Water Supply Outlook For Arizona

SOIL CONSERVATION SERVICE
U.S. DEPARTMENT OF AGRICULTURE

Cooperating with

SALT RIVER VALLEY WATER USERS ASSOCIATION
and ARIZONA WATER COMMISSION

AS OF
MAR. 1, 1981

TO RECIPIENTS OF WATER SUPPLY OUTLOOK REPORTS:

Most of the usable water in western states originates as mountain snowfall. This snowfall accumulates during the winter and spring, several months before the snow melts and appears as streamflow. Since the runoff from precipitation as snow is delayed, estimates of snowmelt runoff can be made well in advance of its occurrence. Streamflow forecasts published in this report are based principally on measurement of the water equivalent of the mountain snowpack.

Forecasts become more accurate as more of the data affecting runoff are measured. All forecasts assume that climatic factors during the remainder of the snow accumulation and melt season will interact with a resultant average effect on runoff. Early season forecasts are therefore subject to a greater change than those made on later dates.

The snow course measurement is obtained by sampling snow depth and water equivalent at surveyed and marked locations in mountain areas. A total of about ten samples are taken at each location. The average of these are reported as snow depth and water equivalent. These measurements are repeated in the same location near the same dates each year.

Snow surveys are made monthly or semi-monthly from January 1 through June 1 in most states. There are about 1900 snow courses in Western United States and in the Columbia Basin in British Columbia. Networks of automatic snow water equivalent and related data sensing devices, along with radio telemetry are expanding and will provide a continuous record of snow water and other parameters at key locations.

Detailed data on snow course and soil moisture measurements are presented in state and local reports. Other data on reservoir storage, summaries of precipitation, current streamflow, and soil moisture conditions at valley elevations are also included. The report for Western United States presents a broad picture of water supply outlook conditions, including selected streamflow forecasts, summary of snow accumulation to date, and storage in larger reservoirs.

Snow survey and soil moisture data for the period of record are published by the Soil Conservation Service by states about every five years. Data for the current year is summarized in a West-wide basic data summary and published about October 1 of each year.

PUBLISHED BY SOIL CONSERVATION SERVICE

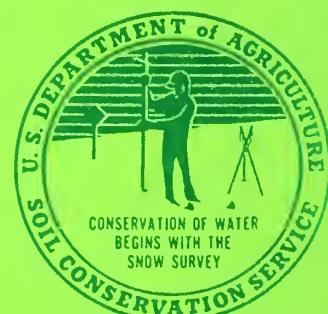

The Soil Conservation Service publishes reports following the principal snow survey dates from January 1 through June 1 in cooperation with state water administrators, agricultural experiment stations and others. Copies of the reports for Western United States and all state reports may be obtained from Soil Conservation Service, West Technical Service Center, Room 510, 511 N.W. Broadway, Portland, Oregon 97209.

Copies of state and local reports may also be obtained from state offices of the Soil Conservation Service in the following states:

STATE	ADDRESS
Alaska	Room 129, 2221 East Northern Lights Blvd., Anchorage, Alaska 99504
Arizona	Room 3008, Federal Building, 230 N. First Ave., Phoenix, Arizona 85025
Colorado (N. Mex.)	P. O. Box 17107, Denver, Colorado 80217
Idaho	Room 345, 304 N. 8th. St., Boise, Idaho 83702
Montana	P. O. Box 98, Bozeman, Montana 59715
Nevada	P. O. Box 4850, Reno, Nevada 89505
Oregon	1220 S. W. Third Ave., Portland, Oregon 97204
Utah	4420 Federal Bldg., 125 South State St., Salt Lake City, Utah 84138
Washington	360 U. S. Court House, Spokane, Washington 99201
Wyoming	P. O. Box 2440, Casper, Wyoming 82602

PUBLISHED BY OTHER AGENCIES

Water Supply Outlook reports prepared by other agencies include a report for California by the Snow Surveys Branch, California Department of Water Resources, P.O. Box 388, Sacramento, California 95802 --- for British Columbia by the Ministry of the Environment, Water Investigations Branch, Parliament Buildings, Victoria, British Columbia V8V 1X5 --- for Yukon Territory by the Department of Indian and Northern Affairs, Northern Operations Branch, 200 Range Road, Whitehorse, Yukon Territory Y1A 3V1 --- and for Alberta, Saskatchewan, and N.W.T. by the Water Survey of Canada, Inland Waters Branch, 110-12 Avenue S.W., Calgary, Alberta T3C 1A6.

The Snotel network provides data daily by meteor burst communications.

ARIZONA SUMMARY

As of
March 1, 1981

STREAMFLOW FORECASTS REMAIN MUCH BELOW AVERAGE IN ARIZONA FOR THE MARCH-MAY PERIOD. MAJOR RESERVOIRS HOLD A COMBINED STORAGE WHICH IS ABOVE AVERAGE FOR THIS DATE.

WATER SUPPLY OUTLOOK FOR ARIZONA

**and
FEDERAL - STATE - PRIVATE COOPERATIVE SNOW SURVEYS**

Issued by

NORMAN A. BERG

CHIEF
SOIL CONSERVATION SERVICE
WASHINGTON, D C

Released by

THOMAS G. ROCKENBAUGH
STATE CONSERVATIONIST
SOIL CONSERVATION SERVICE
PHOENIX, ARIZONA

WESLEY E. STEINER
EXECUTIVE DIRECTOR
ARIZONA WATER COMMISSION

KARL F. ABEL
PRESIDENT
SALT RIVER VALLEY WATER
USERS ASSOCIATION

Report prepared by

RONALD A. JONES

SOIL CONSERVATION SERVICE
ROOM 3008 FEDERAL BUILDING
PHOENIX, ARIZONA 85025

WATER SUPPLY

The anticipated streamflow in Arizona and western New Mexico is still much below average for the March-May period. Forecasts are for the following percents of average discharge: Verde River, 34%; Salt River, 22%; Tonto Creek, 17%; San Francisco River, 20%; Gila River, 19%; and Little Colorado River, 20%. Water storage in major reservoirs is still above average and will provide adequate water to users having access to it. Water users relying on small local impoundments or direct stream diversion should prepare for reduced water supplies.

SNOW COVER

Snowpack water continues to be far below average as of March 1. The snowpack on the Verde watershed was 18% of average; on the Salt River watershed, 21%; on the Gila drainage, 29%; and on the Little Colorado, 24%.

PRECIPITATION

February precipitation ranged between 70% and 90% of average on the snow zone areas of central Arizona and western New Mexico. Precipitation is still only about 40% of average for the November-February winter season.

STREAMFLOW

February inflow to the Salt River Project system was 34,300 acre-feet, 33% of average for this month. Streamflow on the Gila River was about 22% of average, and 28% of average on the San Francisco River.

RESERVOIR STORAGE

The six Salt River Project reservoirs have a combined storage of 1,478,000 acre-feet, which is 72% of capacity. San Carlos Reservoir is at 60% of capacity, with 645,000 acre-feet. Lake Pleasant contains 104,000 acre-feet, 66% full. Lyman Reservoir on the Little Colorado River holds 23,400 acre-feet at 76% capacity. Four major reservoirs on the Colorado River contain a combined storage of 47,437,000 acre-feet, 89% of capacity.

*NOTE: Storm systems have crossed Arizona since March 1, depositing snow and rain on the watersheds. New snow surveys will be conducted near March 15 and a re-evaluation of the water supply situation will be made at that time.
