F-27 NC-27 YELLOW CORN

(Hybrid (illustrated on opposite page))

F-27 NC-27 (Yellow) The picture at right taken in one of our crossing fields shows the fine appearance, high yield and uniformity of Wyatt's NC-27. This is the corn you get when you buy NC-27 in the Wyatt bag. No trouble getting into the 100 bushel per acre class with seed corn from those ears planted on good land, properly spaced and fertilized! In the 5 official tests in the Coastal Plain last year NC-27 averaged 108.7 bushels per acre, and in spite of a 35.8 yield in Guilford County, because of severe drought, it averaged 72.9 in the Piedmont, making 110 bushels per acre in Cleveland County. Besides a good yield record this hybrid has good grain quality and good stalk strength. Prices: 8 lb. bag \$2.10, postpaid.* Not prepaid, 8 lbs. \$1.85; 14 lbs. (peck) \$3.00; 28 lbs. (½ bu.) \$5.50; 56 lbs. (bu.) \$10.50.

F-2 NC-26 (Yellow) A good 2 ear hybrid capable of yields well above 100 bushels per acre, properly managed on good land. In 5 separate tests last year in the Coastal Plain NC-26 averaged 108.8 bushels per acre. Good shuck coverage and average stalk strength. Prices: 8 lbs. \$2.10, postpaid.* Not prepaid, 8 lbs. \$1.85; 14 lbs. (peck) \$3.00; 28 lbs. (½ bushel) \$5.50; 56 lbs. (bushel) \$10.50.

F-4 NC-1032 (Yellow) Recommended for the Piedmont and Coastal Plain where since 1943 it has consistently performed well among the very best hybrids. Official Coastal Plain 1947 average yield in 5 separate trials was 104.1 bushels per acre, one of only 7 hybrids averaging over the hundred bushel mark for the entire area. A dependable 2 ear yellow hybrid of good grain quality and storm resistance. Prices: 8 lbs. \$2.10, postpaid.* Not prepaid, 8 lbs. \$1.85; 14 lbs. (peck) \$3.00; 28 lbs. (½ bu.) \$5.50; 56 lbs. (bushel) \$10.50.

F-1 Dixie 44 (Yellow) A high yielding large eared yellow hybrid, not generally available last year and available in only limited quantities this year. Plants are short, stocky, and well rooted, generally carrying one large ear (120 ears per 100 stalks). Attractive yellow kernels on white cob. Official average yields in the Piedmont tests for two years, 1946 and 1947, were Dixie 44, 84.3 bushels per acre as compared with US-282 83.4; NC-27 83.8; and NC-26 81. It was included in only 2 of the 5 Coastal Plain test plots '46 and '47 and yielded 102 bushels per acre average compared with 105.9 for NC-27; 108.6 for NC-26; and 103.8 for NC-1032. Prices: 8 lb. bag \$2.10, postpaid.* Not prepaid, 8 lbs. \$1.85; 14 lbs. (peck) \$3.00; 28 lbs. (½ bushel) \$5.50; 56 lbs. (bushel) \$10.50.

F-25 NCT-20 (White) A good top-cross hybrid performing well on many farms from the Mountains to the lower Coastal Plain as indicated by 1947 official records of 91.9 bushels per acre in Ashe County and 126.2 in Camden. Prices: 8 lb. bag \$2.10, postpaid.* Not prepaid, 8 lbs. \$1.85; 14 lbs. (peck) \$3.00; 28 lbs. (½ bu.) \$5.50; 56 lbs. (bu.) \$10.50.

F-3 Tennessee 10 (White) A consistently good white hybrid for the Coastal Plain, Piedmont and Mountain sections, where it held top place for yield until the introduction of Dixie 17. Last year in Camden County, Tennessee 10 officially turned out 142.1 bushels per acre and averaged 111.8 bushels per acre in all 5 trials. Prices: 8 lb. bag \$2.10, postpaid.* Not prepaid, 8 lbs. \$1.85; 14 lbs. (peck) \$3.00; 28 lbs. (½ bushel) \$5.50; 56 lbs. (bushel) \$10.50.

F-26 Dixie 17 (T5109) The story of the popularity of this new hybrid is told plainly in the picture at right taken on a Piedmont farm this summer. Dixie 17 is a medium hard, white prolific hybrid with a red cob. Slightly more resistant to lodging and better shuck protection than Tennessee 10. Has out-yielded all other white corns in North Carolina official tests since its introduction 2 years ago, in both the Piedmont and Coastal Plain. Highest individual yield, 158.1 bushels per acre in Camden, and highest average, 124.4 Coastal Plain, of any corn in 1947 tests. Prices: 8 lb. bag \$2.10, postpaid.* Not prepaid, 8 lb. bag \$1.85; 14 lbs. (peck) \$3.00; 28 lbs. (½ bu.) \$5.50; 56 lbs. (bu.) \$10.50.

F-27 NC-27 Corn Hybrid

N. C. Agricultural Extension Service Recommendations for Increasing Corn Yields

1. Have the soil tested and apply lime as recommended.
2. Prepare a good seedbed and plant level with the ground except where drainage is poor.
3. Use 300-500 lbs. of 6-8-6 or 4-8-8 at planting. Use the higher rates following crops receiving low amount of fertilizer and the 4-8-8 on potash deficient soils or following legumes for hay.
4. Avoid late, deep cultivation but control weeds early. Use a weeder where available until corn is six inches high. Cultivate shallow until the corn is 2½ feet high, and then stop cultivation. Do not use turning plow or bull tongue. Do not injure corn roots.
5. Place rows about 3½ feet apart.
6. Space plants about 16-20 inches apart within the row, using wider spacing for less fertile soils.
7. Sidedress with adequate nitrogen (potash where needed) when corn is 6-8 weeks old or about 2½ feet high. Yield increases of 25-45 bushels per acre may be expected by use of 500 lbs. of Nitrate of Soda, or 400 lbs. of Calnitro or ANL, or from 250 lbs. per acre of Ammonium Nitrate. One-fourth of this rate of application should give yield increases of 10-12 bushels per acre above similar corn receiving no sidedressing.

