THE INDIA COMMITTEE.

THE experience of the past has taught us to look upon the ap_ pointment of a Parliamentary Committee with a view to the renewal of the East India Company's Charter, as the prelude of great and important changes in our connections with the East. The only two renewals during the present century took place in 1813 and in 1833. At the former period the trade of India was for the first time, thrown open to private enterprise. Up to that period the country and its trade, so far as England was concerned were in the exclusive possession of the East India Company. By the Act of 1813, the Company retained only the monopoly of the China trade. In 1833 that was also thrown open to private enterprise, and the East India Company, in its trading character, was from that time abolished. The Act of 1833 prohibited the East India Company from carrying on any trade in future, except only such as was necessary to wind up its old affairs. The merchandise, warehouses, and merchant ships belonging to the old trading Company were sold and turned into money with all convenient haste; and thus a body of traders, who were first incorporated by Queen Elizabeth in 1601, with the Earl of Cumberland at their head, after an existence of two hundred and thirty-two years, was dissolved. But the Act of 1833 continued the same Corporation for those great political objects which had gradually grown into existence from the double capacity which had gradually grown into existence from the double capacity which the Com-pany had for a long period sustained in India. During the last twenty years, therefore, the functions of the East India Company have been purely of a political character. It is in that capacity alone that the Committee will have to investigate the success of the efforts of the Company in the past, and to determine what will be best as to the future will be best as to the future.

The Act of 1833, which led to so much discussion at the time, and was so strongly opposed by a large and powerful party, is now to be viewed in two distinct lights :- first, how far its provisions have been faithfully carried out, and with what success to the people of India; and, secondly, how far the great changes which it introduced in our trade to the East have been productive of the advantages which were then contemplated.

So far as regards the first of the great objects alluded to,-the influence of the system of Government established in 1833 over the people of India,-Mr Anstey laboured hard in order to prove

that it had been most prejudicial. His charges, however, were entirely declamatory, and were wholly unsupported by any ad-mitted authority, or by an appeal to facts. Nothing could be of a initied authority, or by an appeal to facts. Nothing could be of a more vague and general character—nothing on their face more exaggerated. We are far from believing that the Indian Go-vernment is perfect. On the contrary, we doubt not that the investigation which is about to take place will prove that many and serious abuses have existed and still exists under our rule. But when it is asserted as it is by Mr Anster and there of the But when it is asserted, as it is, by Mr Anstey and those of the same school, that the natives of British India are not only poor, but are in a declining state, and are becoming every year poorer, we believe such assertions to be contrary to well-known and admitted facts. All trustworthy evidence goes to prove that not only is the condition of the great masses of the people infinitely better than it was when they became British subjects, but also than that of the people of any of the native States. It would be far beyond the limit of our space to attempt to examine the various authorities upon this subject. But there are some great evi-dences of the condition of any people which can be safely relied upon. We may be quite sure that in a country where production is rapidly increasing, and the surplus left for exportation is every year greater; where the net revenue, in spite of reduced taxes, exhibits a considerable increase; and where the demand for the consumption of the people, of foreign productions, is steadily and greatly augmenting, the Government can neither be lax nor oppressive. We will rely upon those great and broad criterions as a proof of the condition of a country in preference to any other whatever. Where the tenure of land is insecure, and the terms upon which it is held are oppression to the cultivator, we do not find an annually-increasing surplus produce to be exchanged for the luxuries of foreign countries. It is a notorious fact, known to every one who has the slightest acquaintance with India, that the terms upon which land was formerly held by the ryots have undergone great modiland was formerly held by the ryots have undergone great modi-fication and improvement. In place of exacting from year to year, just as much as the Zemindar thought he could with any safety insist upon, without endangering the abandonment of the land, but without any reference to the permanent interests of the cultivator, the Government of India have adopted the plan of settling the land for a period of years, varying from twenty to thirty, at a fair and moderate estimate at the time. In short, these settlements are practically leases for twenty to thirty years, with this difference, that even at the expiry of the period, the same parties will continue possession, only subject to a reassess-ment at the time. By this means the cultivator is secured in all ment at the time. By this means the cultivator is secured in all the advantages which can be obtained by increased and improved cultivation, and for a long period, of all other circumstances tending to enhance the value of the land. Nothing could form a more striking contrast to the old way of assessing the land annually according to the nature of the crop upon it :-- a system which Mr Anstey, against all evidence to the contrary, persists is still in general use.

In addition to this improved tenure of land, many very salutary changes have been made, some of them in pursuance of recom-mendations of the Committee which sat in 1832;—all tending to promote industry and free communication. The old system of internal customs and transit duties has been entirely abolished : with very slight and unimportant exceptions the old and some-what onerous export duties have been abandoned. The coasting trade first, and latterly the foreign navigation, have been ren-dered perfectly free. The old salt monopoly has been abandoned. and the trade converted into one in which all who please can engage in the import of foreign salt, which is subject only to an im-port duty to countervail the excise imposed on the home-made salt. In short, the whole tendency of India legislation for the last twenty years has been to remove restrictions of every kind from trade and industry.

Well, let us see what the consequences of these ameliorations have been. Let us compare the imports of these amenorations indian produce into this country in the year 1833, the last year prior to the existing Act being passed, and in the year 1850, the last for which the amounts have been published :--

No. 452.

IMPORTS F	ROM INDIA.		2010
	1834		1850
Cotton woollbs	32,755,000		118,000,0(0
Sheep's wool	3,721		3,473 .00
Silk	989,000		1,500,000
Bagartons	7,600		70,000
Rum	27		450,000
Indigo	32,100		61,10
Hemp	34,000	*********	400,000
Hides	29,000		101, 00
Flax seed q15	270		27.000
	186		70,000
Rape stell	179,000		688,000

Thus we find that not only has a very large increase taken place in the quantities imported of the then old staples of India produce, viz., cotton, silk, and indigo, but new trades which were then in their infancy have grown into very large dimension. Sugar, rum, wool, hemp, rice, and a great variety of products have, during that period, become articles of great trade. We could have no better proof of the improved condition of the cultivators of the soil, than the facts to which we have just referred. We are quite aware that it has often been said that the exports from India, which at first sight showed so flattering a proof of the condition of the people, were rather an evidence of the increasing exactions of the Beople, were rather an evidence of the hardener in such a surmise is conclusively shown by the fact, that the in-creased imports into this country are fully represented by in-creased exports to India for the use of the natives. Thus we have the best proof, that not alone has the productiveness of the soil very much increased, but also that the means of the people have correspondingly improved. In 1834 the value of the exports from this country to India was 2,500,000/, and that amount in-In 1850 the exports had increased to no less a cluded Ceylon. sum than 8,000,000l. The average annual amount of our exports during the first five years beginning with 1834, was 3,508,000/ during the first five years beginning with 1834, was 3,508,0007; while the annual average of the five years ending with 1850 was no less than 6,500,000*l*. Again, if we wanted another proof of the remarkable increase which has taken place in the trade be-tween this country and India during the period referred to, we have only to turn to the shipping accounts. In 1834, the whole of the shipping entered inward and outward in the India trade was 166,300 tons; and in 1850 this quantity had increased to no less than 513,000 tons, of which, notwithstanding all that has been said about the participation of foreign ships in our India trade, only 6,000 tons were under a foreign flag.

When we bear in mind how insignificant a number of Europeans are resident in India, and therefore that these broad facts must refer in all their consequences, direct and indirect, to the great body of the native population, we could not have a more gratifying proof to sustain the general statements that are made of the rapid improvements which have recently taken place in India. But it is to be hoped that these facts, gratifying as they are, will not lead the Committee to believe that nothing is to be done calculated materially still further to increase the production of India and its commerce with foreign countries. On the contrary, we believe that if the Committee does its duty upon this branch of the subject, certainly one of the most important both to this country and to India, it will become apparent that in all these respects India is yet in its infancy, and that with proper management the trade between this country and that portion of our foreign possessions will increase for many years to come, at a rate which even these striking facts to which we have referred would not lead us to expect.

INTERFERENCE WITH ELECTORAL ACTION.

WE have always looked with great suspicion and dislike on all associated and organised attempts to exercise undue influence over elections, or to interfere with and override the individual action of various constituencies. It is only in the rarest cases and the most perilous emergencies that such interference can be tolerated. Societies formed for the purpose of recommending candidates and carrying elections are as foreign to the spirit and intention of the English Constitution as the systematic interposition of Peers,-which is avowedly illegal. In France and America such societies have been common, and have always been noxious : with us they have been of comparatively recent intro-The Carlton Club, the Reform Association, and the duction. League (so far as it directed its energies to the return of special candidates), were all institutions dangerous to the independence of constituencies, and hostile to the purpose of the representative system,—which is to obtain the distinct and individual opinions of separate electoral bodies. If the plan of such associations be persevered in and vigorously carried out, our House of Commons will become the representative, not of three hundred separate constituencies, but of half a dozen unauthorised and irresponsible clubs,—similar to those which organised themselves at Paris, and wielded such tremendous powers, both in the first and the last re-volution. This appears to us a danger to be vigilantly watched and energetically resented-whatever be the quarter from which it threatens us, and whatever be the pretext under which it may make its advances.

Of all these associations for controlling and superseding the in-dividual action of constituencies, we look upon the one recently formed in Ireland with the most alarm and the strongest feeling of reprobation. "The Catholic Defence Association" has plainly announced its intention of managing the whole of the coming elec-tions throughout Ireland, and presenting the return of coming elecannounced its intention of managing the whole of the coming elec-tions throughout Ireland, and preventing the return of any candi-dates who will not do its bidding and pronounce its formularies. Its *proteges* must not merely be Catholics; they must belong to the ultra-montane faction of Catholics. They must not only be earnest for their religion and patriotic for their country: they must hind themselves to be the impositions glaves of Dr. Calles must bind themselves to be the ignominious slaves of Dr Cullen and Mr Henry Wilberforce. Already this body is hard at work, ecommending and forbidding candidates; issuing its edicts to the Priests to set every engine at work to procure the election of its prostrate nominees; proscribing every man who shows the faintest spark of independence or moderation ; encouraging constituencies to apply to it for a decision on the qualifications of the parties who come forward to claim their suffrages; and answering such applications much after the fashion of the prefects of Louis Napoleon on a recent similar occasion. Men of spirit and honour, Catholic laymen who have a duty to perform and a character to lose, and who have too much English stuff about them to sell themselves, bound hand and foot, to any Priesthood, are fast re-tiring from the field, and leaving it to more servile competitors. Mr Anstey has taken leave of the electors of Youghal, because he cannot stoop to sit as the nominee of a club of sacerdotal tyrants, and is about to seek refuge in some yet unenslaved English con-stituency. Sir Thomas Redington, a most meritorious public serand is about to see return the most meritorious public ser-stituency. Sir Thomas Redington, a most meritorious public ser-vant—a Catholic, too, like Mr Anstey—is a candidate for the representation of New Ross. After the publication of his address, in which he stated that he had always opposed the Ecclesiastical Titles Bill, and would vote for its repeal, the electors wrote to the "Defence Association" for advice. Mr Wilberforce, the secre-tary, replied :—"There is no class of candidates, of whatever po-"litical or religious profession, whom this Association will more "ilicial or religious profession, whom this Association will more strenuously oppose, than that to which Sir Thomas Redington belongs,—namely Catholics who, professing liberal politics, sold " themselves to support and serve an Administration which was " passing a penal law against their own religion, and passing it with many gratuitous and unnecessary circumstances of studi-ous insult and disrespect. It is essential that 'the Catholic 64 electors of New Ross, by hearty union among themselves, and

" by sacrificing minor differences and individual wishes, should "render the return of such a candidate impossible." Nappleon himself never assumed a more dictatorial tone, or issued

a more imperial decree. If this line of conduct should be persisted in, and should be successful; if the Irish nation will submit to have their functions thus usurped and their liberty of choice coerced, by a self-elected board of priestly oppressors, the result may become in the last degree dangerous and mischievous. The Irish members will form a "brigade" more united, more disciplined, more isolated than ever. They will represent not Ireland but Rome; they will not be representatives of a Catholic community, but delegates of a sacerdotal club; they will form a compact and numerous body pledged to nothing but a vindictive and anti-imperial policy,—anxious at all hazards to avenge themselves upon the Whig party for a legislative enactment in which Tories concurred, and which England and Scotland almost unanimously supported,—and presenting themselves before the British House of Commons, not as an integral and homogeneous portion of it, but as a hostile and foreign body, fettering its action, clogging its progress, and degrading its character,—a band of mercenaries, taking their orders from *without*, and ready to sell themselves to any faction or party which will aid them in their plans of vengeance.

We confess we look upon the possible return of such a numerous and compact battalion with very great uncasiness, —not only on account of the immediate difficulties which their conduct may cause, but from a dim and reluctant foresight of the possible measures which may, sooner or later, be required to counteract the mischievous effect of their proceedings. We scarcely like to speculate, even in fancy, on the steps it may be necessary to take when time shall have developed the full evil consequences resulting from the existence of a faction amounting to one-seventh of the whole House, acting as one man in obedience to foreign influence, and, where parties are at all evenly balanced, able to overturn any party by throwing its numbers into the scale of its opponents. It may thus easily succeed in rendering any continuous and consistent political action impossible except by its permission and support ;—a support which will only be purchaseable by degrading compliances and noxions concessions to which no British statesmen of any party, we believe, will stoop. If this be so, the time will come when the "Irish Brigade" will be felt by all sections of politicins and by the country at large, as a nuisance which must be abated. Occasions and provocations will teach their own lessons, and dictate their own policy. We yet trust, however, that the evils which we dread may be averted in time by the manifestation on the part of the Irish constituencies of an independent and manly spirit, and of a resolution to resent the audacious attempt now made to reduce them to a condition of subdued and prostrate insignificance.

THE PRESERVATION OF THE CRYSTAL PALACE.

WHEN the question of removing the Crystal Palace was first mooted, while the Exhibition was in the full tide of its glory, we felt so certain of its being preserved that we spoke of the removal of St Paul's as equally probable. The time, however, has arrived when the Crystal Palace is in great danger of being pulled down, and when it can only be saved by a strong and general expression of public opinion Meetings have been held in the metropolis and in the manufacturing towns for this end; we regard its preservation as a great national and moral object in which every man has a deep and almost an imperishable interest.

We say nothing of the scandalous waste implied in the destruction—nothing of the many uses to which such a building may be put; they are multifarious—nothing of such a building being imperatively wanted. A grand national hall has been wished for, sought for, almost prayed for; and now that we possess one, we are to destroy it more mischievously than the child destroys an old plaything when he has got a new one. We say nothing of the future cost; there is no reason to levy a farthing on the tax-payers to keep it up; it can be made self-supporting—maintained by voluntary subscription; and if it could not, if it would cost as much to keep it up as it costs to warm and ventilate the Houses of Parliament, its own magnificence and the use to which it has been put appeal unarswerably to the nation.

Of its beauty there is no question, but it has a far higher merit. It answered admirably the purpose for which it was erected. Of what other metropolitan building can that be said? Without patching or piecing, without pulling down and building again, the first conception perfect and perfectly carried out, providing an immense number of conveniences to serve a new and a great purpose, constitute the Crystal Palace a monument of human ingenuity. Without its vast space, its multiplied contrivances, its many entrances and exits, its perfect ventilation, its numerous compartments, its many refreshment rooms, the Exhibition would scarcely have been possible, and could not have been conducted to its conclusion with that order, decorum, security, and health which distinguished it beyond all other grand gatherings of mankind. The success of which it was an essential element, should make us more proud of it than of Waterloo or Trafalgar, and cherish it as we would the noblest of man's creations.

more provid of it than of Waterloo or Tratalgar, and cherish it as we would the noblest of man's creations. Perhaps its greatness and success have provoked envy. It finds enemies amongst architects. Their poor imitations of antiquity, the chief merit of modern draftsmen, were at once thrown into the background as ill adapted to modern life. Our draftsmen have been singularly unfortunate or nuskilful. Almost every building they have designed and executed has had to be taken down or rebuilt, to be pieced and patched, and in the end has very seldom answered its purpose. A custom house sinking into the earth ;—a House of Parliament, of which the committee rooms are so large that they must be partitioned to make them usable, and the place for the meeting of the members so small as to be inconvenient, and yet so lofty that a double and a low roof was constructed before the speakers could be heard—a Gothic great square box with a useless tower, neither sightly nor serviceable, which has cost upwards of 2,000,000*l*;—a Royal Exchange that is like a well in winter and affords no shade in summer, ornamented with a costly Grecian fagade, and open to the winds of heaven and the noise of the streets, of which the frequenters continually complain and get no amendment,—are amongst the erections of modern architects on which the Crystal Palace reflects disgrace. We scarcely know a modern building that has been carried out from one design and has answered its purpose. Even our new churches are more unsightly than adapted to devotion. From combining great utility and perfect adaptation with great beauty, the Crystal Palace is unrivalled, aud marks an epoch in modern architecture as well as in moral progress. To pull down such a distinguished specimen of moderningenuity and skill, while the French, the Americans, and other nations are trying to imittae it, would be to return to our homage of bad taste and encourage bad passions. The wonders of the Exhibition, too, seem to be almost forgot-

The wonders of the Exhibition, too, seem to be almost forgotten. An average of 43,536 persons streaming day after day for twenty-three weeks to one particular spot, members of all the nations of the world, and there amused and delighted with works of art from all the quarters or the globe, constitute an epoch in the history, not of England only, but of the human race, of which every monument is worthy of preservation. We take great care of the remnants of feudal castles and monkish cells, and Roman walls and Greek columns, of which the unamiable uses are almost forgotten, and we propose now to sweep from the earth a building of which our latest descendants will be proud to discover and preserve the least fragment. We boast of some 80,000 or 90,000 persons annually visiting the Museum, of which the principal merit is that it contains some remnants and memorials of events less remarkable than the meeting in peace of all the nations of the earth in Hyde Park to do homage to useful labour; we regard the attention they pay to such things as a delightful evidence of the increase of moral improvement and the growth of a desire for intellectual enjoyment; but what is that to more than sixty times as many, or 6,007,944 persons who visited the Exhibition in twenty-three weeks, and were taught to admire and respect one another by the display of a common attachment to magnificent

objects. They were impressed, too, at once with a conviction that different nations, against which prejudices had been raised, have common feelings, common interests, and have equal, if diversified, skill. The brotherhood of mankind was emphatically inculcated on all. Nothing more grand or more impressive, than the common worship in Hyde Park by the nations of the earth, of the art and skill with which the DIVINITY has endowed his creatures never forgetting in our silent reverence its inappreciable author—is to be found in history, sacred or profane; and, perhaps, no descration could match the destruction of the temple where there was such a daily gush of life and veneration.

447

there was such a daily gush of life and veneration. The very thought of defacing or injuring St Paul's stately temple is considered a desceration. Yet it may be doubted if it now finds a fitting congregation or fitting service, and be not more visited by sight-seers than worshippers. Human feelings sufferings and enjoyments,—"hallow to human hearts" "the ruin of a wall," and consecrated by human feelings the Crystal Palace is a noble temple. It was even solemnly consecrated by prayer and by the ministers of religion on the opening day. In the presence of a great multitude the blessing of the Most High was asked on the efforts then begun to improve the arts, to extend knowledge, and to promote peace on earth and good-will amongst mea. Considered as a temple, the Crystal Palace was expressly consecrated to that industry by which life is sustained and filled with enjoyments. To pull it down is something like casting an insult on the manual skill it was erected to protect, exhibit, and honour. It would be tantamount to declaring that labour has reverted to its old condition of serfdom, and is less worthy of respect than the idols that were worshipped in antiquity or in the middle ages. It would be a desceration worthy of those who would destroy. St Paul's. The Vandals pulled down buildings that they regarded with superstitious terror, and were never connected in their minds with one kindly thought; but the Crystal Palace, which our Vandals would destroy, is entwined in the heart of the community by the most ennobling and endearing sentiments. It is connected with intellectual enjoyment, the progress of knowledge, and the peace of the world; and no temple built by human hands is more worthy of preservation. To pull it down would be an indelible scandal on the nation, only to be compared to the act of the savage, who, tired of his parent's existence, and the little expense and trouble of nurturing him, buries him alive.

STATE OF FRANCE.

The condition of our Gallic neighbours creates much less interest in England than it did a couple of months ago, partly because it seems hopelessly unsatisfactory, partly because while few look upon the actual position of affairs as otherwise than transitory, few can form even a plausible conjecture as to the next change which the rich chapter of accidents may turn up; partly also because home politics have of late become more interesting and urgent. There are indications, however, that everything is not quite so dull and tranquil in France as it appears. The Presidential decree confiscating the Orleaus property is in course of discussion before a court of law, in consequence of the resistance of the stewards of a portion of that property to the proceedings of the Government officers who came to take possession of it. The result of the discussion is looked for with some interest, for, though no one anticipates that the Judges of the Supreme Court will venture to pronounce the illegality of the autocratic ordinance, yet the line they may take and the language they may use, will give an intimation of the extent of judicial freedom yet left in France. It is a simple question between long-established and unquestioned law, and the *sic volo* of an elected despot. Nothing *except* the bare will of Louis Napoleon can be pleaded in defence of the Government officials.

Liberations from prison of the detenus against whom there is no case, banishments to Algeria, transportations to Cayenne, sentences to surveillance, &c., proceed with great regularity; but another feature has lately made its appearance, calculated to create much alarm, and, we imagine, to strengthen the hands of the Government. The correspondent of the *Times* on Monday gives an account of six districts in which incendiary fires have been reported. These seem to be analogous to our "Swing fires" in 1830: they are the product of that wide-spread misery to which we have more than once called attention as the most permanent and formidable fact which French Governments have to deal with,—acting upon a people inflamed by bitter animosity against all firm rule, and bewildered by the wickedest and wildest theories as to the nature and the rights of property. They are a new, but a most unpleasant, symptom of a social state thoroughly disorganised and rotten; and will help to confirm the middle and upper ranks in their prostrate surrender of all their liberties into the hands of a ruler who promises them nothing but protection against the lawless violence of mobs. Even their hopes from him on this score, however, have begun to be mingled with a certain vague uneasiness. Louis Napoleon, by the confiscation of the Orleans property, has shown that his notions as to the sacredness of property are of a very loose and fluctuating character. He is known to have paid much attention to the subject of pauperism, and to be fully aware of the importance of strengthening his position by some decided measures for mitigating the poverty of the labouring classes, to whose votes he chiefly owed whatever sanction universal suffrage may have given to his nsurpation. It is even understood that he is now meditating some bold scheme for at once rewarding his supporters and regenerating society,—the nature and details of which are a profound secret, and will probably remain so until the *Moniteur* astonishes the world with their sudden promulgation. If, indeed, he could devise any plan by which, without such an interference with the rights of property as would generate an instantaneous rebellion, he could stimulate the industry and set free the enterprise of the country, and so raise the masses from their present state of discontented wretchedness,—he would have done much to deserve and to consolidate his power. But we frace this is a problem beyond his ability to solve, and beyond

immediate unpopularity. No one seems to doubt that Louis Napoleon is preparing to assume the Imperial title on the first convenient opportunity. **Assume** the Imperial title on the first convenient opportunity. Whether this would be a wise step or not has nothing to do with the question of its probability. All who have known the Presi-dent, both before and since his elevation, agree in representing him as a man of "fixed ideas," and, like his uncle, a firm be-liever in "destiny." On several momentous occasions he has been known to speak of his "star." When the complete success of his coup d'etat was announced to him, at six o'clock on the morning of December 2nd, he simply replied—" Bien: mon etoile ne m'abandonne pas"! His fixed idea through life has been that he was destined to restore and perpetuate his Uncle's dynasty, to sit on his Imperial throne, and to wipe out the shame of his sit on his Imperial throne, and to wipe out the shame of his This is the secret of his various abortive attempts and defeat. of his ultimate success. Years ago he said and wrote that his mission was to re-create the Empire and to obliterate the memory of Waterloo. The course of such a man can be calculated by no considerations of interest, gratitude, or honour. What he conceives he is destined to do, he is certain to attempt, if his country will allow, though every motive of prudence, decency, or truth, should combine to withhold bim. Therefore, we entertain no doubt that he will assume the Imperial title, though his doing so should embroil him with the now tolerating Courts of Europe. Nor, in truth, do we think it would be difficult to predict much of his subsequent course if his life is spared and his sway patiently endured.

even his courage to undertake. It must, however, be a work of time, and in the course of its necessary steps must involve much

At present there seems no indication of the least desire on the part of any class to overthrow it. The prevailing impression in France is one of increasing confidence in the duration of Louis Napoleon's Government. Not that there is anywhere the least enthusiasm in his favour, nor much affection to his person. Probably no ruler ever attained so strange an elevation with so few devoted friends and so little popular attachment. He is vehemently abused in nearly all the drawing-rooms of Paris—with the closing and universal admission at the same time, that he is a necessary mun, and that his usurpation saved France. The nation is sick to death of politics. They feel how awfully they mismanaged matters when they had them in their power; they remember with shame what a horrible hash of statesmanship was made by their amateur statesmen; and they confess with bitterness that, in the event of another revolution, affairs would probably fall into the same hands again, and be botched and blandered in the same fashion. Their general prayer is, that they may never be called upon to vote at another constitution. "Govern us decently, and let us live in peace, and look after our own affairs"! These are not noble sentiments, but they are very natural ones; and those who have lived in France since 1847, or who have seen much of those who have, can well anderstand how they have arisen, and why they are so general among the educated ranks.

Then it is universally felt that though the tyranny of an autocrat is disgusting enough, the tyranny of the lower classes would be immeasurably worse. The men of property dread the folly and rapacity of the populace and their leaders. The men of education dread their insolence and envy. Both bave a vivid and a bitter recollection of the oppression they had to submit to and the insults they had to endure from the mob between February and June, 1848; and nothing could tempt them to risk a repetition of these inflictions for the sake of a free constitution for which they believe the nation to be unfit, or for the sake of a participation in political power which they do not desire.

