Toronto, Ontario

THE HONOURABLE JOHN YAREMKO, B.A., Q.C.

REGISTRAR GENERAL

## *Foreword*

I take pleasure in presenting the 91st Annual Vital Statistics Report compiled by the Office of the Registrar General. This report is prepared in two parts.

Part I consists of an analytical survey of the vital statistics of the Province, and, in so far as can be portrayed by vital statistics, indicates the trend over the past years in the general state of health of the people of Ontario. In the light of such general trends, it is possible to assess the vital statistics for the year 1960. It also emphasizes certain specific problems in the field of public health such as infant and maternal mortality and deaths from such diseases as heart and cancer.

Part II comprises detailed tables covering the various aspects of vital statistics for the Province of Ontario in 1960.

In conclusion, may I state that, while this report is primarily of interest to certain professions and agencies, it will give any interested parties a real insight into the vital statistics concerning births, marriages and deaths in the Province of Ontario.

A handwritten signature in black ink, appearing to read "J. M. Garneau". The signature is written in a cursive style with a large, sweeping initial "J".

B.A., Q.C.,

*Registrar General.*

SIR :

I have the honour to submit for your approval the Ninety-first Annual Vital Statistics Report made in conformity with and under the provisions of the Act respecting the Registration of Births, Marriages and Deaths in the Province of Ontario, for the year ending December 31st, 1960.

I have the honour to be, Sir,

Your obedient servant,

R. B. WALLACE,  
*Deputy Registrar-General.*

TO THE HON. JOHN YAREMKO, B.A., Q.C.  
*Registrar General of Ontario.*

## PART I.—COMPARATIVE AND ANALYTICAL SUMMARY

Population.....	13
Natural Increase.....	14
Summary of Vital Statistics by Months.....	15
Births.....	16
Method of Certification of Cause of Death.....	22
Infant Mortality.....	25
Maternal Mortality.....	27
General Mortality.....	28
Selected Causes of Death.....	31
The Five Chief Causes of Death in the Different Age Groups.....	33
Number of Deaths from Selected Notifiable Diseases.....	35
Mortality from Tuberculosis.....	37
Mortality from Cancer.....	40
Classification of Accidental and Violent Deaths According to the Nature of Injury.....	44
Marriages.....	45
Divorces.....	45

### List of Charts

CHART 1 Birth, Death and Natural Increase Rates per 1,000 Population, Ontario, 1925-1960.....	17
CHART 2 Percentage of Live Births, Stillbirths and Illegitimate Births in Each Age Group of Mothers, Ontario, Five-Year Averages 1936-1955 and for the Year 1960..	21
CHART 3 Infant Mortality, Ontario, Death Rates per 100,000 Live Births at Each Age Period, Five-Year Averages 1941-1955 and for the Year 1959.....	24
CHART 4 Percentage of Total Deaths in Each Age Group by Sex, Ontario, 1921, 1931, 1941, 1951 and 1960.....	30
CHART 5 Deaths from Tuberculosis, Cancer and Pneumonia, Ontario, 1948-1960—Rates per 100,000 Population.....	36

### Tables

TABLE A Population, Censuses 1921, 1931, 1941, 1951 and 1956 and Estimated for Inter-censal Years, by Sex and Age Group, Ontario.....	13

## PART I. COMPARATIVE AND ANALYTICAL SUMMARY

## Population

For reference purposes the estimated population of the province over a period of three decades is shown by sex and age in Table A, while a distribution by sex and age-groups of the estimated population of 1960 is provided in Table B.

TABLE A POPULATION, CENSUSES 1921, 1931, 1941, 1951 AND 1956 AND ESTIMATED FOR INTERCENSAL YEARS, BY SEX AND AGE GROUP, ONTARIO  
(In Thousands)

YEAR	Under 20		20-64		65 and over		TOTAL

## Births

Table E presents an historical summary of births, illegitimate births, and stillbirths, together with computed rates for each, while Chart 1 portrays the general trends over the same period.

1960	159,245	26.2	5,119	32.1	1,960	12.3

\* Born to unmarried mothers

There was a definite increase in live births in 1947 when the rate was 26, decreasing slightly for the years 1948 to 1950 and showing a decided increase for the years 1951-1960.

