The Housekeeper's Alphabet

Always make it a point to do your best.
Be charitable in judging others.
Comfort is one of those priceless blessings.
Duty to others must not be over-looked.
Envious people are always unhappy.
Flowers will make a palace out of a hovel.
Godliness with contentment is great gain.
Husband appreciates tidiness and order.
Industry and economy provide for "a rainy day."
Judiciously spend your time and money.
Keep your feet warm, head cool and heart tender.
Learn the virtue of forgiveness.
Meditate long before speaking harshly.
Noble deeds are the best evidence of a noble life.
Owe no one more than you are able to
Pay; and allow no one to owe you more than you are able to lose.
Quality should not be sacrificed for quantity.
Remember the sick, the unfortunate and the bereaved.
Stand by your convictions of right, though the heavens fall.
Trouble comes soon enough; don't court it.
Use your friends; and allow them to use you.
Victory over weakness, should be the aim of all.
Watch your time, your tongue, and your temper.
Execute well your part in everything with which you are connected.
You will pass this way but once, make the best of the journey.
Zealously strive to make the world better for your having lived in it.

An Enlarged Vision.

[A paper read by Mrs. Montrew Sanders on the occasion of the opening of the basement of the church]

"Where there is no vision the people perish" are the words that were spoken by one who was in close contact with human life in its various conflicts and triumphs. That inactivity is followed by retrogression and that circumscribed vision results in loss of power and opportunity, is a fixed law in the spiritual realm as well as in the physical.

Thousands of churches in America to-day have ceased to be bulwarks of power in extending the kingdom of our Christ, simply because the membership was content with small things. Hundreds of churches are closed and are mouldering away by the roadside, because the congregations lacked a vision of a larger field and were unwilling to pay the price of a larger growth and an increased power of evangelism. These empty church houses, where once the gospel of love was proclaimed by men whose hearts were aglow with heavenly fervor, and where the struggling multitudes gathered in from the various walks of life in order that they might receive spiritual food and guidance, have now become mere habitations for the straying bird that seeks refuge from the disturbed elements. The faithful, along with the aged trustees and loyal members, have either passed on to their reward or lapsed into lethargy and indifference. The young men and maidens spend their hours in frivolty and pleasnre. The boys and girls roam the fields and loiter on the streets. The heart of the parent becomes burdened, and their eyes send forth tears of anguish on account of the indifference and waywardness of their children. When we seek to find out the cause of all this, we invariably find that it is a process of spiritual degeneration and decay that had already begun as the result of a failure on the part of the christian forces in those communities to break away from obsolete customs and antiquated methods, and keep apace with the progressive spirit of the age by attempting larger things for the cause of Christ.

We, as members and friends of this part of the christian church have learned some practical and very helpful lessons along this line during the last few years. All of us can remember when the congregations which as-

sembled for worship in this village from time to time were content with quite crude and commonplace facilities for the promotion of religious worship and the extension of gospel privileges. No matter how comfortable and cozy might be our own firesides, we thought little about it if the house of God was not in harmony with our homes. We saw the hand of progress as it wrought its mighty transformation as if by the touch of magic, in other phases of human endeavor, but we realized that the church was not keeping pace. There came a time however, when conditions began to change—a brighter day was dawning, and a new star was appearing in the spiritual heavens which destined to shed its sombre light over the entire community, giving new hope and new life to all who would come under the influence of its marvellous power. I refer to the larger vision that has come to this church in recent years, and the remarkable growth and material enlargement that followed, the culmination of which we meet here to-night to celebrate.

In the worthy achievements of the past few years the women of the church have borne a noble part. They have stood side by side with their sturdy brothers in an united effort to plant the church upon a higher plane and a firmer foundation. The organized work among the women of the church had its inception about five years ago, when a number of the women in this community met in the old church, which formerly stood upon this sacred spot, and organized the Ladies' Aid Society of this church with eighteen members enrolled at the first meeting. Mrs. Sallie Edwards was elected president. Plans were inaugurated and put into practical operation which had as the chief object the assuming of part of the responsibility of providing funds for the support and extension of various departments of the work of the church. The ladies entered into their new labors with a spirit of fervency and cheer, and in a very short time the Aid Society became one of the leading factors in the church life.