Lastly, even the restrictions on the freedom of the press are welcome to thousands. While free, its course was dictated by no pure patriotism, its tone was characterised by no high morality, it was withheld by no scruples from violating the decencies of private life, or from exciting the worst passions among the ignorant and violent population of the cities. By many of the better portion of the educated classes it had long been felt to be a nuisance. This was shown by the readiness with which juries found verdicts against it in all newspaper prosecutions. It was not there, as with us, the guardian of oppressed innocence, the decorous instructor of the multitude, the conscientious exposer of public abuses, the courageous denouncer only of the guilty and the tyrannical: it was rather the vindictive calumniator of public

antagonists, the reckless sower of sedition, the indiscriminate assailant of all men eminent either for character or station. Its suppression, or rather its severe censorship, has been actually felt as a protection and a relief—strange as this may sound to English ears. That it should be so displays a fearful degree of rottenness in the public life of France; and must bring most forcibly home to all minds the great truth, that national morality is the only condition and guarantee of national freedom.

How France is ever to emerge from her present torpid and enslaved condition; whether she must wait for the happy accident of a wise and foreseeing despot; whether her present constitution will enable her to conquer her freedom bit by bit as she desires it and becomes fit for it; whether a period of repose will revive the restless passions of democracy, and a period of misrule wear out the endurance of the higher classes, so as to engender yet another revolution; or, lastly, whether the insane ambition of the present ruler will unite against him all the combined powers of Europe, and lead to his suppression as a public enemy—these are matters on which we will venture on no prophecy. In French affairs, even more than in those of common life, it is true that "we know not what a day may bring forth."

PARIS.-RESTRICTIONS ON FRENCH LABOURERS. THE Minister of General Police at Paris addressed a circular on the 17th inst. to the prefects of departments, in which he says :-"The movement of the floating population of Paris indicates to "me the arrival of a great number of workmen who come to "seek work of all kinds. This movement, which takes place year at this period, corresponding to the commencement " every " of building operations, has taken proportions which exceed " those of preceding years...... It is evident that a too great as-" semblage of workmen at Paris establishes amongst them competition which tend to lower wages, and that when their number exceeds the demand, those who remain unoccupied must neces-" sarily suffer, and may become a cause of anxiety for the autho-" rities. Such an emigration would besides cause to the agriculture and manufactures of our departments a real prejudice, " from which the Government is above all anxious to preserve "them. On the other hand, several lines of railway have just "them. On the other hand, several lines of railway have just "been conceded; they will render necessary considerable "works in different places.....I think it right, Monsieur le "Préfet, for the sake of public order, to beg of you to give in-"structions that in your department passports to Paris shall only " be given to workmen with great reserve, and only when they " can prove that they possess sufficient resources to come here, " and to live a month without labour. It is important that they " should be made to understand that these measures are taken for "their own interest." That opens a subject very worthy of attention. The President, in his zeal to make a great display, gets a large revenue for himself, and directs the appropriation of large sums to beautify the capital, the bulk of which will be spent in Paris; and then his ministers forbid the labourers of the country from freely participating in the advantages of the expenditure. That is not Communism, for it has in it nothing like an equality of advantages, but it undertakes, like Communism, to prevent competition, regulate the labour, and appropriate the property of the community; but, far worse that the Communism preached by the Cabets and the Considerants, it makes the appropriation with favour and partiality. It undertakes, like Communism, to deal with the labour and property of the community; but, unlike Communism, it deals with them to benefit one or a few.

Opinion is said to be the Queen of the world, and as the immediate antecedent to all action undoubtedly it is; but every one is aware that opinion, to cause wise and beneficial actions, must be correct and just. Something, therefore, determines, overrules, and decides, in the long run, whether opinions be correct or in-correct, and whether they shall or shall not prevail. It does not follow therefore, because this conduct of the Minister of Delice follow, therefore, because this conduct of the Minister of Police, and the conduct of the President of the Republic, are only con-sistent with opinions long prevalent in France, favourable to an imperial régime, and favourable to the Government dealing in this manner with the property and the labour of the com-munity, regulating them for the benefit of one or a few, that it is proper, or that those opinions will continue to prevail. The Prince-President's decree-making monomania may be clearly or that those opinions will continue to prevail. traced to the influence of the general opinion that such a manufacturer of decrees and such a regulator of society is necessary to good order and peace in France; but every sane mind out of France, and many sane minds in France, perceive that such a general opinion is a general error, and that other and great revolutions must take place in France, tending to set aside such regu-lations and such manufacturers of decrees, before the conduct of the French can be guided by truth, or try that something which decides whether opinion be correct and shall prevail. France is furious against Communism : here is Communism, or rather selfism, of the worst kind established at the Prefecture of Police and at the Tuileries, and confusion, if not anarchy, is again not far off.

The Government, following out the principle of interference, now feels itself obliged to regulate and impede the free movement

THE ECONOMIST.

of the industrial population. It takes on itself—and its system will compel it to take on itself more and more every day—to regulate all the industry and appropriate the property of the people. For that ever-growing function the present administrators will be insufficient; and numerous as are the present race of functionaries in France, and destructive as they are to the national prosperity, they must become still more numerous and still more destructive. But the French much desire prosperity. They overthrew the Government of Louis Philippe because they were suffering, and supposed it—not incorrectly—to stand in the way of prosperity; and when prosperity does not follow, as it cannot, such circulars as those of M. Maupas and such decrees as those of the President, though they may give momentary ease to the Paris officials and a momentary monopoly to the workmen already in Paris, there will be fresh commotions in France. They may take a different but a more disastrous form than a barricade revolution, and the substitution of one Prefect of Police or one Prince for another—such as a jacquerie in the land,—but the general opinion being erroneous, and the form of Government and the laws founded on it being mischievous, there must ensue other revolutions or great social disasters—they being the customary means by which the French endeavour to get at Truth.

The circular of the Prefect is the more extraordinary when it is remembered that Paris - to translate the words of the "Statistique de l'Industrie a Paris" - " has for a long period taken its "place amongst manufacturing cities of the first rank in France. "Its products, infinitely varied, are known throughout the world, " and have special characteristics which recommend them to con-" sumers. They are influenced by the cultivation of the fine arts " and of the sciences, and by those numerous valuable collections " which are freely open to all who seek inspiration from them." There are carried on in the boundaries of Paris, according to this authority, 325 differently-classified species of industry, presenting a total number of establishments for carrying them on of 64,816, of which there employ—

 More than 10 workpeople
 7,117

 —
 2, and less than 10
 25,116

 Employing only 1, or working alone
 32,583

64.816

The 325 species of industry are collected under the following heads :-----

Chemical and Ceramic
Metals, Mechanism, and
Ironmongery
Precious Metals, Watch-
making, and Jewellery
Cooperage and Turnery
Articles exclusively Parisian
Printing, Engraving, and
Work in Paper

No less than 342,530 persons of both sexes and all ages, besides the 64,816 employers, are employed, in the ratio of 5 28-100 workpeople to each employer — to wit, 204,925 men, 112,891 women, and 24,714 young persons. The value of their produce including the value of the raw materials in most cases, but not in the case of the precious metals and jewellery—was in 1847, 1,463,628,3501 (58,545,134l). The average of the men's wages is 3f 80c per day; the maximum, 351 (an engraver), the minimum, 50c (a boy); the average wages of the women is 1f 63c; the maximum, 20f (a painter on porcelain), the minimum, 15c. It is calculated that 1,000,000f per day are paid in wages; and, taking 300 effective working days in the year, it gives an annual sum of 300,000,000f (12,000,000l) paid in wages at Paris.

Thus Paris is one chief seat of manufactures in France. Wages there are higher, we believe, than in any other part of France. All the advantages of public institutions and galleries of art which tend to promote knowledge are concentrated in Paris; and all these temptations to flock thither are now to be counteracted by the police, and these advantages are as much as possible to be confined to the Parisians. More than ever that city is to be made distinct from the rest of France; and civilisation, such as it is, instead of being diffused amongst all the people, is to be forced back, and to a higher level in Paris, till it again breaks its bounds and overwhelms the Government and France.

The report of the Chamber of Commerce, from which we have borrowed these facts, does not give us any correct information as to the number of workmen who emigrate into Paris. It says, indeed, that of 342,530 workpeople, 7,741 men, 7 women, and 393 young persons, together 8,141, belong to the moving population, and 334,384 are stationary. It is added that these returns, particularly in relation to the moving population, are very imperfect, there being no means of distinguishing between the classes. It seems certain, however, that this 8,141 is the minimum, and that it includes only those, such as the masons from the department of

* The full title of this elaborate and complete work, of which we have just received a copy, is "Statistique de l'Industrie a Paris, resultant de l'enquête faite par la Chambre de Commerce, pour les annees 1847-1845. Paris, 1851, au Depôt des Decumens Officiels, publies par le Ministre da Commerce," &c.

Haute Vienne, and others who repair to Paris annually, or for a couple of years at this season, to gather a little money; or who continue the old custom of visiting different towns; and includes none of those who come from the different places permanently to settle in Paris. But whatever may be their number, it must be a great hardship to all who desire to go, and a great injustice to those who are not allowed freely to diffuse labour and civilisation over the whole community. Such decrees, absurd as they appear to us, are the necessary consequence of the system of meddling with society which characterises the Government of France; and as it obviously acts erroneously and mischievously, it must contribute to bring about more revolutions in France.

449

We have briefly adverted only to one topic, suggested by the Prefect's circular, contained in the elaborate description of the population of Paris, of which we have given the title below. We shall probably again refer to the work.

We must draw attention to another circular of M. Maupas. Certain Inspectors-General have recently been appointed in France, just as if society were an army, to be put through its evo-lutions and kept in training and discipline by military chiefs. "The Government," it is found out, "has need of a perfect knowledge of the situation and wants of the country," (though without possessing that knowledge it has been issuing bushels of decrees and these Inspectors-General have been instituted to obtain for it "They are the media of incessant communication that knowledge. that knowledge. "They are the media of incessant communication between it and the masses. To study and to enlighten is their double duty." To them M. Maupas has lately directed a circular, telling them, amongst other things, that they are, "above all, to penetrate into the lower strata of society, so long unexplored. They are to sound boldly all their depths; visit factories, work-here and the prosterior the openies that employee shops, and the great centres of labour; question the employer and the workmen, and enlighten them as to their reciprocal in-terests. They are to be to them counsellor, father, conciliator." terests. The price of corn, and of other provisions, the renewal of leases, the sale of real property, and the movement of agriculture, com-merce, and manufactures, are to engage their attention. It is to be extended also to charitable establishments, mortgage banks, and all useful and philanthropic institutions, "in order to appreciate their development, their effects, and the encouragements which with religious sentiments, family feelings, habits of labour, and the good faith of business; to weigh carefully the influence exercised by theatres, cabarets, and public places." The existing functionaries not being sufficient, they are especially to put an end to secret societies. "They are to combat false news, malevolent instantions, hostile interpretations, pamphlets, libels;" "to dis-place a the conduction of the terms of the terms." abuse the credulous, and point out the services rendered by the head of the State, the country saved from a jacquerie, the authority restored, religion again in honour, prosperity revived, and, in less than four months, so many ameliorations accom-plished that it appeared that France, in being relieved from so many miseries, was to be consoled each day by a fresh benefit." Messicurs the Inspectors, then, are to insinuate themselves into all families, stop the circulation of all newspapers and pamphlets which they disapprove of, and diligently instruct the people in the great virtues and great services of Louis Napoleon Bonaparte. The Jesuitism of Paraguay is renewed in France, with a military organisation to give it effect. We were not aware of the existence of the Inspectors and their extraordinary functions when we wrote above that the Communistic system, for the benefit of the Prince and his followers, will require additional functionaries to carry it into effect. France has them already; and they are of a most extraordinary character, uniting in themselves all the duties of spiritual and civil officers.

THE BALANCE-SHEET.

The following is an account of the Net Public Income of the United Kingdom of Great Britain and Ireland, in the year ended the 5th day of April, 1852 (after abating the Expenditure thereout defrayed by the several Revenue Departments), and of the actual Issues or Payments within the same Period, exclusive of the Sums applied to the Redemption of Funded or paying off Unfunded Debt, and of the Advances and Repayments for Local Works, &c. :--

Agriculture.

PREDICTED AGRICULTURAL RUIN. WHEN prices of agricultural produce were constantly falling, and farmers were really placed in a position of much embarrassment from the uncertainty of when the fall would stop; and when a political party formed their policy and based their hopes of power on minister-ing to the fears of the farmers, we constantly and steadily maintained that the courses of outcome decourse means the answer of the start o that the causes of extreme depression were exceptional and transitory, and that the repeal of the Corn Laws would place agriculture on a sound foundation, from whence great and rapid progress would be made. The result has fully justified those views. Everywhere land-lords are making efforts to improve their estates, and farmers are greatly improving the cultivation of their farms. In Scotland this is very consummer. Thus we learn that in Arrehize these has the set greatly improving the cultivation of their farms. In Scotland this is very conspicuous. Thus we learn that in Ayrshire there has been no falling-off in the activity displayed of late years by the farmers. "In the course of the past winter draining and other improving opera-tions have been carried on with great vigour, and every effort has been made to meet a lower scale of prices than was calculated upon at the commencement of existing leases. During the last few weeks the various dealers in Ayr have sold nearly one thousand tons of Peruvian guano to farmers, and the most of this is applied as a top dressing to cereal crops, as there are few purchases for green crops made so early in the season." And all the "grass parks" in Scotland are this year letting at advanced rents, ranging from 5 to 20 per cent. beyond last year's prices. But the most striking evidence of this

improvement is to be found in our most backward Euglish districts, amongst which Dorsetshire is a well-known example. There, all is progress and comparative ease, as has been most graphically shown by Mr S. G. Osborne, in a recent letter to the *Times*. After stating that Dorsetshire is "agricultural to the very backbone," and bitterly Protectionist, and that it possesses "almost the sole re-maining pattern squire," the reverend writer says :--

Maining pattern squire," the reverend writer says :---Of the peers, baronets, squires, in Dorset, who can show me one ruined by free trade? Will they deny that their rents are paid punctually, their land generally well farmed? Will they besitate to challenge all England to show a tenantry in the more general posses ion of every comfort of their class? I have means of knowing well the condition of very many Dorset estates. I cannot find that even the most popular squires have been compelled to ascriftee rent on the alter of free trade; they have mostly found it sufficient to return some 10 per cent, not to reduce their rental to that amount. This and civil appenders, expressed houses of better times, and a regular hunting of the constrisome 10 per cent., not to reduce their rental to that amount. This and civil speeches, expressed hopes of better times, and a regular hunting of the county, has hitherto answered the purpose of the owning interest. It is true some few have fairly reduced their rents and readjusted the agreements with their tenants; but as I flud in these cases that no popularity has been won over those who don't readjust, but who court e-teem by donations and civil talk, I can't think the pressure has ever reached a ruin point.

And the owners of land are generally expending "large sums of money And the owners of nand are generally expending "large sums of money on farm buildings," and within an area of 20 miles of the writer's own dwelling "more money has been expended within these six years in building new farm premises and improving existing buildings than was spent in 40 years previous to the repeal of the Corn Laws." And he adds :-

And he adds :--Ten years ago I was told there was not a steam-engine in Dorsetshire. I believe this was not quite the fact. Within the area I have spoken of above I now know myself of five in connection with farm homesteads. As to land going out of cultivation, why, Sir, there will very scone carcely be left a yard of our famed downs. Year by year I have known hundreds of acres broken up; I never saw more activity displayed in this direction than at this very moment; I can find scarce one instance of land which has been so broken up being al-lowed to return again to mere pasture. Is the price of land in the market any criterion of the prosperity of agriculture? I only know of one estate which has been sold in these parts of late, and I defy all denial of the fact that it brought a very high fancy price.

I defy denial of the fact that farms will let at this moment in this country at as good a rent, and to as good tenants, as they ever did; with the exception of cases in which much game is preserved. I believe few agents or landlords ever knew a greater demand for farms, or a better class of candidates. On what reasoning a greater demand for fame, of a better transfort undexter. On which reasoning can we for one moment entertain the supposition that there is one particular class of tradesmen, they who deal in the seed of wheat, oats, and barley, in sheep and bullocks, who are ever anxious to enter a business they declare to be ruin-ous? I can undertand an inn on the great northern road remaining vacant, now the posting and coaching are transferred to the rail. I could easily imagine the man to be mad who took the grest inn at Hartford bridge to carry on a posting and coaching business. But I cannot understand why no farm remains

the man to be and wholes use. But I cannot understand why no farm remains posting and coaching business. But I cannot understand why no farm remains wacant, if farming under free trade is ruinous. Now, I do happen to know that farms in this county have been lately let at an increased rental to existing tenants, and I fully believe the credit of the said tenants to be as good as ever at their banker's, and their friends treat them as same. That there are men unfortunate as farmers is only to be expected, for what trade or profession is there in which all can command success? but that fewer farmers fait than any other class of tradesmen I hold to be a fact as honourable to them as a class as it is declaratory of the wholesome nature of farming business. There is one curious fact relative to this figure—the farmer ; that the chief complainers of the "ruin" are just those who, for years, have cried "wolf" as they have classed the fox. It is consolutory to hear a good-humoured lot of well-mounted men talking year by year of their ruin, and yet to find that they are the first and most constant in the field. Long may they be so, for so long shall I believe their ruin is a mere market phantom—the crafty creation of those who, for political purposes, like to keep up the cry. Again, the agricultural labourers of Dorset are better off than they

Again, the agricultural labourers of Dorset are better off than they have ever been before :-

The wages have in some instances fallen since 1846, but in most cases the demand for labour, from the improved system of farming and the amount of additional land brought under the plough, has kept them up. Where even only 6s a week is received, the labourer is still better off now than ever i knew only es a week is received, the indourer is still better off now than ever I knew him. There is not a thing be eats or wears he cannot get at a less price. At the boards of guardians the work is infinitely less than it used to be; the rates have much decreased. Take the children at school, or the congregations at their places of worship, and who is there who will deny that, in our genera-tion, we never knew the poor so well, so respectably clad? The rent of their coltages, the contributions to their clubs, are now scarcely ever in arcear. For my own part, I can say, after more than 20 years' active interest in their con-dition. I never saw them so comfortable as I have known them to be the last fave wears. That which is the result of my own parter is accordenced to dition, I never saw them so comfortable as I have known them to be the last five years. That which is the result of my own observation is corroborated to me by their own evidence, cheerfully given me. And, again, says Mr Osborne :-Once more-a fact, not a figure. Will any auctioneer deny that farming implements and farm stock are, and have been for some time, fetching a price

astonishing under any circumstances, but almost miraculous in the days of ruin 3

And his view of the hold of the Derbyites on the farmers accords

And his view of the hold of the Derbyites on the farmers accords very nearly with that we lately indicated :--The chief worshippers are those who are intoxicated with the idea of a Quarter Sessions Ministry; it is a tribute to their order. They just at present can command the voices and some of the votes of their market Janissaries. The said Janissaries are, however, well aware they have been used, not honoured in the service. Six months hence, when Protection will be corrupt in the tomb, there will be a just cry for an adjustment of rent-I mean just as regards those landlords who have taught their tenantry the rain cry. I think I know what will be the upshot of that demand? Why take the farm, why hold it, if you are losing? I asked lately the best judge in this county whether we were likely to have many appeals against the income tax from tenants who could swear their profits had not realised their rents; he smiled at my ignorance.

April 24,

THE ECONOMIST.

A Protectionist farmer observed to us the other day—he occupies about 480 acres—that if wheat were 7s a bushel he could "put by" 1,000/a year; and his dissatisfaction with Free Trade arose because wheat is not 7s a bushel. In this case perhaps from 4,000/ to 5,000/ of capital may be employed.

NEW DISEASE IN LAMBS.

WE referred a few weeks ago to the appearance of a novel and severe disease amongst the lambs on two farms in Hertfordshire, where lambs have been attacked by lameness, swellings of the joints, accompanied by debility, and soon terminating in death. On both Joints, accompanied by depinty, and soon terminating in death. On both these farms turnips are more successfully grown, and to a larger extent than on most farms in the county, and the ewes have for the most part been kept wholly on turnips throughout the winter. Is it possible that this may have created a tendency in their offspring to liver discase ? which, as we shall presently show, has been suggested as the origin of a similar disease north of the Tweed. A correspondent of the North British Agriculturist describes a disease amongst Leicester lambs on a Scotch farm, the symptoms of which are very similar to that we have mentioned; indeed, the writer refers to, and quotes our account.

The statement of the north country farmer is as follows :--About five weeks ago, several Leicester lambs about a week old became sud-denly lame in one of their forelegs, and within three days they had become so in all of them, and in other three days small awellings arose on the joints, which afterwards produced tumours; the animals, so soon as lameness appeared, ceased to thrive, the wool became slightly blue, they lost their bellies, but im-mediately behind and beneath the last ribs a swelling arose which gave the lamb a very peculiar appearance. Two days after the lameness was observed each of the lambs affected had a dose of Epsom salts given them, and a p witon of the tail cut off to produce blood-letting, it being perfectly evident that the lameness did not arise from any hurt or external injury, but from some internal affection. Professor Dick, in his valuable lectures, having stated that when sudden lameness occurred in the horse without any visible seat thereof, it some-times happened it arose from affections of the liver. The lameness, therefore, of the lambs, their still continuing to suck, and even manifesting a greediness for food while their bowels were perfectly open, and the large size of their bodies behind the diaphragm, all seemed to indicate the liver as the seat of affec-tion, and, accordingly, on the death of three of them ten days after being first bodies behind the displaragm, all seemed to indicate the liver as the seat of affec-tion, and, accordingly, on the death of three of them ten days after being first seized, the liver was found to have largely increased in size, occupying as much space in the cavity as both longs and heart did, while it was in a disorganised state. But no flukes could be traced in the ducts. Upwards of a dozen have since been seized, several of which are dead, and none have recovered that once have become totally lame. Although one or two are lingering on now for a fortnight : they in general die on the ninth day. In the worst cases where the tumours form on the joints, the animal becomes quite helpless, so that it is unable to stand, and the shepherd has to support it with milk. These tumours generally break, but the beast becomes so weakened, that none of these so affected, have lived so long as the others less severely attacked. As regards the general management of the stock, it has been the same for years past, and this complaint is entirely new. On three of the wes, from which the lambs died, other lambs have been sub-stituted, and these foster ones are quite healthy.

stituted, and these foster ones are quite healthy. The lambs are about eight days old when it is first seen, but this morning one sixteen days old has become lame, it having been quite healthy and thriving hitherto. The stock of ewes are of different sges, but both gimmers' lambs, and those from old ewes have died, whilst the mothers themselves are in good con then sound and healthy. This subject deserves professional examination, for should the disditie

case prevail more extensively another year it may become a serious calamity. The account we have since received of some of the Hert-fordshire lambs, which were opened by the shepherd, is that "they were all full of matter."

SPIRIT OF THE TRADE CIRCULARS.

(From Messrs Edward Higgin and Co.'s Circular.)

(From Messrs Edward Higgin and Co.'s Circular.) Liverpool, April 17, 1852. The ontward foreign trade from Great Britain has only been inactive during the month from the scarcity of vessels to convey our products and manufactures, and a general rise in freights has ensued. It seems probable that the Austra-lian gold discoveries will have the effect of causing freights to rule higher, from and to all eastern markets, whilst the emigration from China to California, Pera, West Indies, and Australia, will occupy many of the large ships and lead to higher rates prevailing all over the world. The decrease to Calcuta is this month much larger than at the period of our last circular. The Joseph Bushby is nearly loaded, being fully engaged a week ago; the Mary Spencer has two-thirds of her cargo arranged for, and about 700 packages of goods and twist are going by the clipper Decgaun, which vessel

ago; the mary spencer has two-thirds of her cargo arranged for, and about 700 packages of goods and twist are going by the clipper Deogaun, which vessel proceeds to the Clyde to take in the remainder of her cargo. The decrease in plain cottons is now 26,315,319 yards, colored cottons 2,066,044 yards, printed cottons 3,273,073 yards, twist 2,383,803 lbs, woollens 10,419 pieces, copper 479 tons, iron 4,184 tons, lead 61 tons, in plates 3,554 boxes, salt 928 tons, and of total value 780,369*l*. Notwithstanding the few goods going forward, the detention of vessels by the easterly winds has enabled the shipowners to demand and obting advanced rates of fright but with the out hock for the continuous and obtain advanced rates of freight, but we do not look for the continuance for any long period. The rate for salt is almost nominal, the last cargo having been arranged for at 29s, a rate which would leave a very heavy loss in Cal-cutta, were not prices likely to rise in consequence of the failing off of shipments.

To Bombay very great activity has characterised the month, and the exports of plain cottons show the very large increase of 16,622,863 yards, twist 55,054 18s, iron 1,978 tons, and total valu: 46,2134. Coloured and plain cottons show an unimportant decrease, but woollens have declined 710 pieces, copper 760 tons, pig lead 125 tons, and coals 1,111 tons.

(From Messrs Browne, Hunter,'and Co.'s Circular.)

(From Meases Browne, Hunter, and Co.'s Circular.) Liverpool, April 21, 1852. We are still unable to report any improvement in the aspect of our produce markets during the month; on the contrary, a further depreciation in value has taken place in some atticles, notwithstanding the very low prices that were previously ruling. The consumption, however, is going on favourably, and al-though arrivals have been retarded by the long continuance of easterly winds, attill the heavy stocks remained near our advance in prices. still the heavy stocks remaining prevent any advance in prices.

