EINLEITUNG

Was ist EINECS?

EINECS ist das European Inventory of Existing Commercial Chemical Substances (Europäisches Verzeichnis der auf dem Markt vorhandenen chemischen Stoffe). Es wurde von der Kommission der Europäischen Gemeinschaften in Anwendung von Artikel 13 der Richtlinie 67/548/EWG, in der Fassung der Richtlinie 79/831/EWG und in Übereinstimmung mit den Bestimmungen der Entscheidung 81/437/EWG der Kommission erstellt. In diesem Verzeichnis sind jene chemischen Stoffe aufgeführt und beschrieben, die zwischen dem 1. Januar 1971 und dem 18. September 1981 in der Europäischen Gemeinschaft auf dem Markt waren. Laut Artikel 1 Absatz 4 der geänderten Richtlinie 67/548/EWG gilt für diese Stoffe nicht die Anmeldepflicht der Richtlinie.

EINECS wird erst sechs Monate nach seiner Veröffentlichung in allen neun Amtssprachen im *Amtsblatt der Europäischen Gemeinschaften* rechtswirksam. Von diesem Datum an wird es die ausschließliche Bezugsstelle sein für die Identifizierung von Stoffen, die von der Anmeldepflicht der geänderten Richtlinie 67/548/EWG ausgenommen sind. In der Zwischenzeit ist die Ausgabe von EINECS im Amtsblatt von großem praktischen Wert als Mittel zur Identifizierung „bestehender" chemischer Stoffe, die von der Anmeldepflicht vor dem Inverkehrbringen, die für „neue" Stoffe bereits seit dem Inkrafttreten der Bestimmungen der Richtlinie 79/831/EWG zwingend vorgeschrieben ist, ausgenommen sind.

Die Vorabausgabe von EINECS wurde ausschließlich in Englisch — in acht Bänden — drei Bände mit dem Hauptverzeichnis, fünf weitere mit den Inhaltsverzeichnissen (Namensregister, Summenformel-Register, UVCB-Register, Definitionsregister und Pflanzennamen-Register) — veröffentlicht. Die veröffentlichte Fassung (im Amtsblatt) enthält das Hauptverzeichnis in neun Sprachfassungen, jedoch ohne Inhaltsverzeichnisse. Wer im Besitz des Vorabverzeichnisses ist, tut deshalb gut daran, es zu behalten, da seine zusätzlichen Inhaltsverzeichnisse den Zugriff zum Amtsblatt erleichtern.

Abgesehen von geringfügigen Änderungen im Inhalt und in der Aufmachung, z. B. der Verwendung der IUPAC-Nomenklatur für die chemischen Bezeichnungen, ist die englische Fassung im Amtsblatt die gleiche wie die der Vorabausgabe. Diese Änderungen werden selbstverständlich in die anderen acht Sprachfassungen im Amtsblatt übertragen, die jetzt zum ersten Mal veröffentlicht werden.

EINECS enthält 100 106 Eintragungen, von denen 33 000 aus dem European Communities' Core Inventory (ECOIN) und 67 000 von zusätzlichen Anmeldungen der Industrie stammen. Davon gelten 82 000 Stoffe als gut definiert und etwa 18 000 als unzulänglich definiert oder als „Substances of Unknown or Variable composition, Complex reaction products and Biological materials" (UVBC-Stoffe). Bei diesen 18 000 UVBC's gibt es jedoch etwa 5 000, die neben der Bezeichnung auch kurz beschrieben sind.

Die im Hauptverzeichnis enthaltenen und definierten Stoffe sind chronologisch nach EINECS und CAS- (Chemical Abstracts Service) Registrierungsnummern geordnet.

Die Anmeldepflicht der Richtlinie 79/831/EWG

Chemikalien machen nicht an den politischen Grenzen halt. Sie werden durch den internationalen Handel und durch natürliche Prozesse so befördert, daß, wie wir jetzt wissen, der Verkauf und die Verwendung eines chemischen Stoffes in einem Land ernsthafte Auswirkungen auf die Bevölkerung eines benachbarten Landes oder sogar der ganzen Welt haben kann.

