To the Honorable F. R. Latchford,
Commissioner of Public Works.

Sir,—I have the honor to submit to you the following report for the year 1902, being my Seventh Annual Report on Street and Road Improvement in Ontario.

I have the honor to be,

Sir,

Your obedient servant,

A. W. CAMPBELL,
Commissioner of Highways.

Parliament Buildings,
Toronto, Ontario, 26th February, 1903.

SEVENTH ANNUAL REPORT

OF THE

COMMISSIONER OF HIGHWAYS

THE GOOD ROADS MOVEMENT IN ONTARIO.

The problem of transportation has never before received so great attention from the Canadian public as during the past year, and the present outlook is that this interest will be intensified rather than diminished for some years to come. In Ontario the southerly section is already a network of steam railways, yet more are being constructed or proposed. For northern Ontario, numerous railways are being projected. The Ontario Government, in keeping with this spirit, is building a Provincial railway from existing connections into the territory adjacent to Lake Temiskaming, now being rapidly occupied by the flow of population from the older section to the south. Electric radial railways are asserting their utility, and are steadily being extended from centres of population, along country highways into the surrounding farm districts.

Millions of dollars have been and are being expended by private corporations, the Dominion Government, the provinces and municipalities, upon railways, canals, harbors, lake and ocean steamship lines, for the purpose of transporting the products of Canada's almost illimitable extent of forest, field and mine. Without common country roads, this enormous outlay would be futile, and barren of results. Every ton that is carried by railway or steamer, has first to be transported over the country roads.

The value of land is created by making it accessible, and the more perfect the means of reaching it, the more readily will land attain its greatest value. The great drawback to settlement in new districts, the cause of hardships experienced by pioneers, is the lack of means of communica-

tion. Land excepted, the value of all material things, in part at least, is created by transferring them from their original position to another.

Despite the value of good roads, their improvement in Ontario has not kept pace with the construction of the greater trunk lines, the railways, and the highest development of the resources of the Province have been retarded thereby. While railways have, in some respects, altered the direction and character of traffic on the roads, the actual number of vehicles is greater than it ever was before, and this traffic must increase rather than diminish. The awakening, however, has come, and "good roads" has become the motto of municipal and provincial organizations.

The agitation for better roads has developed two features of the subject: One, to which reference has been made, the value which improved roads would be to the entire Province; the other, the great need for establishing better methods for directing the present outlay upon roads. It is not, at the present time, so much an increase in the amount spent on roads that is needed, but rather that the system of making the expenditure shall be rendered more efficient. A Select Committee of the British House of Commons, nearly a century ago, as the result of evidence regarding road management, said: "The most improved system is demonstrated to be the most economical; and even the first effectual repair of a bad road may be accomplished with little, if any, increase of expenditure, and its future preservation in good order will, under judicious management, be attended with considerable saving to the public."

What was then true of England, is true of Canada to-day. The money now being expended upon roads, and the work performed, is, in most cases, scattered in small amounts, irrespective of the greater need of certain roads, or parts of roads, and the amount of travel over them. A thin veneering of disconnected improvements is soon lost, and the roads return to their former condition. With the application of money to definite and substantial improvements the results are far different, and in a few years a marked improvement will be made in the average condition of the highways. It is not always necessary that the amount spent shall be large in order that it may be economically expended. The one principle underlies the expenditure of \$50 and of \$5,000, that whatever is done must be well done.

The origin of what is known as the good roads movement has been traced to various sources by various writers. The bicycle, which a few years ago was so popular for long-distance journeys, has been credited with much in this respect. Some suggest that the marked contrast between the roads of this country and those of the Motherland was an original incentive, and unquestionably many of those who have journeyed to England, or Scotland, or France, are among the staunchest of good roads advocates. Railway companies, manufacturers of roadmaking machinery, railway and other interests, have been pointed to as factors of the movement for better roads. Of late years automobile clubs have joined the ranks of those asking for better roads, and the proposed rural mail delivery promises further aid, as its success is understood to be wholly dependent upon good roads. These, however useful, have been, very largely, but surface features of the stronger undercurrent, and the great sustaining force of the movement has been the Canadian farmer, upon whom devolves the burden of country road construction, and who is most directly benefited by road improvement.

Good roads associations have been formed in almost every Province of the Dominion, those most active being in the Provinces of Ontario, Quebec, New Brunswick, Nova Scotia and British Columbia, while more or less consideration has been given the subject by all Provincial Governments. Ontario, however, is the leading Province in this movement, both as regards an active

public interest, organized in good roads associations, and in Governmental action.

The Ontario Good Roads Association.

The first definite step in connection with this movement was taken in 1894, when a Good Roads Association was organized for Ontario. A large number of delegates attended the meeting, representing county councils, township councils, farmers' institutes, dairymen's and other associations. A constitution and by-laws were framed, and a careful campaign was launched. This was the parent association that fought the early battles for road reform.

Realizing the importance of good country roads as a factor in transportation, and recognizing their value to the farming community, the Ontario Government in 1896 created the office of Provincial Highway Commissioner, now a branch of the Department of Public Works. With an annual expenditure on road construction, aggregating three and one-half million dollars, being made by municipalities of the Province, it was apparent that there was much need for skilled direction of this large outlay, if only to prevent waste.

By means of literature on the subject, township councillors and others having supervision of road-building throughout the Province, have been instructed as to the best means to adopt in obtaining economical and permanent results. Public meetings have been held in a large number of townships, addressed by the Commissioner of Highways, at which roadmaking in all its branches has been discussed. These meetings, with rare exceptions, have been largely attended, and a strong interest in road improvement has been aroused, which, directly and indirectly, is turned to practical account on the roads of the districts thus visited and in the system of road management. Throughout the Province there has been a general improvement as regards methods of draining roads, grading them, applying gravel or stone, construction of culverts and bridges, and the roadmaking implements used.

To the end of 1901 there were seventy-three townships which had abolished or commuted statute labor, in whole or in part, and had adopted improved methods. This has been increased, by the end of 1902, to one hundred and twenty, and reports indicate that a large number of townships will make the change in the near future. Of these townships, ten have wholly abolished the system, and, for road purposes, collect a rate on the township assessment. Eighty-two commute all statute labor at a rate per day, and the twenty-seven remaining townships have partially commuted.

Changes in settled methods have at all times been opposed, particularly in the introduction of new machinery or new systems which affect or reduce labor. All familiar with these matters must appreciate the fact that it takes a considerable time to make a distinct change in any part of our municipal system. When we consider that the existing methods of road-making in this country have held for a century, it is apparent that the point of greatest difficulty in road reform has been passed.

To bring about these changes, there has not been any special effort concentrated upon individual townships or sets of townships. The advocacy of road reform has been general, and the awakening is general. A few years ago a change in a single township was regarded as a good omen. To-day townships are not changing singly but in groups. The campaign has been general, and the results are now making themselves apparent in a corresponding manner.

A discussion of new methods of road management is, to-day, in all districts, a vastly different matter from what it was when the office of the Commissioner of Highways was first created by the Ontario Government. Any reference to the defects of the statute labor system was then very apt to arouse much opposition. A very different feeling now exists. The people have learned that the advocacy of better methods of road control is not being made with an unfriendly spirit towards statute labor. On the contrary, the good that it has done must, in all honesty, be recognized and applauded. The greatest enemy to the statute labor system is, to-day, the man who insists that it be asked to do work for which it was not intended.

For pioneer conditions, statute labor is all that could be wished. But Ontario has outgrown that, and if the Province is to make the progress which every patriotic citizen must earnestly desire, the highways of the country, the chief arteries of agricultural and commercial development, must not be neglected in any degree. To this end it becomes a duty of all to see that the best possible use is made of the available means of maintaining the roads. No true friend of the statute labor system, however kindly he may think of its past results, can risk its reputation by prolonging it into present and future conditions for which it is not fitted. The truest friend of the system is he who welcomes every opportunity of making reforms such as tend to a well adjusted balance of economy and good roads.

The new method of doing road work, of making and maintaining roads, and the new system of management, is no longer an experiment. Township after township has made the change, and wherever it has been given a fair trial in a business-like way the results have been a success beyond expectation. The universal testimony from townships where statute labor has been removed is that the roads improve much more rapidly than in surrounding municipalities where the old system is retained. In some cases it is affirmed that one year of the new methods has been worth five years of the old system in actual improvement to the roads.

The Eastern Ontario Good Roads Association.

In 1901 a second road organization was formed, known as the Eastern Ontario Good Roads Association. This association in the two years of its existence has been exceedingly active, and has achieved excellent results. Its chief work has been in connection with its "good roads train," by means of which short sample pieces of road have been constructed in each of eight eastern counties. Manufacturers of roadmaking machinery supplied, free of cost, an outfit consisting of a rock crusher, a steam roller, a grader, wagons, minor implements and expert workmen. Railway companies transported this outfit without charge. County councils each contributed \$100 toward the work, and the township municipalities in which the work was done supplied stone on the ground, common labor and teams. In this way the practical demonstration to the people of the eastern counties of what machinery will do, how it should be operated, and how good roads should be made, was a marked success.

Altogether eleven stretches of road were operated on. These were situated as follows: Leeds County, a short stretch some seven miles north of the Town of Gananoque, a second in the Town of Gananoque, and a half-mile stretch near the Village of Lansdowne; in Dundas County, a road leading from the north into the Village of Ironoquois; in Glengarry County, a road leading from the north into the Village of Alexandria; in Prescott County, a road running from Plantaganet station to Plantaganet Village; in Carleton County, a road a mile and a half northwest of the Village of Carp; in

Renfrew County, a road running from the Village of Egansville to the Canada Atlantic Railway station, and a road leading into the Town of Pembroke from the east; in Lanark County, a road about two miles out from the Town of Almonte; in Grenville County, a road running from the Village of Kemptville to the C.P.R. station at the junction.

Reports respecting these roads show that they have proven a revelation to the people of the districts in which they are located. In every case they were pieces of exceptional difficulty to construct, the councils selecting the worst sections of the road to be found, to make the test as conclusive as

MODEL ROAD NEAR ALEXANDRIA.

possibly, the cost averaging about \$850 per mile. The conditions included all kinds, low swamp roads, rocky roads, rough, hilly roads, clay roads, but all are demonstrating the meaning of durability and permanency as far as these are practical under existing circumstances in Ontario. A feature of this work was the construction of concrete culverts, which have since been adopted exclusively in place of timber by a number of the municipalities

The Western Ontario Good Roads Association.

In September last, an association for Western Ontario was formed, the meeting for organization being held in Toronto. Composed principally of progressive municipal councillors, much may be expected of it in the west. The constitution and by-laws adopted were the following:

1. This association shall be called the Western Ontario Good Roads Association.
2. The objects of the association are as follows:
 - (a) To bring the question of good roads up for discussion in every way possible throughout the various municipalities of Western Ontario.
 - (b) To organize and hold meetings at central points in the counties of Ontario west of Kingston, at which the various county and municipal representatives will be able to meet, discuss and form intelligent decisions on questions pertaining to the improved construction and management of roads.
 - (c) To assist in every way possible in having the statute labor question discussed and considered before the ratepayers, with the object of having it

finally commuted or abolished, and a more systematic and permanent system of road management adopted.

(d) To hold an annual large central convention at some point in Western Ontario.

(e) To assist in securing and disseminating information pertaining to the construction of permanent roads.

Officers.

The officers of the Association shall consist of a president, to be elected at the annual meeting; the wardens of counties in the territory of this Association for the time being shall be vice-presidents.

The Chairman of the Roads and Bridges Committee in each county are to act as executive officers of the Association.

There shall be annually elected by the Association a secretary and a treasurer in one person.

Membership Fees.

The funds for carrying on this Association shall be raised by donations from councils of the various counties within the jurisdiction of the Association.

- (a) Such grants as may be made by the Government of Ontario.
- (b) Private subscriptions.
- (c) Such membership fees as may be directed by the Association.

Meetings of the Association.

An annual meeting of the Association shall be held at such time and place as may be selected at the preceding meeting of the Association.

Membership.

The president, vice-presidents and members of the municipal councils, persons appointed by county councils, and such other persons as may be elected members and that subscribe to the constitution, providing that no county shall have more delegates than two for each township.

Road Legislation.

The most important development of the good roads movement in Ontario has been the appropriation of one million dollars by the Legislature to aid in the improvement of country roads. The motive for this step has very largely been to encourage county councillors to assume the management of the most heavily travelled roads in each county, thereby forming them into one class, in the construction and maintenance of which the most efficient superintendence, plans, methods and machinery can be employed. One-third of the cost of constructing or reconstructing the roads assumed under a county system will be paid by the Provincial Government, and the Act is so framed as to give county councils the first opportunity to accept this aid. Should any counties fail in this, a proper proportion will be given to townships fulfilling certain prescribed conditions. A sufficient period has not yet elapsed to permit an estimate of the extent to which the Act will perform its mission, but at the present time county councils are everywhere interesting themselves in the matter.

Just as changes with respect to township roadmaking and management have been gradual but universal, so the results of education with respect to county roads may be expected to be general but progressive, and the adop-

tion of county systems will be brought about with increasing rapidity. The seed sown in the early days of the movement is but now maturing, and the time of the harvest has come. The forces at work on behalf of improved roads are many, and the means of bettering the roads are various, but the great object to be attained at the present time is good management, in order that all the energy available may be utilized to the best advantage.

COUNTY ROADS.

The appropriation of one million dollars to aid in the improvement of public highways, by the Provincial Government, has already served a most useful purpose in arousing interest in behalf of better roads.

The aim of the Act is not to oblige the building of an expensive system of complete roads, but to secure uniform and systematic work, to employ and properly operate modern and economical implements, to provide careful, constant and methodical supervision and maintenance; to provide object lessons in the care and treatment of roads, and set examples for those having charge of the remainder.

The measure is not one that demands a large expenditure from the municipalities acting under it, but it is designed to do the greatest amount of good by aiding the counties and townships to help themselves. All the expenditure placed on roads will be spent in the county, and thus returned, in a great measure, to those who contributed it in the first place, together with the Provincial grant.

This Legislative grant is for country road construction only, and is a means of requiring the urban municipalities to aid in the maintenance of the common highways, from which they derive a great benefit, without, heretofore, sharing in the cost. As an illustration, the City of Toronto, containing about one-tenth of the population and wealth of the Province, would ordinarily be entitled to one-tenth of the \$1,000,000, or \$100,000. None of this grant, however, is spent within the limits of Toronto, but all is spent on the roads of rural or township municipalities.

By-laws under the Highway Improvement Act have passed all stages in Wentworth, Simcoe and Lanark; the Wentworth by-law including the purchase of all toll roads within the county. Hastings and Wellington already have systems of county roads which they propose to bring under the Act. Action towards systems of county roads has also been taken in the Counties of Carleton, Elgin, Frontenac, Prince Edward, Lennox and Addington, Huron, Middlesex, Victoria, Essex, and Brant.

In Simcoe, one of the largest counties of the Province, the by-law provides for establishing a system of 350 miles of leading roads. This, having failed to receive the assent of over two-thirds of the township councils, as required by the Act, was submitted to a vote of the ratepayers and carried by 1,457 majority. The Wentworth by-law, providing for the purchase of 38 miles of toll roads, to be included in a county system comprising 100 miles in all, was also submitted to a vote of the ratepayers and carried by 956 majority. The Lanark by-law provides for a system of 90 miles, and an expenditure of \$100,000; and 300 miles are proposed for Carleton, involving an outlay of \$300,000.

The First Step.

The preliminary step taken by county councils has been to hold a conference of all municipal councillors, or representatives of councils within the county. At these conferences, the majority of which have been at-

tended by the Commissioner of Highways, the meaning and intention of the Act has been discussed, and to some extent a plan of roads considered.

It then rests with the county council to pass a by-law definitely laying down a system of county roads. A copy of this is sent to each township council within the county, and they have three months in which to consider it. Each council will, within the three months, report to the county council their acceptance of the plan, their rejection of it as a whole, or such alterations in the system of roads as would meet their approval. If a township wishes roads taken other than those proposed by the county, in case of failure to agree, the matter will be submitted to arbitration. If more than a third of the municipalities oppose the by-law as a whole, the question must be submitted to a vote of the people. If the by-law meets the acceptance

MODEL ROAD NEAR ALMONTE.

of the municipal councils, or two thirds of them, the county council may, at the end of three months, proceed to perfect their plans for the improvement of the roads.

The Alternative Plan.

Provision is made that county councils shall have until January 1st, 1904, in which to take advantage of the Act. Failing to do so, township councils which fulfill the necessary conditions, may then take steps to obtain their proportion of the Provincial appropriation. The requirements for townships will be, as nearly as practicable, the same as for counties. That is, a certain mileage of roads to be improved must be designated, and the work done will be in accordance with suitable regulations. The work will be confined to leading roads, not greater than would be undertaken by a county system, in order that the improvement may be of a durable character. The township will be entitled to one-third of the cost of the work, up to, but not exceeding, its share of the appropriation.

Reasons for a County System.

It is objected to township control that the township council, having charge of all the other roads in the township, as well as these special roads, will be influenced, after the first expenditure, to make future municipal expenditures on other roads, and those which have received Government aid will be neglected. While other roads in a township remained unimproved, many councils, after once improving a road under the Act, owing to local jealousies, would find it impossible to make a sufficient yearly expenditure to properly maintain it, and under such circumstances the first outlay would not accomplish its chief mission.

County councils, on the other hand, would have charge of these few leading roads only, all of the one class, so that the most economical but efficient system of maintenance could be adopted with respect to them.

Under county control a properly organized corps of men can be employed to build and repair the roads. As at other employments, they become experienced and do better work, and in the matter of repairs are ready to make them as soon as signs of wear appear.

In a county plan an experienced and properly qualified man could be employed to have constant supervision of the work, whereas under township control each municipality cannot afford to pay the salary of such a man. Under very good system it is necessary to have responsibility centralized and defined, not divided and easily shifted from one to another, as it now is under statute labor methods.

Under county control, modern machinery, too expensive for individual townships can be purchased and handled to advantage, an experienced operator can be employed for each implement, and a better and more uniform class of work will be secured.

A greater cost to the individual citizen need not be feared, as no greater road mileage is to be maintained. The effect of a county system is merely to group the most heavily travelled roads under one management, where they can be most economically maintained.

By a county plan, uniformity of work and system will be immediately secured throughout the various municipalities. Under township control it is by no means likely that the various townships would act in unison, at best there must be delay, while here and there a township will not take advantage of the Act.

The Towns Assist Under the County System.

One chief object in recommending that certain roads be cared for by the county council is to obtain from the towns and villages in the county a fair share of assistance in keeping up the leading roads. There can be no question as to the justice of requiring the towns and villages to contribute towards the cost of this work. Towns and villages are benefited by the improvement of roads, and the county should not hesitate to assess them. This can be done through the county council only. It is not the intention that any of the money should be spent in the towns, but that all should be spent in the townships. Where the county has to raise two-thirds of the total amount, such a percentage of this will be contributed by the towns as to make their contribution, added to the Government grant, equal to about one-half the cost of the work. Where the townships, instead of the county, take advantage of the Act, towns and villages cannot contribute in this way. Under a county system, a portion of the cost of road-building is levied, in the county rate, against the towns and villages within the municipality for road purposes. At the present time, under township systems, the farmers bear the entire cost.

The total assessment of the townships of the Province is \$458,811,926, and of the towns and villages, \$129,771,310, the latter being 22 per cent. of the combined assessment of towns, villages and townships. Thus, under the average county system, the towns and villages would pay 22 per cent. of the amount raised by municipalities for construction and maintenance; whereas under the township system the township cannot obtain this assistance.

Under the county system, for every \$1.50 spent on constructing the roads, the Province pays 50 cents, the townships 78 cents, the towns and villages 22 cents. Where the townships individually take advantage of the Act, the Province pays 50 cents and the townships \$1.00.

While there may be some feeling adverse to townships parting with the control of any of their roads, it is, nevertheless, impossible, under a township organization, in the case of heavily-travelled roads, to levy the necessary taxation equitably, or employ the most economical and at the same time serviceable system. The trend of opinion has turned towards collecting the most important roads of each county, placing them under the management of the county council. It has been shown that, by such means, roadmaking can be placed on a more business-like basis, and consequently greater efficiency is secured. It provides for a more equitable system of levying the cost, for a better use of modern machinery, and for a higher grade of oversight and workmanship. At the present time township councils are unable to maintain the roads by statute labor, and are in consequence compelled to make annual appropriations of money from the general tax. This money is, in the main, spent on the roads which would comprise a county system, but owing to the contracted character of the township system, township councils cannot expect to apply this expenditure to the greatest advantage.

Distribution of Expenditure.

The distribution of the expenditure, where the work is undertaken by a county council, is not defined by the Act, but is left almost wholly to the judgment of the county council. It is not required that the expenditure shall be in proportion to the assessment of the various townships, to their area, nor road mileage, but this may be determined if so desired, by the county council, in framing their by-law.

The Act does suggest, however, that the mileage of roads to be maintained by the county shall be, as far as practicable, distributed among the various townships, in proportion to their area, in order that all the townships may be benefited.

The actual improvements may be placed wherever they will be most serviceable and effective in bettering the condition of the roads. It is quite possible to conceive of a case in which the greatest benefit to one township will arise in making almost the whole expenditure in an adjoining township. Take as an example a township where road material is plentiful and where liberal use of it has been made on the roads, bringing them all to a good and serviceable condition. If the people of this township, in order to reach their market town, have to pass through an adjoining township in which road material is scarce, and where, through the character of the soil and difficulty of drainage, roadmaking is difficult and expensive, and the roads bad in consequence, it is apparent that the greatest benefit to the first township will arise from building and maintaining a good road through the second township, leading to the common market. Having in view such a condition as this, of which instances are common throughout the Province, the reason for leaving the distribution of the expenditure to be governed by local circumstances will be apparent.

Amount of Expenditure and Grant.

The amount of money a council shall spend on the roads is not limited by the Act, except that, in case money is raised by the issue of debentures, these debentures shall not exceed two per cent. of the equalized assessment of the county.

The only restriction is with regard to the amount to be received as Government grant, this to be one-third of the cost of the work, up to, but not exceeding the county's proportion of \$1,000,000.

This money, payable by the Government, may be drawn as the work progresses, and the rapidity with which it is drawn will depend upon the expenditure the county decides to make. It may be drawn in one year if a sufficient amount of work is done by the county. Or the work may be extended over several years, and the proper proportion of the money due under the Act will be paid from year to year as earned.

The roads to be assumed must not be confused with any previous county systems which have existed, many of these having become of secondary importance owing to the building of railways and the growth of new local markets. Only those roads should be selected which can make good their claim to being still the roads of greatest travel.

HAULING AND SPREADING BROKEN STONE IN THE RIGHT WAY.

This is a matter which county councils, with the advice of township councils, will undoubtedly view from a county standpoint, and by them the best possible selection will be made, so that it is not a matter upon which the Act places any restriction.

The roads to be assumed under a county system, should, however, be those which are most used by the public, and which will best serve the requirements of the people in each section. These roads may consist of one road in each township, or several roads; or part of one road, or parts of several roads, may be selected. As a general thing, they should consist of what are now the most heavily travelled roads in each township, leading to the market town or village, of the district.

The roads should preferably connect, so as to form a continuous system-- but it is not necessary that they should do so. In some counties the trend of travel is all in one direction, leading to one market centre. In other counties the trend of travel is divided into a number of distinct sections, each township, it may be, having one or two market centres. Nor is the trend of travel marked by county or township boundaries, but divides according to local conditions, the most important factor in determining the line of travel, being, as a rule, the nearest or best market. These circumstances must be all taken into consideration in framing a county system of roads, and the aim should not be so much a connected system as a most useful system.

Statute Labor.

Whether the county or township council proceeds under the Act, the statute labor assessed against the lands fronting on the improved roads may be commuted by the township council in which the lands are situated, if the council so desires. The property adjacent to the improved roads will undoubtedly derive a direct benefit which should render it liable to such a measure. The commutation money will belong to the township, to be used as the council may direct. A natural step would be to use it in improving other roads in the township: while some townships propose using it in paying the rate levied against the township for county roads.

Character of Improvement.

A fixed standard of road to be constructed is not defined by the Act, nor will it be controlled by the Department of Public Works. Expensive work is not desired. The nature of improvement undertaken by any county must necessarily depend on many local circumstances--the work already done on the roads, the road material available, the extent of traffic, and similar details.

For example, in going over a road which falls within a county scheme, the first mile, owing to its having already been graded, gravelled, and drained, may only require patching and simple repairs to put it in good condition, at a cost of not more than \$100; whereas the next mile, unimproved and neglected, through swampy land, might cost \$500 to drain, grade and gravel or stone. And the next mile, being at the outer end of such road, on favorable soil, and receiving but little traffic, might be made equally good and serviceable by proper draining, grading and a light coat of gravel, at a cost of a couple of hundred dollars.

It will be necessary for the county council to submit a report showing what is proposed, but so long as it embodies the elementary principles, proper drainage, crowning, and as far as possible, uniform grading, and a systematic application of material, it will meet requirements.

Special provision is not being made for Government inspection. The certificate of the county commissioner or engineer, as to the completion of the work, the manner of doing the work, and expenditure of money, will be accepted. It is desired that the services of the Public Works Department in this respect will be advisory rather than that of inspection. Any consultation or assistance of this nature rendered by the Department will be without expense to the municipalities.

The regulations referred to in section 6 of the Act, are therefore very general and are the following:

All road improvement under the provisions of I. Edward VII., Chapter 32, is to be done by a capable commissioner appointed by the council.

A plan of the roads to be improved, a report as to their present condition, and approximate amount of travel over them, specifications showing what work of improvement is to be made, together with an estimate of the cost, shall be prepared by the said commissioner, these to be presented to the Department of Public Works for approval. The improvements must be of a character suited to the requirements of the locality and may consist of : (a) Re-surfacing and substantial repairs on old gravel or stone roads; (b) Draining and grading the roads : (c) Draining, grading and gravelling the roads; (d) Draining, grading and metalling the roads with broken stone. These plans and specifications shall, as far as practicable, provide as follows :

1. The steepness of hills should not exceed a rise of one foot in twelve.
2. The roadway graded for traffic should be in the centre of the road allowance and should have a uniform width of 24 feet between the inside edges of the open ditches. The width of roadway on cuts and fills should not be less than eighteen feet.
3. Side slopes in cuts and fills should be one and one half feet horizontal to one foot vertical.
4. The crown given the newly finished roadway should be uniform and have a rise of one inch to the foot from the edge of the ditch to the centre of the road.
5. When gravel or broken stone is used it should be placed to a width and depth sufficient to form a serviceable road, having due regard to the character and extent of the traffic.
6. The gravel or broken stone used on the road should preferably be obtained in the vicinity of the road, but must be of good quality.
7. As a rule the gravel or stone should not be of a less width than eight feet, nor of a less depth in the centre than nine inches.
8. Where roads have heretofore had gravel or broken stone placed on them, they should be repaired by cutting off shoulders, shaping with a grader, and adding a sufficient amount of gravel or broken stone, to fill ruts, depressions, properly crown and make a road sufficiently strong to accommodate the travel.
9. The gravel or broken stone placed on any road should be thoroughly rolled; otherwise the grade should be maintained by careful raking or scraping until compacted by traffic.
10. An open drain should be made at each side of the road, and given a sufficient fall to a free outlet.
11. Durable sluices and culverts should be built where necessary.
12. Tile underdrains should be laid, so as to carry away excessive sub-soil water, lower the water-line, and secure a dry roadbed, wherever a moist, damp, or springy condition of the sub-soil exists.
13. Modern machinery and implements should be used as far as possible to secure the greatest results from the expenditure, and to provide the best work.
14. Where, owing to special local conditions, any departure from the foregoing regulations may be desired, upon application of the council, an examination of the road or roads in question will be made, free of charge, by an engineer of the Public Works Department, for the purpose of deciding upon a suitable plan.

ACT FOR THE IMPROVEMENT OF PUBLIC HIGHWAYS.

The complete Act for the Improvement of Public Highways, 1 Edward VII., chap. 32, which received the assent of the Legislature, April 15th, 1901, is as follows :

His Majesty, by and with the advice and consent of the Legislative Assembly of the Province of Ontario, enacts as follows :

\$1,000,000 appropriate for road improvements.

1. The sum of \$1,000,000 is hereby set apart to be paid out of the Consolidated Revenue Fund of the Province to aid in the improvement of public highways, subject to the terms and conditions hereinafter set forth.

Townships to report acceptance or rejection of by-law.

2. (1) The highways to be improved in any county may, before the 1st day of January, 1904, be designated by by-law of the county council, and a copy of such by-law shall be transmitted forthwith to the clerks of the townships of such county.

By-law designating highways to be improved.

(2) The municipal councils of the townships shall within three months of the receipt of such notice from the clerk of the county council, take into consideration the highways so designated in said by-law, and shall report their acceptance or rejection of the same to the clerk of the county council.

Arbitration where one-third of the townships are adverse.

(3) On the receipt of such reports by the clerk of the county council from the clerks of the township councils in the county, if it should appear that one-third of the township councils are adverse to the highways designated by the county council as county highways, then the roads within such townships as reported adversely, which are to form part of the county highway system of such township shall be determined by arbitration as provided in the Municipal Act.

Rev. Stat. c. 223.

(4) Where it appears that more than one-third of the township councils disapprove of the system of highways designated in the by-law submitted by the county council, the county council shall then submit to the ratepayers of the county qualified to vote on money by-laws the question, "Are you in favor of a county road system?" If a majority of the votes cast is in favor of a county road system, the roads to be designated and assumed within any township, the council of which disapproved of the roads designated by the county council, shall be determined by arbitration as provided in the Municipal Act.

Submitting question to ratepayers.

Submitting by-law for assuming roads.

3. Before the final passing of a by-law by a county council designating and assuming roads as provided in sub-sections (1), (2) and (3) of the preceding section, the county council may submit the same for the approval of a majority of the ratepayers of the county qualified to vote on money by-laws.

When local municipalities may adopt road scheme.

4. In case the by-law or question so submitted fails to receive the assent of a majority of the ratepayers of the whole county so voting or the county council neglects to take action as provided in section 2, then the council of any local municipality in the county may, on or before the first of January, 1904, pass a by-law designating the roads within such local municipality to be improved, but no by-law for the improvement of roads in any municipality shall take effect until such by-law is approved by a majority of the ratepayers of such municipality in the manner provided by the Municipal Act with respect to by-laws for the creation of debts.

Application of grant to purchase of toll roads.

5. Any municipality may apply the whole or part of the moneys to which it may be entitled under this Act towards paying any expenses that may be incurred for the purchase of toll roads within such municipality, or for freeing the same from tolls. Such toll roads as are purchased shall be included in the roads to be designated and assumed or improved in accordance with the provisions of this Act.

Regulation and inspection.

6. Any highway, in order to come under the provisions of this Act as to aid, shall be constructed or repaired according to the regulations of the Public Works Department with respect to highways.

Mileage assumed to be proportioned to assessed area.

7. The road mileage to be designated and assumed in accordance with this Act shall, as nearly as practicable, be in proportion to the assessed area of each township and county, provided always that no township or county shall receive out of the said sum of \$1,000,000 more than the sum to which it is entitled under this Act.

Grant of one-third of cost of improvement.

8. On the completion of any work of road improvement under this Act the council of the municipality under which such work was carried on shall submit to the Public Works Department a statement setting forth the cost of such work, such statement to be certified by a competent engineer, who shall further certify that the regulations of the Public Works Department

have been complied with, and on the receipt of said statement by the Provincial Treasurer, certified and approved by the proper officer of the Public Works Department, the municipality shall be entitled to receive out of the moneys hereby set apart for public highways an amount equal to one-third of the cost of the work, but not to exceed the proportion of the appropriation to which such municipality is entitled.

9. The municipal council of any township or county taking advantage of this Act may raise by debentures, payable in thirty years, as provided by the Municipal Act, such sums of money as may be necessary to meet any expenditure on highways under this Act, but in no case shall the debentures issued under this Act exceed two per cent. of the equalized assessment of the county. Issuing debentures for expenditure on highways.

10. The statute labor, for which all lands fronting on roads constructed or repaired under this Act may from year to year be liable, may be commuted and may be applied towards the improvement of the other highways of the municipality as may be determined by the township councils concerned. Statute labor on improved roads to be commuted.

11. In the case of any township receiving grants from the consolidated revenues of the Province for colonization roads, the amount of such colonization grants shall be deducted from any sum of money to which such township is entitled under this Act. Amount of colonization road grant to be deducted.

12. Where any township has been in receipt of grants for colonization roads out of the consolidated revenue fund, for the five years previous to the date of this Act, the assessed area of such township shall be deducted from the area of the county in which such township is situated, in determining the sum to which the county is entitled under this Act. Grants made before passing of Act to be deducted.

THE COUNTY ROADS OF HASTINGS.

There is some misapprehension as to the meaning of a county road system as suggested in connection with road reform in Ontario. A county road system would not disturb existing lines of travel. It would include the market roads, or a portion of them, now subjected to heavy travel, and does not contemplate a resurrection of old county systems which traffic has largely abandoned. It means that, under a county rate, supplemented by a Provincial

appropriation, the construction of these main roads would not fall upon the townships alone, but would be borne, as is only just, by all tax payers of the Province who are benefited by good roads, whether they live in city, town or township. The county roads of Hastings are frequently referred to as a practical example of a county road system, and the history of these roads is instructive, they having been maintained by the county for about forty years.

When the movement for good roads commenced in Hastings there were many difficulties to be overcome. The settled portion extended about fifty miles back from the Bay of Quinte. From Belleville roads radiated through-

out the county, but they are said to have been equal to the worst kind of mud roads. After considerable agitation, a county system comprising 100 miles was established, and to meet the cost, toll gates were placed on these, but they became very unpopular and were in a few years removed. The county roads have been systematically extended as they were required, to meet the needs of a growing population. One of the first additions to the original 100 miles, was occasioned by the purchase of thirty miles of toll roads owned by companies.

Several systems of maintaining these roads were tested. The council first tried contracting for material, broken stone and screened gravel, delivered and spread under the direction of a county road superintendent, or foreman appointed by him from time to time. This was found expensive and unsatisfactory. The councillors did not come in touch with the work, and the roads began to run down.

The next system tried was to divide the entire system into sections of from five to twenty miles, and the work of maintaining each section was given out by contract, these contracts specifying how gravelling and ditching should be done and how culverts should be built or repaired. This method, however, was found still more unsatisfactory than the first. Conflicts were constantly occurring between the county road superintendent and the contractors, and there were continual appeals to the council.

The next system tried, however, proved successful, and is the one which has been employed for over a quarter of a century. A road committee of from five to seven members is appointed at the beginning of each year by the county council, and this committee elects a chairman. The county has a permanent superintendent of roads, whose duty it is to meet, report to, and consult with the road committee from time to time, as may be necessary. The superintendent organizes gangs of five to seven men, each under a foreman, for the purpose of constructing roads and keeping them in repair.

Each foreman reports to the superintendent, the superintendent reports to the road committee, and the committee reports to the council. These foremen and men are appointed by the committee, with the advice of the superintendent. The men are given continuous employment for most of the year, dependent on their rendering good service.

Each gang is moved from point to point where work may be needed, and work is done where it is needed the most, with no inducement to slight it. At the same time every ratepayer becomes a road supervisor, for if he finds a man or a foreman shirking his work, he at once notifies the council for the division, and the matter is attended to without delay.

Under this system the men become skilled in their work and the foremen become expert. The superintendent knows all details. The members of the committee become conversant with the progress and character of the work done, and with the work needed to be done. Through the committee, the council becomes equally well informed.

Under this system the good roads of Hastings have been extended from year to year. Of first-class gravel roads, under the county council, there are now over 400 miles, while the influence of these roads on township road improvement has been very great. Every neighborhood has its cheese and butter factory, and good roads are constructed from the main lines to these by the townships. The townships have been relieved of the cost of caring for the main lines of travel, and are in many ways encouraged to perfect their own roads. As soon as the snow is off the ground in this county, the means of communication are nearly as good as in midsummer.

The cost of maintaining these roads is about \$12,000 annually or \$20 a mile. Bridges are very numerous on the county roads, there being about one

hundred, and \$3,000 is raised annually for maintaining these, and for extending the county road system. The county has a full outfit of roadmaking machinery including a grader, a rock crusher, a traction engine, and roller, these alone enabling the county to do much more finished and economical work than can individual townships.

The people of Hastings have every faith in their system of road management, and have no thought of giving up their county roads. These good roads, and the increase of comfort and convenience they have produced, have largely advanced the value of property all over the county. The difference between five and ten miles to a market has become a matter of little consequence. The agent of the Canada Company states that he values land at the rear end of the county at double the price of lands almost adjoining in the Counties of Addington and Peterborough.

THE TOLL ROADS EXPROPRIATION ACT.

Toll roads now exist in comparatively few of the forty counties of Ontario, and the present indications are that these will, in a short time, vanish. The County of Wentworth was the first to take steps, and under the recent Toll Roads Expropriation Act, it has done away with practically all toll roads within that county, has established a system of county roads, and has received its portion of the Provincial grant. Other counties in which steps are being taken towards the abolition of tolls are Carleton, Elgin, Frontenac, Middlesex, Lanark, Oxford, and Brant. The County of Norfolk has a short section of toll roads, while they remain also in Essex, and Leeds.

The roads owned, as a general thing, by private companies, are roads subjected to much travel, and usually accommodate the people of more than one township. For this reason, it is generally difficult to have these roads freed by mutual consent. Townships through which the roads do not pass are averse to being taxed to pay for what they consider a road in another township, although in practice, through the payment of tolls, many of them are doing so.

Again, a large section of the people in the township in which a toll road is located may be averse to assuming the responsibility of keeping up that road within their limits when, as they contend, it is being largely maintained by tolls collected from outsiders; that as these roads are not used exclusively by the township in which they are located, it is hardly fair to impose upon them the expense of keeping up these main arteries for the accommodation of heavy and extensive traffic collected from elsewhere.

The weight of this theory, however, is much less than is generally supposed, as the cost of maintaining a toll gate and keeper, and the dividends paid to owners of the road, usually amount to considerable, so that a toll road, even for one township is apt to be an expensive matter.

The collecting of tolls for the purpose of maintaining the road at the expense of the users, may have some argument in its favor. The principle involved is that the users only are benefited, and that it matters not from whence the traveller comes, he must pay, whether he is from the township in which the road lies, an adjacent township, or another county.

That the users of the road are the only ones benefited is not the case, however, because every individual in the community is affected by the uses made, and the users of the road.

As a rule a distinction cannot be drawn between the user of the road and those whom he serves. But the maintaining of a road by tolls may in certain cases relieve municipalities from the injustice that they would suffer by obliging each township to maintain its own roads regardless of location.

conditions, or who the users may be. For these reasons, where roads have been freed of tolls, their condition, which is usually moderately good, has often been neglected and allowed to get out of repair. All these objections and difficulties may be overcome, a proper system of economically maintaining these roads in good condition, an equitable system for adjusting the cost of maintenance, can be established through the county council.

The many reasons, profitable to the ratepayers, that may be given in support of a county council's maintaining certain roads in every part of the county, are so convincing to the student of the question that one is surprised to find that there should be any hesitation in adopting the county system. Much is often sacrificed by considering these matters, not from the standpoint of the whole community, but from that of the individual township. The county, as a whole, has duties and responsibilities, such as the maintenance of large bridges on certain lines, and the maintenance of roads for joint use, while it is fair to rest the responsibility for minor roads upon the townships.

It should be more agreeable to place main roads in the care of a county council, a representative body of the ratepayers, than to leave them to the care and management of private corporations. There is no good reason why a certain few of the roads in a county should be controlled by private companies, and supported by tolls, while all the other roads are free. We could not think of passing roads generally into the hands of companies. All the

CRUSHING STONE NEAR ALMONTE.

roads should be free, and to allow a private company to place a bar across the highway is something that is permitted only because it affects so few. Roads should be free—tolls should be abolished. Main arteries should be maintained by the county council. To do this, little difficulty should be experienced. The Toll Roads Expropriation Act provides an easy method of fixing a fair valuation of the roads. It also provides for an equitable adjustment of the cost by assessing it against the whole county, if the whole county is interested, by confining the assessment to a section of the county, if only a section will be benefited, or by paying over to any townships not materially or only slightly benefited by the purchase of these roads, such a sum by way of bonus, as may be deemed a fair equivalent for the amount which such municipality or municipalities will be required to pay towards the purchase of the roads.

The Act appropriating one million dollars to aid in the improvement of highways provides that a county council may lay down a system of main

roads which will fairly serve every part of a county. This plan may comprise the toll roads and such other roads throughout the county as the county and the township councils may agree upon as being the roads that will best serve the requirements of traffic. The system does not require to be a connected one, nor must it be designed to lead the traffic in any fixed direction, but may be the particular road or roads in the township upon which the councils think the money should be spent to serve the best purpose. The Act does not attempt to define the roads, but leaves this entirely in the hands of the councils.

Under the Toll Roads Expropriation Act, the first step is for the council to procure a valuation of each road, and to submit an offer to the owners. If a price cannot be agreed upon, the council may then pass a by-law appointing an arbitrator, a copy of which is to be served on the toll roads company.

Having fixed a price for the roads by arbitration, the council can pass a by-law for raising the necessary amount by the issue of 30-year debentures. This by-law may or may not be submitted to the people.

In the case of townships which would not be benefited by the abolition of tolls, amounts may be agreed upon to be paid to each as compensation for the amount they will be assessed in the county rate. Or the arbitrators may determine whether or not the by-law should be sectional, only certain townships or parts of townships being assessed.

The council may collect tolls for a period of not more than ten years, the amount so received to be applied to the payment of the debentures.

THE WENTWORTH BY-LAW.

The two Acts (the Toll Road Expropriation Act and the Highway Improvement Act) may be united in one by-law, as was done in the County of Wentworth, where their by-law designates a system of county roads, including all the toll roads, and providing for the improvement of others. This by-law is as follows :

Whereas, the county council of the said county did, on the 5th day of August, 1902, read a first and second time their by-law designating certain toll roads therein mentioned as roads to be assumed or improved by the said council under the provisions of the said Act, and designating certain other roads in such by-law, mentioned as roads to be improved in the said county by the said council under the provisions of the said Act, and caused a copy of such by-law to be transmitted to the clerks of the eight several townships comprised within such county, such by-law being in the words and figures following :

By-law No. 476 of the County of Wentworth.

Whereas, the County Council of the County of Wentworth took proceedings under the provisions of the Toll Roads Expropriation Act, 1901, and amendments thereto, to ascertain in the case of each of the five several roads mentioned in the first column of Schedule One, hereto, the amount to be paid to the owners of such road in order that the tolls thereon might be abolished, and whereas in the case of the Waterdown and Port Flambore' road the sum of \$1,000 was agreed upon between the county council and the owners of the said road, and in the case of the other four roads the respective sums were determined by the award of Colin G. Snider, to whom, as sole arbitrator, the matters were referred and the amounts awarded by him, and

by whom payable, are as set out in the second, third and fourth columns of Schedule One.

And whereas, the said county council are desirous of obtaining its proportion of the \$1,000,000 set apart under the Act of the Province of Ontario, 1 Edward VII., chapter 32, and for the purpose of carrying out the purchase of the said toll roads mentioned in Schedule One, and also for improving other roads in the said county, and there are set out in the first column of Schedule Two, hereto, the other roads to be improved, and in the second column of said schedule the respective amounts to be expended thereon by the county council.

And whereas, the county council in their plan for abolishing the toll roads deem it fair to provide for the raising of the sum of \$6,550 and paying the same as follows :

To the Township of Beverly.....	\$2,100 00
To the Township of West Flamboro'.....	2,700 00
To the Town of Dundas.....	1,750 00

As a partial equivalent to those respective municipalities for the amounts that they respectively will be required to pay towards the purchase of the said toll roads, these being the amounts said municipalities paid for the Dundas and Waterloo and Sydenham Mountain roads.

It is hereby enacted by the Municipal Council of the County of Wentworth :

1. The said municipal council hath designated and doth hereby designate the several and respective toll roads mentioned in Schedule One, hereto, as roads to be assumed or improved by the county council under the provisions of the said Act, 1 Edward VII., chapter 32 (Ontario).

2. The said municipal council hath designated and doth hereby designate the several and respective roads mentioned in Schedule Two, hereto, as roads to be improved in the said county by the county council under the provisions of the said Act.

3. That a copy hereof be sent to the clerk of each of the township municipalities that go to compose the County of Wentworth, pursuant to the said Act.

Schedule 1.—Toll Roads, their prices and by whom payable.

Toll Roads.	Price.	Payable by County of Wentworth.	Payable by others.
Ancaster Toll Road	\$10,000	\$10,000.00	
Barton & Glanford Road, Mount Albion Branch	4,800	3,000.00	\$1,800 by City of Hamilton
Mount Hope Branch	17,200	15,000.00	\$2,200 by City of Hamilton
Barton and Stoney Creek Consolidated Road	24,000	24,000.00	
Hamilton and Nelson Road	14,000	10,104.34	\$3,895.66 by County of Halton
Waterdown and Port Flamboro Road	1,000	1,000.00	

Schedule 2.

Roads to be improved.	Estimated cost.
Long's to Hall's Corners, 7 3-4 miles.....	\$12,000
Waterdown to Flamboro' Centre, 2 1-4 miles.....	1,000
Town Line road, between East and West Flamboro', from terminus of county road to Freelon, 5 1-2 miles.....	1,000

Sydenham Mountain road, to line between 2nd and 3rd concessions West Flamboro, 2 miles.....	2,000
Dundas and Waterloo road, in West Flamboro, 3 1/4 miles.....	1,200
Dundas and Waterloo road, in Beverly, 12 miles.....	3,000
Governor's road, Copetown to Lynden, 4 1/2 miles.....	6,750
Lynden to Troy, 4 miles.....	4,000
Hall's Corners, eastward 2 1/2 miles.....	3,750
Town line, eastward from Elfrida, 2 1/2 miles.....	3,750
From Walker's Grove on Ancaster toll road southward, 5 miles..	7,500
Concession road between 8th and 9th concessions of Beverly, con- tinued through West Flamboro' to Town line between East and West Flamboro', 11 miles.....	2,400

And whereas, the municipal councils of the said townships have, with the exception of the Township of Beverly, reported to the clerk of the county council their acceptance of the said by-law, and the county council have determined, with the approval of the ratepayers of the county, to finally pass such by-law, and to authorize the issue of debentures to provide the means required for the several purposes in such by-law mentioned, and for that purpose it will be necessary to issue debentures to the amount of \$98,000, in addition to the sum which the county is, or will be, entitled under the said Act out of the Consolidated Revenue Fund of the Province of Ontario.

And whereas, the said sum of \$98,000 is the amount of debt intended to be created by this by-law and the debentures to be issued therefor are to be repayable in annual instalments during the period of thirty years from the issue thereof.

And whereas, the amount required to be raised annually by special rate for paying the said annual instalments and interest is the sum of \$5,496.60.

And whereas, the amount of the whole rateable property of the county, according to the last revised and equalized assessment roll thereof is \$14,236,115.

And whereas, the amount of the existing debenture debt of the said municipality is \$21,585.84, and no principal or interest in arrear.

It is hereby enacted by the Corporation of the County of Wentworth as a by-law thereof as follows :

1. The said corporation do hereby approve of and confirm the said by-law hereinbefore set out, and authorize and require the issue on or before 2nd day of July, 1903, of debentures of the said corporation to the amount of \$98,000, payable in thirty annual instalments from date of issue, and bearing interest at the rate of 3 3/4 per cent. per annum, for the purpose of making the payments herein recited, such debentures to be in annual sums of \$5,496.60 each, thus including in one debenture the amounts falling due in each year for principal and interest.

2. The warden and treasurer of the said county are hereby authorized and required to sign each of such debentures, and to cause the corporate seal to be affixed thereto.

3. During the currency of said debentures there shall be raised annually by special rate on all the rateable property in the said county the sum of \$5,496.60 for the purpose of paying the amount due in each of the said years for principal and interest in respect of the said debt.

4. This by-law shall take effect on the final passing thereof.

5. The votes of the electors of the said county shall be taken on this by-law at the following times and places, that is to say, on Wednesday, twenty-second day of October, 1902, commencing at the hour of nine o'clock

in the forenoon and continuing till five o'clock in the afternoon of the same day by the following Deputy Returning Officers :

.....
.....
.....

6. On Saturday, the 18th day of October, 1902, the warden of the said county shall attend at the office of the county clerk, in the Court House, in the City of Hamilton, at eleven o'clock in the forenoon, to appoint persons to attend at the various polling places aforesaid, and at the final summing up of the votes by the clerk on behalf of the persons interested in and promoting or opposing the passing of this by-law respectively.

7. The clerk of the council of the said county shall attend at his office in the said Court House at 11 o'clock in the forenoon on Saturday, the 25th day of October, 1902, to sum up the number of votes for and against the by-law.

Dated at Hamilton the — day of — A.D. 1902.

Take notice that the above is a true copy of a proposed by-law, which has been taken into consideration by the Council of the Corporation of the County of Wentworth, and which will be finally passed, in the event of the assent of the electors being obtained, after one month from the first publication thereof in the Dundas True Banner, the first publication thereof being on the 25th day of September, 1902, and that the polls will be held for taking the votes of the electors thereon, at the hour, day and places therein fixed.

Dated at Hamilton this 20th day of September, 1902.

J. W. JARDINE.

Clerk of the Council of the County of Wentworth.

STATUTE LABOR,

The inefficiency of statute labor is forcibly illustrated in an extract from a report of the Clerk of the Township of Tuckersmith (Huron County) :

“ We annually let contracts for laying on about 200 cords of gravel (this year 191 cords, at an average cost of \$1.52), which is under the direct supervision of the council. This is a great help to the roads, and is nearly always put on to good advantage.

“ We have 2,812 days statute labor, which this year laid down for us 3,676 loads. We showed the electors at nomination that if the above days were commuted at 75 cents per day, the proceeds (at same cost as our job work, \$1.52 per cord) would lay down 6,000 yards, clear of all expenses, and would be better material and more intelligently laid down. It seemed to almost stagger those who had never given the matter serious thought.”

Not an increased expenditure on the roads, but better methods of applying the present outlay is the great object to be attained by the good roads movement in Ontario. The townships of this Province are, as a rule, dealing very generously with their roads, in so far as the amount of money and labor spent on them is concerned. The great difficulty is that this money and labor is not so directed as to secure the greatest and most lasting results. It would appear that the farmers of this country have been so actively engaged in improving their methods of farm work, and in advancing what seem to be their more personal interests, that the importance of making similar progress with regard to road management has been overlooked.

The advantages of methodical and systematic management are becoming more and more recognized in all departments of industry, from the most simple and commonplace, to the most complex and comprehensive. In none is it more noticeable than in farming, and in the sowing and rotation of crops, the handling of stock, the use of machinery, every farmer can, from his own experience, find instances of new and better method and system. Between good management and bad, between suitable methods and unsuitable, between system and the absence of system, there is all the difference between the successful and the unsuccessful farmer. Good management and bad management, good roads and bad roads, stand on precisely the same footing.

While in a number of instances, and with excellent effect, county councils take charge of the main highways, yet the great body of roads must still remain under the exclusive control of township councils, and the township methods with respect to road improvement are, therefore, in the highest degree important. In the township system the general rule has been, for many years, that the roads are maintained by statute labor, together with

A NICELY CROWNED ROAD.

money grants annually made by the council. The roads of each township are divided into beats or divisions, and a pathmaster is appointed to each. The average length of road division varies in different townships, but is commonly one to two blocks in length, thus ranging from about one and a quarter to three miles. The number of pathmasters thus varies in accordance with the size of the township and the length of road beats, there being ordinarily from 50 to 150 in each township. A pathmaster is appointed for one year only, and rarely does he hold office for two years in succession. It is considered that by appointing a different man from year to year, it enables each to make such improvement as he thinks desirable in front of his own farm.

Early in the year, after his appointment, each pathmaster receives from the county clerk a list of those required to do work in his division, with the number of days each should perform. This number of days is fixed by the Assessment Act, according to the assessed value of property, but each township council has the privilege of adopting a schedule of its own. This many have done, and in place of using the assessed value as a basis for levying the statute labor, some determine it according to acreage.

After receiving the statute labor roll for his division, the pathmaster "calls out" for a certain day, or days, those on his list. Each man appears with such implements as he wishes to use. If he brings a team of horses, this, with a driver, is estimated as the equivalent of two days. Under the direction of the pathmaster, who is not himself required to work, the labor is performed.

The statute labor system as thus outlined was in keeping with the spirit of pioneer days, when the need for roads was urgently felt, when the work consisted of cutting down trees, clearing the road allowance of logs and stumps, of corduroying swamps and throwing up a dirt grade. For such conditions, and for such improvement, statute labor was admirably adapted, and did a vast amount of good.

To-day circumstances are very different. The need of roads is not so keenly felt as in the time of early settlement, and there is not the same incentive for hard and careful work. Men work on the roads very much as they work on their farms. Some are shiftless, some lazy, some stupid, some careless, and so the list might be carried on. Each works, plans the work, or oversees it according to his own ideas. The statute labor system in this respect is not so much a system as an entire absence of system.

Township roads, however, are not kept up by statute labor alone. The ratepayers of many townships who know only of the grants for small repairs, scattered here and there over the township, do not realize how much money is, in the aggregate, spent on their roads in the course of a year. The amount is in no sense objectionable, and if the money were applied to the best advantage there are few townships which could not spend even more than they are now doing on road improvement.

The difficulty arises from the fact that this money is spent on the statute labor basis. The making of money appropriations was commenced many years ago with a view to supplementing statute labor. They were then very small amounts, but with the growth of the Province, this practice has increased, until, in many instances, the total money appropriation exceeds the statute labor for the year valued at one dollar a day. Thus the money spent has constantly increased until it is of greater consequence than the statute labor, but the latter is permitted to govern the expenditure of the former.

At the last municipal elections a number of by-laws for the abolition or commutation of statute labor were submitted to a vote of the people, being carried in several cases. Although not necessary, nor provided for in the Municipal Act, some councils prefer this course to assuming the responsibility of passing the by-law without a plebiscite. Wherever rightly placed before the people a substantial majority should, and can be, procured for these by-laws. The people of Ontario, almost without exception, want good roads. They are very few indeed who do not want better roads than they have at present. While there are some who always object to a change of any kind, who seem born to oppose progress of any description, they are and always will be in the minority. The mass of the people want better roads, and they want a better system of maintaining them.

It merely remains to show them in a plain manner, not merely the faults

of our present system, and the defects of our roads, but what plans are to be adopted that will effect an improvement. To place these matters before the people should be the work of municipal councillors, and where statute labor by-laws have been defeated, there is safe evidence that councillors have not made the most of their opportunities.

Some by-laws have not been successful because the people feared that the change would create wholly new and expensive methods. On the contrary, it is plainly a measure of economy, securing the best possible results with the present expenditures. Farm help is now scarce and expensive. There are few farmers who, during the summer season, cannot better afford to pay 50 cents or 75 cents a day for statute labor, than to leave their farms to work on the road. If there are those who wish to work on the road they can be given ample opportunity to do so, and to even work out more than enough to pay their tax. This is particularly helpful to the poorer farmers, in need of a chance to earn a little money. The systematic grading of roads, operation of the grading machine, draining the roads, building concrete culverts, hauling stone or gravel by the cord, or letting work in small jobs throughout the township, affords all who prefer working to paying, a chance to earn back their tax. Others, at a busy season, when labor is scarce, will much prefer paying 50 or 75 cents in consideration of their road work.

It is sometimes feared that all the money will be spent on leading roads or in one section of the township. The work, however, is kept in the hands of the council, and their practice is very different. It is the general rule that the commutation money from each road will be required for and spent on that road. But, instead of scattering the expenditure over long distances, the good pieces receiving as much attention as the bad, work is concentrated on the worst pieces first, ultimately making them equal to the best, and in that way making all good. By seeing that the worst parts of the roads throughout a township are fixed each year in a permanent manner, the improvement in a few years is so striking as to satisfy all.

DEFECTS OF THE STATUTE LABOR SYSTEM.

The defects of the statute labor system may be briefly summarized as follows :

Responsibility is too much divided. No one can be held directly responsible for the condition of the roads, nor for the proper expenditure of money and labor upon them.

The payment of a tax in labor is too vague and clumsy to meet modern conditions.

The annual money appropriations, small at first, have been constantly increasing for many years, until they are of greater consequence than the statute labor, but the latter is permitted to govern the expenditure of the former, and the money is scattered in small grants among pathmasters, is spent in temporary patchwork and repairs, and durable work is not attempted.

Work is done at one time of the year only, the rest of the time the roads are neglected and repairs are not made when first needed. Once placed in good condition, roads are allowed to become almost impassable before repairs are made.

The work under statute labor is not done at points where it is most needed, but it is understood that the pathmaster for the year will do such work as he desires in front of his own farm.

No matter how urgently grading or ditching may be needed, if it is more convenient for the farmer to haul gravel he does so, or vice versa. The wishes of the man who is to do the work, not the work itself, are the first consideration.

The statute labor system encourages the men who are interested in securing money grants to neglect their own roadwork. It follows that those who do their roadwork faithfully must also pay for the work done by means of money grants for the men who will not perform their statute labor.

While one road section may be good, and statute labor properly performed, there are other sections in the township where work is only half done. It is almost useless for one section to keep up its roads when those who do the work on them are certain to drop off at the end of them into bog holes and impassable mires of the surrounding sections.

A great amount of statute labor is wholly wasted—the time spent by a hundred or so pathmasters attending the clerk's office to qualify for office, calling out those on their road list, and acting as bosses; the time lost by those who come to work too late or stop too early; the time lost in doing work as an annual holiday, in carelessly planning the work, in hauling sand and loam instead of gravel, in working at wrong seasons of the year, in having too few teams or too few shovellers, etc.

STONE ARCH BRIDGE, STRATFORD.

The system is unjust. Some men give a full day's work, others pay one dollar or the township rate of commutation. Other men give only a part of a day's work, and in some townships methods are so lax that they can escape without giving either labor or money.

The basis of levying statute labor is not equitable, as a difference of a dollar in assessment, or of an acre in the extent of a farm, may make a difference of a day in the amount of statute labor required.

A good pathmaster will create ill-feeling between himself and some of his shiftless neighbors if he demands even a reasonable performance of their statute labor. Rather than do this, most pathmasters permit their men

to work as they see fit, or come equipped with any class of tools, wagons or teams.

Good methods of roadmaking cannot be expected, as pathmasters do not retain their office long enough to become expert.

With so many pathmasters, and the annual system of rotation, uniformity is impossible, with the result that some roads are graded forty feet wide, some thirty, some twenty, or less, with corresponding differences throughout all the details of roadmaking. All cannot be right.

Work cannot be carried on continuously from year to year, in pursuance of a well-defined plan, so that improvements as now made have little or no connection with one another. The work of one pathmaster may be rendered useless by the work of a new pathmaster the following year.

The system does not provide for the economical and efficient use of graders and other modern road machinery.

THE TOWNSHIP SYSTEM.

The chief points of the system of road management in townships where improved methods have been adopted include the following :

Statute labor is commuted at a fixed rate per day, and the amount is collected at the same time as the other taxes by the township tax collector; or, if preferred, in place of commuting statute labor, a special rate on the township assessment may be levied for road purposes, thereby entirely doing away with statute labor.

One road overseer is appointed for the entire township; or, if desired, the township is divided into a convenient number of divisions for road purposes, usually two, three or four, and a road overseer is appointed over each. This practically amounts to a reduction of the number of pathmasters and the enlarging of road beats. It is essential to the success of the proposed system. To merely commute statute labor and retain the former number of pathmasters, giving each a small amount to spend, means a perpetuation of most of the defects of the statute labor system.

The duties of the road overseer are :

(a) To supervise all work and repairs done on the roads and bridges within his division.

(b) To acquaint himself with the best methods of constructing and maintaining good roads, and of operating graders and other road machinery used by the township.

(c) To employ, direct and discharge all men and teams required to carry on the work, and to purchase necessary materials.

(d) To see that all washouts, drain and culvert obstructions, bridge failures and other unforeseen defects are repaired and protected, with the least possible delay, so as to prevent further injury to the road, or accident to the users of the road, and to otherwise act promptly in all cases of emergency.

(e) To report to the council early in each year as to the work required the coming season, and to carry out the instructions of the council with regard thereto, and to perform such other services as may be required of him from time to time, under the written instructions of the council.

(f) To collect the poll tax in his road division.

(g) To keep an accurate record of the men employed and the work done, and to furnish this written form to the reeve at proper intervals in order that the reeve, upon being satisfied of the correctness of the statement, may issue cheques for payment thereof.

(h) To stake out all works and see that they are undertaken systematically, so that no time will be lost in taking men, teams and machinery from one part of the township to another.

(i) To supervise the performance of all work done by contract, and certify as to completion, acting as inspector for the township.

(j) To supervise the opening of snow roads under such regulations thereto as, in the opinion of the council, the needs of the township may require.

(k) To report to the council at the close of each year, showing in detail the character, location and cost of each separate work undertaken.

(l) Works, the cost of which will exceed a certain fixed amount (ordinarily from \$10 to \$20, as may be determined by the council), may be let by contract to the lowest satisfactory bidder, but in the event of any work being duly advertised to be let by contract, and the tenders being too high, in the opinion of the commissioner or the reeve, it should be the duty of the former to undertake the work by day labor under his own direction.

The commissioner should be retained in office as permanently as circumstances permit, in order that his experience, increasing from year to year, may enable him to do more perfect and economical work. He should have exclusive control and management of the maintenance, repair and improvement of all the public roads and bridges within his division, in so far as the commutation and other moneys belonging or appropriated to his division will enable him to do so, subject always to such written instructions as he may receive from the council, or from the road and bridge committee of his division.

It is of the greatest importance that the commissioners should be men of good judgment, practical, with ability to direct labor to advantage. The selection of suitable men as commissioners is of the greatest importance, as upon them will largely depend the success of any system adopted.

It is not best for councillors to act as road commissioners. Councillors, like the pathmasters of the old statute labor system, are elected annually, and cannot become experienced. There is a tendency for them to use their office not so much for the benefit of the roads as to gain votes for the next election. The ratepayers are apt to become dissatisfied unless councillors perform the duties of commissioner without remuneration.

Work is distributed throughout the different sections of each road division as evenly as possible, always endeavoring to make the roads permanent, giving preference in this respect to highways most used by the public.

The division of the township is made not only to separate the work of the overseers, but also to assist in adjusting the expenditure. Any method which seems to concentrate expenditure on a few roads will meet with disapproval.

The council should constitute itself a "Road and Bridge Committee," to suit the road divisions, in order that the road overseers may consult the proper councillors as occasion arises, with regard to details of the work.

Work for the grading machine should be staked out in advance by the overseer, so that each piece can be taken up consecutively. Otherwise much time is lost in moving the machine from one part of the township to another. The grader should start work early in the spring, and be kept continuously in operation until the season's work is completed.

The usual road appropriation is made from the general funds of the township, this to be used for the purchase of tools, machinery and materials or for small jobs and contracts.

The residents of the township are employed to do the work, provided they come properly equipped, and will do a fair amount of work, preference being given to ratepayers of the division in which the work is being done,

in order that as many as so desire may have an opportunity to earn back the amount of their commuted statute labor.

Work is paid for in cash if desired, but preferably by cheque ; where a bank is convenient, payment to be made in accordance with the pay roll submitted by the road overseer, accompanied by necessary vouchers and such information as may be considered necessary.

A general plan for road improvement should be laid down by the council for the overseer to follow.

This plan should specify the width to be graded, width and depth of road metal, character of drainage, etc., of all roads.

All roadmaking machines should be under the care of the road overseer.

The same men and teams should be hired to operate the machinery for the entire season, as they become proficient and do better work. This applies particularly to the operation of a road grader.

The council or overseer appoints foremen in different parts of the township to collect the necessary labor, and act promptly when roads are blocked with snow, the men employed to be paid in cash by the council.

STATUTE LABOR COMMUTED AND ABOLISHED.

The following is a list of 120 townships which have abolished or commuted statute labor, wholly or in part, and are establishing in its place more approved methods. There are in Ontario about 400 township municipalities so settled and organized that they can be expected to take advanced steps in roadmaking. With 120 of these included in the following list, or about 30 per cent. of the entire Province, and other townships rapidly falling into line, it is apparent that the good roads agitation is having a beneficial influence.

Elsewhere in this report are communications from residents of a number of these townships, in which the results of the change are discussed. To merely do away with statute labor by commuting it or levying a rate in lieu thereof, is not the end to be obtained, but only a means to that end—the real object being to establish a more efficient system in place of statute labor. It is useless to do away with statute labor unless councils are determined to put something better in its place. That this can be done there is ample evidence, but it is only by appointing active and capable overseers in place of pathmasters, by adopting good methods of roadmaking, by seeing that all expenditures, small or great, are carefully and judiciously made, by doing all work systematically with a view to durability and permanence. This is what is being done almost without exception wherever the councils have progressed so far as to wholly commute statute labor, and the result in actual road improvement is most encouraging.

TOWNSHIP REPORTS.

The following letters and extracts from reports, written at the request of this Department, are from township, and Farmers' Institute officials, and other representative men in townships included in the foregoing list, where statute labor has been commuted or abolished. These communications are thoroughly practical, containing numerous excellent suggestions in the matter of road management and construction, and will repay careful study by all interested in road improvement, whether in townships where an approved system has been adopted, or where changes are being considered. It will be noted that the opinion of these correspondents is, without exception, favorable to the new system, and many are enthusiastic with regard to the change. Last year, as mentioned by a number of correspondents, was very unfavorable

THE CRUSHER AND SCREEN ATTACHMENT.
Loading from the bins.

to roadmaking in most sections of the Province, owing to the exceptionally wet weather, which kept all roads, except those well gravelled or macadamized, in a soft and muddy condition. The high price and scarcity of labor, was also a matter of difficulty last year. In spite of this adverse circumstance there is no note of discouragement from any, but a firm conviction that, with a reasonably business-like effort to make it a success, the new method will have a most beneficial effect on the roads. Some opposition is referred to in a few instances, but this is taken philosophically, as a necessary part of any system; the dissatisfied ones being very much in the minority. The number of road commissioners is a matter in which there appears to be a good deal of diversity of practice, with a tendency to reduce rather than increase the number. Special emphasis must be placed upon the fact that not mere commutation or abolition of statute labor is necessary, but the main requisite is a good and comprehensive system in its place, practical in all its details, seeking permanency of work, in keeping with economy in expenditure.

The various letters are arranged in the alphabetical order of the townships.

Ancaster.

The Township of Ancaster covers some 47,000 acres, and is triangular in shape, the northerly boundary or base being about fifteen miles in length and the length of the sides, approximately, ten and thirteen miles. It is cut up into lots and concessions, the concessions being one and one-quarter miles in width and the side roads one and one-half miles apart. The township is cut in two by what was the Ancaster Toll Road, twelve and one-quarter miles in length, now taken over by the county and freed from tolls. This road has been for nearly thirty years maintained by the township as a toll road and is as good a macadamized road as can be found in the county. The stone is taken from the mountain side, broken by hand—the quarries being near Ancaster village, which is on the toll road about five miles from the Hamilton or easterly terminous of the road. There are gravel pits also in the neighborhood of Ancaster village and gravel is used as a top dressing for the Governor's road; that is, the county portion of the Governor's road, being five miles of the base line or northerly boundary of the township above mentioned. The quarry stone is limestone of not extra good quality for road construction purposes. These two main roads, the Ancaster toll road, twelve and one-quarter miles, and the Governor's road, five miles, are the only roads upon which stone or gravel is generally used. All the other roads in the township, the concession and side roads, are kept in ordinary repair by grading, etc., without any expenditure for metal.

The general features of the township are: All kinds of soil; some heavy clay and some very sandy soil, and a medium between the two; there is also every variety of surface, flat, undulating and hilly, and the roads would be easily drained.

Statute labor was commuted in 1898. There appear to have been, before that time, eighty-one pathmasters and eighty-one road divisions. Upon the commutation of statute labor at fifty cents per diem, in 1898, by township By-law No. 433, the township was divided into six road divisions with one township councillor and three ratepayers as overseers for each of five divisions, a sixth being the Village of Ancaster, with a single overseer to supervise it.

There were also appointed two operators for the two road graders owned by the township, the field of operation for the one grader being the portion of the township north of the toll road, and for the other, the southern portion.

The overseers were to have control of the operations and to direct them when and where the work was to be done. The overseer had power to hire teams to work on road machines, and to hire laborers, the wages of all parties, operators, teamsters, and laborers, being fixed by by-law. Owing, as I have been given to understand to the fact of these divisions being found too cumbersome (it was said that some sections were neglected, and it was difficult to get word to the overseers when any repairs were required), in the following year the number of the road divisions was increased to twenty-three, and a single overseer was appointed for each, (By-law No. 442, 1899), the two grading divisions remaining as before, north and south respectively, of the Ancaster toll road, all overseers being under the general supervision of the township council. The overseers have, as before, power to hire teams and laboring men, "giving ratepayers living in their subdivision the preference," the operators being responsible for the safe keeping of their machines, and receiving their instructions from the different overseers, subject to the supervision of the council. The overseers have general control, apparently, of the purchase of material as well as hiring of men, and teams; all accounts, etc., being submitted to the township council at the then next subsequent

meeting. All work appears to be done by day work, and the wages of overseers and operators are fixed at twelve and one-half cents per hour, and laboring men at ten cents. There appears to be no change of consequence in the general system of management to the present time.

As regards the benefits of the present methods, although I have heard it intimated that the existing system does not work out in practice just like clock-work, owing probably to the neglect of the individual overseers to perform the duties prescribed, and taking it as a matter of course that there are sore heads and born objectors in every community, from what I can learn the general sentiment is that persons of ordinary common sense would not favor for one instant a return to the old system of statute labor. Any suggestion to do so would be simply regarded as ridiculous. And as regards the improvements in roads brought about by more systematic work and the use of road graders, one of our country medicos whose daily rounds take him over the greater part of the township remarked to me not long since, that he noted a wonderful change for the better, the improved drainage doing away with most of the sloughs, which formerly made many of the country roads impassable at certain seasons of the year.

As regards the expenditure, I am sorry to say that I have not the information available, and it would take some little time to hunt it up and institute comparisons—the fact of the roads being undoubtedly in better condition, and the commutation being placed at fifty cents per diem should be some indication that, unless wear and tear and farmers' time count for nothing, the new system is comparatively inexpensive.

There are few bridges in this township of any importance. I understand that a party here has obtained the forms for making cement culverts, and that some few have been used with good satisfaction, in place of tile and wood work in this township. Nothing has been done by way of inducement for the use of wide tires, but many persons in this neighborhood find it to their interest and benefit to use them. Edward Kenrick, County Councillor, Ancaster.

Bertie.

Changing the rate of commutation is discussed, some desiring increase to \$1.00, a few wishing it reduced to fifty cents, majority favorable to seventy-five cents. There is no desire to return to the old system, there now being much better results; more permanent improvements, and money on hand for emergencies. Two points in the by-law need strengthening: (1) Provision for snow roads; (2) By-law provides that ratepayers shall have an opportunity to work out their commuted labor; this leads to difficulties, ratepayers claiming that they should be warned out; and commissioners are thereby hampered in the letting of contracts. A. H. Kilman, Township Clerk, Ridgeway.

Bromley.

Statute labor was commuted in this township in 1901, at a rate of 75 cents per day, and the township was divided into three road divisions, with a commissioner in each. We found this to work better, as, in the smaller division, the commissioner understood the requirements of the road better in his own locality. The wages fixed by the by-law were 15 cents per hour for the commissioner, 25 cents per hour for man and team and 12 1/2 cents per hour for a man. The amount levied in 1902 at the rate of 75 cents per day was \$900. As to the result of the change from statute labor, there are various opinions upon it. There are two small villages in the township, and in these there is a decided improvement.

In the country districts it must be admitted that it has not come up to our expectations, but this is mostly due to the scarcity of labor in some

cases. The commissioners find great difficulty in getting men at all to do the work at the wages laid down by the by-law. As to the general features of the township, it is about half loam and half clay, with a chain of rocky hills running diagonally across it. We have a few pieces of good road in the clay parts of it, made by heavy grading and gravelling on top. There are perhaps half a dozen places in the township where good gravel can be got. Whether from commuting labor or what, there appears a tendency to more permanent roadmaking. Concrete tile are being manufactured in the township for the last two years, and since that time we have used no other where they are large enough. The sizes made are 8 and 12 inches; the former we get for 40 cents per foot and the latter for 50 cents, with an additional \$1 per culvert for delivering on the ground in any part of the township. Cedars cost 40 cents to 50 cents each for culvert timber, but they are nearly exhausted in this section. The Snake River and the well-known McLaren Pond, which at the present time are under consideration by the Department of Public Works, are situated in the township, and are crossed by six bridges. The river has low, marshy banks, and with the back water from the dam, the bridges range from two acres to eight acres in length. These bridges were built when cedars could be bought for 8 cents each, but that was thirty years ago, and a lot of them are about giving out. If a scheme which the municipality has on hand now of buying out the dam at Osceola can be carried out, the most of these bridges can be made a permanent dump.

As to the operating of the grader, the commissioner goes ahead to lay out the work, has the breaking done, and the man operating the grader keeps the men's time. A good man to operate the grader is a very important part of the work. There are very few wide-tire wagons in use in this locality yet, though they are coming into use. Thomas Gorman, Reeve, Osceola.

Cumberland.

I think the change from statute labor to our present mode is a good one; under any circumstances more work can be accomplished with the 50 cents per diem cash than otherwise. We have only had the statute labor commuted one year, and the season was bad for the machinery used, viz., a road grader. I certainly would hate to go back or advocate statute labor.

We in this township are blessed with any quantity of stone and good gravel pits, and there is not the slightest reason why we should not have good stone roads under proper management. The soil in our township varies from sandy loam, heavy clay and gravel, and drainage not a very serious question.

The township is divided into two sections, with a road commissioner over each section. The work is done by day labor, and I think somewhere about \$1,300 or \$1,400 was spent last season. One benefit was that some roads that never had a day's work on them were graded up, and I believe that if statute labor was still in force we would never have a day's labor on them.

Culverts are now made of cement from eight inches to two feet. Wide tires are not much used yet, but those purchasing new wagons are getting wider tires than those used some time ago. J. S. Cameron, Cumberland.

Cumberland.

The principal discussion is drainage of roads. Since the road commissioners have taken hold, the road ditches previously made by the council (except where award under the Ditches and Watercourses Act) are

causing farmers draining into the road ditches to do their share of benefit. If not voluntarily done, then the Act (D. and W.) is applied, and much improvement is made. W. W. Dunning, Township Clerk, Cumberland P.O.

Dorchester North.

As far as I know, and have heard, few, if any, wish to return again to statute labor, but the distribution of expenditure, or roadmaking, over the different divisions in the township is complained of as being very unequal. Thus, in one division \$170.30 was expended, in another only \$13.14. There may be a good cause for this difference, but people think the difference is too much.

For each day's work of statute labor, forty cents is collected as road tax. For a good hundred-acre farm there would be eight days' labor, according to the old scale of assessing statute labor. That gives only \$3.20. It is not enough to keep the roads in good repair, equal to the old system. Of course, the council could easily remedy that.

In doing away with statute labor our council has made no provision for cutting noxious weeds on our roadsides, and although that was indifferently attended to by statute labor, yet weeds have increased wonderfully

STONE ARCH CULVERT, ALMONTE.

since it was given up. The council says that every man should cut the weeds along his own side of the road. A few farmers have principle enough to do this, but the great majority will not do it, and there is no way to make them. In consequence of this, our side roads and concessions are a nursery of weeds. This state of things is very unfair to the careful farmer. He may cut on his own side of the road a lifetime to little avail, when his neighbor on the other side of the road only laughs at him.

The Township of Dorchester is moderately level, yet rolling enough for excellent drainage. Soil, with few exceptions, is a rich clay loam. The south and western part has no gravel beds, hence gravel has to be drawn six and eight miles, costing from \$3.00 to \$4.00 per cord. This makes roadmaking in the best part of the township very dear.

The township owns a road grader. Know nothing about its merits compared with other implements of a like kind manufactured. I know this, however, it takes a long time to grade a piece of road. It is operated by day work, \$3.00 a day for man and team, three teams used on it, the operator \$1.50 per day. Some times it is difficult to get teams, as farmers are busy.

The township is divided into twenty-two sections. About \$883.00 was expended last year on roads, or in round numbers \$40.00 per section. Culverts are now large cement pipes.

Each councillor is a commissioner, for which service he gets \$42.00 and \$2.00 per day for anything special. When they do the commission work is a mystery, for no one has ever seen them on the road on duty.

No wide tires in the township. Low wheels with wide tires are used on farms for drawing manure and hauling grain. Alex. A. Brodie, Gladstone.

Downie.

Statute labor was commuted in 1901, and abolished in the spring of 1902.

The township is divided into five polling sub-divisions, and each councillor superintends a polling sub-division. In 1901 a road commissioner was engaged, but he had too much to attend to, and could not undertake the work. In 1902 the council dismissed him, and roads are superintended as above stated.

All of the large bridges in the township (11) are of iron with stone abutments—concrete and vitrified tile are used in every case when not too small. In smaller bridges we are building cement abutments and steel beams, with no wood except the covering.

We began to build iron bridges about twenty-five years ago or more. By keeping the abutments pointed and bridges painted, they have given good satisfaction. The first iron bridge ever built in the township is in first-class condition to-day, with the exception of the pine stringers on which the flooring was laid, which had to be replaced last year.

In the western portion of the township we have scarcely any gravel, but where it is too coarse for roadmaking we use the crusher. We have quite a quantity of roadmaking material, which, when crushed, makes a beautiful road. In the eastern portion of the township we have nothing coarse enough for the crusher, and the gravel is too fine, particularly for a roadway that has not been gravelled. All the concessions throughout the township have been gravelled, and also some of the side roads. Next year we intend to go on with the crushed stone. I think on the whole that our township is well to the front in the matter of roads, and yet we should be a great deal further advanced if we had gone rightly to work years ago. P. Smith, Township Clerk, Sebringville.

Downie.

Our township is crossed by the River Avon, a small tributary of the Thames. Along its course the land is high and rolling, but a little distance on either side it becomes flat, and at one time was considered swampy, but that day is past. The soil over the larger portion of the township is such as produces black ash and soft elm, and is not favorable for road construction, but gravel was fairly plentiful, and nearly all the roads have now a coat of that material. The supply of a good quality of gravel being about exhausted, resort is now being had to crushed stone for the leading roads, and this is found to be a great improvement, although the cost is considerably higher.

The soil is of excellent quality, but requires draining, and this has been so well attended to that nothing further is to be desired on that score.

I cannot give you the number of road divisions or of pathmasters, but may say that the principal part of the work is done by contract, day labor being only resorted to in the case of spreading gravel, cutting weeds, etc.

I understand that our road machinery is also worked by the day, but this is only for a short time at the beginning of the season.

I cannot give you the expenditure on our roads, and the abolition of statute labor took place so recently that I consider it too soon to say whether the change will be beneficial or otherwise.

Our bridges are nearly all of iron, with stone abutments, and of late years culverts have been built of concrete. I think very few of these structures will require to be replaced during the lifetime of the present generation. Geo. Hamilton, Sebringville.

Eramosa.

The commutation of statute labor is giving satisfaction. Many, however, feel that a competent, salaried road overseer would be much better than the four councillors acting in that capacity. Hugh Black, Township Clerk, Rockwood.

Etobicoke.

The total statute labor assessment in the township for 1902 is 1,384 days ; of this amount 1,365 days are commuted, including non-resident. The statute labor in the villages has been commuted for a number of years, and a road division or two is being added each year.

The township is divided into 106 road divisions. Each division not commuted is placed in charge of an overseer. Overseers are appointed over some of the commuted divisions ; others are in charge of the road commissioners, each member of the council being a road commissioner.

The sentiment is growing in favor of commutation, but the majority of farmers in the township are opposed to it yet.

On account of the large amount of non-resident statute labor in the township, the council feel that if the commutation was reduced to 50 or 60 cents it would mean a large loss to the township, and many of those who are favorable to commutation are not in favor of charging the present rate, \$1.00 per day.

Ordinary culverts are constructed with sewer pipe, a factory being situated in the township ; larger culverts are built with stone and plank covering. All new bridges, from 20 feet and upwards, are being built of steel. Sewer pipe for culverts has been in use for 12 or 13 years, and has given general satisfaction.

Three leading roads, Dundas street, Lake Shore road and Albion road, run through the township, and are chiefly maintained by broken stone, broken by hand. Gravel is now being generally used for road purposes on all roads where it can be secured conveniently. The township rents three pits, and gravel is procured from river bottoms and lake shore. When the graders were procured nearly all the roads in the township were well graded during the first two years. Since then nearly all the statute labor has been expended by gravelling, grants being made to leading roads to supplement the statute labor.

This township being situated near the City of Toronto, there is a vast amount of travel over the leading roads running east and west, and the rate-payers of the township are put to the expense of keeping up the roads for the people of Halton and Peel Counties, who get the benefit of good stone

and gravel roads without costing them a cent. It is the opinion of the thinking men of the municipalities surrounding Toronto, and I fancy that it applies to other cities as well, that the Provincial Government should make a grant to the local municipalities who are responsible for the maintenance of roads leading to the larger cities. J. A. L. Macpherson, Township Clerk, Islington.

Fitzroy.

It is proposed to divide the township into a certain number of road divisions and proceed to improve along the lines as laid down by A. W. Campbell, Commissioner of Highways.

The highways here are largely used for conducting the water from the adjoining farms to an outlet. This will (until remedied) always be a barrier to the making of good roads, and I think the Ditches and Watercourses Act should be amended so as to compel men who use the highway for the purpose of draining their farms to take care of the water until it reaches an outlet, and repair the road where it is injured by said water. This, I think, would cause the farmer to conduct the water (in many cases) through his own land to the outlet. A. Murphy, Township Clerk, Antrim.

Flamboro West.

As we have had but one season's experience with the commutation system, no changes are proposed until it has a further trial. A number of the ratepayers in one division were at first very much opposed to the change, but they seem to be nearly all reconciled to it now.

We have in this township a few culverts made of vitrified sewer pipe. Some of these culverts have been in for about ten years, and where there is plenty of fall at the outlet for the water to get away quickly, they are giving excellent satisfaction. Ira N. Binkley, Township Clerk, Greenville.

Fullarton.

I have made it a point to find out the views of a number of leading men in the township, including the ex-reeve, J. S. Russell, and the concensus of opinion seems to be decidedly in favor of the new system of road management. Of course, in all radical changes for the betterment of any community, there are apt to be a few "kickers," but these, so far as the late change is concerned, are gradually falling into line with the progressives.

For the sake of brevity perhaps it would be better to answer your questions seriatim :

1st. This township, generally speaking, may be classed as one of slightly rolling land, with the River Thames wandering through the central portion, and receiving in its course the tributary waters of Black and Flat Creeks. 2nd. Gravel pits abound in many sections, and all are available for road construction, some supplemented by crushed stones and the use of a grader. In former years the council hired one, but seeing the benefits derived from using a road machine they have purchased one of the same kind. 3rd. The soil is mostly clay loam, and as a rule badly in need of drainage. 4th. The number of road divisions is five, no commissioners being appointed. 5th. Each councillor looks after his own section, and the labor thereon is let by contract. 6th. In the adjoining Township of Blanshard a traction engine is used for operating the grader, but here the same work is performed by horsepower. 7th. The money expended on each division is somewhere in the neighborhood of \$600 annually—say \$3,000 since statute labor was abolished. 8th. The benefits or recent changes in road improvement are now in

striking evidence all around, and thoroughly appreciated by every wayfarer in these parts. 9th. Re culverts—the old-fashioned wooden fixtures have been substituted by cement tile, and found in every way more satisfactory. 10th. Our bridges are built with quarry stone abutments and steel superstructures. There are seventeen in use throughout the township. 11th. Wide tires are seldom seen in this locality. The opinion, however, prevails with some who have studied the matter that they might be of great service on our roads hereafter. Trusting the foregoing facts may help to aid the cause you have so much at heart, and in which you have proved yourself to be an ardent and practical exponent. J. D. Stewart, J.P., V.P. South Perth Farmers' Institute, S. Zorra.

Gloucester.

Statute labor has been abolished for the past two years, and is a decided improvement. Our township is divided into five sections, of fifty miles each. There are two road commissioners, with five road graders and one hundred drag scrapers for draining and levelling, five foremen handling the machinery. We have had five times as much work done this year, as under the old system, at a cost of 35 cents per day. We paid commissioner only out of general fund, and had a balance at end of year unexpended. Our township is a most difficult one, owing to it being bounded by Ottawa and Rideau Rivers, a distance of some twenty-five miles, and numerous gullies emptying into said rivers, necessitating a large outlay for expensive bridges. We have a complete outfit of concrete moulds, from nine inches to thirty-six, and made about five hundred dollars' worth of pipes this year (1902). In 1901 a number were put in, and have given satisfaction. The above was all done by day labor. Our (statute labor) road appropriation for 1901 was \$3,761; 1902, \$2,705. Better organization gave better returns for thirty-five cents than in previous years for fifty cents per day. In 1901, roads and bridges appropriation was \$6,024.25; in 1902, \$4,839.11. In 1902 a large and expensive pile-driven bridge was built, and in 1901 no large bridge was built. You can readily judge that improved system, owing largely to your efforts and printed information, we have been able to show better results. F. E. Caldwell, Reeve, Manotick.

Gloucester.

It is proposed to make application to the Legislature that it be compulsory in this snow-bound portion of Ontario, for wire fences to be substituted in place of the old log fences, especially by people who object to their fields being used in winter to travel on, and who cling to the log fence, because legislation backs them up.

It is the intention to turnpike all township roads, and get proper drainage. They intend gravelling and stoning later, and also may raise rate to 50 cents on same scale, with perhaps only one commissioner. It is intended to put in stone or concrete piers for bridges, and iron superstructure, owing to advance in value of timber and its poor quality. Some are not satisfied with amount of work done in their immediate locality—partly remedied this year (1902) by a reapportionment of the township or division appropriations on the basis of the amount levied in what were the old pathmaster sub-divisions. It is not likely that the old statute labor system will be returned to, judging by indications. H. B. Billing, Township Clerk, Billing's Bridge.

Goulbourn.

Replying to your inquiry of the 16th inst. with reference to the working of the new system in Goulbourn Township, I am pleased to be able to report that it is giving splendid satisfaction. On its introduc-

tion two years ago, we experienced a good deal of opposition from the anti-party, but I may say for the encouragement of others, that this only existed for the first season, and I can safely say that during the second season, just closed, I have not had a single elector giving any opposition, but, on the contrary, many of them have openly expressed themselves as perfectly pleased with the progress being made.

After the passing of the by-law, in January, 1901, we divided the township into four divisions, and appointed one road commissioner at a salary of two dollars per day for every day he was employed on the road. We were successful in securing a good gravel pit in a central locality, and immediately commenced hauling the gravel in sleighs provided with loose-bottom boxes, with a capacity of one and one-half to two cubic yards. Although the snow was quite deep, and heavy storms set in shortly after starting, yet we had two and one-half miles of road gravelled inside of two months. Two men cleared the snow and assisted in unloading gravel into the road-bed. In the early spring the gravel was well levelled, and has since proved to be a success. The following season one mile was completed, and up to date this winter two and one-third miles have been completed. Teams are engaged at \$2.00 per day of ten hours, and shovellers at from \$1.00 to \$1.25.

We have also found a great improvement in operating the grader. Three teams were hired and a man to operate the grader, and furnished them with a camping outfit, at a total cost of \$10.50 per day. They went from place to place with but little delay, and did good service. Next a gang of three men and one team were engaged during the summer, building and repairing culverts, and making general road improvements. During the past season we did not require so much grading, and devoted more time to gravelling. We have not built any concrete culverts, but have built a number of stone ones covered with cedar, which is fairly plentiful in this township. We do not use a stone crusher, but put considerable stone on the roads and then cover them with gravel.

As a proof of the success of the system, when the county system was proposed our people stated that, with the present results, we would soon have good enough roads. I am in favor of the county system, but think our "county fathers" have been extreme in their idea of 300 miles for Carleton County. I may state that the cost of gravelling has never reached \$1.00 per rod on an average in winter, and the saving in general road repairs has proved a great saving over the old system of "letting out contracts."

From the above you can easily see there is very little fear of the by-law being repealed in this township. We propose buying a two-span road roller this spring, which we trust will materially assist in the good work. For the present year we have engaged an additional road commissioner at \$2.50 per day each, and we believe we have the right men in the right place. S. Mann, Reeve, Stittsville.

Grimsby North.

As regards the commutation of statute labor, this township was among the first converts to the new system.

The Helderleigh range of mountains extends through the municipality, dividing it into two unequal parts. That portion lying between the mountain and the lake is for the most part of a sandy and red clay soil, either of which make a good road when graded and covered with from six to ten inches of lake gravel.

The southern portion of the township is mostly a black loam, with natural drainage, and when properly graded resists water fairly well.

Rock and field stones in this section are the only available materials for roadmaking, and the cost is about four dollars per cord on the road.

The municipality is divided into two divisions, with an overseer for each, all work being done under their supervision, by day labor. The road machine is operated by a man who furnishes the teams necessary to work it.

The expenditure varies from twelve hundred to two thousand dollars per year for roads and bridges. The wooden bridges and culverts are replaced with sewer pipe, and iron bridges with plank floors when required.

Wide tires are not compulsory, but are being generally introduced by parties purchasing new wagons.

ONE OF THE STONE CULVERTS AT INGERSOLL.

In summarizing would say that a general system governing the whole township makes the roads throughout have the appearance of being looked after at the proper time. Thos. Allan, Reeve, Winona.

Grimsby South.

Statute labor was commuted by the Township of South Grimsby two years ago. There was considerable opposition to the change at the time, but, owing to the marked improvement in the roads in so short a time, all opposition seems to have died out.

Our township is about ten miles long, east and west, having an average width of about three miles north and south. The unincorporated Village of Smithville is situated near the eastern part of the township. It has a population of nearly four hundred. We have three road divisions, viz., Smithville, Eastern and Western, each having a commissioner. The soil is chiefly clay, there being no gravel convenient in the township, nor in the surrounding townships, consequently our roads are, with the exception of about four and one-half or five miles stone road, clay.

The commissioners, each in their respective divisions, superintend the work, which is done by day labor, and also direct the operation of road machinery, although the only road machinery as yet owned by the township is one road machine, which gives good satisfaction, and is passed from

one commissioner to another. but harrows and rollers hired from the farmers are used to complete levelling the roads. The first season in operating the road machine horses were used, but last season traction engines were used (being the ordinary ones used in threshing grain), and they seemed to give good satisfaction.

Oak plank is chiefly used for culverts, but the past few years quite a number of tie have been used, and more still will be used in the future. I believe we will see greater improvements still on our roads, as the road commissioners become more conversant with their duties. Edward Irvine, Township Clerk, S. Grimsby, Smithville.

Guelph.

The council divided the township into four road divisions, with a member of council as a commissioner for each division, and the reeve to have general oversight.

The road grader was worked in shaping the road for about thirty days. Gravelling was performed by contract, but on account of the increased cost of the work, less gravelling was done than intended, which was rather against the scheme for the first year, but the ratepayers appear to be satisfied that it is a move in the right direction. J. McCorkindale, Township Clerk, Guelph.

Nelson.

The statute labor in the Township of Nelson has been commuted for the past three years, the rate of commutation being fifty cents per day. Our township is about twelve miles in length by six in width, and is divided into two divisions, each about six miles square, with one commissioner for each division.

The soil is chiefly clay loam, and only requires surface draining, with the exception of some quicksand subsoil near the lake, and some clay hills which we have found necessary to underdrain to keep from becoming boggy in the spring. So far our work has been principally grading and rebuilding culverts and bridges, which, through the old system, had become in a very bad state. The material for culverts has been chiefly sewer pipe, but for large ones, say from two to four feet in width, we are using good large stone both for walls and covers, as we have plenty of such material. When grading extensively the commissioners endeavor to use the same teams right through the work, as the horses do much better work when they become accustomed to the work. All work is done by day labor.

Our expenditure on road account averages about \$3,000 a year. About one-half of this amount is raised by statute labor tax, and the balance from the general account.

As the culverts and bridges are now in pretty good condition, I believe the council contemplate putting on gravel where it can be had within a reasonable distance, as there is some very good gravel in the north part of the township. In the south we have none, but have plenty of limestone and hard heads, and the council have under consideration the advisability of purchasing a stone crusher.

Now, in conclusion, I would say that under the new system we have more and better work done for the amount of money expended, and that every ratepayer must contribute his proper share; and not as formerly, when, in a great many divisions the work was not done at all, and in many instances where it was done, the pathmasters undid what their predecessors had done. Although there was strong opposition to passing the by-law, I firmly believe that, after a trial of three years, you could not find twenty ratepayers

who would be willing to go back to the old system, and would recommend that, in townships where commutation is not in force, the council would make no mistake in taking the same course as the council of the Township of Nelson, even though they would face strong opposition. A. P. Alton, Treasurer and ex-Reeve of the Township of Nelson, Appleby.

Norwich South.

I have for one seen the necessity in past years for some kind of a change in our system of doing statute labor in the Township of South Norwich. About three or four years ago some of us, as ratepayers, asked the council to submit the question to the people as to commuting statute labor at the rate of fifty cents per day. It was not brought before them in the shape of a by-law, but was just put on small paper, and asked to be marked for or against. It was lost by a small majority, a number returning the papers unmarked. The next general municipal election I was instructed to submit it to the people again, and it was carried by a good majority. We then started out on what seemed to many a new system, but it was practically the old system with a somewhat different appearance. The overseers are appointed in each road division, of which we have fifty-five in all.

The road lists are made out with the name of each ratepayer on the division, and the number of days each one is entitled to do. The overseer is then in a position to know whether anyone residing in the division is entitled to pay poll tax, which he collects and credits on his list. The overseer can tell how many days he has or, turned into money at fifty cents per day, how much money he has to expend. He can then go over his division and lay out his work. Having done this he gives the ratepayers on the beat a chance to put in their time if they desire. If at drawing gravel, he states a price he will pay, or at any other work he says what he will give. If the ratepayers do not see fit to do this, the overseer then lets a contract to some one to the amount he has to expend. When the work is completed, he comes to the Township Treasurer and draws the full amount for his road division (which is advanced by the council), and collected along with other taxes in the fall, and he settles with the person or persons performing the work on same division. I find one very material advantage in this. The overseer must give his returns to the Clerk of how he expends his money, and to whom paid, before he can draw the money from the Treasurer. This enables the council to know how much gravel has been put on the road, and how much they have to pay for. Instead of paying for it, as of old, by the load, which oftener meant a small amount than a large one, we pay for it by the cord. As the overseer now is the boss, he will accept no smaller load than the quarter of a cord, which he is paying for.

Our township is composed of different soils. In one part, a light sand and very level with a sort of water sand a little distance below the surface, and is hard to drain. In another part the soil is a heavy sand, or a sand loam and rather rolling. The third is a very good clay and is of a rolling nature. We have also two or three large creeks running through the entire breadth or length of the township, and it is no small amount of work to keep the same bridged. We are working into iron or steel with either steel piles or stone abutments. We have a very good supply of gravel throughout the township, which, except in the east end does not require very long distance hauling. We put sandy gravel, a gravel that comes from sandy soil, on clay roads, and clay gravel on sand roads, and we find it works very well.

The township is pretty well drained, as the farmers have been interested in drainage, there being a number of drains, more particularly in the southern portion. We have a road grader which is operated by one man, paid by

the council, who works under the instructions of the overseer. It is the general opinion that no more road should be graded than can be gravelled, but it seems to me that the more you get a road graded and get the water into the ditches and away, the better effect it will have on the road in the future. There has been expended by the council on bridges and roads for 1902 about \$1,500; the amount of statute labor paid, about \$1,200. On account of the very wet season a number of the divisions have done nothing, thereby lessening the expenditure by about \$300, which is in the treasury for future use to the credit of the said divisions. As there were no bridges built last year we can take it that the \$2,700 was spent in the repair of some bridges, and the remainder on culverts and roads.

During the first two years of the change, a decided improvement in the roads was noticeable, as more gravel was being drawn for the same amount of labor, and as each load was to be a quarter of a cord, the road was more even than if the loads had been of different sizes, as of old. But as before said, on account of the almost ceaseless downpour of rain last year, the road work did not show up as favorably as before. There is one thing noticeable that, where the residents are favorable, the present system is bound to succeed in preference to the old, but where there are persons who are opposed to any change in the method of road work, you may expect that there will not be that marked improvement as in the first instance.

In regard to wide tires: The general size of the wagon tire is three to four inches, instead of the old one and three-quarter-inch one, which you will seldom see, and I think it is being a great saving to roads. Now, while I think that our present method is in advance of the old, I can see that something more is needed. That is, instead of having our township divided into fifty-five different sections, if it were divided into a much smaller number, and have the gentlemen appointed over these sections confer with the council, and decide upon some method to be adopted in regard to the building of roads, these men being appointed a few years in succession, I believe it would be a step in advance. Under the overseer system at present, the said overseer is changed yearly, and what one does this season will be undone by someone else the next season.

But these changes must come slowly, as the people must be led to see the benefit to be derived from such a change, before they will be willing to try it. I do not think that the township generally would be in favor of going back to the old statute labor system by a large number. As I am not a practical road builder, I am not in much of a position to give any suggestion about building roads, but would say that if any township is thinking of abolishing the statute labor system and commuting the same at a rate per day, I believe that it will not only be a benefit to the roads, but will lengthen the life of their Clerk by a few years at least, which would be some consideration. Hoping that this may be something of what may be required, and that it may be of a little benefit to some one. Alex. McFarlane, Clerk of South Norwich, Otterville.

Orillia.

In 1901 four commissioners were appointed. These were increased to eight last year with apparent satisfaction, and there is no likelihood of any change this year.

Since commutation three years ago our people are generally quite wedded to the new system, and no talk of going back to the old. A few are of the opinion that too many commissiners are now appointed, and advocate a reduction to one only, who should give his undivided attention to the work.

One of our commissioners takes that view quite strongly, but it will be some time before our people agree with him. John Rose, Township Clerk, Orillia.

Otonabee.

The money now, instead of being frittered away by eighty-four roadmasters, is expended by efficient and expert roadmakers, who are employed all summer. Great difficulty is found in procuring men in the harvest months, consequently a great deal of the money is expended in the fall to the detriment of the roads, and for that reason considerable of the money is unable to be expended. So the council hesitate to have the whole township commuted, as it then would be almost impossible to get men to do the work when it should be done. J. M. Drummond, Township Clerk, Keene.

Oxford West.

The township is divided into two road divisions, and during the last year, which was the first or trial year, two members of the council acted as commissioners for each division, but it is generally understood that the council will endeavor to secure a competent man to superintend the improvements to highways for the whole township, or at least one for each division.

Although the commissioners were greatly handicapped during the past season on account of the scarcity of labor and very wet weather, as well as their inexperience in handling the crusher, there was not a suggestion made at our nomination meeting to return to the old system. The feeling seems to be very general that the new move is a step in the right direction. T. R. Mayberry, Ingersoll.

Paipoonge.

Our municipality consists of five townships, viz.: Neebing, Paipoonge, Blake, Pardee, and Crooks. There is a councillor elected for each, and he is appointed road commissioner for the township he represents, and it seems to work well. A few electors who never saw the time-killing, gossip-dispensing style of statute labor advocate it about election time.

For a new country, as we have, our roads are a credit, 1st to the Government, 2nd to the municipality. They are not quite up to the Ekfrid roads, as I have come from there. But we have lots of good clay for tile and gravel for roads. So it is a question of a little time till we have roads as good as any. Our road work is all let by tender, and works well. James M. Munro, Township Clerk, Slate River, Paipoonge.

Pelham.

It is proposed, 1st, to do the work earlier in the season; 2nd, to get a heavy roller for gravelled roads; 3rd, some condemn using road machines on sand roads.

At the annual town meeting on Monday last, one candidate discussed the statute labor, and the way it is put in, in this township, for nearly half an hour. He asked for a show of hands as to how many were satisfied and dissatisfied, with the way the commutation money was being expended. Out of about 250 ratepayers present, only half a dozen voted to condemn, and another half dozen in approval. No speaker at the meeting advocated going back to the old system.

But many of us feel that the council do not require of the two road commissioners what they should. I look for some improvements this year. J. C. Crow, Ridgville.

Pickering.

The township is divided into twenty-one divisions, with a commissioner over each. It is proposed to reduce the number of road divisions and commissioners, also to have a competent man in charge of the whole township, with a foreman in each road division.

I do not think our system differs much from that in vogue generally, where statute labor has been commuted, unless it be that our appropriations for improvement of roads are also expended under the superintendence of road commissioners, supervised by a member of the council, and both commutation and grant money is expended by hiring man and teams, ratepayers in the road division getting the preference. Faithful work is exacted, and current rates of wages paid. A rock crusher and road roller would further the good roads movement in this township. Donald R. Beaton, Township Clerk, Whitevale.

Sarawak.

Two wards commuted statute labor about six years ago, the third ward last year, and the fourth ward will do so this year. There are four divisions and four commissioners, the commutation rate being sixty cents per day. It is proposed to have one commissioner. We have very good

STONE CULVERT, CORNWALL.

roads, and talk of making permanent what is done hereafter, and not so much patching.

We have a small township, only 11,000 acres, and have one road grader, which works well, and would do twice as much work as we require, or have money to do each year.

We cannot suggest anything new which we have tried that would come up to your advanced improvements, which your Department are creating all over Ontario, and trust you are only beginning the good work. John Mackenzie, Township Clerk, Presque Isle.

Salter.

Last year we passed a by-law wholly abolishing statute labor in the three townships embraced in this municipality, and it, in my opinion, was successful on the whole. We had a plebiscite at our election in January, and found that one township (Harrow) gave a small majority in favor of the old system. Harrow township will have statute labor this year, Salter and May will have the commutation tax—fifty cents in lieu per day, same as last year.

It is proposed that the members of municipal council act as road commissioners, without remuneration.

Statute labor in a municipality which embraces a village cannot, we find, give satisfactory results. We have a population of 500 in the village, with the result that more money was contributed by the village than the balance of the townships. Streets did not require this amount annually, and practically all that was needed year after year, was fixing side walks. Fifty cents in lieu per day, more than covers the amount required to be expended. After operating one year, and taking a vote, only three votes were recorded against the present system. John G. Campbell, Township Clerk, Massey Station.

Sidney.

We have one superintendent for the whole township. He engages foremen to look after the work and hire men to perform the work. One foreman will have from two to five miles, perhaps more, to keep in repair. He keeps the men's time and gives it to the superintendent. He pays the men, and they sign a pay list, as a voucher that they received their money. The township is not divided into divisions. There are simply foremen placed where the superintendent thinks is necessary. He gets \$1.25 per day, and men \$1.00. Team and man \$2.00 per day of ten hours.

Some of our roads need grading and draining. We purchased a grader this summer, and think it is what we want. We have gravel in almost all localities. We may have to draw it in some cases four or five miles. In making culverts, we use the culvert pipe. Where we have an outlet, we think they are the best for culverts.

We expend on our roads from \$2,300 to \$2,600 yearly, commuting statute labor at fifty cents per day, which gives us about \$2,100. The rest we take out of the general tax. The soil in this part of our county is clay, and clay loam, in some places sandy loam. Geo. Nicholson, President W. Hastings, Farmers' Institute, Wallbridge.

Stafford.

On the leading roads of the Township of Stafford there are a few heavy hills, yet the township, as a whole, is not very rough.

There is plenty of gravel, also plenty of stone that could be broken for the roads, but neither the gravel nor the stone is convenient to much of the road. The flat stretches of roads are clay, not much drained, though draining would be a great benefit to the clay roads.

We have one road division and one road commissioner. Work is done by day labor. The commissioner has full control of all the work, he hires the men, operates the grader, is time keeper, and presents his book to the clerk every week. Before commencing work in the spring the commissioner and some of the council go over the roads, and lay out the work. Then the commissioner takes a team and man, and takes out stumps and stones that would interfere with the grader, then ploughs wherever the road can be ploughed for two or three miles, then takes the grader with four teams, and grades all that has been ploughed. The teams then go home till another stretch is ready, and so on till the finish. Last year we spent about \$450 on the roads. This year we will spend more.

On the whole the new system was a wise step. Of course, there are some kickers, and I presume always will be, but fortunately they have not much influence. The leading men of the township would not go back to statute labor on any account.

The commissioner repairs all culverts, and small repairs on bridges, at the time he is going over the roads; culverts needing repairs afterwards are

attended to by the councillor who is convenient, or sometimes the reeve sends the commissioner.

Two years ago we put in three culverts of sewer pipe ; they are giving good satisfaction. This year we intend to put in some more sewer pipe, also some concrete tiles. Wide tires are not much in use in this township, still there is a growing feeling in favor of wide tires.

I notice that many townships are commuting, instead of entirely abolishing statute labor. We adopted the latter, and think it is the only fair method. We put a special rate on the assessment of real estate to meet the road fund, then, if A. is assessed only \$5.00 more than B. he pays a couple of cents more road money. John Kidd, Township Clerk, Stafford.

Tecumseth.

Statute labor has been commuted at fifty cents on the dollar, and the township has been divided into three divisions under a commissioner, who hired men and teams at so much by the hour. I do not know the figures. As to how this system has worked, I think perhaps it is an improvement on the statute labor. The main or leading roads have been improved, and perhaps the back lines have not been so well cared for, little or no work having been done on them. Some of the commissioner's roads are too narrow and rounding, which was all right in summer, but when ground was icy was not safe for waggons, and the snow could not lie on the road in winter. After the road is in good shape I think the system will be able to overtake the work. The road scraper could plane off a great deal of road in a day. The most part of this township has no gravel; it is hauled for three or four miles some places.

Cedar is scarce for culverts and we have been using sewer pipes which have been giving satisfaction. The township has been building some bridges which they claim works well.

I think broad tires on waggons would be an improvement, and keep roads better. I think that it is acknowledged that this is an improvement on statute labor. John Semple, V.P. South Simcoe Farmers' Institute, Tottenham.

Toronto Gore.

In reply to your favor of the 16th of January, addressed to Mr. Porter, Reeve of this township, respecting the progress made since the abolition of the statute labor system of roadmaking, I am instructed to say :

In 1899 the council of this township, after considerable discussion and inquiry, decided on a radical change in the mode of roadmaking, and at that time passed a by-law completely abolishing the old system of statute labor, instituting instead, the levy of an extra rate of 65 cents per day on the prescribed statute labor, or about \$650 annually on the rateable property of the township, to be expended by the commissioner or an engineer, appointed by the council. As there was no engineer within a reasonable distance, and as the township was too small to warrant the employment of a competent man from a distance, the council decided to have the experiment tried of having the work done by commission work, and divided the township into two divisions for that purpose, two members of the council acting in one division, and the other three acting in the larger division. This has been continued with fairly good success up to the present time. The amount paid for commissioners work in 1902 was about \$70.

A competent man is appointed each year to take charge of the grader, with power to engage men and teams, and is always under the direction and instruction of the commissioner for the division in which the work is being per-

formed. The larger bridges are built by contract, while some of the smaller ones are built by day labor, under the instructions of the commissioner. Considerable improvement has been made on some of the leading roads of the township by gravelling, but, having to rely wholly on drift beds or creek gravel, the supply is limited. There is a large quantity of stone in the township, which the council purpose utilizing, as the county council have purchased a rock crusher, and intend letting it out to the local municipalities, so that, with the assistance of the Government grant, we are in hopes of having all the leading roads of the township gravelled or macadamized in the near future.

As the soil in the township is a heavy clay with clay subsoil, the experiments with underdraining so far have not been very successful. Wide tires are not used to any great extent in the township.

I might say that overseers are still appointed in each of the old road divisions, whose duty it is to have general supervision of the roads and bridges within their division, and either repairing any breach or giving way, or reporting to the nearest commissioner, and also employing men and teams for the purpose of keeping the roads open during the season of sleighing in each year. For this work they are allowed at the same rate as commissioners, that is twelve and one-half cents per hour.

In conclusion I might say that, although the statute labor has answered a very good purpose in its day, still we are thoroughly satisfied that any municipality, abolishing or commuting statute labor, and giving the change a fair trial, would not revert to the old method of roadmaking. Nicholas Harrison, Clerk of Toronto Gore, Castlemore.

Westmeath.

We are not in a position to give very much information in regard to commutation in our township. In the first place, we passed a by-law dividing our township into two divisions, and appointed two road commissioners, who also run the graders. I might say at the outset that we were handicapped for funds, no provision being made the previous year, and to help matters we had an outbreak of smallpox, which cost us a good deal, but the council pulled through without borrowing money, and spent about \$1,000 on the roads. The commissioners hired teams by the day, \$3.00 for man and team for ten hours work.

The work done this year was principally grading, and where the grading was done it was favorably spoken of, as the work was done in the right place, stumps removed, and the road straightened, but we are in a good position to give it a fair trial next year. We have the commutation money to spend, in addition to the usual grant to roads and bridges. We commute at seventy-five cents per day to start with.

We have a great deal of good gravel in our township, and we have purchased a set of moulds for making concrete tile, and have made some, and expect to make a quantity in the spring. We were too late starting to make them, and found out that the cold wet weather was against us, but we are in good shape to give it a fair trial next year, when I trust to be able to give a favorable report. There are no restrictions on the width of tires in our township. John Brown, Township Clerk, Beachburg.

Westminster.

We are not yet in a position to give a definite opinion on the matter, owing to several causes. In the first place, 1902, was the initial year, and it was an extremely wet season, greatly hindering the working of any season.

The general features of the Township of Westminster are very mixed. It is bounded on the north by the River Thames, and the land is rolling and hilly southward to the water shed, a distance of one to one and a half miles. The height of land contains sand and gravel pits, principally in the western half of the township. To the south of the water shed the land slopes gently to Dingman's creek, which runs westward through the centre of the township to the London and Port Stanley gravel road, when it trends to the northwest and enters the Township of Delaware, cuts through the water shed and enters the Thames. South of Dingman's creek the land rises gently until the second water shed is reached in the fifth concession and in lots 20 and 21 there are immense deposits of gravel, and there are also deposits in the West Talbot road survey and northward. In fact the north and west is rich in gravel. Then from the second height of land in the fifth and westerly in the sixth concession, the township slopes gently to the basin of Kettle creek, and the roads are easily drained; and with two town line bridges over Kettle Creek and the Dingman Creek bridges, which are the only expensive structures, there is a good chance to have good roads, and we have them.

Our culverts are mostly of concrete pipe, and in many instances were too small for this wet season. The township is divided into four divisions, and each councillor commissions one of them. The work is let by contract except in emergency. Wide tires are not favorably viewed, as they catch more loose stones, and are rougher to ride, and harder to draw.

As to the benefits derived from the commutation of statute labor, they are certainly not few. The tax is equitable, and the shirk cannot escape; the roads will be equalized and the general standard raised; competent overseers instead of careless pathmasters; and the farmer can attend to his farm and need not trouble his head about road work; it saves him valuable time; saves him money, as forty-five cents is the rate instead of seventy-five cents, and the roads must and will improve. I have no words of blame, but plenty of praise.

We have not got the system perfected yet from my point of view. One man cannot look over a quarter of a township without local assistants, as damage may easily happen to the public by snow drift, flood, or break down of bridge or culvert, and there should be some local men to either repair or at once notify the commissioner. The noxious needs are neglected without pathmasters to fulfill or enforce the Act.

We have a grader, it is run over the roads by traction, and sometimes by horse power. It is with a cohort of statute laborers. Our winter roads are getting worse and worse. The drift settles in the track where there is one, and blows off the exposed grades and east and west roads. It is a pity that the public could not be interested in evergreen tree planting. It is the greatest present need both for the road and also for the traveller.

If something is not done to provide wind breaks, we cannot expect to have good sleighing or comfortable travelling. The report I send you will give you an idea of the amount of snow shovelling paid for, and a good many farmers never send in an account. Wire fences are of very little service to the road, as the snow piles in the beaten track raising it dangerously high. We have a piece of road with white thorn hedge on the west side; and it is the most troublesome piece of shovelling we have. The best wind-break would be Canadian pine, cedar or Norway spruce planted thickly in double or treble rows. As they grow up they could be thinned, and the timber or poles sold, and the money would repay the cost in a short time. As the roadways are now formed the roots would not interfere.

There is also the telegraph and telephone poles; it appears that those companies think they own the highway, as they plant their poles where they

please, and even cut across corners, and hack shade trees. They cut the entire top off a young maple which was planted upon my own land, and dropped it into the growing crop, and left it there. These gentry need straightening. James A. Glen, Glanworth.

Westminster.

So far as the abolition of road work is concerned, I was heartily in accord with it, but having as yet only one year's experience of the system, cannot say much about it until it is thoroughly organized.

The roads throughout this township are fairly well graded so that the subject now is rather a matter of maintaining than construction. Gravel pits are well distributed, and I expect that the plan of letting contracts for hauling will, in a few years, show a marked improved condition, if only from the greater quantity of gravel that will be put on the roads.

The land is generally undulating, and the soil of a nature necessitating little to be done in the way of road drainage. So that the main outlay is for gravelling, repairing culverts, and building bridges. Colonel Robert McEwen, Byron.

York.

We have had three years' experience with commuted statute labor. The township is mostly heavy clay, and hilly. The material for roadmaking is gravel, obtained from banks and river bed of the Humber river, which is the west boundary line between York and Etobicoke townships. The soil is

HOW STONE SHOULD BE SPREAD.

heavy clay, but the hills save it from needing underdraining to a certain extent.

I do not know how many divisions or road commissioners there are. The work is done by day labor. The commissioners are not strict enough. The work is done some better than by statute labor, but there is room for improvement, but imperfect as it is, it is a vast improvement on the old way. The work can be concentrated where it is most needed, and a more finished job made. The greatest difficulty is to get the farmers to understand they are working for so much per day, and should do a fair day's work; in hauling gravel, to haul a square yard, and not trot off with a wheelbarrow full. I do not know what the expenditure is on our roads, there seems to be a little more than the commuted labor expended, but a great number pay instead

of working. They have that privilege. R. L. Crawford, Secretary W. York Farmers' Institute, Emery.

Zorra East.

Statute labor has been commuted, in part, in East Zorra, for several years past, and last year, wholly, at fifty cents per day. Statute labor divisions were abolished and one commissioner at \$500 per annum substituted. Now this has been repealed, and 101 road overseers appointed as formerly. Last year was a very unfortunate one in most respects in this township for the working of one commissioner, as the summer was, on the whole, very wet, and laborers were very scarce and wages high. The amount of money raised by commutation was about \$2,500, and about one-half of this has, as yet, been unexpended by the commissioner for these reasons. A stupid little amendment to the Municipal Act, prevents the placing of gravel on the roads during sleighing, so that nothing can be done until the spring mud season. If this was amended so that a good and sufficient other road might be provided, it would result in a marked benefit to the roads during the season when labor is cheap, and farmers' teams for the most part idle. We have a fairly good supply of gravel of good quality, in this township, but it is all purchased by the yard, or load, and very few of the pits are stripped of surface soil.

Concrete pipe up to fifty-four inches diameter is and has been used for culverts, very few or no wooden ones being built. All bridges over twenty feet span are being built of steel on quarry stone abutments. About \$10,000 has been spent in this work, in the past six years. This included the approaches and guard rails to five bridges. A good deal of draining of roads has been done, tile being plentiful, and very reasonable in price.

The wide tire movement is beginning to be felt, the first move being to provide six-inch tires for all gravel contractors. Most of the farmers' waggons are now three inch, and quite a few four inch, and very few of the narrow style are being sold.

I fancy that this year will be the last of the road overseer business, but the township is rather too large for one commissioner to manage, if he has to see all weeds cut, and keep roads open in winter. However, the snow business is nearly solved, as the fences bordering the highways are now nearly all of wire, and high board fences in cuts.

Nearly all of the work done on the highways is by contract, the exception being the work done by the road machines, of which we have two, and have had for five years past. This work is done and paid for by the hour for team and driver. The operator is paid in the same way, work being under the supervision of the commissioner, or a member of the council, as is found most convenient. In conclusion I may say that statute labor will be worked out in this township no longer, but there is a strong tendency to have all improvements paid for out of the general rate. Getting along, as we are, may be slow, but we are very sure that we are having piles of experience, even if our roads are improving very slowly. James Anderson, Clerk East Zorra, South Zorra, P.O.

A BY-LAW TO COMMUTE STATUTE LABOR IN THE TOWNSHIP OF ERAMOSIA.

Whereas the highways in the Township of Eramosa have been maintained by statute labor performed thereon, supplemented by grants from the township funds;

And whereas, for several years, an agitation has been gaining strength to have statute labor commuted, or paid in money, instead of being worked

out as heretofore by the ratepayers, under the direction of the pathmasters appointed for the several road divisions;

And whereas the ratepayers of the township, so far as the council have been able to ascertain are, generally, in favor of the commutation of the statute labor, and desire its adoption, and the council are satisfied that better results would be obtained if the change of system were inaugurated;

Be it therefore enacted by the Municipal Council of the Corporation of the Township of Eramosa as follows;

1. That after the passing of this By-law, all statute labor to which any person, resident or non-resident, may be liable in the Township of Eramosa, shall be commuted at the rate of fifty cents for each day's labor, and the amount of such commutation tax shall be entered in a separate column, opposite such person's name on the collector's roll, and shall be collected and accounted for like other taxes, subject, as regards persons liable to assessment for statute labor under Section 97 and 100 of the Assessment Act, to the provisions by law appointed for enforcing payment of such commutation tax.

2. That the subdivisions of the public highways of the township into seventy six statute labor divisions, as at present, is hereby abolished, and the township shall be divided for road purposes, under the commutation system, into four road divisions, to be known as follows;

The South Division, comprising lots numbers one to fifteen, inclusive, in the first, second, third, and to the centre of the fourth concessions.

The East Division, comprising lots numbers one to fifteen, inclusive, in the east half of the fourth concession, the fifth, the sixth, and the seventh concessions.

The West Division, comprising lots numbers sixteen to thirty-two, inclusive, in the first, second, third, and to the centre of the fourth concessions.

The North Division, comprising lots numbers sixteen to thirty-two, inclusive, in the east half of the fourth concession, the fifth, sixth, and seventh concessions.

The said road divisions shall include the concession roads, the cross roads, and the township boundary line roads, within each of the aforesaid limits, so far as the council has jurisdiction over the same, but they shall not include the county road.

3. The council for each year shall, as soon as practicable after its organization, appoint an Overseer of Highways for each of the said divisions, such overseer being hereinafter called a commissioner.

4. The Reeve of the township shall have a general oversight of the highways and bridges in the township, and the commissioners shall confer with him as often as may be necessary as to the repair or improvement of highways or bridges within their divisions.

5. Moneys derived from the commuted statute labor tax in each year are to be applied in that year exclusively towards the repair and improvement of the highways in the division of the township in respect to which such moneys have been paid, in place of the statute labor which has hitherto been used for that purpose within each division, and the council may in each year supplement the moneys derived from the statute labor commutation tax by grants from the general funds of the municipality, such grants to be expended in such divisions as the council may direct.

6. Each commissioner shall be required, between the first and fifteenth days of May, not later than the fifteenth day of May, in each year, to prepare and lay before the council estimates of the probable cost of repairing and improving highways and public drains, culverts and bridges within his division, and the council may direct such repairs and improvements in the different divisions of the township as it shall think proper, and make such grants

towards the same from the general funds of the municipality as it may see fit, and it may direct the work to be done and materials provided by contract or by days' labor or otherwise, as it may see fit.

7. A commissioner in whose division a village is situated may cause sidewalks to be repaired or laid therein. After sidewalks have been laid it shall be the duty of the commissioner to see that the same are kept in repair.

8. Whenever the council directs work to be done or materials provided by contract, tenders shall be called for.

9. Whenever the council accepts a tender, such acceptance shall be considered conditional upon the person tendering forthwith depositing with the Commissioner for the division a sum equal to 10 per cent. of the contract price as security that he will faithfully perform all the conditions of the contract, such deposit to be forfeited if the person fails to perform his contract by the time agreed upon.

