compared with the December, 1948 index level a decline of 2.8 points has been recorded. Although five of the eight major groups showed increases during the month under review, these were outweighed by declines in the remaining three. Non-ferrous metals led in the downward movement with a decrease of 1.6 points to 139.8; animal products receded 1.0 to 163.0 and vegetable products at 142.5 was 0.5 point lower than November. The largest group increase was recorded by non-metallic minerals which rose 0.9 to 139.0; wood

products moved up 0.5 to 188.6; textile products, 0.4 to 159.7, and chemical products 0.1 to 119.3. Among important commodity price declines between November and December were: Eggs, Grade A, 22.5 per cent, sodium bichromate 13 per cent, tin ingots 13 per cent, acetate of lime 10.7 per cent; solder 10.7 per cent, lemons 10.3 per cent, lard 9.7 per cent, green coffee, 8.7 per cent, coconut oil 8.2 per cent, linen thread 8.1 per cent. In the same period, price increases were recorded as follows: Nylon sewing thread 14.6 per cent, veal carcass 11.0 per cent, lamb carcass 10.9 per cent, brick 10.6 per cent, sand 10.3 per cent, automobile tires 10.0 per cent, caustic soda 9.5 per cent, chlorine 8.8 per cent, cedar siding 8.6 per cent, corn meal, 7.9 per cent.

The Canadian farm products index of wholesale prices moved down 0.6 to 144.4 between November and December. Animal products registered a decline of 1.8 points to 180.7, while field products increased 0.1 point to 122.7.

## EXPORTS TO UNITED STATES HIGHER BUT OVERALL TOTAL LOWER IN JANUARY

Canada's domestic exports to the United States—for the third successive month—were substantially higher in value in January than a year earlier. Shipments to Commonwealth and other countries were generally lower and the total value of domestic exports to all countries fell below that of January last year.

Exports to the United States in the month were valued at \$130,859,000 as against \$116,023,000 in January, 1949, an increase of nearly 13 per cent. The January value was higher than that for any of the first nine months of 1949 before the currency revaluations, but was exceeded in October, November and December, which are usually the peak months of the year. Part of the higher January value in terms of Canadian dollars over January last year can be attributed to the premium on United States exchange.

Total exports to all countries in January declined in value to \$221,200,000 compared with \$237,000,000 a year earlier. Shipments to the United States thus accounted for about 59 per cent of the month's total value as compared with slightly more than 50 per cent in the 12 months of 1949.

Sales to the United Kingdom—which have been subject to fluctuations during recent months—were valued at \$48,608,000, down from \$55,813,000 a year earlier, but

only slightly under the December figure. There were decreases also from a year ago in exports to other Commonwealth areas. The largest decline was in exports to Commonwealth countries in Asia which fell to \$3,473,000 from \$14,937,000, with shipments to India down to \$495,000 from \$11,190,000 in January last year, when there were exceptionally large exports of wheat and railway equipment to that country. Exports to the British West Indies, including British Guiana, Bermuda and British Honduras, declined to \$2,512,000 compared to \$4,608,000; to Commonwealth countries in Africa to \$3,831,000 from \$4,991,000; and to the Oceania group of Australia, New Zealand and Fiji to \$2,612,000 from \$3,145,000. Total value of exports to all Commonwealth countries, including the United Kingdom, was \$62,336,000 as against \$83,706,000.

Exports to Latin America were lower at \$6,866,000 compared with \$7,953,000, decreases being recorded for most of the larger Canadian markets in the group except Cuba and Venezuela. Shipments to Continental Europe fell off more sharply to \$10,362,000 as against \$16,569,000, with sales lower to Belgium and Luxembourg, France, Germany, Netherlands, Norway and Switzerland but higher to Portugal and Spain.

# STRIKES AND LOCKOUTS\*

## Canada, January, 1950

There was little strike activity in Canada during the first month of 1950. Six strikes and lockouts commenced during January and three were carried over from the previous year. About 80 per cent of the total time lost in January was caused by two work stoppages, one of iron ore miners at Bell Island, Newfoundland, and the other of plumbers at Ottawa, Ont.

Preliminary figures for January, 1950, show nine strikes and lockouts, involving 2,456 workers, with a time loss of 39,488 man-working days, as compared with 13 strikes and lockouts in December, 1949, with 3,041 workers involved and a loss of 23,667 days. In January, 1949, there were 10 strikes and lockouts, with 1,811 workers involved and a loss of 9,700 days.

Based on the number of non-agricultural wage and salary workers in Canada, the time lost in January was 0.05 per cent of the estimated working time, as compared with 0.03 per cent in December, 1949, and 0.01 per cent in January, 1949.