Seit der Verabschiedung der Richtlinie über gefährliche Stoffe (1) aus dem Jahr 1967 hat die Europäische Gemeinschaft eine Reihe von Rechtsvorschriften zur Identifizierung und Überwachung der Risiken von im Handel befindlichen chemischen Stoffen entwickelt. Im Anfangsstadium lag der Schwerpunkt auf der Einstufung, Kennzeichnung und Überwachung bestimmter gefährlicher chemischer Stoffe. Im Jahr 1979 hat die Gemeinschaft mit der Verabschiedung der Sechsten Änderung (2) der Richtlinie aus dem Jahr 1967 neue Wege beschritten.

Das entscheidend Neue an dieser Richtlinie ist, daß sie die Errichtung eines einheitlichen Test- und Anmeldesystems für neue in der Europäischen Gemeinschaft in Verkehr gebrachte chemische Stoffe bezweckt. Ein vom Hersteller oder Importeur nach dem 18. September 1981 erstmalig in Verkehr gebrachter chemischer Stoff ist mindestens 45 Tage vorher bei der zuständigen einzelstaatlichen Behörde anzumelden.

Die Anmeldung muß eine technische Beschreibung mit Angabe der Merkmale des Stoffes enthalten : Identität, Verwendung, Mengen, Verfügbarkeit und Ergebnisse physikalisch-chemischer, toxikologischer und ökotoxikologischer Tests.

Eine Zusammenfassung dieser Anmeldung wird der Kommission der Europäischen Gemeinschaften und von ihr den anderen einzelstaatlichen zuständigen Behörden übermittelt. Zu einem späteren Zeitpunkt sind unter bestimmten Bedingungen weitere Angaben zu machen.

Durch die Einreichung einer Anmeldung für einen „neuen" chemischen Stoff bei der zuständigen Behörde eines einzelnen Mitgliedstaats kann ein Hersteller oder Importeur den chemischen Stoff innerhalb der gesamten Europäischen Gemeinschaft in Verkehr bringen.

Was versteht man unter einem „neuen" chemischen Stoff?

In der Richtlinie werden die „neuen" und die „bestehenden" chemischen Stoffe dadurch voneinander abgegrenzt, daß die Kommission aufgefordert wird, ein Verzeichnis der „bestehenden" chemischen Stoffe, d. h. jener, die nicht Gegenstand einer Anmeldung sein werden, da sie vor dem 18. September 1981 in den Verkehr gebracht wurden, aufzustellen.

(1) Richtlinie 67/548/EWG des Rates zur Angleichung der Rechts- und Verwaltungsvorschriften für die Einstufung, Verpackung und Kennzeichnung gefährlicher Stoffe (ABl. Nr. 196 vom 16. 8. 1967, S. 1).
(2) Richtlinie 79/831/EWG des Rates zur sechsten Änderung der Richtlinie 67/548/EWG zur Angleichung der Rechts- und Verwaltungsvorschriften für die Einstufung, Verpackung und Kennzeichnung gefährlicher Stoffe (ABl. Nr. L 259 vom 15. 10. 1979, S. 10).

Daher ist ein chemischer Stoff als „neu" anzusehen und anzumelden, wenn er im EINECS nicht auffindbar ist. Eine Warnung könnte jedoch angebracht sein. Wie oben festgestellt, ist EINECS nicht voll rechtswirksam und kann einen Stoff, der von der Anmeldung ausgenommen ist, erst sechs Monate nach seiner Veröffentlichung im *Amtsblatt der Europäischen Gemeinschaften* endgültig ausweisen. Laut Artikel 1 Absatz 4 der Richtlinie 79/831/EWG gilt die Ausnahme von der Anmeldepflicht bis zu diesem Datum nur „für Stoffe, die vor dem 18. September 1981 in Verkehr gebracht wurden" und verweist nicht ausdrücklich darauf, daß EINECS in der Zwischenzeit maßgebend ist.