BEETS *Grow the Year 'Round*

Beets are easy to grow:

One ounce will sow 100 feet of drill; five to six pounds to an acre. The best soil for beets is light and enriched the year before with well rotted manure. Never use fresh manure. The soil should be thoroughly worked and the seeds drilled $\frac{1}{2}$ in. deep in rows a foot or more apart. When the seedlings have four leaves thin the plants to 2 inches apart in the row. For winter and early spring crops sow from July to October 1. For spring and summer crops sow successively as early as soil can be worked.

123 Crosby's Egyptian

One of the earliest to be ready for market. The skin is smooth and dark red; foliage sparse and erect. The roots are almost round, with a small taproot and a very small crown of leaves. The flesh of the beets is deep blood-red, with slightly lighter zonings. Texture crisp and free from fiber. 52 days. Prices: Pkt. 10c; oz. 15c; $\frac{1}{4}$ lb. 45c; lb. \$1.50; 2 lbs. \$2.50; 5 lbs. \$5.00, postpaid.

128 Detroit Dark Red

CULTURE: To obtain early Cucumbers plant the seed about the middle of April in frames, without much bottom heat, or small pots may be plunged into the soil in the frames, and a few seeds placed in each. In three or four weeks these may be transplanted into open ground. Hills 3 or 4 feet apart each way. When the plants are well started, thin out, leaving four of the strongest in each hill. Loose Leaf and Head LETTUCE

Plant Spring and Fall

One ounce will produce 1,500 plants; 1 lb. produces enough plants to set an acre.

CULTURE: Lettuce is a cold weather crop. By making successive plantings during January to March and again August to October, it can be kept in production almost the year round. For quicker germination and development make earliest sowings under glass. Lettuce requires thorough cultivation, ample moisture and rich soil. Set in 1½ feet rows, 8 to 12 inches apart, or in good soil drill thinly in rows, thinning for use or transplanting as the plants become crowded in the row. One ounce will produce about 1,500 plants; 1 lb. transplanted or 2 lbs. drilled will plant an acre.

386 Dark Green Cos

Repeated attempts by breeders to transfer this quality to melons of the shipping type have failed as have efforts to introduce into Rockyford those characteristics that would qualify it as a shipping melon. It therefore remains the peer of local market and home garden melons. Fruits are small with rather large seed cavity, nearly round, 2½ lbs.; with very faint ribs, and heavily covered with hard grey netting. Flesh thick, green and of excellent texture. 92 days. CULTURE: The Melon delights in warm rich soil with good drainage. Good Melons, however, can be grown on almost any land if the trouble is taken to dig holes 2 feet square, filling them with a rich compost of woodsmold and cow-pen manure. Plant three-fourths to one inch deep April or May in rows 6 feet apart, leaving not less than 4 feet between the hills, putting about 10 seeds to the hill. As insects are often very destructive, it is best not to thin at all until the plants are well started. When they are large enough to be safe, thin to two in a hill, and keep the ground mellow and free from weeds. Those who make a specialty of Muskmelons will find it advantageous to start the seed under protection of glass, so as to have the plants ready by the time seeds could be usually planted in the open ground.

VEGETABLE PLANTING CALENDAR

Many otherwise successful gardeners lose months of valuable production because of a failure to realize the cold hardness of a number of the most popular and productive vegetables.

By successive plantings beet, broccoli, cabbage, carrot, chard, kale, mustard, onion, parsley, radish, spinach and turnip (salad or root) can be kept in production, out-of-doors and without protection winter or summer, every day in the year in this isothermal zone.

The planting information shown in the chart on this page is the result of careful preparation and years of actual gardening experience. Planting dates shown for tender varieties are

based on the average U. S. Weather Bureau records of the last killing frost in the spring and the first killing frost in the fall in this zone, for the past 50 years.

Throughout our catalog we have endeavored to give the approximate number of days to maturity for all varieties. This information should be helpful, especially in determining the latest safe dates to plant tender varieties in the summer or fall, in order to make a crop before frost.

Soil conditions permitting, we recommend planting on or immediately after the average date of the last frost in the spring, otherwise spring rains may delay planting days or weeks.

"TESTED SEEDS"

The term "tested seeds" as used in this catalogue, and in all of our advertising means that every bag or package of seeds purchased at Wyatt's is supplied from a lot that has been carefully tested by the North Carolina Seed Testing Laboratory and the seeds are known to grow. Every lot of seeds reaching our warehouse is sampled and tested before the seeds are moved into our store for packaging or for sale in bulk. This accounts for the fact that "Wyatt's Tested Seeds" are more and more in demand in North Carolina and in the South.

Plant Wyatt's Tested Seeds and be sure of success.

ALL BULBS POSTPAID

CULTURE

"Glads" are the most popular and easily grown of all summer-flowering corms (not true bulbs).

Soil requirements are not very exacting. Plant large corms 6" or more apart 4" to 6" deep, smaller ones accordingly, being governed by whether the soil is light or heavy. Plantings made at intervals of two to three weeks beginning in early April and continued until early July should flower from the latter part of June until frost. Good fertilizers include cow and sheep manures. Apply two to three times as a side dressing during the growing season before flowering. Fertilizers should not come in contact with corms or foliage. Watering during dry seasons will give amazing results.

Our stock is Michigan grown, disease and thrip free.

MORNING GLORIES

IPOMEAS. In growing Ipomeas (Morning Glories and Moonflowers), never plant until the soil is thoroughly warm. To aid germination of particularly hard-seeded varieties, filing a small notch at the top of the seed will help considerably. Always select the driest, sandiest part of the garden and sow where the plants are to flower as the Ipomeas resent transplanting. Plants should be kept on the dry side in order to induce early and abundant flowering with a rather sparse growth of foliage. Heavy watering will stimulate foliage growth at the expense of flowers. A poor soil is preferable to a rich one and fertilizer should not be used as this will promote heavy foliage which will hide the flowers.

