Introduction

Agricultural Statistics is published each year to meet the diverse needs for a reliable reference book on agricultural production, supplies, consumption, facilities, costs, and returns. Its tables of annual data cover a wide variety of facts in forms suited to most common use.

Inquiries concerning more current or more detailed data, past and prospective revisions, or the statistical methodology used should be addressed directly to the agency credited with preparing the table. Most of the data were prepared or compiled in the U.S. Department of Agriculture. A few tables were prepared in other Government Agencies.

The historical series in this volume have been generally limited to data beginning with 1964 or later.

Agricultural data for Alaska and Hawaii are included in the appropriate tables, where available. Certain statistics for Alaska are found in chapter XIV.

Foreign agricultural trade statistics include Government as well as non-Government shipments of merchandise from the United States and Territories to foreign countries. They do not include U.S. shipments to the U.S. Armed Forces abroad for their own use or shipments between the States and U.S. Territories. The world summaries of production and trade of major farm products are prepared by the U.S. Department of Agriculture from reports of the U.S. Department of Commerce, official statistics of foreign governments, other foreign source materials, reports of U.S. Agricultural Attachés and Foreign Service Officers, and the result of office research.

Statistics presented in many of the tables represent actual counts of the items covered. Most of the statistics relating to foreign trade and to Government programs, such as numbers and amounts of loans made to farmers, and amounts of loans made by the Commodity Credit Corporation, etc., are data of this type. A large number of other tables, however, contain data that are estimates made by the Department of Agriculture.

The estimates for crops, livestock, and poultry made by the U.S. Department of Agriculture are prepared mainly to give timely current State and national totals and averages. They are based on data obtained by sample surveys of farmers and of people who do business with farmers. The survey data are supplemented by information from the Censuses of Agriculture taken every 5 years and check data from various sources. Being estimates, they are subject to revision as more data become available from commercial or Government sources. Unless otherwise indicated, the totals for the United States shown in the various tables on area, production, numbers, price, value, supplies, and disposition are based on official Department estimates. They exclude States for which no official estimates are compiled.

DEFINITIONS

"Value of production" as applied to crops in the various tables, is derived by multiplying production by the estimated season average price received by farmers for that portion of the commodity actually sold. In the case of fruits and vegetables, quantities not harvested because of low prices or other economic factors are not included in value of production. The word "Value" is used in the inventory tables on livestock and poultry to mean value of the number of head on the inventory date. It is derived by multiplying the number of head by an estimated value per head as of that date.

The word "Year" (alone) in a column heading means calendar year unless otherwise indicated. "Ton" when used in this book without qualifications means a short ton of 2,000 pounds.

WEIGHTS, MEASURES, AND CONVERSION FACTORS

The following table on weights, measures, and conversion factors covers the most important agricultural products, or the products for which such information is most frequently asked of the U.S. Department of Agriculture. It does not cover all farm products nor all containers for any one product.

The information has been assembled from State schedules of legal weights, various sources within the U.S. Department of Agriculture, and other Government agencies. For most products, particularly fruits and vegetables, there is a considerable variation in weight per unit of volume due to differences in variety or size of commodity, condition and tightness of pack, degree to which the container is heaped, etc. Effort has been made to select the most representative and fairest average for each product. For those commodities which develop considerable shrinkage, the point of origin weight or weight at harvest has been used.

The approximate or average weights as given in this table do not necessarily have official standing as a basis for packing or as grounds for settling disputes. Not all of them are recognized as legal weight. The table was prepared chiefly for use of workers in the U.S. Department of Agriculture who have need of conversion factors in statistical computations.

¹ Standard bushel used in the United States contains 2,150.42 cubic inches; the gallon, 231 cubic inches; the cranberry barrel, 5,826 cubic inches; and the standard fruit and vegetable barrel, 7,056 cubic inches. Such large-sized products as apples and potatoes sometimes are sold on the basis of a heaped bushel, which would exceed somewhat the 2,150.42 cubic inches of a bushel basket level full. This also applies to such products as sweetpotatoes, peaches, green beans, green peas, spinach, etc.

¹² Approximate inside dimensions, 4½ by 11½ by 14 inches.

¹³ The standard weight of 70 pounds is usually recognized as being about 2 measured bushels of corn, husked, on the ear, because it required 70 pounds to yield 1 bushel, or 56 pounds, of shelled corn.

¹⁴ For statistical purposes the bale of cotton is 500 pounds or 480 pounds net weight. Prior to Aug. 1, 1946, the net weight was estimated at 478 pounds. Actual bale weights vary considerably, and the customary average weights of bales of foreign cotton differ from that of the American square bale.

¹⁵ This is the average weight of cottonseed, although the legal weight in some States varies from this figure of 32 pounds.

¹⁸ Approximate inside dimensions, 11½ by 11½ by 24 inches.

¹⁹ In California and Arizona from 1942 through 1953, the net weights as used by this Department were 77 pounds for oranges, 79 pounds for lemons, and 65 pounds for Desert Valley grapefruit. Grapefruit in California areas, other than the Desert Valley, averaged 68 pounds. The new weights effective in 1954 reflect the shift from the "box" to the ½-box carton as the container used.

²⁰ Approximate inside dimensions 10¾ by 10¹¹/₁₆ by 16½ inches for oranges or lemons, and 9¾ by 10¹¹/₁₆ by 16½ inches for grapefruit.

²¹ Approximate inside dimensions, 5¾ by 13½ by 16½ inches.

²² Approximate inside dimensions, 4½ by 16 by 16½ inches.

²³ Approximate inside dimensions, 7¾ by 16 by 21½ inches.

²⁴ Approximate inside dimensions, 9¾ by 13 by 25 inches.

²⁵ Approximate inside dimensions 12 by 12 by 24 inches.

²⁶ Approximate inside dimensions vary. Common size is 4½ by 11½ by 16½ inches.

²⁷ Approximate inside dimensions, 8½ by 11½ by 18 inches.

²⁸ Approximate inside dimensions, 12 by 10½ by 33 inches.

²⁹ Inside dimensions vary. Ranges from 4 by 16 by 16½ inches to 6 by 16 by 16½ inches.

³⁰ Includes both sorghum grain (kafir, milo, hegari, etc.) and sweet sorghum varieties.

³¹ This average of 55 pounds indicates the usual weight of sweetpotatoes when harvested. Much weight is lost in curing or drying and the net weight when sold in terminal markets may be below 55 pounds.

³² Case of 24 No. 2½ cans.

³³ Case of 24 No. 303 cans.

³⁴ Varies widely by method of harvesting.

³⁵ The milk equivalent of ice cream per gallon is 15 pounds. Reports from plants indicate about 81 percent of the butterfat in ice cream is from milk and cream, the remainder being from butter and concentrated milk. Thus the milk equivalent of the milk and cream in a gallon of ice cream is about 12 pounds.

³⁶ This is equivalent to 4.51 bushels of wheat per barrel (196 pounds) of flour and has been used in conversions, beginning July 1, 1957. Because of changes in milling processes, the following factors per barrel of flour have been used for earlier periods: 1790–1879, 5 bushel; 1880–1908, 4.75 bushels; 1909–17, 4.7 bushels; 1918 and 1919, 4.5 bushels; 1920, 4.6 bushels; 1921–44, 4.7 bushels; July 1944–Feb. 1946, 4.57 bushels; March 1946–Oct. 1946, average was about 4.31 bushels; and Nov. 1946–June 1957, 4.57 bushels.

CHAPTER I

STATISTICS OF GRAIN AND FEED

This chapter contains tables for wheat, rye, rice, corn, oats, barley, sorghum grain, and feedstuffs. Estimates are given of area, production, disposition, supply and disappearance, prices, value of production, stocks, foreign production and trade, price-support operations, animal units fed, and feed consumed by livestock and poultry.

¹ Beginning June 1, 1976 (1975 crop year), marketing year begins June 1 and ends May 31.² A loan level of \$1.30 in 1964, and \$1.25 from 1965 to 1973, plus the average marketing certificate payment per bushel was paid to program participants. Loan level protection for 1974 and 1975 is \$1.37 and, for 1976 and 1977, \$2.25, on entire production. For 1974 to 1976, the target level is a price guarantee on allotment production at levels indicated under support price. For 1977, target level of \$2.90 was set up under the Food and Agricultural Act of 1977; \$2.47 is the target level for unplanted allotment acreage. For 1978 and 1979, crop loan rate \$2.35; target price \$3.40.³ Percentage of parity price as of the beginning of the marketing year.⁴ Represents loans made, purchases, and purchase agreements entered into.⁵ Acquisitions through loan cancellations and purchases (under agreement and direct) only from crop harvested in the year indicated.⁶ Uncommitted CCC inventory.⁷ Preliminary.

¹ Years shown refer to years of harvest in the Northern Hemisphere. Harvests of Northern Hemisphere countries are combined with those of the Southern Hemisphere which immediately follow; thus the crop harvested in the Northern Hemisphere in 1978 is combined with estimates for the Southern Hemisphere harvests, which begin late in 1978 and end early in 1979.

² Harvested area as far as possible.

¹Imports of wheat of milling quality have been limited to a quota of 800,000 bushels per year since May 29, 1941, of which 795,000 bushels may come from Canada. Quantities in excess of the 800,000-bushel quota represent quota-free imports of seed wheat authorized by Presidential Proclamation 2550, April 16, 1942. During the war years 1943–44 and 1944–45 this import restriction was waived. As of Jan. 26, 1974, import quotas for wheat and milled wheat products were suspended. ²Imports of flour have been limited to a quota of 4,000,000 pounds per year since May 29, 1941, of which 3,815,000 pounds may come from Canada (total quota is 93,200 bushels, wheat equivalent). Flour for special experimental purposes may be imported ex-quota. Excludes flour "free for export." ³Includes macaroni, semolina, and similar products. ⁴Less than 500 bushels.

¹Years shown refer to years of harvest in the Northern Hemisphere. Harvests of Northern Hemisphere countries are combined with those of the Southern Hemisphere which immediately follow; thus the crop harvested in the Northern Hemisphere in 1978 is combined with estimates for the Southern Hemisphere harvests, which begin late in 1978 and end early in 1979. ²Harvested area as far as possible. ³Preliminary.