A few months after the society entered upon its useful career, some one suggested that Honey Creek should have a resident pastor. The idea was a popular one, and the Aid Society took up the discussion, and continued the agitation which resulted in definite steps being taken toward the building of a home for the pastor of the church. The society came forward when the success of the enterprise was in jeopardy and pledged \$100.00 to aid in building the parsonage. It was a glad day for the society as well as for the entire church when the pastor and his family were moved into the new parsonage, the first house of its kind in the village.

With the completion of the parsonage, and the spirit of sacrifice and service that the society developed in their efforts to provide their part of the funds, came a still larger vision of greater opportunities. When a new house of worship was proposed, the Aid Society was not found lacking in support and enthusiasm. A pledge of \$500.00 was made before the building was begun. The greater part of this sum was paid before the church

was completed. An additional sum of \$200.00 was pledged on the day of dedication, and now the society is expecting to bear the greater part of the responsibility of providing for funds for the completion of the basement. About \$400.00 more will be expended for these improvements, which will make the entire amount expended by the society during the last five years, something near \$1200.00. As to how this large sum of money has been collected, almost every person in the community understands. The women have been toiling arduously, early and late and in many ways, in order that they might carry forward the work that lay so near their hearts. Practically the entire community has encouraged them in a substantial way, and the splendid work that has been accomplished is due largely to the hearty support received from the many friends of the society, all of which has been greatly appreciated by those who have had the work in hand.

Friends, it has been a long, hard pull. There were times when the roads were not smooth, and the weather was not pleasant. There were conditions that made it embarrassing for us to carry on our work. Throbbing heads and aching limbs have told the frequent story of a day of incessant toil, but a full purse when the day's work was over, caused a joyous spirit. The burden of the responsibility has been great and many times seemed more than we could bear; but in the midst of all our sacrifice and labors, we have been happy and hopeful, realizing our labors were for Him, who gave his life for us. As we sit here to-night amidst these beautiful and pleasant surroundings beneath the roof of this splendid temple dedicated to the worship of Almighty God, we glance backward over the pathway over which we have traveled and see how the way has been opened up for our advancement and realize that the hand of the loving Father has guided us to this present hour of victory and promise.

Does it pay? Have our labors been in vain? Nay! Nay! All our labors, all our sacrifices and all our energies have been transformed into bulwarks of spiritual power and have become pillars in the temple of our God. Our work is only begun. This enlarged vision will carry us into new and larger fields of endeavor. Let us not relax. Let every step be forward and upward, until the last battle is fought, and the victor's crown is placed upon our brow. Then—perhaps not until then, will we know the real joy of unselfish service. Then we will forget all about our conflicts, our conquests, and our crosses, for we will hear again the beautiful words which were spoken at Bethany, "She hath done what she could."

Beverages

Coffee

One cupful of coffee, one egg, one cupful of cold water, six cupfuls of boiling water, scald a graniteware coffeepot, wash the egg, break and beat slightly, dilute with one half the cold water, add egg, crushed shell and coffee, put into the coffee-pot, pour on the boiling water and stir thoroughly. Place on front of range and boil from three to five minutes. Pour some into a cup to free the spout from grounds, return to coffeepot and repeat. Add remaining cold water, which, being heavier than hot water, sinks to the bottom, carrying the grounds with it, and completes the process of clearing. Place on the back of the range, where it will not boil, for ten minutes. Three egg shells may be used in place of one egg. For after-dinner coffee use twice the amount of coffee given in this recipe.

—Mrs. B. R. Inman.