10. Where contracts shall be let for the repair or improvement of roads or bridges it shall be the duty of the commissioner for the division to superintend the performance of the contract, and see that the work and materials are according to contract; the commissioners shall see that all persons contracting for road work, or for the delivery of lumber, stone, gravel, or other material for roads or bridges, duly fulfil their contracts, and the commissioner shall be held responsible for the delivery of improper or insufficient quantities or qualities.

11. No contractor shall be entitled to be paid, where the contract is for a job costing \$40 or less, until he shall produce an order in writing from the commissioner for payment; and where the contract is for work or materials over \$40, no contractor shall be entitled to be paid until he shall produce an order from the commissioner, countersigned by the reeve, and it shall be the duty of the reeve, before countersigning such order, to make a personal inspection of the work, to satisfy himself that the contract has been properly performed; unless the council otherwise directs, it shall be the duty of every contractor contracting for the performance of road and bridge work to complete his contract in all respects not later than the first day of August in every year; and all persons entering into contracts for road or bridge work, or materials, in this township, shall be held to be bound by the provisions of this clause with respect to the payment therefor.

12. It shall be the duty of the commissioners, unless the council otherwise orders, to cause all work not done by contract to be completed on or before the first day of September in each year, except, however, that in case of emergency it shall be the duty of the commissioners to cause repair work to be done at any season that may be necessary.

13. Any moneys that the township council may grant or apportion for the repair and improvement of highways, otherwise than by contract, shall, unless the council otherwise directs, be expended under the direction of the commissioners respectively, and it shall be their duty to report to the council not later than the first day of December in each year, how the moneys granted or allotted by the council have been expended, and they shall produce vouchers to the council, showing that the moneys have been properly expended according to the terms of the said grant. They shall also report to the council in what manner contracts have been performed, and the amounts paid thereunder.

14. Each commissioner shall also perform the following duties:

(a) Generally, to see that the public roads, streets, bridges and highways in his division are kept in repair according to the requirements of the Municipal Act.

(b) To employ such labor as in his judgment may be necessary for the due performance of such work as the council may have authorized, where the work is not done by contract. He shall have full control of the men while so employed, and may dismiss any man whom he may deem necessary.

(c) To see that all working tools belonging to the corporation for highway purposes in his division, are properly cared for, and be responsible for their good order and safe keeping.

(d) To keep and render full and accurate accounts of the working time of the employees under his control, also of the highway or part of division in which such work has been done, and to sign employees' time sheets, and certify to the correctness or otherwise of all accounts that may be presented for work or materials for highways or bridges in his division.

15. A day's work for all persons employed by the commissioners hereunder shall consist of ten hours of faithful service, exclusive of the time spent in going to and coming from work, but payment in all cases, except upon job or contract work, shall be by the hour. Men shall be allowed not more than 15 cents per hour for their work.

16. Operators of grading machines shall be allowed 15 cents per hour, and teams employed in hauling gravel or at other work shall be paid 30 cents per hour.

17. The remuneration of the commissioners shall be 20 cents for every hour necessarily devoted by them to their duties hereunder.

18. The road graders belonging to the township shall be used for the benefit of all the highways in the township, and shall be used where and by whom the reeve shall designate from time to time.

19. This by-law has relation only to the roads and bridges within the jurisdiction or partial jurisdiction of the township council.

20. Nothing herein contained, or which may be contained in the recommendations hereinafter mentioned, is intended, or shall be construed or held to increase or otherwise affect the liability, civil or otherwise, of the said corporation under the municipal law, in respect to the keeping of public roads, streets, bridges and highways in repair.

21. The commissioners are recommended, as far as practicable, to consider and follow the recommendations referred to in the schedule attached to this by-law.

This by-law shall take effect from and after the date of the passing hereof.

Passed the seventh day of April, A.D. 1902.

NOAH SUNLEY, Reeve.
HUGH BLACK, Clerk.

SCHEDULE.

Recommendations or Suggestions to Road Commissioners.

1. To begin the annual labor as early in the spring of each year as the condition of the roads will permit, and work continuously until the appropriation to his division for the year is exhausted.

2. To cause to be plowed or scraped any of the roads in his division whenever in his judgment they may require it.

3. To cause to be properly protected, by railings or otherwise, all pits, precipices, deep waters, and other places dangerous to travel.

4. To see that the provisions of the Act to prevent the spreading of thistles and noxious weeds upon the highways and road allowances are carried out.

5. To do what he reasonably can, having regard to circumstances, to cause the roads in his division, in time of sleighing, to be kept open.

6. In order to remedy the inequalities that at present exist throughout the township in the width of those portions of its highways which are intended respectively for the use of vehicles and of persons travelling on foot, in reconstructing or regrading any highway, to aim at a uniform standard width of track or roadway for vehicles, of not less than twenty or more than twenty-eight feet (according to the importance of the road) in the centre of each highway, between the outside edges of the side ditches, unless the confines or formation of the roads as such as, in the opinion of the council, to require a deviation from this rule.

7. To cause to be constructed ditches to drain every highway immediately adjacent to and parallel with the travelled roadway, and separating same from any foot-paths. Every side ditch to be of such width and depth as may, in the judgment of the commissioner, be required, and to have an outlet to which water will flow freely, and not to be held to soak into and soften the foundation of the travelled roadway; the outside edges of all ditches to be lined true and straight, as far as practicable, and the sides evenly sloped. Shoulders should not be allowed to form next to the roadway.

NOAH SUNLEY, Reeve.

ROADMAKING OUTLINED

1. Every good road has two essential features:

(a) The earth subsoil is well drained, naturally or artificially, making a strong, unyielding foundation, acted upon to the least possible degree by frost.

(b) The wearing surface is a smooth, hard and compact crust, which sheds water readily, and distributes the concentrated wheel load over a greater area of subsoil.

2. The surface covering is generally a coating of gravel or broken stone, which should be put on the road in such a way that it will not, in wet weather, be churned up and mixed with the earth beneath. That is, it should form a distinct coating.

3. To accomplish this:

(a) The gravel or broken stone should contain very little sand or clay--it should be clean.

(b) The roads should be crowned or rounded in the centre so as to shed the water to the open drain.

(c) Ruts should not be allowed to form, as they prevent water from passing to the open drains.

(d) The open drains should have a sufficient fall and free outlet, so that the water will not stand in them, but will be carried away immediately.

(e) Tile underdrains should be laid wherever the open drains are not sufficient, and where the ground has a moist or wet appearance, with a tendency to absorb the gravel and rut readily. By this means the foundation is made dry.

4. Do not leave the gravel or stone just as it drops from the wagon, but spread it so that travel will at once pass over and consolidate it before the fall rains commence.

5. Roll the gravel or stone with a road roller until it is smooth and hard, otherwise keep the road metal raked or scraped into the wheel and horse tracks until consolidated.

6. Grade and crown the earth road before putting on gravel or stone, also roll the earth road before putting on the metal, if a road roller is available.

7. The grader should start work early in the spring, and be kept continuously in operation until the season's work is completed. Work for the grading machine should be staked out in advance, so that each piece can be taken up consecutively; otherwise much time is lost in moving the machine from one part of the township to another.

8. A fair crown for gravel roads on level ground is one inch of rise to each foot of width from side to centre.

9. The road on hills should have a greater crown than on level ground, otherwise the water will follow the wheel tracks and create deep ruts, instead of passing to the side drains. One and one-quarter inches to the foot from the side to centre will be sufficient.

10. The work of cutting down hills should be undertaken systematically, a few being taken up each year and made good, the worst or most necessary being first looked after. Gravel or stone can then be put on permanently. The rise should not exceed one foot in twelve.

11. Repair old gravel roads which have a hard centre, but too little crown, and which have high, square shoulders, by cutting off the shoulders, turning the material outward across the ditch if necessary, and placing new gravel or stone in the centre of the road. Do not cover the old gravel foundation with the mixture of earth, sod, and fine gravel, of which the shoulders are composed. The shoulders can be most easily cut off by means of a grading machine.

12. Roads of importance should be about twenty-four feet in width, between the inside edges of the open ditches, with the central eight feet gravelled or metalled with broken stone. Roads of least travel should not be less than eighteen feet in width.

13. Whenever water stands on the roadway or by the roadside, or wherever the ground remains moist, or is swampy in the spring and fall, better drainage is needed.

14. Look over the roads after heavy rains and during spring freshets. The work of a few minutes in freeing drains from obstruction, or diverting a current of water into a proper channel, may become the work of days if neglected.

15. Surface water should be disposed of in small quantities; great accumulations are hard to handle and are destructive. Obtain outlets into natural watercourses as often as possible.

16. Instead of having deep, open ditches to underdrain the road, and dry the foundation, use tile.

17. Give culverts a good fall and free outlet, so that water will not freeze in them.

18. In taking gravel from the pit, see that precautions are taken to draw only clean material. Do not let the face of the pit be scraped down, mixing clay, sand and turf with good gravel.

19. Gravel which retains a perpendicular face in the pit in spring, and shows no trace of slipping, is generally fit for use on the road without treatment. Dirty gravel should be screened.

20. Plan and lay out the work before getting the men on the ground.

21. When preparing plans keep the work of succeeding years in view.

22. Have on the work only such number of men and teams as can be properly directed.

23. In laying out the work estimate on a full day's work from each man, and see that it is performed. Specify the number of loads of gravel to constitute a day's work. Every wagon box should hold a quarter of a cord.

24. Make early arrangements for having on the road, when required, and in good repair, all implements and tools that will be needed.

25. Do all work with a view to permanence and durability.

MODERN ROADMAKING.

Among the earliest roads of which we have definite information were those built by the Romans, chiefly as military highways, leading east, and west to the remote provinces, from which arose the proverb, "All roads lead to Rome." So substantially were these roads built, of layer upon layer of stone and concrete, three and four feet in thickness, that many of them still remain, and are commonly supposed by the peasantry of Spain and of other countries of Southern Europe, to be of supernatural origin. These roads were built at an enormous waste of money and labor, and while of the greatest durability, they lack the first essential of modern construction—a properly balanced union of economy and efficiency.

For several centuries after the downfall of Rome, roadmaking became a forgotten art. In France, during the eighteenth century, under the engineer Tresauguet, road construction was revived, but on very different principles from those followed by the Romans. The type of road built by the French engineer was that introduced into England by Telford,

and consisted of a foundation of large stones, laid on edge and carefully shaped, upon which was placed a coating of finer broken stone. Early in the nineteenth century, McAdam advocated and constructed in England a still more economical design, in which the foundation of large stone was omitted, but greater care was given to draining the roadbed. McAdam's system is that most commonly followed to-day, with a number of important alterations consequent upon the introduction of roadmaking machinery.

In the time of McAdam the best method attainable was to break stone by hand, which was then placed loose on the roadway and left for traffic to consolidate. The process of consolidation was slow, during which a considerable amount of the stone was forced into and mixed with the earth subsoil, injuring the consistency of the road. Under present methods, by means of a crusher, stone is broken much more cheaply than it could be done by hand.

Stone dust and chips (screenings), are created in the process of crushing, which are used to fill the voids, instead of waiting for this to be produced by traffic, or allowing the clay or loam from beneath to be forced up among the stones. With a roller the road metal is made thoroughly compact, forming a strong, waterproof covering over a firm subsoil. The result is that

more perfect work is done in a few days and at less cost than the methods of McAdam or Telford would accomplish in several months. The main features of present-day roadmaking, which are of recent introduction, are :

- (a) The use of grading machines for forming the earth foundation and open drains.
- (b) The thorough drainage of the earth subsoil.
- (c) The use of a crusher to prepare the road metal.
- (d) The screening of broken stone so as to grade it for application to the roads in layers, according to size.
- (e) The use of stone dust and fine chips (screenings) as a binder.
- (f) The use of a roller to consolidate both the earth foundation and the surface covering of broken stone.

THE ROAD SURFACE.

A road surface of gravel or broken stone performs various services. The ordinary dirt road of clay or loam alone ruts readily, softens quickly after a rain and has little supporting power. A well-compacted layer of gravel or broken stone over it distributes the concentrated wheel load over a greater area of subsoil; it does not rut readily, and affords good surface drainage; it gives a smooth, hard, wearing surface; water does not easily penetrate it so as to soften and reduce the supporting power of the subsoil.

The depth of gravel or stone to be used must vary with the quality of the material, the amount and nature of traffic on the road and the nature of the subsoil. A dry, compact and stony subsoil needs less metal than does a plastic clay, difficult of drainage. A definite rule cannot be laid down to accurately meet all conditions, but from six to twelve inches of well-consolidated material will afford a sufficient range to accommodate most circumstances. Ordinarily ten inches of metal should accommodate the heaviest traffic to which a gravel or broken stone roadway can be economically subjected.

A very notable defect of most country roads is the flat, or even concave surface. Others present the opposite extreme, and are so rounded up as to be dangerously high in the centre, making it difficult for vehicles to turn out in passing. Roads must be crowned sufficiently to shed water from the centre to the open drains at the side, otherwise water will stand in the roadway, soak into it, soften and cause rapid wear, resulting in ruts and holes; but a crown higher than is necessary to properly drain the surface is also objectionable. The smoother and harder the surface of the road, the less crown is needed.

The amount of crown should not be more than sufficient to provide for surface drainage. A sharp crown tends to confine traffic to the centre of the road; and also in turning out, the weight of the road is thrown on one pair of wheels in such a way as to rut the side of the road. The shape of the crown is a matter on which road experts differ, but with the class of material available for roads in Ontario, and the methods and plans of construction, a form as nearly circular as possible will be found serviceable, and most easily obtained.

From the edge of the open drain the graded portion of the roadway should be crowned with a circular rise of one inch to the foot from side to centre. That is, a driveway of twenty-four feet wide should be one foot higher at the centre than at the side. This amount of crown may at first appear excessive, but with gravel roads and roads metalled with the qual-

ity of stones commonly used, is not more than enough to provide for wear and settlement consistent with good surface drainage.

The elevation of the road above the level of the adjacent land need not be greater than is sufficient to provide against the overflow of storm water, which should always be guarded against. The depth of the open drain must vary according to the amount of fall and the quantity of water to be provided for; also according to the sub-drainage needed and provided. When tile sub-drains are used the open drain can often be shallow, in which case the width of the graded roadway can be narrowed, there being no danger of accidents such as are caused by a deep trench at the roadside. The tile drains should be placed below severe frost, and usually a depth of three feet will answer.

ROAD DRAINAGE.

Roads should be built and maintained very largely (and by some it is argued, solely) with a view to good drainage. The travelled roadway should be kept hard and smooth and sufficiently crowned, so that water will not lie upon it in depressions or ruts, but will flow immediately to open drains at the side. These open drains should have a regular and constant fall to a free outlet. Further than this the underflow, or subsoil water, should be removed, where necessarily, by tile drainage.

Water should be disposed of in small quantities, along natural water-courses, otherwise if carried long distances and gathered in large bodies along the roadside, it gains force and headway, resulting in extensive wash-outs, and is in every way more costly to handle. It should be taken away from the roads as quickly as possible, for an excess of water is the great destroyer of roads.

The drainage usually found on existing roads consists of open ditches on each side of the graded portion, with a depth of about eighteen inches. They are frequently carried through rises of ground, past natural watercourses. Little attention is given to the regularity of the grade in the bottom, or to the amount of fall, as evidenced by the varying depths of stagnant water at wet seasons. The object of these drains was more to procure earth to raise the centre of the road above the water line than to lower the water.

A drain without an outlet is useless—or worse than useless. If there is not an outlet, the water is held in elongated ponds by the roadside, to soak into and soften the travelled roadway. This water is drawn up into the entire roadway by capillary attraction, just as a sponge will absorb water and hold it in all its pores.

The introduction of graders, wheeled scrapers and modern road machinery requires that a roadway should, in order to construct it economically, without hard labor, be such as the implements will readily form. For this reason deep, open ditches, with sharp angles and narrow bottoms, are not now suitable; but instead, a cross-section of a road should show gentle curves, the rounded surface of the road not sharply defined from ditch. The latter should be about two feet wide in the bottom, where a wheeled scraper can work, and about eighteen inches in depth.

The best practice does not direct that the old open drains should be deepened for the purpose of draining the subsoil. Deep, open drains are expensive, dangerous and unsightly, and the excavated earth generally does more harm than good to the road when used to round it up, especially if piled on top of gravel or stone. When the combined cost of construction

and maintenance is considered, a tile drain laid under the bottom of open drains is cheaper and more serviceable.

It may be accepted as a general rule, that roads tiled without gravel are better than roads gravelled without tile. All roads except those on pure sand can be improved by tile draining. A single line of tile, if placed about three feet below the bottom of the open drain, if the graded portion of the road is about twenty-four feet wide, will accomplish nearly all that tile drainage will do. If one side of the road is higher than the other, lay the tile on the high side so as to intercept the subsoil water as it flows down the slope. A four-inch tile meets most conditions, but the size will depend on the length of the drain and the amount of water to be carried away. Care must be taken to give the tile a uniform grade, so that there will be no depressions. If possible, give a fall of at least three inches in one hundred feet. The cost will be about fifty cents a rod. The work, if properly done, will be a permanent and substantial improvement to the road, and will save many times the cost by lessening the amount of gravel needed on the road.

Municipalities need not undertake to at once underdrain all their roads in this manner, following the one rule. The preferable plan is to place these drains where they are evidently needed most, in low-lying sections, where water is seen to remain longest on the surface in the spring, or after a heavy rain, where springs have a tendency to appear, or where the ground is found to be cold and wet during the summer.

The name "macadam" is commonly applied to any road surfaced with broken stone, and in this respect is a very unfortunate misnomer. It is the neglect to provide a dry subsoil that is the greatest cause of the unfortunate condition of roads throughout Canada today. Roads which are not well drained are but a repetition of the English roads as they existed before the time of Macadam—they are the roads which the system of Macadam displaced. A roadbed in which sub-drainage is not sufficiently provided is the opposite of a macadam road.

The importance of drainage cannot be too thoroughly impressed. Clay in thick beds, when dry, will support from four to six tons per square foot of surface, according to the quality of the clay. If but moderately dry it will support from two to four tons only per square foot of surface. If the clay is wet and soft it will yield to almost any load. Gravel, if well compacted, forms a much stronger roadbed, is less yielding to the action of moisture, and for this reason, even for a thin surface coating, strengthens the road somewhat. But the real strength of the road must lie in the subsoil. Vegetable molds and alluvial soils are weak, having a sustaining power of only one-half to one ton per square foot, and for this reason it is well to remove such soils, securing, if possible, a gravel, clay or sand foundation.

A dry subsoil becomes of greater necessity in a cold and humid climate, such as prevails throughout Ontario for a considerable portion of the year. The injury done to roads by frost is caused entirely by the presence of water. Water expands on freezing, and the more there is under a road and above the frost line, the greater is the injury. In freezing, the particles of soil in immediate contact with the water are first compacted. When room for expansion ceases within the body of the soil itself, owing to its saturated condition, the surface is upheaved. When thawing takes place, the subsoil will be found honeycombed, ready to settle and sink beneath traffic. It is, therefore, of the utmost importance that the soil should be relieved of all water of saturation as quickly as possible by under-drainage. The impassable condition of the roads during spring, often axle-deep with mud, is to be attributed very largely to a wet subsoil which has been honeycombed in this manner.

The making of a strong foundation thus resolves itself largely into a question of under-drainage, and the means whereby proper under-drainage is obtained must be adapted to the manner in which water finds its way under the road, and the nature of the soil. A soil retains in its texture, by capillary attraction, a certain amount of water. In the case of a plastic clay soil, which will absorb nearly one-half its weight and bulk of water, the water retained in this way may be the cause of injury. In the case of gravelly, sandy or other porous soil, it is necessary to remove only the water held by hydrostatic pressure in the foundation of the road. The effect of this is, that, with a clay subsoil, under-drains are nearly always beneficial in securing a strong foundation, and are necessary for traffic of even moderate degree. With porous soils, on the other hand, the necessity and means of drainage will depend upon the height to which the water rises in the foundation, and the direction from which it comes. When a strong foundation is needed these underdrains should be three or four feet below the surface of the subsoil.

Their location with respect to the road should be varied with circumstances. The most effective type of drainage employed is a system in which there is a tile drain on each side of the roadway underneath the open gutters, with V-shaped drains at intervals from the centre of the roadbed to the side drains. From this the scale descends to drains at the sides of the roads only; then a drain at one side only, or in the centre of the road; then only an occasional drain at springy or damp points.

It is of advantage to understand the manner in which underdrains act in different cases. With porous soils, in which the water rises under hydrostatic pressure, the water enters the tile from below, just as water rising in a vessel finds an outlet in the sides or flows over the top, so the under-drains supply the necessary outlet for this excess moisture at a proper depth from the surface; it "lowers the water line."

With clay the process is different. Absorbing and holding as it does, like a sponge, a large quantity of water, drains are less effective, but none the less necessary. The cracks and fissures which appear throughout the surface of a baked soil during the summer drought, afford a clue to the action of under-drains upon the soil. As the clay yields up its moisture, it shrinks, is torn apart. These fissures, commencing at the drain, spread in different directions, and each fissure thus becomes a new drain leading to the tile. This process goes on, the fissures become filled with sand, vegetable and other porous matter, so that they assume a degree of permanency, and, in clay soils, underdrainage is more effective after several years than at first.

BROKEN STONE.

Broken stone, when of a suitable quality and properly applied, is a more durable surfacing material for roads and streets than gravel. Owing to the greater cost, it is used by those townships only which have not a supply of gravel. As ordinarily used, broken stone gives less satisfaction than gravel, because the latter binds quickly under traffic owing to the presence of sand and clay. To get the best service from broken stone a road roller should be used to consolidate it; otherwise the stones roll loosely for a considerable length of time. The feeling of councils with regard to its use is that it makes a passable road for a short time in fall and spring, but that a good dirt road for summer use is spoiled. Townships which have only broken stone for road metal, will receive decided benefit from the use of a steam or horse road roller, which will at once consolidate the stone, and make a thoroughly good and smooth road for all seasons of the year.

The different kinds of stones for macadam roads cannot be completely approached from the standpoint of names. Granite, limestone, sandstone, are rocks common in this Province, but to say that granite is better than limestone, or that limestone is better than sandstone, while true of the best qualities of each, may be quite incorrect as regards particular varieties, since a good sandstone may be preferable to a poor limestone or granite. The best stone for a macadam road is that which is hard and tough, not easily affected by the atmosphere, moisture, or the varying conditions of climate. The choice will generally lie between a cheaper and less durable stone near at hand, and a more costly but better stone from a distance.

A great proportion of the macadam roads in Ontario will be constructed of limestone, since this rock is the most common, quarries being within easy access of almost any part of the Province. In quality it ranges from that which is useless to that which is almost equal to trap. Limestone, if it is tough and close grained, is an excellent material for roads on which the weight of traffic is not excessive. Some dolomitic limestones, while hard, appear to lack in toughness. Other limestones, of a slaty texture, have not good wearing qualities, are rapidly disintegrated on exposure to the atmosphere, and should be avoided. Some limestones of an open, porous nature, yield readily in this climate to the effects of moisture and frost, merely turning into mud. The excellent binding qualities of limestone make up largely for a lack of hardness, a weak cement being formed by the dust, which adds very much to its durability.

All things considered, hardness and toughness to resist wear and atmospheric action, the relative desirability of rocks is ordinarily in the following order: 1, trap; 2, syenite; 3, granite; 4, schist; 5, gneiss; 6, limestone; 7, quartzite; 8, sandstone; 9, slate; 10, mica schist; 11, marble. Of these, the last four, sandstone, slate, mica schist and marble, are of little value in road-making except for the lower courses, when they are surfaced with a durable stone that will resist wear.

In determining the best quality of stone for road purposes, there are four prominent destructive agencies which have to be considered: 1, the crushing of loads; 2, the grinding action of the wheels; 3, the blows from the shoes of horses; 4, climatic influences of air, water and frost.

With respect to the first three, a stone may have great hardness and splendid crushing strength, but at the same time be brittle, yielding readily to the grinding effect of wheels, and the blows administered by the hoofs of horses. On the other hand, a stone may be able to resist, in a measure, the second two wearing agencies, those of "abrasion" and "impact," and yet be so soft as to crush readily.

The fourth agency, the decomposing effect of the atmosphere, is one of very great importance. The denser stones, those which absorb the least water, are usually best able to resist the injurious action of frost and moisture. The weight, or specific gravity of a stone is an indication of durability in this respect, the lighter stones usually being those which are most porous and in consequence are subject to atmospheric decay.

Another other feature which a good rock for roadmaking should possess is that, when crushed, it will break into a compact form. A stone that, in breaking, takes thin, flaky shapes, will not wear so long as one that breaks into cubical pieces, nor will it consolidate so readily in a roadbed, for a wheel, in passing over the side of a flat stone, will throw it out of place and loosen the stones adjoining.

The tests usually applied in determining the qualities of stone are those which indicate crushing strength; the power to resist impact and abrasion; the density, determined by the weight of the stone; the amount of water

absorbed. While elaborate trials may be made, a practical man can judge of the qualities of a stone by applying simple tests; by breaking the stone with a hammer; wearing it on a grindstone; crushing it in a blacksmith's vice; scratching with an iron nail; breaking small pieces with the fingers. By such simple means, a general idea of the stone can readily be formed, but no test is so conclusive as actual wear on the road.

Broken stone produced from boulders has been objected to as road metal on various grounds. The rounded sides do not permit consolidation with the minimum of vacuum. If they have been exposed to the atmosphere the boulders are apt to be decomposed, are soft and will crumble readily. The mixture of different kinds of rock on the road surface, some hard, some soft, permits unequal wear, and produces a rough surface.

While these are defects which certainly are not to be overlooked in the choice of a road metal, boulders nevertheless, constitute a very valuable material for the construction of a road, particularly in localities where they are plentiful and gravel or bed rock not readily obtainable.

In selecting field boulders, care should be taken to discard all rock which shows signs of having "weathered," or having been decomposed by the action of the atmosphere. Sandstones and granites are peculiarly subject to this disintegration, while soft limestones are very common. Rocks which should be condemned from this cause are those which crumble readily under successive blows of a hammer, or which show iron stains when broken. A little experience will quickly teach a judicious roadman to detect the stone which is unfit for road purposes.

Railway companies have shown a desire to assist in the building of roads, especially those leading the traffic to their own lines, and in some instances have delivered the material free, in others not charging more than half freight rates. When they are permitted to carry the material at slack seasons, they have expressed a willingness to do the work at actual cost of hauling, which would place some municipalities in a position to procure first-class material at even less cost than can others where material is considered plentiful. In this way, too, many towns and cities now using gravel of an inferior quality would be enabled to use a first-class quality of durable material.

THE QUANTITY OF BROKEN STONE REQUIRED FOR MACADAM ROADS

The following schedule shows approximately the number of cubic yards of broken stone, required for macadamized streets and roads. The first column indicates the width of roadway in feet. The remaining columns show the quantity of loose stone as measured in a wagon or on a car, required for the given depths of material, after consolidation with the road roller. Screenings for use as a binder will be required in addition.

Where the thickness of metal increases from the side to the centre of the road, the average depth can be taken. The various standards of measurement used are the cubic foot, a cubic yard, a toise, and a cord. One cubic yard contains 27 cubic feet; a toise, 8 cubic yards or 216 cubic feet; and a cord is equal to 128 cubic feet. The weight of broken stone varies considerably, but a cubic foot of crushed limestone weighs about 90 pounds.

Width of Roadway.	Cubic yards of loose broken stone per mile which will consolidate to given width and depth by rolling with a steam roller.

GRAVEL.

Gravel is very largely used throughout Ontario in surfacing ordinary country roads. In the western portion of the Province it is made up principally of limestone, but in Eastern Ontario, it is more largely of granite, blue limestone and the harder rocks. While of a somewhat more durable quality in the eastern portion, it is more generally distributed in the western counties. Huron and Bruce are especially favored in the matter of gravel deposits, while it is very plentiful in Oxford, Perth and Wellington. Most counties have a moderate supply, but there are exceptions, as in Kent, Norfolk, Haldimand, Welland, Lincoln and Wentworth. Stone quarries at Amherstburg, on the Grand River, the Niagara River, and in the vicinity of Hamilton help to make up the deficiency, but the absence of cheap roadmaking material has much retarded road improvement in Kent and in the Niagara Peninsula, following the rule, that the land most desirable for agriculture is apt to be most deficient in materials for roadmaking.

In Eastern Ontario, while plentiful in many districts, gravel is totally absent from others, and is not at all evenly distributed. Where there is no gravel, however, stone is usually available, and numerous townships are supplying themselves with rock crushers. From the vicinity of Belleville on the Bay of Quinte, along the St. Lawrence to Cornwall and the Township of Charlottenburg, thence north and west to Georgian Bay and the Ottawa river, stone quarries are numerous, while gravel, though not always plentiful, is apt to be of a superior quality. Where it is to be obtained within easy hauling distance it is, undoubtedly, a most valuable material for use on country roads, and on many of the little travelled residential streets of towns. In localities where gravel is not within easy hauling distance it will be advisable to consider the use of other material; since gravel, if not found in the immediate locality and therefore expensive in transportation, will frequently be found less economical in final cost than a better, though higher priced stone.

Gravel is made up principally of a mass of fragments of stone, rounded and worn, having been transported a considerable distance by water and ice, the pebbles representing the hardest and most durable bits of the rock from which they were detached. With it is commonly mingled a variable quantity of boulders, sand, clay and earthy matter. The rounded, water-worn character of the pebbles composing the gravel, does not permit as perfect a bond as is the case with a road covering of crushed stone, in which the sharp angular sides take a firm, mechanical clasp.

The largest stones in the best quality of gravel should not exceed one and one-half inches in greatest dimension. The remainder should be of varying sized pebbles each in proper proportion from largest to smallest, so that there will be the least amount of void, and the fragments in contact with one another at as many points as possible. If there are large stones in the gravel, they are apt to work to the top under the action of frost and traffic, even after the roadway has become well consolidated. In the dry weather of summer, the moisture is evaporated from the surface of the road, the fine stuff contracts, wheels and horses' hoofs disengage the larger protruding stones, and from merely making a rough surface, they are soon rolling loosely on the roadway. With stone greater than one and one-half inches in diameter, it is difficult to keep the road from thus "unravelling," in the period of hot weather.

On the other hand, if the gravel is too fine, it is apt to partake of the nature of sand, and may not bind readily. Pit gravel is usually better than lake gravel, as the latter is smooth and water-worn, while there is a deficiency of fine material; the rougher and more angular fragments of pit gravel, and the presence of fine stuff in proper proportion, enabling the pit gravel to bind more perfectly.

While fine material, even a certain amount of powder, is of value in assisting the binding and cementing process, yet one of the most serious faults of gravel in Ontario is that it contains an excess of fine stuff, clay or loam. Clay and loam in gravel aid in producing a pleasant road when the weather is neither too dry nor too wet. They absorb water readily, and in rainy weather the bond dissolves, the road becoming soft and muddy. Containing so much water, the action of frost on clay is very marked, so that when clay is mixed with gravel, the road ruts easily in the spring, and the gravel may even be cut through.

Iron oxide, when coating the fragments of gravel to such an extent as to cement them together, is one of the best binders, and such ferruginous gravels make an exceedingly durable and waterproof road covering. A finely powdered silica, resembling clay in appearance, is an excellent binder. Limestone gravels, or others which contain fragments of certain kinds of shale, or ironstone, pulverize readily under the action of traffic and weather, and

these form a dust which is vastly superior to clay as a binder. For this reason a softer limestone, if clean, may be much superior to harder varieties of rock containing quantities of clay. The fine powder of certain stones, when wetted and compressed, forms a weak cement, which causes the particles of gravel to adhere to one another with considerable force.

The test of actual use on the roads is the best means of determining the relative merits of different gravels, but in this, consideration should be given to length of time each has been in service, the care taken in putting them on the roads, the attention to maintenance and repairs each has received, the nature of the soil on which each is laid, the manner of grading, draining, and preparing the foundation, and the amount of traffic to which each is subjected. The sound made by metal tires in passing over the road is also a means of judging the quality of the gravel. A continuously smooth and gritty sound is most favorable; if the gritty sound is absent, the gravel contains too much earthy material, while an interrupted, intermittent sound, indicates the presence of large stones. Where sand and clay are in excess, these should be removed by screening, and the large stones and boulders should be broken. If there is a considerable proportion of the latter, a method which offers many advantages is to place a rock crusher with a rotary screen attachment in the pit, passing all the material through, thereby removing the earthy substances, and breaking the stones with one operation.

If the product is stored in elevated bins, the expense of shovelling into wagons is avoided. If the number of large stones is not great, it will be the cheaper plan to screen the gravel in the ordinary way; or, better, by a rotary screen propelled by steam, the large stones being broken by hand or used in the road formation.

When being prepared for use on heavily travelled and important roads, it is especially necessary that care should be taken to remove the dirt from the gravel. For little travelled roads it may be impossible to take the precaution to screen the gravel; and, perhaps, if the earthy matter is not in excess, screening may be omitted to advantage; it is necessary, however, to emphasize the point that this can be recommended for little travelled roads only. It is the stone, not the earthy material, which is needed on the roads. There is enough dirt already on the roads without paying for more. Nor should there be loose stones or boulders, as they work up and roll loosely under the feet of horses and wheels of vehicles.

When gravel is not screened, very much may be accomplished by care in selecting and taking it from the pit. In drawing gravel to the roads, it is frequently the case that teamsters wish to be in company with each other as much as possible. For this reason, when loading the gravel, while there may be room for only one wagon in the pit at the point where the best material is to be found, yet a dozen teamsters drive in and the wagons are filled with whatever stuff can be most easily obtained, whether gravel, sand, boulders or clay.

Another common cause of earthy matter and sod being mixed with the gravel is to be found in the practice of tunnelling under an overlying layer of soil, which gradually falls into the pit, is mixed with the gravel, and is drawn with it to the road. This earth should be first stripped from the surface if it does not form too deep a strata, or care should be taken as it falls to keep it from mixing with the gravel.

In searching for gravel, the clearest indications are usually to be found along the banks of streams, where any extensive strata are apt to be exposed. A post-hole auger affords a convenient means of making tests for gravel over the surface of the soil, but the best implement is a simple form

of drill. There are cases in which a gravel bed may be entered at the level of a stream bed, and water is thereby obtained for washing the metal by natural drainage, affording a cheaper means of freeing it from sand and earthy matter than by screening it. Gravel is still being deposited in drifts and bars by the agency of streams; this will be found to partake of the character of the pit gravel of the locality, but generally will contain less clay, although sand may easily be in excess. This is usually one of the best sources, as the gravel can be washed by natural drainage. Lake gravel is of en a good metal, but varies greatly. It is apt to be slaty, and undesirable in quality. It will be free from dirt and clay, but may contain sufficient sharp sand to secure consolidation, especially if a roller is used. Gravel which retains a perpendicular face in the pit in the spring, and shows no trace of slipping when thawing out, may generally be assumed to be sufficiently clean and free from clay for use on the road without any treatment other than is necessary to remove stones greater than one inch and a half in diameter.

A great many townships buy gravel by the load. This is very much like buying water by the pailful instead of digging a well. Gravel should be bought by the pit or by the acre, and should be available at all times for any farmer who wants to increase the value of his land by improving the road past it. Especial care should be taken by councils to see that, prior to the performance of road work, the pit is stripped and the gravel treated if necessary.

DIRT ROADS.

For six months of the year a dirt road is often as good a driveway as could be desired for light travel. In order to extend its usefulness the greatest care must be taken to see that drains and culverts are placed wherever needed, and that they are always in good working order. It should be well crowned, or rounded up, so as to shed the water freely to the side ditches; but in making this crown, sod and vegetable mould should be carefully excluded. A great deal of injury is done to this kind of road by running a grading machine along the edges, bringing loose stones and sod to the centre. This material should be thrown outwards and across the open drain. Under-drains should be used judiciously; while a complete system may not be used, tile drains should at least be placed where the water does not leave the side of the road early in the spring, or wherever the ground appears to be continually damp. If open drains are kept in good working order, and if the road is properly crowned, its condition in fall and spring will indicate the points at which tile drainage is most needed.

Dirt roads can be materially improved for summer travel, by passing a grader or planer lightly over them early in the spring, before the ground has become hard and baked by the sun. It is much more satisfactory to make a road good by the use of machinery than to wear it down by travel. If a grader is not available for this work, a second-hand railroad rail, one weighing from 50 to 70 pounds per yard, can be dragged by a team of horses up one side of the road and down the other with excellent effect; one round trip is usually sufficient. A steel I-beam is equally as good. The object of this treatment is to smooth down the ridges and fill the ruts and hollows. The blade of the grader, or the rail, should be kept nearly square across the road so as to carry a sufficient amount of earth before it to fill depressions. It is most important that this work should be done while the ground is slightly moist.

It is not advisable to repair holes in an earth road by filling them with gravel or broken stone. The latter materials do not wear down so rapidly as the earth around them, with the result that they become bumps or ridges, and the effect is to make two holes where there was originally only one.

Nearly all roads in Ontario have at one time been "dirt" roads. By a process of evolution some have become gravel or broken stone roads. A dirt road nicely crowned and well drained will make an excellent foundation on which to place a layer of gravel. A driveway which has passed through an apprenticeship as a dirt road, and has, during that time, had due attention given to its drainage requirements, will have indicated the points at which open drains, culverts and under-drains are most needed. With these provided, gravel can be applied to the best advantage.

THE BINDER.

A binder is some fine material such as screenings (stone dust and chips produced in crushing), sand or fine gravel, which is spread over a layer of stone on the roadbed, and is then flushed or harrowed into the stone, to fill the voids, and to form a bond between the stones when the layer is rolled or compressed. Clean broken stone or gravel, wholly free from stone dust or other fine material, cannot be thoroughly consolidated by rolling, unless the stone is so soft that it crushes and pulverizes under the weight of the roller. Nor will these materials consolidate under traffic until a quantity of dust has been created to fill the voids in the stone.

The voids in a layer of stones such as will pass through a two-inch ring, loosely spread on the roadway, amount to about 40 per cent. of the entire mass, and compression with a roller will reduce this to about 25 per cent., varying somewhat with the toughness of the stone. This still leaves the mass very porous, but by the addition of a binder, the vacuum can be reduced to about 4 per cent.

Pit gravel has usually too much sand or earthy material mixed with it naturally. Lake shore gravel is very often deficient in this respect. In the case of broken stone, the best practice favors the addition of a quantity of screenings, instead of sand or other foreign material. Stone-dust possesses a quality, as a binder, which sand and other materials do not, in that it forms a weak cement. The value of any variety of stone for road purposes depends very largely upon the degree to which its dust will cement and re-cement on the roadway. Good cementing power is one of the most important properties possessed by a good road metal. If the fine material binds well, it prevents water getting into the foundation of the road, it withstands better all atmospheric conditions of wind, heat, frost and rain, and protects the stones beneath from wear. For this reason the relative utility of granite and limestone is not by any means proportional to the difference of the stones in hardness, since pulverized limestone forms a better cement than do screenings of granite.

Sand, when used as a binder, has not the cementitious or crystalizing property possessed by stone dust, and is dependent upon a certain amount of moisture, to hold it together. A similar action may be observed on a lake shore, the sand which is kept wet being hard and pleasant to walk on, whereas the dry sand farther up on the beach is soft and yielding. In the same manner the asphalt surface of a pavement consists of about 90 per cent. sand, the remainder being mineral pitch and oil, which fills the voids and holds the sand together. Similarly a wet sand road is pleasant for driving, but when dry it is one of the most disagreeable.

When sand is used as a binder, if the weather is very dry, the road disintegrates more or less, loose stones appear on the surface; it "un-rave's." When the weather is very wet, or under the action of frost, the sand again loses its strength as a binder, and rutting takes place more readily. In very wet seasons the sand oozes to the surface and has to be carted away. Nor does sand permit the firm, mechanical clasp and interlocking which one stone takes upon another, in the process of rolling. The advantage of sand is that, with less rolling, the road metal can be made compact, but the results are not so permanent as when dependence is placed upon stone dust or screenings.

A MACADAM STREET IN BROCKVILLE.

Clay should never be used as a binder when it can be avoided. It is very weak both in wet and dry weather. When moderately moist it encourages rapid consolidation of a gravel or stone road, and for this reason makes a very good summer road, but in fall and spring the road will be very much cut up, and its durability greatly impaired, under the action of traffic, water and frost.

Water should be freely used to saturate the road metal when consolidating with a roller. It carries the binder into the voids of the stone, and assists cementation. For this reason it is well to roll the roads in rainy weather. In the case of gravel, if it is not to be rolled, it is best to put it on the roads just before the wet season, and keep it carefully raked into place until consolidated.

REPAIR OF ROADS.

Roads should be repaired, not once a year, nor twice, but as soon as signs of wear appear. Ruts should not be allowed to form in a gravel or stone road when once properly constructed, but the material should be kept in place by a constant use of the rake. This is especially necessary if gravel or stone is placed loosely on the road and left for traffic to consolidate. Settlements and hollows should not be allowed to hold water and create pitch-holes for want of a load of metal. Drains should not be allowed to become obstructed, thereby saturating and softening the whole roadbed. Culverts should not stand full of water to be burst by the expanding ice because of a neglected outlet. An almost inexhaustible list of these everyday occurrences could be mentioned, which in themselves apparently trifling, become in the aggregate, of very great importance. Roadmaking is made up of details none of which can be overlooked, except at a loss.

The overseer should give immediate attention to all emergency work rendered necessary by washouts, etc., either by personal or hired labor. He

should be able to send a man over the roads as often as necessary to repair the effect of ordinary wear. Better still, a man should be employed to devote his whole time to a certain mileage of roads, to make repairs as they become necessary. Every farmer, too, should appreciate the value of good roads sufficiently to voluntarily devote time to the roads passing his property, rather than permit them to become bad or impassable because of neglect.

It is one of the great advantages of the new systems of road management being adopted by townships and counties, that men can be employed to work on the roads whenever and wherever needed. Neglect to keep the surface of a road smooth and in repair permits it to break up badly in the spring and fall, and the gravel or stone is largely wasted, being mixed with the mud from beneath. When this occurs a comparatively great expenditure is needed to make the road as good as before.

ROAD GRADERS.

Roadmaking, as with other branches of construction, has been much influenced by the introduction of machinery, and to-day by its use roads can be built more perfectly, quickly, and at less cost than ever before. A few years ago the most pretentious road machine in any of the township municipalities was the drag scraper. The most widely used of the more modern implements is now the road grader, and this has almost revolutionized the cost of preliminary earthwork, while it is exceedingly useful in the repair of old roads. The majority of townships have only one, quite a number have two, while others have three and even four. With about three hundred in all throughout the Province, the outlay for graders, at an average cost of \$250 each, represents a total investment of \$75,000.

Road graders are now so commonly employed in the construction and repair of roads, and their utility is so generally recognized, that it is scarcely necessary to urge their adoption. They are modern, labor-saving implements, which do their work better and more cheaply than can be done by hand, and that nearly 300 townships of Ontario have purchased them is forcible evidence of their value. It is not their use which it now seems necessary to urge, but rather there is need of guarding against their mis use.

In too many townships the councils have rested content with merely buying a grader, and having done this seem to be satisfied that they have done their duty. Unfortunately, the grading machine is not possessed of intelligence; it does not know when or how a road should be graded. So that, unless a method is established, and unless a capable man is engaged to operate it, the grader is likely to give but little service.

Commence Early.

Arrangements should be made every spring to have the grader ready and in use as soon as the ground is sufficiently dry. The soil is then in its best condition for manipulation, having been mellowed by frost; the roads are rough and most in need of treatment. Roads which are properly graded early in the spring are at once compacted by traffic, and they will remain in their best condition all summer. If the work is left until late in the season, clay soils become baked and hardened, difficult to handle, and rough when finished. Sandy soils, if loosened up late in the year, will be much more dusty than if treated early in the spring, when they are damp and readily compacted by traffic.

Follow a Definite Plan.

It should be the duty of the township road commissioners, councillors or a committee of the council (according to the local system of road management) to go over the roads early in the year and determine what grading is required.

This work should be staked out according to the definite widths and dimensions of roads as required by township regulations. The grader, when it commences in the spring, should proceed to each piece of work consecutively, and should be in use continuously until all the grading is done for that year.

At the present time it is customary for the grading machines to go here and there over the township without method—one day on one side of the township, next day on the opposite side, then to another distant part, backward and forward, wasting a considerable part of the wages of man and teams in moving from one part of the township to another. By following a well-considered schedule the cost of moving the machine between the different pieces of work is reduced to a minimum.

Some distinction should be made between the grading of new roads and repair of old roads. Where the roads are being metalled from year to year with gravel or broken stone, it is not, as a rule, advisable to grade a greater length of road than can be gravelled or macadamized the same year.

Select the Right Man as Operator.

One of the first essentials in providing that the roads will be properly graded is to select the right man to operate the grader. He should be active and energetic, with some mechanical experience; one who will take an interest in his work, who will make a study of roadmaking and who will be willing to follow the instructions given him by the township road commissioner or councillor having supervision of the work.

Profit by His Experience.

When such a man is found he should be engaged from year to year so that his growing experience will render him more efficient. There are many townships which do not employ a regular operator, but instead allow the grading machine to be handled by anyone and everyone. In some cases it is even passed around in the performance of statute labor from beat to beat. Managed in so careless a manner, a grading machine will be a source of disappointment only.

Use the Horses for the Season.

The same horses should be used in operating the grader for an entire season, at least. "Green" horses are very awkward, will not pull together, waste much time, and even a reliable man as operator cannot under such circumstances perform good work. It is a great waste in many ways to attempt to use a grading machine with horses provided, as is sometimes done, as a part of statute labor. Horses used continuously become accustomed to the work, to each other, and to the driver, and will produce much better results.

Or Use a Traction Engine.

Some townships, instead of horses, use a traction engine. Where one can be rented from a local thresher, it can usually be obtained very cheaply in the early part of the year. Where a considerable stretch has to be grad-

ed without turning, as in cutting off the shoulders of old gravel roads, a traction engine is much preferable to horses. It is more steady and does not stop to rest.

Crown and Width of Grade.

The township regulations as to the width and dimensions of road should be closely followed in grading. These generally provide for a width of twenty-four feet between the inside edges of the open drains on roads of greatest travel; twenty feet on roads of moderate travel, and eighteen feet on roads of least travel. A rise of from half an inch to one inch to the foot, from the inside edge of the drain to the centre of the road, is ample crown for a new road, after the gravel or stone has been placed on it. More than this is unnecessary and an injury. There is a tendency in the use of graders to crown the roads excessively, and this should be guarded against.

Repairing Old Roads.

Road graders are of much use in the repair of old gravel and stone roads, in restoring the crown, but, unfortunately, it is no exaggeration to say that miles of roads have been ruined by misuse of graders in this work. Old roads are commonly flat, sometimes concave, with square shoulders at the side. In repairing these shoulders there may be a small amount of stone which has been crowded out by the wheels of vehicles, and which it is safe to draw again to the centre of the road. On no account should the square shoulders at the side be drawn to the centre of the road. These shoulders are composed of earth and sod, and if placed on top of the old gravel or stone foundation will merely turn to slush in wet weather and utterly ruin the road. The only way to repair such roads is to cut off these shoulders, throwing them away from the road across the open ditch, if necessary, and then to restore the crown by placing a coat of new gravel in the centre of the road.

THE STONE CRUSHER.

The stone crusher is one of the most important of modern additions to the list of roadmaking machines. By their use stone can be crushed much more cheaply than by the old method of hand breaking. So far as cost is concerned, stone roads are within the reach of every municipality having suitable rock in the vicinity. In the treatment of gravel a crusher is frequently very valuable, since, if containing many large stones and boulders, it will be possible to place a crusher in the pit and pass all the gravel through.

They are principally used in the eastern part of the Province, where good stone is plentiful and gravel is scarce. In some cases an engine is purchased, and in others the engine is rented from some one in the vicinity owning a threshing machine. A traction engine is an exceedingly valuable part of a roadmaking outfit, as it can be used for operating the crusher; if portable, for moving it from place to place, and for operating a grading machine. Crushers are owned by numerous towns and cities in all parts of the Province. Townships owning them are: West Hawkesbury, Hallowell, Colinswood, St. Vincent, Markham, Ameliasburg, Winchester, Thessalon (town and township), Smith, Cornwall, Nottawasaga, Drummond, North Gainsby and Derby. Crushers are owned by private parties, and used for municipal purposes in Ernesttown, Rear Yonge and Escott, Front Leeds and Leonardville, Beckwith, Pittsburg, Elizabethtown and Kitley. There are also

well-known quarries at Amherstburg, Hagersville and other places on the Grand River, on the Niagara River, in the vicinity of Hamilton, at St. Mary's, Kingston, Brockville, Ottawa and other points. The County of Hastings uses a crusher for the county roads, and the Counties of Victoria and Peel have each purchased a crusher, which is supplied to the minor municipalities as they require it.

These machines are made after various patterns, the main division being into rotary and jaw crushers. Some of the smaller sizes are set on wheels, and may be moved readily from place to place. Others are for stationary work, in a quarry, or at a point to which stone, field boulders, etc., are brought to be broken. They are operated by steam power, a traction engine or stationary engine, or by an electric motor, as circumstances render most advantageous. Some municipalities owning a steam roller obtain power from it, but this is apt to injure the roller.

CRUSHING STONE AT CARLETON PLACE.

One of the most valuable features of a crusher is that by attaching it to a rotary screen the crushed stone may be separated into grades according to size, usually such as will pass through a three-inch ring, such as will pass through a one and one-half inch ring, and fine chips and screenings. By placing the coarse stone in the bottom of the road, and the finest on top, a smoother and more durable road is obtained. An average cost of a crusher is \$800 or \$900, and with it stone at the crusher may be crushed for from 20 cents to 30 cents per cubic yard, according to the kind of crusher, the quality of the stone, and the facilities for handling the stone.

In municipalities where field boulders are plentiful, the property owners are very glad, as a rule, to have a means of disposing of them, especially when they can be hauled in winter time. If the stone is stored for future crushing, it should be put in piles on both sides of where the crusher is to be set up. Much can be saved by setting up a crusher so that it can be fed directly from the wagons, instead of wheeling the stones in barrows.

The broken stone should always be received into bins from the crusher, and from these a wagon containing a quarter of a cord can be loaded in from two to four minutes.

THE ROAD ROLLER.

The advantages to be derived from a road roller in the construction of a broken stone road are becoming more and more appreciated. Unless a roller is used the stone must be spread loosely on the road and left for traffic to consolidate. A road should be made for traffic, not by it. To leave loose gravel and stone in the roadway is neither an agreeable method of constructing a road, nor will it produce the most durable road.

The consolidation of loosely spread stone or gravel by traffic is a slow process, causing much inconvenience to travel, during which the earth of the subsoil becomes mixed with the stone. Earth intermixed with stone prevents the strong mechanical bond which clean metal will assume when the stones are wedged one against the other by a roller. The particles of earth, when wet, have a lubricating influence on the stone, and under the action of wheels the surface is more readily broken up. By the use of a roller the earth subsoil should be first thoroughly consolidated. The stone should be placed on this foundation in layers, and each layer well compacted. In this way a smooth, durable, waterproof coating of stone, free from earthy material can be laid over a firm foundation.

Among the benefits to be derived from the use of a roller on country roads are :

- (1) A good road is at once made for vehicles.
- (2) A dirt track is not made near the ditch, to avoid a pile of loose stone or gravel, so that the side of the road is not cut up in such a way as to interfere with surface drainage.
- (3) Traffic is not inconvenienced in the fall by being forced to drive through loose gravel or crushed stone.
- (4) The gravel or stone is not forced down into the subsoil by the wheels and feet of the horses ; is not churned and mixed with the earth, and there is in this way a great saving in the amount of metal needed on the road.
- (5) There is a great saving in manual labor, and repairs are more easily and effectually made.

An impediment to the use of heavy rollers in a good many townships is the insufficient strength of bridges and culverts; and, while valid in some instances, the objection is liable to exaggeration in others. Weak wooden bridges and culverts could in many cases be temporarily strengthened sufficiently; while in others, they could be entirely avoided by first completing the rolling on one side and then passing around a block or so to commence work on the other.

There are different classes of rollers. The horse roller, weighing six or eight tons, will do fairly well if a steam roller cannot be afforded, but the horse roller is not sufficiently heavy for the best results. It has to be used much longer than the steam roller. The feet of the horses, in exerting sufficient strength to move the roller, sink into and disturb the road metal, and injure the shape and quality of the roadway, while on hills it is at a disadvantage.

The steam rollers are of various weights, ranging from eight to twenty tons. Rollers of fifteen tons weight are those generally used by the towns and cities of Ontario. The cost of horse rollers is usually about \$90 per ton, or from \$400 to \$600 each. Horse rollers are, however, generally so constructed

that the weight may be increased by iron castings; so that a roller of five tons may be made to weigh about six. Steam rollers cost about \$3,000. For operation, a horse roller, with two teams, will cost \$6 per day. A steam roller will cost \$10 a day, including interests and depreciation, but will do several times the amount of work done by a horse roller, so that the saving in operation is considerable.

ROLLING A STREET IN CARLETON PLACE

The amount of rolling which can be done in a day varies according to the quality of metal used, the kind and amount of binder, the thickness of the layer of stone rolled, and the weight and type of roller. With broken limestone, rolled by a twelve ton steam roller, the amount of stone compacted will average between forty and fifty cubic yards in a day of ten hours.

HAULING AND SPREADING ROAD METAL.

Excellent wagons, with a hopper-shaped opening between the front and rear axles, are now made expressly for drawing gravel and distributing it over the road. The opening of the hopper is controlled by a lever beside the driver. The metal can be distributed to any required depth, after a little experience, by regulating the extent to which the hopper is opened.

For screenings especially, in distributing them evenly over the stone, these wagons are particularly useful. A number of these wagons coupled together and drawn by a traction engine affords one of the cheapest methods of hauling gravel or stone for considerable distance, under certain conditions.

Teams and tramsters should be hired to haul gravel by the load or cord, not by the day, and the size of each load should be specified. Care should be taken at the pit to see that only suitable road metal is put in the wagons, and that clay, sod, large stone or very sandy material are excluded.

SCRAPERS.

Wheeled scrapers afford the most economical means yet invented of moving earth short distances, and these, with road graders and the well-known drag scrapers, are the chief implements for dealing with earth-work on

country roads. By their use, the grading of roads can be reduced to less than two-thirds the cost where shovel, pick and wagon are required. Wheeled scrapers are especially useful in cuts and fills where the earth has not to be moved a distance exceeding 200 feet. They are useful for making open ditches, but require that there shall be no shoulders on the road, but only easy slopes, and that the bottom of the ditches shall be about two feet in width. The cost is \$40 or \$50 each.

HILLS.

The great majority of roads in Ontario follow concession and lot lines, without regard to the suitability of the latter for the location of roads. The result is that, by unnecessarily crossing swamps, hills, and rivers at unsuitable points for bridges, the difficulty and expense of making and maintaining the roads are greater than they might otherwise be, while the roads themselves are not as convenient for traffic.

It is of advantage to the farmer to have all his fields of rectangular shape, as they can be cultivated more easily than when outlined by circular or irregular lines. There is a disadvantage, too, in having an estate cut into separate sections by diverted highways. These are obstacles to the proper alignment of roads in long settled and populous districts, but present little difficulty in new portions of the Province. However, it is usually very much more in the interest of a property owner that the roads leading to his farm should be good and easily maintained, than that his farm should be in a compact block with the roads to it impassable during a portion of the year, and even then expensive to build.

It is, of course, desirable that a road between two points should be as direct and short as possible. But a road is not necessarily more direct because it follows absolutely one pointing of the compass. The line followed by a vehicle, leading up the hills and down into the valleys, may be no shorter, nor perhaps as short, as a diverging route following comparatively level ground; just as the distance from one end of the diameter of a sphere to the other is the same whether measured vertically or horizontally around the sphere.

Not only may nothing be gained in point of directness by following the line of the original survey, but there is to be considered the greater horse power required to move loads up and down the hills, demanding, too, a greater expenditure of time.

The expense of building a highway is materially increased by steep grades. A moderate divergence of numerous highways in the Province would do away with many expensive and unsatisfactory cuts and fills, and with a large number of bridges. The unsuitability of the soil also, if low lying, swampy, or composed of vegetable matter, may render advisable a change of location in favor of a course which will offer a firmer and more easily drained subsoil.

Directness should frequently be sacrificed to obtain an easy grade, and to avoid expensive construction over bad ground, cuttings, fills, bridges and excessive grades. Councils are authorized to alter the location of roads by the Municipal Act, in a manner fair to all parties; and it is advisable that this power be judiciously used whenever circumstances render it practicable. Opposition will no doubt be offered in some cases by the individual property owner affected, but councils representing the general public have a responsibility resting upon them which should not be over-looked in a matter so important.

Each hill should be brought to its permanent grade, as far as possible, at one time. If reduced a small amount year after year, the grading is apt to be destroyed in a large measure by rushes of water each ensuing wet season. The roadway being annually filled or cut settles slowly, and is apt to become almost impassable in fall and spring. Hills should be taken up for improvement consecutively, the worst or most necessary first, and they can be gravelled or metalled with broken stone, the work done on them being permanent.

Roads should not be absolutely flat in any direction. A certain longitudinal slope, at least six inches in 100 feet, is requisite to carry the water out of the drains and wheels tracks. A desirable maximum grade will not exceed a rise of two or three feet in 100, as at that slope, which is the "angle of repose" for wagons on macadam roads, a horse can trot down without danger or injury. Hills should not, on much travelled roads, exceed a rise of eight feet in 100 or about one in twelve. When greater than that, they are a hindrance to traffic and to the free use of the road.

The cost of keeping hills in repair is frequently much increased by rushes of storm water, occasioned by the practice of carrying water long distances in open drains, and finally pouring it over the hill by the roadside. If the hill is steep, and a cut has been made, the water is not, and very often at the time of spring floods and freshets, cannot be kept in the open drain, and so is allowed to make a channel of its own down the centre of the road. This condition is the common result of not disposing of water in small quantities along natural watercourses. No water should as a rule, be allowed to pass over the hills by the roadside, except that which naturally falls on the surface of the slope. Provision should be made for the disposal of water in the drains back of the hill, by carrying it through private property, under the authority of the Drainage Act, if necessary. Property owners, however, should understand the wisdom of permitting drains to be constructed across their lands when the benefit to be derived is not only better roads, but better drainage of their own fields.

The surface drainage on hills should be very pronounced. The crown of the road should be slightly higher than is needed on level ground, a rise of at least one inch to the foot from side to centre being advisable for gravel roads. The crown must be sufficient to draw the water to the side gutters, and to do so, it must be sufficient to overcome the tendency of the water to flow directly down the hill, following the line of the wheel tracks. If the water commences to take the latter course, the wheel tracks are quickly deepened to ruts, stones are loosened or protude, and the road becomes roughered and channeled.

Under-ground currents of water often find outlets on the hillsides. If any of these springy places occur under the roadbed, it is necessary to tap them at a good depth below the surface with tile drains. In such cases, tile drains will be needed under the open drains at the sides of the road, and the blind drains may then be carried diagonally across the road into the side and drains. The open drains will sometimes need to be protected with cobbles stones, if the hill is long or subject to damaging rushes of water.

Roads passing along the sides of hills are frequently softened and injured by the seepage water from high lands. This water should be intercepted before it passes under the road, by a deep drain along the side of the roadway next the hill. Tile should be used, if possible, instead of a deep open drain, and the trench filled with gravel, stone or other porous material to more readily intercept and absorb the seepage water.

The protection of the sides of cuttings and embankments should be skillfully attended to. It is very common to see these washed away in places

after a heavy rain, or after the spring thaw; the sides of the cuttings settle into and fill the open drains, and the water is forced into the road; the sides of embankments wash away, leaving dangerous holes in the road. The tendency is to make cuttings and embankments too steep, with a desire to do the least possible amount of earth work.

The stability of earth slopes is endangered by the action of air and moisture, especially by alternate frost and thaw, and depends on the care with which water is drained away. A certain amount of moisture increases the strength of the slopes, but too much acts like a lubricant, and reduces the earth to a semi-fluid condition. Clay retains water and becomes pasty. Sand, if in a basin of water-holding earth, becomes a quicksand and is completely unstable. A mixture of sand and clay, the former favoring the access of water, and the latter preventing its escape, is at times the most difficult case to deal with. There is a certain "angle of repose" at which the tendency of earth to slip is overcome. This angle varies with different kinds of earth, under various conditions of moisture. Wet clay is troublesome, and an angle of about sixteen degrees is sometimes needed to secure it. Well drained clay, however, will rest at an angle of forty-five degrees, or a slope of one to one. With average gravel and compact earth, a slope of one to one is a safe angle, although first-class gravel will retain an almost vertical face for a considerable time. Sand varies greatly, "water sand" being no better than wet clay. Dry sand usually needs a slope of one and one-half to one. Rules of this description cannot be laid down with sufficient accuracy to be of use, except as they serve to indicate what is to be expected with different soils. The qualities of soils are so variable that it is advisable to learn by observation what slope is needed for a particular piece of earthwork.

The natural form of an earth slope when in permanent repose is a concave curve, with the flattest portion near the bottom. There is a careless tendency to leave the slope rather in the opposite form, with an outward curve. Convex or straight slopes will invariably slip until the natural form is obtained, and in cuttings or embankments approaching ten feet in height, care given to a proper construction in this regard is always profitable.

A dry stone wall at the foot of an embankment or cutting will protect the drain from slipping earth. A coating of sod is one of the best protectors of the slope; and a few inches of vegetable mould over the surface, with a liberal sowing of grass seed, is a measure sometimes adopted.

THE CULVERTS.

The construction and repair of culverts has become, in numerous townships, a serious drain upon the yearly appropriation available for road purposes. In some cases as much as half or two-thirds of the grant from the general funds is absorbed in this way, a matter of from \$1,000 to \$2,000 annually. The number of these culverts on country roads varies greatly. Ordinarily half a dozen are needed for each mile of road if proper drainage is provided.

Water should be carried from the road allowance as quickly as possible, for it is an excess of water that is the great destroyer of roads. To do this, it must be led away in small quantities, along natural watercourses, and must be conducted under the roadway at more or less frequent intervals according to the topography of the district. Small wooden culverts are constantly decaying, requiring removal and repair, a matter of constant expense, and an obstruction to travel and the free use of the road.

A reference to the reports of clerks regarding this detail of highway construction, another page, will indicate what a number of townships have done towards greater permanency and efficiency, and a reduction of cost. Concrete tile, and vitrified sewer pipe are becoming very largely used in place of cedar, and with satisfactory results. These materials have been used in a few municipalities for from fifteen to eighteen years, and in some instances the annual outlay for culverts has been almost wiped out, owing to their permanency and durability.

The manufacture of concrete tile for culverts is a very simple matter, and can be undertaken by the municipalities themselves, although in numerous cases they are now manufactured as a private enterprise. Just such a number of pipe as are actually required for the season's work need be manufactured; the implements required are inexpensive, and the pipe may be made by the municipality for actual cost, which, after a little experience, can be reduced to a very small amount.

TOOLS FOR MAKING CONCRETE TILE.

The implements required are of the simplest kind. The most important are two steel spring-cylinders, one to set inside the other, leaving a space between the two equal to the thickness of the finished concrete pipe. These can be procured from the manufacturers of roadmaking machinery. By "spring-cylinder", it may be explained, is meant such a cylinder as would be formed by rolling a steel plate into a tube without sealing the joint. With the smaller of these cylinders the edges overlap or coil slightly, but are so manufactured that the edges may be forced back and set into a perfect cylinder. With the larger, the edges do not quite meet, but may be forced

together and fastened. Accompanying these molds are bottom and top rings which shape the bell and spigot ends of the pipe.

The two cylinders, with joints flush, are set on end, the one centrally inside the other, and on the bottom "ring," which in turn rests on a firm board bottom. The concrete, made of first-class cement, and clean, screened gravel, in the proportion of one of cement to three of gravel, is then tamped firmly into the space or mold between the two cylinders. The tamping-iron used to press the concrete into place is so shaped as to fit closely to the cylinder.

The concrete is allowed to stand in the mold for a short time, when the cylinders are removed; the outer and larger cylinder by removing the clamps, and allowing the edges to spring apart; the inner cylinder by removing the fastenings, so as to allow the edges to again overlap, returning to the shape of a coil. The outer cylinder having thus been made larger, and the inner one smaller, they can be readily taken away, and the concrete pipe is then left until thoroughly hardened. For the larger sizes, the two halves of the outer cylinder are usually hinged, and can be more carefully removed than when allowed to "spring" from the concrete.

The concrete adheres closely to the metal, and to overcome this it is necessary to keep the molds well oiled. This should be done after each tile is made, and, when the molds are by this means kept perfectly clean, a smooth and uniform pipe of good appearance will be obtained. A good mixture for oiling the molds is composed of two parts of machine oil to one part of coal oil.

To secure a durable pipe, it is necessary to exercise much care in mixing the concrete. Portland cement should be used. If gravel is used, it should first of all, be clean. Any earthy material, clay or vegetable mould, will create a flaw in the pipe, which will lead to its early destruction, and durability is the quality most to be desired. The gravel should be of a size that it will pass through one-half inch screen, and should be of varying sized grain, in such proportions as to make a compact mixture. The gravel forms the greater part of the mass of concrete, and it is evident that the results will depend very largely on the quality of the gravel.

The materials should be mixed in the proportion of one part of Portland cement to two parts of gravel. They should be first turned over in a dry state until thoroughly intermixed and of a uniform color. Water should then be added. This, like the gravel, should be clean, and there should be just enough to moisten the mass of concrete, making it of the consistency of a stiff mortar. An excess of water tends to injure concrete in various ways, and is especially to be avoided in the manufacture of tile, as the tamping cannot be properly performed when too much water is used. When the water has been added, the mixture should be made uniformly moist, by turning it over three times with a shovel. The concrete is then ready to be placed in the molds, in which it should be firmly and vigorously tamped.

Such a quantity of concrete should be mixed as can be put in the molds before the process of setting has commenced, and it is therefore of importance to know how long the brand of cement used can be worked before setting begins. A moderately slow setting Portland cement is necessary for this work. Ordinarily it is best to mix enough to fill one mold at a time.

Remnants of concrete which have commenced to set should be thrown away, and under no circumstances should they be worked up again and used, as they are certain to cause a defective pipe. Defects which do not appear until after the tile have been placed in a culvert and covered with earth, cause not merely the loss of the pipe, but a considerable outlay for labor is wasted as well. The concrete should be handled quickly. Two men are

needed, one to shovel it into the molds, and the other to tamp it. From twelve to fifteen feet of pipe, of ten to twelve inches diameter, is an average day's work for two men. The cost of manufacturing pipe of these diameters will vary, with the price of labor and materials, from fifteen to twenty-five cents per lineal foot.

Until the concrete has hardened sufficiently the molds should not be disturbed. When the pipe has attained sufficient strength, (which it should do in from five to seven hours, according to the temperature of the atmosphere, and the kind of cement used,) it can be turned end for end, thereby taking it off the bottom rings, and the molds may be removed. To enable the pipe to set satisfactorily, they should be dampened every day for several days, if the weather is dry, and they should be protected from the direct rays of the sun in hot weather. They should not be used for some time after being made, but should be allowed to season for from four to six weeks.

The molds for manufacturing these tile may be obtained in various sizes, the more common being for tile ranging from ten to thirty inches in diameter. The ten-inch tile is made about one and three-quarter inches thick; the twelve-inch tile, about two inches thick; the fifteen-inch tile, two and one-eighth inches thick; the eighteen-inch tile, two and one-quarter inches thick; the twenty-four-inch tile, two and one-half inches thick; and the thirty-inch tile, three and one-half inches thick. Molds for making twelve-inch pipe cost about \$12 per set; for fifteen-inch, about \$14 per set; for eighteen-inch, about \$17 per set; for twenty-four-inch about \$21.50 per set; and for thirty-inch, about \$26. The molds are such as will manufacture pipe two and one-half feet long. One set of bottom rings—those for forming the bell of the pipe—go with each set of molds, but it is advisable to have about three sets of bottom rings for each pair of cylinders, to permit the maximum number of pipe to be made in a day.

LAYING TILE CULVERTS.

To meet with success in the use of tile culverts they must be put in place properly. They should be laid with a good fall on a regular grade to a free outlet, in such a way that water will not stand in them.

The tile should be laid with the spigot end down grade, and the joints made tight with cement mortar. If the joints are open, water will work along the outside of the culvert, and finally make a considerable channel, which will allow the culvert to get out of line and finally result in a "cave-in". To prevent the water finding its way along the outside of the pipe, it is advisable to protect the ends with concrete, stone or brick head-walls.

Care should be taken to excavate a concave bed for the pipe, with depressions for the bell of the pipe to rest in, thus securing an even bearing, without which a heavy load passing over before the culvert has properly settled into place may burst the tile. Tile cannot be used in very shallow culverts, but must have a sufficient depth of earth over them to protect them from the direct pressure of heavy loads. The depth of covering necessary increases with the size of the pipe. At least a foot of earth over the top is advisable in every case; but for culverts of two feet in diameter or over this should be increased to at least eighteen inches.

The earth should be well packed and rammed around the tile to secure a firm bearing, and light soils should not be used immediately over or around the culvert. A heavy clay, a firm gravel, or a compact sand

will answer, but vegetable mould, water sand, and light loams are subject to washouts.

At the outlet, the culvert should be set nearly flush with the surface of the ground. If set higher than the surface, the fall of water will wash out a depression, and in time will undermine the end of the culvert. A too rapid grade will have the same effect, and it is well to cobble-pave an outlet where this undermining action is likely to occur.

CONCRETE CULVERT WITH FLAT TOP.

An accompanying cross-section of a flat-topped concrete culvert, with side walls, shows a cheap but durable form of structure, suitable for certain locations, more especially where not much distortion by frost may be expected, and a firm base for the side walls can be obtained. The cost would range from \$4.50 to \$6.50 per lineal foot of culvert, according to the availability of gravel, amount of excavation and other details. Thus a twenty-foot culvert would cost, exclusive of wing walls, from \$90 to \$130; and a thirty-foot culvert, from \$135 to \$190. It can be adapted to any location where stone masonry walls with a flag-stone top could be used, and is a parallel case, in which artificial stone or concrete is used in place of natural stone.

In this type of culvert, the principal matter to guard against would be a

break in the cover stone. There is no difficulty, for short spans up to at least six feet, in proportioning the thickness of this cover for any possible load to which the culvert would be subjected. A possible cause of failure would arise from the displacement of the side walls by frost, which might break the cover stone; or by uneven settlement from any cause.

Care should in every case be taken to see that the side walls are carried to a sufficient depth to a secure foundation. The depth indicated on the drawing, three feet, is sufficient for most situations, especially where a layer of hardpan, firm gravel, or rock, is close to the surface. The greater the span, the more necessity there is for a deep or a solid foundation.

The strength of the cover stone, especially for culverts of greater span, say six or eight feet, would be much increased by having barbed or smooth fence wire stretched back and forth across the culvert, which should be fully imbedded in concrete, but as close as possible to the bottom of the cover stone.

It is better that a layer of earth six inches or more in depth should be over the top of the cover stone. If this is impossible, and the top of the culvert must be level with the road surface, the cover-stone should have a

finishing coat rich in cement, in the proportions of one part of cement to two of sand. Otherwise a culvert of this description may be made throughout of Portland cement and gravel mixed in the proportions of one of cement to six parts of gravel. Wing and parapet walls may be built as the situation of the culvert requires.

SPECIFICATION FOR FLAT-TOPPED CULVERT.

Plans and dimensions.

(1) The culvert when completed shall be in all respects in accordance with the plan hereto attached. Should it be necessary to extend the side walls to a greater depth to a secure foundation, they shall have a top width of twelve inches as indicated, and an outside or frost batter of two inches to the foot; the footing to project six inches beyond the bottom of the wall.

Excavation and surplus earth.

(2) Sufficient earth shall be excavated to permit free access to the work, and the placing and removal of the framework. Where the excavation furnishes more material than is required for the embankments, the surplus earth will be used to increase the width of the embankment, or otherwise removed as may be directed.

Framework for side walls.

(3) The side walls are to be erected within a substantial and well-constructed framework of well-fitted lumber, closely boarded up against the work as it proceeds. Care shall be taken to make a smooth, regular surface, such that moisture will not find lodgement. The concrete shall be perfectly rammed into place so that all surfaces shall be smooth, without cavities, when the casing is removed. The framework shall not be removed in less than ten days from the completion of the work.

Manner of attaching wire.

(4) The plank used at the top of the framework for the side walls shall have stout nails driven into it, two inches apart, but projecting above the top of the abutments, barbed or smooth fence wire to be tightly stretched back and forth from these nails across the culvert.

Wire to be imbedded.

(5) A temporary framework shall be erected to support the concrete flooring while in process of construction. This framework shall be firm and substantial, of dressed lumber, in all respects to be approved by the superintendent in charge of the work. Upon this framework shall first be spread a sufficient layer of fine or cinder concrete to cover the wire. By means of a suitable hook, and while the concrete is plastic, each wire above described shall be raised above the concrete, permitting the concrete to freely surround the wire. More concrete shall be added, and the whole firmly tamped and rammed to thoroughly compact the bed of concrete, to the depth shown upon the plans attached.

Portland cement.

(6) All cement employed in the work must be of a favorably known brand of Portland cement, and approved by the superintendent in charge of the work. It shall be delivered in barrels or equally tight receptacles, and after delivery must be protected from the weather by storing in a tight building or by suitable covering. The packages shall not be laid directly on the ground, but shall be placed on boards raised a few inches from it.

Proportions of gravel and cement.

(7) (a) The concrete used in the side and wing walls shall be composed of gravel and Portland cement, mixed in the proportion of one part by measure of cement to six parts of gravel, that used in the cover stone to be in the proportion of one of cement to five of fine gravel, no stones of which exceed one and one-half inches in diameter. The concrete shall be mixed on a platform placed close to the work by first spreading evenly a layer of gravel, upon this shall be spread a proportionate quantity of cement, and the two thoroughly intermixed in a dry state. To this, sufficient clean water shall be slowly added, and the whole again thoroughly mixed and brought to the consistency of a stiff mortar.

Screened gravel.

(b) Should the gravel contain an excessive amount of sand, loam, large stones or other objectionable material, it shall be screened to remove such sand and earthy matter. The concrete for the side and wing walls shall then be composed of one part by measure of Portland cement, two and one-half parts by measure of approved sand, and five parts of screened gravel; and for the cover stone, one of cement, two of sand and four of fine-screened gravel, no stones to exceed one and one-half inches in diameter. It shall be mixed on a platform close to the work, by first spreading evenly a layer of sand; upon this shall be evenly spread the proportionate quantity of cement, and the two thoroughly mixed in a dry state. To this, water shall be added and the whole thoroughly mixed and brought to the consistency of a

stiff mortar. The proportionate amount of screened gravel shall then be spread evenly over the mortar, and thoroughly intermixed therewith. The concrete, when mixed as described, shall be immediately put in place and thoroughly pounded, and rammed until it is perfectly and uniformly solid, moisture appearing on the surface.

(8) Should the cover stone of the culvert be on a level with and form ^{Wearing surface.} part of the surface of the roadway, it shall have a wearing surface one and one-half inches in depth of sand and cement, mixed in the proportion of one part by measure of cement, to two parts of sand, the sand to be clean, sharp, of varying sized grain and free from loam, earth or other impurities. The sand and cement shall be first mixed in a dry state, then sufficient water shall be added to properly moisten, and the whole shall again be thoroughly intermixed. This top coating shall be applied to the concrete base before the latter has set, so that a perfect bond between the two shall be secured. The surface shall be floated and trowelled until smooth and even, and shall be marked into blocks 4 inches by 8 inches, to give secure footing to horses.

(9) While the work is in progress, it shall be so arranged that a steady ^{Work to be continuous.} supply of mixed concrete shall pass from the mixing box to the point where it is to be placed. At any time when the work is interrupted before its completion, or at the end of the day, a wet covering shall be placed over the last layer of concrete; before the work of depositing the concrete is resumed, this surface shall be thoroughly flushed with water to remove any foreign material which may have gathered thereon. No concrete shall be laid in wet or freezing water.

ARCH CULVERTS.

Concrete or other durable culvert tile are to be recommended for small waterways, where there can be no doubt as to their sufficiency to accommodate the maximum flow of water. A difficulty with tile, however, has been that they are frequently used in places where a larger waterway should be provided; and while they may be large enough for the greatest flow of water for a period of years, yet there is apt to come a time of sudden flood or freshet when they are subjected to a rush of water for which they have not capacity, and a washout results.

For this reason, when putting in culverts which it is desired shall be permanent, care should be taken to provide a waterway of ample size for the unusual, not the usual, amount of flow. To this end, arch culverts of concrete or stone masonry should be employed. Of the two materials, the cheaper is concrete made of gravel and Portland cement; or of broken stone, sand and Portland cement

If properly made, concrete is not only cheaper but is equally as durable as stone masonry.

The cost of a concrete culvert will range from about \$4.50 to \$6.50 per cubic yard of concrete in the structure. This variation is created by various details—the availability of gravel, the cost of Portland cement, the cost of labor and other items. The first to be constructed by a municipality always costs more than subsequent work.

A stone arch is so designed that the stones will remain in place without being held together by mortar. Concrete arches, on the other hand, are dependent upon the cohesive strength of the materials. Good workmanship and good materials, are therefore of exceedingly great importance in building concrete arch culverts. It is also essential that the sidewalls of arch culverts shall rest on a firm stratum of hardpan, gravel, compact earth, or other unyielding base, so that there will be the least possible settlement. If settlement occurs to any extent, it is rarely uniform, and the arch is thereby distorted and cracked. Usually it is necessary to excavate, for the sidewalls, a depth of about three feet below the bed of the stream. A certain depth is necessary in any location in order that the sidewalls may not only be safe from settlement, but also from the undermining tendency of the stream. Specimen plans of a six-foot arch culvert (for concrete, not stone masonry), with specifications, are given in this report.

SPECIFICATION FOR A CONCRETE ARCH CULVERT.

Plans and drawings.

(1) The culvert shall be built in accordance with the dimensions indicated upon the plans and drawings hereunto attached, and forming part of these specifications.

“Fine” and “rubble” concrete.

(2) Concrete referred to in this specification shall be known as “fine concrete” and “rubble concrete.” Unless rubble concrete is definitely specified, fine concrete shall be used.

Framework and centring.

(3) The abutments are to be erected within a framework of dressed lumber, closely boarded up against the work as it proceeds. The centring for the arch must be well formed, an exact semi-circle. The ribs must not be placed farther apart than three (3) feet, and the lagging shall be three (3) inches thick, dressed to the intrados of the arch. The framework, centring and their supports shall be substantial and well constructed, and shall not be removed less than fourteen days from the completion of the work.

Fine concrete.

(4) Fine concrete shall be composed of one part by measure of Portland cement, two parts by measure of sand, and four parts by measure of broken stone. The concrete shall be mixed in a water-tight box, placed close to the work, by first spreading evenly a layer of sand; upon this shall be evenly spread the proportionate quantity of cement, and the two thoroughly mixed in a dry state. To this water shall be added, and the whole thoroughly mixed and brought to the consistency of a stiff mortar. The proportionate amount of stone shall then be spread evenly over the mortar, and thoroughly intermixed therewith. The concrete when mixed as described shall be immediately put in place and thoroughly pounded and rammed until it is perfectly and uniformly solid, moisture appearing on the surface.

Rubble concrete.

(5) Within the body of the abutments of culverts, of not less than four-foot span, but not nearer than six inches to the surface in any direction, large stones may be placed by hand in layers. These stones shall be in “rack and pinion” order, and not less than two inches apart. Concrete shall be carefully inserted between the stones thus placed and thoroughly packed and rammed so as to fill all voids. Concrete shall cover each layer of stones to a thickness of half the depth of the stones, when another layer of stones may be placed. A facing of concrete is at all times to be kept at least six inches higher than the rubble concrete; and shall be united with the rubble concrete so as to form a continuous and solid mass. This outer rim of concrete shall precede the placing of the rubble work within, and shall be placed around the interior of the casing to the height of nine inches and a thickness of six inches. It is to be thoroughly pounded so that no cavities shall remain when the outside casing is removed.

A SIX-FOOT CONCRETE ARCH CULVERT.
 Scale, 6 feet = 1 inch.

In no instance is the rubble concrete to extend higher than one foot below the top of the abutment, which top of the abutment shall be finished with fine concrete. The rubble stone is not under any circumstances to extend into the arch.

Cement.

(6) All cement employed in the work must be of a favorably known brand of Portland, and approved by the superintendent in charge of the work. It shall be delivered in barrels or equally tight receptacles, and after delivery must be protected from the weather by storing in a tight building or by suitable covering. The packages shall not be laid directly on the ground, but shall be placed on boards raised a few inches from it.

Stone, sand and water.

(7) The stone used shall be granite, quartzite, fine-grained limestone, or other equally strong and durable stone, care being taken to exclude soft limestone, friable sandstone, and stone affected by the atmosphere. It shall be broken into varying sizes, the largest to pass, any way, through a two-inch ring. The sand used shall be clean, sharp, silicious, and of varying-sized grain. The water used shall be clean, and care shall be taken not to use an excessive amount, the concrete when mixed and ready for the work to have the consistency of freshly dug earth.

Gravel in place of broken stone.

(8) When gravel is used instead of broken stone in making the concrete, it shall be screened to remove all sand and earthy material. If excessively dirty, it shall be well flushed to remove loamy matter, the dirty water being allowed to run off; nor shall it contain stones, any diameter of which exceeds two inches.

Finished surface of culvert.

(9) Care should be taken to make the extrados of the arch a smooth, regular surface, such that moisture will not find lodgment. All framework and centring shall be of dressed, well-fitted lumber, and the concrete shall be perfectly rammed into place, so that all surfaces shall be smooth, without cavities, when the casing is removed.

Concrete to be laid rapidly. When work is interrupted surface to be dampened and flushed.

(10) While the work is in progress, it shall be so arranged that a steady supply of mixed concrete shall pass from the mixing box to the point where it is to be placed. At any time when the work is interrupted before its completion, or at the end of the day, a wet covering shall be placed over the last layer of concrete; before the work of depositing the concrete is resumed, this surface shall be thoroughly flushed with water to remove any foreign material which may have gathered thereon. No concrete shall be laid in wet or freezing weather.

HIGHWAY BRIDGES.

Highway bridges are now being commonly constructed with steel superstructures, and concrete or stone masonry abutments. When timber of the best quality was more plentiful and cheaper than now, wooden bridges were no doubt most economical, but with the growing scarcity of lumber, increased price, and poorer quality obtainable, the more durable if more expensive materials will, after a term of years, be found the cheapest.

Wooden bridges supported on piles do not last for more than eight or ten years, during which period a considerable amount has to be spent for repairs. Concrete piers and abutments, if well built should last a century or more, while the steel superstructure, with proper attention, should last at least half as long. So that, although the initial cost of a wooden bridge may be only one half or one third that of a steel and concrete structure, the latter will in the end, be the cheapest. In addition it will be safer, less liable to collapse, and will be more convenient for traffic.

Well made concrete is cheaper and fully as durable as stone masonry. Just as the cost of stone masonry varies at different localities, in accordance with the cost of stone, labor, etc., so the cost of concrete will vary according to the relative cost of gravel, broken stone, Portland cement, and labor. For piers and abutments, the cost of concrete usually ranges from \$4 to \$6 per cubic yard, as compared with stone masonry at from \$10 to \$14 per cubic yard. Under almost any circumstances concrete is cheaper than stone masonry.

Among the recent uses to which concrete has been applied, is the making of bridge floors. In the County of Elgin more of this class of work has been done than elsewhere in the Province, and so satisfactory has experience been with these floors, that they are being used on all County bridges. Plank floors wear out in from two to four years and are a constant matter of expense.

Concrete floors are exceedingly durable, and although costing much more than plank when first laid, their greater durability will enable them to outwear half a dozen plank floors. Their cost in Elgin when first adopted was 47 cents a square foot, but this has been reduced, and floors are now being laid for 28 cents a square foot.

Concrete adds a considerable load to the dead weight of the bridge, but this is more than compensated for by the extent to which it distributes the live load. With a plank floor, the weight of every vehicle passing over is transmitted to the individual members of the bridge, causing a constant jarring and distortion that is very destructive to steel. With concrete, on the other hand, the weight of a passing vehicle is spread over a much greater area of the bridge structure, the floor being a monolith and distributing the live load over a much greater bearing than can each plank. In this way the injury to bridges is much less with a concrete, than with a plank floor.

So much is this the case that, with a concrete floor, it is not necessary to restrict the speed of vehicles travelling over it. With a plank floor it is always expected that horses will not be driven over the bridge at a faster rate than a walk. But with concrete floors, travel is not interfered with, and horses may be driven over at the ordinary pace.

SNOW ROADS.

The obstruction of roads in winter by snow drifts is a difficulty experienced with more or less frequency in nearly all parts of the Province. The roads most subject to this obstruction are those running in a northerly and southerly direction, this being at an angle with the direction of the prevailing winds, which are from the west and north-west. While all roads are more or less liable to obstruction, those running east and west are not so frequently blocked by snow drifts.

Snow drifts occur in an open country, where the snow is swept from a large area, and deposited at sheltered points, or where the current of the wind is broken. Drifting is practically unknown in a timbered country, and roads protected by woodland are never blocked. The severe drifting of roads is one of the results of the indiscriminate manner in which many parts of the Province have been stripped of the original forest.

There are two methods of preventing snow drifts on roads. One is to interpose an obstacle, neither through nor over which the wind can carry the snow. This method is commonly adopted by railways at deep cuts where board fences are built, about eight feet in height. By this means, the snow is deposited, and the drift occurs, on the side of the fence away from the railway. Without such an obstruction the wind-swept snow would subside into the cut, where it would be sheltered from the wind. A similar purpose can be secured by planting a close hedge of cedar, spruce or other suitable evergreen, parallel to the road. This is an effective means of preventing the roads from becoming blocked.

The other method of preventing drifts is to remove all obstacles, so that there is no hinderance to the sweeping snow. A rail or open board fence permits the snow to pass through and over it, but the force of the wind being checked by the fence, the snow subsides in the roadway. If instead of rail and board fences, wire fences are used along the highway, there is no obstruction to the wind, and the snow is swept along with little more occasion to drift than in the centre of an open field.

The objection has been made to the latter method of preventing drifts, that the snow is caught in the sleigh tracks, which are continually being packed down by traffic. Where this goes on for some time the centre is gradually raised above the sides of the roads until it reaches an inconvenient height for sleighs to turn out and pass one another. This is overcome, however, by making new tracks along each side when the height of the first track indicates the necessity. There are very few municipalities in which wire fences along the highways have not been found exceedingly beneficial.

The county council of Wellington has for a number of years granted a bonus to each farmer building a wire fence along the county roads, and nearly all the townships of the county have adopted the same policy. Numerous townships in most of the northern and eastern counties grant a bonus. The amount of the bonus varies. In Wellington it is about \$1.00 per chain, or about half the cost of construction. In Ontario county nearly all the municipalities grant a bonus of about 35 cents a rod. Holland township gives a bonus of 20 cents per rod; Waterloo, 20 cents; Orillia, 25 cents, and Cavan, 20 cents. It has been stated in some cases that the bonus really costs the townships nothing, for the reason that the wire fences do away with the cost of shovelling out the drifts, while the injury to the road in the spring and the consequent need for repairs is very much lessened.

The damage to macadam and gravel roads from snow drifts is very often considerable. When the road is drifted the surface becomes irregular, causing a series of embankments and pitch-holes. This large quantity of snow remains on the road late in the spring, thawing off gradually. The shallow places melt first, leaving the road in patches or pockets, unprotected by snow. The melting of the snow from the remaining drifts keeps these places soft and saturated, and a few days of traffic under these conditions, breaks up the surface badly, making a series of holes corresponding to the pitch-holes of the snow. Roads broken up in this way are, in the few weeks of spring, injured more than during all the rest of the year. Where wire fences are used, or drifts otherwise prevented, the snow is of a uniform depth and leaves uniformly and more quickly, making a better road in winter and permitting much less injury to the road while the snow is disappearing in the spring.

CULVERTS AND BRIDGES.—REPORTS.

Among the reports made by township clerks regarding culverts are the following :

Blenheim.—We have seven large iron bridges and two smaller ones. Concrete tile from ten inches up to two feet are mostly used now in culverts. They have gradually been displacing the old wooden culverts. We began about seven or eight years ago.

Biddulph.—Concrete is used for culverts entirely—for bridges, masonry and iron from this out. Concrete has been used about fifteen years. We are perfectly satisfied with it. It is cheap and durable.

Binbrook.—In some cases stone, vitrified tile and boiler shells are used, one concrete. Stone is very satisfactory unless laid up with cement. Tile not in use very long. Concrete broken to pieces, but still holding together. Old boiler shells very satisfactory. We have had them in for twenty-five years.

Derby.—Moulds for making concrete culvert pipes were recently purchased, and a few made at the gravel pit at a cost of sixteen cents per foot, for the largest size. Although not in use as yet, the chances are that there will not be any more wooden culverts made in this township.

Eramosa.—The use of cement culvert was began four years ago, and has been continued with most satisfactory results.

Ekfrid.—Concrete and vitrified tile are used exclusively for culverts. Concrete tile has been in use for fifteen years, with the best of satisfaction.

Euphemia.—Sewer pipe has been used for six years, and has given good satisfaction. Pipes from eight to twenty-four inches are used.

Fullarton.—We use iron bridges with quarry stone abutments ; concrete arches for large culverts ; concrete and vitrified tile for small culverts. Iron bridges have been in use twenty-five years ; arch culverts one year ; tile culverts, about eighteen years, and give good satisfaction.

Hay.—This was the first year (1902) that cement pipe were used in any quantity. The council had their own pipe manufactured with first-class results. One of the councillors had them manufactured under his personal supervision. The tile thus made were very cheap, and could not have been hauled a great distance for what they cost the township right in the gravel pit.

Lobo.—We use concrete tile for small culverts. Concrete abutments and some iron bridges and culverts. Concrete tile has been used for fifteen or twenty years ; concrete abutments and iron for two years ; large arch culverts for some time. They give good satisfaction.

McGillivray.—Concrete is used almost entirely for culverts, and largely in abutments for bridges. We have two iron superstructures, and the others are wood. Concrete has been in use for culverts for about fifteen years, and gives very general satisfaction.

Mosa.—Concrete and vitrified tile have been in use for fifteen years, giving good satisfaction.

Nissouri, W.—Concrete tile has been used some ten or twelve years, and gives general satisfaction.

Norwich, N.—Concrete abutments and steel bridges, and concrete pipe for culverts and small bridges have been used for about ten years, giving perfect satisfaction.

Oxford, E.—Our township built one large concrete culvert last year. The smaller culverts are being replaced by concrete tile, wherever practicable, as soon as ever the old wooden culverts wear out. These materials have been used five or six years. Where properly put in they have given entire satisfaction.

Sarnia.—Concrete tile have been used some ten years. Have given good satisfaction.

Stamford.—For large culverts, where an arch is required, stone has been used. We have also used vitrified tile for a numbers of years with the utmost satisfaction, especially where the volume of water is not great.

Tuckersmith.—We use concrete pipe for small runs in almost all cases. We are using cement arch culverts in all cases where practical : for bridges, concrete abutments, and steel superstructures.

It is about seven years since cement tile were used : they are giving excellent satisfaction where intelligently put in.

We have now eight cement arch culverts. All are O.K. except the first one, which was built of natural cement, and is crumbling where exposed.

Our councils for the past seven or eight years have been very much alive to the necessity of permanent improvements. A few years ago our bill for cement tile used to run from \$350 to \$450. Last year it was \$89.94. So you see the permanent work is already being felt.

Usborne—Abutments are built principally of concrete; superstructures of iron or steel. One small bridge was floored with concrete in 1902. Concrete has been used for six or seven years, and is giving good satisfaction.

Westminster—Concrete pipe have been used ten years with good satisfaction.

Whitby, E.—Concrete tile is used for culverts, and some vitrified tile, but none of the latter during late years. Vitrified tile has been used for ten years; concrete for one year. No culverts have been touched since built.

West Williams—We have in a large quantity of concrete tile culverting, a stone arch culvert 56 ft. long, a steel bridge on stone piers, with steel cylinders for steel approaches, also concrete abutments to 22-foot bridge. The concrete tile culverting has been used for fifteen years with good success. Care is needed in putting them in, owing to liability to wash out. Stone piers for steel bridge were built twenty-five years ago; steel bridge about fifteen years ago; concrete abutments in 1902.

Windham—Cement tile is used for all culverts; and for the larger ones up to, say, seven feet arch. Concrete for the last two years, except in one or two cases, when they could not get the tile soon enough and the old wooden ones were put in. About three years ago the council commenced using them, and will put in nothing else but tile made of cement and gravel, or concrete, for culverts or bridges up to, say, seven feet.

Zorra, South—Stone abutments are used for bridges, concrete pipe for culverts and old boilers for large culverts. For last 20 or 25 years.

STREET IMPROVEMENT.

There is no truer indication of the refinement, intelligence and prosperity of a community than well designed streets, with good roadways and walks, trim boulevards, handsome shade trees, and nicely kept lawns on either side. Throughout Ontario, until but recently, streets had been neglected. They were little better than the township roads from which they had developed

THE MAIN STREET IN SMITH'S FALLS.
Macadamized.

—or, perhaps, degenerated. But a new order has taken possession, and in street and road construction and maintenance, more than any other branch of municipal work, there is a determined effort being put forth to effect an improvement.

The old-time plan of a residential street was to lay plank sidewalks on the street allowance immediately beside the fence. Outside the walk a row

of trees was planted ; outside the trees was an open ditch or gutter, and then the roadway in the centre of the street.

The more modern practice is to remove the sidewalk from its old position and place it outside the row of trees ; high-board and other disfiguring styles of fences are removed, and the boulevard where the sidewalk had been is, in effect, added to the lawn. Walks when outside the trees are more effectively lighted from electric arc lamps suspended in the centre of the street, and the public are farther from the citizen's portico or verandah.

The township style of roadway is giving place to one more distinctly urban. There is no longer an open ditch with the road a mound of gravel. Instead the road is levelled down, under-drains keep the subsoil dry, and displace the deep open ditch. The latter becomes a shallow gutter for surface water only, and is often merely the angle between the gentle camber of the roadway and the curb. Between the curb and the sidewalk there is frequently room for a strip of sod, the roadway being narrowed to a width of twenty or thirty feet.

The narrowing of the roadway between the curbs reduces the cost of construction and maintenance, and the widths given are found quite sufficient to accommodate traffic on the majority of residence streets, even in large cities. The narrow roadways give vehicles ample room to pass one another, while to turn, it is always convenient for them to go to a street intersection, where there is sufficient space.

Good streets are of prime necessity to the welfare of a town. They are the objects of an annual outlay which, if wasted, reacts in a two-fold manner by increasing taxes, and at the same time permitting the evils of bad streets to remain. With town streets, as with country roads, the object of the road and street reform movement is not to urge increased expenditure, but to obtain a better use of the money now expended.

The defects most observable, as a rule, arise from the fact that durable and permanent work is not undertaken; in order to correct which, there is need of reforming the present systems of street management in two particulars; the method of expenditure, and the method of superintendence.

The Expenditure.

The expenditure should not be distributed over the street area in patch-work and repairs, but a reasonable amount should be provided for permanent work. Small sums of five, ten or one hundred dollars will quickly exhaust the entire appropriation for the year, whereas if one-half the appropriation were reserved and spent in properly macadamizing a few blocks, such a system would in a few years revolutionize the condition of streets in most towns.

The annual expenditure is usually divided among the different streets and wards of a town, and this is again subdivided by the ward representative in doing odd jobs here and there. It is not spent in accordance with the needs of the work, but as certain electors think it should be spent. It is the inevitable result of such a system that too much money is provided for one piece of work, and not enough is devoted to another—usually the latter. It is productive of shoddy roadways, and is always wasteful in the end.

Many towns have been making an effort to keep in repair a class of roadways not suited to the traffic over them. They might be considered fairly good township roads. Cheap in first construction, they are expensive to maintain, and after a term of years are very costly. The repairs made to these streets are supposed to be such as will eventually provide a solid road.

way ; but this method of sinking stone in the mud year by year, and in the spring carting off the mud which has been forced to the surface, is an extravagant and useless process, which will not make good streets. The waste that arises is of a two-fold nature, combining high taxation and bad streets. It is not to be supposed tht streets can be built without money, but when the expenditure is made as now, it should be to provide good streets.

In order to get the best results in street construction, the work has to be undertaken on a proper scale. A roadway, like a house or any other structure, should be built from the foundation upwards, and should be completed, if only in short sections, before it is used. The roadbed should first be graded, underdrained and otherwise prepared to receive the gravel, broken stone or other road metal. The road metal should be placed on the roadway with proper machinery and in accordance with the best principles of road making. To do this, the expenditure, now extended over a term of years on a badly-formed roadway, should be concentrated so as to secure permanent and durable work. To this end there are three courses open :

1. To set apart a portion of the present annual appropriation for permanent work.
2. To issue debentures for the amount necessary to do finished work.
3. To adopt the frontage tax system.

Superintendence.

The oversight should be delegated to a competent supervisor, instead of being left to the council or a committee. On business principles there is every reason for placing this work in the hands of one man. Street construction is a matter requiring experience and special training. The plan of leaving it to the councillors, is the pathmaster system of the towns. It is even more objectionable in the towns, since the streets demand more skill than do country roads. The supervision of street construction should rest with one who has a knowledge of the subject, together with good business ability, and who will retain office from year to year.

The supervisor would prepare plans and specifications for all work. These having been submitted to and passed upon by the board of works and council, he would further relieve the council by taking full direction of the work.

Classifying the Streets.

One of the first duties of a supervisor in arriving at a plan whereby street improvement may be undertaken systematically would be to classify the streets according to the traffic over them, the character of the street, whether a residential or a business thoroughfare, the nature of the soil, grades, and other details, of the roadway required.

Certain streets, the main business streets, have a large amount of heavy traffic over them, and a strong form of pavement is needed.

Another class would include the thoroughfares over which traffic from the country reaches the centre of the town. That these are residence streets, and that the travel is less severe than on the main streets, should evidently influence the character of the pavement.

A third class would include such streets as are residential, but are not called upon to support either heavy or frequent travel, and the roadway should be built accordingly, at a correspondingly less cost.

By placing before a council such a report upon the streets, showing the present requirements, the special improvements in the way of culverts, grading, etc., the council would be in a position to undertake the improvement of streets on an intelligent basis. At present there is apt to be no

definite object in view. When permanent improvements are undertaken much of the work now being done will be found premature or unnecessary, and will be torn up. This is especially true of the grading, and the coatings of broken stone and gravel. There should be definite plans, which successive councils can follow, and towards which all work and expenditure will tend.

Macadamized Streets.

A standard pavement for streets other than those in immediate business sections of towns should be macadam. A well-kept macadam driveway is in keeping with well-kept boulevards, lawns and shade trees, the characteristics of a residential street; it has a cool appearance, the dust can readily be kept down by sprinkling, and for light driving it is the favorite among horsemen. Bicyclists usually favor macadam in preference to the more costly classes of pavement. A comparison of macadam with asphalt or vitrified brick, in point of utility and appearance, will not result unfavorably to the former for use on residential streets. It is not to be inferred, however, that broken stone roadways are recommended for streets in the immediate business section, where a harder and, in a sense, a cleaner surface is desirable.

By proper attention to repairs, the life of this class of pavement can be made continuous. The surface can be frequently rolled, improving it greatly. It should be scraped and swept as are other pavements. When it begins to lose shape the surface can be loosened up by means of teeth attached to the roller, a light coating of new metal applied, and then rolled down as well as when new. It is by such means as these that broken stone roadways can be made much more economical and satisfactory than any other for streets generally. This ease of renewal and repair is a property peculiar to macadam, which renders it most satisfactory for general purposes. While the cost in the first instance may nearly equal that of cedar block, yet at the termination of the period when cedar block is decayed and has to be torn up or renewed, the macadam, if properly treated, is still in a good condition. It forms a permanent basis, and its perpetuation is merely a matter of repair, to be met by the general funds.

Except under excessive wear, or where, in business sections, a high-grade pavement is necessary, broken stone pavements, by the aid of a steam roller, are beyond doubt the most serviceable and economical, and give the greatest satisfaction.

A complete specification for a broken stone roadway is elsewhere included in this report, but, briefly, an approved method of construction would be as follows:

Excavate the roadbed to the required dimensions, giving the sub-grade a uniform crown, seven inches higher in the centre than at the sides. Lay a row of five-inch porous tile under the roadway, two feet from each of the kerb lines, and parallel with them, these tiles to be laid two feet beneath the sub-grade and to have a regular and uniform fall to the catch-basin or other outlet. If the subsoil is springy, lay lateral drains of porous tile, four inches in diameter, extending diagonally into the roadway at an angle of forty five degrees with the side drains, these drains to be at intervals of fifty feet. Make the trenches to receive the tiles narrow, and fill them with coarse gravel. The surface of the sub-grade should be rolled until it is thoroughly compacted. During the process of rolling fill any settlement or depression with gravel or other suitable material. Place the kerbing at each side of the roadway in the required manner.

On the sub-grade thus prepared, place a single layer of flake stone about five inches in thickness, this stone to be laid as closely as possible, and the openings between them carefully filled with stone chips or coarse broken stone. Upon this and over the flake stone, place a layer of broken stone, such as will pass through a two and one-half-inch ring, the layer to be seven inches deep in the centre, and five inches deep at the kerb, and sprinkle upon it fine stone screening until all the voids are filled. Sprinkle this layer with water from the watering cart, and by the use of a harrow, work the fine screening into the mass. Pass a roller over it until well consolidated. Upon this place a layer, two inches in depth, of one and one-half-inch crushed stone. Apply fine screenings, harrow, sprinkle and roll as above specified. Over this place a layer of one-inch crushed stone, and cover with sufficient screenings to fill all the voids; then roll the mass thoroughly until consolidated, and the surface made hard and smooth.

A Gravel Roadway.

On many lightly-travelled streets a cheap and serviceable form of roadway can be made by laying a foundation of quarry flake-stone in the bottom, laying over this about four inches of coarse broken stone, and surfacing with clean gravel of a uniform size. This style of pavement for light driving is most attractive, it is easily and cheaply repaired, and with a little careful attention is applicable to many streets.

Or if broken stone is not available, gravel may be used throughout, first screening or passing it through a crusher, if necessary, to remove an excess of sand, clay or other fine material, and to break the large stones.

Machinery.

An outfit of roadmaking machinery, consisting of a steam roller, rock-crusher, grader, scraper, sweeper, sprinkling carts, is one of the first requisites in making and maintaining macadam and gravel streets. Among the places in the Province to equip themselves with the more important implements are: Windsor, Chatham, London, St. Thomas, St. Catharines, Niagara Falls, Stratford, Berlin, Guelph, Galt, Ingersoll, Woodstock, Hamilton, Brantford, Owen Sound, Barrie, Toronto, Belleville, Peterborough, Kingston, Brockville, Cornwall, Carleton Place, Smith's Falls, Ottawa, Pembroke, and Renfrew.

For economical, durable and serviceable roadmaking, a heavy roller is indispensable. A road should be sufficiently smooth and compact to shed the water readily to the side gutters. If the gravel or other road metal is dropped from the wagon loosely on a soft earth foundation, water passes into the subsoil as through a sieve. Wheels passing over the road when in such a condition at once sink into and rut not only the gravel, but the earth beneath. Water is held in the ruts, and each succeeding vehicle renders their condition worse. The road is less durable, since the gravel, being mixed with the earth from beneath it, contains, when finally consolidated, a dusty, easily-worn surface.

The weight of the roller used must depend upon varying circumstances—the amount of work it will be required to do, the quality of road metal used, the strength of the bridges and culverts over which it must pass. A steam roller costs much more than a horse roller, but does so much better and faster work that it is more economical. A weight of twelve tons does satisfactory work, and it is not too heavy for the majority of bridges. Rolling should commence at the side of the road, ap-

proaching the centre gradually. If the roller is first passed over the centre the loose metal is crowded out, and the shape of the road injured. The earth foundation should be rolled, and each succeeding layer up to the top dressing. When the latter is put on, the rolling should be continued in wet weather (or the metal thoroughly soaked from a hydrant or with an ordinary watering cart) until the road is thoroughly compact and solid, able to resist, without displacement, the heaviest load passing over it.

Rock crushers are used for preparing, for street purposes, not only quarried stone, but also field boulders and coarse gravel. By a screen attachment the product is separated into grades for application to the roads in the best possible manner. For city or town work, where a large quantity of material is required, it is a mistake to purchase a small crusher. The

A STEAM ROAD ROLLER AT WORK.

breaking of stones is a very severe test on machinery, owing to the varying character of the material; and ample capacity, so that the work can be done with perfect ease, is necessary. A crusher which can break ten cubic yards per hour run at three-quarters its capacity, is the most serviceable and economical machine for most towns and cities. The extra cost incurred will prove a profitable outlay when the expense of maintenance and operation is considered. Fuller information with regard to both rollers and crushers is contained elsewhere in this report.

Scraping, Sweeping and Sprinkling.

It is a mistake to provide for the construction of good pavements, without at the same time insuring the investment by providing for their proper care and maintenance. If an asphalt pavement is allowed to go uncared for, in a very short time an accumulation of dirt, brought on by traffic and other means, will make it discreditable. But where these high-class pavements are laid, provision is always made for scraping, sweeping and sprinkling, so that their best qualities are always fully realized. The cheaper class of

pavements, such as macadam and gravel, are generally neglected, and, in consequence, wrongly condemned. Quite as much, often more, filth from outside sources is carried to a macadam or gravel roadway than to asphalt; and to realize the most from the investment similar attention should be given. During the summer season these streets should be swept with a revolving sweeper. In the spring and fall, gutters and catch-basins should be scraped and cleaned. During the dry season, sprinkling will lay the dust and lessen the wear.

The purchase of certain road implements, more especially sweepers and scrapers, is sometimes opposed in a town, on the ground that they will take away the employment of a number of old men, largely dependent upon corporation work for support. Experience with these machines, on the other hand, goes to prove that they do not take away work, but in some cases tend to create work. They enable a much greater amount of street to be gone over, and effect a most encouraging improvement. The material swept or scraped to the side of the street has still to be drawn by hand into heaps, and thrown into wagons, gutters have to be cleaned out, and weeds have to be cut. The work of these machines in cleaning the streets stimulates to greater effort on the part of the ratepayers, and there is a tendency to extend the work rather than to decrease it.

Business Streets.

While ordinary macadam is a safe standard pavement for streets in towns, villages, and cities, yet the cities and the larger towns feel the need of a higher class of pavement for business and heavily-travelled streets. The materials now generally employed are sheet asphalt, asphalt blocks, vitrified brick and tar (bituminous) macadam. Stone setts or blocks, and cedar blocks, are now commonly employed.

With cement-concrete sidewalks, stone curbing, and a roadway surfaced with sheet asphalt, little is left to be desired, so far as is now possible to reach the ideal in the design of a street. If there is an electric railway on the street, stone blocks or paving brick should be placed between and adjacent to the rails, as the vibration caused by electric railway cars is destructive to sheet asphalt. While much is to be said in favor of asphalt, it is not to be considered faultless. It does not afford a good footing for horses, it is dusty, it is difficult to repair, or to relay after the street has been excavated for the purpose of laying sewer connections, gas or water services. It is expensive, and for that reason alone is not very acceptable, except where property is of a proportionate value.

The material of which asphalt pavements are composed, may be either natural or artificial. Natural asphalt is obtained by grinding to powder bituminous limestone, found in Texas, Utah and elsewhere, or the bituminous sandstones found in California, Kentucky, Texas, etc. This powder is then heated until soft and is spread while hot on the roadway.

The chief source of artificial asphalt is the Island of Trinidad, W.I., where crude asphaltum is obtained: is then refined and mixed with sand and stone dust: is heated and applied to the roadway. The artificial asphalt pavement is composed of about 90 per cent. sand, and 10 per cent. bitumen, so that the quality of sand used is as important as that of the asphalt proper. Underneath this layer, which should be about two inches thick, should be a foundation of concrete, about six inches in thickness. Owing to the skilled labor and machinery needed in laying this pavement it is found most satisfactory to have it laid and kept in repair by contract. When properly laid its durability cannot be questioned, but there is some difficulty in surrounding a contract with such safeguards as will ensure first-class material

and workmanship. A reliable company should be employed to construct the pavement, and the maintenance guaranteed by them for fifteen years, which is its surface life. A common guarantee is for a term of five years, but this is not sufficient. Breaks in asphalt pavement must be immediately repaired, otherwise moisture enters, causing rapid decay.

Vitrified Brick.

Vitrified bricks are different in composition and manufacture from the ordinary building brick. They are made from clay or shale, or a mixture of the two, which is heated to the point of vitrification and then slowly and gradually cooled. The size of each brick is usually about 2 1-2 x 8 1-2 inches. The durability is not equal to that of asphalt or stone blocks, but they are less noisy than stone blocks. They are manufactured in Toronto, in the States of Ohio, New York and Pennsylvania, and elsewhere. There is room for much variation in the quality of brick. The process of manufacture is one which requires an expensive plant and much skill in burning. In laying a vitrified brick pavement, the natural earth is first prepared by draining, grading, and rolling with a steam roller. On this a layer of concrete or broken stone is laid, from four to six inches in thickness. On this is spread a layer of sand about one inch in thickness, and in this the bricks are imbedded. They are laid on edge, in courses, at right angles to the street line, and with broken joints, the joints being cemented or "grouted."

Stone Setts.

Stone setts, or blocks, one of the oldest paving materials, are extensively used in cities, and are the strongest and most durable that can be had. This pavement is well adapted to steep grades up to ten per cent., requires little repair, and suits all classes of traffic. It is, however, very noisy, and is rough. It is, therefore, not suited to residence streets or business streets where there are retail stores. It is best adapted to streets occupied by wholesale houses in which there is much slow and heavy traffic. Stone blocks are also suitable for paving between street railway tracks. The stone generally used is granite or trap, which few cities can find within convenient distance. The stone should be cut into rectangular blocks about seven inches deep, three inches wide, and nine inches long. The price paid for quarrying and making these blocks averages thirty dollars per thousand. In constructing the pavement they are laid on a concrete base, in much the same manner as vitrified bricks.

Tar Macadam

The method of construction is, in preliminary steps, similar to ordinary macadam; the last two layers only of broken stone, together with a top-dressing of fine material, being treated with tar. The process of saturating the stone with tar is a simple one. The stone is first allowed to become thoroughly dry in the sun, or is heated to drive off moisture. The mixing is done on a platform. While the boiling tar is being applied, the stone is turned and returned with shovels, after a manner similar to concrete mixing. The mixture is then carried in wheelbarrows to the work, spread to the desired thickness, and each layer rolled. On the surface of the tarred stone is spread a one-inch layer of tarred gravel and fine crushed stone, which is rolled to a hard finish. A light color may be obtained by sprinkling a light coating of cement as with an asphalt pavement.

Cedar Blocks.

Cedar blocks are probably as cheap a material as can be adopted, but they decay rapidly, becoming offensive and unsanitary. The surface quickly roughens, so that the life of this pavement in which good service is rendered, is such that renewal is necessary in from five to seven years. If retained longer than this they become a source of annoyance, and a discredit to the municipality. The quality of cedar obtainable is becoming less sound and more expensive, so that it is not likely these pavements will be as satisfactory in the future as in the past.

Concrete Curb and Gutter.

A curb defines the roadway, giving the street a more finished appearance, as well as protecting the boulevard from careless drivers, and from horses standing or tied at the side of the street. It also forms the gutter, and aids in keeping it clean and free from obstruction to the flow of water from the roadway. The accompanying cross-section shows one of the many uses to which concrete is being generally supplied in street work. Consisting of a gutter, or water-table, combined with a curb, its stability is greater than a curb alone, its appearance is improved, and its usefulness is much increased. A curb, or curb and gutter, should be constructed after the street has been excavated, graded and under-drained, preparatory to laying the first course of the roadway or pavement. Rolling can then be more perfectly performed, as the curb keeps the road-metal in place, preventing it from being crowded outward by the weight of the roller. Being carefully laid to grade, it is used as a line from which to guage the finished surface of the pavement.

CONCRETE CURB AND GUTTER-CROSS SECTION.

The process of constructing the curb and gutter is first to excavate to sub-grade and lay the foundation of gravel or other material, which is pounded or rammed until firm and compact. Planks are then put in place to form the core of the curb, and the side of the gutter next the roadway. The coarser grade of concrete is then placed and tamped between these planks, ready, after rounding the corners with suitable tools, to apply the surface coat. To do this the inside plank forming the core of the curb is moved outward the required distance, usually one inch, and the cement mortar or finishing coat is then run behind it, in contact with the core; and the remainder of the surface coat is readily applied. Before the surface coat is set, the plank retaining the face of the curb in place is removed, and the whole is shaped with float and trowel. A bristle brush dampened is used last, and in the hands of an expert, the com-

pleted work is given the appearance of natural stone. By means of flat metal plates, which are used as well to keep the planks a proper distance apart, the curb is separated into desired lengths, usually eight feet, the separation providing for expansion in hot weather. The specifications for curb and gutter, are usually a part of, or modelled from the sidewalk specifications, the requirements for excavation, foundation, composition and mixing being in all respects similar. The cost will vary with local conditions, cost of cement, etc., but if laid by a street overseer experienced in laying concrete walks, it would be expected to average thirty cents a lineal foot.

Sidewalks.

Concrete is rapidly taking the place of plank for sidewalks, a number of municipalities having wholly given up the use of the latter material. Wooden walks now cost six or seven cents a square foot for construction, and their life, with extensive repairs, rarely exceeds ten years; while concrete, although costing nearly twice as much as plank, should last ten times as long. Concrete, made of Portland cement and gravel, or of Portland cement, broken stone and sand, although an artificial stone, is, when properly made, more durable than the natural stone commonly used for walks, and the cost is much less.

These walks are variously called "artificial stone," "granolithic," "cement," "concrete," "cement-concrete." The term "granolithic" is properly applied to the walks of this class in which granite chips are mixed with sand and cement in forming the wearing surface. Although of similar appearance, concrete walks are not the same material as is used for asphalt roadways, with which they are very commonly confused, the asphalt pavement being a mixture of sand and mineral pitch. Asphalt is occasionally, as in the city of Kingston, used for sidewalks. Vitrified paving brick are also used to some extent for sidewalks, costing about the same as concrete, while they are commonly used for crossings, being laid on a concrete base, and taking the place of the concrete wearing surface.

The usual requirements for a concrete walk are:

(1) A foundation on layer of stone, gravel, cinders, or other suitable material, consolidated to a depth of from six to twelve inches in thickness, according to the nature of the sub-soil.

(2) A concrete base from three to four inches in thickness.

(3) A surface coat of cement-mortar, one inch in thickness, mixed in the proportion of one of cement to two of sand.

The foundation layer is intended to provide a certain amount of drainage, as well as strength, and should be greater on a clay soil, retentive of moisture and subject to upheaval by frost, than it need be on a loose gravel soil.

A concrete base three inches in thickness is ordinarily required on a favorable soil, and four inches where the sub-soil is of clay or where, for other reasons, the drainage is not thought sufficient.

Where broken stone is used in the concrete base, safe proportions would be one part of Portland cement, two and one-half of sand, and five of broken stone. This quantity of sand and cement will make a strong mortar, and there will be sufficient to surround each stone and fill the voids.

Where gravel is used to form the concrete base, the usual proportions are one part of cement to five or six of gravel. The gravel used in mixing concrete should be free from clay, loam, or earthy material, and should contain about thirty per cent. sand. As there is apt to be some uncertainty as to the quality of the gravel, and the uniformity with which sand is intermixed with it, a greater proportion of cement is required than with a carefully adjusted mixture of cement, sand and broken stone.

The sand used in mixing broken stone concrete should be clean, sharp, and of varying sized grain. One of the objects to be aimed at in mixing concrete is to have fine and coarse materials in such proportion to one another that the percentage of voids in the consolidated mass will be reduced to a minimum.

For the surface coat the proportion of one of cement to two of sand is customary except at street crossings, where one part of cement to one and one-half of sand is commonly employed.

TOWN AND CITY STREETS.

The number of towns, villages and cities which are adopting progressive methods of street improvement is every year increasing, and each is gaining a fund of experience, valuable not only to itself, but to the other municipalities which are in a position to avail themselves of it. Some of this information has been obtained from a few places, and it is expected that, for future reports, data concerning street work in other municipalities will be secured. While by no means covering the entire ground, the work described is representative of the improvement now being generally carried on throughout the Province.

BELLEVILLE.

The management and superintendence of street improvements in Belleville has for some years been under a street commissioner, a permanent officer of the corporation. The more substantial class of work was commenced in 1894, when a stone crusher was purchased, and the construction of

A STREET IN BELLEVILLE.

broken stone roadways was undertaken. Since purchasing the crusher, the main thoroughfares have been re-surfaced, comprising about fifteen miles of roadway. The first concrete walks were also laid in 1894, there being now four and one-fifth miles. The laying of plank walks has been discontinued; gravel is being substituted when concrete walks are not laid as a local improvement, and the cost has to be met out of the general funds.

Machinery.

The city has a complete outfit of road machinery, the cost of which has amounted to \$7,800. It includes a steam roller, a crusher, a grader, a

scraper, a revolving broom, a watering cart, and a portable gravity concrete mixer.

The steam roller, weighing 15 tons, was purchased in 1898, at a cost of \$3,000. The crusher, purchased in 1894, for \$800, is of the jaw type, and has a capacity of 120 tons (limestone) in 10 hours. A screen and elevator attachment for the crusher cost \$200.

The concrete mixer cost \$500, and is found by the street commissioner to be exceedingly satisfactory, the work being more perfectly done and at less cost than by hand. In the construction of sidewalks, the materials are deposited every 45 feet, and the mixer is moved from point to point, giving a short distance to wheel the mixture. To supply water, iron pipe, in detachable lengths, is connected with the nearest hydrant.

Road Metal.

With the exception of the main business street, on which granite was used, the roadways are macadamized with crushed limestone. The city owns its own quarry, in which the crusher is permanently located. The average cost of limestone crushed in the city's quarry, laid on the road and rolled, is \$4 per cord. Roadways of this material, metalled to a width of 15 feet, eight inches in depth at the centre, decreasing to nothing at the sides, cost about \$1,200 a mile, or 1 1-2 cents a square foot.

The rotary screen on the crusher is ten feet in length; one-half being perforated with one-inch holes, and the other half with two-inch holes, stone of larger size passing out of the end of the screen. The crushed stone is thus separated into three grades :

- (1) That passing the one-inch screen.
- (2) That passing the two-inch screen.
- (3) The larger and irregular sizes.

These are placed on the road in the order given, the large size in the bottom and the fine on top; the finer stuff being also mixed through the two lower courses to fill the voids and assist consolidation.

Apart from the general cleaning, scraping and sweeping, which all the macadam roadways receive from time to time, a man is constantly employed in sweeping the main business street, except in winter. About one mile is covered in this way, and the cost is \$1.25 a day.

Telegraph Poles.

All poles, whether for telephone, telegraph or electric railway, are debarred from the business street of Belleville. One or two exceptions have been made in favor of electric railway poles, in cases where the company was refused permission to attach wires to the buildings to support the trolley wire. Poles are permitted on other streets, and wires are carried to the main street from streets in the rear.

Concrete Sidewalks.

