AMERICAN RAILROAD JOURNAL,

AND GENERAL ADVERTISER

FOR RAILROADS, CANALS, STEAMBOATS, MACHINERY,

AND MINES.

ESTABLISHED 1831.

PUBLISHED WEEKLY, AT No. 23 CHAMBERS STREET, NEW YORK, AT THREE DOLLARS PER ANNUM.

SECOND QUARTO SERIES, VOL. I., No. 1.]

THURSDAY, JANUARY 2, 1845.

[WHOLE No. 444, VOL. XVIII.

THE AMERICAN RAILROAD JOURNAL is the only periodical having a general circulation throughout the Union, in which all matters connected with public works can be brought to the notice of all persons in any way interested in these uudertakings. Hence it offers peculiar advantages for advertising times of departure, rates of fare and freight, improvements in machinery, materials, as iron, timber, stone, cement, etc. It is also the best medium for advertising contracts, and placing the merits of new undertakings fairly before the public.

ICOLL'S PATENT SAFETY Switch for Railroad Turnouts.

This invention, for some time in successful operation on one of the principal railroads in the country, effectually prevents engines and their trains from running off the track at a switch, left wrong by accident or design.

It acts independently of the main track rails, being laid down, or removed, without cutting or displacing them.

It is never touched by passing trains, except when in use, preventing their running off the track. It is simple in its construction J. F. WINSLOW, Albany Iron and and operation, requiring only two Castings and two Rails; the latter, even if much worn, or used, not objectionable.

Plans, Specifications, and all Information ANDREW MENEELY, West Troy, obtained on application to the Subscriber, Inventor and Patentee. G. A. NICOLLS. Jan. 1, 1845. Reading, Pa.

To IRON MANUFACTURERS.

The subscribers as Agents of Mr. Geo the United States for his process of smelting Iron Ore with Anthracite coal, and holding an assignment of the patent obtained by the late Rev. F. W. Geissenhainer, are prepared to grant licences for the manufacture of Iron according to Mr. Crane's principle.

A. & G. RALSTON, & CO. No. 4 South Front st. Philadelphia, Pa. G. RALSTON & CO., Philadelphia.

RAILROAD IRON & FIXTURES.
The subscribers are ready to execute orders for the above, or to contract therefor, at a fixed price, delivered in the United States.

ON HAND, AND FOR SALE,

900 tons L or Edge pattern.
200 tons 2½ × ¾ Flat bar.
50 tons 1½ × ¼ Flat bar.

DAVIS, BROOKS, & CO, 21 Broad st., N. Y.

WALUABLE PROPERTY ON THE Mill Dam for sale. A Lot of Land on Gravelly Point, so called, on the Mill Dam, in Roxbury, fronting on and East of Parker street, containing 68,497 square feet, with the following buildings thereon standing:

Main Brick Building, 120 feet long, by 46 feet wide, two stories high. A Machine Shop, 47×43, with large Engine, Face, Screw and other Lathes, suitable to do any kind of work.

Pattern Shop, 35×32 feet, with Lathes. Work benches, etc.

Work Shop, 86×35 feet, on the same floor with the pattern shop.

Forge Shop, 118 feet long by 44 feet wide on the ground floor, with two large Water Wheels, each 16 feet long, 9 feet diameter, with all the Gearing, Shafts, Drums, Pulleys, etc., large and small Trip Hammers, Furnaces, Forges, Rolling Mill, with large Ballance Wheel and a large Blowing Apparatus for the Foundry.

Foundry, at end of Main Brick Building, 60×451 feet, two stories high, with a shed part 451×20 feet, containing a large Air Furnace, Cupola, Crane and Core Oven.

Store House-a range of Buildings for Storage, etc., 200 feet long by 20 wide.

Locomotive Shop, adjoining Main Building, fronting on Parker street, 54×25 feet.

Also - A Lot of Land on the Canal, west ' Crane of Wales, having obtained a patent in side of Parker street, containing 6000 feet, with the following buildings thereon standing:

Boiler House 50 feet long by 30 feet wide,

Blacksmith Shop, 49 ft. long by 20 ft. wide. For terms apply to HENY ANDREWS, 48 State street, or to CURTIS, LEAVENS & CO., 106 State street, Boston, or to A. &

MESSRS. EDITORS:-As your paper is devoted to the benefit of the public in general, I feel desirous to communicate to you for publication the following circumstance of no inconsiderable importance,

from Philadelphia to this city, an axle of our small orders with promptness and despatch. large 8 wheeled passenger car was broken, but from the particular plan of the construction, the accident was entirely unknown to any of the passengers, or, in fact, to the conductor himself, until the train, (as was supposed from some circumstances attending the case,) had passed several miles in advance of the place, where the accident occurred, whereas has the car been constructed on the common plan, the same kind of accident would unavoidably have much injured it, perhaps thrown the whole train off the track, and seriously injured, if not killed many of the pas-

Wilmington, Delaware, Sept. 28, 1840.

testing to the value of Mr. Joseph S. Kite's scriptions. invention of the Safety Beam Axle and Hub for railroad cars. They have for some time been applied to passenger cars on this road; and experience has tested that they fully accomplish the object intended. Several instances of the fracture of axles have occurred, and in such the cars have uniformly run the whole distance with entire safety. Had not 350 tons 2 by 15 ft. in length weighing 468 tins invention been used, serious accidents 280 " 2" must have occurred.

In short, we consider Mr. Kite's invention as completely successful in securing the safety of property and lives in railroad travelling, and should be used on all railroads in the

He will also make Surveys of Estates, with correct maps and descriptions of the same; and examine and report on the best mode of rendering them productive by draining, mines, quarries, water power, roads,

R. F. LIVINGSTON, Civil Engineer Hudson, New York. Refer to W. R.

RAILROADS OF OHIO.

The only railroads in this State of which we have any definite information, are the "Mad River and Lake Erie" and the "Little Miami" Railroads, destined to connect Cincinnati with Lake Erie, and consequently with New York and Boston. The former road is 132 miles, the latter 88 miles long, making the entire distance 220 miles. Locomotives are now running on 40 miles of each road: and by August next, 40 miles debt of the State: more will be ready, besides large amounts Amount arising from taxation, and transfers from of work done on the remaining 100 miles. The Companies require \$590,000 to complete the work in one year. The greater part of this sum is for the iron; to procure which is the only serious difficulty they have to encounter. The parts in operation are, successful, and the works appear to have been carried on with that judgment which characterizes the management of undertakings in which individuals have a deep and permanent interest. Still they are unable to raise this small sum in the "Queen City of the West." The unfortunate but natural result of a "system" of Government works-heavy taxes on all, whether benefitted or injured-causes all public undertakings to be viewed with suspicion, or even with a still stronger feeling. Private enterprize has now to construct all the year 1844, is \$136,142,666 00. The ments, cannot be less than \$420,000,000, the really important works in the State, and, in addition to the difficulties inseparable from such vast undertakings, has to clear away the odium with which the State and other local purposes, eight mills, making is aided by the facilities which are afforded has clothed the very name of Internal Im. in the aggregate fifteen mills on the dollar. by 853 miles of canal, 100 miles of railroad, provements. Suppose that, for the next ten years, the \$600,000 now paid by the people to meet the interest on the cost of For Canal purposes the State Canals, were to be laid out on Common School purposes, railroad iron to be given to Companies which had completed the graduation of their roads: then, at the end of that period, there would be one thousand miles of railroad with heavy iron, which would not only give handsome returns to the shareholders, and aid the general interests of the State, but the cost of the iron would be soon refunded. Then Ohio might, like For school house, Massachusetts, point to a system of works aiding and developing the various interests of the State, without a debt and without Amount of delinquencies for all purposes taxation.

The late acting Governor says :-

The amount of revenue received for the year ending the 15th November, 1814, from the several sources of revenue for State purposes, as distinguished from school and canal purposes, is \$277,155 52 The amount remaining in the Treasury,

#### AMERICAN RAILROAD JOURNAL

PUBLISHED BY D. K. MINOR, 23 Chambers street, N.Y.

### Thursday, January 2, 1845.

We cannot more appropriately commence our new edition than by referring to the list of American railroads on the opposite page. This table must be regarded merely as a first approximation to what we hope shortly to make out. The difficulties in the way of obtaining information of the actual cost, income commissioners of Pennsylvania, requesting and expenses of railways are very great. In such of their reports as might be necessary proof of this we need only refer to the fact to give us data for a complete statement of the that the State of New York is unable to ob-present condition of the public works of that tain returns from her own roads. Referring Commonwealth, has not elicited a reply

tistical information, the secretary of State said in his report of March 14, 1844, (Ass. doc. No. 123,) "the New York and Erie railroad company, probably owing to the de 9 ranged condition of its affairs, has not com plied with the requisitions of the said resolu tion. The following railroad companies are also in default, viz: Buffalo and Black Rock Hudson and Birkshire, Lewiston, Long Island and New York and Harlem." these will be found the roads whose stock i most frequently changing hands, consequently the very roads with the actual condition of which the public ought to be more particu larly acquainted. We trust that the good nature of the secretary is expended, and that he will now try the other tack.

A very respectful application to the cana

and directors. It is only in Massachusetts, New York (partially), Maryland and Georgia that we have been able to procure the cost and income of their railroads, and we doubt whether it will be soon practicable to give the American public anything like the full, clear and accurate weekly statements laid before the people of England by their able and spirited railway Journals.

For the list of English railways we are indebted to the "Railway Times, and the "Mining Journal," and for the canals, docks, etc., and projected railroads, to "Herapath's Railway Journal"-periodicals from which we shall frequently extract much useful information, and that too of a kind peculiarly needed in this country.

We must apologize for the appearance of our advertisements, having been disappointed in obtaining our fonts of type.

A variety of notices have been omitted, owing to the necessity of giving Mr. Casey's paper, on the repeal of the duty on railroad iron entire in this number.

NEW YORK AND NEW HAVEN RAILROAD.

The stock of this road is said to be nearly all taken. An application will be made to the legislature of New York this winter for permission to carry the road from the Connecticut line to this city. When we see the report of Mr. Twining, the engineer, we shall be able to speak definitely on the claims of this important work; also by what route they propose to enter the city, whether by the Harlem or an independent line, and whether they propose to amalgamate with the Harlem, or to join it at some convenient point, in the manner of the Western and Worcester roads in Massachusetts.

This is the first new work which has beenprojected in the neighborhood of this city for some years, and we hail its prospects of success with unfeigned satisfaction. We gladly perceive also, that the company have employed as their engineer a gentleman of education and acquirements, as well as of varied experience in his profession, and most favorably known to the citizens of New Haven. It is to the employment of incompetent engineers that many thousand shareholders may ascribe the unproductiveness of their investments.

We are again indebted to Gerard Ralston, Esq., of London, for interesting reports, " Olservations on the Isthmus of Panama," and a to the resolution of the assembly, 2d Feb., Our numerous friends throughout the Union "Report on Steam Navigation in the Paci-1843, "requiring the several railroad com- will gradually furnish us with every detail fic :" both by William Wheelwright We panies in this State to furnish to this office, but it would be every way better could we shall carefully peruse them, and hope to find in their annual reports, certain items of sta-receive them direct from the commissioners something of interest to our readers.

(For the American Railroad Journal.) ON THE REPEAL OF THE DUTY ON RAILROAD IRON.

By W. R. CASEY, Civil Engineer.

discussing the propriety of repealing the heavy duty so lately imposed on that article. Railway bars are viewed by many as differing from round and square bars, merely it attains have such peculiar and vast influences on the social, economical and political interests of the nation as to warrant, indeed to demand, distinct legislation. A full examination of the subject is impossible here, and indeed would, from its length, defeat its great detriment of the community. own object; but a general outline of the vast interests more or less affected by this gan say: measure cannot well be without interest to the readers of the Journal.

It is known that—with insignificant exceptions-all the railroad iron in the United States has been admitted free of dutv. We may form some idea of the influence this circumstance has had on the construction of railways, when we reflect that the great majority of tracks, in the first instance, were laid with the plate-rail, weighincrease of 1th of an inch in thickness, or from 4 to 5 tons per mile, was, at that time, an object of the most serious consideration. This would amount to only from \$150 to such permission was allowed." \$200 per mile, whereas the present duty of that time, it would unquestionably have cannot be overrated. prevented the construction of many works at present in existence.

constructed during the next ten years may they have done in many places to aid the Without going into detail, it may be obnot exceed half the distance accomplished farming and manufacturing interests gen-served, that capital invested in the manuwithin the last ten years; but, on the other erally. But comparatively few know that facture of the ordinary irons of commerce hand, from four to five times the quantity of a large portion of the mining business of will yield a much greater profit than will iron per mile is required; double tracks are Pennsylvania owes its very existence to the same amount laid out on works exbecoming more frequent, and many of the railways. It is the development of coal pressly constructed for rolling railroad iron. tracks with the plate rail have been, and mines by railways which has, in many in- The former business, from the very nature

The present agree to the (as formerly) free admission of manufacture of iron for common purposes duty on railroad iron, though quite sufficient railroad iron for the next half century. inadequate at this time-requiring large to retard the progress of railroads, does not They have everything to hope from the railimportations to meet the demand—but in any way render the manufacture of that road, and every thing to deter them from emit is more than doubtful whether its income article desirable with them. It merely in barking in the manufacture of railroad iron. is commensurate with that of the wants of dicates that they must labor under their bodies of railway cars, consumes a vast ad- quarter. The present duty inflicts on them engines, cars, turntables, and various fixbe more profitably, employed in other time and capital in much better ways than little short of that sum. The Utica and branches of the trade, now and for many not only more profitable to the individual manufacturer, but also more important in a national point of view. And, on this vital subject-of itself sufficient for a single paper-does not the nation owe much to rail. ways for its present means of defence; and are not those means, to a considerable

A reference to three of the principal seats of the iron trade, which can be spoken of with confidence, will aid this investigation. Commencing at the north, iron is made in the counties of Clinton and Essex, N. Y., for the supply of the other northern counties and the State of Vermont, besides more southern markets. One of the greatest drawbacks is the cost of transportation:

"The price paid for the transportation of ore (a distance of 20 miles) is, in some cases, as high as \$2,50 per ton, which would pay for conveying it more than a hundred miles on the western railroad of Massachusetts. The price of charcoal where wood costs little, is about \$3,50 per 100 bushels; the price at the iron-works is prominent obstacle to their advancement. from \$5,50 to \$6, and the difference would be sufficient to pay for hauling coal on a railway from St. Lawrence county. Some idea of the vast amount of hauling created by the iron trade, may be formed from the following statement. About 5,500 tons of bar-iron were made from the ores of Au Sable, in 1841, requiring 12,500 tons of ore and 22,000 tons of charcoal, besides large quantities of provisions, &c., in all from 40 to 50,000 tons, about twice as much as all the products of a grazing country, which passed over all the canals of New York in 1840."-[Assemb. Doc. No. 70, 1842.]

The iron manufacturers of this district

Erie Railroad.

consent to the free admission of iron for risk of sales. that road. But, to the other manufacturers,

But the low price of railroad iron has a the population; for it is worthy of remark, present disadvantages for many years to direct and powerful influence on the most that the demand for iron, for other purposes come; and instead of aiding the trade, it di- important branches of the iron trade. Using than railroads, increases in a greater ratio minishes the probability, if not the possible round numbers, the value of the imported than the population. For example, the con- lity, of its extension, in so far as it injuriously iron on the two tracks of the Reading rail. struction of ships, steamers, boats, and affects the construction of railways in that way is \$1,000,000; and the value of the ditional quantity of American iron. Every a certain injury without the possibility of tures on the same line, made exclusively of man employed in rolling railroad iron might benefitting them. They can employ their American iron, in American workshops, falls in making railroad iron. In this district also Schenectady railway, a mere passenger road, years to come; and that too in branches there is a mountain of ore, rivalling in was laid with the plate rail, 3 inch in thickquantity and surpassing in quality the iron ness, costing about \$152,000, and the value mountain of Missouri, but the want of a of engines, cars, etc. of American iron communication with Lake Champlain is an and manufacture, reached at least two-thirds almost insuperable obstacle. This region is of that sum. The present well-carned vitally interested in the construction of rall-high standing of American locomotive enways, and consequently has much to hope gines is of course exclusively owing to the from the repeal of a measure calculated in extension of railways in this country, which extent at least, due to the free admission of juriously to interfere with their extension, again has been powerfully aided by the free The iron masters near the Connecticut line admission of railroad iron. Company? it might appear that the benefits knows that this will do more for him in conferred on their general trade in coal and three years than the increase of manufaciron outweighed the supposed advantages tures, on the most extravagant calculation, of the duty on railroad iron: supposed, can effect in fifty years. But more than because sufficient time has not elapsed to this, even the manufacturers in the interior York, a horizontal tariff is ruinous. He The manufacture of iron cannot flourish requires little less than the present protecleast without a protective duty. For ex. cumstances, is it politic for him, in order to ways in the Union. If the duty on railroad iron he insisted on, then will the irresistible influence of this stupendous combination be firmly enlisted in favor of a complete overhauling of the tariff on iron, in which they will be warranted by every consideration of justice and policy.

The two mills which have been called into wealthy, and important part of the State; iron. Such a course would lead to counter- the advancement and general interests of Railway, laid with imported iron: and were increase,—an increase not greater than that those directly or indirectly interested in the

the repeal of this duty, the iron master di- may not be uninteresting or useless. minishes his facilities by increasing the cost of railways simultaneously with a reductestablished are: tion of his profit by a lowering of the Tariff. himself opposed by an influence a hundred the extension of the manufacture of all other ous precedent. times greater than his own, and can only kinds of iron. expect the fate of the vanquished from those rewarded by his insisting on the other tional point of view. twentieth, which, utterly worthless to him, is of vital importance to the cause of railways. The manufacture of iron is carried on by the labor of men, not of women and children; it is a healthy and hardy business, pre-eminently, by the mining interests of and on this account perhaps it has been fa. Pennsylvania. vored by many opposed to the establishment of enormous cotton mills and similar works, where "a hand" means a girl or a child, instead of-as at iron works-a man, and generally the head of a family. Pets are however, proverbially imperious and exacting. Let the highly favored American iron-master "leave well alone." A heavy duty on railroad iron will be the signal for a hostile combination of his, to this time, staunch friends and best customers-the Railways. Of what importance is the manufacture of iron to New England, New York, the South and the West, compared with the existence and extension of railways? The mere enunciation carries conviction: the answer is too plain to require a moment's hesitation. It is as nothing.

The capital invested in railways is about \$130,000,000, or twelve times the total capital of all the factories of Lowell. Boston has nearly 30 millions invested in railways. The success of the system of cheap postage 300 miles long, is without a rival, cost only depends much on railways. These facts will easily appreciate their power in the itants, and connects the two greatest chains fight which the iron masters appear to be of inland navigation on the face of the determined to force on the railways.

Railways of the United States will at once ing interests of the country judiciously, far inferior to those of the Ohio canal,

# AMERICAN RAILROAD JOURNAL,

AND GENERAL ADVERTISER

FOR RAILROADS, CANALS, STEAMBOATS, MACHINERY,

AND MINES.

#### ESTABLISHED 1831.

PUBLISHED WEEKLY, AT No. 23 CHAMBERS STREET, NEW YORK, AT THREE DOLLARS PER ANNUM.

SECOND QUARTO SERIES, Vol. I., No. 2.]

THURSDAY, JANUARY 9, 1845.

[WHOLE No. 445, VOL. XVIII.

THE AMERICAN RAILROAD JOURNAL NICOLL'S PATENT SAFETY SWITCH FOR RAIL is the only periodical having a general circulation throughout the Union, in which all matters connected with public works can be brought to the notice of all persons in any way interested in these undertakings. Hence it offers peculiar advantages for advertising times of departure, rates of fare and freight, improvements in machinery, materials, as iron, timber, stone, cement, etc. It is also the best medium for advertising contracts, and placing the merits of new undertakings fairly before the public.

TicolL's PATENT SAFETY SWITCH FOR RAILroad Turnouts.

This invention, for sometime in successful operation on
one of the principal railroads in the country, effectivally prevents engines and their trains from minning off the track at
a switch, left wrong by accident or design.

It acts independently of the main track rails, being laid
down, or removed, without cutting or displacing them.

It is never touched by passing trains, except when in use,
preventing their running off the track. It is simple in its con
struction and operation, requiring only two Castings and two
Rails; the latter, even if much worn or used, not objection
able.

able.

Plans, Specifications, and all information obtained on plication to the Subscriber, Inventor, and Patentee.

G. A. NICOLLS,

TO IRON MANUFACTURERS.
The subscribers as Agents of Mr. Geo. Crane of Wales having obtained a patent in the United States for his process of smelting Iron Ore with Anthracite coal, and holding ar assignment of the patent obtained by the late Rev. F. W. Geissenhainer, are prepared to grant licences for the manufacture of Iron according to Mr. Crane's principle.

A. & G. RALSTON & Co.

No. 4 South Front street, Philadelphia, Pa.

No. 4 South Front street, Philadelphia, Pa.

VAIL, Proprietor of the Speedwell Iron Works, near own Morristown, N. J. can supply at short notice railroad companies and others, with the following:
Wronght Iron Tyres made from the best Iron and of any given diameter, and warranted to be sound in the welding. Railroad companies wishing to order, will be pleased to give the exact inside diameter or circumference to which they wish the tyres made, and they may rely upon being aerved according to order, and also junctually, as a large quantity in the strait bar is kept constantly on hand. Crank axles for locomotive engines, made from the best Pennsylvania Iron.—Stralght axles for locomotives for outside connection engines. Frames for engines.—Wrought iron work for steamboats, and shafting of any size. Cotton screws of any length or size. Railroad Jack screws, a late invention, and highly approved. Selfacting pumping apparatus for railroad water stations. Ill er refers to the following gentlemen:

Baldwin, Vail and Hufty, Philadelphia; Wm. Norris, Philadelphia; N. Campfeld, Savannah, Ga.; J. and S. Bones, Augusta, Ga; D. F. Guez, New Ocleans, La.; Adam Hall, New York; J. P. Allaire, New York; William Parker, Boston, Mass.; George W. Schuyler, New York:

MESSRS. EDITORS:—As your paper is devoted to the benefit of the public in general, I feel desirous to communicate to you for publication the following circumstance of no inconsiderable importance, which occurred some few days since on the Phitadelphia, Wilmington and Baltimore

Railroad.

On the passage of the evening train of cars from Philadelphia to this city, an axle of our large eight wheeled passenger car was broken, but from the particular plan of the construction, the accident was entirely unknown to any of the passengers, or, in fact, to the conductor himself, until the train, (as was supposed from some circumstance attending the case,) had passed several miles in advance of the place where the accident occurred, whereas had the car been constructed on the common plan, the same kind of accident would mavoidably have much injured it, perhaps thrown the whole train off the track, and seriously injured, if not killed many of the passengers.

whole train off the track, and seriously injured, if not killed many of the passengers.

Winnington, Delaware, Sept. 28, 1840.

""The undersigned take pleasure in attesting to the value of Mr. Joseph S. Kite's invention of the Safety Beam Axle and Hub for railroad cars. They have for some time been applied to passenger cars on this road, and experience has tested that they fully accomplish the object intended. Several instances of the fracture of axles have occurred, and in such the cars have uniformly run the whole distance with entire safety. Had not this invention been used, serious accidents must have occurred.

In short, we consider Mr. Kite's invention as completely successful in securing the safety of property and lives in railroad travelling, and should be used on all railroads to the country.

JOHN FRAZER, Agent,
GEORGE CRAIG, Superintendant,
JAMES ELLIOTT, Sup't Motive Power,
W. L. ASHMEAD, Agent.
A model of the above improvement is to be seen at the N
Jersey Railroad and Transportation Office, No. 1 Hanover st

TO RAILROAD COMPANIES AND MANUFACTURERS OF RAILROAD MACHINERY.—The subscribers have for sale American and English Bar Iron, of all sizes; English Bister, Caet, Shear and Spring Seel: Junistica Rode; Car Allea, made of double refined Iron; Sheet and Boiler Iron, cut to pattern; Tiers for Locomotive Englises, and other railroad carriage wheels, made from common and double refined B. O. Iron; the latter a very superior sticle.

The Tires are made by Messrs. Baldwin & Whitney, Locomotive Engine Manufacturers of this city. Orders addressed to them, or to us, will be promptly executed.

When the exact diameter of the wheel is stated in the order, a fit to those wheels is guaranteed, saving to the purchaser the expense of turning them out inside.

THOMAS & EDMUND GEORGE,

a single mile of either canal or railroad in ope-same has been anticipated by all who would curve is at the western terminus of the road, in ration, and there appears to be little chance of otherwise emigrate to the State. The popular the city of Schenectarly. the Illinois canal being carried through for some time. Indeed, if it be true, that the canal cannot be expected to support itself, and pay 5 or 6 per cent. on the one and a half million required to complete it, for many years to come, numbers. The adjacent territories are filling up to none in the country. Its position is an important one. It forms a link in the great chain we do not see on what grounds its completion we do not see on what grounds its completion can be recommended. We were not a little surprised to find, that gentlemen, well acquainted zen owned more land than he wanted for culti- Utica and Schenectady railroad at its western with the country, and indeed deeply interested vation, or if he wanted to leave the country, or in the progress of the canal, considered that an income of \$200,000 could not be hoped for within the first few years. The tone of the messages of these western Governors is very peculiar, and is not such as to offer any encouragement to ets, as a tax upon our industry? No. Not one bondholders. Their crude dissertations on morals are not a little singular.

"The companies chartered, at the last session, to complete the Central railroad and the Northern Cross railroad from Springfield to the eastern boundary of the State, have not as yet complied with any of the terms of the several laws

by which they were created.

The act also to settle the account of Macalister and Stebbins has not been complied with by them; and it is now pretty certain that they never had, and never will have, the ability to comply with its terms. The bonds which they proposed to return, were not and have not been subject to their control. It will be recollected that these bonds were hypothecated to them, upon which the Fund Commissioner received the sum of two hundred and sixty-one housand dollars, to pay the semi-annual interest on the State debt, due on the first of July, 1841. These bonds were immediately re-hypothecated Fund Commissioner; and have ever since remained beyond their control. The money is to the terms of the above recited act; and many of them have been thrown into the market and of the interest on the public debt.

of the whole sum now due, amounting to \$209,304, the sum of \$100,000 may be collected and paid in by the first of May next. The revenue will be increased for the years 1845 and

1846, about \$5000 each year.

On the 31st October last, there were warrants on the Treasury outstanding to the amount of \$22,882; and on the same day there was an unexpended balance in the Treasury of \$11,733 66. be improved in every respect."

The sum now on hand, and that due, and expected to be collected, will be scarcely more than sufficient, by the strictest economy, to pay the current expenses of the State Government, the interest on the school fund, and the expenses of

this General Assembly.

As to the extraordinary debt of the State, contracted for the canal and other internal imcontracted for the canal and other internal improvements, no interest has been paid on it, which has accrued, since the first of July, 1841, tance the valley of the Mohawk river. The second the present month.

Not having received the Governor's Message, payment. The magnitude of this debt, compared which a railroad passes, pared with the resources of the State, has been a continual terror to the people. They have feet per mile.

by them, to raise the money advanced to the ought to be resumed to the State treasury.

Fund Commissioner; and have ever since renues thus derived, and such additional tax as curvature, the least radius being sixteen hundred due to the holders of the bonds in proportion to the Legislature in their wisdom will provide for, their advances. They have not, however, seen proper to present them for payment, according of which shall be sacred, and dedicated to the of twenty-five feet span, two wooden bridges, extinction of a portion, however small at first, with stone abutments, one of ninety feet span, of them have been thrown into the market and sold, from time to time, as other bonds.

The revenues of the State for the year 1844, are estimated, by the Auditor, at the sum of \$150,000, no part of which has yet been collected. There is also due, for arrentages of pre-lected. There is also due, for arrentages of pre-lected. There is also due, for arrentages of preprovision, remedying completely the derange-ment to which all other tracks are liable from contraction and expansion at different degrees of temperature.

The road was begun about three years since as a part of the New York and Albany road, but after a short time the work was suspended. It is now in progress of completion by an association, under an arrangement with the New York and Albany company. The cost, including cars and machinery, will not vary much The road was completed in November, 1842. this the superstructure will cost about seven

The track will be completed about the middle

#### MARYLAND.

The unfortunate condition of the finances of this State, and the extent and importance of the works for which she has incurred her heavy debt, give great interest to the following views and facts:

The law passed at December session, 1842. for the sale of the State's interest in the several internal improvement companies, remains a dead letter upon the statute books. No offer has been made which the Treasurer felt justified in accepting. In the enactment of this law, such violence is done to a 'preceding solenin engagement of the State, that there was probably no reference at the time to previous legislation on the same subject. By the 64th section of the act of March session, 1841, chap. 23, a deliberate promise was made to keep at the Treasury an accurate account of the revenue paid by the city of Baltimore, Howard district, and the several counties, and to transfer to them respectively, an equivalent amount of the stock of the State in the Chesapeake and Ohio Canal Company, whenever that company is prepared to make a dividend of six per cent. to its stockholders. The prudence and propriety of such an engagement may well be doubted; but the sacred obligation of the State to fulfil it, ought not to be questioned. Even in the absence of such an insuperable obstacle to the sale of the public works, the time has not arrived when such a purpose could be consummated, without sacrifices too serious to be encountered.

The last report of the Baltimore and Susque. hanna Railroad Company, which will be communicated, shews a gradual augmentation of their trade and transportation. During the last year there has been an increase in the number of passengers transported of 14,162: and in the quantity of produce and merchandise of 58.105,-739 pounds. The amount of trade passing over the road during the year, has been greater than at any former period; and exceeds by forty-five per cent. that of the year immediately preceding. The steady increase of the trade on the road between Baltimore and Pittsburgh, may be learned from the fact that the whole amount of transportation in 1839, was 4,105 tons, and some pounds, and during the last year it increased to the amount of 18,615 tons and some pounds. The amount paid into the Treasury during the past year by this company was \$20,000. This gradual augmentation of the means of the company, and of the amount of its annual contributions to the Treasury, encourages the hope that the day is not far distant when its contracts with the State will be faithfully complied with, and admonishes against a serious sacrifice of the State's interest in its

The relations to the State of the Susquehanna and Tide Water Canal Company are not those of a stockholder. Governed by a laudable desire to encourage the enterprize of our commercial emporium, the State loaned to that company its bonds, to the amount of one million of dollars. The annual interest thereon, being at the rate of five per cent., and payable in London, amounts to \$55,000. This company during the past year, has paid into the Treasury only ten thousand dollars, and stands indebted in tion of any individual citizen, holding, for the the sum of two hundred and two thousand dollars, for interest in arrear. There is reason to the transportation of travellers from Baltimore believe that the annual receipts at the Treasury, to Washington city, is to be confined exclusively from this company, are far short of its means of to the railroad, for the benefit of the State, and stood. Hence the curves and inclinations inpayment. The last annual report of the comthe stockholders of the company, it cannot with tended to be the exceptions, become the rule, year 1843, it appears that their receipts for that in charges, as will compel stage and steamboat year were \$65,585,38, and that their entire excompanies to withdraw from competition, with penditures for salaries, damages, repairs, inci- a return to high charges after all competitors are

the legislature, whether measures ought not to its laws.

It is betaken to compel full payment of the annual interest due, and a speedy liquidation of the whole amount of the interest in arrear. The financial condition of the State will not permit dition or future prospects. It is believed, howbe just.

the two works.

December, 1844, amounts to \$41,040,20. tablishment of several lines of stages, which sition of these claims. run daily between Baltimore and Washington city, and convey passengers for a sum less than State, nor of the corporation, can be made avail-that which the railroad company is by its charter authorized to charge.

charges on the road, in comparison with the terms on which the Norfolk line of steamboats proper to interpose by any modifications of the charter of the railroad company. The whole subject is again respectfully submitted to your consideration. During the recess, my attention has been directed to the eighth section of the act of December session, 1832, chap. 175, which gives to the Governor, during the recess of the Directors, having charge of the Washington Branch railroad, to reduce the fare for transporting passengers below the two dollars and fifty cents fixed by the charter of the company. Believing that, under the circumstances, it would have been improper to exercise this discretionary power, the authority was not given to the Board. The charges for transporting passengers should be permanent, and regulated by law, and not regulated by the arbitrary discre pany is not before me. By their report of the propriety be done by such temporary changes

If it shall appear that neither the credit of the State, nor of the corporation, can be made availof the canal, without ruinous sacrifices to the It will be remembered that the attention of creditors of the company, would it not be advithe Legislature, at its last session, was invited to sable, now, to adopt decided measures to deterthe alleged decrease of the State's income from the capitation tax, in consequence of the high in that company? When that has been done, charges on the road, in comparison with the by a foreclosure of the State's mortgages, the facilities for pledging our interest in the corporation will be so far increased as probably to diwere carrying passengers on the Chesapeake tion will be so far increased as probably to di-Bay. The General Assembly did not then think sede, the pecuniary sacrifices which have been heretofore considered necessary to ensure the completion of the canal to Cumberland.

It is stated in many of the papers, we know not on what authority, that the Housatonic Legislature, the right to authorize the Board of road is to be re-laid with heavy iron. The papers add that it is much needed, an assertion for which no authority is required. But we fear this is not the worst. The location of very many railroads in the United States is indifferent or bad, and the location of the Housatonic is generally considered to be peculiarly objectionable. The whole work was taken in one contract, the road to be located by the contractor within certain limits of gradients and curves, as we have always underand to make a first rate railroad without STEAM ON CANALS.

A letter on this subject, signed "Fitch," has been addressed to the Schuylkill canal com- And there remains a charge for freight pany, strongly urging the trial of propellers on a proper scale.

held in Portland on the subject of the Monmiles an hour against tide, and six miles an treal railroad. The great difficulty will be hour with the tide—or at an average speed of the whole where the board of works, with four miles in the river. The trip to New York and back, loading and unloading, will consume seven days. The expenses for a host rupning day and in the whole power of the government, will use the whole power of the government, will use the whole power of the balance of their seven million loan is only about two millions, boat rupning day and will not found will not found to the works, with and will not finish the canals commenced. Still this is the last opportunity, for in another 7 00 year all the money will be spent, and in place of railroads to increase the value of their 3 50 property they will—like Ohio—enjoy the 20 sweets of taxation. But the attempt should be made promptly and with vigor.

Large Scale .- The new scale, now in the course of construction in Philadelphia, by 2 62 Messrs. Ellicott & Gibson, for the Mine Hill and Schuylhill Haven railroad, is said to be one of the largest ever made in this country. 1 26 It is 116 feet in length, and will be capable of weighing 100 tons. Its machinery is of an 1 72 improved construction, and rests on 17 heavy granite pillars. It will be put up near the 2 30 scite of the present scale. The increased trade of this road requires increased facilities expenditure.

STEAMERS.—There were built at Pittsburg \$2 30 during the year ending on the 1st of the present by 11,000,000 in 1844.

month, fifty steamboats, of the aggregate tonnage of 12,067 tons. Three more are in course of construction, and one steamship of 1000 tons is nearly ready for launching.

We give the following extracts from late numbers of the Mining Journal.

RAILWAYS IN INDIA .- We have been favored with a copy of correspondence between Mr. R. M. Stephyou and a rival work. I presume that you are the proper judges of your own position, and if you are not, it is no affair of mine. I am interested in the extension of the use of the steam engine, and I think that in this at least we have a common interest. The invention of the Ericsson propeller has opened a new and wide field for the application of steam.—

This instrument has been successfully introduced on various canals, but in few instances other river towns. They can descend the live with the important undertaking the most complete the steam of the Ericsson propeller has opened a new and wide field for the application of steam.—

They can run up the Hudson to dured on various canals, but in few instances other river towns. Notes to sales of Stocks.

The prices given are the average of each day. When there is any sudden rise or fall in one day it will be alluded to in a note. When the sale of bonds is noticed, the figures in the column headed "Sheres" give the amount sold in dollars.

The prices at which shares are sold do not alwaws give the true value of the stock. No considerable quantity of the stock of the dividend paying works of Massachusetts or New York could be purchased without raising the price so high as to take away all inducement to invest. The stocks which do not pay dividends would be reduced 10 or 20 per cent., or even more, were any large smount offered at once; and in some cases they would be altogether unsaleable.

AMERICAN RAILROAD JOURNAL. PUBLISHED BY D. K. MINOR, 23 Chambers street, N.Y. Thursday, January 9, 1845.

messages of the Governors of Ohio and Inthe legislature to aid the construction of the the Eric canal, not the canal for the people.
diana as would enable our readers to judge canal. The whole difficulty arises from the lation of New York, and is—unconciously very different codes of financial morals in use perhaps—an axiom with nearly all her pub-States. The messages of the Governors of among politicians and the higher order of lic men. But we have not space to pursue Maryland, Pennsylvania, New York and mercantile men in Boston. We can assure this subject at present. The emancipation of

These States, and Illinois—in all seven—ar the States which have incurred large debts for public works; hence the propriety of giving a pretty full view of their financial condition in a Journal devoted to the cause of internal improvements.

English capitalists interested in the completon the Oswego canal. ther legislation is necessary; the Boston com-owing to the sudden increase of 70 per cent. ists, we need scarcely say, followed their adpampered canal counties view the trade of the vice. Still Mr. R. is dissatisfied, and only west as their's by right; the grand object of In our last we gave such extracts from the way, interfere with the measures now before tolls of the Eric canal: the people exist for Michigan will claim our immediate attention our western neighbors that the opinions of of the New York farmer is, we hope, at hand.

half a dozen eminent Boston merchants-if decidedly unfavorable-will be quite sufficient to deter foreign capitalists from investing in the securities of the western States, be the advantages offered ever so great. The only result which can follow will be to sink the faith of the now paying States to a still lower depth. The entire power of their governors and legislatures will be shattered in the encounter with a single individual of standing who cares not a straw for public opinion, when at varience with his own sense of honor. With the general run of politicians it may be sufficient to say that the loan failed on account of the representations of the Boston committee, and nothing further is required to prove their guilt; but it may be well for Illinois and other commissioners to learn, that there is a class of very influential persons here who would inquire as to the accuracy of the representations of the Boston committee, and then give the very same advice to the London bondholder as to their nearest friend here.

### WELLAND CANAL TRADE.

A meeting has been called in Rochester to discuss (the propriety of petitioning the State to charge discriminating tolls on western produce, so as to force that portion of the trade coming to the Hudson, via the Welland canal and Oswego, to enter the Erie canal at Buffalo and pay tolls over its entire length. The excitement appears to have been caused by the great increase of tolls at Oswego; as if it were of the slightest moment whether the State derived revenue from the business of that port or of Buffalo. The tolls have immensely increased, and that is all the people care about. The papers are all publishing statements of the receipts of the Welland canal, in which-for some cause or other-the re-Mr. Ryan, who was sent out by the State ceipts of the years 1842 and 1843 are omitted. of Illinois to London, has ascribed his failure But even since 1841, the increase is only 25 to procure the \$1,600,000 to the representa- per cent.; whereas, on the Erie canal it is 25 tions made by the Boston committee to the per cent. since 1843, and about 70 per cent.

With a continuous rail-better communications. In short, this reno part should be productive until the whole road to Buffalo, the northern line could with garding the Erie railroad mainly as a thorwas completed. Besides this, it is uniformly ease reach Dunkirk in time to take on oughfare is as impolitic, as it is, in our opinadvocated in the public prints as a new route board passengers who started simultaneously ion, incorrect. It has done much toward to the West. Both Boards highly value from New-York, via the Eric railroad. As bringing about the present apathy in the the way business, but the great object of the regards cost, the steamboats running to Alroad is the through-travel. We stated bany for \$1,50, and the railways thence to in our Dec. No. that "we take a different Buffalo, having a way business yielding view of the work, "om either the present or "remunerating" dividends, would be able to the late Board." is in nothing less than the carry as cheaply as the Erie road, relying main object of the work that we differ. mainly on the through-travel. Then the We consider that "remunerating dividends" greater number and choice of boats at Bufmust be derived from the country through falo, the greater ease (to some,) of a night which the road passes. These dividends on the Hudson than in a car, and the atwill be increased by such portions of the traction of the Falls, would not be without through-travel as the road may draw to influence, supposing other things equal. itself-perhaps materially increased; but Lastly, there are the periods of opening and mere competing line, we regard it as having still, this must be a merely secondary con- closing; for, as both lines terminate on Lake error that we attribute the failure of all the months of each year, neither offers an uninnumerable efforts made during the last six interrupted communication with the West, an advantage many suppose the Erie rail-Viewed as a thoroughfare to the West, road to possess. Now, as the storms of the Eric railroad must compete with the winter drive vessels from the Lake some-Albany and Buffalo rnilroads and the Hud what earlier than the ice stops the navigason river. We will briefly examine its tion to Albany, this question is reduced to a claims to superiority in distance, speed and determination of the superiority of Dunkirk economy. As regards the length of the over Buffalo in the time of opening in the routes, it is impossible to speak with preci. spring. The former port was fixed on as sion at this time: but, on the most favorable the western terminus of the Erie railroad supposition, the Erie will at least equal the at least 8 years ago, and it is very singular the wants and capabilities of the succeednorthern route to the lake. Dunkirk, the that an exact statement of the times of its ing portion of country become intimately western terminus of the Eric railroad, is, opening has not been made public. In the known, with little expense, so that the however, 40 miles southwest of Buffalo, so Report of 1841, it is said of the harbor of that there would be a saving of about three Dunkirk, "it is open earlier, and occasion facility of construction and amount of revhours in time—on the supposition that the ally some weeks earlier, in the spring, and enue, with certainty and economy.

The last report states the difference at

southern counties, where repeated disappointments have produced a feeling of despair of success, unless conducted on entirely different principles. The only real claim this work has on the favor of the Le. gislature is, that it is a New-York work. What do the people of this State care about a railroad which may by possibility shorten the trip from the seaboard to Ohio and Michigan by one or two hours?

The Board sink the work to the level of a its main resources in the country through which it passes; as observed in our Dec. No. we place its claims on higher groundwe might say the highest. There is another difficulty in the way when it is necessary to prepare the means for the entire work. We allude to the doubts as to the confidence to be placed in the estimates. Now, if the road yield remuncrating dividends as it proceeds, the total cost is not important; there is no necessity for locations any great distance beyond the part in operation: and the nature of the ground and best location may be chosen, both as regards

In another number, we will briefly trace The relative merits of the harbors of Buf- what has been done, regarding the western trade and travel as the grand object of the work; and what might have been done, had wiser counsels prevailed.

> [For the American Railroad Journal.] PENNY POSTAGE AND RAILROADS.

In your December number, there is a very friendly communication from the Hon. F. O. J. Smith, of Maine, in which that gentleman makes some pertinent remarks on the importsouthern rival. They are already relaying and returned before the harbor of Dunkirk ance of a Journal devoted to the cause of Amerthe northern line, and we may safely assume was open. It is important that this point ican Railroads. In Hunt's Merchants' Magafrom the same pen, on the-to the public-all veniences, of which the public, and, à fortion, able postage. Here \$300 per mile tation of produce and merchandize all over the thence to Dresden.

New-York, January, 1845.

### GERMAN RAILWAYS.

As much interest is felt in, and little known of, German Railroads in this country, the following article from the Railway Times will be

are as extortionate as railroads on the P. M. G.'s are prone to enter into such without adequate month, but a portion at a much shorter period.

hypothesis; most fortunately, because there is means to carry them through, in a manner anti-

the capital at home in a great measure, and pre-

put to a number of schemes in contemplation, by important subject of cheap, or, rather, reason- the authorities at Washington, know very little, the sudden reaction in the prices of almost all important subject of cheap, or, rather, reasonthe sudden reaction in the prices of almost all tent of 25 per cent.; and this reaction being to point out a singular error; the more singular, routes in the United States is anything but un- felt in all the German lines, has, in consequence, as a glance at the November number of your reasonable: and if extra trains are required, at produced a certain feeling of caution among the Journal would have given Mr. Smith correct least double that sum per mile should be all bona fide speculators, generally, whilst it has information as to the sums paid on English rail- lowed. In many cases, it will be almost imshade of forgetfulness, to deplore the foresight and wisdom of the Prussian Government in preventing their more respectable subjects from

Much credit is due to his Prussian Majesty, who takes a great interest in any bona, fide operation tending to benefit his States, and who personally informs himself of all that occurs in railway schemes.

We shall proceed to give a general description of the lines which are nearest the German Ocean.

From Bremen to Hanover a line has been an ounce as some companies charge for a barrel projected, 80 miles long, and will very soon be The London and Birmingham railway, 112 of flour, it does not become the Post-Master-commenced by the Hanoverian Government. Another, 110 miles long, is in progress between Harburg and Hanover, the former of which is The error may have arisen from confounding

The next step will be to equalize the transportant Hanover, Brunswick, Halberstadt, Magdeburg and Berlin, and Magdeberg and Leipzig, and

The Bremen and Hanover line will convey people, and not of the politicians, and then we terior of Germany, which are now conveyed at road carriages; the extent of this traffic will be very great, and the city of Bremen will at the same time be placed in a more direct communication with the interior. The line between Harburg and Hanover promises also well, and will compete in a certain degree with that from Hamburg to Berlin.