FOOTNOTES FOR TABLE 28

¹ Consolidated supply and disappearance of rough and milled rice. Converted milled rice data to a rough rice basis using annually derived extraction rates as factors.

² Based on Bureau of Census reports. Estimates for 1968, 1969, and 1970 adjusted by ASCS data, based on bills of lading submitted to the USDA for export payments.

³ Results from storage handling and processing losses.

⁴ Less than 50,000 cwt.

¹ Years shown refer to years of harvest in the Northern Hemisphere. Harvests of Northern Hemisphere countries are combined with those of the Southern Hemisphere which immediately follow; thus the crop harvested in the Northern Hemisphere in 1977 is combined with estimates for the Southern Hemisphere harvest, which begins late in 1978 and ends early in 1979.

² Harvested area as far as possible.

³ Preliminary.

Foreign Agricultural Service. Compiled from reports of the U.S. Department of Commerce. Prepared or estimated on the basis of official statistics of foreign governments, other foreign source materials, reports of U.S. Agricultural Attachés and Foreign Service Officers, results of office research, and related information.

¹ Includes price-support payments of 15 cents in 1964, 20 cents in 1965, 30 cents from 1966 to 1970, and a guarantee of 32 cents in 1971, 40 cents in 1972, and 32 cents in 1973. Payments were made on a designated portion of the base. Loan level protection for 1974 and 1975 is \$1.10; for 1976, \$1.50; and, for 1977–79, \$2.00 on entire production. For 1974 to 1978, the target level is a price guarantee on allotment production at levels indicated under support price.

² Percentage of parity price as of the beginning of the marketing year.

³ Represents loans made, purchases, and purchase agreements entered into. Percentage of production is on a grain basis.

⁴ Includes deliveries from original program, the reseal program and over-deliveries as determined by weight of farm-stored grain when delivered to CCC.

⁵ Uncommitted CCC inventory.

FOOTNOTES FOR TABLE 55

¹ Years shown refer to years of harvest in the Northern Hemisphere. Harvests of Northern Hemisphere countries are combined with those of the Southern Hemisphere which immediately follow; thus the crop harvested in the Northern Hemisphere in 1978 is combined with estimates for the Southern Hemisphere harvest, which begins late in 1978 and ends early in 1979.

² Harvested area as far as possible.

FOOTNOTES FOR TABLE 61

¹ Beginning June 1, 1976 (1975 crop year), marketing year begins June 1 and ends May 31.² Includes price-support payments of 12 cents in 1965, 1969, and 1970, and a guarantee of 32 cents in 1972 and 26 cents in 1973. Barley was excluded from program in 1967, 1968, and 1971. Payments were made on a designated portion of the base. Loan level protection for 1974 and 1975 is 90 cents; for 1976, \$1.22; and, for 1977–79, \$1.63 on entire production. For 1974 to 1978, the target level is a price guarantee on allotment production at levels indicated under support price.³ Percentage of parity price as of the beginning of the marketing year.⁴ Represents loans made, purchases, and purchase agreements entered into.⁵ Includes deliveries from original program, the reseal program, and over-deliveries as determined by weight of farm-stored grain when delivered to CCC.⁶ Uncommitted CCC inventory.⁷ Preliminary.

¹ Years shown refer to year of harvest in the Northern Hemisphere. Harvests of Northern Hemisphere countries are combined with those of the Southern Hemisphere which immediately follow; thus the crop harvested in the Northern Hemisphere in 1978 is combined with estimates for the Southern Hemisphere harvests, which begin late in 1978 and end early in 1979.

² Harvested area as far as possible.

³ Preliminary.

Foreign Agricultural Service. Prepared or estimated on the basis of official statistics of foreign governments, other foreign source materials, reports of U.S. Agricultural Attachés and Foreign Service Officers, results of office research, and related information.

¹ Includes price-support payments per hundredweight of 23 cents in 1964, 35 cents in 1965, 53 cents from 1966 to 1970, and a guarantee of 52 cents in 1971, 68 cents in 1972, and 54 cents in 1973. Payments were made on a designated portion of the base. Loan level protection for 1974 and 1975 is \$1.88; for 1976, \$2.55; and, for 1977–79, \$3.39 on entire production. For 1974 to 1978, the target level is a price guarantee on allotment production at levels indicated under support price.

² Percentage of parity price as of the beginning of the marketing year.

³ Represents loans made, purchases, and purchase agreements entered into.

⁴ Includes deliveries from original program, the reseed program, and over-deliveries as determined by weight of farm-stored grain when delivered to CCC.

⁵ Uncommitted CCC inventory.

¹ Includes dried skim milk, buttermilk, and whey for feed, but does not include any milk products fed on farms. Beginning 1974, not comparable with earlier years.

² Preliminary.

³ Other mill products that are not listed include screenings, hominy, and oats feeds, etc., for which no statistics are available.

⁴ Adjusted for export data.

⁵ Does not include wet sugarbeet pulp.

¹ Crop year begins October for corn and sorghum, August for barley, and July for oats.² No sales reported.³ Change to Texas High Plains September 1976.⁴ Bulk basis.

Economics, Statistics, and Cooperatives Service—Economics. Prices of corn and oats at Kansas City and Minneapolis were computed by weighting selling prices by reported number of carlots sold. Prices of barley and sorghum at Kansas City and of barley at Chicago and Minneapolis are the average of prices at the close of each day. Prices at Los Angeles are the average of prices on one day each week.

CHAPTER II

STATISTICS OF COTTON, TOBACCO, SUGAR CROPS, AND HONEY

In addition to tables on cotton, tobacco, and sugar, this chapter includes tables on fibers other than cotton, and sirups, honey, and beeswax. Cottonseed data, however, are in the following chapter on oilseeds, fats, and oils.

¹ Average of the crop from 1964 through 1970; Middling 1-inch, micronaire 3.5–4.9, net weight for 1971 and succeeding years. ² Includes price-support payments as follows: To producers within domestic allotment, 3.50 cents per pound in 1964 and 4.35 cents in 1965; to program participants on projected production from farm's domestic allotment, 9.42 cents in 1966, 11.53 cents in 1967, 12.24 cents in 1968, 14.73 cents in 1969, and 16.80 cents in 1970; and, on production from area planted within the farm base area allotment, 15 cents in 1971, 1972, and 1973.³ Percentage of parity price as of the beginning of the marketing year. ⁴ Includes loans made. ⁵ Acquisitions from crop harvested in the year indicated and not acquisitions during that year. ⁶ Running bales. ⁷ Less than 500 bales.⁸ Established price or "target" price. If the average market price is below the target price, eligible producers will receive payment at a rate equal to the difference between the target price and the higher of the loan level or the average market price. No payments have been made since the 1973 crop. ⁹ Estimated.

¹Includes Hawaii for area harvested, yield per acre, production of sugarcane for sugar, and sugar production; includes molasses production for Hawaii. Also includes Hawaii from 1964 to date for area harvested, yield, and production of sugarcane for seed. Price and value for Hawaii not included.

²The growth of 9 months in Louisiana, 12 months in Florida, and 18–24 months in Hawaii. Sugarcane harvest usually ends by December or early January in Louisiana; in Florida, by March following the season of growth; and, in Hawaii, the harvest takes place throughout the year.

³Preliminary.

⁴Prices do not include Government payments under the Sugar Act.

⁵Raw value is the equivalent in terms of 96° sugar, as defined in the Sugar Act of 1948.

⁶Calculated on the basis that 100 pounds of raw sugar is required to produce 93.46 pounds of refined sugar.

¹Crop years are on a September/August basis, (year shown is the beginning year) but include the outturn of sugar from harvests of several Southern Hemisphere countries which begin prior to September.

²Preliminary.

³Centrifugal sugar, as distinguished from non-centrifugal, includes cane and beet sugar produced by the centrifugal process, which is the principal kind moving in international trade.

⁴"Other Africa" includes Afars-Issas, Algeria, Cameroon, Congo, Ghana, Ivory Coast, Mali, Malawi, Nigeria, Senegal, Somali Republic, Sudan, Tunisia, and Zambia.

⁵Since Jan. 1, 1972, includes Ryukyu Islands.

⁶"Other Asia" includes Afghanistan, Bangladesh, Iraq, Israel, Lebanon, Malaysia, Nepal, Sri Lanka, Syria, and Vietnam.

⁷Non-centrifugal sugar includes all types of sugar produced by other than centrifugal process which is largely for consumption in the relatively few areas where produced. The estimates include such kinds known as piloncillo, panela, papelon, chancaca, rapadura, jaggery, gur, muscovado, panocha, etc.

¹ Production of cane sirup and edible molasses is of the fall of the preceding year. Cane sirup discontinued beginning 1970.

² Does not include varying quantities produced on nonfarm lands in Somerset County, Maine.

³ U.S. Department of Commerce molasses and sugar sirups series, less liquid sugar imports reported to Sugar Division, Agricultural Stabilization and Conservation Service.

⁴ Unofficial estimates, 1968–71 and 1978; estimates for 1972–1977 from U.S. International Trade Commission Publication 881, April 1978. Corn sirup production includes high-fructose corn sirup beginning 1972.

⁵ Preliminary.

⁶ Assumed to be largely refiners sirup. Beginning 1965, data not available because of change in export classification.

¹Stocks shown have been converted to a farm-sales-weight basis—the equivalent of weight at the time of sale by grower—thereby making these data of leaf-tobacco stocks comparable with data of leaf-tobacco production.

²Stocks on the island of Puerto Rico are included.

³These tobaccos were previously grouped together and designated "type 90."

CHAPTER III

STATISTICS OF OILSEEDS, FATS, AND OILS

This chapter includes information on cottonseed, flaxseed, olive oil, peanuts, soybeans, margarine, and fats and oils. Most butter statistics are included in the chapter on dairy and poultry statistics. Lard data are mostly in the chapter on livestock.

Seven new tables have been added to this chapter with data for sunflower, peppermint oil, spearmint oil, and mint oil.