French Coffee

1 quart water to 1 cup very fine ground coffee. Put coffee grounds in bowl; pour over about $\frac{1}{2}$ pint cold water and let stand for 15 minutes; bring remaining water to a boil. Take coffee in bowl, strain through fine sieve, then take French coffee-pot, put coffee grounds in strainer at top of French pot, leaving water in bowl. Then take boiling water and pour over coffee very slowly. Then set coffee-pot on stove 5 minutes; must not boil. Take off and pour in cold water from bowl that coffee was first soaked in, to settle. Serve in another pot. The French, who have the reputation of making the best coffee, use 3 parts Java, 1 part Mocha. —Selected

Vienna Coffee

Equal parts Mocha and Java coffee; allow 1 heaping tablespoon of coffee to each person, and 2 extra to make good strength. Mix 1 egg with grounds, pour on coffee $\frac{1}{2}$ as much boiling water as will be needed, let coffee froth, then stir down grounds and let boil 5 minutes; then let coffee stand where it will keep hot, but not boil, for 5 or 10 minutes, and add rest of water. To 1 pint cream add white of an egg, well beaten; this is to be put in cups with sugar, and hot coffee added. —Selected.

Chocolate

One and one-half square baker's chocolate, two tablespoonfuls of sugar, one cupful of water, three cupfuls of milk. Add water to the chocolate and stir over the fire till smooth, add sugar and milk, bring to the boiling point, boil one minute, whipping with an egg-beater. Serve.

—Selected.

Cocoa

One and one-half tablespoonful of prepared cocoa, two tablespoonfuls of sugar, two cupfuls of boiling water, two cupfuls of milk. Scald milk, mix sugar and cocoa, and add one-half cupful of boiling water to make a smooth paste, add remaining water and boil one minute, add scalded milk and beat two minutes with Dover egg-beater.

—Selected

Tea

Water for tea should be freshly heated and just boiling. Teas are of differing strengths, but a safe rule is one teaspoon dry tea to one-half pint boiling water. Scald tea-pot; put in dry tea and cover for one minute. Add boiling water, cover closely. Let stand 3 to 6 minutes, strain off into second hot pot. A wadded cozy will keep tea hot for a long time off the fire.

—Selected.

Russian Tea

Serve a slice of lemon in each cup of tea with sugar to taste. In Russia a preserved strawberry is added to each cup.

—Selected.

Dandelion Wine

Gather one-half gallon of dandelion blossoms, pour over them one gallon of boiling water let stand over night. Strain well and add four pounds of sugar and the juice of two lemons. Let stand five or six weeks, strain and bottle.

—Nettie Fleming.

Grape Wine

Press juice from grapes, place on stove let heat to the boiling point, skim, sweeten and seal it in quart cans.

—Sallie Warner.

Pineapple Lemonade

One pint water, one cup sugar, one quart ice-water, one can grated

pineapple, juice of three lemons. Make a syrup by boiling the sugar and water ten minutes. Add the pineapple and lemon juice. Cool, strain and add the ice water. —Selected.

Fruit Punch

Three cups sugar, one cup tea, two quarts ice-water, one pint strawberry syrup, juice of five lemons, juice of five oranges, one can grated pineapple. Make a syrup by boiling the sugar and water ten minutes. Add the tea, fruit juices, pineapple and strawberry syrup. Let stand thirty minutes; strain, add enough ice-water to make one and one-half gallons of liquid, turn into a large punch bowl over a piece of ice and add the cherries. This amount will serve fifty people. —Selected.

Dandelion Wine

Recipe for one gallon.—Three quarts of blossoms, one gallon boiling water, let stand three days, then strain. Three pounds granulated sugar. Boil, skim and cool, add two lemons chopped fine, two tablespoons of yeast. Let stand five days, strain and bottle. Tie a cloth on each bottle, do not use corks. —Mrs. Adolph Levy, Mrs. Fanny Jones.