1805 Pearly Gates It is exceptionally free flowering with large fleecy pure white flowers making a heavy cascade of flowers on fence or trellis. One of the earliest bloomers. Pearly Gates received Special Mention in the 1942 ALL-AMERICA Selections. Pkt. 10c; ¼ oz. 40.

1808 Scarlett O'Hara This introduction brings us an entirely new color in the popular garden flower, rich dark wine red or deep rosy crimson. While the flowers are not quite so large as the Heavenly Blue Morning Glories they are of good size, 3 to 4 inches in diameter freely produced on fast growing vines that bloom 65 to 70 days after seeds are sown. The dark green foliage does not make a heavy growth, leaving the plants graceful in appearance. Easiest culture. Pkt. 10c; ¼ oz. 40c.

1809 HEAVENLY BLUE. A graceful vine of extremely quick growth producing a great number of exquisitely formed deep clear blue petunia-like flowers. Ideal for covering stumps or other unsightly objects. Pkt. 10c; ¼ oz. 35c; oz. \$1.00.

WYATT'S SUPERB PETUNIAS

Sow the small seeds in a warm, sunny, open place outdoors, thinning to 15 inches apart, or in frames for transplanting. Scatter seeds thinly, barely cover and firm soil over them; water seedlings with a fine spray to prevent drying out. The weakest looking seedlings usually produce the finest flowers, so save the weak plants for transplanting. Seed of the double and fringed sorts should be pressed into a shallow pot of sifted soil and covered with only a sprinkling of sand. The pot should be watered from below by placing it in water. Never allow to become too dry nor too moist.

SCABIOSA

While the annual Scabiosas will bloom during the summer, they do so much better in the early spring than during the hot summer days, that every effort should be made to start the seed in the early fall in warm sections, or in cold frames in early spring in the more northerly sections. In warm sections, such as Southern California, plants will winter over perfectly well and produce extremely early flowers the second year. Scabiosas enjoy full sun and will thrive in any good garden soil.

2046 Blue Moon A strikingly beautiful Scabiosa, as different from the existent Scabiosa varieties as Double Nasturtiums are different from the old single type. BLUE MOON produces large, fluffy, double flowers composed entirely of broad, heavy, wavy petals. Because of this complete doubleness the flowers are extremely large. BRIEF CULTURE NOTES

ZINNIAS: Zinnias are warm weather loving plants and should never be sown until the soil has thoroughly warmed up and all danger of any frost has passed. For best results, especially with the smaller flowered, early blooming varieties, we recommend sowing the seed where the plants are to flower. The taller growing, large flowered sorts can safely be transplanted, although they also will make a more robust growth and will produce more flowers if they can be sown where the plants are to bloom, and then when the seedlings are 3" or 4" tall, thinned to the proper distance. To induce a thrifty, heavy root system, irrigate your plants rather than sprinkling. Dig a little trench alongside the row and let the water run slowly for several hours so it will seep down deep into the ground and make the food in the soil available for the plant throughout the mass of feeding roots. Always cultivate after each irrigation to conserve moisture. By this method you will have to water Zinnias only once every two weeks or so, whereas if the ground is merely sprinkled, you will have to repeat the sprinkling every other day or so. Irrigation not only gives a stronger, healthier plant, but also saves on your water bill.

WYATT'S GARDEN LILIES

Plant 6 to 10 inches deep in a well drained soil, free from manure

CULTURE: Lilies generally dislike lime, must have ample moisture but must be well drained. Regardless of the depth at which the variety is planted the soil should be deep, rich, loamy and rather gritty than stiff clay. Avoid full sun and too dense shade. The ideal situation for Lilies being in the perennial or shrub border where the lower parts of the plants are shaded while the top of the plants and flowers have access to ample air and light. Avoid ordinary manure which may cause the bulbs to rot. Use Sheep Manure mixed well into the bed.

ES-MIN-EL

(Essential Mineral Element)

ES-MIN-EL is a carefully balanced and easily soluble mixture of mineral elements needed by fruits, vegetables, and field crops for healthy and profuse growth. Many plant diseases traceable to a deficiency of minerals are overcome through use of ES-MIN-EL. These plant diseases were formerly called "physiological diseases," but we now know they were simply evidences of a lack of minerals. Minerals enable a plant to make the fullest use of all other available plant foods and of water and sunshine. Thoroughly nourished plants mature early; improperly nourished crops have a slow development and so become the prey of

insects, disease, drought, and early freezes. Plants in poor health because of mineral deficiency cannot take advantage of even the most abundant supply of fertilizer materials or the most favorable climatic conditions. The increase in crop alone usually justifies the small expense of using ES-MIN-EL.

All fruits, vegetables, and nuts which have received a full supply of the essential mineral elements in ES-MIN-EL have been noted for their fine color, flavor, and texture. To the commercial grower this means improved shipping qualities and ready sale.

ES-MIN-EL should usually be used with a good commercial fertilizer. It may be mixed with the fertilizer or applied as a top dressing. For best results ES-MIN-EL should be applied a second time in mid-season on long growing crops. Don't put ES-MIN-EL too close to seeds or plants.

Fifty pounds of ES-MIN-EL spread broadcast will mineralize one acre; one cupful will mineralize a garden plot 10 feet square. This dosage is recommended for fairly normal soils; it is a maintenance ration of minerals. For poorer soils, larger quantities may be used for advantage. Prices: 5 lb. bags \$1.00; 100 lb. bags \$8.00; f.o.b. Raleigh.

New Life
FOR YOUR SOIL

PREMIER
Certified
PEAT MOSS

To have a healthy garden you must first have *healthy soil*. Don't waste time, seed and fertilizer on poor soil. Premier Peat Moss, 97% organic, gives your soil loam-like texture, making it more productive. It absorbs 20 times its own weight in moisture . . . loosens and aerates heavy soil . . . adds body to light soil . . . prevents leaching. Water and fertilizer penetrate deeply, feeding the roots as needed.