The stillbirth rate, on the other hand, has been on an extremely encouraging downward trend. In 1960 for every 1,000 babies born alive, 12 were stillborn.

With respect to illegitimacy, Table G and Chart 2 indicate that the great majority of the illegitimate live births occur to mothers under 25 years of age. Of every 100 such births in 1960, 80 were to this group of mothers.

## Method of Certification of Cause of Death Ontario, 1960

Information on the recorded method of certification of deaths in Ontario, whether by a coroner or medical practitioner, and the frequency of autopsies for a selected group of cause-of-death categories, prepared in collaboration with the Medical Statistics Branch, Ontario Department of Health, is presented in this report for the first time.

These data were tabulated by the Office of the Registrar General and are designated as tentative by reason of the fact that they are based on the death certificates received directly by the Office of the Registrar General and do not include deaths of residents of Ontario which occurred outside the Province.

Of the 51,459 recorded deaths during 1960, 12,378 or 24.0 per cent were recorded as having been certified by a coroner; in 26.0 per cent of these cases an autopsy was performed. There were 39,070 deaths recorded as having been certified by a medical practitioner; in 7,444 or 19.0 per cent of these an autopsy was reported to have been performed. In only 11 cases was the certifier other than a coroner or medical practitioner or unknown.

Of the deaths recorded as certified by coroners (12,378), 1,000 or 8.1 per cent were assigned to vascular lesions of the central nervous system (I.C.D. 330-334), 5,136 or 41.5 per cent were attributed to arteriosclerotic and degenerative heart disease (I.C.D. 420-422), and 2,998 or 24.2 per cent were due to accident, suicide or homicide (I.C.D. E800-999).

There is great variation between cause-of-death categories in the proportions confirmed by post-mortem—from 10.1 per cent for arteriosclerotic and degenerative heart disease (I.C.D. 420-422) and 10.5 per cent for vascular lesions of the central nervous system (I.C.D. 330-334), to 81.9 per cent for homicide and operations of war, 61.8 per cent for complications of pregnancy, childbirth and the puerperium (I.C.D. 640-689) and 56.0 per cent for motor vehicle accidents (I.C.D. E810-835). The proportion of all deaths from all causes in which a post-mortem examination was made was 20.7 per cent.

\*Includes 11 deaths for which the certifier was other than a coroner or medical practitioner or was unknown.

†Includes post mortem not stated.

Chart 3

**INFANT MORTALITY**  
**ONTARIO**  
**DEATH RATES PER 100,000 LIVE BIRTHS**  
**AT EACH AGE PERIOD**  
 FIVE YEAR AVERAGES 1941-1955  
 AND FOR THE YEAR 1959

### Infant Mortality

Table J and Chart 3 both show very clearly that, although infant and neonatal mortality rates have declined during the past ten years, the actual number of children who died before they reached one year of age has increased. These increases must be considered in comparison with the extensive increase in the number of births during the same period.

### Sixth Revision of the International List of Diseases and Causes of Death

The introduction of the new International Statistical Classification in 1950 was accompanied by a change in the procedure of selecting a cause of death for tabulation where multiple causes were stated. Under the new selection procedure, the cause for tabulation is based on the preference expressed by the physician on the medical certificate as indicated by the order in which he records the causes. This method has replaced the former procedure of arbitrary selection by rules.

The effect of the statistical assignments being guided by the physicians' preference is to make recorded mortality more closely reflect clinical opinion, and the recorded mortality is lowered for certain causes and increased for others. The most dramatic illustration of this is given by diabetes, the deaths for 1960 being 677, as compared with 1,157 in 1949.

Noteworthy differences between the figures for 1950-1960 and those for the preceding eleven-year period are seen for prematurity, diseases of early infancy, nephritis and diabetes mellitus. In the Fifth Revision of the International List of Causes of Death, "prematurity" (immaturity) was given a high priority in classification. Following the Sixth Revision, various conditions under "Certain Diseases of Early Infancy" were subdivided as to whether or not there was mention of prematurity. Prematurity became a secondary entity, a residual category being provided when another cause for classification was not recorded.