Sugar, for refining purposes, has been largely purchased at advancing prices, whilst, on the other hand, grocery descriptions have been in limited demand, even at lower rates; an evidence, that whilst the use of suft sugars is becoming more curtailed, refined and crushed from the low prices are increasing in genemptio

(From Wm. Jas. and Hy. Thompson's Circular.) London, April 22, 1852.

London, April 22, 1852. The colonial markets have lately shown improvement as regards some articles of importance, and more confidence is becoming observable. It is to be hoped that this may continue, for the large and increasing consumption of our chief staples plainly indicates the soundness of trade, with the prosperous condition. of the people, while the low prices ruling for many kinds of produce, with so easy a money market, may probably produce some speculative inquiry. The funds have been very buoyant, and Consols at one time reached par, but have since slightly receded. The Bank of Engiand has to-day reduced the rate of discount to 2 per cent. In the beginning of the month the demand for sugar became far, and prices 6d per cwt lower were accepted; importers however having offered their goods sparingly, the downward movement was checked, although much duiness continued until the holidays. After Easter the market reopened with an improved spirit, and purchases were freely made, particularly of foreign kinds, in which a iarge business for exportation has been done, while an advance kinds, in which a large business for exportation has been done, while an advance equal to the previous decline was established. Inquiry of fate has been gra-dually more extended, and rates for all sorts are now fully is per owt above the currency of last month, and an upward tendency is still visible. This inthe currency of last month, and an upward tendency is still visible. This in-creasing demand and enhancement in price is attributable both to the account lately received from some producing countries, stating that short supplies for the ensuing season must be calculated on, owing to injuries inflicted on the crops, as well as to the enormous increase in the consumption, and diminution of stock weekly visible here. The subject of Irish manufactured best-root sugar has occupied some little attention, and it is asserted that the short supply of best-root at present offers the chief drawback to its immediate production. The sp-mearance of the home media acticle differs user slightly from ather supply of root at present offers the chief drawonck to its immediate production. The sp-pearance of the home-made article differs very slightly from other sugar. The Dutch Trading Company have advertised their second sales of 87,453 baskets Java to commence at Rotterdam on the 6th May. Coffee has been duil during the greater portion of the month, while shippers alone at one time chiefly sup-ported the market, a fair business having been done by them in the coloury qualities of plantation Cepton. The quantities offered for sale have been extremely immediate being normaling to prove their greater during the home. quantities of plantation Ceylon. The quantities othered for shift have been extremely limited, importers being unwilling to press their goods forward, while the home trade operated with extreme caution, evidently awaiting the new crop from Ceylon, some shipments of which have lately arrived. Native sorts fell fully is 6d per cwt from the advance of last month, but to-day higher rates have been obtained, 38s 6d being the last price paid for a parcel of recent import. The present stock has been materially reduced, and deliveries continue satisfactory, while it is generally believed that the trade are sparingly supplied. Mocha has lately fallen is per owt, but in other foreign alterations have not occurred. Rice has been very flat, and has declined is to is 6d per owt below the highest currency. Saltpetre has been in good demand, but only a small quantity being on offer business has been restricted. The stock still continues much reduced, and rates fully up. The spice market has been quiet, with little alteration in value. The cinnamon quarterly sales were postponed until the 3rd proximo, to allow time for the shipment ex Persia, to be placed ou the market. The deliveries of indigo have been favourable, and prices are higher, while a good demand exists; the next quarterly sale has been advertised for the 11th proximo, but the declarations as yet have been very trifling. The Dutch Trading Com-pany have advertised a sale at Rotterdam of about 1,300 peculs, for the 29th 29th inst.

Foreian Correspondence.

From our Paris Correspondent.

Paris, April 22, 1852. It can no more be doubted that Louis Napoleon aspires to be sou be soon proclaimed Emperor, and it is even announced everywhere that this event must take place on the 10th of May, during the great military ceremony for the distribution of the *eagles* to the army. The most enthusiastic adherents of Louis Napoleon urge him to accept at once the imperial title. But he is still hesitating, as he is aware that such a proclamation made by the soldiery will have an unfavourable effect at the foreign courts. Some of his most intimate friends have been at the foreign courts. Some of his most intimate menos have been sent abroad to know the dispositions of the Cabinets, and the result of their errand is not quite satisfactory. Louis Napoleon would avoid having his proclamation as Emperor made by the acclamations of the soldiery; he will probably refuse the title of Emperor if it is offered him on the 10th of May by the troops. But he will con-trive to obtain an address from the Senate, urging him to put an end to the present hybrid Government, which is neither a republic nor a monarchy, and consult the nation for the formation of an hereditary empire. The nation for the Government is, properly speaking, the peasantry, who will grant every thing Louis Napoleon requires.

As soon as the President has assumed the title of Emperor, he will address a manifesto to all the foreign courts, protesting that he is de-sirous to maintain friendly relations with Europe and to preserve peace. He will even declare that he is ready to reduce the French army, if other countries consent to do the same. But there is no probability that he will actually take such a measure. He is rather probability that he will actually take such a measure. He is rather intent to increase the troops, and even now the French army is more numerous than it was before the coup d'etat. New regiments of Zouaves are organising in Algeria, in order to form a permanent army, and they are an addition to the general number of our regi-ments, though it had been announced that other regiments would be disbanded in the intericr of France. Orders have been given for the formation of seven new battalions of Chasseurs de Vincennes, and the gendarmeric have been already increased. The foreign Cabinets, who are probably aware of those circumstances, will not have a great belief in the new Emperor's pacific declarations; and a French Go-vernment, whose power rests exclusively upon soldiers. will inspire vernment, whose power rests exclusively upon soldiers, will inspire rmanent distrust abroad. a p

The members of the Legislative body are not very enthusiastic for the advent of the new empire. Dissatisfaction is growing space among them, as they perceive that their part is quite secondary and humiliating. The deputies are quite without influence. They are so much neglected, that when a minister gives a ball or a great re-

ception, he sends no invitations to the deputies, unless he is personally acquainted with them. However, the Legislative body do not think yet to form an opposition against the measures which are introduced to them. They have adopted the Copper Coin Reform Bill after an hour's debate, and five members only voted against it. They will soon receive from the Executive power several new railway bills : one of them for the construction of a railway from Caen to Cherbourg, with a inection line to the Paris and Rouen Railway.

to Cherbourg, with a junction line to the Paris and Rouen Railway, and another for the Bordeaux and Toulouse Railway. They will be occupied with such affairs, but no political question will be submitted to them.

to them. The budget of 1853 will soon be presented. It was reported that they would only examine the budget of ways and means; but the Government durst not go so far as to deprive the Legislative body from the cognisance of the budget of expenditure. It is said that this new budget will balance by a surplus of thirty-nine millions of francs. But no credit can be granted to such budgets, as there are always many additions, which increase theori-rical fources under the form of extraordinary credits.

budgets, as there are always many additions, which increase theori-ginal figures, under the form of extraordinary credits. It seems decided that no loan will be immediately negociated. The Government will wait until the railway companies who have been lately organised have issued their new shares and laws. It seems, however, that the question of a loan has been discussed in several sit-tings of the Cabinet Council. Its amount would have been 300 million of francs. It had been proposed to negotiate it at 3 per cent, or to issue State debentures, according to the system of the railway debentures. 300,000 debentures of 1,000f each would have been created, bearing interest at 4 per cent, and redeemable at 1,150f. This last system of a loan is advocated by the President himself, and it is probable it will be adopted when the negociation himself, and it is probable it will be adopted when the negociation of a loan is decided.

The railway shares have given rise to a great deal of speculation, and there was a sort of mania resembling what happened in 1845. It is true that the principal lines are now working, and every one knows what have been their revenues. But the prices of those secu-rities have been so much advanced, that a sudden fall began yester-day, and I apprehend an approaching crisis in the market. The backs of the Dwie and Structure Railway, had hear quetted 6055 shares of the Paris and Strasburg Railway had been quoted at 605, as it had been supposed that it would divide 18f per share, so that with the addition of 20f for the interest, this line would have yielded more than 6 per cent; but it is certain now that it will divide nothing at all, so that the prices represent for 1851 but an interest of 34 per cent.

The following are the principal variations of our securities from April 15th to the 22nd :--

P.S. The Moniteur of to-day contains a note which proves that I was right when I supposed that Louis Napoleon was desirous to be proclaimed Emperor, but would not accept it from the soldiery. The following is the communicated vote :--* A great number of persons imagine and report that the empire is to be proclaimed on the occasion of a fete. To attribute to the Government the desire of a pre-text for charging the established order of things is to form a very false idea of the manner in which it understands its duties. If necessity should ever lead to such a resolution, it would only be accomplished on the initiative of the constituted powers, and with the consity should ever lead to such a resolution, it would only be accom-plished on the initiative of the constituted powers, and with the con-sent of the whole people. As to the acclamations of the army, they are, it is true, for the Chief of the State a valuable proof of the senti-ments with which it is animated, but they cannot produce any politi-cal result. Thus, at the ceremony on the 10th of May next, the 60,000 men assembled in the Champ de Mars would in vain salute the President by the news of Emerger setter or would not advance the President by the name of Emperor, as that act would not advance the re-establishment of the empire one hour."

HALF-PAST FOUR.—The securities were at first declining, and there were heavy sales upon the railway shares, but they afterwards rallied, and their last prices were about the same as yesterday's. The business is very languishing on the rentes. The 3 per Cents varied for money from 72f to 71t 80c; the 4½ per Cents from 100f 60c to 100f 80c; the Bank shares from 2.785f to 2.765f; the Northern shares from 615f to 625; Strasburg from 575f to 580f; Nantes from 360f to 370f; Bordeaux from 515f to 620f. Central from 585f to 585t. 360f to 370f; Bordeaux from 515f to 620f; Central from 585f to 595f; Orleans from 1,205f to 1,217f 50c; Havre from 307f 50c to 300f; Marseilles from 277f 50c to 273f 75c; Lyons from 612f 50c to 620f.

Correspondence.

DECIMAL COINAGE.

To the Editor of the Economist.

To the Editor of the Economist. Sin,—Some years since (I think it was in the year 1846) I had some communication with the late R. L. Shiel, Esq., then Master of the Mint, on the subject of giving us a coin of the value of 1-10th of a pound, by which we might be enabled to keep our accounts in de-cimals; as all or nearly all the present coins might, by a trifling alteration in value, involving perhaps the withdrawal and reissue of the copper coinage, be adapted to that mode of keeping accounts. Having now obtained this desideratum in the new florin, I propose that the pound or sovereign shall be as now the unit—10 florins equal one pound. The only other denomination of money of account that

we shall require 's one, 100 of which shall be equal to a florin. This is nearly obtained by the present farthing, 96 of which are equal to a florin. I propose changing the name from farthing to cent, and that the same coin shall on its reissue be thus called, and 100 of them be proclaimed by royal authority equal to a florin. This being done, we should then have three denominations only of money of account, viz. : 100 cents equal to 1 florin. 10 florins equal to 1 pound. Which would represent any amount required thus :-

Which would represent any amount required thus :-5471 13s 33d are represented by 5471 6fl 65c.

You will observe that in any sum you place a dot (beginning from the right hand) before the first two figures for cents, before the third figure for florins, and the remainder are pounds, all of which can be done by common addition, multiplication, &c.

done by common addition, multiplication, &c. The present crowns and half-crowns I would withdraw from cir-culation as early as may conveniently be, and substitute a "double florin," value 4s. I would also withdraw the present 3d silver piece, as involving a fraction of a cent. All the other silver and copper coinage, with the reservation of the loss of 4 per cent. on the copper coinage alluded to above, might remain in circulation as now, thus :--The abiliting cold floring walks 60 cents

The shilling or 4 florin, value 50 cents. The sixpence or 4 florin, value 25 cents

The stapence or i florin, value 16 cents. And, if thought desirable, a silver coin equal to 10 cents. may be added; all lower denominations to be represented by the present copper coinage, say :-

One penny equal to 4 cents.

One halfpenny equal to 2 cents. One halfpenny equal to 2 cents. One farthing equal to 1 cent. By these means I think the decimal mode of keeping accounts might be at once commenced without doing violence to the prejudices of any, or disarranging the small retail transactions of trade.— Yours truly. E. J. truly,

Plymouth, April 17, 1852.

INDIAN BANKS.

To the Editor of the Economist.

SIR,—It may not be uninteresting to you, at a time when the in-tentions of the Derby Administration in all matters, directly and in-directly, connected with Free Trade are in question, to know that, at the India Board, a dispatch, proposed by the Court of Directors, prohibiting their servants, civil and military, from holding office as trustees, or directors of any joint stock companies in India, has been at last agreed to, since Mr Herries became President there. The at last agreed to, since Mr Herries became President there. The order to the above effect will, it is believed, go out very shortly, if it have not already been forwarded. For, perhaps, three years past the India House has been endeavouring to effect this object, but so long ms more liberal counsels prevailed in Cannon row, they had, and would have, failed in its accomplishment. When it is considered that in India, apart from the services, there is really no public except at the Presidencies, where jobbing and cliqueism abound, it will be seen what injury may follow the establishment of a principle by which railways coal companies ateam companies for sea and river companrailways, coal companies, steam companies for sea and river, compa-nies for banking, insurance, docking, warehousing, and other purposes of great public utility and advantage, are to be deprived of the assist-ance they might otherwise derive, by having competent and disin-terested parties in their superintendence and control. I should not so much object to the new principle if, where the old practice prevailed, it could be chosen that the public surgers of an entry of the days of the second second second and designed it could be shown that the public service had suffered any detriment whatever by the circumstance of a few selected Government servants holding or having held such or similar offices; or if the new principle were only to be enforced in cases where their continuing to hold office was found to interfere with the prompt and full discharge of duties to Government. Under such a reservation as this, the prohiduties to Government. Under such a reservation as this, the prohi-bition which so long existed against the connection of Government servants with the public press of India was, some years ago, with-drawn. But it is difficult to see why what is still permitted in the one case should be prohibited in every other. It would not be amiss, Sir, if you were to inquire into this matter and express your views accordingly. It may be a sign and symptom of what a Ministry would fain do in kindred matters, upon a grander scale, and on a nearer stage, if they have the means and are allowed the opportu-nity.—Yours, faithfully, VERD. SAT. SAT.

INDIAN BILLS INDORSED BY PROCURATION. To the Editor of the Economist.

SIR,-I trust that it will not be without interest to the commercial community to receive the following hint, by which loss of time and money, and perhaps other more serious inconveniences, may be avoided.

I beg to draw attention to the FACT that bills drawn by the East India Company in London on Calcutta, Bombay, &c., are refused pay-ment if the indorsements of such bills are signed per procuration, un-less such signature is accompanied by a power of attorney duly le-galised, stating that the party in question is really authorised to sign p. pr.

A bill, the payment of which is refused, is of course obliged to travel back to Europe to have the indorsement altered, or if this cannot be done on account of momentary absence of the principal or to the East Indies. In the meantime the produce markets in the East Indies may rise, and when the bill is fit to be converted into cash, it will be too late to execute the order originally intended. Now, I beg to ask whether the East India Company is allowed by

certain laws and regulation to adopt such proceedings, and I shall feel greatly obliged for any information on the subject.--I remain, Sir, your most obedient servant. London.

A SUFFERER.

[In this case the East India Company only insist upon a precaution which any private person would equally be entitled to insist upon if

April 24.

THE ECONOMIST.

he chose, that is, not to recognize a signature per procuration without a distinct intimation from the principal of his authority to his agent to sign for him. In transactions between private houses it is of less to sign for him. In transactions between private notates in both is of the so-consequence, because each party receiving remittances of bills so signed trasts to the respectability of his own correspondent, against whom he would have recourse in the event of any irregularity. With a Government, whose transactions may be with entire strangers, greater care is needed. It will no doubt be of service that the at-tention of the public should thus have been called to the subject.— ED. ECON.]

Emperial Barliament.

PRINCIPAL BUSINESS OF THE WEEK.

HOUSER OF LORDS --Monday: Bill to abolish the Chancery Masterships read a first fine-Muting Bill passed Tweesday: Conversation on the Maynooth Grant. Thurs-day: St Alburs Disfranchisement Bill read a second time. HOUSE OF CONMONS.--Monday: Motion for Se ect Committee on the Indian Charter arreed to. Tweeday: Motion for inquiry into the institution of Mr Bennett negatived. Wednesday: Minor business. Thursday: Motion for the Repeal of the Taxes on Knowledge debated and withdrawn.

HOUSE OF LORDS.

Monday, April 19. The Lord Chancellor laid on the table a bill to abolish the office of Master in Chancery. He explained the means by which he proposed to provide for the due performance of the daties at present discharged by the Masters, and stated that the bill had been prepared with the assistance of other four judges in contra

Lord Cran equity. Lord Cranworth and Lord Campbell expressed their approbation of the measure, Lord Campbell insisting especially upon a remedy for the abuse by which suitors were sent from one court to another at the coprice of the judges. The bill was then read a first time, and the Mutiny Bill having been read The bill was there read a first time, and the Mutiny Bill having been read a third time and passed, their lord-hips adjourned.

Tuesday, April 20.

The Royal assent was given by commission to the Mutiny Bill and several other bills

The Marquis of Clanricarde drew the attention of the house to the Maynooth The Marquis of Clanricarde drew the attention of the house to the Maynooth grant, and having compared the statement made on a former occasion by Lord Derby with that made a day or two ago by the Solicitor-General, wished to know distinctly what were the intertions of the Government with respect to the maintenance of the grant. The Earl of Derby, after some explanations as to the statements made by himself and the Solicitor-General, sold that the Government had no present in-tention of altering the existing law, and that anole notice would be given

should circumstances arise to induce the Government and the opresent in-tention of altering the existing law, and that ample notice would be given should circumstances arise to induce the Government to take another course. An animated but desultory discussion then rose, in which Lord Grey, Lord Derby, the Earl of Harrowby, the Marquis of Lansdowne, and the Bishop of Cashel, took part, after which the subject dropped and their lordships ad-tourned. lonrned.

Journed. Thursday, April 22. The St Albans Disfranchi-ement Bill was read a second time on the motion of Lord Derby, who entered at considerable length into the details of the cor-rept practices which had prevailed at the elections for that borough. Lord Redesdale then moved that leave be given for the hearing of counsel at

th

After some discussion the motion was carried on a division, the numbers ing-Contents, 41; non-contents, 15; majority, 26. Their lordships then adjourned.

Friday, April 23.

Lord Brougham moved that there be laid before the house copies of the correspondence between the Court of East Iudia Directors and the Government of Iudia, relative to the trial of Jotee Pershaud, and to the conduct of certain

embers of the Indian service, connected with that proceeding. The Earl of Ellenborough considered the motion was perfectly proper, and a boped, in justice to the parties who e conduct was involved in the matter, nat it would be agreed to by their lordships. that

The Earl of Derby intimated that there would be no objection on the part of the Government is lay the correspondence before the house. The motion was then agreed to, and their lordships adjourned.

HOUSE OF COMMONS.

Monday, April 19.

Monday, April 19. The Attorney-General obtained leave to bring in a bill to render it unne-cessary to summon Grand Juries within the metropolitan district, and for the amendment of the criminal law in other particulars. opMr Herries moved the appeintment of a select committee to inquire into the oferation of the Act 3d and 4th of William IV. C. 85 for the better government India, and to report their observations. He reminded the house that from 1784 there had been a gradual tendency to the abolition of the exclusive rights and privileges of the East India Company; that in 1813 private traders were admitted to compete with the Company in the commerce of India, and that in 1833 the Company was not only divested of its exclusive rights of trading, but inhibited from trading at all, whilst the act then passed, the ope-ration of which he new proposed to suit-ject to inquiry, took away from the ration of which he now proposed to sui ject to inquiry, took sway from the Company all their tertitorial rights as proprietors of the soil, which were made over to the Crown, and their commercial assets were disposed of in the manner over to the Crown, and their commercial assets were disposed of in the manner provided by that not. In return for this immense sacrifice, the stock of the C-mpany, amounting to 6,000,000, was not to be subject to redemption until 1874, provided, however, that if during that forty years, the agency of the Company in the government of India should be withdrawn from them, they would be entitled to demand the redemption of their stock at the rate of 2007 for every 1001 stock. The Company also retained the entire pstronage of India, which had always belonged to them as incident to their territorial rights, except that they had not the appointment of the Governors and Com-manders-in-Chief. On the other hand, the Crown had the power of revoking all appointments; but the Company possessed the sight of revoking that of the Governor-General of India without the consent of the Grown. In the year 1854 the existing system would ocase with the act of 1833, and Parlia-ment had now three courses open to it—first, to suffer the aot to expire; se-cond, to renew the act without further inquiry; and third, to institute the ex-amination he new suggested before it came to any final determination. The

Iste Government had resolved to propose the appointment of committees in both houses; and, after the most mature consideration, the present Govern-ment had thought this the course most belitting the importance of the subject. It was natural to inquire, he observed, what had appeared to have been the effect of the changes introduced in 1833, during the last twenty years, touching the welfare and progress of our Indian empire-not merely whether the reve-nues had prospered, but whether the administration, under the existing ma-nagement, had, in other respects, contributed to the well-being of the peopla. The total gross revenue had increased from 18,407,0002 in 1834 to 24,379,000 The total gross revenue had increased from 15,407,000l in 1834 to 24,379,000lin the present year, showing an augmentation of 6,000,000l in less than twenty years. The charges, however, had increased, so that in the last year there was a deficiency of 678,000l. How had this occurred? The wars in which British India had been involved, in Afighanistan, in Scinde, and in the Punjab, had awal owed up no less than 36,000,000l. But when he looked at the Indian debt, he found that the addition had only been 20,000,000l; it followed, there-fore, that, so buygant had been the Indian revenues, that they must have fur-mished 16,000,000l towards the extraordinary war expenditure. It might be said that this large revenue extracted from the country had tended to exhaust its resources. There was no better way of meeting this allegation than by showing the progress of Indian commerce; and it appeared that the amount of the exports and import, and that of the towarge entered inwards and out-wards, had more than doubled in the last twenty years. At no former period, he th-ught, were the prospects of Indian for favorable as at the present moment. Mr Herries then read various details, the results of which showed that the Mr Herries then read various details, the results of which showed that the natives of India were largely employed in administrative as well as in judicial offices; and that the est-blishments for native education had been greatly augmented. He then revert d to the outlay on account of canals, roads, tanks, and other means of communication, far exceeding, he said, the deficiency of the revenue, which had consequently been absorbed in the permanent improve-ment of the country. After stating the extent of the patronage distributed by ment of the country. After stating the extent of the patronage distributed by the Court of Directors in the last seven years, he observed, with reference to the agency exercised by the East India Company in the government of India, that it was a mistake to suppose that the Company were mere ministerial fanc-tionaries; they had the power of objecting, and of furnishing and requiring in formation to and from the Government—who were ultimately responsible for all political measures—not only by co-respondence, but by confrontation. He had himself feit the great advantage arising from this agency, and had no heat-terion in avaing that for the code government of India is was an agency of the had himself feit the great advantage arising from this agency, and made to nem-tation in saying that for the good government of India it was an agency of ha-finite importance. It would be the duty of the committee to make the most searching inquiry into the expediency of retaining this agency, which had worked well for the last twenty years. If found to be inexpedient, it would be for the wisdom of Parliament to device some other system. Mr Anstey moved, by way of amendment, in addition to the motion, that an address be presented to Her Majesty, praying that commissioners be sent into British India, instructed to prosecute loquiries and report the evidence, with ther observations. He promosed this commission, because even in the picture

British India, instructed to prosecute inquiries and report the evidence, what ther observations. He proposed this commission, because, even in the picture drawn by Mr Herries had been as correct as it was flattering, the inquiry pro-posed by him could not be complete unless information was obtained from the natives of India, which was improcticable without local inquiry. Mr Anstey entered at great length into the causes of what he considered to be mis-government of India, expatiating upon the wretcheduess of its population, the sait ard opium monopolies, the impolicy of the sugmentations of territory, and of the wave axising therefore

of the wars arising therefrom, and in the course of his strictures animadverted in strong terms upon the case of Colonel Outram. Mr Baillie differed from Mr Anstey as to the best means of obtaining the re-quired information, and as to the expediency of a royal commission to inquire quite information, and as to the experiency of a royal commission to industry into the grievances of the nativer, who, it appeared from a memorial of the British Indian Association (composed of natives of India), did not desire such a mode of inquiry. The question was now a more simple one than formerly; it was merely whether the powers given to the East India Company by the act of 1823 should be curtailed or modified.

1883 should be curtailed or modified. Sir T. E. Colebrooke expressed his satisfaction at the statement made by Mr Herries as to the employment of the natives of Indis, and condemned the amendment as casting a wholesale censure upon the Government of India. The mutual check afforded by the existing double Government ought, in his opinion,

to be retained. Mr Hardinge concurred with Mr Baillie in objecting to a royal commission, and undertook, from personal observation, to say that Mr Anstey's description of the condition of the people of India was exaggerated. He had observed a very strong contrast to their advantage between them and the population of native States.

Mr Hume was pleased to find that the present Government, like the last, had determined not to adopt the faral policy of removing the Court of Directors. So far from reducing the power of the Court of Directors, under an improved constitution, it should be enlarged, so as to control the Minister of the day, who could now plunge India into war without sny check on the part of the Directors. He advised Mr Anstey to withdraw his amendment on the ground that it was impracticable.