¹ U.S. averages not fully representative of entire crop because of relatively small volume of seed graded in some areas.

² These basic factors are combined to form indexes of quantity and quality which in turn are used to determine the official grade of cottonseed in accordance with the United States Official Standards for Grades.

³ The quantity index measures the oil and cake or meal in the cottonseed, taking into account variations in the quantity of oil, protein, and linters.

⁴ The quality index measures the deterioration in oil and meal and takes into account the excesses of moisture and foreign matter.

⁵ The average grade is the product of the quantity index times the quality index. The base grade is 100.0.

⁶ Samples graded by licensed chemists under the supervision of the U.S. Department of Agriculture.

⁷ The linters factor was eliminated from official grade standards effective Sept. 4, 1972.

¹ Harvests of the Northern Hemisphere countries are combined with those of the Southern Hemisphere which immediately follow; thus the crop harvested in the Northern Hemisphere countries in 1978 was combined with the Southern Hemisphere harvest which began late in 1978 and ended early in 1979. Estimates do not include China where annual production probably varies from 25,000 to 50,000 tons. ²Preliminary. ³Seeded area. ⁴Includes estimates for the above countries for which data are not available and for minor producing countries. ⁵Includes fiber flax area and seed production. ⁶Area includes that harvested for seed and that portion of fiber area which is harvested for seed as well as fiber. Production includes seed from fiber flax. ⁷Flaxseed from area grown for seed only.

Foreign Agricultural Service. Prepared or estimated on the basis of official statistics of foreign governments, other foreign source material, reports of U.S. Agricultural Attachés and Foreign Service Officers, results of office research, and related information.

¹ Years shown refer to years of harvest. Southern Hemisphere crops which are harvested in the early part of the year are combined with those of the Northern Hemisphere harvested the latter part of the same year.² Harvested area as far as possible.³ Preliminary.⁴ Area harvested for beans.⁵ Planted area.⁶ Quantities purchased by the Nigerian Marketing Boards for exports.⁷ European farms only.⁸ Includes estimates for the above countries for which data are not available and for minor producing countries.

Foreign Agricultural Service. Prepared or estimated on the basis of official statistics of foreign governments, other foreign source materials, reports of U.S. Agricultural Attachés and Foreign Service Officers, results of office research, and related information.

¹ Years indicated are those in which the predominant share of the given oil or fat was produced from its related raw material.

² Preliminary.

³ Excludes olive residue oil.

⁴ Net exports.

⁵ Production estimated on the basis of exports and information available on consumption in the various producing areas.

⁶ Mill production only.

⁷ Less than 500 metric tons.

⁸ Includes quantities of refined oil for edible purposes.

⁹ Not separately classified.

¹⁰ Production relates to rendered lard only in most countries.

¹¹ Export series revised; figures include edible and inedible tallow and grease. Excludes animal oils.

Foreign Agricultural Service. Prepared or estimated on the basis of official statistics of foreign governments, other foreign source materials, reports of U.S. Agricultural Attachés and Foreign Service Officers, results of office research, and related information.

CHAPTER IV

STATISTICS OF VEGETABLES AND MELONS

This chapter contains statistics on potatoes, sweetpotatoes, and commercial vegetables and melons.

For potatoes and sweetpotatoes, the estimates of area, production, value, and farm disposition pertain to the total crop and include quantities produced both for sale and for use on farms where grown. Potato statistics are shown on a within-year seasonal grouping of winter, spring, summer, and fall crops, by States. Some States have production in more than one seasonal group.

For processing vegetables, the estimates of area, production, and value for each of the 9 crops relate to production used by commercial canners, freezers, and other processors, except dehydrators. These estimates include raw products grown by processors themselves and those grown under contract or purchased on the open market. This production and the actual area harvested are not duplicated in the fresh market estimates for the same commodities. The production of those vegetables used for processing for which regular processing estimates are not made is included in the fresh market estimates. However, with the vegetable program modifications implemented in 1973, the processed segment of production for asparagus, broccoli, carrots, and cauliflower is published at the end of the season. Annual production, price, and value estimates for the portion processed are published beginning with 1969.

Seasonal Groups and Marketing Period

Winter: January, February, March
Spring: April, May, June

Summer: July, August, September
Fall: October, November, December

The seasonal patterns of harvest do not correspond precisely in all States to the quarterly estimating period or periods designated. In some cases, only one seasonal group is shown for a State, but marketing may be active in earlier or later months. Because of the small volume from this earlier or later area, the crop estimate has been placed in the seasonal group where the largest portion is harvested.

Beginning in 1968, commercial vegetables for fresh market include 22 principal vegetables and melon crops in the major producing States. Earlier years include the following three additional crops: Lima beans, beets, and green peas. These estimates relate to crops which are grown primarily for sale, and they do not include vegetables and melons produced in farm and nonfarm gardens. The bulk of the production of the principal vegetable and melon crops is for consumption in the fresh state. However, quantities used by processors of artichokes, brussels sprouts, celery, garlic, onions, and green peppers are included, and separate estimates of commercial processing are not made for these crops. The commercial estimates of the principal crops include local market production from areas near consuming centers as well as production from well-recognized commercial areas which specialize in producing supplies for shipment to distant markets.

For fresh market vegetables and melons, value per unit and total value are on a f.o.b. basis, except garlic, for which values are reported annually on a field-run basis at packinghouse door. For processed vegetables, value per unit and total value are at processing plant door.

¹ Area for fresh market is area for harvest, including any partially harvested or not harvested because of low prices or other economic factors. Area for processing is area harvested.

² Area, production, and farm value of the following 27 crops for which regular seasonal estimates are prepared in major producing States: Artichokes, asparagus, lima beans, snap beans, beets, broccoli, brussels sprouts, cabbage, cantaloups, carrots, cauliflower, celery, sweet corn, cucumbers, eggplant, escarole-endive, garlic, honeydew melons, kale, lettuce, onions, green peas, green peppers, shallots, spinach, tomatoes, and watermelons. Lima beans, beets, kale, green peas and shallots discontinued in 1968.

³ Area, production, and farm value of the following 10 crops in all States: Asparagus, lima beans, snap beans, beets, cabbage (sauerkraut), sweet corn, cucumbers (pickles), green peas, spinach and tomatoes. Production of other vegetables processed included in fresh market series of estimates.

⁴ Production for fresh market excludes some quantities not marketed because of low prices or other economic factors.

⁵ Value for all fresh market vegetables, except garlic, on f.o.b. basis. For processing vegetables, value at processing plant door.

⁶ Beginning 1969, asparagus for processing included in fresh market segment.

FOOTNOTES FOR TABLE 282

¹ Fresh vegetable consumption computed for total commercial production for fresh market, including an estimate for commercial production in States where estimates are not made separately. Does not include production for home use. Civilian consumption obtained by dividing the total apparent civilian consumption by total civilian population as reported by the Bureau of the Census. All data for calendar year, except dry field peas which are on a crop-year basis.

² Less than 0.05 pound.

³ Beginning 1968, included in minor vegetables.

⁴ Preliminary.

⁵ Included less than 0.05 pound of shallots each year from 1964 through 1967. Beginning 1968, included in minor vegetables.

⁶ Beginning 1971, dehydrated onions are excluded from "Onions and shallots" and reported separately.

⁷ Includes table stock and processed potatoes.

¹ Total crop for processing converted to a canned basis by applying factors (cases of 24 No. 303 cans per ton, farm weight); Cucumbers for pickles, 83 cases for 1954, 112 cases for 1964, and interim years interpolated; cabbage for kraft, 65.9 cases for 1954, 54.0 cases for 1964, and interim years interpolated.

² Equivalent cases of 24 No. 303 cans.

³ Preliminary.

⁴ Includes combination vegetable juices containing at least 70 percent tomato juice.

Economics, Statistics, and Cooperatives Service—Economics. Compiled mainly from reports of the National Food Processors Association.

FOOTNOTES FOR TABLE 287

¹ Data for asparagus, lima beans, sauerkraut, and spinach are either estimates or interpolations.

² Actual cases.

³ Canners' stocks of sauerkraut converted to cases by using a factor of 18 cases of 24/303's per barrel (of 45 gallons).

Economics, Statistics, and Cooperatives Service—Economics. Compiled mainly from reports of the National Food Processors Association.

FOOTNOTES FOR TABLE 289

CHAPTER V

STATISTICS OF FRUITS, TREE NUTS, AND HORTICULTURAL SPECIALTIES

For most fruits, production is estimated at two levels—total and utilized. Total production is the quantity actually harvested plus quantities not harvested primarily for economic reasons. Utilized production is the amount sold plus the quantities used at home or held in storage. The difference between total and utilized production is the quantity of mature fruit not harvested for economic reasons or excess cullage of harvested fruit. Losses from natural causes, such as windstorms, freezes, etc., are not included in production. Production relates to the crop produced on all farms, except for apples and strawberries. In accordance with Congressional enactment, the Department's estimates of apple production since 1938 have related only to commercial production. The estimates for strawberries cover production on area grown primarily for sale. Statistics on utilization of fruit by commercial processors refer to first utilization, not necessarily final utilization. For example, frozen fruit includes fruit which may later be used for preserves.

The price shown for each crop is a season average price for all methods of sales. Prices for most fresh fruit are the average prices producers received at the point of first sale, commonly referred to as the "average price as sold." Since the point of first sale is not the same for all producers, prices for the various methods of sale are weighted by the proportionate quantity sold. For example, if in a given State part of the fruit crop is sold f.o.b. packed by growers, part sold as bulk fruit at the packinghouse door, and some sold retail at roadside stands, the fresh fruit average price as sold is a weighted average of the average price for each method of sale.

The annual estimates are checked and adjusted at the end of each marketing season on the basis of shipment and processing records from transportation agencies, processors, cooperative marketing associations, and other industry organizations. The estimates are reviewed (and revised if necessary) at 5-year intervals, when the Census of Agriculture data become available. The Department's available statistics are limited to the major tree fruits and nuts and to grapes, cranberries, and strawberries, and exclude some States where census data indicate production is of only minor importance.