In the case of diabetes mellitus, the difference is due entirely to the method of selecting the cause of death to be tabulated. Diabetes mellitus was formerly given a high preference when jointly stated with other causes; now, if the physician records diabetes as a contributory condition under Section II of the Medical Certificate, indicating that it was a contributing factor but not the disease which initiated the train of events leading to death, the death is not attributed to diabetes, but to one of the causes set out in Section I.

Terms denoting arteriolar nephrosclerosis, once classified under chronic nephritis, have been assigned to classifications under hypertensive diseases. Fewer deaths are therefore now attributed to nephritis, while the number of deaths assigned to "hypertension without mention of heart disease" shows a considerable increase.

Cities—Units of 10,000 population and over.

Towns—Units of 5,000 to 10,000.

### General Mortality

Table N presents an historical summary of deaths by sex in the province and the computed crude death rates over a 30-year period while Chart 1 presents a graphic picture of the general trend in the rate.

The death rate among males has been consistently higher than that among females.

Chart 5

DEATHS FROM  
TUBERCULOSIS, CANCER AND PNEUMONIA

ONTARIO, 1948 - 60

RATES PER 100,000 POPULATION

\* The 1950 to 1960 figures comprise the malignant neoplasm group (categories 140-205 under the 6th Revision of the International List of causes of death).

## Mortality from Tuberculosis

Table S (1) shows the deaths from all forms of tuberculosis in the province from 1951 to 1960. Table S (2) shows the death rates per 100,000 population classified by the age of the decedents from 1951 to 1960. During the year 1960 tuberculosis mortality rate was the lowest ever recorded in Ontario, that of 2.6 per 100,000 of population. Chart 5 illustrates the reduction in mortality from tuberculosis which has taken place since 1948.

Table S (3) in Part 1 of this report gives details of deaths and death rates for counties, cities, towns and villages of 5,000 population and over according to place of occurrence and place of residence for the year 1960.

Mortality from Cancer

Chart 5 illustrates the trend in the mortality rate from cancer. The increase in the total number of deaths since 1951 is shown in Table T (1) and is apparent in most of the age groups particularly among older persons. Table T (2) shows the rate from 1951 to 1960 by sex.

### Marriages

From Table W it will be noted that there have been significant fluctuations in the number of marriages in the province from 1933 to 1960.

**TABLE W MARRIAGES AND MARRIAGE RATES PER 1,000 POPULATION, ONTARIO, 1933-1960**

YEAR	Number	Rate per 1,000 Population	YEAR	Number	Rate per 1,000 Population
1933.....	22,587	6.4	1946.....	46,073	11.2
1934.....	25,874	7.3	1947.....	44,056	10.5

			1960.....	45,855	7.5

### Divorces

In Ontario, divorced persons form a very small proportion of the population as compared with some of the other countries of the world. The following summary indicates the number and percentages of such persons in the population of the province as enumerated in the past five censuses.

	1921*	1931	1941	1951	1956
Divorced persons—Male.....	1,135	1,071	2,291	4,766	5,529
Female.....	1,369	1,015	2,865	7,668	9,069
Per cent of population—Male.....	0.08	0.06	0.12	0.21	0.20
Female.....	0.09	0.06	0.15	0.34	0.34

\*Including legal separations.

An historical summary of the number of marriages dissolved in Ontario since 1919 is presented in Table X. Previous to 1920 very few divorces were granted in the province. There was no appreciable increase in the number till the late 1920's, but, since the transfer in 1930 of jurisdiction from the Dominion Parliament to provincial courts, the rate has increased.

TABLE X DISSOLUTIONS OF MARRIAGE (DIVORCES) AND RATE PER 100,000 POPULATION, 1919-1960, AND RATIO OF DISSOLUTIONS TO MALES AND FEMALES, 1935-1960

Year	Dissolutions of Marriage	Rate per 100,000 Population	Year	Dissolutions of Marriage	Rate per 100,000 Population	DISSOLUTIONS GRANTED TO—		Ratio of Dissolutions to Males per 1,000 Dissolutions to Females