Sir J. Houg, on the part of the Court of Directors, said it was their sole anxious desire that the fullest and most ample information should be laid before the house; and their only wish was that the result of its deliberations should be such as would tend most to promote the weifare and advantage of India. Sir James complained of the conree pursued by Mr Anstey, especially with reference to the case of Colonel Outram, which he had argued, he said, upon ex parte statements. He described with more precision than Mr Herries had done, the respective duties of the Board of Control and the Court of Direc-tors. The administration of all matters in the finance, revenue, and political departments to India was vested by law in the East India Company, and prac-

departments to india was vested by naw in the East india Company, and prac-tically in the Const of Directors; questions of peace and war were within the exclusive cognisance of the Board of Control and the Secret Committee. Sir R Inglis urged that attention should be paid in the proposed inquiry to the instruction, and especially the spiritual instruction, of the people of India. He trusted that so alteration would be made either in the constitution of the Court of Directors, or in the distribution of their patronage. Lord J. Russell, assuming that it was intended that the Government should

propose and Parliament decide upon the plan for the future government of India, thought that the appointment of a committee would be useful in the way of collecting information and making suggestions respecting that vast question. Our first care should be to provide for the millions of Iudia the benequestion. Our first cars should be to provide for the millions of India the bene-fits of good government, and especially for their education and social improve-ment; and in these respects, he thought, we had in a great degree performed our duty to the people in India. As regarded the act of 1833, therefore, although it might be susceptible of improvements in particular points, he thought, in its great outline, it ought to be maintained. With respect to the construction of the machine of government, though theoretically it was open to objection, he helieved it had worked usefully for the people of India: whils questions of peace and war, which were not unconnected with European inte-rests, were and should be left to the discretion of the Ministers of the Crown, with regard to matters of finance, legislation, and revenue, the Coart of Dire-tors should offer their suggestions, the Board of Control having the power of

THE ECONOMIST.

approving or objecting. The question of patronage, he agreed, affected the constitution of the country, which might be endangered by vesting it in a Minister of the Crown, and he thought it was a most fortunate circumstance that a mode of governm at had been found which, whilst it provided for the good administration of India, placed the sovereignty of that wast empire under the Crown of the United Kingdom without injury to the working of the constitution. Mr Goulbarn noticed an omission in the speech of Mr Herrise of one branch of the inquiry—namely, t e result of the system introduced in 1833, for the religious instruction of the people in India; whether the measure had led to the favourable results which had heen auticipated, and how far it had been made instrumental to the extension of Caristianity. India, he considered, had been given to us upon the soleum condition of taking all means that prudence would sanction to extend over that continent the knowledge of truthe which we believed essential to our own happiness. After a few remarks from Sir H. Willoughby and Mr Mangles, the amend-

After a few remarks from Sir H. Willoughby and Mr Mangles, the amendent was negatived, and the original motion was agreed to. Several bills were forwarded their respective stages, and the house adjourned m

at 1 o'clock.

Tuesday, April 20. In reply to a question put by Lord D. Stuart,

The Chancellor of the Exchequer stated, with reference to the outrage al-leged to have been committed by the police at Leghorn upon a corporal of marines named Braggs, belonging to her Majeaty's ship Firebrand, that the British Government had not accepted the puni-hment of eight days' imprison-ment, inflicted upon one of the police officers, as a sufficient reparation, and that communications were still going on with the Tuscan Government respecting this case, as well as that of Mr Mather.

Sir De Lacy Evans obtained leave to bring in a bill to amend the act for the gulation of vestries, with reference to joint parishes. Mr Horsman moved an address to Her Majesty, praying that inquiry might

Mr Horsman moved an address to rier majorsy, praying this interpreta-be made, whether due respect was paid to the decrees of the constitutions and canons ecclesiastical of the Church of England in the recent institution of Mr Bennett to the vicarage of Frome. He traced the history of Mr Bennett from his appointment to the incumbency of St Paul's in 1843, observing that he had his appointment to the incumbency of St Faul's in 1843, observing that he had been known previously by his preachings and writings, and that remonstrances and warnings had been addressed to the Bishop of London against his appoint-ment, which were, however, disregarded. Subsequent to the appointment complaints poured in upon the bishop; tumultuous proceedings took place on Sundays in the locality of the church; the case forced itself upon the attention of the public, the press, and the bishop of the diocese, who required Mr Bennett to resign his living, which, after some communications with the bishop, he did, and his resignation was accented, the grounds assigned by the Bishop of London to resign his living, which, after some communications with the bishop, he did, and his resignation was accepted, the grounds assigned by the Bishop of London for this proceeding being, among other things, that Mr Bennett had been un-faithful to the Church and in-ubordinate to his diocesan. The people of Eng-land, Mr Horsman continued, never expected that Mr Bennett, after this, would have appeared in any pulpit of the Established Church; it was with astonishment, therefore, that within twelve months of his resignation they found Mr Bennett instituted to a vicarage in another diocese. His resignation took place in January, 1851; and in the summer of that year it had been re-presented that, when travelling in Germany, he had regularly attended mass in a Roman Catholic church. The people of Frome, clergy and laity, in a panic address d Lady Bath, the patron, intrasting her to refrain from nominating Mr Bennett; she replied that the appointment had been made and could not be Bennet: she replied that the appointment had been made and could not be revoked. The presentee, however, must be approved by the bishop, and the parishioners memorialised the Bishop of Bath and Wells, objecting to the insti-tution of Mr Beonett on three grounds--first, his own published writings; se-cond, the Bishop of London's testimony sgainst him and his virtual expulsion of Mr Bennett's resignation was made and accepted. Mr Horsman explained the conductions under which a clock in block of the reasons why Mr Bennett's resignation was made and accepted. Mr Horsman explained why air bennetts resignation was made and accepted. Air fifthermal explained the conditions under which a clerk in holy orders, removing from one diocese to another, can only be instituted by the bishop of the diocese into which he re-moves, and anima.iverted with some severity upon the manner in which the Bishop of Bash and Wells had replied to the Frome memorialists. In conclu-sion, he called upon the lairy, constituting, he said, the Church of England, to bestir themselves in a constitutional manner, by laying their petitions at the foot of the throne, praying Her Majesty to protect the Church, not against essential from without, but assist trainer within and competence of some the displassaults from without, but against traitors within, and compel even the digul-taries of the Church to show that ob-dience to the law which the Bishop of Bath and Wells had so wantonly repudiated.

Bath and Wells had so wantonly repudiated. The Chancellor of the Exchequer said it was impossible to exaggerate the importance of this subject; but, if the house sanctioned this motion, he feared it would introduce elements of di-cussion pregnant with effects not anticipated. The means at the command of the house were inadequate to deal with this case. The means at the command of the house were inadequate to deal with this case. According to Mr Horsman, a great grievance had been sustained by some of Her M-jesty's subjects; but he had proposed no remedy. Suppose the house assented to the motion, and the Crown issued a commission of inquiry, it would have no power to force individuals to give information. Either there was at present a remedy for this alleged grievance or not. He imagined that there must be an appeal to the Archbishop, and if so, that was a reason why the House of Commons should not interfere by substituting a measure confessedly in-adequate. If he was told there was no such appeal, was that not a reason for lesislation? If Mr Horsman believed there was no remedy by appeal be was institud in bringing the case before the house, but he chould appeal, he was justified in bringing the case before the house; but he should propose to legislate in a suitable manner. He (Mr Disraeli) gave no opinion upon the metits of the case, feeling that that house was not a tribunal by which is ought to be decided, and he hoped Mr Horsman, being satisfied with bring-ing the case before the house, and considering that it was his duy either to have recourse to the remedy which the law supplied, or, if there was none, to propose to legislate upon the satject, would not press his motion. He moved the previous question

propose to registate upon the surject, would not present a survey of the previous question. Sir H. Verney hoped that Mr Horsman would not accept this advice, and that the opinion of the house would be pronounced upon this important subject. Sir R. Inglis agreed with Mr Disraeli that that house was not a tribunal be-fore which such questions as this could be adjudicated, and that, if once such a grievance were entertained, there would be andless appeals of the same kind. If the motion were adopted, it would be a mere brutum fulmen.

Mr Ewart said the house was not asked to constitute itself a tribunal, but merely to adopt a constitutional and most usual course of proceeding. Mr Hume supported the motion. Parliament had established a church by law, and a scandal was alleged, and not denied.

Mr Newdegete considered that the question having been raised it must be dealt with, and although he wished to leave the investigation of it to the Go-vernment, he thought their mode of meeting the motion would be unsatisaddressing the Queen upon this subject, but he could believe that the Govern-ment might prefer some other mode of inquiry. He begged them, however, not to ask the house to ignore the question without suggesting some practical

Sir J. Pakington likewise thought that the question ought to be dealt with ; and further, that it was one which ought to have been raised. He admitted

that there should be an inquiry, but not in the mode proposed. He could not vindicate the conduct of the Bishop of Bath and Wells, whose health was im-paired; but that was not the real question raised, which related to the alleged conduct of Mr Bennett at Kissingen. If Mr Horsman's allegations in that par-ticular were true, Mr Bennett must be a Boman Catholic. That conduct, which was unknown to the bishop, ought to be investigated. Lord J. Russell said, it was impossible to deny that this was a subject re-specting which they had a right to an explanation. The House of Commons had been a party to the Act of Uniformity, and had, therefore, a right to ask if those who were suppointed to livings were members of the Church of England. But having established that right, he felt the greatest difficulty as to the mode of exercising it. A royal commission might provoke hostility, and he felt the force of the objection that the remedy would be insufficient. He felt, also, that, with regard to particular circumstances, the house was in a great degree withwith regard to particular circumstances, the house was in a great degree with-out information. If it was admitted that this was a proper subject for inquiry, the better course would be to wait till the Ministers of the Crown should, in a friendly spirit, accertain the facts, when the house would be in a better state to determine what steps to take, either by enforcing the existing law, or by new legislation. The whole subject being of such transcendant importance, he should hesitate before he assented to the motion.

Mr Henry Drummond maintained that that house was the only proper tri-bunal to re-ort to in order to assert the rights of the laity against the usurpations of the priesthood.

Mr Sponser should wote for the motion if pressed to a division; but it was ill in the power of the Government to adopt the hint of Lord J. Russell.

Mr Mangles thought a strong prima facie case had been made out.

Mr Mangles thought a strong prima facie case had been made out. Mr Giadstone disputed, and was ready at the proper time to confute, some of the statements of Mr Horsman. Others allegations made by him, he granted, were most material, and, if proved, were so grave that they demanded atten-tion. But he objected to the vague and indefinite measure proposed. If the question was whether the Bishop of Bath and Wells, in instituting Mr Bennett, had or had not proceeded according to the letter and spirit of the law, it appeared to him that Her Msjesty's Government might, in a friendly spirit, obtain the facts and make such a report as would enable the house to judge whether any and what further steps should be taken in the matter. Mr Walpole admitted that a case had been made out which not only invited but required investigation, for if a minister, professing to be a member of the

but required investigation, for if a minister, professing to be a member of the Church of Eogland, and instituted to a benefice, was in fact, or was likely to become, a member of another Christian community, the law, if not strong enough to reach such a case, ought to be made stronger. In compliance with enough to reach such a case, ought to be made stronger. In compliance with the suggestion of Lord J. Russell and Mr Gladstone, the Government would institute an inquiry in a friendly spirit into the facts, in order to see whether

institute an inquiry in a friendly spirit into the facts, in order to see whether any and what measures should be taken in this matter. After a few words from Lord R. Grosvenor and Mr Aglionby, Mr Horaman declined to withdraw his motion upon any other condition than that there should be a judicial inquiry. The Chancellor of the Exchequer did not see how there could be a judicial inquiry; but he would promise that the inquiry should be a bona fide one. Upon a division, the motion was lost by 100 to 80. Lord D. Stuart moved for copies of communications between this Govern-ment Turker, and other foreign Government. respecting the refuceat detained

ment, Turkey, and other foreign Governments, respecting the refugees detained

at Kiutayah. Lord Palmerston, as far as he was concerned, did not object; and Mr Disraeli, after this statement, not opposing the motion, it was granted. The other business having been disposed of, the house adjourned at 20 minutes past 9 o'clock.

Wednesday, April 21.

Mr Conolly, in moving the second reading of the Irlsh Fisheries Bill, dis-cussed at much length the general policy and character of past legislation upon this subject, especially the act of 1842, and explained the leading objects of the bill, which consolidated the existing laws, and introduced provisions adapted to secure the interests of proprietors without injury to the public.

Lord Nass said this was a question of infinite difficulty, involving a multitude of conflicting interests, and with which it was impossible for a private member to deal satisfactorily. He admitted that the law upon this subject was not in a proper position; but the effect of the bill as it stood would be to infinge the a proper position; but the effect of the bill as it stood would be to infining the rights of property, by sweeping away titles guaranteed by Parliament. Some-thing, however, ought to be done, and it would be the duty of the Government hereafter to endeavour to grapple with the question. In the meanwhile he re-commended that the bill, which was open to various objections, should be withdrawn

Mr Monsell, Mr F. Scully, Mr H. Herbert, Captain Jones, and Sir William omerville, concurred in this recommendation ; and, after some remarks from Mr Whiteside and Mr Frewen, Mr Conolly withdrew his motion.

Mr Conolly withdrew his motion. Mr Frewen moved the second reading of the Building of Churches, &c., Bill, explaining its general scope and the objects of the several clauses. The Speaker noticed that one of the clauses was not within the title of the

bill

Mr Gladetone pointed out other informalities, and the order for the second

reading was diecharged, Mr Deedes moved the second reading of the Parish Constables Bill. Captain Scobell suggested some objections for the consideration of the committee.

Sir J. Trollope, not opposing the second reading, observed that the bill would Sir J. Follope, not opposing the second reading, observed that the bill would cast the charges of the constables upon the parochial rates, although the ofject was altogether away from the object of these rates, and of no special benefit to the owners of land. This objection could be dealt with in the committee. After a few observations from Mr Aglionby and Mr Packe, the bill was read

second time.

The house then went into committee upon the Enfranchisement of Copyholds Bill, the clauses of which were considered and agreed to. Mr Slaney moved the second reading of the Industrial and Provident Part-nerships Bill, the object of which was to provide a cheap tribunal for the humble

classes when associated for a common purpose. After a few remarks from Mr Henley, the bill was read a second time, and ordered to be referred to a select committee.

The Proclamation for assembling Parliament Bill was read a second time, and the Burghs (Scotland) Bill was read a third time and passed. The house adjourned at twenty minutes past five o'clock

Thursday, April 22.

Mr M. Gibson brought under its notice the policy of deriving revenue from Ar M. Glosob brought duder is notice the policy of deriving revenue from taxes upon knowledge, and moved separate resolutions, to the effect that such financial arrangements should be made as would enable Parliament to dispense with the duty on puper; that the newspaper stamp ought to be abolished, and the tax on advertisements repealed. He premised that he brought forward these propositions, not on behalf of any suffering interests, but upon the ground of public policy, and with reference to the character of the taxes themselves and their effect upon the morals and industry of the nation; and as to the time,

THE ECONOMIST.

he held it to be the legitimate function of members of that house at any time to question the sources of taxation, and inquire whether the money raised for the support of the public establishments might not be supplied in a better manner. The resolutions were distinct; the assent to one did not require an assent to another. With respect to the duty on paper—the total and immediate repeal of which had been recommended by a committee of that house in 1834—apart from its obnoxious character as a tax upon knowledge, the excise regulations were oppressive, and did not protect the revenue from fraud, or the honest trader against unf-ir competition. Its repeal, moreover, would attract more capital into the rural districts for the employment of labour in the manufacture, whereby this country might supply the whole world with paper, and it would remore an obstacle to the improvement in the quality of our cheap literature. The duty on paper yielded 800,000*i*, but the advertisement duty produced only 160,000*i*, and no tax, he issisted, could be more stupid, for it struck at the very root of revenue, which, if it were repealed, would not feel the loss. Money, he said, could not be the motive for maintaining a tax su opposed to every sound principle; its object must have been to cripple and fetter the every sound principle; its object must have been to cripple and fetter the newspaper press at the expense of the diffusion of useful information. The newspaper stamp was still less a revenue question; it was not originally im-posed, and had never been continued in order to recruit the revenue, but to posed, and had never been continued in order to recruit the revenue, but to restrain the license of the press. Postal facilities, he contended, had no neces-sary connection with this tax; on the contrary, under a different regulation, the post office might obtain a larger revenue from the transmission of news-papers, at a cheaper cost to the senders. Mr Gibson referred to the contents of certain unstamped productions to show that the tax did not accomplish its original purpose—that of checking the dissemination of mischievous matter. From this topic he returned to the wast circulation of the *Zimes*, which, he said, commed to be acting up the part of the form From this topic be returned to the wast circulation of the *Tunes*, which, he said, seemed to be eating up the rest of the press; the effect of its extraordina-y popularity being, as Mr Gibson argued, a serious evil, by creating a kind of mo-nopoly and limiting the diffusion of intelligence, and which he endeavoured to trace to the tax in question. After some general remarks upon the policy of these taxes, and the embarassments to which they might lead, he contended that Parliament was justified in dealing with them upon broad, public grounds.

Mr Ewart seconded the motion, dwilling upon the effects of the advertise-ment and stamp duties, which, arguing from the example of America, he main-tained, linited the circulation of newspapers in this country, and robbed the poor of an innocent enjoyment.

The Chancellor of the Exchequer assured Mr Gibson that the pre-ent Government were not actuated by any einster feelings towards the newspaper press, or any apprehension respecting its influence. He was bound to consider these questions, not under philanthropical or popular aspects, but as a financier. press, or any appreciation respecting its innerter. All was bound to the exciser these questions, not under philanthropical or popular aspects, but as a financier. With regard to the paper duty, he did not conrist the accuracy of Mr Gibson's observations upon the effects of the excise regulations upon the manufacture of paper, but he was not aware that their injurious operation was limited to that manufacture; he could make out as good a case for sonp. The question was whether they were not necessary evils. With every desire to relieve industry and to promote education, but considering, as he must, the effect of these pro-positions upon the credit and finances of the country, he did not feel justified in assenting to them. On Friday the 30th he would place before the house the real state of the finances of the country, and when Mr Gibson and his friends were in possession of that statement it would be open to them to declare their views. With respect to the advertisement and stamp duties, he thought they were subjects which deserved the gravest consideration; but, he repeated, he must consider them primarily with reference to the effect of their repeal upon the general revenue. The advertisement had considered it. He distinguished that and the stamp duty very much from the duty on paper, which was so large gravely considered, and the Government had considered it. He distinguished that and the stamp duty very much from the duty on paper, which was so large that every one should besitate before he consented to reinquish it. All these matters, however, depended entirely upon the state of the fluances, and the matters, however, depended entirely upon the state of the fluances, and the matters, however, depended entirely upon the state of the finances, and the house must feel the great inconvenience of coming to a premature decision on questions of this kind. He reminded the house that there was a determination on its part not to impose new taxes; that the two great sources of our indirect taxation had been stracked, and that a committee was now making war upon a principal source of our direct taxation. Under these circumstances the house should pause before it adopted a motion that would reduce the revenue nearly 1,500,000, and he thought it was not asking too much to call upon it to permit him to make his financial statement without the incumbrance of such a vote. He, therefore, felt it to be his dury to oppose the motion.

Mr Wakley suggested that after this declaration the debate should not be rolonged, and he moved that it be adjourned.

Mr Cobden concurred in this suggestion, as well as Mr Gibson, who, having been absent from the house during the speech of Mr Disraeli, wished to have a distinct understanding whether the subject of these duties was to be taken into consideration by the Government.

The Chancellor of the Exchequer said, what he had stated was not with re-rence to this motion. In reviewing the taxation of the country these duties could not be omitted from consideration, but it was not to be supposed from any statement he had made that they had been specially considered. No terms had been made as a condition of the adjournment.

After some observations from Mr Hume, Mr Mowatt, and Mr Frewen, the bate was adjourned.

The other business was soon disposed of, and the house adjourned at a quarter past 8 o'clock.

Friday, April 23. On the motion for the second reading of the Militia Bill, Sir De Lacy Evans rose to move that the bill be read a second time this day three months. This was not the first bill which had been prepared on the subject, and of the two he must say that he preferred the first one to that now before them. He disapproved of a militia force altogether; it possessed no ad-vantage whatever over a regular force, and as far as expense was concerned he was convinced that 50,000 militia men would cost just as much as so many regulars. In his opinion the best defence for England was the British army, and if we concentrated our regular force, so foolishly and injudiciously dis-persed in our colonies, we should have no occcasion for the levying of a militia force. COURT AND ARISTOCRACY.

COURT AND ARISTOCRACY. THE QUEEN, Prince Albert, and the Royal Family, accompanied by Prince Leopold of Saxe-Coburg, left Windsor casts on Monday afternoon, and arrived at Backingham palace at twenty-five minutes before four o'clock. On Tuesday the Queen held a court at three o'clock at Buckingham palace. The Queen held a levee on Wednosday afternoon at St James's palace. On Tursday the Queen held an Investiture of the Mont Hon. Order of the Bath at three o'clock at Backingham]palace, when several knights were invested, and several other gentlemen were knighted.

METROPOLIS.

THE CRYSTAL PALACE .- The public feeling in favour of the retention of the The CRYSTAL FALACE. — Ine point teening is havour of the relation of the Crystal Palace has been abundanily manifested during the week. On Stur-day at noon a numerous and highly respectable meeting of the inhabitants of Westminster was held at Willis's Rooms, over which the High Bailif, Mr Fran-cis Smedley, presided. Several members of Parliament took part in the pro-ceedings, and an almost unanimous condemnation of the intended V indailism was expressed. On Tuesday, a numerously attended meeting of the inhabit-ants of the borough of Marylebone was held at the Princess's Concert Room, Castle street. Or for attreet, on the sublect. Admiral bit George Satisfies ants of the borough of Marylebone was held at the Princess's Concert Room, Castle street, Oxford street, on the subject, Admiral Eir George Sartorius in the chair. It was similarly influential in its character, and had a similar re-sult. At a public meeting held in the British School Rooms, Cowper street, City road, resolutions in favour of retention were unanimously adopted, and the petition numerously signed. A meeting of the inhabitants of Finsbury was held at the Music hall. Store street, on Tuesday evening, to consider the best steps to be taken to prevent the destruction of the Crystal Palace. Mr Wm. Daniels, Q.C., occupied the chair, and resolutions and a petition to Parliament in favour of the maintenance of the glass structure were should. At the tirst in favour of the maintenance of the glass structure were adopted. At the first meeting of the Hackney Guardians since the election, a similar petition was ilar petition was adopted.

BANQUET AT GOLDSMITHS' HALL .- The Wardens of the Goldsmiths' Com-BANQUET AT GOLDSMITHS' HALL.—The Wardens of the Goldsmiths' Com-pany entertained Het Msjesty's Ministers at a banquet at Goldsmiths' com-Saturday evening. Lord Derby in the course of his speech drew a parallel be-tween the recent discoveries of the precious metals, and the introduction to office of his own Government. He intimated that he had picked up gold where it had never previously been auspected to exist. He had not gone to the old mine, but to "new diggings," and experience would prove whether the article produced would not stand for its full worth on its final assay.

THE CASE OF MR SALOMONS, M.P. — The judges have given judgment against Mr Salomons, M.P., in the case "Miller versus Salomons," and the subject of Jewish disabilities must therefore again come before the House of Commons with

Mr Salomons, M.P., in the case "Antier versus Salomona," and the subject of Jewish disabilities must therefore again come before the House of Commons with more argent necessity than ever for settlement. It appears that one out of the three judges before whom the case was tried holds an opinion favourable to the claim of Mr Salomors, whilst the other two were adverse. METROPOLITAN SANITARY ASSOCIATION.—A deputation of this body, headed by the Bi-hop of London, and comprising the Rev. Dr Camming, Rev. C Hume, Mr B. Bond Cabbell, M.P., Mr T. Abraham, Dr W. H. Brown, Mr W. Uitiam Rogers, Mr P. H. Holland, Mr George Goodwin, F.R.S., Mr W. D. Bruce, F.S.A., Mr Louis Hume, Mr John W. Smith, Dr Gavin Milroy, Mr C. F. J. Lord, Mr Robert Fox, Mr H. Roberts, F.S.A., Mr F. O. Ward, and Rev. M. W. Lucignan, M.A., Mr A. Barnett, M.E., Mr R. Walsh, honorary secretaries, waited on the Earl of Derby on Wednesday afternoon, to present a memorial, calling his lord-hip's attention to the sanitary evils now pressing on the inha-bitants of London, and to point out the means of their alleviation. The Bishop of London introduced the deputation. In his reply, the Earl of Derby thanked the speakers for their valuable suggestions, and replied at considerable is ogth, commenting on the various obstacles to grapping at unce with all the details of so vast a scheme, but assuring the deputation that the sanitary question occupied a large share of the attention of Her Majesty's Government, and that short as the session would be, they were in hopes of doing sometbing towards settling the important question of extramural sepalture before the separation of Parliament. Ture MILLTLA BLL, —Several decisive expressions of opinion adverses to the Parliamen

THE MILITIA BILL .- Several decisive expressions of opinion adverse to the Government measure have taken place during the week. At a meeting of the inhabitants of Marylebone held at the Literary Institution, Edward street, Portman square, Mr J. Williams, M.P. in the chair, strong condemnatory re-Fortman square, Mr J. Williams, M.P. in the chair, strong condemnatory re-solutions were passed. A highly satisfactory meeting has been held in the Temperance Hall, Chelsea, George Thompson, $E \cdot \alpha_i$, M.P., in the chair, who spoke long and eloquently. The other speakers were Messrs James B-II, E Fry, T. Dexter, and F. Chesson; and the resolutions were unanimously car-ried. On Saturday night a meeting was held in the Music hall. Store streat Fry, T. Dexter, and F. Chesson; and the resolutions were unnaimously car-ried. On Saturday night a meeting was held in the Music hall, Store street, Thomas Eld Baker, E.q. in the otair. The speakers were Musars Cooper, Pierce (churchwarden of St Pancras), Jacob Bell, M.P., Rugers (the Chancery barrister), Buckton, Edwards, and Henry Richard. On Monday night a large and enthusiastic gathering took place in the Camberwell hall, H. R. Etington, Esq., in the ohair. Speeches were delivered by Messrs Chamerovzow, Russell, Jeffrey, Townsend, and the Revs. Henry Richard and John Burnet. Letters ad from the members for the borough declaring their intention to oppose the bill.