Remember, your garden can be no better than your soil. Get Premier Peat Moss, with the certified seal.

For new lawns 1 bale should be thoroughly pulverized and mixed in each 100 to 200 sq. ft. of lawn area. Nothing is so beneficial to establish lawns as a bale of peat mixed with 100 pounds of Sheep Manure applied to each 2,000 sq. ft. 3 or 4 times each summer. Peat should also be used liberally in gardens, flower beds and borders, and as a mulch for shrubbery, because of its capacity to hold moisture. Prices: Large Bale 18" x 20" x 39" \$4.75; Handy Bale 18" x 14" x 30" \$3.60.

FIELD SEEDS

F97 Alfalfa (Kansas or Oklahoma Approved)

While Alfalfa is a relatively expensive crop, the first cutting usually returns about double the cost of seeds, lime, fertilizer and planting. A good method is to lime the land and plant an annual legume crop that can be thoroughly disked, not turned, in preparing the alfalfa seed bed. Use 20 to 35 pounds (not more) borax per acre and drill August 20 to October 1, or February 15 to March 25, 25 to 40 pounds of thoroughly inoculated seeds per acre. Roll or culti-pack after seeding. At seeding time use 600 to 1,200 pounds 2-12-12 and 8-10 tons barnyard manure if available and not weed infested. Apply 400 pounds 0-12-12 annually thereafter. Cut before $\frac{1}{4}$ flowers open. Always leave the alfalfa stand 6 inches tall or more for winter since any closer cutting invariably results in severe damage. If your stand of alfalfa becomes thin or weak sow 3 to 5 lbs. Orchard grass per acre to help control weeds and increase production. We offer 99 $\frac{1}{2}$ per cent pure or better seeds, of adapted origin, germinating 90 per cent or more, free of noxious weeds, as follows: KANSAS ALFALFA, lb. 60c; 5 lbs. \$2.45, postpaid. Not prepaid, 10 lbs. \$4.20; 25 lbs. \$10.25; 100 lbs. or more at 40c lb. OKLAHOMA APPROVED ALFALFA, lb. 55c; 5 lbs. \$2.20, postpaid. Not prepaid, 10 lbs. \$3.70; 25 lbs. \$9.00; 100 lbs. or more at 35c lb.

BORAX. Prices: 25 lb. bag \$2.00; 100 lb. bag. \$6.00.

F86 Alsike Clover We offer only premium quality northern grown seeds of hardy strains. Used mostly in mixtures but when properly handled produces heavy tonnage of highly nutritious hay or grazing. Sow 2 to 5 pounds per acre in mixtures or 12 to 15 pounds alone, early spring or fall. Prices: Lb. 80c; 5 lbs. \$3.50, postpaid. Not prepaid, 10 lbs. \$6.40; 25 lbs. \$15.75; 100 lbs. or more at 62c lb.

F85 Manganese Burr Clover (in the burr) Grows on wide variety of soils and better adapted to coastal plains than other types of Burr clover. Responds to same treatment as other clovers. Plant August to October, 30 to 40 pounds per acre. Not available this season.

F82 Red Clover One of the most productive of the clovers. Well adapted to our piedmont soils. Especially valuable in pasture mixtures. Sow early spring or fall 20 pounds per acre. Lime and fertilize as for other clovers. Prices: Lb. 85c; 5 lbs. \$3.85, postpaid. Not prepaid, 10 lbs. \$7.20; 25 lbs. \$17.75; 100 lbs. or more at 70c lb.

F83 Crimson Clover Should be sown from August to October. When sown by itself, 25 to 30 pounds are required to the acre; sown with grain or vetches, 15 pounds would be sufficient. Write for prices.

F95 Sericea Lespedeza Scarified and recleaned. This is the perennial lespedeza being grown so largely over the south. Its greatest asset is that it grows on the poorest soils without fertilizer or lime and while it steadily improves the land, it produces an abundance of nutritious hay if cut when tender. Prices: Lb. 45c; 5 lbs. \$1.85, postpaid. Not prepaid, 10 lbs. \$3.20; 50 lbs. \$15.50; 100 lbs. or more at 30c lb.

F89 Ladino Clover and Orchard Grass

F97 Alfalfa

F87 White Blossom Sweet Clover Adapted to a wide variety of soils; is used for pasture, for forage, for ensilage, for bees, for soil improvement. The deep roots break up, aerate and drain stiff subsoils and add humus. Spring sowings will yield a crop the following fall and two crops the following year. The first season it grows 1 $\frac{1}{2}$ to 2 $\frac{1}{2}$ feet high, but if cut when 6 inches high it stools out and makes a more tender growth for grazing. Sow 15 pounds per acre July to October. Prices: Lb. 40c; 5 lbs. \$1.50, postpaid. Not prepaid, 10 lbs. \$2.40; 25 lbs. \$5.75; 100 lbs. or more at 22c lb.

F80 White Dutch Clover Because of its spreading habit and persistent year 'round growth White Dutch is invaluable for lawn and pasture use. It grows in all soils and will grow both in the shade and open areas and responding to lime and fertilizers recommended for other clovers. Like other clovers White Dutch enriches the soil while furnishing nutritious grazing. Sow 6 to 8 pounds per acre alone or 2 to 3 pounds with other clovers or grasses. Prices: Lb. 90c; 5 lbs. \$3.95, postpaid. Not prepaid, 5 lbs. \$3.75; 25 lbs. \$18.25; 100 lbs. or more at 72c lb.

