THE

Commissioner of gatents.

IN THE MATTER OF

EXTENSION OF LETTERS PATENT OF THE UNITED STATES, GRANTED TO WILLIAM T. G. MORTON, ON THE 12TH DAY OF NOVEMBER, 1846, FOR "AN IMPROVE-MENT IN SURGICAL OPERATIONS."

STATEMENT AND ACCOUNT,

PURSUANT TO SECTION EIGHTEEN OF THE ACT OF CONGRESS, PASSED JULY 4, 1836.

> B. & S. D. COZZENS, of New York, Counsel for Application.

NEW YORK:

H. S. TAYLOR, PRINTER AND STATIONER, 38 JOHN STREET, CORNER OF GOLD. 1860.

Before the Commissioner of Latents.

IN Matter of Extension of Letters Patent of the United States, granted on the 12th day of November, 1846, for "An Improvement in Surgical Operations."

SWORN STATEMENT AND ACCOUNT,

Pursuant to Section Eighteen of the Act of Congress, 1 passed July 4, 1836.

To the Commissioner of Patents:

WILLIAM T. G. MORTON, of Boston, in the County of Suffolk, and State of Massachusetts, an Applicant herein, respectfully represents:

That several of the early years of the life of your said 2 applicant were occupied by him in the practice of dental surgery, and since, as is well known, many of the ordinary operations thereof are extremely painful, and are sometimes quite severe, it early occurred to your said applicant that the discovery of an agent which would with safety produce in the human subject insensibility to pain, for a 3 period sufficiently long to admit of the performance of ordinary operations, would be of inestimable value.

Up to the period when, as before stated, the attention of your said applicant was directed to this subject, nothing had been, with any marked success, accomplished in this field of investigation. It is well known that from the earliest existence of medicine as a science, it had been the aim of many experimenters at different epochs and in

- 4 different countries, to discover an agent which would produce deadening of nervous action, and which could practically be applied to the relief of human suffering. History proves that from a date as ancient as the time of Hippocrates, these attempts were frequent and persevering. A great variety of vegetable and chemical substances were, during this period, sought to be applied to this object. Different narcotics and stupifying drugs were employed, among which were most prominent the
- 5 plant mandragora, or mandrake, the poppy, and especially the Cannabis Indica, or East Indian Hemp; this last being particularly potent, though dangerous, in its effects. But though in the earlier and unlearned ages of medical science these substances, in spite of their extremely imperfect and almost universally injurious results, were nearly exclusively relied upon for the production of nervous insensibility, as civilization increased and knowledge became less contracted, these rude and barbarous 6 applications were discarded, and medical practitioners generally had acquiesced in the belief that no agent could be discovered which could be applied for this purpose with safety and success, and for a very long period anterior to the said patented discovery herein referred to, the only substance at all relied upon to produce relief in surgical operations, was opium. The effects of mesmerism, of intoxication produced by alcoholic stimulants,

the local application of intense cold, or of severe compres- 7 sion, and even the introduction of certain gases into the lungs of the patient, were all proposed or tried for the accomplishment of a practical insensibility to pain, but the imperfection and inadequacy of all these means soon led to their abandoment. So far as your said applicant is aware, for a long time prior to the introduction of the said discovery, hereinafter to be described, opium, as before stated, was the only agent which the enlightened 8 practitioner employed, and the use of this was by no means frequent, and was never considered safe or adequate to the purpose. It was necessary to administer it in quantities sufficient to carry its effects far enough to produce actual stupefaction-without which no real insensibility to pain could be secured-and this could not be done without imminent risk to the life of the patient. Moreover, its action is uncertain both as to time and to degree; it possesses poisonous properties, and its use 9 gives rise to many inconveniences and troubles. These considerations combined to cause it to be employed as seldom as possible, while, even when it was used, the extreme danger attending it deterred from administering sufficient to effect complete insensibility, and hence the patient felt a great degree of pain in spite of its use. Yet, notwithstanding the obvious imperfections of opium for this purpose, it was universally conceded to possess marked superiority over all the other above re- 10 ferred to pain-relieving agents, so exceedingly inadequate had the latter been demonstrated to be.

In this unsatisfactory condition was this branch of science at the time of the making of the experiments which resulted in said discovery.

The common use and the effects of ordinary sulphuric ether as applied locally and externally to diminish pain,

 $\mathbf{5}$

- 11 were well known to your said applicant, and, on one occasion, having been called upon, in the course of his dental practice, to perform an especially painful operation, your said applicant made use of such an application of this agent to relieve a patient, and having from the severity of the pain felt by the latter employed it somewhat more freely than was usual, was surprised to find that the surrounding parts were quite thoroughly be-
- 12 numbed by it. The idea then immediately occurred to your said applicant that if the whole system could be brought equally under similar influence, a most valuable pain-relieving agent would be developed, and that possibly it might be carried to the extent of completely assuaging physical suffering in every form of surgical operation, and yet be attended with entire safety.