¹ For some crops in certain years, production includes some quantities unharvested on account of economic abandonment.² Estimates of the commercial crop refer to production in orchards of 100 or more bearing-age trees.³ Preliminary.⁴ Estimates discontinued after 1977 crop.⁵ Prior to 1970, growers' marketing season for California lemons was from Nov. 1 to Oct. 31; beginning with the 1970 crop.

¹ Net processed weight.² Dried apricots are 12½ percent of total dried fruit for salad.³ Dried fruit converted to unprocessed dry weight by dividing by 1.07. Unprocessed dry weight converted to terms of fresh fruit on the basis that 1 pound dried equals 5.5 pounds fresh. Canned apricots converted to terms of fresh on the basis that 1 pound canned equals 0.717 pounds fresh.⁴ Year beginning October.⁵ Not available.

¹Season begins with the bloom of the first year shown and ends with completion of harvest the following year. For oranges, harvest in California usually starts in late October of the first year shown and continues into December of the following year. In other States, harvest of oranges begins about Oct. 1 and ends in early summer. Grapefruit harvest for the California Desert and for all other States begins in the fall and ends by early summer. Harvest of other California grapefruit begins in March of the year after bloom through October. California lemons are harvested from Aug. 1 to July 31; Arizona lemons are harvested from Aug. 15 to Feb. 1. Florida limes are picked mostly from April through March. Florida tangelos are harvested largely from October through April.

²Preliminary.

³Equivalent returns per box at the intake packinghouse door for all methods of sale.

⁴Navel and miscellaneous varieties in Arizona and California; early and midseason varieties in Florida and Texas, including small quantities of tangerines in Texas.

⁵Net content of box varies. Approximate averages are as follows: Oranges—Arizona and California, 75 pounds; Florida, 90 pounds; and Texas, 85 pounds; grapefruit—Arizona and California Desert, 64 pounds; other California areas, 67 pounds; Florida, 85 pounds; Texas, 80 pounds; lemons—76 pounds; limes—80 pounds; tangelos—90 pounds; tangerines—Arizona and California, 75 pounds; Florida, 95 pounds; and temples—90 pounds.

¹Preliminary.

²Fresh fruit prices are equivalent packinghouse-door returns for Washington, equivalent returns for bulk fruit at the first delivery point for California, and the average price as sold for other States. Quantities processed are priced at the equivalent processing plant door level.

³Price derived from unrounded data.

⁴Fresh equivalent of dried and not dried.

⁵Dried basis; 1 ton of raisins is equivalent to 4.50 tons of fresh grapes for 1976, 4.56 tons for 1977, and 4.40 tons for 1978.

⁶Georgia and South Carolina.

*Estimates discontinued after 1977 crop.

FOOTNOTES FOR TABLE 346

¹Net processed weight. ²Canned peaches are 40 percent of total canned fruit for salad. ³Dried peaches are 21 percent of total dried fruit for salad. ⁴Beginning June 1965, exports of dried fruit converted to unprocessed dry weight by dividing by 1.08 (1.07 prior to June 1965). Unprocessed dry weight converted to terms of fresh fruit on the basis that 1 pound dried equals 6.0 pounds fresh (6.5 prior to June 1965). Canned peaches converted to terms of fresh on basis that 1 pound canned equals about 1 pound fresh; 48 pounds fresh equals 1 bushel. ⁵Year beginning October. ⁶Not available.

¹Net processed weight.²Dried pears are 16^{2/3} percent of total dried fruit for salad.³Canned pears are 35 percent of total canned fruit for salad.⁴Beginning June 1965, canned pears converted to terms of fresh on the basis that 1 pound canned equals about 1.0 pound fresh (1.2 prior to June 1965); dried pears converted to terms of fresh on the basis that 1 pound dried equals about 6.5 pounds fresh (5.5 prior to June 1965); 50 pounds fresh equals 1 bushel.⁵Year beginning October.⁶Not available.

¹ Michigan, Idaho, Washington, and Oregon. Mostly prunes; however, estimates include small quantities of plums in all States.

² Includes "Home use."

³ Some quantities otherwise processed are included to avoid disclosure of individual operations.

⁴ Prices for fresh sales are average prices as sold for Idaho and Michigan; equivalent packinghouse door returns for Oregon and Washington. Quantities processed are priced at the equivalent processing plant door level.

⁵ Not published to avoid disclosure of individual operations.

¹Net processed weight.²Beginning 1965, exports and imports of dried prunes converted to unprocessed dry weight by dividing by 1.04 (1.025 prior to 1965). Unprocessed dry weight converted to terms of fresh fruit on the basis that 1 pound dried equals 2.7 pounds fresh (2½ pounds prior to 1965). Canned prunes converted to terms of fresh fruit on the basis that 1 pound canned equals 0.728 pound fresh. "Otherwise prepared or preserved" converted to terms of fresh fruit on the basis that 1 pound equals 0.899 pound fresh.³Dried prunes in salad estimated at 43 percent of total dried fruit for salad.⁴No longer reported separately.⁵Year beginning October.

¹Fresh citrus fruits are on a crop-year basis. Dried fruits are on a pack-year basis. The per capita civilian consumption was obtained by dividing the total apparent civilian consumption by total population adjusted for members of the Armed Forces not eating out of civilian supplies.

²Excludes noncommercial apples.

³Apricots, avocados, bananas, cherries, cranberries, figs, grapes, nectarines, peaches, pears, pineapple, papayas beginning 1960, plums and prunes, strawberries, bushberries beginning 1970, and miscellaneous fruit beginning 1970.

⁴Preliminary.

⁵Apples, applesauce, apricots, berries, cherries (including brined), cranberries, figs through 1972, fruit cocktail and salad, canned and chilled citrus sections, olives (including brined), pineapple, plums, prunes, peaches (including spiced), and pears.

⁶Grapefruit, orange, blended citrus, lemon and lime, tangerine and blends, pineapple, apple, grape, and prune juices, and fruit nectars. Includes canned concentrated citrus juices converted to single-strength basis, but excludes all frozen juices. Includes chilled orange and grapefruit juice.

⁷Dried apples, apricots, dates, figs, peaches, pears, prunes, and raisins. Excludes unmerchantable figs, substandard prunes, and prunes used for juice and concentrate. Data are in terms of processed dried weight.

⁸Principally cherries, apples, peaches, apricots, strawberries, other berries, and citrus juices.

⁹Not available.

¹ Equivalent wholesale value of all sales for all crops except foliage plants; for foliage plants, value is based on net value of sales.
² Unallocated to avoid disclosure of individual operations.
³ Excludes value of sales from "open acreage" grown outdoors.

CHAPTER VI

STATISTICS OF HAY, SEEDS, AND MINOR FIELD CROPS

Chapter VI deals with hay, pasture, seeds, and various minor field crops. Table 421 shows the seeding rate for a number of specified crops. The State averages are based on surveys made in 1975. The United States average rates are derived by weighting the average for each State by the area planted to the particular crop. Rates are not shown for states where the crop is not estimated currently.

CHAPTER VII

STATISTICS OF CATTLE, HOGS, AND SHEEP

This chapter contains information about most kinds of farm livestock and livestock products, with the exception of dairy and poultry. The information relates to inventories, production, disposition, prices, and income for farm animals, and to livestock slaughter (including horse slaughter), meat production, and market statistics for meat animals.

¹ Balance sheet estimates by States; the sum of inventory December 1, 1977. Pig crop and inshipments are equal to the sum of marketings, farm slaughter, deaths and inventory December 1, 1978.

² Includes custom slaughter for use on farms where produced. State outshipments, but excludes interfarm sales within the State.

³ Excludes custom slaughter for farmers at commercial establishments.

⁴ Adjustments made for changes in inventory and for inshipments.

⁵ Receipts from marketing and sales of farm-slaughtered meat, excluding interfarm sales within the States.

¹ Includes animals custom slaughtered for use on farms where produced, but excludes interfarm sales within the State.

² Excludes animals custom slaughtered for farmers at commercial establishments.

³ Adjustments made for changes in inventory and for shipments.

⁴ Receipts from marketings and sale of farm-slaughtered meat.

⁵ Cash receipts from sales of sheep, lambs, and mutton and lamb plus value of sheep and lambs slaughtered for home consumption.

⁶ Estimates discontinued.

⁷ Decrease in inventory and large death loss of sheep resulted in a deficit in number of pounds produced.

¹Includes sheep shorn at commercial feeding yards.

²Price computed by weighting State average prices for all wool sold during the year by sales of shorn wool.

³Production by States multiplied by annual average price.

⁴Preliminary.

⁵Conversion factors from grease basis to clean basis are as follows: Shorn wool production—47.7 percent from 1964 to 1976, and 50.0 percent for 1977–1978; pulled wool production—72.9 percent.

⁶Apparel wool includes all dutiable wool; carpet wool includes all duty-free wool.

⁷Production minus exports plus imports; stocks not taken into consideration.

⁸Beginning 1965, includes carpet wool exports.

Economics, Statistics, and Cooperatives Service—Crop Reporting Board. Imports and exports from reports of the U.S. Department of Commerce.

¹ Includes shearing at commercial feeding yards.² Preliminary.³ For Texas and California, the weight per fleece is the amount of wool shorn per sheep and lamb during the year.⁴ Production multiplied by annual average price.⁵ Estimates discontinued.⁶ Price per pound calculated by weighting monthly prices by monthly sales of wool for footnoted States. The prices for remaining States are annual averages.⁷ U.S. average price per pound derived using unrounded value and production.

¹ Includes shorn wool, pulled wool, and wool exported on skins, with the latter two converted to a greasy basis. Wool produced in the spring in the Northern Hemisphere is combined with that produced in the season beginning July 1 or Oct. 1 of the same year in the Southern Hemisphere.

² Preliminary and subject to revision.

³ Does not include pulled wool.

⁴ Includes pulled wool converted to greasy basis using 1.7 as conversion factor.

⁵ Includes Republic of South Africa, Lesotho, and Namibia (South-West Africa).

⁶ Totals may not add due to rounding.

¹ Average needed to bring the return up to the support level. The payment to an individual producer is computed by applying the announced percentage to his receipts from marketings of shorn wool.

