IN the third volume of the 'Hand-list' Dr. Sharpe has concluded his list of all the Mesomyodian Passeres, and has commenced the most difficult portion of his work, the enumeration of the Acromyodian Passeriformes. I notice with pleasure the assistance that he continues to receive from ornithologists of every country in what must be admitted by all to be a work of great importance, and one requiring close study and intimate acquaintance with the subject.

It is hoped that the remainder of the *Passeriformes* will be included in the fourth and last volume, which is to be published in the course of the year 1902.

INTRODUCTION.

THE task of compiling a list of the known species of Birds becomes very difficult when the *Passeriformes* are approached, and I have found an extraordinary increase in the number of the *Muscicapidæ* and *Pycnonotidæ*, since I wrote the fourth and sixth volumes of the 'Catalogue of Birds' in 1879 and 1881.

Apart from the work involved in picking up the threads since the 'Catalogue' was finished, the question of Classification presents grave difficulties in the case of the *Passeriformes*. A good deal of sterling work has been done during recent years, but we are still far from a satisfactory system as regards the Passerine birds. Although the late Mr. Seebohm afterwards admitted that he ought to have included *Pratincola*, *Cossypha*, etc. in the fifth volume of the 'Catalogue,' that does not account for all the difficulties of the question; but I have, of course, not enumerated such genera as these among the Flycatchers. There remain, however, many doubtful forms in the *Muscicapidæ*, and I have followed Mr. Eugene Oates in some of the modifications which he has introduced in his excellent volumes of 'Aves' in the 'Fauna of British India.' Genera like *Cryptolopha*, *Parisoma*, *Polioptila*, etc. may just as well be *Sylviidæ* as *Sericornis*, *Acanthiza*, and *Hypolais*; and it seems extremely difficult to draw a line between the Flycatchers and the Warblers. In face of the uncertainty which surrounds the classification of the Old-World Passeres, I have adhered, in the present volume, mainly to the order of Vol. IV. of the 'Catalogue.'

Proofs of this volume have been sent to many of my colleagues abroad, and the assistance they have rendered me requires my sincere recognition. I have tried everywhere to acknowledge the original

information communicated to me; and I must especially thank Count Salvadori and Dr. Otto Finsch for their generous contributions, while Prof. Allen, Prof. Ridgway, Mr. Richmond, and Mr. Oberholser have most carefully read through the proofs, and their suggestions have been of great service. All my colleagues in America have throughout the progress of the 'Hand-list' rendered me most important assistance, while Dr. Sclater and Mr. Hartert have done the same for me in this country. To the following gentlemen I have been indebted for special help in the preparation of the present volume :—

England.—Dr. P. L. Sclater, Mr. Howard Saunders, Hon. Walter Rothschild, Mr. Ernst Hartert, Mr. W. R. Ogilvie Grant, Mr. C. W. Andrews, and Mr. W. P. Pyecraft. In the preparation of the Index and in many other respects, I have received great assistance from my indefatigable chief attendant, Mr. Charles Chubb.

France.—Professor E. Oustalet.

Holland.—Dr. Otto Finsch.

Germany.—Professor A. Reichenow, Dr. A. B. Meyer, Count von Berlepsch.

Russia.—Dr. Bianchi.

Italy.—Count Salvadori.

America.—Professor Robert Ridgway, Dr. L. Stejneger, Professor J. A. Allen, Mr. Frank M. Chapman, Mr. C. W. Richmond, Mr. Witmer Stone, Mr. Harry Oberholser, and Mr. Outram Bangs.

* Dr. Slater enumerates eleven species of *Thamnophilus* which he could not arrange in the 'Catalogue.' I have endeavoured to place ten of these in what appears to be their true position. One species, *Thamnophilus lafresnayanus* of d'Orbigny (*cf.* Slater, *Cat. B. xv.* p. 180, note), is referred by d'Orbigny himself to the genus *Formicivora* (*Voy.* p. 182, pl. 6. fig. 1). It seems to me to be a species of *Myrmotherula*, judging from the figure, and in this sense Dr. Slater himself (p. 229) again mentions the species.

* Mr. Witmer Stone informs me that he has recently examined the type of Cassin's *Dryoscopus atrialatus* at the request of Prof. Reichenow, who suggested that it might be the male of *M. flammulatus*. This Mr. Stone has found to be the case.

† Shelley in his List of the 'Birds of Africa' includes two more species of *Artomyias*:—*Artomyias stuhlmanni* (Shelley, *t. c.* p. 95, no. 1330) = *Muscicapa stuhlmanni*, Shelley, *op. cit.* p. 94, no. 1319 = *Pedilorchynchus stuhlmanni*, Reichenow.