Bread

The Baking of Bread

The oven should be hot enough to turn a piece of white paper a dark brown in five minutes for the baking of bread. The heat should increase slightly for the first ten minutes, and gradually decrease till the end of the baking. The heat in the center of the loaf should reach 212 degrees, otherwise the starch cells will not be ruptured or the ferment germs killed. The heat changes the starch on the exterior of the loaf to dextrine. If it burns, the dextrine is turned into caramel, and has a slightly bitter taste. When the loaf is removed from the oven, place it where the air will circulate freely around it. Do not cover, if you like a crisp crust. When cold put it into a clean, sweet bread-box, without any wrapping, as the latter will give it a musty flavor. The pan for baking bread should not be over four inches wide, four inches deep, and suited in length to the oven. When the loaf is larger than this, there is danger of the temperature in the center of the loaf not reaching 212 degrees Fahrenheit, and the yeast germs not being killed.

—Selected.

Bread With Beer Yeast

Cook and mash four medium sized potatoes, add to these about a tablespoon of salt and one-half cupful of sugar, stir thoroughly, then add two tablespoonfuls of flour, pour over this enough boiling water to scald the flour and potatoes. If the potatoes are new, use the water in which they were cooked, if they are old potatoes use just boiling water from a kettle. After the flour is scalded add enough water to make the amount of yeast you want [this recipe is for four or five loaves] allow a pint of yeast for a loaf. After you have added all the water necessary if too hot allow to cool until luke warm then add your beer yeast and let stand over night. In the morning dip out one quart of the yeast to save for starting, and thicken the rest and let stand until light and mix into dough, don't make dough as stiff as you would with any other bread. Work your dough until smooth and let rise again then mold into loaves

—Mrs. Montrew Sanders.

Home Made Yeast

Boil six large potatoes in three pints of water. Tie a handful of hops in a small muslin bag and boil with the potatoes; when thoroughly cooked drain the water on enough flour to make a thin batter; set this on the stove or range and scald it enough to cook the flour, (this makes the yeast keep longer); remove it from the fire, and when cool enough, add the potatoes mashed, also a half a cup of sugar, half a tablespoonful of ginger, two of salt and a teaspoonful of yeast. Let it stand in a warm place until it has thoroughly risen, then put it in a large mouthed jug, and cork tightly; set away in a cool place. The jug should be scalded before putting in the yeast. Two-thirds of a coffee cupful of this yeast will make four loaves.

—Norah Griffls.

Soup stock is made from cheap, tough cuts. The meat should be cut in small pieces and soaked in cold water for half an hour to draw out the juices. Bone is added for the sake of the gelatine which it contains, and which will give body to the soup. A good proportion is one pound each of meat and bone to each quart of water. Use a kettle with a very tight cover and simmer slowly for a number of hours. Stock is better when made the day before it is to be used. —Selected.

Saratoga Chips

The secret of preparing this dainty dish nicely, lies in cutting the slices to the thinness of heavy paper and soaking them in cold water, with a pinch of powdered alum added, not less than six hours. Moon, the originator, is said to have soaked them in ice water twelve hours. This is done to draw the starch from the potato. When you are ready to fry them, drain them from the water and dry with a cloth. Have not less than two quarts of hot fat, have it hotter than for almost any other dish. Do not attempt to fry too many at a time, as they cool the fat and the chips are greasy and lack crispness. A granite kettle is better than a frying pan, as in order to keep the fat of an even temperature, it will be necessary to move it from time to time. Allow the chips to fry six minutes after the "boiling up" has stopped, which always takes place when the potatoes are first put in. They should be crisp and a deep yellowish white, but not brown. Drain them on brown paper, dredge over with salt, and serve immediately in a hot, uncovered dish. —Selected.

—Alice Wright.

A Substitute for Lard

Buy the fat of beef known as cod fat. This is the fat of the flank. Do not buy the kidney fat as that is very hard. Cut the fat in slices three-fourths of an inch thick, place in cold water for several hours to withdraw the blood then place in a covered pot or skillet over a medium fire, turning the pieces occasionally. When most of the fat is withdrawn pour into a vessel to cool, pressing the pieces with a fork or spoon to extract all the remaining fat. If the fat is well extracted the "cracklings" may be thrown away but if not they may be saved for greasing the griddle. If properly cared for this fat will be as soft and white as lard and may be used in the same way. Pie crust made from this is far sweeter and better than from any other fat. The writer has used this for twenty years.

