## 17. Remarks (Include here any factor hampering production and recommendation you consider necessary):

## 1. Transportations:

The lumber, the chief material, needs to be dried and takes long time for drying. Moreover, there exist bottlenecks for production due to little allocation of freeters and insufficient amounts of fuel for trucks. 9H

## 2. Materials:

There exist great difficulties for obtaining the great quantity of paints, metal parts etc. even they are all the same respectively because they are very expensive and of poor qualities.

A remarkable amount of fuel ( gasoline and coal ) for trucks and boilers is needed but the amount rationed is very little. Consequently, there exist bottlenecks for transportations, drying, etc.