The next projected line, and now in progress, is that between the two last-named cities, pas-Like most other speculations of the kind, the Grand Duchy of Mecklenburg Schewin, and traffic in German railway shares has had its thence to Brandenburg and Berlin. It is expect-baneful influence upon certain individuals who ed that this line will be finished in a twelve-

The distance is 175 English miles; the cost no possibility of calling a steamboat a mono-cipated; and to such an extent was this traffic is estimated at £8,250 per mile; and the shares carried on a few months ago, that the Prussian are 200 thalers, or £30, upon which only 20 per Government issued a decree (in order to antiqi- cent. has been called for. It is expected that pate the faral effects of time bargains in shares, this line will pay well, the localities through and to prevent, as much as possible, irresponsi-which it passes being extremely favorable, and to a company in running extra trains. The ble persons from entering into new schemes, and the management conducted by men of great extotal cost per train per mile is about 55 cts. on an average, carrying say 200 passengers in four large cars. Now, the cost of the cars, including reclaring all bargains in foreign shares upon model to most of the other German lines, both which the whole of the capital had not been paid as to the economy as well as the discipline obup, and all time bargains in them upon the domesticated lines, upon which only a part had been paid, null and void.

When completed, travellers will be enabled to arrive at Berlin from Hamburg or Altona in nine hours, instead of baving, This decree has had a very salutary effect. as at present, to travel in the diligence 36 hours, It has prevented parties from entering into time- by the common road, or up the Elbe by the

From Hamburg to Bergedorf, a distance of 10 vented adventurers from neighboring states miles, there is a line, of which a considerable a railway do not at least equal half the receipts, the shareholders are not to suffer. But the mere cost is not the only difficulty. Where published in time to prevent much harm, had the principal who projected it, and Mr. Giles, single tracks are more frequent than double the effect of at once placing the value of all the second Engineer, who carried the plan out,

under great difficulties. be considered more as a patriotic undertaking of of the city of Hamburg, than otherwise, and was positively established about three years ago as a sort of forerunner to the Hamburgh and Berlin line; and it has, fortunately for the city

of Hamburg, had its effect.

The next coast line is that from Gluckstadt to Elinshorn, which will be ready in the spring of the ensuing year. It has gained very much in importance by the establishment of the European Steam Navigation Company in London, which intends running steamers between Harwich and the first-named place. It will form a junction with the Altona and Kiel Railway, and connect Kenmunster, Kiel, and Altona, and sundry other, by no means unimportant, places together. must here be observed, that Hamburg and Al-tona form almost one great commercial city, and the Altona and Kiel Railway forms a direct communication (with steamboat aid) between Harburg, and Hanover, Magdeburg, Berlin, Kenmunster, and Rendsburg, Hull, Harwich, London, Amsterdam, Havre, Copenhagen, Fuhnen, Sweden, and Russia! The conveyance of all goods to Denmark and Sweden must naturally come to her share, and the whole of the transport of goods between the port of Hamburg and the Baltic must eventually fall to this railway, as it will be too costly to forward them via Lubeck, as is now the case.

Numbers of passengers will flock to the baths near Kiel during the spring and summer months, instead of visiting other places where the means of conveyance are so scanty, and at the same time so costly to reach. The yearly outlay for

fuel, reparation, salaries, wages, &c. is-Estimated at . . . £20,1 Interest on capital 4 per cent. £20,190 During the eight autumn weeks the line has

been opened, there have travelled on it 61,626 passengers at an

Income of . Goods transported . 1,406 £5.668 Averaging weekly

The time for tourists and sea-bathing people was over when it opened; of the lines which done by me by a very simple and easy method will form a junction with it, none are finished; of the turnpike roads which were begun to carry fact, there is no doubt but that the forces, which passengers to the stations, none were ready; should naturally destroy each other, go on the and of the steamboats running between the contrary, by this system, to unite mutually, by cities before mentioned, several had ceased for means of cogging, the two wheels in a common the season, and only the London and a couple pinion, the axis of which represents in this way of Hull steamers have continued. During the the principal beam of the machine. My model ensuing year it can therefore reasonably be expected that a very considerable increase will motive, is only at present the mere development follow.

Hull, or elsewhere, and destined for Kiel, were my idea. A number of improvements have since generally loaded at Hamburgh, from lighters, presented themselves to my mind, and the proforwarded thence to Altona, and then on to Kiel, portions and the forms, which for this model occupying three to four days in arriving at the have only been arbitrary, should be reduced to journey's end. If landed at Gluckstadt for the more suitable proportions, such as theory and future, they will arrive at Kiel in as short a experience will indicate. The plan and operaspace of time as the steamers would take to get tion of this machine are easily understood on inup to Hamburgh, and it is expected that the specting it; but I will give, if necessary, a de-Danish Government will accede to a reduction tailed account of it, and will explain, as far as I of the transit duty through Holstein, which is at possibly can, all the methods which I think capresent about 4d. per cwt.

less fuel will be used on it than perhaps on any internal wheel, so that the jets of steam may

repo itory u itil used.

This small line may DESCRIPTION OF A LOCOMOTIVE BUILT ON A NEW SYSTEM, BY M. PALTRINERI.

Having always been pre-occupied with the idea that great dynamic advantages would arise if we could obtain an immediate, continuous, and circular movement from steam power, and that a steam rotatory machine presenting much simplicity, little friction, and preserving and utilizing the greater portion of the active power of the fluid, would be a real benefit to industry, I thought this result might at least in some manner be approached by making use of the power of action and re-action at the same time, and with this view I have invented the mechanism which I had the honor of submitting to the Academy-a mechanism which consists simply of two or several concentric and independent wheels, so as to be able to turn easily in a ratio contrary the one to the other, while they are all placed in the same plane. The steam is introduced on this system by the axis of the interior wheel, and escaping by continuous or intermittent jets through small orifices made in the external circumference in the direction of the tangent, obliges this wheel to take a rotatory movement, according to the reaction, whilst, at the same time, the power of the action, or the impulse of the jets, by meeting with a continual obstacle in the curved shovels with which the felloe of the external wheel is furnished, forces this to take as much motion in a contrary ratio. The two wheels, therefore, not in an opposite way by the two combined powers of action and re-action at the same time, and the steam which has produced this effect escapes by the external circumference of the second wheel through taking the direction of the tangent, on account of the curvature given to the shovels. This steam always preserves on its escape such a power as may be made available by a third wheel, having curved shovels placed in a contrary direction to those of the second, and which would operate also in a contrary ratio, and so afterwards by other wheels until the power be extinct. It appears that, according to this mechanical arrangeinent, the expansive force of the steam could be used without much loss of the active powers, because there is never any collision between these forces; and the dynamic effects, although they are produced in contrary directions, may be forced to conspire to the same ends as has been in the model which has been presented. In which I have applied as a trial to a small locoflow.

Formerly, all goods coming from London or chanical application, and that very roughly, of pable of improving the invention. In the mean There is one feature of great importance as time, I will just say that I have caused small regards the Altona and Kiel Railway, viz., that chambers to be constructed in the felloes of the of pressure towards the bottom of a vessel, in experiments, representing a value much greater.

proportion to its form and dimension, and so to utilise a much more considerable force of re-action-a result which I have obtained and verified by experiments made in the most exact manner possible. The model which has been submitted to experiment has given the following results: The two wheels measured separately have given a dynamic effect nearly equal, and an experiment has been made, by letting that wheel of the two turn freely which was not submitted to proof; that would show the impulse of the jet is sufficient to repulse the obstacle it meets with in the shovel of the external wheel, without losing any of its power-and, consequently, that in this first effect, the action has still a power equal to the re-action. The two wheels have also been measured separately, by keeping in a fixed position that of the two which was not submitted to proof, the results of which have again been nearly the same as those of the other experiment, which must go to prove that the dynamic effect produced by the one or the other of the two wheels is entirely independent of the effects of the other. When we caused the two wheels to cog in a common pinion (other things being equal), and we were led to expect a dy-namic power which would equal at furthest the sum of the effects produced separately by each of the wheels, I had the pleasure to discover that the effect was much more considerable, and that it was sometimes almost double the sum of the two together. The experiments were varied in many ways, but the results have always been the same; and if each gave, for instance, a dynamic effect equal to one, the effect of the two wheels measured on the axis of the pinion was always not only equal to two-a number which would express the sum—but to three, three and a half, and even to four, when all the circumstances were favorable. Whence arises this augmentation? Should we think that it depends on a diminution in the resistance of fricion, or a want of the mechanical disposition of he two wheels, which cog in a contrary sense in one pinion, the mathematical axis of which would not change its place? This explanation does not appear satisfactory, because the value of that resistance spared would be much too little in comparison with the augmentation which almost arrives at a double force. Is it that the two wheels cogging in the same pinion, and serving as a fly-wheel one to the other, would so mutually aid each other as to produce such a result? This explanation clearly shows how the two wheels will be obliged to equipoise themselves, and to take an uniform quickness, but we do not even see by that from what source the augmentation of power is derived. Finally, is it this, that there would be, according to the law of Nature, a dynamic advantage from using the powers from the action and re-action at the same time in the way I have discovered? This is a question which the phenomena I have been speaking of appear to resolve by the affirmative-an opinion which other experiments seem to concur in demonstrating as true. I think, moreover, that there is no difficulty in rigorously demonstrating this fact by analysis, because it seems evident that the two points of application of the resistance, by running over each one a certain space, in an identical time, should give their dynamic effect with a double speed; and as the forces are proportioned to the quickness, the dynamic effect would, consequently, be double likewise, and the phenomenon of which we are here speaking, gives an example of the fact. Steam being an elastic fluid, and its exother of similar length—and the quantity reescape from a vessel with their partitions, and
quired can be had at a much cheaper rate, being of a certain form and size—my intention being
taken from the ships direct into the Company's to profit by the well-known law of the increase monstrate its fallacy, if really it be so-or, on of patentees who were sufferers by the fire, and is maimed in consequence, or a west country the contrary, assist me in bringing to light its Emerson's letters patent were recorded anew, goose tries the experiment of laying his neck truth as a principle, and the conditions under and in February, 1844, an unattested sketch of across the rails as the train is coming up, and which it might be rendered available .- Moni his invention was deposited in the Patent Office, meets his death accordingly, as it would be wondteur Industriel.

MISCELLANEOUS NOTICES.
There has been a rise in Western Railroad stock within a short time, and sales made at 92, a higher rate than it has ever before attained .-Boston Post.

It must be borne in mind that this Road does not extend further East than Worcester, and was built at an expense of \$7,500,000. Its length is 156 miles. Much of the country through which it passes, is hilly, and comparatively un-draughtsman. productive. Some of its grades are 80 feet to the mile. The only wonder is, how it could be got over the Green Mountains at all.

The succlaimed by Emerson really was his original in Such is the machine that luckily no passenger met with accident. appears from actual returns, that the money received from way passengers is nearly double that received from through passengers, and the same remark is applicable to freight. The way business in a populous country, is, after all, the great reliance, It is more so on many other Roads, than on the Western. If the stock of this Road, at the cost of \$7,500,000 for 156 miles, is worth 92 per cent., one would suppose that the Erie Rail-Road, 500 miles long, at about the same cost, (exclusive of \$3,000,000 sunk by the State) could not fail to be a profitable concern. Nor could less be inferred in regard to the New York and New Haven Railroad, 70 miles long, at \$2,000,000, running through a densely populated country, and connecting 800 miles of Rail-road in New England and New York, with the commercial emporium. Both these roads will of course be built. It is impossible that routes so important, can long remain unoccupied. So, we trust, will the New York and Albany Railroad be built. All the great routes will eventually be occupied by Railroads, and they must become more and more profitable as the population and business of the country increase.

ERICSSON PROPELLER.—The case involving the question of the patent right to this invention, now on trial in the U. S. Circuit Court in N. Y., is thus minutely stated in the National Intelligencer's New York letter:

It is a suit brought by a Mr. Emerson against Hogg and Delemater, proprietors of the Phænix Foundry in this city, for an alleged infringement "the philanthropist must see and read with unof patent right in the manufacture and sale of affected sorrow and unmitigated disgust, the news the celebrated Ericsson propeller, which the columns of the daily journals, in which we find plaintiff claims was substantially included in a from week to week so many painful accidents," patent taken out by him prior to that taken out &c. We pass over the dubiosity of these expresby Ericsson. The facts as stated by Mr. Em- sions, without waiting to inquire whether the erson's counsel, Francis B. Cutting. Esq., are writer means that the daily newspapers record substantially these: In the year 1834 letters the news, or the weekly ones; perhaps, being patent were granted to Emerson for an improved himself in the latter class, he thinks, as naturally

month of May following a second drawing, at-

got over the Green Mountains at all. The success of this Road, (far beyond the antiparations of its projectors, probably,) is a guarantee for the original drawings, and of none being referred haps, scarcely ten per ct. of them which are realthe success of all other well-managed Railroads, to in the specification, and of the dissimilarity of ly and truly accidents arising out of the system, properly situated. The whole population of the two drawings now on file, as well as of the to in the specification, and of the dissimilarity of properly situated. The whole population of Massachusetts west of Worcester is less than 200,000, and that of Columbia and Rensselaer counties, N. Y. about 100,000 more. But these 300,000 inhabitants, fully one-third are too remote from the Road to make any use of it, except for long travel and transportation. One the country of the specification, and of the dissimilarity of any and truly accidents arising out of the two drawings now on file, as well as of the long time that has elapsed since the issuing of long time that has elapsed since the issuing of long time that has elapsed since the issuing of long time that has elapsed since the issuing of long time that has elapsed since the issuing of long time that has elapsed since the issuing of long ways, and the demon-like, everlastingly hissing the letters patent, this point seems to be involved in some obscurity. The case will probably occurred against them; no wonder that journals lively several days, and the decision will be long to the long to the long travel and transportation. One Ericsson's propeller has already been applied to ever unwholesome. The public cravings must be satisfied, and this can better be done by railsustained in this case, it will of course be valid

> SCHUYLKILL NAVIGATION COMPANY .learn that a firm in Philadelphia intends building a number of steam tug boats for the purpose of towing the boats on the canal, and thus avoiding horse power. It is alleged that the expenses of transportation will be considerably decreased, and besides the coal can be conveyed to distant ports without transhipment at Philadel-phia. Nothing but prompt and energetic action on the part of the Directors of the Navigation Company will enable them to survive the competition waged by the railroad company, which is extending its arms, or feeders, embracing the whole extent of the coal region. They must show to the public that they have the energy and the ability to sustain the canal, if they wish to gain new friends and retain their old ones. This is absolutely necessary on their part to remove the doubt and uncertainty which now prevails, otherwise all the appendages for shipping by canal will gradually go to ruin in this region.—Miners' Jour.

RAILWAY ACCIDENTS.
The "Sentinel" of last Saturday has an article, the spirit of which reflects upon the safety of railway travelling. The evident tendency of such articles being to excite the fears of the travelling public, and to raise up anew the old prejudices against the railway system, we feel called upon to notice his remarks. He commences with,

than the sum. But as this is a principle of the either to the drawing or model. All these depovery highest importance in mechanics, I have, sited articles were lost in the destruction of the consequently, submitted it to the judgment of the Academy of Sciences, which can easily devent, in accordance with the act for the relief with fast travelling. A guard neglects his duty which was shortly afterwards returned to him rous odd indeed if he did not. "Frightful railfor the purpose of being duly attested, and was way accidents!" appear next morning in the again deposited, sworn to by Emerson as a daily journals, and afterwards in the weekly correct delineation of his invention. In the prints, wherein when the "confusion that it is easier to imagine than describe" is got over, the tested in like manner, was deposited, between circumstances are detailed, that, in the one case, which and the other there is a very remarkable led to a poor man with a wife and seven children and essential difference; the explanation given ("lamentable to relate!") losing his leg by the of which discrepancy is, that the first was imperfectly and unskilfully executed, having been
made by the inventor himself, who is no
draughtsman.

The interval of the inventor himself, who is no
low-creature, which the Bristol and Exeter Railway Co. will have to answer for. These accounts generally wind up with the pithy remark.

secret of the success of this Road, is its connecting Boston with Albany and the West. Yet it United States. If Emerson's claim should be ways than by any other means—at least so it appears by their writings, penny-a-liner's esti-mate. If a coach upset into a ditch, the lives lost, and the broken limbs, are placed to the account of Providence, and not to the coach. Nay, even if steam, applied in a different shape, be the cause of accident, and a steamer go down with all hands, Providence there, too, alone presides. Such an accident, though attended with greater loss of life than was suffered by the fearful one on the Versailles (French) Railway, is contemplated with a less degree of horror by the public mind!

It is somewhat remarkable, and, we think that very right-minded individual will agree with us, reprehensible, also, that the very party who has assisted in misleading the public by false representations of the safety of railway travelling, should undertake the duties of a censor, and denounce that which has no other foundation than in his own mis-stalements. That having given a had character to an individual—personifying the system of railways—the calumniator pro-ceeds to accuse and condemn on the evidence of his own falsehoods. We trust that the moralis-ings of the "Sentinel," on the wickedness of rail-

ways, will be duly appreciated.
Safety of railways?—Is our cotemporary acquainted with the subject on which he writes, when he calls in question the safety of railway travelling? Is he ignorant that the very mode of transit which he vilifies, one life only was lost out of twenty-four millions carried!! Sure y he must be so, well known as the fact is, or he never would have written what he has.

Since the above was in type, we have heard of one or two accidents having occurred, through the unusually dense fog of Thursday night. This, of course, does not affect the superiority which we claim for Railroads, as the safest means of travelling. For in such seasons how fared the old system? There is no comparison. Indeed, it must be self-evident that the very principle of spiral paddle-wheel, which letters patent, together with a drawing and model of his invention, were deposited in the Patent Office, although in his specification no reference appears.

The majority of accidents placed to the account is guided safe from danger in virtue of the rails. EXPLOSION OF THE "RICHMOND" LOCOMOTIVE.

This fatal accident is well known to the entire country. Since its loccurrence, This he has done; his opinion has been multiplied. published in pamphlet form, and has been pretty generally noticed by the press. He

The following facts and views will aid in Cornwall, from the roof of which a stone of the remains of the fire box, are suffici. somewhat towards forming an opinion. Richmond had yet hauled, consequently

In a word, it is believed to have been already there was no reason to suppose any very demonstrated that the expense of transporting the time, signed a minority report in its favor.

The soot being found still adcoal from the Schuylkill region to New York

-U. S. Gaz. Richmond had yet hauled, consequently that it did not explode from want of water. The engine-driver was a very careful man. The explosion took place whilst the engine was moving-all other explosions having occurred when at rest, or just at starting.

A flash of sharp lightning was seen to strike the engine immediately before the explosion, and, by the doctrine of chances, there is little probability that an ordinary Lastly, the two rails on the other track were cut across as if by a cold chisel—an occur-however, very generally, held by our own criti-however. rence unaccountable in the case of the boiler bursting from too high steam.

zens—friends and neighbors whom we meet William H. Dobbs, Super boiler bursting from too high steam.

Diversity of opinion is to be expected when diversity of interests prevails; but we must decidedly observe that the reputation of such engineers as the Messrs. Norris, or the Messrs. Baldwin & Whitney, is no more to be affected by a single accident of this kind, than is the reputation of the Messrs. Stephensons by the one or two similar accidents which have occurred on their engines in England.

We had occasion some time since to announce the opening of the second track of the Reading Railroad, and in doing so, gave due credit to the spirit and enterprise which led to the completion of this great work. We refer with equal pleasure to a new development of the means of transportation, which it is believed will add greatly to the value of the mineral treasure of the State, promote in an equal degree the prosperity of this city, and help to bring down the cost of one of the great neces ries of life to a minimum price throughout the

SECOND QUARTO SERIES, VOL. I., No. 3.1

THURSDAY, JANUARY 16, 1845.

[WHOLE No. 446, Vol. XVIII.

THE AMERICAN RAILROAD JOURNAL NICOLL'S PATENT SAFETY SWITCH FOR RAILis the only periodical having a general circulation throughout the Union, in which all matters connected with public works can be brought to the notice of all persons in any way interested in these undertakings. Hence it offers peculiar advantages for advertising times of departure, rates of fare and freight, improvements in machinery, materials, as iron, timber, stone, cement, etc. It is also the best medium for advertising contracts, and placing the merits of new undertakings fairly before the public.

TICOLL'S PATENT SAFETY SWITCH FOR RAILroad Turnouts.

This invention, for sometime in successful operation on
one of the principal railroads in the country, effectuelly prevents engines and their trains from running off the track at
a switch, left wrong by accident or design.
It acts independently of the main track rails, being laid
down, or removed, without cutting or displacing them.
It is never touched by passing trains, except when in use,
preventing their running off the track. It is simple in its con
struction and operation, requiring only two Castings and twoRails; the latter, even if much worn or used, not objectionable.

Plans, Specifications, and all information obtained on application to the Subscriber, Inventor, and Patentee.
G. A. NICOLLS,
Jan. 1, 1845.
Reading, Pa.

TO IRON MANUFACTURERS.

The subscribers as Agents of Mr. Geo. Crane of Wales, having obtained a patent in the United States for his process of smelting Iron Ore with Anthracite coal, and holding an assignment of the patent obtained by the late Rev. F. W. Geissenhainer, are prepared to grant licences for the manufacture of Iron according to Mr. Crane's principle.

A. & G. RALSTON & Co.

No. 4 South Front street, Philadelphia, Pa.

No. 4 South Front street, Philadelphia, Pa.

VAIL, Proprietor of the Speedwell Iron Works, near
Morristown, N. J. can supply at short notice railroad
companies and others, with the following:
Wronght Iron Tyres made from the best iron and of any given diameter, and warranted to be sound in the welding. Railroad companies wishing to order, will be pleased to give
the exact inside diameter or circumference to which they
wish the tyres made, and they may rely upon being served
according to order, and also punctually, as a large quantity in
the strait bar is kept constantly on hand. Crank axles for
locomotive engines, made from the best Pennsylvania iron.

Straight axles for locomotives for outside connection engines. Frames for engines.—Wrought iron work for ateamboats, and shafting of any size. Cotton screws of any length
or size. Railroad Jack screws, a late invention, and highly
approved. Self-acting pumping apparatus for railroad water
stations. He refers to the following gentlemen:
Baldwin. Vail and Hufty, Philadelphia; Wm. Norris, Phiadelphia; N. Campfield, Savannah, Ga.; J. and S. Bones,
Augusta, Ga; D. F. Guez, Now Orleans, La.; Adam Hall,
New York; J. P. Allaire, New York; William Parker, Boston, Mass.; George W. Schuyler, New York.

VALUABLE PROPERTY ON THE MILL DAM FOR

VALUABLE PROPERTY ON THE MILL DAM FOR SALE.—A Lot of Land on Gravelly Poiot, so called, on the Mill Dam, in Roxbury, fronting on and East of Parker atreet, containing 68,497 square feet, with the following buildings thereon standing.

Main Brick Building, 120 feet long, by 46 feet wide, two stories high A Machine Shop, 47x43, with large Engine, Pace, Screw, and other Lathes, suitable to do any kind of work.

Pattern Shop, 35x32 feet, with Lathes, Work Benches, &c. Work Shop, 86x35 feet, on the same floor with the pattern shop.

Pattern Snop, 3052 feet, on the same floor with the pattern shop.

Forge Shop, 118 feet long by 44 feet wide on the ground floor, with two large Water Wheels, each 16 feet long, 9 feet diameter, with all the Gearing, Shafts, Drums. Pulleys, &c., large and email Trip Hammers, Furnaces, Forges, Rolling Mill, with large Balance Wheel and a large Blowing Apparatus for the Poundry.

Foundry, at end of Main Brick Building, 60x45½ feet, two stories high, with a shed part 45½x20 feet, containing a large Air Furnace, Cupalo, Crane and Corn Oven.

Store House—a range of Buildings for Storage, etc., 200 feet long by 20 wide.

Locomotive Shop, adjoining Main Building, fronting on Parker street, 54x25 feet.

Also—A Lot of Land on the Canal, west side of, Parker st., containing 6000 feet, with the following buildings thereon standing:

Boiler House 50 feet long by 30 feet wide, two stories.

Blackamith Shop, 49 feet long by 20 feet wide.

and other Presses; Press Screws; Callenders; Laithea and
Tools of all kinds; Iron and Brass Castings of all descriptions.

RUGERS, KETCHUM & GROSVENOR, Paterson, N. J. or 60 Wall street, N. Y.

TESSRS. EDITORS:—As your paper is devoted to the M. benefit of the public in general, I feel desirous to communicate to you for publication the following circumstance of no inconsiderable importance, which occurred some few days since on the Philadelphia, Wilmington and Baltimere ikaliroad.

On the passage of the evening train of cars from Philadelphia to this city, an axle of our large eight wheeled passenged are was broken, but from the particular plan of the construction, the accident was entirely unknown to any of the passengers, or, in fact, to the conductor himself, until the train, (as was supposed from some circumstance attending the case,) had passed several miles in advance of the place where the accident occurred, whereas had the car been constructed on the common plan, the same kind of accident would unavoldably have much lajured it, perhaps thrown the whole train off the track, and seriously injured, if not killed many of the passengers.

whole train off the track, and seriously injured, if not killed many of the passengers.

Wilmington, Delaware, Sept. 28, 1840, 27. The undersigned take pleasure in aucsting to the value of Mr. Joseph S. Kite's invention of the Safety Beam Axie and Hub for railroad cars. They have for some time bedu applied to passenger cars on this road, and experience has tested that they fully accomplish the object intended. Several instances of the fracture of axles have occurred, and in such the cars have uniformly run the whole distance with entire safety. Had not this invention been used, serious acclidents must have occurred. In short, we consider Mr. Kite's invention as completely successful in securing the safety of property and lives in railroad travelling, and should be used on all railroads in the conducty.

JOHN FRAZER. Agent,

W. R. CASE I, Olivier, New York, scription, with Plans and Specifications, and when required, superintend their execution.

He will also make Surveys of Estates, with correct maps and descriptions of the same; and examine and report on the best mode of rendering them productive by draining, mines, quarries, water power, roads, bridges, wharves, etc.

F. LIVINGSTON, Civil Engineer R. Hudson, New York. Refer to W. R. Casey, 23 Chambers st., N. Y.

[For the American Railroad Journal] NEW YORK AND ERIE RAILROAD.

As this road is attracting very general attention at this time, and many, not fully informed cost of the work to the stockholders. as to its merits, present condition, and necessities, are desirous of obtaining information upon the subject, we present them with the following condensed statement, made from the Reports of the Board of last year, with such alterations as the statistics, furnished since the date of those Reports, would seem to warrant.

Present Condition of the Work.

53 miles are completed and furnished with Leaving as the cost of the work, \$7,715,849 36 the necessary engines, cars, &c., and in profit- But for safety, let us add for con-

11 miles completed, but not in use.

177 miles of graded and piled road, ready for the superstructure; on one half of which the bridges are constructed

40 miles grading nearly finished.

The right of way obtained for 325 miles. Permanent arrangements completed for building and maintaining fences upon 220 miles.
350 miles finally located, and the necessary

surveys nearly complete for locating the remaining distance.

rail timbers and cross ties, ready for use; lands for depots, and donations of real estate.

A considerable portion of the road is graded for a double track

Cost of finishing the Work.

Grading, and all other expenses except iron rails, spikes and castings, as per made 3 years since, estimates

36,153 tons iron rails at the present prices, including \$8 50 per ton for distributing along he line,

(The heavy I rail has been used upon those portious of the road already completed; and this estimate supposes the same kind will be used upon the unfinished portion.) 1,057,224 lbs. spikes, at 6c.

4,383,268 " castings, at 3c. 5

The cost of doing work at the present time, as shown by the proposals for constructing 15 miles lately advertised by the Company for competition, is at least 20 per cent. less than the prices used in making the estimate for grading, &c. embrac-ed in the above. It is reasonable, therefore, to diminish the total cost of completing the grading by that per centage, which amounts to

Leaving the am't to be expended, \$5,642,282 18 Cost of the work to stockholders when finished. Amount already expended, in-cluding the indebtedness of the

\$4,734,872 66 Required to complete, 5,642,282 18

\$10,377,154 84

\$3,849,161 49

2,368,021 50

194,931 48

769,832 29

\$6,412,114 47

By an act of the Legislature of 1843, the State Loan of \$3,000,000 will be given to the Co. provided the work is resumed before the

of that act be complied with, then the net proceeds of that loan should be deducted from the the country, and that the net revenue last year

The amount realised from the loan is \$2,639,457 32 Of the earnings of the Eastern division, rent of offices, &c., there has been expended in construction, up to April 15, 1842,

> 2,661,305 48 Making to be deducted,

tingencies, 284,150 64

Making the total cost of the road \$8,000,000 00 to stockholders,

Or \$17,777 77 per mile, for a road 450 miles long, and in no respect inferior to any work of a similar character in the Union.

#### Income.

The Eastern Division has been in operation 3 years up to Sept. 30th, 1844, and the earnings Other property of great value, consisting of and net revenue have been as follows:

			Total Earnings.	Net Revenue.
1st year,	-	-	\$78,526	\$31,732
2d year,	-	-	95,735	43,216
3d year,	•	-	122,769	55,790

Making the average annual net revenue \$43,576.

the operations of the E. Division, a basis of cal culation for determining the net revenue to be expected from the whole road, much pains have been taken in ascertaining-

That the area of country contributing this re venue does not exceed 440,000 acres.

That the population of that area does not exceed 40,000.

That the average annual net revenue derived from the area named is \$43,576.

Now by dividing the area of country tributary to the road into districts, whose centres are 5 miles apart on the line of the road, and assum ing \$40,000, instead of \$43,576, to be the net earnings from a population of 40,000, and that a like population on other portions of the line will produce a like amount of surplus products to be sent to market, and allowing for the increase of receipts from the same amount of tonnage, on account of the greater distance to b transported,—the value of the business of each division will be ascertained with great accuracy

			Population.	Ne	Revenue
1st dist.	50	miles,	40,000,	yields	\$40,000
2	100	46	28,000	44	56,000
3	150	66	51,000	44	153,500
2 3 4	200	44	135,000	66	540,000
5.	250	64 .	87.000	40	435,000
6	300	66	45,000	. 66	270,000
7	350	56	48,000	64	376,000
8 .	400	44	35,000	66 .	280,000
9	450	66	62,000	66	558,000

If the proposed plan for procuring subscrip- 1. That the charges for transportation upon the E. than \$100,000 per annum.

Total,

tions should prove successful, and the condition Division, upon which this estimate is based, are one-third less than upon the principal roads in was over \$15,000 greater than the amount used in these calculations.

> 2. That no notice is taken of the business to be brought to the road from the lakes, some idea of which may be formed from the fact that the number of tons passing through Buffalo East and 21,848 16 West is over 340,000 per annum, as shown by the Report of the Commissioners of the Canal Fund for 1843.

The number of passengers connected with this large and rapidly increasing business must be on the same scale. But the Board have not been able to obtain any accurate statistics by which to present it.

From the best information in their power, it is believed that during seven months of the year at least 300 passengers each day arrive at Buffalo from the lake, and that 600 each day are con-

veyed westward in steamboats and vessels.

The inducements which the New-York and Erie Railroad can offer to this large amount of

business, are as follows :-

By the report of the Superintendent of the Eastern Division of the New-York and Eric Railroad, it appears that passengers can be conveyed from Lake Erie to the city of New-York in 24 to 26 hours; that a charge of \$10 per passenger will afford a profit of \$3 to \$5 per passenger; that light freight can be transported over the road in 24 to 26 hours; that a charge of \$15 With a view of deducing from the results of to \$20 per ton will give a profit of \$5 to \$10; and that heavy freight can be transported in 48 to 50 hours, and that a charge of \$8 to \$15 will yield a profit of \$3 to \$8 per ton.

The existing communications, which will more immediately compete with the New-York and Erie Railroad for the lake business, are the Erie Canal and the northern line of Rail-

roads to Albany.

From information obtained from parties engaged in the freighting business between Buffalo and New-York, the following table has been prepared:

Freight from Buffalo to New-York, through in 7 to 9 days.

\$10 00 per ton On Flour. Wheat, Corn, &c. 9 50 " Pork, Beef, &c. 9 50 " Wool, Skins, &c. 19 50

Freight from New-York to Buffalo, through in 7 to 9 days.

On Groceries, &c. \$21 00 per ton " Dry Goods, &c. " Pig Iron, 24 00 10 00

- 3. That it is a well established fact, that transportation on a long road will yield larger profits than a short one, the expenses of operating not being in direct proportion to the distance passed over.
- 4. That this estimate refers strictly to the population and resources of the country as they now exist, and no allowance is made for the increase of either, or for the additional stimulus to surplus products, which invariably follows the creation of improved modes of transportation; and,
- 5. That no notice is taken of the receipts to \$2,708,500 be derived from the transportation of the U.S. To some this amount may seem large-greater mail, which alone, at \$250 per mile, (less than 18th April, 1845, and completed within 5 years. than will be realised. Let such bear in mind + is paid on other roads,) would amount to more

instead of the amount being too high, it is probably nearly one-half too low.

No doubt, therefore, as to the productiveness of the road can exist.

Aside from the large dividends to be reasonably expected, there are other benefits of a general character which will most certainly follow its completion.

First. The increase in the value of real and personal estate in this city.

It is ascertained that the value of the real and war in 1815, was

That at the completion of the Erie

Canal in 1824, it was -The first year it was opened, in

1825, it was

At the completion of the Ohio

Canal in 1832, it was -And in 1840, - -

tion in this State, and about 2,500 in other Hudson to Lake Erie shall be put in operation; States. Thus it will appear that since the in-States. Thus it will appear that since the introduction of the railmad system, the value of on the 1st day of January. real and personal estate in this city has increased over \$100,000,000. The increased value of \$91,000,000.

Second. The decrease in the cost of articles of country produce consumed in this city.

Great pains have been taken to ascertain the value of produce annually consumed here, and it is believed that the consumption in this city and Brooklyn, and the supplies for shipping, do not fall short of \$25,000,000. Now, the saving to consumers upon the item of milk alone has been about \$400,000 per annum, the price having been of Pennsylvania when the Governor entered reduced one-third since the opening of the Eastern upon the duties of his office; and of the mea-Division. The cost of poultry, fresh meats, &c., has been reduced in about the same proportion, Tax Bills suggested and adopted are analysed, but suppose the reduction upon all articles con- and the difficulties and embarrassments of the sumed to be but 20 per cent., and yet the saving State are adverted to. will be \$5,000,000 per annum.

But this article has already reached a greater length than we intended, we will therefore close by quoting the following plan for resuming the construction of the work, as recommended by the present Board :-

To complete the entire line of the road, six millions of dollars is deemed necessary and sufficient. Towards this sum, the Bonds legally on the public debt. authorized are an eligible and safe reliance for three millions. From a variety of considerathree millions. From a variety of considerations, it is believed to be quite safe to rely upon the interior counties for further aid to the amount of one million. So that to insure the immediate of one million. So that to insure the immediate been made to create doubts in the public mind will connect with the Mount Carbon Railroad

direct tendency to increase the revenues, are amount will not be deemed impracticable, or out that enough money to discharge the interest on taken into consideration, every one will see that of proportion for this city, it is proposed to give the first of February, is in the Treasury, applinotice in due form within a few days, comprising substantially the following conditions, viz.

stock will be opened for two millions of dollars; the option being reserved by the Board of accepting such further subscriptions as may be

made prior to the 1st day of April, 1845.
2. That if two millions, and no further sums rior counties, so as to make an aggregate of three ceed the expenditures the sum of \$629,658 82. millions, which, with the like amount of bonds, as authorised by the Legislature, is deemed sufpersonal property of this city, at the close of the the Lake in such time and manner as to secure the interest on the public debt shall have been \$81,636,042 all the benefits of the Law of April, 1843.

3. That an instalment of \$5 per share be called 83,075,676 at the pleasure of the Board after the 1st day of January, 1845, and that subsequent instalments her public debt, but all her other engagements

252,135,515 the rate of six per cent. per annum be allowed on all the instalments on the stock which shall be for that purpose. During the later period, (from 1832 to 1840,) subscribed, from the dates of the respective payabout 500 miles of railroad were put in opera- ments until the whole line of the road from the

In pursuance of such views, the books of subscription to the capital stock of the Company have real estate alone, from 1831 to 1840, was over been opened at the office, No. 34 Wall street, and the members of the Board are zealously engaged in making personal applications to our citizens for their subscriptions. We learn from good authority, that over half a million of dollars has already been subscribed.

### PENNSYLVANIA.

We find the following abstract of the Goverpor's Message in the Philadelphia Inquirer:

A review is given of the financial condition sures that were immediately taken to improve the condition of public affairs. The various

The entire amount of the public debt at this time is \$40,835,013. The interest due in February next, is \$873,515; in addition to \$97,880 of interest on interest certificates. The amount in the Treasury on the 1st of February is estimated at \$963,030, which embraces the sum of \$50,000 of relief notes, which the State Treasurer withheld from cancellation on the 31st De-

From the facts here presented, the Governor says, it is evident that the Commonwealth will

When all these and other causes, having a as an investment, and that subscriptions to this While, on the other hand, if when it is admitted cable to that object, and it is not so applied, we shall with much appearance of justice, subject 1. That books of subscription to the capital ourselves to the reproach of our traducers, as wilfully dishonest, and regardless of the faith and honor of the State.

The Governor felicitates the public on this cheering aspect of affairs.

The tolls collected in 1844, amount to \$1,should be subscribed by that date, the Board will 167,603 42, being an increase over 1843 of rely on subscriptions for one million in the inte-\$172,199 10. The collections for the year ex-

The State Treasurer estimates that there will be a balance in the Treasury on the 30th of ficient to complete the Road from the Hudson to November, 1845, of \$647,345; and this after paid. There is, therefore, says the Governor, no manner of doubt that, henceforth, the State will be able to meet, not only the interest on be restricted to \$20 per share in 1845; \$30 in 1846; and \$45 in 1847.

4. That as an equitable, and under existing Treasury be strictly enforced,) and the proceeds 146,302,618 circumstances, an expedient measure, interest at of the public improvements, with other sources of revenue, constituting a fund amply sufficient

### RAILROADS IN SCHUYLKILL COUNTY.

The following is the quantity of coal transported over the different Railroads in Schuylkill county, for the year 1844, in comparison with the former year:

	1844.	1843.
West Branch,	334,027	277,474
Mount Carbon,	202,742	147,481
Mill Creek,	75,636	48,878
Schuylkill Valley,	109,865	90,372
Little Schuylkill,	56,669	31,281
Pinegrove,	34,916	22,905
	833,895	618,391
	618,391	

Increase in 1844, 215,504

The whole distance of the West Branch Road, terminating at Schuylkill Haven,) is laid down with substantial iron rails. The Company is doing a thriving business, declares a dividend annually of at least 121 per cent., and the stock is now worth \$73 for \$50 paid.

The Mount Carbon Road, which terminates at Pottsville, has never paid a dividend, from some cause or other. Part of this road was laid down with iron rails during the past season, and the same material will also be substituted on the other portions as soon as possible, probably during the present year. This road ought to be profitthe present year. able to the stockholders.

Arrangements have been made to widen the track of the Mill Creek Road, which terminates at Port Carbon, so as to connect it with the branch cember, and which, if needed, may be applied by the Legislature to the payment of interest on the public debt.

From the facts here presented, the Governor annual dividends, and is considered good stock.

of one million. So that to insure the immediate progress and early accomplishment of the entire work, a subscription of two millions of dollars only is required. With such a subscription, the Board would have no hesitation in proceeding with the work, in the confidence that no further call upon the citizens of this city will be necessary.

Believing this to be the smallest amount that would give to the stockholders sufficient confidence of success to render their subscriptions safe.

A project is under discussion to construct a tion. In France, the proportion is above 22 Railroad from Cleaveland to the Ohio river at lbs.; in Belgium it is about 36 lbs.; and in Wellsville, or Beaver, &c. Distance, with the England it is as high as 55 to 56 lbs. to each curvatures of the road, say 90 miles, cost \$15,000 a mile. Capital required to complete the road, and place upon it the requisite number of loco-motives and cars, \$1,500,000. The income from all sources is estimated at \$700 a day, equal to 14 per cent. per annum! The time to pass from Detroit, by this route, to New York will be about the same as by way of Buffalo and Albany .- Cin. Gaz.

OUR COAL STATISTICS.—We publish in another part of the Journal, our annual coal statistics. They are not all completed, but correct so far as they go. The dose will however, be found sufficient for one week. We would also remark that these statistics have cost us both time and money to prepare: and we hope we will receive the proper credit. The only statistics of the anthracite coal trade in the United States have been prepared in this office. They have in several instances been copied without have in several instances been copied without iron revenue steamers, up to the 1st of December, then re-copied, and credited to the paber, 1844, is for the John Tyler, at Pittsburg,

THE COAL TRADE.-It was our intention to lay before our readers our annual tables, showing the state and progress of the anthracite coal trade in the United States—but the short period that intervened between the first of January and our day of publication, and having been disappointed in receiving the official quantity shipped from two districts, we have concluded to postpone their publication until next week. In the mean time, we give below the quantity shipped from this region.

Schuylkill Haven, Pottsville,

By Railroad. 272,528 06 168,962 08

441,490 14

By Canal. Pottsville & P. Carbon 278,459 00 Schuylkill Haven, 61,675 00 Port Clinton. 58,309 00

398,443 00

839,933 14 To which add from Swatara region, 31,531 00

Total from Schuylkill county, Making 871,464 tons of coal shipped from this county during the year 1844, which exceeds the quantity shipped last year by 171,264 tons, and the amount sent from all the Anthracite regions in 1840, by upwards of 6000 tons.

Should nothing intervene to check the grow ing prosperity of the country, we confidently an-

-Miners' Journal.

THE IRON TRADE.—This interest, which is fast growing in importance in our country, appears to be also increasing in Europe somewhat Mercury. rapidly, a circumstance worthy of note here. Prussia employs in furnaces for the manufacture of pig. iron, 8,674 workmen, who produce 120,000 tons annually; and 6,049 workmen, erected at Mr. Bast's mines, in this region, by who produce 73,000 tons of bar and plate iron. Mr. Battin, as an experiment. So superior is improved pumps in the caissoon, it may, in case Verein is, cast iron, 191,156; wrought iron, or erect four or five more. works in cast and wrought iron, 187,324 tons. In proportion to the population these quantities are not great, since they only amount to 15.

RAILROAD FROM CLEAVELAND TO THE OHIO. | lbs. for each person throughout the confederaperson.

> A NEW LOCOMOTIVE .- Many of our scientific fellow citizens were much gratified yesterday, with an examination of the model and principle of a new locomotive, invented by Mr. Ezra Coleman, of this city. The object of the principle discovered by Mr. C. is to overcome the difficulties of railroad travelling which are presented by inclined planes. By this locomolive there will be no occasion for stationary steam engines, as at the Schuylkill Inclined Plane of the Saturday Courier, where it may be seen until one o'clock this afternoon.

U. S. REVENUE CUTTERS .- The amount of money expended upon the construction of pers who cribbed them. This is not 'doing 469 tons, \$68,468 48; Jefferson, at Oswego, unto others as you would wish to be done by,' to say the least of it.—Miners' Journal.

The Coal Trans.—It was our intention to tons, \$56,254 65; McLane, at Boston, 368 tons, \$69,705 95. Total, \$425,286 35. There are fourteen revenue cutters now in service, besides the two iron steamers just constructed, the Legare and the Spencer—the first upon Ericsson's, and the latter upon Hunter's plan. The Dal-las, now on the stocks at Buffalo, is in a state of forwardness, and will be launched sometime during the early part of next season .- Philadelphia Inquirer.

The Philadelphia Inquirer says that a new plan has been adopted for the warming of rail-

Company. It is thus described:

A small boiler is attached to the upper part of the stove in the cars; two inch copper pipes are attached to this boiler, and these pipes are conveyed under the seats; and thus, being constantly filled with hot water, heat is thrown out in every quarter with entire safety, and to the evident enjoyment of travellers. We learn that the public are indebted for this new and very commendable feature, to the forethought and enterprise of Edwin Stevens, Esq., one of the most efficient members of the Board of Managers.