HEALTH OF LONDON DURING THE WEEK .- The official report says : HEALTH OF LONDON DURING THE WEEK.—The official report says: -The mortality of London again exhibits a slight increase, the deaths in the pre-vious week (ending April 10th) having been 1,051, those in the week that ended last Saturday being 1,092. In the ten corresponding weeks of 1842-51 the average number of deaths was 944, which, if raised in proportion to increase of becomes 1,038. The mortality of last week, therefore, exceeds the corrected popu-lation average by 54 deaths. Last week the births of 805 boysand 839 girls, in ali 1,644 children, were registered in London. The average of seven corresponding weeks in the years 1845-51, was 1,373. At the Royal Observatory, Greenwich, the mean reading of the barometer during the week was 30.012 in. The mean temperature of the week was 47 d-g. The wind was generally in the east till Friday, on which day and Saturday it blew from the north-east.

PROVINCES.

THE ANTI-MILITIA DEMONSTRATIONS.—The opposition to the Militia Bill increases in activity and strength the nearer we approach to the recond reading of the measure.— A great meeting held in Birmingham has excited the people to energetic opposition, and a town's petition has been signed already by 13,000 persons.—The two meetings which have been held in Bristol have pro-duced the strongest excitement against the measure. A general petition signed by 11,450 persons, has been forwarded to the Hon. F. H. F. Berkeley.

THE COMING ELECTIONS.—Bridgewater.—Mr Serjeant Kinglake (author of "Eothen," &c.) is the Liberal candidate for this borough, and has addressed the electors. On the subject of Parliamentary reform, Mr Kinglake said be was ready to go great lengths. —Buckinghamshire.—It is, we believe, the in-tention of Dr Lee to contest the county in real carnest, and at all hazards to go to the poll.—Bucks Advertiser.—Cheltenham.—Sir Willoughby Jones has formally accepted an invitation to context the borough, and has repaired to the seems of contest. He will support Lord Detby, but not in Protection.— Evenham.—Mr Greaville Berkeley has addressed the electors, and was well re-ceived. Mr Serjeant Wilkins has issued an address to the elector, in which he indicates his adherence to the political principles of the National Parliamentary and Financial Reform A-s ciation.——Hastings.—Mr Hollond, the Liberel member, retires, but his place is supplied by Mesers Warre and John Locke, jun. The Conservative member. Mr Brisco, stands again, and is to have as a colleague Mr Robertson.——Maclesfeld — The context at Macolesfield will be between three candidates.—Mr John Brocklehurat, a silk manufacturer, banker. send Whig: Mr John Williams, M.P., in the Reform interest ; and Mr E. C. THE COMING ELECTIONS .- Bridgewater .- Mr Serjeant Kinglake (author of between three c.ndidates—Mr John Brockleburst, a silk manufacturer, banker. and Whig; Mr John Williams, M.P. in the Reform interest; and Mr E. C. Egerton, a barrister, and Conservative.——Notlingham.—At a meeting of Liberal electors on Thursday, a resolution "that this meeting pledges itself to support Mr Strutt and Mr Gieborne at the coming election," was carriedf unanimously.——Notlingham (North).—Lord Robert Clinton, brother of the Duke of Newcastle, is pur-sung his canvass on the Free Trade interest, with very gratifying success.——Shaffeld.—Mr W. Overend, a barrister, has con-sented to become a candidate in the Conservative and Free Tysde interest.—— Hail/ax-—There is now a perfect union amongst all shades of reformers. Sir Charles Wood, the Whig, and Frank Crossly, E-q., the Radical, candidates having coalesced.——Ripon —William Beckett, Esq. at present the Free Trade Conservative member for Leeds, has become a candidate for Ripon, as suc-cessor to Sir James Graham, who is a candidate for the representation of Carlisle. Carliele.

IRELAND.

ARRIVAL OF GENERAL RUSAS AT QUEENSTOWN .- The arrival of the ex dietator Ro-as at the port of Queenstown is thus announced in the Cork Re-porter of Saturday :-- "Her Majesty's steamer Conflict, from the river Plate, arrived at Queenstown on Friday, having on board General Ro-as, his family and suite. The Conflict left the Plate on the 10th of February, touched Bahia on the 5th of March, and was bound to Portsmouth, but was obliged to put in here owing to head winds. We understand that during her voyage one of the boilers burst, by which four men were killed. The General and his family landed and walked about Queenstown on Friday. In the course of the day his daughter and daughter-in-law, accompanied by some of the officers of the ship, visited this city, and returned to Queenstown the same evening by the 9 o'clock train. The Conflict, which is one of Baring and Co.'s broken down shipe, will sail to Spithead in a few days with the General.

ships, will sail to Spithead in a few days with the General. THE EMIGRATION MANIA.—The Galway Mercury states that so great is the anxiety felt by the poor labouring classes in that part of Connaught to escape from the "land that bore them," that such of them as have been fortunite enough to obtain employment on drainage works have adopted the following nevel and extraordinary mode of enabling themselves to emigrate :—It ap-pears they are paid fortnightly, and when the pay night arrives, about '300 of them assemble and pay 6d each into a general fund. A number of tickets, corresponding with the number of persons present, are then placed in a hat, and on one of these the word "America" is written, all the rest being blank. A ballot then takes place, and the lucky drawer of the prize ticket has his possage to America paid for him, and receives a small sum to subsist him for some time after his landing there. During the week ju-t closed no less than six vessels have ast sail for Queenstown, isden with emigrants, bound re-spectively for Boston, Quebec, New York, and St John's. The gross number amounted to 877 souls.

PROTECTION .- Lord Edwin Hill, the favoured candidate in the Protectionist FibreCrips.—About Evanin 1110, the involved candidate in the Frotectionist interest for the representation of the county of Down, has just issued his address to the electors, in the course of which his lordship candidly tells them that, "since that one-sided policy (falsely denominated free trade) has become the law of the land, it would be unwise at the present time to seek for its repeal, knowing that constant changes of the laws tend to insecurity and distrust in the mind of the member". the minds of the people."

the minds of the people." READJUSTMENT OF REWTS — In reply to a congratulatory address from the inhabitants of the triving town of Lurgan, part of the Armagh property of Lord Lurgan, the noble owner thus refers to the question of a bated rents :— • Owing to the many and important engagements which have fallen upon me in my new situation, and considering the precarious state of the potato crop, as well as the uncertainty of the future prices of grain, I think it best to let mat-ters remain um the same footing with regard to the rents as they have been for the last three years by order of the Court of Chancery ; and I have accordingly directed Mr Hanoock to make an abatement of 20 per cent. to all those tenants-at-will who may pay up their rents at the time appointed next winter. I trust before this time twelvemonth that I shall be enabled, by a carcful inquiry into very individual case, to decide what the future rents shall be, and I shall be

ready to afford every encouragement to improving tenants by granting, in suit able cases, leases, on such terms as may be considered reasonable between able cases, leases, on landlord and tenant."

FOREIGN AND COLONIAL.

PRUSSIA.

The municipal authorities and the Chamber of Commerce urge the The municipal authorities and the Chamber of Commerce arge the establishment of commercial fairs at Berlin, similar to that of Leipzic. The grand requisite for such a fair is the consent of the custom house to allow foreign goods in bond to be taken to private warehouses, and to open with the merchants running accounts for the payment of duties. A merchant, for instance, imports and declares The payment of duries. A increment, for instance, imports and declares five tons of English cotton goods destined for the Leipzic fair; he is debited by the custom house with this quantity, and has to pay the duty after the fair only on such quantity as he does not re-export. This is not only a great convenience, but a great alleviation of the restrictive power of the tariff. The merchant in question need only export five tons of German cotton goods under English marks, and deliver in the certificates of exportance. deliver in the certificates of exportation, when his account is thereby balanced, and he sells the English cottons duty free. The great German fairs would cease were it not for this privilege of running accounts with the customs; nevertheless, the Governments and the Protectionists are both very ill satisfied with the matter; it is, there-fore almost out of the superior that a man minimum of the bird fore, almost out of the question, that a new privilege of the kind should be granted to Berlin, where it would certainly be observed to a far greater extent than elsewhere.

emigration from Germany has so increased that the Bremen The journals record almost with terror the number of persons who sailed from that port on one day, the 15th; it is estimated as above 5,000.

AUSTRIA. The Wiener Zeitung confirms the information that Count Buol-Schauenstein is Minister for Foreign Affairs and of the Imperial House

Dr Bach's provisional leading in the Cabinet is therefore at an end, as the Minister of the Imperial House is, necessarily, President of the Council of Ministers.

The rate of exchange on London has fallen some 4 per cent. This striking and unexpected improvement is mainly attributable to considerable investments recently made in Austrian funds on account of foreign-principally Dutch-firms. Towards the end of Baron Krauss's ministerial career the exchange was under a strict police tutelage, and the quotations merely nominal; but this odions and most impolitic system has since been abolished, and as the Finance Department no longer jobs on 'Change, the printed list of ex-changes now show the true state of the money market. The Finance Department entertains sanguine hopes that the improvement will be lasting, but two or three of the most respectable and experienced merchan's, not bankers, say that the fall in the exchanges and in the price of the precious metals must be considered a merely transitory gleam of sunshine. The Finance Minister's determination to diminish the paper currency is duly appreciated, but people are well aware that when the balance-sheets for 1851 and 1852 appear they will show a woful deficit.

Things are in such a sad state in Italy, that the troops "do regular police duty." Two circumstances which occurred not long sizes of Things are in such a sad state in Italy, that the troops "do regular police duty." Two circumstances which occarred not long since at Florence form pretty "pendants" to the Mather story. As an Aus-trian guard was passing, an Italian—whether intentionally or not my informant did not know—spit close before the officer in command; the latter arrested the offender, and made each of the men spit in his face. A young man, the son of the president of some judicial court, who was walking in the outskirts of the town, and reading, accidentally ran sgainst an Austrian captain. The latter employed some offensive epithets, which were returned with interest by the hot-blooded Italian. The end of the matter was that the man in uniform had the civilian arrested, and 25 blows were inflicted upon him in Austrian military fashion. It is said that the commander of the corps in Tuscany was so offended at the behaviour of his subaltern, that the latter was removed from Florence. A day or two after the Italian had been flogged, an Austrian officer was severely wounded as he was returning home after dark. It is the opiniou of my in-formant that things cannot possibly remain as they are in Italy for any length of time. The Austrian officers openly say that they should like "to drive the Italians into the sea," and the Italians vow that if they had the power they would put every one of their op-pressers to the sword.

HESSE CASSEL.

The new constitution for the Electorate of Hesse has been pub-The new constitution for the Electorate of Liese has been pub-lished at Cassel on the 14th inst. Having been drawn up by the federal commissioners and M. Hassenpflug in the plenitude of arbi-trary power, it may be taken as a fair sample of the sort of thing which Absolutists in Germany are willing to let pass under the name of a constitution. That it offers no real check to the governing power may be presumed. The new Hessian charter establishes two Chambers ; the first composed of princes, nobles, and certain high officials ; the second entirely founded on class representation, namely, sixteen members elected by possessors of estates containing not less than 200 acres; 16 members elected in the towns by an assembly composed as follows: one-third of aldermen and common councilmen, one-third of masters and members of guilds, one-third of manufac-turers and wholesale merchants; and, lastly, sixteen members elected in the rural communes by the mayors, adjuncts, and churchwardens. No person under thirty years of age can vote or be elected. The Chambers to be assembled at least once in three years, and not to sit longer than three months. The laws and resolutions of the federal longer than three months. The laws and resolutions of the reaction diet become as such, and by the mere fact of their promulgation, com-ponent parts of the Hessian code. Officials cannot take a seat in the Second Chamber without permission of superiors; no public debtg

April 24.

can be contracted, no new taxes imposed, and no new laws enacted, without the consent of the Chambers. Nevertheless, when the Chambers are not sitting (i. c., at all times, excepting three months once in three years) the ministry has the right of octroying. The enjoyment of civil rights is made dependent on the confession of Christianity, whereby the emancipation of the Jews in Hesso is to-tally rescinded.

SPAIN.

The Duke of Rianzares, the husband of the Queen Mother, who has been to France on business connected with the extensive salt mines which the Queen Mother possesses there, has returned extremely taken with Louis Napoleon's system of government, and it is said very much disposed to recommend an analogous one here. The question of the limits between France and Spain, a question that has been perpetually kept in abeyance these hundred years, and which is conticually the cause or the pretext for bloody frays between the shepherds of both nations, and not unfrequently of petty misander-standings between the subordinate authorities of the two countries, bids fair to become a source of anxiety to the Government. The mixed commission that has been appointed by mutual agreement to examine and decide upon the subject have not been able to come to any agreement on account of the exorbitant pretensions of the French commissioners.

French commissioners. Heavy complaints are made by the democratic party of the perse-cutione they are undergoing. At the epoch of the last elections they were permitted to form their committees with a view of preparing themselves to choose their candidates for the chamber. Most of the persons of their party who made themselves conspicuous in the elec-tion contests have been persecuted for some cause or pretext, and the Madrid prison now contains eight or ten of them, whose friends lowdly delare they are innegent of any attempt against the establoadly declare they are innocent of any attempt against the estab-lished Government. It is stated, moreover, that the persons who have denounced them are individuals who have always been known for their bigoted attachment to the ultra-church and abso-lute metry where the statement surfacement where lute party, whom the Government authorities seem bent upon fawning on. The Gazette publishes a royal decree, in which all sentences of fine or imprisonment for offences against the laws regulat-ing the public press are declared to be annulled. The decree also orders that all pending prosecutions shall be abandoned.

PIEDMONT. The new treaty of commerce and navigation recently concluded between France and Sardinia was presented to the Piedmontese Chamber of Deputies on the 16th. The principal points are as fol-

francs and .4 francs, on all sorts of wines; of 10 francs, instead of 30 francs, on brandles of the first quality; of 5f 50c, instead of 18f, on common brandles; and 10c instead of 30c on every bottle ot wine, brandy, liquor, or vinegar containing less than a litre. 4. The reduction by France to 15f instead of 20f the 100 kilogrammes of the duties on Sardinian oils. 5. The admission by France at a reduced duty of 3f of 12,000 kilogrammes per annum of the steeled cast iron of Savoy. 6. The reduction by France of one-half of the existing duties on the cheese of Savoy, and some facilities for the importation of cattle from that province.

NAPLES. The accounts from Montefusco, where Poerio and his companions are confined, are still very sad. A special order has arrived, from the general of the district, at Montefusco, which says, "These pri-soners are to be treated with the full prison severity, especially Poerio and Nisco, who are not worthy to live. They are to have no medical treatment." Here is a letter from one of the prisoners to his wife :-- "My dearest Wife,-How can I tell you how much and what we are obliged to suffer in this horrible place. From the 8th what we are obliged to suffer in this horrible place. From the 8th we have been removed from the lower portion of the prison, which is under repair, and placed in a floor above, which is divided into two compartments, the most wretched and smallest of which is again dicompariments, the most wretched and smallest of which is again di-vided into two very small rooms, where seventeen of us are huddled together, including the Duke di Gabellina. Imagine, my dear wife, so many human beings in this small place chained, and what is worse, *al puntale* (chained to the wall). Surely those only who are in the *inferno* can suffer more than we do. God help us! we cannot suffer long in this state. Amongst other evils, we are robbed terribly. Whereas in other bagnia responsible person is allowed to wait on the prisoners, here we have no one but calley slaves who make us pay prisoners, here we have no one but galley slaves, who make us pay double for anything we may want; to get a rotolo of bread we must order two. It gives me great consolation to hear of your good health. I shall shall say nothing of mine-it must be worse. I pray you, my dear wife, to present yourself to General Polombo, and to the Mi-nister of Public Works, and tell those gentlemen the state we are inmore cruelly treated than the worst of criminals. A hundred sol-diers guard us night and day, and we are fifty one prisoners in all, chained continually, so I think a less guard would be sufficient under such circumstances; but this is no business of yours or mine. If you could get us sont back to our old prison on the island we could bear it better. God bless you all, and may you find comfort in the family, &c.—Montefusco, April, 1852."

EGYPT.

According to a letter of the 3d from Cairo, which appeared in the Trister Zeitung, the expected arrival of FundEffendi had given_arise to great apprehensions. Nine of the gates of Cairo had been closed, and the guards at the others doubled. Abbas Pasha had had his private treasures removed to the Palace Abbasie. The garrison of Alexandria had been reinforced, and 200 kawasses added to the police force. Different measures had been taken to prevent any sudden blow.

The English fleet is cruising off Mahon.

UNITED STATES.

Advices from New York are to the 7th inst. The principal topic of debate in the United States Senate is Mr The principal topic of debate in the United States Senate is Mr Clarke's non-intervention resolution, condemning the Kossuth doc-trine; but even of that once interesting question the people at large are at length getting tired. A call for information from the Presi-dent to Congress, explaining all the causes, details, and obj ets of the expedition to Japan, has been laid on the table—on the ground that the giving publicity to the action of the Government in the mat-ter micht seriously impair its utility and chances of supress. Advices ter might seriously impair its utility and chances of success. Advices from Santa Fe, New Mexico, inform us that the Indians there are still guilty of cattle stealing and murder to a great extent. The gold placers of the Rio Gila are described as being rich-even more so than those of California.

The debate in the House of Representatives on the compromise between the Southern and Eastern States terminated on the 5th. The house declared that it recognised the binding efficacy of the compromises of the constitution, and believed it to be the intention of the people generally to abide by such compromises, and to sustain the laws necessary to carry them out, the provision for the delivery up of fugitive slaves, and the act of the last Congress for that purpose included, and the house deprecates all further agitation of the questions growing out of that provise, of questions embraced in the quest-tions growing out of that provise, of questions embraced in the actu-of the last Congress, known as the Compromise, and of questions generally connected with the institution of slavery, as unnecessary, useless, and dangerous. A second resolution in the form of an amend-ment declared, that the series of acts passed during the first memium of the 31st Congress, known as the Compromises, are regarded as a final adjustment and a permanent settlement of the question thereia embraced, and should be maintained and executed as such. The first resolution was carried by 101 against 64, and the second by 100 against 65, votes.

against 65, votes. In the Senate, on the 6th, Mr Douglas presented the petition of Henry O'Reilly, proposing to establish a line of communication by mail and telegraph, from the Mississipi River to the Pacific Ocean. He asks no money or land, no donations or gifts, but that his line of telegraphs may be protected by the military posts of the Ge-vernment. If this be done Mr O'Reilly thinks he can, in two years from this time, have European news published on the Paci-fic coast in one week from the time of its leaving Europe. The Chair laid before the Senate a communication from the Secretary of the Navy, in response to a resolution calling for his opinion and estimates with respect to a reconnoisance of the Chinese S-as, &c. The Secretary thinks such reconnoisance would be eminently serviceable, and that it could be performed by United States ves-sels, at a very little increase of expenditure. sels, at a very little increase of expenditure.

sels, at a very little increase of expenditure. Kossuth has had a most enthusiastic reception at Mobile. The meeting was very large and unanimous. Many of the most dis-tinguished Alabamians participated. The date of his return to New York was uncertain. He was said to have received a considerable sum of money in aid of his cause. The steamer Glencove, which arrived at St Louis on Saturday evening, April 3, from New Orleans, while making the landing, blew up with a terrible explosion, bursting all her boilers. She had about 150 passengers on board. The number of the killed is not yet ascertained, but it must be very large. The vessel took fire, and burnt to the water's edge. and burnt to the water's edge. The steamer Redstone, Captain Tate, with about seventy persons

on board, including the boat's crew, blew up on the 3rd instant, on the passage between Madison, Ia., and Cincinnati. The boat imme-diately sunk in 20 feet water. Fifteen dead bodies were recovered in the evening in a horribly mutilated condition.

AUSTRALIA.

Advices have been received to day from the colony of Victoria Advices have been received to day from the colony of victoria (or Port Phillip), by the ship Brilliant, about a week later in date than those published a few days back. They reach to the 16th January, and the latest intelligence from the Mount Alexander diggings was to the 11th. Notwithstanding the failure in the supply of water, gold continued to be found in considerable quantities. The police for the required to be found in considerable quantities. The police force required to be increased, and the Government were biamed for having despatched soldiers to preserve order, their appearfor having despatched soldiers to preserve order, their appear-ance having excited discontent among the miners. Sickness had diminished, and only one death from dysentery had occurred for some time past. The escort of the 8th had brought to Port Philip 10,957 ounces of gold from Mount Alexander, but scarcely Philip 10,957 ounces of gold from Mount Alexander, but scarcely any from Ballarat, the droughts at the latter spot having caused al-most an entire suspension of operations. A locality at Mouat Alexander called Red-hill was yielding large returns at a depth of 22 feet. Sales of dust and specimens continued to be freely made. The Victoria nugget, a piece of gold weighing 58 oz 18 dwts, had been sold at auction at the rate, 34 12s 9d per oz. Other sales had been effected at prices ranging from 21 18s 4d to 32. The latest quotations were 31 4s to 34 5s per oz. The apprehensions regarding the want of labour still continued. The apprehensions regarding the want of labour still continued. Some large proprietors had been left with only one or two men on their establishments, and the worst feature was that the most efficient persons were those who departed the soonest and who were most likely to do well at the mines. Almost all the overseers had given up their engagements. In some instances as many as 10 000 sheep had been put into one flock, but although such expedients might answer temporarily, notwithstanding the risk from the grass fir-s, they would be wholly impracticable in the winter. Business was rather better, but the retail dealers had benefited principally by the change. The quotation for wool was from 1s 25d to 1s 4d per 1b, and tallow 28l to 29l 10s per ton. The crops at Portland and Port

COMMERCIAL AND MISCELLANEOUS NEWS.

COMMERCIAL AND MISCELLANEOUS NEWS. Annexed is a comparison of the present price of wheat, flour, and bread in London and Paris:—The highest price of wheat of the first quality in Paris is 29f per 14 hectolitre, which is equal to 44s 3d per quarter ; and the highest price of white wheat of the first quality in London being 48s per quar-ter, it follows that wheat is nearly 8½ per cent. dearer in London than in Paris. The highest quotation of flour of the first quality in Paris is 35f 15c the 100 kilogrammes, which is equal to 35s 2d per sack of 280lb English ; and the highest quotation of flour in the London market being 40s the eack, it follows that flour is about 13% per cent. dearer in London than in Paris. The highest quotation of the second quality of white flour in Paris is 32f 50c, which is equivalent to 32s 6d per sack of 280lb, and which, as compared with the quo-tation in London of 30e for household flour, shows that this description of flour is nearly 8½ per cent. dearer in Paristhan in London. The price of bread of the first quality in Paris is 31c per kilogramme, which is equal to about 5/d the 4ib loaf, English weight ; and the price of bread in London at the full-priced shops being 7d per 4lb, it follows that the ad is about 32 per cent. dearer in London than in Paris. The second quality of bread is quoted at 24 cents per kilogramme in Paris, which is equivalent to nearly 4/d per 41b loaf. The advantages which the public have derived from the establishment of the Railway Passengers Assurance Companies, and other associations with similar objects, has led to the formation of the Maritime Passengers Assurance Com-pany, by which it is proposed " to assure all travellers by water, whether jour-neying by steam vessel or sailing ship, against death or personal injury arising from accident." These advantages are not offered to passengers only, but are extended at lower and stipulated rates to the whole of the nautical profession, as seemen, pilot, fishermen, boatmen, &c., whose avocations render them

the markets with foreign samples of the fruit before the arrivals from the West Indies have commenced for the season. The proprietors of the Bank of Manchester have given notice that they will

resume business. It will be recollected that this was one of the chartered joint slock banks which stopped payment ten to eixteen years ago. The Northern and Central Bank first gave way, then the Commercial Bank, next the Impe-rial Bank of England, and lastly the Bank of Manchester, whose business has

and Central Bank of England, and lastly the Bank of Manchester, whose Dusinees may rial Bank of England, and lastly the Bank of Manchester, whose Dusinees may now been suspended about ten years. The necessity of securing some more economical and expeditious mode of transporting coals by sea than is at present attained by the employment of sailing vessels, has called attention to the advantages which other branches of trade have recently derived from the introduction of iron vessels propelled by the auxiliary screw, and an association of gentlemen largely interested in the coal trade has been formed for the purpose of building vessels of that description to be employed in the trade from the North of England to London, by which they hope to accomplish the following important results—1. A steady and certain supply of coals. 2. A lower range of prices, with less fluctuation. 3. Less injury to the quality of coal from exposure and breakage at the pit's mouth and in the stores of large consumers. The success of this association is 3. Less injury to the quality of coal from exposure and breakage at the pit's mouth and in the stores of large consumers. The success of this association is of public importance, inasmuch as it will be the means of increasing the supply of coals to the metropolitan markets, and promoting the employment of steam vessels in this important branch of the coasting trade. We are informed that another company, with the same object, is in course of organisation, and that vessels are also building for this trade by private individuals.

An attempt is being made to substitute a more supponious name than "Slough" for the rayidly increasing town situate on the line of the Great West-ern Raiway, near Windsor.

ern Railway, near windsor. The project for the establishment of a Crystal Palace in the Champ Elysees is going on with great activity. A company, formed of capitalists, has al-ready subscribed the amount necessary for this undertaking, and it is occu-

The preliminary steps have been taken in the Lord Chancellor's office for issuing a commission of lunacy upon Mr F. O'Connor, M. P., whose eccentri-cities have for some time past been known to the public, with a view to his

BUENOS AYRES AND THE PROVINCES OF THE RIO DE LA PLATA. By Sir WOODBINE PARISH, Vice-President of the Geographical Society of London, &c. Second edition, enlarged. John Murray, Albemarle street.