Of the nine strikes and lockouts which commenced during January, 1950, two were settled in favour of the employers and two

were indefinite in result, work being resumed pending final settlement. At the end of the month five work stoppages were un-terminated, namely: worsted textile factory workers at Trenton, Ont.; department store clerks at New Westminster, B.C.; coal miners in the Bellevue-Blairmore district, Alta.; plumbers, steamfitters and helpers at Ottawa, Ont.; and grocery store clerks at Montreal, P.Q.

The record does not include minor strikes such as are defined in another paragraph nor does it include strikes and lockouts about which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Strikes of this nature which are still in progress are: compositors, etc., at Winnipeg, Man., which commenced on November 8, 1945, and at Ottawa and Hamilton, Ont., and Edmonton, Alta., on May 30, 1946; and textile products factory workers at St. Lambert, P.Q., August 29, 1949. The strike of soft drink factory workers at Windsor, Ont., which commenced on August 5, 1949, has been settled, a union agreement having been signed. Work was resumed on January 23, 1950.

\* See Tables G-1 and G-2.

## Great Britain and Other Countries

The latest available information as to strikes and lockouts in various countries is given in the *LABOUR GAZETTE* from month to month. Statistics given in the annual review issued as a supplement to the *LABOUR GAZETTE* for April, 1949, and in this article are taken, as far as possible, from the government publications of the countries concerned.

### Great Britain and Northern Ireland

The British *Ministry of Labour Gazette* publishes statistics dealing with disputes involving stoppages of work and gives some details of the more important ones.

The number of work stoppages beginning in November, 1949, was 113 and 13 were still in progress from the previous month, making a total of 126 during the month. In all stoppages of work in progress in the period there were 18,700 workers involved and a time loss of 64,000 working days was caused.

Of the 113 disputes leading to stoppages of work which began in November, four, directly involving 300 workers, arose out of

demands for advances in wages, and 44, directly involving 2,600 workers, on other wage questions; three directly involving 800 workers, on questions as to working hours; 20, directly involving 2,500 workers, on questions respecting the employment of particular classes or persons; 34, directly involving 3,300 workers, on other questions respecting working arrangements; and four, directly involving 3,500 workers, on questions of trade union principle. Four stoppages, directly involving 1,000 workers, were in support of workers involved in other disputes.

### United States

Preliminary figures for December, 1949, show 120 strikes and lockouts beginning in the month, in which 40,000 workers were involved. The time loss for all strikes and lockouts in progress during the month was 1,200,000 man-days. Corresponding figures for November, 1949, are 200 strikes and lockouts, involving 70,000 workers, with a time loss of 7,500,000 days.

# FATAL INDUSTRIAL ACCIDENTS IN CANADA\*

## Fourth Quarter of 1949

There were 357<sup>1</sup> industrial fatalities in Canada during the fourth quarter of 1949 according to the latest reports received by the Department of Labour. This marks a decrease of 55 fatalities over the previous quarter in which 412 accidents were recorded, including 42 in a supplementary list. During the fourth quarter of 1948 there were 335 deaths as a result of industrial accidents, including 27 in supplementary lists.

The accidents recorded are those which involved persons gainfully employed during the course of, or arising out of, their employment. The statistics include deaths which resulted from industrial diseases as reported by provincial Workmen's Compensation Boards.

Statistics on industrial fatalities are compiled from reports received from the various provincial Workmen's Compensation Boards, the Board of Transport Commissioners, and certain other official sources. Newspaper reports are used to supplement these data.

During the quarter under review there were three accidents which resulted in three or more industrial fatalities in each case. On September 19, three workers engaged in metal refining were overcome by carbonyl gas poisoning at Arvida, Quebec, and died early in October. Three construction workers were burned to death in a construction project at Sydney, Nova Scotia, on November 9. On November 26, six crew members of a fishing craft were drowned when their vessel was shipwrecked during a storm off Trial Island, near Victoria, British Columbia.

<sup>1</sup> The number of industrial fatalities that occurred during the fourth quarter of 1949 is probably greater than the figure now quoted. Supplementary lists compiled from reports received in subsequent quarters, generally revise upwards the figures for previous periods.

Grouped by industries the largest number of fatalities, 70, was recorded in transportation. Of these 35 occurred in steam railways and 25 in local and highway transportation. During the previous quarter there were 81 industrial fatalities in transportation, of which steam railways were responsible for 29, and local and highway transportation for 28. In the fourth quarter of 1948 there were 63 industrial fatalities in transportation.