The first concrete walks were laid in 1894, when 4,000 lineal feet were put down on Front street in the business section. This work was not continued laid on Front street in the business section. This work was not continued until 1901, when 14,000 lineal feet were laid. 4,110 feet being laid in 1902. The walk put down in 1894 was laid by contract, but subsequent work has

been done by day labor, under the street commissioner. The walk laid to the present time is as follows :

Year.	Lineal feet.	No. of square feet.	Cost.
1894.....	4,000	\$ 9,800
1901.....	14,000	80,052	13,500
1902.....	4,110	21,944	3,649

This approximates, in all, 4½ miles of walk, laid at a cost of \$26,949. In 1901, the cost, with cement at \$2.20 per barrel, was slightly over 16⅓ cents per square foot ; while in 1902, with cement at \$2.60 per barrel, the cost was slightly under 16⅓ cents. The decrease is accounted for, in part at least, by the use of the mechanical concrete mixer. These walks as now laid consist of :

- (1) An excavation 15 inches in depth ;
- (2) A bed of rough stone 10 inches in depth ;
- (3) A 3 ½ inch layer of concrete, mixed in the proportions of one part of cement, 3 of sand, and 5 of broken stone.
- (4) A 1 ½ inch granite finish mixed in the proportions of 1 part of cement, 1 of sand, and 2 of crushed granite passed through a 1-2-inch sieve.

In placing the foundation bed of rough stone, a wall is laid by hand on each side to within four inches of the grade line. A concrete curb constructed in connection with the walk, on Victoria street, in 1902, is twenty inches in depth and five inches wide, the materials being mixed in the same proportions as the walk. Concrete gutters, exclusive of curb, 14 inches wide, with a one-inch surface, otherwise the same as the walk, cost 12½ cents a lineal foot.

Hard heads for crushed granite are obtained from the farmers of the vicinity in the winter, delivered at the crusher, for \$2.50 per cord. Sand costs, delivered, 70 cents a cubic yard.

Assessment.

Forty per cent. of the cost of concrete walks is levied against the property as a frontage assessment, and 60 per cent. is paid out of the general funds. In addition, the city pays for intersections and all flankage of corner lots. The cost of road improvement is paid out of the general funds, and the work is now progressing at the rate of 2½ or 3 miles yearly.

BERLIN.

The Town of Berlin has, since 1898, been steadily adding to its mileage of modern macadam and gravel streets, and has now 2¼ miles of broken stone, and 3 miles of gravel roadway, all constructed in a permanent manner.

Broken Stone.

The work of street improvement is done by contract, but the stone used is broken and supplied by the town. For the first streets, stone was obtained from the farmers of the district, who delivered it at the crusher for \$4 a cord. The supply of field stone is nearly exhausted, and that now used is obtained from the bed of the Grand River, involving a haul of two miles to the Town Hall, near which the crusher is operated, the cost being \$4 a cord delivered.

The crusher is of the gyratory type, purchased in 1899 at a cost of \$1,400. The maximum capacity is 125 cubic yards in ten hours, but the ordinary output is 100 cubic yards. Thirteen or fourteen men are required in operating it, and the cost varies between \$1.25 and \$1.50 per cord of crushed stone.

It is operated by a 30 horse-power threshing machine, bought second-hand in 1901

The broken stone is supplied to contractors for \$5.50 a cord at the crusher. The quantity is arrived at by weighing, 14,507 pounds being the estimated weight of a cord of crushed stone, of the kind obtainable in the vicinity of Berlin.

MACADAM STREET IN BERLIN.

The stone is ordinarily placed on the streets in two layers, amounting to a depth of 9 inches in the centre and 7 inches at the sides. The first layer is of coarse stone, such as will pass through a two and one-half inch ring, and the second layer such as will pass through a one and one-half-inch ring. Each layer is coated with screenings, watered, harrowed, and made thoroughly compact by rolling.

A Steam Roller.

The steam roller, which weighs 15 tons without being loaded, was purchased in 1898 for \$3,100. This is rented to contractors for street work at the rate of \$7.50 per day, the town employing the engineer, and the contractor supplying the fuel only.

Cobble Stone Gutters.

Very little curbing is used in Berlin, there being a decided preference for cobble-stone gutters. In laying these gutters, an excavation is made 12 inches in depth below the finished grade. In this, sufficient sand ballast is placed to bring the bottom of the gutter to the desired grade. The stones used are required to be not less than six inches deep, and not less than 4 ½ inches, nor more than 10 ½ inches in width. These gutters are usually three feet wide, and cost 50 cents a square yard. The outer slope of these gutters is made steep, so as to act as a curb and protect the boulevard. Hills being somewhat numerous in Berlin, cobble-stone gutters are of service in protecting the edges of the roadway from the wash following severe rain-storms.

Concrete Sidewalks.

Berlin has now a considerable extent of concrete sidewalks. These are laid by contract, the price this year (1902) being 11 cents a square foot. No boulevarding is done under this contract, and very little grading. The standard specification, which requires a five-year guarantee from the contractor, includes the following :

(1) A 10-inch excavation below the grade of the finished walk, the sub-grade to be thoroughly consolidated by ramming.

(2) A six-inch foundation of broken stone, clean gravel or engine ashes, this to be watered, pounded and brought to an even surface.

(3) A three-inch layer of concrete, composed of clean pit gravel, sand and Portland cement, mixed in the proportion of one barrel (350 pounds) of cement to 27 cubic feet of sand and gravel.

(4) A one-inch wearing surface, consisting of a stiff mortar, composed of clean, sharp sand and Portland cement, mixed in the proportion of $1\frac{1}{2}$ parts of sand to 1 of cement, by measure in boxes.

Concrete road crossings have eight inches of ballast, five inches of concrete, and a $1\frac{1}{2}$ inch wearing surface, in other respects they are constructed in the same manner as the walk, but marked into blocks 4" x 8", to give a secure footing for horses.

Assessment.

All permanent roadways and sidewalks are paid for as local improvements, according to frontage. The cost of street intersections is paid out of the general funds, but no flankage allowance is made. Roadway debentures are extended over ten years, and concrete sidewalks over twenty years.

BRANTFORD.

Street improvement in Brantford is under the combined management of a city engineer and street overseer. Although, prior to 1901, little paving had been undertaken, the streets as a whole, particularly during the summer season, present a trim and well-kept appearance. The nature of the soil, which is of a porous, gravelly character, and the well-defined drainage areas throughout the city, are favorable conditions, of which good use is made. The construction of permanent roadways has not been generally undertaken, but much attention has been given to forming the boulevards, which are graded and levelled wherever sidewalks are laid as local improvements. A liberal use has been made of the road grader, which, owing to the nature of the soil, has produced exceptional results, more especially on those streets which have, in addition, been metalled with gravel or broken stone.

A fifteen-ton steam roller was purchased early in 1901, at a cost of \$3,200. Its use to the present has been confined to the re-surfacing of roads, which from time to time have had a considerable depth of stone and gravel placed on them. These roads were graded and re-shaped, and a thin coating of stone was rolled into the old roadbed: about four and a half miles having been treated in this way in the two years 1901-2.

The broken stone used in street work is a rather soft limestone, obtained in the bed of the Grand River within the city, and is very convenient for street work. The crusher, purchased in 1894, at a cost of \$840, is located in the city yard, the average haul to the crusher from the river being about four hundred yards. In operation, two or three teams are needed to haul stone to the crusher, and two haul away. The labor required in addition is an engineer, and two men to feed the crusher being set in the river bank in such a manner as to require the least possible handling of the stone. Ten cords are crushed in a day of ten hours. The crusher is operated by a 17 H.P. engine, purchased in 1900 for \$600. Old sidewalks are used for fuel, and with the comparatively little labor required, the cost of crushing stone is very low. All local improvement work is done by day labor.

Concrete Walks.

To the end of 1902 there were laid 163.4 miles of cement concrete sidewalks, out of a total of 43 miles of all walks laid as local improvements; the amount expended on concrete walks being \$70,000 out of a total expenditure of \$125,000 on all classes of walks. The growing popularity of these walks is indicated by the fact that, last year, there was laid only 500 lineal feet of plank walk, as opposed to 11,000 lineal feet of concrete.

The first concrete walks were laid in Brantford in 1890. A marked example of the durability of these walks is shown at the intersection of two of the main business streets, where a concrete walk meets a walk of natural stone. Both were laid at the same time, and the stone walk has been worn down fully one-third of an inch, whereas the concrete shows very little evidence of wear.

A MACADAMIZED STREET IN BERLIN.

Walks are all laid by day labor under the street overseer. Property-owners are charged a uniform rate per square foot of concrete walk fronting on their property, the charge last year (1902) being 11 cents a square foot, and in 1901, 14 cents, the difference in cost being due to the decreased price of cement. These prices cover the cost of grading and levelling boulevards, which is done at the time the walks are laid.

The walks consist of :

- (1) An excavation ten inches in depth.
- (2) A firmly-rammed foundation of coarse river gravel, seven inches in thickness.
- (3) A layer of concrete three inches in thickness, composed of six parts of clean, selected river gravel to one part of cement.
- (4) A top layer, one inch in thickness, composed of two parts of sand and one part of cement.

In the construction of these walks, from two to four men, with two or three teams are first put at work in excavating for the foundation. When putting in and consolidating the gravel foundation, the number of men is generally increased. In mixing and laying the concrete, six men and one finisher are employed. This number of men will complete about 700 square feet of four-foot walk in a day. The men work nine hours a day, ordinary labor being paid 15 cents an hour, finishers 35 cents an hour, and teamsters 35 cents an hour. The average haul of gravel is about two miles.

Canadian Portland cement has been used since 1895, prior to which English cement had been used. The sand and cement for the surface layer are first mixed dry by passing three times through a screen to secure a uniform mixture. The platforms used for mixing the first concrete layer are about 14 feet by 16 feet, two or three men working on each. Instead of cutting through the concrete with a blade, to divide the walk into blocks, as is ordinarily done, a wooden strip is placed across from curb to curb at proper intervals, and is removed prior to putting on the finishing coat, the space being filled with sand. These strips are one inch thick at the top, are bevelled to one-half inch at the bottom, and are about five inches in width. A complete separation is secured in this way.

Curbs.

Very little curbing has been used in Brantford, the boulevards and surface of the roadway meeting to form the gutter. About four blocks of concrete curb have been laid, and have proven very satisfactory. The walks throughout the city are, as a rule, kept close to the fences, and are not laid next the roadway and outside the trees, as is becoming the usual practice in many places. The curbs are, therefore, except in one instance, separate from the walk.

The last curb laid had a depth of 22 inches, a top width of 5 inches and a bottom width of 8 inches; the core being mixed in the proportion of seven parts of gravel to one of cement, and the one-inch surface coat on the top and next the roadway, two of sand to one part of cement. This curb was 400 feet in length, and, including 180 square feet of steps, the cost was \$88; the cost per lineal foot would, therefore, be about 18 cents. The dimensions of this curb are considered greater than are necessary by the city overseer, and by reducing the depth and thickness of future curbs the cost will be lessened.

Stone curbs placed on the main business streets, four inches thick and two feet in depth, cost sixty cents a lineal foot.

Tar and Flagstone Walks.

Prior to the introduction of concrete walks, tar walks had been laid, there being 7,515 lineal feet of this material. The last was laid in 1891, when they were discontinued, owing, in part, to difficulty in procuring coal tar. The cost had been about six cents a square foot. Practically all of these walks are still in use, and those which were not made too hard—resulting from insufficient tar in the mixture—are wearing well. Many of these walks are in exceedingly good condition; but, having received little attention since laid, some have assumed a rough and gritty surface. They are made in three layers, a gravel foundation, a tarred stone base, and a tarred surface finish of fine gravel or stone.

The use of flagstone walks has also been discontinued, there having been laid 4,276 lineal feet, at a cost of \$17,946, or about thirty-five cents a square foot. In addition to being more expensive, they do not resist severe wear to the same degree as do cement walks.

Crossings.

A feature of the street crossings in Brantford is that they are all brought to the level of the sidewalks, the gutters in most cases being carried beneath them. Vitrified brick and concrete have been used to a considerable extent, the cost being about the same in both cases, averaging \$50 each. The brick is laid on a concrete base. The concrete crossings are made

of blocks, manufactured in the city's yards, enabling them to be laid without interrupting traffic.

Assessment.

The payment for concrete walks is extended over twenty years. The street intersections are paid for out of the general funds, but the remainder is levied against the property according to frontage. The cost of road improvement is met by the annual appropriations from the general funds.

CHATHAM.

The principal work of street improvement in Chatham has been the paving of the main streets in the immediate business section with vitrified brick. The first vitrified brick roadway was laid on King street, in 1900, and additional streets are being paved with it this year. Street improvement has been given much consideration for several years. A steam road roller and a rock crusher were purchased in 1898, and several blocks of macadam have been constructed. A difficulty frequently referred to, is the nature of the soil of the district which, following the rule of soils most useful for agriculture, is bad for roadmaking. It is a very tenacious and absorbative clay, which, when merely graded, cuts up very badly in wet weather. The most objectionable feature, from a roadmaking standpoint, is that it is carried so freely by the wheels of vehicles from the unimproved streets to the macadamized roadways, and is in this way very destructive to the latter, unless carefully and frequently cleaned.

All stone and gravel has to be brought in by rail. Broken stone is now obtained from the Hagersville quarries. Gravel is principally obtained from the Grand Trunk Railway property at Point Edward. No charge is made for this material itself by the Railway Company, the cost to the city being merely the cost of loading, unloading and transportation.

Brick Paving on King Street.

The first brick pavement in Chatham was laid in 1900, on King street, the main business thoroughfare. It has a concrete foundation, with stone curbing, and, for the most part, concrete walks. The work was done by contract, and included the removal of the old pavement, which was of common brick, the resetting of the stone curbing, the laying of sewer pipe, construction of man-holes and gullies, the laying of gas and water pipe to the street line, the moving of telegraph and telephone poles from the roadway to the sidewalk allowance, and other work incidental to the permanent paving of the street.

The city provided the brick for this pavement, the kind used being "Messier block," and is the same as that used in paving Talbot street, St. Thomas. These bricks cost \$23.40 per 1,000, f.o.b. Chatham, including the duty of 20 per cent. The cost of the brick alone was 95 9-10 cents for each square yard of paving. The contract price for the remainder of the labor and material was 85 cents a square yard. This included the removal of the old pavement, grading the street, laying a 6-inch concrete foundation (in which natural cement, not Portland cement, was used), a sand cushion, and the labor of hauling, laying and grouting the vitrified brick. The actual cost of the brick pavement alone was, therefore, \$1.80 9-10 a square yard.

The concrete foundation for King street pavement was six inches in depth. Natural cement was used, the mixture being in the proportions of

one volume of cement, two volumes of sand or fine gravel, and four volumes of broken stone. The stone curbing, which has been on the street for some years, was turned upside down and refaced, the cost of this work being 25 cents a lineal foot. This curbing is 18 inches deep, 4 inches in thickness, and the flags 4 feet in length.

New Brick Paving.

The new brick paving laid this year (1902) differs somewhat from that laid on King street. The total length under construction is 2,100 feet, one roadway being 28 feet wide and the other 30 feet. This pavement, exclusive of concrete curbs and gutters, is being laid entirely by contract, for \$2.17 per square yard, and is guaranteed for five years. Massillon blocks are being used, which, it is understood, cost the contractor between \$23 and \$24 per 1,000.

The concrete foundation is six inches in depth, and is mixed in the proportion of four sacks, or one barrel, of cement, three standard wheelbarrows of sand, and six standard wheelbarrows of broken stone. On this concrete base is spread a one-inch sand cushion, and on this is placed the brick four inches in thickness. The space between the bricks, about one-eighth of an inch, is filled with a composition of coal tar and pitch, mixed in equal quantities.

Concrete Curbs and Gutters.

One particular in which the new brick pavement differs from that laid on King street, in that it has a concrete curb and gutter, in place of a stone curb. The core is mixed in the proportion of one part of cement, one of sand, and two of broken stone, and the one-inch face is mixed in the proportion of one of cement to one of sand. This curb and gutter is costing 85 cents per lineal foot.

Macadam.

The city, in 1898, laid about 700 lineal feet of ordinary macadam. Field stone from the vicinity was broken for the foundation, and this was coated with crushed stone from the Amherstburg quarries. One block of tar macadam was laid in 1898, but this has not been satisfactory, owing, apparently, to the surface of the tar macadam being destroyed by a coating of clay brought by the wheels of vehicles from unimproved streets.

The specifications for the tar macadam required :

- (1) An excavation 12 inches below the finished grade of the pavement.
- (2) An 8-inch layer of broken stone.
- (3) A 4-inch layer of tarred stone.
- (4) A $\frac{3}{4}$ -inch layer of fine tarred surface coating.

The stone to be tarred was spread on an iron floor, under which were flues from a fire, and heated until the moisture was driven off. The stone in its heated state was then mixed thoroughly with tar. The tar was previously boiled in an iron kettle holding 50 imperial gallons, to which was added a bucketfull of pitch. Eight imperial gallons were added to each cubic yard of coarse stone, and from ten to twelve gallons to the fine stone. The cost of the tar macadam was \$1.23 per square yard.

Wooden Block Pavement.

Tenders have been accepted for a chemically-treated wooden block pavement, 1,000 feet in length, for William street, one of the main thoroughfares. Should this material be adopted, the pavement will consist of a four-inch concrete bed, a one-inch sand cushion, and on this the wooden blocks, five

inches deep. The size of these blocks is 5 x 3 x 4 inches, requiring 54 per square yard. The estimated cost of the proposed pavement, exclusive of curb, is \$2.20 per square yard.

Machinery.

The city's steam roller, purchased in 1898, weighs twelve tons, and cost \$3,135. The stone crusher (a jaw crusher) was purchased in 1898 for \$950. The city has also two road graders. A traction engine was used for some time for operating the graders with excellent results, but the steam roller is now frequently used for this work.

Concrete Sidewalks.

About twenty-five miles of concrete walks have been laid in Chatham. The work is nearly all done by contract, the price paid in 1902 being 12 cents a square foot. A five-years' guarantee is required. The first of these walks was laid in 1894, and very few have proven unsatisfactory.

The specifications for concrete walks require :

- (1) An excavation 2½ inches below the grade of the finished walk.
- (2) A foundation of seven inches of Point Edward or other equally clean gravel, or of broken stone.
- (3) A 4-inch layer of concrete, mixed in the proportion of five parts of gravel and one part of Portland cement.
- (4) A 1½ inch wearing surface, composed of one part of Portland cement and two parts of sand.

The city's standard specifications for walks contain much practical detail. The first concrete bed is required to be a depth of four inches, after being reduced 20 per cent. of the original mass, by being tamped to an even surface and a solid and uniform mass. Water is to be added with a water sprinkler or spray. Canadian Portland cement is specified. The surface of the walk must have an upward inclination of one inch to every four feet from the inner to the outer edge of the walk. The city engineer may measure the number of square feet laid by any one batch of mixture, and should it cover a greater superficial area than the established proportions warrant, the relative quantities of cement and gravel are subject to readjustment.

If, in windy weather, any cement is blown away, or if any is lost, or dropped, a proper amount is to be added as nearly as the city's inspector can estimate it.

Assessment.

Pavements and sidewalks are laid under a general local improvement by-law. The city pays for street intersections. A flankage allowance of not more than 50 feet is allowed for corner lots, but this allowance may be reduced at the discretion of the city engineer. Debentures for concrete walks and pavements are extended over 15 years.

CORNWALL.

Street improvement in Cornwall was, for many years, a matter of discouragement to successive councils. The soil of the locality has been described as "a mixture of soapy clay and quicksand," and the broken stone placed upon it year after year, was constantly absorbed. On one street alone more than \$35,000 had been spent, in trying to construct a permanent road. The council of 1896, under the advice of the Commissioner of Highways, laid down a sample block, which,

as distinguished from previous efforts, embodied as its principal features, more perfect drainage, and a more substantial surface of broken stone.

The first thing done was to put down a four-inch tile drain on each side of the proposed roadway, and as the soil was very wet, a number of diagonal drains were laid from the centre of the road to the tile drains at the side. The side drains emptied into a sewer at the end of the street. By this means a dry foundation was ensured. The drainage completed, the roadway was then excavated twenty-four feet wide, to a grade line. The excavated earth was thrown to the side to form the boulevard, and a cedar curbing was put in at each side of the excavation. On the roadbed, as excavated, was placed a layer of stone, broken to cubes of about two inches in size, to a depth of eight inches in the centre of the road, decreasing to six at the sides. After being thoroughly rolled, a second layer of slightly smaller stone was put on this foundation, four inches in the centre and three inches at the sides, this layer being also thoroughly rolled. Over this was spread a thin layer of fine gravel, which was sprinkled and then rolled.

Throughout the whole process, a steam roller rented from Brockville, was used, first on the earth grade, then on each layer of stone, then on the surface coating, the road being as firm and compact as a fifteen-ton roller could make it. The result was a section of roadway that has resisted traffic admirably, and is good at all seasons of the year, in spite of the fact that in the spring it had formerly been one of the worst pieces of street in the town.

The effect of this was to convince the people of Cornwall that a complete change in the methods of roading was necessary, and the system then tested, has, with occasional modifications, been followed in all subsequent work. In 1898 a sixteen ton steam road roller was purchased, the cost being \$3,000.

There are now four miles of permanent macadam roadway in the town, and this is being increased every year. In addition, there has been a general improvement in the manner of grading and draining the streets, which altogether has effected much improvement in the appearance of the town.

A Stone Culvert.

A noticeable detail of road improvement in Cornwall is a handsome, though small, stone culvert of six feet span, on the road leading to the Grand Trunk station, a heavily travelled thoroughfare. This was built in 1899 at an outlay of \$702.23. Although the first cost is somewhat greater than that of timber, it is a permanent work which will, in the end, because of its great durability, prove the cheaper of the two. It is an ornament rather than a disfigurement, and renders better service than wooden structures can possibly give.

Sidewalks.

About five miles of concrete sidewalk have been laid. It is the intention hereafter to lay all new sidewalks of this material, as at the present price of planks walks, about seven cents a square foot, the concrete, owing to its greater durability, will be much cheaper. These walks are laid on the frontage system, the town paying forty per cent of the cost, the remainder being levied against the property.

The greater portion of these walks was laid by contract, at a price usually reaching, sometimes exceeding, twenty-one cents a square foot. In 1901 it was decided to lay the walks by day labor under the town's foreman, with the result that the cost was reduced to twelve and a half cents a square foot.

The composition of these walks is that generally followed: First, a layer of coarse stone, about seven inches in depth; then four inches of gravel concrete; then a one-inch surface layer of sand and cement.

A Gravel Pit.

In 1902, the town purchased a gravel pit about ten miles distant, in order to procure a cheaper material for road and sidewalk construction. This pit was carefully selected, and it is believed that, by screening, it will provide coarse stone, a well proportioned quality of gravel, and a clean sand, in such a way as to greatly facilitate street improvement.

To handle the gravel to greater advantage, the town will purchase two gravel cars. This will overcome the present difficulty of obtaining cars when desired, and keeping them as long as needed. At the present time a car of the railway company, holding fifteen cubic yards, loaded at the pit by the town's employees, is hauled to Cornwall by the railway for \$4; the car is then delivered to any part of the town by the electric street railway for \$2.50 per car.

GALT.

A considerable degree of attention has been paid in Galt to street improvement, it being one of the first towns in Ontario to possess a steam road roller. The first street to be macadamized was the principal business street, Main street, this being done in 1896. Subsequently North and South Main streets, West Main street, Front street, and Ainslie street, have been macadamized in a substantial and modern manner.

Roadmaking Machinery.

The roadmaking machinery owned by the town consists of a steam road roller, costing \$2,700; a rock crusher, costing \$800; a road grader, costing \$225, and minor implements; the estimated value of the outfit being placed at \$4,000. The road roller was purchased in 1896, and weighs fifteen tons. In addition to the ordinary work of macadamizing, a considerable improvement has been made on streets not subjected to severe traffic, by picking up the surface with teeth inserted in the rolls of the roller, adding a quantity of new material, crowning and reshaping, then consolidating again with the roller. In the operation of the roller, it is of note that, in picking up a hard road, the fuel consumed amounts to 1,000 pounds of coal daily, while for ordinary rolling 600 pounds are used.

The grader is found to be of much use in the outlying streets. In winter its chief use is in keeping the gutters clear of snow. Situated as the town is at the confluence of the Grand River and Mill Creek, hills are numerous, and in spring the streets are subjected to severe rushes of water. By keeping the gutters open with the grader after heavy snow falls, the streets are more quickly relieved of water in the spring, difficulty with slush and ice is not so great, and the cost of dealing with these conditions is considerably lessened.

The crusher has been used by the town for six years. The capacity is not so great, and the cost of dealing with these conditions is considerably about ten cords daily, and it is operated by a 7 H.P. engine. Seven or eight men are employed in handling stone and operating the crusher. Stone is broken into two sizes, two inch and one inch for road purposes, the jaws being set to produce the sizes required. In leaving the crusher the stone passes over a perforated iron chute, by means of which the dust is separated from the stone and used for a top dressing.

Street Cleaning.

The main street of Galt is an excellent example of what a macadam pavement can be, if well laid, and given suitable attention. Conditions as to drainage and material are favorable to good construction. Further than this, it is

one man's duty throughout the summer months, to keep this street swept. The cost is only \$6 a week, and the results are highly satisfactory. It affords good evidence that, given the same care that vitrified brick or asphalt receive, the macadam roadway will compare much more favorably with the more expensive pavements. The length of streets cleaned in this way is about half a mile.

Stone.

The local supply of limestone used on the roads is very plentiful, the depth of soil, before bed rock is reached, being very shallow throughout the main part of the town. In excavating for sewers and water mains, a considerable quantity of road material is obtained. Out of each cubic yard of rock excavation, one and three-quarter cubic yards of loose stone is

STREET SCENE IN GALT.

produced, and as only one cubic yard can be returned to the trench, there remains a surplus of three-quarters of a cubic yard to be broken for road purposes. In addition to quarried stone, boulders and large sized stones have been selected from a gravel pit within the town, these boulders being prepared for the road by crushing.

Concrete Sidewalks.

It is estimated that, to the end of 1901, there were twenty-one miles of concrete sidewalk in Galt. The first of these were laid in 1896, and the total amount of debentures issued was \$43,291.30.

The majority of these walks are four feet in width, a few five feet and six feet; and on Main street the concrete walk is twelve feet in width. These walks are laid by day labor, under the supervision of the town foreman. The cost last year was 11½ cents per square foot. This includes the cost of boulevarding, the walks on most residential streets being laid eleven feet from the street line.

The general plan of construction is :

1. An excavation, ten inches below the finished grade of the walk.

2. A gravel foundation, six inches in thickness.

3. A layer of concrete, three inches in thickness; mixed in the proportion of four parts of gravel to one of cement.

4. A wearing surface, one inch in thickness; mixed in the proportion of two parts of sand to one of cement.

Street crossings have four inches of concrete, in place of three, and the wearing surface is one and one-half inches thick, mixed in the proportion of one of cement to one of sand.

A good quality of pit gravel is obtainable for this work. In mixing, the materials are turned over three or four times, dry, and two or three times wet. Sand for the surface layer is screened through a three-quarter inch mesh at the work.

A number of the first walks laid were finished with a trowel, and have a smooth, glassy surface, which becomes very slippery in frosty weather. To remedy this, the present practice in Galt is to finish the walks with a wooden float, producing a slightly gritty surface. This is found to give a more satisfactory surface than the common method of roughening with a toothed roller.

With excavations made, gravel foundation prepared and strips in place, 3,000 square feet of walk have been laid in ten hours by sixteen men. The men usually engaged in the work comprise; two to six men excavating, putting down strips and compacting the gravel foundation; two men on the "facing" board; four men on the concrete board; one man pounding concrete; one man marking joints and levelling the concrete; two men cutting joints and two finishers. The finishers are paid \$2.50 per day, and workmen \$1.50 per day.

Assessment.

The cost of macadam roadways is paid out of the general funds. Concrete walks are paid for by frontage assessment, debentures being extended over twenty years. The town pays for street intersections, and no flankage allowance is made.

GUELPH.

Street improvement in Guelph received an incentive in 1902 by the addition of a steam roller to the city's outfit of roadmaking machinery. Gravel in the vicinity is plentiful, and the city owns two fair pits centrally located. Much gravel has been put on the streets, and the steam roller which was used more in an experimental way during the season of 1902, was employed in picking up and re-surfacing these. The roller weighs fifteen tons and cost \$3,250 f.o.b. Guleph. A scraper has been in use for one year and a grader has been in use since 1898. Some broken stone has been used on the streets, but this has been done largely for the purpose of giving to the poor in winter the work of breaking the stone. The purchase of a stone crusher has been proposed.

Sidewalks.

The city has laid few plank walks for the past eleven years. There are now between twenty-five and twenty-six miles of cement concrete sidewalks, the construction of which was commenced in 1891. Of the total cost of these \$80,000 is assessed against the property fronting on the work, and \$15,000 is charged to the city. The city pays for street intersections only, there being no flankage allowance, nor does the city assume any percentage of the cost of the

work. Payments are extended over twenty years. Concrete walk construction was formerly let by contract, but for the past two years has been done by day labor, under the city engineer.

HAMILTON.

The main streets of Hamilton are paved with Trinidad Asphalt, and the remainder of the improved streets have, as a rule, either tar macadam or ordinary macadam roadways. The asphalt pavements have a total length of a little over two miles, and cost from \$2.10 to \$2.60 per square yard. The most instructive feature of street improvement has been the expenditure in 1899, 1900 and 1901, of a good roads fund of \$150,000 provided for this purpose by a special vote of the ratepayers. Nearly the whole of this amount was devoted to the construction of 8.6 miles of tar macadam pavements, replacing cedar block pavements laid in 1885, which had become, through wear and decay, very unsatisfactory.

Tar Macadam.

Tar macadam roadways have been very generally used in England for a considerable period, but the city of Hamilton has the distinction of being the pioneer in this class of pavement in Canada, and indeed, on the continent. The specification under which these pavements were laid is the following :

TAR MACADAM IN HAMILTON.
Spreading the tarred stone.

(1). "All earth or other material above the sub-grade shall be excavated, so as to conform to the level of the sub-grade, which will be twelve inches below the finished surface of the roadway; and should the sub-grade be above the level of the natural ground, then earth shall be deposited until the level of the sub-grade is reached. The sub-grade shall be shaped to the profile and cross-section which will be furnished by the city engineer

(2). "After the sub-grade has been formed to the proper camber of the road, generally one-half inch per foot, or six inches for a 24-foot roadway, to be thoroughly rolled with the steam roller, and if by this means soft spots are revealed, they shall be filled with good solid material.

(3). "The first six inches shall be made in the ordinary way for a macadam or telford roadway thoroughly rolled. If so required, it may be made of hard broken stone, furnace clinkers, or brick rolled smooth and finished to the required camber of the road. Upon this shall be placed the tarred stone. The first layer,

three inches of hand-broken stone to pass through a 2½-inch ring, then a two-inch layer of machine-broken stone, the whole smoothed off with a hand roller, and after top dressing is applied, thoroughly rolled with a steam roller. On this a layer of fine gravel and quarry chippings, mixed in equal proportions, three-quarters inch thick, shall be placed, and well rolled in so as to fill all interstices. Before finishing, a dressing of stone screenings, for the purpose of coloring, shall be scattered broadcast to be worked in by the traffic. All layers, including the coloring layer, shall be thoroughly compacted by rolling.

(4) "The stone to be tarred shall, if moist, be heated on an iron floor, under which are flues from a fire, until the moisture is driven out. The material in its heated state is then thoroughly mixed with a sufficient quantity of tar. The broken stone in warm weather may be sun-dried, but in all cases the finer course must be artificially dried. At the same time care must be taken not to get this material too hot. The tar should be boiled in iron kettles holding one hundred imperial gallons. Eight imperial gallons should be added to each cubic yard of the coarser material, or more if required to completely cover the stone, and seventeen to eighteen gallons to the finer kind of stone.

(5) "The tar must be pure coal tar free from all foreign substances, and containing not more than 5 per cent. of water, and shall contain upon analysis not less than 56 per cent. pitch.

(6) "The work must be done in the summer months, and all work must be suspended during wet weather."

As the tar macadam was used to replace cedar block pavement, the preliminary work consisted in the removal of the old cedar blocks. As these were ten inches in depth, it was necessary to remove two inches of sand upon which they were placed, in order to make room for the twelve inches of macadam, and bring it to the proper elevation with respect to the curb.

The cedar blocks and surplus sand having been removed, the sub-grade was thoroughly rolled with a 15-ton steam roller.

Care was taken in forming the sub-grade, and in laying each layer of stone upon it, to bring the surface in each case parallel to the finished crown of the roadway. The first six inch foundation course, referred to in section 3 of the specification, was made up of flat stones, from 6 to 12 inches in greatest dimension, laid roughly by hand on their natural beds. On this smaller stones were worked and broken into the interstices, so as to keep the bottom course in place.

The next two courses of tarred stone were then applied. Large kettles were hung close to the work, and in them, the tar was kept at a workable temperature. Convenient to the kettles, the stone to be tarred was placed on mixing boards, similar to those used in concrete work. With a dipper attached to a wooden handle, the tar was then applied to the stone, being scattered over it by a swinging motion of the dipper.

With shovels kept hot to facilitate the work, the stone was turned over twice after the first application of tar. More tar was then scattered over the stone, and the stone again turned over. These operations of tarring and turning the stone were repeated until each stone was seen to have a coating of tar, there being no bare spots on the stone.

As soon as the stone had been tarred, it was shovelled into wheelbarrows, placed on the road to the desired depth, and raked to the required cross-section. It was found of advantage to roll the tarred stone immediately after being placed on the road, since, if left two or three days, it would not consolidate as perfectly.

The top course of fine tarred gravel, was mixed in the proportion of about 20 gallons of tar to one cubic yard of gravel. The gravel, before mixing, was screened through a ¾-inch mesh. This material was prepared in an asphalt

mixer, being brought hot to the road, and carefully raked to the required grade and cross-section. This having been rolled, stone screenings from the crusher were scattered over the surface to harden it, and improve the appearance.

The cost of the various pavements varied considerably. In 1899 the average was about 79 cents a square yard, but labor then cost 15 cents an hour, and coal tar f. o. b., Hamilton \$2.60 per barrel (50 U. S. gallons). The average in 1900 advanced to about 88 cents a square yard; with labor at 17 cents an hour and coal tar at \$3.75 a barrel. With the advancing cost of labor and materials the cost in 1901 averaged nearly \$1.08 per square yard exclusive of curb—about 30 cents per yard more than in 1899. Plain macadam laid in 1901 averaged 53 cents a square yard.

None of the pavements were constructed by contract, all work being done by corporation labor. The stone used was a hard limestone quarried within the city limits, the average haul to the work being $1\frac{1}{2}$ miles. Limestone, which is of a porous nature, is considered better for tar macadam than are close grained varieties of stone, such as granite, as the limestone absorbs a portion of

FINISHING THE SURFACE WITH TARRED GRAVEL.

the tar, and unites firmly in the mass.

The chief advantages claimed for tar macadam are that it is more durable than ordinary macadam, is less muddy and dusty, and less inclined to rut. It is not, in Hamilton, found wholly satisfactory on streets where there are car tracks, and traffic thereby confined to narrow strips on each side of track, instead of the wear being distributed more uniformly over the street.

The main differences between the tar macadam laid in London and that laid in Hamilton, are that in the former case, a tar specially refined for road purposes was used; and different sizes of stone, from the largest to a powder, were mixed in carefully ascertained proportions, in order to reduce to a minimum the voids in the compacted mass.

Sidewalks.

The width of roadway between curbs has varied from 22 to 30 feet. In most cases the sidewalks are now being laid next the curb, while in some instances a space for green turf has been left between the curb and the sidewalk. The city has 131 miles of sidewalks, of which 75.27 are of cement concrete, 52.24 of planks, 2.87 of tar concrete, and .62 of stone.

Cement concrete walks are now being laid to the exclusion of all other materials, the amount laid in 1902 being 34 miles. These walks are all laid by corporation labor, the cost of walks with curb in 1901 being a little less than 12

cents a square foot, and, without curb, about $10\frac{3}{4}$ cents. The standard specification for these walks require :

- (1) An excavation $9\frac{1}{4}$ inches in depth.
- (2) A 5-inch foundation of broken stone.
- (3) A $3\frac{1}{2}$ -inch layer of concrete mixed in the proportion of 6 parts of gravel to 1 of cement.
- (4) A $\frac{3}{4}$ -inch surface finish of $1\frac{1}{2}$ parts of sand to 1 of cement.

INGERSOLL

Street improvement in Ingersoll had its first active commencement in 1896, when it was decided by the town council to construct a model section of road in accordance with plans submitted by the Provincial Highway Commissioner. A horse road roller, plow and stone crusher, were purchased for this purpose. The section of road selected was on the main street, and was one which had given the town a great deal of trouble by its frequently impassable condition in spring and fall. So satisfactory were the results, that a by-law to raise \$10,000 for macadamizing the main street in the business section, was submitted to a vote of the ratepayers and carried.

The principal improvements have been made on Thames street in 1897, and King street in 1898. The town has now a mile and a half of permanent macadam pavement, the greater portion, that on the business streets, being forty feet wide. The old gravel and stone which had for years been accumulating on these main streets was carried to streets of little travel, and about three miles of roadway were surfaced with this material. The work of macadamizing Thames street, about half a mile, was done by contract, the remainder being done by day labor under the town foreman. This street improvement has included the laying of a considerable extent of sewer pipe, and of cobble stone and concrete gutters. The cost of the new macadam roadways has amounted to \$15,000.

Road Machinery

The town has an outfit of road machinery, consisting of a steam road roller, a stone crusher and a grader. The steam roller weighs 12 tons, and was purchased in 1898 for \$2,900, replacing the 5-ton horse roller, purchased in 1896. The crusher was bought in 1896, is of the jaw type, and cost \$900. It is used principally in the town's gravel pit. The gravel is run through the crusher and the rotary screen, the large stones being broken, and the excess of sand and earthy stuff removed.

Gutters.

In macadamizing Thames street, in 1897, cobble-stones were laid next the curb, forming part of the gutter. The design adopted was such as to make the edge of the macadam the bottom of the gutter, and this has been difficult to keep clean and in proper shape. On King street this has been largely overcome, by laying, between the curb and the macadam, a broad bed of concrete. This is ten feet wide, and cost eight cents a square foot. The width is such that horses, tied at the curb, stand wholly on the concrete, and apart from the form, which does not dip quite enough to form a good gutter, it has been found very useful.

Sidewalks.

Very few plank sidewalks remain in Ingersoll, there being now about thirty miles of cement concrete walk. The first of these were laid in 1899,

with a granite finish, and they show very little sign of wear. The cost at that time was 20 cents a square foot. Walks laid in 1902, with a sand finish guaranteed for five years, cost 10 cents a square foot. These walks are usually four feet wide, and consist of :

- (1) A six-inch gravel foundation.
- (2) A three-inch bed of concrete, mixed in the proportion of one part of cement to six parts of gravel.
- (3) A surface coat, mixed in the proportions of one of cement to two of sand.

Payment.

The cost of macadamizing Thames street was met by a special by-law submitted to the people and the issue of debentures. Subsequent improvements have been paid for out of the general funds.

The cost of sidewalks is levied by frontage assessment. The town pays for street intersections, and in the case of corner lots, for half the depth of

KING STREET, INGERSOLL.

the lot, also for extra filling where much is required. In this way, it is estimated that 30 per cent. of the cost of the walks is paid out of the general funds. Debentures are extended over twenty years.

Repairs.

A street overseer is employed for the summer months at \$1.50 per day. Early in the spring, while the soil is wet, it is customary to pass the steam roller over the macadam roads, which has a very beneficial effect. Apart from this the permanent macadam roads have had no repairs since construction. The ordinary yearly appropriations for street improvement, exclusive of sidewalks, is about \$2,000, and it is the present policy to devote as much as possible to permanent work each year. The outlying streets are being rapidly graded and boulevarded, and their appearance is very much improved.

Stone Culverts.

The temporary wooden culverts formerly used are now being replaced, as required, by arch culverts of stone. One culvert has been built each year for the past three years over creeks within the town. The same wooden centre has been used in each case, the culverts being six feet in diameter and forty feet long, with wing walls in addition. Limestone is used, the haul being five miles. The cost of the culverts has been between \$200 and \$225 each.

LINDSAY.

Street improvement in Lindsay had its commencement in 1901, when portions of Lindsay and King streets were curbed and macadamized. The cost of these works is given in detail, as follows :

Lindsay street :

Lumber for curb, \$70 ; posts for curb, \$11 ; building curb, \$65 ; gulleys, \$70 ; raising sidewalk to conform to grade of roadway, \$15 ; excavation, underdraining and macadamizing, \$1,119 ; total, \$1,350. This work was 1,000 feet in length, and the roadway 22 feet wide. With a total area of 2,500 square yards, the cost was 45 cents per square yard.

King street roadway, of which 800 lineal feet was macadamized 30 feet wide, cost 49 1-2 cents per square yard, as follows :

Lumber for curb, \$75 ; building curb, \$55 ; granolithic gutter and curb, \$65 ; four gulleys at \$18 each, \$72 ; laying 6-inch glazed tile sewer, \$40 ; excavation, underdraining and macadamizing, \$1,012 ; total, \$1,319.

The town owns a horse road roller, weighing five tons without a load, or eight tons loaded. This was purchased in 1897, at a cost of \$664. The paving of Kent street, the main business street, is under consideration, and it is also being urged that William street, leading to the railway depot, should be macadamized. Should these improvements be undertaken, it is proposed that a steam roller be purchased, as it is now recognized by those in charge of the work that a heavy roller is indispensable to satisfactory road work.

Road Material.

The County Council of Victoria, in 1897, purchased a stone crusher to provide broken stone for the use of the minor municipalities. The town pays the county \$1.25 per cord for crushing, the county providing the labor, and the town providing the fuel and stone. Field stone is bought from the farmers of the vicinity, who usually deliver it during the winter. Piled in the town where desired, this stone costs, for limestone, \$2.50 a cord, and for harder stone, granite and trap, from \$3 to \$3.50 a cord. The town has to move the crusher from wherever it may have been previously working in the county. This usually makes the total cost of crushing \$1.50 per cord, and the total cost of crushed stone from \$4 to \$5 per cord.

The town owns a gravel pit, but the material is not suitable for street work without treatment. During the summer of 1902 gravel was brought by boat from Sturgeon Lake. This is a clean, hard quality of gravel, and costs 80 cents f.o.b. boat at Lindsay. This makes the cost from \$1.03 to \$1.05 stored in the town, or about \$1.30 delivered on work throughout the town.

Sidewalks.

The first concrete sidewalks were put down in Lindsay in 1899. Some of the first were constructed by day labor, but this year (1902) all have been

put down by contract, for 13 $\frac{1}{4}$ cents a square foot. The specification under which these are laid requires :

- (1) An excavation thirteen inches below the finished grade of the walk.
- (2) A foundation of coarse field or river stone, seven inches in thickness.
- (3) A concrete base, to be four inches in thickness after ramming, and mixed in the proportion of seven parts of lake gravel to one of cement.
- (4) A one-inch surface coat is mixed in the proportion of two parts of sand to one of cement.

The specification requires that the concrete base, after being consolidated, shall be roughened by raking, to secure a firmer bond between the base and surface coat.

The soil in Lindsay is clay and very retentive of moisture. In addition to the drainage secured by the layer of cobble-stone, drains of farm tile are laid across the walk, twenty feet apart, which empty into tile drains beneath the roadbed and parallel with the walk.

The concrete curbs constructed this year have been one foot in depth, and six inches in thickness, the core and surface being mixed in the same proportions as the walk. These curbs have been paid for as a part of the walk at the rate of 13 $\frac{1}{4}$ cents per superficial foot.

In laying crossings of concrete, a sixteen inch excavation is required; a nine inch foundation of field stone; a five inch base of concrete; and the surface, two inches in thickness. The concrete base and surface are mixed in the same proportions as for the ordinary walks.

Walks laid by day labor in 1901 cost 10.8 cents a square foot, the lowest previous contract price having been 14.5 cents. This year the higher price of labor has increased the cost of walks.

The construction of ten miles of concrete walks is contemplated for 1903. No plank walks are being laid as the initial cost is about six cents a square foot, and the life, with extensive repairs, is not more than ten years. The greater permanency of concrete has influenced the council to adopt the policy that no more plank walks will be laid.

Assessment.

The town in 1899 adopted a general frontage by-law covering roadways, sewers, and all local improvements. Under this by-law the municipality is charged for street intersections and property exempted from taxation. The engineer may make such flankage allowance in the case of corner lots as he deems equitable, charging it either to the property on the street, or to the municipality. In the case of granolithic sidewalks the town pays 60 per cent. of the cost on residential streets, and 50 per cent. on the main streets, in addition to the cost of street intersections.

LONDON.

The city of London, with 140 miles of street to maintain, has a greater street mileage in proportion to its population than have most cities. The task of improving them is correspondingly great. The majority are, however, of a good width, and trees are numerous, so that the results are proportionately pleasing. The city has the following extent of improved roadways.

Asphalt, 1 mile; cedar block, 2,400 lineal feet; tar macadam, 1,200 lineal feet; bituminous macadam (Warren's), 4,000 lineal feet; broken stone, 5,000 lineal feet; gravel, 80 miles. The remainder have been graded, ditched and crowned. The asphalt pavement was laid on the main streets in the imme-

diate business section in 1895, but is costing a considerable sum annually for repairs. It is laid on a concrete foundation, the contract price, without curb, being \$2.65 a square yard.

The cedar block, of which a considerable amount remains, has been down for some years, and is being replaced by other materials. The cost of this averaged seventy cents per square yard. It has been found impossible to keep these pavements clean; and the stench arising from them in warm weather, especially after being sprinkled, was found very objectionable, and was regarded by the street commissioner as a menace to health.

The Macadam.

The tar macadam pavement was laid with the ordinary materials for \$1.10 a square yard. A Warren's Bituminous Macadam pavement has just been completed at a cost of \$1.25 per square yard, exclusive of curb. This pavement was laid on Talbot street, which was formerly paved with cedar blocks. The contract required the removal of the old blocks to the city yard, and a six inch excavation. The sub-grade having been rolled, there was laid on it a layer of broken stone, four inches in depth after consolidation. Over this was poured a heavy coating of refined coal tar so as to fill the interstices of the stone. On this was placed a two-inch wearing surface. The material for the latter was prepared at the contractor's yard. The broken stone used varied in size from such as would pass through a two inch ring to a powder. The stone was first heated to 250 degrees F, to drive off all moisture, and was then screened into four grades, and the amount of void in each carefully estimated. The stone thus graded, with a quantity of sand, was then intermixed, but in such proportions as to reduce the void to the least possible amount. Refined tar was then mixed with these materials in a mechanical mixer, at a temperature of from 200 degrees to 250 degrees F. Thus prepared, the two inch coating was spread on the street. After thoroughly rolling this layer, a coat of refined tar was spread over it, and on this was spread fine sand, which in turn was thoroughly rolled. It is claimed for this pavement that the amount of void in the surface is reduced to a minimum, that it is waterproof, and the injurious effect of water therefore largely overcome. It is further claimed that the tar is refined in such a way that it will not become too soft in hot weather nor too brittle in cold weather, and that it is therefore more durable and better suited to this climate, than is ordinary coal tar.

On Talbot street, paved with bituminous macadam, were laid combined concrete curbs and gutters. The core was mixed in the proportion of five parts of gravel to one of Portland cement, the surface coat, one and one-half parts of sand to one of Portland cement, the contract price being 45 cents per lineal foot.

Machinery.

The city in 1895 purchased the fifteen ton steam roller now in use. The cost of this was \$3,200, to which in part payment was applied an old roller valued at \$200. The stone crusher is worn out and may not be replaced. A street grader purchased in 1894 is constantly in use. In the case of contracts, the contractor is charged \$7 a day for the steam roller and a man to operate it, the contractor supplying fuel, oil and waste.

Concrete Walks.

The council of 1898 adopted the plan of laying ten miles of concrete walk annually. At that time there were eight miles in the city, which have, to the end of 1902 been increased to seventy-five miles. This work is done by contract, the price this year being $9\frac{1}{2}$ cents a square foot.

The specifications require a six inch foundation of gravel to be wetted and pounded; a concrete bed mixed in the proportion of seven parts of gravel to one of Portland cement; a surface coat of one and one-half parts of sand to one of cement.

A gravel pit is owned by the city, and the material is of a good quality for street work. Gravel costs \$2.25 per cord, delivered on the streets.

Assessment.

Concrete walks are paid for in part only by frontage assessment, the city paying, out of the general funds, one-half the cost of the walk, the cost of street intersections, and a flanking allowance of one-third the depth of corner lots. Debentures are issued for ten years.

Macadam roadways or pavements of a better class are all paid for by frontage. Some gravel streets have been paid for out of the general funds

PETERBOROUGH.

The improvement of streets in Peterborough is under the management of the town engineer. As is the practice in many municipalities, the Board of Works makes an examination of the streets each spring, and certain are selected for improvement.

Estimates of the cost are then prepared by the engineer; and should the probable cost exceed the appropriation for the year, the work to be undertaken is reduced. All the roadways in Peterborough had been heavily gravelled before the construction of a modern type of street was commenced.

MACADAM STREET, PETERBOROUGH.

The present practice in re-modelling these streets consists of re-surfacing the old roadbed with new material, the work being done with an efficient outfit of road machinery. Mud is first scraped from the surface of the old roadbed, which is then loosened by means of picks inserted in the rolls of a steam roller. The loosened material is plowed up, regraded, from four to eight inches of brokenstone is applied, and the whole is thoroughly consolidated with a steam roller. The cost of this work ranges from one to two

cents a square foot, the variation in cost being very nearly in proportion to the depth of new stone applied.

The total cost of street work is largely augmented by the numerous bridges within the town. Across the Otonabee river are three bridges averaging 350 feet in length. Two, in the maintenance of which the county assists, are steel on stone piers; while the third, maintained by the town alone, is a wooden truss. In addition to these, across a creek flowing through the town, are fifteen road bridges and two foot bridges, each of thirty foot span. Six of these have recently been rebuilt of permanent materials while the others will be similarly constructed as they require renewal. These new bridges have been built with concrete abutments and steel girders, the cost ranging from \$1,800 to \$2,200 each. The variation in cost is occasioned chiefly by the situation, skew bridges being necessary in some cases.

Machinery.

The principal machinery owned by the town comprises a steam roller, weighing fifteen tons, purchased in 1899 at a cost of \$2,800; a jaw crusher; a six and one-half ton horse roller; a grader; and a toothed street cleaner, purchased in 1902 at a cost of \$160.

Field stone is crushed for road purposes. This is hauled in by the farmers of the district during the winter, and last year cost \$2.75 per cord delivered at the crusher in the town yard. The stone is about 50 per cent granite, the remainder of other varieties. The crusher is permanently located in the town yard, and has an ordinary capacity of ten cords in nine hours. The stone crushed in 1901 cost \$2.25 a cord delivered at the crusher and the labor was contracted for at the rate of \$1.50 per cord. The cost amounted to \$4.25 per cord, in detail being as follows :

369.81 cords at \$2.25	\$832.07
Wages of yardsman	62.63
Wages fitting machinery	23.67
Repairs to crusher and engine	59.12
New belt.....	30.25
Supplies	7.80
Contractor for crushing	557.71
Total.....	<u>\$1,573.15</u>

Concrete Walks.

Peterborough, to the end of 1901, had 7.12 miles of granolithic walks, as follows :

Walks 4 feet wide, 8,897 lineal feet ; 5 feet wide, 11,918 lineal feet ; 6 feet wide, 4,182 lineal feet ; 8 feet wide, 2,465 lineal feet ; 10 feet wide, 10,144 lineal feet. Of plank walks there are 35.58 miles.

The standard specifications for concrete sidewalks are very complete, providing very fully for all details of the work, the removal of old sidewalks, the plant and tools to be used, excavation, consolidation of sewer, water pipe or other trenches, the disposal of surplus material, protection of street fixtures, pavements, boulevards, etc. The main requirements are :

- (1) An excavation fifteen inches below the finished grade of the work.
- (2) A nine-inch foundation layer of clean broken stone or boulders, from two to six inches in diameter, to be carefully laid by hand, the larger stones in the bottom and the smaller on top, and on this a layer of clinkers, engine cinders or gravel, the whole being brought to an even surface and pounded.

(3) A four-inch concrete base, composed of one part of Portland cement and six parts of gravel.

(4) A 1 1/2-inch surface mixed in the proportion of nine cubic feet of crushed granite or crushed quartz, nine cubic feet of sand, and 5 1/2 cubic feet, or 5 bags of 87 pounds each, of Portland cement.

The specifications require that the concrete base shall be divided into blocks five feet square by the insertion of bars of iron 5-16 inch thick and four inches deep, the bottom edge resting on the gravel filling and the ends suspended on both curb boards. Along the side of this bar of iron a strip of tarred felt paper is laid in such a manner as to insure entire separation of adjoining blocks, the strips of tar paper to be wide enough to extend from the gravel below the base to the top of it. The iron bars are removed when the concrete has been thoroughly rammed.

The crushed granite for the surface coat was, in 1902, supplied to the contractor at the rate of three dollars a cubic yard at the crusher. As an alternative to the granite finish the specifications provide for a sand or gravel finish mixed in the proportions of one part of Portland cement and two parts of gravel such as will pass through a 5-8-inch mesh.

For the past three years all granolithic walks have been laid by contract, the price in 1902 being 13 cents a square foot.

Assessment.

The cost of macadam roadways is paid by annual appropriation out of the general funds. In the case of granolithic walks 60 per cent. is charged against the property fronting on the work, the town paying 40 per cent. In addition, the town pays the entire cost of street intersections, and a flankage allowance of one-half in the case of corner lots which do not exceed 114 feet in depth. The payments for walks are extended over twenty years.

ST. THOMAS.

St. Thomas was one of the first of the smaller cities in Ontario to undertake street improvement of a modern design, including concrete walks, boulevarding, curbing, and a narrowed macadam or gravel driveway. A summary of street improvement is as follows :

Work.	Length in miles.	Cost.
Brick pavement	1.01	\$49,684 90
Gravel streets, with curb	3.11	25,471 71
Macadam streets, with curb	7.51	71,303 40
Flagstone walks80	15,264 00
Cement concrete walks	15.61	46,056 24
Total		\$207,780 25

The work of paving Talbot street with vitrified brick was done in 1898 and 1899. It included the removal of an old cedar block pavement, the grading and thorough rolling of the sub-grade, lowering and raising of sewer man-holes, trimming the concrete bed of the electric railway and the reconstruction of existing cedar gullies with brick and concrete.

On the sub-grade was first laid a foundation of creek gravel, five inches in thickness, after rolling. On this was placed a layer of broken stone three inches in thickness after consolidation, the voids in the broken stone being filled with coarse sand. On this was spread a layer of clean, screened sand,

one and one-half inches in thickness, gauged with a template to the true crown of the road and thoroughly consolidated.

The roller used in consolidating this foundation was a steam roller, twelve tons in weight, purchased by the contractor especially for this work and subsequently bought by the city.

On the foundation thus prepared the bricks were laid. The pavement was constructed with a single layer of brick on edge, end to end, in right-angle courses across the street. The bricks were set in straight courses with the body of the bricks from one-sixteenth to one-eighth of an inch apart, but touching each other at the ends, and breaking joints at least three inches with the brick in the adjoining course.

After the bricks were laid, the end joints were made close and compact by the use of an iron bar at the ends next the curb. Every fourth course the bricks were straightened up by the use of a sledge hammer, and wooden bar placed against the bricks. Every twenty-five feet apart along the street one row of brick was laid with a quarter-inch strip of wood between the bricks, this strip being removed when the bricks were ready for grouting.

The bricks when thus laid were rammed in courses, three separate times, with a square wooden rammer weighing eighty pounds. In a fourth consolidation the pavement was surfaced up, using a long straight-edge, and by thorough rolling with a five-ton roller.

The bricks having been laid in this manner, the joints and spaces between the brick and the curb, and around all gullies, man-holes, water pipes and on each side of the rails of the electric railway, and spaces between the rows of brick, twenty-five feet apart, were filled with a composition of coal tar and kerosene, which was heated and poured into the joints. The whole of the joints not filled with this composition were filled with Portland cement grout, composed of one part of cement to one of sand.

The brick used in this work was "Massilon block," costing \$21.70 per 1,000, f.o.b. cars St. Thomas. This brick is 9 inches by 3½ inches by 4 inches, and requires 41½ brick for a square yard of pavement. The contract price of the foundation, and for all labor and material, exclusive of the brick, was 57 cents a square yard, the total cost of the pavement, exclusive of curb, being \$1.50 a square yard.

Macadam Roadways.

Macadam roadways are a distinct feature of street improvement in St. Thomas, the use of this material being confined to residential streets.

EXCAVATION.

In general, the work of laying these macadam roadways begins with grading and excavating the roadbed, a large amount of earth usually being removed from the street. This excavation is made the desired width of the roadway, the average width being 24 feet. The depth of the excavation is such as to receive the road metal and leave the crown of the finished roadway at a proper height. For a width of 24 feet, the subgrade is given a crown of about six inches.

CURBS.

This excavation has, in the majority of cases, been curbed with three-inch white cedar plank ten inches in depth, and not less than twelve feet long. Peled cedar posts, three feet long, and not less than six inches in diameter, are set in the earth two and one-half feet below the sub-grade, and six feet

apart, centre to centre. These are bevelled the width of the planks, which are secured to the posts with three seven-inch wire nails at each bearing. At each street, lane or private way the curb is returned to the sidewalk at an angle of thirty degrees with the street line. This curbing is set perfectly straight and level, the top being ten inches above the level given for the sub-grade.

In 1899 concrete curbs were first constructed. In some cases the curbing is combined with the walk, in others it consists of a curb and gutter, and on other streets a concrete curb alone is used, standing any desired distance from the walk, and without a gutter. The composition of the core, and the surface of the curb and gutter are the same as for concrete walks, hereafter described. The curbs, or curbs with gutter, are divided into sections, eight feet in length. The contract price for curb alone in 1902 was 18 cents a lineal foot; for curbing combined with walk, 13 cents a foot, and for combined curb and gutter, 25 cents a foot.

DRAINAGE.

A three-inch tile drain is laid along the inside of the curb line on each side of the street, the trench being six inches wide and eighteen inches below the bottom of the sub-grade, and connected with street gullies or other outlets. After being laid the trench is filled with gravel.

BROKEN STONE

Broken stone, which is procured at the Hagersville quarries, costing 98 cents per ton, f.o.b. St. Thomas, is usually employed for the surface, about ten inches in depth at the centre and seven inches at the curb. To make this depth there would first be placed a four-inch layer of three and one-half-inch stone. On this would be placed a layer of one and one-half-inch stone, to a depth of four inches in the centre and two inches at the side. A final course of one-inch stone would be placed upon this to make the total required depth of ten inches in the centre and seven at the sides.

ROLLING AND CONSOLIDATION.

In all of this work the city's steam road roller is used. It is first used to consolidate the earth sub-grade. Then each layer of stone as laid on the roadway is thoroughly rolled and compacted. To assist consolidation, stone chips and screenings made in crushing are worked into the interstices of the stone, and a sprinkling cart passes immediately in front of the roller to keep the surface well saturated with water. The work is finally completed by levelling and sodding the sides of the street.

Cement Concrete Walks.

All sidewalks in the city are now being renewed with cement concrete, and in some instances concrete curbs and gutters are adopted. The contract price of walks was this year (1902) 10 cents a square foot. The standard specification requires as follows :

(1) A foundation not less than eight inches in depth throughout, of coarse gravel, to be wetted, then rammed or tamped with iron pounders.

(2) A bottom three-inch bed of concrete, composed of five parts of clean gravel and sand, and one part of Portland cement ; the materials to be mixed first in a dry state and again after being wetted.

(3) A one-inch sand finish of two parts of clean, sharp sand and one part of Portland cement.

In place of the sand finish, a one-inch granolithic finish is used for walks subjected to excessive wear, this being composed of one part of fine crushed granite and one part of Portland cement.

Wilson's Bridge.

This bridge crosses a ravine, and connects the city with its main suburb to the south. The electric railway crossing it rendered necessary a structure of considerable strength, and to this end a bridge composed entirely of concrete and steel was erected in 1901, at a cost of \$27,000. This bridge is 415 feet in length, 69 feet above the bottom of the ravine, and is 38 feet in width, the driveway being 28 feet, with a walk on each side five feet wide. The abutments, pedestals and flooring are of concrete, the remainder of the bridge being of steel. It is the best example of modern engineering practice in Canada, as applied to the use of steel and concrete in highway bridge construction.

WINDSOR.

The city of Windsor in 1899 adopted a by-law providing for the expenditure of \$200,000 on street improvement, the work to be extended over ten years. The by-law provided that \$20,000 shall be raised annually for ten years, by the issue of debentures, certain streets being allotted for each year's work. The estimate is based on a plan for paving with macadam the principal thoroughfares and most commonly travelled streets.

The debentures are payable in annual instalments for twenty years from the date of issue. That is, the debentures issued in 1900 were payable up to and including 1920; while the last \$20,000 of debentures, to be issued in 1910, will be payable up to and including 1930. Should the residents on any streets desire and petition for a better pavement than macadam, the difference in cost is levied upon the property on the street according to frontage. The aggregate length of the streets included in the by-law is 15.70 miles. Under this by-law there has been constructed in the three years 1900-1902, inclusive, $2\frac{1}{2}$ miles of macadam pavement and $1\frac{1}{2}$ miles of asphalt block. A special act of the Legislature was obtained at the session of 1900 to validate this by-law, its provisions not being in accordance with the general Municipal Act.

Asphalt Blocks.

Asphalt block has been laid on the main streets, chiefly in the business section, which had previously been paved with cedar block and rubble stone. This paving material is manufactured and used to a considerable extent in the United States, but Windsor is the only city in Ontario where it has been laid.

These blocks are composed of finely crushed granite and asphaltic-cement. In manufacture, the materials are heated, thoroughly combined in mechanical mixers, and then, passing into a machine very similar to that used in pressing bricks, the mixture is moulded into blocks measuring 4x4x12 inches.

The blocks weigh between 17 and 19 pounds each, and require 25 for a square yard of pavement. The price is \$67.20 per 1,000 f. o. b., Windsor, but the city pays for the blocks on the basis of \$1.68 a square yard, measured in the pavement, so that the price includes an allowance for waste.

The cost of this pavement per square yard, as laid in Windsor is estimated as follows :

Removal of cedar blocks, per sq. yd.....	.10
Broken stone foundation.....	.74
Sand cushion.....	.05
Asphalt blocks.....	\$1.68
Laying blocks.....	.10
Hauling asphalt blocks.....	.045
Duty on blocks, 20 per cent.....	.336
Engineering and incidental expenses.....	.05
	\$3.10
Total per square yard.....	\$3.10

The process of laying these blocks is very similar to that of laying vitrified brick. The pavement consists of a substantial foundation of concrete, broken stone or gravel : next a sand cushion, then the surface of asphalt blocks, which is covered with a temporary coating of clean fine sand to fill the joints.

In all, about 20,000 square yards of asphalt block have been laid in Windsor. This has been put on a broken stone foundation ; not on concrete. Petitions have been received and granted for laying this pavement, on about 2 2/5 miles of street. Among the qualities claimed for this pavement are that it does not require skilled labor and an expensive plant to lay and repair, as does sheet asphalt, being on a par with vitrified brick in this respect ; that it is not so noisy as vitrified brick ; that it forms a smooth and practically impervious pavement because, under the action of sun and traffic, the asphalt is compressed and the blocks are cemented together, making a healthy and pleasant pavement.

Macadam.

Broken stone for macadam roadways and for the foundation of the asphalt block pavements is now largely obtained at Hagersville, the cost being \$1.25 a ton delivered on the street.

The general width of roadways on residential streets is being reduced to 24 feet, and on the streets macadamized to the present, there has been laid a depth of twelve inches of stone from curb to curb. All work has been done by day labor under the supervision of the street commissioner.

Curb.

Concrete curbs with gutter have been laid on the streets paved with asphalt block, the cost being 45 cents per lineal foot. The concrete core is composed of five parts of broken stone, two parts of sand, and one part of Portland cement ; and the surface finish, one inch in thickness, one part of Portland cement to two parts of sand.

Concrete Sidewalks.

The city has about eight miles of cement concrete walks, or nearly 200,000 square feet. These are laid by contract, the price this year (1902) being 11 cents a square foot. The nearest gravel obtainable is not of a good quality, and is about five miles distant, so that very little is used for street work. The city sidewalk specifications require :

(1) The excavation to be to a depth of 10 inches below the finished grade of the walk.

(2) A 6-inch foundation of soft coal cinders.

(3) A 3-inch base of concrete, mixed in the proportions of one part of Portland cement, two parts of sand, and five parts of crushed stone.

(4) A 1-inch surface finish, mixed in the proportion of one of cement to two of sand.

The surface of the walk is given a fall towards the street of one quarter of an inch to each foot in width of the walk. The walk is divided into blocks not greater than 4x6 feet and is finished with a fine ribbed roller.

The cost of sidewalks is paid out of the general funds. The contractor receives fortnightly payments to the amount of 80 per cent. of the work finished. On the first of May following completion he is entitled to half the money retained, and on the first of May of the second year following completion, he is paid the remainder, if the walks have been kept in perfect order, and have given satisfactory evidence of proper construction.

Machinery.

The principal machinery owned by the town consists of a steam roller and two graders. The roller is of twelve tons weight, and was purchased in 1898 at a cost of \$2,800 set up in Windsor. One of the graders has been in use since 1885, and is still giving good service, while the other has been in use for thirteen years.

WOODSTOCK.

The indications of a growing feeling in favor of street improvement are shown in many ways. In 1902 a portion of Dundas Street was macadamized in a permanent manner and a street superintendent appointed. Since the purchase of a steam roller in 1897, there has been, each year, a portion of roadway picked up, graded, re-surfaced with a layer of stone, and then rolled to a smooth, compact surface. The roadways treated in this way have been narrowed, and the sides nicely boulevarded. With an abundance of shade trees, this method of improving the streets, extending the work from year to year, produces very much for a minimum outlay, the expenditure in Woodstock being from \$1,200 to \$2,000 annually.

Permanent Macadam.

A STREET IN WOODSTOCK.

Woodstock in 1902 undertook an important work of street improvement, that of macadamizing Dundas Street, west of the business section, in a permanent

manner. This is the leading entrance to the city from the east; and is subject to the traffic of factory drays and heavily loaded farm wagons, as well as a considerable amount of light driving.

The work was done by day labor, under the direction of the street superintendent and the city engineer. The length of street being improved is 2,400 feet, the macadamized portion (exclusive of gutters) being 40 feet wide, broken stone being placed to an average depth of twelve inches. Outside of this are vitrified brick gutters, and concrete curbs and sidewalks.

In the winter of 1901-2, field stone was bought from farmers of the vicinity, who delivered it on a vacant lot adjacent to the work for \$2 50 per cord. This stone was broken by the city's crusher. The total cost of the macadam pavement, exclusive of gutters, curb, etc., was \$7,250.

A feature of this roadway is the vitrified brick gutters. These gutters have a total length of 4,800 feet, are 33 inches wide, and cost 48 cents per lineal foot. The brick used was manufactured in Masselon, Ohio. It costs at the factory \$12.75 per M, and \$25.50 in Woodstock, including freight and duty. These brick are laid on a well-rammed broken stone foundation, and are grouted with thin Portland cement mortar.

In the Business Section.

The re-paving of Dundas Street, the main business thoroughfare of Woodstock, is a matter which, for some time, has received the attention of the city council and citizens interested. The present pavement in the immediate business section is cedar block which was laid in 1887. Its condition is now very unsatisfactory, and asphalt, vitrified brick, and tar macadam have been suggested for its renewal. This is a work which will be undertaken in the near future, and an estimate for a vitrified brick pavement is now under consideration, with every prospect of this material being adopted. The proposed pavement will be 2,100 feet long and about 47 feet wide, and will be laid on a broken stone base. The subsoil being of a gravelly nature, conditions are favorable in so far as the foundation is concerned. The estimated cost is \$21,000, one half to be borne by the general funds of the city, and the remainder levied as a frontage assessment.

Machinery.

The principal road machinery owned by the city consists of a steam road roller, a rock crusher with a 14 h.p. engine to operate it, and a road grader. The roller of ten tons weight was purchased in 1897 for \$3,300, and the crusher in 1899 at a cost of \$1,000.

In 1898, the city purchased a gravel pit, covering about eight acres, which can be excavated to a depth of 20 feet. At this level water prevents further progress. The crusher is ordinarily operated in this pit, all material being prepared for the roads by passing it through the crusher. Out of from 80 to 100 yards of the material as it lies in the pit, fifty yards of good stone is produced. The screenings, a mixture of earthy material, sand and fine gravel, are used in making concrete sidewalk foundations, or for surfacing outlying streets upon which there is very little travel. This pit is located at the north-west angle of the city, so that the haul in most cases is not great.

The principal item of cost in operating the crusher is labor, from ten to twelve men being required. About half a cord of wood per day is used, while water is piped to the pit from the city mains. The renewal of the jaws is said to be the principal item in the matter of repairs.

Sidewalks.

Very little plank walk is now laid in Woodstock, cement concrete having almost entirely taken its place. In 1901 there was laid 1,500 square feet of plank

walk, as opposed to 69,841 square feet of concrete. To the end of 1901 there was an extent of concrete equal to $11\frac{1}{2}$ miles of four-ft. sidewalk, and in 1902 the total extent of concrete walk was increased to 15 miles. In the business section there are about $1\frac{1}{2}$ miles of flag-stone sidewalk, ten and twelve feet wide. The total outlay for concrete walks has been \$35,000, and stone walks, \$20,000. Concrete walks are laid by contract, the cost in 1902 being $9\frac{1}{2}$ cents a square foot. The standard specifications for 1903 require :

- (1.) An excavation 10 inches below grade.
- (2.) A foundation of coarse gravel, broken stone or cinders, 6 inches in thickness.
- (3.) A 3-inch layer of concrete, mixed in the proportion of one part of cement to eight parts of gravel.
- (4.) A wearing surface one inch thick, mixed in the proportion of one of cement to two of sand.

Assessment.

The city has not a general frontage by-law. It was decided by the Council that 80 per cent. of the cost of macadamizing Dundas street would be paid out of the general funds, the remaining 20 per cent. being levied against the property benefited, as a frontage assessment. In laying concrete sidewalks the city pays for street intersections only, the remainder being charged against the property, according to frontage. The debentures for concrete sidewalks are extended over fifteen years.

TESTING PORTLAND CEMENT.

The testing of cement, although a simple process, requires much experience, skilful manipulation, and careful observation to secure sufficiently accurate results to be of service. Numerous tests have been suggested, but many of them are of uncertain value, others are exceedingly difficult of application or require expensive instruments.

The accompanying specification covers the principal points which are necessary to a safe cement, and which can be readily enforced :

Test No. 3 indicates the degree of fineness to which the cement is ground, upon which its strength greatly depends. While fineness is not a certain proof of the value of the cement, yet all cements are improved by fine grinding. If otherwise good, the finer the cement, the greater the amount of sand it will take in making a good mortar.

Test No. 4 shows the time a cement will take to set, and while not an indication of the ultimate strength of the cement, it is a guide as to the work to which the cement is adapted. For submarine work, a quick-setting cement is often a necessity, but for work in the open air, a cement should not require too rapid manipulation in mixing and putting in place before it begins to set, especially for sidewalk, curb and similar construction.

Test No. 5 (a) is most valuable and necessary, as it serves to detect one of the most dangerous of defects, an excess of free lime. Some cements stand well for short periods, but owing to the presence of free lime disintegrate after a few months. If, at the end of three days in water, the thin edges of the pats show no signs of cracking, curling and disintegrating, technically known as "blowing," the cement may be considered safe in this regard. Fine air cracks on the upper surface of the pats, which cross and recross one another, are not due to blowing, but are caused by changes in temperature.

The cracks caused by blowing are usually accompanied by a certain amount of disintegration, are wedge-shaped, running from the centre of the

pat. The boiling test, No. 5 (b) is an accelerated condition to show in a few hours what would otherwise take a much longer period. It is frequently regarded as too severe for all cases, but most sound cements can pass it. Where blowing is developed, it should call for a careful consideration rather than the rejection of the cement.

Test No. 6 is also indicative of the soundness of the cement, and any change in either expansion or contraction should cause the rejection of the cement. The bottle may be watched for signs of blowing, as in No. 5.

In test No. 7, in which pats of neat cement are allowed to set and remain in air, the color should continue uniform throughout, yellow blotches indicating an excess of clay, or that the cement is not sufficiently burned. Under the latter conditions it is probably quick setting and deficient in strength.

A deficiency in tensile strength shown by test No. 9 indicates the presence of too much magnesia, over 3 per cent. making a cement unreliable. This test is important, and is the only one demanding an instrument involving any special expense. Moulds are required in which to form the briquettes with exactness, and a means of applying and indicating a tensile strain is required, various kinds being in use for this purpose. This test requires considerable time to perform it perfectly, more than can be ordinarily taken.

Some cements develop considerable strength during a short interval, but fail to maintain it for a longer period. It is generally conceded, however, that for a brand of good reputation, the one-day test will show whether or not the sample is of its average quality, the seven-day test being, of course, preferable. It is sometimes required that manufacturers shall furnish a sworn statement as to the results of this test with each lot of cement delivered.

SPECIFICATION FOR PORTLAND CEMENT.

- Quality and packing. (1) All cement must be of a well and favorably known brand of Canadian Portland cement, and shall be delivered in barrels or equally weather-proof packages, each labelled with the name of the brand and the manufacturer. Any barrels or packages broken or torn at the time of delivery will be rejected.
- Storage. (2) Immediately upon delivery, it is to be stored in a dry, well-covered, and well-ventilated building, or to be otherwise protected from rain and dampness by a suitable covering. Any cement affected by moisture before or after delivery shall be rejected from any work.
- Fineness. (3) At least 90 per cent. by weight shall pass through a No. 100 sieve, having 10,000 meshes per square inch.
- Rate of setting. (4) A pat of neat cement, made as in section 5 following, must not have its initial set within thirty minutes, nor its final set within one hour after water is first added, the pat being kept in a moist air at a temperature between 65 and 70 degrees Fahr. The "initial set" and "final set" shall mean the time when the pat of cement will sustain a wire one-twelfth of an inch in diameter weighted to one-fourth of a pound, and a wire one-twenty-fourth of an inch in diameter, weighted to one pound, respectively, these to rest upon it without penetration.
- Soundness. (5) (a) Pats of neat cement with thin edges, half an inch thick in the centre, and from two to three inches in diameter, moulded on pieces of glass, and immersed in water after "final set," shall not at any time thereafter show expansion cracks, distortion, curling of the thin edges, nor disintegration.
- (b) Similar pats allowed to set in air, then placed in boiling water 48 hours shall not show any of the foregoing defects.
- Change of volume. (6) A quantity of the cement is to be mixed with a sufficient quantity of water to enable it to be pressed into a glass tube of about one-half inch diameter, or into a narrow-necked glass bottle. Should the cement swell so as to burst the glass, or shrink so as to become loose, either defect will be cause for the rejection of the cement.

(7) Pats moulded in the manner described in section 5 of this specification and kept in air must remain of a uniform bluish or greenish grey color, exhibiting no yellow blotches nor discoloration.

(8) Samples of cement shall be made into the consistency of a stiff mortar, and firmly pressed into moulds to form briquettes one square inch in cross section. These, covered with a damp cloth and allowed to develop "final set" in air, then immersed in water, shall show the following tensile strengths per square inch:—

Age.	Strength. lbs.
24 hours (in water after "final set").....	125
7 days (1 day in air, 6 days in water).....	400
28 days (1 day in air, 27 days in water).....	500
7 days (1 day in air, 6 days in water), 1 part of cement to 3 parts of sand.....	125
28 days (1 day in air, 27 days in water), 1 of cement to 3 of sand..	200

The sand used in the above mortar tests shall be clean and sharp, of the standard size, that passing a No. 20 sieve, but refused by a No. 30 sieve.

SPECIFICATION FOR MACADAM STREET.

(1) The location and approximate extent of macadam or broken stone roadway, to be laid under these specifications, are as follows:—

Location and extent of work.

(2) The space over which the roadway and curb are to be laid shall be excavated to the required depth below the elevation of the finished roadway in accordance with the plans and profiles, and schedule, on file at the office of the clerk of the town of ———, and forming part of these specifications. Perishable or objectionable material shall be removed to a further depth, to secure a firm foundation, if so required by the engineer. Such excess excavation shall be filled with gravel, or other material approved by the engineer, and the bottom of the sub-grade thus obtained shall be then made thoroughly firm and solid by pounding and rolling. For all extra excavation or filling ordered by the engineer, the contractor shall be entitled to the sum of 20 cents per cubic yard.

Excavation and grading of roadway.

(3) The earth taken from the excavation for the roadway and curb is to be used in properly grading up the boulevards and filling in any portion of the roadbed which is beneath the grade line on the proposed improvement; and the surplus earth is to be teamed from one point of the street to another, as may be required in making the said boulevards, where there is not sufficient earth, or in raising the elevation of lots adjacent to the street. All earth in excess of that required on the street, stones, posts, stumps, other obstacles or rubbish shall remain the property of the town, to be removed by the contractor to such point or points as the engineer may direct; if not hauled for a distance exceeding one-half mile from the street, such removal to be without extra charge.

Removal of excavated earth and rubbish.

(4) The curbing, grading, draining, macadamizing and all work connected herewith, shall be completed to the lines and levels given by the engineer. No stakes or bench-marks placed for this purpose by the engineer shall be moved or effaced by the contractor without the permission of the engineer so to do.

Levels, stakes and bench marks.

(5) The contractor is to furnish the tile and construct a four-inch tile drain along the inside, or road side, of the curb line on each side of the street, as shown upon the plan on file at the office of the clerk of the town of The tile are to be placed in an eight-inch trench, the bottom of the trench to be at least eighteen inches below the sub-grade of the roadway; and the tile shall be uniformly and evenly laid, with a fall of not less than three inches in one hundred feet, to a proper outlet. Where it is found necessary by the engineer in reaching a suitable outlet, to carry the line of tile beyond the street allowance, the contractor shall receive the sum of fifty cents for each rod so laid beyond the limits of the street allowance. Tile drains for carrying surface and other water through or under the street or roadway shall be laid as indicated upon the aforesaid plans and profile. All tile used shall be of the best quality of clay, manufactured expressly for drain purposes, in lengths not less than one foot, and of uniform diameter

Tile drainage

throughout. All earth excavated in the laying of these drains shall be returned to the trench, being thoroughly rammed and pounded in layers not exceeding one foot in thickness, and rendered perfectly firm and solid, to the satisfaction of the engineer. When sewer pipe is required in place of common tile, such pipe shall be furnished to the contractor by the engineer; and shall be laid in all respects to the satisfaction of the engineer.

Concrete curbs.

(6) The contractor is to construct upon each side of the roadway throughout the whole length of the street, a concrete curb, as shown upon the plans and profiles hereinbefore mentioned, such curb to be perfectly true to the line and levels given by the engineer. At each street, lane, alley, private way, etc., the curbing shall, unless otherwise directed, be returned to the sidewalk, the returns to be placed at an angle of thirty degrees with the line of the curbing. The earth at the back of the curbing is to be thoroughly rammed so as to ensure stability of the curbing. The material and workmanship used must be in conformity with the specifications and plans for curbing hereto attached, to the satisfaction of the engineer, or other person in charge of the work.

Boulevards to be levelled and trees preserved.

(7) The boulevard between the curb line and the sidewalk is to be regularly levelled off from the grade line at the top of the sidewalk to the top of the curb. The boulevard between the sidewalk and the street limit is to be regularly and evenly graded by cutting down or filling in as may be required, so as to conform to the grade of the sidewalk, except where otherwise directed by the engineer, in order to conform to the elevation of the lawns along the said street. The boulevards are to be left smooth by raking or otherwise levelling, to the satisfaction of the engineer or other person in charge of the work. The contractor, in doing the work, must excavate or fill in around the trees on the said street in a careful manner, so as not to bark or injure the said trees.

Water gullies, manholes, standpipes.

(8) Returns and off-sets, if necessary, must be made in the line of the curb around any of the water gullies on the street. The levelling of the top of the sewer gullies, manholes, etc., and the building up or lowering of all waterworks standpipes in such manner as the engineer may direct, to suit the grade and crown of the roadbed, will be done by the contractor.

Lane and street intersections.

(9) All intersections of private lanes are to be properly made and graded in the boulevard by the contractor at a gradual slope from the line of the street allowance to the bottom of the gutter, and all street intersections are to be graded to conform to the finished grade of the street.

Broken stone surface and quality of stone.

(10) The surface of the roadway over the said roads is to be covered with crushed stone to the depth of inches in the centre, and inches at the curb, to be regularly and perfectly spread over the whole of the roadbed to a depth to conform to the cross-section shown on the drawings, and proportionate to that specified for the centre and curb. The crushed stone is to be furnished by the contractor, and shall be durable limestone, granite or field stone, of such quality and broken to such dimensions as may be approved by the engineer, and authorized by the council of the town of, and shall be equal to the sample to be seen at the office of the clerk of the town of All stone used must be free from clay, loam, or earthy material. Quarry strippings will not be accepted.

Placing stone on the roadway

(11) The broken stone is to be placed on the roadway in the following manner:—

(a) Crushed stone of a size to pass through a three-inch ring is to be placed over the whole of the surface of the sub-grade to a depth, after consolidation, of inches at the centre, and inches at the curb. Upon this shall be spread a one-inch coating of fine screenings, to be worked into the interstices of the stone, and the layer shall then be harrowed, saturated with water and thoroughly rolled.

(b) Upon this shall be spread a layer of crushed stone, such as will pass through an inch and one-half ring, to a depth of inches at the centre, and inches at the curb, after consolidation, this to be coated with a one-inch coating of screenings, harrowed, saturated with water, and thoroughly rolled.

(c) Upon this shall be spread a sufficient quantity of crushed stone, such as will pass through a one-inch ring, to bring the roadway to the line of the finished grade, this to be coated with a one-inch layer of screenings, harrowed, thoroughly saturated and rolled.

(12) Special care must be taken to work each coating of fine screenings down into the interstices or voids in the mass of stone beneath, by thoroughly saturating and flooding with water, by passing a harrow over the surface of the whole mass, and rolling until the engineer is satisfied that the interstices are sufficiently filled. Screenings to fill voids.

(13) Rolling shall be commenced at the edges of curb of the road, working towards the centre, and shall be continued until the earth sub-grade and each layer is firmly set, to the satisfaction of the engineer, and ceases to further consolidate under the weight of the roller. The final rolling must be continued until the roadbed is perfectly consolidated and unyielding, to the satisfaction of the engineer. During the whole of the rolling herein specified, a sprinkling cart is to pass immediately in front of the roller, so that at all times the surface of the road will be saturated with water. The water is to be obtained from the street hydrants, for which a charge of one cent per lineal foot must be paid by the contractor to the water commissioners. Manner of rolling and wetting roadway.

(14) A steam road roller will be provided by the town of, together with a man to operate it, also oil and waste, for which the contractor will pay the said town of the sum of ten dollars for each and every day the roller is in use; the contractor to supply the necessary fuel, oil, waste, water, and other material necessary for its proper operation. Steam roller provided.

SPECIFICATIONS FOR CONCRETE SIDEWALKS.

(1) The location and approximate extent of artificial stone sidewalks to be laid under these specifications are as follows :— Location and extent of walks.

(2) The corporation shall remove the old plank, stone, brick, and other sidewalk from the street before the construction of the new walk shall be commenced by the contractor, all such material being the property of the town, to be disposed of as the engineer may direct. Removal of old sidewalks.

(3) All excavated earth, stones, posts, stumps, other obstacles or rubbish shall remain the property of the town, to be removed by the contractor to such a point or points as the engineer may direct; if not hauled for a distance exceeding one-half mile, such removal to be without extra charge. Removal of excavated earth and rubbish.

(4) The walk shall be laid to the lines and levels given by the engineer. No stakes or bench-marks placed for this purpose by the engineer shall be removed or effaced by the contractor without the permission of the engineer so to do. Levels, stakes and bench-marks.

CONCRETE SIDEWALK WITH CURB.
(Scale, 1 inch=1 foot)

(5) The space over which the walk is to be laid shall be excavated to a depth of twelve inches below the elevation of the finished walk, in accordance with the plans and profiles on file at the office of the engineer. Perishable or objectionable material shall be removed to a further depth, to secure a firm foundation, if so required by the engineer. Such excavation in excess of 10 C.H. Preliminary excavation and earth-work.

of twelve inches shall be filled with gravel, or other material approved by the engineer, and the bottom of the sub-grade thus obtained shall be then made thoroughly firm and solid by pounding or rolling. For all excavation and filling ordered by the engineer in excess of twelve inches below the grade of the finished walk, the contractor shall be entitled to the sum of 25 cents per cubic yard.

Tile drainage. (6) A porous tile drain shall be laid centrally beneath the walk, to the depth, grade, of such diameter, and carried to such outlets as are specified upon the plan and profile on file at the office of the engineer; and tile drains for carrying surface and other water through or under the walk shall be laid as indicated upon the aforesaid plan and profile. All tile used shall be of the best quality of clay, manufactured expressly for drain purposes, in lengths not less than one foot, and of uniform diameter throughout. All earth excavated in the laying of these drains shall be returned to the trench, being thoroughly rammed and pounded in layers not exceeding one foot in thickness, and rendered perfectly firm and solid, to the satisfaction of the engineer. When sewer pipe is required in place of common tile, such pipe shall be furnished to the contractor by the engineer; and shall be laid in all respects to the satisfaction of the engineer.

A layer of gravel or broken stone seven inches in thickness. (7) Upon the sub-grade thus excavated, drained and consolidated, shall be spread a layer of clean gravel or broken stone, to be thoroughly wetted, rolled or pounded, and brought to an even surface. The layer of gravel or stone so placed shall have a thickness of seven inches; and shall be uniformly not less than five inches below the elevation of the surface of the finished walk, having preference thereto.

A layer of concrete, four inches in thickness. (8) Upon the foundation thus prepared, a layer of concrete shall be laid in the following manner:—It shall be composed of one part by measure of cement, of a quality approved by the engineer, and in accordance with the specifications for such elsewhere herein described; two and one-half by measure of clean, sharp sand, and five parts by measure of broken stone, of such a size as will pass through a two-inch ring. (Or where gravel is used the concrete shall be composed of one part of cement and six parts of clean gravel.) The concrete shall be mixed on a water-tight platform placed close to the work, by first spreading evenly a layer of sand; upon this shall be evenly spread the proportionate quantity of cement, and the two thoroughly mixed while dry. To this water shall be added, and the whole thoroughly mixed and brought to the consistency of mortar. The proportionate amount of stone shall then be spread evenly over this mortar and thoroughly intermixed therewith. The concrete when mixed as aforesaid shall be immediately put in place and thoroughly pounded until it has an even surface, is perfectly and uniformly solid, and is four inches in depth over the foundation and within one inch of the finished surface of the walk. Slab or flag divisions, sixteen feet in area, shall be marked off, by such means as will ensure complete separation, the joints to be filled with clean sand or other approved separating material.

A layer of cement-mortar one inch in thickness. (9) Before the aforesaid layer of concrete has set, and while it is still adhesive, there shall be laid upon it a wearing surface one inch in thickness. It shall be composed of one part by measure of Portland cement, and two parts by measure of clean, sharp sand. The cement and sand shall be mixed dry, water then added to moisten sufficiently, the whole again thoroughly manipulated and mixed in a watertight box or floor and immediately put in place. The layer shall then be thoroughly worked to a true and even surface. Over this shall be sifted a layer of Portland cement, the whole to be neatly levelled to a perfectly smooth surface, and rolled with a tooth roller to make a surface that will not be slippery. This surface layer shall be cut into sections, the joints to correspond exactly with those of the first described layer of concrete, the edges of the walk to be rounded, and the whole finished in a neat and workmanlike manner.

Temporary curbs to be supplied by contractor. (10) Before any concrete is placed in the walk, temporary curbs, of 2x6 pine, with edges dressed so as to be perfectly straight, shall be firmly and accurately placed along the outer edges of the walk, to be removed after the walk has hardened; these curbs to be furnished by, and remain the property of the contractor. When the curb is removed, the vacant space must be filled with good soil, and any sodding disturbed in so doing must be carefully restored.

(11) The total thickness of the walk, including foundation layer, concrete layer, and the wearing surface, shall be uniform throughout, and shall have a slope towards the roadway of $\frac{1}{4}$ inch to the foot, unless otherwise required by the engineer. Total thickness and slope of walk.

(12) All Portland cement used in the work must be of some well and favorably known brand, and shall be approved by the engineer. It shall be delivered in barrels or equally tight receptacles, and must be protected from the weather by storing in a tight building or by suitable covering, the packages to be placed on boards or flooring raised above the ground. All cement rejected by the engineer shall be conspicuously marked "Condemned," and shall be immediately removed from the site of the work. Should any cement so rejected be thereafter used in the walk, such sections as may be required by the engineer shall be immediately torn up by the contractor, and replaced with cement of proper quality, without extra compensation. The supply of cement must be so gauged that a sufficient quantity will be kept on hand to allow ample time for testing and examination by the engineer, without delay to the work of construction; the cement to conform to the specifications for cement hereto attached, and to such further tests as the engineer may require. Cement.

(13) The curb, or combined curb and gutter are to be of the form and dimensions shown upon the plan hereto attached, and the construction will, in all respects, be subject to the provisions of this specification applicable thereto. The concrete for the core or backing is to be of the same mixture provided for walks, the following facing to be the same as provided for the finishing coat for walks. The curb or curb and gutter are to be separated into sections eight feet long, are to be faced with a light layer of neat cement, floated, trowelled, and worked to a proper form and uniform color. Curb, and curb with gutter.

(14) The stone and sand shall at all times be subject to the approval of the engineer, the sand to be clean, sharp and silicious. Sand and stone.

(15) At the street crossings, lanes and private driveways, the walk shall be so rounded, placed, and at such an elevation as to give a convenient passage for vehicles, to the satisfaction of the engineer. The surface layer of concrete shall be $1\frac{1}{2}$ inches thick, composed of equal parts by measure of cement and sand, and marked into diamond-shaped blocks by lines crossing the walk diagonally six inches apart. The edges shall be rounded, and faced to the bottom of the concrete with cement mortar used for surfacing the walk. At all street crossings, and elsewhere if so desired by the engineer, the edges of the walk shall be protected by a curbing of 4x6 cedar, placed in a permanent and durable manner, flush with the surface of the walk. Street crossings, lanes and private driveways.

(16) The contractor, in doing the work, shall excavate or fill in around trees in a careful manner, so as not to injure the said trees; and all gratings, areas, tree spaces, or other interruptions to the walk shall be regarded as continuous in the payment of the walk. The repairing or building up of area walls or other supports for gratings, shall be performed and the material supplied by the contractor, as the engineer may direct. Trees, tree-spaces, gratings, areas, etc.

(17) No concrete shall be laid in wet or freezing weather. Laying concrete in wet or freezing weather.

(18) Care must at all times be taken to prevent injury to waterworks stopcock-boxes, down pipes, door sills, steps, areas, gratings, or other appliances which may be under, project into, or pass through the walk, and the pavement shall be carefully and neatly filled around such appliances. When required by the engineer, all gratings or covers furnished the contractor shall be properly fitted into and conform to the surface of the walk. Prevention of injury to waterworks and other appliances.

(19) The contractor shall be bound to maintain the walks and crossings in perfect repair, free from all cracks and defects, for the term of five years from the date of completion thereof, so that at the end of such term, the walks shall have given evidence of their proper construction and durability, and should the contractor fail to repair or reconstruct the walks in accordance with these specifications at any time during the said term, the engineer may cause the necessary repairs to be made, retaining the cost from moneys due, or becoming due to the said contractor on this or any other contract between the town and the contractor, or may recover the same from the contractor, or his sureties in this contract, as money paid at their request. The certificate of the engineer is to be final as to the necessity of repairs and amounts expended upon them. Contractor to maintain walk in perfect repair for five years from date of completion.

SPECIFICATIONS FOR CONCRETE CURB AND GUTTER.

- Plans and dimensions.** (1) The combined curb and gutter shall conform to the dimensions shown upon the drawings hereto attached and forming part of these specifications.
- Lines, curbs and bench-marks.** (2) All work shall be completed to the lines and levels given by the engineer. No stakes or bench-marks placed for this purpose shall be moved or effaced by the contractor without permission so to do.
- Foundation of gravel, six inches deep.** (3) The curbing and gutter shall be laid upon a six-inch bed of gravel, cinders, broken stone or other material approved by the engineer, which shall be thoroughly tamped and consolidated.
- A core or backing, and finishing coat.** (4) The curb and gutter shall consist of a concrete core or backing faced with a one-inch surface coat of mortar, as indicated by the drawings hereto attached.
- Concrete core.** (5) The concrete core shall be composed of one part of the best quality of Portland cement, two and one-half parts of clean, sharp sand, and five parts of approved broken stone; the stone to be broken into cubical fragments not exceeding one and one-half inches, nor less than one-half inch in any direction. The cement and sand shall first be mixed dry, and until the mixture has a uniform color. Sufficient water shall be slowly added and the mixing continued until mortar of a proper consistency is produced. The crushed stone shall then be added and thoroughly intermixed therewith, until each fragment of stone is coated with mortar. The concrete shall then be put in place and thoroughly compacted by ramming.
- Surface coat cement mortar.** (6) The surface of finishing mortar, one inch in thickness, shall consist of two parts by measure of Portland cement and three parts of clean, sharp sand of varying sized grain. These materials shall first be mixed while dry and until the mixture is of a uniform color. Water shall then be slowly added until an evenly tamped and suitable mortar is obtained, when it shall at once be put in place.
- Finishing the surface.** (7) The entire exposed surface shall be neatly faced by floating and troweling with a coat of neat cement, and finished with a dampened bristle brush, so as to give a uniform color throughout.
- Work to be carried on rapidly.** (8) The work shall be carried on as rapidly as the concrete can be thoroughly rammed, and the whole curb and gutter shall be completed while in a soft and plastic state, so that it shall be monolithic when set.
- Division of curb. Street and lane inter sections.** (9) The curb shall be divided into sections eight feet in length, by such means as will insure complete separation. At street and lane intersections the curb shall be made on a curve of such radius as the engineer shall direct, with true and even joints, and shall be set and finished in the same manner as hereinbefore described.
- Temporary forms.** (10) The temporary forms used in shaping the gutter and curb shall be set accurately and firmly in place, these to be provided by and remain the property of the contractor. When the form is removed, the vacant space must be filled with suitable earth and thoroughly tamped to the satisfaction of the engineer.
- Price per lineal foot.** (11) No additional allowance shall be made for round corners, off-sets for catch basins, gullies, or other obstructions, the price paid to be per lineal foot of curbing in place complete. Special construction to protect trees shall be made when deemed necessary by the engineer.

GENERAL CONDITIONS FORMING PART OF ALL SPECIFICATIONS.

- Commencing the work.** (1) The work to be done under these specifications shall be commenced on such day and at such place or places as the engineer may direct. Failure so to commence without good and valid reason therefor will be authority for the engineer to declare the contract forfeited. Nor shall the contractor commence work on any street without the order of the engineer so to do.
- Forfeiture of contract.** (2) The Board of Works reserves the right to declare the contract forfeited at any time it should appear to the engineer that the work or any part thereof, is being unnecessarily delayed by the contractor, or that the contractor is wilfully violating any of the conditions of the contract, or is executing the same in bad faith.

(3) Care should be taken at all times not to interfere with business or **Interference** travel more than is absolutely necessary for the faithful performance of the **with traffic.** work. The contractor shall make suitable and adequate provision for the safe and free passage of persons by or over the works, as may in the opinion of the engineer be necessary.

(4) At all times during the progress of the work, care must be taken **Care of private** not to unnecessarily injure or destroy private lawns, sidewalks, pavements, **lawns, etc.** nor boulevards adjacent to the walk.

(5) On the completion of the work all surplus or **refuse** material must be **Removal of** immediately removed from the street by the contractor. If not removed **surplus** within forty-eight hours after notice in writing so to do from the engineer, **material.** it shall be removed by the engineer at the contractor's expense.

(6) The contractor shall, during the progress of the work, use all proper **Liability in** precautions by good and sufficient barriers, red lights, or watchmen, for the **case of** prevention of accident, and he will indemnify and save the corporation of **accident.** the town of from all suits and actions, and all costs and damages occasioned by the negligence or carelessness of the contractor, or his agents, or employees.

(7) The decision of the engineer shall be final in case of ambiguity of ex- **Interpretation** pression of the specifications, or doubt as to the correct interpretation thereof. **of specifica-**

(8) Any disorderly or incompetent person or persons who may be **Disorderly or** employed on the work shall be removed when required by the engineer, and **incompetent** no person so removed shall thereafter be employed upon any portion of **employees.** the work.

A MACADAM STREET IN BROCKVILLE.

(9) All materials used in the work; or any portion thereof, included under **Material and** this contract, shall be subject to the inspection and approval of the engineer. **work to be** The supply of each and all material or materials must be so gauged that a **approved by** sufficient quantity will be kept on hand to allow ample time for testing and **engineer.** examination by the engineer without delay to the work of construction.

(10) All material rejected by the engineer shall be immediately removed **Removal of** from the site of the work by the contractor. In case the contractor should **condemned** refuse to remove or replace any rejected work or material within forty-eight **work or** hours after written notice, such work or material shall be removed by order **material.** of the engineer at the contractor's expense.

(11) Any defective work or material that may be discovered by the en- **Failure to** gineer before the final acceptance of the work or before the final payment **condemn work** shall be made, shall be removed and replaced by work and material which **or material** shall conform to the spirit of the specification; failure or neglect on the **not to imply** part of the engineer to condemn or reject bad or inferior work or materials **acceptance.** shall not be construed to imply an acceptance of such work or materials.

(12) It shall be understood, and agreed by the parties hereto, that **Engineer's** measurements shall be taken during the progress of the work, and the **estimates final** estimate of the engineer shall be final and conclusive evidence of the amount **and con-** of work performed by the contractor under and by virtue of this agree- **clusive.** ment and shall be taken as the full measure of compensation to be received by the contractor.

Payment to be made fortnightly.

(13) The contractor is entitled to receive 80 per cent. of the value of any portion of the work, completed under these specifications, at the end of each fortnight, such completion being certified by the engineer, and by the chairman of the Board of Works. At the expiration of sixty days after the acceptance of the work, the whole of the moneys accruing to the contractor under these specifications shall be paid, excepting such sum or sums of money as may be retained under any of the provisions herein contained, and such sums as may have been paid in the form of partial payments upon the fortnightly estimates of the engineer.

Notices to parties interested.

(14) All necessary notices to waterworks, gas, electric light, telephone or telegraph officials, owners or occupants of property, or other interested parties shall be given by the contractor.

Payment of workmen.

(15) The contractor shall punctually pay the workmen who shall be employed on the work comprised in these specifications, in cash current, and not what is denominated as "store" pay. And final payment for the work shall not be made until satisfactory vouchers are furnished the engineer by the contractor showing all wages to have been paid.

Unforeseen obstruction, delay or hindrance.

(16) All loss arising from unforeseen obstructions or difficulties encountered in the performance of the work under these specifications, or from delay or hindrance from any cause during the prosecution of the same, shall be sustained by the contractor.

Suitable appliances to be used.

(17) The contractor is to use such methods and appliances for the performance of all the operations connected with the work embraced under this contract, as will secure a satisfactory quality of work and a rate of progress which will secure the completion of the work within the time specified.

Assignment of contract.

(18) The work to be performed under this contract, nor any part thereof, nor any money or orders payable under this contract, shall be assigned or sublet by the contractor, without the previous sanction of the council of the town of No sub-contract shall under any circumstances relieve the contractor of his liabilities and obligations under this contract. Should any sub-contractor fail to perform the work undertaken by him in a satisfactory manner, and should this provision be violated, the council of the town of may, at their option, end and terminate such contract.

Change in plans and specifications.

(19) Should any changes or alterations in these specifications or plans in connection therewith be, at any time, deemed necessary by the engineer, he shall have authority to make such changes or alterations, and, unless otherwise herein provided for, an amount proportionate to the prices contained in the tender upon which the contract was awarded, shall be added to or deducted from the original amount of the contract.

Contractor or his agent to be on work.

(20) The contractor or his duly authorized agent or foreman shall at all times while work is in progress be on the ground, and instruction given by the engineer to such agent or foreman shall be of the same effect as if given to the contractor.

Engineer defined.

(21) The word engineer, where and whenever used herein, refers to the engineer of the town of, or his authorized assistants, or other person appointed by the council of the town of to have charge and oversight of the work.

Contractor defined.

The word contractor, wherever used herein, refers to the party or parties contracting to perform the work to be done under this contract, or the legal representatives, or representative, of such party or parties.

Tender to be accompanied by certified cheque.

(22) Each tender must be accompanied by a certified cheque for the sum of \$100, as a guarantee of good faith on the part of the person tendering, all such cheques to be retained in the possession of the town treasurer until the contract and bond for the performance of the work are signed and filed with the engineer.

Bond for \$1,000.

(23) Before the contract shall be signed, or the work commenced, the contractor shall furnish a bond for the sum of \$1,000 for the satisfactory completion of the work, signed by two responsible sureties, and approved by the chairman of the Board of Works.

Right to reject tenders.

(24) The right to reject any or all tenders is reserved by the town of, and the lowest or other tender is not necessarily accepted.

Form of tender.

(25) Tenders for the work under these specifications must be made on the forms for this purpose, which may be had on application to the engineer.

Receiving tenders.

(26) Sealed tenders, endorsed will be received by the engineer up to noon, the day of next.

AN ACT TO AMEND THE ACT FOR THE IMPROVEMENT OF PUBLIC HIGHWAYS.

The following Act was passed at the Session of 1903, too late to include in connection with the original Act, on page 20 of this report :

HIS MAJESTY, by and with the advice and consent of the Legislative Assembly of the Province of Ontario, enacts as follows :—

1. Sub-section 1 of Section 2 of Chapter 32 of the Acts passed in the first year of His Majesty's reign, intituled *An Act for the Improvement of Public Highways*, as amended by Section 27 of the Act passed in the second year of His Majesty's reign chaptered 12, is amended by striking out the figures "1904" in the second line thereof and inserting the figures "1905" in lieu thereof.

1 Edw. VII.,
c. 32, s. 2,
subs. 1,
amended.

2. Section 4 of the said Act is amended by striking out the figures "1904" in the fifth line thereof and inserting the figures "1906" in lieu thereof.

1 Edw. VII.,
c. 32, s. 4,
amended.

3. Section 7 of the said Act is repealed.

1 Edw. VII.,
c. 32, s. 7,
repealed.

4. No county shall be entitled to receive any portion of the sum set apart by *The Act for the Improvement of Public Highways* passed in the first year of His Majesty's reign as aforesaid unless and until the by-law designating public highways within the county as a county system of highways has been approved of by the Lieutenant-Governor in Council.

By-law for
county road
system to be
approved by
Lieutenant-
Governor in
Council.

5. Where it appears that the highways designated as county roads established under this Act do not pass through one or more of the townships in the county or where it appears that such highways pass through but a small portion of any township, the county council may by by-law make a grant of a specific amount or an annual sum or both for the permanent improvement of highways in such township or townships as an equivalent for the amount which such township or townships may contribute for the establishment of a county system of highways.

Annual
county grant
for roads to
townships not
immediately
interested in
county
system.

6. Where at the time of the passing of the said Act the municipal council of any county had by by-law established a system of county roads equal in every respect to the requirements of the Public Works Department, such system of county roads shall be deemed to be within the meaning and intent of the said Act without any submission thereof to the ratepayers or to the township councils, as provided in sections 3 and 4 of the said Act, but nothing in this section contained shall be deemed as preventing the county council from granting an equivalent to any township not benefitted by the said county road system, as provided by section 5 of this Act.

Aid to county
where road
system estab-
lished prior to
1 Edw. VII
c. 32

County grant
to roads in
villages and
towns.

7. The county council of any county may make a grant by by-law to any incorporated village or town in the county not separated from the county for the purpose of improving certain highways to be designated in such by-law in such village or town, but such highways shall not form a part of the county system of highways.

Intersection
of other high-
ways by
county roads.

8. Wherever a county road intersects a highway which is not a county road the continuation of the county road to its full width across the road so intersected, including the bridges and culverts thereon or touching thereon, shall be a part of the county road system.

County
council not
liable for side-
walks on
county road.

9. A county council shall not be liable for the building, maintenance or repair of sidewalks on any county road or portion thereof.

Counties to
have powers
as to snow
fences.
Rev. Stat.
c. 250.

10. The county council shall in respect to county roads have all the powers given to townships, cities, towns and incorporated villages under *The Act respecting Snow Fences*.

11. This Act shall be read and construed in conjunction with said chapter 32 of the Acts passed in the 1st year of His Majesty's reign.

ANNUAL REPORT

All field crops as above... ..	32
RATIOS OF AREAS UNDER EACH CROP IN 1902 PER 1,000 ACRES OF CLEARED LAND.....	33
PASTURE—ORCHARD—VINEYARD—APPLES	34
STATISTICS OF LIVE STOCK : Showing by counties the number and value of stock on hand July 1, 1902, together with the number and value of those sold or slaughtered during the year ending June 30, 1902 ; also comparative totals for the Province.	
Horses	35
Cattle	36
Sheep	37
Swine.....	38
Poultry	39
WOOL : Showing by counties the clip in 1902	40
BEES : Showing by counties the number of colonies and value (including outfit).....	40
VALUES OF FARM PROPERTY : Showing by counties the value of <i>farm land, farm buildings, imple-</i> <i>ments, and live stock</i>	41
Farm property values per acre occupied	42
Value of buildings, implements, and live stock per acre cleared.....	42
Rental of leased farms	42
MARKET PRICES : Showing for the leading markets of Ontario the average prices of agricultural products for the last six months of 1902, with comparative market prices for the Province for the past ten years, and the averages for the twenty-one years period	43
CHEESE FACTORIES : Showing by counties the number of cheese factories in operation in 1902, the quantity and value of cheese made, the number of patrons and the amount paid to patrons, together with the totals for the Province for the past ten years	44
AGRICULTURAL STATISTICS OF THE UNITED STATES.....	45
CROPS IN MANITOBA AND NORTH WEST TERRITORIES	45
PART II.—CHATTEL MORTGAGES.	
CHATTEL MORTGAGES ON RECORD : Showing by counties the number and amount of chattel mortgages on record and undischarged on December 31, 1902, against (1) all occupations, (2) farmers ; also totals for the Province for ten years.....	47
INDEX.....	48

ONTARIO BUREAU OF INDUSTRIES.

PART I.—AGRICULTURAL STATISTICS.

THE WEATHER.

The study of tables of temperature, rainfall, snowfall, and sunshine is most interesting when taken in connection with the question of crops : for while much of the success in growth of any plant depends upon the nature of the soil, the quality of the seed, and the thoroughness of the tilling, it is also of importance that the particular crop should be suited to the various conditions of heat or cold, humidity or drouth, sunshine or cloudiness, prevailing during the period of its growth.

TEMPERATURE. The following table shows the average temperature of the Province for each of the six months April-September inclusive—practically the growing season—for the past ten years, and also the average for twenty-one years 1882-1902 :

Month.	1902.	1901.	1900.	1899.	1898.	1897.	1896.	1895.	1894.	1893.	1882-1902.
January	18.7	19.0	21.9	18.7	20.2	19.5	18.4	17.3	23.1	10.3	17.7
February	18.1	13.0	17.1	15.2	22.0	21.8	19.2	14.5	16.9	14.7	17.9
March	35.0	26.9	20.5	25.8	35.6	29.0	21.2	21.5	34.9	26.4	25.8
April	43.6	45.0	44.8	44.5	42.1	42.7	46.3	43.3	44.3	38.7	41.8
May	53.2	54.6	51.6	55.7	55.5	52.9	60.1	56.9	53.7	52.2	53.7
June	59.2	65.8	64.1	64.8	65.6	60.9	64.8	68.0	66.1	67.6	64.1
July	68.6	71.9	68.2	67.5	70.2	71.9	68.8	65.5	69.1	68.3	68.0
August	63.5	67.5	70.9	68.5	67.7	64.2	67.2	65.3	64.0	66.1	65.8
September	59.0	60.1	62.3	56.2	61.8	60.8	56.8	60.5	61.1	56.0	58.6
October	46.3	48.5	55.2	50.0	48.7	50.1	43.4	41.4	48.8	48.2	46.6
November	41.0	31.9	35.3	38.0	34.9	34.9	37.8	34.5	31.6	35.1	35.1
December	20.9	22.7	24.7	25.1	22.8	24.6	24.1	25.8	27.7	20.7	24.1
Annual mean	43.9	43.9	45.0	44.2	45.6	44.4	44.0	42.9	45.1	42.0	43.3
Mean for six months, April to September }	57.9	60.8	60.8	59.5	60.5	58.9	60.7	59.9	59.7	58.2	58.7

The mean annual temperature was 43.9°, which is the same as that of last year, although .6° above that of the twenty-one years 1882-1902. The mean for the six months April-September was 57.9°, which is 2.9° lower than that of the two years immediately preceding, and .8° lower than the average for the twenty-one years. March had an uncommonly high temperature, being 9.2° above its average for 1882-1902, while April and November also showed a higher temperature than ordinarily. June and August experienced a much lower temperature than usual, but none of the other growing months had any great degree of

variableness compared with their respective averages. December was 3.2° below its average for the twenty-one years.

PRECIPITATION. The fall of both rain and snow is given in the following table for ten years, together with the average for the twenty-one years 1882-1902. An inch of water is the equivalent of ten inches of snow :

Year.	November.		December.		January.		February.		March.		Total for five months.	
	Rain.	Snow.	Rain.	Snow.	Rain.	Snow.	Rain.	Snow.	Rain.	Snow.	Rain.	Snow.
	in.	in.	in.	in.	in.	in.	in.	in.	in.	in.	in.	in.
1902	1.25	8.0	1.85	14.2	0.10	20.4	0.56	12.1	2.34	2.5	6.10	57.2
1901	2.99	10.4	0.51	8.6	0.58	18.8	R	17.6	1.60	13.1	5.68	68.5
1900	1.13	1.0	2.15	14.5	0.72	15.8	1.68	26.8	0.53	18.8	6.21	76.9
1899	1.67	9.6	0.74	24.6	1.50	13.2	0.76	8.0	1.78	22.1	6.45	77.5
1898	3.40	8.9	1.73	17.5	1.47	18.2	0.60	18.9	2.42	1.0	9.62	64.5
1897	2.51	6.2	0.37	9.6	1.15	17.3	0.89	14.1	1.52	12.7	6.44	59.9
1896	2.47	7.7	2.22	13.2	0.65	17.1	0.46	24.5	0.74	11.4	6.54	73.9
1895	0.78	11.4	1.49	6.6	0.77	31.3	0.08	12.0	0.41	10.8	3.53	72.1
1894	1.97	9.9	1.85	26.2	0.91	14.0	0.59	15.1	1.15	4.8	6.47	70.0
1893	2.09	10.8	0.68	11.6	0.43	25.5	0.73	24.3	1.19	5.4	5.12	77.6
1882-1902.....	2.13	8.5	1.33	14.9	0.98	20.2	0.90	16.6	1.16	11.5	5.50	71.7

The rainfall of the Province for the five winter months comprising the table totalled 6.1 inches, or .6 inch more than the average for 1882-1902, but the snowfall was only 57.2 inches, or 14.5 inches less than that of the twenty-one years. None of the months call for much notice, excepting March, when the rainfall was 2.34 inches, or over double that of its average, while the snowfall of that month was only 2.5 inches, compared with an average of 11.65 inches for the twenty-one years.

The six months, April-September, however, comprise what is regarded as the growing season for most crops, and the following table gives the rainfall of these months for the last ten years, and also the average for the twenty-one years 1882-1902 :

Months.	1902	1901	1900	1899	1898	1897	1896	1895	1894	1893	1882-1902
	in.	in.	in.	in.	in.	in.	in.	in.	in.	in.	in.
April.....	2.12	2.26	1.44	1.10	1.45	2.52	1.26	1.49	0.99	2.61	1.58
May.....	2.44	3.67	2.03	3.43	2.43	3.38	2.10	2.36	5.72	3.35	2.86
June.....	3.92	2.14	2.83	2.46	2.83	2.83	2.39	1.37	2.32	3.15	2.83
July.....	5.49	3.90	3.96	2.78	1.11	5.36	2.79	2.02	1.72	2.44	2.83
August.....	2.02	2.78	2.15	0.81	2.64	2.62	2.86	2.81	0.84	2.67	2.49
September.....	3.53	2.78	2.73	3.72	2.94	0.83	4.47	2.67	3.73	1.94	2.67
Total for six months....	19.52	17.53	15.14	14.30	13.40	17.54	15.87	12.72	15.32	16.16	15.26

The total rainfall for the six months was 19.52 inches, which is 1.99 inches more than that of the preceding year, and 4.26 inches more than the average for 1882-1902. May was the only month of the six to show a less precipitation, while July made a record of 5.49 inches of rain, or 2.66 inches more than the average of that month for the twenty-one years. This will partly explain the delay and difficulty experienced in harvesting the hay and fall wheat crops this year. Contrary to popular belief, April is the month having the least average precipitation in this Province—of rain as compared with the growing months, and of rain and snow as compared with the winter months.

SUNSHINE. In the following table the averages of sunshine are, as usual, derived from the records of the weather stations at Woodstock, Toronto, Barrie, Lindsay, and Kingston :

Months.	Sun above horizon.	1902	1901	1900	1899	1898	1897	1896	1895	1894	1893	1882- 1902
	hrs.	hrs.	hrs.	hrs.	hrs.	hrs.	hrs.	hrs.	hrs.	hrs.	hrs.	hrs.
January.....	285.7	84.1	59.7	77.1	90.8	76.2	70.4	52.3	73.0	74.5	64.0	69.5
February.....	291.4	127.7	115.7	109.8	112.8	69.3	93.7	104.0	110.2	124.2	93.8	96.5
March.....	369.9	138.8	96.9	161.4	133.2	157.5	148.3	188.1	179.6	127.5	150.4	148.0
April.....	406.4	144.1	154.5	214.0	223.2	230.2	174.2	180.3	195.1	212.9	148.5	190.6

August.....	434.5	245.2	208.0	271.4	262.1	225.2	262.4	262.6	228.0	207.3	259.0	241.1
September.....	376.3	149.3	199.7	190.0	164.4	202.4	237.1	168.0	194.2	156.4	175.8	191.2
October.....	340.2	119.1	163.0	164.0	141.7	118.2	161.0	135.5	149.0	129.4	150.0	134.1
November.....	286.9	76.6	80.3	82.4	78.6	89.0	60.8	69.8	79.3	64.7	81.3	68.5
December.....	274.3	71.0	62.9	46.6	60.2	56.6	40.6	80.8	57.1	65.5	55.8	57.5
Total for the year	4463.3	1799.5	1852.7	2136.2	2058.3	1965.8	1923.9	2043.4	2036.3	1864.9	1921.7	1929.3
Total for 6 months April-Sept.....	2614.9	1187.2	1274.2	1494.9	1441.0	1399.0	1349.1	1412.9	1388.1	1279.1	1326.4	1355.2

There was less sunshine registered in 1902 than in any other year comprising the table. For the full year, the figures fall below the average by 129.8 hours, while for the six months they were 168 hours less than in the same period for the twenty-one years 1882-1902. April, June, July, September, and October were the months mainly responsible for the decrease, while January, February, November, and December had considerably more sunshine than ordinarily.

VEGETATION.

Correspondents did not agree regarding the state of vegetation on the first of May, some asserting that the growth in field and forest was then well advanced, and others that it was about normal, while the majority claimed that the season might be described as a rather backward one. In many quarters there was sufficient grass for pasturing sheep, although hardly enough for cattle; but it was considered that only a few warm days were needed to make a luxuriant growth, as the ground contained plenty of moisture, and bud and blade were ready to respond.

SPRING SEEDING. Most of the spring crops were got in somewhat earlier than usual, a number of correspondents reporting seeding as having been practically completed by the 1st of May. In most cases the seed-bed was in excellent condition, and the "catch" was one of the best for years. As correspondents wrote (May 1st), a considerable amount of the spring rain was above ground, and gave promise of a first-class crop should nothing untoward intervene. The sowing of field peas, however, had been delayed in many instances in order to escape the "bug."

THE GRAIN CROPS.

FALL WHEAT. The condition of the crop of fall wheat planted in 1901, was thus described in the bulletin issued in November of that year: "There has been a very considerable and well nigh universal decrease in the acreage devoted to fall wheat, owing to the ravages of the Hessian fly. In order to secure the new crop against the pest, sowing has been deferred by many farmers to a later period than usual. While the bulk of the seeding was done during the first three weeks of September, a large number postponed the work until the following month. The condition of the ground was generally good, although dry in many localities, and where the young plants are visible they present as a rule a healthy appearance. Rain, however, is badly needed in some neighborhoods. In several western counties, more especially in those bordering on Lake Erie, the earlier sown wheat has been attacked by the Hessian fly which occasioned much injury. The principal varieties of fall wheat sown were Dawson's Golden Chaff, Red Clawson, and Genessee Giant."

The returns as to the conditions of fall wheat on May 1st, were thus summarized: "It is satisfactory to note that the injury to the crop by the fly so far has been much less than was feared. While a year ago complaints of losses by Hessian fly were common in nearly all the counties south of a line drawn from Huron to Wentworth—very extensive damage having been done to the growing fall wheat in the counties bordering upon Lake Erie—only a few of the correspondents now reporting speak in a positive manner of actual injury traceable to the fly, and these reports are confined to odd sections of Lambton and the Lake Erie counties. A considerable amount of fall wheat was sown late to avoid the fly, and this has not done as well as that got in earlier. Several correspondents remark that having sown fall wheat on oat stubble it has done poorly. The greatest injury to the crop so far appears to have been sustained from severe frosts and cold winds just after the snow left the ground, the exposed fields suffering considerably in some quarters. Taking the crop as a whole, however, the prospect is better than was hoped for six months ago. The loss from Hessian fly, wire-worm, and other insect pests has so far been comparatively small. There are some patchy places owing to trying spring weather and to local causes, and here and there portions of the crop have been plowed up or re-sown with barley; but, notwithstanding these drawbacks, there are many fields reported in excellent condition, and in a number of sections a large yield per acre is looked for."

August advices were to the following effect: "The yield of fall wheat has been from fair to large, except in Essex and most of the counties of the Lake Erie group. In several instances from 35 to 40 bushels have been reported, and the average yield will be considerably above the average for the last twenty years. The chief damage to the crop everywhere was from rain, which occurred so frequently as to delay the ripening of the grain for about a week later than usual, and which also kept the binder from working in many instances owing to the soft condition of the ground and the tangled state of some of the crop. For these causes a portion of the fall wheat had to be cut with the cradle. Mention was made in various counties of grain sprouting in the shock and in the field. Cutting began in some districts as early as the middle of July, but the bulk of the crop was harvested during the last week of the month, and on the

1st of August there still remained some to be reaped. On the whole the sample may be regarded as of good quality, although, as already stated, there has been some sprouting of grain. Comparatively little injury was done by insect pests, despite the fears entertained of the Hessian fly. Rust and smut were reported here and there throughout the Province, but not to a serious extent, and there will be an abundance of straw."

According to the November bulletin, the wet weather which prevailed during harvesting caused considerable sprouting among the fall wheat, and some of the grain was consequently reported as soft; but the greater part of the crop was described as "good," and even "excellent" in quality, while the average yield was one of the largest on record. The sprouting was confined almost entirely to the white varieties, the red wheats being credited with having more firmness and weight. The injury from the Hessian fly proved to be small after all; in fact, the chief damage to the crop was from rain. As in the case of the other cereals, there was an abundance of good straw.