GEORGIA RAILROAD.—We are gratified to be informed that the Georgia Railroad has been opened for the accommodation of both freight and passengers to Covington, 25 miles beyond the late terminus at Madison. The road beyond ticipate a shipment of at least one million of tons of coal from Schuylkill county the present year. nects with the State road, and will be finished for that distance in September next. At the same period the State road will be in operation as far as Cassville, within 17 miles of the Codsa, and 60 of the Tennessee river .- Charleston

Mr. Battin's receipts for his patent have been considerable during the last season, but so far, we learn, he has been barely remunerated for the expenses he incurred in making the different experiments in perfecting his coal breaker. It is but justice to add, that Messrs. Haywood & the new screw power introduced, enabling Mr. is but justice to add, that Messrs. Haywood & C.'s engine to ascend and descend with ease and safety. The model was exhibited at the office of our friends, Messrs. McMakin and Holden, is the same, it is embraced in Mr. B.'s patent, and all differences have been adjusted between the parties .- Miners' Journal.

### EXTRAORDINARY HYDRAULIC PERFORMANCE.

A most interesting exhibition of hydraulic prowess recently took place in Her Majesty's Dock-yard at Woolwich, where there is a floating caissoon of large dimensions, from which it is occasionally necessary to remove the water This has hitherto been accomplished by means of a pair of ten-inch pumps, fitted up in the best possible manner by an eminent engineering firm in London. These pumps have been worked by a party of thirty-two convicts, in two gangs of sixteen each, relieving each other at intervals of ten minutes, by which means the water has been pumped out in three hours and a half, the men at the end of that time being much distressed by their continued exertions. Mr. Walker (of Crooked-lane, King Williamstreet,) having offered to raise the required quanplan has been adopted for the warming of rail-road cars by the Camden and Amboy Railroad Company. It is thus described: pump, of which we gave an account in vol. xl. page 307, his proposal was made known to the Board of Admiralty, who immediately called upon Mr. Walker to fulfil his promise. Mr. Walker accordingly fitted up a pair of twelve-inch pumps worked by a rotary motion, which were completed and tried on the 20th of September last, under the superintendence of Captain Dennison, R.E., in the presence of Lord Adolphus Fitzclarence, Sir Francis Collier, Mr. Oliver Lang, and the principal authorities of the Dock-yard, who seemed to take a lively interest in the experiment, as the speedy emptying of the caissoon is to them a matter of great mo-ment. The new pumps were manned by fourteen convicts (the same formerly employed in this work) in two gangs of seven each, relieving each other at intervals of fifteen minutes. In one hour and fourteen minutes the required task was accomplished, the men being in no way fatigued! The quantity of water raised was about 3,350 cubic feet, or 95 tons, lifted 13 feet high! The result of this trial created great astonishment among all present. Mr. Walker was warmly congratulated on having more than

In Bavaria, 14,750 tons of cast and wrought this improvement considered to others invented of emergency, be emptied in half an hour by iron are annually produced. In Wirteinburgh, for said purpose, that no less than fourteen have 28 hands, although with the former pumps 32 8,900; in Baden, 11,750; in Saxony, 12,150; already been erected at the following Collieries and in the other German States of the Zollini this region, and preparations are making to three hours and a half. It is always very desirable to have the power of quickly emptying the caissoon, but under certain circumstances, in the event of fire for instance, it is of the utmost

importance to be able to do so.

### AMERICAN RAILROAD JOURNAL.

PUBLISHED BY D. K. MINOR, 23 Chambers street, N.Y.

Thursday, January 16, 1845.

NEW YORK.

We have given in the first part of this number Governor Wright's remarks on the finances of New York, which he very pro-

We call the attention of Directors legislation," as to take precedence of all other to the Tabular Advertisement of the New matters. The governor ranks far above all public men in this State, and his views distinctly point out the course of legislation which will be pursued for some time to come

We must however say that his excellen ferently drawn up-clearness and condensation being sacrificed to what the "reviewers' call "American prolixity." The enlarge ment of the Erie canal, and the completion of the lateral canals are, we are happy to say, postponed to some very indefinite period. The State tax appears to be viewed in a very favorable light, which we are sorry to see, as we consider it every way objectionable. Five years since, when raising our humble voice against the large expenditures of that period, we observed,

"Has the government of New York the right to tax her citizens in order that the property of the inhabitants of other States or board more cheaply than at present rates? Not only is the New York farmer to be taxed but the amount so levied is to be expended in

thus enabling the inhabitants of that region to undersell him in his own market."

NEW YORK AND ERIE RAILBOAD.

In our remarks on this work in our last, and also in our number for December, we have taken it for granted that the management of the road is substantially in the hands of those who controlled it for many years previous to 1844. We have been informed on good authority that the present directors do not consider themselves in any way identified with the management of the road hitherto, but that all opinion of their capacity and judgment must be formed from their own acts and statements. Our object was to show, that the work must be conducted on entirely different principles, and the above information, together with the plan of putting successive and continuous portions of the work into operation, proposed in the late address, would seem to denote that the difference in our views was fast vanishing. In our future remarks, we shall gladly assume that the New York and Erie railroad is in the hands of a board identified with, and pledged to nothing but an earnest, energetic and well matured effort to render the construction of this work certain within a reasonable time.

We are indebted to the Hon. Wm. Wright, M. C., from Newark, N. J., for Prof. Johnson's elaborate report on American canals.

Also, to Win. B. Foster, Esq., canal commissioner, of Pennsylvania, for a copy of the report of the commissioners, dated 30th Dec., 1844, copious extracts from which will appear in our next.

In our last number, the credits which we had carefully given to Herapath, for the article on "Railway accidents," to the the New York Journal of Commerce, for the remarks on "way business," and to the Miner's Journal, for several items, were all omitted by the

We have deferred the Governor's message in order to lay before our readers the clear and condensed statement of the present condition and prospects of the New York and Erie railroad. The extracts from the message of Governor Wright will appear in our next

Hunt's Merchants' Magazine. We are glad to find in this influential and widely circulating Magazine, articles on such subjects as the "penny postage," the "coal trade of provinces may be carried to and from the sea- Pennsylvania," and the "repeal of the duty on railroad iron;" the two last from the pen of Mr. Bloomfield. These subjects will thus reducing the value of his property by adding be brought to the notice of a numerous and perly characterizes as "so intimately con- at his cost, great artificial to the already su- influential class through their favorite perionected with the great and leading subjects of perior natural advantages of the west, and dical, and good must inevitably result.

MONTREAL RAILROAD.

extracts from the very able memorial of the are very far from undervaluing that city. Portland committee to the legislature, praying ocean and the river St. Lawrence, and icad-ing from Portland in the general direction of of navigation from the sea, on the outlet of forward, we regarded it mainly as a compet-rounded, she has a ready and safe water coming line with the routes from Boston, and munication by means of a magnificent canal. supposing that the capital must be furnished mainly by that city, we were naturally not and dangerous, even in the summer months; very sanguine as to any practical result from but for more than six months of the year, it at present. They say that the business of the from the ice. ### NEW-YORK.

The Governor of New-York commences at once with the finances of the State:

The great and leading subjects of legislation are so intimately connected with the state of our finances, as to render it proper to examine first the financial condition of the State.

A general view of the current annual revenues of the State, taken together, according to sury on account of the general fund, from all nually consumed in the payment of interest the receipts of the fiscal year, ending on the 30th sources, are less by \$208,701 98, than the sums alone, upon this increasing debt. Such an exday of September last, is as follows;

The total amount of receipts on account of the General Fund, including the whole of the State tax of one mill on the dollar, and deducting the sum received for temporary loans, 1,073,349 01 was

2,350,615 94

133,826 51

18,490 34

237,304 25

\$3,813,586 05

The entire revenues of the Canal Fund, including all the receipts for tolls, water rents and interest, for all the canals, were The revenues of the School Fund proper, were

The revenues of the Literature Fund were

The revenues of the U. S. Deposite Fund, after deducting \$106,412 55, transferred from revenue to capital, were

Making a total of Deduct from that aggregate the revenues of the School Fund proper, constitutionally pledged to the support of common schools \$133,826 51

The revenues of the Literature Fund appropriated by law in aid of Academies,

The revenues of the U. S. Deposite Fund, appropriated by law to Common Schools, Academies, Colleges, and other purposes of edu-

cation, and the New York Eye Infirmary, 237,304 25

389,621 10

18,490 34

And there will remain, This balance comprises the revenues of the General Fund and of the Canal Fund, embracing all the revenues from all the canals, as well statement, is wholly inadequate to meet the anas fro.n the Canal Fund proper. The part of nual demands upon it.

Fund, as will be seen, is

by the first section of the "Act to provide for paying the debt and preserving the credit of the State," passed 29th March, 1842, one half of it, after the year 1842, is to be paid to the Commissioners of the Canal Fund for the use of the canals; and there was so paid, in pursuance of this provision, during the last fiscal year, the

applicable to calls upon the General Fund, the sum of

The payments made from the Treasury, chargeable to this fund, during the last fiscal year, excluding the payments on account of temporary loans, and also the payment to the Canal Fund of half of the mill tax, as before stated, were

795,051 45

1,003,753 43

Thus showing that the receipts into the Treacharged upon the same fund, and paid from the Treasury, for the last fiscal year.

There was an apparent balance in the Treasury at the close of the fiscal year, of \$99,737 26, which so far as it is available, would diminish the deficit before stated in the receipts of the General Fund. This balance, however, included the sum of \$84,358 15, paid to this State out of the proceeds of the sales of the public lands of the United States under a law of Congress, and placed in the Treasury by the Governor, to whom the payment was made; but which has never been brought into the accounts of the General Fund, or any other of the funds of the State, because the Legislature has directed no disposition and authorized no application of the money. It has remained in bank by a special contract with the Tressurer, at a stipulated interest. If this sum be deducted from the above balance in the Treasury, there will remain only \$15,379 11, as the real available balance, applicable to demands against the General Fund. If this sum be deducted from cluded. \$208,701 98 cents, the deficit in the revenues of the General Fund as before stated, it still leaves

tember in every year, from the canal revenues, the sum of \$200,000. Only one half of this sum has been paid for the use of the General Fund for the last year, the other half having been withheld to make up losses in the fund pledged for the payment of the Erie and Cham-plain Canal debt, occasioned by the insolvency of certain banks which had loans from the Canal Fund. Hereafter, the whole sum of \$200,-000 will be annually paid from the surplus revenues of the Canal Fund for the use of the General Fund. But, with the whole of this ap-\$3,423,864 95 propriation, one half of the state tax, and all its

A further and most important consideration \$1,073,259 01 connected with this fund, is the heavy debt charged upon it. This debt is \$5,634,507 68. This is the amount of the positive, unconditional debt charged upon the fund, the annual interest upon which is \$310,499 69, and comprises one of the heaviest items of permanent charge upon its revenues. The debt has been increased by the sum of \$211,092 35, within the last fiscal year; thus showing that the revenues of the fund, with but half of the mill tax, so far from presenting a surplus beyond the annual expenses chargeable upon the fund, are, in fact, deficient, and that the debt continues to augment. More than three-fifths of this debt was contracted by loans 278,197 56 of the credit of the State to railroad incorporations, which have wholly failed, and thrown the amount upon the General Fund. Without the debt, the present revenues of the fund would be ample to meet the charges npon it, and would authorize the Legislature moderately to increase those charges, when the public interest should be found to require it; but with it, and its constantly accruing interest, the charges upon the fund must be diminished, or its revenues increased, to prevent a constant annual augmentation of the debt.

True economy, as well as sound policy, requires the arrest of this process. A portion of \$208,701 98 the revenues of this fund, more than equal to all the aid it derives from the mill tax, is now annually consumed in the payment of interest penditure, while it makes taxation perpetual, works no public benefit. The money passes from the pockets of the citizens, through the hands of the tax collector, to the pocket of the public creditor, with the loss to the former of he expenses of collection, only that the process may be repeated with the same loss, as regularly as time shall bring around the seasons; and still the demand is undiminished, the weight of the load unnitigated. To reverse this action is the only remedy for the evil. The revenues should be brought to meet the annual expenditures, and leave a balance to wear upon the debt, and then each payment of the tax will bring with it hope and encouragement. The third subdivision of section 2, of the act imposing this tax, looks to its discontinuance after the present year, through an ability in the revenues of the fund to meet and extinguish the debt, without its further aid; but that expectation cannot be realised, while the deht is increasing

There is also a contingent debt hanging over this fund, amounting to \$1,920,000. This is for loans of the credit of the State to canal and by the 5th section of the "act to regulate the accounts between certain funds belonging to this State," passed 25th May, 1841, the Commissioners of the Canal Fund are directed to pay to the Treasury, on or before the 30th day of San the Canal Fund are directed to pay to the Treasury, on or before the 30th day of San the Canal Fund are directed to pay to the Treasury, on or before the 30th day of San the Canal Fund are directed to pay to the Treasury, on or before the 30th day of San the Canal Fund are directed to pay to the Treasury, on or before the 30th day of San the Canal Fund are directed to pay to the Treasury, on or before the 30th day of San the Canal Fund are directed to pay to the Treasury, on or before the 30th day of San the Canal Fund are directed to pay to the Treasury of the Canal Fund are directed to pay to the Treasury of the Canal Fund are directed to pay to the Treasury of the Canal Fund are directed to pay to the Treasury of the Canal Fund are directed to pay to the Treasury of the Canal Fund are directed to pay to the Treasury of the Canal Fund are directed to pay to the Treasury of the Canal Fund are directed to pay to the Treasury of the Canal Fund are directed to pay to the Treasury of t reason for strengthening the condition of the General Fund, and taking prompt measures for the gradual extinguishment of its present increasing debt.

> After deducting the revenues of the School, Literature, and United States Deposite Fund, from the aggregate amount of the revenues of the five funds, the balance remaining was \$3,423,864 95

Those of the General Fund having been examined, may now be separated. They are 1,073,249 01

And the revenues of the Canal Fund will remain \$2,350,615 94 The expenses charged upon and paid out of the revenues of

this fund during the fiscal year

1,777,970 59

Leaving a surplus, over and above the expenses chargeable upon the canals and the Canal Fund, for the fiscal year, of

572,645 35

Included in these expenses, are the \$100,000 paid to the Treasurer for the use of the General Fund, and \$100,000 paid on account of losses of the Fund pledged for the payment of the canal debt, and \$1,031,123 16, for interest upon that debt, making together the sum of \$1,231,-123 16, and leaving \$546,664 86, as the expenses of the canals, including the sums refunded on tolls, and for rents of surplus water from the Oswego canal. The above charge for interest does not include the interest upon the bal ance uppaid of the old Erie and Champlain Canal debt, that being met by the interest upon the funds set apart and invested for the payment thereof.

By the twelfth section of the act of 1842, " the surplus canal revenue, after paying all just canal current expenses, and the interest on the canal debt, and the payment aforesaid to the General Fund, shall, to an amount at least equal to one third of the interest of the canal debt remaining unpaid, be sacredly devoted and applied as a sinking fund to the redemption of the capal debt now existing and authorized by this act, and shall not be diverted from that object to any

other purpose whatsoever."

Such is the language of this law, and such the express pledge it contains, touching the surplus of the canal revenues of the last fiscal year. If the amount of annual interest on the canal debt, as it existed at the close of the fiscal year, \$1,126,397 90, be the correct amount from which to measure the extent of the pledge, and if it be construed with technical strictness to extend no farther than the one third of that interest, then the portion of this surplus to pass to the Sinking Fund is \$375,465 96, leaving a surplus for the last fiscal year, beyond the amount pledged to the Sinking Fund, of \$197,-

By a statement of the canal debt, furnished by the Canal Department, it appears that the whole amount unpaid on the 30th day of September last was \$20,713,905 58. This includes the old Erie and Champlain Canal debt of \$1,380,250 35, for the payment of which, funds have been already set apart, believed to be more than sufficient to cancel it. The portion of the funds set apart, considered available, amounts to \$1,496,306 45, being \$116.056 10 beyond the principal of the debt to be paid, and probably more than sufficient to meet the principal and interest. I am informed by the Commissioners of the Canal Fund, that the holders of the old stock have been personally notified that the money is ready for redemption of the principal, and that payment will be made on the day it falls due. It is the intention of the Commissioners to place the funds in the bank, where the stock is transferable, and where the interest is on that day.

contributions required to be made to it, so far as the canal revenues have furnished the means, although it is believed that the surplus for the years 1842 and 1843 did not equal the one-third of the accruing interest upon the debt.

to \$1,195,102 01, an aggregate sum more than equal to one-third of the interest on the debt for applicable.

of the act of 1842 provides that the contributions the entire mill tax, for the current year, must enure to the benefit of the General Fund, and, after the current year, the collection of that half of the tax, imposed for the use of the Canals, is to cease. Nothing further, therefore, is to be realized from this source, to aid in the redemption of the Canal stocks.

If this be a correct representation of the means and liabilities of the Canal Fund, for the current year, there would seem to be an end to discussion as to the appropriation of these means to any other object than to the payment of the debt, unless the payment is to be postponed. I have already expressed my views in relation to such a diversion; and I am constrained to believe that, whether considered as a question of principle, or one of economy, the policy would be equally unsound.

Our Canal revenues are very large, and nothing but the enormous debt charged upon them keeps the fund so poor as to require the aid of direct taxation to meet its liabilities. Separate from the old debt, more than one million annually of these revenues are consumed in the payment of interest alone. This must be a constant drain upon the fund, and nothing but the

This is the last of the Canal debt, upon which of our financial affairs, I am constrained to be-The statement of the Canal debt, before re-removed at the earliest practicable day, and that construction of a new tier of locks of 110 feet in ferred to, shows that the whole amount of Cathe danger of its recurrence may be obviated by length by 18 feet in width. The entire expense, nal stocks redeemable in July and January a payment of the debts which have rendered it including a large margin for contingencies, is

next, is \$3,742,626 01. This includes the sum necessary. I also believe that true friendship of \$1,380,090 35 of the old debt, the redemp-tion of which is provided for in the manner its safe and certain extension, equally require, above specified, leaving \$2,362,535 66 reimbur- and will demand, the most speedy payment of sable in January, 1846, for the payment of the canal debt, and the liberation of the present which the moneys are not yet fully provided. The Sinking Fund provided for by the twelfth section of the law of 1842, has received the therefore, that course of financial legislation, which shall make these the prominent objects of its policy.

Our financial condition is by do means desperate. The rapid accumulation of debt was arrested, before it had so far surpassed the power Carrying the whole surplus of the last year of the to that fund, with the whole \$278,197 56 paid from the Treasury as the proceeds of the State tax, and the fund, including the accumulations of interest computed at five per cent., amounts the taxation necessary to render this return safe and sure, was cheerfully submitted to. applicable. The third subdivision of the eleventh section strengthening its resources or diminishing its expenses, as to give it power to commence the refrom the State tax to the Canal Fund shall duction of its heavy debt. The question sub-cease, whenever the annual revenue from the mitted to us, therefore, is not that submitted to State Canals, ascertained in the manner pointed the legislature of 1843, whether we will attempt out by that act, shall exceed the expenditures to bring to order and soundness deranged finanupon the Canals, the interest upon the Canal ces, and restore a fallen credit; but whether, debt, and the payment to be made to the Gen-finding our financial condition substantially eral Fund, by more than one-third in amount of sound, and our credit high, we will maintain the annual interest upon the Canal debt. The both in that desirable condition, and as soon as the annual interest upon the Canal decided. The both that decided in the decided

> We take the following interesting article from the Philadelphia U. S. Gazette:

SCHUYLKILL NAVIGATION. The report of the Board of Managers to the Stockholders of the Schuylkill Navigation Company, was submitted at the annual meeting yes erday. Dr. George B. Wood in the chair, Geo. W. Smith, Secretary. It shows that coal has been brought to this city from the Pottsville region, during the season past, on the Navigation, at a little over one dollar per ton, including toll, freight, and unloading. The amount of coal brought down this year is 398,000 tons, being but 11 per cent, less than the quantity brought down last year. There has, on the other hand, been an increase of 12 per cent. on ascending miscellaneous trade, and of 21 per cent, on that descending. The increase in the tonnage of the descending. The increase in the tonnage of the single item of iron, is 60 per cent. The whole amount of miscellaneous weight is 178,000 tons. There has also been an increase of the amount received from rents of water-power, it being now \$20,000. At the very low rate of toll, of onethird of a cent per ton per mile on coal, the receipts of the company have still been adequate paid, before the day of payment, which is the payment of the debt can arrest the corroding to pay expenses and repairs, meet the interest first day of July next, and the notice given to the holders, informs them that interest will cease and may bring accumulated dangers. In any view I am able to take of this portion parying the report submitted to the stockholders, a detailed plan for the Improvement of the Navithe constitutional pledge rests and it may be-come material, in the course of your legislation, nues to the existing debts, so far as the current dept, which had been unanimously adopted by to consider whether, when these steps shall have expenses of the public service will permit, has them, and was recommended for adoption by the been taken, that pledge may not be considered, become an imperious duty to the whole people, stockholders. This plan proposes a deepening of both in principal and in fact, fully redeemed.

The Drincipal and in fact, fully redeemed. dollars. It is thought that its work may be accomplished in two seasons, and that the trade need not be materially interrupted. It proposes to diminish the number of lift locks, now 96, to 65, by increasing the lifts. It states the length of canal on the line to be 57 miles, and of the slack water navigation to be 51 miles, of which last 20 miles is already of the slack are now in the slack water navigation to be 51 miles, of which last 20 miles is already of the slack water navigation to be 51 miles, of which last 20 miles is already of the slack water navigation to be 51 miles, of which last 20 miles is already of the slack water navigation to be 51 miles, of which last 20 miles is already of the slack water navigation to be 51 miles, of which last 20 miles is already of the slack water navigation to be 51 miles, of which last 20 miles is already of the slack water navigation to be 51 miles, of which last 20 miles is already of the slack water navigation to be 51 miles, of which last 20 miles is already of the slack water navigation to be 51 miles, of which last 20 miles is already of the slack water navigation to be 51 miles, of which last 20 miles is already of the slack water navigation to be 51 miles, of which last 20 miles is already of the slack water navigation to th slack water navigation to be 51 miles, of which last 20 miles is already of the required depth. It is not supposed that any considerable widening will show the quantity of Anthracite coal shipwill be necessary, nor is it contemplated to raise materially any of the levels, nor in any way to give rise to heavy claims for damages. The supply of water is stated to be fully adequate to Schuylkill Canal, 398,443 447,058

the contemplated improvement. The present work has cost about one million. of which sum, near half a million has been paid from the earnings. The capacity of the Navigation will be more than doubled by the proposed improvement, at a cost of about one million. The importance of this consideration arises from the constant development of the immense trade of the Schuylkill coal region, already near one million, and soon to reach two millions. The paramount advantages of the trade of this region over others, is stated to consist in this work penetrating the heart of the great coal field, admitting of numberless ramifications tributary to it, whereas in other regions the works attack the extremities consumption of last year (which was 1,213,537 The most interesting and exciting passage in the views of the President is probably that which not believed to be more than the market rerefers to the successful use of steam in the navigation of canals, thus connecting our great coal field with the most remote point reached by navigation, without the necessity for transhipment or delay. There is no allusion to, or invidious com-parison with, any rival work. We are reminded is very generally used on steamboats, and it is that "cheap coal and cheap iron have made estimated that 500 tons per day are consumed England the workshop of the world;" and an in boats leaving the city of New York alone, interesting reference is made to the probable im- and it has been introduced into use in almost mense increase in the manufacture of iron, soon to take place in the valley of the Schulykill. The report having been read, the following resolutions were submitted by Henry J. Williams, Esq., enforced by some cogent and pertinent remarks from that gentleman, expressive of his augmented supply over 1843. In the Wilkeshigh confidence in the source from which it emanated, in the Board who had sanctioned it by their unanimous approval, and his own convictions are field, it has been augmented from 58,000 tions of the advantages of the improvement to 114,906 tons, although it is probable, that lit-After full discussion they were adopted, with the more than the usual quantity has reached tide scarcely a dissenting voice. The meeting was water; the furnaces, &c., in the vicinity of Danunusually large, and all scemed earnest in the

Resolved, That the Report of the President of the Company, made in pursuance of the request of the Managers, and recommended in their resolution on the subject of an improvement of the works of the Company, be, and the same is now adopted, and cordially approved by this meeting, and that the Managers be requested to proceed with the execution of the plan proposed, in the most earnest and energetic manner, so soon opinion to warrant them in doing so.

Resolved, That for the purpose of enabling the fore. Managers to carry into effect the foregoing resolutions, and to provide for expenses and contingencies, which may occur during the progress of the coal in open day, by first removing the suthe work, the Managers he, and they hereby are, authorised to borrow or raise the sum of twelve hundred and fifty thousand dollars, and that an ordinance to that effect be enacted.

We understand there has been some change in the Direction of this Company, which has not

368,130 Tons. Increase in 1844,

Furnaces and factories have been reopened, and new ones erected and put in operation in all parts of the country, and hence a vastly augevery business where a steam engine is employ-ed. This greatly increased consumption has necessarily demanded an increased supply. In every district within the circumference of the ville, having consumed within the past year from 40,000 to 50,000 tons.—Miner's Journal.

### COAL TRADE.

Preparations for the Coal Trade of 1845-Back Track Railroad-Increase of Business .- We are gratified to state that the Lehigh Coal and Navigation Company have completed all their which is the cheapest of all powers yet discovarrangements for mining and delivering their ered. coal into boats, for the present year, on the new system of allotting the work to several distinct as means shall be obtained, sufficient in their companies or sets of contractors, instead of giving the whole to a single company as hereto-

> The Summit Hill or Old Mines, which it is known are principally worked by quarrying out perincumbent rock and earth, have been divided into the following sections, and contracts made for quarrying and delivering therefrom the fol-lowing quantities of coal.

Summit Mines (Broadrick & Davis Contractors) 70,000 tons. Springdale Tunnel (Mc Lean arisen from any difference of views as to the policy to be adopted, but from several gentlemen in the old Board having expressed their wishes to retire.

Springale 1 time (No Dean arisen from Springale 1 times (No Beardrick Williams) 40,000. South Mines (Broadrick Bertsch) 60,000. North Mines (Weiss & Belford) 40,000. Making in the aggregate to to retire. the Companies Room Run Mines at Nesquehoning, the contractors, Messrs. Packer, Harlan & mined from a single slope on the Delaware

co

de

By means of the New Back Track Railroad which the Company are now constructing, which is nearly graded, and will be finished in all its parts and appendages early in the boating season, the Company have been enabled to put into the hands of contractors, Mesers. Lockhart & Barnes, the transporting, screening and delivering into boats the whole of the coal from the Summit Mines, at a reduction of 10 to 15 cents per ton on the cost of delivering last year.

But the advantage of this novel contrivance for returning the cars to the mines by gravity, is not confined simply to the reduction of expenses in the transportation business; for without any great increase in the number of cars now in use, the business of the present descending track, may be augmented three or four fold. How a road can be constructed for returning trains of cars by gravity to the top of a mountain, which is several hundred feet higher than the terminus of the descending track, or point of starting may appear mysterious, and require some explanation. The The supply this year, over and above the Mauch Chunk Mountain, upon the summit of which the Lehigh Company's large mines are located at a distance of nine miles from their landing at the town of Mauch Chunk, extends in a direct line from the mines to the latter place, or landing, maintaining its elevation the whole distance; but is broken off abruptly at the landing by the Lehigh river. The descending road upon which the loaded trains run by gravity from the summit mines to the landing, is located down the side of this mountain, at such a grade as that in the distance of nine miles, it reaches its base at the shutes at Mauch Chunk, where the cars are discharged.

The empty cars are then run a short distance to a point near the end and base of the same mountain, whereby an inclined plane and stationary engine power they are elevated at once in trains to the summit of the mountain, from whence by the new Back Track they commence their return by gravity to the mines, wending their way along the side of the Mountain until they reach a point opposite the mines, where they are again elevated by means of a plane and stationary engine to the summit, to be reloaded with coal and sent down the descending road. By this novel arrangement, locomotive power is entirely dispensed with; and the only power required for doing almost any amount of business, is that of the two stationary engines at the points mentioned, for elevating the empty cars; all the rest is accomplished by gravity,

The Beaver Meadow and Hazleton Companies, we are informed, have also placed their works under contract for the present year; and the contractors are now busily engaged in pre-paring for an increased business. The Buck Mountain Company, we are told, intend to put their works in a condition to do a large business this season, and place them under contract; and some expectations are entertained that the Summit Coal Co, will be able to get into operation soon. From the contracts already entered into, and the preparations being made, we anticipate an increase in the coal trate of the region this year over that of last, of at least 100,000 tons; which will bring the shipments of 1845 up to nearly half a million!—Carbon County Gazette.

Extensive Mining .- Mr. John Daniels

Company's projectly, fifty-fve thousand tons of BOSTON AND MAINE RAILROAD.—UPPER ROUTE. BOSTON TO PORTLAND—via Med-coal during the year 1814, being much the largest quantity of coal ever taken from a single slope in this region, in one year.—Miner's Jour. TICOLL'S PATENT SAFETY SWITCH FOR RAILroad Turmouts.

This invention, for sometime in successful operation on
one of the principal railroads in the country, effectually prevents engines and their trains from running off the track at
a switch, left wrong by accident or design.
It acts independently of the main track rails, being laid
down, or removed, without cutting or displacing them.
It is never touched by passing trains, except when in use,
preventing their running off the track. It is simple in its con
struction and operation, requiring only two Castings and twoRails; the latter, even if much worn or used, not objectionable.

Plans, Specifications, and all information obtained on application to the Subscriber, Inventor, and Patentee.

G. A. NICOLLE.

Jan. 1, 1845. Reading, Pa

TO IRON MANUFACTURERS.
The aubscribers as Agents of Mr. Geo. Crane of Wales, liaving obtained a patent in the United States for his process of smelting fron Ore with Authracite coal, and holding an assignment of the patent obtained by the late Rev. F. W. Geissenhainer, are prepared to grant licences for the manufacture of Iron according to Mr. Crane's principle.

A. & G. RALSTON & Co.

No. 4 South Front street, Philadelphia, Pa.

No. 4 South Front street, Philadelphia, Pa.

S. VAIL. Proprietor of the Speedwell Iron Works, near Morristown, N. J. can supply at short notice railroad companies and others, with the following:

Wrought Iron Tyres made from the best iron and of any given disneter, and warranted to be sound in the welding. Railroad companies wishing to order, will be pleased to give the exact inside diameter or circumference to which they wish the tyrea made, and they, may rely upon being served accurding to order, and also punctually, as a large quantity in the strait bar is kept constantly on hand. Crank axles for locomotive engines, made from the best Pennsylvania Iron.—Straight axles for locomotives for outside connection engines. Frames for engines.—Wrought iron work for steamboats, and shafting of any slze. Cotton screws of any length or size. Railroad Jack screws, a late invention, and highly approved. Self-acting pumping apparatus for railroad water stations. He refers to the following gentlemen:

Baldwin, Vail and Hufty, Philadelphia; Wm. Norris, Philadelphia; N. Campfield, Savannah, Ga.; J. and S. Bones. Augusta, Ga; D. F. Guez, New Oriesns, La.; Adam Hall, New York; J. P. Allaire, New York; William Parker, Boston, Mass.; George W. Schulyter, New York.

YALUABLE PROPERTY ON THE MILL DAM FOR

VALUABLE PROPERTY ON THE MILL DAM FOR SALE.—A Lot of Land on Gravelly Point, so called, on the Milt Dam, in Roxbury, fronting on and East of Parker street, containing 68,497 square feet, with the following buildings thereon standing.

Main Brick Building, 120 feet long, by 46 feet wide, two stories high A Machine Shop, 47x43, with large Engine, Face, Serew, and other Lathes, suitable to do any kind of work.

ork. Pattern Shop, 35x32 feet, with Lathes. Work Benches, &c. Work Shop, 36x35 feet, on the same floor with the pattern

work chop, the set long by 44 feet wide on the graind shop.

Forge Shop, 118 feet long by 44 feet wide on the graind foor, with two large Water Wheels, each 16 feet long, 9 feet diameter, with all the Gearing, Shafts, Drums. Pulleys. &c., large and small Trip Hammers, Furnaces, Forges, Rolling Mill, with large Balance Wheel and a large Blowing Apparatus for the Foundry.

Equator At end of Main Brick Building, 60x45; feet, two

Mill, with large Balance Wheel and a large Blowing Apparatus for the Foundry.
Foundry, at end of Main Brick Building, 60x45½ feet, two stories high, with a shed part 45½x20 feet, containing a large Air Furnace, Cupalo, Crane and Corn Oven.
Store House—a range of Buildings for Storage, etc., 200 feet long by 20 wide.
Locomotive Shop, adjoining Main Building, frunting on Parker street, 54x25 feet.
Also—A Lot of Land on the Canal, west side of Parker st., containing 6000 feet, with the following buildings thereon standing:

containing 5000 feet, with the lonowing unitaries, standing:
Boiler House 50 feet long by 30 feet wide, two stories.
Blacksmith Shop, 49 feet long by 20 feet wide.

MESSRS. EDITORS:—As your paper is devoted to the benefit of the public in general, I feel desirous to communicate to you for publication the following circumstance of no inconsiderate importance, which occurred some few days since on the Philadelphia, Wilmington and Baltimore Railreat.

On the passage of the evening train of cars from Philadelphia to this city, an axie of our large eight wheeled passenger car was broken, but from the particular plan of the construction, the accident was entirely unknown to any of the passengers, or, in fact, to the conductor himself, until the train, (as was supposed from some circumstance attending the case,) had passed several miles in advance of the place where the accident occurred, whereas had the car been constructed on the common plan, the same kind of accident would unavoidably have much injured it, perhaps thrown the whole train off the track, and seriously lujured, if not killed many of the passengers.

Wilmington, Delavare, Sept. 28, 1840.

The undersigned take pleasure in attesting to the value of Mr. Joseph S. Kite's invention of the Safety Beam Axle and Hinb for railroad car. They have for some time been applied to passenger cars on this road, and experience thas tested that they fully accomplish the object intended. Several instances of the fracture of sales have occurred, and in such the cars have uniformly rua the whole distance with entire safety. Had not this invention been used, serious accidents must have occurred.

In thort, we consider Mr. Kite's invention as completely successful in securing the safety of property and lives in railroad travelling, and should be used on all railroads in the country.

### STATE WORKS OF PENNSYLVANIA.

The members of the present Board of Canal Commissioners entered on the duties of their office on the 9th day of January last, in pursuance of the provisions of the law under which they were elected; and now have the honor to submit to the consideration of the Legislature and the people, a report upon the operations of the public works during the last fiscal year from the 30th November, 1843, to the first of December, 1844.

The receipts during the year have been as

follow, viz:

For motive power charges on the Philadelphia and Columbia ra.lroad, including charges for the use

\$233,000 13 of trucks,

Ditto, on the Allegheny Portage railroad,

114,580 20 -\$347,580 33

For tolls on the Philadelphia and Colum-

\$207,157 01 bia railroad,

Ditto, Allegheny Por-65,200 42 tage railroad,

\$619,937 76

272,357 43

To which add receipts for materials sold (old iron) on the Philadelphia and Columbia railroad,

3,179 28

\$623,117 04

For canal tollson main line of canal, including collections at

bridges, aqueducts, and out-let locks, - \$351,101 92 Ditto, on the Delaware

109,277 53 division, Ditto, on the Susque-hanna, North and

West Branches, - 101,948 89

Ditto, on the Beaver division, -

7,381 31

Total gross receipts, From which deduct certificates of drawbacks received in payment of tolls on main line, by A. B. Cummings, late collector at Philadel-

phia, By John S. Cash, pre-sent collector at Philadelphia, -

\$ 939 00

24,284 27

Actual receipts in cash,

been as follow: For maintaining motive power on the Philadelphia Columbia railroad, including expenses

of trucks, -\$144,514 71 Ditto, on Allegheny

Portage railroad, - 106,321 40 For repairing and keeping the Philadelphia and Columbia railroad in order, exclusive of \$1,399 89,

for bridges, -\$51,303 09 Ditto, on Allegheny Portage railroad, 29,724 00

Total repair expenses on railroads, 81,027 09

Total expenses of motive power and repairs on railroads, \$331,863 20 For repairing and keep-

ing main line of canal in order, 67,817 66 Ditto, Delaware divi-17,662 64 sion,

Ditto. Susquehanna, North and West 40,737 21 Branches, Breaches and

building dam at Lackawanna feeder, For repairing and keeping Beaver division

in order, Compensation of collectors, weighmasters, inspectors of cargoes and assistants, including house rent,

Ditto, lock-keepers, -

Total expenses,

532,030 45

6,989 38

2,361 04

32.837 32

31,762 00

\$635,572 97 Net receipts over expenditures,

If from the above be deducted the sum of \$5,914 15, the compensation for the year, of the Canal Commissioners, their secretary, clerk and messenger, including stationery, printing, postage, and all other incidental expenses of their office, the net balance over all the expenditures in any manner pertaining to the fiscal year just closed, exclusive of the appropriation for repairing bridges and the locks at Franklin, will be \$629,658 82.

In order to encourage the coal trade on the 569,709 65 public works as far as practicable, the Board were induced to allow liberal drawbacks on mi-\$1,192,826 69 neral coal reaching Columbia along the state improvements, and also on that reaching Bristol by the Delaware division. This method of reducing the tolls on the through trade was adopted, in order to preserve a fair rate of toll on the local or way trade; and it is believed that the receipts on the through trade have been increased by the adoption of the policy. This course seemed to be rendered indispensable to the interests of the State, in consequence of the reduced rate of charges on other improvements in which she has no direct interest, occasioned by the com-25,223 27 petition of rival corporations.

'The certificates of drawback issued on coal ctual receipts in cash, \$1,167,603 42 were received in payment of subsequent tolls at from the Lackawanna to the out-let into the pool The expenses incurred during the year have the office from which it was shipped, and were of the Nanticoke dam, at Solomon's creek. The deducted by the collectors from the clearances. and the amount received in cash only returned as tolls received.

> The navigation opened last spring upon the main line on the 14th March, and continued without any serious interruption during the navigable season, except about four weeks from the
> latter part of August, extending through the of the finished line below the Lackawanna
> greater part of September, during which period should be surrendered. The advantages that the boatmen experienced much detention for want of a sufficient supply of water on the upper levels of the Juniata division. During a great part of this time a full loaded boat could completion on fair and liberal terms. not pass, and for about two weeks the naviga-tion on this portion of canal was entirely sus-7th day of March, 1843, entitled "An Act to in-

pended, and the transporters compelled to trans-ship their loading and haul it by wagons be-tween the Portage railroad and the point where the boats were stopped, or suffer delay and suspense for an indefinite period.

Interruptions to the regular transportation of goods have occurred to some extent every year since the line has been in operation, occasioned by the want of a sufficient supply of water at the head of canal navigation, on one or both sides of the Allegheny mountain. Last year the supply on the west side was such as to prevent much delay, but this fact affords no guaranty that it will be sufficient the ensuing season. These interruptions always occur at one of the most important periods of the year for the transportation of merchandize west, and it cannot be doubted, that the State has lost, from this cause, much of the carrying trade, and consequently a very large amount of tolls. They have a tendency to give the route a character for uncer-tainty, and cause all those who may have made arrangements requiring punctuality in the de-livery of their goods, to seek other and more certain routes, even at a greater expense. The Board, therefore, cannot urge upon the Legislature too strongly the necessity of making pro-vision for completing the Eastern and Western reservoirs at the Allegheny mountain as soon as may be practicable, consistent with sound economy; particularly the one on the eastern side of the mountain, which is nearest completion, and the necessity for which is considered the greatest.

The section boatmen experienced some deten-tion for want of a sufficient number of state trucks to pass them over the railroads without unnecessary delay. Whatever may be the re-lative merits of the two systems of transportation by section boats and cars, the Board believe the section boat system has produced advantages to the State, by regulating the prices of freight and thereby increasing trade. It is, therefore, earnestly recommended, that authority be given to contract for a sufficient number of trucks to afford reasonable accommodation to section boats, either with the owners of those already constructed or for the construction of new ones, as may be most advantageous, to be paid for out of the motive power fund. It is believed they could be obtained on fair terms, and paid in instalments, without embarrassing that fund. Should the Legislature coincide in this recommendation, and make provision for carrying it into effect, it is of the utmost importance it should be done immediately, in order that the trucks may be in readiness for the spring trade, as delay would, in a great measure, defeat the object

In 1842, an act of the Legislature was passed authorizing the incorporation of a company to complete this work, and by a supplement thereto, passed in 1843, the company, on certain conditions, are to have the canal already finished, from the Lackawanna to the out-let into the pool stock in this company has not yet been taken, and the whole subject is consequently within the control of the Legislature. The Board have only to remark in conclusion on this subject, that whatever legislation may hereafter take place in regard to it, the right of the State to resume the

ded, that upon the issning of letters patent by the Governor to the said company, the Erie di- important consideration connected with the subvision of the Pennsylvania canal, from the town ject, is not to be found in the immense cost of the the Beaver division, unfortunately, have actually of Erie to the mouth of Beaver, on the Ohio river, together with the French Creek feeder, shall be vested in the corporation, together with the surplus water power, and all the property owned by the Commonwealth penaining to the same: "Provided, That the Beaver line of said canal, from New Castle to the Ohio river, shall not be surrendered up to the said company until the whole line from New Castle to Erie shall be completed, and in actual use, for the and from Erie, by the way of the Erie division ascertained whether the work has been completransportation of merchandize throughout its whole length: And provided further, That the Legislature reserves the right to resume the possession of the said Beaver division from New Castle to the Ohio river, with all the privileges and franchises hereby granted in relation to said division, if it shall be deemed necessary to secure the interests of the Commonwealth, or the rights of any other party: And provided further, That in the event of a resumption by the State, it shall be had on such terms as to do no injustice to the corporators under this act."

This company obtained a charter in pursuance of the said act, and that part of the canal between New Castle and the town of Erie was surrendered on the first day of August, 1843, and the Beaver division has remained in the possession of the State, and under the control of the Canal Commissioners, until the present

time.

The members of the Board, however, have having completed the whole line, has obtained nation made by the State, and the trifling sum an order for the surrender of this part also, on it will have cost the company.

the first of January next.

It cannot but be regarded as a matter of deep regret, that any circumstances should have existed, which, in the opinion of the Executive, which now comes up to Pittsburg, and thence rendered it necessary to direct the transfer of a along the Pennsylvania improvements to Philawork of so much importance to the interests of delphia, will be diverted at this point to the lake, the Commonwealth, on the eve of the meeting and thence to New York; and that a large of the Legislature. The hope was confidently amount of merchandise from the east to supply indulged, that as soon as the Legislature could meet, measures would be adopted not incompatible with the provisions of the charter, to con-tinue the possession and control of this portion of the Ohio river.

way by the lake route and through this canal to more to the State, in the form of tolls, for the use of her improvements. the canal in the Commonwealth.

When the other part of the line was surrendered, it was done through the medium of the Board. In this instance they have had no of-ficial information on the subject, nor did they know the company had claimed its possession tracted, raise sufficient revenue to make large until after the order for its transfer had been is-

sued to the officers on the line.

Strong doubts are entertained as to whether in is completed, and in actual use, for the transportation of merchandize throughout its whole length, as required by the act of incorporation; canal has been constructed at a cost of over and if these doubts, upon an actual examination, by competent and disinterested persons, should prove to be well founded the company has no right to the possession of the Beaver di vision.

ments of the State, demands the serious and immediate attention of the Legislature. At the same obtain, cost the State \$3,721,056 86; and the Beaver line, including cost of repairs over re-

corporate the Erie canal company," it is provi- plete the same, as estimated by the engineer on connected with the interests of the State, they he line, was \$297,926 02; but the chief and most work thus surrendered without consideration, when it required so small an amount for com-pletion. What most claims the earnest attention of every Pennsylvanian, is the effect it may have in the hands of a company of adverse interests, on the commerce of the State, and the is also reserved. In order, therefore, that full carrying trade of the main line of improvements.

The distance from Buffalo to Erie is 90 miles; of the Pennsylvania canal, to the mouth of ted in the correct sense of the term, according to Beaver is 136 miles; making the whole dis- the true intent of the law, and how much it has tance from Buffalo, by this route, to steamboat actually cost in money, preparatory to the renavigation on the Ohio, 226 miles. The dissumption by the State of the whole line. In navigation on the Ohio, 226 miles. The distance from Buffalo to Cleveland is 180 miles; the mean time, if the Beaver division shall have and from Cleveland to Portsmouth, by way of passed into the possession of the company, it the Ohio canal, 309 miles; making the distance from Buffalo, by this route, to steamboat navigation on the Ohio, at Portsmouth, 489 miles; and from Cleveland, by way of the Pennsylvania and Ohio canal and the Beaver line, to steamboat pavigation on the Ohio, at the mouth the commerce and trade of Pennsylvania. of Beaver, 143 miles; making the distance In the former part of this report, the necessity from Buffalo, by the last named route, 323 of making a reduction of toll on the article of

Thus, it will be perceived, that the Erie division of the Pennsylvania canal is much the shortest route, which connects Lake Erie with steamboat navigation on the Ohio river.