There were 67 industrial deaths in manufacturing during the fourth quarter of 1949, of which 25 occurred in the iron and steel products group. In the third quarter of 1949 there were 60 industrial fatalities recorded in the manufacturing industries, including 18 in iron and steel products. During the fourth quarter of 1948 there were 64 industrial deaths in manufacturing.

In agriculture there were 28 accidental deaths during the three-month period as compared with 50 during the third quarter of 1949. The smaller number of fatalities reflects the decreased activity in this industry during the last quarter of the year.

There were 43 fatalities in the logging industry during the fourth quarter of 1949 as compared with 34 in the previous three months, and 47 in the fourth quarter of 1948.

In the various branches of the service industry there were 44 accidental deaths as compared with 35 in the previous three months, and 19 during the fourth quarter of 1948.

An analysis of the causes of industrial accidents shows that 111 or 31 per cent were caused by moving trains, watercraft, and other vehicles. During the previous quarter, 33.2 per cent of the fatalities recorded were attributable to the same causes.

\* See Tables H-1 and H-2.

# SELECTED LIST OF PUBLICATIONS RECEIVED IN LIBRARY OF DEPARTMENT OF LABOUR, OTTAWA\*

The publications listed below are not for sale by the Department of Labour. Persons wishing to purchase them should communicate with the publishers. Publications listed may be borrowed, free of charge, by making application to the Librarian, Department of Labour, Ottawa. Applications for loans should give the number (numeral) of the publication desired and the month in which it was listed in the *LABOUR GAZETTE*. Students must apply through the library of their institution.

NOTE.—Many of the statistical data in this table are included in the *Canadian Statistical Review* issued by the Dominion Bureau of Statistics.

† Comparable statistics are not available. (1) Labour Force survey figures given are as of Oct. 29, 1949, Nov. 20, 1948 and Nov. 9, 1946. (2) Base 1926=100. (3) Figures are as at end of quarter ending Dec. 31, 1949, 1948, 1946, 1943 and 1939 respectively. (4) Real earnings computed by dividing index of average weekly earnings of wage-earners in manufacturing by the cost-of-living index; base: average for 1946=100. (5) First of month. (6) Base 1935-1939=100. (7) Figures are for four week periods. (8) Annual figures; monthly not available. (9) Year-end figures. (10) Annual index.

\* Includes retroactive wage payments to railway system employees.

All totals are rounded to the nearest million independently. Therefore, the final total does not necessarily agree with the sum of the individual estimates.

## C—Employment, Hours and Earnings

### TABLE C-1.—EMPLOYMENT AND EARNINGS BY PROVINCE, CITY AND INDUSTRY

(The latest figures are subject to revision)

SOURCE: *The Employment Situation*, D.B.S.

Tables C-1 to C-5 are based on reports from employers having 15 or more employees—At December 1, 20,798 employers in the eight leading industries reported a total employment of 2,106,724 and total payrolls of \$92,324,135

(1) This classification comprises the following:—iron and steel, non-ferrous metals, electrical apparatus, lumber, musical instruments and clay, glass and stone products. The non-durable group includes the remaining manufacturing industries, as listed in Table C-4, with the exception of electric light and power.

(2) Mainly hotels and restaurants and laundry and dry cleaning plants.

**TABLE C-6.—HOURS AND EARNINGS IN MANUFACTURING**

(Hourly-Rated Wage-Earners)

SOURCE: *Average Hours Worked and Average Hourly Earnings, D.B.S.*

Tables C-6 to C-9 are based on reports from a somewhat smaller number of firms than Tables C-1 to C-5. They relate only to wage-earners for whom statistics of hours of work are also available, whereas Tables C-1 to C-4 relate to salaried employees as well as to all wage-earners of the co-operating firms.

Week Preceding	Average Hours Worked			Average Hourly Earnings		
	All Manufactures	Durable Goods	Non-Durable Goods	All Manufactures	Durable Goods	Non-Durable Goods
	No.	No.	No.	cts.	cts.	cts.

<sup>1</sup> Industries classified in the durable manufactured goods industries.

<sup>2</sup> Since 1941, the Dominion Bureau of Statistics has prepared current indexes of a average hourly earnings of the employees of eight establishments producing heavy electrical apparatus. Based upon the hourly earnings at June 1, 1941, as 100 p.c., the latest figures are as follows:—Oct. 1, 1949, 230.9; Nov. 1, 1949, 231.1; Dec. 1, 1949, 231.5; at Dec. 1, 1948, the index was 223.0.

<sup>3</sup> Chiefly street and electric railways.