SIR WOODEINE PARISH, it will probably be recollected, was one of the diplomatists sent by Mr Canning to the republics of South America when he, more magniloquently than truthfully, talked of calling a new world into existence to redress the balance of the old. Though Sir Woodbine might not have been able to render any useful Though Sir Woodbine might not have been able to render any useful services to the country as an envoy, he compiled the best description we possess of the countries on the Rio de la Plata. The first edition of the work appeared some years ago, and supplied a history of the Provinces from the first arrival of the Spaniards, with an interesting account of their progress and the discoveries of the countries they gradually made. The geological formation and natural history of the Pampas and their many denizens, with their curious fossil re-mains—the monsters of this and the customary beings of another age—were carefully described, and their geography made familiar to Europeans. The political condition of the countries, their resources, debts, trade, &c., were discussed ; and on all these points Sir Wood-bine's work became an authority. The second edition is much en-larged ; the description of the Pampas and their fossil remains is improved by the light which modern science has thrown on geology ; larged; the description of the Pampas and their fossil remains is improved by the light which modern science has thrown on geology; the efforts more recently made to enlarge our knowledge of the country by surveying the rivers are noticed, and useful information of the present state of the different countries bordering on the Plata supplied. The work was not published till the late intelligence ar-rived of the fall of Rosas; and Sir Woodbine thinks the Federa-tion of 1820, like other political contrivances, a very sorry, unwork-able piece of mechanism; but he is also of opinion that if the other States now earnestly join Buenos Ayres in substituting constitutional for extraordinary powers, making their confederation something more than a name, better fruits may result from it, and South America become more pesceable and prosperous. The early career of Rosas, who is speedily expected amongst us, and which is thus briefly described by Sir Woodbine, seems to have left a favourable impres-sion of the man which his subsequent career has not effaced :-sion of the man which his subsequent career has not effaced :-

ROSAS' FIRST ACTS

sion of the man which his subsequent career has not effaced :--ROSAS' FIRST ACTS. Don Manuel Rosas (the son of a man who had been distinguished in the scr-vice of his country) was employed on the commission appointed to carry out there arrangements. He was well known to the Iudians, and the influence of his name went far to induce the more peaceably disposed tribes of the Pampas to enter into treaties for their lands, and to engage to co-operate in defending them sgainst the hostile Ranqueles and their associates. Several hundreds of them with their wives and families were located in the rural establishments under his immediate charge, where they were employed in a variety of agricultural, pastoral, and other industrial pursuits, with every promise of their being weaned from their vagabond and predatory habits, and made useful members of society, when, unfortunately for that experiment, as well as for the peace of the whole Republic, whilst all were rejoicing at the honourable conclusion of the war with Brazil for the Banda Oriental, the vic-torious army returning to Buenos Ayres, headed by their commander General Lavalle, mutinied against the governor, General Dorrego, took possession of the capital, discolved the Sala, and +et up a military despotiam. The only forces which could be immediately assembled to oppose the insur-gents were the country militis under Rosas, and with them Dorrego took the field in defence of his own authority and the legal institutions of the Republic: hastily collected and but indifferently armed, they were defeated in the first en-counter, and Dorrego falling into the hands of Lavalle, was by his order most inhumanly and barbarously put to death ; but this brutal act, instead of ter-minating the contest as he expected, roused all who were free to sot against him, and they flocked by thousands to range themselves under the orders of Rosas, who declared his determination never to eheath his sword till he had put "uom General Lavalle and his mutinous fr

Ross, who declared his determination never to sheath his sword till he had put down General Lavalle and his mutinous troops. A long and most disastrous struggle ensued, in which finally the same of order was everywhere triumphant, the army was broken up, and their leaders obliged to fly for their lives. The people, grateful for the result and for the re-establishment of their legi-timate institutions, elected Rosas to be their Governor in place of the unforu-nate Dorrego; and thus was that extraordinary man-for such he has certainly shown himself - first raised to that power and position in which from a variety of unforescen circumstances he has ever since been continued.

The second notice of him is more in accordance with the reputa-tion he subsequently obtained-that of pursuing his own ends and extending his own power by the most atrocious means :-

ROSAS' SECOND APPEARANCE.

ROSAS' SECOND APPEARANCE. The have and devastation the Indians made was dreadful; but it was signally avenged in 1832 and 1833 by General Rosas, who took the field against them in person at the head of the largest force that ever entered their lands: march-ing southward as far as the Rivers Colorado and Negro, he cleared all the in-tervening country, putting hundreds of them to death. Some tribes were ex-terminated, and others field to the Cordillers of Chile, in the fastness of which large the reserved and interface the reserved of the reserved of the reserved of the second distributions. alone they were safe from the pursuit of the exasperated and victorious soldiers.

His career since has, according to the most trustworthy accounts, been marked by many cruelties, such as we might expect from a man accustomed to Indian warfare, and of Indian tastes and habits. Not referring any further to the political or scientific contents of the book, there are two subjects incidentally mentioned that are worthy of notice

Probably our readers are aware that many of the figures recently Probably our readers are aware that many of the ngures recently discovered in the old ruins of Nineveh carry in their hands some-thing that has been taken for a fir-cone, or nut of the fir-tree. It may be the fruit of the plantain-tree, some species of which resem-bles very much the fruit of the fir-tree; and it seems quite reason-

THE ECONOMIST.

able to suppose that the Assyrians should have a veneration for a substance that might be their principal food, as we reverence wheat. But Sir Woodbine Parish describes a fir-cone which yielded a sub-But Sir Woodbine Parish describes a fr-cone which yielded a sub-stance resembling a date; and it might be such fr-cones that the Assyrians held in high honour. Speaking of an expedition under-taken by the Spaniards, he says:—"Their Indian allies helped them to lay in a stock of apples, of which there are great quantities in all those parts, and of pinones, the fruit of the pine-tree, which, taken out of the husk, is not unlike a Barbary date in taste as well as appearance." It might be this fruit of the pine on which the Assy-ing the husk of held in approximate properties. ns in part subsisted, and held in appropriate veneration.

The other point refers to our own present condition of criminality. Of late the community has been much horrified by several great crimes. Perhaps they may not have been uninfluenced by the long prevalence for neither man nor best, which, according to the proverb, being "good for neither man nor best," may have exasperated all the evil pas-sions of poor humanity, and hurried it into the fearful excesses we have to deplore. In illustration of the influence of atmospheric

shed all this blood.

received many seriods wounds; but, he said, it was the north wind, not he, thus shed all this blood. When he rose from his bed in the morning, he told my informant he was at once aware of its accursed influence upon him :--- a dul headach first, and then a feeling of impatience at everything about him, would cause him to take um-brage even at the members of his own family on the most trivial occurrence. If he went abroad his headache generally became worse, a heavy weight seemed to bang over his temples, he saw objects, as it were, through a cloud, and was bardly conscious where he went. He was fond of play, and if in such a mood a gambling house was in his way he seldom resisted the temptation; once there, any turn of ill-luck would so irritate him, that the chances were he would insult some of the bystanders. Those who knew him, perhaps, would bear with his ill-humoura; but if unhappily he chanced to meet with a stranger disposed to resent his abuse, they seldom parted without bloodshed. Such was the account the wretched man gave of himself, and it was corrobo-rated afterwards by his relations and friends, who added, that no sconer had the cause of his excitement passed away than he would deplore his weakness, and never rested till he had sought out and made his pence with those whom he had hurt or offended.

The medical man who gave me this account attended him in his last moha

ments, and expressed great anxiety to save his life, under the persuasion that he was hardly to be accounted a reasonable being. An anecdote of this kind is rather calculated to make us pause in

An anecdote of this kind is rather calculated to make us pause in our somewhat headlong career of inflicting dreadful punishments on ments, compel us to reprobate all similar actions to those of Juan Antonio Garcia; let us reprobate all similar actions to those of Juan Antonio Garcia; let us reprobate them with all our might, but let us remember that in ordaining them to be punished with death, or some other greater evil, we perhaps may be under the influence of an east wind, and may to higher Powers be as pitiable objects as Juan Antonio Garcia is to us. At least it is impossible to read such ac-counts, and be aware of the many influences to which the human frame is subject, without entertaining doubts of the principles of criminal jurisprudence, and imagining that crimes are as much objects of pity jurisprudence, and imagining that crimes are as much objects of pity as of anger, and are probably to be prevented by care and kinduces rather than by indiscriminating and unscrupulous cruelty. We need add nothing as to the character of the book. Its reputation is well established, and the present is a much-improved edition of a valuable work.

40,394,49 The balance of assets above liabilities being 3,094,9131 as stated in the above a under the kead Russ. 43,489,382 FRIDAY NIGHT.

The preceding accounts, compared with those of last week, exhibit-

An increase of Circulation of	£851,823
A decrease of Public Deposite of	1,499,366
A decrease of Other Deposits of	86,014
A decrease of Securities of managements and	1,041.829
An increase of Bullion of	
An increase of Real of means and an an an and an an and an an and an	3,701
A decrease of Reserve of	533,392

By the present returns the circulation has increased 851,823l, the public deposits have decreased 1,499,366l, private deposits have decreased 86,014l, securities have decreased 1,044,829l, bullion has increased 314,973l, the rest has increased 3,701l, and the reserve has decreased 533,392l. 'The increase of bullion again, when, in consequence of the exportation to Australia mentioned last week, consequence of the experiation to Australia mentioned last week, it was expected to show a decrease, and the great decrease of securities,—the decrease consisting of 905,316*l* of Government securities, and 139,513*l* of private securities,—are the striking features of these returns. The decrease of public deposits and the increase of circulation are only the consequences of the payments of the dividends.

The alteration in the Bank rate of discount, which was reduced on Thursday from 24 to 2 per cent., being a mere approximation of its terms to the still lower current rate of interest in the market, has had no important effect. Discount houses, though they have allowed from $1\frac{1}{2}$ to $1\frac{3}{4}$ on the money in their hands, have been for some time past slow to accept any new sums on call at a rate even lower than this, and the alteration in the Bank rate may be said rather to have confirmed them in their previous practices, than to have induced them to make a change. The alteration, however, is a guarantee for the continuance of a low rate of interest, and so far will have a moral effect. It sinks the stream no lower than it was previously running, but it removes far off any doubt that it will speedily rise. From the last Bank returns, from the smallness of its advances before the dividends were paid, and from its having increased its public securities, it is plain that it was obliged to adapt its business to the low rate; and we presume that it was, as we stated some weeks ago, only the expectation of a speedy dissolution of Parliament which prevented it adopting this course at an earlier period. Though the money market felt the change, and the public funds and railway shares, which before had a ten-dency to decline got up, its effects are not expected to be great. There are so many circumstances tending to discourage undue speculation,—such as the recollection of former disasters, particu-larly those of 1847, the excessive publicity which every operation now receives, the great competition which now pervades the whole mercantile world,--that much wild speculation to end in another crisis is not anticipated. At any rate, whatever may happen, the Bank seems exonerated, as it only follows and does not lead the market rate of interest. We have heard it said, indeed, and it does not seem very improbable, that an alteration in the exchanges and a great increase of good business may speedily raise the mar-ket rate of interest, when the Bank will have to follow another lead, and may regret that it made the present change. The public funds, in consequence of many sales, tended down-

wards during the week, but they rallied yesterday, after the announcement of the Bank change, and continue firm to-day. Consols closed at $99\frac{3}{4}$ $\frac{3}{5}$. The following is our usual list :—

We have had in the course	of the week	a furt	per arrival from

We have had in the course of the week a further arrival from Port Philip to the 16th of January. The Brilliant has about two tons and a half of gold, valued at 217,000¹. She brings news from the colony up to the 21st of January, and she reports that, by the 1st of February, the Statesmen and Aberfoyle were to have sailed with 80,000 ounces of gold. New diggings had been discovered at the Muddy Creek and the Hurrel River. A locality at Mount Alexander called Red Hill was yielding large returns. The Victoria nugget, a piece of gold weighing 58 ounces 18 dwts, had been sold at anction at the rate of 3l 12s 9d per ounce. The last quotations were 3l 4s to 3l 5s per ounce.

quotations were 32 4s to 32 5s per ounce. A letter of an antecedent date, written from Buningyong, Oct. 29, and said to be written by an eye-witness, gives an apparently true description when it states "gold finding is neither more nor less than a grand lottery, in which there are a few splendid prizes and innumerable blanks. It has been found, by averaging the quantity of gold found and the number of people, that they are not earning common wages. Numerous friends of mine have brought up parties and not made enough to pay their expenses. But, again, I saw two servants who had left me a week ago, and they were clearing 11 sterling per day. Numbers are making more than this, still greater numbers less." At that period workmen could be got, but by the latest news the lottery had tempted the bulk of the people to forsake other work. "Almost all the overseers," it is said, "had given up their engagements. In some instances as many as 10,000 sheep had been put into one flock, but although such expedients might answer temporarily, notwithstanding the risk from the grass fires, they would be wholly impracticable in the winter."

A letter dated Melbourne, Jan. 15, 1852, states "the merchants are very much put about in the shipments of wool, owing to the almost absolute want of labour. At the wharves so high as 10s per day are given to common labourers for loading and discharging vessels, and even at these wages it is very difficult to get men. In my last I ridiculed the idea of sailors asking 80*l* for the run home, but in many instances 60l and 70l have been paid. A great number of vessels will have to remain here for a long time, but those for London will get away; for, having a good freight for gold, the captains will be enabled to pay high wages. The shipments to 31st December consisted of 144,825 oz, which at 3*l* 10s gives an amount of 506,887*l*, the result of about three months' digging. But the above forms only a portion of our exports." We are likely, therefore, notwithstanding the difficulties, to get for some time a continual supply of gold from Australia.

COMPARATIVE EXCHANGES.

COMPARATIVE EXCHANGES. The quotation of gold at Paris is about 4 per mills premium (accordin[§] to the new tariff), which, at the English mult price of 31 17s 10gd pe^F ounce for standard gold, gives an exchange of 25°27; and the exchange at Paris on London at short being 25°40, it follows that gold is about 0.51 per cent dearer in London than in Paris. By advices from Hamburg the price of gold is 429 per mark, which, at the English mint price of 31 17s 10gd per ounce for standard gold, gives an exchange of 13°7; and the exchange at Hamburg on London at short being 13°8, it follows that gold is 0°46 per cent. dearer in London than in Hamburg.

being 18'8, it follows that gott is 0 to per the following a state of the following of the

The Commercial Times.

GENERAL POST-OFFICE, APRIL, 1852. —In addition to the ports mentioned in the instructions No. 9 of this year, as included in the new scheme of the Pacific mail packets, arrangements have been made for serving once a month, by means of a branch contract packet, the ports of Guayaquil, Lambayeque, Huanchaco, Santa, and Huacho. This branch packet will be fitted to the West India mail packet leaving Southampton on the 2nd of each month; but letters for the above named ports will also be forwarded, as far as Panama, by the packet leaving Southampton on the 17th of each month.

Mails Arrived.

LATEST DATES. LATEST DATES. On 19th April. INDIA and CHINA, per Benlinck steamer, wis Southampton.-Dates as received 13th Inst., vis Marsellise...Gibraltar, April 12. On 19th April. AMERICA, per Europa steamer, vis Liverpool-Montreal, April 5; BOSION, 6; New York. 7 On 19th April, HANAN. March 29, vis United States. On 21st April, LIBBON, April 15, per H M. steamer Encounter, vis Portsmonth. On 22nd April, Poar Phillip, Jan. 16, per Brilliant, vis Falmouth.

Mails will be Despatched FROM LONDON

On 24th April (evening), for the MEDITERBANEAN, EGTPT, INDIA, and CRINA, vis

On 24th April (evening), for the an EDITAREAREAN, ENTRY, INDIA, and CHINA, was Marseilles.
On 27th April (morning), for Vigo, OPORTO, LISBON, CADIS, and GIBRALTAR, per steamer, via South ampton.
On 28th April (morning), for UNITED STATES, "BAITISE NORTH AMERICA, "CALIPORNIA, and "HAVANA, per Washington steamer, via South ampton.
On 39th April (evening), for BITISE NORTH AMERICA, BERMEDA, UNITED STATES, "CALIFORNIA, and "HAVANA, per Canada steamer, via Liverpool.
On 3rd May (morning), for WERT INDISA. MERICO, VENEUELA, CALIFORNIA, CHILI, and PERU (CUAH, HONDURA, and Nasseu, excepted; mails to these places on the 17th of each month only), per Orinoeo steamer, wis Southampton.
If addressed "Fis United States."
The Sultan steamship is appointed to sail from Southampton, 29th Iost., for Gitraltar, Malta, and Constantinople; letters in time on the 28th inst.

Mails Due.

Mails Due. Apail 20.-West Indies. Apail 20.-Western Coast of South America (Chili, Peru, &c.) Apail 20.-Havana, Honduras, and Nassau. Apail 26.-Spain, Portugal, and Gibraitar. Apail 28.-America. Mar 3.-Maita, Greece, Ionian Islands, Syria, Egypt, and India. Mar 3.-West Indies. Mar 5.-Methon. Mar 10.-Cope of Good Hope. Mar 13.-Brazils and River Plate. Mar 23.-China, Singapore, and Straits.

COMMERCIAL EPITOME.

FRIDAY NIGHT.

The wheat market was quiet to-day at Monday's prices. Barley was firm, and oats were a shade dearer. The arrivals of wheat were however, short, and the Gazette returns show a considerable falling off in the quantities brought to market. The present hold-ers of home-grown corn are probably wealthy, the necessitous class having already sold their stocks, and the former probably keep back the supplies, anticipating a higher price. According to the quality of the wheat, it is remarked that the present price is lower than the price last year at this time and from that and other lower than the price last year at this time, and from that and other circumstances, there is some reason to expect a rise. In the near continental markets prices are again looking up. But we learn from a book written by Mr Tremenheere, just published by Mr Murray, that there was in the last two years a great amount of surplus of wheat in Ohio and other Western districts of the United States ; and though Mr Tremenheere estimates the cost at which it can be profitably sold at Liverpool at from 44s 2d to 51s 6d in ordinary years, yet till the surplus be worked off it may possibly be ob-tained, as it has lately been obtained, at a lower sum. In our markets last week flour has been selling at 21s a barrel. If our farmers, therefore, as is supposed, are holding back the supplies from the expectation of a very considerable rise in price, they may, unless we should have very unfavourable weather, be disappointed. But asGermany as well as England is now looking to the United States for a supply of corn, we add to the extracts we pub-lished the week before last from the American papers, relative to the stock to come forward, the following information :

The Chicago Tribune publishes a table showing the amount of grain and flour in store in that city on the 1st March, and also the quantity awaiting shipment in thirteen towns on the Canal, Fox River, and the line of the railroads. The aggregates are-

po

reduced from 25 to 50 per cent. on the rates of 'ast year.

Other exertions are making in the United States to facilitate the carriage of the produce of the West to the seaboard, and every improvement of that kind, and of the agriculture of Obio and Michigan, will tend permanently to keep down the price of wheat in England.

Sales continue to be made of Egyptian barley-not oats as stated last week-for Sweden; and thus making England the means of supplying Sweden with Egyptian corn, is perhaps one of the most curious changes in trade that has occurred for many years.

The colonial produce market is decidedly improved. Large de-liveries of sugar continue, and, owing to the prevalence of east winds, few ships arrive. Reports, too, from the Havana, from Brazils, and some of our own West India Islands, are not favourable, and sugar is from 1s to 1s 6d dearer than last Friday. fined sugar has advanced 6d. Re-

Coffee also is better, and both plantation Ceylon and native Ceylon fetch higher prices.

The cotton market, too, has become better, and 1,470 bales have been sold. It will be seen, however, by our tables, that 455,983 more bales of American cotton had been received at the ports of the United States to April 7th, than at the same period last year, and the exports are 176,529 bales in excess of last year, so that at present there is every probability of a full supply.

All the markets have been to a small extent influenced by the Bank reduction, but the metal markets have felt it most. There some speculations have been entered into, and several articles "taken in hand" which were before left untouched. In Liverpool and other places the reduction, giving the assurance of the continnance of a low rate of interest, will probably be more influential than here, and brisker markets are generally expected. Those who calculate on much advanced prices must however recollect that, great as consumption in general is, production is also very active, and there is a probability of production keeping fully up to consumption.

In the tea market, says Messrs R. and W. Moffatt, "the past month has again been a dull one, and the business transacted of a moderate character, the large supply of all kinds causing buyers to act with great caution even at lower prices. A few speculative purchases in common congou (within these few days) have caused a little better feeling."

Of the fruit market Messrs Witherby and Hanson say. " We have again to notice an improvement in our clearances for home consumption, those from 18th ult. to 17th inst. having been 980 tons, against 1,000 tons in 1851, 750 tons in 1850, and 1,020 tons in 1849, during the corresponding weeks. The shipments have been extensive, the declared quantity exported during the five weeks ending 21st instant having been 880 tons, of which 120 tons were for our colonies. The Liverpool deliveries are now keeping pace with those of last season at this date.

INDIGO.

THE business done in indigo in the course of the present week is very insignificant, but an advance of 3d to 4d per lb upon the aver-age value of the last quarterly sales held in February is firmly mainage value of the last quarterly sales held in February is firmly main-tained, and as the consumption of the article in this country and on the continent of Europe appears of late to be somewhat greater than what it has been during the first three or four months of the previous years, it is supposed that the present prices will be supported until the supplies of this season come in. They are this year more than usually retarded through late shipments from Calcutta and the pre-vailing easterly winds. The bulk of the Bengal, &c. supplies will drop in during the summer months; we may therefore look for good choice and abundant quantities in our July and October auctions. The next quarterly sales in May will in all probability only contain a scanty exposé in quality as well as quantity, still the brokers as-sure us that al ogether about 8,000 or 9,000 ch sts of all sorts may be brought forward, two-thirds of which would suffice for the regular demand at this time of the year; it is thought, however, not to be unlikely that speculative purchases may be continued in the May sales, and if such be the case it is impossible to calculate beforehand what quantity may be bought for immediate consumption from one quarterly sale to the other, and no opinion can thus be formed as to the prices that may rule. The declarations at present amount only to a few thousand chests, but we understand that more will be brought forward for inspection next week.

The French markets,-the imports being much in excess of 1851,appear to assume again this year a considerable importance for our trade in indigo with other continental countries, such as was the case two years ago. It may, therefore, be desirable to take a glance at them, from which materials may be gleaned of the direct and in-direct influence which those markets may have upon the London export trade in the last six months of the present year.

We refer to the following statistics of the trade in indigo at Havre and Bordeaux during the last two years and up to the present time :---

Stock at Havre and Bordeaux, 31st December, 1849 Imported in 1850, Bengal, &c Madras, &c.	10,726	Chests. 4,280 12,226
Total supply Delivered in 1857, for home consumption export	8,700	16,506
Stock 31at December, 1850 Imported in 1851, Bengal, &c Madras, &c.	5,6?1	5,180 7,356
Total supply Delivered in 1851, for home consumption export	6,360	12,536 6,580
Stock 31s: December, 1851 Imports in 1852, Bengal, &c. Madras, &c.	7.500	
Total supply		14,956

It will be seen by the above figures that the total stock of indigo at Havre and Bordeaux on the 1st January, 1852, was 5,956 chests of all sorts. The importations of the present season will amount to at least 7,500 chests ex Calcutta, and probably to 1,500 chests of Kurpah, Madras, Java, &c., giving a total of stock and supply for 1852 of at least 15,000 chests. If we deduct from that quantity a

THE ECONOMIST.

delivery for the home consumption in France of more than an aver-sge, say 8,000 chests, there will remain about 7,000 chests, or nearly a whole year's requirements of France itself. From the experience which the year 1850 has furnished, it becomes, therefore, probable that the French importers will sell 3,000 chests or upwards for the consumption of those countries which usually draw their supplies from London, viz., Germany (Z-11-Verein), Russia, Austria, &c. It will be remembered that the export of 2,626 chests which took place in the summer and automa 1850 had to react the older of the

It will be remembered that the export of 2,626 cheats which took place in the summer and autumn 1850, had, towards the close of that very year, the effect of diminishing the export from London, and ul-timately that of reducing the value of indigo in our market. The value of indigo in the London February sales of the two years 1850 and 1852 is nearly alike, and may be called moderate in the re-lative position and prospects of stocks, supplies, and consumption. If, however, we remark that the article is now considerably cheaper than in the autumn of 1850, and thus the competition of the French markets apparently loss threatoning then at the project and market add

than in the autumn of 1850, and thus the competition of the French markets apparently less threatening than at that period, we must add that a material rise in our market would of course neutralise that difference. In 1850 our October sales realised an advance of from 25 to 40 per cent. on those of the preceding February. In public sale there were offered yesterday 450 serons and 20 boxes Guatemala, 5 serons Caraccas, and 16 chests Kurpah, the whole of which found buyers at full previous prices : Guatemala Cortes from 2s 7d to 4s 2d, Sobres from 4s 3d to 4s 8d, Flores from 4s 9d to 4s 11d, Caraccas Sobres from 4s 6d to 4s 9d, good ordinary Kurpah from 3s 1d to 3s 3d per lb.

Whilst in the beginning of last month the total stocks of coffee in whilst in the beginning of last month the total stocks of conee in the principal European markets still exhibited a surplus against the corresponding period of the three preceding years, our above table, made up to the commencement of the present month, shows, on the contrary, a deficiency of nearly 20 per cent. as compared with 1850 and 1851, and an increase of but 10 per cent. compared with 1849. The importations during the first three months of this year only amount to 680 000 cert against 825 000 cert again time bet year. only amount to 690,000 cwt, against 825,000 cwt same time last year ; and the deliveries during that period in 1852 have been 813,000 cwt,

and the deriveries during that period in 1852 have been 813,090 cwt, against 728,000 cwt in 1851, and but 494,000 cwt in 1850. This shows the favourable effect which moderate prices have had upon the consumption, and it may now be fairly expected that the latter will go on at an undiminished rate. In the proportion as at present established, the stocks on hand in the entrepôts, as given above, would only suffice for about three months. The wave of first has comerched defined since the beginning of would only suffice for about three months. The value of coffee has somewhat declined since the beginning of last month, both in this country and in the continental markets, but in the face of increased consumption, more confidence is gradually becoming established. From Holland we learn that the quantities disposed of in the last Company's sales are being rapidly cleared away from the public warehouses, and the stocks in second hands in that country are likewise on the decrease.