² For unshorn lambs sold.

³ Unadjusted for weight of unshorn lambs produced.

⁴ Payments for wool produced during the year shown are made after Mar. 31 of the following year.

¹ Wool grown in the range areas of Oregon, Washington, the intermountain States (including Arizona and New Mexico) and parts of the Dakotas, Kansas, Nebraska, and Oklahoma. These wools vary considerably in shrinkage and color.

² Most wool grown in the farm areas of the Dakotas, Nebraska, Kansas, Oklahoma, and parts of Minnesota, Wisconsin, Iowa, and Missouri is somewhat dark in color and of moderately heavy shrinkage. Most of that grown in the States which are east of the Mississippi river and in parts of Minnesota, Iowa, and Missouri is bright in color and of relatively light shrinkage.

³ Beginning January 1970 reported as Australia Type 62-64's.

⁴ Beginning January 1976, the unit designation terminology for wool prices changed to microns. For example, Fine good French combing and staple now reads as 64's (20.60-22.04 microns) Staple 2½" and up French combing 2½" - 2¾". For fleece % blood good French combing and staple, there are now two designations as follows: 56's (26.40-27.84 microns) and 58's (24.95-26.39 microns) staple 3¼" and up. An average of the two is given in the price data here.

¹Carcass weight equivalent or dressed weight. Beginning 1977, pork production was no longer reported as "pork, excluding lard." This series has been revised to reflect pork production in prior years on a dressed weight basis that is comparable with the method used to report beef, veal, and lamb and mutton. Edible offals are excluded.

¹ For method of combining species and weights in construction of these index numbers see Agricultural Handbook No. 365, Volume II, major statistical series of the U.S. Department of Agriculture, April 1970. Weights based on 1967 sales values relative to milk cows are as follows: Milk cows, 1.00; beef cattle and calves, 0.71; hogs, 0.17; sheep and lambs, 0.07; chickens, 0.001; and turkey breeder hens, 0.014. For 1965 and thereafter, milk cows and heifers that have calved are used in place of milk cows two years old and older; turkey breeder hens on hand Dec. 1 preceding year are used in place of all turkeys on hand Jan. 1; all chickens (excluding commercial broilers) on hand Dec. 1 preceding year are used in place of all chickens on hand Jan. 1. Hogs and pigs relate to Dec. 1 preceding year.

² Weights for milk cattle are as follows: Milk cows, 1.00; heifers weighing 500 lbs. and over, 0.56.

CHAPTER VIII

DAIRY AND POULTRY STATISTICS

Dairy statistics in this chapter include series relating to many phases of production, movement, prices, stocks, and consumption of milk and its products. Two series of number of milk cows on farms are included in this publication. One series is an inventory number of a specific classification estimated as one of the major groups making up the total cattle population on January 1. The other series identified as "milk cows" is an annual average number of milk cows during the year (excluding any not yet fresh) and is used in estimating milk production.

In comparing the several series of milk prices, it is important to note that prices received by farmers for all whole milk sold are for milk or milkfat content as actually sold, while certain prices paid by dealers for milk for fluid purposes or for specified manufacturing purposes may be quoted on a 3.5 percent butterfat basis, or for some types of manufacturing milk on the test of the milk used for that particular purpose.

Poultry and poultry products statistics include inventory numbers of chickens by classes; the production, disposition, cash receipts, and gross income from chickens and eggs; poultry and egg receipts at principal markets; commercial broiler production; turkey production, disposition, and gross income; poultry and eggs under Federal inspection; and the National Poultry Improvement Plan. Estimates relating to inventories, production, and income exclude poultry and eggs produced on places not classified as farms.

¹Percentage of milk sold to plants and dealers that is eligible for fluid use (Grade A in most States). Includes fluid-grade milk used in manufactured dairy products.

²Not published to avoid disclosing individual operations.

³Based on unrounded value. Includes milk sold directly to consumers.

⁴Cash receipts divided by milk or milkfat represented in combined marketings.

⁵Valued at average returns per 100 pounds of milk in combined marketings of milk and cream.

⁶Cash receipts from marketings of milk and cream plus value of milk used for home consumption and farm-churned butter.

⁷Includes value of milk fed to calves.

¹In-area sales represent total sales in each of the areas by handlers regulated under the respective orders, by handlers regulated under other orders, by partially regulated handlers, and by producer-handlers. Sales routes of handlers may extend outside defined marketing areas; therefore, some handlers in-area sales are partially estimated.

²Plain and flavored whole milk.
³Plain, fortified, and flavored skim and lowfat milk and buttermilk.

¹ Simple average of monthly prices, by States, weighted by the number of milk cows on farms Jan. 1 of the current year.

² Average price at average fat test for all milk sold at wholesale to plants and dealers, based on reports from milk-market administrators, cooperative milk-market associations, whole-milk distributors, and milk-products manufacturing plants, f.o.b. plant or receiving station (whichever is the customary place for determining prices) before hauling costs are deducted and including all premiums.

³ Milk eligible for fluid market, including surplus diverted to manufacturing.

⁴ Weighted average of monthly prices, by States, weighted by the estimated quantity of fat sold.

⁵ Preliminary.

⁶ Monthly average prices and tests weighted by estimated production in each month. Price f.o.b. factory or local receiving station (whichever is the customary place for determining prices) before hauling costs are deducted and including all premiums.

⁷ Includes milk for canned condensed milk.

¹ Total disappearance is based on production, imports, and change in stocks during the year. Production statistics for these commodities appear in other tables in this chapter. The total apparent civilian consumption was obtained by subtracting ending stocks, shipments, exports, and military takings from the total supply. The per capita civilian consumption for each year was obtained by dividing the total apparent civilian consumption by the number of persons eating out of civilian supplies.

² Includes both farm and factory-made butter.

³ Includes all kinds of cheese except cottage and full-skim American.

⁴ The evaporated milk is unskimmed, unsweetened, case goods. The condensed milk is unsweetened (plain condensed), unskimmed, bulk goods; and sweetened condensed milk, unskimmed, case and bulk goods.

FOOTNOTES FOR TABLE 576

¹ Broilers are young chickens of the heavy breeds and other meat-type birds, to be marketed at 2-5 pounds live weight, and from which no pullets are kept for egg production. These figures are not included in farm production of chickens.

² Includes value of consumption in households of producers, which is less than 1 percent of total production.

³ Commercial broilers were changed to a Dec. 1 through Nov. 30 marketing year, beginning 1970.

CHAPTER IX

FARM RESOURCES, INCOME, AND EXPENSES

The statistics in this chapter deal with farms, farm resources, farm income, and expenses. Many of the series are estimates developed in connection with economic research activities of the Department.

For convenience the tables have been arranged in general groups. These groups, with the beginning table indicated, are as follows:

Economic trends table 599.

Farm property, table 600.

Population and employment, table 618.

Farm production and distribution, table 627.

Price and income, table 643

Costs and expenses, table 660.

¹Cropland harvested, crop failure, and cultivated summer fallow.

²Grassland and other nonforest pasture and range.

³Excludes reserved forest land in parks and other special uses of land. Includes forested grazing land.

⁴Includes urban and transportation areas. Federal and State areas used primarily for recreation and wildlife purposes, military areas, farmsteads, farm roads and lanes, and miscellaneous other uses.

⁵Remeasurement and increases in reservoirs account for changes in total land area except for the major increase in 1959 when data for Alaska and Hawaii were added.

FOOTNOTES FOR TABLE 618

¹Total population includes Armed Forces overseas.

²Farm population is defined as all persons living on places of 10 or more acres with at least \$50 worth of agricultural products sold in reporting year, and places of under 10 acres if at least \$250 worth of agricultural products were sold. For 1978, when farm population is defined as all persons living on places with \$1,000 or more of agricultural sales in the reporting year, the farm total is 6,501,000 people. The percentage of total is 3.0.

Economics, Statistics, and Cooperative Service. Economics and the U.S. Department of Commerce.

FOOTNOTES FOR TABLE 619

¹Annual average is the straight average of the four quarters during the year. Quarterly multiple frame surveys cover the week of the twelfth of January, April, July, and October.

²Includes farm operators doing 1 or more hours of farm work and members of their families working 15 hours or more during the survey week without cash wages.

³Includes all persons doing farm work for pay during the survey week.

¹ Through 1973 arithmetic means of monthly estimates of persons employed during last full calendar week ending at least one day before the end of the month. Beginning 1974, annual average is the straight average of the four quarters during the year.

² Includes farm operators doing 1 or more hours of farm work and members of their families working 15 hours or more during the survey week without cash wages.

³ Includes all persons doing farm work for pay during the survey week.

⁴ The 1910-14 base is the arithmetic mean of the annual average of number of persons employed for these five years. The base for 1967 is the annual average number of persons employed.

Economics, Statistics, and Cooperatives Service—Crop Reporting Board.

¹ Data relate to persons 14 years of age and over in the civilian noninstitutional population at or near the end of the year who performed hired farm work at sometime during the year. This series differs from the hired workers series shown in table 620 which gives an annual average of quarterly estimates of jobs on farms.

¹ Data relate to persons 14 years of age and over in the civilian noninstitutional population at or near the end of the year who did migratory farm work at sometime during the year. Migratory workers are those who leave their homes temporarily to do farm work in another county or State. Does not include foreign nationals brought into the United States to do farm work who have left the country before the time of the survey.

Economics, Statistics, and Cooperatives Service—Economics. Based on data from enumerative sample surveys made by the U.S. Department of Commerce for the Economics, Statistics, and Cooperatives Service.

¹ Data relate to persons 14 years of age and over in the civilian noninstitutional population at or near the end of the year who performed hired farm work at sometime during the year. This series differs from the hired workers series shown in table 620 which gives an annual average of quarterly estimates of jobs on farms.