It is not only the nearest and most direct route, but it can be made much the cheapest, in

The mouth of Beaver is 28 miles below Pitts. burg; and there is every reason to believe that a large portion of the trade of the Ohio river,

There is no minimum rate of toll fixed in the act of incorporation, consequently the company may reduce the toll so low as to make it comparatively a free canal; and by the increased amount of business, which may be thus atdividends on the small investment of the stockholders. If this trade could be obtained by the State, ought to be encouraged. company without being diverted from the state improvements, there would be no just cause of four millions and a half of the people's moneythat they are taxed to pay the interest thereonand that it is now in the hands of a company and may be so used as to injure the prosperity monwealth.

have no disposition to recommend any course that would do injustice to the company. Should passed into its possession, the right to resume it, at any time the interests of the State require, is reserved; and the right to resume the whole line at any time, on refunding to the company the money expended in its completion, with interest, justice may be done to all parties interested, an immediate and thorough investigation of the whole subject should be instituted. It should be ought to be resumed forthwith, so that the State may have the power to regulate the tolls in such magner as to counteract the influence of the low solls which may be established by the company, or any other arrangement calculated to injure

coal, in the form of drawbacks, has been adverted to. The drawbacks allowed, during the year, on the Delaware division of the Pennsylvania canal, on coal arriving at Bristol, amounted to \$17,199 63; and the tolls actually paid in cash on the same article to \$69,114 59. The retention and increase of the coal trade on this learned that the company, on the allegation of proportion to distance, because of the large do- division of the public works, are of great importance to the revenue of the State, and since a reduction of tolls on this line has been deemed essential to encourage the trade, and to enable those engaged in it to maintain a successful competition, it is, in the opinion of the Board, a subject worthy of the consideration of the Legislature, whether the interests of the State would not be promoted by a more direct and less expensive mode of reaching the Delaware and Rariamount of merchandise from the east to supply tan canal, so as to relieve this important item of the west, which would otherwise pass on the trade from any unnecessary burden in the shape Penusylvania canals and railroads, will find its of freight, and thereby enable it to contribute

> The only consideration that could have justified the projection of this canal, was the extensive coal trade which was anticipated, and its chief value is now derived from the transportation of this article. Whatever, therefore, will tend to facilitate and increase this trade, not incompatible with other paramount interests of the

The Board incline to the opinion, that a connection with the Delaware and Raritan canal at complaint. But when it is considered that this New Hope, or somewhere below that point, would not be injurious to the interests of the State, but, on the contrary, would tend to promote them, by increasing the transportation of coal on the canal. They, however, believe if such connection should be permitted, that all of the commercial metropolis of the State, and tonnage passing out of or into the Delaware di-In the opinion of the Board, this subject, above divert the carrying trade from the main line of vision at this point, should pay the same tolls as all others, connected with the internal improvenecessity of increased taxation, it is impossible tertain this belief because this canal has been for any Pennsylvanian to avoid feelings of the constructed at great public expense, to afford an time the company obtained the charter for this deepest mortification. It is a subject which out-let for the coal of the Lehigh, and to acimprovement, that part of it, from New Castle deeply concerns every man interested in the commodate the trade between Easton and Philato Erie, including the French Creek feeder, had, commerce of Philadelphia—every holder of delphia. If the State should permit any portion from the best data the Board have been able to State stock, and every tax-payer in the Com- of it to pass out before reaching Bristol, for the purpose of saving freight to the transporters, it Its effects upon the interests of the State at furnishes no reason why she should lose any of ceipts \$760,148 48; making the aggregate cost large, in diminishing her commerce and depre-of the whole line, contemplated by the act of in-ciating the value of her canals and railroads, fit of such trade. Should the Legislature dicorporation to be surrendered to said company, would be difficult to estimate. Vitally import-rectly authorize the connection, the interest of \$4,548,906 29; and the sum necessary to com- ant, however, as the Board view this subject, as the State, in her tolls, should be well secured. so that all trade passing through the same be sioner, of \$121,750 33. Of the net revenue, subject to such tolls as she may find it her in \$25,345 41 have been paid into the State Treaterest to impose.

pay a certain rate of toll per mile for each passenger-the State having no control over the 000 00. rate of fare.

ceived a specific part of the fare as their com- that part of it at an early period of the ensuing pensation, and all above that sum was paid to the State. In this contract there was a stipulation in regard to the rate to be charged to passengers, but from some cause the arrangement did not seem to meet public approbation, and was abandoned.

The system now existing was in operation when the present Board entered on their duties. The experience of the past year has satisfied them, that it is not the most profitable one to the State, as in their opinion she does not receive a full proportion of the amouat paid by those who pass over the road.

On this subject the Board would respectfully refer the Legislature to the annual report of the intelligent and very efficient superintendent of the road, in whose views they entirely concur. It is confidently believed, that if cars were placed on the road by the State, she would gain in an excess of \$36,276 01 above those of the preceding year. The receipts were all required preceding year. The receipts were all required the preceding year. stock required. The authority to place cars on the road, and to use a portion of the motive power fund for that purpose, is therefore, carnestly stock; and a debt previously incurred for like recommended to the immediate consideration of objects, estimated to be about \$10,000 00, still rethe Legislature.

The tonnage reports from some of the principal officers, will shew a considerable increase of business during the past year on the public works, over the preceding one. What it may be during the coming year is of course altogether conjectural, but it is not believed it will be in the same ratio of the one just closed The unfortunate destruction of the railroad bridge, at Harrishurg, may, to some extent, have an unfavorable influence on the business of the Philadelphia and Columbia railroad. The opinion is enter tained that there will be a fair increase in the articles of coal, iron, and other productions of the State; and should the trade on the Main line not be injured by a diversion to the Erie extension and other rival routes, or by interruptions to the navigation that cannot be foreseen, there is no try.

### MICHIGAN.

The Albany Argus says of the public works of Michigan:

As these topics are interesting to the citizens of New York, we give the following summary

The Central road was finished to Marshall

The Board are further of opinion, if this con- of repairs and running the cars during the same contractors have, however, continued their work nection be authorized, the State should secure period was \$89,419 51, leaving a net profit, acthe entire control of the out-let lock at Easton, cording to the statement of the acting Commissury, \$57,424 53 paid for iron, and the balance. Flint River below the village of Flint. The interests of the Commonwealth require except about \$3000 on hand, mostly expended unusual high state of water during most of the that some change should be made in regard to in the increase of stock and further improves season in all our rivers afforded facilities for carrying passengers over the Philadelphia and ment of the facilities of the road, in the con-Columbia railroad. At present the cars in which struction of side tracks, and building a ware-they are carried are owned by individuals, who house at Detroit. The board estimate the residuals of the cars in which struction of side tracks, and building a ware-they are carried are owned by individuals, who ceipts on this work the ensuing year at \$275,-

This road is also mostly graded from Mar-In 1843, they were carried under a contract shall to Kalamazoo, a further distance of 36 with a company who furnished the cars and re- miles, and will be ready to receive the iron on season. The state would meet with but little in Blanch county, and Sturgeon Lake in St. Jodifficulty in obtaining the necessary supply of iron, but for the high price of that article, caused the Flint, have been made with advantage the by the tariff of 1842, the cost of the quantity wanted to lay the track between the places named being increased, in consequence, little at a low stage of water, have been necessarily less than thirty thousand dollars. It is confidently believed, however, notwithstanding its enhanced price, that the iron can be obtained existed the last two years, will no longer pre-without further legislative action upon the subject, and the road made available to Kalamazoo before the close of the current year. A further required for the erection of buildings at the several stations and for construction of the necessary side tracks.

The whole amount of receipts upon the sent debt of the state, and and have been expended in running cars, in re pairs of the road and in the further increase o mains unnaid.

The road being in a dilapidated condition a the commencement of the year and its stock being insufficient, the expenditures that have been made were anticipated, and the legislature, at its last session, advised of their necessity. The improvement of the harbor at Monroe, affording, as it does, greater facilities to commerce, the present good condition of the road and the increased quantity of its stock, now valued above \$50,000. all warrant an estimate of receipts upon this work the ensuing year, greatly exceeding that of any preceding one; and it is confidently believed, that besides paying current expenses, the revenue will be sufficient to pay a portion of the indebtedness contracted by the board for iron.-The cost of the iron purchased for this road, under the act of February 21, 1843, including two reason to doubt an increase on all the public locomotives, was \$58,612 74, of which \$45,006 Due from Detroit and Pontiac rail works, corresponding with that of the growing 94 have been paid from receipts from the Cenwealth, population, and prosperity of the countral road, and the balance being \$13,605 80, remains a charge upon the future proceeds of the public works, and is part of the debt abovementioned. The Board estimate the receipts on the Southern road at \$100,000 the present

Contracts for the completion of the Clinton & Kalamazoo Canal, between the villages of Rochester and Frederick, were made in the spring, in of the present condition of the public works, accordance with the provisions of the Acts of They show a steady progress during the last March 1, 1843, and of March 2, 1844, at a price not exceeding the estimates of a competent en-The Central road was finished to Marshall gineer, and for a sum less than the appropriation about the 10th of August last, and since that made. In the progress of the work it has been time has been in use between Detroit and that found that, by reason of subsequent dilapidation,

relying on the legislature for recompense of their labor, by a further appropriation.

Contracts were also made, during the summer, for the improvement of the navigation of the making the improvements required in this stream, which consisted mostly in the removal of the flood-wood that had accumulated at various points; and the work has progressed to the satisfaction of the board, and its entire completion may be expected according to the terms of the contracts.

The necessary improvements in the navigation of the St. Joseph river, between Union city seph county, being of the character required upon past season; but the improvements needed below that lake, being such as can only be made postponed until the ensuing summer, when it is hoped that the causes of delay, which have

Gov. Barry is evidently in favor of selling the public works, believing that this would be small appropriation of 20,000 acres of land is the best means to wipe out the state debt, and at the same time, to finish the Central Railroad to St. Joseph.

Notes to sales of Stocks.

The prices given are the average of each day. When there is any sudden rise or fall in one day it will be alluded to in a note. When the sale of bonds is noticed, the figures in the column headed "Shares" give the amount sold in dullars. It will be seen that the sales have been very heavy. Two of the solid Boston stocks have fallen on account of the projection of rival lines, but on the whole it shows that the confidence in the dividend paying stocks rather increases with the "stock panies."

We call the attention of Directors to the Tabular Advertisement of the New Jersey Railroad and Transportation Compa ny on our last page. A similar advertisement for each of the principal railroads would afford to the traveller in our widely extended country, information which is at present beyond his reach, even had he access to all the papers in the United States.

The attempt to sell the "main line" of canals and railroads from Philadelphia to Pitts burg has turned out a failure—the attendance being trifling, and no bids.

AMERICAN RAILROAD JOURNAL.

PUBLISHED BY D. K. MINOR, 23 Chambers street, N.Y.

Thursday, January 23, 1845.

the halls of legislation. on almost all classes by that most "peculiar quality of the workmanship. institution," which denies to western New York the use of the most extraordinary invention of modern times-the railroad.

.61 the close of the year. Even now we have have been remarkably successful.

only the "freight engine" on six wheels, all drivers, but are promised the passenger engine for our next number. These engines are so arranged that inequalities in the road do not diminish the number of points of bearing, and on a road in tolerable order, the weight on the drivers may, practically speaking, be considered uniform. They also traverse curves with remarkable facility, a quality which, highly creditable to the maker, is very apt to lead inexperienced engineers and directors into irreparable mistakes in locations. Messrs. Notris, Brothers continue to execute large orders from Europe, not withstanding the high price of iron. In fact, engines are built for less in Philadelphia, than in England, as far as labor and profits are concerned. After numerous trials, the attempt to make tyre for the driving wheels of locomotives has been given up, and the Philadelphia engineers use exclusively English tyres, paying four cents per pound duty! Notwithstanding all this, the price of an engine here is about the same as in England.

The Railway Times announces the appearance of the first number of the "Railway Register," edited by Hyde Clark, Esq., C. E., a name well known to all educated 2 engineers, from his valuable papers in the "Civil Engineer" The Railway Times speaks highly of the contents of its new auxiliary.

We would draw attention to the advertisement of Messrs. Morris, Tasker & Morris, next that of the Messrs. Norris, Brothers, on our last page. Welded wrought iron tubes are extensively used in England, and we understand that they have given satisfaction on We defer any farther remarks on the State the Reading railroad. They are heavier works of New York, until the publication of than copper tubes, and their conducting power the reports of the canal commissioners.— is said to be a very little less. On the other Everything seems to denote that the general hand, the equality of their expansion with policy of the State, with reference to the ca-that of the boiler must render them less liable nal system, is likely to be very generally agi- to leak, and we should suppose that they tated during this session, both in and out of would stand the intense heat of mineral coal The meeting at better than copper flues. The wrought iron Rochester on the 29th of this month, by pro-tubes of Messrs. Morris, Tasker and Morris voking discussion, must inevitably draw publare used by Messrs. Norris, Brothers, and lic attention to the present odious and unjust Messrs. Baldwin and Whitney, the eminent tax, and thus prepare the community to un-engineers of Philadelphia, and we can speak derstand the far more serious injury inflicted from observation of the neatness and excellent

A bill has been introduced into the U. States Senate to purchase the right of sending the mails by railroad by paying a sum in ad-The advertisement of Messrs. Norris, vance. But there is little probability of this Brothers, engineers, of Philadelphia, on the or indeed any bill diminishing the rates of last page, has been delayed from the impos postage, passing at this session. In our next sibility of sooner procuring the cut from the we hope to give a full account of the trial engravers, who are overrun with business at trips of the Great Britain, which are said to

100

THE FARMERS AND THE CANALS.

We are glad to find that the baneful effects of legislation on the interests of the farmer, are attracting general attention in western New York. The Rochester Democrat, of the 7th inst., contains several articles on the Welland canal, in which the injustice of the State tax is well pointed out. The arguments are, however, entirely for western New York. Thus the competition with the western lands is ruinous to their farmers, whose producea few miles from the canal—costs more for transportation than from Ohio and Michigan; never reflecting that the Erie canal has built up the central counties and part of the west. which the same property would have paid" if entered at Buffalo, the tolls paid at Oswego tive State, because it costs less to send his pro-The tolls at that port are a loss to the revenue, duce to market from Ohio and Michigan than year, are about \$5,000 less, and those rei. e. to the revenue "as the Buffalo people from nearly one-half of the State of New ceived at Oswego about \$55,000 greater than understand it." But we proceed to make an extract from the communication of a "farmer" who very pithily observes, that the citizens of other States, using the canal should be "taxed like our own citizens," a project not very easy to carry out.

"If there is any good reason why we should build the canals, and pay a heavy premium to the very destruction of our own best to pass through them, I have yet to learn it. The people of the western States will not ket." pretend that it is pure patriotism of country, or great love for New York, that they use her public works; no, they will tell you it is because here they find a better and surer market, a cheaper and quicker and safer communication. I am glad we are able to accommodate them, and glad to see their products come to us: but my benevolence to them cannot extend to granting them greater privileges than our own citizens enjoy. Using our canals as they do, only when their interest guides them this way, and freed from the cost of building and maintaining them, as we are not, it is no more than right and proper that when they do make use of our public works, they should be taxed like our own citizens, and be required to pay, both on their up and an element in the investigation.
down freight, from lake Erie to the Hudson "In relation to the canal police." river, whether they pass in or out of the ca-nal at Buffalo or Oswego, the same rate of toll paid by any citizen of New York who runs the entire length of the Erie canal.

"This great direct tax must be removed the States bordering on the same. from western New York by legislative action. I am glad to see measures being taken structed from Syracuse to Oswego, as a chanto invite a general convention of western N. York, and from any other part of the State disposed to meet with us, to assemble in Rochester, some time in the month of January, to the Welland canal, connecting the waters of ver counties, occasioned by the Erie canal, take the great subject into consideration, and lake Erie with those of lake Ontario, by a and the producers it has raised in the west, is there devise a plan or a method to more communication navigable for the largest class all very right. That canal benefitted them. equally distribute the burthens for the sup- of vessels.

port of our canals, upon those who use them, soon to assemble.

this property from other States should pay, State for that trade, and at a cheaper rate. the value of our real estate rapidly depreciresources are diminishing.

A TAX PAYER AND FARMER.

We find the whole case, as it now exists, stated in the Journal for January, 1840.

"Now, the Erie canal is a work as general in its character as any undertaking of the up the central counties and part of the west, kind can well be, yet, beyond a distance of 25 at the expense of northern and southern New or 30 miles, its beneficial influence ceases, and it is notorious, that it has been the means revenue," they add to "the additional toll of retarding the advancement of the southern pays tolls to the State upon 154 miles less of and northern counties by offering every inducement to the husbandman to leave his na-York. The western States offer great natu. the tolls received at the same places last year, ral inducements to settlers, and it would be showing in some measure the extent of the as unfair to them to attempt to check the tide diversion of the western trade the present of emigration as it is unjust to our own citi- year, while the Welland canal is in some dezens to use indirect but most powerful means gree incomplete. to retard the settling of our northern and southern counties. Not only is the New York quences result: farmer to be taxed, but the amount so levied is to be expended in reducing the value of his property by adding, at his cost, great artificial canal. to the already superior natural advantages of interests, to induce the products of other States the west, and thus enabling the inhabitants of that region to undersell him in his own mar- Welland canal.

> The following extracts will show the light rather the western canal counties, for there is from taxation. not a crumb of comfort for the northern and southern parts of the State, whose young men have been drawn off to the west by the Erie canal, and who now avenge their native districts by underselling the farmers of the canal counties. They even speak of reducing the nished, and the land upon which it is raised tolls west of Syracuse, the enormous addition. is consequently reduced in value. al taxation which such a course would impose on other parts of the State not being even

"In relation to the canal policy, the following facts would appear to exist:

A canal has been constructed from Albany to Buffalo as a channel for the trade of lake Erie and the chain of lakes west, and to whom we are under no obligations, and

"A side cut from this canal has been conrounding territory.

"The British government has constructed

"By reason of this British canal the proand through the medium of that convention, duce of the western States can be transported present our claims for relief to the legislature to the tide waters by way of Oswego, through the length of the canals of this State, 154 Under the operations of the present system miles less than if so transported by way of the State is losing a very large revenue which Buffalo through the channel created by this

"The people of this State have incurred a ating, our canal debts unpaid, our taxes in debt for the construction of these canals, creasing, and at the same time our means and which is a mortgage upon their property, and for the payment of which it has been thought necessary to resort to taxation.

"The resources for the payment of the interest of the debt and the eventual liquidation

of the principal, are the tolls upon the property transported on the canals, which tolls are graduated by the distance of transportation. "The trade of the western States passing

through the Oswego and Welland canals the whole length of the Erie canal.

"The tolls received at Buffalo the present

"From these facts the following conse-

"That the tolls derived from the canals are diminished by the trade through the Welland

"That the amount of the reduction will be increased after the entire completion of the

"That this diminution is to be supplied by taxation upon the citizens of this State.

"That if the full amount of tolls are realin which the competition of the Welland ca- ized which legitimately belong to our canal nal is viewed in "western New York;" or system, our citizens will the sooner be relieved

> "That the introduction of the produce of the western States under this evasion of legitimate tolls, brings such produce into injurious competition with that of our own citizens.

> "That by it the value of our own products, particularly wheat, our great staple, is dimi-

> "That it thus affects the interests of all our citizens who have property to be taxed; and affects the interests of western New York, by diminishing the value of her products, and reducing the price of her lands.

> " That all these results are produced, or threatened by the construction of the Welland canal, an enterprize of a foreign government

> against the consequences of which it is the duty of the State to guard its citizens." We would draw particular attention to the

nel for the trade of lake Ontario and the sur- last paragraph. The immense depreciation of property in the northern, southern and ri-As long as the people were taxed to keep

to Montreal, not yielding a farthing to "the ble route from lake Erie to New York than vising measures to remove the present unjust revenue," no injustice was complained of; but by the Erie canal. An increase of 30 per taxes imposed on the farmer. now that this trade passes over 150 miles of cent. is equal to 11 cents per barrel of flour the Erie canal, vielding largely to "the reve- or 2 cents and 2 mills per bushel of wheat nue."-at least as we understand it-the State carried from Buffalo to Albany; to assert is called on to "guard its citizens." In plain that this is sufficient to divert trade from English, the canal forwarders, millers and New York to New Orleans, Philadelphia or others between Syracuse and Buffalo cannot Montreal is to show little knowledge of prices bear that any considerable amount of west in this country, where even the weekly flucern trade should pass via Oswego. They do tuations are at least as much. Disguise it as not object to its going down the St. Lawrence we may, the New York farmer is fleeced for to Montreal, but to build up a rival, and that the benefit of the western people, or the forrival Oswego! Though not unused to gales warders or the consumers here, it is immateat Buffalo they cannot stand a blow from that rial which. quarter. We asserted sometime since that the Welland canal was more for New York find it stated that "all these results are prothan Canada. We derive the benefit of an duced or threatened by the construction of the easier, cheaper and-more than all-earlier Welland canal." Now these results are not communication with the west; and when the threatened—they are and have been matters Welland canal yields a surplus beyond inter- of fact for some years; and they are exclues: and expenses, the people of Canada will sively due to the legislation of this State. draw a revenue from our trade: till that time The canal meeting at Rochester had the cause they must continue to be taxed for our conve- of two-thirds of the State tax under their very nience. Both countries have constructed use-noses: the enlargement of the Erie canal, less canals under the guidance of designing and that most unprincipled affair, the Genemen with little ability and still less integrity; see valley canal. The Welland canal has miliar denominations the measures, weights, taxation follows with tolerable certainty, uu-nothing to do with the matter. We confine ourselves to a general view of

COAL,

The Philadelphia Inquirer announces a new work on coal, by R. C. Taylor, Esq. We are happy to have it in our power to state that this gentleman is peculiarly well qualified for the task; not from hearsay, but from close personal examination of coal districts, which he had thoroughly examined and reported on. Mr. Taylor is also intimately acquainted with all the routes from the coal regigns to the seaboard, and can thus give information necessary to a complete knowledge of the actual value of any part of our numerous and wide spreading coal regions.

"A new work is about to be published, entitled 'Statistics of Coal.' It will embrace an immense amount of valuable matter, and will be comprised in a royal 8vo volumn of 750 pages, illustrated with maps. The compiler is Rich'd C. Taylor, Esq., and the publisher J. W Moore. Mr. Taylor, in his prospec-

""One part of our plan, requiring no inconsiderable labor, is the rendering into facountries to which we refer. adopted for our standards those of Great Bri-

Anthraern produce, which, more cheaply produced shilling per barrel of flour brought from the cites; of course form an important feature, especially in the United States. The lignites, he has some claim for relief from the suicidal loo, in their various modifications and condi-The nature of some of the soled bitu niens has, not unfrequently, been mistaken. Even the fluid bituments, the naptha and pctrolium; and, moreover, the asphaltes and the mineral resins, possess claims to notice. Finally, in treating of a certain class of combustibles, we are led to note that of tuif or peat; a substance entitled to much higher consideration than it has always enjoyed.

"'In the three hundred tables of coal statistics we have brought down the returns to the latest practicable period. In the thousand tables of coal analysis, we have inserted none without the sanction of the highest scientific authority. In these our classification has been partly mineralogical and partly geographical. For our authorities in geology, we have an extensive catalogue. So much as results from our own observations will, of course, be judged by its own merits."

Speaking of the payment of the interest on their debts, the Philadelphia Inquirer wisely

certainly demanded by "our republican in-supports itself with a penny postage, and yields stitutions," if they would even rival the limitit monarchy of Great Britain, in giving fair not support itself at the same rate; especially that the Postmaster General is, play to the energy and enterprize of her as by the use of steam, heavy mails can be trans-subjects.

We deplore the misunderstanding. We are sure that the whole commercial country will deplore it, and we think the difference between the parties too small, and the consequences too tigation is, that the whole difficulty has grown great, to be allowed to continue. The road asks for simple justice. That the same terms may that they have not been treated with even hand be conceded to it as are granted to others, and no more.

THE PROPOSED NEW RAILROAD.

A writer in a late number of the Boston Mail age of two cents, the Department would not support itself. The English P.Office establishment Companies for similar service. by considerations of the public wants. They have been aware that the existing road original

complaint since. They know that another 200-horse power, and running to various ports cial, which must as a necessary consequence route, a better and a cheaper one, was surveyed in Ireland, the Welsh and English coasts, &c. ensue; and in a commercial point of view, if at the time, and ought to have been chosen. They did not see why, because a company of interested individuals chose to build a road where Common Boiler.—Messrs. Bury, Curiis, & gation, it requires no conjuror to predict a far the travelling public did not want it, and at a Kennedy, of Liverpool, are now making two greater result, when the difficulties and deprevery great expense, the community should be steam-vessels for the Russian Government, the citations of inland travelling shall have been obliged to support such an expensive route, and boilers of one of which is to be of the tubular, surmounted, suffer the inconvenience and delay of the Ferry and that of the other of the flue descripton. The at the end of it. The time had arrived when a road should be built where the public wished it, same, and the result will be to establish a very tion of their Lordships directed to no less than and at moderate expense, requiring only moderate fares for its support. They have taken zealousy hold of the work, and depend for its might be expected, something larger than those support on the excellent location of the route, and the accommodation it will give to the public by placing the passengers, when they leave the cars, almost in the centre of the city of Boston. They also see the advantage of passing through Danvers, (a town which the writer in the Mail contemptuously calls a "mighty village,") which has a population of over 6000 inhabitants, and whose business will afford a large merchandize share of patronage from the western portion of of pig lead, which has completely exhausted the ern, through South Wales, to Fishguard, from Lynn, as well as from Sangus. They find the stocks held by the producers. These large ope- which port an easy and regular communication route unexpectedly favorable for the construc-tion of a cheap and durable road. We have the authority of a highly intelligent member of the Committee, who accompanied the Engineer over the route, for saying that the portion of it from Lynn to the junction with the Maine Road, (ahout seven miles,) scarcely varies ten feet from a dead level. Nature appears to have graded the route, and only left it for man to lay the superstructure.
With these advantages, (and we might name

many more,) the writer in the Mail will not deem the estimated cost (\$300,000) extravagantly low, especially when he sees it publicly stated that the Eastern Railroad propose building a longer road to Gloucester for \$200,000. We hope he will not now consider our estimate much too low.

The writer objects to the greater length of the new road, calling it three or four miles. Now the distance to the centre of the city is scarcely two and a half miles greater, and this will be accomplished before the boat gets half over the Ferry, and in many cases before she leaves the East Boston Depot, so that the saving of time will actually be in favour of the new route.— LOCOMOTIVE. Among the Irish railway schemes now before the public, there are several having for their terminus the town of Enniskillen, and all contributing to supply the traffic on the great lowing remarks on Irish railways, and hail with line of communication between Dublin and Belpleasure the announcement of an "Irish Rail-dalk and Enniskillen scheine, which was first way Gazette." So much has been said of these in the field; but the very fact of the shares in projects during the last few years, and so much is generally expected from them in ameliorating should operate strongly by way of caution to the condition of the people, that we know not parties who trust the interested statements of a to what nobler cause an Irish Journal can well prospectus, without having the means or opportunity of satisfying themselves. Suffice it to say, that there is not a single public conveyance The success and prosperity which have attended the construction and working of rail-the goods traffic is very triffing, certainly not ways in this country, render the daily increasing more than 100 tons per week—the country of a most difficult character, and to crown the whole, the Port of Dundalk is only known as being one If there be anything which is calculated to of the worst in Ireland. True, Sir J. Macneil remedy local grievances, and to repair the injuis a Dundalk man, which may account in some remedy local grievances, and to repair the inju-ries arising from social disorganisation, it must way for a blindness to these defects which marks

Next we find the Great North-Western, from Dublin to Cavan and Enniskillen, as recommended by the Commissioners. through a fine extent of country, much of which is unusually favorable for railway construction, and with a fair estimate according to the presenttraffic, this line may be considered as promising well.

The Derry and Euniskillen, being the third proposed, is only worthy of notice from the extreme folly which seems to have originated it. The passenger traffic of late has been insufficient to support a solitary public conveyance, which has in consequence been taken off the road. The Commissioners also reported "That they were satisfied that the expected intercourse through that country would not be sufficient to warrant the commencement of a railway for some time to come."

we may remark, that the country from Armagh to Ennishillen is very favorable—in proof of which may be stated the small cost of forming the existing canal; and from Clones to Ennishillen the road is almost level, the canal and by those who have money to invest in railways, that the risk is with the sharcholders, and with them only. All parade, therefore, of journal of great utility, and conducted with containing a fall of only about 30 feet sharcholders, should be looked upon with sustance of 23 miles.

This line, embracing picion, either as intended to conceal facts, or to being statement on the advantage of conveying cattle by railway, is extracted from the columns of the Railway Bell, a weekly journal of great utility, and conducted with containing the property of the guidance of travellers, as to starting of trains, &c., corrected up to the latest bound a fund of information, its claim to support.

is requisite before embarking capital without due which he himself is altogether protected. "Slight knowledge of physiology is sufficient to show us that unusual labor unavoidably produces a wasting of the animal substance: and even that slight knowledge is hardly necessary, since the fact is daily set before us by instances. The practice of driving fat cattle over considerable distances was, doubtless, resorted to in the absence of any means of conveyance whose cost was tolerable; but that it should be continued where railway or steamboat transit can be employed, must be attributed to blind adherence to usage, and neglect of the plainest principles on which the profit of the parties concerned depend. A long journey will, of course, walk flesh and fat off the bones where it had been laid with all the skill of the grazier, and at no little care and cost. This fact is presented with considerable effect, because with precision and the authority of actual experiment, in the sailing bill of the Enterprise steamer, which plies between Loudon and Boston. It is there stated that Mr. David Martin, of Wainfleet, sent five sheep to London to walk the whole distance on the road, and killed five others at home. The two lots were of exactly equal weight (858 lbs.) when alive. The carcases were weighed when dead, when it was found that the sheep which had walked to London weighed 435 lbs., and their loose fat 60 lbs.; while the five killed at home reached 489 lbs. their loose fat weighing 741 lbs. The total difference of weight amounted to 681 lbs., or 14 per cent of the original weight of mutton, and this was evidently the loss of meat occasioned by compelling the five sleep to walk from Lincolnshire to London. It is hardly necessary to point out the consequences of this important fact. Fourteen pounds of every hundred of the best of human food are absolutely thrown away best of numer took are assentially in the performance of such a journey by the living animals, not a single human being is benefited by the waste or the process. To abolish the practice would be equivalent to adding many thousands of acres to the grazing districts of the kingdom, and those of a kind to require no expense for management. Nor is this all. At the end of so long a journey, the hausting the source from whence they come—the and its flesh is, to say the least, less wholesome than it ought to be as human food. There can now be no excuse for the continuance of this practice, or if some districts still remain unprovided with railways, the want is likely to be very speedily supplied. Steam conveyance, both coasting and inland, now supplies or soon will supply, every grazing district with the means of sending its living produce, at reasonable cost, to the great seats of population, without waste or deterioration, and without unnewhich are intrinsically sound are rather impeded tition, to the relief of the remainder. The value cessary suffering to animals destined to die for valuated utterance of sounding names is but to would throw them back, an unproductive dead country the processes by which the various lead others on to the struggle.

which have hitherto prevented the establishment of this reasonable practice, they now exist no longer, thanks to the rapidity and economy of steam locomotion by land and water."

Whatever may have been the difficulties have hitherto prevented the establishment reasonable practice, they now exist no thanks to the rapidity and economy of locomotion by land and water."

E NEWCASTLE MANUFAC-uring Company continue to furnish at orks, situated in the town of Newcastle, Locomotive and other steam engines, corews, Wrought iron work and Brass on castings, of all kinds connected with boats, Railroads, etc.; Mill Gearing of description; Cast wheels (chilled) of altern and size, with Axles fitted, also THE NEWCASTLE MANUFAC turing Company continue to furnish at the Works, situated in the town of Newcastle, Del., Locomotive and other steam engines, Jack screws, Wrought iron work and Brass and Iron castings, of all kinds connected with Steamboats, Railroads, etc.; Mill Gearing of every description; Cast wheels (chilled) of any pattern and size, with Axles fitted, also with wrought tires; Springs, Boxes and bolts for Cars; Driving and other wheels for Locomotives.

The works being on an extensive scale, all orders will be executed with promptness and despatch. Communications addressed to Mr. William H. Dobbs, Superintendent, will meet with immediate attention.

ANDREW C. GRAY

President of the Newcastle Manuf. Co RAILWAY IRON, LOCOMOTIVES, Etc. The subscribers offer the following articles for sale :

Railway Iron, flat bars, with countersunk lbs. per ft. holes and mitred joints. 350 tons 2 by 15 ft. in length weighing 468 280 " 2 " 3.50 21

70 " 1½ " ½ 80 " 1½ " ½ 44 1.26 90 " 1 " 1 with spikes and splicing plates adapted there-

to. To be sold free of duty to State governments, or incorporated companies.

Orders for Pennsylvania Boiler Iron executed.

Railroad Car and Locomotive Engine tires, wrought and turned or unturned, ready to be fitted on the wheels, viz: 30, 33, 36, 42, 44, 54 and 60 inches diameter.

WHOLE No. 448, Vol. XVIII.

THE AMERICAN RAILROAD JOURNAL is the only periodical having a general circulation throughout the Union, in which all matters connected with public works can be brought to the notice of all persons in any way interested in these undertakings. Hence it offers peculiar advantages for advertising times of departure, rates of fare and freight, improvements in machinery, materials, as iron, timber, stone, cement, etc. It is also the best medium for advertising contracts, and placing the merits of new undertakings fairly before the public.

NICOLL'S PATENT SAFETY SWITCH FOR RAIL-road Turnouta

This invention, for sometime in successful operation on one of the principal railroads in the country, effectually prevents engines and their trains from running of the track at a switch, left wrong by accident or design. It acts independently of the main track rails, being laid down, or removed, without cutting or displacing them. It is never touched by passing trains, except when in use, preventing their running off the track. It is simple in its ortruction and operation, requiring only two Castings and two-Rails; the latter, even if much worm or used, not objectionable.

able.
Plans, Specifications, and all information obtained on application to the Subscriber, Inventor, and Patentee.
G. A. NICOLIS,
Reading, Pa.

TO IRON MANUFACTURERS.

The subscribers as Agents of Mr. Geo. Crane of Wales, having obtained a patent in the United States for his process of smelting Iron Ore with Anthracite coal, and holding an assignment of the patent obtained by the late Rev. F. W. Geissenliainer, are prepared to grant licences for the manufacture of Iron according to Mr. Crane's principle.

Work Shop, 86x35 feet, on the same moor with the shop.
Forge Shop, 118 feet long by 44 feet wide on the ground floor, with two large Water Wheels, each 16 feet long, 9 feet diameter, with all the Gearing, Shafs, Drums, Pulleys, &c., large and small Trip Hammers, Formaces, Forges, Rolling Mill, with large Balance Wheel and a large Blowing Apparatus for the Foundry.
Foundry, at end of Main Brick Building, 60x45 feet, two stories high, with a shed part 45\(\frac{1}{2}\)20 feet, containing a large Air Furnace, Cupalo, Crase and Corn Oven.
Store House—a range of Buildings for Storage, etc., 200 feet long by 20 wide.
Locomotive Shop, edjoining Main Building, fronting on Parker street, 5x25 feet.
Also—A Lot of Land on the Canal, west side of Parker st., containing 6000 feet, with the following buildings thereon standing:

Containing own teet, with the following stateding standing:

Boiler House 50 feet long by 30 feet wide, two stories.

Blacksmith Shop, 49 feet long by 20 feet wide.

MACHINE WORKS OF ROGERS, RETCHUM & GROS-

Vernot, Paterson, N. J.

The Undersigned receive orders for the following articles, manufactured by them of the most superior description in every particular. Their works being extensive and the number of hands employed being large, they are enabled to execute buth large and small orders with promptness and described.

Locomolive Steam Engines and Tenders; Driving and other Locomolive Wheels, Axies, Springs and Flange Tires; Car Wheels of cast iron, from a variety of patterns, aed Chilla; Car Wheels of cast iron with wrought Tires; Axies of best American refined iron Springs; Boxea and Bota for Care

for Cars.

Cotton, Wool and Flax Machinery
of all descriptions and of the most improved Patterns, style
and workmanship.

Mill Gearing and Millwright work generally; Hydraulic
and other Presses; Press Screws; Callenders; Latthes and
Toula of all kinda; Iron and Brasa Castings of all descriptions.

ROGERS, KETCHIM & GROSVENOR, Paterson, N. J. or 60 Wall street, N. Y.

MESSRS. EDITORS:—As your paper is devoted to the Male benefit of the public in general, I feel desirous to communicate to you for publication the following circumstance of us inconsiderable importance, which occurred some few days since on the Philadelphia, Wilmington and Baltimore Railroad.

days since on the Philadelphia, Wilmington and Baltimore Railroad.

On the passage of the evening Irain of cars from Philadelphia to this city, an axle of our large eight wheeled passenger car was broken, but from the particular plan of the construction, the accident was entirely unknown to any of the passenger, or, in fact, to the conductor himself, until the train, (as was supposed from some circumstance attending the case, Phal passed several miles in advance of the place where the accident occurred, whereas had the car been constructed on the common plan, the same kind of accident would unvoidably have much injured it, perhaps thrown the whole train off the track, and seriously injured, if not killed many of the passenger.

Wilmington. Delavare, Sept. 28, 1840.

Wilmington. Delavare, Sept. 28, 1840.

Wilmington. Delavare, Sept. 28, 1840.

The undersigned take pleasure in attesting to the value of Mr. Joseph S. Kite's invention of the Safety Beam Azle and Hib for railroad cars. They have for some time been applied to passenger cars on this road, and experience has tested that they fully accomplish the object intended. Several isstances of the fracture of axles have occurred, and in such the cara have uniformly run the whole distance with entire safety. Had not this invention been used, serious accidents njust have occurred. In short, we consider Mr. Kite's invention as completely successful in securing the safety of property and lives in railroad travelling, and should be used on all railroads in the country.

Jersey Railroad and Transportation Office, No. 1 Hanover st.,
New York.

TO RAILROAD COMPANIES AND MANUFACTURES OF RAILROAD MACHINERY.—The subscribers have for sale American and English Bar Iron, of all sizes; English Blister, Cast, Shear, and Spring Steel; Juniatia Roda; Car Asles, made of double refined iron; Sheet and Boller Iron, cut to pattern; Tiers for Locomolive Enginea, and other railroad carriage wheels, made from common and double refined B. O. Iron; the latter a very superior article.

and double refined B. O. Iron; the latter I very superior article.

The Tires are made by Messrs. Baldwin & Whitney, Locomotive Engine Manufacturers of this city. Orders addressed to them, or to us, will be promptly executed.

When the exact diameter of the wheel is stated in the order, a fit to those wheels is guaranteed, saving to the purchaser the expense of turning them out inside.

FOURTRENTH ANNUAL REPORT OF THE BOSTON AND LOWELL RAILROAD CORPORATION

The Directors of the Boston and Lowell Railroad Corporation hereby make their fourteenth annual report of their acts and doings, receipts and expenditures, under their act of

incorporation.
The total amount of capital paid in is \$1,800,000 00 The amount of current expenses for the past year, is Repairs of road and bridges, " engines and cars, 26,053 33 26,424 41

Fuel, oil, salaries, wages, loading merchandize, and all other miscellaneous expenses,

Interest paid more than received,

Charged to the repairs of engines and cars, on account of depreciation in value,

The amount received during the past year, is

For transporting passengers between Boston and Lowell bnly,

For transporting passengers in connection with Boston and Maine railroad, Eor transporting passengers

ville, Pa., a paper which gives the earliest and most authentic information of the vast operations going on in that wouderful district. This table distinctly points out the rapid increase of the trade in the several localities, and gives a clear and correct idea of the anthracite coal trade of Pennsylvania, from its very beginning to the end of 1844. Still the supply is altogether inadequate to the demand. in connection with the Nashua and Lowell road, For transporting passengers in connection with Concord railroad, -

For transporting merchandize between Boston and Lowell only, For transporting merchan-

dize in connection with Bost, and Maine railroad, For transporting merchandize in connection with the Nashua and Lowell road, For transporting merchandize in connection with the

Concord railroad, For transporting U. \$. mail, rents and miscellaneous,

8316,909 58 The number of miles run by locomotives 100,243

during the past year, is With passenger trains, 49,034 With merchandize trains, With miscellaneous, 15,097 164.374

The amount of profits divided during the past year is \$144, 000, being two dividends of four per cent. each, on a capital of 1,800,-

The amount of freight during the past year has been much greater than in any preceding one. We have carried,

To and from Lowell, for the 45,420 tons. factories, To & from Lowell, for the town, 16,214

To and from the Boston and 30.778 Maine railroad To and from the Nashua and 20 505 Lowell railroad, 151,731

Also, from the Concord railroad 4,731 cords of wood, equivalent in weight to about 12,000 tons more.

Our freight and passenger tariff has been reduced since our last annual report. It is as follows:

1st class cars for passengers from Boston to Lowell, 75 cents. 2d class do. 50 cents.

Merchandize generally at \$1 50 per ton: if in cargoes landed on our wharves, \$1 25 per ton, without any charge for wharfage. Coal, lime, flour, plaster, lumber, wheat, pig iron and salt, are taken in this way to a considerable extent. With the Lowell factories we have a special bargain. They furnish their own depots at Boston and at Lowell, and either load and unload the cars themselves, or pay us extra for so doing. We therefore charge them \$1 25 for all cotton or wool, and cotton or woollen goods, and \$1 per ton for all other articles.

The stockholders of the Woburn branch railroad, incorporated at the last session of the legislature, having unanimously voted at a meeting duly called for that purpose, to transfer their rights, privileges and franchise under their charter, to the Boston and Lowell railroad corporation, and the stockholders of the latter corporation having voted to re-ceive and hold the same by a unanimous vote at a meeting called for the purpose, at which a majority in interest of all the stockholders was represented, according to a section in the charter of the Woburn branch railroad, authorizing such a transfer and acceptance, this corporation has, during the past year, laid out and constructed the said branch railroad, which is expected to be opened for travel on the 30th of Dec., 1844.

The Woburn branch railroad is all within the town of Woburn, in the county of

Middlesex.

It begins at a point on the Boston and Lowell railroad, seven miles, and 3,781 feet from the depot of said road in Boston.

Thence it diverges to the west by a urve to the left 662, with a radius of 1,975 Thence curves to the left 775, " 2,000 " 2,739, course N. 24° W.15'. curves to the right 586, radius curves to the right 200, radius 3,000 46 curves to the left 274, radius curves to the left 274, radius curves to the right 237† radius straight 195 course N. 8° W. 6′.

ending near the centre village in Woburn. It has 7,091 feet of straight line. 2,7341 feet of curved line.

9,8251 feet total length. The grades of the road are as follows, beginning at the junction with the Boston and Lowell railroad.

362 feet, level. 5000 ft. ascending at the rate of 53 85-100 ft. pr. mile 16 54-100 39 60-100 2100 ft. 34 50-100 6631 feet, level. 98251

The whole ascent is 73 54-100 feet.

The road has a single track with a heavy T rail of 56 pounds to the yard, upon chesnut sleepers 7 ft. long and 6 inches in depth, 2 feet 7 inches apart, resting upon a bed of clear gravel, at least 2 feet deep. The rails are in lengths of 18 feet, and the joints are secured by a clasp chair of 20 lbs. weight.

The whole cost of the road thus far has been \$35,440 68.

The new stock which the Boston and Lowell railroad corporation were authorized to make for the purpose of defraying the expense of building this branch, has not as yet been created.

At the close of the accounts of the corporation for the present year, the directors, aware that a depreciation must have been going on in their stock of engines and cars, many of which have been in use ever since the opening of the road in 1835, have caused a valuation of the same to be made, to ascertain This valuthe amount of this depreciation. ation, made by the agent of the corporation, after a personal inspection of every engine and car, shows them to be worth at the present day not more than \$100,000. They stand charged in our books at their original cost, \$157,237 43. To meet a part at least of this depreciation, the directors have ordered \$30,000 to be charged to the expenses, and credited to this account, in order to prevent this perishable species of property from standing charged on their books at a rate so much above its real value.

The whole cost of the Boston and Lowell railroad, with its depots, cars, engines and appurtenances, and about 58 miles of single track, amounts to \$1,902,555 67, of which

Land for tracks and land dam-

\$73,909 48 ages, 276,079 48 Depot lands and buildings, 127,238 43 Engines and cars, 282,833 95 Iron rails, bolts and chairs, Bridges (66 in No.) and culverts, 196,831 58 Road, excavation and embank-

910.222 06 35,440 68 Woburn branch railroad, -

\$1,902,555 67

The directors herewith submit a statement in a tabular form, showing the capital, income, and expenses of the road, from its opening on the 24th of June, 1835, to this day, by which it appears that the surplus on hand on the 30th of November, 1844, after paying the dividends of that year, amounts to \$18,433 36, which is the whole surplus remaining undivided after nine or ten years ber, 1835, when the first annual settlement half of which was derived from withholding the assessments from the time when they the winter dividend of 1836, (in which year were laid, and deducting the dividend paid only 2 per cent. was divided,) has been absorbed by the necessary expense of taking up and relaying the first track, on which too vance on the par value. Since then, in the light a rail had originally been laid, as has nine years which have followed, the dividbeen more fully stated in former reports. ends have averaged seven and one ninth per The cost of this work was \$121,558 84, and cent. on the par value of the shares. is spread over the three years 1841-42-43. November 30th, 1845.