F89 Ladino Clover A perennial clover of exceptional merit for pastures, especially on moist, fertile land. Recovers rapidly from grazing or clipping and is leafy and succulent. A complete recovery after grazing often takes place in two weeks. Its growing season is as long as that of any other legume. Like all clovers, Ladino succeeds best on well limed, fertile and somewhat moist land. Sow 5 to 6 pounds per acre alone or 1 to 3 pounds in mixtures. Prices: Lb. \$2.85; 5 lbs. \$14.00, postpaid. Not prepaid, 5 lbs. \$13.80; 25 lbs. \$68.75; 100 lbs. or more at \$2.70 lb.

F93 Kobe Lespedeza A variety particularly adapted to lowlands and tighter soils. The leaves and stems are slightly coarser making a heavier hay crop. This variety is recommended by the N. C. Experiment Stations for all but the mountainous regions of North Carolina, South Carolina and Virginia. Sow 30 to 40 lbs. per acre. Responds to liming and fertilizing. Prices: 100 lb. bag \$26.00. Write for quantity prices.

F92 Korean Lespedeza Korean Lespedeza will grow on any soil, wet or dry, rich or poor, sour or sweet. Unexcelled for hay crop since it will produce from 2 to 4 tons of good hay per acre on a good thick even stand. It is almost equal to alfalfa in feeding value, and compares favorably in fineness, palatability and protein content. A good stand will make one ton of hay per acre for each 4 to 5 inches above cutter bar. Korean Lespedeza is earlier than other lespedezas, this insures harvest before fall rains and early frost and gives time for seed bed preparation for small grain that fall. Sow 30 pounds of seed per acre February to April. Prices: 100 lb. bag \$18.00. Write for quantity prices.

SOY BEANS

CULTURE: Soy beans may be planted either broadcast or in drills. They grow equally well on light and heavy soils, but on heavy soils they should not be planted more than 1 to 1½ inches deep except in dry season. On light sandy soils plant deeper, but not more than 3 inches. Plant in April, May or June. Such large seeded varieties as Mammoth Yellow require 1 bushel or more per acre, whereas Laredo small seeded kind only require 1 peck to the acre.

F146 Ogden This variety is worthy of consideration and comparison for several reasons. During recent years in the trials carried on by the North Carolina State College Experiment Stations it has ranked at or near the top in yield of beans, oil content of the beans, yield of hay and resistance to shattering. In addition Ogden is considerably earlier than most beans and is consequently better adapted to rotations with small grains. Seedings as late as June in the Wake County trials made a substantial production of hay. Average bean yield for 6 tests at scattered points in the state during 1943 was 27.8 bushels per acre. Plants are nicely branched and for that reason are more desirable for hay than the coarser growing types. Write for prices.

F150 Volstate A yellow seeded variety producing high yields of good oil beans. Plants are somewhat taller than Ogden and slightly less branched. For a hay crop or a crop that might be optional we would recommend Ogdens, but for a crop planted on light land and for combining we would recommend the Volstate owing to the height of the plant and the fact that the beans are somewhat bunched on the plant. Tennessee Certified Seeds (packed 2 bushels). Write for prices.

F151 Virginia It is about twenty days earlier than Mammoth Yellow. The vines make a fine growth, are filled with pods, stand about three feet high, are easy to cut and easy to cure. Prices: 2 bu. bags \$6.00 per bu.

F140 Wood's Yellow A strong upright growing plant producing a heavy crop of beans. This variety is suitable for sowing thick for hay, or planting alone or with corn for grazing. One of the best varieties for bean production and the beans are readily accepted at the crushing mills. Late maturing. Packed 2 bushels. Write for prices.

F147 Tokio A heavy producer of extra-large pods and beans. Packed 2 bushels. Write for Prices.

F142 Ototan Its late maturity is more than overcome by the abundant growth—five feet and more in long seasons—its fine stems and abundant foliage, and the fine texture of its hay. 1 peck to acre. Write for prices.

F152 Laredo A bean of outstanding worth, particularly for making hay. In a six-year test it averaged 1½ tons to the acre. It is medium in maturity, is a good yielder of beans. 1 peck per acre. Write for prices.

F141 Roanoke A new bean developed in the N. C. Experiment Station, U.S.D.A. Co-operating. Bean yield is higher than other popular varieties and the oil content of the beans is higher. Write for prices.

SORGHUM - MILLET - MILO - TEOSINTE

COMBINE MILO FOR GRAIN

F296 Combine Milo

F296 Combine Milo—Showing uniformity and height of plant

HEGARI

F197 Hegari Recognized as the most valuable and widely adapted member of the sorghum family, and well suited to conditions in the Southern states. Hegari has great forage value for two reasons. First, because its high sugar content makes stalks and leaves highly palatable to livestock, and second, it yields heavily with its many broad leaves and substantial stalks. As an ensilage crop many acres are planted to Hegari every year in the South. As a pasture crop, in thickly seeded plantings it pastures well and also makes good hay. Its largest use is in bundle feeding and it can be left shocked in the field until fed, or as is coming into more general practice, it is ground head, stalks and leaves through a hammer mill. Hegari makes a good substitute crop for corn, which it out yields on light soils, and it can be planted much later. Prices: Lb. 30c; 5 lbs. 85c, postpaid. Not prepaid, 10 lbs. \$1.15; 25 lbs. \$2.50; 100 lbs. or more at 9c lb.

WYATT'S RECLEANED MILLETS

F185 Golden Millet German or Golden Millet makes a quickly grown, easily cured and large yielding, nutritious hay crop. Seed thickly, not less than 50 lbs. to the acre, from the middle of April until the end of July. It's a quick crop, maturing in six to eight weeks. Cut while in bloom, before the seed hardens in the head. Prices: Lb. 30c; 5 lbs. 80c, postpaid. Not prepaid, 10 lbs. \$1.25; 25 lbs. \$2.75; 100 lbs. or more at 10c lb.