—Mrs. L. E. Custer.

A New Sandwich

One-half cupful scalded milk, one-half cupful of boiling water, one-half tablespoonful of lard, one-half tablespoonful of butter, two tablespoonfuls of molasses, three-fourths of a teaspoonful of salt, one half a yeast cake dissolved in two tablespoonfuls of lukewarm water, one-half cupful of white flour and enough entire wheat flour to knead, and one cupful of English walnut or pecan nut meats broken in pieces. When this bread is twenty-four hours old, slice as thin as possible, spread sparingly and evenly with creamed butter, and put orange marmalade between slices. Remove crusts, cut in triangles or any desired shapes, and garnish with halves of nut meats, which need a bit of butter on their under surfaces, to keep them in place. An Original Chicken Dressing

Have one-quarter cup of lard in a skillet and let boil; stir in sifted corn-meal as long as there is enough lard to keep it from burning, then break up stale biscuit and add to this. Add broth from the chicken sufficient to moisten the mixture; break in two eggs. Let cool sufficiently to bear hands in it, work out in balls, and have ready one-quarter cup of butter in the skillet boiling hot. Put in the dressing and fry brown on both sides, then sprinkle flour in the butter while the dressing still remains in the skillet and pour in chicken broth till enough gravy is made to cover the dressing. Use salt and pepper to taste. This is much better than baking the dressing in the chicken, as it dries out in the baking. The fowl is placed in the platter and the dressing put around it.

Things Worth Knowing

Cake Baking .

When baking a delicate white cake, set a vessel of water in the oven, it will keep it from browning too brown.

Tar, or Buggy Grease

To remove, rub well with lard then wash out with soap suds.

White Furs, White Shawls, etc.

Cover with corn meal, let stand for four or five days, shake out, hang in the wind, they will look like new.

Croup

Cover the throat and chest well with a cloth wrung out of cold water, then wrap the child in a blanket and keep warm, relief will come in a few minutes. Powdered alum, one fourth teaspoonful in white of egg is very good as it will cause the phlegm to be thrown up.

Iron Rust

Get one-half ounce of oxalic acid in small pieces, in vial and keep corked, when needed dissolve one-half teaspoonful with two or three table-spoonfuls of boiling water, and dip the spot into it or wet with rag; as soon as the rust is bleached out, wash the article right out in clean water to keep acid from injuring the goods. Applications of lemon juice and salt is good, laying the goods out in the sun, or holding over the spout of a boiling tea-kettle

Mildew, to Remove

Cover the spot with soap and salt, that has been mixed and wet just enough to spread, lay out on the grass over night, if not removed, repeat the process, a sure thing.

When Freezing Ice Cream

Pack and fill the freezer with fine ice and salt, then pour in cold water until it runs out at the drain in the side of the freezer. Turn the crank of the freezer rapidly, but not too fast, and in five minutes or less the cream will be frozen and of a fine grain.

—L. L. L.

To Peel Oranges

If you will pour scalding water over oranges and let them stand five minutes you will save time in peeling them. The thick white inner skin, usually so hard to get off, will adhere to the peel and come off with it, leaving the fruit beautifully clean and ready to slice.

To Remove Ink from Wash Goods

Melt a piece of tallow, and plunge the ink spot in the hot fat, then wash the article, and all traces of the ink will be gone. If the article be colored or will not wash, drop melted wax on the spot, let it harden, then remove with a knife. The ink will be soaked up by the wax. If a shadow of wax or stain remains, put a piece of blotting paper over the place and press with a hot iron.

—Mrs. H. B.

Cough Syrup

Juice of six lemons, one pound of strained honey, one ounce glycerine, one quart whiskey, mix, bottle, and take one tablespoonful three times a day.

—S. P. Ledgerwood.

Kerosene for Burns

Few people seem to know the value of kerosene for burns. If possible, immerse the burned part in kerosene for ten or fifteen minutes; if not, cover it closely for some time with a cotton cloth saturated with kerosene, and you will be surprised how soon the soreness will leave, never to return.