Ausarbeitung des EINECS

Die Kommission hat im Mai 1981 das Verfahren für die Erstellung des EINECS und die Kriterien für die Übermittlung der Angaben für das EINECS durch die Mitgliedstaaten an die Kommission angenommen (1).

Das EINECS setzt sich aus einem europäischen Grundverzeichnis (ECOIN) zusammen, das von der Kommission im Jahr 1982 aufgestellt und veröffentlicht wurde und einer Liste von Stoffen, die Gegenstand entsprechender von den Mitgliedstaaten der Kommission übermittelter Anmeldungen sind und die sich auf die Erklärungen der Hersteller oder anderer Personen, die ihren Wohnsitz in der Europäischen Gemeinschaft haben und diese Stoffe in Verkehr gebracht haben, an die Mitgliedstaaten stützen.

Die Entwicklung wurde in fünf Phasen unterteilt, die nunmehr abgeschlossen sind:

1. Die Erstellung des ECOIN und des Leitfadens „Zusatzmeldungen für das EINECS-Verzeichnis."
2. Die Vorlage von Erklärungen durch die Industrie bei einzelstaatlichen Anlaufstellen, die an die Kommission weitergeleitet wurden.
3. Prüfung und Bearbeitung der Erklärungen.
4. Veröffentlichung der Vorabausgabe von EINECS.
5. Veröffentlichung des EINECS im *Amtsblatt der Europäischen Gemeinschaften* in den neun Amtssprachen.

Benutzung des EINECS

Ein chemischer Stoff kann im EINECS entweder anhand der EINECS- oder der CAS-(Chemical Abstract Service) Nummer aufgefunden werden.

Das EINECS besteht aus einer fortlaufenden Liste, in der die chemischen Stoffe nach EINECS- oder CAS-Registrierungsnummern in aufsteigender Reihenfolge aufgeführt sind. Jede Eintragung eines chemischen Stoffes enthält auch die chemische Bezeichnung, die Summenformel und falls erforderlich, die Beschreibung des Stoffes.

Links oben befindet sich als erste Angabe die EINECS-Nummer; es handelt sich um eine siebenstellige Nummer, bei der die letzte Stelle eine Kontrollnummer ist. Die EINECS-Nummern umfassen die Nummern von 200-001-8 bis 310-192-0.

Auf der gleichen Zeile rechts befindet sich die entsprechende CAS-Nummer.

Die chemische Bezeichnung wird gemäß der IUPAC-Nomenklatur dargestellt.

Die Summenformel wird angegeben, wenn die Struktur des chemischen Stoffes klar definiert ist.

Eine Beschreibung wird zusätzlich zur chemischen Bezeichnung eingefügt, wenn letztere nicht genau angegeben werden kann, wie beispielsweise für UVCB-Stoffe. Sie enthält normalerweise eine Beschreibung des Prozesses, physikalische oder Einstufungsbezeichnungen, Auskünfte über Klasse bzw. Art, SDA- (Soap and Detergent Association) oder Colour Index Nummern.

Zeolithe
Kristalline Aluminiumsilicate aus Siliciumdioxid (SiO_2) und Aluminiumoxid (Al_2O_3) in verschiedenen Zusammensetzungen mit Metalloxiden. Herstellung durch hydrothermische Behandlung eines festen Aluminiumsilicates oder eines Gels aus der Reaktion von Natriumhydroxid, Aluminiumhydrat und Natriumsilicat. Zur Einführung anderer Kationen kann im ursprünglichen Produkt oder in einem natürlich vorkommenden Analog partieller Ionenaustausch vorgenommen werden. Spezifische Zeolithe werden durch Kennzeichnen der Kristallstruktur und des dominierenden Kations identifiziert, zum Beispiel KA, CaX, NaY.