THE NEW FALL WHEAT. The following references to the newly sown crop of fall wheat appeared in the November bulletin: "Reports vary greatly, even in the same counties, as to the area of wheat sown this fall as compared with last year's acreage. In both the Lake Erie and West Midland districts the increases and decreases will about balance each other; but each of the other groups will probably show a slight decrease in acreage. The counties forming the Niagara peninsula, facing either lake, report a decided increase in area of fall wheat over that of last year. In many sections of the Province the rain delayed harvesting, and this in turn kept back threshing and other operations, which largely accounts for the fact that the putting in of fall wheat this year will be a week or two later on the average than ordinarily. However, many purposely delayed putting in the crop in order to avoid the Hessian fly. This pest appears to have almost entirely disappeared, not one correspondent in fifty reporting it, while last fall its presence was commonly reported. The bulk of the crop was got in about the middle of September, although dates of sowing ranged from the last week in August to the 20th October. Except on clay land, the seed bed was in good condition, and as correspondents wrote the new crop of fall wheat was looking most promising, being healthy in color and vigorous-looking generally, although not having as much top as is usually seen at the same date. Dawson's Golden Chaff is the variety most largely grown, with Clawson a fair second, Genessee Giant, Michigan Amber and Manchester also showing up fairly, with about forty other varieties scattering."

SPRING WHEAT. The August bulletin contained the following regarding spring wheat:—"This crop is expected to be a good one both in point of yield and quality, although a number of poor fields are to be found in various sections. Most of the injury to the crop has been caused by heavy rains, which have caused considerable "lodging," the straw being unusually long. A few complaints of rust have been made, but the general tenor of the reports is of a cheering character. Harvesting will be later than usual, very little of the crop being cut until about the 7th of August."

November returns were to the effect that the yield of spring wheat was considerably above the average, and that the quality of the grain was good. The crop had suffered but little from sprouting, or from any other cause, and was set down as first-class.

BARLEY. This crop was thus dealt with in the August bulletin: "In a few localities the barley harvest began in the third week of July, but most of the crop was yet to be cut on the last of August, the wet, dull weather having delayed operations. There will be a large yield of plump grain, much of which will be discolored, although considerable is reported of good color. As much of the barley raised in the Province is now fed on the farm, the matter of color is not so important as it was a few years ago, and for general purposes the crop may be termed a first-class one. There will be an immense amount of straw, much of which has been

lodged by the rain, and some of it will have to be cut with the mower. A few correspondents mention rust, but no serious injury has been sustained by the crop apart from rain."

The November statements of correspondents were to the following effect: "An immense growth of straw, and a large yield of plump but more or less discolored grain, is a fair summary description of the barley crop. In fact, several correspondents call it the best crop in years. The chief injury sustained was from rain."

OATS. The August bulletin had the following regarding this crop: "This promises to be one of the best years on record for oats, as regards both grain and straw, especially on high lands and on well drained soils. The straw is usually described as tall, straight, and well-headed, but a considerable portion of the crop has been beaten down by the heavy rains prevailing during the latter part of July, and there will be much trouble in some quarters in harvesting the crop with the binder. A few complaints of smut and rust are made, but not sufficient to be regarded as serious. Cutting will not be general until the second week of August, and may run a week or so later, as this crop, like other cereals, has been ripening very slowly this season."

November returns were on the whole favorable. The bulletin issued in that month said: "This crop has given a most generous yield, and although some of the grain is said to be light and chaffy, the greater number of our correspondents describe it as of good quality, and sometimes as "extra good," especially that which was sown early. The growth of straw was something unusual, and much of the crop lodged, and was cut with great difficulty. Some rust was complained of, and cut-worm was reported in a few localities; but apart from the rain the crop suffered very little."

PEAS. More attention has been given to the pea crop this year than for many a season, owing to the havoc wrought by the pea weevil, or "bug" as it is frequently called. The August bulletin had the following concerning this crop:—"Many farmers abstained from sowing the common field pea this year on account of the depredations of the 'bug' during the last two or three seasons, and the grass pea was largely substituted; but the rainy weather caused the crop to run very much to straw, and so lengthened the period of blossoming that in many instances the pods have developed imperfectly, while in Haldimand and Wentworth this variety of pea has been attacked by a green aphid. The yield of the pea crop generally is one of the most irregular on record, some correspondents reporting large returns, while others describe the yield as a very poor one—in some instances not worth cutting. Owing to the frequent rains mildew has set in in various localities. Cutting was not expected to be general until about the 11th of August."

While a few correspondents, writing regarding crop conditions on November 1st, spoke favorably of peas, the greater number regarded the crop as one of the poorest on record. In very many cases the common or round pea was not sown, in order to avoid the weevil, the "Grass" pea, a flat variety, being largely substituted. The crop made a very rank growth, owing to frequent rains, and in many instances podding proved to be a complete failure. Much mildew also resulted from the wet weather. The bug was reported as appearing in nearly every county where the common round pea is grown as a regular field crop.

BEANS. Judging by the remarks of correspondents at the beginning of August, this crop suffered more than any other from the wet weather. In the county of Kent, where the bulk of our beans are raised, it was sometimes necessary to plant a second or third time on account of the earlier plantings having been drowned out.

The November bulletin said of beans: "This crop may be considered as the worst of the season. In many cases it turned black or rotted, and a positively good word as to its condition is not given by anyone. In fact, several correspondents describe it as being fit only for hog-feed. Notwithstanding these unfavorable reports some fairly good beans will likely find the market."

RYE. Only a few correspondents now speak of rye as a regular grain crop, most of it being cut for green feed. Where raised for the grain it turned out very well this season, although growing rather rank like the other cereals, and suffering somewhat from the unusual amount of rain.

BUCKWHEAT. This crop is not largely grown for grain, although it appears to be coming into favor. Correspondents describe it as being a good crop this year; but it was harvested somewhat late, although in time to escape the frost almost entirely.

CORN. The midsummer prospects of corn were thus referred to in the August bulletin: "The indications are that this crop will be considerably below the average, owing to the cold of the earlier part of the season, and the excessive rains of July. The greatest injury from the latter cause was sustained to the crops growing on low-lying lands, or undrained lands. In many cases the failure was so complete that the fields were plowed up. While corn is everywhere backward, reports from numerous localities note that with the setting in of fine warm weather it is making good progress, so that with the continuance of favorable weather a fair yield may be obtained. The damage done by crows appears to have been unusually heavy, more especially in the Lake Huron and Georgian Bay counties."

The bulletin, dealing with conditions existing on November 1st, contained the following regarding corn: "Owing chiefly to the effect of frequent rains, and the comparatively cool weather prevailing during the greater part of the growing period, corn will not be up to the average in either yield or quality, except in a few special cases. From different portions of the Province come statements that a portion of the crop was not fully matured, and, as a consequence, there will be more soft corn than usual, and the quality of much of the ensilage may not be up to the standard. Although the crop was harvested a week or so later than ordinarily, only a little of it was caught by frost, and even then serious injury was not done. In a few localities some of the corn land was plowed up and sown to buckwheat."

HAY AND CLOVER.

Reports on May 1st concerning clover were favorable generally, many of them being enthusiastically so. Here and there accounts came in of "heaving" during the winter or spring, but nothing general was reported in the way of injury to the crop. As correspondents wrote the prospects for hay were never better, both old and new meadows promising well.

The August bulletin had the following regarding the cut of hay and general condition of the crop: "Grasses of all kinds made an immense growth this year, but where grown for hay the wet weather told against the crop in the matter of both cutting and curing. So much was this so, that although in many sections mowers had started in the first week of July, there was still some hay uncut at the end of the month, the frequent heavy showers having delayed operations in the field. Notwithstanding all this a considerable number of farmers were fortunate enough to get their big cut of hay housed in first-class condition; but much of the crop will be of only medium quality, and a portion of it will be unfit to market." Although the first cut has been remarkably heavy, the weather since mowing has been so favorable to vegetation that the second growth of clover is already a large one."

CLOVER SEED. The following was given in the November bulletin: "There has been an immense growth of clover this year, the second cutting in some cases exceeding the generous product of the first; yet, from various causes, the amount of red clover seed threshed will be much smaller than usual. The wet weather is said to have given a rankness to the stalk at the expense of the heads, while from every district comes more or less complaint of the ravages of

the midge. Very little damage was, however, occasioned by frost. One correspondent, speaking of red clover, summed up the situation in the phrase, 'Plenty of feed, but little seed.' Where alsike was grown for seed favorable reports were given."

FIELD ROOTS.

The August bulletin had the following paragraph concerning roots generally: "The rainy weather of the season has been upon the whole favorable to root crops, which as a rule are in excellent condition, and promise to yield heavily. On some of the low lands, however, they have been drowned out, and the continuous rains in many places have greatly interfered with cultivation. There is very little mention of any damage from insect pests or blight. Some injury was inflicted in the eastern counties by spring frosts."

POTATOES. Following is a summary of the reports sent in about the beginning of August: "The prospects are favorable for a large yield of potatoes, the vines, especially on high land, being as a rule in excellent condition and promising well. Owing to the excessive moisture of the season the tops are unusually long and heavy. The rains have caused considerable injury in low-lying and heavy lands where rot is threatened in some localities. Some damage has been caused by the potato bug where the application of Paris green has been neglected, but this pest has not been nearly so destructive as in former years. In some western sections early potatoes are mentioned as presenting a better showing than those planted later. With favorable weather for the remainder of the season, the crop is likely to be an abundant one."

The November bulletin said: "Since the issuing of the August bulletin, when potatoes were booked for a large yield, rot has appeared among the crop in practically every part of the Province, the losses from this source being variously estimated at from 10 to 50 per cent. Some of the correspondents go so far as to state that on certain fields the rot was so bad that the crop will be let go altogether. In several sections there will be only about enough for home use and for seed. In some districts the rot was preceded by a blight, while in other quarters the potatoes appeared to rot as they were dug. But for the rot the crop would have been an immense one. On flat and low-lying lands the crop suffered most severely, while on sandy soils and on high lands injury by rot was much less."

CARROTS. August reports were to the effect that carrots were doing well, reports from the northern districts being noticeably favorable. The November bulletin remarked: "Carrots are reported as an excellent crop where grown, but they are not so generally raised as turnips or mangels. Early sown were particularly good. A few low fields were more or less drowned out."

MANGEL-WURZELS. According to the August bulletin mangels were an exceptionally good crop. November returns were also most favorable, the bulletin then issued containing the following: "Except on low-lying fields mangels were a first-class crop, being frequently reported as extra good. Most of these roots had been secured by the 1st November."

TURNIPS. When reports were sent in early in August turnips were said to be thriving, particularly on high and light land. According to the November bulletin, "the bulk of the turnip crop was reported to be in fine condition, although odd mention was made of rot on low lands owing to the frequent rains. In a few localities the crop was housed by the first November, but in most sections there was still considerable to be harvested at that date."

SUGAR BEETS. Sugar beets have been grown in many sections of the Province for the first time this year, not only for sugar making but also for stock feeding. They have done fairly well, especially where grown for feeding. The great drawback to this crop, and indeed to all the root crops, was the great lack of labor necessary to harvest them in the best manner. Not for many years have our correspondents complained so much regarding the scarcity of suitable help in the fall of the year.

FRUIT AND FRUIT TREES.

The spring opened with favorable prospects for fruit. The May bulletin said: "Reports from the districts where the bulk of our fruit is grown are decidedly optimistic in tone. There have been no ice storms this year to break off limbs and disfigure trees, and the general appearance of orchards is all that could be desired. There is promise of abundant blossom for nearly every variety of fruit, and if frosts and heavy rains keep off during the period of bloom a record year for fruit generally may be looked for. In the counties lying between the St. Lawrence and Ottawa rivers, however, there has been a serious visitation of field mice, which have swarmed over the orchards and wrought much serious injury by girdling young apple and other trees. A correspondent in Fitzroy states that mice ate 44 rods of thorn hedges on his premises. The only complaints of mice in the Lake Ontario district came from the county of York and Ontario, and of the western Ontario counties, Middlesex was the only one to send a report of their presence. Several correspondents in the fruit growing centres express fear that the tent caterpillar may do much injury unless actively checked. A few also complain of the presence of the borer. Warnings are also sent in regarding black-knot in cherries. It seems strange that so few references are made to the San Jose Scale. Small fruits came through the winter in good condition as a rule, although in some quarters berry bushes were considerably broken down by snow. These reports were all made before the cold dip of May 10th, and therefore represent the condition up to that time."

August reports were summarized as follows: "Apples promise to yield very well, though reports differ greatly as to the present condition and prospects of the harvest. The trees seem to have been remarkably free from tent caterpillar, codling moth, and other destructive insects, the fruit presenting good samples with the exception that it is badly spotted in some cases. Owing to wet and cold weather, the yield, which at one time promised to be abundant, will be considerably reduced in volume, as much of the fruit has dropped off the trees. Winter apples in particular are likely to be scarce, the earlier varieties being much more plentiful. Reports as to the yield of plums are generally unfavorable. The crop is a light one in most sections owing to the injury caused by spring frosts and the later rains, while, where spraying has been neglected, the ravages of the curculio have been very destructive. Some of the fruit has been damaged by rot. Peaches have generally done well, and there will be an abundant yield. Pears also promise satisfactory returns in most neighborhoods. The reports as to cherries are not so encouraging. In many cases the crop was a light one, one cause assigned being the prevalence of black-knot, especially in the western counties. Grapes have sustained considerable injury from frost, and the wet weather has in some localities resulted in mildew, but the yield bids fair to be an average one. Berries have been a large crop in nearly all parts of the Province, but rainy weather has considerably interfered with picking and marketing them."

The following reference to fruit appeared in the November bulletin: "Notwithstanding heavy losses from wind and hail storms the yield of apples has been a good one in most parts of the Province. In some of the western counties, and in a portion of the Lake Ontario group, there has been so generous a yield, and the prices offering have been so low, that thousands of bushels of apples were allowed to rot on the ground, or were fed to live stock. Insect pests appear to have wrought less injury this year than commonly, but there has been an unusual amount of scab on the fruit. In fact the prevalence of scab has been one of the reasons for the very cheapness of apples. Pears have given a fair yield, but they also suffered from scab and blight. Peaches yielded well, but some of the late varieties did not fully mature, and lacked perfect flavor. Several correspondents complain of great injury being done to this crop by San Jose scale in neglected orchards. Correspondents have had less than usual to say

about grapes, but there has been a fair yield with no serious drawbacks. Fruit trees generally are reported in good condition, excepting in some of the St. Lawrence and Ottawa counties, where many young apple trees were girdled by mice during the winter."

MISCELLANEOUS.

FLAX. So far the growing of flax has been mainly confined to the western counties. The majority of the reports received in August and November were to the effect that the crop would have been an excellent one but for the way in which it suffered from being beaten down by the heavy rains. Judging by some of the remarks of correspondents, it would seem as though interest in the growing of flax was reviving.

HOPS. The season was a good one for hops. Where grown, the vines were heavily laden and were in good condition generally.

LUCERNE. There is every indication that this crop is about to take its place with others as a staple one for hay and pasture. Most of our correspondents who have tried lucerne (also called alfalfa) are favorably impressed with it.

RAPE. This crop continues to grow in favor as a means of turning off sheep in the fall, as well as for feeding to cattle and swine. It is also used for plowing under in the fall, more especially in orchards and vineyards.

TOBACCO. Reports regarding this crop were not so full as desired, but would indicate that the crop was only middling as to yield, although of fair quality. The frequent rains during July told against its success. November reports stated that it was late in maturing, and that it was somewhat slow in curing. The yield was 3,070,717 pounds, against 3,113,580 in 1901. The acreage was 2,961, as compared with 7,871 in 1898, when the crop was 10,560,590 pounds. Over 90 per cent. of the crop was produced in the counties of Essex and Kent.

THRESHING AND MARKETING. The November bulletin had the following: "There has been more grain to thresh than usual, and on account of the wet weather prevailing at harvesting much of it was cut late. The consequence is that while many correspondents report threshing as practically completed, a large number claim that much still remains to be done in this line, several complaining that it has been impossible to get enough threshing machines to do the work demanded. Marketing has not been so general as at the same period in other years. The lateness of threshing, and the shorter time given for fall plowing, have had something to do with this; but many correspondents lay stress upon the fact that most of the coarse grains, and some of the wheat, will be fed to live stock, more especially as the pea and corn crops have been comparative failures. Oats, being very abundant, have been sold freely, although a large quantity will be kept on hand on account of the low prices now being offered. Wheat has been moving slowly. Comparatively little barley has been disposed of, and unless prices for this grain take a decided rise little is likely to be sold, as correspondents declare that at ruling prices it pays better to feed the barley to cattle and hogs. In fact, barley is now, more than ever, considered a leading feeding crop."

FARM IMPROVEMENTS. The necessity of drainage has been greatly impressed upon agriculturists during the wet season of 1902. The rains prevented much work being done in this line, and labor was scarce and high; nevertheless a considerable number of correspondents reported progress in both underdraining and the making of open drains. An immense amount of wire fencing was put up during the year in every part of the Province. A large number of new farm buildings—houses, barns and stables—have also been erected, and many old barns have been raised and enlarged, and cement or stone walls built beneath them, thus affording better accommodation for all classes of live stock. Cement floors also appear to be coming

more into favor. The scarcity of labor, and the high prices of material, are said to have kept back some intended improvements in the way of better houses and barns.

FALL PLOWING. In the western half of the Province fall plowing was very far behind when correspondents reported on the last of October—scarcely an acre being turned up in some townships of the Lake Erie group. In the more eastern counties work in this line was more advanced, although not up to the average. Several reasons were assigned for the backward condition of plowing, viz., the late harvest, the extra amount of grain threshed, the scarcity of labor, and the wet weather. Hopes were expressed by some correspondents that with open weather until the middle of November a fair amount of fall plowing might yet be done.

LIVE STOCK AND THE DAIRY.

Live stock of all classes came through the winter in good condition. The May bulletin said: "A few comparatively light forms of distemper among horses are reported in several localities, and in the county of Lanark some cases of strangles occurred, but the majority of correspondents speak of horses as being in an unusually good condition for the time of year, and spring work has had only a good effect upon them. Their chief drawback appears to have been a rather lighter ration of oats than ordinarily, owing to a scarcity of that grain. Cattle, as a rule, are also in excellent form. Some report them as being rather thin, but none dispute their general good health. Ringworm appeared among several herds in some of the Parry Sound townships, and odd cases of lumpy jaw occurred elsewhere, but with these exceptions there is a remarkably clean bill of health to be shown for cattle. Sheep have done exceedingly well, a large number of lambs having been dropped, which have turned out healthy and vigorous. The dog is inveighed against by several correspondents as being a nuisance. Swine have also done well as a class. Cases of disease and death among young litters have been reported in several parts of the Province, but these appear to have resulted from purely local conditions, and in no section have losses been general. In fact, references to the steady way in which bacon hogs have been fitted for the market is a feature of the reports. Fodder generally has been sufficient, although straw has been rather scarce, and the high prices prevailing for coarse grains and mill feed tempted many raisers of live stock to feed closer than usual. Several correspondents refer to the silo as having been an excellent aid in carrying cattle and other animals through the winter."

The August returns were to the following effect: "The unusually large amount of rain which has fallen this summer has kept the pastures green and fresh, and promoted a luxuriant growth of grass. Consequently live stock everywhere are in fine and healthy condition. No mention is made by any correspondent of the prevalence of any disorder affecting stock, and the attacks of flies appear to be less troublesome than in other seasons. From almost every neighborhood it is reported that the supplies for the fall and winter keep of live stock are abundant, as the hay and root crops are above the average, and straw is of unusual length. Much of the hay, however, is of inferior quality. The flow of milk is good, and the season's output of cheese and butter will be heavy. Some eastern returns note a considerable increase in the number of cows kept, while in a few western localities a decrease is noted."

The bulletin issued in November contained the following regarding pastures and live stock: "Summer pastures were among the best reported for years, and fall fields are also praised by most of our correspondents, the only adverse statements coming from odd points in some of the counties along the St. Lawrence river. Live stock were much benefited by the unusual freedom from insects during the season, some correspondents ascribing the absence of such pests to the very cool and rainy character of the summer. Young cattle have come through the

season in good flesh and in first-class trim generally, but older animals are hardly as heavy as usual, although considered in tip-top condition for fattening. In several places "Christmas cattle" have been tied up for finishing off, although in most parts of the Province the splendid state of the pastures, and the favorable conditions generally prevailing, warranted farmers in keeping their stock still on the grass. Sheep do not appear to be increasing, although said to be in first-class condition where raised. On the other hand swine raising is still growing in favor, and in most parts of the Province hogs are now being turned off all the year round, as several correspondents put it. Hog cholera was reported in some portions of Kent, and a Wellington correspondent speaks of spring litters as dying off, but with these exceptions all classes of live stock seem to have been remarkably free from disease. The supply of fodder will be fully adequate in most sections of the Province. Not for many years have live stock of all classes gone into their stables in better shape, both as regards condition and the prospects for generous winter feeding. A number of new silos have been erected in every group of counties, chiefly of the barrel or round style. A few new silos have been built of concrete. Fears are entertained that a considerable portion of the corn is not fully matured, and that the ensilage may not have full feeding value."

POULTRY. It is easy to discern in the remarks of correspondents an increasing note in favor of pure-bred poultry on the farm. Several varieties are named as desirable, but the Plymouth Rock appears to be most in favor. Notwithstanding this, considerable difference of opinion is still expressed as to the profits of poultry raising. The wet and cold weather prevailing during the early part of the summer told heavily against the vitality of chicks of all classes, although young turkeys seemed to suffer most severely, and were very much thinned off in numbers. With the exception of a few cases of hen cholera in one or two western localities, very little disease among poultry has been reported. Eggs were not plentiful this year, as a rule, but prices paid were on the whole very satisfactory.

VALUES PER HEAD. The statistics of live stock will be found on pages 35-41. The following table gives the average value per head of stock on hand for the past ten years :

Classes of live stock.	1902	1901	1900	1899	1898	1897	1896	1895	1894	1893
Horses :	\$	\$	\$	\$	\$	\$	\$	\$	\$	\$

BEES AND HONEY. August returns regarding the apiary were to the following effect: "Reports as to the yield of honey vary greatly according to locality, but are on the whole favorable. The average production will be about 45 pounds per hive. The bees have swarmed freely, too much so in the opinion of many correspondents, though in some parts the swarming has been late in the season. They are in a thrifty condition everywhere, and remarkably free from disease. The supply of nectar was abundant in most localities, but the wet weather seriously interfered with honey-making."

The November bulletin said: "Bees swarmed well, but the wet and cold character of the early part of the season delayed honey gathering. Basswood was not plentiful, but there was an abundance of clover in the fall, and some gain was made in stores. The average yield per colony will be about fifty pounds. One experienced beekeeper in the county of Haldimand states that from 200 hives he got six tons of extracted honey, but very little comb. Some reports, however, are to the effect that in various quarters bees may have to be fed back."

THE DAIRY. The following summary of the condition of dairying is taken from the November report: "The splendid condition of pastures during the summer helped to an abundant flow of milk, and both cheese factories and creameries were kept well supplied. A number of correspondents in the eastern portion of the Province describe the cheese industry as "thriving," or "booming," but in the western counties butter making is coming more and more into favor. Mention is frequently made, more especially in western Ontario, of cream separators being purchased by farmers, and several correspondents point out that the use of these separators means the keeping of the skim milk on the farm for the calves and the pigs. The quality of the butter made this season is said to be an improvement over that of last year, and on the whole prices have been satisfactory. Shorthorn grades, Ayrshires, Holsteins, and Jerseys, in the order named, are given as the breeds of cattle most in favor for milking purposes on Ontario farms."

CHEESE FACTORIES. The number of cheese factories operated in 1902 as reported to this Bureau, shows a decrease of forty. The factories closing down were mostly small concerns, the proportionate expenses of which left too small a return to the patrons. Some are accounted for by amalgamation, while a few others gave their entire attention to butter making. However, the season's output of the number of factories reduced to 1,127 was 146,805,776 pounds, or nearly 6,000 tons in excess of 1901. This, combined with better market prices, brought to the patrons \$13,153,255 or \$2,338,717 more than in 1901. This amount includes cost of collection or delivery and is therefore equivalent to prices delivered at the factory.

CREAMERIES. The following comparative table gives the statistics of the creameries operated in Ontario for the ten years 1893-1902, showing the quantity and value of butter made, the average number of patrons, the average price of butter per pound, and the amount paid to patrons for milk or cream supplied:

Year.	No. of creameries in operation.	Butter made.		Average No. of patrons.	Average price of butter per pound.	Amount paid to patrons for milk or cream delivered.
		Quantity.	Value.			
		lb.	\$		cts.	\$
1902	282	11,082,078	2,181,100	21,672	19.68	1,887,026
1901	286	9,047,260	1,798,264	19,896	19.88	1,548,576
1900	308	9,041,168	1,819,290	21,809	20.12	1,589,241
1899	323	9,113,964	1,746,362	22,090	19.16	1,448,411
1898	282	9,008,992	1,632,234	22,741	18.12	1,294,210
1897	214	7,708,265	1,403,609	18,909	18.21	1,139,463
1896	170	6,033,241	1,101,232	12,245	18.25
1895	135	4,553,708	868,382	9,661	19.07
1894	115	3,162,550	662,297	8,298	20.94
1893	74	2,707,570	571,156	7,852	21.21

Although a few new creameries were started in 1902 many of the winter creameries did not operate. The amount paid to patrons for milk or cream in 1900-2, included the cost of collection. The number of creameries includes the skimming stations.

LABOR AND WAGES.

The remarks of correspondents in May were to the effect that farm labor was very scarce, and of rather poor quality as a rule, too many of the better class of farm hands having gone to the Northwest during recent years. The only hope of the future, according to some, lay in the invention of more labor-saving machinery. Domestic servants on the farm were reported to be more difficult than ever to find.

August reports were thus summarized in the bulletin issued in that month: "The scarcity of labor during the haying and harvesting seasons is a chronic complaint in all sections of the Province, and the present season offers no exception in this respect. Extra help appears to have been difficult to obtain almost everywhere, and wages have had decidedly an upward tendency. Many correspondents who state that the supply of labor is adequate, couple this opinion with the statement that but few men are hired, as the farmers are doing their own work with the aid of machinery, or by exchanging services with their neighbors. Where a reason is assigned for the scarcity of help, it is generally attributed to the preference of young men for city life, emigration to the Northwest, and the higher inducements offered by the lumber camps being also referred to as causes for the shortage. There are numerous complaints as to the quality of the labor obtainable."

The following appeared in the November bulletin: "All classes of farm laborers have been difficult to obtain during the season. In a few instances local reasons are given for the scarcity of hands, such as lumbering, handling beets for sugar factories, etc.; but the exodus to New Ontario and the Northwest appears to be the chief cause, and the drift of rural population citywards also continues. It is pointed out many times, both directly and indirectly, that the class of persons leaving Ontario farms for the reasons above assigned is much superior to those who are being brought in to take their places. In this connection a number of correspondents seriously state that even the introduction of Chinese labor would be better than the continuance of the condition of things now prevailing on the farm during the busy season. Notwithstanding the introduction of labor-saving machinery, the supply of good farm hands has been so scarce that more land is being given to pasture. Domestic servants on the farm are still hard to find, town life being so much more attractive. Wages for all classes of farm help are not likely to fall, and several aver that it will be utterly impossible for farmers to stand any increase in rates."

The following table gives the average rate of wages paid farm laborers by the year and by the month, with and without board, for ten years, together with the average for twenty-one years: also the monthly wages paid domestic servants on the farm:

Farm Laborers.	1902.	1901.	1900.	1899.	1898.	1897.	1896.	1895.	1894.	1893.	1882-1901.

CONTENTS.

MUNICIPAL STATISTICS :	PAGE.
Comparative tables as to <i>population, assessed values, taxation and debts</i> of Ontario municipalities	v.
Summary financial statement for all the municipalities of Ontario, being the aggregate of the several items of <i>Receipts, Disbursements, Assets and Liabilities</i> for ten years, 1892-1901	vi.
POPULATION, AREA, ASSESSED VALUES AND TAXATION IN 1902.	
Showing details for municipalities arranged in alphabetical order, together with the average rate of taxes per head of population, and the average rate on the dollar :	
Townships	2
Villages	38
Towns	46
Cities	56
Comparative totals for the Province for seventeen years. 1886-1902	71
Showing total for township, town, village and city municipalities grouped into county limits, and giving comparative totals for "county limits" for five years. 1898-1902	74
RECEIPTS, DISBURSEMENTS, ASSETS AND LIABILITIES FOR 1901 :	
Showing an abstract statement for municipalities arranged in alphabetical order :	
Townships	2
Villages	38
Towns	46
Cities	66
Counties	54
Comparative aggregate for ten years :	
Townships	60
Villages (9 years)	62
Towns (9 years)	64
Cities	66
Counties	54
Showing totals for townships, town, city and county municipalities grouped into county limits, and giving comparative totals for "county limits" for five years. 1897-1901	82

PART III.—MUNICIPAL STATISTICS.

POPULATION, ASSESSMENT AND MUNICIPAL DEBT.

The following statement is compiled from the summarized tables and gives population, total assessment, amount of taxes imposed, the amount of debenture and floating debt, together with the amount paid each year by all municipalities of the Province for interest for the seventeen years, 1886-1902.

Year.	Popu- tion.	Total assessment.	Taxes imposed for all purposes.			Debenture debt.		Floating debt.	Interest paid on loans and deben- tures.
			Total.	Rate per head.	Mills on the dollar	Total.	Rate per head.

* Statistics of debts for 1902 are not yet complete.

In 1902 there were 597 township municipalities, 105 towns, 135 villages, 14 cities and 28 counties.

The changes in population, assessment and taxation for townships, villages, towns and cities for the seventeen years are shown in table on page 71, while a comparison of the aggregate financial transactions of townships for ten years will be found on page 60, of villages on page 62, of towns on page 64, of cities on page 66, and of counties on page 54. The combined transactions of all Ontario municipalities for ten years are given herewith.

FINANCIAL STATEMENT—ONTARIO MUNICIPALITIES.

Summary statement showing for all Municipalities in Ontario (including counties, townships, cities, towns and villages), the total of the several items of receipts, disbursements, assets and liabilities for the ten years ending December 31st, 1892-1901.

* Including \$35,531 erroneously tabulated as a Sinking Fund in the County of Grey; also \$271,823, being Clergy Reserve Funds. † Exclusive of school property. (a) All municipalities; (b) townships, cities, towns, and villages; (c) cities, towns and villages; (d) townships; (e) counties; (f) counties, cities, towns and villages; (g) townships, towns and villages.

NOTES.

Although the "disbursements" of all Municipalities amount to \$31,745,746 in 1901, there are some items of a duplicate nature and others which are not strictly "expenditures" of the year.

Of the former we have county road grants of \$19,873 and non-resident taxes \$40,847 paid to the minor municipalities and expended by the latter; also \$1,073,442 paid to county treasurers for levies and expended by the counties.

Of the other class we find \$2,720,587 in sinking funds and other investments and deposits, principal of debentures redeemed amounting to \$2,290,805 and refund of moneys borrowed amounting to \$6,660,448; all of which were *expended* in some previous year. The item of administration of justice should be diminished by \$122,330, and schools and education by \$144,370, both of which amounts were received from the Legislature.

By deducting the above disbursements we get a net "expenditure" in the year 1901 of \$18,673,044, or \$9.20 per head of population for municipal and school purposes, as compared with \$7.83 in 1896, a year in which the item entitled "construction works" was comparatively low and was \$1,619,585 less than in 1901.

The payments on account of schools and education include only the aforesaid \$144,370, the proceeds of debentures, \$173,272, and school taxes collected through the municipal corporations. The expenditures from fees and other sources of school revenue are not, therefore, included. The \$144,370 is the Legislative grant to counties only, and does not include any Legislative moneys paid direct to schools.

The "cash in treasury" does not include sinking funds, but several municipalities borrowed from these funds amounts aggregating \$181,213 in 1901 to balance their general accounts.

The ratio of debenture debt to total assessed value increased from 4.3 per cent. in 1886 to 7.12 in 1901.

An apparent discrepancy exists between the 'county rates' as received by county treasurers and the aggregate paid by local municipalities. In many of the original returns we found the payment by the local municipalities was merely the balance on this account by deducting the non-resident taxes collected. These were corrected, but a few may have passed undetected owing to the absence of details. The main difference, however, is due to moneys *in transit* at the end of the year, this being a popular time for settlement. Money paid by a local municipality on December 31, would not be received from the bank until January 1, that is, the next year.

The population as shown by the assessors' returns is the aggregate "number of persons in the family of each person rated as resident." Although it differs from the true population the figures as a comparative issue are valuable, and especially so, as they are procurable annually. Like other figures of the assessor, these are confined to such territory under organized municipal government. The Dominion census, on the other hand, which is taken but once in ten years, takes in all the territory in each Province. It includes population in unorganized territory and the Indian Reserves.

STATISTICS OF
ONTARIO MUNICIPALITIES.

*This large decrease in personal property was due to a change in the Assessment Act, which exempted farm live stock, etc.

COMPARATIVE TABLES

SHOWING FOR FIVE YEARS, STATISTICS FOR MUNICIPALITIES GROUPED
INTO COUNTY LIMITS.

POPULATION, ASSESSMENT AND TAXATION.

Statement of municipalities of Ontario (townships, towns, villages and cities) grouped into County limits, showing for 1902 the population, the area, the assessed values and amount of taxes imposed for all purposes, inclusive of schools, as shown by the assessment and collection rolls, together with the average rate per head of the resident population, and mills on the dollar; also comparative totals by Counties for five years, 1898—1902.

THIRD REPORT
OF
THE BUREAU OF LABOR
1902.

TO THE HONORABLE F. R. LATCHFORD,
Commissioner of Public Works, Ontario.

Sir,—I have the honor to submit herewith the third Report of the Bureau of Labor.

I have the honor to be, sir,

Your obedient servant,

R. GLOCKLING,
Secretary.

INTRODUCTION.

The work of the Bureau for the past year, the third of its existence, has been similar in character to the two preceding years, that is, the scope of its operation being measured by the means and facilities at its disposal. The duties laid down for the Bureau under the Statute affords many lines of investigation. The future facilities placed at the command of the Bureau will doubtless afford opportunities which will permit of greater usefulness.

The experience of the past year is similar to that of the first two, in the unsatisfactory results of gathering data through the mail, and which, as has been pointed out in previous Reports, has been the common experience of other Bureaus who have employed this method at their inception, all of whom subsequently adopted the special agent system for collection of statistical matter in their various investigations.

During the past year the Secretary has visited as many industrial centres in the Province as time would permit. To the extent of his visits has the work of the Bureau been enhanced.

The Secretary, in his personal contact with labor organizations throughout the Province, has, beyond questions, removed much misapprehension existing in regard to the Bureau of Labor, its object and general purpose.

The apathy in making returns to the Bureau is due largely to the neglect of those deputed by the organization, rather than to the body itself. The effort to collect industrial statistics through the manufacturers has been, as last year, exceedingly unsatisfactory. We again venture the hope, expressed in last year's Report, that with time, full confidence will be established in the impartiality of the Labor Bureau, and that its value, as an adjunct of government, will be fully realized and measured at its true value, not only by wage-earners, but by employers of labor—and that all will recognize that "statistics" are the basis of the science of government, and legislation can never be anything but a bungling succession of experiments until legislators are regularly furnished with the data on which to establish remedies, revenues, and expenditure." The result of a single census is almost worthless for such a purpose, and it is only after the statistics have been collected for a considerable term of years that their scientific value becomes obvious.

During the past year I have had many enquiries for data on various subjects and their relation to the Province, notably that of the cost of living. I confidently hope that ere long sufficient interest will be manifested in the Bureau as to warrant the necessary facilities being placed at its disposal, which will permit of this and kindred investigations that will make history which will be invaluable to the future.

THE VALUE AND INFLUENCE OF LABOR STATISTICS.

By Carroll D. Wright.

There are now in the United States, besides the Federal Department of Labor, thirty-one State bureaus or departments devoted to the collection of statistics of labor by means of original investigations. Besides these the Federal Census Office, the Bureaus of Statistics of the Federal Treasury and Agricultural Departments, the Bureau of Foreign Commerce of the Department of State, the departments and boards of agriculture of the various States, and various other offices may be considered as publishing labor statistics in some degree. But I speak here of the value and influence of those offices first mentioned—those devoted specifically and technically to the investigations of social and industrial conditions and to the publication of distinctive labor statistics. These offices had their foundation in the establishment of the Massachusetts Bureau in 1869. Gradually other States created Bureaus of Statistics of Labor, and in 1884 the United States Government added its own office to those already in existence. All the offices, together, have published over 400 octavo volumes, covering a great variety of topics and the results of investigations relative to almost every condition and environment of the workingman.

The character and quality of the work of the different offices varies in some degree, due to a considerable extent to the short tenure of the heads of the different bureaus. Where the Governor of a State has allowed himself to ignore politics and insist upon scientific work, the bureaus have achieved the greatest success: but as a rule a Governor feels that the office of the chief of the Bureau of Statistics of Labor of his State, must be filled by somebody from his party, without reference to the skill, the experience, or the integrity of the incumbent under the previous administration. Yet I am glad to say, as the result of pretty careful study of the reports of all the officials who have done duty in this country during the past thirty-two years, that no matter for what reason they were appointed, no matter how inexperienced in the work of investigation and of compilation and presentation of statistical matter, no matter from what party they came, and whether in sympathy with capital or with labor, and even if holding fairly radical socialistic views—the men have, almost without exception, at once comprehended the sacredness of the duty assigned them, and have served the public faithfully and honestly, being content to collect and publish facts without regard to their individual bias or their individual political sentiments. As soon as a man realizes that he is giving to the world a fact, he feels the necessity of accuracy, and that to distort the information collected would be to commit a crime worse than any ordinary lying, because it would mislead legislators and others and fix a falsehood in the history of the State. Many men, too, have come into the work of the statistical bureaus feeling that they could use them as the means of propagandism in some way, and in a few cases this has been attempted, but almost always with failure, because bureaus are looked to to furnish information relative to actual conditions surrounding industry.

That what I have said is true is illustrated by other countries following the example of the American States. Great Britain, France, Belgium, Austria, New Zealand, New South Wales, Canada, and the Province of Ontario, Canada, have established bureaus following in their duties very closely those assigned by law to the American bureaus and departments. In Germany, Italy, and Sweden labor statistics of the same character are

published by general statistical bureaus. A distinguished member of the House of Commons of England told me a few years ago that, whenever he wished to lay any facts relative to workingmen before his colleagues, he carried into the House some American report on the statistics of labor. In the Chamber of Deputies of France, in the German Reichstag, and in the legislative bodies of other countries the American labor reports have been freely used in economic discussions. Had not the work of the American offices been highly regarded, these things would not have occurred. It is true, of course, that the sentiment of the times is largely conducive to the successful operation of bureaus of statistics of labor. The general attention paid to social and industrial conditions and all conditions affecting the environment of men has fitted the soil for statistical seed. The altruistic spirit of this age calls for accurate information, that it may know how best to expend its efforts and not dissipate its energy. The question is constantly being asked: "What do social classes owe to each other?" and that any one class may not be deceived in the nature or magnitude of its debt, it must turn to statistics to ascertain the true situation.

The question is often asked, and by very intelligent people. Of what good is a bureau of statistics of labor? Does the workingman secure any direct benefits from its existence? This question cannot be answered very specifically, any more than could one asking for the direct benefits of the Public School. It would be a difficult process to show how a dollar more is made to enter the pockets of the working people through the existence of the Public Schools, or any other educational institution, and yet all men will admit that the sum of benefits is largely increased by the existence of schools. Personally, I have always contended that the Bureau of Statistics of Labor, wherever it exists, is simply a part of the educational machinery established by the community, through which it is enabled to know more of itself. "Know thyself" is an injunction which should be applied to communities as well as to individuals, and it is only through rigid, impartial, and fearless investigations that any community can know itself in many directions. Notwithstanding this general view of the educational influence of the offices I am considering, very many instances of their specific influence can be cited. These instances, I must, for purposes of convenience, draw largely from those which have come under my own observation or within my knowledge, for to enter upon a research of all the influences which have come in direct ways from the services of all the offices in existence in this country would take me too far afield.

One of the first results that I remember, as being traceable to a published report, related to the tenement-house system of the city of Boston. In the second, third, and fourth reports of the Massachusetts Bureau of Statistics of Labor there were many facts showing the condition of the tenement-houses in the city named. The public was fully apprised of the misery that existed in them, resulting from bad conditions, ill-construction, and all that tended to make tenement-house life an evil. Public attention was aroused through these publications, better laws were framed and passed, and a public sentiment created which crystallized in a reform movement, having for its purpose the improvement of the tenement-houses in Boston. Some of the worst places were improved, and the impetus then given is still active, as is shown by the existence of societies in that city and their influence in securing from the Legislature an appropriation to enable the bureau in that State to make a very exhaustive investigation covering every tenement of whatever grade in the city of Boston.

The bureaus everywhere, whenever conditions warranted it, have inves-

tigated the subject of child labor and shown to the public all the facts connected with such employment, the evils it entailed upon the community, and the methods which could be resorted to for its reduction, and everywhere, too, the results have been beneficial. If the bureaus had never accomplished anything else than the marked reductions in the number of young children—those under ten years of age—who are employed in factories and workshops, they would have amply repaid the public for its expenditure in their equipment and support.

The publication of information relative to the inspection of factories and workshops in England and other countries, together with statistics showing the necessity for such inspection in this country, has led in several States to the establishment of boards of factory inspectors. These boards have committed to them the execution of all laws providing in any way for the benefit of those who have to work in any kind of productive establishments. These inspectors enforce the laws concerning the hours of labor, the employment of women and children, the guarding of machinery so that the operatives may be more free from accidents, and in all ways undertake the enforcement of all laws of the character specified. Through these efforts (and they were largely induced by the reports of labor statistics) child labor has decreased, accidents have been reduced in number and severity, the hours of labor have been shortened and recognized, and so all long that line of facts the influence of the reports of the bureaus has been enormous; the value of their statistics cannot be expressed by figures.

The first ten-hour law in this country was passed by the Massachusetts Legislature in 1874. The statistics published by the bureau of that State helped the passage of the law in a marked degree, and saved its repeal in later years. The manufacturers, finding that they were brought under the ten-hour law so far as minors and women were concerned, felt that the manufacturers in surrounding States ought to be brought under like laws or the law of Massachusetts should be repealed, for they claimed, as was claimed in England years ago, that in working under a ten-hour law the manufacturers of Massachusetts were placed at a decided disadvantage relative to the manufacturers in the surrounding States. The Legislature, therefore, directed the Bureau of Statistics of Labor to investigate the subject of the hours of labor in that State and in the other New England States. The result of the investigation showed that, under a ten-hour system, the Massachusetts manufacturers paid more wages than those in the other States, where eleven and twelve hours were the rule; that they produced more goods on any basis that could be named, whether per individual or per machine; in short, that in every respect the Massachusetts operatives were under better conditions than those of the surrounding States. There has been no attempt since that report was published to repeal the ten-hour law of Massachusetts. On the other hand, other States have followed suit, until now that system prevails generally in the United States.

The bureaus have been very influential in securing a modification of the old common-law rule relating to the liability of employers for accidents occurring to their employees. Under this rule a workman cannot recover damages for injuries received through the carelessness or negligence of a co-employee, although a stranger might recover damages for an injury following the same carelessness or negligence: as, for instance, under the old common-law rule, a brakeman on a train running perhaps 500 miles could secure no damages from a railroad corporation in consequence of injuries received through the carelessness or negligence of a switchman along any

part of the line, although the brakeman knew nothing of the switchman, had no knowledge of his skill or capacity when he engaged with the company, and in no sense of the word, so far as reason is concerned, could be considered the co-employee of the switchman; yet, although that common-law rule grew up before great industrial enterprises were established, Judges had adhered to it, and had ruled that in such a case as that just mentioned the switchman and the brakeman were co-employees, and therefore the employer could not be held liable. The agitation for a legislative change in this common-law rule in England resulted in the enactment of a law in 1880 changing or modifying the rule, and, in this country, the matter being taken up by Bureaus of Statistics of Labor, several Legislatures have been convinced of the justice of a change, and have therefore made it; the dire results which were predicted as sure to follow the change of the rule have not followed. In this direction the bureaus have done a great service, not only to the employees of railroads and corporations engaged in productive industry, but in securing the public against the employment of incompetent men.

Another very emphatic influence which the bureaus have exercised is in the abolishment or modification of what is known as the "truck-store" system, or, as it more popularly known in some parts of the country, the "pluck-me" method of store trading. This system consists in the establishment of a store by the proprietors of a works for the supply of its employees. Formerly, in many instances, the prices charged at these stores were much higher than those charged at other places, and so the employee of a concern having a truck store was almost compelled, and in many instances actually compelled, to purchase the necessaries of life for his family at an exorbitant price, whereby the employer made a second profit on the labor of the employee. In very many instances the workmen of such an establishment never saw any money from one year's end to another. The pay for the goods purchased in the store was secured by the payrolls, and the debts and credits left no margin on pay day. Early in the existence of Bureaus of Statistics of Labor this system was attacked through the statistical method, and the result has been that in very many States laws have been passed making it a criminal offence, in some cases, to carry on such a system, and in other cases making it the duty of the proper officers to see to it that they are regulated. The evils of the truck-store system have not yet been entirely eradicated in this country, but the change has been great, and the value to the wage receiver of the greatest importance.

In this connection, I might mention the influence which the bureaus have had in securing more frequent payments for the workingman. Formerly the payments were monthly. Under this system, the credit system grew also, because without ready money the wage receiver must secure credit of his grocer, and the grocer, under such circumstances, looks out that the charges are sufficient to cover the delay in receiving his money, or the losses which may come through his endeavors later on to collect the amount of his bill of the employer through the trustee or the garnishee system. Weekly payments have been shown by various bureaus to be beneficial in eradicating some of the evils of the credit system.

In some of the western States there have grown up during the past few years some of the most rascally practices on the credulity of the workingman that have ever been known. They are robberies of the meanest sort, for they not only rob a man of his money, but in many instances of his manhood. The practice I refer to is that of a certain class of employment offices, located usually in the rear of some beer saloon, which ad-

advertise that a large number of men are wanted for labor in a certain city, but almost always at a distance. In a western city one of these offices advertised for one thousand men to proceed immediately to Washington, D.C., where employment would be furnished at \$1 per day. Hundreds of men responded to this advertisement. They were obliged to pay down \$3 or \$4, as the case might be, or as the rascality of the manager might demand, and then the men were put off by various excuses for several days, until they began to clamor for their contract. When they became too demonstrative, the manager would pay back part of the sum advanced, for the sake of integrity. Meantime, however, these hundreds of men, loafing about his beer-saloon, had expended more or less money for beer, in addition to the fee paid for the supposed employment. In one city an advertisement appeared for a large number of men to be shipped to Iowa, while in Iowa an advertisement appeared for a large number of men to be shipped to the very place of the first call. The bureaus in some of the States where such practices have been carried on collected the information relative to these offices, and exposed the swindle perpetrated upon the wage receiver. Much good was derived from these reports, and, in addition to the laws in existence, others of a more stringent nature followed.

These instances of the direct influence and value of bureaus of statistics of labor are sufficient, it seems to me, to prove beyond any question their right to exist, their right to the sympathy and support of the public, and their right to ample equipment and means for carrying on their beneficent work. But they have another office to perform, which is one of the leading offices of statistics in every direction, and this is the correction of false impressions and the removal of apprehension, and two or three instances of this kind may perhaps be of service.

The statement is usually made by writers on the labor question from the capitalistic point of view that the prosperity of the savings-banks of the country represents absolutely the prosperity of the working man—that the total amount of savings in such banks clearly indicates the prosperity of labor. I am not disposed to question this statement, so far as it applies as a principle, but I question the degree of accuracy contained in it, for the investigations have clearly shown that only about one-half of the deposits in the savings-banks belong to men and women engaged in manual labor or in the toil necessary to the production of goods. Such a fact, properly brought out, simply sets people's thoughts in the right direction, although it does not disprove the sentiment underlying the erroneous statements regarding the conditions involved.

In 1878 a great deal was said about the unemployed in this country. It was reported, and the report was very industriously circulated, that there were from 200,000 to 300,000 people out of employment in Massachusetts, 40,000 in the city of Boston alone, and 3,000,000 in the United States. These figures were quoted in newspapers, works on political economy, speeches in Congress, political resolutions, etc., until they came to be believed everywhere, and yet no attempt was made, officially or otherwise, to ascertain the real facts. The Bureau of Statistics of Labor of Massachusetts undertook to make an investigation of the subject, and this it did in two separate canvasses, one in June, 1878, and the other in November of the same year. The result showed that in that Commonwealth, on June 1, there were 28,508 skilled and unskilled laborers, male and female, out of employment, seeking and in want of work, and that in November there were not more than 23,000 of the same class. On these bases, there could not have been over 460,000 unemployed able-bodied men and women in the United States, ordi-

narily having work, out of employment at the time mentioned. The report further showed that in the State mentioned there were in 1875 only 316,459 persons engaged in manufactures and mechanical industries, in occupations upon which they depended for support, whether actually employed or not, and the whole number actually employed in the manufacturing and mechanical pursuits of the State was 308,963. If, therefore, there had been 200,000 or 300,000 persons out of employment in the State in June, 1878, as the alarmists were in the habit of stating, there could have been hardly any left in the factories and work-shops of the community. The figures published by the report were used all over the country, and completely reversed the popular belief relative to the vast number of the alleged unemployed in the country.

But I think one of the most striking instances of the removal of false impressions from the public mind relates to mortgage indebtedness on real estate. In a speech made in Congress in May, 1888, the statement was quoted from an agricultural paper that the estimated mortgage indebtedness of all real estate in Ohio at that time was \$701,000,000; in Indiana, \$398,000,000; in Illinois, \$620,000,000; in Wisconsin, \$250,000,000; in Michigan, \$350,000,000; in Iowa, \$351,000,000; and statements were made from other States. The Ohio and Michigan Bureaus of Statistics of Labor undertook to investigate this subject, through the offices of the registers of deeds, the boards of assessors, etc., and in these two States the mortgage indebtedness, as established and estimated by the Commissioner of Labor, was, for Ohio, \$330,999,205, and for Michigan, \$129,229,553, instead of the amounts popularly claimed. Under the Federal census of 1890, an investigation was made relative to mortgage indebtedness, and the facts established with remarkable accuracy for the other States just named. By the investigation of the census it was shown that in Indiana the mortgage indebtedness is \$110,730,643; in Illinois, \$384,299,150; in Wisconsin, \$121,838,168; and in Iowa, \$199,774,171. It is a little remarkable that the sums accepted in a popular way for the mortgage indebtedness of the States named were in some instances exactly the valuation of all the property of the State. The extravagant figures quoted were used all over this country and in Europe, wherever capitalists were seeking investments in this country. The figures did immense harm: the wrong cannot be calculated; but as time goes on the statistics emanating from the bureaus of statistics of labor and from the Census Office are removing the apprehension which grew out of the original statements.

Another feature relative to mortgages relates to the causes for which mortgages are placed upon farms in the western country. It has been claimed in recent years that the great mortgage indebtedness of western States is due largely to disaster or adversity. The Commissioner of Labor of Nebraska undertook to satisfy himself, by positive investigation, as to the truth or falsity of such claims, and he took as the territory for his investigation the county of Sarpy, covering the period from December 31, 1879, to January 1, 1890. Sarpy is one of the oldest counties in Nebraska, and it therefore offered the best opportunities for investigation in that State. The result, as to the causes for the creation of the mortgage indebtedness of the county, is shown in the following statement, taken from Commissioner Jenkins' report for 1889-90.

Purchase money.....	58.00 per cent.
Permanent improvements.....	3.00 per cent.
Purchase of stock.....	4.00 per cent.
To meet personal obligations50 per cent.

To invest in real estate.....	7.00	per cent.
To invest in mercantile business	20.00	per cent.
Sickness.....	.25	per cent.
Unknown causes	7.25	per cent.

Allowing that all the mortgages from sickness and from unknown causes were the result of misfortune or of adversity of some kind, the foregoing table shows that 92 1-2 per cent. were for legitimate causes, and such causes as indicated prosperity rather than adversity.

The investigation under the eleventh United States census comprehends the object of indebtedness for 102 selected counties in several States, the results being obtained by personal inquiry through the experts of the office. That investigation is a clear and emphatic corroboration of the results arrived at by Commissioner Jenkins of Nebraska. It shows that to legitimate objects, indicating clearly prosperity and advancement, 94.37 per cent. of all the mortgage indebtedness of the 102 counties considered must be attributed.

The convict labor question is one that has attracted a great deal of attention during the last quarter of a century, but it was not until various State bureaus and the United States Department of Labor collected exhaustive statistics relative to the productive employments in penitentiaries and other penal institutions, and showed the effect of different systems of employing convicts, that the discussion took intelligent shape. There has been much reform along the lines of convict labor. Many States have made experiments which have been abandoned, while others have established new systems which are progressing favorably; in the whole work the contributions of labor statistics have been of the greatest possible value.

The advancement of technical science, too, has been greatly accelerated by the exhaustive publications of different departments and bureaus of statistics of labor relative to industrial education. It is only recently that the different States of the Union have felt it incumbent upon them, through their Legislatures, to study all the phases of industrial training, consisting of manual training, trade school instruction, and the higher technological or university work which is done in our institutes of technology. The United States Bureau of Education has aided the discussion and consideration of such matters, and its work has been grandly supplemented by the State bureaus and the United States Department of Labor. It is now possible to discuss the question of industrial education in all its phases, not only intelligently, but on the basis of practical experience in this and other countries.

These few instances show the enormous value of statistics in removing apprehension and in correcting erroneous views. The money value of such information is not easy to calculate.

In September, 1883, the heads of the few bureaus of statistics of labor then existing met at Columbus, Ohio, and organized the National Convention of Chiefs and Commissioners of Bureaus of Statistics of Labor. Since then these officials have met annually for the purpose of discussing statistical methods, and the best way of collecting information and of tabulating, analyzing, and presenting it. It was one of the early dreams of the founders of this convention that some uniform contemporaneous work could be undertaken by all the bureaus in co-operation, but this dream was fraught with many difficulties. States did not organize their bureaus at the same time. Many of the subjects which had been covered by those organized at earlier dates formed the subjects of investigation of those which had been established at later dates, and hence there was a conflict; for the earlier

bureaus did not wish to cover again what was new and important to the more recently established ones. Another difficulty arose in the fact that the industries and conditions of one State were not common to all States having bureaus of statistics of labor. Notwithstanding the fact that the original idea has not been, and cannot be, carried out, the convention has been of the greatest possible value to the different States. At each annual meeting each Commissioner of Labor reports the investigations he has in hand, the methods he has adopted for obtaining the information desired, and all the difficulties and complications attending his work. These matters are then discussed, and the experience of older Commissioners brought out for the benefit of those who have more recently come into the work of gathering statistics of labor. Thus great advantage is given to even the older Commissioners to gain fresh inspiration from the troubles and difficulties of those who are new to the work. The convention also helps to call public attention not only to the value but to the methods of the work being conducted.

Notwithstanding all that I have said relative to the value and influence of the statistics of labor, I am perfectly well aware that they could be made of far greater value; but that greater value can only be secured through the direct action of the legislative bodies behind the bureaus. They are very poorly equipped. They need more men and more money. They need experience, which can only come through the influence of the executives of the States. With a longer tenure of office and an increase in the equipment and means of the bureaus, their future usefulness can be made to far excel that of the past and of the present. The lines of work which they can undertake are numerous and inexhaustible. Knowledge of production is absolutely essential for the adjustment of many of the difficult questions we are facing to-day, and any contribution, through statistical investigation or otherwise, that will enable both the capitalist and his employee to more clearly understand the real conditions of production should be welcomed by all elements of the community. The bureaus must be kept in the future, as in the past, free from partisanship. The statistician is not a statistician when he is an advocate, no matter how skilful he may be in the manipulation of figures. He must be impartial, he must make his investigations without any reference to theories to be proved or disproved, and give to the world the actual results of his inquiries. This country lacks trained statisticians. We have no means for training them, except in the practical work of the statistical offices of the State and Federal Governments. These offices, therefore, become a school for the future, and the statisticians of this country that are to be of great service to the Governments must acquire their knowledge through the statistical offices; but no work can be accomplished successfully without money and without men. We must look, therefore, to the legislative branches of our various Governments for the increase of the usefulness and for recognized influence of our bureaus of statistics of labor.

LIST OF BUREAUS OF LABOR STATISTICS.

That the utility and general value of accurate statistics in those branches of a nation's wealth, comprising subjects of mechanical and manual labor, is recognized by most civilized countries, is evidenced by the following list of existing labor bureaus, compiled from official records:

Ontario.—The Bureau of Labor was created by an Act passed by the Ontario Legislature, April 25th, 1900, under the direction of the Hon. F. R.

Litchford, Commissioner of Public Works. R. Glockling, secretary of the Bureau of Labor.

Canada.—The Department of Labor was established in July, 1900, and practically supersedes the Bureau of Labor of the Department of Agriculture established in 1890, with Mr. George Johnson as chief clerk. The department is under the direction of the Minister of Labor, the Hon. William Mulock. The Act establishing the department provides for the monthly issuing of a Labor Gazette, the editor of which is W. L. Mackenzie King, B.A., Deputy Minister of Labor. The first number of the Gazette was issued in September, 1900.

Great Britain.—The Labor Bureau of the Board of Trade was established March 2nd, 1886. In 1893 the service was greatly enlarged, and given its present name, "Board of Trade Labor Department." H. Llewellyn Smith, chief secretary. It publishes monthly The Labor Gazette; also annual reports.

New Zealand Department of Labor.—The Right Hon. R. J. Seddon, Minister of Labor. E. Tregear, secretary. Wellington, N.Z.

New South Wales.—Department of Labor and Industry. T. B. Clegg, chief clerk, Sydney, N.S.W.

Queensland Department of Immigration.—Government Labor Bureau and Relief. Chief clerk, J. O'Neil Brennan, Brisbane, Queensland.

South Australia Labor Bureau.—Chief clerk, A. C. H. Richardson. Adelaide, South Australia.

United States Department of Labor.—Established as a Bureau of Labor, January 31st, 1885; made a Department of Labor, June 13th, 1888. Bimonthly bulletins. Annual reports. Commissioner of Labor, Carroll D. Wright, Washington, D.C.

Massachusetts Bureau of Statistics of Labor.—Established June 23rd, 1869. Quarterly bulletins. Annual reports. Chief of the Bureau of Statistics of Labor, Horace G. Wadlin, Boston, Mass.

Pennsylvania Bureau of Industrial Statistics.—Established April 12th, 1872. Annual reports. Chief of Bureau of Industrial Statistics, James M. Clark, Harrisburg, Pa.

Connecticut Bureau of Labor Statistics.—Established July 12th, 1873. Abolished July 23rd, 1875. Re-established April 23rd, 1885. Annual reports. Commissioner of Labor, Harry E. Back, Hartford, Conn.

Kentucky Bureau of Agriculture, Labor, and Statistics.—First established March 20th, 1876, as a Bureau of Agriculture, Horticulture, and Statistics; the duties of the Bureau were enlarged and the present name adopted April 2nd, 1892. Biennial reports. Commissioner of Agriculture, Labor, and Statistics, Lucas Moore, Frankfort, Ky.

Missouri Bureau of Labor Statistics and Inspection.—Established March 19th, 1879; enlarged March 23rd, 1883. Annual reports. Commissioner of Labor, William Anderson, Jefferson City, Mo.

Ohio Bureau of Labor Statistics.—Established May 5th, 1887. Annual reports. Commissioner of Labor, M. D. Ratchford, Columbus, Ohio.

New Jersey Bureau of Statistics of Labor and Industries.—Established March 27th, 1878. Annual reports. Chief of the Bureau of Statistics of Labor and Industries, William Stainsby, Trenton, N.J.

Illinois Bureau of Labor Statistics.—Established May 29th, 1879. Bien-

nia] reports. Secretary of the Bureau of Labor Statistics, David Ross, Springfield, Ill.

Indiana Bureau of Statistics.—Established March 29th, 1879. Biennial reports. Chief of the Bureau of Statistics, B. F. Johnson, Indianapolis, Ind.

New York Bureau of Labor Statistics.—Established May 4th, 1883; created a Department of Labor, 1902. Commissioner of Labor, John McMackin, Albany, N.Y. Annual reports.

California Bureau of Labor Statistics.—Established March 3rd, 1883. Biennial reports. Commissioner of Labor, F. V. Myers, San Francisco, Cal.

Michigan Bureau of Labor and Industrial Statistics.—Established June 6th, 1883. Annual reports. Commissioner of Labor, Scott Griswold, Lansing, Mich.

Wisconsin Bureau of Labor Statistics.—Established April 3rd, 1883. Biennial reports. Commissioner of Labor, Halford, Erickson, Madison, Wis.

Iowa Bureau of Labor Statistics.—Established April 3rd, 1884. Biennial reports. Commissioner of Labor, E. D. Brigham, Des Moines, Iowa.

Maryland Bureau of Industrial Statistics.—Established March 27th, 1884. Annual reports. Chief of the Bureau of Industrial Statistics, Thomas A. Smith, Baltimore, Md.

Kansas Bureau of Labor Statistics.—Established March 5th, 1885. Annual reports. Commissioner of Labor, W. L. A. Johnson, Topeka, Kan.

Rhode Island Bureau of Labor Statistics.—Established March 29th, 1887. Annual reports. Commissioner of Labor, Henry E. Tiepke, Providence, R.I.

Nebraska Bureau of Labor and Industrial Statistics.—Established March 31st, 1887. Biennial reports. The Governor, ex-officio Commissioner. Deputy Commissioner of Labor and Industrial Statistics, C. E. Watson, Lincoln, Neb.

North Carolina Bureau of Labor Statistics.—Established February 28th, 1887. Annual reports. Commissioner of Labor, Henry B. Varner, Raleigh, N.C.

Maine Bureau of Labor Statistics.—Established March 7th, 1887. Annual reports. Commissioner of Labor, Samuel W. Matthews, Augusta, Maine.

Minnesota Bureau of Labor.—Established as a Bureau of Labor Statistics, March 8th, 1887; enlarged and changed to a Bureau of Labor, April, 1893. Biennial reports. Commissioner of Labor, John O'Donnell, St. Paul, Minn.

Colorado Bureau of Labor Statistics. — Established March 24th, 1887. Biennial reports. Commissioner of Labor, James T. Smith, Denver, Col.

West Virginia Bureau of Labor.—Established February 22nd, 1889. Annual reports. Commissioner of Labor, I. V. Barton, Wheeling, W. Va.

North Dakota Department of Agriculture and Labor.—Established October 1st, 1890. Biennial reports. Commissioner of Labor, H. U. Thomas, Bismarck, N.D.

Tennessee Bureau of Labor Statistics and Mines.—Established March 23rd, 1891. Annual reports. Commissioner of Labor, R. A. Shiflett, Nashville, Tenn.

Montana Bureau of Agriculture, Labor and Industry.—Established February 17th, 1893. Annual reports. Commissioner of Labor, J. A. Ferguson, Helena, Mont.

New Hampshire Bureau of Labor.—Established March 30th, 1893. Biennial reports. Commissioner of Labor, Lysander H. Carroll, Concord, N.H.

Washington Bureau of Labor.—Established June 11th, 1897. Annual reports. Commissioner of Labor, Wm. Blackman, Olympia, Wash.

Idaho.—Commissioner of Labor, J. A. Czizek, Boise City, Idaho.

Argentine Republic.—Francois Latzina, Directeur General de la Statistique de la Republique Argentina (Ministere de l'Interieur), Buenos Ayres.

Austria-Hungary.—Commission Central of Statistics (Minister of Public Instruction). Dr. Karl Theodor von Inama Sternegg, President, Vienna. Department of Municipal Statistics, Dr. Sedlatzek, Chief, Vienna.

Bavaria.—Royal Bureau of Statistics (Department of the Interior). Karl Rasp, Director, Munich.

Belgium.—Royal Bureau of General Statistics (Minister of the Department of the Interior and Public Instruction). Edmund Nicoali, Chief, Brussels.

Brazil.—Dr. R. Pompeia, Directeur de Bureau de Statistique des Etats Unis du Bresil (Ministere de l'Interieur), Rio Janeiro.

Bulgaria.—Bureau of Statistics of Bulgaria (Minister of Public Instruction). F. Ivantchoff, Director, Sophia.

Chili.—Don Francisco S. Asta Buruaga, Chef du Bureau Central de Statistique du Chili, Santiago.

Denmark.—Royal Bureau of Statistics (Minister of Finance). Marius de Gad, Director, Copenhagen.

France.—Office du Travail (Ministere du Commerce et de l'Industrie). C. Moron, Directeur. Paris.

Victor Furquan, Chef du Bureau de la Statistique General de France (Ministere du Commerce et de l'Industrie—Office du Travail. Paris.

Germany.—Imperial Office of Statistics (Department of Interior), Dr. F. W. Hans von Scheel, Director, Berlin.

Herzegovina.—Bureau of Statistics of Bosnia and Herzegovina. Dr. Ferdinand, Schmid, Director, Sarajevo.

Italy.—Luigi Bodio, Directeur General de la Statistique du Royaume (Ministere de l'Agriculture, de l'Industrie et du Commerce), Rome.

Japan.—S. Ishibashi, Chef du Bureau General de Statistique (Cabinet Imperial), Tokio.

Mexico.—Antonio Penafiel, Directeur General de la Statistique de la Republique (Mexicaine du Fomento), Mexico.

Paraguay.—I. Jasquet, Directeur General de la Statistique du Paraguay, Assumption.

Portugal.—Ernesto Madeira Pinto, Director General of Statistics of Commerce (Minister of Public Works, or Commerce and Industries), Lisbon.

Prussia.—Royal Bureau of Statistics (Minister of the Department of the Interior). Karl Julius Emil Blenck, Director, Berlin.

Office of Statistics of the City of Berlin. Dr. Richard Bockh, Director, Berlin.

Roumania.—C. E. Curpenski, Directeur de la Statistique General du Royaume (Ministere de l'Agriculture, de l'Industrie, du Commerce et des Domaines), Bucharest.

Russia.—Nicholas Troinitsky, Directeur du Comite Central de Statistique (Ministere de l'Interieur), St. Petersburg.

B. Grigoriev, Chef du Bureau de la Statistique Municipale, Moscow.

Saxony.—Bureau of Statistics of the Minister of State. Dr. Victor Bohmert, Director, Dresden.

Spain.—Ing. Francisco de Paula de Arrillaga, Director General of the Geographic Institute and Bureau of Statistics of Spain, Madrid.

Styria.—Bureau of Statistics of Styria. Dr. Ernest Meschler, Director, Gratz.

Sweden and Norway.—Dr. Elis Sidenbladh, Directeur en Chef du Bureau Central de Statistique du Royaume (Minister de l'Interieur), Stockholm.

Anders Nicoali Kiaer, Director du Bureau Central de Statistique du Royaume (Ministere de l'Interieur), Christiania.

Switzerland.—Dr. Louis Guillaume, Directeur du Bureau Federal de Statistique (Ministere de l'Interieur), Berne.

Uruguay.—Honore Roustan, Directeur du Bureau de la Statistique General, Montevideo.

CIRCULAR TO TOWN CLERKS.

The following circular was issued in April, 1902, to the Clerks of the cities, towns, and villages of the Province. In reply to the 263 circulars sent out, 187 answers were received. A record is herewith given of these answers, which includes a list of the new industries established in the various towns, the openings that may exist for other enterprises, and the remarks and suggestions that have been sent to the Bureau for publication regarding industrial development, etc.

DEPARTMENT OF PUBLIC WORKS, ONTARIO.

THE BUREAU OF LABOR.

Toronto, April 3rd, 1902.

Dear Sir,—The Bureau of Labor of Ontario purpose continuing the investigation begun last year of the industries of the Province, and beg to solicit your co-operation in ascertaining those started during the year 1901, together with your opinion as to the opportunities for others in your locality.

You are respectfully asked to answer the following questions as accurately and fully as possible. If the space for answer is insufficient, please use other paper. Thanking you in advance for courtesy, I am,

Respectfully yours,

R. GLOCKLING,

Secretary Bureau of Labor, Ontario.

1. Name of industries started during 1901. Give name and nature of business and postoffice address.
2. Have any industries changed hands? Name them.
3. Do you consider there is any opening in your locality for new industries?
4. If so, what character?

Clerks of the following cities, towns, etc., responded to the enquiry of the Bureau.

REMARKS FROM TOWN CLERKS.

Alliston.—Opening for manufacturer of wooden-ware.

Alvinston.—Opening for new industries. Beet sugar, canning factory, button factory, flax mill, furniture factory, stone-ware, vitrified brick.

Amherstburg.—New industry started, machine shop, steam power. Good opening for a dry dock and a canning factory.

Almonte.—New industry—Municipal Electric Light System. There is excellent water power here, available for new industries.

Arkona.—There is a good opening here for a canning factory, as the town is situated in a fruit-growing district.

Arthur.—A flax mill has been started, and the Council offers liberal inducements to manufacturers.

Aylmer.—A new industry for the manufacture of scale trucks has been opened. There is also an opening for a flour mill and stove foundry.

Ayr.—A new hoop factory has been started. There is also openings for a white goods manufactory, sash and door factory and novelty wooden-ware.

Bath.—Mill for grinding all kinds of grain; power, gasolene. Coal depot, handling 800 tons per year. There is an excellent harbor here for shipping and there is an excellent opening for an electric light plant, canning factory, lumber yard, carrying wood, coal, lime, etc.

Bayfield.—There is a splendid opening for a flour mill.

Barrie.—This is a first-class railway centre. Good opening for carriage works, furniture factory, shoe factory, pork-packing establishment; first-class opening for a summer hotel for tourists. The town is beautifully situated at the head of Kempenfeldt Bay, a beautiful sheet of water. Manufacturing industries encouraged by free light and exemption from taxes.

Beeton.—New industry—creamery. Opening for sash and door factory, carriage factory and furniture factory.

Berlin.—Good opening for agricultural implement works, in fact any industry employing male labor is very much to be desired.

Beamsville.—Good opening for a saw mill and planing mill for any one with a capital of \$3,000 or \$4,000. There is also a good opening for a fruit-canning factory.

Belleville.—The Belleville Lock and Hardware Co., the W. B. Deacon Shirt and Collar Factory. There is also a fine opening for industries of almost every description, particularly in iron, as large deposits of iron ore are available just north of the town of Belleville.

Belle River.—There is a good opening here for almost any industry, as there is good railway and water facilities.

Blyth.—Handle factory and shingles. Good opening for any kind of industry, apart from what there is at present.

Bobcaygeon.—A small saw mill has been established in Harvey Township. Good opening for carbide works, also lime kilns, as there is lime stone, wood for charcoal, and water power.

Bolton.—Acetylene lighting plant.

Bowmanville.—Foundry and machine works. Good opening for furniture factory, and canning factory.

Bracebridge.—The Council purposes assisting a furniture factory, wooden-ware factory and foundry. By-laws for this purpose to be voted on 5th of May.

Brantford.—Adams Wagon Works, Canada 'Farmers' Cordage Co. There is a good opening for cotton mills and linen manufacture; in fact, manufactured goods of almost any description.

Bridgeburg.—Good opening for all kinds of industries.

Brockville.—Almost any kind of an industry would do well here.

Brussels.—Carriage building business. An opening for knitting factory or furniture factory.

Burk's Falls.—Almost any kind of industry requiring cheap water power—woollen mill, grist mill, foundry—would find a good opening.

Caledonia.—An excellent opening for manufacturing of any kind.

Cardinal.—There is a good opening for a foundry.

Cannington.—Knitting factory. Good opening for pork-packing and canning factory.

Carleton Place.—Almost any kind of an industry would do well here: good water power. Good opening for a furniture factory.

Chatham.—The Dowling Spring & Axle Co., the Victoria Steam Laundry, Mineral Baths, and the R. Martin & Sons' Carriage Works. There is a good opening for an agricultural implement manufactory, pork-packing factory, beet sugar factory, bent goods and handle factory, and cold storage.

Chesley.—Good opening for beet sugar and knitting factories.

Cobourg.—Opening for canning and pork factories.

Clifford.—The Village Council are soliciting correspondence from those seeking a location to start any industry employing labor.

Clinton.—There is a pork-packing and cold storage plant projected.

Cornwall.—Corn-broom factory. Almost any kind of manufacturing industry would do well here.

Cobden.—There is a good opening for foundry and machine repair shop.

Creemore.—There is a good opening for evaporator and fruit canning factory.

Delhi.—A manufactory for farm implements would do well here; also foundry and marble works.

Drayton.—Good opening for a planing mill, sash and door and builders' supplies, with lumber yard in connection; also for a wholesale and retail manufacturer of boots, shoes, and felt ware.

Dresden.—The Dresden Sugar Co., Ltd., manufacture of beet sugar; Strathroy Canning and Preserving Co., flax factory.

Durham.—National Portland Cement Co., Ltd. There is an opening for the manufacture of concrete, tiles, woolen mills, and any other industry that offers.

Dundas.—Any line of manufacturing would do well here.

Dunnville.—Carpet factory, planing mill, foundry in connection with machine shop. There are excellent facilities for ship yard, sugar beet factory, and good machine shop for iron work.

Elora.—Agricultural implement machine shop. A large addition to the Chair Factory has been built. There is a good building, with water power available, in which almost any industry might be opened.

Embree.—A good opening for a brick and tile business.

Essex.—Mr. A. H. Raymond, of Stratford, is about building a flax mill here, and promises later on to establish a binder twine factory. There is a good opening for a furniture or wagon factory, or both.

Exeter.—Good opening for sash, door and blind factory, canning factory, carriage factory, foundry and machine shop. Town might offer some inducement to any of these industries.

Fergus.—There is a good opening for any industry of staple goods, for which a permanent market may be obtained.

Forest.—Carpet factory, concrete, etc. Good opening for a woollen mill to manufacture yarns, fruit basket factory and furniture factory.

Fort Erie.—The Campbell Manufacturing Co., lubricating oils and greases; bakery. Excellent opening for a lumber yard and planing mill. There is an opening for several more stores, and a number of small factories would do well if located here. A bank is needed badly. In fact, there is a pretty fair chance for almost any small business.

Fort William.—Legislature having recently granted the town power to develop Kakabeka Falls, some 16 miles from the town, we are in a better position to offer unlimited water power for all kinds of manufacturing purposes. Added to this, we have unrivalled natural advantages that are worth considering by any manufacturer wishing to locate his business.

Gananoque.—Morden Manufacturing Co., special office and furniture fittings. Good opening for any kind of business with capital. Do not want hungry adventurers or bonus hunters.

Glencoe.—Good opening for canning factory, evaporating apples, etc., as this village is situated in the centre of an excellent farming country.

Goderich.—Lake Huron Milling Company. Good opening for a carpet factory and wooden-ware factory.

Gore Bay.—Good opening for woollen mill; a 50-barrel per day flour mill is needed; splendid opening for this mill here.

Grand Valley.—This village would be ready to loan, or perhaps bonus, an industry of some kind employing a number of hands.

Hagersville.—Steam laundry. Good opening for lumber yard. The owner of the Sash and Door Factory is dead, and the heirs want to sell. Good opening for a live man who understands handling lumber, shingles, etc., and could buy sash and door factory adjoining lumber yard.

Hanover.—Water Works System, costing \$25,000. The Kneatbe Furni

ture Company rebuilt factory and warehouses, at a cost of \$100,000. Other existing factories enlarged and improved. Good opening for any kind of industry not at present existing, as there is low taxation, good fire protection, and the whole Saugeen River for water-power.

Harriston.—Harriston Shoe Co., Ltd. Good opening for shirt factory or knitting factory, or both combined.

Hastings.—Good opening for woollen mills or almost any industry. The village has the best of water-power.

Havelock.—Good opening for a furniture factory, as lumber is cheap.

Hawkesbury.—Good opening for match, pail and tub factories. There is room for a number of industries, as there is communication with outside points by rail and water. Mr. H. J. Clevan, a resident and large property-owner in the town, has recently had surveys made of his island and the water contiguous, and it is said that the civil engineer reports that 40,000 horse-power can be developed with a reasonable outlay. The damming of the Ottawa River at the head of the Long Sault Rapids, now talked of, would also be of immense benefit.

Hespeler.—The Hespeler Furniture Company.

Hensall.—Good opening for a furniture factory, canning factory and foundry.

Hintonburgh.—Good opening here for any manufacturing industry that could be run by electricity or steam. Being a suburb of the City of Ottawa, there is an excellent electric railway service to any from any part of Ottawa.

Holland Landing.—Good opening for any manufacturing business. Splendid water facilities.

Kincardine.—Good opening for a glass factory, canning factory, or almost any kind of business or industry.

Kingston.—Canadian Locomotive Co., Ltd., obtained charter, and runs works of old Locomotive Company. Good opening for iron smelter for Eastern Ontario, and kindred industries. Any good manufacturing concern should find Kingston location, rail and water connection and general conditions excellent for their purpose.

Kingsville.—Good opening for beet root sugar factory, tobacco factory and canning factory.

Lakefield.—The Lakefield Portland Cement Co., Ltd. Good opening for wood-working factory.

Lindsay.—A knitting factory has been added to a woollen factory. Good opening for any manufacturing industry using wood or timber in the production of their goods, such as farming implements, carriage factory, etc.

Listowel.—The Listowel Furniture Co., Ltd., and the Canadian Bent Chair Co., Ltd.

London.—Two new rug factories have been started. Good opening for almost any industry, as the city is centrally located for the whole western district.

Lucknow.—“Sepoy Washer” Company. Good opening for foundry, binder twine factory, and pork-packing factory.

Lucan.—Good opening for almost any kind of industry.

Marmora.—Good opening for pulp, lumbering, smelting, box factory, saw mill, veneering. There is good water-power, timber, and mines in abundance.

Markdale.—Good opening for furniture factory, beet root sugar factory, and pork-packing industry.

Markham.—Brush back factory. Almost any kind of industry would find here a good opening.

Madoc.—Good opening for cheese-box factory.

Mattawa.—A pulp mill has been started about three miles from the village.

Meaford.—The Meaford Manufacturing Co., manufacturing furniture, etc.; capital \$50,000. Good opening for saw mill, large grist mill or flour mill, canning factory, cement works, coal yard for supplying lake vessels, and any manufacturing industry requiring large quantities of hardwood. Excellent shipping facilities.

Merrickville.—Sash and door factory. Good opening for manufacturers requiring water-power.

Merritton.—Good opening for any industry employing skilled labor, as there is plenty of water-power to be had at normal rental.

Millbrook.—Good opening for canning factory, woollen mill, and veneer factory.

Milton West.—Good opening for any iron industry.

Mitchell.—Any industry differing from what is already established would find an excellent opening.

Midland.—Almost any description of wood-working industry would find here a good opening.

Mt. Forest.—Good opening for carriage factory, upholstering and furniture factory.

Napanee.—Good opening for a canning factory.

Newburgh.—This village has considerable water-power undeveloped, and some good buildings in close proximity to said power. A Mr. Breese has invented a new process of spinning wool yarns, which is bound to revolutionize the spinning business all over the world. He would start the manufacture of machines and employ a large number of first-class machinists, had he the capital to back him. This is a good chance for the Department of the Bureau of Labor to interest capitalists and push this to a success.

Newcastle.—A bicycle and machinery repair shop. Good opening for any industry not requiring water-power. Good water and railway shipping facilities.

New Hamburg.—Good opening for iron foundry, pork factory, fruit canner, stave factory.

Newmarket.—Good opening for beet sugar factory, tannery, etc.

Niagara Falls.—Good opening for a machine shop.

Niagara.—Good opening for canning factory, basket factory.

North Bay.—Any sort of a manufacturing business would do well here, as this is a railway centre, and the building of the Temiscaming Railway will open up an enormous country, all of which is practically a virgin forest. Manufacturing industries should become a great success, especially in the line of lumber and its products.

Norwich.—Good opening for any industry using hardwood. There is a large flour mill, for which some one is required to buy or lease and operate.

Owen Sound.—Good opening for manufacture of agricultural implements, there being an abundance of timber, and also good shipping facilities. A novelty woodworking factory and carriage works would also do well.

Oakville.—Inducements offered for any good manufactory.

Omeme.—Good opening for any industry in which hardwood could be used.

Orangeville.—Good opening for almost any industry with capital.

Orillia.—Mattress factory, wooden ware and veneer factory, furniture factory, box factory, Standard Lumber Company, Spanish River Pulp Company. Special inducements in the way of cheap light, water and power, free sites, etc., offered to new industries.

Oshawa.—Wire Fence Manufacturing Co. Good opening for cabinet factory, agricultural implements, boiler and engine works, boot and shoe factory, sash, blind and door factory, etc.

Ottawa East.—There is a good opening for factories here, as rail and water connections are excellent.

Paisley.—Carpet factory. Good opening for foundry, woollen mill, wood-working factory, and canning and evaporating factory.

Paris.—Good opening for the manufacture of agricultural implements, machine shop, cold storage, etc.

Pembroke.—Saw mill has been constructed. Good opening for wooden-ware manufactory, as there is a great quantity of timber wasted by saw mills that could be used in the making of wooden-ware.

Peterboro'.—Good opening for beet sugar factory, iron industries of all kinds, industries utilizing wood, tannery, carpet factory, carriage factory, canning factory, cotton factory, biscuit factory, etc. Excellent water-power and good shipping facilities.

Perth.—This town is open for an industry of any character, and for a business that will employ a number of hands; would stand a good bonus.

Port Arthur.—Good opening for flour mill and foundry.

Port Colborne.—Excellent opening for smelting works, dry dock and ship yard.

Port Dover.—This village will give inducements to any good concern that might offer. There are two lines of railway and a fine harbor, so that material could be shipped by land or water.

Port Hope.—Canadian Radiator Co., Ltd. The opening for any kind of industry is excellent.

Port Perry.—Creamery. Good opening for beet sugar factory.

Port Rowan.—Good fruit-growing district, and the opening for a canning factory is excellent.

Port Stanley.—Good opening here for a drug store, canning factory, harness shop, etc., as the town is very deficient in industries of all kinds.

Prescott.—Imperial Starch Factory. Good opening for foundry business.

Preston.—The Castile and Mill Soap Co., Ltd. The Preston Glove Co.

Picton.—No better opening in any town in Canada in almost any line of industry. We have some business carrying on men, but few men carrying on business—opportunities are consequently going to waste.

Rat Portage.—Good opening for pulp manufactory and flour mills. Unlimited water-power available.

Renfrew.—Power company. Good opening for a furniture factory, a pulp mill, and a large brick manufactory.

Richmond West.—Good opening for flour and provender mill.

Ridgetown.—Good opening for a canning factory, pork-packing factory, foundry.

Richmond Hill.—Good opening for boot and shoe factory, woollen mill, cheese factory.

Sault Ste. Marie.—Lake Superior Steel Plant, sulphide works, brewery, machine shop.

Shelburne.—Good opening for planing mill or other wood-working concern.

Simcoe.—The Maple Leaf Stone Paving Co., chimney caps, brick and tile. Opening for pork factory, beet sugar factory, wood turning factory.

Smith's Falls.—Good opening for brick and tile industry, woollen mills.

Southampton.—Wood-turning factory, chair factory, sash and door factory, broom factory. Good opening for foundry, flour mill.

Springfield.—Good opening for sash and door factory, in connection with a lumber yard, brick and tile factory, and machine repair shop.

Sterling.—Good opening for fruit canning industry.

Stouffville.—Pork Packing Co., Forsyth Acetylene Co. Good opening for almost any kind of industry.

Sarnia.—Industries started during 1901: British American Can Co., planing mill, boiler shop, glove and mitt factory, implement factory, cigar factory, skirt factory. The Northern Transportation Co. has been changed to the Northern Navigation Co. There is a good opening for saw mills, grain elevators, transportation companies, and almost any kind of an industry where a market is sought in the Northwest.

Sudbury.—Industry started during 1901: Steam laundry. There is a good opening for manufacturies, mills, foundry, machine shops, etc.

St. Catharines.—McKinnon Dash & Metal Work Co., Kinleith Paper Co. Excellent opening for beet sugar factory, knitting mills, wheel works, tin can factory (there are five canneries here, who have to procure the cans used from outside points), pork-packing, paper boxes. Good water and electric power.

St. Mary's.—The Horseshoe Quarry. Good opening for wagon factory, machine works, wood-working machinery.

St. Thomas.—Carpet factory. Good opening for almost any kind of industry.

Sutton West.—Good opening for a foundry or some large manufacturing business, the corporation being willing to assist such.

Sundridge.—Veneer factory. Good opening for woollen mills, planing mills, grist mill, and a manufactory of small wooden wares.

Teeswater.—Carriage factory. Good opening for a chair and furniture factory. Village will assist such an industry.

Thamesville.—Good opening for canning factory, creamery, foundry, beet sugar factory.

Theford.—Good opening for fruit canning industry, as this is one of the leading small fruit growing districts in Ontario.

Thornbury.—Splendid opening for beet sugar factory, canning factory, paper mills, furniture, or any kind of woodworking industry.

Tilsonburg.—Harvesting tool manufactory, grill work manufactory.

Tilbury.—The Tilbury Flax Co., flax mill. Good opening for planing factory, canning factory.

Toronto Junction.—The Union Stock Yards Co., Ltd. Good opening for any industry kindred to the stock yards, such as meat packing, etc., furniture factory, smelting works, farm implements.

Toronto.—The industrial development of the manufacturing industries is exceptionally large. Quite a number of manufacturers were forced to make extensions to their factories, while others kept their staffs employed more than the usual working hours, in order to supply the demand; others erected new and more commodious buildings—all of which goes to demon-

strate the fact that Toronto is fast becoming the manufacturing metropolis of Canada. A greater development of steel shipbuilding is essential to the enormous demand. Also a large and well-equipped dry dock is of immediate necessity to the marine interests of this port. An up-to-date malleable iron foundry would not only be a boon to the iron-workers of this city and the surrounding municipalities, but would pay handsome dividends to the company venturing on this line.

Tweed.—This town offers a good opening for a woollen factory.

Uxbridge.—A good opening for a first-class creamery.

Waterford.—Good opening for foundry and repair shop.

Walkerton.—Binder Twine Company. Good opening for oatmeal mill and canning factory.

Wellington.—Good opening for canning factory and sugar beet industries.

Winchester.—Good opening for following industries: Canning factory, whip factory, pork-packing, and sugar beet factory.

Windsor.—The Mordyke Novelty Co., iron castings; the Detroit Leather Goods Manufacturing Co.; Hip Gore Corset Co.; the Caille Novelty Co., slot machines; the Loudon Machine Co., farm implements, etc. Good opening for a tobacco factory, beet root sugar factory, and dry dock and ship yard.

Wingham.—Good opening for the manufacture of furniture and small wooden-ware. Good timber and excellent shipping facilities.

Woodville.—Good opening for foundry and machine shop.

Woodbridge.—Good opening for woollen mills and creamery.

Wyoming.—Good opening for canning factory or evaporating fruit.

CIRCULAR TO LABOR ORGANIZATIONS.

The following circular and accompanying schedule was forwarded to the labor organizations in the Province of Ontario:

Department of Public Works, Ontario.

The Bureau of Labor.

Dear Sir,—The Bureau of Labor of the Province of Ontario, for the present year (the third of its existence) will continue the investigation of the condition of wage-workers as to wages, hours of labor, and such other information as the Bureau may be able to gather, as will give an intelligent knowledge of the relations of capital to labor, and the progress or otherwise being achieved generally by the wage-earning class; together with the progress of organization of the workers for the betterment of their condition. The confidence of labor organizations in the Labor Bureau to assist them in gathering information that will be of value to them, is rapidly increasing and its true purpose becoming better understood. The suspicion existing in the minds of many that Bureaus of Labor, such as that of Ontario, are not in their interests, is fast passing away. The response to enquiries last year, while not complete, was a decided improvement on the previous year. There is no doubt that ere long the fullest confidence will be established, not only on the part of the wage-earners, but with manufacturers also; resulting in their fullest co-operation to assist the Bureau in the collection of such data as may be desired to present accurate conditions existing, that will enable our legislators and others to reach a solu-

tion of public questions that tend to the general prosperity of the Province.

Copies of the Report of the Labor Bureau for 1901 have been forwarded to Secretaries of all labor organizations whose addresses could be obtained. If none have been received by your body, would ask you to drop me a card, and a copy will be at once forwarded. The Bureau also cordially invites any remarks of a general character that in your opinion will be of benefit to other organizations.

In conclusion, I trust that you will answer as fully and as accurately as possible the questions on accompanying schedule, and return same in enclosed envelope—no postage is required.

I am respectfully yours,

R. GLOCKLING,
Secretary Labor Bureau, Ontario.

If you are not now Secretary of your organization, will you kindly hand this to your successor as soon as convenient.

The Bureau respectfully asks that the name and address of the Corresponding Secretary of your organization be forwarded whenever a change of officers takes place.

Department of Public Works, Ontario.

The Bureau of Labor.

The following questions refer to the year ending December 31st, 1901 :

1. Location.
2. Trade or calling.
3. Title of organization.
4. Date organized.
5. Total membership, male female
6. Average earnings, per week, male female
7. No. of working hours first five days.
8. No. of working hours Saturday.
9. Average number of days idle per member during year.
10. General cause of idleness.
11. Total number employed at your business in your locality, male
female
12. What difference in wages or hours of labor (if any) of those engaged at your business in your locality, between members and non-members of your organization, male female
13. What cash benefits, if any, are paid in case of (a) lack of employment, (b) sickness, (c) death, (d) superannuation?
14. Do you carry on any special work for members, such as a reading-room, evening classes, etc.?
15. Name of President for current term.
Address.
16. Name of Corresponding Secretary for current term.
Address.
17. Nights of meeting.
18. Do the above named officers object to the publication of their names and addresses in the Bureau Report?

Organizations formed since December 31, 1901, are requested to return schedule, answering as many questions as possible, so that the Bureau's Directory of Labor Organizations may be complete.

Remarks.

Any remarks or suggestions bearing on the subjects under investigation, or anything that in your opinion will improve the condition of your craft, or any other suggestions that in the opinion of your organization may seem wise and proper, looking to such legislation or otherwise, as will, in its judgment, be of permanent benefit, are cordially invited, and will be most cheerfully received, and made the best use of by the Bureau.

In response to the 600 schedules sent out to the labor organizations, but 297 replies were received, many of which were very meagre in the information supplied. The number and location of the various organizations reporting available for use are as follows:

Berlin	11	Niagara Falls	4
Brantford	9	Ottawa	12
Brockville	8	Oshawa	3
Beamsville.....	1	Palmerston	1
Chatham.....	6	Preston	1
Carleton Place	2	Peterboro'	6
Collingwood	2	Prescott	1
Cobourg	1	Port Colborne	1
Crookston	1	Queenston Heights ..	1
Dundas	3	Rat Portage	1

Flint Glass Workers					

REMARKS FROM LABOR ORGANIZATIONS.

No. 94.—You have our fullest confidence and co-operation. Keep coming ahead.

No. 121.—If it were possible to cultivate the people's taste in furniture it would be a great benefit to the country, as we manufacture furniture not equal in quality to that made in the United States. Their reputation is much better than the Canadian manufacturers.

No. 99.—I beg to state that according to a Resolution passed by this Assembly, I am instructed to say that the members of this Assembly would like to see the laws of this Province amended in the following particulars: 1st.—The adoption of the Initiative, so that on the application of a certain percentage of the voters, any question must be submitted directly to the vote of the people, and if favored by a majority, must become law. 2nd.—The adoption of the Referendum, so that any act of the Legislature, on the demand of a certain percentage of the voters, must first be submitted to a vote of the citizens for confirmation. 3rd.—The imperative mandate, whereby any constituency can recall its representative, whenever a majority vote shows that he no longer enjoys the confidence of the people. 4th.—The removal as quickly as possible of all taxation from the products of industry and the concentration of taxation on the value of the land, or a local option law allowing municipalities to remove taxation from the products of industry. 5th.—Public ownership of public utilities, by means of a general act allowing municipalities to construct waterworks, lighting plants, street car service, etc., or to acquire such service on equitable terms. 6th.—The grouping of constituencies with proportional representation, and the Hare-Spence system of voting. 7th.—The abolition of bonuses and subsidies. What the public pay for the public should own.

No. 86.—Initiative referendum, proportional representation, grouping of constituencies with the Hare-Spence system of voting, public ownership of public monopolies, and the abolition of all bonuses and subsidies.

No. 106.—Our trade is affected mostly by the increase of ready-made clothing, which thrives because of its cheapness, owing to underpaid and overworked labor.

No. 82.—We have only two non-union shops in our city. They have only one chair each and do not amount to much. The other difference in the number of union and non-union men is made up of bosses employing journeymen. Such bosses are not allowed to join, but must sign an agreement to live up to the laws of our Local and International Union. What is needed most to benefit the barbers' trade is a License Law, such as is in force in the States of Michigan and Minnesota. Such a law would put a stop to all low-grade, dirty shops, and raise the standard of our profession where it ought to be, and ought also act as a safeguard to our patrons against all disease inoculated in inferior shops.

No. 65.—We are going to get nine hours a day for our factory, and also do away with the piecework system, which is the worst thing we have to deal with. There is too much cutting prices. One man might make \$2.00 a day at a job, and another might not make more than \$1.00 per day at the same work, so it is difficult to get things equalized. There is too much selfishness among trades men. Some men will rush with the work, and then the price is cut down, which makes it harder for the man who cannot work fast.

No. 156.—A Bureau of Arbitration would be the most welcome of any step taken by your Bureau to help all classes of wage-earners, both skilled and unskilled, when it would compel both capital and labor to settle all troubles in this manner, and laws enacted in our Legislature governing the same, making it compulsory to settle all disputes in this manner.

No. 170.—The Industrial Brotherhood was instituted to bring into touch with the Trades Union movement persons whose trades were not organized. Several existing local unions were organized largely of members of the Brotherhood. This organization founded and started the labor paper, the "Industrial Banner." It has assisted members in difficulty, although this is not obligatory. It has been of value to the movement in London from the fact that some of the hardest workers for unionism have been members, who, but for its organization would not have been enabled to be enrolled in the ranks of organized labor at all. It has now under way a scheme to acquire land in the limits of the city, by co-operation of the members, to ensure homes at actual cost. Most of our members enjoy the Saturday half holiday—a few have the Wednesday afternoon for the months of June, July and August, while most factories close here on Saturday afternoon, there is a growing movement in favor of the Wednesday half holiday in commercial lines of business. Many establishments now close on that day.

No. 155.—Higher duty on imported cigars and a greater demand by our people for a Union Blue Label Cigar, would benefit our organization and its members.

No. 50.—There are a very poor class of workmen in our business and it is caused by so-called Barber's Colleges and others who start up for themselves after they have been at the business for about three months. We desire the license system like they have in some places in the United States, with local examiners composed of first-class workmen under the control of the Union. We think this the only remedy, and we wish you to do all in your power to get legislation to this effect. We intend to apply later, and want your co-operation in the work.

No. 182.—The subject of sanitary plumbing is of such importance to the health of the public and more especially to the cities, that it seems incomprehensible that it has not received more consideration from the Provincial Board of Health or the Legislature. From our point of view there should be Provincial Plumbing By-laws, drawn on modern plans, and all cities of over 10,000 inhabitants be compelled to appoint a practical plumber to enforce the by-law. I realize the good work that may be done by the Bureau of Labor if given encouragement.

No. 147.—It is the opinion of this organization that it would be in the interest of the Moulders if the Factory Inspector would come around some time and see if the shop is in the condition required by law. The shop here is sometimes not fit to work in, especially in winter, with coke and gas and dust. If the inspector would call around it might be remedied in the opinion of the Moulders' Union.

No. 192.—Labor organizations are in their infancy in this town, but have made wonderful strides during the two years they have been in existence, having secured an advance in wages and shorter hours for almost all classes of labor. We feel highly honored by having the next convention of the Dominion Trades Congress meet in the Island City in 1903.

No. 193.—It is the opinion of the labor organizations here that the law regarding the working of girls and women overtime in textile factories needs amending. Several factories work their employees over time in the summer months, and during the winter, which they claim is their dull sea

son, the employees are laid off. We believe that this can be regulated and the laws made to read that no employer can work his female employees overtime when he does not give them steady work the year round.

No. 199.—A resolution was passed by the Council that we do request the enforcement of the Factory Act, the Bake Shops' Act and the Shops' Regulation Act, by the Bureau of Labor, instead of by the Department of Agriculture as at present.

No. 203.—We would desire a more rigid enforcement of the Factory Act—a shorter work day by legislation.

No. 201.—Am directed to inform you that this Council desires to be on record that they appreciate Mr. T. H. Preston's Conciliation Bill of last session of the Legislature; that it is a move in the right direction and that this Council believes in his idea of voluntary arbitration.

No. 124.—Steam Fitters should not do conduit work in our opinion. There should be public ownership of electric power plants, telephone and telegraph systems—a better regulation of apprentices, an eight-hour day and better wages and direct legislation.

No. 131.—All that is wanted just now is the ten-hour day at present rate of wages, that if we have to work after 6 p.m. that we be paid for the extra time.

No. 148.—An import duty on cigars of \$4.00 per pound, thus enabling the Canadian manufacturer to compete in ten-cent cigars. The Inland Revenue Stamp duty of \$6 per thousand cigars should be reduced. We also desire legislation making it a criminal offence for any one illegally using our Blue Label, just as a manufacturer is protected in the use of his trade mark.

No. 175.—We are in favor of a Provincial Printing and Binding Bureau, eight hours a day and Union Label on Government printing and binding.

No. 9.—Organization not thoroughly established, but promises well. Could furnish much fuller report in a month or so. We want more thorough factory and boiler inspection.

No. 183.—In the majority of bake shops and factories where the Union is not recognized, the clauses in the Bakeshop act, viz., hours per week and Sunday labor is totally ignored, and the rate of wages is very low. We are glad to say that we have twenty-six establishments that have signed the agreement of the local, and have established seven locals throughout Ontario. We also know that the permit system is the cause of a great deal of misunderstanding, as the majority of employers who have them are abusing the same.

No. 180.—We firmly believe that, 1st, the adoption of the Union Label on all clothing would tend to elevate our craft out of the rut it has fallen into through the sweating evil; 2nd, a systematic inspection of all sweat shops and factories, and a strict enforcement regarding child labor; and that all clothing be made where it is cut, thus doing away with the contractor. Shops could then be inspected with ease. The contractor is the root of all unsanitary shops where the sweating evil exists.

No. 91.—Abolition of convict labor in competition with free labor.

No. 37.—We have a healthy organization and things run smoothly. We constitute the two large paper offices, the smaller ones being unable to qualify, as our constitution calls for the employment of at least one union man before label is granted.

No. 129.—Think a general working day of eight hours is greatly needed.

No. 104.—A matter to which I wish to call attention is the use of concrete, as it is a detriment to our trade, and the cost between the two materials is very little. We would like you to use your influence against it.

No. 16.—Stonecutting has been carried on continuously during the last five years, exclusive of the major part of 1901. It has again started for one to two years more.

No. 164.—All Government printing should bear the Union Label, as a sign that the Government favors fair conditions and wages.

No. 97.—We are not affiliated with the Trades and Labor Council, not being eligible as we are all team owners, some of us having as many as a dozen teams; yet the Trades and Labor Council acknowledges us and has helped us, and we work on the same lines as they do.

No. 3.—Members of our organization are receiving as a minimum 23 cents per hour since April 7th, 1902, as against the old rate of 20 cents per hour minimum wage of 1901. This is due solely to organization.

No. 2.—We would like to have our canal deepened at the piers, so as to enable larger boats to get into our bay, as the iron ore was taken away from here to Point Edward for lack of water at the piers, and the boats could not get in with half loads, which made a difference to 28 of our men of \$400 per man during navigation season alone.

No. 5.—We would like shorter hours, less Sunday work, and it would greatly benefit us if all men belonged to the Brotherhood.

No. 78.—We are of the opinion that the Government should make an eight-hour law for Ontario.

No. 155.—Higher duty on cigars and a greater demand by our people for Union Blue Label Cigars would benefit our organization and its members.

No. 165.—No man should be asked or allowed to work over eight hours, and the Provident Society should be abolished, as it robs us of the benefit of the Workmen's Compensation Act.

No. 64.—We would suggest that it be demanded that any employer advertising for men where his employees are on strike, that he be required to state that in said advertisement that there was a strike on. Many men have spent money going to such jobs who could ill afford it, believing everything to have been all right.

No. 88.—In favor of eight hours for working day, under instructions from Lodge.

No. 65.—We are going to try to get nine hours a day for our factory, and also do away with the piecework system. That is the worst thing we have to deal with. There is too much cutting prices. One man might make two dollars a day at a job and another wouldn't make more than one dollar and fifty cents at the same work. So it is hard to get things equalized.

No. 4.—Fulminate of mercury is made here twice a year, and about 80 employed, some of them are farmers' sons, that don't pay any taxes. Could not the corporation pass a by-law to prohibit them, by demanding a poll tax from them, and if they didn't pay the Chief of Police should be empowered to send them home to their farms. If such legislation could be made it would be a great advantage to union men, also to other laborers who live in the corporation.

No. 178.—There is plenty of work in the city, but wages are low. An instance of it is that the G.T.R. has thousands of tons of coal to unload and they pay \$1.25 per day, but cannot get men, and they would rather pay for the detention of the cars than pay higher wages.

No. 26.—Now that our company has done away with double-headers we don't have much to complain of. We have had a good year. Expect that the summer will be above the average on account of an extra boat on the N. W. T. Company line and the ore business they are getting ready for.

No. 33.—Would say that in our opinion, better ventilation of working shops should be observed by employers. Also that a new law be enacted that all employees be paid once a week for their labor, and not any time set by their employers. This would be gladly welcomed by the laboring classes generally.

No. 59.—We strongly recommend the copyright of our Union Label, as a benefit to us to protect our union.

No. 66.—A universal eight-hour day will in our opinion be a panacea for the worst of the ills from which we suffer.

No. 107.—One thing that would benefit our union at large throughout the Province, and have a tendency to elevate the standard and grade of men, is to have it specified in all Government specifications for contract work to be done by union labor.

No. 8.—Railroad employment should be fixed at eight hours per day in train and yard service, compelling men to ride on top of trains equipped with power brakes should be abolished, and a minimum of \$3,000 placed as compensation for injuries or death where company is liable.

No. 106.—Our trade is effected most by the increase of ready-made clothing, which thrives because of its cheapness, owing to under-paid and over-worked labor.

No. 171.—The effect of organization to this local has been an increase of wages of about 33 per cent. in the last five years, and reducing the hours of labor from nine to eight hours per day, and time and a half given for over time. Double time for Sundays and statutory holidays. We also have a Conference Board, composed of five men from the Master Plumbers, Steam and Gas Fitters, and five men from the journeymen associations, to settle any dispute that may arise. The local has a permanent Secretary or Business Agent to conduct the business, with an office, and find it is a great benefit to the union and individual members.

No. 110.—We are trying to stop the issuing of permits to men, allowing them to run boats when there are some of our members who hold Government certificates out of a position. We don't think it is just, that after a man has served a number of years to gain a certificate, that the Government should knock him out.

No. 146.—The revising of the Grand Trunk compulsory insurance, with regard to making men employed by the company sign an agreement not to hold the company liable in case of accidents. Very few know, that this clause is in the insurance rules until after they have become employees.

No. 188.—Government ownership of railways, telegraph, lighting, and telephone systems, mines, municipal control of street railways.

Table showing average wages per week and hours of labor, with comparison between those organized and unorganized, in localities as reported.

STRIKES AND LOCK-OUTS.

In the former Reports of the Bureau, the record of Trades disputes were carried up to August 31st; in the present Report they are extended up to the end of the year, Dec. 31st. The disputes herein reported will, therefore, be for the period of Sept. 1st, 1901, to Dec. 31st, 1902. The aggregate number of disputes in the Province reported is 75 strikes and 4 lock-outs, involving about 500 establishments, 6,863 persons, and covering an aggregate of 1,227 days. This, however, does not include the strike of the Kingston machinists, now running some eight months, it having commenced on April 30th, and being still unsettled on Dec. 31st.

The average number of days involved in each dispute is 16, or 5.59 days per person, and which would be considerably less if we deducted the time worked by parties to the dispute at other places during the time involved in the disputes, of which we have no record.

The Secretary of the Labor Bureau, who is also Registrar under the Trades Disputes Act, has during the past year acted officially as conciliator in the following disputes, in which the conciliation amendment to the Trades Disputes Act was officially invoked:

- Journeyman Tailors, Lindsay.
- Jewelry Workers, Toronto.
- Woodworking Machinists, Toronto.
- Street Railway Carpenters, Toronto.

Machinists, Kingston.
 Harnessmakers, Toronto.
 Carpet Weavers, Toronto.
 Plumbers and Steamfitters, Toronto.
 Bookbinders (female), Toronto.
 Iron Moulders, etc., Toronto.
 Carpenters, St. Catharines and Thorold.
 Sheet Metal Workers, Toronto.

In addition to which, he has assisted in the prevention and adjustment of a number of other disputes. The existence of a conciliator in trades disputes in the Province is but little known. Its usefulness will be extended as the wage-earners of the Province become acquainted with and understand it. The following resolution explains itself:

RESOLUTION OF EXECUTIVE OF TRADES AND LABOR CONGRESS OF CANADA.

That this Executive Board of the Trades and Labor Congress, having in view the growing tendency to submit industrial disputes to conciliation or arbitration, and it being a fixed principle of organized labor, we would recommend to all unions of labor in Ontario, that, as there has been an Act passed by the Ontario Legislature, commonly known as the "Preston" Bill, under which power is given to the Secretary of the Labor Bureau of Ontario, as follows:

An Act to amend the Act respecting Councils of Conciliation and Arbitration for settling industrial disputes.

His Majesty, by and with the advice and consent of the Legislative Assembly of the Province of Ontario, enacts as follows:

1. Section 4 of the Trades Disputes Act is amended by adding the following sub-sections:

(4) If any difference shall arise between any corporation or person, employing ten or more employees, and such employees, threatening to result, or resulting in a strike, on the part of such employees, or a lock-out on the part of such employer, it shall be the duty of the Registrar, when requested in writing to do so by five or more of said employees, or by the employers, or by the Mayor or Reeve of the municipality in which the industry is situated, to visit the place of such disturbance and diligently seek to mediate between such employer and employees.

(5) It shall be the duty of the Registrar to promote conditions favorable to a settlement by endeavoring to allay distrust, to remove causes of friction, to promote good feeling, to restore confidence, and to encourage the parties to come together and themselves effect a settlement, and also to promote agreements between employers and employees, with a view to the submission of differences to conciliation or arbitration before resorting to strikes or lock-outs.

Knowing Mr. R. Glockling, the present Secretary, as a man in sympathy with the work of his department, and thoroughly experienced in the operation and methods along trades union lines, the Executive recommend that labor organizations give their co-operation to make this department useful, and to the benefit of those for whom it is intended to apply.

(Sgd.) P. M. DRAPER,
Secretary.

President.

ONTARIO STRIKES AND LOCKOUTS, SEPTEMBER 1st, 1901, TO DECEMBER 31st, 1902.

Location and nature of industry.	Time of beginning and ending of strike.		Number of establishments and persons affected.		Cause of dispute.	Nature of settlement.
	From	To	Establishments.	Persons.		
Strikes.						
Aylmer:						
Laborers	May 15th	May 15th	2	15	Increase of wages	Unsuccessful.
Berlin:						
Woodworkers	March 13th	March 22nd	1	40	Refusal of employer to discharge non-union men	Settled by conciliation.
Woodworkers	April 28th	May 15th	1	48	Sympathy with discharged employee	Settled by conciliation.
Woodworkers	August 8th	1	58	Objections to condition of shop	Unsettled.
Broom-makers	July 10th	1	Men started co-operative factory.
Bowmanville:						
Piano workers	August 12th	Sept. 22nd	1	130	Refusal of employers to meet committee	Returned to work pending settlement.
Brockville:						
Cigarmakers	Jan. 25th	April 30th	1	8	For union wages	Successful.
Bridgeburgh:						
Switchmen and yardmen	April 15th	1	20	Discharge of union men	Unsettled.
Chatham:						
Journeyman tailors	Sept. 2nd	Sept. 8th	3	22	Increase of wages	Successful.
Guelph:						
Journeyman tailors	July 5th	July 14th	1	9	Refusal to work with objectionable men	Successful.
Ironmolders	Sept. 11th	Sept. 23rd	1	100	Increase of wages	Successful.
Hamilton:						
Linemen	Dec. 4th	Dec. 10th	1	12	Against reduction	Successful.
Ironmolders	March 6th	March 10th	1	32	Increase of wages	Successful.
Tobacco workers	" 26th	April 8th	1	150	Objection to system of fines	Compromise.
Smelter workers	April 10th	" 16th	1	65	Increase of wages	Unsuccessful.
Civic laborers	May 5th	May 9th	22	Increase of wages	Successful.
Electrical workers	June 17th	June 23rd	250	Increase of wages and shorter hours	Agreed to arbitrate.
Electrical workers	August 8th	August 29th	1	85	Delay in arbitration proceedings	Pending arbitration.
Hatters	" 10th	" 13th	1	8	Employment of non-union men	Successful.
Leather workers	Oct. 13th	1	6	Against reduction of wages
Horseshoers	Nov. 4th	2	4	Increase of wages
Lathers	" 8th	1	8	Refusal of firm to discharge non-union men
Knitting mill employees	" 28th	Dec. —	1	6	Against new system and reduction of wages	Amicably settled.

Kingston:										
Machinists	Sept. 25th	Sept. 30th ..	1	65	Refusal of firm to reinstate discharged employee ..	Unsuccessful.				
Journymen tailors	Oct. 8th	Oct. 11th	8	20	Increase of scale	Compromise.				
Tanners	April 1st	April 4th	1	25	Increase of wages	Compromise.				
Tinsmiths	" 24th	" 28th	12	Increase of wages	Successful.				
Machinists	" 30th	1	65	Objection to placing of handy men	Unsettled.				
London:										
Egg packers	Nov. 7th	Nov. 11th	1	4	Refused to work without stoves	Successful.				
Lindsay:										
Journymen tailors	March 29th ..	April 2nd	4	28	Increase of wages	Successful.				
Milkmen	May 15th	June 9th	1	55	Successful.				
Coopers	June 4th	" 26th	1	10	Successful.				
Ottawa:										
Painters and decorators	March 11th ..	April 21st	4	109	Increase of wages	Successful.				
Journymen tailors	" 24th	March 25th	8	47	Increase of wages	Compromise.				
Plumbers and steamfitters	August 25th ..	Sept. 24th	10	54	Increase of wages	Compromise.				
Peterborough:										
Builders' laborers	Feb. 20th	Feb. 28th	1	10	Against arrangement of hours	Returned to work.				
Port Burwell:										
Laborers	May 31	June 2	1	30	Increase of wages	Settled by conciliation.				
Stratford:										
Civic laborers	Nov. 5	1	5	Misunderstanding about supply of tools	Unsettled.				
Smith's Falls:										
Ironmoulders	March 22	March 27	1	32	Increase of wages	Successful.				
St. Catharines:										
Journymen tailors	Oct. 7	Oct. 24	8	53	Increased scale of wages	Successful.				
Ironmoulders	Sept. 29	" 11	1	50	For shorter day and time rate	Amicably settled.				
Carpenters	Nov. 17	Nov. 22	1	40	Refusal to work with men without cards	Settled by conciliation.				
St. Mary's:										
Journymen tailors	March 24	April 31	5	12	Increase of wages	Successful.				
Toronto:										
Piano workers	Dec. 23	Dec. 31	5	680	For fixed rate of wages and nine hours per day ..	Compromise.				
Stove mounters	Jan. 21	1	22	Refusal to recognize members of the union	Unsettled.				
Painters and decorators	March 31	April 15	30	215	Increase of wages and eight-hour day	Successful.				
Jewellers	April 14	June 2	2	88	Against discharge of union men	Successful.				
Woodworkers	" 16	May 1	1	95	Discharge of union men	Settled satisfactorily.				
Printers	" 16	" 1	1	9	Refusal to pay union wages	Settled by agreement.				
Street railway carpenters	" 19	May 6	1	45	Increase of wages	Returned to work.				
Carpenters and joiners	May 1	" 9	150	1,100	Increase of wages	Successful.				
Bricklayers	" 1	" 2	319	Increase of wages	Demanding 42 cents per hour ; granted 37½ cents.				

ONTARIO STRIKES AND LOCKOUTS.—*Concluded.*

Location and nature of industry.	Time of beginning and ending of strike.		Number of establishments and persons affected.		Cause of dispute.	Nature of settlement.
	From.	To.	establishments.	Persons.		
<i>Toronto.—Continued.</i>						
Lathers	May 1	May 9	75	Increase of wages	Compromise.
Carriage and wagonmakers	" 1	" 13	23	140	Increase of wages and shorter hours	Successful.
Machine woodworker	" 1	" 7	60	Increase of wages and shorter hours	Compromise.
Structural ironworkers	" 10	June 10	5	125	Increase of wages	Successful.
Building trades	31	" 5	1	65	Sympathy with ironworkers	Successful.
Marble workers	June 2	" 14	3	42	Increase of wages	Amicably settled.
Boilermakers' helpers	" 2	" 14	3	160	Increase of wages	Settled by arbitration.
Electrical workers	" 1	July 21	12	86	Increase and shorter hours	Successful.
Boilermakers	" 7	June 14	3	70	Sympathy with helpers	Settled by arbitration.
Plumbers, steam and gasfitters	" 17	July 8	250	For increase of wages	Compromise.
Street railway employees	" 21	June 24	1	1 000	For increase of wages and recognition of union	Successful.
Leather workers on horse goods	" 23	" 26	1	49	Agast system of piece work	Settled satisfactorily.
Carpet weavers	July 16	Sept. 19	Objection to clock system	Returned to work.
Ironmoulders	Aug. 16	1	30	Increase of wages	Unsettled.
Building trades	Sept. 25	Oct. 6	1	60	Refusal of contractor to recognize union	Amicably settled.
Jewellers	" 26	" 20	2	70	For reduction of hours	Suspended pending investigation.
Walkerville:						
Laborers	June 9	June 11	1	20	For shorter day at same pay	Compromise.
Windsor:						
Plumbers and tinsmiths	May 1	May 8	11	24	Increase of wages	Successful.
Carpenters and machine hands	" 19	June 24	2	24	Increase and recognition	Successful.
Berlin:						
Cigarmakers	March 15	1	12	Lockout and refused increase of wages	Secured employment elsewhere.
Hamilton:						
Journeymen bakers	May 25	1	3	Lockout and objecting to Sunday work	Unsettled.
London:						
Cigarmakers	Jan. 27	Feb. 12	1	9	The firm being refused the label	Compromise.
Orillia:						
Carriage workers	Sept. 13	1	35	Lockout for forming union	Unsettled.

STRIKES IN CANADA.

Labor disputes reported by the "Labor Gazette" for 1902 are as follows: Province of Ontario, 75; Quebec, 19; Manitoba, 8; Alberta, 1; British Columbia, 7; Nova Scotia, 10; New Brunswick, 7; Prince Edward Island, 2; aggregate labor disputes during the year, 129, involving 795 establishments and 12,788 persons, covering about 1,912 days; average number of days involved in each dispute, 9.51 or 6.68 days per person.

Total results of the 129 labor disputes were: Ontario.—Successful, 30; settled by compromise, 54; settled by arbitration or conciliation, 16; unsuccessful, 9; still pending, 11; no particulars, 4.

Quebec.—Successful, 12; settled by compromise, 2; settled by arbitration or conciliation, 1; unsuccessful, 2; still pending, 1.

British Columbia.—Successful, 3; compromised, 2; still pending, 3.

Manitoba.—Successful, 3; compromised, 2; still pending, 3.

Alberta, N.W.T.—Successful, 1.

Nova Scotia.—Compromised, 3; settled by conciliation or arbitration, 2; still pending, 4.

New Brunswick.—Successful, 2; compromise, 2; unsuccessful, 1; still pending, 2.

Prince Edward Island.—Successful, 1; compromise, 1.

Summary.

Successful.....	52
Settled by compromise..	17
Settled by conciliation or arbitration...	19
Unsuccessful.....	13
Still pending.....	22
No particulars.....	6

STRIKES IN GREAT BRITAIN.

The Report on Strikes and Lock-outs for 1901, published by the Labor Department of Great Britain, says:

The disputes of 1901 were not remarkable either for number or magnitude, and they included no stoppage of sufficient importance to overshadow all the others, as in some recent years. The aggregate duration of all the disputes in progress during the year, though below the average, was somewhat greater than in 1900, chiefly owing to an increase of stoppages in the mining industry, which, though all of a purely local description, were in some cases very prolonged. The only dispute beginning in 1901 which attracted general public attention was the stoppage from July to October in the Grimsby fishing trade, which was ultimately settled by Sir Edward Fry's award under the Conciliation Act, 1896.

The 642 fresh disputes recorded in 1901 involved nearly 180,000 work-people, or about 2 per cent. of the industrial population of the United Kingdom. The aggregate duration of disputes (new and old) during the year was about 4,000,000 working days, or about 20 days per head of those effected. The loss of time during the year, if spread over the whole industrial population, amounted to about half a day per head.

On the whole, the results of the disputes were more in favor of the employers than in the previous year. The number of actual stoppages settled by arbitration or mediation was only 41, but these included some of the

most widespread and prolonged disputes of the year. As usual, however, the principal agencies for arbitration and conciliation were chiefly concerned with the prevention of strikes and lock-outs, rather than with their settlement. Thus the various permanent Boards of Conciliation and Arbitration are known to have settled 685 cases during the year, apart from the cases dealt with under the Conciliation Act or by the mediation of individuals.

It is satisfactory to note that the first half of the present year, 1902, has been exceptionally free from serious disputes.

STRIKES IN THE UNITED STATES.

The statistical history of strikes in the United States covers the period of twenty years, which closed with December, 1900. No attempt was made before then to collect data relative to labor controversies; yet, in the United States, as elsewhere, strikes in some form had been resorted to as a means of enforcing demands and obtaining redress of real or fancied grievances, although the method was not a general one. It was during the period designated that the strike assumed importance.

The first recourse to this method occurred in 1740 or 1741, when a combination of the journeymen bakers in the City of New York, formed for the purpose of demanding an increase in wages, resulted in a strike. The instigators were tried and convicted of conspiracy, on account of their agreement not to bake bread until their wages were raised. There is no account, however, of any sentence having been passed upon them. In 1796 the journeymen shoemakers in Philadelphia indulged in a strike, or "turn-out," as it was then called, the action being ordered by the organization representing the shoemakers, for the purpose of securing an increase of wages. This strike was successful. The same trade ordered another strike in 1798, for the same purpose, and with the same result. The next year the shoemakers of Philadelphia resisted, through a strike, a threatened reduction of wages, and after being idle about ten weeks, made a compromise, so that the result was only partially successful. These were the only occasions on which strikes occurred in the United States before the nineteenth century. Industrial conditions were not particularly conducive to such controversies. Relations between masters and men were individual, so that concerted action among the men was seldom practicable.

The first strike of any importance that occurred in the nineteenth century took place in the City of New York in 1803, and was known as the "sailors' strike." At the time of their demands sailors had been receiving \$10 per month. They sought an increase to \$14. They organized a procession, compelling other seamen than those who organized the movement to join them, and thus the strike grew in proportions. The constables pursued the strikers and arrested their leader, who was lodged in jail. This terminated the difficulty.

The Journeymen Shoemakers' Association of Philadelphia, which originated the difficulties in 1796, 1798, and 1799, again sought through a strike in 1805 to secure an increase of wages. Their demands were somewhat exorbitant, ranging from 25 to 75 cents increase on each pair of shoes. After six or seven weeks of controversy, the difficulty was closed, but without success to the strikers. They were, however, tried for conspiracy.

The cordwainers of New York organized a strike in November, 1809. It was at this time that a stoppage of work in a shop by the journeymen was called a strike. A general stoppage in all shops in a particular trade

was known as a general "turn-out," and a member of an association who did not keep his obligations to his organization was denominated a "scab." Other difficulties occurred in 1815 among the cordwainers in Pittsburg, the instigators being tried for conspiracy and convicted.

A very interesting strike occurred in Medford, Massachusetts, in 1817. Medford was a shipbuilding place, and a leading shipbuilder of that town determined to abolish the grog privilege customary at that time. So he gave notice to his people that no liquor should be used in his ship-yard, and the words, "No rum; no rum;" were written on the clap-boards of the workshop and on the timbers in the yard. Some of the men refused to work, but finally they gave up their contention.