—M. S. Van P.

To Clean Tan Shoes

A piece of lemon rubbed briskly on tan or brown shoes will effectually remove all dark stains, such as those from coal, soot, etc. After cleaning, wipe the lemon off the shoes, let dry, and then polish with the usual polish. The bright, new appearance of the shoes is very gratifying.

—Mrs. F. H. P.

Fruit Stains

Pour boiling water through the article which has been stained before it is put into the regular wash.

Stings of Bees, etc.

Wet the place and cover with soda, or wet with amonia.

Bruises

Cover with butter as soon as possible, will prevent the bruised part from coloring.

Ink Spots on Carpet or Clothing

Wash as soon as possible in milk (sour milk is best) and rinse in clear water.

Soot

If soot falls on the carpet lay a paper near it and fan the soot onto it, if the least particle remains cover with bran or meal and brush up, then rub with dry cloth.

Washing Windows

Use a tablespoonful of kerosene (instead of soap) to a gallon of water and see how the windows sparkle.

To Clean Clothing

To clean a skirt or pair of pants, pour one gallon of gasoline into a vessel and dip the garment up and down, examine and if needed rub the soiled places gently, hang up to the clothes line and let drip, do not wring, it will not injure or shrink the finest fabric or most dainty color,—do not attempt this work in the house as it is positively dangerous.

Flavoring Strawberry Preserves

When making strawberry preserves add a little pine-apple and it will give a delicious flavor. Squeeze the pine apple through a cloth.

—Mrs. J. H. Painter.

To Cut Bread or Cake

When about to cut new bread or cake, heat the knife very hot; this will prevent its crumbling.

Some Uses of Salt

For removing egg stains from silver, salt applied with a soft cloth will act like magic.

If salt is rubbed on fruit stains when they are fresh all trace of them will disappear in the washing.

A pinch of salt added to the whites of eggs will cause them to whip in half the time usually required.

A pinch of salt added to ground coffee just before the cooking accentuates the natural flavor of the berry and gives "body" to the drink.

Greens used for salads should be thoroughly rinsed in salt water to dislodge possible insects or their eggs too small to be seen by the naked eye when picking over the greens.

Sprinkle salt over a dingy carpet before sweeping and the transformation wrought will convince the most skeptical of the value of salt as a cleanser all along the line.

Everybody knows, or at least should know, that nothing is so effectual for putting out fire in a burning chimney as salt. To kill weeds apply boiling hot salt water in liberal quantities. To remove grass from brick walks sprinkle freely with salt and let stand several days.

Renovating Soap

Good for cleaning spots from clothing, grease from coat collars, etc. Ivory soap one-fourth pound, alcohol one ounce, beef gall two ounces, saltpeter one-fourth ounce, borax one-fourth ounce, sulphuric ether one-fourth ounce, spirits of turpentine one-fourth ounce, camphor gum three drams, pipe clay one dram, common salt one small teaspoonful. Mix the pipe clay into beefs gall, the camphor into the alcohol, pulverize, saltpeter and borax, after two or three hours, slice the soap into a porcelain kettle, with the gall mixture and place over a slow fire, stirring until melted, remove from fire, add all the other ingredients, stir until mixed, put into a glass fruit jar, as it soon hardens, keep lid screwed on tight as it loses strength by evaporation; keep in a dark closet as light injures it. To use, take out a tablespoonful, dissolve it in a quart of boiling water, use as hot as possible by dipping an old brush or cloth in the hot liquid and rubbing the soiled spots, dry quickly.

Antidotes for Poisons

First—Send for a physician.

Second—Induce vomiting; by tickling throat with feather or finger; drinking hot water or strong mustard and water. Swallow sweet oil or whites of eggs.

Acids are antidotes for Alkalies, and vice versa.

Special Poisons and Antidotes

Acids, Muriatic, Oxalic, Acetic, Sulphuric (Oil of Vitriol), Nitric (Aqua Fortis).—Soap suds, magnesia, lime water.