¹ Hawaii is included in commercial vegetables and in area and production of sugarcane, but is excluded from other crops.² Preliminary.³ Includes area seeded in preceding fall.⁴ Area seeded in preceding year.⁵ Yield in pounds.⁶ Clean basis.⁷ Does not include Hawaii.
⁸ Includes syrup later made into sugar. Does not include production on nonfarm lands in Somerset County, Maine.⁹ Fresh basis.¹⁰ Year of bloom.¹¹ Maine, Michigan, New Jersey, North Carolina and Oregon added to the bushberry program beginning in 1978.¹² Estimates discontinued after 1977 crop.¹³ Crop begins with bloom in one year and ends with completion of harvest the following year. Currus production is included with other crops on a harvested basis.¹⁴ For breakdown between fresh market and processing, see individual crop tables.

¹ All index number series are of the weighted aggregate type. They are based on averages of rates in effect during the year. Annual averages are computed by weighting the rates by the number of days they are in effect.

² Combined index includes corn and small grains in addition to other products for which data are shown separately.

^a Beginning 1975, indexes for wool, tobacco, and all commodities combined have been discontinued. Those for wool and tobacco are dropped because of limited traffic. The Bureau of Labor Statistics now reports monthly an index on farm products and a separate index for food and kindred products.

^b These indexes use revised volumes and, in some instances, different origins and/or destinations than were used in earlier years. They were linked to the earlier series through computation on both bases for 1976.

¹ For domestic farm foods bought by civilian consumers in this country.² Labor cost includes imputed earnings of proprietors, partners, and family workers not receiving stated remuneration. It also includes supplements to wages and salaries such as social security and unemployment insurance taxes and health insurance premiums, but it does not include the cost of labor employed in for-hire transportation.³ Includes charges for protective services, heating and refrigeration; does not include local housing. Charges for intercity transportation by water and air are a part of the "other" or residual component of the marketing bill.⁴ Does not include profits of unincorporated firms or transportation firms.⁵ Residual component; includes other costs such as advertising, depreciation, fuel, electric power, containers, packaging materials, air and water transportation, interest on borrowed capital, taxes other than those on income, and noncorporate profits.⁶ Preliminary.⁷ Estimated.

¹ Revised to adapt to the expenditure weights and retail price indexes of the new Consumer Price Index for all urban consumers (CPI-U) published by the Bureau of Labor Statistics. The market basket represents purchasing patterns of domestically produced farm foods in food stores by households from July 1972 through June 1974. ² Special index of retail prices for domestically produced foods published by the Bureau of Labor Statistics. ³ Gross return or payment to farmers for the farm products equivalent to foods in the market basket. ⁴ The spread between the retail cost and farm value is an estimate of the gross margin received by marketing firms for assembling, processing, transporting, and distributing the products.

¹The total marketing bill is the difference between total civilian expenditures for domestic farm-originated food products and the farm value or payment farmers received for the equivalent farm products. It relates only to domestic food bought by civilian consumers and not to that sold to the Armed Forces or exported.

¹Season average prices for crops; weighted calendar year average for livestock and livestock products, except chickens, eggs, and hogs, which are on a Nov.-Dec. marketing year basis. Unless otherwise noted, these are averages for marketing season or calendar year computed by weighting State prices by quantities sold, or by production for those commodities for which virtually all the production is sold.

²Preliminary.

³Parity prices as computed, currently using base prices in effect and indexes for months indicated. Parity prices shown are those for the most recent month available preceding the start of the crop marketing season for crops and the calendar year for livestock and livestock products.

⁴Crop is sold during year following production. 1978 price is average of auction sales through May 4, 1979. Parity prices are for March 1977 and 1978.

⁵No production since 1972.

⁶Based on average of 7-season average prices, 1967–73.

⁷Based on average of 6-season average prices, 1968–73.

⁸Previous year.

⁹State annual average prices weighted by production to obtain U.S. averages.

¹⁰Average local market price for wool sold excluding incentive payment.

¹¹Average local market price for mohair sold excluding incentive payment.

¹²Crop year begins with bloom in one year and ends with completion of harvest the following year. Prices refer to the year harvest is completed.

¹³Equivalent packinghouse-door returns for Oregon and Washington, equivalent first delivery point returns for California, and prices as sold for other States.

¹⁴Equivalent per unit returns for bulk fruit at first delivery point.

¹⁵No nectarines processed in 1977.

¹⁶Prices for fresh use in Arkansas, California, Georgia, Maryland, Michigan, New Jersey, New York, North Carolina, Pennsylvania, South Carolina, Virginia, Washington, and West Virginia, and average price for all sales in all other states.

¹⁷Packinghouse-door returns for fresh consumption for Oregon and Washington, equivalent first delivery point returns for California, average prices for fresh use for Michigan and New York, and average prices for all methods of sale for other States.

¹⁸Continental United States only.

¹⁹Includes some processing.

²⁰Simple average of States weighted by estimated Jan. 1 head for U.S. average.

²¹Sold by farmers directly to consumers.

¹The index for tobacco products and bottled beverages formerly appearing in this table was discontinued in 1967.

²Prior to January 1967, classified as "all commodities other than farm products and processed food."

³Preliminary.

Economics, Statistics, and Cooperatives Service—Economics.

Compiled from reports of the U.S. Department of Labor. Beginning January 1971, data represent the revised sample and the 1967 weighting pattern; previously reported on a 1957–59 = 100 basis.

¹ Index values shown for 1965 through 1976 were revised and published June 1977 using 1971–73 weights. Some reordering of sub-indexes was introduced. Revised monthly indexes for January 1965 through May 1977 are available upon request.

² Fresh market for noncitrus, and fresh market and processing for citrus.

³ Due to the decrease in relative importance of wool sales between the previous index base period (1953–57) and the current base period (1971–73), wool has no weight in the revised (1965 to present time) Prices Received Index; therefore, revised wool indexes are not available.

⁴ Ratio of Index of Prices Received (1967 = 100) to Index of Prices Paid (1967 = 100).

⁵ Preliminary.

Economics, Statistics, and Cooperatives Service—Crop Reporting Board. These indexes are computed using the price estimates of averages for all classes and grades for individual commodities being sold in local farm markets on or about the 15th of each month. In computing the group indexes, prices of individual commodities have been weighted by average quantities sold during 1953–57 for 1959–64 indexes and by average quantities sold during 1971–73 for the 1965–75 indexes.

¹National averages during the marketing years for the individual crops, beginning in the years shown.²Support level for 1974, 1975, 1976, 1977, 1978, and 1979 represents the statutory established price (the so-called target price) except for extra-long staple cotton.³Commodities grouped under "Mandatory" are those which the Commodity Credit Corporation is required by law to support.⁴Represents the average loan rate plus any direct price-support payment (or in the case of wheat the value of the domestic marketing certificate) received by participants in the program for the commodity. The basis of such payments varies among the crops and from year to year.⁵Preliminary.⁶1-inch middling.

⁷Subsequent to 1970, loans are made on net weight basis rather than gross weight basis.

⁸Target level for wheat planted within allotment was \$2.90; target level of \$2.47 for unplanted allotment acreage.

⁹Suspended since 1971.

¹⁰Grade No. 2 or better except for oats which is Grade No. 3.

¹¹Payment rate dropped; support level and loan rate are the same.

¹²No support program.

¹³For ginners' purchases from producers, basis Grade 100, plus appropriate differentials to reflect ginners' normal handling costs

CHAPTER X

TAXES, INSURANCE, CREDIT, AND COOPERATIVES

The statistics in this chapter deal with taxes, insurance, agricultural credit, and farm cooperatives. Some of the series were developed in connection with research activities of the Department, while others, such as data from agricultural credit agencies, are primarily records of operations.

¹Data for 1978 are preliminary.

²Number of farms on which the insured crop was planted, including duplication where both the landlord and tenant are insured. Insured farms on which no insured crop was planted are not included.

³The insured's share of the planted area on the farm.

⁴Less than 500 acres.

⁵Includes a combination of commodities varying by counties.

⁶Thousand of tons insured for raisins (not included in total of all commodities).

⁷Less than 500 tons.

¹ Real estate mortgages or deeds of trust are taken as supplemental security for some of these loans.

² Excludes loans to individuals guaranteed by the Commodity Credit Corporation and certificates of interest in pool of notes.

³ Loans "made" include renewals.

⁴ Loans outstanding include aquatic loans, loans guaranteed by CCC, and loans held by associations in liquidation. Beginning 1972, exclude rural home loans and farm-related business loans.

⁵ Excludes loans secured by CCC documents.

⁶ Loans outstanding are the unpaid balances of loans made directly by FmHA. Loans made include loans made directly by FmHA and loans guaranteed by that agency. For separate data on operating and emergency loans, 1949-65, see *Agricultural Statistics, 1965*, table 722.

⁷ Economic opportunity loans are made to farm and nonfarm rural residents. Through June 30, 1971, more than one half of the economic opportunity loans were made to farmers. Loan program was terminated in 1971.

⁸ Loans "outstanding" are cumulative net advances minus principal repayments; loans "made" are net advances to borrowers.

⁹ Approximately 2/3 of the individuals served by these cooperatives are farmers. ¹⁰ Beginning calendar year 1972, includes Rural Telephone Bank loans.

¹¹ Principally loans to public bodies and to power companies.

¹² Loans to commercial telephone companies.

¹³ Includes direct loans made and held by CCC. Excludes pooled loans against which certificates of interest were issued and also loans guaranteed by CCC held by other lending agencies.

¹ Contract rates on loans through Federal land bank associations. In computing the average rates, each Farm Credit district is given equal weight; within districts, rates are weighted by the number of days in force.

² Weighted average net cost to banks of bonds outstanding at end of year.

³ Rate represents interest (less patronage refunds), service fees, cost of record searches, and filing and releasing mortgages, etc., paid by borrowers as percentage of average loans outstanding during year.

⁴ Annual interest income on loans, discounts, and notes receivable as a percentage of average balance of such items outstanding during the year.

⁵ Excludes rates on loans secured by CCC documents.

⁶ Board of Governors of the Federal Reserve System. Annual averages of prevailing open-market rates in New York City.

⁷ Board of Governors of the Federal Reserve System. Annual ranges in discount rates on advances secured by Government obligations maturing or callable beyond 1 year and discounts of and advances secured by eligible paper.