F186 Pearl, or Cat-Tail Millet

One of the best and most nutritious of the continuous cutting green forage plants. Grows 8 to 10 feet high, but cutting can commence when it has attained the height of 3 to 4 feet, when it will stool out enormously and make rapid growth; can be cut in this way three to four times during the season. It does well even on poor land, and surprisingly well in dry seasons. Plant April to August, 6 to 8 lbs. to the acre in rows 3 feet apart. Prices: Lb. 35c; 2 lbs. 70c; 5 lbs. \$1.50, postpaid. Not prepaid, 10 lbs. \$2.20; 25 lbs. \$5.25; 100 lbs. or more at 20c lb.

F187 Japanese Mil-

(Billion Dollar Grass.) Also known as Barnyard Millet. Distinct from other millets; grows 4 to 6 feet high, yielding an enormous crop. Sow in May, June or July. 20 lbs. to the acre broadcast; or sow in 15-inch drills and cultivate until it is 18 inches high. When green, feed a moderate quantity at first, gradually increasing the quantity as the animals become accustomed to it. Write for prices.

SYRUP AND FORAGE SORGHUMS

CULTURE: Plant when the ground becomes thoroughly warm, about two weeks after corn planting, on a rich, well drained clay loam, in rows 3½ to 4 feet apart, and cultivate as you would corn. After the flowering stage is passed, but not earlier, it may be pastured or cut for fodder. Sorghum may be grown with cowpeas and soy beans either in rows or broadcast. Sown alone, 50 lbs. per acre. In rows 6 to 8 lbs. per acre.

F195 Atlas Sorgo A more recent and much improved sorghum for syrup or ensilage. This is a distinct improvement over the older varieties both in yield and quality. As a fodder or ensilage crop Atlas is rapidly replacing Orange and Amber. Not offered this season.

F192 Early Amber If planted early it will yield two cuttings a season. Grown with cowpeas or soy beans the quality of the hay is improved. The proportions recommended are 15 lbs. Early Amber Cane, ½ bushel of soy beans and 1 bushel cowpeas to the acre broadcast. Grows 10 to 12 feet high. Sow broadcast 50 lbs. per acre; 5 to 6 lbs. plants an acre in 3½-to 4-foot rows. Not offered this season.

F193 Early Orange Taller and heavier stalks than the Amber, although not as early. Prices: Lb. 30c; 5 lbs. \$1.00, postpaid. Not prepaid, 10 lbs. \$1.50; 25 lbs. \$3.50; 100 lbs. or more at 13½c lb.

TEOSINTE

F289 Teosinte Cut when 4 or 5 feet high, it makes an excellent fodder, starts immediately into growth again, and will give several more cuttings. If sufficient quantity is planted a continuous supply of, nutritious green feed can be had daily right up to frost. Plant in May or June in drills 3½ to 4 feet apart; 3 to 4 lbs. plants an acre. Prices: Lb. 85c; 2 lbs. \$1.50; 5 lbs. \$3.25, postpaid.

POTATOES - PEANUTS - RAPE

SEED POTATOES

Potatoes are forwarded by express or freight, as directed, purchaser paying charges. One peck will plant about 100 feet of row, or 100 hills; 10 to 12 bushels required for an acre.

IRISH COBBLER, Maine Certified or Select

The flesh is pure white with a clean, smooth, white skin with strong, well developed eyes slightly indented. In quality they are excellent, always cooking dry and mealy. Write for prices.

RED WARBA, Maine Grown

This good red variety replaces the popular Red Bliss with us. Admirers of the Bliss qualities will not be disappointed with Red Warba which is distinctly superior in quality and yield. They stool out splendidly, have large, full heads, fine, plump grains and strong straw that stands about three feet high. Prices: 3 bu. bags \$1.95 per bu. Write for quantity prices.

F174 Columbia Oats Favorite for growing on the light sandy soils of the coast sections of the South Atlantic States. It makes a good growth of straw, is an abundant yielder of bright, clean heavy grain, is free from rust, and what is of equal importance, when plantings are late it is of early maturity. Early plantings can be cut in time to put the same land in summer crops. Write for prices.

F287 Rape, Dwarf Essex

PEANUTS

CULTURE: Soils: Well drained sandy loam, properly limed, is best. Varieties: Virginia Bunch and Jumbo Runners in the old belt of North Carolina and Virginia. Spanish, North Carolina Runner or Virginia Bunch in the Southern Coastal plains and counties bordering the Piedmont using Spanish, Tennessee Red, or North Carolina Runner if in doubt as to the ability of the soil to make the larger varieties. In the Piedmont the Spanish variety is recommended. Smaller varieties produce more oil per ton of nuts, however, on adapted soils the larger nuts produce more oil per acre. Use 35 lbs. small varieties; 45 lbs. large varieties (shelled) per acre. Buy 1-3 more nuts by weight in the shell for the desired amount of shelled nuts. Field tests show 27 per cent increase in yield when seeds are treated with Arasan. Average of 22 tests conducted in North Carolina showed \$16.43 per acre increase return where peanuts were dusted 4 times with sulphur-copper dust, after deducting the cost of dusting.

F221 Valencia Yields 600 to 700 pounds in shells. Adapted to a variety of soils and makes few "pops." Straight smooth pods contain 3 or 4 large kernels of finest quality. An early bunch variety. Not available.

F222 North Carolina Runner

Yield 800 to 1,200 lbs. in shells per acre, very high in oil content and a good variety for hogging. Pods slightly larger than Spanish, red skinned and good quality. Prices: Lb. 45c; 2 lbs. 80c; 5 lbs. \$1.75, postpaid. Not prepaid, 10 lbs. \$2.80; 25 lbs. \$6.75; 100 lbs. or more at 26c lb.

F223 Tennessee Red

F224 Improved Spanish

Yields 1,000 to 1,200 lbs. per acre in shells. This is the earliest of all peanuts, a bunch type, producing pods tightly filled with 2 kernels each. Highest in oil content and most dependable for varied soils. Strong roots attach nuts to plants and prevent loss in harvesting. Plant 6 inches apart in 18 inch rows for highest yields. Prices: Lb. 45c; 2 lbs. 80c; 5 lbs. \$1.75, postpaid. Not prepaid, 10 lbs. \$2.80; 25 lbs. \$6.75; 100 lbs. or more at 26c lb.