From 1821 to 1834 there were several strikes, but not more than one or two in each year. They occurred among the compositors, hatters, ship carpenters and caulkers, journeymen tailors, canal laborers, the building trades, factory-workers, shoemakers, and others. One of the most notable of these occurred in 1834 in the shoe-manufacturing city of Lynn, Massachusetts. The women shoe-binders began to agitate the question of an increase of wages. They usually carried on their work in their homes. The employers were unwilling to increase the prices paid, and at a meeting of more than one thousand binders, it was resolved that no more work should be taken home until the increase was granted. The employers refused to comply with the demands, and after four weeks of struggle the strike terminated unsuccessfully. The same year the female factory operators at Lowell engaged in a disturbance to prevent a reduction of wages.

The New York Daily Advertiser, 1835, declared that "strikes are all the fashion," and further, that "it is an excellent time for the journeymen of the country to come to this city." From that period strikes have been fairly common, often expensive, and destructive. There were no very notable strikes, however, until 1877, those which occurred prior thereto not being very important as to the number of persons engaged, or losses, or otherwise, although some of them were severe in the conditions accompanying them. After the year 1877 the greatest labor wars of the century occurred. There were strikes having a wide and far-reaching influence, which was felt in many directions, and involved the interests of parties not engaged. The first of what may be called historic strikes took place in 1877 on the Baltimore & Ohio Railroad, at Martinsburg, in West Virginia, on account of a threatened reduction in wages. The Pennsylvania Railroad Company was the victim of a most extraordinary strike, accompanied by riots and violence, and the destruction of property, at Pittsburg, in 1877. The story of the difficulty is a very long one, and the strike itself was severe in every respect. Troops were called out, Gatling guns were used, and the incident took the form of war. The county in which the strike occurred was declared by the courts to be liable for all the losses sustained through riots accompanying the strike. The amount was over \$3,500,000. The next great strike was that of the telegraphers, which occurred in the year 1883. This was followed by another memorable controversy, which took place on the South-western or Gould system of railways in the years 1885-86.

Without doubt, the most expensive and far-reaching of historic strikes was the strike of June and July, 1894, at Chicago. But the most interesting, thrilling, and dramatic incident or event in the labor movements of the country must be considered the Homestead affair of the 4th of July, 1892. The trouble grew out of a disagreement in the previous month regarding wages. On the 4th of July, the officers of the Carnegie Steel Company asked the Sheriff of the county to appoint deputies to protect the

works while they carried out their intentions to make repairs. The employees, on their part, banded themselves together to defend the works against what they called encroachments or demands to enter; in other words, the workmen took possession of the Homestead Steel Works. When the Sheriff's men approached, the workmen, who were assembled in force, notified them to leave the place. They offered, however, to act as deputies, which offer was promptly declined. On the 5th of July, a force of detectives, brought to the scene in barges, were met by a heavy volley of shots from the strikers, who were entrenched behind steel billets. The detectives were armed with Winchester rifles, but on landing they were obliged to ascent an embankment in single file, and so they were forced to retire, suffering from the opposing fire. Many efforts were made to reach the strikers, but without success, so strong was the position of the men behind their breastworks of steel. The battle continued throughout the day, and by the following morning the strikers had secured a ten-pound cannon, and planted it in such a way as to command the barges. About 9 o'clock a regular bombardment commenced. The barges were protected by heavy steel plates; so the strikers made efforts to destroy them by floating burning oil to them, and by spraying the boats with oil at the same time by means of hose. The combined movements against the detectives obliged them to throw out a flag of truce. Seven men had been killed, and twenty or thirty wounded in the battle. The arrival of the troops on the 12th of July restored the town to order.

July, 1894, witnessed another severe labor war. This was what is commonly known as the Pullman strike at Chicago, which began with a private difficulty at the works of Pullman's Palace Car Company, and ended with a practical insurrection of the labor employed on the principal railroads radiating from Chicago and some of the affiliated lines, paralyzing internal commerce, putting the general public to great inconvenience delaying the mail and in general demoralizing business. The effects of this great strike were felt all over the country, for the contest was not limited to the parties with whom it originated. The strike was brought to a close, not so much through the action of local police, state militia or the Federal troops, as by the action of the courts through the power of the writ of injunction. There were riots, intimidations, assaults, murder, arson, burglary and lesser crimes. All the attending circumstances of the strike pointed to the one conclusion, that a share of responsibility for bringing it on belonged in some degree to each and every party involved in it. A great deal of very bitter feeling was generated. It was, however, one of the most suggestive strikes that have ever occurred, for it taught the public its rights in such matters.

The year 1894 may be called the high-water mark of labor controversies, so far as magnitude is concerned, although the statistics of other years shows a larger number of establishments involved. The Lehigh Valley Railroad strike, which occurred in December, 1893, extending into 1894, the American Railway Union strike on the Great Northern Railroad in April of the latter year, and some others, emphasize the statement.

The latest of what may be called historic strikes are those of the anthracite coal regions and the bituminous coal strikes of 1895, 1897, 1900 and the so-called "steel strike" of the year 1901. The latter was a contest between the Amalgamated Association of Iron, Steel and Tin Workers and the United States Steel Corporation. It began on the 1st of July, 1901, and lasted until the 15th of September, when work was resumed in accordance with an adjustment agreed to on the 13th of the latter month. The diffi-

culty grew out of an attempt to adjust a sliding scale of wages with some of the constituent companies of the United States Steel Corporation, a new company, having \$1,404,000,000 capitalization, which was perfected after the difficulty really began. The real nut of the difficulty was not a question of wages, hours of labor or rules or conditions of work, but a contest for recognition of the association to demand the unionizing of mills, a demand, of course, which was positively refused by the United States Steel Corporation. It was the first great struggle in the United States that was conducted solely on this issue, which, indeed, has been contested many times, but usually in conjunction with some grievance or complicated with some demand as to wages or other economic condition. The result was that the Amalgamated Association did not secure the terms demanded; and it lost further, because some of the mills which were subject to the union's rules were taken out and made non-union mills. It was a disastrous experience. In many respects this steel strike is one of the most remarkable strikes of our time, yet it was conducted without any of the dramatic and tragic circumstances which attended the Homestead affair in 1892, in which the Amalgamated Association was one of the parties. In the difficulty of 1901, the association did not have the hearty indorsement of a large number of workmen, as it was not a movement to redress any grievance.

The cost of the steel strike cannot be accurately gauged, but officers of the Amalgamated Association estimate that the number of men out of employment during the strike averaged thirty thousand per day. There were at times very many more than this number out of work. The wages of the thirty thousand men on strike averaged \$3 per day, it is estimated. These are fairly conservative estimates; and, taking them for a basis, there must have been a loss of more than \$4,000,000 in wages during the strike. The steel company, through its officers, has claimed that it experienced no great loss as the result of the strike.

With this statement relative to the past and concerning some of the most prominent and destructive labor wars of the past twenty years, it will be interesting to know the statistical history covering practically the strike period of the country. There are no statistics prior to 1880, in fact the number of strikes which occurred annually before that time was so small that the statistical method could hardly be applied. From all accounts, gathered from various sources, the total number of strikes and lock-outs in the United States from 1741 to 1880 inclusive was 1,491, of which 813 occurred in the year 1880; and of those occurring in 1880, 618 were strikes, clearly defined as such. In 1879 there were only 51 conflicts, and this was the largest number for any year prior to 1880. From this statement it is seen that the real strike period of the United States begins with 1880, but the classified statistics begin with the year 1881; for the facts for 1880, collected at the time of the census of that year, were not classified as to losses, number of persons involved, etc., as they have been for the twenty years beginning with 1881.

From the Sixteenth Annual Report of the United States Commissioner of Labour the following tables, showing the main facts accompanying the strikes and lock-outs for the period from 1881 to 1900, inclusive, have been constructed:

STRIKES.

Year.	Number of Strikes.	Establishments involved.	Employees thrown out of employment.	Average duration (days).	Wage-loss of employees.	Assistance of employees by labor organizations.	Loss of employers.	Per cent. of establishments in which strikes—		
								Succeeded.	Succeeded partly.	Failed.
1881	471	2,928	129,521	12.8	\$ 3,372,578	\$ 287,999	\$ 1,919,483	61.37	7.00	31.63

Total	1,005	9,933	504,307	97.1	48,819,745	3,451,461	19,927,983	50.79	6.28	42.93

From the foregoing table relative to strikes—an analysis of the lock-out table need not be attempted, as the lock-outs constitute but a comparatively small proportion of industrial disturbances—it will be seen that the largest number of establishments involved in any one year was in 1899, being 11,317, and the next largest number was in 1886, being 10,053. The losses to employers and employees under all the conflicts, both strikes and lock-outs, occurring in the period amounted to the enormous sum of \$468,968,581, more than six million persons having been thrown out of employment for an average of 23.8 days. It is often supposed that most strikes fail; but the foregoing record shows that 50.77 per cent. of the strikes succeeded, that 13.04 per cent. succeeded partly, and that 36.19 per cent. failed.

The figures in the tables do not represent the actual number of different individual employees who were involved in strikes or lock-outs in a given year, because in many cases there have been two or more strikes or lock-outs in one concern in the same year.

Of the whole number of strikes, 14,457 were ordered by labor organizations: these represented 103,455 establishments out of a total of 117,509. Of the strikes ordered by organizations, 52.86 per cent. were successful, 13.60 per cent. partly successful, and 33.54 per cent. unsuccessful. These percentages coincide very closely with those relating to the total number of successful, partly successful and unsuccessful strikes.

The distribution of strikes offers occasion for some very serious reflections. During the twenty years included in the report, New York shows the largest number of strikes as well as the largest number of establishments affected, that State having 28.34 per cent. of the total number of strikes in the country during the whole period, and 32.20 per cent. of the total number of establishments involved. Pennsylvania follows, with 12.48 per cent. of the total number of strikes and 15.69 per cent. of the total number of establishments involved. Illinois had 11.58 per cent. of the strikes and 17.68 per cent. of the establishments affected.

As regards the employees involved in strikes, almost the same percentages are shown; but the industries most affected by strikes during the twenty years were the building trades, with 4,440 strikes, involving 41,910 establishments and 665,946 employees; coal and coke, with 2,515 strikes, involving 14,575 establishments, and 1,892,435 employees; metals and metallic goods, with 2,080 strikes, involving 4,652 establishments and 511,336 employees; clothing, with 1,638 strikes, involving 19,695 establishments and 563,772 employees; tobacco, with 1,509 strikes, involving 6,153 establishments and 251,096 employees, and transportation, with 1,265 strikes, involving 3,436 establishments and 484,454 employees. It is thus seen that of the 22,793 strikes which occurred during the period, 59 per cent. were in the six industries just mentioned, while of the 117,509 establishments involved 76.95 per cent. were so engaged. As regards the employees thrown out of employment by strikes, 71.60 per cent. of the total number were connected with establishments engaged in these six industries.

The leading causes or objects for which strikes were undertaken, together with the number and percentage of establishments falling under each general cause, are shown as follows :

Cause or object.	Establishments	Per cent.
For increase of wages	33,731	28.70
For increase of wages and reduction of hours.....	13,201	11.23
For reduction of hours	13,116	11.16
Against reduction of wages	8,423	7.17
In sympathy with strike elsewhere	4,078	3.47
Against employment of non-union men	2,751	2.34
For adoption of new scale	2,742	2.33
For recognition of union	1,649	1.40
For increase of wages and recognition of union....	1,111	0.95
For enforcement of union rules.....	1,068	0.91
For adoption of union scale	928	0.79
For reduction of hours and against being compelled to board with employer	927	0.79
Against task system	917	0.78
For reduction of hours and against task system	901	0.77
For adoption of union rules and union scale	880	0.75
For reinstatement of discharged employees	868	0.74
For increase of wages, Saturday half-holiday, and privilege of working for employers not members of master association	800	0.68
Against reduction of wages and working overtime.....	750	0.64
For increase of wages and against use of material from non-union establishment.	750	0.64
For increase of wages and Saturday half-holiday ..	729	0.62
Total of twenty leading causes	90,320	76.86
All other causes (1,383)	27,189	23.14
Total for the United States	117,509	100.00

In a group of States consisting of Illinois, Massachusetts, New York, Ohio and Pennsylvania, there were 87,878 establishments under strike during the period, out of a total of 117,509, in the whole country ; that is, in this group of States the establishments involved were 74.78 per cent. of all involved. These States contained 45.02 per cent. of all the manufacturing establishments and employed 55.15 per cent. of the capital invested in the mechanical industries of the United States.

It is interesting to note that the causes grouped and classified include 76.86 per cent. of all the establishments, leaving 1,383 causes, variously classified, active in only 23.14 per cent. of the establishments subject to strikes during the period. Three causes, involving increase of wages, reduction of hours and reduction of wages, included 58.26 per cent. of all the establishments.

The success attending strikes, in relation to their cause, is very varied. Such results are shown in the following table :

Cause or object.	Per cent. of establishments in which strikes—		
	Succeeded.	Succeeded partly.	Failed.
For increase of wages	52.77	17.38	29.85
For increase of wages and reduction of hours.....	62.49	21.08	16.43
For reduction of hours	49.43	8.66	41.91
Against reduction of hours	32.54	13.14	54.32
In sympathy with strike elsewhere.....	25.03	2.33	72.64
Against employment of non-union men	67.21	1.38	31.41
For adoption of new scale	35.34	30.09	34.57
For recognition of union	12.37	87.63
For increase of wages and recognition of union	13.41	17.46	69.13
For enforcement of union rules	89.79	10.21
For adoption of union scale	46.23	0.43	53.34
For reduction of hours and against being compelled to board with employer	32.47	67.53
Against task system	50.93	49.07
For reduction of hours and against task system.....	100.00
For adoption of union rules and union scale	64.20	5.23	30.57
For reinstatement of discharged employees	40.67	1.96	57.37
For increase of wages, Saturday half-holiday, privilege of working for employers not members of master's association.....	100.00
Against reduction of wages and working over-time	100.00
For increase of wages and against use of material from non-union establishment.....	100.00
For increase of wages and Saturday half-holiday	77.64	15.09	7.27
Total	50.44	13.53	36.03

Strikes to secure an increase of wages included 28.70 per cent. of all establishments involved, and of this number success resulted in 52.77 per cent. In strikes undertaken for both increase of wages and reduction of hours 62.49 per cent. succeeded.

In considering all the data relative to strikes, it should be remembered that it is difficult always to state the facts with complete accuracy. This is especially true when dealing with losses. Taking strikes only, while the average duration of the strike does not appear great in the aggregate, the number of days involved amounts to the enormous sum of 2,789,160, which, reduced, equals 7.6415 years. The days so lost do not represent an absolute loss, as cessation of work or production often does away with the necessity of stoppage at some other time for restricting the output to the demands of trade or making repairs.

The figures relative to losses have been collected with the greatest possible care, and, although in many cases only an estimate could be secured, the results given are believed to be a very close approximation to exact losses; but the figures are for the immediate, and in many instances only temporary, losses of employees and employers. The wage loss of the employees is the most exact statement as to losses. The employer may in some instances be subjected to an ultimate loss, by reason of his inability to fill contracts already made; so it is more difficult to ascertain his exact loss. The entire loss as estimated, including the loss through assistance and all other facts relating to losses, it is believed, is much less than the real amount.

Whatever the exact truth, the approximate statements are sufficient to convince any right-minded person that every effort that can be made to adjust differences and deal with grievances in such a way as to prevent an open outbreak should be encouraged. Such attempts, where honestly and faithfully made, are leading everywhere, whether in the United States or in

other countries devoted to manufacturing industries, to satisfactory results. The organization of private boards of arbitration now being resorted to in this country, following the long-successful example in the industries of Great Britain, is meeting with success. It is recognized now that labor conflicts grow out of increasing intelligence. The avoidance or adjustment of such conflicts must be the result of increased intelligence. Fools do not strike; it is only men who have intelligence enough to recognize their condition that make use of this last resort. With increased intelligence they will look upon the strike period as one of development, and when they shall have accommodated themselves to the new conditions, and when employers shall have recognized the increased intelligence of their employees, these matters will be handled in such a way as to prevent in the future a repetition of incidents like those which are chronicled in the statistical history of the strikes of the last twenty years.—The Hon. Carroll D. Wright, United States Commissioner of Labor, in the North American Review.

Great Britain.

The latest report published by the Labor Department of Great Britain re changes of wages and hours of labor for 1901, shows that for the first time since 1895 a decline in wages has to be recorded. In 1896 an upward movement began which culminated in 1900, when the general level of wages stood higher than in any other year for which statistics exist. It was, however, stated in the introductory note to the Eighth Report that towards the end of 1900 signs were not wanting that the period of rising wages was drawing to a close. The statistics given in the present report confirm this forecast.

In the industries for which it is possible to obtain definite statistics it is found that about 430,000 workpeople received advances during the year amounting to \$205,000 per week, while 493,000 sustained decreases amounting to \$590,000 per week. The net weekly decrease for 1901 was accordingly \$385,000, which compares with increases of \$1,045,000 in 1900 and of \$455,000 in 1899.

The decline is accounted for mainly by the fall in miners' wages, the rise in which was the predominant feature of the statistics for the years 1898-1900. The fall in wages in this industry accounted for over 80 per cent. of the total weekly decrease in 1901. A considerable decline also occurred in the metal trades, but in the remaining industries the net result for the year was a slight increase.

It is estimated that, taking into account the various dates at which the changes came into operation, the net increase in the wages bill of 1901 due to changes recorded in this report was about \$7,920,000. This compares with a net increase of \$30,000,000 in 1900.

As regards the methods by which the changes have been arranged, it is satisfactory to note the increased tendency to settle changes in wages by conciliation or arbitration. During 1901 only 2 per cent. of the workpeople whose wages were changed were engaged in disputes on this account. This percentage is the lowest recorded. In the case of three-fourths of the workpeople, the changes were arranged by conciliation, arbitration, wages board, sliding scales and similar machinery. This fact is, of course, connected with the prevalence of agencies of this kind in the coal and iron trades, which were those most affected by wages-changes in 1901.

During the first half of 1902 the fall in wages in the mining industry has continued and become even more widespread, the total number of miners

affected by reductions in this period having been no less than 625,000. On the other hand, the fall in wages in the metal trades has been much less noticeable than in 1901, and no other groups of trades show a decline.

INDUSTRIAL STATISTICS.

During the year 1902 the investigation of industrial statistics, commenced in 1901, was continued. The experience of the previous year in so far as the difficulties in obtaining information, were similar during the succeeding one. Notwithstanding that every assurance of confidence was vouchsafed by the Department, but 307 answers were received to 3,000 circulars issued, demonstrating the prediction previously expressed that the mail method of seeking such information is altogether ineffective. Time will demonstrate the value of such data. It is hoped that with increased facilities and greater confidence the data will be increased in volume and more accurate information given.

Tables 1 to 24 record the information received. Of these, but 236 were available for use in Tables A to X. The object of Tables A to X is primarily to show the relative percentage of the labor cost to the gross value of product. The value of such data naturally increases with time, when comparison year by year will show progress or otherwise in this particular direction. The tabulation shows that there were 11,484 persons employed in the 236 establishments, the aggregate number of days in operation were 68,948, the gross value of product of the 236 establishments was \$17,825,220.00—the amount paid in wages \$3,965,421.00, an average annual earning per person of \$345.29, a daily wage rate of \$1.18, the per cent. labor cost of production being 22.24 as against 21.69 in 1900, or an increase of .55 for 1902. Applying the ratio of four persons to each worker, we find that the average annual earnings of \$345.29 of the 11,484 workers support 45,936, which will allow \$86.32 1-4 for the support of each person. The gross value of the product which may be considered as the manufactured product, or the output of the 236 establishments, being \$17,825,220.00, the labor cost being 22.24 per cent., the balance of the cost of production distributed among the several accounts, as cost of material, interest, taxes, rent, insurance, miscellaneous expenses and profit, will be found to be 77.76 per cent.

It will be discovered in studying the tables and making comparisons that there are many establishments which, while being classified under similar captions, show a considerable discrepancy when the rates of wages paid to the value of the product is considered. This will be understood when it is explained that in many cases much of the material used in the manufacture by one establishment may be, and oftentimes is, the unfinished product of another. Hence, a smaller labor cost in one instance and a greater proportion of expense for labor in the other. Of course, therefore, there will be a reversal of conditions as to the cost of material, etc., in such instances.

The following circular was forwarded to 3,000 manufacturers throughout the Province :

DEPARTMENT OF PUBLIC WORKS.
BUREAU OF LABOR.

Toronto, Ont., June 6th, 1902.

To the Manufacturers of the Province of Ontario :

The Bureau of Labor of Ontario purposes continuing the investigation begun last year of the Provincial Industries, their growth and character, together with their general relation to the wage workers, in accordance with the provisions of the act respecting the Bureau of Labor, S.O., 1900, Cap. 14.

The response to the inquiry by the Bureau from the manufacturers last year, while not as complete as desired, still, considering the fact that the Bureau of Labor and the character of the inquiry being in their initial stage, was fairly good. There is little doubt that time will remove the misapprehension as to the purpose of such data now existing in the minds of many of our manufacturers.

The Bureau in seeking your co-operation in this matter gives you the fullest assurance that any information you may give will be received in the strictest confidence and will only be used in tabulated form, and in such manner as will not disclose the identity of the person supplying such information. The Bureau respectfully requests that you answer questions on enclosed schedule at your earliest convenience, and have same returned to this office in enclosed envelope—no postage required.

Thanking you in advance for this courtesy.

Yours respectfully,

R. GLOECKLING,,
Secretary Bureau of Labor, Ontario.

DEPARTMENT OF PUBLIC WORKS, ONTARIO.
THE BUREAU OF LABOR.

The following questions refer to the year ending 31st December, 1901.

- 1.—Name of firm ?
- 2.—Post office address ?
- 3.—Character of business ?
- 4.—Capital employed, including plant ?
- 5.—Number of days in operation during year ?
- 6.—Gross value of product manufactured during year ?
- 7.—Has the production increased or decreased during year ?
- 8.—If either, what per cent. ?
- 9.—Value of materials used in production during year, including fuel, gas, etc. ?
- 10.—Total taxes paid during year ?
- 11.—Total insurance paid during year ?
- 12.—Amount invested, if any, in permanent repairs or plant enlargement during year ?
- 13.—Total number of employees during year (wage earners only), male
female
- 14.—Total wages paid during year to wage-earners only, male . female
- 15.—Highest weekly wages paid, male , female .
- 16.—Lowest weekly wages paid, male , female .
- 17.—Total number of salaried clerks and officials, male , female .
- 18.—Total salaries paid to clerks, officials, etc., during year.
- 19.—Have wages been increased or decreased during the year ?
- 20.—If either, what per cent. ?
- 21.—Which class of employees has increase or decrease affected, if both, what per cent. in either case ?

RETURNS IN DETAIL FROM MANUFACTURERS.

LIST OF NATIONAL AND INTERNATIONAL LABOR
ORGANIZATIONS,

With name and address of General Secretaries, having subordinate organizations in the Province of Ontario.

Trades and Labor Congress of Canada, P. M. Draper, Box 1017, Ottawa, Ontario.

American Federation of Labor, Frank Morrison, 423-5 G. street, N.W., Washington, D. C.

Bakers' and Confectioners' (International Journeymen), F. H. Harzbecker, Room 39, Harrington Building, 236 Superior street, Cleveland, O.

Barbers' (International Journeymen) Union, W. E. Klapetsky, Room 407 Electric Building, Cleveland, Ohio.

Blacksmiths' (International Brotherhood of), Robert. B. Kerr, New Mail Building, Moline, Ill.

Boilermakers, Iron Ship Builders (Brotherhood of), W. J. Gilthorpe, Room 406, Portsmouth Building, Kansas City, Kansas.

Bookbinders (International Brotherhood of), James W. Dougherty, 216 East 76th street, New York, N.Y.

Boot and Shoe Workers' Union, C. L. Baine, 434 Albany Building, Boston, Mass.

Brewery Workmen (International Union of United), Louis Kemper, Rooms 109-110, Oddfellows' Temple, cor. 7th and Elm streets, Cincinnati, O.

Bricklayers and Masons (International Union), William Dobson, 41 Sumner street, North Adams, Mass.

Builders' Laborers (International Union).

Brick, Tile and Terra Cotta Workers' Alliance (International), George Hodge, 155 E. Washington street, Chicago, Ill.

Broommakers' Union (International), W. R. Boyer, 387 South Prairie street, Galesburg, Ill.

Carpenters and Joiners of America (United Brotherhood), Frank Duffy, Stevenson Building, Indianapolis, Ind.

Carpenters and Joiners (Amalgamated Society), Thomas Atkinson, 322 East Ninety-third street, New York, N.Y.

Carriage and Wagon Workers (International Union), C. A. Peterson, 54 Aiken avenue, Cleveland, Ohio.

Carvers' Association of North America (International Wood), M. A. Brinkman, 147 Centre street, Bellevue, Kentucky.

Car Workers, International Association of, A. D. Wheeler, 644 Prudential Building, Buffalo, N.Y.

Cigarmakers' International Union of America, George W. Perkins, Room 820 Monon Block, 320 Dearborn street, Chicago, Ill.

Clerks, International Protective Association of (Retail), Max Morris, P. O. Box 1441, Denver, Col.

Cloth Hat and Cap Makers of America (United), Maurice Mikol, 66 East 4th street, New York, N.Y.

Coopers' International Union of North America, James A. Cable, 411-412 Portsmouth Building, Kansas City, Kansas.

Coremakers' International Union, M. F. Flaherty, 101 Baxter street, South Boston, Mass.

Conductors (Order of Railway), W. J. Maxwell, Cedar Rapids, Iowa.

Drivers' International Union (Team), George Innis, Room 12, 29 Monroe avenue, west, Detroit, Mich.

Electrical Workers of America (International Brotherhood of), H. W. Sherman, Corcoran Building, Washington, D.C.

Engineers, International Union of Steam, R. A. McKee, 224 Masonic Temple, Peoria, Ill.

Engineers, Amalgamated Society of, William Delahay, 76 Ahrens Buildings, Elm and Franklin streets, New York, N.Y.

Freight and Baggage Handlers (International), Robert P. Neil, Lancaster, Penn.

Garment Workers of America, United, Henry White, Rooms 116-117 Bible House, New York, N. Y.

Garment Workers' Union (International), Ladies', Bernard Braff, 8 First avenue, New York, N.Y.

Glass Bottle Blowers' Association of the United States and Canada, William Lawner, Rooms 930-931 Witherspoon Building, Juniper and Walnut streets, Philadelphia, Penn.

Glass Workers' Union, American Flint, John L. Dobbins, Room 316, Bissell Block, Pittsburg, Pa.

Glassworkers' International Association, Amalgamated, William Figolah, 3257 Union avenue, Chicago, Ill.

Hatters of North America, United, John Phillips, 797 Bedford avenue, Brooklyn, N. Y.

Horse Shoers of United States and Canada (International Union of Journeymen), Rody Kenahan, 1548 Wazie street, Denver, Col.

Hotel and Restaurant Employees' (International) Alliance and Bartenders' International League of America, Jere L. Sullivan, 903 Elm street Cincinnati, Ohio.

Iron Moulders' Union of North America, E. J. Denny, 433 Walnut street, Cincinnati, Ohio.

Jewelery Workers' Union of America, International, J. O. Jackson, 275 Seventh street, Buffalo, N.Y.

Knights of Labor, I. D. Chamberlain, 43 B street, N. W., Washington, D. C.

Lathers' International Union of Wood, Wire and Metal, A. F. Leibig, 182 Abbey street, Cleveland, Ohio.

Leather Workers on Horse Goods, United Brotherhood of, J. J. Pfeiffer, 435 Gibraltar Building, Kansas City, Mo.

Leather Workers' Union of America, Amalgamated, John Roach, 317 N. Seventh street, Olean, N.Y.

Longshoremen's Association, International, Henry C. Barter, Wetherbee Building, Detroit, Mich.

Locomotive Engineers, Brotherhood of, Charles H. Salmons, 307 Society for Savings Building, Cleveland, Ohio.

Locomotive Firemen, Brotherhood of, F. W. Arnold, Peoria, Ill.

Machinists, International Association of, Gerge Preston, Rooms 82-85 Corcoran Building, Washington, D.C.

Marbleworkers, International Association of, Henry Roberts, 273 Porter street, Detroit, Mich.

Meat Cutters and Butcher Workmen of North America, Amalgamated, Homer D. Call, Lock Box 317, Syracuse, N.Y.

Metal Polishers', Buffers', Platers' and Brass Workers' Union of North America, James J. Cullen, 25 Third avenue, Station D, New York, N.Y.

Musicians American Federation of, Owen Miller, 20 Elm Building, Broadway and Market streets, St. Louis, Mo.

Plasterers' International Association (Operative).

Painters, Decorators and Paperhangers of America, Brotherhood of, M. P. Carrick, P. O. Drawer 199, Lafayette, Ind.

Paper Makers of America, United Brotherhood of, P. J. Ackerman, 57 Smith Building, Watertown, N.Y.

Patternmakers' League of North America, J. B. McNerney, 25 Third avenue, New York, N.Y.

Piano and Organ Workers' Union of America (International), Frank Helle, 1350 South 42nd Court, Chicago, Ill.

Plumbers, Gas Fitters, Steam Fitters and Steam Fitters' Helpers (United Association of), L. W. Tilden, 518 Ogden Building, Chicago, Ill.

Plate Printers' Union of America, International Steel and Copper, T. L. Mahan, 12 Le Roy street, Dorchester, Mass.

Printing Pressmen's Union, International, W. J. Webb, 1007 Putnam avenue, Brooklyn, N. Y.

Railway Employees of America, Amalgamated Association of Street, W. D. Macon, 45 Hodges Block, Detroit, Mich.

Railroad Trainmen, Brotherhood of, A. E. King, Cleveland, Ohio.

Railroad Telegraphers, Order of, L. W. Quick, Fullerton Building, St. Louis, Mo.

Railway Trackmen, Brotherhood of, John T. Wilson, 303 Benoist Building, St. Louis, Mo.

Rubber Workers' Union of America, Amalgamated, Clarence E. Akerston, 52 Conant street, Concord Junction, Mass.

Sheet Metal Workers' International Association, Amalgamated, John E. Bray, 313 Nelson Building, Kansas City, Mo.

Saw Smiths' Union of North America, Herbert I. Scott, 1316 Capitol avenue, N. Indianapolis, Ind.

Stage Employees' International Alliance, Theatrical, Lee M. Hart, care of Bartle's Hotel, corner State and Harrison street, Chicago, Ill.

Stereotypers' and Electrotypers' Union of North America, International, George W. Williams, 534 Warren street, Boston, Mass.

Stovemounters' International Union, J. H. Kaefer, 166 Concord avenue, Detroit, Mich.

Switchmen's Union of North America.

Tailors' Union of America, Journeymen. John B. Lennon, Box 597, Bloomington, Ill.

Textile Workers of America, United, Albert Hibbert, Box 713, Fall River, Mass.

Tile Layers and Helpers' Union, International, Ceramic, Encaustic and Mosaic, James P. Reynolds, 108 Corny street, Alleghany, Pa.

Tobacco Workers' International Union, E. Lewis Evans, Room 56, American National Bank Building, cor. Third and Main streets, Louisville, Ky.

Trunk and Bag Workers' International Union of America, Chas. J. Gille, 1522 N. 17th street, St. Louis, Mo.

Typographical Union, International, J. W. Bramwood, Room 7, De Soto Block, Indianapolis, Ind.

Upholsterers' International Union of North America, Anton J. Engel, 28 Greenwood Terrace, Chicago, Ill.

Woodworkers' International Union of America, Amalgamated, Thomas I. Kidd, 616-617 Garden City Block, Chicago, Ill.

Women's International Union Label League, Miss Ada Cable, Peoria, Ill.

EMPLOYMENT BUREAUS.

The second Bureau report (1902) contained reference to the Free Employment Bureaus established in the various countries. The principle of the Government and Municipal Free Employment Agencies is so rapidly progressing that further reference to the subject is given herewith.

The Commissioner of Maryland in his tenth annual report says :

"It seems the saddest commentary upon progressive civilization that there should be a necessity for the discussion of the subject in hand, or even the establishment of Bureaus designed to bring together employer and employee. Probably under proper economic conditions we should have ten jobs seeking the laborer, rather than ten laborers seeking the job. Indeed, with a proper observance of God's laws in the formation of society and the establishment of government such would be our actual condition. However, the laws of nature are not obeyed, and consequently we have the poor, both spiritually and financially, with us at all times. Society must face the conditions as they exist, and in striving for the ideal must adopt the best means at hand for mending the breaks that occur in economic government and the non-observance of the law of equity and justice.

Thus we are confronted many times with the condition of idle men and women anxious to work, but unable to secure it ; oftentimes because the work for them to do exists in some unknown place, and at other times because he who wants the work done does not know where to find readily the worker. Out of this latter condition grew the establishment of the middleman, or employment agency, whose task consisted in finding the man for the place and the place for the man, with both ends of the exigency to draw profit from. It is hardly possible to find out when the first private agency was started, but we can be sure it did not have a beginning until a profit was assured for the prosecution of the work. Private agencies for securing positions are not all bad institutions, nor by any means are they all good.

Investigation into these private employment agencies in every State of the Union has conclusively proven that they have been used as a means to a bad end, in addition to the legitimate profit arising from the performance of the duty contracted for.

In every State, not excluding Maryland, have these employment agencies been condemned by the investigator, and a few quotations from his report will clearly set forth the evils attached to the institution.

In 1886 Commissioner Peck of the New York Bureau of Labor Statistics in his report to the Legislature of that State, said : "In brief, the employment agency is one of the many traps and springs of the metropolis set to catch the heedless and inexperienced and teach life's hard lessons."

Hon. John McBride, Commissioner of Labor of Ohio, in his report for 1890 said: "They were leeches, engaged in sucking the life blood from the poor. These private agencies charged men and women anywhere from \$1 to \$15 for securing them employment, and in most cases they demanded and received a price for accepting an application, whether they secured a place or not. This every honest citizen knows to be wrong, because it is evident that when men and women who are willing to work and are unable to find it to do, it is sufficient for them to suffer the hardships which are inseparable from enforced idleness without taxing them for the privilege of securing work, or for the promise to secure work."

Labor Commissioner Willard C. Hall of the State of Missouri, says : "No where in this great State can be found a more perfect expression of

man's inhumanity to man than is embraced in the pernicious methods of our so-called employment offices. The song of the "Spider and the Fly" never formed a more fitting illustration of duplicity than is found in the management of these offices. They allure the honest and unsuspecting laborer seeking employment into a web of confidence, surrounded by a web of pretended sympathy and false promises, only to rob him of his earnings and turn him out disappointed and destitute."

The same commissioner, speaking of the agencies of Kansas City, says:

"In Kansas City there is one employment agency for women exclusively ; and three for both men and women ; the remainder are for men alone. With the exception of the one for women exclusively, they all have a reputation not the best in the world for veracity and conscientiousness. Many of the women applying for work are sent to houses of ill-repute. By one employment agency this is said to be done knowingly, but without the knowledge of the women thus disposed of ; while with others it is supposed to be done unwittingly."

Hon. David M. Ross of Illinois, in his second annual report, says : "The individual plan, as represented by the private employment agencies, has been justly voted an unmitigated curse. People who conduct such institutions are moved solely by the instinct of personal profit, and many of them, as experience has shown, have moved from place to place in large cities, accepting large fees from poor, unsuspecting applicants for work, with no purpose of furnishing employment. There is scarcely a private employment agency that has not exposed itself to criminal prosecution, and only official indifference to a strict enforcement of the law has saved their managers from serving time in the prisons of the State. This is a serious charge to refer against some of our fellow-citizens, but the testimony of thousands of men and women who have been robbed of the few dollars they could ill afford would fully support it. That part of the population, however, who have no last dollar to pay for a false promise of work, and who are liable to form a dangerous element in a community, are precisely the class who can get no aid from the sharks in charge of the private offices, and whose necessities can only be reached and relieved through the free offices under the management of the State."

Mr. A. B. Howard, the Maryland Labor Commissioner, in his second annual report in 1894, after a thorough investigation of the private employment agencies then existing in Baltimore City, said :

"An attempt was made to secure information from among some of the patrons of these establishments, but it was only partially successful, as many of those to whom inquiries were directed declined to answer them. Those, however, who did answer are nearly unanimous in the opinion that many of the proprietors of these employment agencies are not paragons of honesty. In fact, one of those answering, who is a well-known real estate agent, stated as his belief that some of the domestics who applied for and secured positions through these agencies are very much like "cappers" ; that is to say, they are charged with being in collusion with the agencies and accept positions assigned them. After remaining in the position for a short time they leave to take a new place, thus being a source of continual revenue to the agency. Others have stated that, though they have repeatedly paid fees of one and two dollars to secure help, not one was furnished. On the other hand, domestics report that the payment of their fees did not, by any means, insure them a position. They have been told at each succeeding visit to call again, until, tired out and disheartened, they were driven to seek a situation from other sources.

"The investigation made is convincing to my mind that were the proper authority given, evidence would be adduced to show not only that much of the difficulty experienced by employers securing help may be charged to this collusion, but that, worse still, some of these places under cover of employment agencies, are really houses of assignation."

Thus it will be seen that the decision against private employment agencies is general and sweeping in condemnation, and it is doubtful whether conditions have improved in Baltimore City to any great extent since Mr. Howard made his investigation. This Bureau has been to the trouble of looking up a number of these institutions during the past months, and endeavored to secure some data from the proprietors as to the character of their work and its extent.

We find that the number of these agencies has considerably increased, dividing up the patronage and yielding in many cases a meagre return to those who manage them. It is probable that the general resumption of work in the last year or two has had something to do with the cutting down of their patronage. At present there are known to be a about forty-five employment agencies in Baltimore, many of them being carried on by negroes..

The Bureau of Industrial Statistics prepared a blank, containing questions, which was submitted to the proprietors, and in nearly every case failed to get specific information. This is probable due to the fact that very few of the agencies keep any book or accounts other than scraps of paper or a little copy book, in which they write the names and addresses of the different applicants for situations or for help. In one particular case the lady running the agency referred us to a drawer full of small pieces of paper. When I asked her the number of applications that she had had in the year, gazing upon the mass of scraps, she said :

"Really, I cannot tell you. I never keep any account of them."

"How do you keep account of the money you receive ?" I inquired.

"Oh, I take what I can get, and more often than not after I get the situations for the girls they never come back to give me a cent. And in some cases the ladies whom I supply with help do not give me the dollar promised."

She finally said, as settling the proposition: "I carry my accounts in my head, and I know all about it."

The United Catholic Literary Association, the Charity Organization Society and various church organizations charge nothing for assisting needy persons in securing positions.

Of the number of private agencies visited we received replies from sixteen, one of which reported itself as having been in existence since 1824. Nearly all of them reported to have been in existence over one year. These sixteen reported for the year 1900 a total of 2,875 male, and 11,194 female, or a total of 14,069 applications for situations, and the same report situations secured for 1,335 males and 8,428 females, or a total of 9,763.

The charge for registering the names of applicants in six cases was reported as nothing. Two of them reported charging fifty cents for registration, and one of them, the Young Women's Christian Association, ten cents. Thirteen of the sixteen reported charging fifty cents or one dollar to the person securing the position, and one dollar to one dollar and fifty cents to the person to whom help is secured. In one or two instances the proprietors confessed that in addition to the charge above stated, when the position is a good one, they would demand a portion of the first month's salary, but they said they did not always get this.

In one case the custom in vogue was to charge one dollar for registration, which would entitle the applicant to the use of the Bureau for one year, and a charge of five dollars to the person desiring help, which guaranteed to them the services of the Bureau for one year. In all cases the proprietors of the employment agencies secure remuneration from both the employee and the employers, and I found on further investigation that they do not confine themselves to the charges above stated, but get just as much for their services as they can.

We are of opinion that some of these bureaus are used for wrong purposes, but tangible evidence is hard to secure. One institution, which is presumed to be run entirely on business principles, has established a co-operative association, and is connected with a detective agency, so that when a person secures a servant from such a source he may not be sure that an unwelcome adjunct, is not made to the household in the shape of a prying housemaid or a curious servant, who may be utilized in divorce proceedings, or in any other nefarious scheme to make money.

Very seldom do these agencies make any inquiry as to the kind of a home or surroundings into which they are sending a girl or man. They do, to some extent, inquire into the character of the man or woman.

As heretofore stated, many of the agencies existing in the City of Baltimore are conducted by colored people, who, in some instances are entirely irresponsible. Most of the proprietors of these establishments are reticent as to the amount of business they do, and their methods of doing the same, and all of them complain of the low wages offered by the employers of house help and the many hours of labor imposed upon this class of help.

The following table summarizes the work in the city intelligence offices as far as reported :

No. of Establishments.	Office opened.	Applicants for positions.			Situations secured.			Charge for registering.	Charge for securing position.	Charge for securing help.
		Male.	Female.	Total.	Male.	Female.	Total.			
1	1891	100	625	725	15	385	400	Nothing	\$1 00	\$1 00
2	1901	500	1,000	1,500	250	750	1,000	1 00*	1 00
3	1882	6,000	6,000	6,000	6,000	50 cents.	1 00	5 00†
4	1900	125	250	375	50	125	175	50c to \$1.00	1 00
5	1898	38	390	428	15	48	63	50c to \$1.00	1 00
6	1900	500	500	100	100	50 cents.	50 cents	1 00
7	1893	50 cents	1 00
8	1824	1,000	400	1,400	1,000	400	1,400	\$1.00 to 3.00	\$1.00 to 1.50‡
9	1899	600	600	1,200	10 per cent §	1 00
10	1843	100	200	300	125	125	\$1 00	1 00
11	1837	50c to \$1.00	1 00
12	1891	400	600	1,000	55	55	Nothing	1 00
13	1893	429	429	230	230	10 cents.	10 cents	1 00
14	1898	12	300	312	b	200	205	1 00
15	1896	10	10	50 cents	50
16	1901	50 cents	1 00
Total	2,875	11,294	14,069	1,335	8,428	9,763

* This charge entitles the person to a position, even if more than one attempt is made by Bureau to secure same.

† These charges entitle the person to one year's service of the bureau.

‡ This agency charges ten dollars a year to persons who desire to ask for help at any time in the year. Does a large business in railroad and farm help in the summer time.

§ Ten per cent. of first month's wages.

These figures do not fully cover the field of the efforts of the private employment agencies of Baltimore. It is safe to say that even in the prosperous year of 1900, when everybody was supposed to be employed, the employment agencies of Baltimore found positions for at least 25,000 persons, at a cost to the employees and employers of \$30,000 to \$40,000. It is unfortunate that more accurate figures cannot be ascertained.

No Licenses or State Regulation.

We find that these agencies pay no license to the city or State, are under no surveillance, nor subject to any law in the State of Maryland, and it is time that cognizance was taken of the same by our Legislature so as to correct the evils growing from the system. A license law and a State Free Employment Agency will do much for the needy employee and the anxious employer.

The Remedy—Free Bureaus.

I am well aware that there will be strong arguments made that it is not the legitimate function of the State to furnish employment to people seeking work any more than it is to give beds to the homeless and clothes to the naked, and many will say that the establishment of such bureaus is a result of a tendency to socialism.

These arguments will not seriously disturb the people now, as the tendency in this country towards a "community of interests" and an inclination of the people to do collectively that which can be better and more economically performed by collective effort is strong and growing.

The fact remains, however, that idleness begets crime and suffering, and it is the duty of the State to prevent crime, and necessarily alleviate suffering among its citizens.

Cardinal Manning said that a starving man had a right to a share of his neighbor's bread, and if the opportunity to earn that bread is taken away men will find other methods of securing it. The other methods are the "dangerous ones," and are to be avoided by a legitimate effort, both of the individual and of the State, because "these other methods" are expensive to the State and very often demoralizing to the individual.

Therefore, it is my belief that free employment agencies, under the auspices of the State, are conducive to the public welfare to such an extent as to warrant the suggestion that a free employment bureau should be established in the State of Maryland, and that private agencies of the same character should be licensed, bonded and held to a strict accountability for their doings, as in other States, where they have been tried and found effective.

History of Free Employment Agencies.

The history of the Free Employment Agency is interesting. Ohio was the first State to establish one. This was done in April, 1890, the prime features of the law being:

First: The collection of statistical data relating to the industrial interests of the State.

Second: To assist employers to secure employees.

Third: To furnish working men and women when out of employment free and reliable information as to the kind and character of employment to be had.

Under this law five bureaus were opened in the cities of Cincinnati, Cleveland, Columbus, Toledo and Dayton, on August 11th, 1890, and the annual reports of the superintendents of these offices up to January 1st, 1898, for eight years, presented the following report of the remarkable work performed: Situations wanted, 219,568; help wanted, 140,429; positions secured, 103,112.

Free employment offices were established in New York under a law approved by Governor Morton May 25th, 1896. This law, however, was substituted by another adopted May 13th, 1897. It is similar in many respects to that of Ohio, except that it placed the entire expense of the system on the State, while the Ohio law placed the burden of the expense upon the cities in which the bureaus were established.

Superintendent John J. Bealin of the New York Bureau, says:

"Since the opening of this bureau for public business on July 20, 1896, to date, January 1st, 1897, we have registered 8,040 applicants for labor, of whom 6,458 were males and 1,582 were females; and for help 332 males and 616 females—total, 948. Almost every trade and calling was represented, from the clergyman to the day laborer; from the school teacher to the ordinary domestic."

For the year which ended September 30, 1900, the New York Bureau shows that 5,625 applications for work were received; 3,505 applications for help and 2,899 situations secured.

A Free Public Employment Office was established in Montana in 1895, but in 1897 the law creating the State Bureau was repealed, and another law passed authorizing the municipalities in that State to establish such offices.

Commissioner Calderhead of the Montana Bureau of Labor, said of that bureau:

"It was never much of a success in this state, for the reason that there was not the interest displayed that the importance of the matter demanded. If the office had been established at Butte, where the demand for employment is greatest, the showing would have been very much better."

In July, 1895, an office was opened in San Francisco with a regular appropriation of one thousand dollars, which was added to by public subscriptions of prominent business men and establishments. During the first year of this bureau's existence there were 18,920 applications for employment and 7,983 persons secured employment.

In 1897 a Free Employment Department was created by law in Nebraska, but in two States, California and Missouri, the Bureaus of Labor opened Free Public Employment Offices without waiting for legislative sanction just as we have done here in Maryland.

The Commissioner of Missouri says that in the City of St. Louis, in 1897, thirty per cent. of the applicants secured employment through the department.

Subsequently the Legislature of these two States made proper appropriations, and the work was and is being pursued successfully.

In 1893 a bureau was opened in Seattle, Washington, of which the Hon. A. H. Grant, Labor Commissioner, in his report, says:

"This public employment office has been in existence for three years and nine months, during which time it has been of incalculable value in bringing together employers and employees to the number of many thousands, and has saved during this time in cash to the laboring classes fully \$25,000. In 1894 the office found work for 3,967 persons; in 1895 for 5,779, in 1897 for 11,626.

"But of all the efforts made to establish free employment bureaus under State supervision, the most successful in this country has undoubtedly been that of Illinois. From all the evidence that can be secured the law under which the Chicago offices have been established is a model of its kind. I would earnestly suggest that we emulate Illinois and follow its plan. The title of the Act establishing the office fully describes the extent to which it operates, and I venture to quote it:

"An Act to create free employment offices in cities of certain designated populations, and to provide for the maintenance, management and control of the same, and to prevent private imitations of the name of same, and regulating private employment agencies."

The Act itself provides ample means for rooms, clerk hire and advertising expenses, the advertising being the most important item for the successful establishment of a free employment bureau, as it is absolutely essential that the people seeking employment and the people seeking help should be made thoroughly acquainted with the existence of the office and the rules governing the same. The Illinois Act is too long to discuss in full—but its prominent features, namely, providing separate rooms for men and women applying for positions; that all data shall be held in confidence and not published so as to reveal the identity of anyone; requiring advertising in all the daily papers; requiring annual reports of the work of the office; prohibiting the charging of any fees; prohibiting the furnishing of any help when a strike or labor trouble of any kind is on hand; prohibiting the carrying on of a private employment agency without first having obtained a license and given bond to the State, and prohibiting any private agency from in any way simulating the Illinois Free Office.

At present the Illinois Act only creates offices in Chicago and Peoria, the latter having only recently been opened, with the following results:

During the first year that these offices were in operation in Chicago there were 44,267 applications "for situations" filed (27,811 males and 16,456 females). Of this number 32,712 got places (16,616 males and 16,096 females). The total number of applications "for help" filed during the year numbered 39,539.

These figures can be supplemented by the following, which gives an idea of the immense amount of work done by the four Chicago offices since their existence, August 2, 1899, to Nov. 9, 1901:

Applications for employment	81,970
Number of positions secured	64,420
Number unfilled	16,550
Applications for help	78,176
Number unfilled	12,756

In addition to those already mentioned a public employment registry was opened in England as far back as 1885 at Egham. Later, others were opened at Chelsea, Ipswich, Salford and still later metropolitan bureaus were established in Camberwell, St. Pancras and Westminster, all of which proved fairly successful. There is now under consideration in London the establishment of a Metropolitan Municipal Labor Bureau, with inter-communication with all other labor bureaus in the country.

The Twenty-fifth Annual Report (1902) for Ohio, gives the following summary of business of the Bureau of that State since their organization:

Summary.

From Reports of the Five Offices, with Population of Cities in which Offices are Located.

Cities.	Population.	Males and Females.					Applications filled.
		Situations wanted.	Help wanted.	Positions secured.	For situations.	For help.	
					per cent.	per cent.	
Cleveland	381,768	72,246	48,535	34,968	48 $\frac{1}{3}$	72
Columbus	125,560	53,628	41,636	28,452	53	68 $\frac{1}{3}$
Cincinnati	325,902	60,189	39,036	26,526	44	68
Dayton	85,363	73,922	54,324	36,654	49 $\frac{2}{3}$	67 $\frac{3}{4}$
Toledo.....	131,822	56,912	54,367	38,251	69	72 $\frac{3}{4}$
Grand total.....	1,050,385	316,897	237,808	165,851	52 $\frac{1}{3}$	69 $\frac{3}{4}$

The Third Annual Report of the Illinois Free Employment Offices, in summarizing the work of the four bureaus, three in Chicago and one in Peoria, for the fiscal year ending Sept. 30th, 1901, says: "The offices continue to be a boon to common laborers and farm hands. Large numbers of this class have sought and found employment. In the manual labor class the places provided applicants run up into the thousands. The classes of domestic service and transportation are also conspicuous for the number who have found employment.

The number of males who filed applications in the four offices was 16,324; number of females, 11,281, or a total of 27,605. The number of positions secured for males were 13,625; the number secured for females, 10,371, aggregating a total of 23,996 positions secured, thus showing that 87 per cent. of those applying for work secured positions.

In 1899 the Legislature of the State of Missouri passed an Act providing for Free Employment Bureaus for all cities of the State of 100,000 population. In that year St. Louis and Kansas City came under its provisions. In 1900 the census placed St. Joseph within its provisions. The Report of the Labor Commissioner of that State for 1902, show that since the establishment of their Free Employment Bureaus 48,036 persons have made application to the three offices for employment. Of this number 29,859 were placed in satisfactory positions.

The Legislature of West Virginia at the 1901 session enacted provision for the operation of a Free Employment Bureau.

On May 15th, 1901, an office was opened at Wheeling. The report for the first seven months the record shows that of 1,208 applicants 1,044 secured positions—a percentage of 86.4. The Commissioner of that State in his report for 1902, says: "It is pleasant to be able to say that the office has been patronized by many of our leading industries, and its importance has been felt over the State, and is appreciated by employer and employee.

Mr. R. B. Suthers, an English journalist, writing on the subject of Free Employment Bureaus, says: "A man is out of work. How is he to get a fresh job?"

If he is a member of a trade union, his task may be comparatively easy, always supposing there is work to be got somewhere.

His trade union Secretary will register him, and inform him of any vacancies, not only in his own town, but in distant places where his trade

is carried on. But how, if he is not a member of a trade union? In the latter case, which is the position of the bulk of the workers of this country, he must "look" for work.

"Looking for work." If it were not too tragical, one could laugh at the idiotic methods that must be employed by a man who is "looking for work."

What can he do? He can "hear" about something from his friends. He can go to the Free Library and consult the "Wanted" columns of a few newspapers. And he can tramp around from employer to employer.

Of that tramping around we have heard some pitiable stories these last few weeks.

It is one more proof of our slap-dash methods, our muddling thoroughness, that we should have no municipal or national system of bringing together two "eligible partis." whose union is in these days necessary for the production of wealth.

The employer wants the worker, the worker wants the employer, but they cannot be joined together (in wholly a matter of money) because there is no institution at which the ceremony can be performed, except in a few places.

Such an institution is the Labor Bureau. During the severe distress of 1892, twenty-four municipal labor bureaux were opened, only three of which were in the Provinces, viz., at Liverpool, Glasgow, and Plymouth.

Most of those in London were discontinued as soon as good times returned. That at Battersea is the only one which has been open all the time.

Some of the others were closed because the legality of carrying them on was questioned, but through the efforts of the London Reform Union and its hard-working Secretary, Mr. F. W. Galton, a bill was passed last session empowering the London Borough Councils to start Labor Bureaux.

The usefulness of these institutions is proved by the following figures, which were taken from a leaflet just issued by the National Reform Union :

Table showing the number of applicants at each of the five Labor Bureaux in operation in London in 1900, and the number for whom work was found during the year :

Name of Borough.	Total No. of fresh applications for work registered in the year 1900.	Total No. of applicants for whom work was found by the Bureau in the year 1900.
Battersea.....	1,289	393
Hackney.....	920	1,070
Islington.....	3,258	2,072
St. Martin-in-the-Fields.....	2,054	1,043
St. Pancras.....	2,203	1,746
Totals.....	9,724	6,324

That is to say, over 60 per cent. of the persons registered obtained employment.

When the low cost of this service is considered, the result is decidedly satisfactory. In Chelsea, during 1892, the Bureau cost the Vestry £180 12s. 7d., and it is stated that at St. Pancras the cost, beyond the use of an office and the salary of the Superintendent, who was one of the staff, did not exceed £2 a week.

But is mere cheapness the most important consideration in this question? I think not.

As in so many other cases of municipal enterprise, the gain to the community of a well-organized Labor Bureau cannot be measured in pounds, shillings and pence. If our Councillors look upon a Labor Bureau as a sop to the un-employed agitation, and take no further interest in it when good times come back, then its usefulness must be impaired, and its possibilities never realized.

Under the present system there are always a number of unemployed, and one would think that it would be unnecessary to urge the commercial advantages of a central office, where workers could hear of employment and employers could be supplied with workers quickly.

One of the drawbacks to the growth of Labor Bureaux in this country is the fact that where they have been tried the unemployed applicants have belonged largely to the unskilled trades, and employers consequently got the idea that it was no use applying there for high-class labor.

But this is a matter that could easily be remedied by the council or committee in charge of the Bureau.

If such a committee were really inspired with the desire to make the most of the Bureau, it would not be a very difficult matter to create such a reputation for the institution, that the first thought of the unemployed man or woman, in any grade of employment, would be to apply to the Municipal Employment Exchange.

We must go once more to the despised foreigner to learn how to do this thing properly.

Last week a number of representatives of English Friendly Societies were in Berlin studying the working of the Imperial system of compulsory life insurance. While there they visited the Central Bureau for unemployed workmen, which is managed by a committee of employers and workmen, in co-operation with the Imperial Insurance Department.

This institution is not a desolate outbuilding in a back yard, but a commodious building, with offices, where the unemployed are registered in different departments, and with a large hall, where the poor are provided with good food and moderate prices, and with facilities for mending their clothes and boots. Employers communicate with the exchange by telephone, and an official announces the nature of the employment.

If there are several applicants for one vacancy, the official decides between the rival claims. The office is in communication with similar bureaux in other towns, and the officials meet annually to discuss labor problems.

It was in Stuttgart, in 1895, where the first Municipal Employment Exchange was started. In the first nine months there were applications from 13,576 employers and 16,371 unemployed, 7,512 of whom found positions through this agency.

In 1899 the numbers who obtained employment increased to 17,800. This is in a town with a population of 172,000.

Copenhagen possesses a model Municipal Employment Exchange. This Bureau was opened in July, 1901. The managing committee consists of 11 members, four from employers' organizations, four from workers' organizations, two from the Municipal Council, and the Mayor, who acts as Chairman.

The Bureau is provided with separate rooms for men and women. Applicants enter the manager's room one by one. The waiting-rooms are supplied with newspapers and other periodicals, and it is hoped shortly to add a library, baths, and free medical attendance.

The applicant's name and other particulars are entered on a numbered ticket, employers being registered in a similar way.

If there is a vacancy for an applicant, he is given a numbered card, on which his own name and the employer's name are written, with two questions: "Was applicant accepted?" and "Is further assignment desired?"

These cards are post cards, addressed to the Bureau, and they are posted there by the employers so that the Manager will know whether the applicant was satisfactory or not.

The Bureau does not confine its operations to Copenhagen alone. It is in communication with other towns and if necessary will pay the fare of an applicant to a distant place, collecting the money afterwards from the employer.

In the first six months of its existence the Copenhagen Bureau found positions for 8,669 applicants, out of 19,228.

The success of these Municipal Employment Exchanges is recognized, and instead of starving and stifling them, the authorities are improving and enlarging them.

Why do we not follow their example? Every town in the country ought to have a Municipal Employment Registry. Not a wooden hut behind the municipal stables, but properly-appointed offices, with a competent manager, who would employ the most up-to-date and efficient methods for bringing together employers and unemployed.

Large cities, or districts like the Lancashire and Yorkshire manufacturing districts, might have a Central Exchange, and, if necessary, a National Bureau could be organized, so that in whatever part of the country labor was required, the information could be obtained quickly.

The cost of these institutions is not worth considering, against the saving in time, in anxiety and in poor rates which would follow their adoption.

Labor without a Municipal Employment Exchange is like an army without an intelligence department.

RECENT ONTARIO LEGAL DECISIONS AFFECTING LABOR.

(Reported by Labor Gazette, 1902.)

Accident to Railway Employee.

M. was the driver of the G. T. R. Co.'s engine No. 916, drawing a freight train from York to Cobourg, and on 26th October, 1899, was ordered to take back from Cobourg an extra freight train. Before leaving Port Hope the conductor took M. a despatch from Belleville, stating that his train, known as extra 916, "will meet 2nd 86, engine 988, at Newtonville." Second 86 was an east-bound freight. The conductor gave M. a copy of the despatch, as required by the G. T. R. Co.'s rules, and M. re-read it to the conductor, and asked him if it was all right to go, and he replied, "Yes," and gave the usual signal to start. Two miles west of Port Hope the train collided with another, called 1st 86, and M. was injured. The trial judge held that the despatch did not affect the matter. The conductor gave the order to start his train, and it was his negligence in failing to examine the train register at Port Hope before starting to ascertain whether 1st 86 had passed, as

required by rule 23, which was the cause of the accident. By the company's rule, M. was obliged to obey the conductor's orders in regard to starting a train, "unless they endanger the safety of the train," etc., and this should read as meaning "unless he has reason to believe that they endanger," etc. Judgment was therefore given for M. (reported in the March number of *The Labor Gazette*, 1901). The railway company appealed, but the Court of Appeal decided that M. was obliged to obey the conductor, that it was the negligence of the latter which was responsible for the accident of M., and that M. himself had not been guilty of any contributory negligence. The judgment in M.'s favor was therefore confirmed with costs.

In giving judgment the court said that one of the objects of the Workmen's Compensation Act was to do away with what is known in law as "the doctrine of common employment," that is, the theory that when an employee is injured by the act of a fellow-employee working for the same employer, the employer is not responsible, on the ground that risk of injury by the doing of his fellow-employees was one of the risks which the employee injured was aware of, and voluntarily took, when he entered the service of his employer.

(*Munro vs. G. T. R. Co.*: judgment of the Court of Appeal for Ontario, delivered 31st December, 1901.)

Accident Caused by Act of Person Injured.

T., a boy of sixteen years of age, was working in a furniture factory, together with another employee, G. While the latter was putting away a machine, T. put his foot under the table to touch a peg, which would stop the saw. There were three saws under the table, and T.'s leg coming in contact with one of them, his knee-cap was seriously injured. T. sued the owners of the factory for damages, but at the trial the judge found that as T. had no instructions to touch the machine in question, he had no right to attempt to do so, and that, therefore, the employers should not be held liable for the accident.

(*Thompson vs. Oliver & Son.* Judgment delivered in Ottawa by Mr. Justice McMahon, January, 1902.)

Case of Accident in a Mine.

Adams and Howe were employed to do work in a mine in the Rainy River District. One night, when the engineer blew the whistle for the men to go to work, the bucket was hanging over the open shaft, having been left by the men when they came up at 6 o'clock. The men, believing that the engineer was at his post, and that the brakes and machinery were properly applied, stepped into the bucket—four men in all—and it commenced to move, and in a moment fell away and fell down the shaft. It was stopped by the engineer after it had descended about ninety feet, but the sudden drop no doubt threw three of the men out of the bucket, for they were found at the bottom of the shaft, one of them dead, and the other two dying shortly afterwards.

The representatives of Adams and Howe, two of the men thus killed, brought actions for damages against the owners of the mine, alleging that their negligence was responsible for the accident, on the ground that the ladders and hoisting apparatus were in a defective condition at the time of the accident.

The evidence given at the trial proved that the brake, which was supposed to be strong enough to hold any weight that the hoist was capable

of lifting, had, possibly by means of wear, become loose, so that when locked in place it was not sufficient to hold the bucket with the men in it. There was some additional means used for holding the bucket in place, namely, a friction clutch, which threw the machinery into gear. If both brake and friction clutch were applied they together will hold any weight. The engineer stated that the brake was properly locked, but he could not tell the position of the friction clutch. The cause of the accident no doubt was that the brake, while locked, was not sufficient to hold the bucket with the men in it, and that the friction clutch was not properly set, and therefore the bucket fell away when the men got in.

Those suing as representatives of the deceased men alleged (1) that the ladders provided for use by the men in going into the mine were in a defective condition, inasmuch as (a) they did not comply with the requirements of the Mines Act, and (b) that they were insufficient in number to enable the employees to enter the mine safely. (2) That owing to the defective condition of the ladders, they used the bucket to go down the shaft, and that the management authorized its use; that the bucket, being a common ore bucket, was unsuitable for the purpose, and the mine owners were negligent in not providing a suitable means for the men getting to their work. (3) That the hoisting apparatus was defective in that the brakes were not in proper working order, and had not been in proper working order for some time prior to the accident, to the knowledge of the mine owners or their foreman. The defendants denied negligence, and alleged: (1) That as the mine was in process of development, the ladders were as good as could reasonably be expected, and, having regard to the mine, that they were suitable for the purpose, and that there was no occasion for the men to use the bucket. (2) That the men using the bucket did so at their own risk. (3) That the men were guilty of contributory negligence in getting upon the bucket on the night of the accident without first ringing the bell, so as to make sure the engineer was in his place.

The trial judge decided that the facts were as alleged by the representatives of the deceased men, and that the accident was caused by the defective machinery and plant of the mine, for the unsafe condition of which the owners were responsible. It is also held that the deceased had not been guilty of any contributory negligence. Judgment was therefore given against the owners of the mine, who were directed to pay certain sums as damages to the representatives of the deceased.

(Adams vs. Culligan; Howe vs. Culligan. Judgment given by Chief Justice Falconbridge, at Toronto, January, 1902.)

Infringement of Trade Mark Registered by Trade Union.

H. Robinson, Secretary of the Journeymen Tailors' Union, brought an action against one MacLeod, a merchant tailor, to restrain the latter from using or selling any clothing having attached or fastened to it, or upon it, a certain label or mark which, it was alleged, was an imitation of the trade mark registered by the Journeymen Tailors' Union. The case was decided purely on the questions of fact involved, and the Judge therefore did not give any opinion as to whether a trade mark registered by a trades union (as was the one alleged to have been infringed), came within the provisions of the Trade Mark and Design Act. He found on the evidence that McLeod did not use or issue any fraudulent imitation of the trade mark of the union, and therefore dismissed the action with costs.

(Judgment delivered by Mr. Justice Britton, at Toronto, Feb. 1, 1902.)

The Requirements of the Factories Act.

L. brought an action for damages against the Toronto Biscuit Company, for injuries sustained by him when stepping on an elevator in use in the factory of the company. Section 20 of the Ontario Factories Act provides that the openings to elevators shall be kept in the manner therein stated, unless the Government Inspector directs otherwise. The jury found that the opening to the elevator in question was not kept in the manner required by the Act, but in answer to another question, the jury also stated that the Government Inspector had led the company to believe that the elevator complied with all the requirements of the Act. All the other questions submitted to the jury were answered in favor of L.; but it was contended that the fact that the jury decided that the Inspector had led the company to think that the elevator was in accordance with the provisions of the Act absolved the company from any responsibility for any accident which occurred through the elevator being otherwise. The Judge, however, held that this was not so, and that therefore the plaintiff was entitled to obtain damages. L. was therefore awarded \$300 with costs.

(Leeder vs. Toronto Biscuit Company. Judgment given at Toronto, by Meredith, C. J., January 21, 1902.)

The Lord's Day Observance Act.

The Court of Appeal for the Province of Ontario has, within the last few weeks, given its decision upon the questions submitted to it by the Government of that Province, regarding the validity of the Act passed by the Ontario Legislature (Revised Statutes of Ontario, 1897, chapter 246), respecting the Observance of Sunday, and kindred points.

It will be noticed that the Chief Justice of Ontario differed from the majority of the court upon the first question submitted, he being of the opinion that the Legislature of Ontario had no jurisdiction to enact the statute which is now chapter 246 of the Revised Statutes of Ontario, 1897, while the other Judges came to the conclusion that that enactment was within the powers of the Legislature.

The other questions are such, and the answers hereto are so different, that it appears advisable to give them both word for word in order that the whole matter may be clearly understood. The questions and the answers of the Judges are, therefore, given below :

Questions.

1. Had the Legislature of Ontario jurisdiction to enact chapter 246 of the Revised Statutes of Ontario, 1897, entitled: "An Act to prevent the profanation of the Lord's Day," and in particular sections 1, 7 and 8 thereof?

2. (a) Had or has the Legislature of Ontario power by the aforesaid Act, or any Act of a similar character, to prohibit the doing or exercising of any worldly labor, business or work on the Lord's Day within the Province upon and in connection with the operation of lines of steam, or other ships, railways, canals, telegraphs and other works and undertakings to which the exclusive legislative authority of the Parliament of Canada extends under the British North America Act, section 91, sub-section 29, and section 92, sub-section 10, a, b, c?

(b) Had or has the Legislature of Ontario power to prohibit the doing or exercising of any worldly labor, business or work, on the Lord's Day within the Province, when such prohibition would affect any matter to

which the exclusive legislative authority of the Parliament of Canada extends under any other sub-section of said section 91, as for example, sub-sections 5, 10 and 13.

3. In section 1 of said statute, R.S.O., chapter 246, or the Consolidated Statutes of Upper Canada, chapter 104, as the case may be, do the words "other person whatsoever" include all classes or persons other than those enumerated who may do any act prohibited by said section, or is the meaning of these words limited so as to apply only to persons *ejusdem generis* with the classes enumerated?

4. Subject to the exceptions therein expressed, does said section 1 prohibit individuals who for or on behalf of corporations do the labor and work, or exercise the business of carrying passengers for hire from doing such labor and work, and exercising such business on the Lord's Day, whether the corporations for or on behalf of which the work or labor is done are or are not within the prohibition of said section?

5. Do the words "conveying travellers," as used in section 1, apply exclusively to the carrying to or towards their destination of persons who are in the course of a journey at the commencement of the Lord's Day?

6. Does the said section 1 apply to and include corporations?

7. (a) Do the words "work of necessity," as used in section 1, apply so as to include the doing of that which is necessary for the care or preservation of property so as to prevent irreparable damage other than mere loss of time for the period during which the prohibition extends?

(b) If so, is the necessity contemplated by the statute only that which arises from the exigency of particular and occasional circumstances, or may such necessity grow out of or be incident to a particular manufacture, trade or calling?

(c) If such necessity may grow out of or be incident to a particular manufacture, trade or calling, do the words "work of necessity" apply exclusively to the doing on the Lord's Day of that without which the particular manufacture, trade or calling cannot successfully be carried on during the remaining six days of the week?

Opinion of Chief Justice Armour :

I, the Honorable John Douglas Armour, Chief Justice of Ontario, do hereby certify my answers to the questions arising under "The Act to Prevent the Profanation of the Lord's Day" submitted to the Court of Appeal for hearing and consideration.

As to question 1 so submitted, I am of the opinion that the Legislature of Ontario had no jurisdiction to enact chapter 246 of the Revised Statutes of Ontario, 1897, entitled, "An Act to Prevent the Profanation of the Lord's Day" in its present form, and to the full extent of its provisions.

The profanation of the Lord's Day is an offence against religion, and offences against religion are properly classed under the limitation "crimes," and consequently the enacting of laws to prevent the profanation of the Lord's Day and imposing punishment therefor by fine, penalty or imprisonment properly belongs to the Parliament of Canada, under sub-section 27 of section 91 of "The British North America Act," and to this extent chapter 246 of the Revised Statutes of Ontario, 1897, is beyond the power of the Legislature of Ontario.

The consequence of this opinion is that to this extent chapter 104 of the Consolidated Statutes of Upper Canada is still in force, never having been repealed by competent authority.

And as a result of this opinion I answer question 2 a and b in the negative.

As to question 3, I may say the meaning of the words "other persons whatsoever" in section 1 of chapter 104 of the Consolidated Statutes of Upper Canada, is limited so as to apply only to persons *ejusdem generis* with the classes enumerated.

I answer questions 4, 5 and 6 in the negative.

As to question 7a, I answer in the affirmative, and as to b, I say that such necessity may grow out of or be incident to a particular manufacture, trade or calling, and I answer c, in the negative.

(Sgd.)

J. D. ARMOUR,

C. J. O.

Opinion of Mr. Justice Osler.

Questions submitted by the Lieutenant-Governor in Council as to the construction, effect, and meaning of certain sections of the Lord's Day Act.

Question I. My answer to the first question is in the affirmative, referring for my reasons to my judgment in the case of *R. vs. Watson*, 17 A. R., at pp. 221, 238.

2a, 2b. I answer these questions in the negative.

3. The first branch of this question I answer in the negative.

The second branch in the affirmative.

4. I answer this question in the negative.

5. I answer this question in the negative.

6. I answer this question in the negative.

My reasons for these answers will be substantially found in the decisions in the cases of *Attorney-General vs. Niagara Falls and Tramway Company*, 18 A. R., 453; *R. vs. Somers*, 24 Ont. R., 244; *Attorney-General vs. Hamilton Street Railway Co.*, 24 A. R., 170; *Regina vs. Reid*, 26 A. R., 181; 30 O. R., 732.

7a, b, c, I find it difficult to understand the scope of these queries or their true meaning, and to answer them in such a way as not to make the answers of doubtful application in many of the ever varying circumstances and conditions which may from time to time hereafter arise between parties in a real litigation.

I must, therefore, with all respect ask to be excused from attempting to solve them, as no useful answer can be given to them.

Further, with the like respect, I submit that while it may be reasonable and proper to take the opinions of the Bench as to the constitutional validity of an Act or section of an Act, it is not convenient that the power of the Lieutenant-Governor in Council, under chapter S4, R.S.O., 1897, should be exercised by asking the Judges to answer questions such as number 3, and the following questions, assuming that the Act ever contemplated the submission of such questions. They relate to matters which I humbly submit ought to be left for decision when they are raised in actual litigation in the application and construction of legislative enactments with reference to an existing state of facts. When they are presented as they here are presented in *scena* and not in *foro*—argued and decided academically and not judicially—the answers are likely to embarrass and perplex Judge and parties, who may afterwards have to deal with such questions or similar questions arising under varying facts and circumstances as they may be presented in actual litigation. More especially is this likely to be

the case where answers to abstract questions are intended to be or may be made use of by inferior judicial officers, justices of the peace, police magistrates, etc., in summary proceedings before them.

I must add that I reserve as in former similar cases I have reserved the right to arrive at a different opinion upon all or any of the questions I have answered except in so far as I may be precluded by authority from doing so should they or any of them again come before me in the course of actual litigation.

(Sgd.)

F. OSLER.

Opinion of Mr. Justice MacLennan.

I am of opinion that the questions submitted to us should be answered as follows :

Question 1. Yes.

Question 2 (a) and 2 (b). No.

Question 3, first branch. No.

Question 3, second branch. Yes

Question 4. No.

Question 5. No.

Question 6. No.

Questions 7 (a) 7 (b) and 7 (c). I have given a great deal of attention to these questions, and to the arguments which were addressed to us, and must confess my inability to answer them. In order to do so it appears to me one would require to arrive at an exhaustive definition of "works of necessity," a definition limiting the extent of the signification of the words, and including every conceivable work to which they could apply. I have not found myself able to do that; and must therefore respectfully pray to be excused from answering those questions.

(Sgd.)

JAMES MACLENNAN.

Opinion of Mr. Justice Moss.

In the matter of Chapter 84 of the Revised Statutes of Ontario, 1897 ;
And of certain questions arising under "The Act to prevent the profanation of the Lord's Day," referred to the Court of Appeal for hearing and consideration.

I have considered the case stated and the questions submitted.

A number of the questions appear to me to be covered by authority, and in the answers I give as respects such questions, I am stating what I understand to be the law as declared by the decisions of the Courts or the effect of the preponderance of authority where there have been differences of opinion.

I am of opinion that the questions submitted should be answered as follows :

Question No. 1. In the affirmative.

Question No. 2 (a). In the negative.

Question No. 2 (b). In the negative.

Question No. 3. The first branch in the negative ; the second branch in the affirmative.

Question No. 4. In the negative.

Question No. 5. In the negative.

Question No. 6. In the negative.

Question No. 7 (a), 7 (b) and 7 (c). Upon the same ground and for reasons similar to those stated by my brother MacLennan, I must respectfully ask to be excused from making any further answer to these questions.

To undertake to answer them would be to endeavor to give an exhaustive definition of "works of necessity" or to lay down a series of abstract propositions not having application to any particular case or set of circumstances, a thing dangerous to attempt, and if attempted likely to lead to embarrassing and possibly mischievous results when afterwards sought to be applied to actual cases.

And upon similar considerations I beg leave to reserve the right to reconsider the answers I have given (except of course in regard to such as are already covered by binding authority), should they, or any of them arise in course of actual litigation.. (Signed) CHARLES MOSS.

Case of Excessive Damages.

M. was employed by a pulp and paper company, and in the course of his work was obliged to climb a step-ladder, and step over the unguarded rim of a cog wheel on to a plank where he did his work. As M was coming from his work another employee took away the ladder as he was stepping on it, and in regaining his balance his leg went through the spokes of the wheel and he was seriously injured. He sued his employers for damages, alleging the accident was caused by their negligence, and the jury found that such was the case, and that M himself had exercised all proper care. The jury found also that the accident was only to a certain extent caused by the negligence of the employee who moved the ladder, since if the wheel had been properly guarded and the ladder had been securely fastened to the floor the accident would not have occurred in any event. It was also found that the wheel was a dangerous part of the mill, and that since it had not been guarded as well as possible, the employers were responsible for the results of their negligence in that respect.

The employers appealed from the judgment upon these findings, but the court held that they were warranted by the evidence and therefore could not be changed. It was considered, however, that the damages awarded at the trial were excessive, and it was therefore ordered that there should be a new trial, upon that ground, unless the plaintiff consented to a reduction of the same. (Myers vs. Sault Ste Marie Pulp and Paper Company. Judgment of the Court of Appeal for Ontario, April 12, 1902.)

Case of Accident on Foundry Premises.

F was employed as a teamster by a firm of coal merchants. His employers sold a quantity of coal and coke to the proprietors of a foundry, and while F was delivering it there he was struck in one eye by a chip from an iron pipe, which was about ten feet from him, and at which one of the foundry employees was then working with a hammer and chisel. F sued the owners of the foundry for damages, alleging that the accident was occasioned by the dangerous condition of their premises. A jury found that the accident was caused as F claimed, and that the danger could have been avoided by having either a movable or stationary screen in front of the pipe on which the employee was working. F was therefore awarded \$400 damages.

The owners of the foundry then appealed, but the court held (1) that the conclusions of the jury were supported by the evidence; and (2) that it was

The legal duty of the foundry proprietors to guard F from such danger arising from the condition of their premises. The judgment given at the trial in favor of F was therefore affirmed. (*Fallis vs. Gartshore-Thomson Pipe Foundry Company*. Judgment rendered by the Court of Appeal for Ontario, May 8, 1902.)

A Case Under the Factories Act.

A. Moore, a boy of 14 years of age, was working in a factory straightening some pieces of wood, as directed by the foreman. He was near a machine called a "dove-tailer," and putting his hand on it to brush off some dust he became entangled in it, and lost one of his arms. He sued his employers for damages, alleging that the accident was caused by their negligence. At the trial the jury found that the knives of the machine were not guarded as far as practicable, and that the employers had been negligent in this respect, and that their negligence had caused the accident. The jury also came to the conclusion that the boy had used reasonable care, taking into consideration his age, and awarded him \$500 damages.

The judge who presided at the trial, however, dismissed the action notwithstanding the findings of the jury, being of the opinion that the only question was, whether or not the boy was capable of understanding the danger of interfering with such a machine.

From this judgment the employee appealed, and the higher court decided that since the object of the Factories Act in providing that all dangerous parts of machinery should, as far as practicable, be securely guarded, was for the protection not only of those operating such machinery, but also of those whose work brought them near it, and since the employers in this case had neglected to properly guard the machine, it was their act of deliberate neglect which had caused the accident.

The Court of Appeal also stated that there was no hard and fast rule as to the age at which an infant should be held to be capable of understanding danger, and that, as in this instance, the jury had found that the boy had used reasonable care considering his age, that, finding negatived the suggestion of contributory negligence.

The Court of Appeal, therefore, reversed the decision of the trial judge and ordered that judgment should be entered for the boy for \$500 and costs.

(*Moore vs. the J. D. Moore Company*. Judgment delivered at Toronto by the Court of Appeal for Ontario, April 11, 1902.)

Case of Accident to Railway Employee.

Isaac Van Allen was engaged as a brakeman by the Canadian Pacific Railway Company. He was working as such as one of the crew in charge of a freight train running from Chalk River to Carleton Place, when the engine broke down and became unable to pull the train. It was, therefore, decided to leave the cars and proceed with a van to Carleton Place. Van Allen went in the cupola of the van. On the way a freight train which had been in the rear collided with the van, which was broken and set on fire, Van Allen being instantly killed.

Van Allen's parents sued the Canadian Pacific Railway Company for \$3,000 damages.

The evidence given at the trial was somewhat contradictory, those in charge of the train which came behind saying that they saw no lights ahead, although it was stated by the crew of the first train that the same were displayed.

The jury finally brought in a verdict in favor of the plaintiffs, who were awarded \$1,000 damages.

(Van Allen vs. Canadian Pacific Railway Company. Judgment at the Perth Assizes, May 1st, 1902.)

Decision Under the Alien Labor Act.

An interesting decision under the Alien Labor Act was recently given by the Police Magistrate of the City of Toronto.

The facts of the case were briefly as follows: F. B. Hayes, Secretary-Treasurer of the Toronto Carpet Company, Toronto, while in Lowell, Mass., engaged Pierre Derocher to work at the factory in Toronto. Pierre, however, stipulated that his brother, Fred Derocher, should also be engaged, and to this Mr. Hayes agreed. But so far as Fred Derocher was concerned no exact arrangement was made regarding the wages which he should receive, it only being said that he should "get a show."

Subsequently, the Carpet Weavers' Union laid the information against Hayes, stating that he had infringed the Alien Labor Law. At the trial it was proved that although Pierre Derocher had lived for over twenty years in the State of Massachusetts, yet he had been born in Canada and had never been naturalized, and, therefore, as he was still a British subject, the case against Hayes as regards his employment, was dismissed.

The action regarding the engagement of Fred Derocher, however, was shown to be on a different basis, for the latter was born in the United States. It, therefore, turned upon whether or not there was an infringement of the Alien Labor Law, when, as a matter of fact, Fred Derocher had not been engaged to do any specific work for any specific wages but had only been told that in Toronto he would be "given a show" in the Carpet Factory. The Police Magistrate held that this constituted a tacit agreement between Hayes and Fred Derocher which amounted to a violation of the Act. Mr. Hayes was therefore fined fifty dollars (the minimum amount under the Act.)

It may be added that the Act to restrict the importation and employment of aliens makes it an offence "in any way to assist or encourage the importation or immigration of any alien or foreigner into Canada, under contract of agreement, parole or special, express or implied, made previous to the importation or immigration of such alien or foreigner, to perform labor or service of any kind in Canada."

(R. vs. Hayes. Decision of the Police Magistrate of the City of Toronto, rendered August 25th, 1902.)

Conviction for Using Union Label for Non-union Goods.

In a recent prosecution under the Inland Revenue Act a conviction was obtained because a cigar dealer had sold a number of non-union cigars in a box bearing the union label.

The dealer was charged with a violation of Section 320 of the Inland Revenue Act (being Revised Statutes of Canada, Chap. 34). This section reads as follows:

"Every manufacturer of tobacco or cigars, and every other person who, except as permitted by this act, packs, puts up or has in his possession tobacco or cigars in packages which have been before used for that purpose, shall, for the first offence, incur a penalty of ten dollars for each box or package so unlawfully used, and for each subsequent offence a penalty of fifty dollars for each box or package so used."

The chief evidence given was that of a person who stated that he was acting for the Cigarmakers' International Union, No. 55. It appeared that, giving an assumed name, he told the dealer that he wanted to buy one thousand of a certain brand of cigars, but that it was necessary they should have the union label. He admitted in his evidence that he did not think he could get one thousand cigars of that kind with the label, because the manufacturers had stopped making union cigars, and that his object was therefore to find out if the dealer was selling non-union cigars in boxes bearing the union label. He added that the dealer promised him the cigars in boxes bearing the union label; that he said he would take one box in advance, and that the dealer then took fifty cigars from the non-union box and put them into a box bearing the union label, and said that he would do the same with the remainder of the order. The dealer himself gave evidence to the effect that he had changed the cigars from one box to the other at the suggestion of the purchaser, the preceding witness. He also said that he had given the purchaser the box from which the cigars had been taken as well as the union box into which they had been put at his suggestion.

The Police Magistrate dismissed the case, which was then appealed to the County Court judge. Before the latter it was argued that the Inland Revenue Act was only for the protection of the government, and that as the government had not lost any money or had not been defrauded by the transaction in question there could be no conviction under the Act.

The court held otherwise, however, and convicted the cigar dealer, who was fined ten dollars.

(Miller vs. Engel. Decision of Judge Monck, rendered at Hamilton, August, 1902.)

The Legal Position of Labor Unions.

A decision recently given by the Master in Chambers at Toronto shows that the tendency in this country is to place labor unions in the same position as incorporated bodies, as regards their liability to be sued, following in this respect a recent decision given in the English courts. The point arose in an action taken by the Metallic Roofing Company against the Local Union No. 30 of the Amalgamated Sheet Metal Workers' Association, as well as against several individual strikers. The union made an application to have it declared that it could not be sued as a union. The Master in Chambers, however, stated that that was not his opinion, but instead of dismissing the application he allowed it to be continued, so that the point could be decided by the higher court at the trial. The Master in Chambers added that his opinion on the subject agreed with that given by Mr. Justice Meredith in the case of the Massey-Harris Company vs. Woodward, where his Lordship is reported to have said: "*Prima facie* the union has some legal existence. The name is indicative of such as used by its members. It has a constitution and by-laws, and was formed under the charter of the Iron Moulders' Union of America, issued under what seems to be the common seal of that body, of which the union here is apparently a part. One naturally thinks that the larger body, at all events, must be incorporated somewhere, or otherwise have some legal existence and capacity, and it might not be difficult to throw considerable light upon the matter at the trial."

In the Massey-Harris Co. vs. Woodward, however, the application was also continued until the trial, but as the case was settled before the trial, the point was never decided by the court.

(Metallic Roofing Company vs. Local Union No. 30, Amalgamated Sheet Metal Workers' Association.—Decision given at Toronto, September 10, 1902.)

Liability of Strikers for Picketing.

An interesting decision respecting the liability of employees on strike for inducing others to break contracts which they have previously entered into with their employers was recently decided by the police magistrate of Kingston.

It appeared that a number of men employed by the Canadian Locomotive Works Company, Kingston, had, on account of some dispute, gone on strike. Some time afterwards, the company summoned three of these former employees (who were also members of the local union), for picketing, and for inducing one of its employees to break his contract. The evidence was to the effect that a machinist from Dundas, engaged by the company under a contract whereby he was paid twenty-two cents an hour by the company and a bonus of \$5 per week, for at least four weeks, by the Amalgamated Metal Association, was induced to stop work by the accused. It appeared that they had intercepted this man near the company's works and elsewhere upon various occasions, and had advised him to leave the town. Eventually, one of the accused lent him the sum of \$5 to enable him to leave, as he thereupon did. The police magistrate found the accused guilty, and fined them each \$50 and costs. It is stated that an appeal will be taken from this decision.

The section of the Criminal Code which applies to such cases is as follows :

"Every one is guilty of an indictable offence and liable, on indictment or on summary conviction before two justices of the peace, to a fine not exceeding one hundred dollars or to three months' imprisonment, with or without hard labor, who, wrongfully and without lawful authority, with a view to compel any other person to abstain from doing anything which he has a lawful right to do, or to do anything from which he has a lawful right to abstain.

"(a) uses violence to such other person, or his wife or children, or injures his property ; or

"(b) intimidates such other person, or his wife or children, by threats of using violence to him, her or any of them, or of injuring his property ; or

"(c) persistently follows such other person about from place to place ; or

"(d) hides any tools, clothes or other property owned or used by such other person, or deprives him of, or hinders him in, the use thereof ; or

"(e) with one or more other persons, follows such other person, in a disorderly manner, in or through any street or road, or

"(f) besets or watches the house or other place where such other person resides or works or carries on business or happens to be."

An Action Under the Workmen's Compensation Act.

One Charles Armstrong, employed by the Canada Atlantic Railway Company, was engaged in shunting cars in the yard of that company at Ottawa, when he received injuries which resulted in his death.

His widow brought an action under the Workman's Compensation Act against the railway company for damages, alleging that the accident was caused by certain negligence on their part. Now that act requires that, in the case of any action being brought under it, notice of the accident upon

which the accident is founded shall be given to the proposed defendant within twelve weeks from the date of the accident, and the action itself shall be commenced within twelve months from the time of the death of the person injured, when the accident has resulted in death.

In this instance the action was brought within the proper time, but notice of the accident had not been given to the company within the twelve weeks, and, on that ground, amongst others, the judge at the trial held that there was no right of action under the act, and, therefore, dismissed the action.

The plaintiff appealed, and a Divisional Court held that as the evidence showed that the company was well aware that Armstrong had been killed in its yard, whilst in its employment, and whilst engaged in its work, and as the notice of the accident, if it had been given, would have given it no information which it did not possess before, that afforded a reasonable excuse for not giving the notice. It was said that the whole object of requiring notice of the accident to be given was attained by the knowledge of the company of the occurrence of the accident at the time, and the cause of it, and that it had not been proved that it had been in any respect prejudiced by the notice not having been given. A new trial was, therefore, ordered, the costs of the former one to be paid by the defendant company. From this decision the company appealed to the Court of Appeal, and which tribunal allowed the appeal.

Regarding the question of notice, the higher court agreed with the Divisional Court, but the appeal was allowed on the ground that the trial judge was right in holding that there was no evidence of negligence which could be submitted to a jury. The deceased was killed by being run into by an engine on a track known as "track No. 5." There was no evidence to show exactly how he came to be there. The action was brought on a supposition that he was walking on a space between track No. 4 and No. 5; that this space (which was admitted to be the "way" within the meaning of the Workmen's Compensation Act) was defective by reason of snow and ice having been allowed to accumulate thereon to such an extent as to render it unsafe and difficult to walk upon, and that deceased in so walking there had slipped and fallen on to track 5, where he was struck by the engine. On the other hand it was contended that he was walking along track No. 5 when he was struck, in which event there was no liability on the part of the railway company, as there was no evidence of negligence regarding either the condition of the track or the management of the engine.

Regarding the important question of the notice of the accident required by the Workmen's Compensation Act, the following interesting remarks were made by Mr. Justice Osler in giving the judgment of the Court of Appeal:

"In order to justify the exercise of the power to dispense with the notice of injury, etc., prescribed by section 9, it should appear (1) that there was some reasonable excuse for not having given notice, and (2) that the want of it has not prejudiced the defendants in their defence.

"What may constitute reasonable excuse for not giving notice is not defined, and must depend very much upon the circumstances of the particular case.

"The notoriety of the accident is one element, and the employer's knowledge of it and that the workman or his representative is in fact making a claim upon him in respect of it, is another. Both these circumstances concur in the present case, and there is the additional fact that the employers took the claim into consideration but never gave the plaintiff a final answer.

"Altogether, I think it might very properly have been held at the trial that there was reasonable excuse for the want of notice, and also, as the defendants had all the knowledge of the accident, and claim that the most formal notice could have given them, that the want of it had not prejudiced them in their defence. I therefore agree with the judgment of the Divisional Court on this point. I cannot but think that reasonable excuse for want of notice may be very slight indeed, where the occurrence of the accident appears to have been well known to the employer, and a bona fide claim for compensation therefore has been made, inasmuch as the judge had power under section 14 in the alternative, and simply in his discretion, and on such terms as he may think proper, to adjourn the trial of the action to enable notice to be given."

The decision of the Divisional Court in this case was reported at pp. 241 of Volume 2 of the Labor Gazette, but it was incorrectly referred to as a judgment of the Court of Appeal.

Armstrong vs. Canada Atlantic Railway Company. Judgment given by the Court of Appeal at Toronto, September 19, 1902.)

Conditions in Accident Insurance Policy.

M, who was a baggageman, employed at a railway station, took out an accident insurance policy, in which his occupation was so described. The policy stated that if he was injured in any occupation or exposure which was classed by the insurance company as being more hazardous than that of baggageman he should only receive whatever insurance the premiums he had paid would have purchased if he had said he was engaged in the more hazardous business. Another clause of the policy provided that no insurance should be paid if death was caused by voluntary exposure to unnecessary danger. M was killed while coupling cars, which was not part of his duty as a baggageman. The insurance company, therefore, claimed that the accident came within the exceptions above mentioned. The evidence showed that M had coupled cars on other occasions, and that in this particular instance he thought that the brakeman had requested him to make the coupling.

The court decided that the words "occupation or exposure" did not include the casual act of coupling; that there was not any "voluntary exposure to unnecessary danger," and that, therefore, the representatives of M were entitled to the sum for which he was insured.

An appeal was made to the Court of Appeal and subsequently to the Supreme Court, both of which confirmed the judgment given at the trial in favor of M's widow. In the Supreme Court it was also held that the facts showed that M was in the habit of coupling cars frequently, and therefore would not consider the operation dangerous, and therefore there was "no voluntary exposure to unnecessary danger" within the meaning of the second condition of the policy.

(Canadian Railway Accident Insurance Company vs. McNevin. The Supreme Court Reports, Vol. 2, page. 194.)

Negligence in Not Providing Guard.

F was a teamster employed by the firm of G. & Company, which had a contract for supplying the Gartshore-Thompson Pipe and Foundry Company with coke. F had been delivering coke to the Gartshore Company for about four weeks when, on December 13, 1899, while delivering a load as usual,

putting the coke into the bin provided for it, he was struck in the eye and seriously injured. The injury (as F claimed, and as the jury subsequently found to be the fact) was caused by a chip from an iron pipe which one of the Gartshore Company's employees was working on the inside of the shoulder of the pipe with a chisel. This workman was about fifteen to eighteen feet distant from F at the time of the accident.

F brought an action against the Gartshore Company for damages, claiming that the place should have been protected by a guard or screen to keep the chips from flying around, or that if otherwise their employee should have been directed to stop work during the ten or twenty minutes when the coke was being delivered. F also proved that these chips might possibly fly as far as fifty feet with a good deal of velocity. The Gartshore Company defended the action and alleged that there was no evidence to show that F was struck by the chip in question; that as a matter of fact, it was not such a chip which had injured his eye, and that, in any event, a guard or screen would have been impracticable.

The action was tried with a jury to whom the judge put a number of questions. The jury found that the injury was caused by a chip of iron from the pipe; and that a screen, either movable or stationary, would have prevented the accident; and that F was entitled to \$400 damages. Judgment was accordingly given in favor of F for that amount with costs.

From this decision the Gartshore Company appealed, but the Court of Appeal confirmed the judgment given at the trial.

In the course of his judgment Chief Justice Armour quoted from an English judgment regarding the legal position of a person engaged in lawfully fulfilling a contract in which both he and the person on whose premises he then is have some interest. This citation, illustrating the law on the point, is as follows: "That with respect to such a visitor at least, we consider it settled law that he, using reasonable care on his part for his own safety, is entitled to expect that the occupier shall on his part use reasonable care to prevent damage from unusual danger, which he knows or ought to know; and that when there is evidence of neglect the question whether such reasonable care has been taken by notice, lighting, guarding or otherwise, and whether there was such contributory negligence in the sufferer, must be determined by a jury as a matter of fact."

(Fallis vs. the Gartshore Pipe and Foundry Company. Judgment rendered by the Court of Appeal for Ontario at Toronto.)

Dismissal of Employee.

L was employed for a fixed period by the Gould Bicycle Company as manager, receiving both salary and also a percentage on all moneys paid in on sales. Before the expiration of his engagement the company sold their business and L was dismissed. He then brought an action, claiming his salary for the balance of the term of his engagement and also the percentage on moneys received after his dismissal for sales previously made, and a percentage upon the sales which would probably have been made had he been employed until the end of his engagement. The court held that on these facts alone he would have been entitled to his salary until the end of the term and to a percentage on moneys paid in after his dismissal for sales previously made; but that he could not have recovered anything as percentage upon sales which might have been made during the balance of his employment, as it was altogether too uncertain what that amount would have been. But as it appeared in evidence that L, shortly after his

dismissal, had been employed otherwise, and had received from such employment more than the damages which he claimed, his action failed and it was dismissed with costs.

(Laishley v. The Goold Bicycle Company. Judgment rendered at Toronto by Mr. Justice Ferguson.

The Liability of Trades Unions.

What is probably the most important legal decision ever given in England regarding the rights and liabilities of trade unions was rendered during December in what is generally known as the Taft Vale Railway case.

The Taft Vale Railway Case.

The trouble which eventually led to legal proceedings arose in August, 1901, when a strike took place amongst the employees of the Taft Vale Railway Company. In the following month the company asked for an injunction restraining the Amalgamated Society of Railway Servants, Bell, the general secretary of that organization, and Holmes, another official, from watching or besetting the company's works or the residences of any men who might be working for it, for the purpose of persuading or otherwise preventing them from so working for the company or from procuring any persons who had or might enter into contracts with the company from breaking the same.

The Amalgamated Society of Railway Servants asked that its name should be struck out as a defendant in this proceeding, upon the ground that it was neither a corporation, an individual nor a partnership, and therefore could not be sued under that name.

Liability to be Sued.

The judge before whom the matter first came decided that while a trade union was, strictly speaking, neither a corporation nor an individual, yet that the fact that Parliament had (by the Trade Union Act, 1876) given it the capacity to own property and to act by agents, endowed it with two of the essential qualities of a corporation—"essential" I mean in respect of liability for tort, for a corporation can only act by its agents, and can only be made to pay by means of its property.

He therefore came to the conclusion that the Amalgamated Society of Railway Servants could be sued. Upon the merits of the case itself he also held that an injunction should be granted against it, Bell and Holmes (the admitted agents of the society) having illegally watched and beset men to prevent them from working for the company, and having illegally ordered others to break their contracts with the company.

From this judgment the society appealed, and the Court of Appeal set aside the interim injunction granted by the first court, holding that a trade union could not be sued in its registered name.

From this decision the company appealed to the House of Lords, which reversed the Court of Appeals and restored the judgment of the trial judge. The practical result of this litigation, therefore, was to establish that a trades union could be sued in its registered name, and that, if it was proved

that a union had used illegal methods in carrying on a strike, its funds (for whatever purpose they might have been collected) could be levied on to satisfy a judgment obtained by the employer against whom such wrongful methods were employed.

A Verdict Obtained.

This point having been decided, the Taff Vale Railway Company proceeded with its action against the Amalgamated Society of Railway Servants and its officials. The company claimed that the society had caused the stoppage of work by intimidation and by picketing, and that its officials had induced employees to break their contracts. According to the cabled newspaper report of the trial the jury without leaving the box, gave a verdict in favor of the company for \$140,000. The society is said to possess \$1,250,000, and, so far as can be gathered from the published statements of its officials, it has decided that the only course open to it is to pay the amount of the judgment. The case will be referred to later, when fuller reports of the trial have been received. The result is merely putting into practical operation what the House of Lords said might be done. Hereafter, apparently, the funds of a trade union will be the security for the reparation of any damage caused by any illegal action on its part in the conduct of a strike.

Recent Cases.

It is worthy of notice that within the comparatively brief period of five years the legal rights of both employers and employees have been definitely established by the courts of England. In January, 1898, the House of Lords (by a divided judgment, six to three) held that where A told B that if he did not dismiss C and others, certain other workmen would leave his employment, and B therefore dismissed C, the latter had no right of action against A. This was considered a signal victory for the trades unions, and marks the extreme limit of the decisions in their favor. It laid down the rule that so long as the act complained of was not in itself illegal the fact that its motive was malicious did not render it illegal.

But in 1901 the House of Lords in the case of *Quinn v. Leatham* (see *Labor Gazette*, 1901, page 239), held that where two or more members of a trade union induced people not to deal with a butcher because he employed non-union men, they would be responsible in damages to the butcher for the loss of business they had caused. In the judgment it was pointed out that the facts of this case were not analogous to those of *Allen v. Flood*—for instance, in the latter case there was neither the combination of two or more persons, nor was there any intimidation. There is no doubt, however, that the result of *Quinn v. Leatham* was to greatly impair what many supposed to be the effect of *Allen v. Flood*.

In the same year the House of Lords decided that trade unions could be sued in their own name, and that their funds could be taken to satisfy damages; while the verdict above referred to offers the first illustration of a trade union being placed upon exactly the same financial responsibility as any ordinary corporation.

THE LAWS RELATING TO LABOR.

CHRONOLOGY OF ONTARIO'S LABOR LAWS.

- Apprentices and Minors' Act. Passed, 1871—Amended, 1874. Chap. 161, R.S.O., 1897.

Act Creating Bureau of Labor. Passed, 1900.

SYNOPSIS OF THE LABOR LAWS OF ONTARIO.

The Mines Act.

R.S.O., 1897, chap. 36, provides that no boy under the age of fifteen years shall be employed in or allowed to be for the purpose of employment in any mine to which this Act applies, below ground. The Act applies to all mines, quarries and pits, and oil, gas and salt wells, and other openings from which ores and minerals of any kind or class are raised or taken, and to all furnaces or works for smelting or otherwise treating rocks, ores or clays, sands, oils, brines or other minerals for any economic object.

No boy or young male person of the age of fifteen and under the age of seventeen shall be employed or allowed to be for the purpose of employment in any mine to which this Act applies below the ground on Sunday or for more than forty-eight hours in any one week, or more than eight hours in any one day.

Any appliance used for the purpose of entrance to, or communication to or from any part of the mine, and which is operated by steam or other mechanical power, or by animal or manual labor, must be in charge of a male of at least twenty-one years of age. Where the motive power is supplied by an animal, the driver of such must be at least sixteen years of age.

No wages shall be paid to any person employed in or about any mine, etc., at or within any public house, beer shop or place for the sale of intoxicating liquors.

Each owner is required to make returns to the Bureau of Mines each year of the number of employees, their ages and hours of labor, the rate of wages of each class, together with weights and estimates of values of minerals, dressed and undressed, etc., and may be required by the Bureau of Mines to make such returns monthly or quarterly.

Provision is also made for proper ventilation, also care of explosives used in or about mines, etc., also for the appliances of safety in the operation of the shafts, cage, etc. Accommodation is also required near the entrance of the mine for the conveniently drying and changing of clothes of those employed in or about the mine, etc.

Provision is made for the reporting of any accident in writing within twenty-four hours of the occurrence of such accident, giving full particulars thereof.

Mechanics and Wage Earners' Liens.

R.S.O., 1897, cap. 153, provides protection to wage earners and contractors for loss on account of labor or material furnished in the erection of buildings or the construction of machinery.

The Act not merely recognizes the new form of liability, but provides the means of establishing and enforcing claims arising under it. The original Act has been several times amended, with a view to make it more simple and perfect in its working. The Act also provides that the liens for wages shall to a certain amount have priority over all other liens, and over any claims by the owner against the contractor, on account of failure to complete his contract.

In 1890 an Act was passed to simplify procedure for enforcing mechanic's liens. One clause provides that without issuing a writ of summons or taking any other preliminary proceedings, the plaintiff may file a statement of claim in the office of a master or official referee having jurisdiction in the County wherein the lands are situate. It is also provided that any number of lien holders may join in one action. The ruling or certificate of the master or official referee when filed in the proper office shall become a judgment of the High Court when the sum is \$400.00 or over, of the County Court when less than \$400.00, but over \$100.00, and of the Division Court when the sum is less than \$100.00. The fees payable for entering such certificate as a judgment are as follows: In the High Court, \$1.60, in the County Court, 80c, in the Division Court, 50c.

A further amendment provides that a device by any owner or contractor which shall be adopted in order to defeat the priority of wage earners for their wages under the several acts relating to mechanics' liens, shall as respects such wage earners be null and void.

A further provision regulates that in the case of wages due to any mechanic or other person in respect of work referred to in the 4th section of the Mechanics' Lien Act, the jurisdiction of a police magistrate in a city under the act respecting master and servant shall extend wages for thirty days or for a balance equal to the wages for thirty days, though the same or the balance thereof exceed the sum of \$40.00 in the said section mentioned.

It is also provided that where no specific rate of wages has been expressly agreed to between the parties, the city police magistrate may order payment of the wages, reckoning the amount thereof according to the current rate of wages in the city in like cases, or according to what may appear to be a just and reasonable allowance, and any order of a city police magistrate for the payment of such wages as aforesaid shall be payable forthwith.

Woodmen's Liens.

R.O.S., 1897, cap. 154.—This Act applies to the Districts of Muskoka, Parry Sound, Nipissing, Algoma, Manitoulin, Thunder Bay and Rainy River and to the provisional County of Haliburton, its purpose being to protect the wages of all engaged in those localities in cutting, skidding, felling, hauling, scaling, banking, driving, running, rafting or booming any logs, or timber, and any work done by cooks, blacksmiths or others, usually employed in connection therewith, giving them priority of right for wages above all other claims, except such right as the Crown may have upon logs or timber for, or in respect of any dues or charges, or which any timber slide company, or owner of slides and booms, may have thereon for or in respect of tolls.

This Act also provides that no payment of wages shall be made or offered to any person for any labor or services performed upon, or in connection with any logs or timber in the said districts or provisional county, by any cheque, order, I.O.U., bill of exchange, promissory note, or other undertak-

ing other than a bank note, or bill drawn upon or payable at or within any place or locality not within the Province of Ontario. A violation of this provision incurs a penalty of not less than \$5.00 or more than \$20.00, recoverable by summary proceedings before a stipendiary or police magistrate or justice of the peace, under the Ontario Summary Convictions Act.

Labor on Public Works.

R.S.O., 1897, cap. 155.—This Act secures payment of wages for labor performed in the construction of public works. Any foreman, workman or laborer or by any team employed on the work, giving notice not later than two months after the wages are due to the member of the Executive Council entering into the contract, for and on behalf of her Majesty, or having the supervision of the execution of the contract where the same is made, may cause such claim to be paid to the extent of any moneys or securities at the time of the filing of the said claim in the hands of the Crown for securing the performance of the contract.

The Act also provides that the said member of the Executive Council may in writing require every contractor or sub-contractor to forward a list each month showing the names, rate of wages, amounts due and unpaid for wages for labor done, such list to be attested on oath.

Failure to comply with this demand incurs a penalty of not less than \$10 or more than \$100 for every day during which default continues.

Wages.

R.S.O., 1897, cap. 156.—An Act respecting wages—applies to wages or salary, whether payable by the day, week, piece, job or otherwise. When an assignment is made for the general benefit of creditors the assignee shall pay in priority to the claims of the ordinary or general creditors of the person making said assignment, the wages or salary of all persons in the employment of such person at the time of making such assignment or within one month before the making thereof, not exceeding three months' wages or salary, and such persons shall be entitled to rank as ordinary or general creditors for the residue, if any, of their claims. This provision also applies to the liquidation in distributing the assets of a company under the provision of the joint stock companies winding-up act, also to the sheriff who has made seizure, under the creditors' relief act, also under the act respecting absconding debtors, and also applies to the administration of the estate of deceased person. This Act is not intended to apply to an assignment made under the provision of any Act of the Parliament of Canada relating to or respecting bankruptcy or insolvency.

By an amendment of 1899, it was also provided that where an estate was not sufficient to meet priority of claims for wages over ordinary or general debtors, that the priority extends to the wage-earner over all others excepting the cost of liquidation.

It is also provided that the executor, liquidator, administrator, or other person engaged in winding up the estate, may forthwith, upon such estate coming into his hands, pay all claims for wages, without being chargeable, in case it shall in the end appear that said estate was insufficient to cover such payment, provided that he has acted in good faith, and had reasonable ground to believe that the estate would be sufficient.

The Trades Arbitration Act.

To Facilitate the Adjustment of Disputes Between Master and Workmen, R. S. O., 1897, chap. 159.

This act provides that any number of masters and workmen in any city, town, township or village in Ontario, may mutually agree to the formation of a board of arbitration for the purpose of settlement of any industrial disputes that may arise at any time between them in their relations as employers and employees.

The masters and workmen shall jointly sign a memorandum, whereby it is mutually agreed to establish such board; such memorandum to be filed with affidavits verifying the signatures thereto in the registry office of the registry division within which the masters and workmen reside. The board shall consist of not less than two masters and two workmen, not more than ten masters and ten workmen and a Chairman, and the number to constitute the board other than the Chairman shall be inserted in the memorandum, but no member of the board shall adjudicate in any case in which he or any relation of his are one of the parties.

The Board shall have power to appoint their own Chairman and two clerks, one for the masters and the other for the workmen's portion thereof. The Board is given all the powers conferred upon arbitration by the Arbitration Act, R. S. O., 1897, chapter 140, s. 10.

Any award made by the Board is final and conclusive between the parties thereto, without being subject to review or challenge by any court or authority whatsoever.

A committee of the Board, to be denominated the committee of reconciliation, shall be appointed by the Board, consisting of one master and one workman, who shall sit at such times as shall be appointed, and shall be renewed from time to time as occasion may require; and all cases or questions of dispute which are submitted to the Board by both parties thereto shall in the first instance be referred to the committee, who shall endeavor to reconcile the parties in difference. When such reconciliation is not effected, the matter in dispute shall be referred to the Board, to be disposed of as contested matter.

An Act Respecting Master and Servant.

R. S. O., 1897, cap. 157—Provides that no voluntary contract or services or indentures entered into by any parties shall be binding on them or either of them for a longer time than a term of nine years from the day of the date of such contract. Where an agreement is entered into between the master and the servant, by which a definite share of the profits or proceeds of a business is allotted to a servant, either in lieu of or additional to his salary, wages or other remuneration, and such agreement not creating any relation in the nature of a partnership, such agreement shall be deemed lawful, provided that in such case the servant must accept the statement of the said master as to proceeds involved in the agreement, and shall not have power to examine accounts of said master.

An agreement, whether verbal or written, entered into between master and servant, for the performance of any duty or service whatsoever shall be binding, but a verbal agreement shall not exceed the term of one year.

The Act also provides that no tavern keeper or boarding house keeper shall keep the wearing apparel of any servant or laborer in pledge for an

expense incurred to a greater amount than \$6, and shall surrender immediately any goods kept by said tavern or boarding house keeper under such circumstances upon the tender of said \$6 or less sum due. This does not apply to other property of the servant or laborer.

Any agreement verbal or written between any person and any other person not a resident of Canada, for the performance of labor or service in the Province of Ontario shall be void and of no effect as against the person only migrating or coming. This foregoing provision does not apply to teachers, professional actors, artists, lecturers or singers, or to such skilled workmen not procurable in Canada.

Proceedings may be taken under this Act for the collection of wages within one month after the engagement or employment has ceased, or within one month after the last instalment of wages under the agreement of hiring has become due. Where proceedings are taken under this Act before a police magistrate, and payment of wages is ordered by him to be made by the master or employer to the servant or laborer, and the same are not paid within the time limited by the order, the same proceedings may be taken by the person claiming the benefit of the order as may be taken by a party having an unsatisfied judgment or order in the Division Court for the payment of any debt, damages or costs, as respects the examination of the judgment debtor touching his estate and effects, the means he has of discharging his liability, and the disposal he has made of any property, and the police magistrate shall have the like power and authority to enforce payment of the debt as are possessed by the Division Court Judge in like cases. The police magistrate may also, if he thinks fit, name in the order for payment of wages such time not exceeding twenty-one days, as to him may seem just and reasonable for the payment of the same and costs, and in case of non-payment within such time the complainant shall be entitled to take forthwith the proceedings for enforcement provided by the Division Court Act with respect to judgment debtors.

In the case of wages due and no specific rate has expressly been agreed upon between the parties, the police magistrate has the power to fix the rate on the basis of the current rate of wages in the city in like cases, or according to what may appear to be a just and reasonable allowance.

Every agreement or bargain, verbal or written, expressed or implied, entered into having for its object the waving of the provisions of this Act is declared null and void and of no effect as against any workman, servant, laborer, mechanic or other person.

Trades Disputes.

R. S. O., 1897, cap. 158.—An Act respecting Councils of Conciliation and Arbitration for settling industrial disputes.

The preamble to the Act recites: There is reason to believe that the establishment of councils of conciliation and arbitration for the friendly settlement of disputes between employers and employees, would conduce to the cultivation and maintenance of better relations and more active sympathies between employers and employees, and would be of benefit in the public interest by providing simple methods for the prevention of strikes and lock-outs, from which industrial operations and the welfare of the country generally may suffer injury.

The Act applies to any person or body of persons incorporated or unincorporated employing not less than ten workmen in the same business in which the trade dispute has arisen, and their employees.

A claim or dispute under this Act shall include any disagreement between any employer and his employees in respect of any of the matters following :

1. The price to be paid for work done or in course of being done, whether such disagreement shall have arisen with respect to wages or to the hours or time of working.

2. Damage alleged to have been done to work, or delay in finishing the same ; not finishing the same according to agreement ; or dispute respecting materials supplied to employees or alleged to be bad, unfit or unsuitable.

3. The price to be paid for mining any material or substance mined or obtained by mining, hewing, quarrying or other process ; or the allowances, of any, to be made for bands, refuse, faults or other cause whereby the mining of the mineral substance is impeded.

4. The performance or non-performance of any stipulation or matter alleged to have been in the agreement, whether in writing or not.

5. Insufficient or unwholesome food supplied to employees where there is an agreement to victual them, or to supply them with provisions or stores of any kind.

6. Ill-ventilated or dangerous workings or places in mines, or unwholesome or insanitary rooms or other places of accommodation, in which work is being performed, or want of necessary conveniences in connection with such rooms or places.

7. The dismissal or employment under agreement of any employee or number of employees.

8. The dismissal of any employee or employees for their connection with any trade or labor organization.

Duties, etc., of the Registrar.

It shall be the duty of the Registrar under this Act to deal with all applications coming within the meaning of the Act ; to keep a register in which shall be entered all particulars of cases referred to the Council of Conciliation, and the settlement thereof. The Registrar shall have the power to summon witnesses and issue notices in connection with the sittings of each Council of Conciliation.

Council of Conciliation.

Such council as above mentioned shall consist of four conciliators, two to be nominated by each of the parties in dispute ; each nomination in writing to be lodged with the Registrar.

The council shall deal with cases in which the parties of the dispute jointly agree to refer the claim or dispute to the Council of Conciliation for settlement. Upon receipt of application the Registrar shall refer same to the Council, and under the Act shall carry out the directions of the Council in the endeavor to affect a settlement of the dispute or claim.

Either party of the dispute or claim may, for the purpose of this Act, be represented by one or more persons, not exceeding three, authorized by such party as manager or managers in that behalf, and such party shall be bound by the acts of this representative or representatives ; where the party number fewer than twenty the manager must be authorized in writing, signed by the members of the party, to act for and on their behalf. Where the party number twenty or more, the manager may be elected in such manner as the members of the party think proper.

The statements of those thus agreeing to refer their dispute to the Council of Conciliation should be forwarded to the Registrar before the meeting of the Council. When the parties of the dispute or claim have nominated their conciliators, the Registrar shall by notice in writing convene a meeting of the conciliators, mentioning time and place of meeting, the same being selected with due regard to the convenience of all concerned. The Council of Conciliation shall transmit to the Registrar a report setting forth the result of the reference. In case such report is to the effect that the Council has failed to bring about any settlement or adjustment of the dispute or claim, the Registrar shall transmit a copy of the report to each party of the dispute or claim; whereupon either party may require the Registrar to refer the dispute to the Council of Arbitration for settlement.

Council of Arbitration.

There shall be two Councils of Arbitration, one for the settlement of disputes and claims between railway companies (including street railway companies), and their employees, both in respect of railway construction or traffic on railways, and a Council of Arbitration for the settlement by award in respect of disputes and claims other than between railway companies and wage-earners employed in respect of railway construction or traffic.

Each council shall consist of three members, one to be appointed by the Lieutenant-Governor on the recommendation of the employees, and one to be appointed by him on the recommendation of the employers. The third member to be appointed shall be President of the Council, and may be appointed by the Lieutenant-Governor on the recommendation of the two members already appointed, within twenty-one days of their appointment. Failing in this, the Lieutenant-Governor shall appoint as President of the Council an impartial person, not likely to be biased in favor of or against employers or employees. The same person may be President of both Councils.

As soon as practicable after the appointments have been made, the names of the members of the Council shall be notified by the Registrar in the Ontario Gazette. The Lieutenant-Governor may cancel the appointment of any member on the recommendation of the authority by which his appointment was recommended. The term of office of a member of a council shall be two years; and at the end of every term of two years a fresh appointment of members shall be made in manner aforesaid. Every member shall be eligible for reappointment.

Qualification of Voters in the Interest of Employers.

For the person to be recommended by the employers every employer in the Province, having at least ten persons in his employment, shall be entitled to one vote; every organization in the Province, whether incorporated or unincorporated, representing the interests of employers, each member of which has at least ten persons in his employment, shall be entitled to one vote.

Every Board of Trade in the Province, legally constituted, shall be entitled to one vote for a representative of the employers in each Council.

Qualification of Voters in the Interest of Employees.

For a person to be recommended by employees in matters not belonging to railways, every trades and labor council, every district assembly of the Knights of Labor, every fédèrated Council of building trades, every lawfully incorporated trades union, every organization of wage-earners of an industrial calling primarily constituted for, and actually and bona fide operated for the regulation of the wages and hours of labor as between employers and employed, shall be entitled to one vote ; but this shall not be deemed to include co-operative associations or societies formed under the Revised Statute respecting Co-operative Associations.

For choosing the person to be recommended by employees of railway companies as a member of the Council of Arbitration in matters belonging to railways, every organization in the Province, whether incorporated or unincorporated, exclusively representing the interest of wage-earners employed in respect of railway construction or traffic on railways shall be entitled to one vote : but this shall not be deemed to include co-operative societies or associations.

The Registrar shall give notice in The Ontario Gazette, calling on all organizations and persons entitled to vote for a member to be recommended to either Council, or claiming to be so entitled, to communicate with him on or before the 1st day of August, 1898, and every second year thereafter. Such notice is to be inserted for at least four weeks before the said day in each of the said years.

The Registrar shall forthwith, after the 1st day of August aforesaid, prepare a list of the persons and organizations appearing to be entitled to vote for a person to be recommended for appointment to each of the said Councils respectively, and may refer any doubtful claim to the Minister of Agriculture for his advice or direction.

Each list so to be prepared shall give the last known postoffice address of every person and organization entitled to vote as employers and employees respectively for the said Councils respectively, and shall be published in The Ontario Gazette, and shall be open to inspection at any time by any person without fees, in the office of the Registrar, during office hours.

Between the 1st and 30th days of September, 1898, and between the same days of every second year thereafter, the Registrar shall transmit by post to the address of each person and organization entitled to vote, a voting paper ; and such voting paper may be in the following form :

Voting paper of (naming the person or organization).

A. B. (person recommended) is hereby recommended to be appointed a member of the Council of Arbitration for disputes between railway companies and their employees (or in matters not relating to railway disputes) under the Ontario Trade Disputes, Conciliation and Arbitration Act, on behalf of the employers or employees, as the case may be).

(Signed)

The voting paper of any person entitled to vote under this Act as an employer shall be signed by himself or by some duly authorized person; and the voting paper of any organization entitled to vote shall be signed by the president or vice-president of the organization, or, in the absence of such president or vice-president, by any office-bearer of the organization other than the secretary thereof, and shall be countersigned by the Secretary or the acting secretary, or, in the absence of such secretary or acting secretary, by any two members not being office-bearers. The voting papers of a Board of Trade shall be under the corporate seal of the Board.

The voting paper shall be forwarded to the Registrar in a stamped envelope, addressed to the Registrar of Councils of Conciliation and Arbitration, Toronto, and endorsed, "Voting paper under the Ontario Trades Dispute, Conciliation and Arbitration Act."

Every voting paper shall be forwarded by mail or otherwise to the Registrar, before the 15th day of October, in the year in which the voting is to be held, and no voting paper received after said date shall have any effect or validity.

After the 15th day of October the Registrar shall count the recommendations of employers and employees for each council, and shall forward same to the Minister of Agriculture with report thereon; and the Minister of Agriculture shall publish in The Ontario Gazette the names of the persons appointed by the Lieutenant-Governor upon such recommendations to be members of each council; and also the names of, and the number of votes of the five persons who shall receive the greater number of votes for each council on behalf of employers and employees respectively.

In case either employers or employees, or both, fail to recommend any person to represent them on either or both the councils, as provided for in this section, the Lieutenant-Governor in Council may appoint a person or persons to fill the vacancy or vacancies.

The Mayor of any city or town upon being notified that a strike or lock-out is threatened, or has actually occurred within the municipality, shall at once notify the Registrar thereof by writing, stating the name of the employer, the nature of the dispute, and the number of the employees involved, as far as his information will enable him to do so.

Upon being notified that a strike or lock-out is threatened or has taken place, it shall be the duty of the Councils of Arbitration, under this Act, to communicate with the parties concerned as soon as practicable, and endeavor by mediation to affect an amicable settlement, and if deemed best, to enquire into the causes of controversy, it shall proceed as provided in this Act in the case of a reference.

The Council of Arbitration shall sit and conduct its proceedings as an open court, and in making its decision shall be governed by the principles of equity and good conscience. The President shall for the purpose of preserving order during any sitting of the Council have all the powers of a Judge of a High Court of Justice, save that he shall not have the power of committing for contempt.

Any two members shall constitute a quorum for the transaction of business, and may hold meetings at any time and at any place in the Province of Ontario.

The Council may order that an examination or investigation may be held before any one member of the Council, but such member shall report to the Council, and his decision shall not be considered binding until approved of by the Council or a majority thereof.

The report of award of the Council shall be made within one month after its hearing of a reference, and shall be by, and under the hands of, a majority of the members of the Council.

The report of award, or a copy thereof, shall be deposited in the office of the Registrar, and shall be open to inspection during office hours without charge.

Miscellaneous Provisions.

For the purposes of this Act the Councils of Conciliation and Arbitration shall have power (a) to visit the locality where the dispute has arisen,

and hear all persons interested who may come before them:-(b) to summon witnesses and to administer oath, or to take the affirmations of any person attending as a witness before the Council. On refusal of any person to attend as witness, application may be made in a summary way to a Justice of the Peace for an order compelling such attendance.