¹ Includes loans made directly by FmHA and those guaranteed by the Agency. Amounts of loans made represent obligations and include loans to new borrowers and subsequent loans to borrowers who received an initial loan in a prior year. Amounts outstanding are loan advances less principal repayments for loans made directly by the Agency.

² Included in "Association loans" through 1968; data unavailable for reporting association loan types for the calendar year.

³ Beginning in calendar year 1969, association loan funds were reported by project type.

⁴ Recreation association loans are made only to subsequent borrowers who received an initial loan in a prior year.

⁵ Funding for this program is no longer available.

¹ Reports of cooperatives are included either for the calendar year or for fiscal years ending between July 1 of the calendar year shown and June 30 of the following year, with limited exceptions.

² Includes independent local cooperatives, centralized cooperatives, and federations of cooperatives. Cooperatives are classified according to their major activity. If, for example, more than 50 percent of a cooperative's business is derived from marketing activities, it is included as a marketing cooperative.

³ Includes cooperatives whose major activity is providing services related to marketing and farm-supply activities.

⁴ Includes members (those entitled to vote for directors) but does not include nonvoting patrons. (Some duplication exists because some farmers belong to more than one cooperative.)

⁵ Receipts for services related to marketing and purchasing activities, but not included in the volumes reported for these activities.

⁶ Preliminary.

⁷ Estimated gross business includes all business reported between cooperatives, such as the wholesale business of farm-supply cooperatives with other cooperatives or terminal market sales for local cooperatives.

⁸ Estimated net business represents the value at the first level at which cooperatives transact business for farmers. Figures are adjusted for duplication resulting from intercooperative business.

Economics, Statistics, and Cooperatives Service—Economics. Based on records from cooperatives reporting to the Service.

¹ Represents value at the first level at which cooperatives transact business for farmers. ² Includes coffee, forest products, fur pelts, hay, hops, nursery stock, tung oil, and other farm products not separately classified. ³ Because many cooperatives do more than one type of business, these totals are less than the number that would be obtained by adding the number of cooperatives marketing individual products, handling individual supplies, or providing individual service. ⁴ Includes plant equipment, automotive supplies, hardware, chicks, and other supplies not separately classified. ⁵ Receipts for services related to marketing and purchasing activities, but not included in the volumes reported for these activities.

¹ Includes cooperatives headquartered both in and outside the State handling business originating in the State. No totals can be shown because of duplication.

² Represents value at the first level at which cooperatives transact business for farmers.

³ Volume of a sugar cooperative located in Hawaii but headquartered in California is included in California.

⁴ Sales outside the United States, and to domestic military installations.

¹ State totals represent data for borrowers incorporated within the State.² Includes loans obtained by REA borrowers' affiliates specifically organized to facilitate non-REA financing.³ Totals for other types of borrowers are as follows: Public Power Districts, 54 borrowers, \$360,174,571; municipalities and other Government authorities, 36 borrowers, \$252,020,375; power companies, 26 borrowers, \$28,562,038.⁴ Includes \$10,394,979,000 in REA guarantee commitments made as of Jan. 1, 1979.⁵ Funds loaned to corporate borrowers for relending to individuals. Includes wiring, plumbing, and refrigeration installations.⁶ Includes miles energized and consumers served, shown in table 695 and 696.

¹ State totals represent data for borrowers incorporated within the State.² Actual funds advanced out of REA loans approved, as shown in table 694.³ Cumulative.⁴ Includes data at time of repayment of loan for borrowers whose loans have been repaid in full. As of Jan. 1, 1979, there were 68 such borrowers with 25,498 miles energized and 144,266 consumers served.⁵ Includes energy sold by one REA borrower to another.⁶ Excludes energy sales and revenues of power sold by one REA borrower to another.⁷ Includes rural nonfarm and farm consumers.

CHAPTER XII

AGRICULTURAL CONSERVATION AND FORESTRY STATISTICS

Statistics in this chapter concern conservation of various resources, particularly soil, water, and timber. Forestry statistics include area of private and public-owned forest land, timber production, imports and exports, pulpwood consumption and paper and board production, area burned over by forest fires, livestock grazing, and recreational use of national forest lands. Data on production, supply, and distribution of naval stores are included because of their close association with forestry statistics.

FOOTNOTES FOR TABLE 736

¹ Data may not add to totals because of rounding.² Forest land is land at least 10 percent stocked by forest trees of any size, including land that formerly had such tree cover and that will be naturally or artificially regenerated. Forest land includes transition zones, such as areas between heavily forested and non-forested lands that are at least 10 percent stocked with forest trees, and forest areas adjacent to urban and built up lands. Also included are chaparral areas in the West and afforested areas. The minimum area for classification of forest land is 1 acre. Roadside, streamside, and shelterbelt strips of timber must have a crown width at least 120 feet wide to qualify as forest land. Unimproved roads and trails, streams, and clearing in forest areas are classified as forest if less than 120 feet in width.³ Commercial timberland is forest land which is producing or is capable of producing crops of industrial wood and not withdrawn from timber utilization by statute or administrative regulation. Areas qualifying as commercial timberland have the capability of producing in excess of 20 cubic feet per acre per year of industrial wood in natural stands. Currently inaccessible and inoperable areas are included.⁴ Includes Indian lands.⁵ Includes Alaska.⁶ Includes Hawaii.

² All of the 11 watersheds were approved Dec. 22, 1944; however, flood control funds did not become available for works of improvement until 1946. As of June 30, 1965, work in one watershed was completed.

²Timber removals include the net volume of growing stock or sawtimber trees removed from the inventory by harvesting; cultural operations, such as timber-stand improvement; land clearing; or changes in land use.

³The considerable excess of cut over growth for most western softwoods is not entirely due to overcutting. Growth is at a low level because part of the commercial forest area consists of old-growth timber which contributes little to net annual growth, and an excess of cut over growth is necessary to achieve a more regulated forest containing a desirable balance of growing stock by age classes.

⁴Includes Alaska.

⁵Includes Hawaii.

¹ *National Forest System lands.*—The national forests, national forest purchase units, national grasslands, and other lands administered by the Forest Service. Includes national forest lands withdrawn for use of other Federal agencies where the National Forest reservation has not been revoked.

National forests.—Areas formally designated or proclaimed as national forest.

Purchase units.—Portions of approved national forest acquisition areas established by the Secretary of Agriculture or previously recommended by the Secretary and approved by the National Forest Reservation Commission, located both inside and outside designated or proclaimed national forest boundaries.

National grasslands.—Lands designated "National grasslands" by the Secretary of Agriculture and permanently held by the Department of Agriculture under Title III of the Bankhead-Jones Farm Tenant Act. The acreage shown for the national grasslands are the areas of such lands administered by the indicated unit headquarters or regions.

Land utilization projects.—Lands administered by the Forest Service for programs of land utilization and adjustment under Title III of the Bankhead-Jones Farm Tenant Act.

Research and experimental areas.—Areas outside of the national forests and grasslands which have been reserved and dedicated to forest or range research and experimentation.

Other areas.—Lands administered by the Forest Service that are not included in the above groups.

² *Other lands within unit boundaries.*—Lands within the unit boundaries in private, State, county, and municipal ownership and Federal lands over which the Forest Service has no jurisdiction. Areas of such lands which have been offered to the United States and have been approved for acquisition and subsequent Forest Service administration, but to which title had not yet been accepted by the United States.

³ Less than 500 acres.

FOOTNOTES FOR TABLE 737

¹ Data may not add to totals because of rounding.

² Net volume in cubic feet of live sawtimber and poletimber trees from stump to a minimum 4-inch top (of central stem) outside bark or to the point where the central stem breaks into limbs.

³ Net volume of the saw-log portion of live sawtimber trees in board feet, International $\frac{1}{4}$ -inch log rule. Live trees of commercial species containing at least one 12-foot saw log or two noncontiguous 8-foot saw logs, and meeting regional specifications for freedom from defect. Softwoods must be at least 9.0 inches in diameter at breast height, hardwoods 11.0 inches.

⁴ Includes Alaska.

⁵ Includes Hawaii.

Forest Service. All U.S. Forest Service national forest prices in this table are bid prices (including KV payments) for timber sold on a Scribner Decimal C log rule basis, except in the Northeastern States where International ¼-inch log rule is used. Prices exclude timber sold by land exchanges and from land utilization project lands.

¹ Data for 1964 are user visits; beginning 1965, data are visitor-days. A visitor-day represents fisherman or hunter use which aggregates 12 person-hours. This may entail one person for 12 hours, 12 persons for 1 hour, or any equivalent combination of individual or group use, either continuous or intermittent. 1978 data for fiscal year ending Sept. 30.

² Inventory as of Apr. 30.

³ Includes antelope, elk, bears, lions, moose, mountain goats, bighorn sheep, peccaries, and wild boar; population data also include alligators, beginning 1973.

⁴ For years ending June 30.

¹ Imports for consumption, as reported by the U.S. Department of Commerce.² Breakdown between gum and wood not available prior to 1976. All imports are included in "Gum" in "Total supply" prior to 1976.³ Drums of 520 pounds net weight for wood; 517 pounds for gum.⁴ Less than 500 drums.⁵ Reports of the U.S. Department of Commerce. Includes some modified rosin.⁶ Total supply less exports and Mar. 31 stocks.⁷ The difference between domestic disappearance and reported industrial consumption is due to unreported industrial consumption; failure of some consumers to distinguish in their reports between gum, wood, and modified or derived rosins; and the inclusion of modified rosins in exports.

CHAPTER XIII

CONSUMPTION AND FAMILY LIVING

The statistics in this chapter deal with the consumption of food by both rural and urban people, retail price levels, and other aspects of family living of farm people. Data presented here on quantities of food available for consumption are based on material presented in the earlier commodity chapters, but they are shown here at the retail level, a form that is more useful for an analysis of the demand situation faced by the producer. Data on quantities of farm-produced food consumed directly by farm households are presented in the commodity chapters. Its value and the rental value of the farm home are given in the section on farm income, table 657.