Prussic Acid—Ammonia in water. Dash water in face.

Carbolic Acid—Flour and water, mucilaginous drinks.

Alkalies, Potash, Lye, Hartshorn, Ammonia.—Vinegar or lemon juice in water.

Arsenic, Rat Poison, Paris Green.—Milk, raw eggs, sweet oil, lime water, flour and water.

Bug Poison, Lead, Saltpetre, Corrosive Sublimate, Sugar of Lead, Blue Vitriol.—Whites of eggs, or milk in large doses.

Chloroform, Chloral, Ether.—Dash cold water on head and chest. Artificial respiration.

Carbonate of Soda, Copperas, Cobalt.—Soap suds and mucilaginous drinks.

Iodine, Antimony, Tartar Emetic.—Starch and water astringent infusions. Strong tea.

Mercury and its Salts.—Whites of eggs, milk, mucilages.

Opium, Morphine, Laudanum, Paregoric, Soothing Powders or Syrups.—Strong coffee, hot bath. Keep awake and moving at any cost.

In Case of an Accident

Immediately send for a physician, while waiting for him proceed as follows:

Drowning—Loosen clothing. 2 Place patient face down with head and shoulders low. 3 With finger, clear mouth of foreign substances. 4 Press firmly on back and sides of chest to expel water. 5 Draw tongue well out of mouth and keep it so by tying string over it and under lower jaw. 6 Turn patient on back with tightly rolled coat under shoulders. 7 Kneel on patient's head, grasp arms below elbows and draw them above patient's head making the forearms touch ground. 8 Push the arms forward, cross them over the lower part of the chest and press firmly. 9 Repeat these movements eighteen times a minute. 10 Every two minutes turn patient on face and press firmly on back and sides of chest to expel water. 11 Others should replace wet clothes with dry ones and make hot applications. 12 Continue these measures at least two hours. 13 When patient begins to breathe give stimulant, hot drinks, and rub legs upward, vigorously.

Burns and Scalds—Cover with Cooking Soda and lay wet clothes over it. White of eggs and Olive Oil. Olive or Linseed Oil, plain, or mixed with Chalk and Whiting.

Lightning—Dash cold water over person struck

Sunstroke—Remove patient to shady place, apply ice to head and neck, sponge body with cold water.

Mad Dog or Snake Bite—Tie band above wound and burn with iron at white heat; or cut out wound, making it bleed freely and then apply nitric acid.

Venomous Insect Stings, etc.—Apply weak Ammonia, Oil, Salt water or Iodine.

Fainting—Place flat on back; allow fresh air, and sprinkle with water.

Tests of Death—Hold mirror to mouth; if living moisture will gather. Push pin into flesh; if dead, the hole will remain; if alive, it will close up.

Cinders in the Eye—Roll soft paper up like a lamp lighter and wet the tip to remove, or use a medicine dropper to draw it out. Rub the other eye.

Gargle a bad sore throat with a strong solution of lemon juice and water.

A hot lemonade, taken before going to bed, will cure a cold on the lungs.

To keep lemons fresh a long time, invert over them a glass dish that fits closely.

A cloth saturated in lemon juice and bound about a cut or wound will stop its bleeding.

A strong, unsweetened lemonade taken before breakfast, will prevent and cure a bilious attack.

Lemon juice is much nicer for salads than vinegar. This is especially true of fruit salads.

Lemon juice mixed very thick with sugar will relieve that tickling cough that is so annoying.

For hoarseness, beat up the white of an egg, flavor with lemon and

sugar and take some occasionally.

The juice of half a lemon in a cup of black coffee, without sugar, will cure sick headache.

Lemon juice added to fruit juices that do not jell readily, such as cherry, strawberries, etc., will cause them to jell.

To relieve rheumatism, add lemon juice to milk until it curds; then bind these curds upon the swollen parts.

Lemon Extract—Let stand the rind of four grated lemons in half a pint of alcohol for about three weeks. Drain off the fluid, bottle and cork, and you have a finer extract than you can buy at the stores.