The difficulty which first presented itself to your said applicant in attempting to reduce this suggestion to prac-13 tical application, was to devise a means whereby the whole body could be properly subjected to the action of the ether, it being impossible, practically, to immerse the patient in it, and it appearing doubtful whether it could be washed over the particular parts sought to be affected, in quantities sufficient to produce the result desired. Your said applicant, however, devoted himself at once, after the idea referred to occurred to him, to devising a method by which the benumbing effect of the sulphurie 14 ether could be readily, efficiently, and safely applied so as to produce quiet of nervous sensibility through the entire system, by which alone could a genuine relief from pain be secured, since every merely local application of the ether must produce only a partial and highly imperfect result.

In pursuance of experiments and investigations upon this subject, your said applicant procured all the books

which he was able to find tending to throw light upon 15 the matter, and by examination of them, learned that sulphurie ether was a powerful anti-spasmodie anodyne and nareotie eapable of producing, when inhaled, intoxication and stupefaction. Your said applicant, therefore, proceeded to verify the information thus obtained by a variety of experiments upon birds and other animals, these investigations occupying much of his time during the year 1844. None of these experiments proved 16 successful to any satisfactory degree, but soon after, in the winter of 1844-1845, your said applicant, while still speculating upon the eauses of these failures and the probable means to be adopted to realize practically the result which his investigations convinced him could be accomplished, found himself embarrassed by his lack of the requisite medical knowledge to prosecute said researches understandingly, and joined the medical school of Harvard University, in Massachusetts, for the pur- 17 pose of acquiring such knowledge, and while attending lectures in the winter before referred to, witnessed an exhibition, before the class of which he was a member, of an application of nitrous-oxide gas for the purpose of extracting a tooth without pain. The attempt failed, but it served to impel your said applicant to renewed exertion, and in view of the statement contained in the works before referred to, that ether could be inhaled so as to produce stupefaction, and aided by the experiment with 18 the nitrous oxide, which had furnished to him an instance in a human subject of inhalation of an agent somewhat analogous, he determined to make trial upon himself of the quantity of ether which he believed could be inhaled without injury even when earried to complete insensibility, and to ascertain whether such an insensibility could be produced by this mode of administering

19 it as would enable an operation to be performed without pain.

Your said applicant continued to thus experiment upon himself until convinced that sulphuric ether might be inhaled with safety, and would probably produce sufficient insensibility to permit operations to be performed without pain; but it still required further experiment upon other persons before the success of your

20 said applicant's investigations could be assured, since it is obvious that when experimenting upon himself he could not test the extent of the insensibility by performing an operation upon his own body. But about this time, which was in the summer of 1846, your said applicant, having made certain experiments upon other persons, ascertained that in order to produce a certain and effectual insensibility, the ether inhaled must be *chemically pure*, whereas in his experiments previously, being unaware of this fact, he had employed the ordinary ether of

commerce, which is more or less impure, containing foreign substances, and by reason of this your said applieant did not at first succeed satisfactorily in his experiments upon other persons, two of these experiments. made on different subjects, having failed discouragingly. This led your said applicant to speculate upon the probable cause of the difference in the effect produced by the ether when inhaled by himself and when administered to the other persons. It finally occurred to him 22that the other which he had employed upon himself had been prepared with particular care by the party from whom he had obtained it regularly theretofore, but that the ether used in the experiments upon the other subjects referred to, had been procured at a different place and might not be so pure. Upon causing an analysis of the latter to be made, this was found to be the fact, and

at the next opportunity he repeated his experiments 23 upon human subjects by administering other which had been prepared by the same chemist who had at first supplied him, to a patient who wished to have a tooth extracted without pain. The operation was one well calculated to test the sufficiency of the other to produce a reliable and harmless insensibility to the pain of surgical operations, and was in the highest degree successful, no pain whatever being experienced by the patient and the experiment being attended with no injurious results in any respect. This was on the thirtieth day of September, 1846, and was considered by your said applicant as the first demonstration of this new fact in science.

After this date many other experiments and trials of the anæsthetic properties of sulphuric ether were made by said applicant upon different persons, the results of which placed, in his opinion, beyond doubt, the certainty 25 as well as the immense value of the said discovery.