TOBACCO SEEDS

F254 Tobacco, Oxford 26, Granville Wilt Resistant

Our Oxford 26 tobacco seeds are produced on soils known to contain the wilt spores and the crop is interplanted every tenth row with a standard variety. Note the effect of the wilt on the non-resistant variety in the center row in the picture above, and the uniform stand of Oxford 26 in the next rows.

F254 Oxford 26 Certified This is the variety, resistant to Granville wilt, offered for the first time for planting in 1945. Granville Wilt is widespread in Granville, Wake, Durham, Pitt, Carteret, and Craven counties but is present on at least a few farms in nearly every North Carolina county where flue-cured tobacco is grown. In general appearance Granville wilt is similar to other diseases that attack the crop, but in mid-summer can be easily distinguished by the presence of dark streaks which extend for 18 or more inches above the soil in the woody part of the stem. Oxford 26 is recommended only for fields known to be contaminated with Granville wilt. This strain is highly resistant, but for best results should be grown on soil rotated to other crops for 1 to 2 years.

By comparison this variety will not produce the weight of leaf per acre that can be expected from 400 or 401, but the yield would compare favorably with such standard varieties as Gold Dollar, White Stemmed Orinoco or Cash. Because the leaves are spaced somewhat farther apart than on some varieties, it can be planted closer together in the row for increased yield. The quality compares favorably with other varieties. Our Oxford 26 is produced directly from seeds supplied by the Oxford Experiment Station where this variety was developed. Our seeds are chemically treated. Prices: Oz. \$2.00; 3 ozs. \$5.25; lb. \$26.00, postpaid.

F279 Oxford No. 1 Resistant to Black Shank, a disease that attacks the larger roots and stalks, causing death rapidly. Oxford 1 is the least resistant but the best quality of the resistant varieties. For best results plant on soils that have been planted to crops other than tobacco for at least 2 years. Recommended only for fields where black shank is known to be present. Prices: Oz. \$1.00; 3 ozs. \$2.65; lb. \$13.00, postpaid.

HOW TO USE DILUTION TABLE

This Dilution Table indicates the quantities of any given spray material to add to a given quantity of water to give the desired dosage (strength) of spray.

All liquid or semi-liquid materials are proportioned directly on a liquid basis, i. e., 1 to 100 dilution indicates that one gallon of spray material should be diluted with water to make 100 gallons of diluted spray (or three tablespoonfuls to make one gallon of diluted spray).

Dry materials such as Lead Arsenate or "BORDO" are proportioned by mixing a given number of pounds of spray material with water to make each 100 gallons of diluted spray. To aid in mixing, the table shows the smaller quantities of dry materials in convenient household measuring units.

NOTE: When two or more spray materials are combined in one spray mixture the same water is used to dilute all the materials.

The shut-off rod is operated from the same point.

Weight 70 lbs.
Price: \$18.75

These Planet Jr. Horse Hoes and Cultivators are stronger, better made and finished than any other one-horse cultivators, and enable you to increase your yield, because they do a greater variety of work in corn, potatoes, cotton, beans, tobacco and other crops requiring similar cultivation, and do it more thoroughly. Cultivate deep or shallow, in different width rows, and the extra long frames make them steady running. All Planet Jr. cultivator steels are made of beveled steel thickest down the center, making them self-sharpening, and the points retain their shape and strength. No. 9 has lever expander, allowing quick adjustment for different width rows. Used with or without a wheel.

NO. 9-D. Without wheel. Price: \$16.65.

Wyatt's Lawn Grass Seeds

A smooth green lawn is your home's greatest beauty asset. Deep, thorough preparation, proper fertilization and good seed are the most important steps toward a successful lawn. Read "10 Steps in Lawn Building," then select the mixture below, most suited to your needs. The results will please you.

Wyatt's Carolina LAWN GRASS MIXTURE

F-60. WYATT'S CAROLINA MIXTURE of lawn grass seeds is an improvement on all the better mixtures offered heretofore at comparative prices. Our constant experiments have taught us just what grasses are best suited to the eastern and southern states. The finest seeds of these varieties are carefully re-cleaned and blended into our Carolina Mixture so as to give the very best results obtainable. Sow 6 lbs. per 1000 sq. ft. **Prices: 1 to 4 lbs., 50c per lb.; 5 to 24 lbs., 45c per lb.; 25 to 99 lbs., 42c per lb.; 100 lbs. or more at 40c per lb., delivered.**

Wyatt's Colonial LAWN GRASS MIXTURE

F-58. WYATT'S COLONIAL MIXTURE. The continued demand for a mixture of the finer leaved grasses has led us to prepare this Colonial Mixture consisting largely of the best varieties of bents and fescues. While the price per pound is higher, only a fraction of the quantity required of other grasses is required of the Colonial Mixture, leaving very little, if any, difference in the total cost for seeding. Once the lawn is seeded to these grasses of vastly superior beauty, all other varieties will be discarded. Use 3 lbs. per 1000 sq. ft. **Prices: 1 to 4 lbs., \$1.10 per lb.; 5 to 24 lbs., \$1.00 per lb.; 25 to 99 lbs., 95c per lb.; 100 lbs., or more at 90c per lb., delivered.**

Wyatt's Sunny South LAWN GRASS MIXTURE

F-59. WYATT'S SUNNY SOUTH MIXTURE. For lighter soils and soils that became extremely dry, and in locations subjected to extreme heat during the summer months Wyatt's Sunny South Mixture of lawn grasses is recommended. The grass varieties used on golf greens over the entire South predominate in this mixture. Only the purest stocks are used. Sow 6 lbs. per 1000 sq. ft. **Prices: 1 to 4 lbs., 60c per lb.; 5 to 24 lbs., 55c per lb.; 25 to 99 lbs., 52c per lb.; 100 lbs., or more at 50c per lb., delivered.**