Cosh reecived for old rail iron sold

† Balance of interest account charged to expenses.

: Cost of rail iron for repairs, originally charged with rail iron for construction, and now transferred to its proper head.

Il Depreciation in value of engines and cars.

\$ Advance on 600 shares new stock sold at auction for account of the corporation.

The cost of a share on the 30th Novemoperations. The amount on hand in the of accounts was made, after the opening of year 1841, when it was largest, more than the road, including interest at 6 per cent. on

MISCELLANEOUS NOTICES.

THE BALTIMORE AND OHIO RAILROAD IN VIRGINIA.—The message of Governor McDow-ell to the Legislature of Virginia in relation to which we publish below, will attract the attention of our readers and elicit their commendation

for its good sense and propriety.

To persons at a distance, and unacquainted with the minute particulars which may influence opinions and feelings at the place of action, it must seem strange that a proposition to carry a valuable railroad through a long extent of her territory at the expense of the party asking the privilege, should meet with opposition in Virginia. It may be true that a portion of the State will not be directly benefitted by the work—but what a reason is that to give why another portion which should be benefitted by it must be denied the proffered advantage! It cannot be that any portion would be injured by so useful an improvement.

The message of Gov. McDowell, however, takes the proper view of the case. Virginia, if she refuses the use of her territory to the road, will only deprive herself of a benefit. Her refusal will not prevent the completion of the road to the Ohio river. There are other routes besides the projected one through Virginia; and efforts of the most earnest kind are now on foot to induce the Company to go direct to Pittsburg. Efficient means no doubt would be soon forthcoming if the Pittsburg and Pennsylvania interest should be brought to bear upon this project. The Company, however, are desirous of having the choice of the most eligible route.—

Balt. Amer.

BALTIMORE AND OHIO RAILROAD .- A COTrespondent at Richmond writes us that "the memorial of the Baltimore and Ohio Railroad Company is still before the Committee of the Virginia House of Delegates; its discussions having been thus protracted by the opposition of the various interests adverse to its prayer; and that President McLane having several times addressed the Committee during the progress of the argument, delivered his concluding reply at considerable length and with marked effect, on Saturday, the 18th instant. A decision of the Committee may now be expected within a few days, and the case will then come before the House for the consideration which its merits and importance demand."

The subject of the extension of the railroad to the Western waters is one of deep interest in Pennsylvania as well as in Virginia. A committee from Pittsburg is now in Baltimore, whose object is to induce the railroad company to extend the road to Pittsburg by the offer of an unconditional right of way, &c. If, therefore, the application now before the Virginia Legislature should fail, there is no doubt that a route will be offered through Pennsylvania on acceptable

ternis .- Balt. Amer.

On motion of Mr. Phelps, an order was adopted, calling on the President of the Baltimore and Ohio Railroad Company to report, at what rate, under an arrangement to exist for ten years, they would trasport coal and iron for, from Cumber land to Dam No. 6; and what amount of tons they would agree to deliver annually. Also to report what would be the relative cost of transportation by the railroad and canal, and by the canal alone, if completed to Cumberland. Also, what amount of stock, if any, they would take, in a company, saould the same be incorporated, to construct a railroad from Cumberland, to the coal region at Frostburg .- Balt. Am.

The House, after considerable debate, adopted by 35 year to 27 nays, an order submitted yes- was gone over in 271 minutes precisely, without

terday by Mr. Clarke of Washington Co., pro- any assistance from her sails, giving a speed of viding for the appointment of a committee of 9 4-5 miles per hour. The time required to ship route, and the western portion of the Baltimore the proceedings of the Clarksburg Convention, and Ohio Railroad, with a view to ascertaining the expediency of postponing the liens of the state on the canal, to allow the company to obtain means to complete the work; and for judging of the practicability of using the railroad as a feeder. -Balt. American.

> THE CHESAPEAKE AND OHIO CANAL. - When it is considered that this Company can obtain the means for its own completion without its costing to do, is, to postpone its liens from which it cannot receive anything until the canal is finished. it is indeed extraordinary that any opposition boats) 1,561; departures (exclusive of steam-should be made to so reasonable a request.

THE LOPER PROPELLER—A NEW IRON STEAMSHIP.—A beautiful model of an iron steamship of 300 tons, now building at Wilinington by Messrs. Bates, Harlem and Hollingsworth, for the Bengal Iron Steamboat Company, intended to trade between Boston and Bengal, is now to be seen at the Merchants' Exchange. The Loper propeller is attached, and the recent improvement of Mr. Loper is applied, so as to house the wheel in case of a storm at sea, or when other circumstances should render it necessary. The means by which this desirable object is attained is at once simple and effeetual. The wheel is fitted in a frame which supports the whole weight of the wheel, and thus relieves the shaft. The wheel, by being brought into a particular position, is uncoupled, and a chain working in the top of the frame is attached to the shaft, by a few revolutions of which the wheel is hoisted completely out of the water, and hangs suspended by the chain until it is wanted for use. The steam can then be applied to lower the wheel, it falls into its proper position, a coupling block is screwed over the joint in which the shaft of the wheel fits, and all is prepared to go ahead again. The frame supporting the wheel works in a groove, which keeps it steady, and at the same time causes the joint of its shaft to fall into the position for coupling with the main shaft. This arrangement is so complete, that the housing of the wheel can be accomplished by the engineer, without the application of any other power than that afforded by the engine, in less than five minutes from the time the order is given by the captain.

The ship now building at Wilmington is 140

feet long, 23 feet beam and 12 feet hold, and is to have two engines with 24 inch cylinders. She is to be completed by the 1st of April. The stern of the model resembles that of the U. S. steam-

ship Princeton.

The Loper propellers are rapidly increasing in number, and are generally admitted to be the form best adapted to either sea, river, or capal

THE ERICSSON PROPELLER.—Yesterday the barque Edith, recently arrived from Boston, sailed for China. This vessel is provided with an auxiliary steam power, for use in calm weather, or against moderate head winds. Her engines, two in number, are of 26 inch stroke, 18 inches in diameter, and work the propeller. They are so compactly and symmetrically arranged that to a spectator they appear to occupy not a great deal more room than two water casks. The distinguishing feature, however, of this application, is an apparatus recently patented by Capt. Ericsson, and now first used, for unshipping the in 1843, £213,328,972. propeller when the steam power is not required. In a trial of the vessel on the day before she sailed, a measured distance of 41 statute miles

seven, to visit the western section of the canal and unship the propeller, in a number of experiments, did not exceed 7 minutes.

The Edith is owned by Messrs. R. B. Forbes and Thomas H. Perkins, of Boston. She is of exquisitely beautiful model and finish, and no expense necessary to give her all the qualities of a fast sailer, has been spared. Previous to her leparture, she was visited by many of our ship owners .- J. of Com.

The Cleveland Herald of the 13th instant, gives the details of the trade of that port. From the state one cent, and all that the state is asked an examination of these we find that for 1844 the tonnage belonging to that port amounted to 11,-738 ts.; arrivals of that year (exclusive of steam-

Imports constwise for the same year \$5,670,622 Imports from Canada . . . 4,933,326 Exports coastwise Exports to Canada 579,711

Making a total of exports and im-

ports of \$11,195,702 During the same year there were 2,400 arrials and departures of steamboats, and the numper of men employed as mariners in the trade of this port amounted to 681,

The foregoing facts are taken from a state-nent, signed by M. Milford, the Collector, in which he enumerates also the articles of which the vast trade of the port consists. We wish the Collector of every port on the Lakes would fol-low the example of Mr. Milford, as we feel confident that no better arguments could be adduced in favor of the economy, advantages, and necessity of the Lake harbor improvements. Nat. Intel.

THE COAL TRADE .- The Allegany papers state that this trade is daily increasing, orders for coal reaching from all quarters .- Fred. Herald.

GOLIATH ENGINES .- Four of the largest locomotive engines ever constructed, are about to be built for the Sheffield and Manchester Railway. The cylinders are to be 18 inches, the stroke 5 feet, the wheels, six of them, 41 feet diameter, and all six coupled. The weight of the engine alone, when loaded with fuel and water, is 24 ions. It is calculated that on a level they will draw separately from 1000 or 2000 tons.

THE BRITISH POST OFFICE SYSTEM .- In the Senate, on Thursday, the President pro tem-submitted a report of the Post Master General, in compliance with a resolution of the Senate, relative to the operation of the British Post Office system, and the effect of the reduced rates of postage on the revenues of the Post Office. We make the following abstract of some of its contents:

The expenditures of the Post Office for the ear ending Jan. 5th, 1844, £977,140.

The gross revenue for do. 1,620,867.

The amount of revenue under the pennypostage system, as compared with the five years preceding its adoption, exhibits a £1,240,000.

The nett revenue for the year ending Jan. 5th, 1844, was £643,727.

But the expense of the packet service was £564,577.

Reducing the nett revenue to £79,150.

Estimated number of letters subject to penny postage, which passed through the Post Office

Foreign and Colonial letters, \$7.108,330. Internal Colonial letters, £2.025.348.
Post Offices in the United Kingdom, £4,758. The document was ordered to be printed.

We call the attention of Directors to the Tabular Advertisement of the New Jersey Railroad and Transportation Company on our last page. A similar advertisement for each of the principal railroads would afford to the traveller in our widely extended country, information which is at present beyond his reach, even had he access to all the papers in the United States.

We particularly request weekly statements of the traffic, also of the corresponding weeks of last year to be regularly sint to us. At present they are scattered over many papers, and are of little value, os they can never be found when wanted. The inaccuracies also are often very great.

We are endeavoring to devise a mole of advertising the rates of fare and distances of the principal railroads in the country, and have opened a correspondence on the subject with gentlemen connected with some of the most important works.

### AMERICAN RAILROAD JOURNAL. PUBLISHED BY D. K. MINOR, 23 Chambers excet, N.Y.

### Thursday, January 30, 1845.

Notice has been given of numerous applications to the legislature for charters, amendments, etc. The New York and Erie request permissiod to locate part of their line in Pennsylvania; the Utica and Schenectady and Syracuse railroads petition for an increase of capital to enable them to relay their roads with the heavy rail; the New York and New Haven railroad company ask for a charter from this city to the State line, and the New York and Albany company for an extension of the time at the end of which a certain quantity of work was to have been done. That these most reasonable requests will be granted would appear to be a matter of course, unless the railroad companies quarrel among themselves.

There are however other applications which will meet with strenuous opposition. The petition of certain persons in Troy to have that portion of the New York, Albany and Troy railroad, between Greenbush and Troy, struck off from the main line and erected into a "sovereign" work, in order to divert from Albany to Troy the trade for which the former city contributed so largely to the construction of the Western railroad. An application will also be made for permission to build a bridge at Albany to prevent the western trade from going round by at, say, Binghampton, Owego, Ithaca, Elmi-Troy. It is a contention between the rival cities.

kill Navigation Company, and will notice the enlargement in our next. Also the report of the Little Miami Rrilroad Company.

THE FARMERS AND THE RAILBOADS.

We think it proper to commence by stating, that if we oppose canals and favor railroads in any particular case, it is not on account of any objection to canals generally, but because we believe that railroads would give superior accommodations. For example, if the State of New York had speculated in railroads, instead of canals, and had bolstered them up in the same manner, we she be just as desirous to see the people allowed to use canals as we now are that they should be permitted to forward to and from the west by railroad.

There is, however, a grand distinction between the kind of accommodation offered by canals and railroads. By the canals, the farmer of western New York can send flour, pork in barrels and grain to market during seven and a half months of the year. The very same articles are sent from the cheap lands of the west, at a trifling additional cost of transportation, across the lakes, during the same period, and the consequences are only too well known in both country and city. By the railroad fresh meat and butter, poultry, fruit, eggs, milk, etc., may be sent to market throughout the year. The low rate of speed on the canals renders this impracticable during summer; and in the winter they are closed by ice. The above mentioned articles must therefore go by some other conveyance, or not at all. The only practicable conveyance is by railroad, but the use of that mode of transportation is prohibited by the government; hence the farmer loses the sale of his cheaply produced and high selling articles, and the city pays an exorbitant sum for supplies, which-though their present actual amount be immense, would not meet one-half the demand at reasonable prices.

In our last we endeavored to show the injustice of the State tax; but that is a trifling affair compared with the monopoly of the State government. For example, we will assume the average valuation of western farms, at \$5,000 each; then the mill tax for the support of the canals will be five dollars. Now, the difference in the value of a single hog, of the common weight of 250 pounds, in western New York, and in this city or Boston, is more than five dollars. A couple of dozen of common sized turkeys would sell for five or six dollars more in these cities than ra, Geneva, etc. Yet, \$5,000 is very far We have received the Report of the Schuyl above the average valuation-perhaps double.

Now there is no possibility of competition from the west in those products, and we con- the western papers: fidently assert that, with free access to market by railroads, several millions per annum following rates will hereafter be charged upon the would be put into the pockets of the farmers. Buffalo and Hudson railroad, we understand from would be put into the pockets of the farmers the Buffalo Advertiser, for the winter 1844-5, excluof western New York by the consumers of sive of State tolls:

"Freight tariff between Buffalo and Hudson river. Boston and this city, to say nothing of Albany, Troy, Worcester, Hartford, etc.

The By the passenger train, per 100 pounds, By the freight train reports of the New York and Erie railroad 1st class merchandize, company show that a canal on the line of that road would have yielded as little as the 4th "flour, meal and salt, -Chenango canal; a mere nominal income. But we have other evidence and direct to the point. Some years since the State-virtually -prohibited the great majority of her citizens from travelling in steamboats. Fortunately a higher authority overruled this audacious assumption of power over the free this State—and now, not only do the people numerable landings on the rivers and bays, a large proportion of which produce could never have reached us, had the State been permitted still to sway her leaden sceptre over the energies of our citizens. The difference will be as great with railroad as with steamboat emancipation. The steamboat skirts the shore to landings whence roads lead into the interior. The railroad plunges at once into the bowels of the land and drains the produce from either side like a mighty river and its tributaries. The present travelling between Albany and Buffalo at the rate of 15 miles per hour in comfortable cars, as compared with the former mode by stage, at the rate of two miles per hour (often walking, or rather wading half the way) will show what may be expected, when our citizens are no longer trammelled by legislative enactments as to the time and mode of transporting western freight. The difference will not be less in the latter than in the former case. We may incidentally allude to the railroads of New Jersey, which bring large quantities of fruit and vegetables to this city. Nothing of this kind exists on the line west of Albany—it would be a reflection on the "State canals," and might tend to dangerous consequences.

But some will ask, can the railroads carry of these advantages. That the public men than the winter rates by railroad to Boston. of the State believe they would, is sufficient-

1

We find the annexed rates of freight in tance to Albany, we have a charge of \$10

" Freights between Buffalo and the Hudson .- The

"Wool and feathers unpressed, and sheep pelts, will be charged twice second rates.

"State tolls on produce of the country generally, 4½ mills per mile, per 1,000 pounds, or 15 cents per 100 pounds from Buffalo to the Hudson river.

"On merchandize, 9 mills per mile, per 1000 lbs., from Buffalo to the Hudson river."

barrel, exclusive of canal tolls, about thirty-lest in this question. The line from Albany gifts of nature—the rivers, lakes and bays of five cents. The average rates during the to Buffalo is the only one in the Union on season of navigation are seventy-five cents which there is a very large general traffic travel by steamboat whenever they please, per barrel from Buffalo to Albany, carried in existence, and consequently offers the but an immense quantity of produce is daily in large quantities during the best season of best opportunity of testing the capabilities of brought to this city by steamboats from in- the year, and with considerable return the railroad for the business of transportation freights of merchandize. Now, this is twen-in all its branches. ty-five per cent. less than the charge by railroad, at six times the speed, during the sus-many and such varied topics of interest, that the least business to indemnify them for the shall conclude our present remarks by exing accommodations which are idle during State tax-it would be better for the farthe seven months of the year when they mers, of all those portions of the State which should be most busy. In short, under every can be materially benefitted by railroads, to disadvantage, with which even legislative in- pay all the canal deficiencies which comgenuity could fetter their energies and capa-plete emancipation might produce than to bilities, the railways have shown the vast ben- suffer longer under the present most wretchstricted use, as enjoyed by the inhabitants of taxed and denied the use of railroads. The other States and foreign countries-for few canal deficiencies could, under any circumof our readers can doubt, that it would be stances, scarcely reach a million per annum, more profitable for the companies to carry and the markets of this city would benefit flour throughot the year at 75 cents per barrel (two cents per ton per mile,) than du-that amount. ring the winter only at \$1. Those who are more intimately acquainted with the cost of in this city is entirely unknown in the countransportation on railroads know very well, that 60 cents per barrel through the year would pay much better than \$1 during winter only. On the Eastern Railroad, in Massachusetts, the winter rates are 35 cents per barrel of flour carried 200 miles, or at the rate of 56 cents for 320 miles of railroad portant, then, would be a measure which from Buffalo to Albany. The average cafreight at rates which will insure all or any nal rates are, therefore, 30 per cent. higher ets of the farmers? Let no one pronounce

ly plain from the pertinacity with which cheaply than those articles the transporta-country and city prices, and has obtained they cling to the "peculiar institution;" but, tion of which by railroad we consider of some idea of the almost miraculous, manner as we place little value on their opinions such vast importance. A charge on these in which the demand in city markets inwhen against us, we have little inclination of four cents per ton per mile will pay very creases with a diminution in the prices of to weaken our position by such "auxiliaries." well; and, assuming 250 miles as the dis-the supply.

per ton, or 1 cent per pound to that city, and less than that sum thence to Boston. By the Housatonic Railroad to New York the cost will be about 3ds of a cents per pound, or say a total cost of one cent per pound. But this cannot be expected until the freighting business is thrown open to competition. It will require large investments in cars, engines, warehouses, additional portions of track, and a well arranged system of doing business. Without these, the attempt to do a large general trade can never succeed, and such expenditures will not be incurred until the use of railways, "ad libitum," is accorded to our citizens. All friends of in-Flour is therefore charged one dollar per ternal improvements have a peculiar inter-

The discussion of this subject brings up so pension of navigation only, at the most ex- it is difficult to keep within the limited pensive time of the year, and when there is range we prescribe to ourselves, and we great expense they have incurred in prepar-pressing the opinion, that-hard as is the efits the people might derive from their unre-ed arrangement, by which they are both both producer and consumer to many times

The consumption of produce of all kinds try, and could scarcely be credited by persons who have given little attention to statistics. An increase of half a million in the canal tolls is considered a matter of general congratulation, though it is all required to pay for the canals. How much more imwould put five times that sum into the pockthis statement overdrawn until he has made But flour will be carried much more himself acquainted with the difference in

ABULAR STATEMENT, exhibiting in detail, the operations and various actual expenses of working the "Main Stem" of the Baltimore and Ohio Railroad, during the year ending Sept. 30th, 1844; and also the amount of receip's for transportation of passengers, tonnage, mails, etc.

stated that after deducting the expense of horse power in the Surplus revenue as shown by secretary's statement,
streets of Baltimore, the cost per mile of running the trains has been 513 cents; and that including horse power, it has been 548-19 cents.
The expenditures common to both passenger and burden trains, have been divided in the proportions of the number of miles run by the locomotives with JAMES MURRAY, Engineer of Muchin ry and Repairs. trains of each description.

In introducing the report of the Baltimore and Ohio railroad company in our December number, we observed:

"We would draw attention to two important points towards the establishment of which the Baltimore and Ohio company have contributed so largely. These are firstly, the very large amount of business which a railway through a thinly settled country will draw to itself, and secondly, the views presented as to the actual cost of transportation on works with the gradients and curves of the Baltimore and Ohio

railway. Both positions are again confirmed by the experience of the Western railroad of Massachusetts.

"It seems necessary for us to give the following report for other reasons. We shall be obliged frequently to refer to it during the coming winter in discussing the proper policy to be pursued in this State, and especially in pointing out the causes which have so long delayed the re-commencement of operations of the proper policy to be pursued in this state, and especially in pointing out the causes which have so long delayed the re-commencement of operations. rations on our greatest undertakings.

We had especial reference to the Erie railroad in this last remark, and will now the Erie company, starting with all the adgive our reasons for believing that the pres- vantages which the experience of the other ent condition of that work is not owing to had conferred on the country at great exany insuperable or inherent defect in the pense to themselves. The work done is said project itself. No argument or calculations by the directors to be well worth five milto show the advantages of any contemplated lions of dollars and the following statement, undertaking will influence the public like a which we find in the papers and presume to end, the length of the railroad in use was 46 miles-

BALTIMORE AND OHIO AND NEW YORK AND reference to some work, similarly stuated, which has done what the new one promises to do. The Baltimore and Ohio railroad is the only work with which the Erie can be compared, and, taken altogether, we consider its advantages equal to those of the fornothing in the above statement. Now after contending with engineering, financial and legislative difficulties, altogether without a parallel in the history of American railroads, we find that, by an expenditure of \$7,5 600,000, they have put into efficient opera-

Let us now see what has been done by

be authentic, shows what the expenditure of that sum has accomplished

"While strenuous efforts are made by the friends of this great work to ensure its speedy completion it may be well to submit to the public the statistics of its success thus far:

The road was opened for business, to Goshen, on the 23d of Sept. 1841. The gross receipts for mer to this time; for coal has contributed the year ending Sept. 1841. The gross receipts for the year ending Sept. 30th, 1842, were \$101.587 62 pothing in the above statement. Now after 44 . 146 1844 158,285 28 Of these amounts, the parts derived from the rail-

oad, proper, each year, were as follows \$78,525 67 1st year, 95,735 41

122,769 95 The remaining sums having accrued from the steamboat. The net profits of the failroad, during each year, were as follows:

\$31,732,96 1st year, 43,215 85 55,790 02

The number of passengers was, for the first year. 51,974; second year, 63,610; third year, 81,173.

The number of tons of freight, of 2000 lbs. each was, for the first year, 23,867; second year, 28,996;

third year, 36,369.

The income on the railroad during each year was made up as follows:

\$34,848 30 35,064 55 1st year, \$43,677 37 60,070 86 **76,04**6 50 21 45,402 45 Middletown, 53 miles."

It will be seen that in the last year the receipts were \$122,769, while at the ratio of the Baltimore road they would have been about \$440,000.

To persons acquainted with the particulars this may appear an unfair comparison, but it is the view taken by the vast majority, and, explanations and apologies to the contrary notwithstanding, remains a "great The various interests along the line, fact." the unfortunate laws requiring the road to be located in this State exclusively, and directing the work to be commenced in every county at the same time offer no justifications in the eyes of the shareholders. Their reply is, that trusting all to the judgment and good faith of the directors it was the duty of the latter to oppose all restrictions calculated seriously to affect the interests of the company, and to incur no liabilities beyond mere preliminary expenditures until they could conscientiously state that all the important interests of the shareholders had been properly secured Suppose the Baltimore and Ohio Railroad had built a few miles at either end, and had done little patches of work all along the line, the re ceipts would have borne a strong resemblance to those of the Erie road. But even taking the fifty miles in very inefficient operation; as the directors state, costing about two and a quarter millions, and we have only a gross income of 5 per cent., equal to the nett income of the capital invested in the Baltimore and Ohio Railroad. We are, therefore, forced to admit that the management has been unfortunate or that the project is worthless. We have already stated that we consider it equal to the Baltimore and Ohio road in resources, and conclude with expressing our belief that, "had wiser counsels prevailed" an income of 5 or 6 per cent, on the amount expended would have been certain. Under such circumstances the completion of the work would have been insured—not improbably by this time.

GENERAL VIEW OF STATE WORKS.

PHILADELPHIA BOARD OF TRADE .- After on the State, the Board proceeds to recommend a reduction of tolls, to draw trade to their canals.

Prior to the opening of the state canals last spring, a letter was addressed to the canal commissioners, asking a further reduction on the rates of toll on the public works, in order to enable successfully with the route opened to the seaboard through neighboring states. It was believed that such reduction would augment the revenue of our own commonwealth. The reduction proposed was in the form of a drawback on all arvicles passing along the whole line of the state works between Pittsburg and Philadelphia. The application succeeded in part, and during the past season a drawback has been allowed on flour, bacon, pork, and several other articles of produce. But no material reduction has been made in the rates generally. The consequence is, that a vast amount of produce from the western states, including some from the western part of Of these eight leading articles of Western our own state, annually seeks the seaboard by description of bituminous coal has been received

The line of steam tow-boats between this city and Havre de Grace, which was established through the instrumentality of this Board, has fully realized the anticipations of the early friends of the enterprize. During the past year, 2353 boats, most of them larger than that vessel in which Columbus made his perilous voyage for the discovery of a New World, have been towed between Philadelphia and Havre de Grace. Inget our own bread stuffs by this route, but also be able to supply a considerable part of New be able to supply a considerable part of New are not included. The lists embrace only those of the managers of this company. The following comparative statement of the business on the Tide Water and Chesapeake and Delaware Canals, will best elucidate this subject:

A Memorial was presented at the last session of the Legislature, asking for the repeal of the alluding to the injury the inspection laws inflict Non-Imprisonment Act of 1842, so far as that act had reference to persons not residents of this state. Similar memorials, signed by a large number of citizens, were presented, but the applications were not successful.

The utility of trucks upon the state railroads has been fairly tested, and the experiment has of toll on the public works, in order to enable been entirely successful. An application has those engaged in the Western trade to compete been made to the present Legislature, to increase the number, and thus facilitate the transportation of produce and merchandize between the Grent West and the seaboard, by the Central or Pennsylvania route.

> The management of the Lehigh Canal Co. was never more efficient and vigorous than now; and we hope that a liberal policy will be pursued towards this association—by our state legislature in relation to an outlet for their coal and produce on the Delaware. The interests of northern Pennsylvania should not be lost sight of.—Phil. Inquirer.

CANNEL COAL .- A couple of barrels of this Produce, it would seem that Cincinnati alone the circuitous but cheaper route of the Eric Canalships more than one half of the entire receipts at New Orleans, leaving to the several ports things, and add materially to our present trade, and the Chicago at New Orleans, leaving to the several ports things, and add materially to our present trade, can see a quantity of it burning in the grate of above this on the Ohio river, to Madison, Lou- An application has been made to the present the reading-room.—Phil. Ladge.

Two per Cent. Fund-Railroad Bill .-After much discussion and much unnecessary (from Dublin to Mullingar and Athlone) in condelay, the bill appropriating the two per cent. fund (from the sale of lands in this state,) to the the royal canal, and converting one of its banks purposes prescribed by Congress, has at last to the purposes of a railway, for a distance of passed the House by a decided majority, and 92 miles from Dublin. All preliminaries hawill, there is now little question, pass the Sen-ving been now concluded, upon terms satisfacate, and we trust to be able soon to chronicle the tory to both Companies, the prevailing opinion Parliamentary expenses, final accomplishment of a measure of so much seems to be that this will turn out one of the interest to our citizens, and this section. This best projects in Ireland, on account of its direct fund, it will be recollected, was, by an act of course through the centre of the kingdom, and Congress, Sept. 4, 1841, relinquished to the state, its connection with the river Shannon, at the to be used exclusively for the construction of a two important towns of Athlone and Longford. line of internal improvement from West Point, The Royal Canal will afford two termini in in the direction of Jackson, Miss., and also a line Dublin of incalculable advantage; one for pasconnecting the Tennessee River with the waters sengers, almost in the heart of the city—the of Mobile Bay. The fund was accepted by the other for cattle and goods, at the river Liffey Legislature in 1841, on the terms prescribed.

Strenuous efforts, prompted by local jealousies and other causes, have been made to frustrate the designed application of the tund, and divert along the route, and also because the traffic may it to other purposes, and have defeated, until the be materially interfered with by the obligation present moment, the bills for its appropriation. The present bill divides the fund, which amounts the company, of keeping the navigation of the to \$220,000—one half to the Tennessee and canal in an unimpaired state, for the transit of Coosa Railroad, for the purpose of establishing a merchandise of the heavier kind, and for agriline of communication between North and South cultural produce. Alabama, from a point on the Tennessee to period. Of the great importance of this road to and Ireland amongst a sound constituencyour section and Mobile as bringing within reach and that the directors, who are both wealthy of these markets a vast and fertile country, we and respectable, hold a large number in their have often spoken, and our citizens, who have own hands. looked at the subject, are sufficiently aware .-Augusta Chronicle.

IMPORTANT ROUTE .- We perceive by a Jacksonburgh (Michigan) paper, that a company has sent a petition to the legislature of that state, offering to improve for \$150,000 the Grand River, from its mouth to Jacksonburgh, so that steamboats can navigate the same. They include in the offer the building a steamboat, and agree to give good security for the fulfilment on their part. There is said to be no doubt of the feasibility of this route, which, when completed, will form an important link in the route from the "Great West" to "Down East." It will form a direct steamboat route from Milwaukie to Jacksonburgh, 75 miles from Detroit, and reduce the distance from Milwaukie to Detroit to 24 hours' ride.

### IRISH RAILWAYS.

We take the following from the Railway

Georgia and Alexana Improvements.— of that country have caused no little stir—and miles of railway open in 1839. None of these Apart from any consideration of interest, because of their connection with the internal improvements of our own state, the following paragraph from the Alabama Journal cannot but be at the difficulty of obtaining sound information, but it is a startling fact, that the apart which the startly interest by all who feel a just wide in our case of participation of these are single, and others are of slight at the difficulty of obtaining sound information, but it is a startling fact, that the

A great deal of interest has attached to the proceedings of the Great Western Company, sequence of the novel proposition of purchasing and docks. A doubt has been raised as to whether such a railway can be efficiently worked, on account of several sharp curves

The facilities which the canal will afford for Will's Creek on the Coosa, a distance of 40 conveying the materials along the entire course miles. From the proposed terminus of the road, of the line during its construction, will matethe Coosa is navigable down to the Tch Islands rially enhance the already favorable engineerat all seasons. From thence the proposed line ing features of the line of country. The rivalof communication is by a Railroad intersecting ry of a competing line from Dublin to Galway the Montgomery and West Point Road at the has given rise to a good deal of acrimonious nearest point. The other half has been loaned feeling, which has been exhibited lately in the to the Montgomery and West Point Railroad publication of counter statements in the public Company on adequate security, and will enable newspapers. We are informed, however, that the directors to complete the road at an early the shares are equally distributed in England

ENGLISH AND FOREIGN RAILROADS .- It is remarkable, that though iron, and all engines and apparatus made of iron, are cheaper here than anywhere else, while labor, properly estimated, is not dearer, yet railways are made at a much smaller cost in other countries than in Britain. The two most important railways in France are the lines from Paris to Orleans and Paris to Rouen. We have travelled on both, and could not discover that they were in any respect inferior to our own great lines. Now, the former cost 24,800l. per mile; the latter, 24,000l. The three leading English lines—viz. the London and Birmingham, the Great Western, and the South Western, cost 47,000l. per the Post office service gratuitously, and the mile; and the average cost of all the English passenger lines was 34,600l. The small state hour and a quarter would be the time for the of Belgium has more than 300 miles of railway in operation. Some are single, but the double railways measure 272 miles; and the cost of construction of these, including stations and car- Pyrenees states that a proposition has been made Times;

We perceive from the various Irish journals, Some of the lines pass over very uneven and that our remarks on the subject of the railways difficult ground. The United States had 3500 Aviles (Asturias) to Madrid. Its capital is said

best American railways, which are said to be very little inferior to ours, are made at one-third

Mr. Laing, from whom we have borrowed something like an average :-

British Railways.

Parliamentary expenses,			Per mite. £1,000
Law charges, engineering, and d	irecti	on,	1,600
Land and compensation, -	-	-	5,000
Railway works and stations, -	-		26,000
Carrying establishment -	-	-	3,000

Paris and Rouen Railway. nothing. Law charges, engineering, and direction, 800 Land and compensation, -2,300 Railway works and stations, 17,000 Carrying establishment, 2,400

Belgian Railways. Parliamentary expenses, nothing. Law charges, engineering, and direction, 430 Land and compensation, 2,750 Railway works and stations, 10,600 Carrying establishment, 2,350

A part of the excess of expense of the British lines over the continental is accounted for by the greater weight of the rails, and the greater amount of accommodation required at the stations. But, apart from these heads of charge, Mr. Laing estimates the additional outlay equalities on British railways by the forms and mode of proceeding they are subjected to, at 2700l. per mile. Hitherto it has actually been much more. The parts of the outlay that chiefly require the pruning-knife are the following:-First, the expense of carrying the bill through Parliament, which often amounts to 1000l. per mile. It is scandalous that a company should be compelled to pay 100,000l. for permission to make a work like the London and Birmingham railway, which is an inestimable public good to one-half of the kingdom. Secondly, the law expenses are unduly increased by our burdensome stamp duties affecting the sale and transfer of land, and by the general costliness of our legal proceedings. Thirdly, what Mr. Laing says is strictly true, that companies are forced to make great sacrifices to purchase support or buy off opposition; and that they are made to give twice the value for their land, and to pay extravagant sums in name of compensation. Useless expense, too, has often been incurred in the execution of railways, from the ambition of engineers to render the works monuments of their own skill, by making all the parts unnecessarily strong or unnecessarily perfect.—London Mining Journal.

RAILWAYS IN ALGIERS.—It is a question at Algiers, whether a line of railway shall be granted in perpetuity between Algiers and Blidah. The party who solicits this concession promise, as they say, in exchange, to convey journey between the two places.

RAILROADS IN SPAIN .- The Observateur des

MESSES CDITORS:—As your paper s devoted to the benefit of the public in general, I feel desirous to communicate to you for publication the following circumstance of so inconsiderable importance, which occurred some few days eince on the Philadelphia, Wilmington and Battimore

of a lucousiderable importance, which occurred some few tays since on the Philadiphia, Wifmington and Battimore Railroat.

On the passage of the evening train of cars from Philadelphia to this city, an axle of our large eight wheeled passenger car was broken, but from the particular plan of the construction, the accident was entirely unknown to any of the passengers, or, in fact, to the conductor bimself, until the train, (as was supposed from some circumstance alterning the case,) that passed several niles in advance of the place where the accident occurred, whereas had the car been constructed on the common plan, the same kind of acculent would unavoidably have much injured it, perhaps thrown the whole train off the track, and seriously injured, if not killed many of the passengers.

**Wimington, Delaware, Sept 28, 1840.**

**The undersigned take pleasure in attesting to the value of Mr Joseph 8. Kite's invention of the Safety Beam Axle and Hub for railroad cars. They have for some time been applied to passenger, cars on this road, and experience has tested that they fully accomplish the object intended, Several instances of the fracture of axles have occurred, and in such the cars have uniformly run fite whole distance with entire safety. Had not this invention been used, serious accidents nust have occurred.

In short, we consider Mr Kite's invention as completely successful in securing the safety of property and lives in radiroad travelling, and should be used on all railroads in the country.

**DOIN FRAZER. Agent,**

JOHN FRAZER. Agent,

## MONROE RAILROAD AND BANKING evidence before them, the legislature have here-COMPANY.

The undersigned Committee, instructed by a Resolution of the Board, to examine into the actual condition and resources of this institution, and to report thereon, beg leave to submit the subjoined statement, as the result of their investigations and labor.

Upon a careful and thorough examination of the books of the company, we find that the entire amount of liabilities of the Monroe Railroad and Banking Company, on the 1st of December,

1844, are as follows-\$186,010 00 Bills in circulation, 247,754 16 Bonds 13,872 00 Certificates 44 24.818 00 Checks 1,442 27 Railroad Tickets, 47,619 70 Time Checks, 228 00 Due Central Bank, Unclaimed Dividends, 14,835 02 132,631 35 Individual Deposits,

Amounting in all to the sum of \$669.210 50 To meet this amount, the Company have assets as follows, to wit-

1st, The Monroe Railroad. The amount expended for construction of the Railroad, and for purchase of machinery, &c. Macon to Fursyth, \$526,630 29

Extension above For-887,933 15 syth, \$1,414,563 44

\$196,465 74 2d, Notes lying over and in suit, 6.000 00

Due by individual subscribers to 133,425 46 Extension Stock, Due by State of Georgia, to Extension Stock, 200,000 00

\$535.891 20

Your Committee regret to say, that, upon a detailed examination of the item, "Notes lying over and in suit," to the amount \$196,465 74they find only \$33,824 40, that can be put down as positively good. The item \$6000 in Checks, are vouchers for cash. The entire amount of \$133,425 46, due from individuals for subscription to the Extension Stock, your Committee believe and consider to be good. It is possible that it may be necessary to compel payments from delinquent subscribers in a few instances; but, from information upon which they can rely, your Committee are warranted in expressing the opinion that the whole amount so due and unpaid by individual subscribers, can be collected without much difficulty; and, therefore, this item of the assets may be set down as positively good.

The amount due by the state of Georgia for subscription to the capital stock, we likewise set down as among the available assets of this com-pany; for your Committee cannot bring themselves to doubt, that this will be, ultimately, paid, for the following reasons-

This subscription by the state, of \$200,000 to the capital stock of the Monroe Railroad and Banking Company, was made under the sanction of an act of the legislature, which expressly requires that, upon due evidence of certain conditions being complied with on the part of this company, the Governor shall subscribe for 2000 fulfilled the conditions required in the act of the legislature, (to the entire satisfaction of the executive,) and the Governor having no discretion of the state for the amount of stock so author-

Your Committee are aware that, with this improvements."

[1

tofore declined to be bound by the obligations of pretty rapidly verified. Referring to the prothority, between the state of Georgia and this posed Canton and Akron Railroad in Ohio, the company, virtually repudiating the authorized act of the chief magistrate, where they had left him no option. Your Committee are aware, also, that although individual delinquents can be ful and candid perusal and examination of them readily coerced through our courts of law, yet, to every reader, as we humbly conceive them to that the amount due from the state, as author- present interesting matter for reflection, to every ized by act of the legislature, cannot be collected by any similar process—the law-making power remaining above the reach of law-still your Committee confidently rely upon the equity of the case, to influence another legislature to an act of sheer justice to the stockholders of this commany.

Your Committee are not without strong hope that the legislature will not lend themselves to from the fact, that it will crease a market and perpetuate a measure of gross injustice, by any demand for them at your door—they will comlonger delaying to fulfil the obligations of their mand un increased price, because they can, at contract with this company.

Under these impressions, your Committee cannot reconcile it to themselves to class this of \$200,000 is put down among the available will be required to transport them.

of the company at this time are, as above stated.

While the assets, available in time, 373.249 84 amount to

Showing a balance of \$295,960 66 being the excess of the company's liabilities over and above the assets.

Your Committee would call the attention of the creditors generally, as well as the stockholders of this company, to the accompanying communication from the general agent, I. D. Gray, Esq., in relation to the embarrassed position of the company; with his suggestions as to the mode of in the event of a railroad being completed." liquidating the remaining liabilities of this institution. And, in conclusion, your Committee would earnestly recommend that some such arrangement as that therein proposed, may be acted on at the ensuing general meeting of stockholders, believing, as we do, that it would be the means of retrieving the fortunes of this institution, and placing her once more on a firm and stable

### RAILROADS IN OHIO.

We are agreeably surprised to find that we have not overrated the energies of our citizens either in the east or west: in proof of the former, we refer to the extraordinary spirit, intelligence. and perseverance, manifested in favor of the Portland and Canada Railroad, and the last mail brings the welcome news, that even in Ohio, where private enterprise has been almost annihilated by a "system" of government jobbing and political engineering, a determination is manifested to undertake works of the opposite character. Only four weeks ago we observed-

"The unfortunate but natural result of a system' of government works-heavy taxes on shares of the stock of said company. Now this all, whether benefitted or injured causes all company did furnish incontestible proof of having public undertakings to be vie ved with suspicion, or even with a still stronger feeling. Private enterprise has now to construct all the really important works in the state, and, in addition to the in the matter, accordingly subscribed on the part difficulties inseparable from such vast undertakings, has to clear away the odium with which

The prophecy in the last sentence has been

"We have, above, given the proceedings on this subject thus far, and we recommend a carevalue will be increased thereby—the value of your agricultural productions will be enhanced all seasons, be transported to the head of the market at a cheaper rate than can be done by any other means, and they will be of more value legal and just claim against the state of Georgia, to you, for the reason that it will take less of your in any otherwise than as one among the good, time, and cost you less money to dispose of them, undoubted claims eventually. And this amount in consequence of the diminished distance you

" To those having coal banks on their land, Thus, therefore, by reference to the foregoing and there are many such, the interest is still statement, it will be perceived that the liabilities greater. It will more than quadruple the demand for that article for transportation to the \$669,210 50 lake shore, to supply the great and increasing market in that quarter for that description of fuel. The mechanic, the laborer, the manufacturer, the merchant, and the capitalist, are all deeply interested in the success of the project-because it will increase the demand for what each has to furnish. Nor will this impetus to business be merely temporary. It will continue while there are fertile fields to cultivate, yielding their rich fruits-while the mines are unexhausted-and while there are industry and enterprise to carry on the vast business which can and will be done

> LITTLE MIAMI RAILROAD .- The total amount expended on this road to 1st December, 1844, is \$575,526 49, of which sum \$123,871 46 was spent last year. The receipts from all sources have been \$597,697 87, the subscriptions to capital stock \$525,950 00, the indebtedness of the Company is \$99,313 19, their means of meeting it \$98,417 60.

Received for the year ending December 1st, 1844-

For carrying passengers. \$8,052 95 freight, 10.579 31

Total, \$18,632 26 The cost of working the road for the year ending December 1st, has beeu-\$2,841 62

For repairs of track, " of machinery 642 37 " wages of men, fuel, horse power,

5,152 79 renewal of superstructure, 438 63

Total. \$9,075 41 Leaving a nett revenue over current

expenses of - \$9,556 85 The total amount received for the year ending December 1st, 1842, was 9,912 49 Expenses, 6.868 57

Leaving, as a nett revenue, It will be seen, on comparison, that while the receipts have increased but 100 per cent., the the state has clothed the very name of internal sum realized over the current expenses of management has been increased more than 300 per last annual report, and affording gravitying proofs of the ultimate productiveness of the work when it shall have been extended to Xenia.

It should be remembered, too, that the road was not opened for travel to Deerfield until the month of July, and the further extension to its present terminus, at the moudr of Todd's Fork, was not accomplished in time to realize any considerable bencht from it during the present liscal year. From present indications, the estimate of receipts for the coming year would be justified without an extension of the road, and the completion to Xenia cannot fail to swell the amount, particularly if completed at as early a day as we are now justified in helieving.

### NORTHERN RAILROAD MEETINGS.

We find all the following in the N. H. Patriot of the 30th ult .-

We have received, just as our paper is going to press, a notice of a railroad convention at Orford, to promote the purpose of building a railroad, connecting with the proposed northern road at Lebanon or Canaan, and thence to run up the valley of the Connecticut to some point where it may unite with the contemplated railroad from the eastern line of Vermont to Stanstead and to Montreal. The convention is to be held at Orford the 7th day of February next, at 10 o'clock

A large and highly respectable meeting of the citizens from the different towns upon the route, friendly to the construction of the "Northern Railroad" was held at the town hall at Lebanon, N. H., on the 21st inst.

Roswell Sartwell, Esq., was chosen to preside, and Maj. Geo. H. Lathrop appointed secretary. On motion, the following gentlemen were appointed a committee to prepare resolutions expressive of the sense of this meeting, viz. Messrs. Ransom of Norwich, Vt., Mann of Orford. Latham of Lyme. Blaisdell of Hanover, Kenrick of Franklin, Willis of Enfield, and Dewey of Lebanon, who submitted the following, which were adopted by acclamation:

been found by actual survey not only favorable, desire to take stock therein. but is imperiously demanded by the commercial, Resolved, That the track of agricultural, and social interests of this great re- a large and fertile territory, which must be rich gion of country.

Resolved, That we rely for the success of this and most feasible route, extending from the Atlantic seaboard and the great metropolis of N. E.: through the capitals of New Hampshire and Vermont, to the capital of the Canadas on the one hand, and to the fertile regions of northern New York and the great lakes on the other-a country unsurpassed in agricultural and mineral treasures.

Resolved, That in seeking to obtain the construction of the " Northern Railroad," we wage no contest with the friends of any other routeother than may arise in a firm, consistent, and determined perseverance, in every honorable way, that shall tend to effect its consummation.