593,162 549.036 58',470 432.500 55.540 24.200 372,940 547,270 In the early part of the past week there was a very animated demand, chiefly for the middling qualifies of American cotton. The supply being at the same time extremely limited, males were made in these grades at an advance of ad, and in some mass of ad per lb moun previous rates, especially in cottons of good staple. On one or two days a large business was done by the trade. The prospect of a mort free supply, owing to a slightly increased import, as well as the high rates demand; d by holders, have size chacked the operations of manufacturers, and the extreme prices of the beginning of the week are not now obtainable. Speculators have operated to a for extend, and ex-porters have promptly possessed themselves of any reasonable parcels offered. Brazil fave been in fair request at steady prices. Egyptien, from the late decline in value, have attracted the notice of buyers, and appear likely to come into increased consump-tion. East india are offered fairly at steady rates. The import of the week amounts taken by the trade being 68.28 bales, and the actual export as per Customs' return 2.40 bales. The sules to day are computed at 8,000 bales. The market is quiet, but steady. steady

BRADFORD, April 22.—Wool—There has not only been more inquiry, but extended sales made of Botany combing, and of this article the market is comparatively bare. In English wools of a good class the market is not abundantly supplied, nor is it probable that any material increase is kely to take place. The difficulty to buy in the country is represented as great.

and when it reaches here, to realise a profit is impossible. The time for the new clip is drawing nearer every week, but partice seem more disposed to hold their present stocks than to sell out at a loss and buy a fresh supply at higher prices, and thus be barthened with new difficulties. The stock of tope has been gradually diminishing; there is less than average supply, and held for prices beyond the limits of consumers. Noils and brokes are good sale, at firm prices. Yarns-We regret we are again compelled to repeat the old tale of distress, but so it is-not a spinner can we confer with but con-firms the statement made by others of the losing condition of all engaged in this branch of trade. Wools continue to maintain their price, and the yarns are taken as produced. There is and must continue to he a deal of idle ma-chinery until an advance of moment can be established, and this is not ob-tainable for orders that are wanted to be given out; but there is a firmeness now mailfested on the part of the spinners not to take fresh orders except at an advance, and 21 per gro s may be considered as conceded by the buy-ers during the week. The demand for Lancashire continues good, and orders for quantity are offered for distant delivery. The home trade is far below the usual consumption, and the shippers for a long time have been doing very little. A good deal of re-sales have been made by the commission houses; but the stocks on hand are less than at any period of either last or the present year, and if orders are to be given out; a price commensurate will have to be naid. There is more inquiry for yarns suitable for. Russi houses; but the stocks on hand are less than at any period of either last or the present year, and if orders are to be given out, a price commensurate will have to be paid. There is more inquiry for yarns suitable for Russia, for which market shiptoents usually begin early in May. Pieces—There is now again a fair amount of business doing, but the prices are most wretched, and every one seems at a loss how to account for it; for the abridgement of the production is considerable, and the market is not visited with any great supplies from Lancashire. Yarns are very firm in price, there is no disposition to accept orders for distant delivery at present prices, and to sell goods to cover present prices is impossible. This, too, occurs at the period when our market is usually brisk, and the manufacturers generally busy. There is only one alternative, and that is, to still further narrow down, or at all events not increase the production; for if the latter is done, it will be only at still greater cost.

an events not increase the production, where a flat market to report to-day, there having been very few buyers in town. Manufacturers make goods very cau-tiously, and, consequently, stocks continue low. The goods most in demand in the cloth hall are light goods for summer wear. Fancies, of new pat-

terns and light makes, are more in demand. ROCHDALE, April 19.—We have had a better attendance of buyers in the market to-day, and more inquiry after goods, but prices have undergone no change. The wool market is inactive, and the manufacturers purchase for

Change. The wool market is inactive, and the manufacturers purchase for immediate u conly. HALIFAX, April 17.—We cannot report any improvement in the general condition of the worsted trade; and the aspect of our piece hall to-day has not presented any noticeable variation from the usual dulness. The tone of the yarn market is more cheerful, and the spinners are asking and obtaining a trifling advance. In wool there is no change since our last. LEICE-TER.—The Easter holidays have interfered with the usual course of busine-s during the past week. There is more doing for the home trade, and some foreign orders have also been received; but the American orders for worsted hosiery are much smaller than last season. Worsted is still selling below cost, and, to add to the disagreeable position of the spinners, skin comb wool has advanced from 5s to 10s per pack.

CORN.

AMERICAN CORN AND FLOUR MARKETS.

AMERICAN CORN AND FLOUR MARKETS. New YORK, April 7.—GRAIN.—There is a fair supply of wheat, but as the demand is very light, either for export or home use, the market is un-settled and our notations nominal. White Canada, which is now searce, having been shipped freely from first hands, may be quoted 1 doi to 1 doi 6c in bond; 2,000 bushels Michigan sold on terms we did not learn. There is very little doing in corn for export, and the home demand is moderate— prices vary from day to day, as the supplies are plentiful or otherwise. The sales are 37,000 bushels, closing without activity at 67 cents for yellow South-ern, 67c to 68c for white do, 66c to 66 jc for round yellow, and 66c nominally for mixed Western. for mixed Western.

LONDON MARKETS. STATE OF THE CORN TRADE FOR THE WEEK. MARK LANE, FRIDAY MOBNING.

There was a very moderate supply of English wheat at Mark hane last Monday, and it met a good sale : all fine qualities commanded an advance of 1s per qr. particularly parcels of white, which fully recovered what they lost the previous week. Foreign white was held at fully as much money, but there was not much passing in any description. The imports were very trifling, consisting of 1,692 qrs from Amsterdam, 550 qrs from Jaffs, and 240 qrs from Stralsund, making a total of only 2,762 qrs. The arrivals of flour coastwise were 1,898 sacks, by the Eastern Counties Railway 4,777 sacks,

April 24.

THE ECONOMIST.

from Marsellice 1,574 sacks, from Leghorn 125 sacks, and from Boston, U. S. from Marsellies 1,574 sacks, from Leghorn 125 sacks, and from Boston, U. S., 18 barrels. Choice qualities were rather easier to sell, and such supported prices. Barley was steady in value and demand: from our own coast there were 2,366 qrs, from Scotland 606 qr-, from Ireland 1,669 qrs, from Alex-andris 1,700 qrs, and from Stralsund 600 qrs, making a total of 6,941 qrs. Oats were better to sell, and prime sweet qualities must be quoted 6d per qr dearer: the arrivals from our own coast were 1,730 qrs, from Scotland 34 qrs. a Ireland 5.370 qrs, and from foreign ports 2.678 qrs, making a total of 2 qrs. Floating cargoes were held somewhat more firmly, with few 9,712 qrs. arrivals on the coast.

At Liverpool on Tuesday, there were fair imports of wheat and flour from At Liverpool on Tuesday, there were fair imports of wheat and flour from America, whilst the exports to Ireland increase, and during the week these amounted to 4,700 qrs wheat, 4,973 barrels and 570 sacks flour, with 6,084 qrs Indian corn. A fair amount of business was transacted in wheat at an advance of 1d to 2d per 70 lbs: average, 41s 3d on 102 qrs. Flour was 6d to 1s per barrel and 1s per sack dearer than the previous week. The imports at Hull consisted of 880 qrs barley, no other foreign grain having arrived, and there was a short delivery of home-grown whea', on which the millers had to pay 1s per qr advance: average, 83s 2d on 476 qrs. There were limited arrivals at Leeds, and an improvement of 1s per qr was established on the value of wheat: a verage, 40s do 1,72 ars.

established on the value of wheat : average, 40s 6d on 1,728 grs.

The deliveries from the farmers at Ipswich were quite trifling of all grain, and wheat sold readily at 1s per qr more money: average, 41s 2d, on

932 qrs. re were very short arrivals of all English grain at Mark lane on Wed-Increased and the fail prices of Monday for all articles, and in some instances for

healthy at the full prices of Monday for all articles, and in some instances for fresh-thrashed wheat and prime oats rather more money was obtained. There was rather more firmness in the Soutch markets. At Edinburgh the supplies were moderate, and wheat was taken off at the full prices of the previous week: average, 41s 9d on 780 qrs. Not many sales of foreign grain were effected, and oats were 6d to 1s per qr lower. The imports into Giasgow were moderately good of wheat and beans; on the whole there was a better feeling, and full prices were obtained for wheat. At Birmingham a fair supply of wheat was brought forward, which the millers purchased at 6d to 1s per qr more money; the sellers commenced by asking much higher prices at the opening of the market: average, 40s 6d on 1.625 qrs.

1.625 qrs.

The quantity of wheat shown at Bristol was limited, and a good demand as experienced for all good qualities at an advance of 1s per qr : average, 41s 1d on 186 grs:

Als 1d on 166 qrs: Newbury market was well supplied with wheat, and it met a slow sale from higher rates being asked: average, 438 8d on 954 qrs. There was a scanty delivery of wheat from the farmers at Uxbridge, which sold bri-kly at an advance of 1s per qr: average, 468 3d on 660 qrs: The weekly averages announced on Thursday were 408 10d on 68,348 qrs wheat, 299 1d on 26,826 qrs barley, 199 1d on 15,220 qrs oats, 338 6d on 88 qrs rye, 298 10d on 4.757 qrs beans, 298 11d on 896 qrs µcas. At Mark lane on Friday the fresh arrivals of English grain were quite limited, with a fair addition to the supply of foreign wheat, and a moderate import of barley and oats was reported. English wheat was in good request at rather more money. There was a somewhat better demand for good foreign wheat, but no advance could be established. Flour met a better demand at full prices. Barley resliked previous rates with a fair sale for sweet grinding full prices. Barley reslised previous rates with a fair sale for sweet grinding parcels. The consumers took off good oats more freely, and generally 6d per qr enhancement was established for all good horse corn.

COLONIAL AND FOREIGN PRODUCE MARKETS.

TRANSACTIONS OF THE WEEK.

(For Report of This Day's Markets see " Postscript.") MINCING LANE, FRIDAY MORNING.

SUGAR.—The market has been active ince last week, some large speculative sales effected in foreign having led to an improved demand for colouist descriptions, and prices show a general improvement of 1s to 1s 6d since last Friday. Arrivals and prices show a general improvement of 1s to 1s 6d since last Friday. Arrivals keep light, so that the stock at this port is further reduced. In the West India market a fair amount of busines« has been transacted at the above advance, and now the supply is very small. 206 hhds Barbadoes sold at stiff rates: fair yel-low, 35s to 37s; low heavy and brown to good middling yellow, 29s 6d to 35s 6d. The stock in London, on 17th inst. was 67,855 tons, against 54,862 tons in 1852. The deliveries are steady, being computed at 4,194 tons during last meak week.

Mauritius -- The sales on Tuesday, comprising 5,370 bags, went off at 6d ad-vance: middling to fair yellow, 32s 6d to 33s 6d; good to fine, 34s to 33s; low to fair strong refining kinds, 30s 6d to 33s; brown, 25s to 29s 6d per cwt. The stock shows a further increase, but the delivaries keep steady, being 668 tons last week.

last week. Bengal.—There has been a steady demand for white Benares this week at stiffer rates, 3,451 bags finding buyers: good middling to fair, 35s to 36s; low to middling, 31s 6d to 34s 6d. No grainy sugars were offered in the early part of the week: low descriptions meet with rather more inquiry. The stock is now moderate.

moderate. Madras.—A good inquiry has prevailed for all descriptions. 14,323 bags in the public sales were chiefly sold at an improvement of fid to is: low to good soft brown, 22s to 24s 6d; soft yellow, 25s 5d to 29s; good grainy yellow, 36s 6d to 37s; good to fine white, 42s to 43s 6d per out. Some business is also reported in the lower qualities by private contract. Foreign.—Some further extensive sales have been made this week at higher rates than last quoted. 121 hhds 100 bris St Croix sold as follows: fair controls to 24s 6d and 24s, brown to middling gravity 30s to 24s.

Torogenergy the set of the set o

MOLASSES.—The sales in West India have been unimportant. COFFEE.—The market has been firmer, with a limited supply offering during to week. Piantation Ceylon has met with a steady demand, and 126 casks 44 the week. the week. Finitation Ceylon has met with a steady demand, and 126 casks 44 bags in public sale were sold at rather stiffer rates, from 48s to 52s 6d for fine fine ordinary to middling; peas, 61s to 62s. Very few sales are reported privately. Native must be quoted 6d higher, about 700 bags having sold to yesterday at 28s 6d for good ordinary; 250 bags ordinary mixed, by auction, brought 28s. The stock has further decreased. Mocha shows a decline of about 5s on the late private contract prices, 470 bales and half bales, &c. finding buyers: fair clean garbled small berry, 77s to 79s; long berry taken in at 90s. Scarcely anything has been done in foreign by rejuste contract this week

has been done in foreign by private contract this week. COCOA.-703 bags Trinidad, about two-thirds sold at full prices: good to fine red, 38s to 44s; ordinary and low grey to fair red, 27s to 36s 6d per cwt. The stock is very large, consisting of 15S casks 10,627 bags. Foreign has been quiet.

TEA.—There is rather a better teening to the trade are getting low. Medium cougous at with more inquiry as stocks of the trade are getting low. Medium cougous at 9d to $9\frac{1}{2}$ d are inquired after, but the sales made at low prices, fair common is 9d to $9\frac{1}{2}$ d are inquired after, but the sales made at low prices, fair common is 9d to $9\frac{1}{2}$ d are inquired after, but the sales made at low prices, fair common is 9d to $9\frac{1}{2}$ d are inquired after, but the sales made at low prices, fair common is 9d to $9\frac{1}{2}$ d are inquired after, but the sales made at low prices, fair common is 9d to $9\frac{1}{2}$ d are inquired after at the sales made at low prices at the sale of the sale TEA .- There is rather a better feeling in the market, some kinds having met 9d to $3\frac{1}{2}d$ are isquired after, but the sales made at low prices. fair common is difficult to buy under 8d; fine have been more in demand. Further public sales, comprising 10,889 pkgs, were held on Tuesday, when 4,000 sold without any material change in prices. Fine gunpowders in small boxes brought the full value. Nearly all the congou offered was bought in. Two more vessels have arrived here since the 16th inst. Rice. —The few sales made in East India this week have been at previous rates. 870 bags Moulmein sold at 9s, with a few lots 9s 6d per owt. The stock shows a further decrease, and is 7,900 tons less than at same period last year.

Cleaned is unaltered. PIMENTO.-The market has been very firm.

100 bags brought previous

rates, selling at 4gd to 4gd per lb. The stock continues light. PEPPER.—A few transactions are reported in black kinds, at the high prices last quoted, and holders do not appear inclined to realise. White is scarce.

Ortige Spices.-16 casks Dutch limed nutmegs were taken in at 1s 9d to 2s per ib. 21 casks 153 barrels Jamaica ginger all sold from 2l to 4l per cwt. 300 cases Cochin were withdrawn.

RUM. - The market is quiet, no sales being effected. SALTPETRE. - The public sale declared for this day has prevented much in quiry by private treaty, and the supply is extremely limited. 220 bags Madras 320 bags Madras old at 22s 6d to 25s for 18s to 7h refraction. The stock on the 17th inst. was reduced to 1.131 tone

NITRATE SoDA has brought the advanced price of 15s 3d to 15s 6d per cwt

on the spot, owing to its scarcity. COCHINEAL. - The market continues quiet. 117 bags Honduras only partly sold at barely previous rates: silvers, 3s 8d to 3s 10d; black, 4s 2d to 5s. 33 bags Teneriffe were partly realised at 3s 9d to 4s 2d; blacks, 4s 2d to 4s 6d. to 54. 10 bags Mexican were taken in : silvers, 3s 8d ; blacks, 4s 1d per lb. The stocks

show a further increase. LAC DYE. 51 chest LAC DYE. 51 chests sold at rather higher rates: MB, 1s 7d to 1s 8d; other marks, 10 hd to 1s 4d per lb. The market is very firm, with few parcels

offering. Drewoope -32 tons red Saunders sold at 4/ 5s to 4/ 16s per tou.

THE ECONOMIST.

Dauces.-The small quantity of castor oil brought forward yesterday was disposed of at rather higher rate, seconds bringing 3dd to 3dd per lb. Gum oll-banum, owing to its previous cearcity, sold very high, fair to good bringing 56s 6d to 61s 6d. East India arable brought full rates. Good Siam benjamin widd as bight on add to be a state of the second second

566 6d to 618 6d. East India arable brought full rates. Good Siam benjamin sold as high as 281 per ewt. Some fine blood shellar realised 508 to 558. Cam-phor has advanced, and 978 6d to 1008 is now the nearest vrlue. Yesterday 400 bales Gambier about two thirds sold at 198 6d. Cutch has sold at 198 to 198 6d, being fully 1s lower; but yesterday this decline was nearly recovered, 208 to 208 6d being paid. 1,229 bags in public sale all found buyers. Good Medras turmeric sold at 138 to 138 6d : middling Bengal, 128 to 128 6d per owt

METALS .- There is no alteration to report in the iron market this week metrals. - Infere is no anterative to reates, with more inquiry for exporta-botch pig remains steady at last week's rates, with more inquiry for exporta-on. Few sales have been made in spelter, but holders evince some firmness: if 5s is demanded. A large speculative business has been done in E at India 1 sl 5s is demanded.

last year.

-A few sales have been effected in clean Petersburg at the quoted HEMP. MEM. — A rew sales have been encoded in clean receiving as the form ices. There is no further change to report in Manilla. The sales of jute, maprising 1,711 bales, went off without spirit at previous rates, a portion only prices. finding buyers at 7/ 12s 6d to 10/ per ton.

OILS.—The prices of fish oils have been fully supported this week, as stocks keep light. Pale seal is firm at 311. Southern is in demand. Sperm fully maintains its previous value. Linseed oil is firmer, owing to the reduced supply, and 26s per cwt has been paid on the spot, with a steady demand. Rape meets with more inquiry at stiffer rates. Palm and cocon nut are both steady, TURPENTINE.—British drawn spirits are rather higher, being quoted at 42s 6d to 43a per ewt.

LINSEED.—The business is chiefly confiled to East India, at 44s per qr, other kinds having been nearly negleo'ed. Linseed cakes are inactive, at 8l to 8l 5s per ton, for fine English made; fine American command 9l to 9l 5s per ton.

POSTSCRIPT. FRIDAY EVENING.

SUGAR.—A further advance was established to-day, the demand being partly speculative, and prices for nearly all kinds close fully is higher than on Friday last. 179 casks West India only sold to-day at stiffer rates, making 1,621 casks for the week. Mauritius.—13,000 bags sold 6d to is above Tuesday's rates: yellow low to fine, 31s to 36s; fine brown to good strong refining kinds, 20s to 33s 6d; crystallised, 33s 6d to 40s 6d. Bergal.—1,866 bags, consisting of white Benarce acld rather binhar. Madras _ 2601 here brown to 26s 6d for low Benarcs, sold rather higher. Madras.- 3,621 bags brought 23s to 26s 6d for low becarree, sold rather night, hadras, - 2,021 bigs brought 208 to 208 do 100 tow brown to low yellow, being a further improvement of 1s. Foreign.-152 hbds, &c., 110 hrls Porto Rico, sold at stiffer rates : Icw to fine yellow, 33s to 41s per cwt.

per owt. COFFEE -- 87 casks 332 brls plantation Ceylon were sold at 1s to 2s advance, chiefy upon the better kinds: low middling to good, 57s to 63s. Business was done in native at 39s 6d to 40s, Leing fully 1s dearer. 158 casks by auction sold at 40s to 40s 6d. 129 pkgs Mocha sold at stiffer rates. 239 bags low done in native a size of the total sold at stiffer rates. 239 bags low Babla were taken in at 35s per cwt. CASSIA LIGNEA.-229 cases sold at 110s to 120s for 3rd to 1st pile. SALTFETRE.-1,277 bags Bengal, refracting 5s to 3s, brought 30s to 31s

per cwi

per cwt. PIMENTO.-600 bags sold at 4³/₄d to 4³/₄d per lb, being stiffer rates. DRISALTERY GOODS, &c.-351 bales Gausbier sold at 19s 6d. 47 bales Bengal sofflower brought 3l to 4l 7s 6d for low to low middling quality. 215 chests shellac were chiefly taken in at high rates: middling to good orange, 50s to 54s 437 chests lac dyc, part sold at stiff rates: B Mirzapore with-drawm at 1s 11⁴/₂, R B 2s 2d; other marks partly sold 1s 2d to 1s 6d; ordi-mere held at 6d at 8d are 1b

nary held at 6d to 8d per lb. TALLOW.—The sales went off at stiffer rates. 137 chests Australian chiefly sold from 33s to 35s 9d. 224 casks South American, all sold from 33s 9d to 35# 9d.

OIL -135 casks palm brought 24s 6d to 26s 3d per cwt.

ADDITIONAL NOTICES.

ADDITIONAL NOTICES. REFIRED SUGAR.—The home market is about 6d higher in the lower and middling description of goods; the bonded remains without any alteration. About 500 tons Dutch crashed have been sold, f. o. b. in Holland, 23s to 24s : there has also been a large business done in Holland for forward delivery at rather higher prices. In Bel-gium several values of loaves and crushed have also been effected. GREEN Fautr.—The market continues good for all kinds. Two cargoes of oranges, K Michael, sold by Keeling and Hunt, went at an advance of 3s to 4s per box. A better sais exists for nuits, which is likely to continue, owing to the backward state of vegetation in this country. Lemons dull of sale, warm weather being required for the consumption. Market Mool.—The trade is generally better, both as regards demand and value, and prices may safely be quoted a trifte higher than of lart, but not sufficiently so to warrant an alteration in the quotations. Mark Fautr.—A steady demand continues for currants, and full prices are paid. A small cargo is in the Channel, but very little more at present afford. Clearances large, and the market is firm and bealty. Very little doing in raisins of any description. SEED.—There has been a fair business done in all seeds at the quotations, except cloves, which are cull. Example the set of the lower and head are little dance.

and the market is firm and resulty. Very fittle comp in raises of any description. SERDS.—There has been a fair business done in all seeds at the quotations, except cloves, which are dull. FLAX and HEMP very quict this week and very little done. COTTON.—The market opened heavily, but within the hast few days an improved de-mand has prevailed, and a fair business has been transacted at steady prices. Sales of cotton wool from the 16th to the 22d instant inclusive: -1.220 bales Surat, at 34d to 44 for very middling to fair ; 250 bales Madras, at 4d to 44d for fair to good Tinnivelly. HUDEs and LEMPE —At Leaden hall market on the past Tuesday there was a fair amount of business for the season of the year, and during the past week also some con-siderable sales were made, generally at former prices. A good demand exists for common English butts of the lighest weights. There was a small public cale last week of East India kips, East India goat akins, &c., which were ebiefly of an ordinary quality, and sold at about previous quotations. By private contract above 10,000 salled Buenos Ayree hides have been sold during the past week af former rates. There allesd, with more demanded, under the expection of restricted shipments from the several ports until fresh supplies artive there from Poland. For Memel stares en-hanced prices are asking, and consequently their sale is checked. Of Candian deals there has recently been some move at prices rather under the previous quotations, influenced by the importation of cheap Norway white deals in competition with then, of which are attended at full rates. Tin.—A speculative sto ash lighter rates. English remains as before. Spelter is neglected at our quotations. Iron.—Owing to

the drought in the manufacturing districts, and a large demand for rails, makers are very firm at the annexed prices. Scotch pigs are in great request for shipment, but neglected by speculators.

PROVISIONS.

PROVISIONS. The bacon market looks very firm; considerable business having been done at 52a free on board for this month, and is more for two weekly shipments in May. The supplies from Ireland are quite equal to last season, but from Hamburg very little. Friesland butter Is lower. Comparative Statement of Slocks and Deliveries.

NEWGATE AND LEADENHALL.

NEWGATE AND LEADENEALL. MONDAY, April 19.—For the time of year, large supplies of country-killed meat have come fresh to h and in excellent condition. The show of meat slaughtered in the me-tropolis being very moderate, the demand for beef, mutton, and veal is steady, at full pices; but lamb and pork ars lower to purchase. FRIDAY, April 23.—The general demand was in a depressed state, at barely late Pile

SMITHFIELD CATTLE MARKET.

MONDAY, April 19 .- Since our last, the imports of foreign stock into Lon MONDAY, April 19,—Since our last, the imports of foreign stock into London have been very moderate, viz, 1.315 head. During the corresponding period in 1851, we received 1.883; in 1850, 1,244; in 1849, 1,093; and in 1848, 1,256 head. No lambs have yet arrived, and the general quality of the stock does not improve. Insports into London last week:—beasts, 254; sheep, 754; csives, 307. During last week, the arrivals of stock from Ireland, direct from sea, amounted to 40 hearts

During last week, the arrivals of stock from Ireland, direct from sea, amounted to 40 beasts. From our own grazing di-tricts, the receipts of beasts fresh up to-day were unusually heavy and in excellent condition. Notwithstanding that the attendance of buyers was large, and that the weather was favourable for slaughtering the beef trade was in a very depressed state, at a decline in the quotations obtained on Monday last of 2d per 81bs. The extreme figure for the bast Scots was only 3s 4d per 8 lbs, and a total clear-ance was not effected. The show of foreign stock was but moderate. The arriva's from Norfolk, Suffalk, Essex, and Cambridgeshire, amounted to 2,460 Herefords, runts, Devons, &c.; and, from Scotland, 510 horaed and polled Scots, mostly per railway. There was a considerable increase in the supply of sheep. All breeds met a very dull inquiry, and in some instances the currencies had a dow ward tendency. The extreme value of the best old Downs in the wool was 4s 2d per 8 lbs. Nearly four-fitts of the akeep were shore. From the Isle of Wight 320 lamba reached us, and the arrivals from other quarters were large. The trade was heavy at a further decline in prices of 2d per 8 lbs, the cur-rent rates being from 4s 6d to 5s 6d per 8 lbs. We had a very siow sale for cartecs, the supply of which was moderate, at last week's prices. The pork trade was nusually heavy at previous constations.