Wyatt's Shady Nook LAWN GRASS MIXTURE

F-61. WYATT'S SHADY NOOK LAWN GRASS. A carefully blended mixture of grasses best adapted to shaded situations. Use 6 lbs. per 1000 sq. ft. Where the soil is acid from poor drainage or drippings from trees, occasional application of agricultural lime should be made at the rate of 5 lbs. per 100 sq. feet. **Prices: 1 to 4 lbs., 75c per lb.; 5 to 24 lbs., 70c per lb.; 25 to 99 lbs., 65c per lb.; 100 lbs. or more at 60c per lb., delivered.**

F-49. HIGHLAND BENT. Not recommended for the South. Under favorable soil conditions in moist, cool places a beautiful velvety green sod, of the finest texture, is produced. Sow 3 lbs. per 1000 sq. ft. **Prices: 1 lb., \$1.75; 5 lbs., \$8.00, postpaid. Not prepaid, 10 lbs., \$15.00; 25 lbs., \$35.00; 100 lbs. or more at \$1.40 per lb.**

F-48. BERMUDA. Thrives best on rich, loamy soils but will grow anywhere the soil is not too tightly packed. The surest variety on soils exposed to full sun. Used on all golf greens in the South where it responds beautifully to close clipping, ample watering and feeding. Sow 4 lbs. per 1000 sq. ft. **Prices: 1 lb., 90c; 5 lbs., \$3.70, postpaid. Not prepaid, 10 lbs., \$6.80; 25 lbs., \$16.50; 100 lbs. or more at 64c per lb.**

F-37. HULLED BERMUDA. You buy only the fine seed kernel itself in this pure, hulled Bermuda seed. Should be used only after the soil is warm in the spring and because it germinates much quicker it may be seeded later in summer. Sow 2 lbs. per 1000 sq. ft. **Prices: 1 lb., \$1.10; 5 lbs., \$5.10, postpaid. Not prepaid, 10 lbs., \$9.40; 25 lbs., \$23.00; 100 lbs. or more at 90c per lb.**

F-51. CARPET. Beautiful, dark green, flat growing grass of spreading habit and excellent for the low, moist soils of the coastal areas. Tolerant to shade. Sow 4 lbs. per 1000 sq. ft. **Prices: 1 lb., 95c; 5 lbs., \$4.20, postpaid. Not prepaid, 10 lbs., \$7.60; 25 lbs., \$18.50; 100 lbs. or more at 72c per lb.**

F-40. KENTUCKY BLUE. Very dark glossy green and remaining green longer than other lawn varieties. Ideal for lawns but requires deep, fertile, alkaline soil. Use lime and 4-12-12 fertilizer regularly. Never cut close during hot, dry seasons. Sow 3 lbs. per 1000 sq. ft. **Prices: 1 lb., 85c; 5 lbs., \$3.60, postpaid. Not prepaid, 10 lbs., \$6.40; 25 lbs., \$15.50; 100 lbs. or more at 60c per lb.**

F-54. RED CREEPING FESCUE. Best for dense shade. Very fine leaved, dark green grass which, once established, withstands the poor dry soil under trees better than most others. Sow 4 lbs. per 1000 sq. ft. **Prices: 1 lb., 95c; 5 lbs., \$4.20, postpaid. Not prepaid, 10 lbs., \$7.60; 25 lbs., \$18.50; 100 lbs. or more at 72c per lb.**

F-52. RED TOP. A fine leaved variety of the bent family best suited to moist, fertile soils. Sow 2 lbs. per 1000 sq. ft. **Prices: 1 lb., 50c; 5 lbs., \$2.00, postpaid. Not prepaid, 10 lbs., \$3.40; 25 lbs., \$8.25; 100 lbs. or more at 32c per lb.**

F-43. RYE GRASS (Annual.) The quickest germinating and fastest growing grass for lawn use. May be seeded any month and will germinate and produce a green lawn until killed by warm weather. Sow 10 lbs. per 1000 sq. ft. **Prices: 1 lb., 30c; 5 lbs., \$1.00, postpaid. Not prepaid, 10 lbs., \$1.40; 25 lbs., \$3.25; 100 lbs. or more at 12c per lb.**

F-80. WHITE DUTCH CLOVER. A most dependable lawn subject. Stays green almost the year round, and if limed and fertilized improves the soil and serves as a nurse crop for grasses. Sow 1 lb. per 1000 sq. ft. **Prices: 1 lb., \$1.00; 5 lbs., \$4.45, postpaid. Not prepaid, 10 lbs., \$8.00; 25 lbs., \$18.75; 100 lbs. or more at 72c per lb.**

Ten Steps in Lawn Building

- 1—Break or plow deep, with subsoil or similar plow to prevent burying top soil—then level or grade as needed.
- 2—Apply the equivalent of 3 heavy, green cover crops or 3 inches weed free manure or both if available.
- 3—Apply lime as needed up to 50 lbs. per 1000 sq. ft. and fertilizer, 40 lbs. per 1000 sq. ft.
- 4—Pulverize and smooth surface.
- 5—Seed 6 lbs. Carolina, Sunny South or Shady Nook, or 3 lbs. Colonial mixture per 1000 sq. ft., between September 1 and March 1.
- 6—Soak thoroughly but slowly to avoid moving seeds. Keep moist until grass is up. Soak occasionally during dry periods.
- 7—Mow Bermuda and Rye grasses close and often; Blue grasses and Fescues no closer than 2 inches nor more often than necessary, particularly during hot, dry seasons.
- 8—Compost clippings with liberal amount of sand and return to lawn in light application as mulching during summer.
- 9—Feed at 6 to 8 week intervals from February through November with 20 to 40 lbs. per 1000 sq. ft., high grade fertilizer or 50 to 100 lbs. per 1000 sq. ft. sheep manure, or both. Always sprinkle after feeding.
- 10—Apply additional seeds as needed with regular feedings.