At a meeting of the citizens of Coos county, N. H., held at Lancaster in that state on the 11th instant, a committee appointed for the purpose made a report, from which we copy the following extracts-

"A road connecting Boston with Montreal, via Brattleboro. Montpelier, Burlington, &c., would necessarily pass east of Misisque Bay. about 40 miles south-east of Montreal, and run

cent., thus sustaining the position taken in the within ten miles of the line between Portland and Montreal. The distance from Boston to Moutreal via Brattleboro, &c., is about 305 miles, giving to the line between Portland and Montreal an advantage of 95 miles in the distance. In fact, the distance between Boston and Montreal via Exeter, Dover, Great Falls, Con-way, &c., is between thirty and forty miles less than by Brauleboro, Montpelier, &c.

" A railroad is now in operation from Boston to Great Falls, N. H. The distance from Great Falls to the Connecticut River at Lancaster, via Conway, Jackson, &c., is 97 miles, and the distance from Portland to Lancaster on the line betwixt Portland and Montreal is less than 90

" Your committee are therefore of opinion that the road to connect Montreal with the sea will commence either at Great Falls, in Somersworth, N. H., or the city of Portland, in the state of Maine. If from Portland, there are two feasible routes, one on the line before indicated, another via Westbrook, Windham, Orisfield, Bethel, Shelburne, &c.

" Your committee recommend that a committee of five be appointed to open a correspondence with gentlemen in Canada, Portland, and other places, who feel an interest in the proposed road, and to communicate to them all such information as may be desired relative to the proposed mprovement, and that said committee be authorized to call another meeting of the citizens, whenever in their judgment it may be deemed expedient."

A committee of correspondence was appointed.

MEETING AT WELLS RIVER .- The Commitwere unanimously adopted-

the Passumsic Valley in Vermont to Stanstead, by the rains, a bridge of forty feet span would Canada, thence to Montreal, is the most feasible compass the largest, and shortest route for a railroad from Boston to "If we are not de Montreal, entirely practicable, and imperatively demanded by the interests of this community.

Resolved, That the charters for milroads in through Concord and Lebanon, N. H., Moutpelier and Burlington, Vt., to be continued to Oglensburg, N. Y., and Montreal, Canada, has such as will be acceptable to capitalists who may detrendent of any tellular to continued to such as will be acceptable to capitalists who may detrendent of any tellular to canal entirely in-

Resolved, That the track of this route is through in resources seeking railroad accommodation.

Resolved, That for the securing the advantage great enterprise upon the ascertained fact, that in of a railway upon this route, inunctiate, enerther Northern Railroad" we present the shortest getic and active measures are imperiously demanded.

> Therefore, Resolved, That in view of the great object and advantages to be obtained, and the great interest to be promoted by the expeditious one cause preity well understood by all. fort, in its accomplishment; and, Resolved, furor by any other unjustifiable means-and if persevering resistance to any such attempt can avail, no advantages shall be gained by any such unjustifiable effort to prostrate our interests.

on the 29th instant.

# ISTHMUS OF PANAMA.

We give a few extracts from a pamphlet on the Isthmus of Panama, by W. Wheelwright, London. Mr. W. gives the "various lines"-

" First. The Lake of Nicaragua.

"Second. The Boca de Toro and Cherokee.

" Third. The Gulf of Darien.

" Fourth. The Coast of Mandinga.

" Fifth. Panama and Chagres. All of which are shown in an accompanying map."

He gives a decided preference to the last.

"In 1840, I was desired by the directors of the Pacific Steam Navigation Company to examine the capabilities of the River Chagres, and the best means of communication. The following is an extract from my report on the subject-

· I commenced by sounding the Chagres bar, where I found fourteen feet of water, but as the rains had set in, I ascertained that the river was swollen eighteen inches, reducing the usual depth to twelve and a half feet; from thence I proceeded up the river, sounding in from two and a half to three and a half fathoms, until I reached the junction of the Trinidad, where there were three to four fathoms, and the bank of the river so bold as to admit of vessels discharging with as much facility as at a wharf. A little above the junction, the water shoaled to seven and eight feet. The fork of the two rivers is healthy, and the location favorable and secure for landing and depositing goods; passengers may reach Panama from this point in twenty-four hours, the water carriage to Gorgona being twenty-five miles, from thence mules are taken to Panama, a ride of from five to ten hours, varying according to the season; but a road could be made to transport passengers in about five or six hours from the steamers of the Pacific to those of the Atlantic, and leaded mules could traverse it in en or twelve hours.'

" If further proof be wanting of the existence of nearly a level line on this mute, I might mention that this road passes over streams which find tee on resolutions reported the following, which their way into both oceans without the traveller heing able to distinguish any perceptible division between their head waters. These streams are Resolved, That the route from Concord, via between their head waters. These streams are Plymouth and Haverhill, N. H., and thence up of no great magnitude, and even when swollen

> " If we are not deceived, the level is so complete that it would only be necessary to have ocks at either end of the canal, while its total length would not exceed thirty miles. The

Both of the termini would require artificial harbors, or must be protected by breakwaters. No substantial difficulty exists on this point; when the work is undertaken, ways and means will soon be found for overcoming all minor obstacles.

"Considering the limited extent of the Isthmus of Panama, together with the ve y interesting position which it occupies, the paucity of knowledge hitherto obtained respecting it can have but construction of a railroad upon said route, we Spain should have held America for nearly three will spare neither time, money, nor personal ef-fort, in its accomplishment; and, Resolval, fur-with the topography of the Isthmus of Panama, ther, That if competition be brought to bear upon appears impossible; Spanish maps and charts this route from any quarter by misrepresentation have ever been held the most correct in use, and considering the difficulties under which science labored during the ages referred to, from the imperfection of instruments, it is quite wonderful to see how much was accomplished in this particu-Voted to adjourn, to meet at Plymouth, N. H., lar, and it is much to be deplored that their minute surveys of the Isthmus should have disappeared; like the records of the kingdom of Montezuma, no trace of them is to be found. I have sought among the documents of the royal academy of Carthagena: I have examined the archives of the city of Panama; I have searched the royal depository in Lima, without being able to discover any thing satisfactory in relation to this important and interesting subject, and it is only to the present and future efforts of science we are

which all are so desirous of possessing.
"I am aware that much has been said of recent surveys, the formation of roads and projecting of canals, but it is my perfect conviction that no really scientific research has been made, or a single step gained towards the realization of the oliject in view-an object which, when aunined, will produce some of the most extraordinary results that the combined intelligence, wisdom, science, and energy of man, are capable of effecting."

Mr. Wheel wright considers that an abundant supply of coal may be found on the Isthmus.

### ENGLISH AND AMERICAN PROPELLERS.

It is known to most of our readers, that a verdict has been rendered by a jury, in this city, in favor of Ericsson's claim to a well known propeller, in very extensive use, called Ericsson's. The first authentic information we could find was in an excellent report of the trial, made for the "New-York Farmer and Mechanic": a new weekly paper, well got up, and judiciously filled, nublished by Messrs. Fleet & Starr, 135 Nassau street. New York. It appears that the evidence was, in some respects, contradictory; some witnesses asserting, that they could make the propeller from Emerson's specification, others that they could not.

If, however, the reports of our Philadelphia neighbors be correct, the result of this trial is of little consequence, for it appears that-in their waters-the "Ericsson" has been superseded by the " Loper" propeller, and always with an increase of speed, other things remaining the same. We have given the accounts of two vessels fitted with the rival propellers, and both arranged so as to be unshipped when under canvass only. An experienced English engineer gave it to us as his opinion, that it was best to keep the engines always at work-that no great speed should be attempted by auxiliary power, not beyond 5 miles per hour-that, engineers and firemen being indispensable, that portion of the expense would be diminished by shortening the voyage, and other reasons.

The London Mechanics' Magazine gives an account of a trial in which Mr. Low obtained a verdict establishing his claim to the screw-the favorite propeller in England. It appears, therefore, that the subject of propellers is attracting very general attention, and nowhere can it be more important than here, where bays, lakes, and rivers, almost demand a class of vessels combining the regularity of the steamboat with the capacity of stowage of the sloop or schooner. Again, as a rough sea is to be frequently encountered, a submerged propeller appears the only one adapted to the purpose; for the common wheel destroys the stowing qualities of small craft, and renders them very awkward in a stiff breeze. It would appear almost impossible that some unexceptionable propeller should not spring from the innumerable experiments her best speed, there was no swell whatever now going on in this and other countries. A few under the bows, her stem cutting through the trips of the Great Britain will furnish some very important "facts" as to the working of the screw on a grand scale, and may be the means of intro-

to look for the acquirement of that knowledge ducing a new and powerful auxiliary into our the chains passing over the drums to give mo Ericsson or Emerson, of the Loper, or of the screw propeller.

> THE "GREAT BRITAIN" STEAMER.-The following account of some experiments made absence of vibration in the ship."-Mech. Mag. with her, is given by a correspondent of the Times :

"The steam was then got up (on arriving at Kingroad), and at half-past 11 o'clock the screwpropeller was put in motion. It has been objected against the use of the screw in many steamers, that its action causes them not only to steer very badly, but renders it necessary to have more men at the wheel than under other circumstances, the steering being extremely laborious. The Great Britain, however, steered like a boat' with one or two strokes of her wheel, and came round with the helm at 30 degrees in a circle of less than half a mile in diameter. The superintending engineers, Mr. I. K. Brunel and Mr. Guppy, of course, in starting, did not intend that this, the first experiment, should be one of full speed, as no new engines can be expected to have properly come to their bearings until after they have been worked for some time; and accordingly directions were given to Mr. H. S. Hurman, the engineer-in-chief, to start her with six revolutions only, at which she made about four knots. On passing Portishead at 12 o'clock, the revolutions were increased to 91 per minute, when she made a 61 log; 101 revolutions gave a log of 7 knots; 101 revolutions a rate 71 knots. The steam was kept at this point for some time, and then increased to 12 revolutions, when she gave 8 knots as her rate of speed. At this period, being then near the Holmes, the experiment of turning her round with the helm hard down was tried; she came round in hine minutes, making a circle of rather more than half a mile in diameter. She was then tried a second time. with the helm at only thirty degrees, when she came round in a most beautiful manner in six minutes, and in a less distance. When going the straight course, the stupendous mass answered her helm most readily, taking not more than one spoke of the wheel, and fequiring only one man at it. In returning homewards, the speed of the engines was gradually increased to 13 revolutions, at which she gave 81 knots, and to 16 and 16; revolutions, when she went through but to sell low, and they will undoubtedly se the water at 11 knots, against a strong head wind, cure a large portion of the Western business. 10 16 and 164 revolutions, when she went through passing easily the Sampson, the fastest paddleboat out of the port. At this rate of going, the steam was cut off by the expansion-valve at 1 loot, or one-sixth of the stroke, six of the fires not having been lit during the whole rip. The engines worked perfectly smooth, and without the slightest vibration or tremor being felt in any part of the vessel. The screw-pippeller during these experiments was not fully immersed, the ship's draught of water abaft being only 14 feet 6, and about 12 feet forward, and no doubt existed in the minds of any of those present versed in such matters, that upon the next experiment, or when the revolutions of the engine are increased to 20 in a minute, a speed of from 12 to 13 knots can be easily obtained. When the vessel was going 11 knots, the screw-propeller was only going 12, making the slip or loss only one-eighth and a third per cent., and which slip will of course be diminished when the screwpropeller is entirely immersed. When going at water just as the fastest Thames boats do. The

mercantile marine, either in the shape of the tion to the screw by which she is propelled, would be so great as to prove an annovance to the passengers. This, however, has been com-pletely avoided, the chains and wheels upon which they work revolving without noise, and what is still more desirable, there is a complete

#### MISCELLANEOUS NOTICE S.

OCMULGEE AND FLINT RIVER RAILROAD. At a meeting of the Stockholders of the Ocmulgee and Flint River Railroad Company, in this city, on Monday the 13th inst., the following board of Directors were appointed for the ensuing year: A. H. Brisbane, Pres't; Nelson Tit, Thomas P. Smith, Joseph Bond, Thos. Spalding, Jas. Mercer, T. D. Mathews, H. Morgan, and D. A. Vason.
Col. Nelson Tift was appointed by the board

General Agent, for the year 1845.

The reports of the President, Gen. Brisbane, and Agent, Col. N. Tift, to the stockholders, we may at some future period publish, and comment upon. Although no labor has been done on the work for the past year, yet the company have not been idle. It is to be hoped that a work so important to the trade of this section will not be abandoned without one more vigorous effort to carry it through .- Albany (Ga.)

THE MONONGAMELA IMPROVEMENT .- The rouse of trade and travel from Baltimore to Pitts. burgh, by way of the Ohio Railroad and the steamboat lines from Brownsville, is steadily manifesting its superiority on the score of both expedition and cheapness. We have before us a letter from a very respectable source at Brownsville. under date of 24th instant, which says

"Our route is daily becoming more important, and so soon as the travelling and forwardng community will have more freely patronized thit will be decidedly the most popular one between the East and West; and the advantages which will accrue from it to Baltimore, will be great. It will haven the transit of merchandise very considerably, as the distance to be wagoned will be shortened almost one half. Your merchants will also have the advantage of seeing: Western men first, when nothing remains

"If the rates of transportation on the Baltiwe hear is contemplated, this route would com-

pete successfully with the Pennsylvania works. "Our navigation is now in fine order, and boats are running again regularly, after a short interruption while putting on a new lock gate. -Balt. Amer.

THE STEAMBOAT LOPER.—This little iron bont, built by Messrs, Merrick & Towne, was tr ed yesterday for the first time. Her engine is he one commonly known asthe vibrating cylinder engine; and her propellers as those of our townsman. Capt. Loper. In the presence of many of our scientific men, the distance of six miles (three going and three returning.) was accomplished in 301 minutes. The boat was light, and every thing was of course new and stiff. The performance was considered by those on board to have been the best yet accomplished by any freighting propeller boat .- Phila. Ing.

ILLINOIS DEBT .- The entire debt, principal and interest, calculating the interest on the canal whole experiment lasted five hours; and in every and interest, calculating the interest on the canal particular the vessel realized the most sanguine debt up to this time, and on the residue up to expectations. It was supposed that the noise of January next, will be \$13,777,869.56.

We call the attention of Directors to the Tubular Advertisement of the New Jersey Railroad and Transportation Compa- PUBLISHED BY D. K. MINOR, 23 Chambers street, N.Y. ny in this number. A similar advertisement for each of the principal railroads would afford to the traveller in our widely extended country, information which is at present beyond his reach, even had he access to all the papers in the United States.

We particularly request statements of the traffic of cach week and of the corresponding week of last year to be regularly sent to us.

Correspondents will oblige us by sending in their communications by Monday morning at laicst.

We are endeavoring to devise a mode of advertising the rates of fare and distances of the principal railroa is in the country, and have opened a correspondence on the subject with gentlemen connected with some of the most important works.

The "Traveller's Directory" on the last page will perhaps give all the information required by "through" passengers on the main routes of the Union. It is not yet complete as regards fares and distances, though the times of starting on all the important roads, except some of the southern roads, are given pretty fully. There are included even the trips of the accommodation trains on many roads, though for way-passengers each great thoroughfare in the country should have a table similar to that of the N. J. Railroad Co. Then, with the "Traveller's Directory," with tabular advertise-ments of the railroads and steamboats on the principal routes, the traveller will easily ascertain the cost and time of a journey to almost any part of the

We are under obligations to different gentlemen for the Railway Bell and small pocket Directory, with colored maps, very well got up. These are both English publications; the former is published weekly, and sold at 61.; the latter is published monthly, and sold for 1s. sterling.

We are also indebted to an eninent engineer of Boston for a small manual of the railways in that 3.4 vicinity, very conveniently arranged; the price is 1-2 not stated. Our object is to adapt our publication 1-4 to this community, and we do not think the English plan would answer here; at the same time we are not fully prepared to submit any definite plan to the companies, and should be happy to receive suggestions from the numerous gentlemen connected with railways, who are seriously turning their attention to this subject. We are inclined to believe that the publication must be weekly, and the price very low; the former in order to be alreads correct, the latter to make its circulation as extensive as possible.

If the different railroad companies feel disposed to stand by the Journal, they may do much to aid the extension of this incomparable mode of communication, and, at an insignificant cost, give all the information required by the traveller, and obtain for themselves the results of the experience of th's country and of Europe in a cle :r and condensed form. In justice to the companies we feel bound to state that, during the last month, we have received many proofs of their friendship to the Journ 1 ...

The report of the Comptroller of New York is published in some of the papers, but we shall wait for the official publication of this and of the report of the canal commissioners, before we attempt these formidable works-almost as extensive as complicated.

The subject of "discriminating tolls," is creating some sensation, and from the discussions to which it leads, will do much to unveil the system of debt and taxation so highly prized by the public men of New York. We are sorry to see such ignorance prevailing as to the diversion of the trade from the Erie canal to the St. Lawrence, the notorious fict being always overlooked; that the flour is destined to New York and New York only; were the tolls of the Erie canal doubled it could not go via. Montreal, Boston, or Philadelphia.

In the legislature of New York we notice a favorable report on giving up the claim of the State on the N. Y. and Erie Railroad Co., on conditions which will be satisfactory to the company. Also motions for inquiry into the charges of the railroad companies for winter freight, and into the nature of the agreement between the Troy and Greenbush and the New York and Albany Railroad companies.

It will be seen by our extracts that the Northern Railroad has even found its way into the Engish railway journals.

ENLARGEMENT OF THE SCHUYL-KILL CANAL.

cost of this is estimated at \$592,000, or less than Hudson is 50 c. for the same distance. \$1000 per foot lift, and the cost of deepening the for one half more than the estimate, we shall be very agreeably surprised. But this is of comparatively little consequence.

Mr. Roberts says, (p. 17,) "The next question is, will the work, when done, repay its cost?" This is the grand consideration; this is the great marks. At the present unexampled low rates of capital would be about \$1,500,000, and the engineering question, the discussion of which in- toll of a cent. per ton per mile, it will require a income from 1,500,000 tons, at the moderate toll volves as elements, the cost of construction, the million of tons of coal to pass over the canal an- of 1 cent per ton per mile-as on the Erie canal saving which these enlarged locks will effect, nually to yield the moderate return of 7 per cent., and the manner in which that saving will in- assuming the other business of the canal to clear actually exceed those of the Loughborough Cacrease the receipts of the Company, so as to all expenses whatever. Were the canal to be nal, which divides 70 per cent. But even at the render an increase of debt a safe and judicious commenced "de novo," we should be disposed low toll of & cent per ton per mile, the present

Of the first we have already spoken. Of the second element Mr. R. says

"It has been found heretofore, that the decrease in the cost of freighting has been nearly proportional to the increase of the number of tons proportional to the increase of the number of tons carried in a boat. Coal in large quantities has been carried upon the Schuylkill Navigation in 60 ton boats at the rate of 65 cents per ton per 100 miles, including unloading. With boats of "A boat will carry about the carried to the carrie treble the present capacity, propelled by steam, and running two or more in a train, it is believed that the cost of freighting could be reduced to from 25 to 30 cents per ton, and so as to com bine with this great reduction the vast advantage of being able to proceed directly on to the ports where the bulk of the coal is wanted."

Here we ought to have the first cost of boats of 60 and 180 tons, the costs of repairs and renewals, the charges for towing by horses and by steam power, and of manning the two classes of vessels. That the larger boat will carry more cheaply than the smaller craft may be very true, but there should be some proof given, "that the decrease in the cost of freighting" is as the increase in the capacity of the boat. Suppose that the enlarged Schnylkill Navigation should turn out a failure, then will this very same Report show the propriety of a second enlargement as conclusively as it now does the advantages of the first increase in dimensions. And this is by no means a mere supposition. The Lachine Canal at Montreal has locks 20 by 100, (see Table of Canadian Capals,) and we believe it never yet passed over two hundred thousand ions, less than onethird the tonnage of the present Schuylkill canal, with locks \$0x131. By a system of high tolls, they raised up a rival with which no canal on though we confess that the latter part of this reearth could contend-the giant St. Lawrence. port makes us fear the worst, for the grand en- by the quiet, yet significant remarks made in Finding the trade irrecoverably gone from the gineering consideration is most decidedly blinked: your last (No. 5), relative to the comparative (for Canada) small Lachine Canal, they deter- in place of a close professional analysis, we find management of the Baltimore and Ohio Railmined to enlarge it from locks of 20 by 100x5 only the collateral advantages and the general road, and the New York and Eric Railroad.

We have attentively perused the Report of to the trade as the old canal, omitting all con- to lay down a wider track, because the expense Mr. S. Roberts, Civil Engineer, to the Schuyl-sideration of cost. There, as in the case of the of transportation might be reduced somewhat by kill Navigation Company, in which he strongly Erie and Schuylkill Canals, an increase in the that change, we should think such a course very recommends an increase in the dimensions of the size of the boats is to accomplish all; but how, channel and locks, so as to pass boats of the size is left pretty much to the imagination; indeed, The first question would naturally be. Is the contemplated for the enlarged Eric Canal, that it will require no ordinary powers to believe that road worked up to its capacity? So with the is, the locks are to be 110 feet long by 18 feet freight can be carried for 25 to 30 c. per ton over canal, we ask, What is the capacity of the wide. The total lockage is 616 feet, and the 108 miles of canal, when the lowest price on the Schuylkill Navigation? Experience on the

But even admitting that this reduction could channel is estimated at \$486.000, making the be effected, it remains to be shown how that be passed very well in 250 days in one direction, entire amount \$1,080,000. If this work be done will accomplish the end in view; that is, how it will render the canal able to pay a fair interest on its total cost after enlargement, say five millions of dollars (p. 20). The tolls must be raised, or the trade must be greatly increased. All this would yield a dividend of 15 per cent. On this is passed by very quietly, for general re- the English system of small, cheap canals, the to pay very close attention to the English canals, Schuylkill Canal might pay a fair dividend, if the extraordinary success of which may be seen the trade were vigorously carried on. The use in our Table of the Canals of that country.

> "In England, canals are generally successful, but though doing an immense husiness, they are very small, some of the most important having locks only eight or ten feet wide.

> "The capacity of these little English canals is immense, their cost and management com-

" A boat will carry about 30 tons, and as one of the old single locks of the Erie canal passes 116 boats in 15 hours, a lock little more than half the width will easily pass 200 boats per 24 hours, and is abundantly adequate to the trade of English canals, with a small amount invested in their construction, accommodate an immense traffic, and are as valuable to their proprietors as they are useful and honorable to the country. Here the reverse is generally the case. For example, the Genesce Valley Canal will cost about \$60,000 per mile, the cost of the Lowell Railway, the best in America; the income of the former is estimated by its friends at one-half of one per cent. per annum, the actual income of the latter is 15 per cent. Again, one mile of the Cornwall Canal in Canada cost as much as fifteen miles of the Champlain and St. Lawrence Railway, with cars, engines, buildings, and wharves, and it will be fortunate if the income from the twelve miles of canal equal half the revenue of the railway. The two private railways are adapted to the business of their respective localities; viewed in this light, the two government canals are monstrosities of the first order."-Journal May 1844.

We shall be sorry to see the Directors of a respectable Company vieing with the "honorable" Canal Commissioners in effecting a maximum of expenditure with a minimum of income; to 45x200x10. The work is to be completed by views which would very appropriately follow. It appears, the former, a pioneer road, "after

December, 1845, and it remains to be seen such an examination. By way of illustration. whether it will be on the whole worth as much suppose it were the intention of the Reading Co. similar to that of the Schuylkill Navigation Co. Erie Canal demonstrates that, with single locks, and boats of 60 tons burden, 1,500.000 tons may and of course an equal amount of return freight. Now, with the low toll of & cent per ton per mile, the income from coal alone would be \$750,000, and if other business pay the ordinary expenses, -would be \$1,500,000, so that the profits would of iron vessels will increase the capacity to nearly 80 tons per boat, and the great saving in wear will reduce the cost of transportation still further. At present we cannot pursue the subject, and must conclude with remarking, that the Schuylkill Navigation is equal to three times the present trade at least; that the demand for coal already exceeds the supply; consequently, that the coal trade, via the Schuylkil Canal, has all the advantages which can ever be expected; for an increase in dimensions brings with it a larger any canal likely to exist in this country. The divisor, and of course a smaller quotient, in the shape of profits. But the great objection to the Report is, that there is-professionally speaking -not even an attempt to make out the grand point: " Will the work, when done, repay its cost ?"

For the American Raifroad Journal.

RAILWAY MANAGEMENT.

Permit a shareholder in Railways to congraulate the public on the improved appearance and independent stand your valuable journal has taken in its editorial columns, in exposing the management of railways, as well as their extravagant cost. Heretofore the Railroad Journal has been devoted too much to algebraical calculations for the engineers, and to reports, without any remarks to benefit the stockholders. You have at last got on the right track, in following the course pursued by the London Railway Times-Herapath, and other European journals, in exposing the errors in management that tend to discredit the Railway system, in and around New York. I am led to make this observation

history of American Railways, has put into ef- pecting public, that requires examination. I engine was unable to bear-a force, be it reexpenditure of \$7.600,000, which yielded a Company, to give us the true facts in the case, of a force of great intensity, and generated with gross income of \$658,620, or \$363,786 nett, to save his credit as an engineer. That there is such explosive suddenness as to render the safefor the year ending Oct. 1st, 1844." While the truth in this statement, there can be no doubt, ty valves and cylinders of the engine uscless as management of the Erie road has produced, af- when it is recollected, that it took the best lecoter an expenditure of \$5,000,000, only 53 miles motive on the road upwards of 21 hours to draw stress was laid upon the fact of its having ocof road, that has yielded, to include receipts from 3 cars 25 miles, the day of the opening of the curred during a thunder-storm, and the agency a Ferry of 24 miles! the gross sum of \$158,285, road to White Plains; and if we are accurately in the accident has been attributed to electricity; and \$55,790 nett, during the last year, for the informed, the average up-trip, with a single car, but in what manner it may be conceived to have railway.

After reading your just criticism on these roads, and stumbling over the iron and bales of hay that fill up the foot of Centre street, oppo- of this road, I may ask, what talents advised the not conjecture. If there are any experiments, or site the Hall of Record, the terminus of the Har- dangerous curve to cross a Bridge built, not for observations, on record, tending to show the powlaem Railroad on this street, I asked myself, is it possible the managers of the Harlaem Railroad design to do a freighting business, or to accommodate the travelling public, by turning them out into the open street in all weathers on such a limited space of ground,-and can the management of this road give confidence to capitalists, and advance the railway cause? An intelligent friend, well versed in railways, remarked, "that the Harlaem Railroad had done more to injure and retard the Railroad cause in the United States than any work within his knowledge! For, (said he,) on offering stock or the bonds of a good railway, I am always met with the remark, look at the Harlaem Railroad. its stock has varied from 7 cents to 65 cents on the dollar, except when there is 'a corner,' and its bonds have been hawked at 33 cents; and, although, more than one million of persons have been transported over it per annum, yet it has never given a dividend, but has got deeper and deeper in debt."

The pretensions of this road, and its present stockholders, (for they change annually in Wall street.) to make a good railway to connect us readers both sides of the question. with Albany, has led me to inquire into the situation and the capacity of this company, to perform a freighting as well as passage business. I would design to draw the attention of your independent journal, to make the inquiry of the President or Engineer, where the fault lies, and that the workmanship of the hoiler was such as who is to blame, in so locating and constructing this road from Harlaem river to White Plains, as to give it grades of 60 feet on curves that require the use of motive power, and of course expense proportioned to the load drawn at a given veocity, as it does equal to that to ascend the Berkshire mountains, where there are 80 feet grades to the mile.

I cannot believe the practical Engineer, Mr. Showell, who has had charge of the location and construction of this road, can have had his own way, with two lines staked out for his guide from Harlaem River to White Plains, by Engineers of the experience of Messrs. Joseph D. Allen, J. T. Shipman and Edwin F. Johnson, on either which, I learn, there need be no grade to exceed 30 feet to the mile, and with moderate cutting and embankments, compared with the valves were free. object to be accomplished. If this is true, and The whole results of the explosion moreover the fire-box: (the length of the cylindrical part

a Railway, but for the Free use of the people of continuous conductor, as a locomotive engine, Morrisania, over which the Harlaem Company running too, be it observed, upon a wet rail, the river. This bridge, in its location for an entrance pendently of this, the evidence to the contrary is to this great city, is a disgrace to the railway as plain as could be desired. cause, and is totally unfit to pass heavy engines and trains with freight.

I may pursue this subject, and point out errors this city, that have so disgusted our capitalists. that even the New York & Erie, and other important railways, are lest without subscribers to capitalists are fearful of trusting them with their

VERITAS.

EXPLOSION OF THE LOCOMOTIVE RICHMOND.

The Committee of the Franklin Institute have made an elaborate report on this unfortunale occurrence. Having given the views of Dr. Lardis, such portion as may be necessary to give our

The committee believe, from the fact, that not a single portion of the joints had given way, except where the rivets had been torn off by the lateral expansion, and from the general appearance of the remains of the engine, when examined, that it will, on all hands, be admitted, to sustain the reputation which the Messrs, Norris have acquired in their business; and it is evident that the experiments, cited above, refute any supposition of insufficient strength in the crown plate-the laminated structure of which is one of those contengencies, against which the most careful precautions are not always sufficient to guard.

It is not then to weakness of materials, or defects in the manufacture of the boiler, that we are to look for the cause of this explosion: the committee believe that the strength of the engine would have proved adequate to any working pressure which could have been placed upon

On the other hand, the engineer, Mr. Joseph Ward, was reputed one of the most capable and have acted in the present case. trustworthy upon the road, and his character for the suspicion of any improper tampering with

> In the first accounts of this explosion much creased the tension of the steam, or diminished When the directors explain the bad location the strength of the material, he committee canhave already tumbled one car nearly into the committee are in ignorance of them; and, inde-

In the testimony before the coroner, two of the brakesmen, Powell and Cowden, declare that they saw lightning previous to the explosion: Powell says,-" I saw a flash of lightning in management of this and other railways around previous to the explosion, but I could very easily see between the flush and the explosion." Cowden says,-"I saw several flashes of lightning previous to the explosion." Neither say any thing of the nature, or the nearness, of the flash, their stock, from the fact, that directors of rail-nor do they seem to have auributed to it any ways have committed such gross blunders, that agency in the explosion. On the other hand, two other brakesmen, McGnire and Smith, declare that they saw no lightning, and heard no thunder which is scarcely reconcilable with the supposition of lightning striking the boiler. Messrs. Weber and Shipp, persons residing near the place of accident, both of whom saw the explosion, agree likewise in the statement that there was no lightning at the time.

In the testimony collected by the committee. it will be found that the storm, which (as is ner, we now give those of the Committee, that most commonly the case with our thunder storms,) had come from the north-west, had passed off to the south-east, and was almost enurely over before the Richmond had left Reading, so that Mr. Ward had laid aside his outer coat. Mr. Spayd also asserts with confidence, that for some hours previous to, and after the explosion, there was no lightning to the north of Rending; he heard the explosion, and is sure there was no flash at the same moment. Messrs. Hiester, Herbst, Richardson, and Gruber, all testify to the san.e absence of lightning. evidence, therefore, alone is perfectly conclusive that the explosion was not due to the fact of the engine being struck with lightning.

But there is another cause, which, if we can suppose it to have been in action, is quite sufficient to account for all the effects observed. We allude to the rapid generation of steam of enormous tension, when water is suddenly brought into contact with a part of the boiler unduly heated. The agency of this cause is now so well understood, and its circumstances have already been so carefully investigated by a committee of the Franklin Institute, that we need say no more upon the subject, but proceed to inquire whether such a cause can be supposed to

It may be admitted that when the Richmond carefulness and sobriety was such as to forbid reached Reading at 7h. 18m. P. M., the boiler was filled with water as far as the upper cock, the valves: we have besides evidence that the which would give about thirty cubic feet of wathe safety valves.

In fact, a carefully conducted series of experiments, upon a very similar engine, tried and remum, evaporation per hour. While the average of a very extensive series of experiments, made by Mr. Nicofls, the superintendent of the road, with a number of different engines, while they vary very much from engine to engine, give about one hundred and fifteen embical feet per hour for engines running at ten miles per hour.

As the Richmond seems to have been engaged in shifting cars for about fifteen minutes before its start, and as the explosion took place about fifteen minutes after it left the depot, the very lowest of these estimates show that its evapora-tive power was amply sufficient to have reduced the water below the crown of the fire-box, provided the pumps did not work.

What then was the condition of the pumps ? It will be recollected that the pumps are beneath the cylinder, and that the pipe leading from the supply valves to the boiler passes between the cylinder and the boiler. All these arrangements are avowedly made for the purpose of keeping the pumps warm when in danger of freezing in cold weather.

That the pumps actually did not work perfectly, there is abundant proof. Thus Mr. Kirk. foreman of the Reading workshops, and Mr. Loeser, a clerk at the depot, both testify that Mr. Ward had several times told them that the pumps did not work well, and that they had given him much trouble.

Mr Yeager, the engineer of the freight train, which was immediately behind the Richmond when she exploded, testifies to Mr. McCahe's (the conductor's) statement, as to the cause of delay on the Saturday preceding, at the Mana-yunk tunnel, to which Patrick Nugent, a brukesman upon the train, also testifies; this is, moreover, confirmed by the statement of Mr. Simpson, at the time foreman of the workshops at Richmond, to one of the committee, that he did not see Mr. Ward upon Saturday evening, but that upon inquiring of another engineer, whose train had been behind, as to the cause of the detention, was old that the pumps of the Richmond had given out, and that Ward had to take them to pieces.

Mr. Day, also an engineer upon the road, testifies that Mr. Ward told him, some day of the tifies that Mr. Ward told him, some day of the one. Number of tons transported, 24.862, or estimated at about £500,000 currency. It is week preceding the accident, "that his pumps 49,724,739 lbs. Of this amount, 30,996,028 thought that immediate steps will be taken for worked badly, and that he never could start them without first unscrewing them, and lifting the caps." He also testifies that he passed the Richmond at Portsville, upon the day of the ac-cident, that Ward was then just starting, and was engaged in unscrewing the cap of his pump

norder to make it work.

Now all those who saw the explosion testify that the engine was running under a heavy head of steam.

Cowden, a brakesman, testifies that "she had a great head of steam, and was blowing it off at the time."

Weber, who was standing in his porch says, that "although not very familiar"

In this connexion it is not be forgotten that when found, to be pursued by torchlight. I the part of this line, between S well known to all conversant with engines, that one pump, when in action, is more than sufficient to supply the water was turned on to both the pump pipes of the tenter, whereas, it appears, from the testimony of Mr. Kirk, and the part of this line, between S that "although not very familiar"

Novogorod (180 versts), will be examined to supply the water was furned on to both the pump pipes of the tenter. When the part of this line, between S that "although not very familiar"

of the boiler is nine feet six inches, and the with engines, he could easily perceive that she The Harrisburg (Pa.) Telegraph says, Mr crown of the fire-box is eleven inches below this was working differently from what engines gene-line.) And the evaporation of the Richmond, rally work; that she had a very heavy head of Representatives on Tuesday, in the shape of a as calculated by the Messrs. Norris, from the steam, and was going fast, and that the appear-resolution calling upon the Canal Board for ceras calculated by the blesses. Norms, from the steam, and was going last, and the appearresolution cating upon the Canal Board for dedimensions of its cylinders, is 525 gallons, =84 24
cubical feet per hour, when running ten miles
she was able." Mr. Herbst declares that there produced, will lead to the discovery of some
per hour, with steam of one hundred pounds.
Was a heavy head of steam; and Mr. Gruber,
enormous robberies practised upon the
ComTo this may be added, according to the opinion who was standing with him, says that "it had monwealth of Pennsylvania. of Mr. Kirk, who has great practical experience high steam, was making a great noise, and was in these matters, at least fifteen per cent. additional, owing to the condition of the rails, and before." Now all this is easily accounted for, Now all this is easily accounted for, some additional quantity for the blowing off from if we suppose that, the night being exceedingly dark, when starting from Reading, Mr. Ward of the Railway Times: could not tell whether, or not, his pump was in action, the try-cock being nearly the length of Stockton and Darlington Railway have contractcorded long before this accident happened, gave the engine from him, and the noise of the empty ed to find locomotive power for the transport of eighty-seven cubic feet as a minimum, and one cars behind him preventing him from hearing coal and coke, on the Great North of England hundred and thirty-three chic feet as a maxi- the escape. The great increase of the head of Railway, at the extremely low rate of one-eighth steam would at length give him notice, although of a penny per ton per mile. I sometime ago not until the water had sunk considerably in the mentioned that the Midland was carrying coals boiler. If then he threw on the other pump, at three farthings, or six-eighths of a penny, and and this acted properly, he should have a sheet making a good profit. The present contract is of water suddenly rising, upon the overheated a fine illustration of the fact. surface of the crown-plate, and a condition of things existing exactly such as to give rise to a terrible and inevitable explosion.*

This view of the case seems, in the opinion of your committee, to be pointed out by all the circomstances, and suffices to account for all the phenomena which accompanied the explosion.

The committee, therefore, report that, in their opinion, the explosion of the locomotive Rich-did they get rid of it?" mond was probably caused by the sudden rise of water over the crown-plate of its fire-box, which had been laid bare by the defective action of the pumps, and had become unduly heated.

NEW HAVEN AND NORTHAMPTON CANAL. From the annual Report of this Company, just published, it appears that the receipts of the year tures to \$30,738 82. Of the receipts. \$10,935 13 were from tolls and rents on the Canal, and \$9,-043 83 from assessments on the stock and interest. The receipts are stated to have exceeded the expenses proper,-"the difference arising wholly from the increased and extraordinary re-

The only debt of the Company, except a small balance due to the Treasurer, is \$60,000, over bad roads, from participating in that which consists of 5 per cent. stock, payable in prosperity which the liberal policy of the Britanian prosperity which the liberal policy of the Britanian prosperity. 1854. The \$3000 received annually from the city of New Haven, is pledged, and regularly applied, to the payment of the interest on this indebtedness. To repay the balance due the recommended by the Engineer, it is proposed ing more than double that from the most western shares of stock among the principal stockholders, greatly to remove the feeling which is arising fixed by the charter, viz. \$300,000.

The business of the Canal the past year shows an increase of 20 per cent. over the preceding went up the Canal, and 18,728,711 down. The carrying the object into effect. amount cleared up and down at New Haven in 1844 was. Do. in 1843, -- 24.567.500

Increase, - - - - -- 9,050,963

The shurtness of the bridge bars would evidently transfer this strain from the surface of the crown-plate to the points in which they rested upon it, and thus determine the line of

We select the following articles and notices from late numbers of Herapath's Magazine, and

EXPENSE OF LOCOMOTIVE POWER .-

EXTRAORDINARY PASSAGE OF COAL .- I understand that the Stockton and Darlington Company have very recently carried over the Great North of England Railway into York, 8,000 tons of coal in 26 hours. Reckoning 24 tons to a wagon load, that would be 3,200 wagons, which, at 40 wagons to a train, would be 80 trains, or one train every 191 minutes. One may ask, " how

RAILWAY THROUGH THE EASTERN TOWN-SHIPS OF CANADA.—We learn from the Canadian papers brought by the " Hibernia," that the inhabitants of the eastern townships of Canada have been memorialising the Governor General on the subject of a railway in that district. It is considered that this line of road would not only have amounted to \$26,135 18, and the expendithat district of the Seigniories which used to be called "The Lower Garden of Canada," it would be of incalculable benefit to it, as well as to Montreal and the province at large. line is to be called the St. Lawrence and Atlantic Grand Junction Railway. The townpairs in consequence of extensive breaches in ships have a territory exceeding five millions October, 1843, caused by the great storm and of acres of available fertile land, and a population of fifty thousand souls, at present lation of fifty thousand souls, at present completely debarred by long land carriage, tish government is extending to other sections of Canada. This want of communication prevents the capabilities of the township lands as a grain growing country being developed, the cost Treasurer, and to make certain improvements of carriage of a bushel of wheat to Montreal beto apportion the 471 unsubscribed or forfeited district of Canada. Such a line would tend which would increase the capital to the limit among the Colonists-that they are alien as well to the French Canadians of Canada East as to the Anglo-Canadians of Canada West. A full survey of the line has been made, and its cost is estimated at about £500,000 currency. It is

RAILWAYS IN RUSSIA. - A letter from St. Pe-- 33.618.463 tersburg of Dec. 4, states that the Emperor, having ordered the Minister of the Interior, to urge on the works of the railroad between that city and Moscow, already commenced on the St. Petersburg side, a considerable number of additional workmen have been put on, and measures taken for the commencement of the works at the Moscow end. It is even said that the works are to be pursued by torchlight. In all probability, the part of this line, between St. Petersburg and Novogorod (180 versts), will be completed about

INCREASE OF RAILWAY TRAFFIC .- It appears to £352,090.

RAILROAD TRAFFIC .- The last weekly returns of 48 Railways 1,781 miles in length. The number of passengers on 34 railways, 267. 375. The receipts for passengers on 48 railways, £65,669; ditio for goods on 47 railways, £29.527; total £95,196. This is an average of £531 per mile per hour.

TRAFFIC BETWEEN FRANCE AND ENGLAND. for the week ending 5th December, 1844.

Boulogne and Folkestone, arrived 190, departed 151 Dover, 66 41 Ramsgate, London,

GREAT NORTHERN RAILWAY OF FRANCE. We observe from an advertisement, that in addition to the parties now before the public as candidates for leasing this line, the South-Eastern and Dover Company, united with individuals of the highest standing in France, will tender for the management of the French line.

GERMAN RAILWAY .- A line of railway has been commenced for connecting the Adriatic and Baltic Scas, It will extend from Kiel (Holstein) to Trieste. A distance of 58 miles, from Bresham to Leignitz, has already been opened.

PENNY-A-MILE SYSTEM. - Great success of the Penny-a-mile System on the Eastern Counties Railway .- The alteration made in the fares and accommodation of the Eastern Counties Railway has been attended with the greatest success. Already two large onmibuses and a coach have started in conjunction with the Company running from Ipswich to Colchester, and scarcely a day passes without every one of them being Mulhouse Railway is to be passed in the apfilled with passengers. In addition to these, a proaching session of the French Chamber and number of fast coaches run from Norwich and various other towns in the district, and it is anticipated a few weeks more will see others on the road. The inhabitants of Ipswich look upon this as a surprising change, and no wonder. when it is considered that only two coaches passed through the town some few years back. As the spring approaches, three or four more conveyances will be started; and seeing that the experience of the last six weeks justifies the belief that the passenger traffic will, before that time, have been nearly doubled, there can be little doubt they will turn out profitable speculations.

A LARGE ORDER .- We learn that the Birkenhead Warehousing Company have engaged by contract the partners of a celebrated brick-making firm of the south of England (who, we believe, made the bricks for the Eastern Counties Railway) for the supply, against the next summer, of 50,000,000 bricks, for the building of their warehouses on the southern margin of Wallasey Pool; and that within the last week 300 operative brickmakers have been sent from Kent to Birkenhead, and have already commenced operations .- Liverpool paper.

THE ELECTRICAL TELEGRAPH.—Some of the journals state that the Paris and Versailles Company (right bank) have agreed with Professor Wheatstone for the establishment of his system

however, have pleasure in elucidating any other over the Strasbourg and Baste Railway points on which our readers may desire further. It will also have the large goods traffic which information.

under the great disadvantage of both its termini Lancashire of France.) and Switzerland. being situated outside of the cities of Basle and Strasbourg, which rendered the use of conveybeen removed into the city itself; and the quescommunication in consequence of the various lines projected from it, or with which it is to be immediately connected. The whole of the railway direct from Paris to Strasbourg, is now de-half-yearly meeting of this Company several parts of it are already commenced. other line from Strasbourg to Mayence, parallel with the Rhine, is now intended by the government, in order to form a continuous railway communication with the Belgian lines, and thus to ranean, on the French side of the Rhine, (to per share on 2,409 shares) to £25,059 5s. 1d. prevent that traffic from going by the German railways on the other side of the Rhine.) by means of the Strasbourg and Basic, Mulhouse and Dijon. Paris and Lyons, Lyons and Avignon, and Avignon and Marseilles rallways, which will thus form the great unbroken chain from the north-east frontier of France to the Mediterranean. We stated last week, that the Dijon and Paris and Lyons Railway is in course of construction by the government, and that the Lyons and Avignon is to be soon commenced, and that the Avignon and Marseilles is leased to a powercompanies next year.

> MONMOUTHSHIRE CANAL COMPANY. - At the half-yearly meeting of this Company last week, finitively settled by the French legislature and a dividend of £4 10s. per share, payable on the 31st December next, clear of the In-come Tax. By the published statement it appears that the nett proceeds for tonnage for the half-year ending September 30th, 1644, amount to £20,297 17s. 8d., and the various disburseconvey passengers and goods from Belgium and ments for the same period (including payment the north to Lyons, Marseilles, and the Mediter- of a dividend on the 30th of June last of £4 10s.