No fees shall be paid to the Registrar by any party in respect of any proceedings under this Act.

Every member of such Council shall be remunerated as follows:

Preliminary meetings	\$3 00
Whole-day sittings	4 00
Half-day sittings	2 00

An Act to Amend the Act Respecting Councils of Conciliation and of Arbitration for Settling Industrial Disputes, S.O., Cap. 22, 1902.

His Majesty, by and with the advice and consent of the Legislative Assembly of the Province of Ontario enacts as follows :

1. Section 4 of The Trades Disputes Act is amended by adding the following sub-sections :

(4) If any difference shall arise between any corporation or person employing ten or more employees, and such employees, threatening to result, or resulting in a strike on the part of such employees, or a lock-out on the part of such employer, it shall be the duty of the Registrar, when requested in writing to do so by five or more of said employees or by the employer, or by the Mayor or Reeve of the municipality in which the industry is situated, to visit the place of such disturbance and diligently seek to mediate between such employer and employees.

(5) It shall be the duty of the registrar to promote conditions favorable to a settlement by endeavoring to allay distrust, to remove causes of friction, to promote good feeling, to restore confidence and to encourage the parties to come together and themselves effect a settlement, and to promote agreements between employers and employees with a view to the submission of differences to conciliation or arbitration before resorting to strikes or lock-outs.

Workmen's Compensation for Injuries, R.S.O., 1897, Cap. 160.

This Act applies to all wage-earners while engaged in their daily occupation for injuries received by reason of any defect in the condition or arrangement of the ways, works, machinery, plant, buildings or premises connected with, intended for or used in the business of the employer, or by reason of the negligence of any person in the service of the employer who has had any superintendence entrusted to him, or who has the charge or control of any points signal, locomotive, engine, machine or train upon a railway, tramway or street railway.

If the injuries received result in the death of the workman, his legal representative, or those entitled in case of death, shall have the same right of compensation and remedies against the employer, as if the workman had not been a workman of, nor in the service of the employer, nor engaged in his work.

Work Done Under Contract.

Where the execution of any work is being carried into effect under any contract, and personal injury is sustained by any workman, through any

defect or negligence, as mentioned above, the person for whom the work is done shall be liable to pay compensation for the injury as if the workman had been employed by him, and for that purpose shall be deemed to be the employer of the workman within the meaning of this Act.

Personal injury caused to workman employed on or about any railway.

Such injury shall be deemed to have been caused by reason of a defect within the meaning of the clause numbered 1 of section 3 of this Act.

The amount recoverable under this Act shall not exceed a sum equivalent to the earnings during three years previous to the injury received, in like employment within this Province, or the sum of \$1,500, whichever is the larger sum, and such compensation shall not be subject to any deduction or abatement, save as is specially provided for in section 12 of this Act.

When compensation is awarded in the case of the death of a workman through an injury sustained by him in the course of his employment the amount recovered may be divided between the wife or husband, parent or child, of the deceased, as the case may be, in such shares as the Court or Judge may direct, or if tried by jury, as the jury may determine.

No action shall be maintainable against any employer, unless notice that the injury has been sustained is given within twelve weeks of the accident, and the action is commenced within six months of the occurrence of the accident, or in case of death, within twelve months from the time of death; in the latter case the want of such notice shall be no bar to the maintenance of such action, if the Judge be of opinion that there was reasonable cause for want of such notice.

Notice under this Act shall give the name and address of the person injured, and shall state in ordinary language the cause of the injury, the date on which it was sustained, and the amount of compensation claimed, and shall be served on the employer either at his residence or place of business. The notice may also be served by post in a registered letter, and may be deemed to have been served when the letter containing the notice would be delivered in the ordinary course of post.

If the defendant in any action intends to rely for his defence on insufficient notice, or on the ground that he was not the employer of the workman injured, he shall, not less than seven days before the hearing of the action, give notice to the plaintiff of his intention to rely on such defence.

In the trial of an action for the recovery for compensation under this Act before a Judge without a jury, one or more assessors may be appointed by the Court or Judge, for the purpose of ascertaining the amount of compensation. In any such action a party who desires assessors to be appointed shall, ten clear days before the trial, file application stating the number of assessors he proposes to be appointed, and the names, addresses and occupations of the persons who have expressed, in writing, their willingness to act as assessors. If the applicant has obtained the consent of the other party to the persons named being appointed, he shall file such consent with his application.

This Act, by an amendment of 1899, gives the choice of settlement of claims for injuries, under the Act, by either action or arbitration, subject to appeal by either party to the High Court of Justice.

Apprentices and Minors, R.S.O., 1897, Cap. 161.

Any parent, guardian or other person having the care of a minor, or any charitable society authorized to exercise the powers conferred by this Act, may, if the minor consent, if the minor is a male not under the age of

fourteen years, or a female not under the age of twelve years, and without consent if he or she is under such age, constitute to be the guardian of the child, any trustworthy person who is willing to assume the duty of a parent toward the child, but the parent shall remain liable for the performance of any duty imposed by law, in case the guardian fails in the performance thereof.

The guardian shall thereupon possess the same authority over the child as he or she would have were the ward his or her own child, and shall be bound to perform the duties of a parent toward such child.

Rights and Liabilities of Minors.

No minor who is dependent upon charity for support shall be removed from any charitable institution or from the control of any private person who is charitably taking care of the minor, by the father or mother or guardian, against the will of the head of such charitable institution or of such private person, without an order from the Judge of the High Court, or from the Judge of the County Court, or the Mayor or Police Magistrate of the city or town where the minor is; and the Judge or other person so empowered may refuse to grant the order unless he is satisfied that the removal will tend to the advantage of the minor. When a minor, who has no parent or legal guardian, enters into an engagement to perform any service, he shall be liable upon the same, and shall have the benefit thereof, as if he were of legal age.

Apprenticing Minors.

A parent, guardian or other person having the care of a minor, or any charitable society authorized to exercise the powers conferred by this Act, may, with the consent of the minor, if a male not under the age of fourteen years, bind him as an apprentice by indenture to any respectable master mechanic, farmer, or other person carrying on a trade or calling for a term not to extend beyond the minority of the minor; or in the case of a female not under the age of twelve years, may, with her consent, bind the minor to any respectable person carrying on a trade or calling, or to domestic service with any trustworthy person, for a term not to extend beyond the age of eighteen years.

Where the father of an infant child abandons and leaves the child with the mother, the mother, with the approbation of two Justices of the Peace, may bind the child as an apprentice to any person as mentioned in the last section, until the child attains the age of twenty-one years in the case of a male, and eighteen in the case of a female, and an indenture to that effect under the hand and seal of the mother and countersigned by such justices shall be valid, but no child, having attained the age of fourteen years, shall be so apprenticed, unless he or she consents.

In a city or town, the Mayor, Judge of the County Court or Police Magistrate, and in a county, the Judge of the County Court of the county, may put and bind for a like period to any person mentioned in the several sections of this Act, with the consent of such person and of the minor (or if such minor is a male under the age of fourteen years, or a female under the age of twelve years, then without the consent of such minor), any minor who is an orphan or who has been deserted by his or her parents or guardian,

or any minor who is dependent upon charity for support ; and such apprentice and the master of such apprentice shall be held in the same manner as if the apprentice had been bound by his or her parents.

All wages reserved by any indenture or otherwise to be paid for the services of any minor, shall, if not payable to the parent, be either payable to the minor or to some person for the benefit of the minor.

If the master of an apprentice dies, the apprentice, if a male, shall be transferred to the person who continues the establishment of the deceased and such person shall hold the apprentice on the same terms as the deceased, if living, would have done.

A master may transfer his apprentice, with his consent, to any person who is competent to take or receive any apprentice, and who carries on the same kind of a business.

Every master shall provide his apprentice with suitable board, lodging and clothing or such equivalent therefor as is mentioned in the indenture, and shall also properly instruct him in his trade or calling.

Every apprentice shall faithfully serve his master, and obey all his lawful and reasonable commands, and shall not absent himself from his service without his consent.

An indentured apprentice leaving his employment is liable to the penalties of the Act, if apprehended in the Province of Ontario, up to three years of his desertion.

An Act Respecting Innkeepers, R.S.O., 1897, Cap. 187.

Every innkeeper, boarding-house keeper and lodging-house keeper shall have a lien on the baggage or property of his guest for the value and property of his guest for the value or price of any food or accommodation furnished, and in addition to all other remedies provided by law, shall have the right, in case the same remains unpaid for three months, to sell by public auction the property of such guest, on giving one week's notice by advertisement in a newspaper of the intended sale, stating the name of the guest, the amount of his indebtedness, and giving a description of the property to be sold, and shall pay over the surplus of such sale (if any) to the person entitled thereto, on application being made by him therefor.

Where an innkeeper, etc., or livery stable keeper has by law a lien on a horse or other animal for the price of any food or accommodation supplied to such animal or care bestowed thereon, he shall have the right, in addition to the other remedies provided by law, if such price remains unpaid for the space of two weeks, to sell by public auction such horse or other animal, on giving two weeks' advertisement in a newspaper, stating (if known) the name of the person who brought such horse or other animal to the inn, etc., the amount of the indebtedness, and the name of the auctioneer, and giving the description of the horse or other animal, and after the sale the innkeeper, etc., shall pay over the surplus (if any) to the person entitled thereto on application being made by him therefor.

No innkeeper shall be liable to make good to any guest any loss or injury to goods or property to a greater amount than the sum of \$40.00, except in the following cases :

Where such goods or property have been stolen, lost or injured through the wilful act, default or neglect of such innkeeper, or any servant in his employ ; where such goods or property have been deposited expressly for safe custody with such innkeeper.

Pawnbrokers, R. S. O., 1897, Cap. 188.

The Act defines any person who takes and receives, by way of a pawn, pledge or exchange any goods for the repayment of money lent thereon, shall be deemed a pawnbroker within the meaning of the Act.

Any person carrying on the trade of pawnbroker shall have license issued by the treasurer of the municipality in which he is carrying on the business. Any person carrying on the business of pawnbroker without a license shall forfeit \$50.00 for every pledge he takes, recoverable with costs before police magistrate.

Each pawnbroker is required to exhibit sign with the word pawnbroker thereon, under a penalty of \$40.00.

Each pawnbroker is required to have painted or printed in a conspicuous place in his shop the rates of profits he is allowed to charge under the Statutes of Canada, which rates are as follows :

R.S.C., cap. 128, provides that every pawnbroker may take the following rates above the principal sum advanced before he is obliged to re-deliver the goods pawned, that is to say, upon every pledge upon which there has been lent not exceeding 50c the sum of one cent for any time not exceeding one month, and the same for every month afterwards, including the current month in which the pledge is redeemed, although such month has not yet expired ; and so on progressively, and in the same proportion for every sum of fifty cents up to twenty dollars.

When the sum lent exceeds twenty dollars, the pawnbroker may take up all beyond the amount after at the rate of five cents for every four dollars by the month, and so on in proportion for any fractional sum.

Such sums respectively shall be in lieu of and taken as full satisfaction for all interest due and charges for warehouse room.

On all pledges where the sum lent exceeds \$1.00 the pawnbroker is required to make entry of such in a book kept for the purpose, giving a description of the goods received, in pledge, the sum lent thereon, the date and the name and address of the person making the pledge, and whether he is a housekeeper or lodger.

When the amount lent is above \$2.00 a separate book must be kept for purpose of entry, the pledges received to be numbered in consecutive order in the book. The pawnbroker shall issue to the person making the pledge a note or memorandum written or printed, containing a description of the goods pawned, and money advanced thereon, the date and name and address of the person making the pledge, and whether a housekeeper or lodger. On the back shall be printed or written the name and address of the pawnbroker.

For such ticket or memorandum he will be allowed to charge the following rates :

If the sum lent is under \$1.00, the ticket shall be free.

If the sum lent is over \$1.00 and under \$2.00, the charge shall be one cent.

If the sum lent is over \$2.00 and under \$5.00, two cents may be charged.

If the sum lent is over \$4.00 and under \$20.00, three cents may be charged.

When the sum lent is over \$20.00 and upwards seven cents may be charged.

No goods pledged can be sold by the pawnbroker until one year has expired after the pledge of such goods. If the amount lent exceeds \$2.00 the sale must be by public auction, and must be exposed to the public view.

And a description of the goods, the date of the pledge, etc., published on two separate days in a public newspaper at least two days before the sale.

Should the goods be sold for more than was due thereon, and in case of demand within three years after the sale, the overplus, after deducting the costs, shall be paid to the person on whose account the goods were pawned.

No pawnbroker shall :

1. Purchase, receive or take any goods in pledge from any person who appears to be under the age of fifteen years, to be intoxicated with liquor, nor

2. Purchase or take in pawn, pledge or exchange the ticket or memorandum of any other pawnbroker.

3. Employ any servant or any other person under sixteen years of age to take any pledge.

4. Receive any goods by way of pawn, pledge or exchange on any fast or Thanksgiving day appointed by authority, or on Sunday, or any other day before 8 o'clock in the morning, nor after 8 o'clock in the evening, except on Saturday and the evening preceding Good Friday and Christmas Day. On such days he may keep open his place of business until 10 o'clock p.m.

Liability of Directors of Companies for Wages. R.S.O., 1897, Cap. 191.

The directors of the company shall be jointly and severally liable to the laborers, servants and apprentices thereof for all debts not exceeding one year's wages due for services performed for the company; but no director shall be liable to an action therefor, unless the company has been sued therefor within one year after the debt became due, not yet before an execution against the company has been returned unsatisfied in whole or in part; and the amount due on such execution shall be the amount recoverable with costs against the directors.

Liability of Directors of Mining Companies for Wages R.S.O. 1897, Cap. 197.

All mining companies in force in Ontario, shall be subject to the provisions of this Act.

The directors of a company shall be jointly and severally liable to the laborers, etc., for all debts not exceeding one year's wages due for services performed; but no director shall be liable to an action therefor unless the company has been sued therefor within one year after the debt became due, nor yet before an execution against the company has been returned unsatisfied in whole or in part; and the amount due on such execution shall be the amount recoverable with costs against the directors.

Co-operative Associations. R.S.O. 1897, Cap. 202.

Any seven or more persons who desire to associate themselves together for the purpose of carrying on any trade, labor or business, whether wholesale or retail, except the working of mines, minerals, or quarries, and except also the business of banking and insurance, and the business of a loan corporation within the meaning of the Loan Corporations Act, may make, sign and acknowledge before a Notary Public or Justice of the Peace, in duplicate, and file in the office of the Registrar of the Registry Division in

which the business of the association is intended to be carried on, a certificate in writing on the form set forth in the schedule of this act, or of the same effect together with a copy of the rules agreed upon for the regulation, government and management of the association, signed by such persons respectively.

. Upon the filing of the certificate and rules as aforesaid, the members of the association shall become a body corporate by the name therein described, with power to hold such lands as are required for the convenient management of the business.

No association shall be registered under a name identical with that by which any other existing association has been registered, or so nearly resembling such name as to be likely to deceive the members or the public; and the word limited shall be the last word in the name of any association registered under this Act.

A member of an association incorporated under this Act may have shares therein to an amount mentioned in any by-law of the association, provided the same does not exceed \$1,000,000.

The liability of the shareholders shall be limited, that is to say: No shareholder shall be in any manner liable for or charged with the payment of any debt due by the association, beyond the amount of his share, and having fully paid up the amount of his share shall not be subject to any further liability.

. Every person appointed to an office touching the receipt, management, or expenditure of money, or with the receipt of goods, wares or merchandise for the purposes of the association, shall before entering upon the duties of his office, give such security as is deemed sufficient by the trustees, which security shall be renewed from time to time as the amount of the business, or other circumstances, may, in the discretion of the trustees be rendered necessary.

The business of the association shall be a cash business exclusively; no credit shall be either given or taken, and no officer, member or servant of the association shall have power to contract any debt in its name, except in respect of rent of the premises required for the business, the salary of clerks and servants, and such like contracts, necessary in the management of the affairs of the association; everything shall be bought and sold for cash only.

Insurance by Trades Unions. R.S.O. 1897, Cap. 203.

Where a friendly society registered under this Act has its head office elsewhere than in the Province of Ontario the Grand or other Provincial body, or the Lodges situated in the Province may file with the Insurance Registrar, an application for Provincial incorporation, setting forth the facts of the case, and the proposed corporate name and head office, and the purpose and rules of the society; also the names of those persons who are to be its first trustees, and stating the mode in which their successors are to be elected; also furnishing such other information as the Registrar requires.

Upon due application made the Registrar may name a day for the hearing of the application, and such public hearing of the application shall be given in The Ontario Gazette and otherwise as the Registrar directs.

If, upon the hearing, it appears to the Registrar that such incorporation ought to be granted, he shall have authority to certify in duplicate, or in as many parts as may be required, under his hand and the seal of his office, that he finds entitled to incorporation under the name and for the purposes specified in the certificate, the persons mentioned therein.

One of the original parts of the certificate shall be filed in the office of the Provincial Registrar, together with such other documents as the Insurance Registrar by his certificate requires to be filed; and from the day of such filing the persons mentioned in the Insurance Registrar's certificate and their associates and successors shall henceforth be a body corporate and politic, and shall have the powers, rights and immunities vested by law in such bodies.

Upon due application the Insurance Registrar shall have authority to admit to registry as a friendly society the body so incorporated.

Upon like proceedings taken as enacted in the first section under this Act, incorporation may be granted in either of the two following cases :

Where any trade or labor union, or trade or labor organization purposes to undertake contracts with its own members exclusively, for any of the insurance benefits enumerated in and permitted by clause 3 of section 62, or contracts to furnish tools or to pay unemployed or superannuation benefits to the said members.

Where any organization of persons resident in Ontario, consisting of not less than twenty-five members and managed and operated as a friendly society under rules conforming to this Act purposes to contract with its own members exclusively for sick benefits, not exceeding five dollars a week and a funeral benefit of not more than one hundred dollars, or either of such benefits.

The body so incorporated may upon due application, be admitted to register as a friendly society; but unless and until so registered, the corporation shall not undertake, nor agree to offer to undertake, any contract insuring the said or other insurance benefits.

Where any society, association, union, organization or lodge already incorporated under a prior Act of this Province becomes incorporated under this Act, such prior incorporation shall be deemed to have been merged in and superseded by the said latter incorporation.

In addition to friendly societies standing duly registered as such, at the passing of this Act, the following shall be admissible to registry on the Friendly Societies' Register :

Societies incorporated from time to time by virtue of sections 33, 34, 36, 37 and 38 of this Act :

Any corporation not provided for elsewhere herein which has, by virtue of an Act of the Parliament of Canada, an insurance and provident society or association, or an insurance or guarantee fund in connection with the corporation, may upon due application for registry under this Act, be registered on the Friendly Society Register.

Provided that where any bona fide trade union or labor organization provides by its constitution, by-laws or rules for the assistance, relief or support of its members, the Registrar may, by writing, under his hand and the seal of his office, declare the organization exempt from the operation of this Act; and such certificate shall remain valid until by like writing revoked; and the organization so exempted shall not be subjected to any penalty imposed by this Act :

Any corporation in Ontario which at the passing of this Act has under authority of an Act of Canada created a fund for paying a gratuity on the happening of death, sickness, infirmity, casualty, accident, disability or any change of physical or mental condition, shall, upon due application for registry hereunder, be entitled to be registered on the Friendly Society Register:

Any association of the civil servants or employees of the Dominion of Canada, incorporated by virtue of an Act of the Parliament of Canada, may, upon due application, be admitted to registry.

Railway Companies—By-laws Affecting Employees. R.S.O., 1897, Cap. 207.

Every railway company shall make such by-laws, rules and regulations to be observed by the conductors, engine-drivers and other officers and servants of the company, and by all other persons and companies using the railway of such company, and such regulations with regard to the construction of the carriages and other vehicles, to be used in the trains of the railway of the company, as are requisite for the perfect carrying into effect of the provisions of this part of this Act and the orders and regulations of the Lieutenant-Governor in Council.

Any railway company may, by a by-law, impose upon any officer, servant or person who, before the contravention of such by-law has had notice thereof, and is employed by the company, a forfeiture to the company of not more than thirty days' pay of such officer or servant, for any contravention of such by-law, and may retain such forfeiture out of the salary or wages of the offender.

The notice of the by-law, or of any order or notice of the Commissioner of Public Works, may be proved by proving the delivery of a copy thereof to the officer, servant or person, or that he signed the copy thereof, or that a copy thereof was posted in some place where his work or his duties, or some of them were to be performed.

Such proof, with evidence of the contravention, shall be a defence to the company in any action for the recovery from it of the amount so retained. The Electric Railway Act, R.S.O., 1897, cap. 269, contains four sections (137-140) exactly similar in terms to the above.

Street Railways—Lien for Wages. R.S.O. 1897, Cap. 208.

Every mechanic, laborer or other person who performs labor for wages upon the construction or maintenance of the railway or the works connected therewith, shall have upon the said railway and other property of the company a lien for such wages not exceeding the wages for thirty days, and the said lien may be enforced in the manner provided for enforcing liens for wages by the Mechanics' and Wage-earners' Lien Act.

Immigration Aid Societies. R.S.O. 1897, Cap. 212.

The Minister of Agriculture shall from time to time divide the Province of Ontario into immigration districts, either by counties, ridings, municipalities, as seems to him most expedient; and in each of such districts there shall be an immigration office and an immigration agent; and such division and any future alteration thereof, shall be notified in The Ontario Gazette as the immigration district of the place where the immigration office is kept.

In each of such districts an Immigration Aid Society may be formed and constituted under this Act, for the purpose of assisting immigrants to reach Ontario from Europe and elsewhere; and of obtaining employment for them on their arrival in the Province; and of enabling persons in the Province in want of laborers, artizans or servants to obtain them by such immigration; for every such society shall consist of not less than twenty-five persons, whether resident or not in the immigration district, agreeing

to form such society and to subscribe among them, as the capital of the society, not less than \$500.00, in fifty shares of \$10.00 each, one-fourth of which, at least, shall be paid on subscribing the declaration of membership into the hands of a person agreed upon as their secretary-treasurer, by the persons present at the meeting at which it is agreed to form the society.

The Act also provides for the regulation and control of such societies under the inspection of a district agent, to be appointed by the Minister of Agriculture. Such societies have power to make loans to immigrants, and provision is made for their inspection by the Minister of Agriculture.

An Act Respecting Municipal Matters. R.S.O. 1897, Cap. 223.

This Act provides that the hours for the nomination of candidates for the offices of aldermen in cities may, by by-law be fixed at half-past seven o'clock in the evening, and for polling from nine in the morning until seven o'clock in the evening. This latter provision applies only to cities of 100,000 inhabitants and over. A by-law to extend the time of holding the election until seven o'clock in the evening must be passed before the fifteenth day of November of the year in which such by-law is to take effect. In all other cases the polls shall be opened at nine o'clock in the morning, and shall continue open till five in the afternoon and no longer.

Powers of Police Commissioners as to Livery Stables, Etc.

The Board of Commissioners of Police shall, in cities, license and regulate second-hand shops and junk stores, and the owners of livery stables and of horses, cabs, carriages, carts, tucks, sleighs, omnibuses and other vehicles regularly used for hire within the said city, and shall establish the rates of fare to be taken by the owners or drivers of such vehicles for the conveyance of goods or passengers from any point within the city to any point not more than three miles beyond the limits of such city, and may provide for enforcing such rates.

The Board of Commissioners of Police in any city may pass by-laws defining areas or districts in the city within the limits of which no livery stable, sale, or boarding stable in which horses are to be kept for hire or for express purposes shall be established or maintained.

The Board of, etc., in any city shall pass by-laws regulating the hours of labor of persons employed in livery or boarding stables, or as drivers of cabs, carriages or sleighs kept for hire within the city, and also the hours of labor of persons employed by owners of horses, carts, etc., kept for hire within the city, and for licensing drivers of cabs within the said city.

The Board, etc., shall also regulate and control children engaged as :

- (a) Express or despatch messengers ;
- (b) Vendors of newspapers and small wares ;
- (c) Bootblacks.

The Board in any city, and the council in any town, may regulate and prohibit the playing of bands and of musical instruments on any street, highway, park or public place in the city, but this shall not apply to any military band attached to any corps of the militia of Canada when on duty under command of its regular officer.

Protection of Workmen and Others on Buildings.

By-laws may be passed by the councils of municipalities, townships, cities, towns and villages for inspecting and regulating the construction and erection of hoists, scaffolding and other constructions used in erecting, repairing, altering or improving buildings, chimneys or other structures; and for making all necessary regulations for the protection and safety of workmen and other persons employed thereon; and for appointing inspectors of scaffolding.

Egress From and Construction of Buildings.

By-laws may be passed as above for regulating the number of doors on churches, theatres, halls or other buildings used for worship, public meetings or places of amusement, and the street gates leading thereto; and the construction and width of stairways, in churches, etc., and in factories, warehouses, hotels and boarding houses; and also the size and number of doors and other means of egress from all hospitals, schools, colleges and other buildings of a like nature, and also the structure of stairs and railings in all such buildings, and the strength of beams, walls and joists and their supports, and for compelling the production of plans for inspection and for enforcing the observance of such regulations.

For preventing the obstruction of the halls, aisles, passage-ways, etc., in any such building or leading thereto during the occupation of the same by any public assemblage.

Hoists and Elevators.

For licensing and inspecting elevators and hoists for passengers or freight, used by the public or by employees, and for imposing and enforcing penalties for the infringement of such by-laws, and for prohibiting and preventing the use of elevators and hoists contrary to the provisions of such by-law. But the provisions in this clause contained shall be subject to the Ontario Factories Act and of any other Act making provisions applicable to elevators and hoists.

By the Councils of Cities, Towns and Villages.

For regulating the construction of cranes, hoists and elevators, and for determining the manner in which elevators in buildings shall be constructed and worked, and for providing for the inspection of all cranes, etc., but none of the provisions of such by-laws shall be inconsistent with the Ontario Factories Act so far as the same provides for the regulation or construction of cranes, etc.

Cab Stands and Booths.

By-laws may be passed by the councils of cities, etc., for authorizing and assigning stands for vehicles kept for hire on the public streets and places; and for the erection and maintenance of covered stands for booths on streets, etc., and for the protection or shelter of the drivers of such vehicles. Provided that no such booth shall be placed upon any sidewalk without the previous consent of the owner or lessee of the property fronting or adjoining such stand or booth.

By-laws may be passed by the councils of cities, etc., for building, equipping and maintaining and operating street railways in, along and over such streets of the city or town and subject to and upon such terms as the Lieutenant-Governor-in-Council may approve; and for leasing the same from time to time on such terms as may be determined on; and for levying an annual special rate to defray the yearly interest on the expenditure therefor, and to form a yearly sinking fund for the payment of the principal within a time not exceeding thirty years.

A municipal corporation which builds, constructs, owns or manages a street railway shall have and exercise the same rights and powers and be subject to the same liabilities as street railways and companies under the Street Railway Act, except where the same conflict with or are repugnant to the rights, powers, liabilities or duties of a municipal corporation as provided by law.

Electric Street Railways.

By-laws may be passed by the councils of cities for compelling every electric railway company, operating its railway within the limits of such city, to provide proper and sufficient enclosed vestibules upon its street cars to protect the motormen and persons in charge of such cars, from exposure to cold, snow, rain or sleet, during the months of November, December, January, February and March in every year, while engaged in operating the cars.

Schools for Artisans.

By-laws may be passed by the councils of municipalities, counties, cities and towns for establishing schools for the training and education of artisans, mechanics and workmen in such subjects as may promote a knowledge of mechanical and manufacturing arts, and for acquiring such real property as may be requisite for such schools; and the erection and maintenance of suitable buildings thereon; and for improving and repairing such school buildings, and for disposing of such property when no longer required. Councils establishing such schools may appoint boards of trustees to conduct the schools, giving them such authority as the councils may deem expedient.

For making grants in aid of such schools, or to art schools, approved by the Department of Education, as they may deem expedient.

An Amendment to the Municipal Act of 1900.

Provides that in cities having a population of more than 15,000 the council may, by by-law, provide that the aldermen shall be elected by a general vote of the electors, and either by general vote, or in two electoral divisions with a population exceeding 40,000, one-half the number to be elected by each division, but such by-law shall not come into force until it has been first submitted to a vote of the electors, and the persons entitled to vote on such by-law shall be the persons entitled to vote at municipal elections. Upon a petition being presented by 400 of the electors, it shall be submitted at the next municipal election following, and such by-law being carried by a majority of the electors voting thereon, shall come into effect at the next annual municipal election.

Such a by-law may be repealed by a by-law to be submitted to the electors at any annual municipal election held not later than five years after

its first coming into effect. The repealing by-law to be submitted to a vote of the municipal electors after being petitioned for by at least 400 of such electors. Where such vote has been in favor of the election of mayor and aldermen by a general vote of the electors, and not by ward, a by-law bringing the Act into force may be passed by the council of the municipality before the first day of July next, without submitting the same to a vote of the municipal electors.

Public Meetings. R.S.O. 1897, Cap. 230.

The notice to be issued by the sheriff of any county, or by the mayor of any city or town, or by two or more justices of the peace, for calling any public meeting shall be issued at least three days before the day on which such meeting is appointed to be held, and shall set forth the names of the requisitionists, or of a competent number of them. Also that the meeting is called within conformity of the provisions of this Act, and that such meeting, and all persons attending the same, will be within the protection of this Act, and that all persons are required to take notice and govern themselves accordingly.

Every person required by law, or who has in the usual way been appointed at such meeting to preside over the same, shall cause order to be kept at such meetings, and shall commence the proceedings of the meeting by causing the summons or notice calling the meeting, or the declaration whereby the same is declared to be a public meeting, under the protection of this Act, to be publicly read. The person who presides over such public meeting shall cause any person who attempts to interrupt or disturb such meeting to be removed to such a distance from the same as may effectually prevent such interruption or disturbance, and may adjudge any person who makes such an attempt guilty of such attempted disturbance, upon which conviction any justice of the peace may, by warrant under his own hand, forthwith commit such person to the common gaol of the county or district, for any period not exceeding forty-eight hours from the time of commitment signed, and until the lawful costs of the constable and gaoler for the arrest, transmission and detention of such person are paid or satisfied.

Every action to be brought against any person for anything by him done under authority of this Act, must be brought within twelve months next after the cause of such action accrued.

Factories. R.S.O. 1897, Cap. 256.

An Act for the protection of persons employed in factories.

Provided that where not more than five persons are employed within any place coming within the foregoing definition of a factory, and that where children, young girls or women are employed at home, that is to say, in a private place, house or room used as a dwelling, wherein neither steam, water or other mechanical power is used in aid of the manufacturing process carried on there, and wherein the only persons employed are members of the same family dwelling there, the provisions of this Act shall not apply.

A part of a factory may for the purposes of this Act be taken to be a separate factory; and a place used as a dwelling shall not be deemed to form any part of the factory for the purposes of this Act.

Where a place situate within the precincts of a factory is used solely for some other purpose than the manufacturing process carried on in the

factory, such place shall not be deemed to form any part of the factory for the purposes of this Act, but shall be deemed to be a separate factory and regulated accordingly.

No place shall be excluded from the definition of a factory by reason only that such place is in the open air.

Where any owner, occupier or tenant of any premises, building, workshop, structure, room or place, who has the right of access thereto, and control thereof, lets or hires out or contracts for work or labor to be done therein by any other person, and such other person employs therein any workman, child, young girl or woman, in or for the carrying out or performing of any such work or labor, every person thus employed shall, for the purposes of this Act, be considered and taken as being in the service of the said owner, tenant or occupier, and in computing the number of persons employed in any place in order to ascertain if such place comes within the definition of a factory according to the intent and meaning of this Act, every such person shall be taken into account.

"Child" shall mean a person under the age of fourteen years.

"Young girl" shall mean a girl of the age of fourteen years and under the age of eighteen years.

"Woman" shall mean a woman of eighteen years and upwards.

No child shall be employed in any factory, except in the business of canning or desiccating fruits and vegetables and the work incidental thereto, as provided above.

The Lieutenant-Governor-in-Council may, from time to time, by order in Council, notice of which shall be published in The Ontario Gazette, prohibit the employment of girls under the age of eighteen years, and of boys under the age of sixteen years in factories the work in which is deemed by the Lieutenant-Governor-in-Council to be dangerous or unwholesome.

It shall not be lawful to employ in a factory any child, young girl or woman so that the health of such child, young girl or woman is likely to be permanently injured, and whoever so employs any child, etc., shall upon summary conviction thereof incur and be liable to imprisonment in the common gaol of the county wherein the offence has been committed for a period not exceeding six months, or to a fine of not more than \$100, with costs of prosecution, and in default of immediate payment of such fine and costs, then to imprisonment as aforesaid.

It shall not be lawful for any child, young girl or woman to be employed for more than ten hours in one day, nor more than for sixty hours in one week, unless a different apportionment of the hours of labor per day has been made for the sole purpose of giving a shorter day's work on Saturday. In every factory the employer shall allow every child, etc., therein employed not less than one hour at noon of each day for meals, but such hour shall not be counted as part of the time herein limited as respects the employment of children, etc.

If the inspector so directs in writing the employer shall not allow any child, etc., to take meals in any room wherein any manufacturing process is then being carried on. And if the inspector so directs in writing the employer shall at his own expense provide a suitable room in the factory, or in connection therewith, for the purpose of a dining and eating room for the persons employed in the factory.

Notwithstanding anything contained in this Act, women may, during the months of July, August, September and October in any year, be employed to a later hour than nine o'clock in the afternoon of any day in any factory wherein the only work or operations carried on relate to and are

exclusively such as may be necessary for the canning or dессicating of fruits or vegetables, and the preparation thereof; but no woman shall be employed during the said months to a later hour than nine o'clock on the afternoon of any day for more than twenty days in the whole, and in reckoning such period of twenty days every day on which any woman has been employed to a later hour shall be taken into account.

Where any woman is employed on any day to a later hour than seven o'clock in the afternoon, she shall, on every such day, and in addition to the hour provided at noon, be allowed not less than forty-five minutes for an evening meal between the hours of five and eight o'clock.

Subject to the regulations which may be made in that behalf by the Lieutenant-Governor in Council, it shall be lawful for the inspector, where any accident, which prevents the working of any factory happens to the motive power of any machine, or where the exigencies of certain trades require that children, young girls or women working in a factory shall be employed for a longer period than is herein provided, on due proof of such accident or exigency, to give permission for such exemption, as, in his judgment, will, fairly to all parties concerned, make up for any loss of labor from such accident, or meet the requirements of any exigency of trade. In such cases no woman, etc., shall be employed before the hour of six o'clock in the morning, nor after nine in the evening, and the hours of labor shall not be more than twelve in any one day, nor more than seventy-two and a half in any week. And such exemption shall not comprise more than thirty-six days, on the whole in any twelve months.

A child shall not be allowed to clean any part of the machinery in a factory while the same is in motion by the aid of steam, water or other mechanical power.

A young girl or woman shall not be allowed to clean any part of the machinery in a factory as is mill-gearing while the same is in motion for the purpose of propelling any part of the manufacturing machinery. A child or young girl shall not be allowed to work between the fixed and traversing part of any self-acting machine, while the same is in motion.

Every factory shall be kept in a cleanly state and free from effluvia arising from any drain, privy or other nuisance.

A factory shall not be so overcrowded while work is being carried on therein, as to be injurious to the health of the employees.

Every factory shall be ventilated in such a manner as to render harmless, so far as is reasonably practicable, all the gases, vapors, dust and other impurities generated in the course of the manufacturing process that may be injurious to health. In Every factory there shall be kept a sufficient number and description of privies, earth and water closets and urinals for the use of the employees, which shall at all times be kept clean and well ventilated, and separate sets thereof shall be provided for the male and female employees.

In every factory all dangerous parts of mill-gearing, machinery, vats, pans, caldrons, reservoirs, wheel-races, flumes, water channels, doors, openings in the floors or walls, bridges and all other like dangerous places shall, as far as practicable be securely guarded.

No machinery other than steam engines shall be cleaned while in motion if the inspector so directs by written notice.

The openings of every hoistway, hatchway, elevator, etc., shall be provided with and protected by trap-doors or self-closing hatches, and such trap-doors, etc., shall be kept closed at all times except when in actual use by the persons authorized by the employer to use the same.

In every factory there shall be such means of extinguishing fire as the inspector acting under the regulations made in that behalf, directs in writing.

The main inside and outside doors shall open outwardly, and any door leading to or being the principal or main entrance to the factory or to any tower, stairways, or fire-escapes therein, or belonging thereto, shall not be bolted, barred or locked at any time during the ordinary and usual working hours of the factory.

In case of a fire or accident in any factory occasioning any bodily injury to a person employed therein, whereby he is prevented from working for more than six days notice shall be sent to the inspector in writing by the employer forthwith, after the expiration of the said six days; in case of an explosion occurring in any factory, whether any person is injured thereby or not, the fact shall be reported to the inspector within twenty-four hours of the occurrence. Where in any factory any person is killed or injured through any cause, written notice shall be sent to the inspector within twenty-four hours.

In case of neglect on the part of any employer to comply with the foregoing provisions with respect to sending written notices to the inspector, such employer shall be liable to a fine not exceeding \$30.00.

The provisions of this Act which relate to cleanliness, ventilation, etc., and to children etc., being during any part of the times allowed for meals in any factory, and to sending notices of accidents, shall not apply where persons are employed at home, that is to say, in any private room, house, place, etc. used as a dwelling.

Nothing in this Act shall extend to any person being a mechanic, artisan or laborer, working only in repairing the machinery in, or any part of, a factory.

The Lieutenant-Governor in Council may from time to time, for the purpose of carrying out this Act, make such rules and regulations for enforcing its provisions and for the conduct and duties of inspectors, as may be deemed necessary. And also from time to time appoint a female inspector, in addition to the other inspectors directed by law.

Every person shall, within one month after he begins to occupy a factory, serve on the inspector a written notice, stating the name of the factory, the place where it is situated, the address to which he desires his letters to be addressed, the nature of the work, the amount of moving power therein and the name of firm under which the business of the factory is to be carried on, and in default shall be liable to a fine not exceeding \$30.00.

Such annual or other report of the inspector as the Lieutenant-Governor from time to time directs, shall be laid before the Legislative Assembly.

Regulation of Shops. R. S. O., 1897, Cap. 257.

An Act Respecting Shops and Places Other Than Factories.

No child, young girl or woman shall be employed in or about the shop on any day of the week, other than Saturday or the day next before a statutory holiday, before the hour of seven o'clock in the morning, or after the hour of six o'clock in the evening.

Saturday labor shall not commence before the hour of seven o'clock in the morning nor continue after the hour of ten o'clock in the evening.

There shall be allowed for each child etc., so employed not less than one hour for the noonday meal, and not less than forty-five minutes for the evening meal.

If any child, young girl or woman is employed in a shop on the day next a statutory holiday until ten o'clock in the evening, in that case such child, etc., shall not be employed after six o'clock in the evening on Saturday of the same week.

Nothing in this section contained shall apply or be in force as to any shop, from the 14th day of December to the 24th day of December, inclusive, in each year.

In any shop where females are employed the employer shall at all times provide and keep therein a sufficient or suitable seat or chair for the use of every such female and shall permit her to use such chair when not necessarily engaged in her work.

Any person offending against the provisions of this Act shall be liable to a fine of not less than \$10.00, nor more than \$25.00, with the costs of prosecution, and in default of immediate payment of such fines and costs, to be imprisoned in the common gaol of the county for not less than one month or more than three months.

The provisions of this Act relating to the sanitary conditions of shops, and the means of extinguishing fire, etc., are practically the same as the provisions of the Factories Act in this respect.

The inspector shall have the right to exercise such powers as may be necessary for carrying this Act into effect.

Bake Shops.

All bake shops to which this Act applies shall be constructed as to lighting, heating ventilating and draining in such a manner as not to be

injurious to the health of any person working therein, and shall be kept at all times in a clean and sanitary condition, so as to secure the production and preservation of all the food products therein in a good, and wholesome condition.

Every bake shop shall be supplied with a proper washroom, closet and other conveniences necessary for the health and comfort of the persons employed therein

The sleeping places of the employees shall be entirely separate from the bake shop and no person shall be allowed to sleep in such shop.

No employer shall allow or require any employee to be in any bake shop to work on Sunday, nor to work more than twelve hours on any day, or more than sixty hours in any one week, except by permission of inspector.

No employer shall knowingly require or permit any person to work in his bake shop who is affected with consumption of the lungs or with scrofula, or with any venereal disease, and every employer is hereby required to maintain himself and his employees in a clean and healthy condition, while engaged in the manufacture, handling or sale of such food products

Any employer who violates any of the provisions of this Act which relate to bake shops shall for the first offence pay a penalty of not less than \$20.00, besides costs thereof, and not more than \$50.00; and for the second offence shall pay a penalty of not less than \$50.00, besides costs, and not more than \$100.00 and in default of payment shall be imprisoned in the common gaol of the county in which the offence is committed for a period not less than thirty days, or more than six months, and be kept at hard labor at the discretion of the Magistrate, and for the third and subsequent offence shall be imprisoned in gaol for a period not less than six months nor more than one year, to be kept at hard labor at the discretion of the Magistrate.

An Act to Amend the Ontario Shops Regulation Act.

S.O., 1900, Cap. 43, provides that every person contracting for the manufacture of coats, vests, trousers, overalls, cloaks, caps, drawers, blouses, waists, waist bands, underwear, neckwear, shirts, or any parts thereof, or any other garment or article of clothing, or giving out for improvement, manufacture or alteration, incomplete material from which the said articles or any of them are to be made, or to be wholly or partially altered or improved, shall keep a written register of the names and addresses, serially numbered, of all the persons to whom such work or material is given to be made, altered or improved, or with whom he may have contracted to do the same; and such register shall at all times be kept prominently posted up in the office of the person thus giving out such articles for manufacture, alteration or improvement.

Every article thus made, altered or improved, as aforesaid, shall bear upon a label attached thereto the register number or the name and address of the person to whom the same was given for manufacture, alteration or improvement, and any false statement upon such label shall render the person making the same liable to the penalties provided by this Act for making false entry in any register, notice, certificate or document.

No person shall knowingly sell or expose for sale any of the articles mentioned in this section and made in any dwelling house, tenement house or building in the rear of any tenement, etc., without a permit from the inspector, stating that the place of manufacture is thoroughly clean, and

otherwise in good sanitary condition. Such permit shall state the maximum number of persons allowed to be employed upon the said premises, and shall not be granted until an inspection of the premises is made by the inspector.

When any article mentioned under this section is found by the inspector to be made under unclean or unhealthy conditions, or upon any unregistered premises, he shall seize and impound the same, and affix thereto a label bearing the words "unsanitary" printed on a tag not less than four inches in length.

The owner of such article shall, after it has been disinfected, be entitled to have the same returned to him, upon first paying the costs of such seizure and disinfection.

If the inspector finds evidence of unhealthy conditions, or of infectious or contagious disease present in any workshop, tenement or dwelling, where any of the articles herein mentioned are manufactured, etc., he shall forthwith report the same to the local board of health, and the board shall issue such order as the public health may require, or may condemn or destroy all such infectious and contagious articles or any articles manufactured under unsanitary conditions, as aforesaid.

Immigration of Children.

R.S.O., 1897, Cap. 262, provides that no child shall be brought or caused to be brought into the Province of Ontario by any society or agent or by any person other than the parent of the child, or person standing in *loco parentis* to such child, from any port in Great Britain or Ireland, unless a certificate has first been obtained from an examiner stating that he has satisfied himself that the child named in the certificate has not been convicted of any crime, nor displayed any criminal tendencies, and that in other respects he is a child who may lawfully be brought into the Province.

Every society or agent shall maintain a careful supervision over every child caused by them to be brought into the Province, until such a child attains the age of eighteen years, and shall provide a permanent home or shelter, to which such child may be returned after being placed out in a foster home, or as an apprentice, if the person with whom the child has been placed is unable or unwilling to retain the custody of the child; and the address of such shelter shall be specified in every agreement made with persons receiving children into foster homes or as apprentices, and every such person shall, when so required by the society or agent, furnish full particulars as to the health, conduct, progress and welfare of such child.

Any complaints received that a child placed out in a foster home, or as an apprentice is being ill-treated or overworked, etc., shall be immediately investigated by the society or agent, and the necessary steps taken to protect the child from future ill-treatment or neglect.

Every society or agent having the custody of any child brought into the Province shall be entitled to send such child to the public or separate schools of the municipality in which the child resides, in the same manner as the child of any ratepayer.

If any child hereafter so brought into the Province of Ontario, within three years thereafter, becomes dependent on public or private charity, the society or agent, if so ordered by the inspector, shall pay to the Province or to any person maintaining the child, the cost of the maintenance of the child, and may be required to return the child to the place from which he came into this Province.

Any society or agent who brings into the Province any child, who from defective intellect or disease or physical infirmity, or any other defect, is unable to follow any trade or calling, or any child of known vicious tendencies, or any child who is known to be an habitual criminal, or whose parents have been criminals, lunatics or idiots, or weakminded or defective constitutionally, or confirmed paupers or diseased, shall be liable to a penalty of not more than \$100 or less than \$10, and in default of payment shall be imprisoned for any period not exceeding three months.

Horse Power for Threshing Machines.

R.S.O., 1897, cap. 265, provides that all persons owning or running any threshing machine, wood-sawing or other machine, which is connected to a horsepower by means of a tumbling rod or line of shafting, shall cause each of the knuckles, couplings and joints, etc., of such tumbling rod or line of shafting to be safely boxed or secured while running, with wood, leather or metal covering, in such manner as to prevent injury to persons passing over or near such tumbling rod, etc., and shall cause all oiling cups attached to arbors or journals to which driving belts are attached, to be furnished with tubes of tin or other material, which shall extend above the belt so as to prevent damage from oiling when the machine is in motion; and shall further cause a driver's platform to be placed on any horse-power used for driving machinery, of such size as to cover the gearing and to prevent accident to any person from contact with said gearing.

Any person who refuses to comply with the provisions of this Act shall be liable to a fine of not less than \$1 nor more than \$20, over and above the costs of prosecution, and in default of payment shall be imprisoned in the nearest common gaol for a period of not less than two or more than twenty days.

Technical Schools.

R.S.O., 1897, Cap. 301, provides that the trustees of any high school or board of education may, by resolution passed at a special meeting, called for the purpose, establish a technical school, or may change any high school already established into a technical school, providing that such resolution shall not take effect until ratified by by-law of each municipality composing the high school district, and also by the county council (if any) required by the High School Act to contribute the equivalent of the legislative grant towards the maintenance of such high school.

The provisions of the High Schools Act shall apply to technical schools, subject to any regulations of the Education Department, with respect to fees, etc.

Technical Schools for Adults.

It shall be lawful for the municipality corporation of any city or town to appropriate such sums of money as may be deemed expedient for the establishment of a technical school for adults within the meaning of this Act.

The general management of the schools for adults shall be vested in and exercised by a board of management, to be appointed as provided in section 9 of the Public Libraries Act. In cities and towns where there is a Public Library, technical schools for adults shall be under the control of the board of such library.

Employment of Prisoners.

R.S.O., 1897, Cap. 316, provides that the Lieutenant-Governor in Council may, from time to time direct the employment upon any work or duty, the nature of which is to be specified, beyond the limits of any common gaol, of any prisoner who is sentenced to hard labor under the authority of any Statute of Ontario, or for breach of the by-laws of any municipal corporation in this Province. Every prisoner shall during such employment be subject to the rules and regulations of the gaol so far as applicable. No prisoner shall be so employed, save under the strictest care and supervision of officers appointed to that duty.

An account shall be kept of the amount earned by the labor of prisoners, and shall be divided between the Province and the county in proportion to the amount contributed by them respectively towards the maintenance of such prisoners.

On April 4th, 1900, the following resolution was passed by the Legislature of Ontario :

Resolved, that in the opinion of this House all Government contracts should contain such conditions as will prevent abuses which may arise from the sub-letting of such contracts, and that every effort should be made to secure the payment of such wages as are generally accepted as current in each trade for competent workmen in the district where the work is carried out, and that this House cordially concurs in such policy, and deems it the duty of the Government to take immediate steps to give effect thereto: and it is hereby resolved that the work to which the foregoing policy shall apply includes not only work undertaken by the Government itself, but also all works aided by a grant of provincial public funds, and that the aforesaid policy shall be forthwith applied to every department of the public service, and to all parties now performing services for the Government. That this House is further of the opinion that in all appropriate cases the legislation of this House should be in harmony with this resolution.

S.O. 1900, Cap. 14. An Act Respecting the Bureau of Labor.

Her Majesty, by and with the advice and consent of the Legislative Assembly of the Province of Ontario, enacts as follows:

1. There shall be attached to the Department of the Commissioner of Public Works a bureau, to be styled "The Bureau of Labor."

2. The Lieutenant-Governor may appoint a Secretary of the said Bureau and may also appoint such other officers as may be necessary for the proper conduct of the Bureau.

3. It shall be the object of the Bureau to collect, assort and systematize and publish information and statistics relating to employment, wages and hours of labor throughout the Province—co-operation, strikes, or other labor difficulties, trades unions, labor organizations, the relations between labor and capital, and other subjects of interest to workmen, with such information relating to the commercial, industrial and sanitary condition of workmen, and the permanent prosperity of the industries of the Province, as the Bureau may be able to gather.

An Act Respecting Aid to Certain Railways, S.O., 1901, chap. 22, contains clauses for the protection of workmen engaged thereon, as follows :

8. The workmen, laborers or servants employed on or about the construction of the said railway, each of them shall be charged fair and reasonable prices for any board, provisions, clothing and other necessaries of life and reasonable comfort, supplied by the company, their agents or any person or persons authorized by the said company to supply such goods and accommodation, and upon the breach of any of the provisions of this section or in the event of exorbitant charges being made by the railway company, their agents or other person or persons authorized by the railway company, there may be deducted and retained from moneys payable in respect of such unearned subsidy, or hereafter to be granted subsidy, such amount as the Lieutenant-Governor in Council may think proper.

12. The Lieutenant-Governor in Council may instruct the Secretary of the Provincial Board of Health to enforce such reasonable sanitary regulations on the works and in the camps connected therewith during the construction of the said railways, as may be deemed necessary to maintain proper sanitary conditions and accommodation, and contractors shall have at such camps a tent and store, where in case of emergency a patient suffering from a contagious disease may be isolated at once, so as not to endanger the men in the camp.

18. All the provisions of the "Act to secure payment of wages for labor performed in the construction of public works," of the "Act respecting subsidies to railways and to encourage the manufacture of railway steel and iron in the Province." and of "The Ontario Railway Act," shall apply to the subsidies granted by this Act, and the wages paid on any of the said works shall be such as are generally accepted as current for competent workmen in the respective districts where such railways are to be constructed.

An Act Respecting Sanitary Regulations in Unorganized Territories, S.O., 1901, chap. 34, provides that the Lieutenant-Governor may from time to time make regulations applicable only to those parts of the Province which are without municipal organization.

(1) Respecting any particular industry, and the conditions under which the same may be carried on, for the purpose of preventing nuisances and the outbreak or spread of disease.

(2) For the cleansing, regulating and inspection of lumbering camps, mining camps and railway construction, and other places where labor is employed.

(3) For providing for the inspection of Louses and premises.

(4) For providing for the employment of duly qualified medical practitioners by employers of labor in lumber and mining camps and railway construction and other works where labor is employed, and for the erection of permanent or temporary hospitals for the accommodation of persons so employed.

S. O., 1901, Cap. 35. An Act to Further Improve the Factories Act.

1. Sub-section (4) of section 15 of the Factories Act is amended by inserting in the first line after the word "provided" the words "by the owner

of the factory," and sub-section (5) of the same section is amended by adding thereto the following:

"And the owner of any factory who does not provide the equipment, accommodation or conveniences required in sub-sections (3) and (4) of this section within two months after receiving from the inspector notice in writing in regard to the same shall be deemed to be guilty of a contravention of the provisions of this Act and shall be liable to the penalty provided in section 19 of this Act."

2. Section 20 of the Factories Act is hereby amended by adding thereto the following sub-sections :

(f) Inflammable material such as coal oil or petroleum, benzine and naphtha, and explosives of all kinds shall be kept stored when not in actual use in a building separated from the other parts of the factory, or in a fire-proof compartment of the factory approved of by the inspector.

(g) No boiler shall be used that is not insured in some boiler inspection company duly authorized in the Province for that purpose, or that has not been inspected within one year by a competent inspector, such inspector to be a man who has had charge of a boiler and engine for a period of not less than five years, or who holds a certificate as a stationary engineer, and the manager or proprietor shall, whenever so requested by the inspector, produce for examination the insurance policy or the certificate of inspection.

3. Sub-sections (2) and (3) of section 21 of the Factories Act are hereby repealed and the following substituted therefor :

(2) The owner of every factory over two stories in height, and where deemed necessary by the inspector, the owner of every factory over one storey in height, shall within six months from the time of the passing of this Act, provide the said factory with one or more systems of fire escape as follows, and shall keep the same in good repair :

(a) A sufficient number of tower stairways with iron doorways within reach of or having easy communication with all the working-rooms of the factory ; or

(b) a sufficient number of iron or other uninflamable fire escapes on the outside of the building, such fire escapes to consist of stairways with railing or iron ladders and to be connected with the interior of the building by iron or tinned doors or windows with iron shutters, and to have suitable landings at every story including the attic if the attic is occupied as a workroom, and the said stairways to start at a distance of not more than eight feet from the ground or pavement; or

(c) any other system or form of fire escape that may be sanctioned under this Act by the Lieutenant-Governor in Council on the recommendation of the Factories Inspectors.

(3) The owner or proprietor of any factory refusing or neglecting to provide the means of safe exit in case of fire prescribed in this section shall upon conviction thereof incur and be liable to a fine of not more than \$500 with costs of prosecution, and in default of immediate payment of such fine and costs, be liable to imprisonment within the common gaol of the county for a period of not more than twelve months.

4. The following is added to the Ontario Factories Act as section 51 :

51. The owner, proprietor or manager of any factory hereafter established and to which this Act applies, shall not begin operations until he shall have received from the factory inspector a certificate of inspection of the factory a permit to operate the same ; and any such person violating the provisions of this section shall be liable to the penalties provided for in section 19 of this Act.

S.O., 1901, Cap. 36. An Act to Amend the Ontario Shops Regulation Act.

1. Section 13 of the Ontario Shops Regulation Act is amended by adding thereto the following sub-sections :

(3) The owner of every shop shall be held responsible for the providing of the sanitary conveniences provided under sub-section (2) of this section, and on failure or refusal to provide the same within two months after receiving written notice from the inspector, shall be liable on conviction to a fine of not more than \$500 ; or in default of payment of the same, shall be imprisoned for a period of not more than twelve months.

(4) Where grinding, polishing or buffing is carried on in any shop, the provisions of section 16 of the Ontario Factories Act shall apply to such shop.

2. Section 39 of the Ontario Shops Regulation Act is repealed and the following substituted therefor :

39. No person shall require, permit or suffer any employee in any bake shop to work on Sunday, nor for more than twelve hours out of every twenty-four hours, computed from the time when the employee commences to work, nor more than sixty hours in any one week, to be computed as commencing on Monday and ending on Saturday, both days inclusive, except by permission of the inspector given in writing to the employer ; and a copy of such permission shall be posted in a conspicuous place in the bake shop.

Barber Shops.

3. The said Act is further amended by adding thereto the following as sections 45 and 46.

45. No employer shall require, permit or suffer any employee in any barber shop to work on Sunday, and no proprietor of any barber shop shall open his barber shop or permit the same to be opened to the public or carry on any business or work therein at any time between the hours of 12 o'clock on Saturday night and 12 o'clock on Sunday night.

46. Any employer or any proprietor of a barber shop who violates the provisions of the preceding section shall on conviction thereof be liable to a penalty of not less than \$20, besides costs, and of not more than \$50, besides costs, and in default of payment of the same, shall be imprisoned for a period of not less than thirty days and of not more than six months.

REPORT
OF THE
ONTARIO
GAME COMMISSION
FOR THE YEAR
1902.

PRINTED BY ORDER OF
THE LEGISLATIVE ASSEMBLY.

REPORT
OF THE
ONTARIO GAME COMMISSION.
1902.

His Honor The Lieutenant-Governor of Ontario.

Sir,—We your Commissioners beg to present the Eleventh Annual Report of the Department charged with the important and responsible duties of the preservation of the game of the Province.

Nature has been prodigal in her gifts of game animals, birds and fish to the people of this Province; but owing to the large increase in numbers yearly of those who seek pleasure afield with rod and gun, the demand on our game and fish supply is becoming very great, and sportsmen must be less exacting in their demands as years roll on, otherwise the supply will become very much depleted, if not exhausted entirely. Having these facts continually before them, your Commissioners, while anxious not to ask for restrictions to be placed on sportsmen which will to them appear arbitrary and vexatious, feel at the same time that duty demands them to protect to the fullest extent the great heritage that the people of this Province possess in game and fish.

We have pleasure in stating that throughout the older settled sections of the Province, we have every reason to believe that our Game Laws are being well observed. A few infractions have been reported from the more newly settled districts; infractions which we hope were committed more in ignorance than wilfulness.

The experience of sportsmen in the Province during the season of 1902 was a varied one. The continual wet weather in June and July proved most disastrous to the young quail and partridge in low lying districts. Both quail and partridge were as plentiful in the northern part of the County of Lambton as they have been for several seasons past; but in the northern portions of the county, and the counties of Middlesex, Essex and Kent, reports to hand show conclusively that the great downpour of rain worked sad havoc among the young birds, and in some districts where birds had been plentiful in former years not a bird was to be found.

Woodcock was reported to be very scarce, but this may be accounted for by the fact that the birds could find feed almost anywhere owing to the wet summer; and, as they were not to be found in their usual haunts, sportsmen concluded that there were no birds, whereas they were scattered throughout the country.

Ducks were unusually plentiful in some of the smaller preserves, and some good bags were made; but on some of the larger preserves the experience was anything but satisfactory. But the conditions of the weather and the surrounding country had more to do with this than anything else. Ducks were found in

large numbers in old marshes that for years up to last summer had been dry. In years gone by many people resented the leasing of duck preserves to private individuals, but this, with the abolition of spring shooting, has done much to keep up the present good supply of birds.

To the devotees of rifle and hound the season of 1902 was a red-letter one. The Dominion and Canadian Express Companies report having carried 2,526 carcasses of deer alone ; but this gives but an imperfect idea of the actual number killed, as it has been estimated that over 12,000 deer are killed in the Province annually. As usual after the close of the season, your Commissioners have been urged from different quarters to recommend certain changes in the law before another season. Were these demands acceded to, they would be followed by another batch of requests next year.

The open season for Moose has been taken advantage of by many sportsmen, and some lordly heads were secured. These noble animals appear to have increased during the last few years. No fewer than 5,165 deer licenses, and 150 moose licenses, were issued.

The otter and beaver, two of the most valuable fur-bearing animals we have, appear to be decreasing in numbers yearly: the value of their pelts being accountable for this.

We regret to announce that it has been reported to your Commissioners that in a few cases summer tourists in the northern part of the Province have been guilty of killing moose and deer during the summer, and leaving their carcasses to rot. Should this wanton destruction continue, your Commissioners will feel compelled to ask for legislation prohibiting the carrying of firearms in certain districts during the summer months.

Your Commissioners have under discussion plans for the propagation of quail in the Province. These grand little game birds are yearly becoming fewer in numbers, and it is felt that something must be done other than shortening of the open season to assist them in keeping up their numbers. With this end in view the Government may be asked in the near future to lease the rights of a few hundred acres of land in favorable portions of the Counties of Lambton, Essex, Kent and Middlesex for the purpose of propagating quail on these lands ; it being their opinion that this would be the cheapest and most effective way that quail can be protected and increased. Another plan proposed is to breed them in confinement, turning them down in pairs in the spring.

It is to be regretted that some sportsmen are in the habit of getting in all the game they can lay their hands on during the open season, simply because they can place it in a cold storage for an indefinite period. This should be frowned down on by every true sportsman. The aboriginal inhabitants of this country shewed us the good example of killing only for their daily requirements, an example which we should feel it our duty to follow.

A very successful meeting of the North American Fish and Game Protection Association was held in the City of Ottawa in January, at which the Province of Ontario was well represented. The gathering together of representative sportsmen from various States and Provinces, and the discussion of methods for the better protection and propagation of our game and fish cannot but be productive of much good, not only to the present generation, but also to the generations yet to come.

We cannot close this Report without referring to the good work done by Chief Game Warden Tinsley and his able staff of deputy wardens (now numbering 285). In the discharge of his duties, Mr. Tinsley has displayed both tact and sagacity, and, whilst never subjecting sportsmen to vexatious annoyances over trifles, has firmly insisted on obedience to the Game Laws of the Province. Under his able management the Game Department of the Province from a fin-

ancial standpoint, shews a remarkable growth. The year just closed shows receipts from all sources of no less a total than \$17,178.37, with expenditures of \$9,857.75, leaving a surplus to the Province of \$7,320.62; a most gratifying showing.

During the year Dr. McCallum, who had filled the position of Chairman of the Commission for several years, was called upon by the Government to fill an important position, which necessitated his resignation of the Chairmanship. Your Commissioners feel that his place on the Board will not be easily filled, and they beg to place on record their high appreciation of the good work done by him while on the board as a member. To his ripe judgment as a true sportsman and ardent naturalist is to be largely attributed the present efficient condition of the Game Laws of the Province.

All of which is respectfully submitted.

MONTAGUE A. A. SMITH.

Chairman Ontario Game Commission.

REPORT OF THE CHIEF GAME WARDEN.

TORONTO, January, 1903.

MONTAGUE A. A. SMITH, Esq.,

Chairman, Ontario Game Commission.

SIR,—I herewith submit my annual report of the work of the Commission for the year ending December 31st, 1902, which I trust will receive the approval of yourself and colleagues.

WARDENS.

The increased work of the Commission has been accomplished—I venture to hope—to your satisfaction, and in a large measure due to the energetic and efficient services of Wardens Willmott, Smith, Quallins and Gill, also my clerk Mr. Pegg, who has done all possible to keep up with the work of the Commission. I have also received valuable aid from Inspectors Rogers and Greer. These gentlemen have done much in having due respect paid to the game laws of the province. Provincial Officers, Crown Land and Timber Agents, Bush and Fire Rangers have also done good work in their respective localities.

I take the liberty of drawing your attention to the urgent necessity of having two more salaried wardens appointed for the Nipissing and Algoma Districts, in consequence of the influx of settlers, miners and others to these remote districts. I have reason to believe that much illegal killing of large game occurs during the winter in those districts beyond the reach of our present staff of wardens. We cannot reasonably expect deputy wardens to go to those remote portions of the Province on the chance of obtaining convictions to reimburse them.

DEPUTY WARDENS.

Twenty-seven deputy wardens have been added to the list during the year, the number now being 285, most of them doing effective work. This improvement is in a large measure due to them having to take Oath of Office for the proper discharge of their duties. Allowing deputy wardens the whole of the fines resulting from convictions obtained by them has also been a factor resulting in more effective enforcement of the game laws.

GAME LAWS.

I am able to report a general desire of the residents of the Province to have the game laws observed, the result of which, is securing us the valuable assistance so necessary to the effective work of the Commission.

I regret having again to refer to the abuse of settlers' permits. What was intended by the Government to assist poor settlers' in the least productive portions of the Province, has been taken advantage of by men well able to pay for hunters' licenses, business and professional men residing in towns and villages, the majority being in comfortable circumstances, should not be allowed to pose as settlers and hunt on those permits. I have reports to the effect that many of the bona fide settlers fail to live up to the conditions on which these permits are issued. Many of them are accused of selling deer to unsuccessful hunters, and afterwards killing two more for their own use. Such conduct if continued would justify the Government in withdrawing the privileges so grossly abused.

As usual after the close of the open season, the regular annual agitation for changes in open season occurs. We have the periodical outcry from the still hunters who want hounding prohibited. Others want the open season to be the last half of November instead of the first half of the month. No doubt some of these malcontents would like the Government to change the open season with every change of weather. The month of November had a higher temperature than had prevailed in the Province, in November, since 1848, and it may be fifty years more before we have such mild weather during November in the Province. Those asking for changes evidently have not considered the impossibility of the Government changing the open season with every change of weather.

If the hounding of deer in Ontario was prohibited ninety per cent. of the hunters in our short open season would never see a deer, when we take into consideration that a large portion of our northern country has had the original trees cut down, and succeeded by a dense second growth in which still-hunting would be impossible. While the object of the Commission is game protection, the large number of hunters are entitled to some consideration. The large number of fatal accidents that annually occur in those States where still-hunting prevails, and the almost entire absence of such accidents during our short open season when at least 10,000 hunters are in the woods of seven or eight of our northern counties. If the hounding of deer was prohibited in the Province I feel sure many hunters would decide that it was a case where absence of body would be better than presence of mind and would wisely stay at home.

GAME IN ONTARIO.

Duck shooting, in many localities, during the past season has been all that could be desired, while in other localities, where the marshes are in the vicinity of large lakes or open waters, the shooting was not satisfactory, in consequence of continued mild weather, enabling the ducks to stay out in the open waters. A large number of sportsmen complain of the open season for ducks; some recommending the open season to commence on the 1st of October instead of the 1st of September. Personally I would like the season to open the same time as for Partridge, Snipe, and Woodcock, viz.: September 15th. I have the usual complaints against market hunters making stationary hides, and anchoring their boats in open waters on the line of flight, securing all the best shooting, to the detriment of general sportsmen. Until duck shooters in general can agree on a uniform distance that boats may be anchored and decoys placed from shore or natural cover, this vexed question must remain in abeyance.

Ruffed grouse or partridge are reported to have been numerous as ever in the northern portions of the Province, offering strong inducements to market hunters and unscrupulous storekeepers to violate the game laws. These characters resort to all kinds of subterfuge to enable them to evade the laws. In the more settled portions of the Province, owing to the very wet cool weather during the breeding season, partridge were not so numerous as usual.

Quail. I regret having to report the most unfavourable breeding season for these grand game birds that has occurred in the Province for many years past. Large portions of the breeding grounds in the counties of Essex and Kent were covered with water about the time the young quail usually leave the nest, resulting in a most unsatisfactory season in those counties. In other sections of the Province, where the conditions were more favourable, there are a fairly satisfactory number of birds left over for next season's stock. The wise action of the Legislature at the last session in reducing the open season for quail to one month will have a tendency, with an intelligent system of re-stocking and a little self-denial by sportsmen, to again have a satisfactory number of these gamey birds in those favorite counties.

Snipe. Some very fair bags of these wary birds were made in the marshes frequented by them.

Woodcock in the Province were scarcer than ever, except in a few favored localities. I am afraid, unless action is taken to protect this king of game birds in their winter home in the south, they will soon become like some other species, things of the past.

DEER.

During the open season of 1901 the Canadian Express Company carried the large number of 2,372 carcasses of deer, being an increase of 878 compared with the open season of 1900. The number carried by the Dominion Express Company during the open season of 1901 was 129, making a total of 2,501. The Canadian Express Company during the open season of 1902 carried 2,286, 86 less than last year. The Dominion Express Company carried 240, an increase of 111 compared with open season of 1901, making a total of 2,526, an increase of 25 over season of 1901. The above figures convey an imperfect idea of the number of deer actually killed in the Province, full one-half of those procuring licenses have their deer conveyed to their respective homes by teams, and of which we have no record. There being upwards of 10,000 hunters hunting deer under licenses and settlers' permits, and when taking into consideration the large number annually killed by Indians and settlers in unorganized districts, it is a low estimate to say that more than 12,000 deer are yearly killed in the Province. A few years will determine whether the natural increase of these beautiful animals will meet the demand without further legislative restrictions.

MOOSE.

I am glad to say that many of those taking advantage of the open season for moose succeeded in securing very fine heads. The Dominion Express Company report having carried 40. Nearly all the hunting was done on the mere fringe of the moose grounds, few of the hunters going far enough to reach the caribou grounds.

FUR-BEARING ANIMALS

Otter and Beaver are not increasing to the extent desired, the amount received for their skins being a powerful incentive to the Indians and trappers to incur the risk of illegally killing these valuable animals.

Mink and Muskrats.—A lucrative business is done in the Province in buying and selling the skins of these animals.

INSECTIVOROUS BIRDS.

The issue of these permits has been further reduced, from fifty-one in 1901 to forty-six in 1902.

SHOOTING LICENSES.

Two hundred non-resident licenses have been issued during the year, an increase of one hundred compared with 1901. One hundred and fifty moose licenses were also issued, and 5,165 deer hunting licenses, an increase of seventy-five over the issue of 1901.

I again tender my sincere thanks to the officials of the various Railway and Express Companies, the Press and Sportsmen, for the courtesy and assistance rendered me.

Your predecessor, Dr. G. A. MacCallum, having been appointed by the Government to a responsible position necessitated his resigning the position of Chairman of the Ontario Game Commission. Dr. MacCallum's ability as a naturalist and accomplished sportsman, eminently fitted him for the position he filled so satisfactorily from its inception, with credit to himself and in the interest of the Province. I desire to tender him my warmest thanks, for his uniform courtesy and assistance rendered me in the discharge of my duties.

All of which is respectfully submitted by

Your obedient servant,

EDWIN TINSLEY,

Chief Game Warden.

BELLEVILLE, 31st Dec., 1902.

E. TINSLEY, ESQ.,

Chief Game Warden.

SIR,—I beg, herewith, to submit my annual report, as Warden for the eastern district.

Moose seem to be about in the same condition as in former years along the northern boundary of this district and with advancing settlement it is hopeless to expect any increase of their number south of Algonquin Park.

The usual supply of red deer was in evidence at the close of the hunting season, but on the whole I think the kill was smaller than that of last year owing, no doubt, to the quantity of water in all the swamps and ponds.

Considerable agitation is going on regarding the changing of the open season to a later date, but I am strongly of the opinion that it would not be wise to make any change in that direction at present.

I regret having to say that there is no evidence of an increase in beaver and otter in the counties comprising this district.

Muskrats are about in the same condition as in former years but on account of the incessant pursuit of them, it is impossible that their number can increase to any great extent.

In this connection I would strongly recommend that mink be put in the list of protected animals, inasmuch as it is now the most valuable fur bearer we have in older Ontario, the value of the pelts having risen from seventy five cents to four dollars and upwards during the last few years, and while it is claimed by some that they are somewhat destructive around a settler's premises, a clause might be inserted in the Act permitting the killing of them when found doing damage, as in the case of muskrats in the vicinity of dams and embankments.

Partridge have not been as plentiful in this district as they were last season, owing, no doubt, to the low temperature, and excessive rainfalls of the early summer, which must have been very destructive to the young chicks, but notwithstanding their scarcity, violations of the Act respecting their sale and shipment have been of frequent occurrence, but confiscation of the packages and prosecution for the offence ought to prevent a recurrence of this in future.

Ducks have been fairly plentiful and shooting good, but the season closed early. Numerous complaints have been made regarding the punting of them in the open water, and I have been requested to draw your attention to this with a view of having an enactment compelling shooters to erect their blinds within a reasonable distance of the shores and rush beds.

I have also been requested by a large number of sportsmen to draw your attention to the fact that it is not advisable to protect hares to the extent that now obtains, and that the open season should be extended to the 1st of February at least, claiming also that the contention that it would lead to the killing of partridge in the swamps is not good, inasmuch as that the hunters do not go into the swamps but stand on the roads, killing the game when they come out in the open, and that there is altogether less damage to the partridge from them than from the fox hunter for whom there is no restriction other than the close season.

I have the honor to be, sir,

Your obedient servant,

H. K. SMITH.

BEAUMARIS, 24th Dec., 1902.

E. TINSLEY, Esq.,

Chief Game Warden, Toronto :

SIR,—Herewith I beg to submit my annual report in regard to game in the Northern Districts.

During the past hunting season deer have been reported plentiful in most sections, and hunters on the whole have met with fair success.

Owing to the comparatively mild weather during the open season many carcasses of venison were lost. This has led to many hunters agitating for a later open season, and that from the 15th to 30th of November, has been named as an improvement on our present season.

I myself feel satisfied that for many reasons our present season could not be improved upon. 1st. In all probability we will not have a recurrence of so mild a season for years to come. 2nd. Many outsiders take the hunting season for their annual vacation, and enjoy the camp life as much as the hunt, and this is naturally much enhanced by a certain amount of temperate weather. Of course, we can never attempt to cater to all; but the present season I think is satisfactory to the majority. 3rd. Should the season be set back, I am afraid it would result in the loss of numbers of deer; as the small lakes would be beginning to freeze over, and deer pursued by hounds would take to the water as usual, and in many cases break through the ice and be drowned. Of course we know it is astonishing how a deer can scramble out of the water onto the ice under ordinary circumstances; but a deer after a long chase and a sudden submersion as above, would not, I am afraid have the strength in many cases to save itself.

The throwing open the season for moose has met with the approbation of hunters, and has been taken advantage of by many, with most satisfactory results to most.

It is not the bona fide sportsman who decimate these animals, but a certain class of skin hunters, and Indians who do the damage. Partridges have been plentiful up north; but scarce in the districts lying further south. There seems a growing desire for private parties to acquire by lease, territory for private hunting grounds. Whilst not in favour of granting privileges to the classes, to the prejudice of the masses, I cannot but think that territory thus acquired would form breeding and distributing centres for game animals and birds, and I believe that if the Government could set apart portions of otherwise useless lands in tracts, say of four townships or so throughout the province, (or rather the north and north-western portion) as game preserves, they would be more than recompensed. Two men could easily look after such tracts of land; whereas it would take an army of men to properly protect an extensive tract. On a recent trip I was most gratified to find fresh beaver workings on many lakes and creeks where this animal had not been known to frequent for a number of years.

Considering the vast extent of our territory, the infractions have been few, and the growing interest in the protection of our game is a full guarantee of the appreciation of the work performed by the Commission.

I am, Sir.

Your obedient servant,
JOHN H. WILLMOTT.

WINDSOR, Dec. 31st, 1902.

Mr. E. TINSLEY,
Chief Game Warden.

DEAR SIR,—I herewith submit my annual report as game warden in charge of the Western district, for the year 1902.

QUAIL.

In consequence of the continued wet weather during the breeding season quail are very scarce on all the low lands. On the higher lands there are quite a few left. If we have a favorable winter there will be a number of quail left for next season's stock. Sportsmen during the past season have been satisfied with few birds, and have done all possible to have birds left for the production of next year's crop. The owners of preserves, and others, are feeding the quail during severe weather.

PARTRIDGE.

Partridge have afforded western sportsmen fairly good sport in the counties of Essex, Kent and Lambton. Black squirrels, and the wood-hare or cotton-tail rabbits are becoming more numerous in the western counties.

SNIPE AND PLOVER.

These birds have been fairly plentiful in the localities where they resort.

DUCKS AND GEESE.

Duck shooting has been satisfactory, except early in the season, the ducks feeding on the flooded farm lands, and in consequence did not frequent the marshes as in other years until late in the season when good bags were made.

Wild geese visited the St. Clair Flats and the shores of Lake Erie in large numbers, and afforded excellent sport in those localities.

DEER.

Owing to the effective protection of deer that has prevailed in Essex for some years a satisfactory increase of the animals is noticed in the southern portion of the county.

WILD TURKEYS.

I am afraid there are very few left, either in Essex or Kent. I intend taking a trip in the near future through the woods where they were last seen, and will let you know the result.

ENGLISH PHEASANTS.

Are doing well on Pelee Island, the climate being favorable for these fine birds. A very large business is done here by trappers and others in Muskrats, the carcasses even, are taken over to Detroit and disposed of for food purposes.

POACHERS.

Most of the poaching on S. Clair Flats and Detroit River is done by parties from power launches. Some of these are very fast and cannot be overtaken by wardens in row boats. It will be necessary, to enable us to enforce the game laws, to have a power boat at our disposal in this district.

I have the honor to be,

Your obedient servant,

F. C. QUALLINS.

DUNNVILLE, Dec., 30th 1902.

E. TINSLEY ESQ.

Chief Game Warden

SIR,—I beg to present you my annual report for this district during the year 1902.

Partridge have been in fair supply during the past season but I fear the increase in these birds has reached the limit, owing to the annual decrease in their natural covers and winter protection, but the greatest obstacle to their increase is, in my opinion, allowing hunters of all sorts to carry guns, accompanied by dogs, all through the closed season, on the pretence of hunting cotton tailed hare, foxes or coons. It thus becomes very difficult for the Wardens to secure an increase of game birds and animals.

Quail undoubtedly do not show an increase this season above that of the last three years. The same cause that is checking the increase of partridges is still more ruinous to the quail, namely, the gun and dog in the woods all the year round.

Ducks, on the whole, were in good supply, but the season for shooting ducks is at least one month too early in this district. All the responsible sportsmen in this district, are very strongly of this opinion.

Woodcock, except in one locality, were somewhat scarcer than usual. They have not increased any during the last three years. I would say shorten the season for these birds.

Snipe also need a shorter season to be hunted, or some further protection: such as moving the open season backward to the first of October.

Black squirrels still continue to give the amateur and boys good sport. The grey squirrel is still holding his own in the eastern and western extremes of this district.

Insectivorous birds in this district have certainly been on the decrease for the last ten years, which is very unfortunate for the interests of the agriculturists and fruit growers, gardeners etc. The greatest enemy of these birds is, in my opinion, the swarms of worthless cats harboured by the majority of house

holders. The greater number of them being half starved this forces them to take the birds. They catch at and tear down the nests and eat the young birds or eggs. The small boys, and English sparrows come next in the destruction of the nest and eggs.

I have the honor to be

Sir,

Your obedient servant.

J. A. GILL,

Game Warden.

TORONTO, January, 1903.

To the President and Members of the North American Fish and Game Protective Association:

SIRS,—Since our last meeting good progress has been made in the great public work in which our Association is actively engaged. It gives hope for the future for game protection, when so many States are abolishing the barbarous practice of spring shooting, and prohibiting the sale of many valuable and decreasing species of game. Recent action has been taken to procure concerted measures for the better protection of two of our most valuable and vanishing game birds, the woodcock and wood duck; so far, I regret to say, without any appreciable results. Sportsmen in general are interesting themselves in this most important matter. Any measures must be general to be effective in perpetuating these species. It would be of no avail to have close seasons for these grand birds in the northern portion of this continent for several years, and allow unrestricted slaughter in the south.

There has been considerable controversy during the past year, as to the right or wisdom of the system of non-resident licenses. The license system is the only measure that will enable sportsmen of moderate means to indulge in field sports in the future. The acquisition, by wealthy men, of immense tracts of the best game lands of our respective countries, proves how rapidly and dangerously we are approaching the undesirable system of European countries, in which fish and game are exclusively for the favored few. Had more respect been paid to the laws of nature in the past there would have been far less of the public domain in private preserves, from which the general public are debarred. Vandals, who claim to be sportsmen, are largely responsible for the increase of private preserves, and also for the necessity of a stringent protective system. This class—I cannot truthfully call them men—who during the tourist season invade a neighboring country or state and form pools: the apology for a man catching the most fish during the day, takes the results of such pooling, immense quantities of fish being daily left to rot on the shores or dumped into the waters. There are others who during the close seasons abuse the privileges accorded them, as tourists, by shooting everything in sight, from the poor little fawn to the lordly moose, in a spirit of sheer destructiveness, leaving the carcass to rot. Surely the State or Province would be more than justified in requiring a license fee from these characters, to pay the costs of the espionage their wrong doing had necessitated. States or Provinces do not allow strangers to enter their respective timber lands and take their timber without paying an equivalent therefor. The same rule applies with equal force to game and fish, both being valuable assets of the States and Provinces, the same as timber.

The protection of fish and game should be self-sustaining. This can only be accomplished by those doing the hunting and fishing paying the cost of the sport provided for them. This as a rule, would have the beneficial effect of

keeping the public domain for the public, and make the task of buying or leasing large portions of public lands for private preserves more difficult. In justice to those hunting on non-resident licenses, they should certainly be allowed to take home, at least part of the game killed by them. I am more than ever convinced that the general adoption of licenses for shooting game is the only means of insuring even a moderate supply of game in the future. Those who object to paying a reasonable license fee are not sportsmen, but belong to that numerous class who are always on the alert to procure something for nothing. If all hunters and tourists had in the past honestly obeyed the game and fish laws of our respective countries, the system of licenses would not have been necessary, and the expenses of espionage would not have to be provided for. All who have given the question of fish and game protection the consideration it deserves, will admit, that the fish contained in our magnificent lakes and rivers, and the game of forest and field, is a most valuable heritage left us by nature for the purpose of being used wisely and well for the benefit of all. Nature makes few mistakes and intended her laws to be observed, and exacts severe penalties for the violation of them.

It is well known that large portions of the United States and Canada is not adapted for agriculture, or even for grazing purposes. The rocks may be rich in mineral deposits which may in due season be discovered, the valuables extracted, the mines deserted and afterwards unproductive for all time; but on the surface of these rocks, and in the lakes and rivers intervening, there exists a perpetual and natural productive source of wealth in fish and game. We are told that good government consists in doing the greatest good to the greatest number. Then it is evidently the duty of our respective governments to introduce measures to perpetuate a valuable heritage in the interest of the majority, and wisely prevent its total destruction in a few short years, to satisfy the greed and rapacity of a few.

If the wild lands composing the public domains are to remain open to the public in our respective countries and the game protected, an equitable system of hunting licenses has become an urgent necessity, and will be found to be the only practicable solution of the problem of game protection. We who have enjoyed for many years the pleasures and healthful recreations in field, forest and streams, should consider it an imperative duty to do all possible to enable posterity to have the benefit of such health-giving and manly recreations. It is the duty of the State to perpetuate all that has a tendency to make manly men of the rising generation, men who will uphold the honor and dignity of our respective countries.

I take the liberty of saying—without fear of contradiction—that the inherent love of field sports, so long prevailing in Great Britain, has been a powerful factor in creating that grand empire on which the sun never sets. No other country has produced such offshoots, with their glorious love of liberty, viz.: your own United States, Australia, New Zealand, and last but not least, our own Dominion. We should endeavor to imbue our sons with the love of nature: educate them in nature's complete work, by taking them with us on our annual outings, teach them to do that which is just and right to God and their fellow-men, and become the peer of any man on earth.

OPEN SEASON FOR MOOSE, CARIBOU AND VIRGINIA DEER IN ONTARIO, 1902.

Previous to 1896 there was no resident license required from residents of the Province to legally enable them to hunt and kill deer, the law allowing each hunter to kill two deer. In the remote districts we had no means of knowing whether hunters killed two or twenty-two, so long as they were able to get the

deer out of the woods to the respective shipping points. The Ontario Game Commission, perceiving the urgent necessity of restricting the shipping facilities, advised the Legislature to pass the present effective license and coupon system, making it illegal for common carriers to transport any deer, moose or caribou, or any portion of same, without having attached one of the two coupons issued with each license. This change has the twofold effect of affording more protection for the deer and has more than provided the cost of such protection. Notwithstanding the very large number of deer killed in the northern portion of the Province, we have good ground for believing that they are not decreasing. During the open season of 1901 the Canadian Express Company carried the large number of 2,372 deer, being an increase of 878 compared with open season of 1900. The number carried by the Dominion Express Company in open season of 1901 was 129, making a total of 2,501.

The Canadian Express Company during the open season of 1902 carried 2,286, 86 less than last year. The Dominion Express Company carried 240, being an increase of 111 compared with 1901, being a total of 2,526, an increase of 25 over season of 1901. The above figures convey an imperfect idea of the number of deer killed annually in the Province, full one-half of those procuring licenses having their deer conveyed from the woods to their respective homes by teams. There being nearly 10,000 hunters hunting under licenses and settlers' permits, each being allowed to kill two deer, it is safe to assume that at a very low computation 10,000 deer are killed in Ontario during the open season, in addition to those killed by Indians and settlers in unorganized districts, who are allowed to kill for their own use during the whole year. I feel justified in saying that not less than 12,000 deer are annually killed in the Province. A few years will determine whether the natural increase of these animals will equal the demand without further Legislative restrictions. The past open season for moose and caribou was the first open season—with one exception—for these animals for many years in the Province. I am glad to say that many of those taking advantage of the open season succeeded in securing very fine heads. The Dominion Express Company report having carried 40. Indians and settlers in unorganized districts being allowed to kill one moose each, for their own use, during the open season, would no doubt increase the number killed to at least 100. Many of those successful report killing their moose in close proximity to railway or water transportation facilities, and with little work or trouble. Nearly all of the moose hunting is done on the mere fringe of the moose grounds of the Province, few of the hunters going far enough back to the caribou grounds. With the completion of the various railways under construction, in connection with the present facilities, moose can be procured with less expense and trouble in Ontario than in any other portion of the great American Continent.

The Ontario Game Commission is badly handicapped in the protection of the moose, the king of all game animals. The Government kindly allows Indians and settlers, as before stated, living in unorganized districts or territory, to kill game at all seasons, for their own use. Instead of this leniency having the desired and intended effect of benefitting their families, it has resulted, with few exceptions, in creating a worthless class of loafing poachers whose services are utilized by unscrupulous owners of timber camps, and hotel-keepers, to supply them with illegal game. There is not much satisfaction in sending Indians and half-breeds to gaol. The fines for illegal possession are so light that owners of camps can well afford to pay fines and continue to feed their men on moose meat instead of beef. While Northern Ontario, with its immense stretch of woods, lakes and rivers, its invigorating and bracing climate seems to have been specially provided by an allwise Creator to be a breathing place for the inhabitants of the

pent-up and overcrowded cities and towns of the United States and the Dominion, I regret to say that many of the so-called tourists, to whom the privilege of enjoying this great health giving country are so freely extended, are a disgrace to the country from which they emanate. Several cases were reported to me by Deputy Wardens during the past tourist season, of finding many carcasses of both moose and deer which had been shot in sheer wantonness and spirit of destruction, no portion of them being taken or utilized by those doing the miserable and illegal work. I allude to this matter at some length for the purpose of procuring the active assistance of all respectable tourists in suppressing such vandalism, in the interests of all concerned. If in consequence of the abuse of these privileges more restrictive measures become necessary, those obeying the laws will be punished to the same extent as those causing further restrictions. The prohibiting of tourists and guides having fire-arms in the woods during close seasons, and making it imperative for all guides to be licensed will be the most effective.

WOLVES.

One hundred and eighty-one wolves were killed during the past year in Ontario, at a cost to the Government and Municipalities of \$2,715.00. The \$15 00 bounty, I trust, will be effective in the near future of ridding the Province of these destructive pests, with the exception of the extreme northern portion of it.

ACCLIMATING FOREIGN GAME BIRDS.

The more consideration I have given this matter the less sanguine I become. English and Mongolian pheasants may be well adapted for private preserves where they can be fed during the winter. The fact of them being ground feeders, and to some extent semi-domesticated, makes it impossible for them to become a factor in the game supply on public lands. Pheasants would have a poor chance in farming districts depleted of woods; in fact, pheasants require similar grounds to those suitable for wild turkeys. Wild turkeys some years ago were found in large numbers in western Ontario, but they have disappeared with the woods and so would the pheasants.

The experiments with capercaillie and black game in Maine have not been successful. No other game birds can be introduced, suitable to our climate, that will compare with our ruffed grouse and quail, and certainly no other game birds are so able to take care of themselves, but, even these hardy birds cannot hold their own in the fight with nature in her angry moods. A severe winter with the snow crusted, or an unusual wet and cold breeding season, these plucky birds are unable to contend with. It seems to me that we should pay more attention to the material we have, suitable to our respective countries, than to waste time and money on foreign birds.

I am not aware that the propagation, in captivity, of our native game birds has been undertaken to any large extent, or in an intelligent way. I am not sure this can be done to any large extent, but, I feel convinced that the establishment of quail breeding farms on a large and intelligent plan would do much to ensure a supply of breeding stock after bad breeding seasons, and be a prolific source of profit to those engaging therein.

E. TINSLEY.

ONTARIO FOREST RESERVES—THEIR RELATION TO THE FISH AND GAME
ASSOCIATION.

By Thomas Southworth.

Paper read before the North American Fish and Game Protective Association, at Ottawa, Jan. 1903.

I am accorded the privilege of bringing to the attention of the members of the North American Fish and Game Protective Association the system of forest reserves now existing and to be created in the Province of Ontario.

As it is very well known that the Government of Ontario regards the forests of the Crown largely from an economic standpoint, it may be asked what the establishment of these reserves has to do with the objects aimed at by the members of this Association.

It is quite true that a forest has of recent years come to be regarded as a crop of trees, and forestry as the growing and harvesting of trees for profit. That is merely the modern interpretation of the term, and as our institutions in Canada are supposed to be based upon those of the parent country, it may be permissible to refer to the earlier and original application of the word "forest."

According to Manwood, who has made a very interesting compilation of the early forest laws of England, I learn that "A forest is a certain territory of woody grounds and fruitful pastures, privileged for wild beasts and fowls of forest, chase and warren, to rest and abide there in the safe protection of the king, for his delight and pleasure; which territory of ground so privileged is meered and bounded with unremovable marks, meers and boundaries, either known by matter of record or by prescription; and also replenished with wild beasts of venery or chase, and with great coverts of vert, for the succour of the said beasts there to abide; for the preservation and continuance of which said place, together with the vert and venison, there are particular officers, laws and privileges belonging to the same, requisite for that purpose, and proper only to a forest, and to no other place. And therefore a forest doth chiefly consist of these four things, of vert, venison, of particular laws, proper officers."

By this it will be seen that a forest consists of not only trees or vert, a term that meant underbrush or any green covert, but also venison, and particular laws and proper officers.

The first forest law of which we have any record was passed by Canute, or Canutus the Dane, who was king of England in 1018. Even in that early time the forests of England had begun to disappear, for Manwood tells us that "Before this nation was replenished with inhabitants, there were many great woods full of all sorts of wild beasts then known in England; and after the same came to be inhabited, the woods were by degrees destroyed, especially near the houses, and as the land increased in people, so the woods and coverts were daily destroyed, and by that means the wild beasts retired to those woods which were left standing, and which were remote from their habitations."

We are further told that "There were still, and even in the Saxon's time, many great woods which were not destroyed, and these were called walds, that is, forests or woods where wolves and foxes did harbour; which being afterwards destroyed by Edgar, a Saxon king, Anno 959, and very few remaining, the Welshmen paid him a yearly tribute of wolves-skins, and these and such like ravenous beasts being destroyed, the residue being beasts of pleasure, as well as delicate meat, the kings of this land began to be careful for the preservation of them, and in order thereto to privilege certain woods and places so that no man may hurt or destroy them there; and thus the said places became forests."

As previously stated, King Canute in 1018 set bounds and limits to certain forests, and afterwards, when any king desired to do the like, a commission under the Great Seal, out of the Court of Chancery, "directed to certain persons, "declaring his will and pleasure to take a forest in such a place, and in such a "county, within so many miles of such a place, commanding them to perambulate "and view the county within the compass of so many miles; and to bound and "meet so much thereof as they should think convenient to make a forest for his "delight and recreation; and to encompass the same with such marks and boun- "daries, as the king may know and discern it from other land which is not forest. "When the commissioners had viewed the ground and considered how much was "convenient for a forest; then they made perambulations round it, and bounded "it with hills, rivers, highways, and sometimes with remarkable trees, that the "same might be known to be a forest; and having returned their commission "into Chancery, and therewith certified the circuit and compass of the ground "so bounded, beginning at such a bridge, at such a river, the highway over the "same leading from such a place to such a place, as the highway there goeth, all "on the right hand of the same highway is forest, and so directly from mark to "mark, and all the boundaries round the same, until they come to the same "place where they began the perambulation; and this being returned and certi- "fied as aforesaid, then the king is entitled to it by matter of record."

But Manwood further states "But even yet it was not a forest. After "this another writ was issued out of Chancery, directed to the sheriff of the "county where the place was so returned to be a forest, which writ recited all "the proceedings of the commissioners; that the sheriff should make procla- "mation throughout the county as well as in burroughs and towns, as also in "fairs, markets and other public places, that the king had appointed that circuit "of ground so bounded, and thus returned into his Court of Chancery to be a "forest, and that no person whatsoever after such a day, should hunt or chase "any wild beasts of venery or chase there, etc."

But Manwood proceeds, "And yet after such proclamation, made and "returned by the Sheriff into the Court of Chancery, 'tis not a forest yet, but a "chase, for something more was to be done to make it a forest; because neither "the perambulation, nor the return and certificate into the Chancery, though 'tis "matter of record, without any proclamation, did make the same either a forest "or a chase, but only a territory of ground; for though by the return of the per- "ambulation the king is entitled by matter of record, yet 'tis neither a forest nor "chase till 'tis proclaimed by the Sheriff, that the king's pleasure may be known "that it should be so; neither doth that proclamation make it a forest, but only "a chase; for 'tis not a forest after all this is done, nor until the king hath "appointed officers for the same, as Verderors, Foresters, Regarders, Agistors "and Woodward's."

From all this it will be seen that a forest was originally a game preserve, trees being merely incidental or perhaps necessary as cover for the game; and although in these degenerate days (degenerate from the standpoint of the sports- man), forests are chiefly regarded by Governments as sources of revenue, and supplies of timber, the game still exists; and although the king only hunts this game in our reserves by proxy, and is very free to issue his license to the mem- bers of this Association for a monetary consideration, the administration of the reserves will continue to have regard to the proper protection of the game which find their cover and safety for at least part of the time within their boundaries.

The principle of establishing Forest Reserves in Ontario was adopted by the Provincial Government in 1898 by the passage of the Forest Reserves Act. Under the provisions of that law and subsequent amendments, three forest reserves have so far been established, the first one being what is called the Eastern Reserve in the counties of Adlington and Hastings.

This Reserve is small in area, containing only about eighty thousand acres and is surrounded by settled country. Despite this fact, however it is full of red deer and smaller game, including ducks and partridge, while in some of the many lakes contained within its boundaries, the fishing is also excellent. This Reserve is reached by the C.P.R. from Kaladar Station, or by the Kingston & Pembroke Railway from Lavant

Another small Reserve containing only forty-five thousand acres, has been established on the north shore of Lake Superior, being part of the Township of Sibley, and including the well-known Thunder Cape. The Sibley Reserve is a narrow peninsula extending into Lake Superior, uninhabited, and because of its remoteness from the settled country, is a favorite breeding ground for cariboo, large numbers of which winter there, so far unmolested. The Government has not found it necessary to patrol this reserve with rangers, but it is likely that such action will be rendered necessary in the near future.

The third and largest Reserve so far created includes the celebrated Lake Temagami, and takes in a territory of about one million four hundred thousand acres of virgin forest, containing some billions of feet of white pine, as well as other valuable timber. This Reserve includes a large number of lakes, all teeming with fish, and is one of the best moose hunting territories in the Province. I have made several excursions to this territory at different times of the year, and on only one occasion have I failed to come in contact with both moose and red deer during the trip.

Regulations governing this and the other Reserves have recently been adopted by the Government, copies of which can be obtained on application to the Commissioner of Crown Lands.

I might mention that so far the hunting in the Reserves is under the operation of the Game Law of the Province, and directed by the Commissioner of Public Works, the Hon. Mr. Latchford.

Without expressing any dissatisfaction with the way in which our game laws are administered, or without any reflections upon the President of your Association, I might add that, as the official having immediate charge of the Forest Reserves, I have advised that the protection of game within the Reserves be placed directly under the control of the Department of Crown Lands by special Act. It is only fair to add, however, that the Government has so far failed to accept my suggestion in this matter. We have proceeded thus far, however, as you will observe by the printed regulations, as to insist that tourists going into the Reserves, if accompanied by guides, may only employ a guide who is duly licensed, and the Superintendent of the Reserve or the Commissioner of Crown Lands has the power to cancel the license of any guide who he thinks is not duly qualified for the position, or who fails to properly observe the provisions of the Act protecting the forests from fire or the provisions of the Game Act.

The Forest Reserves so far created are but the beginning of a system of permanent Crown Forests that will, I hope, eventually include many millions of acres, covering the finest big game territory on the continent.

The Temagami Reserve occurs in what we call the Laurentian Country, stretching across the Province from east to west a distance of seven hundred miles, across a rough and broken country, full of lakes, and densely timbered, from which the streams flow both north and south. It is a country ill-fitted for agricultural purposes, but eminently adapted for the growing of trees for revenue purposes, and for the protection of our water supplies, and affording cover for the game with which it is now filled.

This country has not all been fully explored: scarcely any of it has been surveyed, but from information in possession of the Department of Crown Lands

there is reason to believe that in the following out of the plan of Forest Reserves, which forms the settled policy of the Government, the Temagami Reserve and its additions will eventually include a territory of at least twenty-five millions of acres of timbered land, abounding in fish of various sorts, and inhabited for the most part at present by moose, cariboo, deer, bear, and smaller game.

Very little of this territory has been shot over by sportsmen. The Indians who live in it kill game for their own use under their treaty rights. My experience with the natives in this vast country has been confined to those living in the Temagami Reserve, and they are very careful, never killing deer or moose except for purposes of food, all of which is consumed. In some sections I am led to believe that the pay offered by lumbermen has induced the Indians to break the law by disposing of moose meat and venison, but that is not done to any very great extent. When a moose is killed by the Temagami Indians it is divided up among the band, and no attempt is made to kill another until they are again out of meat, and even then they depend very largely on pork and fish for food.

One thing I have noticed in the Reserve is that cow moose seem to be very much in the minority. The Indians explained this to me by some process of natural causes, but I am inclined to think that it is to some extent at least due to the preference by the Indians for the meat of the cow moose at certain seasons, rather than that of the bulls. Although this is not proven, I am inclined to think it is the correct explanation.

In the management of these Reserves it is of course evident that the main object in constituting them is with a view to their timber production, but at the same time the fire rangers are given full instructions to act as deputy game wardens, and see to the protection of the game within the Reserves; and although these Reserves will undoubtedly be operated within a short time for timber, the lumber operations will be so conducted as to not only secure a rapid reproduction of the timber, but that the protection of the game within the Reserves will be more carefully looked after than is probable in territories outside the boundaries of such Reserves.

The settled portion of the Province of Ontario at present lies mostly to the south of the Laurentian Belt, referred to as likely to be ultimately included in our Reserves. Lying north of this territory is another extensive agricultural belt, including about sixteen millions of acres, extending from Quebec to the western boundary of the Province, so that eventually Ontario will consist of two rich agricultural sections, separated by a permanent Crown Forest, many millions of acres in extent, which we hope will provide perpetually a revenue quite equal to the present large one derived from that source, and afford a continuance of our present magnificent water supplies, and provide a "Happy Hunting Ground" for the members of this Association, their heirs and successors for ever.

COPY ON AN ORDER-IN-COUNCIL APPROVED BY HIS HONOUR THE LIEUTENANT-GOVERNOR, THE 8TH DAY OF MARCH, A. D. 1902.

Upon the recommendation of the Honourable, the Commissioner of Public Works, the Committee of Council advise that Montague A. A. Smith, Esquire, of Forest, be appointed a Member of the Ontario Game Commission, in the room and stead of Dr. G. A. McCallum, resigned, said appointment to take effect on and from the first day of April, 1902.

The Committee further advise that Mr. Smith be appointed Chairman of the Board of Commissioners at an honorarium of \$100.

Certified,

D. LONSDALE CAPRÈOL.
Assistant Clerk, Executive Council.

COPY OF AN ORDER-IN-COUNCIL APPROVED BY HIS HONOUR THE LIEUTENANT-GOVERNOR, THE 25TH DAY OF JULY, A. D. 1902.

Upon the recommendation of the Honourable the Commissioner of Public Works, the Committee of Council advise that the close season for moose, reindeer and caribou in that part of the province lying to the north and west of the Town of Port Arthur to the Manitoba boundary, be the same as for that part lying to the north and east of the said Town of Port Arthur to the town of Mattawa, viz., from the 16th day of November to the 15th day of October in the following year.

Certified,

J. R. CARTWRIGHT.
Clerk, Executive Council.

COPY OF AN ORDER-IN-COUNCIL APPROVED BY HIS HONOUR THE LIEUTENANT-GOVERNOR, THE 30TH DAY OF SEPTEMBER, 1902.

Upon consideration of the petition of the Council of the County of York, in that behalf and upon the recommendation of the Honourable the Commissioner of Public Works, the Committee of Council advise that pursuant to the provisions of subsection 3, section 7 of the Act to amend and consolidate "The Ontario Game Protection Act" the hunting or shooting of quail in the County of York, be prohibited for a period of three years from the First day of November, 1902.

Certified

D. LONSDALE CAPRÉOL.
Assistant Clerk, Executive Council.

FOURTH ANNUAL REPORT
OF THE
DEPARTMENT OF FISHERIES
OF THE
PROVINCE OF ONTARIO.

1902.

PRINTED BY ORDER OF
THE LEGISLATIVE ASSEMBLY OF ONTARIO.

TORONTO:
PRINTED AND PUBLISHED BY L. K. CAMERON,
Printer to the King's Most Excellent Majesty.
1903.

WARWICK BRO'S & RUTTER, PRINTERS,
TORONTO.

To His Honor the Honourable SIR OLIVER MOWAT, G.C.M.G.,
Lieutenant-Governor of the Province of Ontario, etc., etc.

May it please Your Honor,—

I have the honor to submit herewith, for the information of Your Honor and the Legislative Assembly, the Fourth Annual Report of the Department of Fisheries of this Province.

I have the honor to be,

Your Honor's most obedient servant,

F. R. LATCHFORD,

Toronto, 18th February, 1903.

Commissioner of Fisheries.

Near Lake of Bays, Muskoka.

Lake Helen at Nepigon.

Camp on the Nepigon.

The Nepigon—just missed him!

After Dinner, Flat Rock Portage, Lake Nepigon.

REPORT

OF THE

DEPUTY COMMISSIONER OF FISHERIES

FOR THE YEAR

1902.

To the Honorable F. R. Latchford, Commissioner of Fisheries for Ontario :

The undersigned has the honour to submit the report of the workings of this department for the year ending 31st December, 1902.

Special attention is invited to the fact that the revenue of the department has increased from, in round numbers, \$30,000 in 1899 to \$40,000 in 1902, the actual revenue for the year being \$40,140.70.

The total expenditure was \$33,514.44.

The fishing season opened earlier than for many years. The Georgian Bay was practically clear of ice on the 10th April, the "Gilphie" leaving port on that day on her annual patrol.

The season's operations, notwithstanding the extremely rough weather which was experienced at frequent intervals during the year, and to which is in a large measure attributed the falling off in the quantity of fish taken, have been, on the whole, in view of the high prices which obtained, more generally satisfactory than they would otherwise have been. Lake Erie herring are said to have one day during the season sold at 13 cents per pound.

Licenses to fish with 2,538,673 yards of gill net, 479 pound nets, 479 hoop nets, 98 seines, 22 dip nets and 3 machines, besides several thousand hooks, were issued.

The occupation has given employment to 2885 men, 124 tugs (inclusive of gasoline launches), and 1295 boats.

An estimated capital of \$816,392 is invested in the industry.

The aggregate catch amounts to 23,715,070 pounds, as compared with 26,863,779 pounds in 1901, a decrease of 3,148,709 pounds

The estimated value of the catch is \$1,265,705.

A list of the overseers with the territory under the jurisdiction of each will be found at page .

Statements have been prepared showing:

1. The revenue derived from each division (p. 86).
2. The number in detail of fishermen, tonnage and value of tugs, vessels and boats, quantity and value of all fishing material, and the kinds and quantities of fish caught (pp. 88 to 103).
3. The gross yield of the different kinds of fish in each division in 1901 and 1902, and the increase or decrease (p. 108).
4. The total quantity of each kind of fish taken in 1902 as compared with the quantity taken in 1901, and the increase or decrease (p. 110).

5. The value of the different kinds of fish taken (p. 111).
6. The number of tugs, boats, men, etc., engaged in the industry, the quantity of nets licensed and the value thereof (p. 111).
7. The value of the Ontario fisheries from 1870 to 1902 (p. 112).
8. The quantity of fry distributed by the Federal Government in the Province since Confederation (p. 112).

PROTECTION.

The overseers have rendered good service, and their efficiency is of course increasing as they become more familiar with their duties. They have been on the alert for violations, and especially for illegal shipments of fish. By a frequent examination of these shipments we are able to detect whether the laws are being observed as to size and kinds of fish permitted to be taken. A number of seizures have been made during the year, and the offenders severely punished. Fishermen throughout the province have been warned so frequently against the shipment of trout and whitefish under two pounds in weight, a lesser size being prohibited to be taken, that no violations of this law have been reported. The statute is very severe on the point, rendering the whole shipment liable to confiscation if any fish taken contrary to law are intermixed therewith.

FINES AND CONVICTIONS.

Sixty-nine persons were fined for breaches of the law, as compared with 121 in 1901, and \$540 were obtained from fines, as compared with \$1527 during the same period. This may be regarded with favor, and as a sign that the fishermen are realizing that it is in their own interest to observe the law, and assist in protecting and perpetuating the source of their livelihood.

CONFISCATIONS.

The following articles were confiscated during the year: 111 gill nets, 28 seines, 82 trap nets, 4 hoop nets, 12 spears, 1 punt, 2 boats, 27 night lines and 2746 hooks, all of which were being fished illegally. Where fish were confiscated they were given to charitable institutions, which are always grateful for such donations.

SUNDAY ANGLING.

Overseers are frequently requested to interfere with persons who "go fishing" on Sunday, under the supposition that it is an offence against the Fishery law. This, however, is an error. Sunday fishing is an offence against the Lord's Day Act, the provisions of which it is not a part of the duty of fishery overseers to enforce. A decision was recently rendered under the authority of the Attorney General of Massachusetts which held that fishing on Sunday, being a violation of a section of the Act entitled "An Act for the better observance of the Lord's Day," the enforcement of that provision of the Act was no more one of the duties of the fishery overseers than the enforcement of any other provision of the same Act.

PATROL BOATS.

The "Gilphie," which was placed in commission in 1898, has each season since been patrolling the Georgian Bay and North Channel. She has proved to be a staunch and seaworthy boat, and her presence on the bay has had a most beneficial effect. The Department is extremely fortunate in having as her commander Capt. Angus McAulay, a skilled mariner, and one familiar with these

waters, having sailed them for over twenty years; as well as a most trustworthy and efficient crew. The captain's report of the work done will be found at pages 69-74.

The "Gladys" and "Maud," sailing craft, have also maintained a constant patrol on the Georgian Bay, the former between Penetang and Point au Baril, and the latter in the North Channel and northern portion of the bay as far east as the Bustards. The "Gladys" was in use by the Crown Lands Department for a number of years before her transfer to the Fisheries' service, and is now reported unseaworthy and beyond repair.

The "Eva Bell," the steam launch which polices the Rideau waters, has done good service. It will be remembered that she was donated by persons who spend their summers in that attractive locality, and who were anxious for the proper protection of the excellent fishing to be had there. Before this boat was placed in commission, much poaching was committed, but little, if any, is believed to have been done during the last two years. Her master is himself an old fisherman, and familiar with the waters where illegal fishing would be apt to be carried on.

ANGLERS' ASSOCIATIONS.

It is gratifying to learn that the Anglers' Associations which have been organized are not anglers' associations in name only, but that they are taking an active interest in the protection of waters in their several localities from the depredations of the poacher, and are also influencing public opinion to the extent that everyone is manifesting a greater interest in the fisheries. Violations are consequently becoming much less frequent. Our officers have generally found the Anglers' Association to be a reliable medium of communication in regard to information desired in respect to the inland fisheries.

STOCKING INLAND WATERS.

The work inaugurated last year of transplanting black bass has been continued, though a lesser number were, it is to be regretted, handled, owing to the almost continuous rough weather at the points from which the supply was procured, and the consequent difficulty in obtaining fish in sufficient numbers. The deposits were again made in waters upon which the drain has for many years been very great, such as the Muskoka and Kawartha Lakes, as well as in waters which are fast becoming popular resorts, but which nature in her distribution had overlooked, namely, the Lake of Bays. In due time, it is hoped attention may be directed to waters nearer the busy centres, and also to the beautiful rivers which wend their way through our agricultural districts, rivers now barren of game fish, but in every way suited for the reception of bass. The demand is increasing as the value and importance of the work is appreciated, and has exceeded our utmost endeavors to cope with it, in view of the fact that the period during which it is possible to obtain a supply of parent fish from their native waters is short. There are also many lakes and rivers which it is most desirable to stock which cannot be reached with the adult fish. It is therefore suggested that if the object which the Department has in view is to be early attained, rearing ponds should be established at convenient points as an adjunct to our present system. It is believed that no expenditure is being incurred by the province which will be more heartily endorsed or give a more beneficial return than that of restoring the fishing in the inland waters.

An exceptional opportunity was afforded the Department of purchasing 50,000 bass fry, which were retained in the pond for several months, and then

distributed in the Thames and other waters in the western part of the province.

Elsewhere (at p. 75) will be found a paper on the subject of the stocking of inland waters with black bass, prepared by the undersigned to be read at the annual meeting of the North America Fish and Game Protective Association, to be held at Ottawa on the 20th proximo.

LEGISLATION.

The fruits of the legislation prohibiting the sale of speckled trout, bass and maskinonge have been so gratifying that a further prohibition for a period of three years is recommended.

THE COMMERCIAL FISHERIES.

CLOSE SEASONS, ETC.

Many representations have again been received that the close seasons are inapplicable, and require revision; and that close seasons should be established for herring and sturgeon. The subject is, as has already been pointed out in former reports, within the entire jurisdiction of the Federal Government, and parties making such representations have been so advised; but at the same time it is one which seriously affects the fisheries of the Province and the fishing industry, and in that connection the following observations are made.

Lake Trout.—Perhaps in the case of none of our fish does the spawning season vary so much as in that of Lake Trout. In some of the Lakes of Muskoka, they are ripe in August; in Lake Superior they spawn in September, and during that month agents of the American hatcheries, located on the lake, have been in the habit of visiting the stations along the north shore for the purpose of collecting spawn: in Lake Huron, the North Channel, the Georgian Bay, in the vicinity of the Bustards, and in the Temiscamingue District, they begin to spawn about the middle of October: and it is only in the lower part of the bay that the season may be said to apply. In Lakes Erie and Ontario, spawning continues until late in December. Strong protests have been raised by fishermen of the Georgian Bay against what they call an unfair discrimination in favor of the Lake Superior and Lake Huron fishermen, it being alleged that their biggest catches are made while the trout are "running," or are on the spawning grounds. A close season to fulfil its functions should cover at least a portion of the time when the fish are carrying their eggs, as well as the spawning period; but the present close season for lake trout is, practically, a "close season" in name only. The objection which has been heretofore presented to varying seasons is the difficulty of proving possession of fish taken in closed waters; but with the adequate provision which the Ontario Government has made for the enforcement of the fishery laws, it is believed such objection would not be based on tenable grounds.

Herring and Whitefish.—The most potent argument in favor of a close season for herring is, that it is alleged, and no doubt with more or less truth, that large numbers of trout and whitefish are taken by the fishermen while nominally fishing for herring; and more especially is this said to be the case in the Georgian Bay and Lake Erie. Herring have been everywhere unusually large this year, many having been taken weighing 3 pounds and upwards, and they are said to have sold in the American retail market as "choice whitefish." The Lake Erie herring in flavor more nearly possesses the distinctive qualities of whitefish than it does of herring from Lake Huron or the Georgian Bay, and it therefore easily sells as true whitefish; in the round, only an expert can decide which is which. The catch of herring during the season in Lake

Erie shows an alarming decrease when compared with that of 1901, being 2,338,000 pounds less. Its extermination would therefore appear to be certainly approaching, and to be a matter of time only unless radical measures are adopted for its preservation, such as the establishment of a close season, and perhaps a limitation of the implements used for its capture. The following is an extract from the annual report of Overseer Laird of Kent on the subject :

“The past season has brought ruin to more than one fisherman, and others have not made enough to pay expenses, all owing, I have no doubt, to the very great falling off of the herring fishing, which has been getting lighter every year for several years. I have no hesitation in saying that the decrease is owing to the wholesale destruction of the herring during the spawning season with gill nets. . . . If some means is not adopted at once for the better protection of herring and whitefish when these fish are on the spawning grounds, the fishing industry, as far as they are concerned, will, in the very near future, be a thing of the past.”

In the Georgian Bay there does not appear to be the same cause for alarm, and but as a safeguard for the trout and whitefish the same precautions would evidently be unnecessary as to herring. Captain McAulay of the “*Gilphie*” reported them to be “as thick as water,” that more were taken each morning than could be dressed and salted during the day, and that all available packages were soon filled ; district Overseer Pratt, that “they began to appear on the inshore shoals about Oct. 11th, and were in countless millions, and that the total catch is but an infinitesimal fraction of their numbers.” A decrease in whitefish is everywhere reported, except in the North Channel of Lake Huron, and unless a larger output from our hatcheries is made there can be but one result, one that will ever be deplored—its complete annihilation. Its only salvation is the hatcheries. To rely upon its natural increase for re-establishment would, it has been said, be like a farmer relying upon the seeds which fall from the ripened grain for next year’s crop ; and perhaps this may be said of trout also. Indeed, it is a debatable question whether, under all the circumstances, it would not be better, rather than continue the close season for trout and whitefish, to abolish it altogether and rely for their maintenance on the two pound limit and an increased output from the hatcheries.

Sturgeon:—As has been already stated, the reports indicate a gradual decrease in almost every quarter. A few years ago they were so plentiful and in such small demand that Ontario fishermen threw them away without attempting to market them. To-day they are the highest priced of our fresh water fish, and the supply is unequal to the demand. If, therefore, this valuable fish is not to entirely perish, some measure of protection must be accorded to it. Not only should a close season be established, but a weight or length under which none shall be taken should be stipulated. Many of the States have already taken steps in that direction, and attempts at artificial propagation have also been carried on for some years, not only in the United States, but in Germany and Russia, but so far with only indifferent success ; and if restoration is to be accomplished, it would seem that it must be by natural increase. There is a wide difference of opinion as to its being destructive of the spawn of other fish, which has been a reason urged by the fishermen why its protection was not to be desired. The result of issuing licenses for sturgeon fishing in Lake Nipissing for the last two years has been a very marked improvement in the size of the fish. In the Rainy River much poaching has been done for some years, and correspondence has been had with the State of Minnesota with a view to joint action to suppress it if practised next season. It is chiefly carried on in the months of May and June, while the fish are passing from the Lake of the Woods to the river to spawn. The Lake of the Woods was a few years

ago the most famous sturgeon fishery in Canada; and the caviar made from the roe taken there is said to be fully equal to the renowned Russian caviar.

Pickereel:—In waters like the Thames River, many tons of pickereel have been annually taken as they ascend the river to spawn, and before the close season begins (15th April). Consequently, for these and similarly situated waters it has been pointed out that the season should commence earlier—some go so far as to say the 1st January. The decrease in the catch in contiguous waters to the Thames is about 25,000 pounds as compared with the quantity taken in 1901. The pickereel is a very valuable food fish and next to the sturgeon has brought the highest price in New York of any fresh water fish, namely, 12 cents per pound.

Carp:—Carp are reported to be rapidly increasing, and it is said they are destroying the rice and celery beds at Long Point and in Lake Simcoe. The most successful implement with which to take them is the seine, and permits have been issued wherever this could be properly done. The demand for carp has been good, and the prices high, the average wholesale price in New York having been about six cents. A close season is not yet asked for carp, and there is no occasion for any apprehension that one will be needed for many a year. On the other hand, there seems to be a disposition on the part of every one to expedite its extermination.

PLANTING OF SPAWN.

In a former report, the undersigned strongly urged the adoption of a method pursued in some of the neighboring States, viz., the placing of men on tugs during the gravid period of fish to take and fertilize the eggs and plant them on the natural spawning beds. It is pleasing to note that the suggestion has been acted upon in Lake Superior by some of our larger fishing concerns, and that the increase in trout which is reported from that lake may probably be explained by the quantity of spawn so placed in the lake by the Wisconsin fishermen. It is hoped a larger number of the fishermen will adopt the practice. In Wisconsin, as was pointed out, there is a law of the State providing penalties for the failure of the fishermen to save the spawn and treat it in this way.

SALT HERRING.

As salted herring is becoming quite an important factor in our commercial fishing, it behooves our fishermen to prepare and cure their catch in the best manner possible in order to secure the highest market price. Thirty-five thousand barrels of Scotch and Irish herrings were last year marketed in New York, as compared with 500 barrels fifteen years ago. The prices ranged from \$9.00 to \$12.00 for Scotch, and \$11.50 to \$13.50 for Irish. The Jews, of whom there are said to be 50,000 in New York, are the chief purchasers. They will buy none but the best, and they are willing to pay whatever is asked for the proper article. Newfoundlanders are now curing their herring in the Scotch style, and these command prices almost as large as those from Scotland and Ireland. But Ontario fishermen have been apparently wedded to antiquated methods, and satisfied with having always made a ready sale. The report of Mr. Alexander T. Duthie, who recently visited America under the auspices of the Department of Agriculture and Technical Instruction for Ireland as a fish trade expert, advises that herring should be neatly gutted, carefully roused (stirred in pickle), and *packed on their backs* in barrels. Just sufficient salt to cure the herring should be used, and *no salt should remain undissolved* in the barrels after the herring are cured. The filling-up of the barrels should, he says, be specially attended to. After sufficient time has elapsed for the fish to "pine" in

the salt, the barrels should be firmly filled, and great taste and skill shown in making a nice finish on the top rows, so that when the barrels are opened they will have an attractive appearance. His observations no doubt apply more particularly to salt water herring; but the directions would be just as applicable, I am told by experienced fishermen, to our fresh water herring, and would be an improvement on the method of curing and packing at present adopted in this province. They are presented here in the hope that they may stimulate the men engaged in the industry to place their goods upon the market in a form to command the highest market price. Ontario herring deserves to have a recognized place in the fish markets of the world, and it is within the province of our fishermen to establish for it that place; but this cannot be done unless the most approved methods of curing and packing are adopted.

THE FISHING SEASON.

There is a growing conviction among fishermen that all fishing in our great lakes should cease on the first December; and that they would be hundreds of dollars in pocket every year if they were obliged to then shut down. It is usually after that date that the most disastrous storms prevail, gill nets are lost, and pound nets are blown out. But the work of destruction does not end here, for the gill net continues to fish, and may fish almost indefinitely; the decaying fish pollute the water, and fisheries have been practically ruined for years in this way. So that there is much to be said in favor of the fishing season for gill and pound nets closing on December the first.

GASOLINE ENGINES.

Fishermen on nearly all of our lakes are equipping their sailboats with gasoline engines as an auxiliary propelling power. The chief advantages claimed for them over steam engines as a motive power are their cheapness, the little space which they occupy in the boat, and their economy of fuel and help. The fishermen are able to reach their fishing grounds and return in calm weather, while under similar conditions with sails much time would be lost in beating their way, and a run which in many cases would thus occupy several hours may be made in a quarter of the time. The fee for a license for a boat so equipped has been \$15, while for a sailboat of the same size, and with the same quantity of net, the fee is but \$5. The fishermen willingly pay the difference. Engines which will compare favorably in price and efficiency with any foreign production are now being manufactured in our own Province.

HOOP NET FISHING.

Strong protestations have been received against the issue of hoop net licenses for waters where they have not heretofore been fished, as being destructive of game fish, and it has been difficult to satisfy the parties that these protestations are not well founded. Where sufficient opportunity has been afforded to demonstrate the fact, it has been clearly shown that if the nets are fished in strict accordance with the terms of the license, the game fish at once begin to improve and increase. The ling is perhaps the most destructive fish we have upon fry and small fish, and they can be only successfully taken with the hoop net. Overseer Craig reports that 85 ling, one of which weighed 12 pounds, were recently taken in one lift of a hoop net in Bob's Lake. This lake was at one time a fine bass lake, but no netting having been allowed, under the mistaken idea of protecting the fish, the ling have multiplied so rapidly that they now have possession. A few years' judicious fishing will reduce and, it is hoped, ultimately

exterminate them and the other coarse fish, and give the bass a chance to re-establish themselves. The lake is well suited for bass, and being so conveniently located should in time become a popular resort for anglers.