¹ Quantities of nutrients computed by Science and Education Administration, Consumer and Food Economics Institute, on the basis of estimates of per capita food consumption (retail weight), including estimates of produce of home gardens, prepared by the Economics, Statistics, and Cooperatives Service. No deduction made in nutrient estimates for loss or waste of food in the home, use for pet food, or for destruction or loss of nutrients during the preparation of food. Civilian consumption. Data include iron, thiamin, riboflavin, and niacin added to flour and cereal products; other nutrients added primarily as follows: vitamin A value to margarine, milk of all types, milk

extenders; vitamin B₆ to cereals, meal replacements, infant formulas; vitamin B₁₂ to cereals; ascorbic acid to fruit juices and drinks, flavored beverages and dessert powders, milk extenders and cereals. Quantities of added nutrients for 1964–66 were estimated in part by Consumer and Food Economics Institute.

¹ Estimated from quantities in the thrifty food plan shown in *Agricultural Statistics, 1976*, table 763 and in the other three food plans shown in *Agricultural Statistics, 1975*, table 764. The costs of the food plans were first estimated by using the average price per pound of each food group paid by urban survey families at four selected food cost levels in 1965-66. These prices were adjusted to current levels by using food price information released periodically by the Bureau of Labor Statistics.

²Ten percent added for family size adjustment. (See footnote 3.)

³The costs given are for individuals in 4-person families. For individuals in other size families, the following adjustments are suggested: 1-person - add 20 percent; 2-person - add 10 percent; 3-person - add 5 percent; 5-or 6-person - subtract 5 percent; 7-or-more-person-subtract 10 percent.

FOOTNOTES FOR TABLE 767

¹ Civilian consumption only. Quantity data used in computing the per capita food consumption index, table 766. Final consumer products that are derived from a combination of primary food groups, such as bakery products, are measured and reported in their primary ingredients, such as flour, shortening, and eggs.

² Includes game and edible offal.

³ Includes 4.3 pounds per capita of game fish in 1975–78 and smaller amounts in previous years.

⁴ Preliminary.

⁵ Data for melons, fresh vegetables, potatoes, sweetpotatoes, and dry beans and peas include consumption of home garden produce.

⁶ Data have been revised to reflect conversion from fresh weight equivalent to processed weight for dehydrated potatoes, potato chips, and shoe strings.

⁷ Soya products approximated at 1.3 pounds in 1972, 2.1 pounds 1973–74, and 2.0 pounds for 1975–78.

⁸ Corn sugar and sirups are with sugars and other sweeteners.

⁹ Excludes sugar used in production of canned and frozen fruit, canned fruit juices, canned vegetables, and unskimmed sweetened condensed milk.

¹⁰ Includes fruits and vegetables in soups and baby foods.

¹Reflects retail prices of goods and services usually bought by average families in urban areas of the United States. This index is the official index released monthly by the U.S. Department of Labor. Beginning 1978 data are for all urban consumers; earlier data are for urban wage earners and clerical workers.

CHAPTER XIV

MISCELLANEOUS AGRICULTURAL STATISTICS

This chapter contains miscellaneous data which do not fit into the preceding chapters. Included here are summary tables on foreign trade in agricultural products; statistics on fishery products; tables on refrigerated warehouses; commodity futures statistics; and statistics on crops in Alaska.

Foreign Agricultural Trade Statistics

U.S foreign agricultural trade statistics are based on documents filed by exporters and compiled by the Bureau of the Census. Agricultural commodities consist of (1) nonmarine food products and (2) other products of agriculture which have not passed through complex processes of manufacture such as raw hides and skins, fats and oils, and wine. Such manufactured products as textiles, leather, boots and shoes, cigarettes, naval stores, forestry products, and distilled alcoholic beverages are not considered agricultural.

The trade statistics exclude shipments between the 50 states and Puerto Rico, between the 50 States and the island possessions, between Puerto Rico and the island possessions, among the island possessions, and in transit through the United States from one foreign country to another when documented as such by U.S. Customs authorities.

The export statistics also exclude shipments to the U.S. Armed Forces and diplomatic missions abroad for their own use and supplies for vessels and planes engaged in foreign trade. Data on shipments valued at less than \$251 (\$100 prior to October 1969) are not compiled by commodity and are excluded from agricultural statistics but are reflected in nonagricultural and overall export totals. The agricultural export statistics include shipments under Public Law 83-480 (Agricultural Trade Development and Assistance Act), and related laws; under the Foreign Assistance Act of 1961, as amended; and involving Government payments to exporters. (USDA payments are excluded from the export value.) Separate statistics on Government program exports are compiled by the U.S. Department of Agriculture from data obtained from operating agencies.

The export value, the value at the port of exportation, is based on the selling price (or cost if not sold) and includes inland freight, insurance, and other charges to the port. The country of destination is the country of ultimate destination or where the commodities are to be consumed, further processed, or manufactured. When the shipper does not know the ultimate destination, the shipments are credited to the last country, as known to him at the time of shipment from the United States, to which the commodities are to be shipped in their present form. Since substantial amounts of agricultural commodities such as wheat, corn, and soybeans are transshipped through the Netherlands, West Germany, and Belguim, exports to those countries are overstated. Exports to final destinations including the United Kingdom, France, Spain, East Germany, and other countries are understated. Except for Canada, export shipments valued \$251-\$999 (\$100-\$499 prior to October 1969) are included on the basis of sampling estimates; shipments to Canada valued \$251-\$1,999 (\$100-\$1,999 prior to October 1969) are sampled. Prior to January 1, 1973, shipments of grains and oilseeds to Canada were greatly overstated because of transshipments. After January 1, 1973, shipments to Canada of wheat, rye, barley, oats, corn, soybeans, and flaxseed from certain U.S. ports to certain Canadian ports were designated as exports to "unidentified countries."

Imports for consumption are a combination of entries for immediate consumption and withdrawals from warehouses for consumption. The import value, defined generally as the market value in the foreign country, excludes import duties, ocean freight, and marine insurance. The country of origin is defined as the country where the commodities were grown or processed. Where the country of origin is not known, the imports are credited to the country of shipment. Low-valued shipments under \$251 are reflected in nonagricultural and overall import totals.

¹Estimated market values include values of shipments under P.L. 480 agreements for long-term dollar credit and convertible local currency credit payment provisions. These methods of financing were included in Title I when a revision of the Act was signed in 1966 (P.L. 89-808).

²Beans.

³Blended foods.

Office of the General Sales Manager.

FOOTNOTES FOR TABLE 778

¹Includes long-term dollar and convertible foreign currency sales.

²Agricultural exports excluding Government programs (sales for dollars) include, in addition to unassisted commercial transaction, shipments of some commodities with governmental assistance in the form of extension of credit and credit guarantees for relatively short periods, and, for tobacco, sales at less than domestic market prices.

Economics, Statistics, and Cooperatives Service—Economics.

FOOTNOTES FOR TABLE 780

¹Fiscal years July 1–June 30 for 1973–76; Oct. 1–Sept. 30 for 1977 and 1978.

²Preliminary.

³Less than \$500,000.

⁴Includes payments in cash or in kind and sales from CCC stocks at less than domestic market prices; loans and guarantees from Export-Import Bank; credits extended by Commodity Credit Corporation; and barter shipments for overseas procurement for U.S. agencies through 1975.

FOOTNOTES FOR TABLE 783.

¹ Fiscal years July 1–June 30 for 1973–76; Oct. 1–Sept. 30 for 1977 and 1978.

² Preliminary.

³ Supplementary agricultural import products consist of all products similar to agricultural commodities produced commercially in the United States, together with all other agricultural products interchangeable to any significant extent with such U.S. commodities. Complementary agricultural products include all others, about 98 percent of which consist of rubber, coffee, raw silk, cacao beans, wool for carpets, bananas, tea, and vegetable fibers.

Economics, Statistics, and Cooperatives Service—Economics. Compiled from reports of the U.S. Department of Commerce.

¹ Fiscal years July 1–June 30 for 1976; Oct. 1–Sept. 30 for 1977 and 1978. Data for transition quarter July 1–Sept. 30, 1976, are as follows (million dollars): Total agricultural exports, 5,355.1; under specified Government-financed programs, 523.6; outside specified Government-financed programs, 4,831.5.² Not adjusted for transshipments through Canada and Western Europe.³ Includes Title I long-term credit sales for dollars and convertible foreign currencies and Title II donations for disaster relief and development through government-to-government, World Food Program, and voluntary relief agencies, under P.L. 83-480 (the Agricultural Trade Development and Assistance Act of 1954, as amended), and other legislation. Also includes the Foreign Assistance Act of 1961, as amended.⁴ "Agricultural exports outside specified Government-financed programs" (sales for dollars) include in addition to unassisted commercial transactions, shipments of some commodities with governmental assistance in the form of (1) barter or overseas procurement for U.S. agencies, (2) extension of credit and credit guarantees for relatively short periods through Commodity Credit Corporation and loans and guarantees from the Export-Import Bank and (3) sales of Government-owned commodities at less than domestic market prices.

¹Fiscal years July 1–June 30 for 1976; Oct. 1–Sept. 30 for 1977 and 1978.²Supplementary agricultural import products consist of all products similar to agricultural commodities produced commercially in the United States, together with all agricultural products interchangeable to any significant extent with such U.S. commodities. Complementary agricultural products include all others, about 98 percent of which consist of rubber, coffee, raw silk, cacao beans, wool for carpets, bananas, tea, and vegetable fibers.³Less than \$50,000.⁴Totals may not add due to rounding.

¹Commodities covered by the Commodity Exchange Act prior to April 1975. Preliminary.

Average is for three months only for lumber, plywood, broilers, coffee, and sugar.

²Effective July 1, 1963, reporting traders began classifying their positions as speculative or hedging; long and short (spreading) positions are derived on a mechanical basis from equal long and short positions reported as speculative.

³Derived by subtracting reporting traders' commitments from total open interest.

¹Beginning 1971, figures contain only Jack mackerel.²Represents the net weight of canned products. In the classifications, "Clam products," "Oysters," and "Other products," the weight of any chowders, soups, and juices includes the weight of the entire mixture, which may contain potatoes and other vegetables, etc.³Included in "Other products," beginning 1967.⁴Preliminary.