Shortly after this, your said applicant, desirous of bringing said discovery before the public, obtained permission to administer the ether to a patient at one of the clinical lectures at the Massachusetts General Hospital, in the city of Boston, so that an operation might be performed in the presence and with the co-operation of the eminent surgeons connected with that institution, for the purpose of publicly demonstrating the value and 26 character of the new discovery. Accordingly, on the sixteenth of October, 1846, an operation took place at the said hospital, which was in the highest degree sue cessful, your said applicant having administered ether by inhalation, and a long operation being completed satisfactorily, without the slightest pain being felt by the patient. A large number of the most eminent sur. geons of Massachusetts were present, and witnessed the

27 trial, unanimously indorsing the value of the aforesaid improvement, and from this time the said discovery of the anæsthetic properties of sulphuric ether, when inhaled, to eause insensibility to pain during surgical operations, became a recognized fact in science.

Your said applicant further represents, that having, in the manner aforesaid, secured the recognition of his title to the making of said discovery by said Massa-23 chusetts General IIospital, the publicity thereby given to the same induced other parties to seek to obtain for themselves the credit of having been the sole originators of a discovery of such extended value as that of your said applicant at once appeared to be. That these efforts to deprive your said applicant of his due share of the merit thereof were continued with pertinacity for a period extending from shortly after his reception of a patent therefor, as hereinafter mentioned, until a very 29 recent period, and though your said applicant has at length, as he believes, succeeded in overcoming said unfounded claims, he has been enabled to do so only by the most unremitting personal exertions, and the expenditure of large sums of money in the obtaining of testimony to establish his own claims, and to contradict those of his said opponents. That said expenditures, as will be seen by reference to the annexed account, extended over a long period and formed one of the chief items of the entire expense of your said 30 applicant, by reason of said discovery, and were entailed upon him solely by the fact that his efforts to introduce said discovery to the public were successful, and consequently established widely that his said discovery was one of value, for which reason others were induced, as aforesaid, to claim it as solely their own.

Your said applicant further represents, that upon

the maturity as aforesaid of the said discovery, Letters 31 Patent of the United States were, upon due proceedings had therefor, issued to him for said discovery, but as in the making thereof he had derived certain aid from Doctor Charles T. Jackson, of Boston aforesaid, said Jackson and your said applicant jointly made application for such letters patent, and in pursuance of an agreement between said Jackson and your said applieant, said Jackson, at or about the time of the making 32 of said application, duly assigned to your said applicant all the right, title, and interest whatever of the said Jackson in the said discovery or invention, and in and by the said assignment requested and authorized the then Commissioner of Patents to issue such letters patent to and in the name of your said applicant and his legal representatives alone, as by reference to said assignment duly on file will fully appear. That thereupon on the 12th day of November, 1846, letters patent of 33 the United States, as aforesaid, entitled, for "An Improvement in Surgical Operations upon Animals," were duly issued and delivered to your said applicant, as aforesaid, for the said discovery, to which said letters patent, also duly on file, your said applicant refers.

That upon the granting of said letters patent, your said applicant immediately made vigorous exertions to introduce said discovery to the public, and promulgate information of the same and of its benefits and the 34 best modes of applying it, throughout the country, and believing that the diffusion of pamphlets, setting forth the characteristics of the said sulphurie ether and its mode of action and effects upon the human system, and the apparatus requisite to its due and successful adminis tration, would be the most effectual means of bringing the said discovery in the most thorough manner to the

- 35 knowledge of the public, caused large numbers of books and other printed matter to be published and circulated in all sections of the country. That great expenditures for this purpose were, from the commencement of the existence of the said patent, incurred by your said applicant, for the details of which he refers to the account of expenses by reason of said discovery, hereto annexed. That your said applicant believes, and always has be-
- ³⁶ lieved, that said expenditures were absolutely essential to introduce the said discovery to the public, and your said applicant represents that the effect of them and of the other steps also at the same time taken by your said applicant to bring said discovery to the notice of the public, was to almost immediately attract universal attention thereto, and to lead the same to be everywhere discussed and investigated. That as it was obvious that until the nature and best mode of applying said dis-
- 37 covery was more fully understood than was practicable upon the first introduction thereof, it might fail of success by reason of ignorance or inexperience on the part of those attempting to employ it, your said applicant early found it to be necessary to employ young physicians, at a large salary, who had been instructed by your said applicant in the application of said discovery, to travel about the country and bring said discovery to the notice of medical and surgical men everywhere, and teach the latter the proper method of employing the same in their practice. That your said applicant therefore provided these parties with large quantities of sulphuric ether, and with numbers of the peculiar apparatus employed for administration.
 - tering the same, and constituted them his agents to visit different sections of the country, to induce all persons whom they could to make use of the said discovery, and to sell licenses to use the same for the account of your

