## (1086)

sicians the use of simple Medicins made of Herbs, used by plain Countrey-men, Nurses, Farriers, 676. affirming, that the chief of the Antient Physicians, as Celsus,

Scribonius, Marcellus, Diescorides and others have done fo.

He taketh notice, First, That the external likeness in some Plants is not to be altogether despised; affirming, that from thence it was discovered, that our Assumod, like to Guaiacum, is conducive to the Lues Venerea, and other Maligne Diseases. Secondly, That neither the outward Signature is to be totally neglected; since the Antients thereby did first discover, that Hypericum was good for wounds; Pulmonaria for the Lungs; Saxifraga, for the Gravel, Wilnuts for the Distempers of the Head. V Vhere he notes, that these signes do not so much respect the parts of the Body, as their Distemper.

He conclude the with observing, that those Plants which afford Salts of the like Figure, seem to evince a likeness in their Vertues. Upon this accompt he compareth together Wormwood and Pellitery on the Wall; Baulm and Fennel; Licerish and Capillus Ve-

neris; Rosemary and Eug. offe. &c.

The Treatise it self, to which this Epist'e is an Introduction, is directed to Medical Practice, and enlarged with divers useful Observations for the sake of young Physicians.

V. DE LACTE LUNA Dissertatio Medica, Johannis Danielis Majoris, Ph. & M. D. Kiloni 1667 in 40.

His Book came but very lately to our view; And that the extravagant Name of its Subject may not take off lober men from confidering it, we shall at the very first tell them, that by this affected word of Lac Luna nothing else is meant here, than Flores Argenti, or a fine white porous and friable Earth, insipid and without scent, disfoluble in water, and tinging it with a milky colour, and sometimes raising a kind of ebullition in it; sound commonly in Silver-Mines, and in them sublimed and sticking to the roofs of the rocky Hills; having a drying and abstersive quality, and therefore good against the afflix of sharp humors in ulcerated parts; serving also for an excellent Cosmeticle. All which particulars are at large deduced and discoursed upon by the Author; who observeth, first, That Gesner in his Book of Fossils taketh good notice of this Mineral Earth; and affirms it to be found in the Mountains of Helvetia, especially that, which is called Mount Pilat. From whom he thinks that others, as Everbius a Evot, Olaus Wormius, Aldrovandus, Calceolarius, and others, have taken the hint.

secondly, He maketh the matter of this Earth to be the Metallick Vapors of Silver-

Ore, by fome fermentation raised and sublimed, and then condensed.

Thirdly, Having commended its Abstersive and Cosmetique quality, he giveth this sollowing Recipe;

which Powder, he faith, when 'tis to be used for the sace or hands, may, for more conveniency, be moistened with some Essence of Benzoin, Rose-water, or Orange water; whereby the skin shall acquire a natural and florid whiteness, without any denger of mischief.

Fourth'y, Inquiring into the particular places of the Generation of this Earth, he affirms it to be found, as in the above-named Mountains of Helvetia, so in the Mines of New Spain, and about the Mexican Bay, as also about Perusium in Italy, in an Isle near Hamberough, called Heilige Land, belonging to the Duke of Holstein, and in Silista near Brusnitz.