> Wooden RAILWAYS .- We learn from the Waterford Mail," that on Thursday week Mr. Bridges, the Secretary to the Waterford and Kilkenny Railway Company, delivered an interesting address on this subject to a numerous and respectable audience at Waterford. Mr. Bridges orged the great importance of railway communication in Ireland, and especially insisted on the necessity of economy in the conthat line will join that of Strasbourg and Basle at Mulhouse. We need hardly say, that the represented that more than double the capital requisite for the Waterford and Kilkenny line had been subscribed.

> FATAL EXPLOSION ON THE SOUTH-EASTERN ful company, and more than half made. The RAILWAY .- On Wednesday morning an accitwo former lines will certainly be also leased to dent occurred on the line, near the Bricklayers' Arms station, by which Robert Buckley, an en-The extent of traffic along this line, with so gine-driver, was killed on the spot, Aaron Wilimportant a centre of trade and manufactures as kinson, the stoker, received such extensive inju-Lyons, and with such a port as Marseilles for its ries that his recovery is considered impossible, terminus, is too well known to need comment; and several other persons were severely injured, but as many of our readers may not be aware of It appears that about twenty minutes after midthe extraordinary and continuing increase of night the goods' train destined for Dover left the commerce at Marseilles of late years, in con-station at the Bricklayers' Arms. Unfortunate-sequence of the great impulse which trade and ly, however, before the train and reached more general intercourse have received in the Medi-than half way to the junction of the wooden with terranean, from the improvement in Egypt, and the earth-raised line, and just as it had passed the overland communication with India, from the the timber-mill viaduct near the Blue Anchor-French colonization of Algiers, and from the road, the engine exploded with a report which changes in Turkey and Greece, and other danses, was heard for some miles distant. The engine we may add that the total tonnage of Marseilles leaped completely over the side of the railway, now amounts to nearly a million and half of tons and the tender broke through the latticed work per annum, which places it very far in advance forming the left side of the line, on the ground, of all the other French ports. The numerous a depth of nearly 18 feet. The intended jourpassengers and the large amount of goods (whe-ney of the engine (the "Forester,") was only ther for home consumption or sent in transit for the fourth it would have made. It was considother countries), that will use this great line of ered a very good one up to the time of the dis-railway communication, in going to or from the aster. What caused the explosion has not been South to the North-east, will thus pass over the yet ascertained. It is, we hear, attributed to a

casting of the fire box. The matter is undergoing a searching investigation by the Company's officers, and we understand General Pasley has reported to the Board of Trade.

TRAVELLING FOR LESS THAN A FARTHING PER MILE. The competition between the Forth and Clyde Canal Company and the Edinburgh Railway is so strong that the Canal Company are carrying passengers from Glasgow to Edinburgh, with profit, at less than a farthing a mile! Since the reduction of fares by the Canal Company, about a year ago, the increase of passongers nearly exceeds 235 per cent. upon the day through passenger trade and 209 per cent. by the night boats. The last half-yearly report further states that all this has been accomplished "at an extra expense not exceeding £30"-Glasgow Post.

STUPENDOUS BRIDGE.—Messrs. Bury & Co., of Liverpool, engineers, have been commissioned by the Emperor of Russia to supply the iron-work of an iron bridge, to cross the Neva at St. Petersburgh, as a substitute for the present bridge of toats. It will be 1078 feet long; there will be seven arches, and the centre one will be 156 feet span; there will be a swivel-bridge, 70 feet wide, to allow the passage of ships, the bridge itself being of small altitude; the carriage and pathways will be, together, 70 feet.

THE IRON TRADE.—We are glad to perceive a marked and steady improvement in this branch of trade. We learn that the Great North of England Railway Company's contract for 6000 350 tons 2 by 15 ft. in length weighing 4 68 tons of rails was taken by the Bistiopwearmouth Iron Company, at Sunderland, and Messrs. Bolckow and Vaughan, of Middlesbro' Iron Works, at \$7 15s. per ton, which is a considerable advance on the last quotations.

THE "PHENIX" WAR STEAMER .- This to. frigate was towed down to the East India Docks ments, or incorporated companies. on Wednesday last, for the purpose of having her machinery completed. Her burden is 820 tons-her power 260 horses-and her armament two pivot guns and ten caronades. She has been fitted with a new pair of vibrating engines, similar in every respect to those last year applied to lar in every respect to those last year applied to the Wheels, viz. 30, 30, 30, 42, 42, the Admiralty yacht. Black Engle, tubular boilers, and Mr. Steinman's patent submarine propeller, which may be briefly described as two peller, which may be briefly described as two radiating helical blades set each upon an arm, 13 feet 2 and advancing from an angle of 30° to an angle diameter. of 45°. Its number of revolutions per minute will be 55 only, which is 57 less than that last tried in her majesty's steamer Rauler, and its diameter is 12 feet. The engineers employed in fitting her are Messrs. Penn & Son, and Messrs. F. C. Cristy & Co.

TESTING OF THE LATTICE BRIDGE (SPAN 144ft. 6in.) OVER THE ROYAL CANAL, ON THE DUBLIN AND DROGHEDA RAILWAY .- On Friday an interesting experiment was made of the capabilities of this bridge, which, our readers will recollect, was constructed at the Drogheda Iron-Works. After taking out all the wedges under the two west beams, by running one engine and three carriages across three times, the greatest deflection was two-tenths of an inch. and each time the bridge resumed its original position. At 1 o'clock, P. M., the bridge was again tested by running a coupled engine across, the weight of the tender, eight carriages, and three trucks, averaging from eighty to ninety tons. This train of carriages and engine was allowed to stand upon the bridge until Mr. Hamilton, Sir J. Macneill, and Mr. M. Cormick. measured the deflection, which was two-tenths of an inch, and when the train moved off the at a fixed price, delivered in the United States. bridge it resumed its original position .- Drogheda Conservative.

AMERICAN RAILROAD JOURNAL, AND GENERAL ADVERTISER

FOR RAILROADS, CANALS, STEAMBOATS, MACHINERY.

AND MINES.

ESTABLISHED 1831.

PUBLISHED WEEKLY, AT No. 23 CHAMBERS STREET, NEW YORK, AT THREE DOLLARS PER ANNUM.

SECOND QUARTO SERIES, Vol. I., No. 7.1

THURSDAY, FEBRUARY 13, 1845.

[WHOLE No. 450, Vol. XVIII.

THE AMERICAN RAILROAD JOURNAL is the only periodical having a general circulation throughout the Union, in which all matters connected with public works can be brought to the notice of all persons in any way interested in these undertakings. Hence it offers peculiar advantages for advertising times of departure, rates of fare and freight, improvements in machinery, materials, as iron, timber, stone, cement, etc. It is also the best medium for advertising contracts, and placing the merits of new undertakings fairly before the public.

NICOLL'S PATENT SAFETY SWITCH FOR RAIL

TICOLL'S PATENT SAFETY SWITCH FOR RAIL. road Turnouts.

This invention, for sometime in successful operation on one of the principal railroads in the country, effectively prevents engines and their trains from running off the track at a switch, left wrong by accident or design. It acts independently of the main track rails, being laid down, or removed, without cutting or displacing them. It is never touched by passing trains, except when in use, preventing their running off the track. It is simple in its construction and operation, requiring only two Castings and two-Rails; the latter, even if much worn or used, not objectionable.

Plans, Specifications, and all information obtained on application to the Subscriber, Inventor, and Patentee.

G. A. NICOLLS,

Jan. 1, 1845.

TO IRON MANUFACTURERS.

The subscribers as Agents of Mr. Geo. Crane of Wales, having obtained a patent in the United States for his process of smelting Iron Ore with Anthracite coal, and helding as assignment of the patent obtained by the late Rev. F. W. Geissenlainer, are prepared to grant licences for the manufacture of Iron according to Mr. Crane's principle.

and other Presses; Press Screws; Callenders; Laithes and
Tools of all kinds; Iron and Prass Castings of all descriptions.

ROGERS, KETCHUM & GROSVENOR, Paterson, N. J. or 60 Wall street, N. Y.

MESSRS EDITORS:—As your paper is devoted to the benefit of the public in general, I feel desirous to communicate to you for publication the following circumstance of no inconsiderable importance, which occurred some few days since on the Philadelphia, Wilmington and Baltimore

days since on the Philadelphia, Wilmington and Baltimore Railroad.

On the passage of the evening train of cars from Philadelphia to this city, an axle of our large eight wheeled passenger car was broken, but from the particular plan of the construction, the accident was entirely unknown to any of the passengers, or, in fact, to the conductor himself, until the train, (as was supposed from some circumstance attending the case,) hall passed several miles in advance of the place where the accident occurred, whereas had the car been constructed on the common plan, the same kind of accident would unavoidably have much injured it, perhaps thrown the whole train off the track, and seriously injured, if not killed many of the passengers.

Wilmington.

Delavare, Sept. 28, 1840.

The undersigned take pleasure in attesting to the value of Mr. Joseph S. Kite's invention of the Safety Beam Axle and Hub for milroad cars. They have for some time been applied to passenger cars on this road, and experience has tested that they fully accomplish the object intended. Several instances of the fracture of axles have occurred, and in such the cars have uniformly run the whole distance with entire safety. Had not this Invention been used, serious accidents must have occurred.

in such the cars have do not this invention been used, serious accidents must have occurred.

In short, we consider Mr. Kite's invention as completely successful in securing the safety of property and lives in railroad travelling, and should be used on all railroads in the

country.

JOHN PRAZER. Agent,
GEORGE CRAIG. Superiotendant.
JAMES ELLIOTT, Sup't Motive Power,
W. L. ASHMEAD, Agent.
A model of the above improvement is to be seen at the N.
Jersey Railroad and Transportation Office, No. 1 Hanover st.,
New York.

TO RAH.ROAD COMPANIES AND MANUFACTUR. ERS OF RAILROAD MACHINERY.—The subscribers have for sale American and Egglish Bar Iron, of all sizes; English Blister, Cast, Shear and Spring Steel; Juniatia Rods; Car Axles, made of double refined iron; Sheet and Boiler Iron, cut to pattern; Tiers for Locomotive Engines, and other railroad carriage wheels, made from common and double refined B. O. iron; the latter a very superior article.

and double refined B. O. iron; the latter in very superior article.

The Tires are made by Messra Baldwin & Whitney, Locomotive Engine Manufacturers of this city. Orders addressed to them, or to us, will be promptly executed. When the exact dismeter of the wheel is stated in the order, a fit to those wheels is guaranteed, saving to the purchaser the expense of turnlog them out inside.

THOMAS & EDMUND GEORGE,

K. E. corner 12th and Market streets, Philadelphia, Pa. jal

by the undersigned.

extensively used during the last year on both when required, superintend their execution. the excellence of the material always used in passenger and freight engines, and have been brought to such a state of perfection that no with correct maps and descriptions of the for railroads and other purposes in this counannovance from sparks or dust from the chim-same; and examine and report on the best try, the manufacturers have no hesitation in ney of engines on which they are used, is mode of rendering them productive by drain- warranting them fully equal to the best spikes experienced.

These Arresters are constructed on an entirely different principle from any heretofore offered to the public. The form is such that a rotary motion is imparted to the heated air, hood of Bituminous Coal and Iron Ore, of smoke and sparks, passing through the chim-ney, and by the centrifugal force thus acquired Pa. This is the nearest point to tide water by the sparks and dust, they are separated where such coal and ore are found together, from the smoke and steam, and thrown into and the communication is complete with Philan outer chamber of the chimney through adelphia and Baltimore by canals and rail-openings near its top, from whence they fall ways. The interest on the cost of water by their own gravity, to the bottom of this power and lot is all that will be required for chamber; the smoke and steam passing off many years; the coal will not cost more than at the top of the chimney through a capa- \$1 to \$1 25 at the mill sites, without any cious and unobstructed passage, thus arrest-trouble on the part of the manufacturer; rich ing the sparks without imparing the power iron ore may be laid down still more cheaply activity of the fire in the furnace.

Railroad Companies would do well to ment being large, can execute orders with great promptitude, at reasonable prices, and Address.

JOHN F. WINSLOW, Agent, Albany Iron and Nail Works, Troy, N. Y.

PROPOSED RAILROAD BETWEEN CAIRO AND SUEZ.

A canal across the Isthmus of Suez is now in project. Some good communication is required there, and the following extract from the Report of M. Galloway, C. E., will show the difficulties in the way of a canal:

" I started from Suez on the 10th of March. 1844, and six miles from that place fell in with the remains of what is called the ancient canal, which extends about nine miles, but beyond that nothing whatever is visible. I directed my course to Sheik Anedik, occasionally diverging from right to left, and so on to the Bir El Arrass and the Bir El Dowedar, all of which appear on the man; and when within sight of the bay of Tineh I could not approach it, owing to the land being very swampy. Having achieved all I sought for-viz.. an examination of the different lines projected, I retraced my steps into the El Arish road, and skirted the Desert up to Salich, and near to Belbeis, where I turned off across the country, and joined Moses' Canal at Zag-Zig, thence proceeded into the Damietta branch of the Nile round the head of the Delta, and down the Rosetta branch to Atfé. The direct line proposed by Captain Veitch is impracticable, inasinuch as it presents overwhelming difficulties of sand mountains, besides very high and low levels. The second line proposed would also be attended with similar obstructions; and the third, that of uniting the Lake of Menzelah with the Bitter Lakes and the Mediterranean, is equally impracticable, inasmuch as they are mere marshes. Indeed, after paying due attention to the possibility of finding a suitable line for a canal, I confess I gave up the project as a hopeless one. Starting from Suez, where there would be considerable work to form into deep water an approach from the shore, and vicwing the immense work to form an artificial port and channel into deep water seaward at Tineh, or any part of its neighbourhood, as well as the variable levels and marshy land for several miles before reaching it, I have come to the conclusion of its being an impracticable affair; one in which millions may be spent in the attempt to effect it, while in the end it must be abandoned. What may have existed in the time of the ancients I know not, but my own eyes convince me if any canal of importance was ever used, the land must have undergone a material change, and what was available then is by this change rendered impracticable now. I am therefore disposed to look upon the Report of the French in the town of Salina, during the year 1844, of Commission with vast suspicion, and more particularly when I see their fellow-countrymen resident in Egypt following up the same ideas on most erroneous data.

"Last year Solimon Pacha and Galice Bey, (both French military officers in the service of over the ground, and forgetting that it only formleast difficult. It is really amusing to read some them the pain of being severely animadverted upon. I have been over the Caledonian Canal, and I am well acquainted with its construction, and the difficulties Mr. Telford had with it, which, if I recollect right, cost the country above a million sterling. Judging from that parallel 000 bushels. case, this work would cost treble as much-a

Nile, and then across the Desert. In a word, the difficulties are so great, that I could fill a volume in narrating them."

MANUFACTURE OF SALT IN NEW YORK,

Our readers at a distance will suppose that we are "running off the track,"-some may even go so far as to allude to a certain river only too well known by many, but the fact is, that the sovereign State of New York, besides her immense forwarding business, and her extensive manufactures carried on by convicts, has also embarked in the manufacture of salt, and, by way of increasing the production of this necessary of life, has allowed a bounty in the shape of a drawback in the canal tolls for salt delivered at certain places named in the act of 13th April,

A duty of about 6 cents per bushel is or was imposed by the State, and to counteract the injurious effects of such excise, no toll was charged on fire-wood transported on the canals to the salt works. A large portion of this fuel was carried on the Oswego Canal, the tolls of which were thus kept down-a policy in high favor with the State authorities generally. What with the duty, the bounty, the remission of tolls on fire-wood, and the general supervision of an agent of unexceptionable politics, the actual state of the manufacture of salt in New-York is a riddle which we have not time to solve.

The average quantity imported into the United States is about six millions of bushels. The superintendent says in his Report:

There have been manufactured and inspected

Common or fine salt, 3,358,240 bushels. Coarse or solar salt, -332,418 do Ground or dairy salt, - 312,896

Total, - - - 4,003,554 do Being an increase over 1843, of 876,054; over the Pacha,) visited the remains of the ancient 1842, of 1,711,651 bushels; and over any pre-canal near Suez, and pronounced the feasibility vious year of 662,785 bushels. It will be perof establishing the whole line, without going ceived, by examining the table hereunto annexed marked A., that the increase has been princied one-twentieth part of the line, and that the pally at distant points, where a bounty is paid least difficult. It is really amusing to read some under the act passed April the 18th. 1843. The of the remarks contained in the recently published above increases may be attributed principally to pamphlets, and it is fortunate for the authors that the operations of the above law. Should it exploits is so far off to save pire by its own limitation, and the same rate of Connersville and Cambridge city has been let duty and tolls be imposed that was levied pre-vious to its passage, no doubt is entertained that the amount which will be manufactured in 1845. will fall short of 3.000,000 bushels, but if re-en-per annum, payable half yearly. This contract acted we think the amount will exceed 4,50p,-dispels all doubt of the early completion of the

The operations of the act of the 18th April. sum which would be independent of the additional 1843, entitled "an act to increase the revenues line above Brookville, regiain unpaid, but the cost of he artificial harbour in the Mediterranean, of the State by extending the market for salt, whole liability on such accounts are not expect-which ought to hold many sail, and of the chan-coal and lead," have realized the most sanguine ed to exceed 30,000 dollars.—Cin. Gaz.

lnel, which must be run from the canal at least expectations of those who solicited its passage six miles out. The work has also to be formed not only in opening new markets for our salt, in a desert, and therefore, all the supplies must but also in securing for the State an increased be sent from Cairo. If any parties are really amount of revenues. Its passage was urged serious about this project, their best plan would upon the Legislature on the ground that it was be, as a preliminary, to form the Suez railroad, the only method that could be adopted to give so that they could convey the supplies and ma-teriel, of which there is none along the whole coast, or in the district of the proposed canal; heavy duty imposed by the State, without diand I am not aware that any stone fit for such a minishing its revenues. One of the principal work can be obtained, except from Upper Egypt, objections urged against its passage was that it which of course must be conveyed down the would materially lessen the revenues of the Nile, and then across the Desert. In a word, State derived from salt. But we think the result has most conclusively shown that these apprehensions were unfounded. The revenues to the State the past year in salt duties, and tolls for transporting it upon the canals, is greater in amount than has been realized in any one year since the duties were reduced to six cents per bushel, with the exception of 1841, in which year there was a large surplus manufactured which entered into the consumption of 1842. Whatever the State may have lost in salt duties, it has more than realized in canal tolls. Previous to the passage of the law under consideration, the manufacturers were almost entirely excluded from the eastern markets.

WHITE WATER VALLEY CANAL COMPANY.

We have before us the semi-annual Report made to the White Water Valley Canal Company on the 1st of Jan. 1845, from which it ap-

That of the \$432,000 stock subscribed, \$261,-076 have been paid up, leaving unpaid only \$170,923. A majority of the stockholders, in order to complete the work, have pledged themselves to pay two instalments annually, on the 1st of March and Sept., thus completing their payments in 5 instead of 10 years allowed by the terms of subscription. This effort and the arrangements made with Mr. Vallett, it is supposed, will secure the completion of the canal the coming year.

The revenues of the company consist of Tolls collected at Harrison, - - \$1493:75 at Lawrenceburgh, 135:90 at Brookville, 9759-10 Water tolls collected, -1354:57

\$5743:32

Deduct expenses collecting, 396:09 repairs, - 4773:51 do

The repairs last year were thorough, and made expensive by wet weather and freshets. Notwithstanding the delay of this the tolls show an increased sum received from that source for the last over that of any previous six months of \$529.

Up to the present time the cost of construction amounts to 250,258: 77 dollars, of which 61,475:01 has been worked out in payment of Stock.

The means of the company consisting, besides the canal, of real state, debts due, is estimated at 512,758 dollars, and their liabilities of

whole work to Cambridge.

The claims for damages for land, &c., on the

ILLINOIS CANAL.

The Report of the Illinois Canal Commissioners statés the actual cost of the Illinois Canal thus far to be as follows: Sum actually disbursed, \$5,039,248

THE BOSTON, CONCORD AND MONTREAL

as the most inviting opportunity for investment that has been presented since Railroads were

Mr. Boardmar, from the committee appoint-

ed for that purpose, reported the following reso-

Resolved, That information which we have already obtained, satisfies us of the practicability of the route for a railroad from Concord, via Meredith, Plymouth, Haverhill and Stanstead to Montreal.

Resolved, That the interests of the terminating points of the Boston, Concord and Montreal Railroad, and the interests of the whole population between those points, imperiously demand the construction of said road.

Resolved, That in our judgment the amount of business to be done on said road when constructed, will be so large, that money invested in it cannot fail to afford a profitable return.

Resolved. That the enterprise ought to be commenced with the least possible delay, prosecuted with unremitting assiduity and perseverance, and completed with the utmost despatch.

Resolved, That we hereby tender to the Boston, Concord and Montreal Railroad Corporation, in the prosecution of this enterprise, all the aid which it is in our power to give them, and we strongly urge it upon the officers of that corporation, to procure a surveyof the route at the earliest practicable moment; that they immediately cause books for the subscription of stock to be opened; and that they leave unattempted no effort which will hasten the completion of the en-

Resolved, That we have strong confidence in the belief, that the route above described is the one marked out by nature, being free from ice and every other obstruction, and very decidedly the best for a great thoroughfare between the commercial emporiums of New England and Canada.

From the Binghamton Courier.

connect with the Boston Road.

My Dear Sir :- I have been waiting anxiously for the citizens of New York city to subscribe the requite sum to warrant the Directors of the New York and Erie Railroad Co. (since the State have virtually given the Co. \$3,000,-000.) to proceed, and complete said Road. But clusive to avail themselves of it. The good sense I have now become satisfied that the city of New of the Legislature must see this matter in its true York had rather lose the trade of the "South-ern tier of Counties" and all of the trade of "the far West," that would naturally flow through said channel of communication, than to subscribe the requisite sum for its completion, (yet ever the interests of the work may point out the I have no doubt, if built, that the city of New most advantageous line, with reference to the York would save enough every ten years to pay the whole cost of building said Road), and thousands of individuals have come to the same conclusion that I have. And my object now is, through your paper, to call the attention of the people to another project, which is a Road from Binghamton to Albany, via Harpersville, Bainbridge, Unadilla, Otsego, Colliersville, Cobleskill, Smithsbridge, &c., or such other route as people on the line of said Road, and the Bostonians. I am aware that this project will divert a large portion of trade from the city of as much as any citizen of the Empire State does, for I have a little state pride, but if we cannot have things as we want them, we must take them as we can get them.

to the subject, preparatory to a meeting to be called, to take the matter into consideration.

A. KEYES.

Bainbridge, Dec. 31, 1844.

recommendation-

"The reasons that would influence the com mittee to recommend that the lien of the state be subscribed, and one fourth paid in, instead of making the completion of the road a condition of the release, arc, that the company relies upon borrowing one half the amount necessary to complete the work, by pledging the road for security

—and such a loan could not be obtained while the state lien existed.

"They would, therefore, as soon as enough the work, recommend the removal of all embarrassment to the borrowing the remainder created by the lien of the state. Should the company fail to procure the subscription, the lien will remain as it is. Should they succeed, the completion of the work may be looked upon as ceriain, in the opinion of the committee.

We perceive by the papers, that petitions are New-York and Eric Railroad. The restriction the Chenango and Genesee Valley Canal, &c. of the road to this state was a most unfortunate one; for, at that very time, it was known that the line must be carried into Pennsylvania. The of which Mr. Roberts is well aware: southern counties of New-York look to this work Railroad from Binghamton to Albany, and to as their only means of obtaining a good comferent as to whether the road is located entirely within this state or not; they want the cheapest, quickest, and easiest route, and, if Pennsylvania or New-Jersey offer such, they are not too exof the Legislature must see this matter in its true light when they examine the question; we then confidently anticipate a release from the state lien, and full permission to locate the road wheregreat subjects of traffic and engineering.

ENLARGEMENT OF SCHUYLKILL CANAL.

locks, which are to be 110x18, as on the enlarged Erie Canal.

I wish you would publish this in your paper, aware that the "State Engineers" of New York was very well known, but an addition of 10 feet unfortunate—a greater width of lock.

NEW YORK AND ERIE RAILROAD. would have been quite enough. All professional We are indebted to Mr. J. E. Bloomfield for men were astonished at the views of the "State the "Report of the Committee on Railroads, on Engineers;" the common sense of the publicathe petition praying for a surrender of the lien of became alarmed, and, by some means or other, the State upon the New-York and Eric Rail-the Commissioners contrived to increase the road." The report concludes with this favorable width to 18 feet. This dread of a greater width of lock, on the part of the state officers, has been generally ascribed to the influence of the canal fowarders and others, who suspected that, with released on the condition of three millions being locks 120x24x7, transhipments at Buffalo and Albany would be in great measure avoided-at the former port partially, at the latter totally. The friends of the Schuylkill Navigation cannot select more unfortunate advisers or examples than the 'State Commissioners and Engineers" of New-York. There is not the slightest reason was obtained by private subscription for one half to suppose, that the honor and interests of the state, or any of the higher considerations which influence the members of an honorable profession, were allowed any weight in their counsels. Hence we are sorry to see that gentlemen every way superior to these "State officers" should imagine that, because the enlargement of the Erie Canal demanded a thorough and impartial expresented against the location of part of this work amination of the whole question, it therefore rein Pennsylvania. We cannot permit ourselves ceived it. We will soon give some proofs of the to believe that there is any serious hostility to capacity and integrity of these "Commissioners this measure; for, to refuse this, is to destroy the and Engineers," as exemplified in the cases of

The great object with the friends of the Schuvlkill Navigation should be the trade of the North,

"Only a small part of this vast supply of fuel is consumed at Philadelphia, the great bulk of it munication with this city, and are utterly indif- being sent to New-York, and to other centres of population and industry farther to the north and east, whose inhabitants are deeply interested in obtaining these essential supplies by the cheap-est means of conveyance. Water communicaest means of conveyance. tions exist with them all adapted to vessels of a larger size than the boats that now traverse the Schuylkill Navigation, and although the boats now in use carry coal without transhipment from Pottsville to New-York, an increase of their dimensions and capacity is exceedingly desirable."

In order to tow safely through the bay of New-York, and, as far as practicable, in the Sound, a width of 18 feet is too little—the boats are not sufficiently stiff. Now the difference in the cost of lockage, on Mr. Roberts' plan of construction, of 120x22 or 24, and of 110x18, will not exceed Every canal, however small, is better adapted \$80,000; the ordinary balance gates may be to a certain amount and description of business used; and no increased width of channel will be than a canal of different dimensions. We are required. Of the great superiority of vessels of under the impression that a canal, of the size of 22 or 24 feet beam over those of 18 feet, on may be deemed most feasible. By this project, the Schuylkill, will be more efficient for a coal broad rivers and bays, no one can entertain a I am satisfied the stock will all be taken by the trade not exceeding one and a half millions of doubt; and as increased capacity is not so much trade not exceeding one and a half millions of doubt; and as increased capacity is not so much tons per annum, than a larger and more costly the aim at present, as the introduction of a class work. But, assuming the enlargement to be of boats better fitted to the trade of the North, we New York, and give it to Boston, which I regret judicious, we object to the dimensions of the new cannot help thinking that, even admitting the enlargement to be judicious, the adoption of the dimensions introduced by mere politicians on the Perhaps our Pennsylvanian neighbors are not Erie Canal must necessarily lead to failure.

The enlargement of the Schuylkill Navigation for the purpose of calling the attention of the strongly insisted on locks 16x110, and a channel is determined on; hence we take the liberty of people along the line of this contemplated route 7x70, in place of the old locks 90x15, and the old drawing the attention of those interested to a channel 4x40. That a width of 40 feet, for boats measure which we think of the utmost import-15 feet wide to pass easily, is rather too little, ance, whether the enlargement be judicious or

We particularly request statements of the troffic of each neeck and of the corresponding week of last year to be regularly sent to us,

Correspondents will oblige us by sending in their communications by Monday morning at latest.

We are endeavoring to devise a mode of advertising the rates of fare and distances of the principal railroads in the country, and have opened a correspondence on the subject with gentlemen connected with some of the most important works.

AMERICAN RAILROAD JOURNAL

PUBLISHED BY D. K. MINOR, 23 Chambers street, N.Y.

Thursday, February 13, 1845.

It will be seen that we have changed the arrangement of the sales of shares, in order to give a better general view of their operations, and to save valuable space. During the past week 15,070 shares were sold in New York; of these, only 35 brought above par, 150 sold for 98, and the remainder went from 76 to 30. In Boston there were sold during the same period of Massachusetts r.road stocks only 432 shares varying from 991 to 121. The very high price of road company was incorporated March 14, these stocks is not owing to their reasonable diviednds but to their security as investments.

MINEHILL AND SCHUYLKILL HAVEN RAILROAD. The following is the amount of coal transported over this road, for the week ending on Wednesday evening last 2,904,14

Per last report, 19,309,17 Total

We have great pleasure in placing before the rail- Int. to State on 500,000 road community, the following extract from a letter addressed to us by Mr. C. L. Lynds, formerly superintendent of the Troy and Schenectady railroad, and now in charge of the passenger, baggage and mail cars on the line between Albany and Rochester.

"The cars for the passenger business belonging to the roads, viz. Mohawk and Hudson, Utica and Schenectady, Syracuse and Utica, Auburn and Syracuse, Auburn and Rochester, were put into general stock, each owning according to its length, and put in charge of a general superintendent, under whose directions they are repaired, and placed

make the roads from Albany to Buffalo work as one line, little imagining at the time, that it was already more than half accomplished.

EASTERN RAILROAD.

The Portland, Saco and Portsmouth railroad company was incorporated March 14. Nov. 25, 1845. It is 51 miles long, connects with the Eastern by a bridge over the Pisca taqua river at Portsmouth, and with Boston and Maine at South Berwick, 13 miles east of Portsmouth. For the year ending Nov. 30, 1843, it divided 31 per cent., and for the past year 6 per cent. Its cost is not definitely settled, but will amount to about \$1,200, 000, a little over \$23,000 per mile. It is laid with a T rail, 56 lbs. to the yard; highest grades 35 feet per mile, passes through the towns of Keeting, Elliot, South Berwick, North Berwick, Wells, Kennebunk, Saco, 29,838 Scarborough to Portland.

Net income. 847,165.98 \$89,997.08 1844 124,497.39 74,841.25 The number of miles run being severally 102,036 and 117,008, and the expenditures 47 cents and 421 cents per mile run.

The Eastern railroad, extending from Bosto Portsmouth, N. H., 54 miles, was partially opened Aug. 28, 1838, and for the whole of 3 miles to Marblehead.

Gross income for 1844, Current exp. 53-341 pr m. run, From the road, net income, From rents, etc., do

Total surplus,

325,000.00 loan, Dividend in July, 79,887.50 91,300.00 \$196,187.50 Dividend in Jan'y, 838,393.24 Sales of property over costs, 9,344.57 Surplus of 1844, \$47,737.81 Surplus previously, 39,310.30

Number miles run 204,962, number passengers 544,994; average cost of carrying a passenger 1 mile 1.166 cents; receipt from each company per mile 3351 cents.

The preceding may be more particular for service. The repairing is done by con-than you want, but may be useful among tract, the contractor keeping the cars in order your notes for reference. It is to be regretted and clean, furnishing stoves, oil and men, at that some uniform mode of making up all certain points on the line, to examine the trains railroad accounts could not be adopted through and renew oil, etc. He makes, and is liable the country. This, and a great many other for all repairs and accidents, except such as advantages might accrue from the appointoccur from negligence or the engine leaving ment by the several railroad companies, of the track, loose bars, etc., which is a local one general agent to collect all the statistics, charge upon the road on which it happens. collate the regulations, and describe and com-The price paid him is one mill per mile for pare all the different modes of doing the same each wheel run. This is a saving to the thing on all the roads—ascertain the prices roads, and a profitable job to the contractor." and qualities of the work and materials used We said, a few weeks since, that competition would at various places, and bring together the vast amount of useful information and detail that is now lost to a great portion of this great interest. When it is recollected that each railroad has a direct interest in having all others conducted on the safest and most economical plan, because the safer and the cheaper, the larger is the amount of travel, and the more it is diffused, there would seem to be no objection to such a plan. This, and what must be done to bring it about, an annual meeting of one representative from each road at some central point in the country, it would, I think, be worth while to suggest in your Journal, and if it should be generally approved, some means might be adopted to bring it about. I make these remarks as you seem desirous of making your Journal of service to the railroad interest, leaving it entirely to your judgment to give any heed to them or not.

The gentleman to whom we are indebted for the above very interesting and friendly communication, will see that we have availed ourselves of his kind permission to the fullest extent. The idea of a general agent to collect and collate all the information which experience is daily furnishing, strikes us as most excellent, as well as practicable, at a very trifling cost to the companies. This is precisely the kind of information we should like to give in the Journal, and, this again, besides making these important results more generally known, would still distance Nov. 9, 1840, and has also a branch further decrease the expense to the companies. We shall recur to the subject, and in the mean time, beg \$337,238.46 leave to draw to it the attention of some of those gen-109,318.86 tlemen who, to our knowledge, have long had in view \$227,919.60 a general means of communication between the different railroad companies, so as to give each companies. 6,661.14 ny the full benefit of the experience of all the other \$234,580.74 companies in the Union.

THE RAILWAY SYSTEM.

A few remarks taken from an article in "The London Times on " The Railway System and the Board of Trade," will be perused with inte- perty, by altering the relative cost of transit for all the repairs essential to their machinery. The rest. We had flattered ourselves that some similar, liberal and enlarged views on "The Railway System" to be pursued in this State, would have appeared in the late message of the therefore, on a comprehensive plan is a subject Governor. But the subject of railroads-by far the most important topic which can come up be- the most extensive experience which can be for the past year. fore the Legislature for some years-is not even brought to hear upon the question will be realluded to: the Railways of New York and the and indicate the rest class, and combine Canals of Canada have been overlooked or considered unworthy of notice by their respective Governors. We regret this the more, as that sident is above reproach. But cleverness is as part of the State where the Governor resides, Northern New York, is peculiarly interested in the success and extension of the railroad system. the success and extension of the railroad system, even the collective Board can boast would be of than any heretofore in use. Several very important surveys have been made but little avail. To judge of such questions as at the expense of the State, some very incorrect these, military engineers are almost totally in-son with those engaged in the coal trade, have information has been disseminated, and much competent, unless they possess talents quite disstill more important information has been, as far as possible, withheld from the public. Now sounding names attached to various of the new we have the best authority for stating, that the schemes knows personally the truth of any one in the spring. This increase, they believe, will Governor is intimately acquainted with the re- single fact which has been stated respecting the enable them to supply the wants of the colliers, sources of the north, as well as with the proper schemes with which they are connected; and and transport as much coar as even increased they have only at any moment to sell their rade will require.

The Managers hope that they will not be bye, little understood. It is not unreasonable to have been deceived by the false representations of deemed to depart from the appropriate sphere of the deemed to depart from the appropriate sphere of the sources. suppose that he has a good general acquaintance others, in order to exonerate themselves from the their report, by reminding you that this work was with the southern counties; and he must be consequences here stated. The proceedings of commenced in 1835, a year of comparative prosaware of the extraordinary position in which the western furmer is placed, who, because he has be has aided in constructing a canal to the lakes, is now capital of their own, and supported on the state taxed to keep down the tolls on produce brought ments of those who must be responsible for them. to his own market from the cheap lands in the are left without the possibility of being able to this company was compelled to extend its work. western States. It is to the "Railway System" alone that the nor bern, southern, river, and even some of the probable evils that will attend the tors, irritated at delay and procrastination, by some of the central or canal counties can look for decisions of the Board of Trade, made, as these any substantial general improvement. We re- decisions will be, on most inconclusive evidence, ened to render fruitless all further attempts to peat that we are disappointed, mortified to find, and by persons inexperienced in the matter.' that the ablest public man in the State, in the longest message ever seen, even in this country, should have atterly neglected the subject of railroads, and passed by without remark, the wretched imposition to which the farmer must submit, in order to perpetuate the disabilities which reduce his income one half, by excluding him from the use of a communication leading to a market almost boundless in its demands.

"The course which Parliament intends to pursue with respect to railways in the ensuing session is now become a subject of great interest. To develope a sound and permanent system of Delaware has thus been carried into effect, and intercommunication suitable to the commercial an increase, not only in the trade itself, but in poses past, while such heavy outlays for the purand political situation of the country, both in its convenience, regularity, and economy, cannot fail national and continental relations, is a matter of to be attained. no inconsiderable difficulty; and this difficulty. To this great result of the past year, the Man-becomes still more perplexing by the necessity agers have to add, that the extensive improvewhich exists for repairing the errors that have ments for the shippers of coal on the Delaware be stated that the cost of the entire work and already been committed, while preserving a due are on the eve of completion, and will be entire-machinery will not, in any event, exceed \$10,regard to existing interests of so large a charac- ly prepared for use before the opening of the trade 000,000, and when it shall become advisable to ter as those already involved in these undertak-

It is looked upon generatly and to reduce productive, at the as merely a more easy mode of transporting a progressive increase in each year.

It will also be seen by the report of the same place to another.

But those who look deeper into the matter discover in it a principle which been constructed to facilitate the immense traffic resulting from it, will appear by the accompany-

merce of the country-which is daily absorbing regularity and economy. the merchandise traffic to such an extent as must nliect, to an unknown degree, the value of prothe staple commodities and general merchandise its officers have rendered this arrangement high-of the country. The laying out of railways, ly beneficial. requiring the most serious consideration; and and judicious decision on this difficult subject.

The Railway Board undoubtedly contains far removed from that grasp of mind which this subject requires as it is from that practical expetinet from those of their own profession.

Not one in twenty of the owners of the highrefute the statements of their opponents, howev- In its progress, heavy floating liabilities to coner erroneous they may be. Such appear to be

READING RAILROAD.

To the Stockholders of the Philadelphia and Reading Railroad Company.

It is with pleasure the Managers communicate to you the present situation of the Company, and the progress of the work under their charge during the past year.

By reference to the annexed report of the engineer, it will be seen that the double track has been completed from the terminus of the road, in panying statement of the treasurer. Schuylkill county, to the coal depot at Richmond, on the river Delaware.

The original design of connecting the coal region by a double track railway with the river Delaware has thus been carried into effect, and

of the engineer, that they afford conveniences of pacity for business will be almost unlimited. The full effects of the railway system are but the highest order, and with the ease and econovery imperiectly comprehended by the great my of transhipment will secure the great ship-

is fast producing a change on the whole com- of the road, and to give to each portion greater

The workshops have been enlarged with advantage, and the company is now able to make our mineral productions and our manufactures, delay and expense that necessarily follow the which form so important an item in the value of employment of those not under the charge of

The report of the Superintendent of Transportation exhibits the increase of the machinery

The engines are of the first class, and combine equal distribution of weight, with an increase of power, is attained, and experience has shown some clever men, and the character of the Pre-them to be peculiarly adapted to the heavy tonnage of the road.

Great advantages, it is believed, will result from the use of the iron coal cars. They possess rience without which far greater talents than greater durability, and have less useless weight,

The arrangements made for the ensuing searendered it necessary that the managers should increase the machinery. They have, therefore, contracted for six hundred additional iron coal cars, and four new engines, to be delivered early schemes with which they are connected; and and transport as much coal as even the increased

> place to the coal region. The financial disasters of the ensuing years frustrated their designs, and tractors and others were incurred. The credilegal proceedings, carried to extremity, threatprosecute the undertaking, and the prostration of the company was confidently predicted as inevitable.

> Notwithstanding these embarrassments, the work gradually progressed, until the original design may now be deemed fully accomplished.

> The heavy outlays for construction account, cars, and engines, combined with the settlement of old claims, arrears of interest, land damages, law expenses, &c., have added greatly to the cost of the work, as will be seen by the accom-

> It will be further increased by the payment for the cars and engines contracted for, the completion of the wharves at Richmond, and the settlement of some claims still unadjusted.

pected, but the stockholders will naturally be To this great result of the past year, the Man-desirous of knowing when this increase of debt is to terminate. In answer to this inquiry, it may of next season. It will be observed, by the report increase the expenditure to this amount, its ca-

ing statements. The gross receipts for that period exceed those of the preceding year 46 period exceed those of the preceding year 46 percent., although the work was, in many essential respects, unfinished. Without double track and sufficient machinery, and with limited shipping facilities, the Company, during the greater portion of the past year, was compelled to relinquish many valuable opportunities for increasing its business, and the ensuing season will be the first in which its merits, as an investment, can be fairly demonstrated. The cost of transporting coal during the past year under the disadvantages already mentioned, has been reduced to 41 % cents per ton, a saving of 43 cents per ton on the expense of the previous season. New sources of revenue have also been secured by connections with important portions of the mining districts, and the company will be enabled, for the future, to send their cars to every mine in Schnylkill county. The advantage of having the coal transported direct from the colliery to the vessel, without transhipment is apparent, and seems universally appreciated, as all engaged in the trade have been tound desirous to contract with the company for the ensuing year. In conclusion, the Managers feel that they may justly congratulate the stocklic liers up in the present situation of the company. The works are on the eve of completion They afford every facility for trade and profit, and in construction and revenue may rank as the first of the local improvements of Pennsylvania. They do not believe that an institution can fail to be successful, when its prosperity is based upon a well-ascertained ability to furnish with speed, economy, and convenience, an article demanded by the interests and necessities of each citizen. This being the case their is little forecast, if not great ignorance, in a direction that their proceedings. It is true, it is said they hitch will be from Greenfield to Brattleborough. attempts to palm off this road upon the pub- "are above law;" this may account for their 25 miles, where it will strike the extension of lic as the stem or terminus of railways from infringement on the statute, year after year. New Haven, from Albany, and the southern The management which produced the pretier of counties. The termination of the Har-sent financial situation of this company, (to lem road has not accommodation even for our be found in the printed statement, made by city travel. It is now six days since the snow a committee of the stockholders, 15th Oct., storm, and yet, strange to relate, such is the 1841,) may be a useful beacon to other comparsimony or want of means of this company, panies. Its details up to the present time, \$50,000, to construct a magnetic telegraph that they have not cleared off their track, al-may claim my attention, to show the error in though their is any number of laborers, at selling their own unissued stock, greatly unhalf price, to do this needful work, in default der par, and contrary to law, to raise money of snow ploughs and motive power. For to pay debts; thus placing the stockholders the credit of the railway cause, in a city like who have paid 100 cents for stock, on a par It is supposed to be more than were ever made this, it should have been accomplished with those who purchased from the company in the same period, at any one establishment in promtly. The New Jersey railroad and "2,980 shares at 294, and 8,150 shares at the United States, from the iron ore. - U. S. Gaz. Transportation company cleared out the long rates from 39% to 58 cents on a dollar," Transportation company cleared out the long rates from 39% to 58 cents on a dollar." A GREAT. INDIAN RAILWAY.—Our attention pass on Bergen hill the day after the storm, alluded to (1999) the report has been drawn to a series of statistics, on although ten or twelve feet of snow was drift isted for a resort to the unissued stock, and for ing, to be called the "Great Indian Railed into the extended cut. The great western making sales of it, below par, it would have way," from Bombay to Coringa, (on the Bay shire mountains, was cleared out the day afby fairness and good faith, to have first made
ter the storm. The Springfield and Namith facts the interest of the interest made ter the storm. The Springsield and New the facts, (the indebtedness of the company) the reach of branch communication, some of the whole the reach of branch communication, some of the whole the reach of branch communication, some of the whole the reach of branch communication, some of the whole the reach of branch communication, some of the whole the reach of branch communication, some of the whole the reach of branch communication, some of the whole the reach of branch communication, some of the whole the reach of branch communication, some of the whole the reach of branch communication, some of the whole the reach of branch communication, some of the whole the reach of branch communication, some of the whole the reach of branch communication, some of the whole the reach of branch communication, some of the whole the reach of branch communication, some of the whole the who also cleared I believe in one day; yet we find the Harlem railroad company obliged to abandon their cars for sleighs! thus plac-the State of Maryland personally to inspect the ing themselves on a par with the omnibus Chesapeake and Ohio Canal from Dam No. 6, have successfully competed with the railroad! Cumberland .- Nat. Intel.

The inhabitants of Harlem complain, and way company to refuse to commute by the ing an untrammelled right of way to the Balti-the entire Peninsula-for the distance between Westchester also object that the rates charged points of view which control in new them for the freight on milk, etc., is double, attentive, and, we hope, favorable consideration of that fertile, but now neglected region, can be proportioned to the distance, to the prices Pitt burg and Western Pennsylvania have a made available. By the present modes of conproportioned to the distance, to the prices charged on the Erie railroad; and that there

I have called this road one of promise. This name is derived from a report of one of its presidents, who stated that the income "estimated for 1838 would be \$211,816

" 1839 296,544 " 1840 415,162."

The president alluded to made the following as this income seems to be, it nevertheless, eral estimate, made some years ago, the entire to a certain extent, is sustained by arithmetical deductions, hard to be disputed, however difficult to be believed." Other presius see the performance.