said applicant. That the ether and inhaling apparatus 39 so furnished to said agents by your said applicant were extremely expensive, the ether being, as before herein stated, necessarily chemically pure, in order to produce a proper anæsthetie effect, and in this form commanding a very high price, and the inhaling apparatus also costing large sums. That said agents were necessarily furnished with said ether and apparatus at the sole expense of your said applicant, and as it was from the first indispensable 40 to the introduction of the said discovery, that medical and surgical operators throughout the United States should have put into their hands every facility to the employment of the same, in order that no lack of information respecting it should impede its diffusion, most of the said agents and other suitable parties were instructed by your said applicant to give said ether and apparatus, without charge, to all proper persons who would make use of them in testing and introducing the 41 said discovery. That this thus speedily became a large item in the expenditures of your said applicant by reason of said discovery, as will be seen by reference to the said account, but that the good effect of the course thus taken by your said applicant was soon apparent in the general attention in this manner, in the early existence of the said patent-to wit, in the years 1846, 1847, and a little later, attracted to the said discovery. That these agents were constantly employed as aforesaid by 42 your said applicant until, for the reasons hereinafter set forth, it became necessary to discontinue their operations. That during the entire time they were so engaged in relation to said discovery, your said applicant was compelled to pay them large salaries, and as they mostly all were, necessarily, physicians of professional education and good talents and social position, it being

- 43 indispensable that the services of parties of such character should be secured, in order that by their indorsement and influence confidence might be inspired in the said discovery, it being at first generally regarded with apprehension and distrust. That many of said agents were taken by your said applicant from their private practice to engage in the efforts aforesaid, and consequently demanded large compensation, and, in many
- 44 instances, your said applicant was forced to offer, in addition to a handsome salary to be paid absolutely a per centage upon the sales of rights to use said discovery, which such agents might make, in order to induce parties of the requisite qualifications to engage in said undertaking. Moreover, in all cases, your said applicant was compelled to pay, and he did pay, all the traveling expenses of the said agents. For these reasons, it will be obvious that the expenses 45 of your said applicant, in his aforesaid efforts to intro-
- duce said discovery, were necessarily large, and for the details thereof he refers to the said annexed account.

Your said applicant further represents that after his experience in the practical administration of the said sul phurie ether had become more extended, he ascertained that the before referred to inhaling apparatus, which were elaborate and, as before stated, very expensive, was not best adapted to the employment of said discovery,

46 but that simply a sponge saturated with said ether and applied directly to the mouth and nostrils of the patient, which said method has ever since been continued, was the most satisfactory mode of administering the same. That consequently all the aforesaid apparatus purchased or contracted for by your said applicant, a large amount of which was on hand or in process of manufacture, was necessarily abandoned, causing to your said applicant a 47 very considerable loss.

Your said applicant further represents, that by said persistent and systematic efforts of your said applicant, the said discovery soon became widely known throughout the country, and during the latter part of the year 1846 and the year 1847, a very large number of licenses to use said discovery were sold in different parts of the United States by your said applicant and by said agents, all of 48 which are set forth in due detail in said account. But your said applicant represents, that though all possible precaution was taken by him in regard to said sales, it frequently happened, since it was often necessary to take from such licensees notes and other securities in payment instead of cash, that such obligations were not met by the parties giving them, by reason of the fact that the opposition which was afterwards encountered by your said applicant in substantiating his claims to the said dis- 49 covery, as hereinafter set forth, caused for a series of years doubts in the minds of many as to the validity of the said patent, which doubt was made the pretext, by many of said licensecs, for not paying to your said applicant the sums agreed upon as the consideration of said licenses, and from a large number of such sales your said applicant has never been able to realize any but a small part, and in some instances he has received no portion whatever of said sums, and as they were generally in 50 each particular case of but small amount, though amounting in the aggregate to a considerable sum, the cost of collecting the same, by legal proceedings, would have greatly exceeded the amount recovered. In some instances, the parties taking licenses were found to be unable to pay your said applicant therefor, and the losses to your said applicant from these two causes combined

51 were, in a single year or thereabouts, of very considerable amount, the same being the deficit in said time between the outlay of your said applicant for said agents and said ether and apparatus, and the amount realized by him from said sales.

That during the whole of the time above referred to, your said applicant, as aforesaid, was continually circulating throughout the country various printed publica-52 tions calculated to bring said discovery into use, and was procuring to be published in leading journals, in various quarters, articles setting forth the results and benefits of said improvement, and personally visiting many sections of the United States, and corresponding in relation to said improvement with prominent persons in various places, and urging its adoption, and vindicating its safety and important results. That further to bring the same before the public, your said applicant constantly in

53 his practice as a dentist as aforesaid, and also in many hospitals and for numerous physicians, administered said ether to patients, and also caused to be fitted up, at considerable expense suitable rooms adjacent to his office in the said eity of Boston, for the purpose of applying the said discovery, to perform operations upon all who might attend for that purpose, and at the same time employed several assistants to take charge of said operations, to whom, since they nearly all were, necessarily, educated

54 physicians, your said applicant was compelled to pay a considerable compensation, but, at the same time, was not able to realize from said operations any but the most trifling sums, as until the success and safety of the said discovery became universally assured, persons were unwilling to pay for the application of the same, but in great numbers of such cases consented to it only from euriosity or at the earnest solicitation of your said applicant 55 or his said assistants.