NEPIGON TROUT.

A Duluth, Minnesota, paper published an item to the effect that trout fishing in the Nepigon River was likely to be impaired, owing to a mysterious disease which, it was alleged, had been prevalent among the trout; that the disease was gaining in virulence, and that hundreds of the fish were to be found dead on the shore daily. The attention of our agent at Nepigon was directed to the report, which he pronounced utterly false. The story must have been manufactured out of whole cloth, as there was not the slightest foundation for it; and its object cannot be even conjectured. The fishing has not been so good for years as it has been this year.

Reference was made in the report of last year to the increase of pike in the River Nepigon, and the extermination of the speckled trout was predicted unless vigorous steps were early taken to eradicate the pest. During the summer the work of destruction of the coarse fish was entered upon, and 1800 pike, 389 pickerel, and 803 suckers were taken and destroyed. The good work should be continued during the coming season, and no doubt a ready market may then be found for the fish taken, as it is expected the Canadian Fish Co., to which Lake Nepigon has been leased, will have by that time begun fishing operations.

Application was received from the Board of Trade of Rat Portage for trout to be placed in waters in the vicinity of that town. Overseer McKirdy was instructed to arrange for taking 100 trout, provided free transportation for the fish was furnished by the C. P. R. Owing to some delay in obtaining the requisite tanks for carrying the fish and in perfecting the details, a number died while in captivity. The remainder were safely deposited in good condition. Their average weight was about two pounds.

Overseer McKirdy has suggested the advisability of erecting one or two ice houses along the river, where ice may be obtained by tourists who come from long distances, and who are anxious to take home with them trophies of the rod. He thinks that it will be possible to obtain lumber on the spot, as the Nepigon Pulp Co. expect next year to have a portable sawmill there cutting material for their prospective works. The cost would be inconsiderable, and with a little assistance the structures could be put up by the overseer before the season opens. No doubt many would visit the river who do not now do so, if they could take away with them a few noble specimens. The matter will be considered in good time.

THE CASHMERE DAM.

The work of removing this dam, which had long been a barrier to the ascent of fish on the Thames, has been completed, and there is now a clear passage for fish to ascend the river. Everyone is said to be well pleased that the cause of so much dissatisfaction has been removed.

FISHWAYS.

Representations have been made as to the necessity for fishways in a number of dams in the province. Several new fishways are reported to have been erected, and officers have been directed to see that those in existence have been kept clear of debris and otherwise in good working order. In view of the urgent representations received as to the necessity of fishways in dams on the Humber River, a special officer was detailed to make a thorough examin-

ation of the dams, procure information, and report upon the subject. His report was forwarded to the Department at Ottawa, the question of the necessity of fishways being, as has been pointed out in a former report, one for the Federal Government, and not for the Provincial Government, to decide. It may be said, however, that it is not always expedient to erect a fishway simply because one is desired, as it would in many cases afford a means of entrance of undesirable fish to our inland waters, which could not but be regarded as a calamity.

SAWDUST.

The law with respect to the pollution of waters with sawdust and mill refuse has been rigidly enforced, and where persistent violations have been committed, after repeated warnings, fines have been imposed as an earnest of the department to stop the practice. Ample opportunity of determining that sawdust is injurious to fish life has been given the department while engaged in transplanting its bass, where the ice used had not been thoroughly rinsed. On an examination of the bass which had died in transmission, particles of sawdust were found between the gills, which it may be assumed caused the death of many of the fish. But the danger to and effects upon fish life from this pollution do not alone arise from this cause, but they are also due to the poisonous gases which are emitted from the decaying deposits; and these gases are not only most deadly to fish life, but they are a great menace to human health as well. It may be assumed that for this reason in waters in the vicinity of old mill sites no fish are usually to be found. With modern appliances for burning and disposing of mill refuse, and as fuel becomes scarcer and more valuable, complaints have been much less frequent.

THE NORTH AMERICAN FISH AND GAME PROTECTIVE ASSOCIATION.

The Association held its second annual meeting in Burlington, Vermont, on the 22nd and 23rd January, 1902, at which there was a good representation of members from the neighboring States, and provinces of Canada. A number of valuable and interesting papers were presented, and two days were spent in profitable discussion and intercourse. Copies of the official report containing the transactions of the meeting, in which were embodied certain suggested reforms in the fish and game laws, were ordered to be sent to the Governments of Canada and the States in which it was desired the suggestions should become law. The Hon. Mr. Latchford was elected president for the current year, and Ottawa was appointed as the next place of meeting. Mr. Tinsley and the undersigned were in attendance, representing this province. The whole-souled hospitality extended to the visitors by their co-adjutors of Vermont will, it is safe to say, not soon be forgotten, and Ontario will be only too anxious for the arrival of the day when she may have the opportunity of showing what she can do in her own way for the entertainment of the Association. The fact that the next meeting is to be held in the "Capital City," it is superfluous to say, already assures its success.

LEASING LAKES FOR COMMERCIAL FISHING.

The undersigned in his annual report for the year 1900 referred to the subject of the leasing of lakes for commercial fishing in these terms:

"A general policy on the subject of the leasing of lakes for commercial fishing should, as soon as may be, be approved and announced, but more especially with reference to the lakes in our new districts. These lakes should be regarded as so many farms, the property of the province, and be dealt with in the same way—leased or rented for a number of years—the province being the landlord

as it were, and the person desiring the lease the tenant—the lease to contain such conditions as would ensure the property's being kept in a fertile condition, by limiting the number of nets that could be fished, the quantity of fish to be taken annually, the saving and planting of spawn, etc., etc. If such a plan were adopted, these lakes would be made to yield a revenue in perpetuity, while if the present system of issuing licenses therein were followed, they would in a short time be exhausted. Depleted of their contents they would be valueless, either from a revenue or food producing standpoint.”

A number of applications have since been received for the leasing of lakes in different parts of the province, and upon a report of the undersigned approved by the Government, recommending that lakes be leased, two leases have during the year been granted and on most advantageous terms. Lake Nepigon, in the District of Thunder Bay, has been leased for a period of twenty years to the Canada Fish Co. The lease provides for a rental for the first year of \$2,000, for the second year, \$5,000; for the third year, \$8,000; for the fourth year, \$10,000; for the fifth year, \$12,000; for the next and subsequent years, \$15,000 per year, in addition to such license fees for the different implements of capture to be used as the Department may think proper to charge. Important conditions of the lease are: that the company is to build a railway to the lake for freight and passenger traffic—there is at present no means throughout the year by which fish may be got out; that a hatchery is to be maintained, and that 10,000,000 fry each of trout, whitefish and pickerel are annually to be deposited in the lake. The licensees are also limited to 500 tons of fish for each of the first three years, and to 1,000 tons for each year thereafter. The interests of the public have been protected, and the Government has reserved the right to grant permits to settlers to net for fish for their own use, but not for barter or sale. A number of applications had from time to time previously been received for this lake, but only one other contained an offer of any definite sum by way of rental, viz., \$500 per annum.

The other lake which has been leased is Lake Manitou on the Manitoulin Island, also for twenty years, and at a rental on a sliding scale up to \$5,000 for the fifth and subsequent years, in addition to proper license fees. Provision is likewise made for the erection of a hatchery, and the depositing of ten million fry each year. The catch is limited to 200 tons a year for the first three years, and 400 for each subsequent year.

The Government should be congratulated upon the favorable terms upon which the lakes have been leased, as the revenue therefrom will amount to considerably more than half as much as has hitherto been received from the fisheries of the whole province.

Applications for other lakes are now under consideration.

UNIFORM LAWS AND REGULATIONS.

With a view to securing the co-operation of the jurisdictions of the several border States in the matter of the enactment of uniform fishery laws and regulations governing international waters, this province inaugurated a correspondence with these States, the following being the initial letter on the subject:

“TORONTO, 12th December, 1902.

“Dear Sir,—

“By a decision of the Judicial Committee of the Privy Council of England delivered in 1898, the Fisheries of Ontario, which had theretofore been claimed by the Dominion of Canada, were declared to be the property of the province, and the province has for the past four years assumed the duties which under the judgment were determined to devolve upon it. During this period it has experienced some considerable difficulty in enforcing the provisions of its fishery laws upon the Great Lakes, chiefly in view of the fact that United States fisherman

“are granted almost unlimited privileges as to time and manner of fishing. It is therefore suggested that it would be manifestly in the interests of both countries if regulations could be agreed upon which would be just and equitable to the fisheries, fishermen, and fishing industry alike—regulations establishing close seasons covering the spawning periods of fish, as to the kind and number of implements to be used in the capture of fish, and as to the kinds of fish to be taken, and that the most convenient and satisfactory means to this end would be a conference between representatives of the several jurisdictions surrounding the Great Lakes. It is not improbable that if amicable conclusions could be arrived at, our Great Lake fisheries could, and would, in a few years be restored to their former condition of excellence, and a profitable livelihood to many thousands of our citizens, and a valuable food supply, assured for all time.

“I might mention for your information that large sums are annually being spent in this province for the protection of its fisheries, and for the propagation of fish; that fishermen are restricted in the number and kinds of implements which they may use, and the periods during which they may be fished; that they are prohibited from taking immature fish, and in the case of trout and whitefish of any less than two pounds in weight; that no bass or maskinonge or speckled trout may be taken in any manner except with hook and line, and that their sale is strictly prohibited. Further restrictions have been in contemplation; but in view of the fact that there have heretofore been few, if any, placed upon the operations of the fishermen of most of the border States, we are in doubt as to whether anything further can properly be done in that direction; indeed, whether the restrictions now in force on this side of the international boundary can be justly maintained. Certainly it will be difficult to longer resist the importunities of our fishermen, for similar privileges to those enjoyed by your fishermen, should no concurrent action be approved by you. We are strongly urged to throw down the bars; but before doing so would first respectfully invite the attention of the representatives of your State to the inevitable result of such a course, and with the hope that you may appreciate the importance of some concerted action being immediately taken for the conservation of this great heritage. I should be glad of your views upon the subject at your earliest convenience.

“Yours truly,

“S. T. BASTEDO,

“Deputy Commissioner.”

It is gratifying to be able to state that the letters in reply indicate an intense interest in the subject, and that nearly all of the States are anxious to co-operate with this province in the objects enunciated in its inaugural communication. The following may be quoted as a fair sample of the answers received:

“STATE OF OHIO FISH AND GAME COMMISSION.

“Columbus, Ohio, Dec. 17th, 1902.

“To the Deputy Commissioner of Fisheries,

“Parliament Buildings, Toronto, Canada.

“Sir,—

“I have the honour to acknowledge receipt of your valued communication of the 12th December, the contents of which have been noted with great pleasure. Permit me to say that the suggestions you make are in conformity with the opinion that the Ohio commission has entertained for a long time, and that we will welcome any concerted action which will have for its object the preservation and perpetuation of the lake fisheries. The laws governing the fishing in Ohio waters of Lake Erie at the present time more nearly approach those of the province of Ontario than at any other time in our history, and it is our desire to make them still more closely related in order that there may be unity of action. It will give me great pleasure to meet you at any place you may suggest at some time in the near future, to talk over this matter thoroughly and to inaugurate a basis for such action as may be deemed proper and necessary. Permit me to say in conclusion that we sincerely hope that the province of Ontario will not abate in the slightest degree from their heretofore admirable position upon the question of the lake fisheries. In my opinion, the care, firmness and good sense exercised by the dominion authorities in the matter of these lake fisheries have been in

“ notable contrast to that of some of the States, and the result has been a conservation of the fish supply which would not have been obtained under other conditions.

“ Again assuring you that it will give me great pleasure to confer with you on this important subject, I am, sir,

“ Very respectfully yours,

“ J. L. RODGERS,

“ President.”

A conference will probably be held as soon after the approaching session of the Ontario Legislature as details can be arranged.

THE BIOLOGICAL STATION IN THE GEORGIAN BAY.

The biological station, which has been recently established by the Dominion Government in the Georgian Bay, is situated on island No. 121 in Go-Home-Bay, about twenty miles from Midland. Scientific work was begun there last summer. An application was received from the station for permission to use certain nets to enable the work for which the station was established to be carried on, which permission was, of course, promptly granted. A complete hydrographic survey of the vicinity is being made under the supervision of Professor C. H. C. Wright, of the School of Science. Last season a surface map of the islands and reefs lying between Station Island and Red Rock was finished, and this survey, it is understood, will be extended next summer. The biological work is under the direction of Dr. B. A. Bensley, of Toronto University, who, it may be said, is now making a classification of the fish of the Georgian Bay from specimens taken last season, a full list of which will be published as soon as completed. One of the chief features of the biological work will be a study of the food and environment of the fish of the district, with special reference to those of commercial value. Mr. R. T. Anderson, a student of the University of Toronto, has made a large collection of the skins of lake and marsh birds, which is to form the nucleus of a complete collection of the birds of the region. He is also making a collection of the plants and animals of the surrounding country. In addition to the strictly scientific work of the station, work of a more practical and commercial nature is being carried on—a hatching pond for bass was last fall prepared, and twenty-nine bass of different ages were placed therein. If they winter successfully, their spawning operations are to be carefully studied. The preparation of another hatching pond for bass is contemplated next season that the effect of food and environment may be determined, as well as the growth from year to year. Meteorological observations were made during the summer, under the supervision of Professor W. J. Loudon, and arrangements are being made for more complete meteorological records during next season.

There is an infinite variety of fish fauna at the very door of the station. Fish are being caught daily at all stages of their growth. We have no reliable information as to the time it takes them to arrive at maturity—the matter has been one of speculation largely. It is a subject of great interest from an economic standpoint, and it would be most desirable that the purview of the station should be extended to other kinds of fish as well as bass, that some organized means of obtaining this very useful information may be evolved.

THE EFFECT OF DYNAMITE EXPLOSIONS UPON FISH LIFE.

Reference was made in the report of last year to permission having been granted to Dr. A. P. Knight, Professor of Animal Biology Queens College, Kingston, to make tests in provincial waters as to the effect of dynamite explosions

upon fish life. A copy of the learned doctor's very valuable and interesting report of his investigations has been received and filed in the department. His investigations were most extensive and exhaustive in their character, and were conducted not only in our own province but throughout the dominion, and the experiments were tried not only upon the smaller fishes, but upon the larger species also, and even upon seals. The destructiveness of the explosions varied, of course, according to easily recognizable conditions, viz., (1) as to the charge of dynamite used, (2) the depth of the water in which the explosion occurred, (3) the number of fish in the neighborhood of the explosion, and (4) the kind of fish in the vicinity of the charge when exploded. A charge of $1\frac{1}{2}$ lbs. exploded in Kingston harbor did not bring up a solitary fish, while one cartridge, $\frac{1}{4}$ lb. in weight, set off in St. John harbor, New Brunswick, killed over 800. The depth of water appeared to be another important condition affecting the destructiveness of the explosions. Tests were made in depths varying from $1\frac{1}{2}$ to 300 ft. Little, if any, destruction was caused in shallow water, due probably to the pressure resulting from the explosion being not sufficiently great to rupture the swim bladder. One blast at 18 inches below the surface sent up a column of water about 100 feet high. Another blast, 3 feet below, sent up a column about 60 or 70 feet high. In neither case was fish killed, though it is thought some must have been present. At 10 or 20 feet below the surface, the explosion lifted a broad cone or mound of water 6 or 8 feet high. At increasing depths the surface disturbance, of course, became less and less marked, until at 200 feet the only evidence of the explosion, except the noise and the tremendous blow on the bottom of the boat, was the appearance of a vast number of small bubbles of gas, covering a diameter of about 60 feet. A few of the results of the explosions are tabulated as follows:

No. Exp't.	Weight of Dynamite	Depth of Water in feet	Depth of Cartridge in feet.	No. Fish Killed.
1	1 lb.	12	12	0
2	$1\frac{1}{2}$ "	14	12	0
3	"	10	10	0
4	"	26	18	300
5	"	25	18	160
6	"	24	18	35

Dr. Knight says it is difficult to say whether in Nos. 1, 2 and 3 there were no fish present, or whether the pressure was insufficient to kill them. In the case of Nos. 4 and 5, he thinks that more fish must have been present in the former case than in the latter. In No. 6 not a single fish came up when the explosion occurred. He thought it quite evident that besides the fish that came to the surface and floated, there were a large number which were merely stunned, and subsequently escaped or were killed outright and sank to the bottom. Thus the destructiveness of dynamite takes on a wider aspect than that of merely counting the slain. Nearly all of the fish floated belly up; the sun fish lay more upon their side; lake trout on their back, but with the tail end deep in the water and head above it. The rupture of the swim bladder and escape of its gas ventrally, so as to displace its centre of gravity was probably the cause of the fish floating on their backs. It was thought however that a physiologist could scarcely escape the conviction that the nervous mechanism for the maintenance of equilibrium must have been paralyzed in all of them. It is said that fish that die in water from other causes than concussion, say from suffocation or from poison, lose their power of maintaining the vertical position, and that in these cases they lie on their backs, presumably because of muscular inability to balance themselves. The brains of a dozen fish, half killed by dynamite and half caught by hook

and line, were preserved and subsequently examined under the microscope. On comparison with each other no difference could be observed in their minute structure as a result of their different modes of death. Shortly, the result of the experiments was to demonstrate that large numbers of immature fish were killed, and that not one-third of those which came to the surface in fresh water could be sold in the market.

ACKNOWLEDGMENTS.

The department desires to acknowledge with grateful thanks the receipt from Hon. G. M. Bowers, United States Commissioner of Fisheries at Washington, of four volumes of Jordon & Everman's Bulletin of the United States National Museum, and also of a number of volumes of the United States Commissioners' Report ;

The generous consideration and courtesy accorded by various railway and steamboat companies in the matter of transportation ;

The courtesy of the Biological Department, Toronto, in, from time to time, identifying different species of fish ; and

The kindness of Mr. S. J. Martin of Kemptville, in sending to the department a very fine maskinonge, which has been mounted and added to the collection which is being made of our game and important food fishes.

CONCLUSION.

In conclusion, it may be unnecessary to say that the work has been conducted as economically as possible, having regard to the important and extensive duties to be performed, and the report is submitted in the hope that it will meet with your hearty approval.

The reports of the district and local overseers, which follow, will be found to contain much interesting and valuable information as to fisheries and fishery matters in their respective divisions.

All of which is respectfully submitted.

S. T. BASTEDO,

Deputy Commissioner.

Dec. 31st, 1902.

OVERSEERS' REPORTS.

District Overseer Judd, Morton, reports as follows :

"In my last annual report, I referred to the past season's satisfactory returns, of the quantity and quality of the catch of fish in my district, of the diminishing abuses and consequent observance of the laws and regulations, the increased number of tourists, the interested feeling of the people in the value of the fisheries and their co-operation in protection.

I made suggestions as to the limitations of catch, the preservation of minnows, the ridding our waters of destructive fish; and what is true of that season is quite as much so in the one just closed.

That difficulties and suggestions for improvement are continuously coming to notice, is nevertheless a fact. Indeed it would be a miracle yet unheard of if legislation could devise a system of laws and regulations that could be adjusted to all circumstances and meet universal approval.

Every year brings knowledge with experience, and it has been my desire to note carefully wherein these difficulties arise and report to you from time to time. That there is a general and marked improvement in the observance of law and the development of our fisheries, that an awakening and increased feeling is becoming more and more manifest, is an assured fact, from testimony continuously coming to hand and that never before were strenuous efforts from your department more loudly called for.

In this report I beg to confine myself to certain characteristics which appear most prominent towards perfecting the machinery of protection, viz :

- (1) The co-operation by means of anglers' associations.
- (2) The encouragement of such by your department.
- (3) The preservation of minnows and extermination of ling.

In my official position, I have been the means of organizing six anglers' associations. These associations comprise a membership each of from 50 to 100 or over, having a president, two vice-presidents secretary-treasurer, and an executive committee of seven. They are in active working order and enthusiastic in response to a call of meeting.

These associations group in their immediate locality a number of lakes ranging from five to twenty in number, over which they assign to themselves a careful watch. They know well the peculiar characteristics of this group of lakes and suggest by way of resolutions, questions of granting or not granting licenses, the appointment of local overseers who shall reside within touch of their group of lakes, give information of infractions to their local secretary, who, in turn, interviews the local overseer, and thus you will observe, a machinery is on the spot at all times whereby it will be impossible for fish-mongers either with, or without licenses to commit the depredations hitherto so prevalent.

So far, my efforts in this direction have been experimental and with this view I have "made haste slowly," but from what has been done I am convinced that it will eventually be the solution of the problem of protection, and that I cannot press you too strongly upon the question of its adoption.

The co-operation of the public is one thing, but a specific organization of citizens who have local active interested feeling is altogether different. The one carries with it a passive moral tone in the administration of the law; the other is the active machinery which sets in motion the executive of the law.

The question of encouraging such associations is an important one. If you will take into consideration the innumerable lakes which nature has bestowed upon Eastern Ontario, how they are being mapped and studied by the leisured wealth of this continent, the hundreds of thousands of guide books that are

being distributed by the great railway institutions, how hotels and boarding houses are enquired for, beyond the possibility of an adequate supply, and the unlimited wealth that will be distributed in consequence of this tide of tourists that these lakes, if properly cared for, will be to Eastern Ontario what the prairies are to the citizens of the Northwest. I think you will concur in the opinion that I cannot impress upon you too strongly, the imperative necessity of a vigorous policy in adopting every available, and the best possible, means to maintain its present standard of excellence before it becomes too late, and depression sets in as it has in other parts of Ontario.

The practicability of these anglers' associations is exemplified by resolutions forwarded to you requesting, for good causes, that no licenses be granted for certain groups of lakes, where hitherto licenses had been granted, while others by similar resolutions have requested licenses to be granted for their group (where formerly no licenses were granted) for the purpose of ridding the waters of destructive fish. And further that local overseers be appointed, who shall reside at, or within, easy access of such group. This is notable testimony that each local association is reasonable and intensely interested, and will commend itself to your judgment.

I submit, therefore, the wisdom of organizing kindred anglers' associations wherever it is possible so to do, and that all possible encouragement ought to be given, and that in consequence they will develop into very strong organizations.

That in so doing your department will save a large expenditure in traveling expenses now incurred in mileage by reason of the distance many of your overseers live from the lakes assigned to them, and that the evidence sent for prosecutions are of a more reliable character. That the prevalent practice now adopted by many of your overseers in recommending all applications for licenses that come to their hands under the supposition that they are giving good service, where in reality they ought to exercise very distinct discretionary judgment in recommending or rejecting, according to the condition of their lakes, and have decision of character in carrying it out, is another aspect which would be greatly relieved by these anglers' associations.

That the appointment of more overseers is necessary, and the expenditure will be warranted in the accomplishment of what your department desires, and that without them, and the assistance of angler's associations, and by reason of the intricate mass of lakes in my district, all efforts towards an adequate protection under any other system will be fruitless.

In calling your attention to the preservation of minnows and the extermination of ling, I have to say simply that it is a well-known fact that our minnows are decreasing while ling in a few of our lakes are increasing and my suggestions towards a remedy in this respect is to limit the length of minnow seines, raise a revenue by licenses thereon and expend the same in destroying the ling. You cannot take action too quickly in this matter.

The patrol boat "Eva Bell" did excellent service last year and her officers, like others, have been acquiring knowledge from experience, and it is widely known and admitted that the chain of water over which she patrols is rapidly increasing in quantity and quality of fish, and the utmost confidence is expressed that through her agency these lakes will be kept in the best possible condition.

There is still another matter I wish to refer to, and implore your discontinuance, namely, the extension of fishing season with hoop nets to first of May. In my opinion this is unwise. Indeed, instead of extending this season you should shorten it to April 1st, for the reason that in the spring bass are moving and will lead into hoop nets in greater numbers than at any other season of the year. The fishermen know this well and I am suspicious of their design in soliciting such extension.

In conclusion let me observe, no country can claim and no province can appropriate to itself a greater acquisition than the fresh water fisheries of Ontario. Nature has "with lavish hand" bestrewn our territory beyond compare. Its wealth yet unseen will undoubtedly be illimitable. It takes a generation for our forests to recuperate but only a triplicate of years for our fish to grow. Government would be recreant to its trust did it not bend its energies to save harmless and develop such great resources so near the people."

District Overseer Lamarsh, Wheatley, reports that he "visited the different waters and fisheries comprising his district during the month of August, and some of the localities in November. I found that the Lake Erie fisheries were proving very disappointing to fishermen. The herring catch from Detroit River to Port Burwell for 1902 will not total up more than one-third that of 1901, and the catch of many other kinds was proportionately as light. The spring fishing on Lake St. Clair, River Thames and Mitchell Bay was light. Some of the fishermen in those waters report better catches during the fall. The fishing industry in this district has experienced one of the poorest years ever known; while some individual fishermen have done well, and some localities better than others, yet the statement made above will apply generally. Some two or three complaints of crowding were made by some of the Kent fishermen, with, as near as I could judge, good ground for complaint. On my visit to Detroit River and Lake St. Clair I found that there is poaching by Americans going on in those waters during fishing seasons, and that to make the proper inspection and protection of those waters it would be necessary to be able to procure a light gasoline or steam launch at times to run over these waters when needful. I went to Ridgetown and different points in Kent to investigate reports of taking whitefish during November. I examined shipments of fish, going through them thoroughly, but found nothing wrong. I visited all along the shore in Essex in November, but found no whitefish either being shipped or in fishermen's boats. I secured conviction of a couple of parties for gill netting without licenses, one at Kingsville, the other at Leamington. I was at Leamington wharf shortly after. About two ton of herring that had been caught with gill nets were landed on the wharf about the 24th November. I wish to make the above observation that I could have skated on the herring spawn which covered the wharf where the fish had been landed and handled. I found, from conversation with the fisherman, that Overseers Allan, Stephen, and Wonnacott were very active in looking after their divisions. I am of the opinion that the overseers for Elgin and Kent have a very large amount of work for the remuneration received, as each has a very long coast line with a large number of nets in each division to look after.

District Overseer, McCargar, Belleville, reports a decrease in the catch in the Bay of Quinte and Weller's Bay, caused by the Government prohibiting netting of any kind on these waters during the months of July, August and the first half of September. The fishermen who had nets in did well when they were willing to work. The law prohibiting the sale of black bass and maskinonge had the effect of greatly diminishing the catch of these game fish. The anglers this season had better fishing than any season for a long time. There was a lot of black bass put in the bay from the Quinte bass pond, and there should be a great many more put in, as the Bay of Quinte has many advantages over large lakes for anglers, on account of the coves and bends in the bay, where they can get out of the wind and fish any day. I trust the Government in their wisdom will leave the law as it now is re. black bass and maskinonge. It will only be a short time until we have as good fishing as we ever had in the Bay of Quinte.

The Bay of Quinte is one of the finest waters in the province, and if properly protected will be one of the finest fishing and summer resorts in Ontario. There are already a great number of fine cottages and summer resorts along the beautiful shores of the bay, and should the angling improve in the way it has in the last three years this will be one of the most attractive summer resorts along the lake front.

I reported last year the necessity of stocking a number of fine lakes in North Hastings with bass. There are no bass farther north than Gilmour, about fifty miles north of Trenton, on the line of the C.O.R. There are some fine breeding grounds north of this for bass, nice spring water, hard bottom, and fine shade trees around the lakes. Eagle Lake is a very fine lake, from a half to a mile and a half wide, and about eight or nine miles long, and is said to be a hundred feet deep in some places. There are some large lake trout in it, and the settlers are very anxious to have black bass. This lake is only a quarter of a mile from Coe Hill, the terminus of the C.O.R. This lake should be stocked with bass this season. Moira Lake should also be stocked this season, as this is the only lake with fish in near Madoc village, which is a fine summer resort, and a great many gather here for the summer. There are over one dozen cottages there now. I confiscated one gill net and three night lines (the night lines were over a mile long in Moira Lake). This is the second year, and I trust they will not bother again, as I destroyed their nets and night-lines. I have had more trouble with this lake than all the other lakes in the north.

Consecon Lake, west of the C.O.R. Bridge, as I reported last year, is one of the finest fishing grounds in P. E. County, and should be well protected. There are no licenses granted for this lake and should not be in the future. There was some illegal fishing in this lake, but not to any great extent. Consecon Lake and Weller's Bay are both convenient to Consecon village, where there is first-class accommodation as to hotel and boats. The fishermen all along the Bay of Quinte observed the close season. I reported last year that there should be fish-ways or slides put in all dams in the Trent and Moira rivers, and all streams leading from them, but I have found this would be a great mistake, as both Trent and Moira rivers are fine breeding grounds for bass and maskinonge, and were there fish-slides put in carp and all other destructive fish would go up.

The Trent River up to Campbellford has pike, suckers, pickerel, black bass, maskinonge and bull-heads. West of Campbellford there are no pike, as they cannot get up the river, there being no slides, consequently it is one of the best breeding grounds for black bass and maskinonge in Central Ontario.

Great attention should be given to the restocking and protection of the Trent River, as there is the best lunge and black bass fishing there now to be found in this section.

Crow Bay is a beautiful bay on the Trent River, about three miles north of Campbellford, where there is fine fishing. Lunge and bass are the only game fish there. This lake is about four miles long, and from one quarter to three-quarters of a mile wide. They have a couple of fine little steam launches on the lake, and from Healey's Falls to Meyersburg is one of the finest bass and lunge grounds I ever saw. A great many people from Toronto and New York come here to fish, and they can most any day get the amount they are allowed to catch. At Meyersburg there are good stopping places, and there is good fishing all the way up to Hastings, about six miles of beautiful water; and from there to the head of Rice Lake there could not be a more desirable place for anyone to go who likes nice clear water and the very best fishing. They can get good men with boats to row them at any time, and they furnish good bait also. There are no nets allowed in the Trent River but hoop nets, and they

are not allowed in the summer months. The game fishing in the river has improved since they allowed hoop nets, and if fishermen are, and would be honest, all lakes and rivers that have bull-heads, pike and suckers should be fished with hoop nets. Should bass or lunge be caught in the hoop net it does not hurt them. Therefore I would recommend the government to grant licenses for hoop nets alone, with the understanding that anyone not returning a bass or lunge to the water their licenses would be cancelled at once and their grounds transferred to another. This would put a stop to all illegal fishing, as there is less illegal fishing every year. The fishermen realise that it does not pay to take the chances of being fined.

There was a misunderstanding around Hastings and Campbellford about large mouth bass, and swamp bass and there were a few shipped, but I told them last spring the law re black bass was the same for all bass and I am fully satisfied the law has been well observed in this division.

Re-stocking the Trent River. This can be done very cheaply, as there can be one or more bass hatcheries started and run at a small expense. At or near Mr. Rod Kellers, near Healey's Falls, would be a good place for one. The government, in my mind, should start hatcheries all through Ontario where there are suitable waters and places. There is no doubt that the fishing industry in Ontario is only in its infancy, and if proper attention is given to starting bass hatcheries and restocking the fine waters all throughout Ontario, it will only be a few years before there will be a great saving of food—I mean it will take the place of meat and a good revenue will be received by the fisheries department.

I stated last season that the government should aid the fishing industry, just as well as the cheese, or butter, or fruit growers, or breeders' associations.

I strongly recommend that there should not be any nets of any kind allowed in the Bay of Quinte, or any lake in P. E. County or Weller's Bay, or any waters east of Peterboro, north of the St. Lawrence River, in the spring at the time when all the game fish are spawning, as they should not be disturbed. The fishermen stand in their own light when they do this, as I am fully satisfied they would catch as many fish in the fall and winter as they do now, and would get from two to four cents per pound more for the fish. This, to my mind, is a matter that should be looked into. It is too bad to see fine fish sell for half price, when, if they were allowed to grow a few months, they would bring double the money.

I had to fine one man, at Bancroft, for allowing the refuse to go in the water, and a few more will have to be fined unless they fix up the floor in the lower part of their mills so that the saw-dust will not go through. All the mill owners in the southern part observe the law well.

I find more fish are being consumed every year. I think more than one-third of the catch in this district is consumed in Canada, and they are the best fish as well. Our worst fish are shipped away.

District Overseer Mathen, Brockville, reports that the fishing on the St. Lawrence River during the year has been much better than in former years. His district has been well inspected, the different overseers attending faithfully to their duties. Pike fishing has been good, and maskinonge fishing excellent. The report that Americans were fishing in our waters for minnows with seine caused considerable trouble, but on investigating, he found in every case that hook and line only were being used by them. Even this is objected to. He would recommend a close season for pike, the same as on the American side.

District Overseer Pratt, Penetang, reports that the season of 1902 will always be remembered as a very early one, the bay being entirely free of ice on April 10th. His operations began on April 15th, when he sailed from Midland

to Shawanga Bay, finding no ice. It will also be remembered as a season of very high winds and severe gales, and fishermen will always associate it with the remembrance of great loss of nets and fishing gear. It was also a very cold year, and tourists, although in greater numbers than ever, remained for shorter periods than usual. The catch of fish, however, was about normal, although fishermen report less profit, by reason of losses mentioned above.

His operations were conducted in the sailing cruiser "Gladys." In his last year's report, he stated that she (the "Gladys") was a "done" boat. Afterward, when consenting to try her another year, he advised the Department not to expect good work out of her as she was unseaworthy. His opinion has been fully verified, as, early in the season, first one sail, then another, was blown out of her. However, he worked along with one assistant the best he could until December 1st, when navigation closed. During the season he was obliged to haul her out of the water twice, patching here and caulking there, and finally hauled her out for good; and he states most emphatically that she is of no more use as a cruiser. A steam launch, he thinks, is the only way in which effective patrolling can be done, as it can travel in any water that a fish-boat can. It would not be readily seen, could work in any weather that a fish-boat could, and the very name of a steam launch cruiser would place the would-be offender on the apprehensive.

The tourist fraternity, as expected, are ever increasing in numbers, and it is becoming painfully apparent that in this class are to be found some of the most flagrant law-breakers, and unless a stronger check is placed on the unsportsmanlike slaughter of black bass, that fish must speedily become rare. He has during the past season seen heaps of rotting bass in the rear of camp-grounds; but as there was no conclusive evidence that the then campers were the offenders, nothing could be done. For the past few years bass have been multiplying very rapidly; in fact he believes that 1902 saw bass in greater plenty than for twenty years past. Some tourists seem to think that hauling out one hundred per day is correct sport. Trap nets, seines, and other illegal contrivances are not on the increase, but still too many are in evidence. It is true that there is a great temptation for the regular fisherman to adopt speedier and more effective methods than the gill net affords, but he can truthfully say there seems to be less disposition on their part than formerly to break the law. But there is a growing class of watermen that must be reckoned with, namely, the guides. These men get good pay for two months or so. A great many of them have taken it up quite recently; they become enamoured of water life. They are for the most part without much means, and trap fishing offers a comparatively easy opening for continuing the water life until the close of navigation with profit.

He reiterates his recommendation of last year that placards containing a synopsis of the fishery laws be placed at all summer resorts, on all house boats and passenger steamers, as well as a general distribution over the entire district.

The use of gasoline as a motive power for fish boats has proved satisfactory to the few who tried it last season, and it is certain that the coming season will see a good many fish boats similarly equipped. He would recommend that they be classified, as some dissatisfaction exists among sailboat men, who claim the license fee is disproportionate.

He would recommend that a more liberal regulation be issued for the catching of herring. Herring begin to appear on the inshore shoals about Oct. 1st. They are then in schools for a few days, evidently in search of spawning grounds. Immediately afterward they separate, but for the most part remain in the vicinity until the ice leaves in the spring. From the time they begin to appear in the fall they are in countless millions, and the total catch is an infinitesimal fraction of their numbers, the great bulk of those destroyed falling a

prey to other kinds of fish. From April to October they are rarely seen in these waters, and unless they be taken when inshore, they cannot be taken at all. A herring outfit is a comparatively inexpensive one, and many a poor man who has not the means to fish in the regular way would gladly engage in herring fishing for a month or so before the long winter sets in; in fact, if they are prohibited from doing so, a real injustice would be done, and these men are entitled to consideration.

Whitefish and trout are of better size than usual, owing no doubt to the regulations re small fish, and to more general use of a larger mesh net by fishermen.

Maskinonge, our king of fish, are having a hard time to hold his own with his twin brother, the pike, and he would recommend that special facilities be given to pike fishers.

He would strongly recommend that all common carriers be held liable for the proper labeling of fish packages.

District Overseer Thwaite, Oshawa, reports that he has been over his districts many times during 1902, and found that the local overseers had performed their duties satisfactorily. They report that there have been many complaints of illegal fishing and netting, especially in lakes Simcoe and Couchiching. These are large lakes and cannot be properly guarded with canoes and row boats. He would recommend that a small steamer be purchased for this purpose. A patrol boat on these lakes would, he thinks, deter poachers from netting, and stop this illegal fishing. A better feeling is being manifested by both residents and tourists towards the protection of fish. The people seem to be awakening to the fact that reckless and continual trolling for maskinonge can have only one result—the extermination of this highly-prized fish. Of all the lakes Stoney Lake takes the prize for good trolling. This lake is noted for its beautiful scenery and healthy atmosphere, and thousands visit it during the summer months in search of rest and recreation. The female portion of the visitors seem to enjoy the fishing as well as the male portion, and have made some big catches. A plan suggested to re-stock Stoney Lake with maskinonge would be to put fishways in the Indian River, which flows from Stoney Lake into Rice Lake, where maskinonge are plentiful besides. These fish would no doubt have a better chance to increase if the use of spears was prohibited, and it were made illegal to have them in possession in, say, the Counties of Ontario, Peterboro, Victoria, Simcoe and Haliburton. They are principally used during the spawning season, and maskinonge are the fish that suffer most from these instruments of destruction. Great interest is taken in the work of re-stocking the back lakes with parent black bass by the Fisheries Department, and the general desire of all parties is that this good work will be largely extended this season. He recommends that a fee of \$5 be charged all non residents for the privilege of fishing in our lakes. This small fee would not deter people from visiting these lakes, when it becomes known that the fees would be expended in increasing the supply and providing better protection. As the time draws near when the Act expires prohibiting the sale of maskinonge and bass, he trusts the Department will extend this prohibition indefinitely. As regards the number of these fish to be caught in one day, he would suggest that the catch be limited to eight bass and two maskinonge. No complaints have been received that mill refuse has been allowed to flow into any of the rivers or lakes.

Overseer Allan, Kent, reports that there was an increase in the catch in his division, and that the fishermen were well satisfied with the season's work. The fish caught were all exported to the United States. The close seasons were well observed. One case of illegal fishing came to his notice, and the offender

was fined \$10 and costs. The mill owners have observed the law regarding the pollution of streams by sawdust. There are no fishways in his division. Some of the Indians of Wallpoole Island set hoop nets in Ontario waters, and were fishing for commercial purposes. He told them they must apply for license or take out their nets, and gave them ten days to comply with his orders. They were all removed with the exception of half a set and some baited hooks, which he seized and stored.

Overseer Armstrong, Nipissing, reports that the fishery laws have been fairly well observed in that district. There were six licenses issued, two for domestic use and four with permission to sell. Two parties securing licenses did not make their annual report to him; one, as far as he could ascertain, had moved out of the district, and the other claims he had no fishing. He is pleased to say that fishermen report that fish appear to be on the increase in Lake Tamiscamingue, especially herring and whitefish. New settlers also report all varieties of trout in many of the small inland lakes and streams. The rising of the water in the lake in the springtime, which is usually about 12 feet, causes a considerable amount of low lands to be inundated for at least six weeks every spring. On some of these low lands there are several saw mills. During the low water these mills dump sawdust on what is their dry land, but in high water some of the sawdust is carried into the lake by currents. The mill owners claim they are not liable.

Overseer Bailey, Nipissing, reports that during the year 1902, there were no cases of illegal fishing brought before his notice, the laws and regulations being well observed. The angling during the season was not very good owing to the long continued wet and cold weather, which made it very unpleasant for camping tourists. There were no violations regarding the pollution of streams by sawdust, as the mill owners use all the sawdust for fuel and making roads around their property. The fish in Lake Nipissing are in no way diminishing, as there is good angling for bass, pickerel and pike in almost any part of the lake. The tourists are becoming more numerous every season, and are locating and building on the islands to such an extent that there are very few islands left that are not taken. All that is required now is a little advertising to make this lake the best summer resort of Ontario. There is abundance of good fishing and shooting on the islands and shores.

Overseer Barr, Renfrew, reports that there has been an increase in the number of fish caught as compared with the previous year. No fish are exported, but all are used for home consumption. Quite a number of persons have been fishing with hook and line in White Lake, and selling large quantities of fish thus caught. So far as he has been able to find out, the close season has been fairly well observed. Two cases of illegal fishing he had come under his notice during the year, and convictions secured in both. There is only one saw mill in the district, and the proprietor had attended to instructions re sawdust. There are no fishways in the district.

Overseer Blondin, Cornwall, reports that the fishing in his division was as good as in former years. Anglers in the vicinity of Cornwall caught some 80 or 90 maskinonge during the season. They also report an increase in the catch of pickerel. The catch of pike and perch has also been satisfactory. There were fewer licenced fishermen in this district this year than in the past year. All the fish caught except sturgeon are for home consumption; the sturgeon are shipped to Montreal. The close seasons are well observed. No violations of the law or illegal fishing came to his notice. There are no fishways in his division.

Overseer Bilton, Leeds, reports that the catch of pike was about the same as last year; of catfish and herring, about double the quantity were taken. The herring caught were the largest he had ever seen, especially those taken in the Little Rideau Lake. The number of tourists is increasing every year, and there is plenty of bass to give them first-class angling. The local residents would like to see the close season for salmon trout in Lower Rideau Lake include the month of October, as that is the month in which they spawn in the lake. They would also like to be allowed to take whitefish under license with a gill net during the month of November for domestic purposes only. He complains that he has great difficulty in getting the fishermen to make returns of the fish caught. He has repeatedly warned them not to neglect this, but they do not seem to take notice of his warning. He is of the opinion that the returns will never be fully made unless some penalty is attached, and an example made of the offenders. The close seasons and other regulations were well observed.

Overseer Bowerman, Ontario, reports that the law has been well observed during the season of 1902; that maskinonge fishing was very good, but that there was a falling off in the bass, owing, he thinks, to so many being taken out in the winter. He would advise stopping the winter fishing altogether. Stopping the sale of fish has been a great improvement to the fishing. He would recommend that prohibiting fish houses would do away with any illegal fishing. The water has been very high this last season, which is also a good thing for the lake, as it has drowned a lot of wild rice that grows so plentiful in shallow water.

Overseer Brady, Victoria, reports that maskinonge were never more plentiful in Lake Scugog than this year. Green bass fishing was good, but the gamey black bass is a thing of the past in those waters, owing, he says, to the large number taken out through the ice in the winter. Maskinonge were very plentiful on Pigeon Creek during the summer, but were very scarce in Sturgeon Lake later on the fall. Some very good catches were made, and as a whole the fishing was good up to the middle of November. The close season was fairly well observed. Ninety per cent. of those he had been speaking to during the summer were in favor of a six months' close season from the 1st December to the 1st June for all kinds of fish which inhabit these waters. He says if any kinds of fish are allowed to be taken, and a person is found breaking the law, he will make the excuse that he was fishing for fish not protected by close season. He would also recommend that a close season for frogs be enacted from 1st April to the 1st or 15th July, and any frogs that will measure less than seven inches from nose to tip of hind toe, should not be retained out of the water. He says this law would not only protect the frogs, but also the fish, for during the close season for maskinonge and bass, if any person is caught with a frog lamp in his canoe (which answers instead of a jacklight), he will make the excuse that he is catching frogs. He would recommend that the finding of firearms, or any other article which is used for killing fish, in the possession of a person in a canoe or a place where maskinonge or bass are found during the close season, or where fishing is being prosecuted, should be ample evidence to secure a conviction. During the year he confiscated four snares, five spears and one gill net 130 feet long, which he destroyed. There is only one fishway in his district, and it is in good repair.

Overseer Cattenach, Wolfe Island, reports that he received but very few complaints from any source regarding the violations of the regulations. The tourists who visited that locality were well satisfied with the fishery laws and the enforcement thereof. He would recommend an earlier opening of the bass season. He says that such privileges send the guests away fully satisfied, and

with the determination of returning another year. He is pleased to report that the number of tourists is increasing every year. The local fishermen had a very successful season; the quantity and quality of fish caught were much superior to former years. While the principal market was St. Vincent, N.Y., many of the fishermen shipped direct to New York City.

Overseer Clark, Prince Edward, reports that the catch of fish is a little in excess of 1901, and the prices obtained are a little in advance. The greater number of licenses issued accounts for the increase. About 85 per cent. are exported, and 15 per cent. are consumed at home. The shad caught are manufactured into oil and fertilizer at Consecon. The product is valuable. The close season has been very well observed. Very little, if any, illegal fishing has come under his notice. During the early part of the season he seized three hoop nets and four gill nets. There were no complaints of mill refuse being allowed to run into the water. There are no fishways in his division.

Overseer Clyde, Frontenac, reports that the catch of every kind of fish, with the exception of perch, which about holds its own, has considerably increased over the year of 1901, and with the increase in the quantity of the catch, there is shown a corresponding increase in the value of the fish sold. This increase as shown by the report of 1902, as compared with that of 1901, may in part be explained by an increase in the number of licenses issued for 1902, and also, he believes, by a more accurate count by the fishermen of their catch. He has endeavored to obtain as accurate a statement as possible from each, and with the exception of one or two cases, perhaps, feels that the figures returned represent the catch in his district fairly accurately. He had but two cases of illegal fishing for the year, as compared with twenty-seven for 1901; he takes pleasure in referring to this as indicating a growing regard for the law. He is still convinced of the soundness of his recommendation of last year with regard, first, to the statutory length of bass, and secondly, to increasing the length of gill nets, in the case of domestic licenses, from 30 to 100 yards, and advancing the license fee from \$1.00 to \$2.00.

Overseer Couper, Monck, reports that the catch of fish in his division was a good one, with the exception of whitefish. The tug fishermen of Port Maitland had a splendid catch of herring, blue pickerel, pike and perch in the months of November and December. The laws were well observed. He had no trouble with fishermen in his division.

Overseer Cousineau, Essex, reports that although the catch of fish for the past season was not so large as that of 1901, nevertheless the result of the fishing operations was quite satisfactory. There was a notable decrease in the catch of fish taken by set lines, owing no doubt to the neglect in looking after the line, as most of the licensees who operate night lines follow other occupations as well as fishing. There was a fair increase in the catch of pike and catfish, and a large increase in the catch of German carp. When the fishermen are better prepared to keep the carp until cold weather, the catch will increase more than 100 per cent., as this kind of fish is increasing in numbers at a fast rate. Owing to the shifting of the ice fields in that portion of Lake St. Clair which forms part of his district, the fishermen are unable to take full advantage of the already short season for hoop net fishing. Fully ninety per cent. of the catch of fish is exported to the United States. The prices for the different kinds of fish were higher owing to the keen competition of the different buyers. The whitefish and herring taken were on an average much larger than for many past seasons.

Overseer Craig, Frontenac, reports that the catch for 1902 is equal to, and in some waters much larger than 1901. Bull heads and other coarse fish are plentiful, the demand from the United States larger than formerly, and the

prices are higher. The licensed fishermen are well satisfied with their catch. Although more licenses were granted for herring fishing than in former years, all the fishermen caught sufficient for their domestic use, and report that the fish were plentiful and of good size. Tourists are increasing each year. Several very fine cottages and boat houses were built last summer, which help to beautify the lake. The bass fishing was good up to the last of September. He would recommend that the number of bass to be lawfully taken by tourists be reduced to eight in one day, and the length extended to eleven or twelve inches. Ling are very numerous. He reports being present at Bob's Lake, when eighty-five ling were taken out of one hoop net, some weighing 12 lbs. Every means should be taken to destroy this fish, as it is most destructive to the better class of fish, and is useless either as a food or game fish. He again calls attention to the protection of salmon trout in winter, as a greater number of smaller fish are taken at that time than at any other time of the year. Several people in his district make a living by fishing through the ice, and think a fee of so much per line should be charged. The law has been fairly well observed. He thinks the public willing to give more assistance to the overseer on discharging his duties than formerly. He seized three gill nets and a number of night lines during the year.

Overseer Crotty, Kent, reports no violations of the law, therefore no convictions or fines. There are no dams or fishways in his division. He would suggest an early issuance of licenses, and an extension of his territory to the town line of Middlesex and Kent.

Overseer Donaldson, Frontenac, reports that the fishery laws were fairly well observed throughout his district. There were no fishing licenses granted excepting for domestic purposes. He regrets to say, it is very difficult to get fishermen to send in their returns at the end of the fishing season. He also finds that in several cases, applications have been made for licenses, and after they were issued the applicants failed to pay the fee. He would respectfully recommend that all applicants for license be required to deposit the fees, or a portion of the fee, before the license be issued. By their depositing a certain sum as a guarantee of good faith, it would save considerable trouble and expense. On April 22nd, 1902, he inspected Antoine Lake, Township Palmerston, and seized one gill net 150 ft. long, 5 ft. deep, and 2-inch mesh; also one boat valued at about one dollar. He would recommend that spearing pike be not allowed at any time of the year in his district, as it is the means of great slaughter of those fish during the month of April. There are many streams in that locality in which no other fish of value exist, and the pike is looked upon as one of their best fish. He regrets to say that some of the small lakes and streams have been almost stripped of this valuable fish, owing to the practice of spearing.

Overseer Driscoll, Howe Island, reports that the angling in his division has been fully up to former years, and the fish of a fine quality, and plentiful. The fishery laws were well observed. No instances of illegal fishing came to his notice.

Overseer Flynn, Addington, reports an increase in the catch in his district, and that the prices secured were about the same as in 1901. About forty per cent. of the fish caught were exported to the United States, and the remainder were used for home consumption. Considerable money was expended by tourists during the months of July, August and part of September. They express their approval of the present fishery regulations, and the policy of the Department in issuing hoop net licenses for lakes frequented by ling. Five cases of illegal fishing were reported in his division; a conviction was secured

in each case, and a fine of \$10 imposed. Herring are increasing in most of the larger lakes. The wholesale slaughter of fish by spearing is practically done away with, and for that reason, the angling is much better in many of the lakes.

Overseer Freeman, Northumberland, reports that there has been a decrease in lake fishing in his division, owing to so much high wind during the summer season that it was impossible for the fishermen to get out to their nets. The bay fishing shows an increase over previous years. Pike and rough fish were caught in large quantities, but bull heads were merely nothing. In fact the fishermen have almost decided not to fish for them on account of their scarcity. He is opposed to spring fishing in any of these inland bays, as that is the time the fish spawn, and he thinks if it was stopped altogether good results would follow. There are no fishways in his division. No mill refuse has been put in the water, and no violations of the law came to his notice.

Overseer Gibson, Strathroy, reports that since the difficulty he had last February with certain parties for placing nets in the streams he has had no further trouble, and the local anglers have had better sport than they have had for years. They have had good catches of pike and pickerel, some of the latter weighing upwards of nine pounds. There has been but few black bass caught, and in most cases they were returned to the water. There is one dam at Strathroy that has no fishway in it, and he does not think one necessary, as the gates are open long enough for the fish to pass up and down. There are two saw-mills in his division, but the dust is not allowed to enter the stream.

Overseer Goulette, Gananoque, reports that the year has been a good one. Black bass are increasing in his district. Bull-heads are also on the increase in Gananoque Lake. He would recommend that three hoop net licenses be granted for South Lake, as the coarse fish are numerous in that lake. He reports having seized several gill nets in the St. Lawrence River.

Overseer Graham, Victoria, reports that no violation of the law respecting close seasons came under his observation, and no complaints of violations of the regulations in any way were laid before him. He has reason to believe that the law is more strictly observed than in former years. There has been no mill refuse allowed to pass into the streams in his division.

Overseer Hadgraft, Lincoln, reports that the fishermen in his division are well satisfied with the season's catch. Those who followed fishing exclusively for a means of living had good success. Over half of the fishermen in his division have other work, which they follow during the summer, and take up fishing when the run of herring is on. This will account for the difference in the fishermen's report. The catch of perch, both by line and net fishing, is below the average. Very few trout were caught, and they were taken near the head of the lake. Whitefish were so scarce that it would not pay the fishermen to set their nets for them. The catch of herring was above the average, both in size and quantity taken; from the 1st of June to November 19th they were taken in large quantities, after that date the stormy weather interfered with the fishermen, and the catch was smaller. The run of herring started the last week in October, and continued till the 19th of November, and they were more plentiful than he ever knew them to be before. Prices were also better than in former years, being as high as 2½ and 3 cents per lb. Agents from Buffalo Fish Companies were there during the rush, also a staff of cleaners. He would recommend that a seine license be granted at Niagara for river fishing for three months in winter; also one at Queenston, American fishermen use them in the river without molestation from fishery officers, and at night come over to the Canadian side and haul on our shore. He thinks if the privilege was granted to Canadians they would defend their own rights. He would recommend that

a clause be inserted in the licenses in his division restricting fishermen from setting their nets within one mile of the grass beds at Fifteen and Sixteen Mile Creek. He would also recommend that a fee for boat licenses be \$10. All others should remain as they are.

Overseer Howard, Collingwood, reports that the catch was a little less than last year, caused by the rough weather that prevailed, and the non-extension of the open season for trout and whitefish (which had been granted in some other years.) Fish were as plentiful as they have been any year since he was appointed overseer. The close seasons were well observed. The only report of illegal fishing that came to his notice during the year was the fishing of a trap net in Nottawasaga River; this he seized and destroyed. There are no fishways in this division. He would recommend that one be placed in the dam at Thornbury, and also at Clarksburg on the Beaver River. The people are complaining that the fish cannot get up the river.

Overseer Huntington, North Bay, reports that there has been a considerable increase in the catch of fish by angling this season, maskinonge, pickerel, bass and pike being very plentiful in Lake Nipissing and on the French River. The increase in the numbers of the above fish he attributes to the taking of sturgeon in such large numbers by the licensed fishermen. The sturgeon, without doubt, were increasing in numbers for several years, and game and other fish were decreasing, owing principally to sturgeon following up other fish in spawning time and sucking in their spawn as it was deposited. He has made personal observation of the above, and has watched the cleaning of sturgeon for shipment, and has seen pounds of the spawn of other fish taken from their stomachs. He has seen no German carp in those waters. The speckled trout fishing has been very good in all the northern streams running into Lake Nipissing. Lake trout fishing was good in the spring and fall. He would recommend that the close season for lake trout begin on the 15th October, as all lake trout in that district run to the shoals and spawn in the full moon of October and the greatest catches are made at that time, and everybody that wants to fish will soon find this out in the new territory being opened up by the Tamiscamingue Railway, where the waters are full of these fish. The fishery regulations were well observed. No fines were imposed or confiscations made. The close seasons were strictly adhered to, and the law respecting the pollution of waters was not violated. The fishways in his district were all found open and working well.

Overseer Johnson, Brantford, reports that the angling in the waters under his supervision has been better than for some years. The anglers report some very good catches, and the fish of a good size. The regulations have been well observed, very few cases of illegal fishing having come to his notice. The efforts of the Department to re-stock the river with the gamey bass have been much appreciated by the local anglers, who would like to see the good work continue. The fishways at Caledonia, Brantford and Paris should be put in repair, as in their present condition they are absolutely useless.

Overseer Johnson, Northumberland, reports that the fishing this season in his division has been excellent. There was a very large catch of maskinonge, but the rough weather last spring and the lowering of the lake was very destructive of the spawn. He would recommend that something be done to keep the water up at Hastings until the spawn is hatched. No illegal fishing came to his notice.

Overseer Johnson, Parry Sound, reports that the fore part of the season was very cold, which made the season for tourists much shorter than usual, but

they found good fishing in the inland lakes and fairly good in the Georgian Bay, in the vicinity of Parry Sound. The licensed fishermen in his division report a fairly good season. The close seasons and other regulations were well observed.

Overseer Laird, Kent, reports that the past season has been a very light one for the fishermen; in fact it has brought ruin to more than one fisherman, and others have not made enough to pay expenses, all owing, he has no doubt, to the very great falling off in the herring fishing, which has been getting lighter every year for several years. He has no hesitation in saying that the decrease is owing to the wholesale destruction of the herring during the spawning season with the gill nets, and as he has said in former reports that if some other means than are being used at the present time are not adopted at once for the better protection of the herring and whitefish in the fall of the year when these fish are on the spawning grounds, the fishing industry, so far as Lake Erie is concerned, will in the very near future be a thing of the past, which, to his mind, would be a great calamity to that part of the province, as there is a large revenue derived from the fisheries, and the industry furnishes employment to a great number of men. He believes that the fishermen have observed the law to the letter, but he maintains that it is a farce to have close seasons on fish, and then to allow fishing for other kinds of fish. The fishermen in his division are a unit as to the necessity of stopping all fishing about the 10th November until the 1st April the following year. The people in that part of the province are pleased to know that at last steps are being taken to rid the waters of Rondeau Bay of the carp. At the present time three parties are engaged catching these fish, and although only one license was fished the past season, the coming season will see all parties who hold licenses, make an earnest effort to catch their fish which are destroying the feeding grounds of the wild ducks, and the Eau is becoming more and more of a resort for sportsmen during the summer season. This act on the part of the department is very much appreciated by the people who spend a season at this popular resort.

Overseer Lamarsh, Essex, in submitting his annual report for his district for 1902, says: "I am sorry to have to report that the past season has been one of continuous disappointment and disaster to the fishermen. The nets had only been set a few days last spring when a terrific gale from the south and west arose, which caused great damage to the fishermen all along the shore of Lake Erie. Gales and storms followed each other, so that it was almost impossible for the fishermen to follow their calling properly. The value of the catch for 1902 in my district is only a trifle over half of the catch of 1901, the total for 1902 being \$24,287, the general opinion of the fishermen being that the decrease was mostly due to the unfavorable weather. The heavy and continuous rains experienced during the whole fishing season kept the rivers, creeks and drains pouring roily or muddy water into the lake, with the result that the lake water for a distance of one to three miles out was kept almost muddy and dirty. Herring and whitefish being clear water fish would not enter this water to any extent. The catch of these two kinds, particularly herring, shows a tremendous falling off from last year's catch, while those kinds of fish which delight in muddy water show substantial increases. The total catch of herring for 1902 was only 182,294 lbs., a decrease of 385,316 lbs. from 1901. Whitefish totalled up 95,417 lbs. for 1902, a decrease of 17,893 lbs. Pickerel shows a decrease of 16,771 lbs., the total being 174,823 lbs., while pike show a remarkable increase, being 84,014 lbs. more than 1901. Sturgeon 19,064, a decrease of 3,892 lbs. Perch shows a total of 131,086 lbs., an increase of 24,535 lbs., owing no doubt to the perch gill nets fished in this division during part of May. Catfish show a decrease of 6,974 lbs., while mixed and coarse fish show an increase of 34,128 lbs. The decrease in the catch of herring is attributed to the frequent and

heavy thunder and rain storms of the past season by many of the fishermen, while others think that the operations of American and Canadian gill net tugs are responsible to a certain extent for the decrease in the pound net catch. Fully 95 per cent. of the fish caught in this division were exported to the United States, the balance being used for home consumption. No abuses exist in this district, unless the complaint of some residents that they are unable to procure fish for home use from some of the fishermen can be called an abuse. Many of the fishermen contract their fish for the season to American buyers, and then refuse to supply residents at the market price, thereby causing irritation. The several close seasons were well observed. I made frequent examinations of shipments at different points, but did not find anything wrong. I also visited nets at different times, and found everything all right. Although numerous complaints were made of violations of the close season on whitefish, I am of the opinion that they were made by parties who did not know the difference between large herring and whitefish. The herring caught this fall were of unusual size and quality. Three cases of illegal fishing came to my knowledge, one using more nets than licensed. I confiscated several gill nets so used. Two cases of fishing gill nets without licenses were brought to my notice. One was fined \$15 and costs by the magistrate before whom I laid the complaint: the other case, the individual acknowledged his guilt to me, and I fined him \$35. Some complaints of illegal gill netting were made against some other parties, but I failed to catch them or to secure evidence sufficient to convict them. I shall keep these parties in mind during the coming season. The issuing of gill net licenses in the Pelee Island division gave these parties, they thought, an excuse for using gill nets. The pound net fishermen in this division complained that the parties holding gill net licenses on Pelee Island came over into this division and set their nets close to the pound nets on this shore. If this statement is correct, it certainly looks very unfair to the pound net fishermen here. There are no saw mills in this district that are liable to do injury to the fisheries. There are no fishways in Essex, as there is no necessity for them here. The majority of the fishermen lost heavily this fall by the sudden set-in of winter. They kept their nets in until into December, some of them hoping to get a few good catches to help make up for the poor season. Though winter set in with heavy gales and rough weather, they were unable to remove their nets and stakes. The result is a loss of between \$6,000 and \$8,000 to the fishermen in this division. The opinion of the majority of the fishermen now is, that if the Dominion Department of Fisheries would permit the taking of whitefish up to the 15th or 20th of November, and then prohibit all fishing after that date, a greater measure of protection would be afforded to the whitefish than under the present regulation, and would incidentally give protection to spawning herring, which spawn from the 20th November till into December. I am strongly of the opinion that such a change would be beneficial to all interests concerned. If fishermen were compelled to remove their fishing gear by the 20th November, the losses which occurred this fall would not be repeated.

Overseer Legault, Sturgeon Falls, reports, that the quantity of sturgeon caught during the season was not so great as in the previous year, but the fish were of a much superior quality. The fishermen do not know what caused the decrease in the catch. There have been no abuses. Several complaints were made but when the charges were investigated, no proof could be given by complainants, and he attributed the charges to jealousy among the licensees, some of whom laid charges of trespass against their neighbors, but which were afterwards amicably settled. The close seasons have been strictly observed. There was no injury done in his division by dumping mill refuse in the waters by mill owners. He would respectfully recommend and urge the department, for the

protection of the fisheries, that no licenses be granted on the lake within a radius of at least two miles from the mouth of any river so as to give the fish a chance to go in and out of the river.

Overseer Loveday, Ottawa, reports that during the year he had seven persons before the magistrate for violation of the fishery laws, of whom five were convicted and two were dismissed. Angling he reports to have been fairly good. He calls attention to the mill dam on the Carp River which has no fishway. If this dam was removed, or a fishway put in it, fish could ascend for about 25 miles, and he believes lots of fish would do so and reach favorable spawning grounds. At Shelly's Bay fly fishing has been very good, and some very fine catches have been made. Some of the bass taken were of a much larger size than usual. On the Ottawa he says the fishing was a failure, and he does not wonder at it, as the river is a mass of decaying sawdust and other mill refuse. On the Rideau River the fish seem to be very plentiful but are hard to catch. This, he believes, is due to such an abundance of small fish in the river.

Overseer McAulay, Bruce, reports that trout and herring fishing in his district has been better this season than any season for the past twenty years, but whitefish seem to be a thing of the past. The fishermen are all well pleased with their catch. He says some of the fishermen had to stop fishing, as they could not get barrels to put their fish in, or salt to cure them. The bass fishing in the Saugeen River was a failure, owing to so much rain. The close seasons were well observed. There were no fines imposed.

Overseer McCall, Norfolk and Haldimand, reports that there has been a substantial increase in the take of herring, a falling off in the take of whitefish, and an increase in pickerel, which are nearly all blue. In perch there is a decrease. Sturgeon are on the decline, and if not protected in some way, will soon become extinct. Of coarse fish the take is about normal. There has been a great falling off in the take of all kinds of fish in that portion of the waters of Lake Erie where gill nets were set in December, 1901. Southwest of Long Point, 10,000 or 15,000 yards of gill net were set and frozen in and fished all winter, and no doubt a windrow of fish that reached for miles was left to decompose and pollute the waters, and have driven the fish off their natural feeding and breeding grounds. The tug gill net fishermen, he thinks, should be restricted to a specified time for setting their nets, so as to prevent the destruction of fish, and also to prevent the destruction of valuable fishing grounds. There is not probably over one per cent. of the fish taken used for home consumption, the great market being Buffalo. The close seasons, he says, are well observed by the pound net and tug gill net fishermen. In the front of the township of Rainham they make a practice of gilling whitefish in close season. The fish visit the shore, and farmers living along the shore fish, more or less, by setting four or five nets after dark and lifting them before daylight. They only have to go from two to ten hundred yards from the shore to fish. Illegal fishing in and around Long Point is on the increase, and calls for a more vigorous enforcement of the law. There are no saw mills or any streams in his division. The fish ways are of the same character that have been for years.

Overseer McComber, Port Arthur, reports that there has been a decrease in the catch of all kinds of fish excepting trout, as compared with the year 1901. The decrease is as follows: Fresh herring, 120,110 lbs., whitefish, 96,884 lbs., pickerel, 153,493 lbs., pike, 119 lbs., sturgeon, 16,639 lbs., salt trout, 140½ barrels. The increase is as follows: Trout, 39,746 lbs., and coarse fish 240 lbs. The only explanation he can give for this decrease is, that the fish are decreasing, as about the same number of licenses were fished in 1902 as in 1901. The increase in

trout may probably be explained by the increased quantity of spawn placed in these waters by the Booth Fishing Company. About eighty per cent. of the fish is exported to the United States, the balance being consumed in Canada. The Booth Fishing Company is the principle purchaser. A considerable quantity is sent to Winnipeg. The close seasons have been well observed so far as he is aware. Only one complaint of illegal fishing was made to him, but in this matter it was impossible to ascertain the truth of the report. There are no saw mills in operation in those waters, excepting two at Port Arthur, and consequently there is no injury to the fishing from that source. There are no fishways in the district. The great depreciation which has taken place in the quantity of fish caught shows the great need there is for a hatchery in that district, as with the continual fishing year after year, and the destruction of spawn which annually takes place, the catch is bound to decrease. In 1901 the total value of the catch was \$98,198.76; in 1902 the value was only \$76,997.69, being a decrease of \$21,201.07. The Government has recently leased Nepigon Lake to the Canadian Fish Co., and this no doubt will greatly increase the total catch of fish on the north shore of Lake Superior.

Overseer McIntyre, Peterboro, reports that he is not in a position to give any particulars as regards clause 37, as no licenses have been issued except for catfish of which he has received no report. There was a good catch of fish in his division, much better than last year and they were all consumed in the neighborhood. He thinks keeping the water down in the lake last spring in April and May saved a great amount of spawn, as the fish could not get up on the marshes to spawn, where the spawn would dry up when the water went down. He would favor the licensing of hoop nets for catfish, as there are a great many in Rice Lake and Indian River. No violations came under his notice. The close season was strictly observed.

Overseer McKirdy, Nepigon, reports that there has been an increase of visitors to Nepigon. The number of permits issued were 64 foreign, netting \$990.00; 21 Canadian, netting \$105.00; total \$1095.00, an increase of eleven permits and \$145 over last year. The fish taken has been fully better than the average weight of other years, being slightly over 2½ lbs. each. As usual, those who visited the stream during June and early in July had the best fishing. They had a few more flies to contend with, but were better satisfied, as there were not the number of visitors then as there were during August. The river has been patrolled by Overseer Charles de Laronde, and the camping grounds were never in better condition. A gentleman who revisited the river after a number of years expressed himself as delighted with the change in the sanitary condition of the camps. He is pleased to report that the war waged against the pike (which were fast taking control of certain portions of the river) has been a decided success. Some thousands of pike which would average 10 lbs. each have been destroyed, as well as large numbers of pickerel (equally destructive to the trout) and suckers. He thinks it would be advisable to continue the netting of these destructive fish during the coming season, as there are still large quantities left, and the more that are taken out the better will be the fishing. As usual, during August the river was taxed to its utmost to accommodate the visitors, frequently three or four parties having to camp at one place, which is undesirable. He would suggest that Overseer Charles de Laronde be instructed to commence his duties earlier and be supplied with a man to help him lay out three or four new camping grounds in favorable location.

Overseer McNabb, Orillia, reports that the close seasons were well observed in his district. Whitefish, salmon trout, herring and bass were very plentiful in Lake Simcoe. The law regarding the dumping of mill refuse in the water

was well observed. He reports having seized a gill net at Grape Island shoal, which he destroyed. Guardian Leatherdale also seized a net on the shoal at 8-Mile Point, which he (McNabb) has in his possession. Some night lines were also seized.

Overseer McRitchie, Bothwell, reports that the amount of fish caught in his division was just about the average, and that the prices obtained were good. No violations of the fishery laws came to his notice. The removal of the Cashmere dam is complete, and there is now a clear passage for fish to ascend the river, and all parties are well pleased that the cause of so much dissatisfaction has been removed.

Overseer Miller, Wiarton, reports that during the year 1902 he visited the several lakes on the Bruce Peninsula two or three times during the summer months, and once a month he visited those lakes where bass fishing was carried on. The most of the bass fishing is done by summer visitors in Bedford Lake, where the bass are very large. The settlers fish a good deal in Miller Lake in the summer, and sometimes parties go there to fish for bass and pike. Along the coast of Lake Huron, from Stokes Bay down to the Sauble Beach, all the bays have plenty of bass. The summer resort people come from London, Goderich, Listowel, Guelph, Hamilton, and some from the United States, to spend a few weeks at the different places along this shore. The most of the fishing islands are bought, and cottages have been erected, and they spend their time fishing for bass. These people, he finds, generally keep the law, and only catch sufficient bass for their immediate use. He has more trouble with the people near at hand. He visited these islands during the summer months often, and along the shores opposite them. In the section of country he has to look after, the game fish are quite plentiful, and the inland lakes are numerous. There are no speckled trout streams, only Spring Creek, near Hepworth, and this stream is leased to a company. There are mountain trout in Lake Gillies. The perch and bass are most plentiful on the Lake Huron coast.

Overseer Moore, Huntsville, reports that there have been no convictions for illegal fishing during the year 1902. Some complaints have been brought to his notice, but upon investigation, there was not sufficient evidence to warrant prosecution. He found either carelessness or indifference to the law on the part of two saw mill owners in the matter of allowing sawdust to get into the Muskoka River, where it might have been avoided had proper care been exercised by them over their employees. This matter was reported to the Department at the time. Two gill nets for taking salmon were brought to him from Rebecca Lake, in the township of Sinclair territory, which would appear to be out of his jurisdiction. These are still in his possession, awaiting instructions in regard to their disposition. He had not been able to ascertain the name of the owner. The black bass placed in Lakes Vernon, Fairy, Peninsular and Mary appear to be doing very well, and he thinks that the fishing for this class of fish should be excellent in the near future. Salmon trout fishing appears to be as good as usual. No fish are caught for export trade.

Overseer Moore, Peterboro, reports that during the past season fish have been fairly plentiful, that the law has been well observed, with the exception of a few cases of illegal net fishing which was promptly stamped out by seizing the nets. The close season has been well observed. The re-stocking of Stony Lake with parent bass has been successful. Several schools of the young bass have been seen during the summer, and their progress watched with much interest. A great many tourists visited our waters during the summer and had good fishing. In this connection he thinks foreigners should be charged a small license fee for the privilege of fishing in our waters there. In some of the

waters of this district ling, catfish, suckers and eels are very plentiful. He suggests that permission be given to take them with nets, for which a license fee should be charged. They are not desirable fish for many reasons, among which and principal is that they destroy the spawn of the maskinonge and bass.

Overseer Mullin, Nipissing, reports that there were fewer licenses issued in his division this year than the year previous, but the catch was better, and the sturgeon were the largest he had ever seen taken in that locality. There were several attempts made to fish hooks illegally by parties from Sturgeon Falls. He was not successful in his efforts to catch these parties, but succeeded in capturing eighteen lines and hooks, which he destroyed. He reports that there were some fine black bass and pike caught, but they were not numerous.

Overseer Myers, Wellington, reports that the chief fish in his district are speckled trout, and the catch this year to be about the same as last year. The close season was well observed, and no infractions of the law came to his notice. He reports having watched the streams closely, and that the mill owners were obeying the law regarding sawdust and other refuse being dumped into streams. There were five fish slides in his district, all in good repair.

Overseer Nash, Rat Portage, reports that there is an apparent increase in the catch compared with the preceding year. This he attributes largely to the fishing industry in that district being on a much better commercial and financial basis than heretofore. He has been over his district some time during each season, and few infractions of the regulations have been reported to him or come under his notice. While on this subject he wishes to state such irregularities. The pound net fishermen report having caught several sturgeon with hooks in their bodies, which helps to bear out the charge made that poachers endeavor to catch sturgeon, and are partially successful in Rainy River during the spawning season when these fish are going from the Lake of the Woods up Rainy River to spawn. The waters in question being international waters, it has been rather difficult in the past to apprehend the offenders, but in conversation with the United States Consul at Rat Portage, he learned that his Government is taking the matter into its consideration, and will likely join with this Department in an endeavor to rid the district of law-breakers in this case. While this illegal fishing may not actually be in this district, yet the evil results affect the fishermen therein most directly. Early in the year it was reported to him that illegal fishing was being carried on in Silver Lake, a small lake about fifteen miles from Rat Portage. This, on investigation, he found to be true, and took every precaution to prevent its recurrence, in which he believes he was successful, as no further reports of a similar kind came to his notice. He did not apprehend the parties, nor find any of their nets. This matter was fully reported to the Department in his letter of February last. In closing he would say that from all he can ascertain the year has been a profitable one to the fishermen. The fish caught wore of an improved quality over the year 1901, being of good size, firm and bright. The close seasons are being better observed, and fisherman have fewer complaints to make, and, in all, the industry has apparently become a healthy and substantial one.

Overseer Norris, Lanark, reports that the catch in his division has been small for the number of licenses issued, owing to the fact that none of the fishermen had their nets set more than two months. The feeling of the locality is strongly opposed to the granting of net licenses in the lakes. The people are under the impression that the hoop nets will take all kinds of fish, while the fact of the matter is that very few pickerel or bass are caught in them, and they are the only game fish in those waters. No doubt where pike are plentiful they would be captured in quantities. He thinks it would be to the interest of

the anglers to employ men with hoop nets during the months of January and February to fish in places like Christie's Lake and other such lakes where ling are plentiful, as they are looked upon as the most destructive fish that inhabit our waters. The law as to close seasons, etc., has been well observed.

Overseer Ogg, Hamilton, reports that in the discharge of his duties as Fishery Overseer for Wentworth, he did not have to fine any person for violating the fishery laws and regulations. The fishermen see the advantage of fishing with a large mesh, as they catch better fish. Especially is this true of the herring, and consequently they realize better prices with less work. They have observed strictly the law regulating the close season. The catch of whitefish for this year was 12,625 pounds, a decrease of 6,525 pounds from last year; trout, 3,000 pounds, a decrease of 1,300 pounds; herring 231,800 pounds, a decrease of 206,030 pounds; pickerel 1,000 pounds, a decrease of 1,400 pounds; and perch 6,100 pounds, a decrease of 3,969 pounds. Other coarse fish caught in Lake Ontario have decreased 4,669 pounds from last year. The cause in a measure may be attributed to a decrease in the number of fishermen who formerly fished in his district. There were three licenses less, and three others which were not fished. Considering the higher prices realized for their fish, it has, on the whole been a satisfactory season. Licenses for spearing were issued for Burlington Bay. There seems to be a carelessness, or disinclination on the part of the fisherman who have taken out spearing licenses to give in their returns, as only twenty-four returns were received to date. Carp in the Bay have become so numerous that they are driving the catfish and other coarse fish out of the inlets, their natural home. All the fish caught were sold for the home market. He found no abuses. The close seasons were strictly observed. One small piece of gill net was seized in the inlet. Messrs Tinsley and Graham seized a quantity of net in what is known as Kerr's Pond, Burlington. The net was forwarded to the Department. Complaints have been made by fishermen that the farmers are dumping apples and grape vine brush in the lake, which wash into their nets and almost destroy them. Acts of this kind in any division should be at once reported to the Department. The angling in the bay was exceptionally good, notwithstanding that the best place for angling was at the canal, which was undergoing repairs.

Overseer Oliver, Little Current, reports that fishing in his division has been as good as last year, excepting the pound net fishing in the west end of the North Channel in the vicinity of Cutler, Blind River, Cockburn Island and the Ducks, which he says has not been quite so good as usual. The prices obtained have been good. Whitefish were higher than he ever knew them to be before, and trout and pickerel have also been much higher than in former years. The gill net catch in the vicinity of the Bustards, Killarney, Squaw Island, Fitzwilliam Island, South Bay, Duck Island, Cockburn Island and Meldrum Bay he reports as being good. The pound net fishing in the vicinity of Gore Bay is about the same as last year. He reports that the fourteen pound nets east of Little Current did very well, although it was well on in the season before they got started. Fourteen nets were fished, although there had been licenses for fifteen. The herring fishing at Bad River was about the same as last year; and at Sprague in the North Channel it was very good, although the season was short. He commenced with the Government boat "Maud" on the 24th day of April, and did good work in looking after illegal fishing; he made a number of seizures of nets that were being fished illegally, and collected license fees which he would not have got otherwise. He reports having received great assistance from Capt. McAulay of the steamer "Gilphie" and her crew. He seized a good number of seines, and taught the parties who practice illegal fishing a severe

lesson. He says that the Indians on Wekwemikong Reserve give a good deal of trouble with seines.

Overseer Roblin, Lennox, reports an increase in the catch over last year, and prices in some cases a little higher. There were no complaints of any illegal fishing came to his notice in the last year, which is proof conclusive that the fishermen are observing more closely the law. And there is also a very friendly feeling towards the Department among the majority of the fishermen. Angling is becoming more popular each year in this district, no doubt largely due to the increase in bass for the past two years. The total value of catch in this district is \$2,839.90, an increase over last year of \$534.00. About 90 per cent. was exported, and 10 per cent. used for home consumption. Fish dealers do not heed the importance of the law requiring them to keep an accurate account of fish bought from each fisherman.

Overseer Sargent, Halton, reports that the season of 1902 has not been as profitable for the fishermen as the previous year, but he is pleased to say that the prices obtained were far better than those of former years. About one-third of the fish caught were shipped to the United States; the remainder were sold in Toronto and local markets. He reports that the fish are increasing in size each year. Owing to the stormy weather during the fall, the fishermen were unable to go out for their nets, and consequently some of them lost considerably. It was one of the worst seasons for stormy weather that he ever experienced, and thinks that the cause of the decrease in the catch. The fishermen devote most of their time to herring fishing, with the exception of one or two who fished a little for trout, and some very fine herring were taken. Bass in the Twelve and Sixteen-Mile creeks are decreasing. This, he thinks, is caused by the German carp invading those waters. If the Government could adopt some means of ridding the waters of this noxious fish, he would think it would be of great benefit to the angling. The laws have been well observed.

Overseer Skeen, Northumberland, reports that the close season on Rice Lake was fairly well observed, no open violations of the law having come under his own observation. Some reports of fish having been slaughtered in the close season reached his ears late in the summer, but when investigated proved to be nothing but heresay. He expresses his disapproval of allowing hoop-net fishing in the lake except under the strictest surveillance. The fishing has been good, the catch of both maskinonge and bass being equal to, if not better than, that of last year. A desirable object to be attained is the regulating of the rise and fall of the water in the spring; if that could be regulated properly, he thinks it would result in a great saving of spawn.

Overseer Smith, Gravenhurst, reports that fish are increasing in his district, and this he attributes to the enforcement of the fishery laws and regulations, and to the better spirit shown by both settlers and tourists, who are now more anxious to assist in carrying out the laws and helping the fishery officers to enforce them. He thinks the increase in bass is due to the measures taken by the Department to re stock the lakes with this desirable fish. No fish are exported from his division, the two licensees finding a ready market for all the fish they can obtain in the home market. The fishery laws are well observed, and the close season closely kept. He visited the several portions of his district at various times during the year, and believes illegal netting has been scarce. He has seen no signs of it himself, and with a few exceptions has had no reports or complaints of same. The complaints, upon investigation, proved to be without foundation. He inspected the various lumber mills during the season, and found the law as to mill refuse carefully carried out. There are no fishways in his district, but he thinks something should be done at Bala Falls

to enable the fish to get from Georgian Bay to Muskoka lakes to help in keeping up the supply of fish. He is of opinion that the issuing of two netting licenses in his district has been most beneficial in the interests of the fishermen, and has helped very materially to do away with illegal netting. There has been no confiscation of nets or any other fishing implements during the past year.

Overseer Steed, Lambton, reports that the catch of fish during the past season of 1902, though below that of 1901 in the total amount, yet in respect of some kinds it is above, and prices have been better. As to the reason why it might be summed up in a few words—heavy weather combined with the geographical position of our shores has all to do with this. And when we report the fact that nets were blown out last spring as soon as set, combined with this last fall only some ten set of stakes were saved out of over forty, and cases in which parts of nets were lost, prove conclusively that heavy north-east and south-west gales have a great deal to do with the profits of all those engaged in the industry. The peculiar way in which the fish run has much to do with the individual catch, for we find some of our fishermen parting with one net and keeping what they were sure was the best, and then find that the other net let out fishes the one kept. In other cases, in which the leader has been made shorter in the lower net, placing the heart of the upper away out in hopes of taking everything that came up the shore, even this failed. As reported last season, the great percentage of our catch is exported to New York. Close seasons have, he says, been fairly well kept, for although it was reported in the latter part of November that the fishermen on our lake shore were keeping trout and whitefish, he found after taking the trouble, on that month, of going up and seeing some of the nets lifted, as well as taking the "Murray" up on the 24th and seeing four more lifted, then going over to Fort Gratiot, U.S., and meeting the fishery tug "Wilson," when she came in with a load of fish from our shore, and finding no trout or whitefish, the report to be false. This past season has been the exception as far as illegal gill net fishing goes; we have had a rest. Our own fishermen would like if those holding licenses on our own shore would try to remember the three mile limit from pound nets, and in some cases go so far as to ask that no gill net licenses be granted off Sarnia Township. The saw log matter has turned up again this last season as a nuisance, but in this case to the pound nets on our lake shore, for the saw-mills located on Sarnia Bay in rafting down their logs have had the misfortune during heavy weather to have their rafts broken up, and the logs, when they are blown in towards the shore, play sad havoc with all nets that come in their way. The one fishway in this division is working all right.

Overseer Steele, Ontario, reports that the fishing in his division was not so good as in 1901, especially the bass fishing, there being one-third less caught, owing, he thinks, to the wet and stormy weather, which was a great drawback to the anglers. The trout and whitefish caught was also not so good as in 1901 for the same reason. He reports that the maskinonge are on the increase, and the herring seem to be as plentiful as in former years. There seems to be an abundance of coarse fish. The carp he reports to be very numerous, both in Lake Simcoe and Couchiching. During the year he confiscated two spears, one hundred yards of gill net, one seine, and had six persons prosecuted for violating the Fishery Act. Of these cases three were fined and three dismissed for want of evidence. Anglers who have been fishing in the lake for years tell him they have been making good catches in spots where for the last few years they have been unable to get anything. He thinks this is good evidence that the fish are increasing in that lake. There are no fishways in his division.

All the fish caught are used for home consumption. The laws have been well observed.

Overseer Stephens, Chatham, reports that there has been a large falling off in the fish taken in his district last year, which is accounted for by the seines on River Thames being shortened to two-thirds of their former length, and because the licenses were not issued until March 12th, which made the season very short. About ninety-five per cent. of the fish caught are exported to the United States and only about five per cent. used for home consumption. The close season was very well observed, no illegal fishing having come to his notice. A small gill net was found in Baptist Creek, which was confiscated. There are two saw-mills in his district; no sawdust or other refuse is thrown into the river. There are no fishways in his division, and none are necessary.

Overseer Stewart, Pelee Island, reports that, while he has little to report, owing to the conditions of the fishing and fisheries being much similar to previous years, he is however pleased to state that the industry is on the increase, and while some kinds of fish appear to show a falling off, as for instance sturgeon, the cause is probably owing to a less prosecution of this branch of the industry, no night lines whatever having been used during the past year for the purpose of taking these fish. The conditions of weather and water were very favorable during the whole season for fishing purposes. Angling for black bass was exceptionally good in the spring, and a number of anglers took advantage of it, and in some instances abused their privileges. Having obtained permits to angle, they came with tugs bringing their own row boats and oarsmen, and very seldom came near shore, making it very difficult, and in some instances impossible, for him to know what they were doing, but from reports he has seen in the local American papers some of them caught and took away more bass than the regulations authorized. He would respectfully recommend that the angling permit system be done away with, and the persons desiring to angle in our waters be required to domicile here; there is ample accommodation for them. As it is now, having permits, they come over here, take our fish and return to their tugs on Put-in Bay, Middle Bass and elsewhere, without probably having landed on our shores, or the community being one whit the better of their coming. During the fall fishing, however, the bass were either scarce or wary of the bait, as very few were taken. In all other respects the fish laws were strictly respected, the close season well observed, and no instances of illegal fishing came to his notice. The herring caught during the fall fishing was very large and hard; in fact, the finest he had ever seen, and brought $3\frac{1}{4}$ cents per lb. at the landing, all of which were sold to American buyers. In fact, all the fish caught in his division are exported to the United States. He would recommend that the Ohio State Fish Hatchery be permitted to procure herring spawn for artificial breeding, provided the fry are placed back in the lake at or near that district.

“During the freshet of the past season the carp not only came over the bars but went up the ditches from drains leaning off the lands to the lake, and could be found, not only in the mains but on the lands flooded by the great quantity of rain fall we had during the past season. If I do not assume too much, I might call your attention to the fact that during your visit here and on our drive up the west dyke of the Drainage System, I called your attention to the condition of the water, also the cleanness of the edges of the canal, caused by these fish feeding upon the vegetation that grow there. Now it appears to me after studying to some extent the nature of these fish, that they do not come inshore for the purpose of destroying the spawn of other fish as reported. No fish come so close to shore to spawn, especially when there is clay bottom, preferring reefs and gravelly points in deeper water, but for the purpose of their own either to feed or deposit their spawn, or both, and my reason for supposing this is that the water during their habitation in shore is kept in perfect turmoil, being roiled up to such an extent that it would be impossible for them to do much in the way of preying on young fish. I am also inclined to believe that the whole representation of these fish in the lake is present at these times in the bays and indentions of the shores for the purpose as aforesaid of depositing spawn or

feeding. They seem to be a sort of hog fish, or as I stated in my last annual report, a herbivorous fish. If this is so, I do not think they should be to any great extent interfered with. The time will come, if not now, when there will be a fish worthy of protection, as for instance, sturgeon. A few years ago fishermen threw them out of their nets, they having no market value, while to-day they are one of the most valuable fish on the market, and the fewest of them. And again, if, as I said before, a representation of the carp in the waters of the lake is expressed by the numbers in shore, there are not so many of them after all; also an examination of this fish will show that they have not the capacity for being voracious like the pike, pickerel, or in fact any of the game fish. We live and learn, and while I was of opinion that these fish were detrimental to all fishing interests, I have had occasion to change my mind, and while I do not for a moment presume to dictate to you or your Department, I would ask for your careful consideration of this matter, and herring fishing as well.

Overseer Taylor, Renfrew, reports that the fish caught in his district are all for home consumption. He would call attention to the necessity of a fishway at Pembroke on the Indian River, to allow the fish to pass into this river and up the Muskrat to Muskrat Lake, etc. The close seasons were all well observed. He has had no complaints of spearing, nor has he seen any signs of such having been done. He has entirely put a stop to mill men putting sawdust in the water. Parties holding net and line licenses rendered useful advice in giving information of parties violating the law or encroaching on their territory. Bass seem to be more plentiful, but pike are not so numerous as formerly. Whitefish and pickerel and all coarse fish seem to be increasing. The catch for all purposes was about 25,670 lbs., an increase over former years. There are no fishways in his division.

Overseer Terry, Lake Simcoe, reports that during the close season for maskinonge, three guardians were on the Holland River. They did good work in protecting the maskinonge. He superintended their work, visiting them at different times. One night he took five nets from the main branch, near the upper end of the river. During the last few years the large bed of rice has been completely destroyed by carp. The rice bed was the chief spawning ground in Cook's Bay for the maskinonge. Since its extermination there is no suitable spawning ground in the bay for the maskinonge, so they run up the Holland River. This confines them to a smaller spawning ground, and the poachers would be more easily caught; but it is almost impossible to catch or convict them, as they set their nets in the night. After setting the nets, they leave them. The trolling was fairly good, and a goodly number of fish were caught, but not equal to the average of other years, owing, he thinks, to the cold, wet weather rather than to there being a scarcity of fish. The bass fishing was good, but not so many caught as in other seasons. This was due to their being fewer fishing, the weather being so wet and cold. During the close season for lake trout the weather was generally windy, therefore the poachers had but little chance to set their nets.

Overseer Trotter, Bobcaygeon, reports that the year just closed has been a most successful one for both maskinonge and bass fishing. They are the only kinds of fish taken in the waters under his supervision. He consulted some of the guides—about 25 in number—who were of opinion that about 40,500 lbs. of bass, and about the same of maskinonge were taken during the season. He does not think that any one exceeded the limit in their daily catch. He reports that a greater number of tourists visited that locality during the year, most of them from the United States. He would call the attention of the Department to the fish slide in the Government dam, and would recommend that it be repaired in such a way that the fish could get through to the upper lakes; that there should be a fishway in the dam at Boyd's mills; and that a license fee be charged all foreigners in those waters. The law regulating the sale of bass and maskinonge has been a great protection. This law has been well observed, and he would

recommend that it be further enacted for a term of years, in the interest of both the tourist and the settler. The public regard this law with more favor now than when it was first enacted, which is good evidence that it is a good law and just to all parties. It has been reported to him that there is considerable illegal fishing through the ice in Emily Creek. This is a very difficult place to get at, and consequently a hard matter to catch any one in the act, unless a person spent some time in locating them. It is said the maskinonge are very large and plentiful in that locality.

Overseer Van Norman, Sault Ste. Marie, reports that the fishing in his division has been very good the past season, and the fishermen are well satisfied with results. Fish have been plentiful and of a large size. There is an increase in the catch of whitefish and coarse fish. Trout will about compare with the catch of last season. The catch is nearly all exported to the United States, very little being sold in Canada. No abuses of the regulations came to his notice and the close seasons were well observed. There is no mill rubbish deposited in the waters and there are no fishways in his division.

Overseer Villeneuve, Prescott and Russell, reports that the catch has been a satisfactory one. There has been a substantial increase in sturgeon, whilst other kinds of fish compare very favorably with the catch of other years. The fish caught are all sold in Canada; about ten per cent. is used for home consumption. On one of his trips of inspection he seized and destroyed some night lines which were illegally set. The close seasons were well observed. There is a small saw mill at Plantagenet, but very little damage is caused by the sawdust running into the water, as the mill is worked only in the spring, when the water is high, and the sawdust is carried away by the currents. There are no fishways in this division, and none are needed. No illegal fishing of any consequence came to his notice, and no fines were imposed.

Overseer Waddell, Grey, reports that the catch this season is not so good as last year, owing, he thinks, to the frequent storms which made it impossible for the fishermen to venture out to set or lift their nets. He says there were frequent reports of illegal fishing during the close season. He strongly advises the prohibition of herring fishing during the close season for trout and whitefish. The fishermen take advantage of this privilege, and take trout and whitefish as well as herring. No complaints respecting the pollution of streams with sawdust came to his notice. About one half of the fish caught in his division are sent to the American market.

Overseer Walker, Peel, reports that some of the fishermen in his division who took out licenses never set a net during the year, and the majority did not fish with as much energy as they might have done. This accounts for the catch being a little under the average. In angling he finds that black bass have increased, but owing to so much rain during the first part of the summer (which caused the streams to be very muddy), the catch of white bass was not up to former years. Perch have not been very numerous. He would recommend that some means be adopted to get rid of the carp, also the pike, as both are very destructive to the smaller fish.

Overseer Whalen, Port Arthur, reports that there was an increase in the catch of fish for 1902 as compared with 1901. About the same number of licenses were issued, and there seemed to be no particular explanation as to the cause of the increase. The greater part of the fish is sent to Winnipeg, for distribution, and is mostly consumed in that vicinity. The close season has been well observed, and no illegal fishing has been reported. There are no saw mills in his district.

Overseer Willis, Ontario, reports that the weather during the early part of the season was very unfavorable for the fishermen, but on the whole they had a very good season's business. The fish were all sold locally, except a part of those caught at Pickering Harbor, which were sent to Toronto dealers. Both whitefish and herring were considerably larger than last season, which was partly due to nets of a larger mesh being used. There were no violations of the Act reported, and he believes the laws were well observed. Suckers, pike, and carp were very plentiful in the bay and creeks in the spring. Fishing with hook and line in Whitby and Pickering harbors was better than it has been for some years, both in size of fish and in number taken.

Overseer Willmott, Muskoka, reports that angling in the inland waters during the past summer has been satisfactory, although in most places (the Muskoka lakes principally) the experience of the majority has been that the bass have been small. The efforts of the Government in continuing to introduce adult fish into our waters has met with the approbation of all, both tourist and settler. There is no doubt that the best way to re-stock these waters would be to stop fishing altogether for the term of two years, the lakes being literally swarming with small bass. These would in their time bring fishing to the standard of many years ago. As this course would be most unpopular, the next best method of re-stocking should be devised. This, in his opinion, would be blasting out of passages round insurmountable obstructions between these lakes and the Georgian Bay. This course, he believes, would be preferable to fish ladders; the latter being liable to accident, etc., whereas the former would be a permanency. This could be accomplished at a trifling cost, as tourists would gladly contribute to a fund for the purpose, which, with a little aid from the Government, would be ample. Before, however, soliciting contributions for this purpose, the netting licenses at present in the Muskoka lakes should be withdrawn, as the issuance of these is most unpopular to all classes. Should this suggestion be carried out, it would unavoidably introduce maskinonge into these waters. This he would not consider objectionable, as these fish inhabit the same waters as bass and pickerel elsewhere with no evil results. Should the present netting licenses be removed he would recommend that settlers be granted licenses at a nominal fee for herring only, and only during the month of November, for their private use solely. The laws have been well observed both by the mill owners and fishermen.

Overseer Wonnacott, Elgin, reports a very small catch in comparison with the two preceding years, owing partly, no doubt, to the unusual number of storms, both of wind and rain. The pound nets suffered severely both spring and fall. The most valuable fish, viz., the sturgeon, seems to be about depleted. Whitefish and pickerel were quite scarce during the past season, and, owing to the unsettled condition of the water, the herring scarcely came on shore during the fall, but later in the season; that is, after the pound nets were taken up, some very good catches of herring and perch were made by the gill net men. It appears to him that the only valuable asset left to the fisheries is the herring, as far as his district is concerned, and that the day is not far distant when some protection will have to be given them. Herring were caught in gill nets as late as the 10th December which were still full of spawn. Nearly all the fish caught were exported to the United States. Some high prices were realized, which, in part helped the fishermen out for the short catch. The law was pretty carefully observed, no illegal fishing coming to his knowledge. He says the carp are getting very numerous in the larger streams, which has just about destroyed the angling in the catfish stream at Port Bruce, and also in the Otter Creek at Port Burwell. Some measures should be adopted to try and exterm-

inate this destructive fish. The hoop net set in the Otter Creek at Port Burwell did not have the desired effect, owing probably, in part, to the net not being properly set, and partly by the net being interfered with by parties living up the stream. There are no fishways in his division, although at one time, before the dam was rebuilt at Vienna, he thinks one was in existence there. About the only fish that would make use of it probably were mullet and suckers. On the whole the close seasons were well observed. Of blue pickerel, while some very fair catches were made by one or two men, he thinks, on the whole, it is a mistake to protect this fish, for they certainly destroy a great quantity of the more valuable fish, and the market for this fish is not what it used to be; in fact they are nearly valueless from a commercial standpoint.

Overseer Wood, Toronto, reports that there has been a large falling off in the catch of herring during the year 1902. This may be accounted for by the adverse winds and currents which prevailed during a greater part of the season. The fishermen report that in the early part of the season, while the weather was favorable, the catch was somewhat larger than last season. There was also a depreciation in the quantity of whitefish taken. In regard to this it is claimed by the fishermen that the refuse from the city is deposited on the feeding beds, thereby destroying the food supply and driving the fish to other waters. He has seen nets filled with what was no doubt filth from the city. There was a satisfactory increase in the trout catch during the season. The law was well observed on the whole. In two cases fines were imposed on parties for setting nets in prohibited waters, and a quantity of maskinonge was confiscated. The transportation companies and police officials have shown a disposition to help keep the laws and regulations of the Department.

Overseer Yates, Huron, reports that the season has been a poor one, the first part being very stormy, which interfered very much with fishermen. The pound net men particularly suffered on this account. The fish caught were of a larger size, and the quality good. There were not as many licenses issued in this division this year as in former years. He is pleased to report that the close season has been well observed for the past two years; this, he thinks, accounts for the excellent bass fishing in his district during the year. The catch was good and of excellent quality. The catch of herring and perch with hook and line was very large at Goderich, Port Albert and Bayfield. The mill owners have observed the laws regarding the pollution of streams with sawdust. On the whole, he says, the laws have been fairly well observed. About thirty-five per cent. of the catch is sold in the local market.

REPORT OF THE CAPTAIN OF THE CRUISER GILPHIE.

Southampton, Dec. 31st, 1902

SIR,—I beg to submit my fourth annual report of the work done by the Fisheries Cruiser "Gilphie."

I proceeded, along with the engineer, to fit out the vessel on the 24th March, and she was ready for work on the 9th April. Owing to stormy weather, however, we were not able to leave port until the 10th, when we sailed down the south shore as far as Collingwood, where we remained all the following day interviewing the overseer and fishermen. On Thursday, the 11th, we left for Penetang, calling at Christian Islands, Cedar Point and Thunder Bay. On Monday morning we left Penetang, remaining over night at Muskoka Mills, and on the following day we succeeded in capturing 9 trap nets in the vicinity

of Waubuno and Copperhead Islands. On Thursday, the 17th April, we captured two trap nets and four seines in Shawanaga Bay, and imposed fines of \$10 each on an Indian and white man for fishing illegally. On the following day, after visiting Point au Baril, we returned to Shawanaga Bay, and succeeded in capturing two more seines, and again on the following day we seized a trap net near Jack Rock. The following week was spent in patrolling all the bays and islands between Parry Sound and Penetang. We found one trap net on Friday 25th near Allan's Straits. On Monday, 28th April, after leaving Penetang, we visited Giant's Tomb, and captured a large trap net on the west side of the Island; and on the following day we seized another trap at Salt Harbor Point, Christian Island. The remainder of the week was spent in patrolling around Beausoliel Island and Thunder Bay, calling at Midland on Friday for coal, and at Penetang on Saturday, where we had to remain on account of bad weather. We left Penetang at 8 a.m. on Monday, and searched around Waubuno Island, and on the following day Copperhead and Moon Island, but found no nets. The following morning we left Parry Sound and made a diligent search in the Batteau Channel, and the following day in Shebeshekong Channel and the coast of Shawanaga Bay, arriving at Point au Baril at 7 p.m. On Friday we visited Byng Inlet, where I gave licenses to three fishermen; and on Saturday we made diligent search of the inlet for seines, and proceeded to the Bustard Islands. The following week was spent in patrolling Bad River, Key River, Fraser Bay and Badgely Channel. We seized a trap net in McGregor's Bay, and a seine on West Mary Island.

During the next three weeks we patrolled between the Bustards and Penetang. The weather was very unfavorable and little fishing was done. No seizures were made. On Monday, the 9th of June, at the request of the Harbour Master, we replaced some bouys which had been dragged out of position. We left Penetang on Tuesday, calling at Minnecognashene and Waubuno, Sans Soucie and Copperhead Islands, making a thorough search for nets, but none were discovered. On Saturday, the 14th of June, we left the Bustards with the two rowboats and searched Bad River, with the result of capturing one trap net. On Monday we proceeded to Killarney, and while there succeeded in capturing four seines and one trap net. Overseer Oliver joined us and remained during the next four days. We patrolled the waters between Killarney and Snug Harbour, and on the following morning made a search of Frazer Bay. On Thursday we searched under the lea of Little Clouche Island, but owing to the heavy winds were obliged to give up and go to Little Current. On Friday we went to Smith's Bay, where we anchored the cruiser and took the boats, and were successful in capturing 4 trap nets and one seine. The former were owned by residents of Killarney, and the latter by Indians, who ran away on our approach. We continued the search on Saturday, but without finding any nets. We then went to Little Current and remained over Sunday. On Monday we patrolled all the way to Killarney and captured two seines, and on Tuesday another seine. On Wednesday we left Killarney at 4 a.m., and anchored the cruiser at William Island. We then took the large boat and visited Wikwimikong, where we found some seines, which we proceeded to remove, when the Indians came down in force and tried to prevent us. The Chief arrived and ordered the Indians away. We then took the seines—3 in number, and spread them on the shore to dry. We left Killarney and patrolled the waters as far as Campbell's Rock, calling at Point au Baril and Dillon's Point, without discovering any nets. On Saturday we started out with the two boats, one patrolling around the Umbrella Island, and the other Sandy Island, and succeeded in capturing three large trap nets at the latter island. On Thursday we seized another trap net at Whaleback near Espabekong, and on Friday we got 3

more traps near Giant's Tomb, all of which we burnt. We were delayed at Penetang until Tuesday at 2 p.m. taking on coal. We then left for Christian Island, and while there assisted in releasing a tug which had been surrounded by a large boom of logs. We then patrolled Nottawasaga Bay, but it got so stormy that we had to make for Collingwood. Called on Overseer Howard, who reported that everything was all right. We spent the next three days in patrolling Nottawasaga Bay, and around Christian Islands as well as Thunder Bay. We arrived in Penetang at 3 p.m., on Saturday, 12th July, where we were compelled to remain until Wednesday the 16th, on account of a heavy gale which was blowing. On Wednesday we proceeded to Owen Sound, calling at Christian Island, and remained there on Thursday painting the boat and fixing up generally. On Friday morning we left Owen Sound and patrolled along the shore to Wiarton, where we were joined by Overseer Stephens. We then visited Whitecloud, Griffith and Hay Islands searching for nets, and stayed at Whitecloud Island that night. The following day we continued our search around these islands, and received complaints from the settlers that the Indians steal their fowl and other things when they come there to fish in the fall of the year. We then returned to Wiarton, where we remained over Sunday. On Monday we got as far as Cape Croker, when we were obliged to seek shelter at Whitecloud Island on account of rough weather. On Tuesday we proceeded to Rattlesnake Harbour, calling at Tobermory, and while at Cape Smith we captured two very large trap nets, which we burnt. On Thursday we called at Partridge Island where we were joined by Overseer Oliver. We then visited McGregor's Bay, and the following day we visited Strawberry Island (where we left Overseer Oliver), also Haywood Island, thence on to Sheguindah and Little Current, where I received your telegram to proceed to Parry Sound and pick up the Commissioner. I left at 2 and arrived at Killarney at 7 p.m., and on Sunday I proceeded to the Bustard Islands, where I arrived at 5 p.m. On Monday, 28th July, we left the Bustards, calling at Point au Baril at noon, and then made search of Shawanaga Bay and Shebeshekong Bays, arriving at Parry Sound at 7 p.m. On the following morning we proceeded to Depot Harbour, where we met the Commissioner of Fisheries and returned again to Parry Sound arriving at 8 p.m. On Wednesday morning we left Parry Sound, calling at Dillon's Point, Shawanaga Bay and Point au Baril, arriving at the Bustards at 6 p.m. On the following morning we proceeded to Killarney, where we took on soft coal and then went to Round Island. On Friday we visited Rattlesnake Harbour and South Bay, and on Saturday went to Owen Sound and took on some hard coal. On Monday and Tuesday we patrolled in the vicinity of Minnecognashene and Go Home River, also Jubilee, Wabuno, Copperhead and Sans Soucie Islands, and as far as Rose Point. On Wednesday we succeeded in capturing two trap nets at Sandy Islands, and on Thursday made our way to Penetang, being short of coal, where we arrived at 5 p.m. We washed out the boiler on Friday, and took on ten tons of hard coal on Saturday.

On Monday, 11th August, we again left Penetang and continued our search for nets among the islands, but without success until Thursday, when at the Limestone Islands we captured four trap nets. On Friday we searched Shawanaga and Shebeshekong Bays, and at the latter place found some relics of nets, as well as a large deer which had been killed in the water and drifted on shore. On Saturday we searched all along the shore to Parry Sound, where we remained over Sunday. On Monday 18th we captured two large trap nets near Waubuno Island, and on Wednesday we found two more near Giant's Tomb. We left Thunder Bay on Thursday at 7 a.m. for Watchers Island, but the wind was too strong to admit of any work, and we were obliged to run to the Christian Islands for shelter. We had to remain until Saturday morning, when we left

for Penetang. Tuesday, 2nd Sept., we proceeded to Midland and took on 9½ tons of soft coal, and then returned to Penetang. The remainder of the week was too windy to do much in the way of grappling with the small boats, although we visited Maxwell Island, Go-home and the back water of the Moon River: also Copperhead, Sans Soucie, Iona Rock, Quivive, Campbell's Rock and Sandy Islands, arriving at Parry Sound on Saturday at noon. On Monday morning we left Parry Sound with Dr. Stone on board to pick up the body of Mrs. White, wife of the lighthouse keeper, who with her son were reported drowned. We found the body on shore, but did not find that of the son. We again left Parry Sound at noon, and reached Point au Baril at 7 p.m. Tuesday, Wednesday and Thursday a heavy gale was blowing, and we were obliged to remain at Point au Baril. The Str. Atlantic was 24 hours behind time on Thursday, and still no sign of her. At 6 a.m. we left for the Bustards and Killarney where we arrived at 6 p.m., and on Saturday worked our way to Little Current. We here saw Overseer Oliver, who reported that very little fishing had been done so far in September. On Monday we left Little Current, calling at Centre Island and Cape Smith, where we anchored, as the sea was very heavy outside. At 7 the same day the wind changed and came from the north, and we were obliged to lift anchor and make for Fitzwilliam Island, where we arrived at 10.30. On Tuesday we arrived at Tobermory, the wind still blowing very hard. I heard a great many complaints from fishermen about the rough weather—that it was the worst season they had ever seen. On Wednesday we visited Lion's Head, but there was no fishing going on. On Thursday at Cape Croker we saw a few Indians getting ready for fall fishing. We arrived at Wiarton at 1 p.m., and had an interview with Overseer Stephens, who reported that everything was all right. On Thursday, 19th Sept., we left Wiarton with Overseer Stephens on board, and visited his district, returning to Wiarton at 5 p.m. On Saturday we left Wiarton at 8 a.m. and saw one small boat off Cape Commodore. It made for the shore as soon as we were seen. We arrived at Owen Sound at noon and took on 3 tons of soft coal. We left Owen Sound on Monday morning, patrolling along the shore of the bay and Vail's Point, arriving at Meaford at 5 p.m. On the following day we visited Thornbury, and found that there was only one man there fishing. We then proceeded to Collingwood, and were informed by Overseer Howard that everything was in good shape. Wednesday proved too stormy to venture out, but on Thursday we managed to make a circle around Nottawasaga Bay, and arrived at Thunder Bay at 5 p.m. Wind southeast and blowing very hard. On Friday we went to Muskoka Mills, calling at Hope, Christian and Beckwith Islands, but saw very few signs of fishing. On Saturday I sent one boat to search McRae's Lake and the other to Honey Harbour, but no signs of illegal fishing were discovered, and we arrived at Penetang at 6 p.m.

On Monday, 29th Sept. we called at Minnecognashene Island, where I made the cruiser fast and sent the boats, one to Giant's Tomb and the other to Whaleback Channel. We succeeded in capturing a very large trap net near Eschpabekong Island, which we burnt. On the following day we searched without success in the neighborhood of Tommahawk Point, and arrived at Penetang at 6 p.m. Wednesday and Thursday we spent in washing out the boiler and fixing things up generally, and on Friday went to Midland and took on ten tons of soft coal, and then visited Victoria Harbour and saw Overseer Labatt. On Saturday we grappled around Methodist and Sturgeon Points and Green Island, and seized 3 trap nets, which we burnt. We arrived at Penetang at 6 p.m. On Monday morning we patrolled in the vicinity of Go-home and McQuade Island, and also at Waubuno, Iona, Rockall and Quivive, but did not find any nets. On the following day we visited Copperhead and San Soucie, and found that nearly

everybody had left. We then went to Campbell's Rock, but found it too rough to visit Sandy Island with a boat. We cruised to Parry Sound, and on Wednesday went to Point au Baril, calling at Shebeshekong, Shawanaga Bay and Freddie Channel. On Thursday we were obliged to remain at Point au Baril, as it was too rough to venture out with our deck loaded with soft coal. On Friday the wind was blowing hard and a big sea running. We left for Byng Inlet, where we made a thorough search with boats for nets. Saturday was stormy and hazy, so we remained at Byng Inlet until Sunday morning, when we went to Killarney.

On Monday, the 13th October, we visited Little Current and saw Overseer Oliver, and on Tuesday visited McGregor and Fraser bays. The pound net fishermen reported good catches. We returned to Little Current at 6 p.m., and on the following day went down the inside channel to Killarney. On Thursday we visited the Bustards, and went to Bad River in our long boat. Here we found parties from Killarney and Wikwimekong trying to catch whitefish on the shoals. We returned to the cruiser at 8 p.m. On Friday we went to Black Bay, and up as far as Groundie Rock, where we found some Wikwimekong and other Indians fishing, and on Saturday went down to the Key River, returning to the Bustards at 3 p.m., where we remained over Sunday. Monday, 20th October, wind was blowing very hard and cold. No boats were moving. On Tuesday we left at 7 a.m., arriving at Point au Baril at noon. Saw very little fishing going on, and in the afternoon we patrolled Shawanaga Bay and arrived at the Freddie Channel, where we remained for the night. On Wednesday we left for Parry Sound, and on Thursday visited Sandy Island, Campbell's Rock, Sans Souci and Copperhead. We next visited the Moon River with the long boat. Several of the fishermen complained of having lost nets during the storm. On Saturday we left Waubuno Island at 7 a.m., and saw several boats trolling off Moose Point, called at Minnecognashene and arrived at Penetang at 4.30 p.m. On Monday, 27th October, we went to Midland and took on 10½ tons of soft coal and some wood, returning to Penetang at 6 p.m. On Tuesday we patrolled in the vicinity of Minnecognashene, Maxwell, Jubilee and Waubuno Islands, arriving at Copperhead at 6 p.m., and on Wednesday we went to Point au Baril by way of the Shebeshekong Channel. Thursday the wind was blowing a gale and no boats were moving, and on Friday, although there was still a heavy sea running, we left for Byng Inlet. On Saturday, at 8 a.m., we left Byng Inlet, but after going about two miles were obliged to return on account of the heavy sea running, and on Sunday we went to the Bustards, where we arrived at noon. There was no one at these islands, but we found a few men at Bad River on Tuesday. They were fishing for herring, and said the fishing was never so good before. We were unable to leave, on account of the heavy sea, before Wednesday, when we ran down to the Key River, where we found several Indians and two white men fishing for herring and making good catches.

On Thursday, 6th November, we left the Bustards and were obliged to run into Byng Inlet for shelter on account of the heavy seas. On Friday we arrived at Point au Baril at noon, and found that everybody had quit fishing, and that the fish houses were closed up. We then patrolled Shawanaga and Shebeshekong bays, and the next morning went to Parry Sound, where we remained over Sunday. On Monday, 10th November, we visited Sandy Island, where we found one man fishing herring, and on Tuesday searched around Campbell's Rock. It rained very heavily and turned to sleet during the night. We left Campbell's Rock on Wednesday, with a heavy sea rolling, called at Copperhead and Sans Soucie, and on Thursday went up the back waters of Moon River, where we found several parties fishing for herring. On Friday we visited Waubuno

Island, and found an old trap net, and then went to Jubilee Island for the night. On Saturday the wind was blowing hard with snow. We went to Midland and got coal, and then went on to Penetang. On Monday we visited Go-home and Split Rock, and at each place we found one man fishing for herring; and on Tuesday we called at Jubilee Island, where we took the boats and searched around Bass or Moose Islands. We succeeded in capturing two trap nets, as well as a lot of culled salted fish. We then returned to Waubuno, where we found a man fishing for herring. On Thursday we visited the back waters of the Moon Island and River, where we found some settlers fishing for home consumption. We visited several places on Friday, and found that everyone had left; and on Saturday we went to Parry Sound, where we had to remain until Tuesday morning on account of the storm. We then visited Palestine, Sand and Snake Islands, where we found several parties fishing for herring; and on Wednesday we called at Sans Soucie and Copperhead, but there was no one at either place. On Thursday it was very cold with snow. We visited Waubuno and Capt. Allan's Strait, but could go no further on account of the snow and were obliged to tie up to rocks. On Friday and Saturday we visited Jubilee and Moose Islands, also Split Rock and Minnecognashene, but everyone had left.

On Monday, 1st December, it was blowing hard and snowing. We left Penetang and called at Thunder Bay, Cedar Point and Christian Islands, reaching Collingwood at 5 p.m. On Tuesday I learned from overseer Howard that no fishing had been done since the close season ended. We went on to Meaford, where we were storm-bound until Saturday, when we went to Wiarton, and on Monday had an interview with Overseer Stephens, who stated that a good deal of illegal fishing had been carried on around the islands, and that he had confiscated some nets. Tuesday morning we left Wiarton and arrived at Owen Sound at 2 p.m., after hard work getting through the ice. We got the boat up to the the Abbey Bros. dock on Wednesday, 10th December, and after putting everything in shape for the winter, I dismissed the crew.

Your obedient servant,

A. McAULAY, Captain.

THE STOCKING OF INLAND WATERS WITH BLACK BASS.

This is a subject which I must treat chiefly by the aid of such light as I have obtained in the discharge of my official duties, rather than as the result of special observation and investigation otherwise; and my paper will therefore of necessity be more of a relation of the work as it has been conducted in this province, than a treatment of the question from a technical or scientific standpoint.

The work of re-stocking the inland waters of Ontario with black bass on an extensive scale is but of recent origin. It is recorded that bass were transplanted by the Dominion Government as long ago as 1873, and have been transplanted at irregular intervals since; but the instances are few, and the work does not seem to have been prosecuted to any considerable extent or with any special vigor, for only incidental references are made to it in the official reports. It appears to have been treated merely as an incident to what presumably was considered more important, or at least more necessary, work, the propagation of the greater food fishes—the trout and whitefish. The Provincial Government, while the dispute with the Dominion Government as to the ownership of the fisheries remained unsettled, probably felt a difficulty in doing more than grant pecuniary aid to localities which were undertaking a little stocking on their own account. But, be this as it may, no systematized or organized plan was inaugurated or carried into execution by the province until the Judicial Committee of the Privy Council of England had decided that the fisheries were the property of the province, and the province had assumed the duties which the committee determined belonged to it, and had organized a department. The fact was at once appreciated by the Ontario Government that our inland waters could be made a fruitful and lasting source of profit and pleasure to our people if good fishing could be established and maintained therein, and that it was manifestly a public duty to put forth every effort for the accomplishment of that great end, and as speedily as possible. Most, if not all, of the inland lakes and rivers of Ontario are well adapted to the black bass. It is well known that, given a fair chance, a few pair will in a short time populate the waters in which they are placed, their fecundity being great, and their habit of protecting their young ensuring them immunity, to a great extent, from the depredations of other fish; consequently, a relatively large number reach maturity; they will thrive under conditions where the brook trout could not exist, and in water of a much higher temperature; and they can be successfully introduced into waters in which they are not indigenous. These, and other reasons, seemed to indicate the black bass to be the ideal fish with which to re-stock our waters; and the most practical, successful and speedy means of accomplishing this, having regard to the success which had signalized the work already referred to, to transplant the parent fish. Many lakes in the sparsely settled districts are already naturally well stocked, and it was suggested that these waters might be drawn upon for stocking waters which had become more or less depleted in the older and settled portions. But such a policy was open to objection, because these lakes would in turn, it might reasonably be expected, soon themselves become popular as a resort for anglers and tourists. Besides, they were so difficult of access, and so far from railway communication, that the primitive means of transportation which would have to be adopted would be tedious and expensive, and accompanied by so much loss as to make it impossible to enter upon the work as extensively and as economically as would be desirable and necessary to meet the demand which was known to exist. The department therefore felt that such a plan could not be entertained; that the fish would have to be obtained from waters where a minimum of opposition would be raised to their removal, where

they could be obtained in large numbers, and convenient to railway points. Such points having been located upon one or more of our great lakes, the next matter to be considered was that of rapid transportation. The province was not yet prepared to build a car for the purpose, and therefore the Government approached the railways, which it was thought would be interested in the work, with a view to obtaining their active co-operation to the extent of fitting up and placing at the disposal of the department a car for the purpose of carrying fish, bearing in mind that in some of the States the railways had co-operated in that way. A well-known passenger agent has observed: "What would the interior travel amount to if no effort was made to keep up the supply of fish and game? It is not to be supposed for an instant that persons are going to our interior just to see what the rivers and lakes look like. It is, of course, for the pleasure derived in the way of sport incident to the catching of fish and the hunting of game." It was not suggested that a car on anything like so elaborate a scale as some of the United States fish cars should be provided, but merely that a superannuated passenger or express coach should be adapted to the purpose. Ultimately it was found that a greater part of the work, or that which, in the opinion of the department should first be done, was at points to be reached by the Grand Trunk Railway, and therefore the matter of the construction of the car was thoroughly gone into with representatives of that road. Their willingness to co-operate was graciously and readily expressed, a plan was prepared, and the car was equipped. Originally a first-class passenger coach, it is divided into sections, with a passageway down the middle. A double door in the centre on either side is provided for convenience in loading and unloading, taking on ice, etc. There are ten tanks, besides two compartments for ice. The tanks are lined with heavy galvanized iron, and are so constructed that the water may freely circulate from one tank to the other. The car is charged from a railway hydrant or tank en route. At one end of the car is a double lower and upper berth, a lavatory and a compartment for storing the various utensils in use. The fish are taken by seines and in pound nets under contract, which provides that they be delivered on the car. The Government pay for the catching and loading of the fish, the railway company furnish the car and practically free transportation, and the fish are distributed at the point of destination by interested parties under the supervision of the Government overseers. During the first season (1901), in a few weeks' time, nearly 10,000 adult bass, ranging from 12 to 20 inches in length, were deposited in some 18 different lakes and rivers, a greater number than had theretofore been introduced in the province's whole history. The bulk of these fish were deposited before they had spawned that year.

The main essentials to successful transportation are, (1) healthy and vigorous stock, and (2) unceasing attention while in transit. The water should be changed as often as possible, kept at a proper temperature, and frequently oxygenated. The latter is done by means of a hand pump. Our attendant in charge of the car has been much interested in and most devoted to the work. The success of our operations so far may be characterized as almost phenomenal. The fish have been transported in some cases nearly 400 miles; 850 was the largest number carried at any one time, with a loss of only ten per cent.; 720 were carried 225 miles with a loss of not more than two per cent. Of course, without the car, we should have been unable to pursue the work with anything like the success that has attended it. Where the car has been hauled over other systems than the G.T.R., this has been done gratuitously, and at times special service furnished.

The most convenient way to distribute the fish, where there is a steamboat plying on the lake or waters to be stocked, we have found to be from a scow

towed alongside a steamboat. Upon the scow are placed a sufficient number of tanks or barrels to conveniently hold the fish without crowding. Flat-bottomed boats, where these can be obtained, answer admirably. For carrying fish, ordinary washtubs (new, of course), are considered much better than cans or pails, as more can be carried at a time. A few inches of water should be placed in the tub. In transferring the bass to the water, we place a dozen or so, as may be desired, in a tub and dump them quickly but carefully at suitable spots. This plan we find preferable to depositing with dip nets, as the fish are not so likely to become separated. We know the parental instinct is very strongly developed in the bass, and why not the social habit and other domestic qualities also?

Discretion is of course exercised in regard to the waters which are being stocked. The department has been criticised somewhat for placing bass in a certain lake which at one time had been inhabited by speckled trout, on the ground that it should have been restocked with trout instead of bass, or the trout remaining therein given the protection which would have resulted in their increase in due time. The waters referred to are waters which are being extensively visited by holiday-makers. They were clamoring for fish. The residents desired that we stock with fish that would re-establish themselves in the shortest possible time, and afford sport during July and August. They said: "There may be trout in the lake, but we cannot get them; we want a fish that will bite during July and August, otherwise people will not come here; let us have bass." The council of the municipality unanimously appropriated a sum to assist in the work, realizing its importance, and bass were accordingly put in.