The pork trade was unusually heavy at previous quotations.

Lambs, 45 66 to 58 6d. Total supply at market:—Beasts, 618; sheep, 4,500; calves, 241; pigs, 280. Foreign supply—Beasts, 129; sheep, 320; calves, 50.

HOP MARKETS. BOROUGH, Monday, April 19.—There is no alteration to notice in our market during the past week. The demand is but moderate, though prices are firm at previous quota-tions. Mid and East Kents, 140s to 240s; Weald of Kent do, 120s to 145s; Sussex

tions. Mid and East Kents, 1403 to 2105; Weald of Kent up, 1208 to 1408; Sum-pockets, 1103 to 1265 per cw. FRIDAY, April 23.—Our market still continues firm for all kinds of hops, the abow of which is limited, and last week's quotations are well supported. Sussex pockets, 5/128 to 6/6 s; Weald of Kent, 6/6 St to 7/; Mid and East Kent, 6/108 to 12/; Yearlings, 3/108 to 5/105; Old Olds, 1/28 to 2/108 per cwt.

POTATO MARKET.

POTATO MARKET. SOUTHWARK, April 19.—Since our last report, the supply has been quite equal to the demand, except for good samples of Regents, which have made more money; but a cond-rate or inferior stuff have been almost unsaleable, particularly Scotch Reds or Cups. The following are this day's qu tations: - York Regents, 70s to 90s; Scotch do, 65s to 75s; Perth and Forfarshine Cups, 60s to 55s; Fie-hire dito, 50s to 55s; Kent and Essex, 65s to 80s; Cambridge and Wisbeach, 60s to 70s per ton. Southwark, April 22 - There was an adequate supply at this market to-day, with an indifferent trade. York Regents, from 60s to 80s; Scotch dito, 60s to 75s; Kent and Essex ditto, 70s to 90s; Wisbeach ditto, 60s to 75s; Scotch Cups, 55s to 63s; Shaws, 60s to 70s; Kidneys, 60s to 80s; Middlings, 45s to 55s per ton.

HAY MARKETS-THURSDAY. PORTMAN.-Old meadow hay, 70s to 78s; inferior ditto, 64s to 68s; old clover, 72s to 78s; inferior ditto, 65s to 70s; wheat straw, 25s to 2ss per load of 36 trusses. Smithfield.-Fine upland meadow and rye grass hay, 76s to 78s: inferior ditto.

LIVERPOOL MARKETS.

WOOL. FRIDAT NIGHT.

(From our own Correspondent.)

The only improvement we can notice is a feeling of more confidence, the business sing being still very small; but as soon as freeh arrivals come in there will no doubt b more active demand. oing being being

CORN.

(From our own Correspondent.)

A feeling of firmness continues to prevail in the grain market, and the business doing, daily, is to a fair extent and at very full prices. This morning the demand for wheat was not very lively, but a moderate quantity found buyers at the extreme rates, and, in some cases, rather exceeding trose of Tuesday. Flour was without change. Oats and meal were held for rather higher prices, but they did not move freely. Indian corn is in fair demand, at Tuesday's currency. The weather is still dry.

FOREIGN MARKETS.

PETERSBURG, April 10. Convections neglected. DESIS.-A minor dealer has sold 2,000 doz. redwood in Cronstadt at 4 ro 70 co, eash and 2,700 doz. redwood, and 700 doz. whilewood, for September delivery, at 4 ro 45 co and 3 ro, three-fourths cash. #FLAX.-One of the best dealers has sold 75 tons 9-head, on contract, at 85 ro, eash down; otherwise, no transactions. It is now said the new supply will not exceed \$30,000 to 400,900 poods, owing to the small quantity hitherto bought and prepared up th country.

Botontry, country, HEMP-quiet. 100 tons clean taken at 80% ro, cash: and buyers readily appear for anything offering at our lower money quotations, but do not give the price with an ad-vance. The quantity contracted for is estimated at 350,000 to 470,000 poeds, and the supply by the summer barks, at 1,500,000 poods. LINEEED -5,000 chets Morshansk, on contract, were done at 25% ro, cash, and there

Takkers -0.000 chets morshanas, on contract, were done at 25 re, cash, and there seems more inquiry. Taklow.-50 reaks for August, done a few days since at 109 ro, 10 ro down : some-thing in soap tailow at 100 ro, 10° ro down : a lutle Ukraine at 107 ro, cash. Estimates of the new supply vary from 92,000 to 93,000 cashs.

AMSTERDAM, April 19. COWFEE — A middling business went on at d an advance of \$20 on last sale prices was allowed for almost every description of Java, at which rate several lots were taken ; there was more demand for Brazil also, of which about 2,000 bags were sold at 21 to 22g in bond.

was more demand for Brazil also, of which about 2,000 bags were sold at 21 to 22j in bond. SUGAR.—Some lots Surinam were sold at 21f to 22jf, and 0,000 bags brown Manilla at 22jf new condition, to receive from the ship's side. Dvcs, &c. —Indigo.—Prices very firmly maintained, and although transactions are but smail, a good demand remains, especially for the better sorts. Cochineal—Con-tinued in request, and very full prices were paid for Java, 135 chests of which were sold for export. Dyewoods—Without the least change in value. SEZDS.—Rape—Advancing. Lin—Rather declining. Clover—Only a few bales prime were taken for the country and a trifle for export at SSift 029f for red Maese, and 27f for Gulichs, both superior samples. Mustard—With little doing; 12jf to 13f for German account by small lots; prime lots are held at 13f to 13jf, but inferior is to be had lower; yellow without demand and to be had at 9f to 11f. Canary—Fetched by small parcels 8f to 7jf per hect. Carraway—North Holland 15jf to 15jf per 50 kilo; a good demand is going op, and of the last cop very little remains for sale. Cosw.—Wheat—Polish descriptions were sold for home use at a decline; foreign red norts by lots of some importance were sold at a considerable reduction on, speculative account. Rye—Dried descriptions cargetenced a mostsersibler reduction but since more demand rame forward, an advance of 3f to 4f is experienced. Barley firm. Oats and buckwheat with little doing.

EPITOME OF RAILWAY NEWS.

SCOTTISH CENTRAL.—The report of the directors of this company submitted to the shareholders on Wednesday, states that there is an increase in the traffic receipts from every department, with the exception of the local passenger traffic at the smaller stations, on which there is a decrease of 2211; and this exceptional state has been owing to the diversion of the usual traffic caused by receipts from every department, with the exception of the value of the traffic at the smaller stations, on which there is a decrease of 2211; and this exceptional state has been owing to the diversion of the usual traffic caused by the Great Exhibition. The receipts for passengers during the half-year ending 31st of January last amounted to 23,307, and for the corresponding period of 1851 to 18,860, showing an increase of 4,4471 or 19 per cent. One-third of this increase is on the Edinburgh and Perth passenger traffic, to which, in connection with the Edinburgh and Glasgow Eailway, experime has shown that the company are fairly entitled. The receipt for goods, min-rale, and live stock during the last half-year amounted to 20,4814, and at the corresponding period of 1851 to 17,8484, showing an increase of 2,6224, of which 1,0142 was for goods, 1,3131 for minerals, and 3051 for stock. Compared with the corresponding half-year of 1850 there is an increase in the passenger traffic of 6,2001, or 32 per cent, and in the goods traffic 6,4724, or 46 per cent. Since the close of the balf-year the receipts have continued to increase at the rate of nearly 10 per cent. compared with the corresponding neriod of last year, and about 40 per cent. compared with the year preceding. The per centage on the receipts of the whole working expenses is lower than in any corresponding half-year. These expenses in the last half-year we de-per cent.; and if the sum set spart for deprecision on the plant be deducted, for which there was no provision in former corresponding half-year, the ex-penses are 422 per cent. on the receipts. After making full provision for all charges properly due out of past revenue, the directors recommend that a divifor which there was no provision in former corresponding half-years, the expenses are $42_{\rm F}$ per cent, on the receipte. After making full provision for all charges properly due out of past revenue, the directors recommend that a dividend of 7s per share, amounting to 14,2807, be declared, leaving 6,9827 for the next account. During the last half-year 12,9307 have been paid on account of land and road trusts, and additional sums amounting to 22,6367 have since of land and road trusts, and additional sums amounting to 22,636l have since been paid. It is estimated that 21,903l more will be required for these settlemeurs. The total amount for land and road trusts may be computed at 265,000l. In addition to the outstanding claims for land, there are miscellaneous liabilities estimated at 28,755l. These include the harbour branch. A sum is also in-cluded for providing telegraph communication along the line. Preference shares amounting to 151,541l have been issued, and there remain 18,458l 6s 8d unissued. The capital to the 21st of January last shore d that 1,596,824l had been received, and 1,610,699l expended, leaving a balance due to bankers and others of 13,875l. The loan necount shows that 418,005l had been borrowed, of which 254,065l was borrowed at 5 per cent. 42,130l at 4½ per cent., and 221,810l at 4 per cent. The revenue account for the half-year ending the 31st of January last showed that 47,332l had been received, and 21,413l expended; leaving a balance of 25,919l, out of which is deducted 13,096l for interest on loans, advances, &c.; leaving 12,822l, which added to 8,439l, balance from last account, makes a total of 21,262l to the credit of revenue.

RAILWAY AND MINING SHARE MARKET.

LONDON.

MONDAY, April 19.- In the railway market there was rome finetuation to-day, and the highest prices were not supported up to the close of business. The shares of the Californian gold mines were firmer, some descriptions having left

and the conformal goal mines were miner, rome decomptions marks, of at advanced quotations. TUESDAY, April 20.—The railway market was weak in the earlier hours of business, but towards the close there were symptoms of a favourable reaction. An average amount of bargains took place in the shares of the various gold

WEDNESDAY, April 21.—The railway market, owing to the fluctuations in Consols, was not well supported at the commencement of business, but subsequently there was more firmness, and prices closed with a steady appearance. There were few operations in the shares of the gold mining companies, which participated in the flatness occasioned by the position of affairs in the other depa tments,

THURSDAY, April 22 .-- The railway market was rather depressed this morn-ing, but, after the reduction of the rate of discount by the Bank, a better de-mand was noticeable for all descriptions, and prices closed with firmness. The

shares of the gold mining companies were only dealt in to a limited extent. FRIDAT, April 23.—Railway shares are all in request, and about $\frac{1}{2}$ to 1 per cent. higher than yesterday. The chief business has been in Calidonian, A ber-deen, Great Western, North Western, Midland, and York and Noth Midland Gold mines are very firm, and some of the Californian are better

A PRACTICAL ANSWER TO SIR F. KELLY. — The following singular reason for voting against a Free-Trade candidate was given by a butcher in an agricul-tural constituency :— "I am sorry I can't support you. I believe that you mean well, but Free Trade does not agree with me. I can't sell these here plucks and offal (seizing them as they hurg upon the wall) Look here. People now-sidays have so much bread to eat that they will not buy my offal. Ch-sp bread is all very well, but it don't do for my trade, and I can't vote for you." Calling upon another voter (an agricultural laboure) the wife, a quick, intelli-gent-looking woman, only appeared, and, addressing Mr Mellor said, "Are you in favour of taxing our bread?" "No, quite the contrary: I wish to prevent its being taxed," quoth the candidate. "Then my husband will vote for you." Mr M. "May I see your husband, as I should be glad to hear him confirm your promise?" "You need not fear; come here (opening the door of a noom, and pointing to five children.) do you think that my husband will go and vote gainst his own children."

CARTER, puddeston row, for all Stations on the London and North Western Railway. South of Stafford; and for Stations on the Buckinghamshire, and Birmingham and Gloucester Railways: Shrewsbury, Mesars Youxo and Sprexce, for the district between that town and Stafford; or to the Secretary of the Company, at their Chief Office, 7 Rumford street, Liverpool, will meet with prompt at-tention. WILLIAM LAIRD, Geueral Manager.

" Costly thy habit as thy purse can buy,

But not expressed in fancy ; rich, not gaudy -For the apparel oft proclaims the man !"-HAMLET.

For the apparel of proclaims the man "—HARLET. **E** VERY WELL-DRESSED MAN knows how difficult it is to flud a tailor who thoroughly u dersrands the peculiarities of each figure, and can suit its requirement, with a well-cut gentlemaly fitting garment, in which ease and taste, being equally fitting garment, in which ease and taste, being equally fitting garment, in which ease and taste, being equally fitting garment, in which ease and taste, being equally fitting garment, in which ease and taste, being equally fitting garment, in which ease and taste, being equally fitting arment is that so few feel " at home" during the first day's wear of any new garment, and so many are ap-parently doomed to appear in clothes, however coally, that never can become adapted to their forms. To re-medy so manifest a deformity in costume, FREDERICK FOX adopts this means of making known that be has practically studied both form and fashion in their most comprehensive meaning, and in the course of an exten-sive private connection has clothed every conceivable de-velopment during the past thirteen years, always adapt-ing the garment, whether coat, walstcoat, or trousers, to the exigencies of its initividual wearer, and the purposes it is intended to serve, thus invariably attaining clegance of fit with that regard for ECONMY which he woird is intended to serve, thus invariably attaining clep fit with that regard for ECONOMY which the the age dictates — W. FOX, pr ctical tailor, 73 C II, -an e side of the way as the Royal Exchange.

This, where note on the way as the Royal Exchange. A USTRALIAN GOLD. Second State of the way as the Royal Exchange. A USTRALIAN GOLD. Second State of the second

shift, taken, and industry, are convincing proofs of inter-Australian Gold may be advantageously employed in this country. E. Mosta and Sos's gigantic trade effords the most immense advaringes in the investment of gold. The magnificent and unparalleled Stock of Gosda in their Wholesale Department offers to the capitalist the most decided opportunities, if heintends to accumulate wealth by legitimate commerce, to such to other countries an article which will soon be sold, and leave him an amiling proportion of profit On the other hand, the splendid Styles and the inter-minable warfery of their SPRING and Stammar Stock furnish equal advantages in similar Investments of the prectous metal. Clohing, surpassing in norwity of fories, nearness, cois ur, and strength of material, dis-playing the power of art and the match of improvements, matche to the story description of Spling and Summer Styles of DEE's, suffable for all siges and every class in society, now more conspicuously displayed at E. MosES and SN's than at any PREVIOUS SEASON.

AL IS AN EL

GOLD QUARTZ CRUSHING MACHINERY. CROSSKILL'S PATENT MILLS, awarded the "Council Great Medal" at the Great Exhibition. These Mills—as proved by testing one at Beyerley with a 20 cwt sample of California Gold Quartz—will reduce the quartz rock to powder at the rate of THEEE TONS PEE HOULE. These Mills, fixed or portable, will split beans, c ush oats, and grind household flour.—For further parti-culars, apply to Mr CROSSKILL, Iron Works, Beverley.

C AUTION.-TO TRADESMEN, MERCHANTS, SHIPPERS, OUTFITTERS, &c. Whereas it has lately come to my knowledge, that some unprincipled person or persons have for some time past been imposing upon the public, by selling to the Trade aid other, a spurious article under the name of BOND'S PERMANENT MARKING 'NK. This is to give Notice, that I am the Original and sole Proprietor and Manufacturer of the said Article, and do not employ any Traveller, or authorise any person, to represent themselves as coming from my Establishment for the purpose of selling the said Ink. This Caution is published by me to prevent further imposition upon the public, and serious injury to myself. E. R. BOND, sole Ex-ecutrix and Widow of the late John Bond, 28 Long lane, West Smithfield, London.

THE BEST MATTING AND MATS at Exhibition, awarded the PRIZE MEDAL to T. TRELOAR, Occas Nut Fibre Manufacturer, 43 Ludgate Hill, London.

GUTTA PERCHA TUBING. Amongst the peculier properties possessed by this Tubing, which render it an article of great value not only to manufacturers, but to the public generally, are the following :-

Lightness, combined with remarkable strength, (a 2-in she having remisted a pressure of 237 lbs on the square with h tube h inch.)

tane naving remister a pressure of sortin of the square inch.) Non-affection by the carbonic, acetic, hydrofinoric, or numriatic acids, or by the most caustic alkalies. This re-markable property renders Gutta Percha so valuable for the conveyance of water, lining of claterns, &c., being free from the deleterious effects to health resulting from the use of lead for those purposes. Peculiar power of resisting frost. Reatiness with which it can be connected (by means of the Gutta Percha Union Joints) with the water-tap or pump, and used for watering gardens, washing windows, carriages, &c. Great lengths in which it can be made (50 ts 500 feet) without a joint.

thout a joint.

Thout a joint. Base with which the requisite joints can be made. Facility with which it can be cut open, and again re-aired, in case of stoppage. Extraordinary power of conducting sound.

Extraordinary power of conducting sound. APFLICATIONS OF GUTTA FERCHA TUBING. The couveyance of Water, Oli, Acids, Gas, and other Chemicals, Liquid Manures, &c.; Drain and Soil Pipes; Suction Pipes for Fire Engines; Pump Barrels and Feeding Pipes; Syphons; For Watering Gardens, Streets, Washing Windows, &c.; Ventilation of Mines, &c.; Ships Pumps, &e.; Ear and Mouth Trumpets; Speaking Tabee in lieu of Belia, &c. BURTON PALE ALE, OR BITTER

BURION PALE ALE, OR BITTER BEER. The "urion Brewers have requested me to ublisk a solemn declaration, which they have made before me in yr official capacity, and which they have left in my keeping, in answer to a mischlerous charge recently brought against them to the effect that they use Strych-nine in the making of their celebrated Bitter / eer. That a charge so absurd should obtain a moment's credence appears surprising to persons on the spot, who know that it ever a manufactured article was free from adultera-tion, it is this wholesome and grateful overage. In fact, it is well-known to every one practically acquainted with the process, and ought to be known to every chemist, not to mention learned "M.D.S." that nothing could pro-duce the article in perfection but the finest malt and hops and the parest water, combined with the most scraphlous cleanlices and skill in the mannfacture. The Burton Brewers, in adopting this mode of defence, have been advised by counsel that it is the only legal course open to them, owing to the extreme vaguences of

cleanifices and skill in the manufacture.
 The Burton Brewerz, in adopting this mode of defence, have been advised by counsel that it is the only legal course open to them, owing to the extreme vagu-ness of the charge. It would have been more agreeable to them collectively, or to any of them individually, to have met their calumniator in a court of law, where he would have been more agreeable to them collectively, or to any of them individually, to have met their calumniator in a court of law, where he would have been more agreeable to them collectively, or to any of them individually, to have met their calumniator in a court of law, where he would have head every facility for making good his charge, had it been ca able of proof. As, however, the opnortanity of dois go is denied them, they think it due to the public, as well as to themselves, to repel the calumny in the most solenn form the law allows them to employ. JOHN RICHARDSON,
 High Bailiff of the Borough of Burton-upon-Trent.
 We the several persons whose names are hereinto materioed, being wholesale brewers at Burton-upon-Trent, in the county of Stafford, do severally and respectively is ole our re-pective firms of Bitter Beer or other Beer or Ale, no article whatever is used or employed, directly or indirect y, other than mait, hops, and water ; and that in our respective brewe les no other article ever was used or employed, excepting that in the year 143 some of a stried, by way of experiment. (under an Act of Parliament passed in that year authorising the same) a small quantity of sugar, but the use of Strychning was imputed to any of the Burton: Brewers, until such imputation is abou e's and entire y like and groundless. And we further solemuly and sincerely declare thas such imputation is abou e's and entire y inside and groundless. And we make this solern declarations to the provisions of the Act of Parliament made and passed in the fourth and fifth years of the reign of King William the Fourth, in

HUBBUCK'S PATENT WHITE

THE "PERMANENT WHITE" OF THE ANCIENT ARTIST, Is now offered at the price of the ordinary White Lead Paint. Four years since the Proprietors placed their manu-facture on a large scale, and offered it as a substitute for White Lead Paint. The successful introduction of this Paint, and its con-fessed superiority over every other Paint hitherto, kown, brought norward various multiations. These inferior productions, frequently made from zinc ores, containing lead, arsente, and other deleterious ma-terial, alike injurious to he ith deficient in body, and reducing the preservative properties for which the origi-nal Paint stands pre-seminent. In justice to the Proprietors these should not be con-founded with the original, even though sold under the presence that it is all the same.

The Powdered while Zinc also thay be had for grind-ing in oil; also for use for porcelain cards, for japanners, for gutta percha, and for plaster decorations, and the other purposes where it is used with size, gum, varnish, spirit, &c., &c. A circular, with full particulars, may be had of

THOMAS HUBBUCK and SON, Colour and Varnish Manufac'urers, opposite the London Docks, London. "HUBBUCK'S PATENT WHITE ZINC PAINT.—For public schools, and all rooms occupie: by children, there will how be no excuse for using poisonous paints. Parents have remarked that their children, on returning from the country to newly painted houses, have suffered in health. The reason is evalues the stretch extracts the poison from paint even after several months' drying, and the lungs draw in the deadly vapour." "Amongst other tests to which it has been subjected has been that of painting the hold of a sugar vessel, which, after a voyage to St Kit's and back, is found as white as the first day the paint was applied."—Jours BULL, September 14, 1850.

[April 24, 1852

ALLSOPP'S EAST INDIA PALE ALLOUT S LAST LINDIA PALE and other BUETON ALES. The public is respectfully informed that these favourite Ales may be had, genuine, in casks of 18 gallons and up-wards, at their respective flores as under, where also a list of the Botslers may be obtained :--The Brewers, Bur-ton-on-Trent; Stores, 61 King William street, City, London; Cook street, Liverpool; High street, Birming-ham; The Exchange, Manchester; 33 Virginia street, Giasgow; Royal Brewery, Dudley.

or

or stores. PORT and SHERRY, from 50s per dozen; CHAM. PAGNE, 43s per dozen. Address, WOOD and WATSON, 16 Clement's lane, City.

Address, wood and wARSON, to Clement's lane, City. **B** OTTLEED ALES, STOUT, by Messrs Jas. Thorne and Company, have acquired, as well from their brilliant colour and fine flavour, as from the great care taken in the bottling and packing, a justij high reputation all over the East and West Indies, and other parts of the world; they are consequently strongly re-commended to the at ention of shippers. The Westminster ales and Stout are also warranted to stand any voyage or climate, and are not surpassed either in quality or price by those of any other brewery. All orders will be promptly attended to by HOLMES and ZOHRAB, Sole Agents, at 2 Fen court, Fenchurch street.

PERUVIAN GUANO. - CAUTION TO AGRICULTURISTS.

To AGRICULTURISTS. It being notorious that extensive adulterations of this manure are still carried on, ANTONY GIBBS and SONS, as the only importers of Peruvian Guano, consider it to be their duty to the Peruvian Government and to the public again to recommend farmers and all others who buy to be carefully on their guard. The character of the parties from whom they purchase will of course be the best security ; and in addition to particular attention to that point, ANTONY GIBBS and SONS think it well to remind buyers that the lowest wholesale price at which sound Peruvian Guano is or has been sold by them during the last two years is £9 5s per ton, less 24 per cent.

ton, less $2\frac{1}{2}$ per cent. Any resales made by dealers at a lower price must therefore either leave a loss to them or the article must be adulterated.

TO AGRICULTURISTS. OWEN'S ANIMALIZED CARBON is now for Sale at £2 5s per ton in bulk.

•OWEN'S ANIMALIZED CARBON Is now for Sale at £2 5s per ton in bulk. This MANURE has been introduced, with the most benchicial results, at \$1 Croix and the Mauritius, in the growth of the sugar cane, as proved by testimonials received from the planters. The powerful farilising properties of the Carbon have long since been ac-knowledged in Denmark, where it has been extensively used for agricultural purposes, as no less than 26,000 tons have aircady been sold. It is ready for tunmediate use, having no cecasion to be ground, is equally as portable and diffusible as bones, and the low price at which it can be sold in this country must always be a paramount re-commendation. A LIBERAL COMMISSION ALLOWED TO DEALERS OF AGENTS. For copies of the testimonials of its utility in this country, also for samples, apply to J. OWEN and CO., 3 Rood lane. Messrs J. OWEN and CO., are now importing from their Copenhagen Manufactory.

their Copenhagen Manufactory SUPERPHOSPHATE OF LIME

SUPERPHOSPHATE OF LIME of the very best descrip ion, containing at least 18 per cent, of Neutral Soluble Phosphate of Lime, and capable of furnis-ing at least 3 per cent. of Ammonia to the Soil. The "Analysis" is made by Professor J. THOMAS WAR, Consulting Chemist to the Royal Agricultural So-clety. The price, in London, of this powerful Manure is £7 per Ton, Cash, or Banker's Bill on London.

PURE PATENT WHITE ZINC PAINT, from the VIEILLE MONTAGNE ZINC MIN'NG COMPANY of BELGIUM.- This Paint is superior in every respect to White Lead; it is unequalled in whiteness, and grows very hard atter it is applied, and is, therefore, for interior work, susceptible of a high polish. Besides, it is entirely free from all pois-nous in-fluences, is unaffected by sea-water, sulphurated hydro gen, or any gases, and preserves its original colour, which White Lead does not do.

fluences, is unaffected by seawhere, the second sec