That by means of the efforts and expenditures thus detailed, your said applicant succeeded in bringing prominently before the public the said discovery, and would undoubtedly have soon commenced to realize therefrom an adequate return for his exertions in relation to the same, but that the publicity given thereto by his said efforts and the consequent attention attracted to your said 56 applicant, aroused against him a most formidable opposition, which manifested itself first in an organized attack upon your said applicant and the said discovery on the part of a large number of the dental profession in said city of Boston, of which said profession your said applicant, as before stated, was a member. This attack and the opposition from this source was followed up for a great length of time with persistent virulence, its originators asserting, and professing to cite, authentic and con- 57 clusive instances of actual cases in which the said discovery had produced the most dangerous effects upon patients who had been treated with it. Published matter was circulated by these parties throughout the country with the design and result of stirring up a general feeling of distrust of and hostility to the said discovery, and to such an extent were these measures carried that in a short time a violent tide of public feeling was excited against said discovery, to overcome which all the time 58 and efforts of your said applicant were required for a protracted period. Widely circulated articles in leading medical journals in different parts of the United States were published setting forth the danger of the new agent and strongly urging the abolition of all use of it on the part of the medical profession, and the discountenancing of it by the public at large. That in consequence of the

- 59 general suspicion aroused against the same by these persistent and systematic attacks, your said applicant speedily found the public feeling growing hostile to said discovery, and to such a degree that in a short time patients wholly ceased to visit the offices of your said applicant fitted up by him, as before stated, in said city of Boston, expressly for the purpose of administering therein said sulphuric ether for the object of introducing
- 60 knowledge of the same to the public in a speedy and effectual manner, as before herein set forth. That hence your said applicant was forced to relinquish said rooms shortly after first opening them, and as he received almost no compensation for said operations therein with said ether, as before stated, the expense of fitting up the same and the payments upon the lease thereof which he was obliged to make—all which amounted to a large sum is appears in the annexed account, became a direct loss to your said applicant in his said efforts to introduce said discovery.

That it at once became apparent that the only effectual means of refuting the before-referred-to assertions of said opponents of your said applicant, and of resisting their said attacks, was to spread over the country the actual facts relative to the practical results and successes of said discovery, and by thus disseminating the wellauthenticated proofs thereof, to silence the false charges 62 which were rapidly having the effect of causing said discovery to fall into disuse by the public. Your said applicant therefore at once caused to be prepared, and printed and distributed to every section of the country and to every person upon whom, either from his influential position or his scientific reputation, or from any other cause, it seemed desirable to produce a particular effect, large numbers of documents setting forth in full

detail the chemical properties and constituents of said 63 sulphuric other, the effect and the manner of operation of the same in producing anæsthesia upon the human subject, and containing detailed and authenticated reports of all the effects resulting from its application to perform surgical operations, and accurate accounts of a very large number of cases actually occurring in the practice of your said applicant and of other physicians, also including therein the opinions and experiments of the most 64 distinguished European physicians who at an early date became almost unanimously strong advocates of said discovery. That the cost of preparing and distributing said documents-the necessity for them existing as before said for an extended length of time--was very great and nearly exhausted the means of your said applicant. And your said applicant for full details of said expenditure refers to the annexed account, and he further says that he verily believes that but for his said efforts at this time 65 and in said manner, the said discovery would have been driven out of use and the public deprived of the benefit thcreof.

Your said applicant further represents that his said efforts and publications and especially, perhaps, the influence upon medical men of the United States of the before-mentioned opinions and successes of the said European physicians in respect of said discovery, ultimately overcame all general opposition to said discovery, and 66 after American medical practitioners had been persuaded to give the same an impartial trial, quieted nearly all apprehension as to danger from its use and gradually led to an almost universal recognition of its great value.

That the importance of your said applicant's said discovery having thus been finally established, it speedily met with the recommendation of the medical officers of