Things to Remember.

To prevent salt from becoming damp or hardening in the shaker place a few grains of rice in shaker when filling.

—

In flavoring puddings, if the milk is rich, lemon flavoring is good; but if the milk is poor, vanilla makes it richer.

—

To keep the flies on the screen door from coming inside rub the door with kerosene; the flies do not like the odor. A cloth saturated with kerosene in a room drives flies to the floor.

—

Delicate blues and pinks can be laundered without fading, in the following way: One teaspoonful of turpentine put into half a gallon of water. Wet the goods in this and hang in the shade to dry.

—

An easy and convenient way to remove the silk from sweet corn is to use a small vegetable scrub-brush.

—

If any member of the family is very sick at the stomach, beat up the white of an egg and let him swallow it. It acts like a charm.

—

A very valuable remedy for cases of proud flesh, an obstinate out-growth of flesh from small sores, consists of alum. A lump of alum is placed upon a heated stove just hot enough to enable it to turn to dry powder. The powder placed on the affected part repeatedly and covered

with a bandage can be relied upon to effect a speedy and inexpensive cure. It has never failed to cure when even the services of a physician were vainly resorted to. —A. A. H.

Rice has a finer flavor if washed in hot water instead of cold, before cooking.

The smaller a roast of meat, the hotter should be the oven at first, that the least possible amount of its delicate juices may escape.

Bread should never be covered with a cloth when taken from the oven, but laid on the side and allowed to become perfectly cold; then keep in a closely covered tin box, without any wrappings.

A spoonful of vinegar put into the water in which meats or fowls are boiled makes them tender.

When corks swell and are too large for a bottle throw them for a few minutes into a basin of boiling water. They will then soften.

The best way to freshen home made bread so that it is as good as new is to dip the loaf in cold water, put it in a pan and bake it until it is heated through. Then wrap in a damp cloth, and when cold it is as good as when first baked.

A good bath for tired, swollen feet is to bathe the feet in a bath with alum, one ounce; rock salt, two ounces; borax, two ounces; using one teaspoonful to each quart of water. Bathe the feet in this water every night for a week.

If grease is splashed on a stove, a little salt sprinkled on it prevents any unpleasant smell.

A little vinegar kept boiling on the stove while onions or cabbage are being cooked will prevent the disagreeable odor going through the house, or a small pinch of carbonate of soda in the water preserves the color of vegetables and lessens the unpleasant odor of cabbage and onions when cooking.

How to Cook a Husband

A good many husbands are utterly spoiled in the cooking. Some women set them constantly in hot water; others let them freeze by carelessness and indifference. Some keep them in a pickle all their lives. It is not reasonable to suppose that any husband can be tender and appetizing treated in this way, but they are really delicious when properly prepared. In selecting your husband you should not be guided by the silvery appearance, as in buying mackerel, nor by the golden tint, as in picking salmon. Be sure to select him yourself, as tastes differ. Do not go to market for him. The best are always brought to your door. But it is far better to have none unless you will patiently learn how to cook him.

A preserving kettle of the finest porcelain is best; but if you have nothing but an earthen pipkin, it will do, with care. See that the linen in which you wrap him is nicely washed and mended, with the required number of buttons and strings securely sewed on. Tie him in the kettle by a strong comfort cord. The duty cord is breakable and apt to let him fly out of the kettle and become burnt and crusty on the edge. Of course you know that, like a crab or lobster, you have to cook him alive. Set him near a clear, steady fire of love, neatness and cheerfulness. If he sputters and fizzes, do not be anxious. Some do this until they are quite done. Add a little sugar in the form of what confectioners call kisses, but no vinegar or pepper on any account. A little spice will improve him, but it must be used with judgment. Do not stick any sharp instruments into him to see if he is becoming tender. Stir gently, watching the while lest he lie too flat and too close to the kettle, and so become flabby.

If thus treated you will find him digestible, agreeing nicely with you and the children. He will keep as long as you like, unless you become careless and set him in too cold a place.