Of course we did not approve of putting bass into streams or small bodies of water which are inhabited by brook trout, or in waters where there would be a possibility, however remote, of restoring the trout fishing; but in large bodies of water, several hundred acres in extent, in which the trout are practically exterminated, and which we wish to stock with the greatest possible expedition, I claim that bass are the proper fish. The opponents of bass may also be too apprehensive with regard to the effect on trout which the stocking of large bodies of water with bass will have. Henshall, in his "More About the Black Bass," says: "The black bass gets the best of other game fish, not by devouring the fishes themselves, but by devouring their food. For this reason, more than any other, they should not be introduced into the same waters with brook trout."

I should like to mention that I am acquainted with a gentleman who has a fishing preserve in Muskoka, in which he tells me he has trout and bass, and that they are thriving equally well, that the trout are not only holding their own but are increasing rapidly. He showed me last season three trout taken in his preserve which measured $19\frac{3}{4}$, $19\frac{1}{2}$ and $18\frac{3}{4}$ inches respectively, the largest of which weighed three pounds. He had frequently, he said, opened bass to ascertain upon what they were feeding, and had never in a single instance found a trout. The food consisted principally of crawfish, minnows and perch, which abound in these waters. The preserve comprises three hundred acres. There are no screens to prevent the trout and bass from intermingling. I have also been told that in some of the lakes along the St. John railway in Quebec bass and brook trout have naturally and always co-existed.

There are some who look with contempt upon the black bass as a game fish. Indeed, I remember hearing a delegate at the Montreal meeting say that a man would not be seen going up a back street in his country with a string of bass. There are many, however, who consider the bass quite the peer of the brook trout. Henshall speaks of the salmon as a king, the brook trout as a courtier, and the black bass, "in his virescent cuirass and spring crest, as a doughty warrior whose prowess none can gainsay. He is plucky, game, brave

and unyielding to the last when hooked. He has the arrowy rush and vigor of the trout, the untiring strength and bold leap of the salmon, while he has a system of fighting tactics peculiarly his own. He will rise as readily to the artificial fly as the salmon or the brook trout under the same conditions. I consider him, inch for inch and pound for pound, the gamiest fish that swims. The royal salmon and the lordly trout must yield the palm to a black bass of equal weight."

Parker Gilmore, an English authority, whose writings appear over the *nom de plume* of "Ubique," and whose statements on sporting subjects are received everywhere without question, has this to say of the black bass: "I fear it will be almost heresy to place the black bass on a par with the trout, but I am bold and will go further. I consider he is the superior of the two. He is equally as good as an article of food, is much stronger, and is untiring in his efforts to escape when hooked." Many other recognized authorities might be quoted to the same effect.

It is not, however, the purpose of this paper to discuss the relative merits of the trout and bass as game fish. I have myself been a bass fisherman for many years, and I have enjoyed to the full the exciting sport it has always afforded, for in our cold waters the bass are most active and vigorous. I have also whipped the far famed Nepigon, which many have declared, and properly so, to be the finest trout stream in the world; and I should not like to say that the black bass is the peer of the trout as found in the Nepigon. But I think I have supplied testimony sufficient to satisfy the most exacting sportsman that if the waters of Ontario are not being stocked with the gamiest of fresh water fishes, we are introducing the next best, and certainly one which none can honestly despise, and the only one, I may say, which, under existing conditions, we are able to utilize, as the Government has at present no brook trout hatcheries, and no resources upon which we can draw for trout.

I shall not attempt either to discuss in detail what appear to me to be the relative advantages and disadvantages of stocking in the manner which we have been adopting, and that of pond culture and the introduction of the fry. Each no doubt has its advantages in some respects, and each its drawbacks. Indeed, I think that better results could be attained where practicable by a combination of the two. Especially would this be so in the case of small lakes and rivers, where a full carload would not be required, and to which a can of fry could be readily despatched, and there are a great many such places in this province. The work could probably also be carried on to a later period. But it is gratifying to us to know that the success of transplanting the parent fish has been demonstrated wherever they have been introduced. As I have already intimated, lakes which were stocked some few years before a department was established, now afford excellent fishing; and those into which bass have since been introduced are said by our officers to be literally swarming with the young of these fish. But pond culture would appear to be yet in the experimental stage, judging by the reports of States which are propagating in that way, and I have, therefore, refrained from recommending any appropriation for the construction of ponds until the results of pond culture appear more certain. Michigan, I suppose, has more nearly solved the difficulty than any other State. But even from that State I have a communication in which the writer says he has for twenty years or more given the black bass considerable attention, and that the result of his own experiment, and what he can learn from others is, that he is not enthusiastic on the subject of raising black bass for stocking other waters for many reasons, one of them being that a given number of adult fish will not produce one-half as many fry in artificial ponds as in the wild state. They spawn too late in the season, in artificial ponds, to be of any use. The fry

must be planted before they are properly weaned, or as soon as they begin to eat, as the young bass do not take kindly to liver or other artificial food, as in the case of brook trout. There are many other reasons equally good on which to base the statement that all that has been accomplished in the experiments is to demonstrate the necessity of giving the black bass the necessary protection during the spawning season. I firmly believe that dame nature has done about everything that can be done for them."

In lieu of the construction of ponds, I have thought of recommending the experiment of screening off small areas at appropriate points on the shores of lakes which we are desirous of stocking, and placing therein a few breeders. The fish would then spawn naturally, and without disturbance, the parent fish could be removed when desired, and the fry when old enough could swim out into the lake. The mesh of the screen could be fine enough to prevent the encroachment of other fish, and strong enough to withstand the force of the sea. The cost would be a mere bagatelle. At the end of the season, the screens could be packed away for use again. An almost unlimited number of pens could be so erected. I have never heard of the experiment being tried, and I should like to hear an expression of opinion as to the idea.

I do not know that I need relate to a gathering such as this, the manifest benefits which will accrue to the whole community from having our inland waters well stocked with game fish. It goes without saying, that every dollar spent in the work will be returned to the people manifold, by the thousands of persons whom good fishing will attract.

The recently inaugurated work has been confined to those waters where tourists have congregated in largest numbers, and where the drain has been heaviest, but it may be extended until all our suitable waters are in a condition to afford the greatest amount of pleasure to the angler. This, of course, cannot be accomplished without an active public sentiment to uphold the department in requiring a strict observance of our laws. To promote the creation of such a sentiment, we have encouraged the formation of Anglers' Associations, as it is believed that these may exercise a potent influence in that direction. But our legislation prohibiting the taking of bass with nets, and their sale, will, no doubt, prove the most effective safeguard for their preservation. It has greatly removed the incentive to take the fish illegally.

S. T. B.

SCHEDULE OF FISHERY OVERSEERS IN THE PROVINCE OF ONTARIO

DISTRICT OVERSEERS.

Name.	Residence.	District.
Angus Macaulay .	Southampton	Province of Ontario.
J. C. Judd	Morton	That part of the Co. of Frontenac lying north of the Twps. of Kingston and Pittsburg; the Twps. of North and South Crosby, Bastard, South Elmsley and Kitley in the Co. of Leeds, the Counties of Lanark, Carlton, Russell, Prescott, Glengarry and Stormont, and for those portions of Dundas and Grenville lying north of the C. P. R.
Peter Lamarsh	Wheatley	Twps. of Anderson, Malden, North Colchester, S. Colchester, N. Gosfield, S. Gosfield, and Mersea, in the Co. of Essex, with jurisdiction over so much of the waters of the Detroit River and Lake Erie as lies in front of said Townships.
Hy. Mathen	Brockville	That portion of Co. of Frontenac lying south of the Twps. of Portland and Storrington; for the Twps. of Leeds, Lansdowne, Front of Escott, Rear of Escott and Yonge and Elizabethtown, Co. of Leeds and for those portions of the Cos. of Dundas and Stormont lying south of the C. P. R.
J. K. McCargar	Belleville	Counties of Hastings, Lennox, Addington and Prince Edward and the Electoral district of East Northumberland.
Wm. Pratt	Penetang	County of Simcoe and Districts of Muskoka and Parry Sound, and all waters and islands in Georgian Bay fronting said counties.
M. Thwaite	Oshawa	Counties of Ontario, Durham, Victoria, Peterborough, Provincial County of Haliburton and Electoral District of West Northumberland, including the waters of Lakes Simcoe and Couchiching.

LOCAL OVERSEERS.

O. Allan	Wallaceburg	County of Kent, exclusive of Dover West Tp., also Walpole and St. Anne's Islands, County Lambton.
J. Armstrong	Thornloe	Temiscamingue and tributaries.
Henry Barr	Douglas	County Renfrew and Twps. of Nipissing District lying east and south of Algonquin Park.
George L. Bailey	Callandar	Lake Nipissing, in the Districts of Parry Sound and Nipissing.
Geo. Bilton	Newboro	Twps. of North Crosby, South Burgess, South Elmsley and over the Rideau waters as far as Smith's Falls.
I. Blondin	Cornwall	Cos. Stormont and Glengarry and St. Lawrence River.
J. Bowerman	Port Perry	Twps. of Reach, Co. Ontario, and Tp. of Mariposa, Co. Victoria, also River Scugog, and joint jurisdiction over Lake Scugog.
Nicholas Brady	Lindsay	Twps. of Emily, Ops, Co. Victoria.
John Brown	Rockdale	Twps. of Belmont and Methuen, County Peterboro'.
Frederick Brown	Baysville	Twps. MacLean, Ridout, Franklin and Brunel.
D. Cattanach	Wolfe Island	Township of Wolfe Island and for the islands of Simcoe, Garden and Horseshoe, and any other islands comprised in the Tp. of Wolfe Island, with jurisdiction over the waters of the River St. Lawrence and Lake Ontario surrounding the said Tp. of Wolfe Island and the islands comprising the same.

SCHEDULE OF FISHERY OVERSEERS.—*Continued.*

Name.	Residence.	District.
Edw. Charpontier.	Sutton West	Tp. of Georgina, County of York.
M. Clark	Picton	Co. of P. E. Island, exclusive of the Tps. of Ameliasburg and Sophiasburg.
A. Clunis	Claude	In and for the Tps. of Chinguacousy, Caledon and Albion in the County of Peel.
George Clyde	Cataraqui	Tps. of Pittsburgh and Kingston, Co. Frontenac.

REPORT

OF THE

TREASURER *re* FIDELITY BONDS

1903.

PRINTED BY ORDER OF
THE LEGISLATIVE ASSEMBLY OF ONTARIO.

TORONTO:
PRINTED BY L. K. CAMERON,
Printer to the King's Most Excellent Majesty.
1903.

TORONTO:
WARWICK BRO'S & RUTTER, PRINTERS.

To the Honourable Sir Oliver Mowat, G.C.M.G.,
Lieutenant-Governor of Ontario,
Toronto.

Treasury Department,
Toronto, 31st January, 1903.

Sir,—

I have the honor to enclose herewith the following documents:

1. An Order-in-Council approved by Your Honour on the 30th December, 1901, with reference to the security to be given by Public Officers paid entirely by salary, and directly by the Crown, for the performance of their duties under the statutes.

2. An Order-in-Council approved by Your Honour on the 1st November, 1902, with further reference to the bonding of officers, and extending the provisions of the first Order-in-Council, so as to allow of the bonding of officers paid by fees, or partly by fees and partly by salary.

3. Form of Agreement referred to in the said Orders-in-Council, to be entered into by the Government with Guarantee Companies for the bonding of officers other than Division Court officials and Registrars of Deeds and Sheriffs, in the manner set forth in the said orders.

4. Form of Agreement to be followed in the bonding of Registrars of Deeds and Sheriffs.

5. Special clause inserted in Agreement (Document No. 3), providing for the bonding of Surrogate Registrars, under section 12 of the Surrogate Courts Act,—that they will not receive Succession Duty.

6. An Order-in-Council approved by Your Honour on the 6th December, 1902, with scale of security to be required from the classes of officers therein mentioned, respectively.

SYSTEMS OF BONDING.

As set forth in my Report to Council, approved on the 30th December, 1901, the old system of private bonds had been found very unsatisfactory. When first taking up the question of a change in the bonding system, I gave some consideration to the proposal that the Government should form a Guarantee Fund of its own, as has been done by some of our Banks. Assuming that the aggregate liability for the whole Civil Service would approximate \$1,500,000, and that officers of the Government would pay a premium of one-half of one per cent., or 50 cents per \$100, it was apparent that the premium for the first year would amount only to \$7,500—a small sum to offset an aggregate liability of \$1,500,000. At the same time this revenue, compounded at 3 per cent. yearly, would in five years amount to \$41,013.07, and, therefore, it appeared probable that ultimately the fund would increase to sufficient proportions to cover possible losses from time to time. The main objection to this plan, however, seemed to be that the Government would have to undertake the exaction of the penalty and the punishment of defaulters, and would no doubt be harassed by appeals for clemency from friends and relatives of offenders. Under the system of bonding officials through Guarantee Companies, delinquents would know that their punishment would

be swift and sure unless their defalcations were made good. For these and other considerations, the project of a Government Guarantee Fund was finally abandoned.

BLANKET AGREEMENTS WITH COMPANIES.

Having decided to adopt the system of Company Bonds, my first step was to do away with private bonds so far as officers paid directly by salary and by the Crown were concerned. For this purpose, tenders were invited from different Guarantee Companies, with the result that four companies entered into what is known as "a Blanket Agreement" (see Document No. 3), for a term of five years, at the rate of 30 cents per \$100 per annum, viz. :

Dominion of Canada Guarantee & Accident Co., on 22nd April, 1902.

London Guarantee & Accident Company, on 30th April, 1902.

Guarantee Co. of North America, on 24th June, 1902.

Employers' Liability Assurance Corporation, 23rd October, 1902.

To these Companies were assigned from time to time such officers of the class above referred to, as the Minister in charge of the Department to which they belonged respectively thought proper to have placed under bond, for the amount considered adequate in each case.

Upon the passing of the Order-in-Council of 1st of November, 1902, further agreements were executed (at the same premium rate) by each of the companies, covering the bonding of officers paid by fees, or partly by fees and partly by salary, and Registrars of Deeds and Sheriffs—in the special form provided.

It will be noticed that in my first Report to Council it was recommended that an officer whose salary did not exceed \$600 should pay no proportion of the premium on his bond. By the Order-in-Council of 1st November, 1902, this was amended to provide that officers whose salaries, fees or other emoluments did not exceed \$800 should be exempt from payment of any part of the premium, and this has been followed with regard to officers paid entirely by salary. Subsequent to the Order-in-Council of 1st November, 1902, a reconsideration of the subject led me to recommend that officers paid by fees, or partly by fees and partly by salary, should pay the whole premium on their respective bonds. The Order-in-Council of 6th December, 1902, provides for this modification of the original provision.

The scale of bonds decided upon for the different classes of officers was prepared after careful consideration, and report to the Government by the Inspector of Registry Offices, the Inspector of Legal Offices, and other officials at Osgoode Hall.

I have thought it advisable to postpone the bonding of License Inspectors under our Blanket Agreement, until the beginning of the license year—1st of May next—when they will all be placed with one of the Companies under contract.

I have endeavored as far as possible to place each class of officers with one Company. For example, all Sheriffs have been bonded with one Company, all Registrars of Deeds with another, County Crown Attorneys with another, and so on.

As will be noticed from the documents submitted, the bonding of Division Court officials remains as formerly, as it does not come within the scope of the new system at present. Under the Division Courts Act, the securities

of these officials have to be approved by the County Judge, and the bonds filed with the Clerk of the Peace for the County in which the office is located.

I append a statement showing the number and amount of private bonds and company bonds, respectively, held under the old system, and the number and amount of company bonds in force on 31st December, 1902, under the new system.

I have the honor to be, sir,

Your obedient servant,

GEO. W. ROSS,
Provincial Treasurer.

(L.)

COPY OF AN ORDER-IN-COUNCIL, APPROVED BY HIS HONOUR THE
LIEUTENANT-GOVERNOR, THE 30TH DAY OF
DECEMBER, 1901.

The Committee of Council have had under consideration the annexed report of the Honourable the Treasurer with reference to the matter of security given by Public Officers for the due performance of their duties under the Statutes, and advise that the recommendations therein contained be concurred in and acted on.

Certified,

J. LONSDALE CAPRECL,
Asst. Clerk, Executive Council.

REPORT OF THE HON. THE PROVINCIAL TREASURER.

The undersigned has had under consideration the matter of the security given by public officers for the due performance of their duties under the Statutes.

1. It appears that there are in the service a total of eleven hundred and thirty-two officials under bonds aggregating \$1,821,855; of these some three hundred and one have given policies or bonds of guarantee companies which aggregate \$489,300; the remaining eight hundred and thirty-one have given bonds of private parties aggregating \$1,332,555.

Where this security consists of bonds given by private persons, there must always be a certain amount of uncertainty, owing to change of residence and circumstances on the part of the sureties, and it appears to be almost impossible to be certain that in all cases the security is valid and subsisting, and such as the law requires.

Another difficulty which is experienced under the present system is that the securities not being uniformly dated are lapsing at various dates, and it is extremely difficult to keep such a check upon them as to insure their prompt renewal.

These difficulties would be obviated if, instead of a separate policy or bond being required in each case an agreement were entered into with one

or more companies, under which, upon notice, the company would become security for any official to the extent required, the first premium in the case of an official newly appointed to be paid at the time of such notice being given for the balance of the then current calendar year, and thereafter premiums to be paid annually on the first day of January in each year.

In view of the foregoing, the undersigned is of the opinion :

That on and after the 1st day of January, 1902, all private bonds given as security by public officers paid entirely by salary and directly by the Government should be dispensed with.

The undersigned respectfully recommends:

1. That all bonds given by private persons or by Guarantee Companies as security for public officers paid entirely by salary and directly by the Government, and now held by any Department of the Service, be deposited in the Treasury Department forthwith in the custody of an officer detailed for that purpose by the Provincial Treasurer.

2. That the Treasurer be authorized to enter into an agreement in the form hereunto attached with such guarantee company or companies as he may deem proper.

3. In the case of any such officer whose salary does not exceed \$600, the whole amount of the premium payable under such agreement shall be paid out of the funds of the Province by the Provincial Treasurer; in the case of any such officer whose salary exceeds \$600, but does not exceed \$1,500, one-half of the premium shall be so paid, and in the case of any such officer whose salary exceeds \$1,500, the whole amount of the premium shall be paid by such officer. All the premiums shall in the first instance be payable by the Provincial Treasurer out of the Provincial funds, but as to such proportion of such premiums as are payable by a public officer, the same shall be refunded to the Treasurer, or may be deducted by him from any salary or fee payable to the officer.

It shall not be necessary to issue a separate cheque for each premium, but each company giving security under these regulations shall furnish to the Provincial Treasurer out of the Provincial funds, but as to such pro-statement showing the premiums payable on the 31st day of December then next ensuing, and the Treasurer may issue one cheque to cover the total amount of such payments.

(Sgd.) G. W. ROSS,
Provincial Treasurer.

(2)

COPY OF AN ORDER-IN-COUNCIL APPROVED BY HIS HONOUR THE
LIEUTENANT-GOVERNOR, THE 1ST DAY OF
NOVEMBER, A.D., 1902.

The Committee of Council have had under consideration the annexed report of the Honourable the Treasurer with reference to the security given by Public Officers for the due performance of their duties under the Statutes, and advise that the recommendations therein contained be concurred in and acted on.

Certified,

(Signed) J. LONSDALE CAPREOL,
Assistant Clerk Executive Council.

REPORT OF THE HON. THE PROVINCIAL TREASURER RE FIDELITY
BONDS OF PUBLIC OFFICERS.

The undersigned has had under further consideration the matter of the security given by Public Officers for the due performance of their duties under the statutes. The undersigned is of opinion that the provisions of the Order-in-Council of the 30th December, 1901, relating to officers paid entirely by salary and directly by the Crown, may be advantageously extended so as to include all Public Officers except Division Court Clerks and Bailiffs, whose bonds can be more conveniently dealt with by the Inspector of Division Courts.

The undersigned respectfully recommends :

1. That all bonds given by private persons or by Guarantee Companies, other than those of Division Court Clerks and Bailiffs, and now held by any department of the service, be deposited in the Treasury Department, in the custody of the officer appointed for that purpose.

2. That the Treasurer be authorized to enter into an agreement in the form set out in the Order-of-Council of 30th December, 1901, hereinbefore referred to, with such Guarantee Company or Companies as he may deem proper; such agreement to cover any class of Public Officers not included in said agreement, except Registrars, Sheriffs, Division Court Clerks, and Bailiffs.

3. That the Treasurer be also authorized to enter into an agreement in the form hereto annexed with such Guarantee Company or Companies as he may deem proper.—such agreement to cover the cases of Registrars and Sheriffs.

4. Notwithstanding anything contained in the said Order-in-Council of the 30th December, 1901, in the case of any officer of the Government required to furnish security, whose salary, fees, and other emoluments do not exceed \$800 per annum, the whole amount of the premium payable under such agreement shall be paid out of the funds of the Province by the Provincial Treasurer; in the case of any such officer whose salary, fees and other emoluments exceed \$800, but do not exceed \$1,500, one-half of the premium shall be so paid, and in the case of any such officer whose salary or other emoluments exceed \$1,500, the whole amount of the premium shall be paid by such officer. All premiums shall in the first instance be payable by the Provincial Treasurer out of the Provincial funds, but as to such proportion of such premiums as are payable by a Public Officer, the same shall be refunded to the Treasurer, or may be deducted by him from any salary or fee payable to the officer. Provided that in case any officer or other employee of the Government is required to give security to an amount exceeding \$5,000, then the premium upon the amount of such excess shall be payable by the Treasurer, and the maximum of security upon which any such officer or other employee shall be called upon to pay the premium shall be \$5,000.

5. It shall not be necessary to issue a separate cheque for each premium, but each company giving security under these regulations shall furnish to the Provincial Treasurer annually, on or before the 15th day of December, a statement showing the premiums payable on the 31st day of December then next ensuing, and the Treasurer may issue one cheque to cover the total amount of such payments.

(3)

FORM OF AGREEMENT REFERRED TO IN REPORT.

This agreement made this day of in the year of Our Lord one thousand nine hundred and Between The Company, Limited (hereinafter called "The Company") of the First Part and His Majesty, King Edward the Seventh, represented herein by the Treasurer of the Province of Ontario (hereinafter called "The Treasurer,") of the Second Part.

Whereas the Government of the Province of Ontario have appointed, or may hereafter appoint, certain persons to sundry offices or employments in the public service of Ontario who are required to give security to the Crown for the due performance of the duties appertaining thereto, and the Company hath agreed to enter into this agreement with His Majesty, represented as aforesaid, to become the guarantor or security for the performance of their duties by the said employees respectively for the consideration and upon the terms and conditions hereinafter mentioned.

Now therefore, the Company, in consideration of the payment to them of an annual premium at the rate of thirty cents for every hundred dollars of liability of the Company from time to time in force under the provisions of this contract, has agreed and hereby agrees with His Majesty and his successors represented as aforesaid, to pay and make good to His Majesty and his successors all such sums of money as shall or may while this agreement, or any extension thereof, is in force, be lost to His Majesty, his heirs and successors, or to any other person or corporation by reason of the default, malfeasance, misfeasance, dishonesty or neglect of duty of any of the said employees covered by or included within this agreement, as hereinafter defined and expressed.

The obligation of the said Company shall arise if any of the said employees shall at any time, while this agreement is in force, during their continuance in the said offices or employments, as well under the said present appointments under the Government as under any future appointment or appointments and notwithstanding any change, increase of or diminution of duties, commit any theft, larceny, robbery or embezzlement of, or lose, or destroy, or commit any malfeasance, misfeasance or neglect of duty from which may arise any theft, larceny, robbery or embezzlement, loss or destruction of any money, goods, chattels, valuables or effects, or of any letter or parcel containing the same, which may come into their custody or possession as such officers or employees respectively, and whether the same shall be the property of the Crown or not, and whether the Treasurer or the Crown may be liable for the loss thereof or not.

This agreement shall take effect forthwith, and shall continue for five years from the first day of A.D., 1902.

This Guaranty shall apply to such of the employees from time to time in the service of His Majesty, his heirs and successors, represented as aforesaid, for whom security is required to be given, and shall be for such respective sums in respect of any such employees as His Majesty may from time to time by notice to the Company require, and may be also increased and diminished, and the original as well as any increased or diminished

liability of the Company to His Majesty and his successors shall take effect upon notice from the department through any of the authorized officers of the department, notifying the Company in that behalf, and such liability shall at once arise without further consent thereto by or on the part of the Company upon the giving of such notice: and for the purpose of this agreement such notice shall be deemed to be effectually given by the delivery of such notice prepaid and registered to the post office for transmission to the Company, but may be otherwise given.

The Company may at any time withdraw from its obligation hereunder in respect of any one or more of the said employees by giving to the Treasurer three calendar months' notice in writing of its intention so to do, and from and after the expiration of the said term of three calendar months the obligation of the Company shall cease and determine as regards any acts, defaults or omissions of such employee or employees subsequent to such determination, the said Company, however, remaining liable hereunder for all or any acts, defaults or omissions done or committed by the employee or employees in their said offices or employments up to the date of such determination.

No claim shall be payable hereunder on account of an employee unless made within two years from the date of such employee leaving the service for any cause whatever, or from the date of the expiration or cancelling of this agreement with regard to such employee, whichever shall first happen, and as regards all employees to whom this agreement is applicable, the Company shall not be liable in respect to any claim until notice thereof shall be delivered to the Company with full particulars of such default or loss.

His Majesty, represented as aforesaid, hereby further agrees that as a condition of the liability of the Company hereunder, His Majesty will, as soon as practicable after the discovery of any default or loss intended to be covered by this instrument, furnish the Company with particulars of the claim made or intended to be made hereunder, and such particulars shall be deemed to have been sufficiently furnished if the same be signed by any authorized officer of the Treasury Department, and delivered to the post office prepaid and registered for transmission to the Company, provided, however, that the same may be otherwise furnished.

And His Majesty for himself and his successors, in consideration of the premises, hereby covenants with the Company to pay to the Company the said premium above mentioned as the consideration for this agreement, namely, the sum of thirty cents for each one hundred dollars of insurance covered by the agreement from time to time in cash.

The amount of the premium payable by the Treasurer under this agreement shall be adjusted between the parties hereto from time to time and at all times so as to be payable at the fixed rate agreed upon for each one hundred dollars of insurance in force.

It is hereby agreed that His Majesty and his successors may acquire or have any other or additional security by way of indemnity to him in respect of any loss he may sustain by reason of the default, malfeasance, misfeasance, dishonesty or neglect of duty of any of the said employees covered by or included within this agreement, but the Company shall have no claim thereon nor shall the same be considered or taken into account whenever the Company is called upon to pay to His Majesty or his successors any sum thereby guaranteed, but for the purpose of this agreement the liability of the Company hereunder shall be construed as if no such other additional security existed.

In witness whereof the said Company hath caused its Corporate Seal to be hereto affixed, and these presents have been signed and sealed by the said Treasurer on behalf of His Majesty.

FORM OF AGREEMENT REFERRED TO IN REPORT.

This agreement made this.....day of.....in the year of Our Lord one thousand nine hundred and Between the Company Limited (hereinafter called "The Company") of the First Part and His Majesty, King Edward the Seventh, represented herein by the Treasurer of the Province of Ontario (hereinafter called "The Treasurer") of the Second Part.

Whereas the Government of the Province of Ontario have appointed or may hereafter appoint certain persons to fill the offices of Registrars and Sheriffs in the Province of Ontario, every such Registrar being required by law to give security for the due performance of the duties and obligations of his office, and that neither he nor his deputy shall negligently or wilfully misconduct himself in such office to the damage of any person or persons whomsoever, and every such Sheriff being required by law to give security respectively that he shall well and truly pay over to the person or persons entitled to the same all such monies as he shall receive in virtue of the said office of Sheriff, and that neither he nor his deputies shall wilfully misconduct themselves in their said office to the damage of any person being a party in any legal proceeding:

Now therefore the Company for itself and its successors, in consideration of the payment to it of an annual premium at the rate of thirty cents for every hundred dollars of liability of the Company from time to time in force under the provisions of this contract, doth covenant and promise that each of the Registrars to whom this covenant applies as hereinafter provided, shall well, truly and faithfully perform the duties and obligations of his office as such Registrar, and that neither he nor his deputy shall negligently or wilfully misconduct himself in his said office to the damage of any person or persons whomsoever, and that each of the said Sheriffs to whom this covenant applies shall well and truly pay over to the person or persons entitled to the same all such monies as he shall receive by virtue of his said office as Sheriff, and that neither he nor his deputy shall wilfully misconduct himself in his said office to the damage of any person being a party in any legal proceeding.

This Agreement shall take effect forthwith, and shall continue in force for five years from the first day of November A. D. 1902.

This Guaranty shall apply to such Registrars and Sheriffs from time to time in the service of His Majesty, his heirs and successors, and shall be for such respective sums in respect of each such Registrar or Sheriff as His Majesty may from time to time by notice to the Company require, and may be also increased and diminished, and the original as well as any increased or diminished liability of the Company to His Majesty and his successors shall take effect upon notice from the Department of the Treasurer of Ontario through any of the authorized officers of such Department, notifying the

Company in that behalf, and such liability shall at once arise without further consent thereto by or on the part of the Company upon the giving of such notice, and for the purpose of this Agreement such notice shall be deemed to be effectually given by the delivery of such notice prepaid and registered to the post office for transmission to the Company, but may be otherwise given.

Provided that the Company may at any time withdraw from its obligation hereunder in respect of any one or more of the Registrars or Sheriffs by giving to the Treasurer of the Province of Ontario three calendar months' notice in writing of its intention so to do, and from and after the expiration of the said term of three calendar months the obligation of the Company shall cease and determine as regards any acts, defaults or omissions of any such Registrar or Sheriff subsequent to such determination, the said Company, however, remaining liable hereunder for all or any acts, defaults or omissions done or committed by the employee or employees in their said offices or employments up to the date of such determination, and further

Provided that no claim shall be payable hereunder on account of any Registrar or Sheriff unless made within two years from the date of such officer leaving the service for any cause whatever, or from the date of the expiration or cancelling of this Agreement with regard to such Registrar or Sheriff, whichever shall first happen, and as regards all officers to whom this agreement is applicable, the Company shall not be liable in respect of any claim until notice thereof shall be delivered to the Company with full particulars of such default or loss.

His Majesty for himself and his successors, in consideration of the premises, hereby covenants with the Company to pay to the Company the said premium above mentioned as the consideration for this Agreement, namely, the sum of thirty cents for each one hundred dollars of insurance covered by the Agreement from time to time in cash.

The amount of the premium payable by the Treasurer under this Agreement shall be adjusted between the parties hereto from time to time and at all times so as to be payable at the fixed rate agreed upon for each one hundred dollars of insurance in force.

In witness whereof the said Company hath caused its Corporate Seal to be hereto affixed, and these presents have been signed and sealed by the said Treasurer on behalf of His Majesty.

Special Clause inserted at end of Paragraph No. 3, of Document No. 3 (covering the obligation of the Company), providing that Surrogate Registrars shall not receive succession duty:—

“And as to any such employee or officer as may from time to time hold office or act as Registrar of a Surrogate Court, the obligation of the Company shall arise if such officer shall at any time neglect or refuse to punctually perform the duties of his office under the Succession Duty Act, or in case he shall receive any duty payable under the said Act.”

(6)

Copy of an Order-in-Council approved by His Honor the Lieutenant-Governor, the 6th day of December, A.D. 1902.

Upon consideration of the Report of the Honorable the Treasurer, dated 4th December, 1902, with reference to the question of the amount of security which should be required from Registrars of Deeds, Sheriffs and certain other officers coming within the provisions of the Order-in-Council of 1st November, 1902, in that behalf, the Committee of Council advise that, notwithstanding anything contained in any former Order-in-Council, and subject to the said Order-in-Council of 1st November, 1902, relating to the manner in which security shall be given, the amount of security to be required of the public officers hereinafter enumerated shall be as follows:

Registrars of Deeds:

	Amount of Bond.
Where the average gross fees for the past three years have been under \$500.....	\$2,000
\$500 and under \$1,500.....	3,000
1,500 and under \$2,500.....	4,000
2,500 and under \$3,500.....	5,000
3,500 and under \$4,500.....	6,000
4,500 and under \$5,500.....	7,000
5,500 and over.....	8,000

Sheriffs:

Where the average net income for the past three years has been under \$2,000.....	3,000
Where \$2,000 and under \$3,000.....	4,000
Where \$3,000 and over.....	5,000

Local Masters of the Supreme Court of Judicature:

Where the salary does not exceed \$600.....	500
Where the salary is over \$600 and under \$1,500.....	1,000
Where the salary is \$1,500 and over.....	1,500

Local Registrars of the High Court of Justice, Deputy Clerks of the Crown, Clerks of County or District Courts and Registrars of Surrogate Courts:

Whether holding one or more of the above offices....	1,000
------------------------------------------------------	-------

(Additional)—Registrars of Surrogate Courts—under R.S. O., Cap. 59, section 12:

In Counties where there is no city.....	400
In Counties where there is a city.....	600
In the County of York.....	1,000

County Crown Attorneys..... 1,000

Distributors of Law Stamps shall be bonded for the gross amount of credit, if any, allowed them.

Local Masters of Titles:

At Bracebridge, Parry Sound, North Bay, Sault Ste. Marie, Port Arthur and Rat Portage.....	2,000
At Gore Bay, Ottawa, Whitby, and St. Thomas.....	500

License Inspectors..... 1,000

District Treasurers:

At Port Arthur and Sault Ste. Marie.....	2,000
At Rat Portage, Parry Sound, Bracebridge, North Bay, and Gore Bay.....	1,500

The Committee further advise that the above regulations are to apply notwithstanding the provisions of any Order-in-Council formerly passed dealing with the case of any particular official.

And the Committee further advise that, notwithstanding anything contained in the Order-in-Council of 1st November, 1902, every official who is paid by fees, or partly by fees and partly by salary, shall pay to the Provincial Treasurer the whole amount of the premium payable upon the amount of security required to be furnished by such official.

ANNUAL REPORT
OF THE
INSPECTOR OF DIVISION COURTS
FOR THE
PROVINCE OF ONTARIO
FOR THE YEAR
1902.

PRINTED BY ORDER OF
THE LEGISLATIVE ASSEMBLY OF ONTARIO.

TORONTO:
PRINTED AND PUBLISHED BY L. K. CAMERON,
Printer to the King's Most Excellent Majesty.
1903.

ANNUAL REPORT
OF THE
INSPECTOR OF DIVISION COURTS
FOR THE
PROVINCE OF ONTARIO.
FOR THE YEAR 1902.

To his Honor THE HON. SIR OLIVER MOWAT, K. C. M. G.
Lieutenant-Governor of Ontario.

MAY IT PLEASE YOUR HONOR :

I have the honor to submit the following report upon the Division Courts of the Province for the year ending 31st December, 1902.

WHAT THE RETURNS SHEW.

The accompanying tables give complete returns for the year.

In table A, will be found the returns shewing the number of suits entered in each court, the total amount of claims, amount of suitors' money collected, and paid out of court ; the number of transcripts of judgment, and the amount of such claims, the number of judgment summonses issued, the numbers judges' orders against judgment debtors, and the number of judgment debtors actually committed. There will also be found a large amount of miscellaneous information, tabulated under proper heads, as to the business of the courts,

The suits entered (exclusive of transcripts of judgments and judgment summonses) number 39,927 an increase of 200 on the returns of the previous year.

The total of claims sued amount in the aggregate to \$1,413,371 being an increase of \$38,456 upon the figures of 1901.

Total amount of moneys paid into court, \$438,418.77, total paid out, \$439,540.10. This includes balance of \$1,121.33, from the previous year.

The figures for the previous year were : \$436,543.51 paid in, and \$431,115.26 paid out.

It is necessary to state here what has been stated in previous reports, that the figures just given, taken from the official returns, by no means represent the full collecting powers of the Division Courts, inasmuch as a very large proportion of the suits entered are settled out of court between the parties and of which there are no official returns made. But all the same, such collections are secured by the Division Court process, just as surely as if the money realized had been paid into court.

PERCENTAGES TO THE TREASURY.

The amount payable to the Provincial Treasury by clerks on their emoluments for last year is \$4,432.34, being an increase of \$433.35 on the figures of the previous year, when the returns gave only \$3,998.97 the lowest amount (with one exception) in twenty years paid the Government from Division Court percentages.

EXECUTIONS AGAINST LANDS.

According to the report of the Inspector of Legal Offices for last year, there were 465 executions and 141 renewals of executions against lands issued to sheriff in 1901. The sums endorsed on the writs for debt and damages amounted to a total of \$40,904.63. Amount realized by sale under executions, \$2,558.24. Amount realized on execution without sale, \$3,205.46. Making a total of \$5,763.70, collected under this head—a very gratifying result of the effect of this amendment to the Division Courts Act.

NEW COURT.

Another new Court was established in Rainy River during the year, in the village of Rainy River, making the fifth Court for that district.

VACANCIES AND APPOINTMENTS.

Vacancies occurring during the year were filled up by the appointment of ten clerks and twenty-five bailiffs. Last year the vacancies were 16 clerks and 28 bailiffs. One clerk and one bailiff were appointed for an additional new Court established at Rainy River, in the district of the same name.

LEAVE OF ABSENCE.

Leave of absence for short periods, not exceeding two months, was granted 33 clerks and 19 bailiffs, whose appointments of deputies had been approved. In the previous year, papers had been made out granting leave to 32 clerks and 27 bailiffs.

COMPLAINTS—INVESTIGATIONS.

The complaints against officers of the Courts during the year numbered 175. Of these, 140 were registered against clerks and 35 against bailiffs. Charging excessive fees, neglect in making returns promptly, failure of clerks to give the notice required of moneys paid into Court, collecting accounts on com-

mission, without suit, neglect in answering letters asking for information, etc., neglect to pay foreign fees and withholding suitors' moneys (the latter the most serious of the charges made), constituted the great bulk of the complaints.

All complaints were promptly investigated, and I am pleased to be able to state that in several instances investigation proved many of the complaints to have been made without proper foundation, and to be too hastily made upon insufficient information. Satisfactory results speedily followed in almost every case of inquiry, as testified to by the numerous letters of suitors and their solicitors, on file in the department.

INSPECTION.

In last year's report it was stated that the duties of inspection had considerably increased, extending, as they do, over so wide an area, embracing the immense districts of New Ontario, in which new Courts are being now from time to time established to meet the exigencies of increasing population at points needed in these districts. And reference was also made to the heavy correspondence of the Department, the dealing with which required special knowledge and training. The appointment of an Assistant Inspector became a necessity, and the promotion of Mr. W. H. Higgins to the position was as well deserved as the appointment was in every way suitable. Mr. Higgins has been twenty years in the Department and possesses all the requisites and qualifications of a good, intelligent and expert officer.

In reference to the performance of their duties by the officers of the court, the result of careful inspection enables me to say, speaking generally, that their duties are better attended to, that the books are kept with more neatness and greater accuracy, and that there is quite a noticeable improvement constantly taking place, as the result of more frequent and closer inspection.

THE JURY FUND.

The sum returned as having been paid to County Treasurers for the Division Courts' Jury Fund, amounts to \$1,136.20 as against \$1,175.31 for 1901. This fund proves ample to meet all demands upon it. Copies of this report are mailed to all County Treasurers, and they should make it part of their duty, to examine and compare the figures with the entries in their books, so as to satisfy themselves and the County Auditors of their correctness.

The jury fund itself, it may be mentioned, is created as follows:

By section 176 of the Division Courts Acts it is provided that the Division Court Clerks shall collect, on all claims entered for suit, where the claim exceeds \$20, but does not exceed \$60, 3 cents. Where the claim exceeds \$60, but does not exceed \$100, 6 cents. And where the claim exceeds \$100, 25c.

The section does not extend to Provisional Counties or the unorganized districts. (see sub-section 2 of sec. 59, c. 109 R. S. O., which states that "Sections 159 [now Sec. 162] and 176 of the Division Courts Act shall not apply to the Division Courts of said Districts.") Consequently there is no jury fund for districts.

It is a question whether the time has not now arrived when the subsection referred to should be repealed, and the sections (sections 162, 163 and 164) which relate to the summoning of jurors, for courts in districts be amended, say by adopting machinery to courts in districts, the same as in counties, or as nearly the same as possible.

IMITATING COURT FORMS.

Complaints have been from time to time made against persons who send out, through collecting agencies, or otherwise, printed notices in imitation of Division Court forms, with the intention of inducing the belief that such notices are issued under the authority of the Court. This, as all officers of the Court should know, is an offence against the law.

The Act, Cap. 255, (R.S.O. 1897), intituled, "An Act respecting fraud by debt collectors", was passed expressly to prohibit such an offence. It reads as follows:—"Every person, whether principal or agent, who prints or publishes any notice or form which is an imitation of any of the forms appended to the Division Courts Act, and which is calculated to deceive the public by inducing the belief that such notice or form from said Court, or who issued or makes use of any such notice or form in connection with any collecting agency or otherwise, shall be liable to a fine not exceeding \$20 for every day on which such offence is committed, the said fine to be recovered before a Justice of the Peace of the City or County, with costs." (59 v. c. 23, sec. 1).

In all such cases, the persons receiving the bogus form, or any clerk or bailiff, would be quite justified in laying an information before a Magistrate under the provisions of the Act above referred to.

TRANSCRIPTS IN SUITS NOT EXCEEDING \$10.00.

At the last meeting of the Division Court Clerks' Association, it was considered by the majority of those present, that clerks had a right to a fee for transmitting transcripts, in suits not exceeding \$10.00, the same as allowed in other suits.

While it might be urged as unreasonable that clerks should be compelled to perform this duty without a fee, it is the tariff which the law allows that must govern, in this as in all other Division Court cases of costs. It must be remembered that, in reference to this class of suits, the existing tariff is repealed and the bulk sum of \$1.25 to clerk, and 40 cents to the bailiff, substituted for all fees up to judgment, with a few items of exceptions.

Sec. 57 of the Act (R.S.O. 1897) determines the matter, and is quite specific in giving the fees excepted from the operation of that section. Amongst other items is the item for receiving papers from another division for service. But nothing is said as to transmitting transcripts or receiving transcripts. And that being the case, there is no warrant or authority for allowing either of these two items. Of course, the clerk who receives transcript gets the 50 cent fee for issuing execution.

The total fees therefore that can be properly taxed to clerk, up to judgment or final order, are : \$1.25 ; Execution, whether issued by Home or receiving clerk 50 cents.

DIVISION COURT COSTS.

In concluding the report of last year, the statement was made that the Division Courts of the Province of Ontario were at once the cheapest and most speedy, in their beneficial results to suitors, of any other courts with which a comparison could be made.

The statement has been questioned, but not refuted. An instance of the character of the mistakes which are so frequently made is the case where a Hamilton bailiff sold under a landlord's warrant. The costs in the case were very heavy. They were charged by a correspondent in the newspapers to be "extortional Division Court costs," because the landlord's warrant happened to be entrusted to a bailiff of the court. They had no relation whatever to any case in court, and were altogether outside the tariff of fees taxed to Division Court officers. But the item was, nevertheless scattered abroad and public opinion sought to be wrongfully influenced by the grossly misleading statement as to the enormity of Division Court costs. A comparison with English County Court costs has been sometimes challenged, and in every instance has been found to be very much in favor of the Division Courts.

UNCLAIMED MONEYS.

Amongst the forms sent out for returns by clerks during the past year, was one asking for a list of unclaimed moneys remaining in court for six years, copy of which, under section 51, is directed to be posted up in the clerk's office ; and which moneys are required by section 303 to be paid over to the County Crown Attorney, and by him to the Treasurer of the Province, to form part of the Consolidated Revenue Fund.

Under section 304, no time during which the person entitled to claim such moneys was an infant, or of unsound mind, or out of the Province shall be taken into account in computing the six years.

In cases where the disability occurs, some clerks claim that they have still the right to hold the moneys, notwithstanding the direction to pay them over to the County Crown Attorney. A full compliance with section 303, directing that all sums of money paid into Court or in the hands of the clerk or bailiff, unclaimed for a period of six years is required to be made. It will be for the Government afterwards to deal with the question of claims of persons under disability. Clerks in making these returns should note the special cases which would be likely to come under the operation of the section.

SECURITY OF OFFICERS.

The returns show that out of 324 clerks and 363 bailiffs, 119 clerks and 65 bailiffs have supplied the security of guarantee companies. This security is favored by the Government in preference to that of personal security, and is now required to be given in most other branches of the public service. The

change from the security of private friends to that of guarantee companies is a change in every way desirable, and is accompanied with best results. Where furnished, an officer of the court is rendered more independent in the performance of his duties, and the security is more immediately available, in the case of a defaulting officer. It is respectfully submitted that, if the time has not already arrived, it ought not to be long delayed, when officers of the courts should be compelled to give the security of guarantee companies altogether, to such an amount as may be measured by the county judge, and that the existing form of covenant, requiring the names of approved private persons, be done away with. The premium charged by guarantee companies has been now reduced to 40 cents on the \$100, a comparatively low charge, which is another step in favor of the desirable change suggested.

The failure of some clerks and bailiffs to make their annual returns by the 15th January, as required by the provisions of the Division Courts Act, leads to much inconvenience—especially in delaying the printing of the annual report.

The names of all delinquent officers must now be specially reported, with the view of the prompt action taken by the Government in dealing with such cases with the utmost strictness. Officers of the court should not fail in giving this due attention.

I have the honour to be

Your Honour's obedient servant,

J. DICKEY, Inspector.

TABLE

RETURN of Division Court business, from the first day of January

Name of county, united counties or district.	(1) Number of divisions.	(2) Number of suits entered, exclusive of transcripts of judgments and judgment summonses.	(3) Amount of claims entered, exclusive of transcripts of judgments and judgment summonses.	(4) Number of transcripts of judgments received from other courts.	(5) Amount of claims received by transcripts of judgments from other courts.	(6) Number of judgment summonses issued.	(7) Balance of cash in court from the previous year.	(8) Total amount of suitors' moneys paid into court.	(9) Total amount of suitors' moneys paid out of court.	(10) Balance of cash in court.	(11) Number of suits entered where the amount claimed does not exceed \$100, exclusive of transcripts of judgments from other courts.

TABLE D.

DIVISION COURTS AND THE LIMITS OF THE RESPECTIVE DIVISIONS IN THE PROVINCE OF ONTARIO.

NAMES OF COUNTY AND DISTRICT JUDICIAL OFFICERS.

ALGOMA.

F. W. Johnston, Judge, Sault Ste. Marie.
 Edward O'Connor, Jr., Judge, Sault Ste. Marie.
 J. J. Kehoe, County Crown Atty. and Clk. P., Sault St. Marie.

1.—Bounded west by Thunder Bay District, 85th parallel of west longitude, and east by Barr River, including all the islands in front.

2.—Bounded west by Barr River, and east by the westerly boundary of the Townships of Thessalon River, Kirkwood, Bridgeland and Houghton, and by said boundary line of the last three named townships produced northerly.

3.—Bounded west by the westerly boundary of the Townships of Thessalon River, Kirkwood, Bridgeland and Houghton, and the boundary line of the last named three townships, produced northerly, and on the east by the eastern boundary of the Township of Sprague, produced northerly.

4.—Bounded on the west by the boundary line between the Townships of Sprague and Lewis, produced north to the northern boundary of the District of Algoma, thence along the northern boundary of the said district, thence south along the eastern boundary to the waters of Lake Huron, thence westerly along the southern boundary of the District of Algoma, to a point opposite the boundary line between the Townships of Sprague and Long, thence northerly to said last-mentioned boundary line, thence easterly along the said southern boundary line of the Township of Sprague to the place of beginning, except the territory comprised in the limits of Division No. 5.

5.—The Townships of Rayside, Balfour Snyder, Creighton, Fairbank, Dowling, Lanark, Morgan, Lumsden, Carscaden, Cartier, Ermatinger, Hart, Hess, Moncrief and Craig, and all those portions of Algoma lying adjacent to the main line of the Canadian Pacific Railway, south of said railway and west of the westerly boundary of the Township of Moncrief to the westerly boundary of the Provisional Judicial District of Algoma, and all that portion of the said District lying north of the said C. P. R. and west of the said westerly boundary of the said Township of Moncrief. And that such portion of the said territory above described as has been and is a portion of the other Division Court divisions in said district shall be separated from such several divisions; and that the said divisions are altered accordingly.

6.—Consisting of St. Joseph's Island.

BRANT.

A. D. Hardy, Judge, Brantford.
A. J. Wilkes, C.C.A. and C.P., Brantford.

1.—The City of Brantford and that part of the Township of Brantford now included in the other divisions hereinafter described. The Townships of Onondaga and Tuscarora, and that part of the Township of Brantford lying south of the main road from Brantford to Hamilton and east of Fairchild's Creek.

2.—The Town of Paris and the part of South Dumfries west of the line between lots 18 and 19, and that part of the first concession of the Township of Brantford lying west of a continuation of the last-mentioned line.

The remainder of the Township of South Dumfries and of the first concession of the Township of Brantford.

4.—The ten northern concessions of the Township of Burford, and all that part of the 2nd, 3rd, 4th and 5th concessions of the Township of Brantford, west of the line between lots numbers 10 and 11, and that portion of the Kerr tract west of the continuation of the last mentioned line.

5. The Township of Oakland, the four southern concessions of the Township of Burford and lots number 1 to 5, inclusive, in the ranges east and west of the Mount Pleasant Road, in the Township of Brantford, adjoining the Township of Oakland.

BRUCE.

Wm. Barrett, Judge, Walkerton.
A. B. Khen, J.J., " "
Thomas Dixon, C.C.A. & C. Walkerton.

1.—The Town of Walkerton and the Township of Carrick and the Township of Brant, south of the 12th concession, in lots up to No. 26, and south of the 10th concession in lots 26 to 34, inclusive.

2.—The Village of Teeswater, the Townships of Culross and Greenock south of the 12th concession.

3.—The Town of Kincardine, the Township of Kincardine, lying south of 10th concession.

4.—The Village of Paisley and that part of the Township of Brant lying north of 11th concession and west of lot 26. That part of Greenock lying north of concession 11; lots 26 to 35, inclusive, in the 8th, 9th, 10th, 11th, 12th, 13th and 14th concessions of the Township of Bruce; and Saugeen, east of a line between lots 28 and 29, and south of the proportion of the town line between Aaron and Elderslie to the Saugeen River. All Elderslie lying west of the 25th side line and south to the 12th concession. And also that part lying north of concession 11 and west of lot 17.

5.—All of the Township of Amabel lying north of the 10th concession, Port Elgin and Southampton, and all Saugeen not in No. 4, and Arran, west of the line between lots 10 and 11, north of Arran Lake and its outlet, and Amabel, south of concession 11, and west of concession C, and concessions 8, 9 and 10.

6.—The Village of Tiverton, and all the Township of Bruce, except that part included in No. 4, and all Kincardine north of the 9th concession.

7.—Tara and all Arran, not in No. 5, and all Elderslie, not in Nos. 4 and 12, and Amabel, south of the 8th concession and east of concession lettered C.

8.—The Town of Wiarton, the Township of Albemarle and that part of Amabel not in Nos. 5 and 7.

9.—The Township of Huron.

- 10.—The Townships of Eastnor, Lindsay and St. Edmunds.
- 11.—Lucknow and the Township of Kinloss.
- 12.—Chesley and those parts of Brant and Elderslie not included in Nos. 1, 4 and 7.

CARLETON.

D. B. McTavish, Judge, Ottawa.
 Wm. Musgrove, J.J., “
 J. A. Ritchie, C.C.A., & C.P., Ottawa.

- 1.—Comprising all the City of Ottawa and the Township of Gloucester, to lot 15, inclusive, Rideau front and concessions 1 and 6, inclusive, Ottawa front and the islands in the Ottawa River opposite thereto.
- 2.—The Township of Gouldbourne, the 8th, 9th and 10th concessions of the Township of Marlborough, all the Township of Nepean south of the River Goodwood, and the 4th, 5th and 6th concessions thereof north of the same river to the boundry line between lots 20 and 21 in the last mentioned concession,
- 3.—The Township of Huntley and the Township of March, except lots 1 to 5 inclusive, in concessions 1, 2, 3 and 4 thereof.
- 4.—The Townships of Fitzroy and Torbolton.
- 5.—The Township of North Gower, Long Island in the Rideau River and 1st, 2nd, 3rd, 4th, 5th, 6th and 7th concessions of Marlborough.
- 6.—The Township of Osgoode, the 6th, 7th and 8th concessions Ottawa front and from lots 16 to 30 inclusive, of the Rideau front of the Township of Gloucester.
- 7.—The Township of Nepean, except the City of Ottawa, and part of the said Township lying south of the River Goodwood and concession 4, 5 and 6 north of the River Goodwood to the boundary line between lots 20 and 21 in the said last mentioned concessions and including also lots 1 to 5, inclusive, in concessions 1, 2, 3 and 4 in the Township of March.

DUFFERIN.

M. McCarthy, Judge, Orangeville.
 W. J. L. McKay, C.C.A. & C.P., Orangeville.

- 1.—The Town of Orangeville, the Township of East Garafraxa, and all that portion of the Township of Amaranth lying south of the southern boundary of lot number 26, in each concession in the Township of Amaranth.
- 2.—The Village of Shelburne, the Township or Melancthon, and all that portion of the Township of Amaranth lying north of the southern boundary of lot number 26, in each concession of the Township of Amaranth.
- 3.—The Township of Mulmur.
- 4.—The Township of Mono.
- 5.—The Township of East Luther.

ELGIN.

D. J. Hughes, Judge, St. Thomas
 C. O. Z. Ermatinger, J.J., St. Thomas.
 D. J. Donahue, C.C.A. and C.P., St. Thomas.

- 1.—The Township of Bayham, Malahide and South Dorchester.
- 2.—The Townships of Southwold and Yarmouth (except the City of St. Thomas).
- 3.—The City of St. Thomas.
- 4.—The Townships of Aldborough and Dunwich.

ESSEX.

C. R. Horne, Judge, Sandwich.
 M. A. McHugh, J.J., Sandwich.
 A. H. Clarke, C.C.A. & C.P., Sandwich.

- 1.—Town of Sandwich and Township of Sandwich East.
 - 2.—Town of Amherstburg and Townships of Alden and Anderdon.
 - 3.—The Village of Kingsville, and all that part of the Township of Gosfield not included in Division No. 8.
 - 4.—The Township of Colchester South and all of Colchester North, south of the 9th concession, exclusive of the said concession and the lots on both sides of Maiden street.
 - 5.—Township of Mersea and Village of Leamington.
 - 6.—The Township of Rochester, the Village of Belle River, the first concession of the Township of Maidstone, and all north of the Middle Road in the said Township of Maidstone.
 - 7.—Town of Windsor, the Town of Walkerville and all of Sandwich East, north of the Talbot Street range.
 - 8.—The Town of Essex, all of the Township of Maidstone lying west of the first concession and south of the Middle Road; so much of Sandwich East as is south of Talbot street, including the lots on both sides of said street to Nos. 306 and 307; all of Colchester north of the 9th concession, including said concession and lots on both sides of Maiden street, and all that part of Gosfield lying north of concession 6, and extending as far east from the limits between Gosfield and Colchester as lots No. 12, including such lot in each concession north of concession 6, inclusive.
 - 9.—The Townships of Tilbury West and Tilbury North.
- [NOTE.—A resident bailiff appointed on Pelee Island is authorized to serve and execute process of the Second, Third and Fifth Division Courts of Essex on the Island.

FRONTENAC.

C. V. Price, Judge, Kingston.
 J. L. Whiting, C.C.A. & C.P., Kingston.

- 1.—City of Kingston, Township of Garden Island, Wolfe Island, Howe Island and part of the Township of Pittsburg.
- 2.—Cataraqui, comprising the Township of Kingston and the Village of Portsmouth.
- 3.—Loughboro', comprising the Townships of Loughboro' and Bedford.
- 4.—Verona, comprising the Townships of Portland and Hinchinbrooke.
- 5.—Sudbury, comprising the Township of Storrington and part of the Township of Pittsburg.
- 6.—Comprising the Townships of Kennebec, Olden, Oso, Barrie, Clarendon, Palmerston, Miller, Canonto and South Canonto.

GREY.

W. J. Hatton, Judge, Owen Sound.
 Duncan Morrison, J.J., Owen Sound.
 J. Armstrong, C.C.A. and C.P., Owen Sound.

- 1.—The Town of Owen Sound, the Village of Brook and the Townships of Derby, Keppell, Sarawak and Sydenham.

2.—The Town of Durham, the Township of Egremont, and those portions of the Townships of Bentinck, Normanby and Glenelg as follows:—That part of the Township of Bentinck lying east of the line between lots 30 and 31 in the 1st, 2nd and 3rd concessions south of the Durham road, and in concessions 1, 2 and 3 north of the Durham road, and east of the line between lots 15 and 16 in concessions 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14 and 15 thereof. That part of the Township of Normanby lying east of the line between lots 20 and 21, in the 4th, 5th, 6th, 7th, 8th, 9th, 10th, 11th, 12th, 13th, 14th, 15th, 16th, 17th and 18th concessions, and all of the Township of Glenelg, excepting that portion lying east of the line between lots 10 and 11 in the 7th, 8th, 9th, 10th, 11th, 12th, 13th, 14th and 15th concessions thereof.

3.—The Town of Meaford, the Township of St. Vincent and that part of the Township of Suphrasia lying west of the line between the 6th and 7th concessions and north of the line between lots 15 and 16.

PRINCE EDWARD.

E. Merrill, Judge, Picton.

Jas. R. Brown, C.C.A. and C.P., Picton.

1.—The Town of Picton, the second and third concessions of "Military Tract," from the west line of lot No. 13, eastward: Gore "G"; 1st and second concessions north of the Carrying Place; 1st concession southeast of the Carrying Place, and 2nd concession north of Black River, including Gores "K" and "L" and McCan Gores, all in the Township Hallowell; Block "I" the concession north and east of East Lake, and Gore "B" in the Township of Athol, and 1st and second concessions south of the Bay of Quinte, and Gore "A" in the Township of North Marysburg, and 1st concession southwest of Green Point, to the end of Carmen's Point in Sophiasburg.

2.—The Township of South Marysburg, and the southern part of Athol, commencing at the outlet of East Lake, thence down to the head of the lake, thence down to the base line between the 1st concession south and the 1st concession north of East Lake, till it strikes the Township line of Hallowell, thence down said township line till it strikes South Marysburg.

3.—The Township of Sophiasburg, together with Big Island, excepting the 1st concession southwest of Green Point to the end of Carman's Point.

4.—All that part of the Township of Ameliasburg lying east of the line between lots No. 86 and 87, in the 1st, 2nd, 3rd and 4th concessions of said Township, including Huff's Island.

5.—That part of the Township of Hillier not included in the 7th division, also the 1st and 2nd concessions north of West Lake, and west of lot No. 7 in the said concession, and that part of Irwin Gore lying north of and west of lot No. 7 in the second concession, and the west part of the 2nd concession produced west of lot No. 74, in that concession in the Township of Hallowell.

6.—Block (IV.) four, concession south side of West Lake, 1st concession "Military Tract" 2nd and 3rd concessions of said tract west of lots No. 13, in those concessions, Gore "E" 1st and 2nd concessions north of West Lake, and east of lot No. 6 in those concessions; the Gerrow Gore and that part of Irwin Gore not included in Division No. 8, and all that part of the 2nd concession produced east of lot No. 75 in the Township of Hallowell.

7.—All that part of the Township of Ameliasburg lying west of the line between lots No. 86 and 87, in the 1st, 2nd, 3rd and 4th concessions of said township; all that part of the 4th and 5th concessions of the Township of Hillier west of the line between lots 36 and 87, and the 3rd concession west of the line between lots No. 22 and 23, with that part of the 2nd concession lying north of Pleasant Bay in the said Township of Hillier.

8.—All the point lying east of the west line of Marshland's Gore, the concession lying north of Smith's Bay and Waupoos Island in the Township of North Marysburg.

DISTRICT OF RAINY RIVER.

T. W. Chapple, Judge, Rat Portage.

W. J. Moran, C.C.A. and C.P., Rat Portage.

1.—That part of the District composed of the territory lying west of a line commencing at Pickerel Rapids, on Cedar and Manitou Lakes, and extending northward parallel with the Sixth Meridian line to the northern boundary of the district, and north of the line drawn from the mouth of Rainy River, at Hungary Hall, in a north and easterly direction along the shore of the Lake-of-the-Woods to the easterly end of Sabiskong Bay, thence easterly to the said Pickerel Rapids.

2.—That part of the district composed of the territory lying east of the western boundary of the Township of Shenstone and Tait, and extending northwards in a straight line from the westerly boundary line of the townships of Aylesworth, Lash and Carpenter.

3.—That part of the district composed of the said line forming the eastern boundary of the said above mentioned townships, extended northward and south of the said line running eastward from the east end of Sabiskong Bay to Pickerel Rapids, and extended further in an easterly direction to the boundary line between the Districts of Rainy River and Thunder Bay, at the southwest angle of Hawke Lake.

4.—That part of the district lying north of the northern boundary of the said Third Division Court, and east of the eastern boundary of the said First Division Court.

5.—To be composed of all that portion of said district lying west of the western boundary of the Townships of Shenstone and Tait, and the line drawn northward to the northern boundary of the second division.

RENFREW.

John Deacon, Judge, Pembroke.

Thomas Deacon, J.J., Pembroke.

J. R. Metcalf, C.C.A. and C.P., Pembroke.

1.—Comprising the Town of Pembroke, the Townships of Pembroke, Stafford, Alice, Petawawa, Buchan, Rolph, Wylie, McKay, Fraser, Herd, Clara and Maria, and all that part of the Township of Wilberforce from the 18th to the 25th concession, both inclusive, and also those parts of the 14th, 15th, 16th and 17th concessions of the same Township of Wilberforce lying north of Snake River and east of Lake Dore.

2.—Comprising all that part of the Township of Westmeath lying east and north of the Muskrat Lake and River and all those parts of the Township of Ross, from the 5th to the 9th concession, both inclusive, east of Muskrat Lake, and from the 7th to the 13th (of the other) concessions, both inclusive, of the said Township of Ross.

3.—Comprising the Village of Renfrew, and the Townships of Horton and Adamston, excepting the lots numbered 1 to 22, inclusive, in the 9th, 10th, 11th and 12th concession and the whole of the concessions numbering 13, 14, 15 and 16 in said township.

4.—Comprising the Village of Arnprior and the Township of McNab.

5.—Comprising the Township of Bagot, Blythefield, Brougham and Matawatchan, and all the lots numbered 1 to 22, inclusive, in the 9th, 10th, 11th and 12th concessions in the said Township of Adamston, and the whole of the concessions numbered 13, 14, 15 and 16 in the said townships.

6.—Comprising the Townships of Grattan, Sebastopol, South Algoma, North Algoma, and all that part of the Township of Wilberforce, from the 1st to the 17th concessions, both inclusive, excepting those parts of the 14th, 15th, 16th and 17th concessions, of said Township of Wilberforce lying north of Snake River and east of Lake Dore.

7.—Comprising the Township of Bromley, and all that part of the Township of Westmeath west of Muskrat Lake, and all those parts of the Township of Ross, from the 1st to the 4th concessions, both inclusive, of the said Township of Ross.

8.—Comprising the Townships of Brudenell, Radcliffe, Raglan, Lynedoch, Griffith, Hagarty, Sherwood, Jones, Richards and Burns.

SIMCOE.

J. A. Ardagh, Judge, Barrie.

W. F. A. Boys, J.J., Barrie.

J. R. Cotter, C.C.A. and C.P., Barrie.

1.—Comprising the Town of Barrie, the Township of Vespra, except that portion lying west of the Nottawasaga River, and excepting also lots Nos. 38, 39 and 40, in the 1st and 2nd concessions, and lots Nos. 1, 2 and 3 in the 3rd, 4th, 5th, 6th and 7th concessions, respectively. That portion of the Township of Oro lying south of lots Nos. 21 in the 1st and 2nd concessions (including the Ranges), and south of lots Nos. 13 in the 3rd, 4th, 5th, 6th, 7th and 8th concessions, respectively; that portion of the Township of Innisfil lying east of lots Nos. 5 in the 6th, 7th and 8th concessions, and that portion lying north of the 8th concession; that portion of the Township of Essa lying north of lots Nos. 19 in the 7th, 8th, 9th, 10th and 11th concessions.

2.—The Village of Bradford; the Township of West Gwillimbury, excepting thereout lots Nos. 1, 2, 3, 4 and 5 in the 14th and 15th concessions; the Township of Innisfil, excepting that portion lying north of the 5th concession, and excepting also lots Nos. 1, 2, 3, 4 and 5 in the 1st, 2nd, 3rd, 4th and 5th concessions.

3.—The Township of Tecumseh, except concessions 12, 13, 14 and 15; the Township of Adjala, except that portion lying north of lots Nos. 25 in the 8th concession thereof.

4.—The Town of Collingwood, the Village of Stayner, that portion of the Township of Nottawasaga lying north of Lots Nos. 18 in the 12th concession thereof; that portion of the Township of Sunnidale lying north of the 8th concession; that portion of the Township of Flos lying west of the Nottawasaga River: the Islands in Lake Huron contiguous to the Township of Nottawasaga.

5.—The Township of Flos, except that portion lying west of the Nottawasaga River, the Township of Medonte, except that portion lying east of the 10th concession, and north of lots Nos. 10 in the 9th and 10th concessions, respectively, that portion of the Township of Oro lying north of the southern boundaries of lots Nos. 21 in the 1st and 2nd concessions, and north of the southern boundaries of lots Nos. 13 in the 3rd, 4th, 5th, 6th, 7th and 8th concessions, respectively; lots, 38, 39 and 40 in the first and second concessions, and lots Nos. 1, 2 and 3 in the 3rd, 4th, 5th, 6th and 7th concessions of the Township of Vespra.

6.—The Town of Orillia, the Township of Orillia, southern division, the Township of Orillia, northern division, except that portion lying north of lots Nos. 15 in the first seven concessions thereof: that portion of the Township of Oro lying east of the 8th concession; that portion of the Township of Medonte being composed of lots Nos. 1 to 6 (both) inclusive) in the 11th, 12th, 13th and

14th concessions; the islands in Lake Simcoe contiguous to the townships and portions of townships above described lying wholly or for the most part opposite thereto.

7.—The Township of Nottawasaga, except that portion lying north of lots Nos. 18 in the 12th concession thereof; the Township of Sunnidale, except that portion lying north of the 8th concession; that portion of the Township of Vespra lying west of the Nottawasaga River; that portion of the Township of Essa lying north of lots Nos. 19 in the 1st, 2nd, 3rd, 4th, 5th and 6th concessions; that portion of the Township of Tossoronto lying north of lots Nos. 20 in each of the seven concessions thereof.

8.—The Township of Essa, except that portion lying north of lots Nos. 19 in each of the eleven concessions thereof; the Township of Tossoronto, except that portion lying north of lots Nos. 20 in each of the seven concessions thereof, that portion of the Township of Innisfil being composed of lots Nos. 1, 2, 3, 4 and 5 in the 1st, 2nd, 3rd, 4th, 5th, 6th, 7th and 8th concessions; the 12th, 13th, 14th and 15th concessions of the Township of Tecumseth; lots Nos. 1, 2, 3, 4 and 5 in the 14th and 15th concessions of the Township of West Gwillimbury; that portion of the Township of Adjala lying north of lots Nos. 25 in the eight concessions thereof.

9.—The Town of Penetanguishene, and the Village of Midland, the Township of Tiny; that portion of the Township of Tay lying west of the 8th concession; the Islands in Lake Huron contiguous to the Township of Tiny, and to that part of the Township of Tay, forming part of the 9th ninth division, and lying wholly and for the most part opposite thereto.

10.—The Township of Matchedash, that portion of the Township of Orillia, northern division, lying north of lots Nos. 15 in the first seven concessions thereof; that portion of the Township of Medonte lying north of lots Nos. 6, in the 11th, 12th, 13th and 14th concessions, and that portion lying north of lots Nos. 10, in the 9th and 10th concessions thereof; the Township of Tay, except portion lying west of the 8th concession; the Island in Lake Huron, contiguous to that portion of the Township of Tay, forming part of the 10th division, and lying wholly or for the most part opposite thereto.

Note.—Each of the said several divisions shall include all allowances for roads embraced within its external limits, and shall also extend to the centre of every allowance for road lying external and adjacent to every such division, excepting always where any such last-mentioned allowance is hereinbefore declared to belong to or form part of any particular division.

STORMONT, DUNDAS AND GLENGARRY.

J. R. O'Reilly, Judge, Cornwall.

J. W. Liddell, J.J., Cornwall.

Jas. Dingwall, C.C.A. and C.P., Cornwall.

- 1.—Township of Charlottenburg, in the County of Glengarry.
- 2.—Township of Lochiel, in the County of Glengarry.
- 3.—Town and Township of Cornwall, in the County of Stormont.
- 4.—Township of Osnabrook, in the County of Stormont.

| 10. Certificate therewith | 25 |
| 11. Certifying under the seal of the Court, and delivering to a judgment creditor a memorandum of the amount of judgment and costs against a judgment debtor, under The Creditor's Relief Act, or for any other purpose | 25 |
| 12. Copies of papers, for which no fee is otherwise provided, necessarily required for service or transmission to the judge, each | 10 |
| If exceeding two folios, per folio | 05 |
| 13. Every notice of defence or admission entered, or other notice required to be given by the Clerk to any party to a cause or proceeding, including mailing, but not postages | 15 |
| 14. Entering final judgment by clerk, on special summons, where claim not disputed | 50 |
| 15. Entering every judgment rendered at the hearing, or final order made by the judge | 50 |
| (Note.—This fee does not apply to any proceeding on judgment summons). | |
| (This one fee of 50 cents will include the service of recording at the trial and afterwards entering in the procedure book the judgment, decree and order in its entirety, rendered or made at the trial. If a garnishee proceeding before a judgment, the fee of 50 cents will be allowed for the judgment in respect to the primary debtor, and a like fee of 50 cents for the adjudication, whenever made, in respect to the garnishee). | |
| 16. Subpoena to witness | 25 |
| (The subpoena may include any number of names therein, and only one original subpoena shall be taxed, unless the judge otherwise orders). | |
| 17. For every copy of subpoena required for service | 05 |
| 18. Summons for jury (including copy for each jurymen, when required by the parties | 1 25 |
| 19. Calling and returning jury ordered by the judge | 25 |

20. Every order of reference, or order for adjournment, made at hearing, and every order requiring the signature of the judge and entering the same, including final order of judgment debtor's examination.....	25
(Any warning necessary with order, e.g., the warning in Form 73, forms part of the order.)	
21. Transcript of judgment to another Division Court	25
22. (Abolished—Transcript to County Court.)	
23. Every writ of execution, warrant or attachment, or warrant of commitment and delivering same to bailiff.....	50
24. Renewal of every writ of execution, when ordered by the judgment creditor, or of warrant of commitment; when ordered by the judge	15
25. Every bond, when necessary, and prepared by the clerk (including affidavits of justification and of execution).....	1 00
26. For necessary entries in the debt attachment book, in each case (in all).	20
27. Transmitting transcript of judgment; or transmitting papers for service to another division, or to the judge on application to him, including necessary entries and mailing, but not including postage	25
28. Receiving papers from another division for service, entering the same, handing to the Bailiff, receiving and entering his return and transmitting the same (if return made promptly, not otherwise).....	30
29. Search by person not party to the suit of proceeding, to be paid by the applicant	10
Search by party to the suit or proceeding, where the suit or proceeding is over one year old.....	10
(No fee is chargeable for search to a party to the suit or proceeding, if the same is not over one year old.)	
30. Taxing costs, in defended suits, after judgment pronounced.....	25
31. Making out statement of costs in detail (including bailiff's fees), at the request of any party, or for the purpose of settlement, or upon entering judgment by default	10
(Neither item 30 or 31 applies to statement of costs endorsed on summons or copy to be served.)	
32. Taxing bailiff's costs under section 241 of the Division Courts (R.S O. 1897)....	25
33. Copying and transmitting to municipal clerk, judge's decision to appeal	50

2. BAILIFF'S FEES.

1. Service of summons issued under the seal of the Court, or judge's summons or order, on each person (except summons to witness and summons to juryman):	
Where claim does not exceed \$20.....	30
" exceeds \$20 and does not exceed \$60.....	40
" exceeds \$60 and does not exceed \$100	50
" exceeds \$100	75
(In interpleader suits the value of the goods to regulate the fee.)	
2. For every return as to service under item 1.; attending at the clerk's office and making the necessary affidavit (as provided by Rule 183).....	15
3. Service of summons on witness or juryman, or service of notice	15
4. Taking confession of judgment and attending to prove	10
5. For calling parties and their witnesses at the sittings of the Court, in every defended case, and at the hearing of every judgment summons	15
6. Enforcing every writ of execution or summons of replevin, or warrant of attachment or warrant against the body, each :	
Where claim does not exceed \$20.....	50
" exceeds \$20 and does not exceed \$60.....	75
" exceeds \$60.....	1 00
(When goods replevied, the value of the goods to regulate the amount of the fee. This fee does not include service of summons in replevin on defendant.)	
Fees under Creditor's Relief Act (see section 7 of 52 Vict. cap. 12; and section 25 of R. S. O., cap. 65) shall be taxed according to this tariff.	
7. Every mile necessarily travelled to serve summons, or process, or other necessary papers, or in going to replevy goods, or to seize on attachment, or in going to seize on a writ of execution, where money paid on demand, or made on execution, or case settled after seizure.....	12
8. Mileage going to arrest under warrant, when arrest made, per mile.....	12

9. Mileage carrying delinquent to prison, including all expenses and assistance, per mile.....	20
10. Every schedule of property seized, attached or replevied, including affidavit of appraisal, when necessary :	
Not exceeding \$20.....	30
Exceeding \$20 and not exceeding \$60.....	50
Exceeding \$60.....	75
11. Every bond, when necessary, when prepared by the bailiff, including affidavit of justification and execution.....	50
12. Every notice of sale, not exceeding three, under execution or under attachment, each	15
13. Reasonable allowances and disbursements, necessarily incurred, in the care and removal of property.	
(a) If a bailiff removes property seized, he is entitled to the necessary disbursements, in addition to the fees for seizure and mileage.	
(b) If he takes a bond, then to 50 cents, instead of disbursements for removal of property.	
(c) If assistance is necessary in the seizure, or securing, or removal, or retaining of property, the bailiff is entitled to the disbursements for such assistance.	
(d) All charges for disbursements are to be submitted to the clerk for taxation, subject to appeal to the judge.	
(e) The bailiff must in all cases endorse a memorandum of all his charges on the back of the execution, or state them on a separate slip of paper, so that the clerk may conveniently tax the bailiff's charges for fees and disbursements.	
(f) The clerk is in all cases to sign the memorandum of his taxation and preserve it among the papers in the cause, together with the execution, for future reference, and thereby enable the clerk to certify the bailiff's returns properly.	
14. If execution or process in attachment in the nature of execution, be satisfied, in whole or in part, after seizure and before sale, whether by action of the parties or otherwise, the bailiff shall be entitled to charge and receive 3 per cent. on the amount directed to be levied, or on the amount of the value of the property seized, whichever shall be the lesser amount.	
15. Poundage on executions, and on attachments in the nature of executions, 5 per cent. exclusive of mileage for going to seize and sell, upon the amount realized from property, necessarily sold.	

3.—FEES TO WITNESSES AND APPRAISERS.

Allowances to Witnesses.

Attendance, per diem, to witnesses residing within three miles of the place where the Court is held, if within the county.....	75
And if without the county.....	1 00
Attendance, if witness resides over three miles from the place of sittings, and within the county, per diem.....	1 00
Attendance, if witness resides without the county and more than three miles from the place of sittings, per diem.....	1 25
Barristers and solicitors, physicians and surgeons, engineers and veterinary surgeons, other than parties to the cause, when called upon to give evidence of any professional service rendered by them, or to give professional opinions, per diem.....	4 00

(Note.—Disbursements to surveyors, architects and professional witnesses, such as are entitled to specific fees by statute, are to be taxed, as authorized by such statute.

If witnesses attend in one case only, they will be entitled to the full allowance.

If they attend in more than one case, they will be entitled to a proportionate part in each case only.

The travelling expenses of witnesses, over three miles, shall be allowed, according to the sums reasonably and actually paid, but in no case shall exceed twenty cents per mile, one way.

FEES TO APPRAISERS.

Fees to Appraisers of Goods, etc., Seized under Warrant of Attachment.

To each appraiser, 50 cents per day, during the time actually employed in appraising goods—to be paid in the first instance by plaintiff and allowed as costs in the cause.

FEES IN SUITS NOT EXCEEDING \$10.

(57 Vict., cap. 23, sec. 11.)

Clerk.

For all services, from entering action, or suing out a judgment or interpleader summons, up to and including the entering of final judgment or final order on any such judgment, or interpleader summons, in case the action proceeds to judgment or final order. \$ 1 25

In case the action does not proceed to judgment or final order, the fees heretofore, or that may hereafter be payable, but not exceeding in the whole the sum.

For issuing writ of execution, warrant of attachment, or warrant for arrest of delinquent and entering the return thereto 50

Bailiff.

For all services rendered in serving summons and making return, and any other service that may be necessary, before the judgment is entered by the clerk or pronounced by the judge, mileage excepted 40

For enforcing execution, schedule or property seized, or attached, bond, where necessary, and all other necessary acts done by him, after seizure, mileage excepted, if money made or case settled, after levy 1 00

(Necessary disbursements incurred in the care and removal of property shall be allowed, to be first taxed by the clerk, subject to the approval of the judge.

REPORT

OF THE

INSPECTOR OF LEGAL OFFICES

1902

*To The Honorable Sir Oliver Mowat, K.C.M.G.,
Lieutenant-Governor of the Province of Ontario.*

SIR,—I have the honor to present the Twentieth Annual Report of the Inspector of Legal Offices for the year ending 30th December, 1902.

Shortly after my appointment to the office on the 9th October, 1902, I commenced the inspection of offices which had not been visited by my predecessor during the year. With but a few exceptions I was able to complete the work of inspection before the end of the year, and to meet a large proportion of the County Judicial Officers of the Province, and to familiarize myself with many of the duties of the office. In all parts of the Province deep regret was expressed at the death of my predecessor, Mr. Fleming. He was esteemed by everyone with whom he came in contact, and by his death the Crown lost a faithful and efficient servant, and the Judicial Officers of the Province a firm and considerate friend.

The following officers have been appointed during the year :—

SHERIFFS.

John Wesley Humble, of the Town of Rat Portage, in the District of Rainy River, Esquire, to be Sheriff in and for the said District of Rainy River, in the room and stead of William Henry Carpenter, Esquire, deceased ; Gazetted 22nd March.

George Augustus Dana, of the Town of Brockville, in the County of Leeds, Esquire, to be sheriff in and for the United Counties of Leeds and Grenville ; Gazetted 3rd May.

SURROGATE JUDGES.

Thomas Ambrose Gorham, of the Town of Milton, in the County of Halton, Esquire, Judge of the County Court of the County of Halton, to be Judge of the Surrogate Court of the said County of Halton : Gazetted 11th January.

LOCAL MASTERS.

His Honour Thomas Ambrose Gorham, Judge of the County Court of the County of Halton, to be a Local Master of the Supreme Court of Judicature for Ontario, in and for the said County of Halton, in the room and stead of John M. Hamilton, Esquire, resigned ; Gazetted 12th April.

COUNTY CROWN ATTORNEYS, &c.

Herbert David Smith, of the Town of Ridgetown, in the County of Kent, Esquire, Barrister-at-Law, to be County Crown Attorney and Clerk of The Peace in and for the County of Kent, in the room and stead of William Douglas, Esquire, one of His Majesty's Counsel learned in the Law, deceased; Gazetted 26th July.

LOCAL REGISTRARS, DEPUTY CLERKS OF THE CROWN, &c.

Donald Reginald Anderson, of the Town of Lindsay, in the County of Victoria, Esquire, Barrister-at-Law to be Local Registrar of the High Court of Justice, Clerk of the County Court of the County of Victoria, and Registrar of the Surrogate Court, of the said County of Victoria, in the room and stead of William Grace, Esquire, resigned; Gazetted 13th September.

Thomas Huson Murray, of the Town of Sault Ste. Marie, in the District of Algoma, Esquire, to be Local Registrar, Clerk of the District Court and Registrar of Surrogate in and for the said District of Algoma, in the room and stead of George McGill Farewell, Esquire, deceased; Gazetted 11th October.

Theophilus Henry Alexis Begue, of the Town of Dundas, in the County of Wentworth, Esquire, to the Deputy Clerk of The Crown, Clerk of County Court and Registrar of the Surrogate Court in and for the said County of Wentworth; in the room and stead of Sampson Howell Ghent, Esquire, deceased; Gazetted 29th November.

Stewart Charles Macdonald, of the Town of Dunnville, in the County of Haldimand, Esquire, Barrister-at-Law, to be Local Registrar of the High Court of Justice for Ontario, Clerk of the County Court and Registrar of Surrogate, in and for the said County of Haldimand, in the room and stead of James Mitchell, Esquire, deceased; Gazetted 13th December.

POLICE MAGISTRATES.

Thomas Alfred O'Rourke, of the Town of Trenton, in the County of Hastings, Esquire, Barrister-at-Law, to be Police Magistrate in and for the said Town of Trenton, in the room and stead of George Henry Gordon, Esquire, resigned; Gazetted 4th January.

Rupert Etherage Kingsford, Esquire, Barrister-at-Law, at present Deputy Police Magistrate in and for the City of Toronto, to be, pursuant to the provisions of Section 13, of The Act 2, Edward VII, Cap. 12. entitled "an Act to amend the Statute Law," a second Police Magistrate in and for the said City of Toronto; Gazetted 5th April.

Thomas Rice, of the Town of Dunnville, in the County of Haldimand, Esquire, to be Police Magistrate in and for the said Town of Dunnville, and for that portion of the said County of Haldimand being composed of the Townships of Canborough, Moulton, Dunn, South Cayuga and Sherbrooke, without salary, in the room and stead of John Taylor, Esquire, deceased; Gazetted 12th April.

William Mitchell Horsey, of the Town of Bowmanville, in the County of Durham, Esquire, to be Police Magistrate in and for the said Town of Bowmanville, in the room and stead of George Haines, Esquire, resigned; Gazetted 10th May.

William Mitchell Horsey, of the Town of Bowmanville, in the County of Durham, Esquire, to be Police Magistrate in and for the Electoral District of the West Riding of the said County of Durham, in the room and stead of George Haines, Esquire, resigned.

James Kirkwood, of the Village of Ospringe, in the County of Wellington, Esquire, to be a Police Magistrate in and for that portion of the District of Nipissing known as the "Temiskaming Region," and the new settlement to the North and West thereof and along the line of The Temiskaming and Northern Ontario Railway, whether completed or under construction; the said Territory within which the said Police Magistrate shall have and exercise jurisdiction shall comprise more particularly the Townships already surveyed and sub-divided to the west and northwest of Lake Temiskaming, in the said district of Nipissing; and the unsurveyed territory lying to the east of said Railway and between said Railway and Lake Temiskaming and west of said Railway for a distance of twelve miles and extending as far south as the southerly limit of the Temagami Forest Reserve and its eastern prolongation to Lake Temiskaming.

John Loughrin, of the Town of North Bay, in the Provisional Judicial District of Nipissing, Esquire, to be Stipendiary Magistrate in and for the Provisional Judicial District of Nipissing, at a salary of one thousand six hundred dollars per annum, in the room and stead of William Doran, Esquire, deceased, with jurisdiction in the territory comprising the said Provisional Judicial District of Nipissing, saving and excepting thereout the territory set forth and described in the Order-in-Council on 23rd April, 1902, appointing James Kirkwood, Esquire, a Police Magistrate, with jurisdiction in the territory therein set forth and described; Gazetted 14th June.

John Tierney, of the Town of Arnprior, in the County of Renfrew, Esquire, to be Police Magistrate in and for the said Town of Arnprior, without salary, in the room and stead of George Craig, Esquire, deceased; Gazetted 28th June.

Samuel Haryett, of the Village of Bancroft, in the County of Hastings, Esquire, to be Police Magistrate in and for the Townships of Lake, Tudor and Grimsthorpe, in the County of Hastings, and for all that part of the said County of Hastings which lies north of the said Townships, in the room and stead of James Cleak, Esquire; Gazetted 18th October.

Arthur C. Woodman, of the Village of Drayton, in the County of Wellington, Esquire, to be Police Magistrate in and for the said Village of Drayton, without salary; Gazetted 18th October.

James McAllister Farrell, of the City of Kingston, in the County of Frontenac, Esquire, Barrister-at-Law, to be Police Magistrate in and for the said City of Kingston, in the room and stead of John Duff, Esquire, deceased; Gazetted 1st November.

Thomas Jones, of the Town of Forest, in the County of Lambton, Esquire, to be Police Magistrate in and for the said Town of Forest, in the room and stead of William Gunn Owens, Esquire, resigned; Gazetted 22nd November.

ASSOCIATE CORONERS.

Arthur Hamilton Hough, of the Town of Trenton, in the County of Bruce, Esquire, M.D., to be an Associate Coroner within and for the said County of Bruce; Gazetted 4th January.

James McLurg, of the Town of Sault Ste. Marie, in the District of Algoma, Esquire, M.D., C.M., to be an Associate Coroner within and for the said District of Algoma; Gazetted 24th January.

Arthur Gun, of the Town of Durham, in the County of Grey, Esquire, M.D., C.M., to be an Associate Coroner within and for the the said County of Grey; Gazetted 22nd February.

Wm. Logie, of the Town of Sarnia, in the County of Lambton, Esquire, M.D., C.M., to be an Associate Coroner within and for the said County of Lambton; Gazetted 22nd January.

Alexander Smith McCaig, of the Town of Sault Ste. Marie, in the District of Algoma, Esquire, M.D., to be an Associate Coroner within and for the said District of Algoma: Gazetted 15th March.

John William Scott McCullough, of the Town of Alliston, in the County of Simcoe, Esquire, M.D., to be an Associate Coroner within and for the said County of Simcoe: Gazetted 15th March.

Duncan Frazer, of the Village of Lakefield, in the County of Peterborough, Esquire, M.D., to be an Associate Coroner within and for the said County of Peterborough: Gazetted 22nd March.

Casimir Courtland Fissette, of the City of Brantford, in the County of Brant, Esquire, M.D., to be an Associate Coroner within and for the said County of Brant: Gazetted 19th April.

Samuel Knapp Lake, of the Village of Battersea, in the County of Frontenac, Esquire, M.D., to be an Associate Coroner within and for the said County of Frontenac: Gazetted 19th April.

Francis James Ewing, of the Village of Helen Mine, in the District of Algoma, Esquire, M.D., to be an Associate Coroner in and for the said District of Algoma: Gazetted 19th April.

James Campbell of the Village of Tottenham, in the County of Simcoe, Esquire, M.D., to be an Associate Coroner within and for the said County of Simcoe: Gazetted 19th April.

Samuel James Mellow, of the Village of Port Perry, in the County of Ontario, Esquire, M.D., to be an Associate Coroner within and for the said County of Ontario; Gazetted 31st May.

Julian Donald Bissonnette, of the Village of Sterling, in the County of Hastings, Esquire, M.D., C.M., to be an Associate Coroner within and for the County of Hastings, in the room and stead of Robert Parke, Esquire, M.D., deceased: Gazetted 16th August.

Samuel E. Birdsall, of the Township of Pelham, in the County of Welland, to be an Associate Coroner in and for the said County of Welland; Gazetted 20th September.

Malcolm McLachland Crawford, of the City of Toronto, in the County of York, Esquire, M.D., to be an Associate Coroner in and for the said County of York; Gazetted 11th October.

James Samuel La Belle, of the City of Windsor, in the County of Essex, to be an Associate Coroner in and for the said County of Essex: Gazetted 11th October.

James Webb, of the Village of Steelton, in the District of Algoma, Esquire, M.D., to be an Associate Coroner within and for the said District of Algoma: Gazetted 18th October.

George Alexander Hassard, of the Village of Harrow, in the County of Essex, Esquire, M.D., to be an Associate Coroner within and for the said County of Essex: Gazetted 1st November.

Elias Thorpe Snider, of the Village of Cayuga, in the County of Haldimand, Esquire, M.D., to be an Associate Coroner in and for the said County of Haldimand: Gazetted 6th December.

David Peterson Bogart, of the Town of Whitby, in the County of Ontario, Esquire, M.D., to be an Associate Coroner within and for the said County of Ontario, in the room and stead of George Alva Carson, Esquire, M.D.; Gazetted 6th December.

SHERIFFS.

The duties of these officers have been generally well performed and the fees charged generally uniform. In some of the offices the entries in the execution books were not as full as they should be. Every proceeding or step taken in relation to writs of *Fi. Fa.* should be at once noted in the execution book. The following erroneous charges were made in different offices: Return to sub poena; affidavit of service of County Court writ. No fee is allowable in either of these cases. Fees for receiving and filing, &c., were charged in some offices as if the present writ of *Fi. Fa.* (Goods and Lands) were two writs; it is but one writ and fees, for one only, should be charged.

The incomes of Sheriffs show no improvement over former years. The remuneration of these officers is not adequate, when the importance of their duties and the extent of their responsibilities are considered. It would somewhat assist the Sheriffs and at the same time be in the interest of creditors of Insolvent estates, if all the assignments for the benefit of creditors were made to Sheriffs.

During the year 1902 nine Sheriffs, not paid wholly or in part by salary, derived a net income from their office of less than \$1,000.00 and are entitled, under the Statute 2. Edward VII. Chap. 13. Sec. 5., to be paid sufficient to make their income \$1,000.00.

In Appendix "A" I have set out in tabulated form the Statistical Returns made by Sheriffs for the year 1902.

LOCAL MASTERS.

The amount of business transacted in the offices of Local Masters during the year has not been large. During the past few years there has been a tendency to avoid References whenever it was possible to do so, because of the delays and expense sometimes attendant upon proceedings in the Master's office. Solicitors are more often responsible for these delays and expense than the Masters, but so long as these officers receive fees proportionate to the length of time a reference occupies, it is but natural to expect that the time occupied will sometimes be greater than necessary. All Local Masters, being solely judicial officers should, in my opinion, be paid a salary.

In Appendix "B" is set out in tabulated form the statistical returns of the Local Masters for the year 1902.

LOCAL REGISTRARS, DEPUTY REGISTRARS, DEPUTY CLERKS OF THE CROWN, AND CLERKS OF THE COUNTY COURTS.

With but few exceptions the duties of these officers have been carefully and efficiently performed during the year. Carelessness is shown in some cases in not making prompt returns of judgments to the Central Office, returns of criminal business to the Registrar's office, and returns of cases entered for trial to the Accountant's office. There is no reason why these returns should not be promptly made, and the continual complaints of neglect made to this office be avoided.

Many questions of practice have been submitted to me, and in settling these I have found my experience in the Taxing and Registrar's offices useful. I shall always be pleased to assist the officers in deciding any points of difficulty they may encounter. Appendix "C" is a return of all business of the High Court of Justice in the offices of Local Registrars, Deputy Registrars, and Deputy Clerks of the Crown; and Appendix "D" a return of the business done in the offices of the Clerks of the County Courts, for the year 1902.

SURROGATE REGISTRARS.

In the offices of the Surrogate Court I found a lack of uniformity in the fees charged. In several offices proper care was not exercised in seeing that Law stamps for the proper amount were affixed. Errors in this respect I had corrected.

The greatest want of uniformity in charges is found in connection with applications when the value of the estate is less than \$400.00. Where Section 74 of the Surrogate Courts Act applies, the only sum chargeable, in addition to the necessary disbursements for postage, and certificate of Surrogate Clerk, is \$2.00, except, possibly, when the application is for a Grant of Letters of Administration, and it is a necessary preliminary to give a certificate of Search for Will, when a fee of 70c. therefor may be charged. No certificate of Search for Will should be charged for, where application is for Probate. In some cases I found this charge made.

New regulations under the Succession Duties Act have been made, and under this it is necessary, before any Order for a Grant of Probate or Letters of Administration is made, that notice should be sent to both the Provincial Treasurer, and the Solicitor for the Treasury, and the consent of the latter be obtained to the Grant. Several enquiries have been made regarding the fees to be charged for these notices. The affidavit of value and relationship and the Schedules thereto should be filed when received, and ten cents charged for each filing. The charge for the two notices in addition to necessary postage should be one dollar

In Appendix "E" I have set out in tabulated form the business of the Surrogate Courts for the year 1902.

GENERAL REMARKS.

During the year by Order-in-Council provision was made for bonds of Guarantee Companies in the case of all officers from whom security is required by Statute. The new arrangement is much more satisfactory than the former one, and obviates the necessity for returns as to sureties from the officers, and the giving of new bonds in the case of death, etc., of the sureties.

The amounts paid to the Provincial Treasurer under R.S.O., Chap. 18, have been as follows:—

From Local Registrars, etc.....	\$2,647.86
From County Attorneys, etc.....	311.73

In Schedule "F" I have set out a detailed statement of the fees and emoluments of the several officers, and the sources from which they derived their income.

The Premier of the Province, desiring to have the report of the various departments completed as early as possible, on December 1st I sent a circular

letter to all officers whose duty it is to forward returns to me, requesting them to complete the same and send them to me as soon as possible after the close of the year. On the 2nd January I received a large number of these returns. Many of the officers paid no attention to my request, and failed to comply with the Statute requiring returns to be sent by 15th January. The neglect to forward these returns promptly, and want of care in their preparation, has occasioned extensive correspondence and delayed the preparation of this report. The necessity for promptness and accuracy in the preparation of these returns will, I trust, be borne in mind by officers in future years.

I have the honour to be,

Sir,

Your most obedient humble servant,

J. A. McANDREW,
Inspector.

Osgoode Hall,
February 20th, 1903.

T O R O N T O :

REPORT
OF THE
INSPECTOR OF REGISTRY OFFICES
FOR THE YEAR
1902.

GUELPH, 24th February, 1903.

TO THE HONOURABLE J. M. GIBSON,

Attorney-General of the

Province of Ontario.

SIR,—I now beg to present to you my Report as Inspector of Registry Offices for the year 1902.

It gives me pleasure to report that the Registrars generally conduct their offices in a creditable and satisfactory manner. They and their assistants keep the work well in hand and perform their important duties intelligently and with an increasing desire to observe the requirements of the law. As the country advances in wealth, conveyances become more complicated and the proper abstracting of them requires both skill and care. It gratifies me to be able to report that the Registrars and their assistants, most of them laymen, have by practice and attention to the advice of my predecessors and myself become quite proficient in the difficult work of abstracting.

I have found that in most cases the Registrars, especially in connection with the entries in the Abstract and Alphabetical Indexes, are following the directions I have given, both special and general, with the view of making the entries more complete. It may be well to repeat here some of the directions referred to.

In making entries of deeds, etc., in the Abstract Indexes wherever the estate is limited or other than an ordinary estate in fee simple, as for instance where an estate is for life or upon or subject to a condition or is a joint tenancy or is subject to a charge or reservation or the like, the fact should be carefully noted.

Wherever there are special recitals, conditions, limitations or any special clauses which affect or may affect the estate conveyed, the Registrar should call attention to the fact in the column for remarks in the Abstract Index.

The entries in Alphabetical Indexes should be made as promptly as in the Abstract Indexes : that is to say, as soon after the registration of an instrument as possible and not later, unless under exceptional circumstances, than the morning after the receipt of the instrument.

Separate Alphabetical Indexes where the same are not now kept should be immediately ordered, and kept under Section 35 of the Registry Act.

It is important that instruments by or to Executors should be indexed in the Alphabetical Index under the name of the deceased as well as under the names of the Executors. This rule also applies to deeds by or to Trustees and others. Wherever the name of the beneficiary is given it is desirable to index the instrument under his name as well as under the name of the Trustee.

When a deed is made with the approval of the Attorney-General, Official Guardian or other public officer, the fact should be noted in the Abstract Index.

Where a deed of land expressly conveys machinery, fixtures, appliances, shelving, counters or the like, attention should be called to the fact in the Abstract Index.

Not only the Registry Books but the Abstract and Alphabetical Indexes and Fee Books should be certified by the Judge of the County Court or the Warden, or the Mayor or Stipendiary Magistrate, under Section 31 of the Registry Act.

Completed Registers should be verified by Statutory Declaration as soon as they are completed.

Statutory Declarations as to the existence or non-existence of any event upon which the title to land may depend should not be registered. They may be deposited in the Registry Office under the custody of Title Deeds Act. This observation does not apply to Statutory Declarations under 62 Victoria, Chapter 16, Section 1, giving a local description of lands and attached to an instrument affecting lands by general description.

Endorsements on mortgages "not to be registered in full" should be authenticated by the signature of the mortgagee, his solicitor or agent.

Where wills are registered which have not been admitted to probate, Registrars should insist that the affidavits of execution shall strictly comply with Section 70 of the Registry Act. The affidavit of execution of the will by one of the witnesses to the will should set forth what the Wills Act of Ontario requires ; see Section 12, Subsection 1 of that Act.

In some cases since the Act of 1899, to amend the Registry Act, general assignments for the benefit of creditors which do not contain local descriptions of land have been registered and entered in the general register, which is wrong. Registrars should pay strict attention to the requirements of the Act of 1899.

Where a deed purports to be by several Grantors, but is only executed by some, a memorandum should be made in the Abstract Index, showing by whom the deed is executed or showing that the deed has not been executed by certain of the Grantors.

Care should be taken to note reservations of rights or grants of rights of way and where the same affect other lands than the lands conveyed, the instrument should be entered against such other lands.

Where under Section 57 of the Registry Act a certified copy of an instrument from another Registry Office is registered, the fact that registration is by certified copy should be noted in the Abstract Index in the column for remarks.

Care should be taken to see that instruments are numbered consecutively; that no two instruments have the same number.

Alterations in red ink are to be signed by the Registrar or Deputy, not merely initialed.

Marginal entries in registers of the registration should not be signed by the copying clerk, but should be signed by the Registrar or Deputy Registrar in person.

Some Registrars stamp upon the duplicate of the instrument retained by them, a memorandum giving the number and page of the abstract index in which the instrument is entered. This is a convenient practice, and facilitates the finding of entries in the Abstract Index. I recommend the general adoption of the practice by Registrars.

Where instruments purport to be under seal but there does not appear to be a seal, that fact should be noted in the Abstract Index.

When a sketch or plan is attached to and is part of a deed or the like, it should be copied into the register.

Corrections in Registry Books or certificates should not be made by scraping out words or figures. The pen should be drawn through the wrong word or figure, and the correct word interlined, and where necessary the alteration should be noted in red ink.

In some cases the impressions made by rubber stamps in use by Registrars for certificates in the margins of Registry Books are almost illegible. More care must be taken either in the use of the stamps or new stamps should be provided, or the entries must be written.

The use of book typewriters in Registry Offices is becoming more general. Their use effects a saving in books and of space; and, of course, the facility of making searches in these books is increased; and the work in the larger offices can be kept better up to time.

I recommend that the Legislature be asked to amend the Registry Act by providing that Registry Books may be certified by the County or District Crown Attorney or Police Magistrate.

I have again to call attention to the necessity for amending the law so as to facilitate the enforcement by municipalities of their duties in connection with providing suitable Registry Offices and proper fitting for the same. Some Registry Offices are too small. Some are poorly furnished, and in others there is no provision or suitable provision for heating the vault. Then again, in many

instances, the vault fittings are all of wood when they ought to be of metal. There are offices where the books have to be kept on tables or on wooden shelves. In some offices they are piled on the floor of the vault. While I am glad to report that there has been quite an improvement in regard to heating, ventilation, and proper fitting up of Registry Offices since my appointment as Inspector, yet there is still room in many cases for improvement.

Details of the work of the Registry Offices during the year 1902 appear by the tabulated statement appended to this report.

Attached hereto are notes of some further decisions and opinions I have been called upon to give in connection with disputes as to fees and other matters.

I have the honour to be, sir,

Your obedient servant,

DON. GUTHRIE,
Inspector R. O.

DECISIONS

BY DONALD GUTHRIE, K.C., INSPECTOR OF REGISTRY OFFICES.

A question in difference between Messrs G. & F., Solicitors, Toronto, and the Registrar of N. has been referred to me.

The Solicitors sent to the Registrar for registration an Assignment and Appointment of a new trustee, *re* W. Estate. No lands are described in the instrument, but certain securities and mortgages set out in the Schedule to the instrument are assigned. The Schedule is headed as follows:

“Schedule of properties mortgaged referred to in the within Assignment, and which mortgages are registered in the Registry Office for the County of N.”

Then the particulars given are, the registered number, date of mortgage, date of registration, name and residence of mortgagor, name and residence of mortgagee, and consideration; but under the heading “description” the only words are “lands set out in this instrument,” these words being repeated opposite three several mortgages enumerated. Under the heading of the registered number of the instrument the particulars are the numbers,—thus, “3294”—without saying for what municipality in N.

One objection taken by the Registrar is that, even if the form of Schedule is right (which he doubts) it does not give the name of the municipality in which the mortgaged lands are situated, and he says that he surely is not supposed to search in each municipality in the registration division to obtain this information. He further observes that if this instrument can be registered, any deed, mortgage or other instrument in future need only give the registered number of some former conveyance.

The Solicitors state their view to be that the Schedule refers to the original mortgage numbers sufficiently to enable the Registrar to identify them and consequently the lands which the Assignment affects, and they think that as the Schedule does refer to the original mortgages and these mortgages contain certain descriptions of the land, that ought to be sufficient to comply with the provisions of 62 Vict., chap. 16, sec. 1. They also state that in correspondence with the Registrar they pointed out to him by letter the Township in which the mortgages are registered, so that, as they think, he would have no difficulty in finding the registered number, and they also mention that in the Schedule the township where the mortgagors live is stated and they think that of itself should have been sufficient to show which Township the instruments were registered in.

With regard to the latter point, the Registrar in his reply says that he does not find that in their correspondence the Solicitors mentioned the municipality in which the lands were situated, but if they had done so he does not think it would warrant him in entering the instrument in the municipality as their letter is no part of the instrument. He also thinks that the fact of the mortgagors being described as residing in a particular township does not prove that the land mortgaged is in that township.

I agree with the Registrar in thinking that the Solicitors' letters cannot, strictly speaking, be looked at to supply a defect in connection with the description of lands necessary for the valid registration of the instrument. I also agree with him in thinking that the mere fact that the mortgagors reside in a particular township does not show that the mortgaged lands are situated in that township.

The Schedule here is part of the instrument, but it does not, in my opinion, contain a sufficient description of the lands. Strictly speaking, I do not consider it would have been sufficient even had it stated the township in which the lands

are situated. I know it is common in conveyances to refer to registered instruments, but not generally, except in cases where it saves the repetition of a long description by metes and bounds: for instance, if an instrument affects part of a particular lot in a certain township it is not uncommon to say, after stating the number of the lot, etc. "Which said part is more particularly described in a certain registered conveyance," etc., but in that case the lot affected is described. Without expressing an opinion as to the sufficiency or insufficiency of such descriptions under the Act, I have to point out that here, even if the Schedule had mentioned the municipality as well as the number the Registrar could not have entered this instrument in his Abstract Index without having to make a search for the mortgages—indeed he would have had to make three searches, one in respect of each mortgage.

I am of opinion, therefore, that the Schedule does not sufficiently describe the lands under the Act of 1899, and I think that either the Schedule should be amended by describing the lands, or a statutory declaration describing the lands should be attached to the instrument in pursuance of the Act referred to.

A question has been referred to me which has arisen between Mr. M. Solicitor for the Railway Company, and Mr. J. D., the Registrar of F.

The Solicitor filed in the Registry Office a Plan and Book of Reference of the completed railway through the County of F., under section 134 of the Railway Act of 1888. The instruments appear to affect quite a number of lots in three townships in the county of F., and the Registrar considered it to be his duty to enter the instruments in the abstract indexes on the various lots affected, having made in that way 112 entries.

The Registrar considers that he ought to be entitled to fees for so entering them in the abstract indexes.

Mr. M. contends that the instruments should not be registered in the abstract indexes against each lot, as the plans are of the completed railway and do not affect the title to the land, inasmuch as the Company's deeds for the right of way are all properly registered.

These instruments are filed in the Registry Office, not under the Ontario Registry Act, but in pursuance of the Dominion Railway Act.

Under the Ontario Registry Act there is no provision for registering such Plans or Books of Reference of a railway right of way. The plans, registration of which is provided for under that Act, are plans of subdivisions of lands into smaller lots, etc.

I do not think the plans and profiles here are to be considered as *registered*. They are merely filed in the Registry Office. I do not think it was necessary to enter them in the abstract indexes.

Under the circumstances I think \$4.00, the amount Mr. M. is willing to allow, is a reasonable fee, and I decide the matter accordingly.

A matter in difference between a Solicitor, and the Registrar of the County of D., has been referred to me. The difference arises in connection with a description of lands in a mortgage tendered for registration by the Solicitor.

The mortgage describes the land as being composed of part Lot six in Block one, Plan 3a, in the Village of S. and such part "if any" of Lot five in said block included in the following description. Then follows a description commencing in the centre of a Party Wall on the west and running easterly to the centre of another Party Wall, the centres of these two Party Walls being the westerly and easterly boundaries of the land intended to be mortgaged.

The Registrar's view is that the words "if any" render it uncertain whether any part of Lot five is included in the mortgage and he considers that he should not be compelled to receive an instrument containing such a description. In reply to this the Solicitor says that the Registrar can and should register the instrument against Lot five, but he says if I shall be of opinion that the words "if any" render the description defective for registration purposes, he will have them deleted.

I am of opinion that these words "if any" should be struck out in order to remove any uncertainty from the description. The Registrar will then be clearly justified in entering the instrument against Lot five.

The case submitted for my opinion by Mr. A., the Registrar of the County of E. and is as follows:—

"A mortgage registered as No. 11561 for a Solicitor was made by Thomas A. S. to M. A. G. and John F. This mortgage was assigned by M. A. G. and John F. to "George N. P., Trustee for Agnes Jane R." by No. 12772 Letters of Administration "of all and singular the personal estate and effects, rights and credits of George Neal P." were granted to James Adam P. and registered as No. 2534 for General Register. Mr. John F., has just brought in a certificate of discharge of this mortgage, in the usual form, signed by James A. P., who is styled Administrator of the estate and effects of George N. P., deceased, and the instrument recites the documents above mentioned as required by sec. 7, chap. 16, 62 Vic. (2). The question now arises whether the Administrator of the Trustee is entitled to receive the mortgage money and to discharge the mortgage, and if not, whether the Registrar is not prohibited from registering such discharge by s. s. l., sec. 78. c. 136, R.S.O. 1897."

Mr. F. contends that the Registrar has no discretion in the matter and should register the mortgage.

While my opinion on such a question is not a decision, I have no objection to express the same as the parties so desire.

I am of opinion that as George N. P. took the mortgage expressly as Trustee for Agnes Jane R., the administrator of his personal estate and effects is not the person entitled by law to receive the money and discharge the mortgage: at all events, without, the concurrence of Agnes Jane R., or without something to show that the administrator represents the beneficiary. I do not consider an administrator of the personal estate of a Trustee represents the beneficiary or the Trust Estate, unless he has been expressly appointed succeeding Trustee. Had George N. P. been executor of the will of Agnes Janes R., his administrator could not give a valid discharge of the mortgage nor do I think he can do so under the circumstances existing here.

A dispute has arisen between a Solicitor, and the Registrar of T, with respect to fees, and the matter has been referred to me.

In making searches the Solicitor made extracts from instruments affecting the lot he was searching, and these extracts exceeded 300 words, and the Registrar required an extra fee. The extracts did not, however, exceed 300 words in respect of any one instrument. The clause in subsection 2 of section 118 of the Registry Act which bears upon the matter is as follows: "No person shall make copies of or extracts from any instruments, etc., in the Registry Office or of any matter contained therein to an extent in the aggregate exceeding 300 words for any one lot or part of a lot except on payment in addition to the fees for searching of five cents for each one hundred words or fraction thereof in excess of 300 words."

The Solicitor contends that the language of this clause is ambiguous. He says the word *any* before "instruments" must mean any one of the instruments etc. He would therefore read the paragraph as follows: "No person shall make copies of or extracts from any one of the instruments to an extent in the aggregate exceeding 300 words for any one lot."

I cannot accede to the Solicitor's view. I think the meaning of the clause referred to is quite clear because of the words "for any one lot or part of a lot," and that it means that where the extracts from any one or more of the instruments exceed in the aggregate 300 words for any one lot then the five cents extra fee becomes payable.

I therefore decide the dispute in favor of the Registrar.

A question has arisen between the Registrar of O., and Mr. J. E. F., which has been referred to me touching the registration of Letters of Administration in the separate books for three separate municipalities in the County of O.

I am of the opinion as follows:

1. The Letters of Administration should go into the General Register in the first place.

2. Afterwards, if the parties desire, another step may be taken as follows: Under Section 2 of the Act to amend the Registry Act, Chap. 19, 63 Victoria (1900), Clause C., the letters may be further registered in the separate registry books by a statutory declaration in the form of Schedule R. to that Act.

Disputes respecting fees between Messrs. M. & F., Solicitors, K., and the Registrar of F., have been referred to me.

One concerns the fee properly chargeable for registration of an Assignment of Mortgages, Morice to Williams.

This instrument purports to assign three several mortgages, one being a mortgage made direct to the Assignor, and the other two being mortgages made by different Mortgagors to the same Mortgagee, and by the latter assigned to the Assignor. The mortgages were on different lands and for separate amounts, the lands embracing several lots in the Townships of L. and H., in the County of F.

The Solicitors desired to register the Assignment in short form, and endorsed it "not to be registered in full." A difference exists between the Solicitors and the Registrar as to what occurred when the instrument was registered.

The recollection of the Registrar is clear that at the time of registration he stated to Mr. F. that it could not be endorsed "not to be registered in full," and Mr. F.'s recollection is equally clear that at that time nothing of this sort was spoken of. The Registrar further says that two days afterwards when Mr. F. received the instrument and signed receipt therefor in the book he made a memorandum of the fees on the instrument and an opinion of mine was shown to him to the effect that such an instrument could not be endorsed for resignation in short form.

The Solicitor's statement on this point does not contradict that of the Registrar. He says the Registrar did call his attention to the fact that he was charging \$3.65 for registering the instrument, but he cannot say whether this was at the time he got the instrument back or afterwards: but he says he recollects very well asking the Registrar how the fees charged were arrived at and the Registrar read to him from one of my Reports a section which he thought did not cover the case. He says he in no way assented to the charge made.

It does not appear, however, that Mr. F. said anything at that time against the charge. It appears from the instrument that the figures \$3.65 are marked in pencil on it twice; the first probably at the time the Registrar handed back the instrument to Mr. F. The figures are admittedly in Mr. F.'s writing.

Under these circumstances I think I should deal with the broad question whether this was or was not an instrument which could be properly endorsed "not to be registered in full." Indeed in looking at Messrs. M. & F. first letter to me on the subject, I find they put their case by asking me whether I was still of the same opinion as expressed in a letter to them of 21st January, 1901, in which in a similar case I said I thought such an instrument could not properly be endorsed not to be registered in full. They then say "Are you still of the same opinion, and if you are what do you say is the proper charge to be made in this case?" I am of the same opinion and I think the proper charge to be made in this case is:

Registration and 7 folios in one municipality	\$1.40
7 folios extra up to 14 folios95
The aggregate copying being 22 folios (in 2 townships).	
I allow 8 folios additional at 10 cents80
	\$3.15

I allow therefore \$3.15 as the fee for registering this Assignment of Mortgage.

A second question in difference between the same parties was referred to me touching the fee for the registration of a Vesting Order. The Solicitors did not register the order under a certificate of the order. The Registrar charges \$1.40 treating the order as an ordinary instrument, and he certified to a copy, the copy being prepared by the Solicitors. The Solicitors' contention is that the utmost charge for registering a vesting order is \$1.00. While I think the proper way to register a vesting order is by a certificate thereof, still I cannot say that it is wrong to register the original order if parties so desire. Technically, however, the order itself would not come under sub-clause 12 of section 116, and therefore, I think the charge of \$1.40 for registration of the order is probably correct. With regard to the registrar's charge for a copy and certificate on it, I had occasion previously to consider that question, and my opinion is reported in

my report for 1895 on page 17. There, as here, the Registrar charged for a copy which he did not, in fact, make, and I was constrained to hold that the Registrar was not bound to certify a copy prepared elsewhere than in his own office, and that if he did so he was entitled to attach a condition that he retained the right to the same emolument as if he himself had done the work. One source of income provided for Registrars in the Registry Act is making copies of registered instruments and certifying same.

Reading Section 60 and Section 118 (subsection 1) together, I think the word "duplicate" means a duplicate original. I am, therefore, of opinion that the Registrar's charge of fifty-five cents for copying the order and certifying to the copy is right.

OPINIONS BY DONALD GUTHRIE, K.C., INSPECTOR OF REGISTRY OFFICES.

To a Deputy Registrar,

Dear Sir,—I return By-law 407D, affecting roads and copy thereof.

The original by-law, I observe, is not under the corporate seal. I think the corporate seal must be attached to any such by-law before you can register it. If a by-law authenticated under the corporate seal is registered, then I think you can give a certificate of registration on the copy, certifying to it, of course, as a true copy of a registered by-law, as you would if you furnished a copy of any other registered instrument or a certificate of the registration thereof.

When you register such a by-law you will give it a proper number as you would another instrument, and enter it in your various books; and where necessary, of course, you will open pages for the closed streets in the proper places in the Abstract Index for the municipality.

To a Deputy Registrar.

Dear Sir,—On my return I find your letter of 20th August with enclosures. The matters upon which you desire my opinion arise under the following circumstances, as stated by you:—

"On the 14th of this month I registered an Agreement For Sale of certain hotel property in the Village of M. between Henry H. and Hermann Z. According to the terms of this agreement Z. is to give H. an assignment of a mortgage which he holds on Lot 8, Con. D of the Township of C., as part payment of the consideration money. I entered this agreement in the usual way on the hotel property in M., and also on the farm Lot 8, Con. D, as is shown on the enclosed abstract. The party tendering this agreement told me that Mr. Z. a day or two after the Agreement wished to have the contract cancelled, but Mr. H. would not consent and ordered the agreement to be registered so as to hold Z. to his bargain.

"Since then I have had presented for registration a certificate of discharge of mortgage purporting to discharge the above referred to mortgage on Lot 8, Con. D, C. This certificate of discharge is issued by the said Hermann

Z. to Andrew S. and recites that the mortgages have not been assigned to any one, either in part or entirety. I declined to register it on the grounds that H. appeared to have an interest in the mortgage under the aforesaid agreement, and that Mr. H. should be made a party to the discharge. The Solicitor called in to-day and asked again to have it registered, which I declined to do without submitting it to you. He gave me his reasons, on a pencilled slip, for insisting on a registration of the discharge, viz. :

1. I contend that agreement should not have been registered against Lot 8, Con. D, C. (the lot covered by the mortgage).
2. That whether the agreement should be registered against Lot 8 or not the Registrar is bound to register discharge of mortgage from Z to S. There are no connecting links, and the agreement is not an assignment of mortgage.

I am of opinion as follows :—

1. I think the agreement which was registered the 14th of August and which was executed by Z, the Mortgagee, was properly registered by you against the mortgage premises, namely, Lot 8, Con. D, C. (See Secs. 2 and 36 of the Registry Act.) Suppose that instead of being a mortgage which the purchaser Z. had agreed to assign he had agreed to give the Vendor a conveyance of Lot 8, Con. D, C., part payment of the purchase money. surely it would be proper to enter his agreement to that effect in the Abstract Index against Lot 8 ; what difference does it make because he has agreed to give not the land itself but his claim against the land as mortgagee ?

2. If a formal agreement by Z. to assign the mortgage to H. for some consideration, to be performed in the future, were registered, and no one can doubt it could be registered, I think Z. could not afterwards give a valid certificate of discharge of mortgage. An agreement to assign would, I think, be treated as tantamount to an assignment for the purposes of Section 76 of the Registry Act. But this instrument, in my opinion, is just as much an agreement to assign the mortgage to H. as the most formal agreement could be. H., under the agreement, has, in my view, a right to the mortgage, provided he carries out his part of the bargain. He is not bound to take money in lieu of the mortgage.

I think he can insist, under the agreement, on getting from Z. an assignment of the mortgage. So long, therefore, as the Hauck Agreement stands I do not consider Z can execute a valid statutory discharge, without H's concurrence.

I may add that my opinion on such a question has not the force of a decision

To a Registrar.

R. Township of

Dear Sir,—In answer to the matters submitted by you for my opinion I have to say :

It seems to me that deeds of mining locations which have been patented are entitled to be registered with descriptions of lands following the descriptions contained in the patents.

As at present advised I am not aware of any authority by which the Crown could change the descriptions contained in their previous patents.

My impression is that before patents for mining locations are issued by the Crown surveys are made of the locations, which surveys the Crown either authorizes originally or adopts in the issuing of patents. One would think the

Crown would be bound by these surveys; in other words, the Crown has no further power over the land after it has granted the same, unless such power arises from some reservation in the patent itself, or there is express power under some Act of Parliament.

To a Registrar.

Dear Sir,—I return will and papers.

Under Section 70 of The Registry Act the affidavit proving due execution of the original will must be made by one of the witnesses to the will.

I think that means subscribing or attesting witnesses.

W. M's. affidavit would be sufficient had he been one of the attesting witnesses.

I do not think the affidavit of F. C. is sufficient, because it does not show that he and the other attesting witnesses subscribed their names in the presence of the Testator, and the attestation clause to the original will does not show that either.

I suggest that the Solicitor should either obtain the probate of the will from the Surrogate Court or obtain a certificate from a judge of the County Court under Section 50 of the Registry Act.

Probably a judge under Section 50 would consider the affidavit of F. C. and W. M. sufficient.

I have all along had a doubt whether Section 50 applies to the case of a will; but by Section 2, Subsection 1 the word "instrument" includes a will. I have advised Registrars in other cases of registration of original wills to register upon a judge's certificate.

To a Registrar.

Dear Sir,—The case put by you for my opinion in your letter is: A Solicitor about a year ago registered a Deed of property in C. The property as described in the Deed was Lot 15 in a certain Section and the Deed was entered in the Abstract Index accordingly. The Solicitor now states that the description of the Section was wrong and he has registered either a new deed with a correct description or he has had the original Deed amended and re-registered it. He now requests you to strike out the entry of the original registration as it is a cloud on the title.

You cannot of course comply with such a request, nor can I authorize you to do so. The Deed as registered is the instrument of and executed by the parties and they alone can correct the alleged error. The grantee under that Deed can give a Quit Claim Deed to the Real Owners reciting that it is given to correct an error and it might be well for the grantor to join in that Deed; however, this is only by way of suggestion.

To a Registrar.

Dear Sir,—I return the lease. Although it is only for five years, I think it is capable of registration.

Clause 39 of The Registry Act might be better expressed. What I think it really means is, that when a lease is for a term not exceeding seven years, but where actual possession goes along with the lease, it shall not be necessary to register the lease in order to constitute notice under The Registry Act.

To a Registrar.

Dear Sirs,—I am in receipt of your letter of the 20th inst. with enclosures. I am of opinion as follows:—

1. The caution which the Company forwarded to you for registration on the 15th day of October can not be registered in a Registry Office. I suppose it might be registered in a Land Titles Office.

2. The original agreement between the Company and A., if properly verified by affidavit, may, of course, be registered. The fees for registration will depend upon the number of words, as in the case of an ordinary instrument.

3. Regarding the fees for certifying a copy of the instrument, you are entitled to ten cents per folio the same as if you had yourself copied the instrument, but it will be for you to consider how much you will charge when the party furnishes a copy and when all you have to do is to compare it. If you insist in charging the full amount for copying, the Company may content themselves with a simple copy of the original order without requiring that it be certified by you.