- 67 the National Government, and was by the authorization of the proper Departments introduced into the public service in the Army and Navy, but without any compensation being then or ever made to your said applicant for such appropriation of his said discovery and without reference to the lawful protection thereof which he had secured by the Letters Patent aforesaid. That the public being early apprised of this disregard by Government of
- 68 its own grant, a general impression at once prevailed that the said discovery might be freely used by all without payment, and consequently your said applicant immediately found it impossible to dispose of any more licenses to use the same, and as his before referred to agents had only been induced, as already set forth, to undertake selling rights under said patent upon condition that their expenses should be paid by your said applicant in addition to their said salaries, and as all necessity for further
- 69 employing them had ceased since the said discovery had now become widely introduced, but no more licenses could be sold under said patent, your said applicant was forced to recall them, paying their entire expenses back, yet realizing from their efforts merely a sum wholly inadequate to recompense him, as before set forth, for even the actual disbursements attending said employment of them, and your said applicant refers to said account for the particulars of said expenditure for said purposes.
- 70 Your said applicant further represents that from the inception of said discovery, he had, by reason of its peculiar character, felt desirous that its benefits should be as widely as possible extended—to the poor as well as to the rich—and preferred to rely upon the action of the General Government, so long as there seemed a reasonable prospect thereof, for the compensation due to him for the time, ingenuity and expense bestowed by him

upon the said discovery and the introduction thereof into 71 use, rather than upon the modes usually employed for the protection and assertion of patented property. That when therefore he learned that the National Government had as aforesaid appropriated the said discovery, your said applicant, strongly urged by many friends and by parties of high official position, determined to appeal to Congress for remuneration for his labors in making and communicating to the public his said discovery. That 72 though his means were entirely exhausted by his beforerecited efforts to bring said discovery before the public, certain of his friends were induced to advance to him a part of the necessary sums to enable him to prosecute his said appeal to Congress, which he at once proceeded to do. That many applications to that body were made by him during a period extending from about the first part of the year 1847 to the commencement of the year 1854, and as these had for their object the sale of the entire 73 patent of your said applicant to Government and the payment to him therefor of a considerable sum of money, your said applicant during said period devoted nearly the whole of his time and exertions to the prosecution of the same and to the necessary steps involved therein to establish his claims to the authorship of the said discovery -the same being again disputed by the same opponents who as before stated had contested his said claims from the first general recognition of the said discovery. That 74 during the whole of this time, your said applicant found it necessary, in order to refute said pretended claims, to prepare and distribute many other pamphlets and docu ments of various descriptions, and which involved him in large expenditures, as will be seen by reference to said account. That the expenses of the establishing as aforesaid the said claims of your said applicant were also very

- 15 large, as, acting under the legal advice of the late Hon. Rufus Choate and Wm. Whiting, Esq., your said applicant was obliged to take the testimony of numerous witnesses in Boston aforesaid and in Hartford in the state of Connecticut, all which was necessarily attended with large disbursements counsel and magistrates in taking said testimony and in for other expenses relating thereto, for full details of which your said applicant refers to the said annexed account.
- 76 That although said proceedings of your said applicant resulted in a thorough vindication of the claims urged by him, his said application to Congress to induce that body to decide to purchase the said patent was entirely fruitless, notwithstanding that the matter was several times referred to and received the sanction of Congressional Committees appointed for the purpose, and was also favorably acted upon by the Senate.
- That after thus spending seven years in said efforts 77 to realize some compensation for said discovery, and having therein expended the large sums set forth in said account, your said applicant, encouraged by very strong assurances of success held out to him, determined to address the Executive Departments of the Government, and induce them, if possible, to make the purchase of said patent. That he accordingly took immediate steps to this end, transmitting, on the 15th day of Junc, 1854, to the President of the United States, 78 and the respective Secretaries of War, the Navy, and the Treasury, a memorial, strongly indorsed by a majority of the members of each branch of Congress, praying that the purchase of said patent for the public service might be made, and a proper compensation awarded therefor. That much time was consumed in the deliberation of said Secretaries upon said memorial, and in the references ordered by them to sevc-

ral officers of Government for information upon ques- 79 tions involved therein, but that finally, after long delay, the entire matter was referred back by said Departments, after being favorably reported upon by them, to the President of the United States, for his concurrence. That the President, although expressing himself favorable to causing said purchase to be made, desired, before giving his final assent, that certain preliminary questions should be satisfactorily settled; the first of 80 which was, whether the application of all anæsthetic substances was covered by said patent; and the only other of which was, whether compensation for usc of said patent could be legally compelled; to determine which latter inquiry a suit against some government officer who might be making use of said patent, was recommended. That though professional opinions upon both these points of parties of unquestioned ability. were tendered to the Executive, no effect was produced 81 thereby, and after this final failure of your said applicant to procure a favorable action from Government in relation to the purchase of said patent, and after increased expenditures on his part had been necessitated thereby, and a period of about two years, extending to the early part of the year 1856, had elapsed, your said applicant was compelled to abandon all hope of obtaining compensation for said discovery and patent from the Government, without having realized from said dis- 82 covery even a small proportion of his actual necessary expenses by reason thereof. That thereupon, by advice of counsel, your said applicant commenced legal proceedings in the United States Circuit Court for the District of Massachusetts, against an officer of the Government, who was in the use of said patent within said District. and recovered judgment for such infringement against

83 said officer. That though said action was brought on as speedily as your said applicant was able to do, the said judgment was not, in consequence of said action not being sooner reached in said Court, rendered until the 16th day of May, 1859. That the amount recovered in said judgment was one hundred dollars, but that no part of the same has been paid to your said applicant, as he felt unwilling to compel an individual who had only made use of said patent in the service of the 84 Government, to respond from his private means thereto, and as Government declined, notwithstanding the assurances previously held out to your said applicant, as before stated, to assume the responsibility of any such recoveries. That consequently, as said recovery was designed principally for the purpose of establishing the requisite legal basis for further proceedings in equity to restrain infringements of said patent, your said applicant, by the advice of his counsel, released to the 85 afore referred to defendant, the amount of said recovery.

That immediately upon the rendition of said judgment, your said applicant, and his counsel, commenced the requisite steps to bring suits in equity to restrain the infringement of said patent, but before the preliminary preparations therefor were completed, the expense requisite to the same was found by your said applicant to exceed the means at his disposal, he not being able to pay his said counsel for their services. 86 That by reason thereof, he was forced to suspend said proceedings temporarily and at once devoted himself to efforts to raise the funds necessary to carry on the same, also endeavoring to induce sundry wealthy institutions which had long been infringing said patent, to settle with, and pay your said applicant therefor, without suit. That after some time thus spent by your

me offen milesto

said applicant, he found that it was indispensable, to 87 give said institutions and other parties a proper understanding of the justice of his claims-so much had they been and still were being denied and opposed by interested parties-that a detailed account of the whole merits thereof should be placed before them, and as the only possible way of doing this was by printing the same, your said applicant, urged by the advice of many influential personal friends, and by his 88 eounsel, who all informed your said applicant that such a printed detail thereof was not only indispensable to the effecting of any settlement under said patent, but was also absolutely necessary for enabling his counsel to properly conduct legal proceedings to enforce said patent, with much labor caused to be prepared and printed the book referred to in the annexed account, called "Discovery of Etherization," and thereby was enabled by employing said book to complete a settlement for 89 use of said patent by the Board of Ten Governors, so called, having eharge of the municipal medical institutions of the city of New York, which had been for some time under negotiation, but was being delayed, and would not, in all, probability, have been terminated favorably, but for the agency of said book. That the amount recovered by said settlement was the sum of fifteen hundred dollars, but the whole thereof, and a eonsiderable additional sum, was expended in the pre-90 paration and publication of said book, and for the details of said expenditure your said applicant refers to said account.

That your said applicant, not deriving any funds from said settlement towards the prosecution of said suits, and not being able to make other settlements, continued his efforts to raise means from other sources to carry on said 4

- 91 litigation, but not until the month of April, 1860, or thereabouts, was your said applicant able to make any arrangements for the sums necessary to proceed with said litigation, and then only by the voluntary assistance of a personal friend of your said applicant, through whose efforts a party in whom your said applicant and his said friend supposed confidence might be placed, was procured who agreed with your said applicant to pay, from time to
- 92 time as might be required, the necessary disbursements for said suits, to the amount of one thousand dollars, to guaranty which said sum, securities satisfactory to said party were, by the aid of your said applicant's friend before referred to, procured and deposited with him by said applicant. That immediately thereupon your said applicant re-commenced said legal proceedings, but after a part only of said money had been paid therein by said party, all further payments, in spite of his said agree-93 ment, were refused, and though the same have repeatedly been demanded of him, they still remain unpaid, and your said applicant has not the means to enforce said agreement, and said proceedings have consequently ever since been suspended, your said applicant not having, as

before stated, the means to prosecute, the same.

Your said applicant further represents that, in regard to the ascertained value of the said discovery, which he is advised by his counsel it is necessary to state upon this 94 application, in his judgment the same will best be understood by the Commissioner of Patents by a statement of the result of a careful compilation recently caused to be made by your said applicant of the actual number, so nearly as the same could be ascertained, of surgical cases in which the said discovery has been successfully employed in institutions in the city of New York.

That it was not possible for said computation to be

obtained as respects more than eight of said institu- 95 tions, but that as to those, their official returns show, upon the basis of their reports of 1857, 1853, and 1859, that they have treated four hundred and twenty-three thousand four hundred and eighty-four anæsthetic eases, although only a part of the said institutions have been in existence for the whole past duration of said patent; one thereof having been established in 1851 and another in 1853. That in addition to these said institutions, there 96 are about thirty-two others in said New York and its immediate vieinity, but as before stated, no reliable returns could be procured from them, though, as your said applicant believes, the relative proportion of eases treated in said last mentioned institutions with said discovery would be found to be the same as in the eight first referred to.

That from said returns, it further appears, having reference to the entire population of said New York and 97 vieinity, the same being regarded as a million or thereabouts, that the proportion of anæsthetie cases treated in said institutions, as compared with said total population, is as one to thirty in the said proportion being arrived at in the following mode:

Four hundred and twenty-three thousand four hundred and eighty-four anæsthetic eases having, as aforesaid, been treated by said eight institutions during the past duration of said patent, the average thereof for one 98 year would be one-fourteenth of said number, or 30,248 eases per year. This number having all occurred in said eity of New York, has been taken as the number of anæsthetie eases in every million of population in one year. There being, according to the most authentie estimates, thirty-one millions at least of inhabitants in the United States, the number aforesaid should be multiplied 99 by 31, which gives 937,688 anæsthetic cases in the whole country in one year. Multiplying this by 14, the result is 13,127,632 cases in the whole country in fourteen years, the life of the said patent. At only one cent, patent fee per case, the value of said discovery would be shown to be one million three hundred and twelve thousand dollars.

Your said applicant further represents that another 100 mode of estimating the said ascertained value of said discovery is as follows—the same being based upon actual sales of licenses under said patent heretofore effected by said applicant :

In the year 1846, your said applicant sold to one Doctor Fisk, a license, extending for five years from its date, to use said discovery in Essex County, in said State of Massachusetts, for the sum of eight hundred and fifty dollars in cash. That the area comprised under said license contained a normalitien of one hundred thereand

- 101 lieense contained a population of one hundred thousand. Assuming, therefore, that said lieense would have been proportionally valuable for the residue of fourteen years, it would have been worth two thousand three hundred and eighty dollars. At the same rate, lieenses for the entire state of Massachusetts aforesaid, containing a population of upwards of one million, would be worth twentythree thousand eight hundred dollars, and, for the whole United States, estimating the entire population thereof as 102 at least thirty-one millions at the present time, would be
- 102 at least thirty-one minions at the present time, would be worth the sum of seven hundred and thirty-seven thousand, eight hundred dollars, by actual and reliable computation as aforesaid.

Your said applicant further represents that at the present time, the value of said discovery is far better understood, and is regarded as far greater than it was at the time above referred to—to wit, the said year 1846, so that the said valuation thereof ought, in reality, to be 103 placed much higher than as above set forth.

Your said applicant further represents that in said account hereto annexed, he has included all the items of expenditure and of receipts by reason of said discovery and the introduction thereof into use, which it has been possible for him to recollect, with the exception of the matters hereinafter to be referred to, but that said applieant has never kept regular books of account, and is 104 therefore not now able to state said expenditure with entire accuracy, but he believes that the said account presents a substantially correct and faithful record of said expense. But he represents that he verily believes that no items whatever are omitted from his rcceipts by reason of said discovery, as stated in said account, but that said portion thereof is in excess rather than in deficiency of the actual amount of his said rceeipts. He further represents that in said account he 105 has made no mention of the value to be assigned to his own time spent about said discovery, during fourteen years last past, but referring to the fact that, as will appear from the testimony hereafter to be filed upon this application, the practice of said applicant, as a surgeon dentist, at the time he commenced devoting himself wholly to said discovery, was worth the sum of ten thousand dollars per year, said applicant leaves it to the Commissioner of Patents to allow to said applicant for his 106 said time and services such sum as in his judgment may seem proper.

Your applicant further represents that he has made no entry in said account of the item of interest upon the sum of five thousand dollars necessarily borrowed by your said applicant, on or about the first day of January, 1848, and a further sum of equal amount so borrowed in

107 January, 1851, to enable him to prosecute his afore recited efforts in relation to said discovery, and which was all expended by him in respect thereto and is included in said account, the total of said interest on said two sums now amounting to nine thousand and ninety dollars, which your said applicant has ever since paid and is still paying on said sums respectively, and which your said applicant prays may be allowed to him as an 108 expenditure herein, if, in the judgment of the Commis-

sioner of Patents, the same shall be proper.

Your said applicant also further represents that from the first making of said discovery he has devoted almost his entire time thereto, and that during the time spent by him as aforesaid in attempting to induce Congress and the Executive to purchase said patent, to wit, a period of nearly eight years, his necessary hotel bills and traveling expenses at the city of Washington, and passing back and forth therefrom during said last mentioned time, were upon an average at least one thousand dollars per year, which he prays may be allowed him, if the Commissioner of Patents shall deem the same a proper charge. WM. T. G. MORTON.

STATE OF NEW YORK, CITY AND COUNTY OF NEW YORK, } ss:

WILLIAM T. G. MORTON being duly sworn, says,
that he has read the foregoing statement and account, and knows the contents thereof, that the same is true to his own knowledge, except as to the matters therein stated on information and belief, and as to those matters he believes it to be true.

WM. T. G. MORTON.

Sworn to before me this 4th day of October, 1860. [L. S.] JAMES MARRINER, Notary Public.