CHESAPEAKE AND OHIO CANAL. - The Williamsport Banner says that the Committee re-cently appointed by the House of Delegates of line on the 3d avenue, who at the same prices are, upon the evidence thus obtained, almost unanimously in favor of completing the work to

From a friend at Harrisburg we have received with reason, that they are not accommodated, a copy of the memorial which has just been preand that an unwise policy prompts the rail. sented to the legislature of Pennsylvania by the year, except at double the rates charged by more and Olio Railroad Company through that the eastern side and Bombay renders the former Murphy's stages. The farming interest in state to the western waters .- It is a well written, unapproachable by the present modes of conveypoints of view, which cannot but obtain for it an way communication that the numerous products deep interest in this matter, and the legislature veyance cotton has to be transported 500 miles owes it to that section of the state to place it on to the coast to be carried by sea to Bombay is not the requisite accommodation afforded a proper footing as a competitor for the site of to them to transfer their agricultural produce, the western terminus of our great railroad.-

The Belfast Journal speaks favorably of a monient to commence the road at the line. The projected railroad, while it would enrich a large section of country, increase the value of farms and other property, and open new and extensive remark, (1st Jan., 1837, p. 15,) "Enormous ment to the stockholders. By a careful and libcost of the road was put down at \$2,500,000.

> CONNECTICUT RIVER RAILROAD .- The Greenthe Directors express their belief that, "if no un-

the Boston and Fitchburgh Railroad, and thus give to the Vermonters, as well as to the people of Central Massachusetts, a choice of markets between Boston and New York, on nearly equal terms .- Jour. of Com.

Among the notices of applications to the Legislature, published in the New Jersey papers, is one to incorporate a company, with a capital of across the state, between New York and Philadelphia.

At the Duncannon Iron Works, Perry county, there were made and packed during the last two weeks, about two thousand casks of nails.

of India. The area of country from which the project is to be supported is stated to contain a population of more than ten millions, while the known traffic, in its present irregular and halfdeveloped state, presents a very imposing aggregate of tonnage.

In forming their estimates, the promoters of the undertaking have taken the Reports of the Bombay Chamber of Commerce as their basis -and from these it appears that there is a present traffic, to and from Bombay, of no less than 187,343 tons, the articles chiefly cotton and salt. Pittsburg Board of Trade, on the subject of grant- This result is drawn from little more than half ance, and it is only through the facilities of railor to Mirzapore, on the Ganges, whence it has to descend that river 700 miles to Calcutta.

The destruction and delay arising from journies of this duration, the cotton being conveyed project of establishing a railroad from Helfast to by droves of small oxen, at the rate of 10 miles Quebec. The route is already surveyed, and a day, form a serious item in the accumulation by droves of small oxen, at the rate of 10 miles the people of Quehec are ready at any suitable of the expense at which the raw material is mount to commence the road at the line. The shipped. To obviate this is one great feature of the undertaking. Some idea may be formed of the importance of this object from the fact, that while the present cost of conveying cutton from Nagpore to the port of shipment is from £14 to £20 a ton-the charge by railway of 2d. per ton

per mile would be about £4 3s. 4d.

Besides the actual traffic now in existence, there are several sources of revenue which may be ultimately, if not for the present, relied on. field and Northampton (Mass.) Railroad Com-pany has been incorporated. The surveys have time, in order to become familiarised with so dents have also promised great results. Let been completed, most of the stock is taken, and complete a change in their established habits of locomotion. But prejudice, however deeply toward circumstances shall occur, the shrill rooted, must ultimately yield to the enormous An official report to the legislature of 1840, whistle of the engine and the rattling of cars difference both in time and expense, that a conshows that the receipts for 1839, instead of will be heard along the line of the road, before trast of the railway will present to their present \$296,544, were \$99,784: and the expenses the next Thanksgiving shall be kept by the peo\$104,068. Since 1840, I have in vain looked ple." When this road is finished, there will be conveyed entire, through the aid of a continuous line of railroad from New Haven for the annual reports, required by law, of to Greenfield—distance 100 miles. The next Calcutta in four days.

The great desideratum of all, however, to be considered is the ultimate development of inter-nal resources now neglected—the promotion of intercourse with the inhabitants of other countries, and the consequent removal of baneful prejudices, which are the real flarrier against the course of civilization .- Railway Times.

ATHLONE NEW BRIDGE —On Saturday, the 9th November, a new bridge crossing the Shannon in the town of Athlone, specied under the Shannon Commission, was obened to the public at one o'clock, p. m. and the old bridge, crected in the days of good Queen Bess, closed for ever at three o'clock. The ancient structure, which was placed at the lowest point of the town, and shallowest partion of the river, was a long range of small semi-circular unequel arches, carrying a stripe of roadway so narrow as scarcely to ala stripe of roadway so narrow as scarcely to allow a single carriage to pass, with recessed parapets, and of that inconveniently picturesque character which marked the work of early bridge builders. It was directly under the guns of the citadel or ancient fort, and was the scene, or connected with the events of some of the most stirring passages of Irish history. An ancient inscription stone, now presented to the Royal Irish Academy collection of antiquities, recorded some of those, and alluded to others in a style which the present town council of Athlone did not consider sufficiently complimentary for its Railway Iron, flat bars, with countersunk re-erection on the new bridge. The site of the new bridge is higher up the river, to the northward of the old; it is wholly from the designs of Thomas Rhodes, Esq., civit engineer to the 280 commissioners, who has judiciously placed the roadway at such a level as will avoid hereafter that tremendous descent into the bowels of the lower town as all who have passed the old bridge will recollect. The new bridge consists of 3 noble elliptic arches, each of 63 feet span, together with a cast iron swivel bridge, resting on heavy abutments, of 45 feet span, and 24 feet width of roadway; the general width of roadway is about 30 fect, with flagged footways of six feet at each The material is limestone of the finest colour, scantling, and texture, and the style of execution of every part, and the skill with which 54 and 60 inches diameter. difficulties of no ordinary character in constructing the underwater work were met and overcome by the contractor. Mr. John M'Mahon, are in the highest degree admirable. The average depth of water under the bridge is about 18 feet, diameter. and when it is stated that the large coffer dams were driven and standched upon a bottom of links, manufactured from the E. V. coarse open grave, admitting water like a sieve, bolts, and proved at the greatest strain. these difficulties will be appreciated by those acquainted with practical engineering. The swiv-cl b idge was constructed and erected by Messrs. John and Robert Mallet, iroa founders and engiocers, of Dublia, and its execution has met the highest appropation from the engineer and commissioners. Although the width of roadway is so great, and the weight of the mass of fram-ing, upwards of 300 tons, either leaf of the brilge can be opened or closed by a single man est notice, by the agency of one of our partin about a minute. The largest castings proba-bly ever made in this country occur in this structure; each of the traverse rings, which measure 24 feet across, weighs about 16 tons. Four of these rings, each of this large diameter, were turned in a lathe constructed for the purpose in the foundry, in order to render the bearing surfaces for the rollers true and polished. The style of the bridge is of the massive Roman order, and viewed from the ancient one hears much of that aspect of repose and grandeur which pre-enjocativ characterise London Bridge, that noblest building of its class which the hand of man has yet constructed .- Civil Engineer.

AMERICAN RAILROAD JOURNAL,

AND GENERAL ADVERTISER

AND MINES.

ESTABLISHED 1831.

PUBLISHED WEEKLY, AT No. 23 CHAMBERS STREET, NEW YORK, AT THREE DOLLARS PER ANNUM.

SECOND QUARTO SERIES, Vol. I., No. 8]

THURSDAY, FEBRUARY 20, 1845.

[WHOLE No. 451. VOL. XVIII.

THE AMERICAN RAILROAD JOURNAL is the only periodical having a general circulation throughout the Union, in which all matters connected with public works can be brought to the notice of all times of departure, rates of fare and freight, improvements in machinery, materials, as iron, timber, stone, cement, etc. It is also the best medium for advertising contracts, and placing the merits of new undertakings fairly before the public.

DATENT RAILROAD, SHIP AND BOAT Spikes. The Troy Iron and Nail Factory keeps constantly for sale a very extensive assortment of Wrought Spikes and Nails, from 3 to 10 inches, manufactured by the subscriber's Patent Machinery, persons in any way interested in these undertakings. which after five years' successful operation, and now 350 Hence it offers peculiar advantages for advertising almost universal use in the United States (as well 280 as England, where the subscriber obtained a patent) 70

as England, where the subscriber obtained a patent) are found superior to any ever offered in market.

Railroad companies may be supplied with Spikes having countersink heads suitable to holes in iron rails, to any amount and on short notice. Almost all the railroads now in progress in the United States are fastened with Spikes made at the above named factory—for which purpose they are found invaluable, as their adhesion is more than double any common spikes made by the hammer. mon spikes made by the hammer.

All orders directed to the Agent, Troy, N. York, ches diameter.

will be punctually attended to.
HENRY BURDEN, Agent.

Spikes are kept for sale, at Factory Prices, by I. & J. Townsend, Albany, and the principal Iron merchants in Albany and Troy; J. I. Brower. 222 Water St., New York; A. M. Jones, Philadelphia; T. Janviers, Baltimore; Degrand & Smith, Boston.

** Railroad Companies would do well to forward.

their orders as early as practicable, as the subscriber is desirous of extending the manufacturing so as to keep pace with the daily increasing demand, ja45

PATENT HAMMERED RAILROAD SHIP and Boat Spikes. The Albany Iron and Nail Works have always on hand, of their own manufac-ture, a large assortment of Railroad, Ship and Boat Spikes, from 2 to 12 inches in length, and of any form of head. From the excellence of the material always used in their manufacture, and their very general use for railroads and other purposes in this country, the manufacturers have no hesitation in warrant-

The above spikes may be had at factory prices, of Erastus Corning & Co., Albany; Hart & Merritt, New York; J. H. Whitney, do.; E. J. Etting, Philadelphia; Wm. E. Coffin & Co., Boston.

TO RAILROAD COMPANIES AND MAN-ufacturers of railroad Machinery. The subscri-bers have for sale Am. and English bar iron, of all sizes; English blister, cast, shear and spring steel; Juniata rods; car axles, made of double refined iron; sheet and boiler iron, cut to pattern; tiers for locomotive engines, and other railroad carriage wheels, made from common and double refined B. Q. iron; the latter a very superior article. The tires are made by Messrs. Baldwin & Whitney, locomotive engine manufacturers of this city. Orders addressed to them, or to us, will be promptly executed.

When the exact diameter of the wheel is stated in

the order, a fit to those wheels is guaranteed, saving [See Adv.] to the purchaser the expense of turning them out inhaladelphia. side. THOMAS & EDMUND GEORGE. N. E. cor. 12th and Market sts., Philad., Pa. ja45 ja45

RAILWAY IRON, LOCOMOTIVES, ETC.
The subscribers offer the following articles for

Railway Iron, flat bars, with countersunk holes and mitred joints.
350 tons 2 by 15 feet in length weighing
280 * 2 " 1 " 4.68 3.50 46 70 " 11 " 66 2½ 1.26

with spikes and splicing plates adapted thereto. To be sold free of duty to State governments, or incorporated companies.

Orders for Pennsylvania Boiler Iron executed.
Railroad Car and Locomotive Engine tires,
wrought and turned or unturned, ready to be fitted on the wheels, viz: 30, 33, 36, 42, 44, 54 and 60 in-

E.V. Patent chain cable bolts for railway car axles, in lengths of 12 feet 6 inches, to 13 feet 2½, 22-3, 3, 3½, 3½, 3½, and 3½ inches diameter.

Chains for inclined planes, short and stay links, manufactured from the E. V. cable bolts, and proved

at the greatest strain.

India rubber rope for Inclined planes, made from New Zealand wax.

Also, Patent hemp cordage for inclined planes and canal towing lines.

Patent felt for placing between the iron chair and

stone block of edge railways. Every description of railway iron, as well as lo-

comotive engines, imported at the shortest notice, by the agency of one of our partners, who resides in England for this purpose.

A highly respectable American Engineer resides

in England for the purpose of inspecting all Loco-motives, Machinery, Railway Iron, etc., ordered through us.

A. & G. RALSTON & CO. No. 4 South Front st., Philad., Pa.

MACHINE WORKS OF ROGERS, KETCH-um & Grosvenor, Patterson, N. J. The un-dersigned receive orders for the following articles, manufactured by them of the most superior descrip-tion in every particular. Their works being exten-sive and the number of hands employed being large, they are enabled to execute both large and small or-

ders with promptness and despatch.

Railroad Work.

Locomotive steam engines and tenders; Driving and other locomotive wheels, axles, springs & flange tires; car wheels of cast iron, from a variety of patterns, and chills; car wheels of cast iron with wrought tires; axles of best American refined iron; springs; boxes and bolts for cars. Cotton, Wool and Flax Machinery of all descriptions and of the most improved patterns,

style and workmanship.
Mill gearing and Millwright work generally;
hydraulic and other presses; press screws; callenders; lathes and tools of all kinds; iron and brass castings of all descriptions.

ROGERS, KETCHUM & GROSVENOR,
Paterson, N. J., or 60 Wall street, N. York.

NO IRON MANUFACTURERS. THE SUB-TO IRON MANUFACTURERS. THE SUBscribers, as Agents of Mr. George Crane, of
Wales, having obtained a patent in the United
States for his process of smelting Iron Ore with Anthracite coal, and holding an assignment of the patent obtained by the late Rev. F. W. Geissenhainer,
are prepared to grant licenses for the manufacture
of Iron according to Mr. Crane's principle.

TO RAILROAD COMPANIES AND BUILD ERS OF MARINE AND LOCOMOTIVE ENGINES AND BOILERS.

PASCAL IRON WORKS.

WELDED WROUGHT IRON TUBES

From 4 inches to 1 in calibre and 2 to 12 feet long, capable of sustaining pressure from 400 to 2500 lbs. per square inch, with Stop Cocks, 7°, L°, and other factures to suit, fitting logether, with screw joints, suitable for STEAM, WATER, GAS, and for LOCOMOTIVE and other STEAM BUILER Furs.

Manufactured and for sale by
MORRIS, TASKER & MORRIS.
Warehouse S. E. Corner of Third & Walnut Streets, PHILADELPHIA.

TO IRON MASTERS.—FOR SALE.—MILL SITES in the immediate neighborhood of Bi-L SITES in the immediate neighborhood of Batuminous Coal and Iron Orc, of the first quality, a Ralston, Lyoming Co., Pa. This is the nearest point to tide water where such coal and ore are found together, and the communication is complete with Philadelphia and Baltimore by canals and railways. The interest on the cost of water power and lot is all that will be required for many years; the coal will not cost more than \$1 to \$1 25 at the mill sites, without any trouble on the part of the manufacturer; rich iron ore may be laid down still more cheaply at the works; and, taken together, these sites offer remarkable advantages to practical manufacturers with small capital. For pamphlets, descriptive of the property, and further information, apply to Archibald McIntyre, Albany, to Archibald Robertson, Philadelphia, or to the undersigned, at No. 23 Chambers street, New York, where may be seen specimens of the coal and ore.

W. R. CASEY, Civil Engineer, the coal will not cost more than \$1 to \$1 25 at the

FRENCH AND BAIRDS PATENT SPARK ARRESTER.

TO THOSE INTERESTED IN A Railroads, Railroad Directors and Managers are respectfully invi-ted to examine an improved SPARK ARRESTER, recently ratented by the undersigned.

Our improved Spark Arresters have been extensively used during the last year on both passenger and freight engines, and have been brought to such a state of perfection that no annovance from sparks or dust from the chimney of engines on which they are used is experienced.

These Arresters are constructed on an entirely different principle from any heretofore offered to the public. The form is such that a rotary motion is imparted to the heated air, smoke and sparks passing through the chimney, and by the centrifugal force thus acquired by the sparks and dust they are separated from the smoke and steam, and thrown into an outer chamber of the chimney through openings near its top, from whence they fall by their own gravity to the bottom of this chamber; the smoke and steam passing off at the top of the chimney, through a capacious and unobstructed passage, thus arresting the sparks without impairing the power of the engine by diminishing the draught or activity of the fire in the furnace.

the engine by diminishing the draught or activity of the fire in the furnace.

These chimneys and arresters are simple, durable and neat in appearance. They are now in use on the following roads, to the managers and other officers of which we are at liberty to refer those who may desire to purchase or obtain further information in regard to their merits:

E. A. Stevens, President Camden and Amboy Railroad Company; Richard Peters, Superintendant Georgia Railroad, Augusta, Ga.; G. A. Nicolls, Superintendant Philadelphia, Reading and Pottsville Railroad, Reading, Pa.; W. E. Morris, President Philadelphia, Germantown and Norristown Railroad Company, Philadelphia; E. B. Dudley, President W. and R. Railroad Company, Wilmington, N. C.; Col. James Gadsden, President S. C. and C. Railroad Company, Charleston, S. C.; W. C. Walker, Agent Vicksburgh and Jackson Railroad, Vicksburgh, Miss.; R. S. Van Rensselaer, Engineer and Sup't Hartford and New Haven Railroad; W. R. M'Kee, Sup't Lexington and Ohio Railroad, Lexington, Ky.; T. L. Smith, Sup't New Jersey Railroad Trans. Co.; J. Elliott, Sup't Motive Power Philadelphia and Wilmington Railroad, Wilmington, Del.; J. O. Sterns, Sup't Elizabethtown and Somerville Railroad; R. R. Cuyler, President Central Railroad Company, Savannah, Ga.; J. D. Gray, Sup't Macon Railroad, Macon, Ga.; J. H. Cleveland, Sup't Southern Railroad, Montroe, Mich.; M. F. Chittenden, Sup't M. P. Central Railroad, Detroit, Mich.; G. B. Fisk, President Long Island Railroad, Brooklyn. sident Long Island Railroad, Brooklyn.

Orders for these Chimneys and Arresters, addressed to the subscribers, or to Messis. Baldwin & Whitney, of this city, will be promptly executed.

N. B.—The subscribers will dispose of single rights, or rights for one or more States, on reasona-

e terms.

VAIL, PROPRIETOR OF THE SPEED-S. well Iron Works, near Morristown, N. J., can supply at short notice railroad companies and others

with the following:
Wrought Iron Tyres made from the best iron and of any given diameter, and warranted to be sound in the welding. Railroad companies wishing to or-der, will be pleased to give the exact inside diameter or circumference to which they wish the tyres made, and they may rely upon being served according to order, and also punctually, a large quantity in the straight bar is kept constantly on hand. Crank axels for locomotive engines, made from the best use flat bar rails are particularly interested, as such Pennsylvania iron. Straight axles for locomotives for outside connection engines. Frames for engines.

W. Mc. C. CUSHMAN. Civil Engineer. Wrought iron work for steamboats, and shafting of any size. Cotton Screws of any length or size. Railroad Jack screws, a late invention, and highly approved. Self-acting pumping apparatus for rail-road water stations. He refers to the following gen-

Store house—a range of buildings for storage, etc., 200 feet long by 20 wide.

200 feet long by 20 wide.

Locomotive shop, adjoining main building, fronting on Parker street, 54x25 feet.

Also—A lot of land on the canal, west side of Parker st., containing 6000 feet, with the following buildings thereon standing:

Boiler house 50 feet long by 30 feet wide, two stories.

Blacksmith shop, 49 feet long by 20 feet wide.

Locomotive town of Newcastle, Del., Locomotive and other steam engines, Jack screws, Wrought iron nected with Steamboats, Railroads, etc.; Mill Gearing of every description; Cast wheels (chilled) of any pattern and size, with Axles fitted, also with wrought tires, Springs, Boxes and bolts for Cars, Driving and other wheels for Locomotives.

The works being on an extensive scale, all orders will be executed with promptness and despatch.

CUSHMAN'S COMPOUND IRON RAILS, etc. The Subscriber having made important improvements in the construction of rails, mode of guarding against accidents from insecure joints, etc. -respectfully offers to dispose of Company, State Rights, etc., under the privileges of letters patent to Railroad Componies, Iron Founders, and others interested in the works to which the came relate. Companies reconstructing their tracks now have an op-portunity of *improving* their roads on terms very ad-vantageous to the varied interests connected with their construction and operation; roads having in

W. Mc. C. CUSHMAN, Ciril Engineer, Albany, N. Y.

Mr. C. also announces that Railroads, and other works pertaining to the procession, may be constructed ander his advice or personal supervision. Ap-

approved. Self-acting particles approved ap

It is never touched by passing trains, except when in use, preventing their running off the track. It is simple in its construction and operation, requiring only two Castings and two Rails; the latter, even if much worn or used, not objectionable.

Working Models of the Safety Switch may be seen at Mesers, Davenport and Bridges, Cambridge-port, Mass., and at the office of the Railroad Journa', New York.

Plans, Specifications, and all information obtained on application to the Subscriber, Inventor, and Pa-tentee. G. A. NICOLLS,

Rading, Pa.

PILBROW'S ATMOSPHERIC RAILWAY.

the principle of propulsion, so highly spoken

can be said to have as yet established more, the air has been or is being exhausted or than that it is a practicable system for short withdrawn; the piston rack is put in genr a single line of rails, any discontinuance of lengths of railway, and as economical for with the pinions inside the tube; a railway the main tube but at a place arranged for

regard to this question, Mr. Pilbrow has come to the rescue with a plan which promises so to improve the atmospheric system as to obviate all Mr. Stephenson's objections; and doubtless this is the best and most effectual way of meeting them. The 'continuous valve' of Messrs. Clegg and Samuda, which is the great source of waste of power, attending the great source of waste of power, attending the system as now reduced to practice, Mr. Pilbrow dispenses with altogether. The 'discontinuance' of the main tube at every continues, and the piston that it advances, then replaced, or closing by the time this engine will the rack upon the carriage be affected in the reach upon the carriage be affected in the replaced, or closing by the time this engine replaced, or closing by the time this engine replaced, or closing by the time this engine will the rack upon the carriage be affected is again required to work.

"The piston would, when it arrives here either partially or wholly leave the tube, after displacing the disc or door by its remaining momentum, and the train with the carriage be affected in the same way, by and through the median again required to work.

"The piston would, when it arrives here either partially or wholly leave the tube, after displacing the disc or door by its remaining momentum, and the train with the carriage be affected in the same way, by and through the median again required to work.

"The piston would, when it arrives here either partially or wholly leave the tube, after displacing the disc or door by its remaining momentum, and the train with the carriage to again required to work.

"The piston would, when it arrives here either partially or wholly leave the tube, after displacing the disc or door by its remaining momentum, and the train with the carriage to again required to work. opinion of Mr. Pilbrow's invention. We description, crossed, on a level, by a roadway, would not be required to go on the whole have carefully investigated it in all its details, and can see no reason why it should not perform everything that is predicted of it. ty of space between the pairs of pinions for "Mr. Pilbrow observes that ropes or bands We have made and another line of atmospheric railway; journey, but a fresh one every 20 miles, leaving the other to be examined. &c.

"Neither the extensive discussion which the atmospheric railway system has undergrone, nor the brief experience which has been had of it on the Kingston and Dalkey line,

We have witnessed also an experimental trial the crossing, and that the mains being sunk of leather may be substituted for the racksof it, which, if there had been any doubts of beneath the surface of the ground, or under 'varying the surface accordingly.' For our its perfect practicability remaining in our the sleepers of the rails, they will be entirely own parts we are inclined to think that it minds, must have removed them completely. out of the way, the carriage rack passing on will ultimately be found that neither cogged-

The scale of the trial, it is true, was a small from one pinion to another over such roads, We take the following from the London one; but the practical facts demonstrated by without interfering. It will be obvious also, mechanics' Magazine. The figure referred ence in magnitude could materially affect to cross each other, one will pass to is not necessary to obtain a correct idea of them." "The manner of working the apparatus is level course, the lower one taking a gradual of by the editor of the Magazine. We con- as follows:—A pipe or tube, as before dedescent or dip under it, and the pinions keep-fess that we more than doubt its chances of scribed, of sufficient diameter, being laid ing their necessary level at the upper part ultimate success, especially with cog-wheels. way, and being exhausted of air by suitable the axes and supports, as shown at a. The

lengths of railway, and as economical for such lengths as (but not more so than) any other. The objections advanced some six months ago by Mr. Robert Stevenson, to its applicability to long lines of large traffic, having many stages and crossings, remain in every material point, unanswered and unrefuted; for we cannot dignify with the name of answer or refutation, the mere verbal criticism, or worse vituperation, to which the assailants of the elaborate and masterly inassailants of the elaborate and masterly in- or forwards without turning the pinions; and vacuum is to be made up by the air pump, vestigation by that gentleman have hitherto found it convenient to confine themselves.

"While such is still the state of things in regard to this question, Mr. Pilbrow has come effect upon the piston that it advances, then replaced, or closing by the time this engine

discontinuance of the main tube at every continues, and the piston advances, the carthree mile station, which is another great defect, and the chief cause of the unfitness of neither arriving before or after the other, but ry it to the place required, or middle of the the present system for long, main trunk lines, together, as they cannot separate, nor can siding. When the piston and rack reach the he renders also unnecessary; with him the one move or stop without the other.

"As it is necessary and important that the it is proposed that there shall be placed, at continuity of the main, whatever may be its "As it is necessary and important that the it is proposed that there shall be placed, at length, is unbroken, and other tubes may atmosphere should be admitted as nearly be-each of the two ends of the mains, a receptanot only communicate with, but cross it at any place without the least interruption or any place without the least interruption or and the air will enter through the space allowed by the lifting of the conical or flat porton or other contributes, bridges, etc., for crossings; no cranes, or other contributes for lifting carriages on tion of the arbor or axis of the pinion, as de-brown and the same means) and off; and instead of a stationary engine scribed; so that there would always be at with its head in the tube ready for the next every three miles, he requires but one every least two or more such passages open, as the returning train. The trains having both arten—probably fewer. All who are acquaint each acts upon the one before it leaves the rived, each train would be (by any suitable other. After the rack has passed by, the means) urged on to the commencement of the pinions by their own weight fall into their the opposite main, where the fresh pistons these things, he has done that for the atmospheric plan, which must advance it immeasurably beyond the point where it has been be set to work at the other end, and the difference, the carriage rack coming into gear for some time stationary, and most probably rection of the piston and rack changed, and with the first pair of pinions, and the piston make it no longer a matter of question that placed again as before into proper gear, the released, the train would start on its journey. it is, for all situations, and under all circum-carriage would return in like manner.

Thus the pistons would neaer leave the main, Fig. 10 represents a longitudinal elevation or enter another, but at a very slow pace, and stances, superior to the ordinary system.— Fig. 10 represents a longitudinal elevation or enter another, but at a very slow pace, and We entertain ourselves a most favorable of a portion of an atmospheric railway of this at a place for stopping. The same piston

wheels nor racks are requisite for the proper working of this system; and that the propulsion of the carriages may be effected by the simple adhesion of plain surfaces; that is to say, that the tube piston, the pinions, and this prove to be the case, we shall then but Edwin Northrup, in Harpersville, on the 30th have a repetition as regards the atmospheric system, of the same thing which took place day of January, 1815, Robert Harper was on the first introduction of railways. Nobo chosen president, and Luther Badger, Lewis it could be made to advance otherwise than Hial Edgerton, secretaries. by the help of cogs or grippers of some sort or other. A single trial of the force of simple grippers were no more heard of.

saving (from his system) for 100 miles per State of Pennsylvania, and showing the inestimated cost by the present atmospheric the inhabitants of several counties of the system, would amount to not less than £53, southern tier, should our legislature grant by 303. The correctness of this estimate may possibly admit of question; but that there from the supercession of so many of the ex- on resolutions reported the following resolupensive and wasteful adjuncts of the present tions, which were unanimously adopted. system, cannot reasonably be doubted. The following observations by Mr. Pilbrow, touching one point of this question of economy, are too important to be omitted.

riages will be required on this plan is, that the interests of so large a number of citizens stockholders, that the entire energies of the there being no long valve here, the leakage will be so diminished that it will amount to large number to be benefitted by the construction of the road. We are great-"The reason why a less number of carless in ten miles than in one; it is estimated that now the leakage equals 5-horse power per mile, and therefore, should there be but one engine to ten miles of main, 50-horse said road more than the one-hundredth part, enure to the advantage of the State. age alone; so it is found absolutely necessareducing the loss to 15-horse power out of rights, and the rights of the State, from this dollars, and the company about two hundred will not leak so much as the long valve is, attempt of interested men to wrest the same thousand—in all, one million, eight hundred first, because the surfaces are ground truly, from us, to promote their own private ends. and are pressed together by the weight and of the small quantity of surface or space that prompt her to ask for this alteration, is very plane at this place. This additional power can leak, the proportion being as 1 to 20 bemuch impaired. can leak, the proportion being as 1 to 20 be-much impaired. tween the two systems, for the pinion valve or seat being but about 9 inches in circum-ference at the aperture where the air is ad-cannot go on with the construction of the mitted, and there being only two of them to road without the proposed alterations being every thirty feet of main=1 5 feet, whereas, made, and if it should prove true that the rethe present long valve would be the whole cent subscriptions to the capital stock of the thirty feet exposed, and liable to leakage; company were based upon the condition, that hence, even were the pinion valves to leak the company obtain leave to build parts of surveying in 1814 was 70,000 tone but there

(to be combined with atmospheric railway;) State may be in a condition to revive this has been often before proposed."

RAILROAD MEETING.

At a meeting of the citizens of the county of Broome, friendly to the construction of the New York and Erie railroad within the carriage piston, may all be plain, and that southern tier of counties, and opposed to the by the friction of each against the other, the building of said road, or any part of it, in the desired progression will be produced. Should State of Pennsylvania, held at the house of dy at one time, supposed that a plain wheel Northrup, Elias Patrick and Jas. B. Frazier, would move forward on a plain rail; or that vice presidents, and Timothy Ruggles and

The meeting was then eloquently addressedadhesion dispelled the illusion, and cogs and by several gentlemen, upon the subject of all terations in the charter of said company, per-"Mr. Pilbrow calculates that the 'total mitting it to make parts of said road in the annum in working, as compared with the justice that would result to a large portion of southern tier, should our legislature grant by enactment such alterations in the charter of must be a very considerable saving resulting said company. After which the committee

> and utility of the New York and Erie rail-place, and shall contribute the little aid in road remains undiminished.

Resolved, That where our interests, and power out of the 100 would be lost for leak- are involved, we will not stand by and see ry to have one engine every 3 miles, thus with undiminished confidence in the integrity

Resolved, That our confidence in the abifall of the pinion (and the more used, the better they will stop); and secondly, on account influence the decisions of the company, and draw 250 tons on level, and 30 tons up the

Resolved, That if it should prove true

Chenango, Otsego, Delaware and Sullivan counties. - Binghampton Courier.

Madison and Indianapolis Railroad. From what we learn from various quarters, we are inclined to think that the railroad will speedily be completed. We speak advisedly, when we say, that we do not believe that a more profitable investment for capital can be found in the State. Of its benefit to the State at large, and to southern and central Indiana in particular, none who have examined the subject can for a moment doubt. Severe lessons have been taught our people: and they seem not to have lost their effect on the managers of public works. Hence we now see them advancing with prudence and caution, yet steadily. In this way, they are gaining the confidence of the people; and instead of the wild recklessness of former days, the interest of all is carefully studied. We have several letters on the subject, which want of space prevents our noticing at this time, except to give the following extract from one of them: - Indiana Sentinel.

"I feel a deep interest as a large stock-Resolved, That our confidence in the value holder in the completion of this road to your my power to produce so desirable a result.

"I can speak for the directors and other

"We can now offer the best of security to with the cars, locomotives, depots, etc., which

"We have just received on of Baldwin & ceipts of the company, and the usefulness of the road.

"In this matter, Indianapolis and Madison have a common interest, and we ought to work together."

The total quantity of iron of every deas much as the long valve, surface for sur-their road in Pennsylvania, then we, uninflu-sylvania in 1844 was 70,000 tons, but there face, this plan would only leak 21-horse power, in 10 miles. enced by personal considerations would re-spectfully ask the State to absolve themselves in the State which never touched the public "Mr. Pilbrow's patent and pamphlet in from all connection with the said company, works. Hence we are unable to state the clude also a scheme of a pneumatic telegraph trusting rather to await the time when the actual quantity of iron manufactured: still it dependent on the rise and fall of columns of much needed work, than longer to depend would appear certain that the above amount mercury, when acted on by air exhausters; upon the frail promises, so often made, and but in this we do not see anything new.

Such a mode of telegraphic communication Resolved, That the proceedings of this and as no less than 13,500 tons were importmeeting be published in the papers of Broome, ed in 1844, it would appear that even Pennsylvania, with duties from 60 per cent. upwards, is still unable to supply the demand at home, no less than 1000 tons of pig having been imported. The increase in rolled bars of common dimensions and of railroad iron is very great, though the duty on the recognition of this claim. latter article amounted to nearly a quarter of a million of dollars.

can render them. In the freight department business hours,

It is, also, proper to remark in this con- a considerable accession of cars is expected nection, that a most equitable claim for more in a few days, and business daily offers for

Running of the Road .- In the report of your directors do not despair of obtaining a December, 1843, while the line was still incomplete, a confident opinion was expressed that the line-95 miles-would be run over important to the post office department, the within four hours, and the entire distance be-defence of the coast, and the connection of the tween New York and Boston, including the north and south; the fact that such remission Greenport-ferry, accomplished within ten will not now operate to exclude foreign iron hours. With respect to the Long Island railand thus stimulate the home manufacture, and road, more than this has been accomplished. that nearly every railroad in the country has The run has been made within three hours, imported its iron duty free, show the injustice and the average time of the through train, and impropriety of subjecting this iron to a stopping twice to wood and water, has not duty exceeding 100 per cent. upon the prime cost of the article. Planned and chartered as this enterprize was, and partly finished while there was no duty on railroad iron, and suspended in consequence of the reverses of the country, it may be well urged, that there is an implied obligation on the part of congress to impose no new or unexpected burthen on a great public undertaking. time occupied has been about 21 hours, and occasionally less than two hours. The Construction .- The railroad has been fin-trains on the Eastern roads, connecting ished with a heavy and permanent H rail, laid with this line, have not run with a speed principally on Chestnut ties, at the rate of equal to the expectations of the company—2,000 to the mile, with sub-sills, and a deep having averaged usually not jar from five gravel foundation, and is now in excellent hours in one direction and four and a half in condition. The company have a surplus of the other, making the average time nearly prise them that the entire line is opened, and has been in successful operation through its whole extent since the 29th day of July last. They have constructed confidently believed that more perfect arrunning to deep water, and under the authorized which will bring the entire journey between rity of the city government of Brooklyn, have Boston and New York within ten hours. the road, tunnel, equipments, surplus iron, constructed a tunnel under Atlantic street, The average time, by the fastest competing line is about fourteen hours. It is also hoped that under new arrangements, hours may The Tunnel.—The whole length of this be selected more adapted to the convenience and the payment for some additional cars and motive power.

The eastern half of the Long Island railroad has been constructed at an extremely low brick, twenty-two inches thick, the whole laid your directors confidently rely on the co-operacost. The contracts were made when wages in hydraulic cement. The width of the tun-tion of the able and experienced managers of and materials were at the lowest point, and nel is 21 feet, and height 18 feet. The esti-those lines in measures which must alike ben-

The late period last summer at which this derate outlay. The entire cost of this portion thus far has been \$51,352.10; and although road was opened left it out of the power of the of the line, exclusive of cars and engines, but in daily use for trains, it is not entirely finish-board to develope its capabilities to their full inclusive of depots, land and track, will not materially vary from \$10,000 a mile.

in daily use for trains, it is not entirely finish-board to develope its capabilities to their full extent, as a part of the line of railways upon materially vary from \$10,000 a mile.

The lines of steamers through the sound, tion of the tunnel, the purchase of steamers, swell the cost of the line, and was not con-olaimed, and perhaps justly, the continuance and extra cars, and engines, have swelled the templated at the date of the last report, will of their lines through the season, sharing, expenses of the company beyond the original greatly facilitate the operations of the company however, with the Long Island railroad comcomputation of the board, but bring with them ny, obviate many dangers, and as a work of pany, in fair proportion, their income. Durart will embellish the city of Brooklyn. It ing the approaching season it is contemplated Capital.—The capital consists of 29,846 pany, and enable it to conduct its freight traf- both a day and night line, the former leaving fic on a scale of expenditure much below Portland at 6 o'clock in the morning, Boston at 12, (after much of the business of that place 340.22. Deducting from this the debt due the State of New York, in the year 1861, of the State of New York, in the year 1861, of the line with respect to engines and cars apit is intended to leave N. NEW YORK AND ERIE RAILROAD.

In another page will be found extracts from the Binghampton Courier, and the views of the meeting with reference to the confidence to be placed in the company, are only too general throughout the southern counties. They make no distinction between the present and the previous directions and would apthe most advisable course under all circumstances. For they cannot imagine that there is any probability of this or any other work being undertaken by the State, if they give the least attention to public opinion not only here by take in the most advisable or the work and continued in the state of the s pear to regard the sale of the work by the State, as not only here, but also in the east and west. If the not only here, but also in the east and west. If the State should re-commence the construction of public works, then have the southern counties unquestionably the first claim; but such a remote contingency has little interest. It will be observed that the meethas little interest. It will be observed that the meeting "does not believe" that a location of part of the line out of the State is necessary; a position in which

pass into the hands of those who will select the best the track with the ordinary arrangement. line, and, as that line is unquestionably in Pennsylvania, for a considerable distance, they will gain nothing by their present opposition. We are no apologists for the company, but taking things as they are, we would respectfully, but earnestly, entreat the friends of the New York and Erie railroad to withhold all opposition to any measure calculated to forward the work-above all to its location in Pennsyl-

vania, which is, we repeat, indispensable.

In looking over the list of stopping places on

SAFETY SWITCH.

from the very best authority. They may, and with may be seen at our office. The object is described to which we refer cur correspondent. justice, say that the circumstance of the road being in the advertisement; but we may here observe that We must also remind him that there is a vast difwithin the State of New York. This is a question be also set for the turn-out; otherwise the train cording to our ideas.

We particularly request s'alements of the traffic of of good faith on the part of the company, which we runs off. Now, with the safety switch, the train is of some of the southern counties should succeed in ference to the position of the safety switch, after being defeating the application of the company, they will thrown on the side track by neglect. In the night only stop the work, injure others and themselves time, with heavy trains especially, this is all importtoo; for we take it that any location is preferable to ant, for it is generally too late to stop the train before no road at all. Again, if the road be sold, it will reaching the lower switch when the train runs off

READING RAILROAD.

In our last we gave the report of the Reading company at length. The large amount invested, the very contradictory opinions entertained as to its capabilities, and the circumstance of its being the only freight road of great length in this country combine to give general interest to this work. Using round numbers the gross income for 1844 was \$600,000, the expenses \$250,000, and the net income nearly \$350,000, on an expenditure of \$9,500,000, equal some of the great thoroughfares, we found that tabu- to 31 per cent. The road was in full operation only lar advertisements, in the style of that of the New part of the year. The company estimate the receipts Jersey railroad company, would occupy too much of 1845 at about \$1,100,000 and the quartity of coal space. We therefore present the following table of to be transported at 890,000 tons, the amount carried the fares and distances on the Long Island railroad, over the Stockton and D: rlington road in England. and would observe that if each company would in- This will be nearly twice the business of 1845 and, sert a similar advertisement in the Journal, they allowing twice the amount of expenses to cover rewould confer a great favor on the travelling public newals as well as repairs, the net income would be and themselves, besides increasing the capability and \$600,000, or 6 per cent on the total cost of the road. \$17,703 46 efficiency of a Journal devoted to the cause of all We trust that twelve months hence we may be able - 7,100 63 public improvements—railroads especially.

We are indebted to Harace Williams, Esq., treasurer of the Boston and Worcester railroad company, for the last report of that corporation; also to George Bliss, Esq., president of the Western railroad company, for their report for 1844. We give extracts from them both, and shall probably continue them in the next number. The controversy between these two companies is of the utmost importance to Massachusetts, and cannot be regarded with indifference by any company or even individual interested in railroads. In another number we shall refer to the rates of fare and freight on the Western railroad.

For the American Railroad Journal.

6

In your Journal of yesterday you give the cost of the State lateral canals of New York, including deficiencies. The deficiencies being the interest on their cost and repairs, deducting receipts, compounded at an annual interest of about 6 rer cent.

Now will you be kind enough to publish the cost of the Eric canal in the same way, adding in defi-

Also the cost and deficiencies of the following railroads, viz: New York and Erie, Hudson and Berkshire, Harlem, Long Island, Mohawk and Hudson, Troy and Saratogo, Troy and Schenectady, Ithaca and Owego, Canajoharie and Cattskill, Saratoga and Schencetady, in this State; and the far famed p.m. and 9 a.m., for Brooklyn and intermediate Reading railroad, in Pennsylvania; computing the interest on their cost, in calculating deficiencies, at 6 per cent. and on loans at the amount paid, and FAIR PLAY. much oblige

The interest on the deficiencies of the the canals is not compounded. The comptroller published a state-We call the attention of railroad companies to ment of the income and debts of the Eric canal, althey are greviously in error, as we have understood Mr. Nicoll's patent safety switch, a model of which lowing compound interest on both, a few years since,

confined to the State of New York by the charter, a train, intended for the main track, and running off ference between the Troy and Reading roads and the and operations on a large scale having been com- on a turn-out, owing to neglect in the switch-tender, others. The former roads do not inflict their losses menced under that charter, a pledge was virtually will come on the main track again without injury, on the community; if the latter gain, they pocket the given to them that the road was to be kept entirely on the ordinary plan, if the switch at the other end profit, if they lose we pay, which is not fair play, acBEAUTIES OF GOVERNMENT ENGINEERING.

Under this head we will occasionally give lars per mile for repairs, etc. !! our readers such information as may be necessary to a pretty thorough understanding of the extraordinary system of political jobbing, which, acting under the specious title the public mind. From the prosperous state of the business of the country, and the satisfactory accommodations which have been provided for the transportation of both passengers and freight over this road, there has been a considerable increase in the business of the last year over that of any preceding year. This increase has arisen in part; from the extension of the business of the Western road, for the accommodation of which this corporation has made a very large expenditure of capital, but in a greater degree, from an increased activity of business, in those parts of the State which are specially accommodated by this road alone.

The number of passengers transported on 631 were passengers conveyed to and from 488 were passengers travelling exclusively the local travel of this road, and that con-stances. nected with the Norwich and Worcester road.

MISCELLANEOUS ITEMS.

(F A mention was made in this paper, some weeks since, of a new invention which promised to overcome the obstacles hitherto presented in the travel of Inclined Planes on Railroads. We had the pleasure of viewing the model in operation yesterday, in the great room of the Exchange, and what was done seemed to warrant The whole number of miles run by all the rains the helief, that the inventor, Mr. Coleman, has accomplished an object much desiderated. A small locomotive, with but 11 inch bore of pis-....255,376 100, and 11 inch stroke, drew after it a car load-For other trains, road repairs, wood, etc... 31,6991 ed with fifty-six pounds of iron, up a plane placed at an elevation of six degrees, with perfeet ease, and stopped at any point desired-moving backward and forward emirely at the will of the engineer.

Along the centre of the track of the plane, a -195,927 centre pin fixed to the beam. On the bottom of200,9651 thread of which fell exactly into the vacant space between the circles, catching on at least three of A table annexed shows the number of passengers them at once when the locomotive was fairly in motion. The series was connected by a cog-By reference to the tables of each year, it wheel to the driving wheels of the engine, and will be seen that the number of through pass derived its motion from them. It is easy to see sengers is stated in 1844 less than in 1843, that when in notion the engine will pass along This is mainly owing to the fact, that in the This is mainly owing to the fact, that in the greater part of 1843, the difference between the through and way fare was so great, that way passengers, to a considerable extent took the screw, and that when it is stopped, each thread of the screw will rest against a fixed bod y—and the flanges of the engine wheels not permitting any motion to either side, the pressure is kept The total expenditures to January 1, 1845, through tickets, and were thus registered as fixed and firm against the circles, which become

REDUCTION OF RATES .- Col. Elmore, in a The whole number of tons pett, carried letter to a Committee in Kershaw District, S. C. thus speak of the income of the South Carolina carried over the whole length of the road, facts speak - give the profits of our Railroad for five years:

1840, Receipts were - \$322.740:95 1841, 349,834:44 1842, 348,355:95

We then reduced freights nearly 50 per cent., and passengers' fares nearly -40 " And yet our receipts were

" - \$348,355:51 " - 533,657:00 1843, 1844.

The first year of reduction, viz: 1843, we gained immensely in freights, but not enough to make up fully-but in 1814, our rates had become known, and our business has been immense. - Ga. Mess.

SHAMOKIN AND POTTSVILLE RAILROAD. Mr. Kimber Cleaver, Engineer, who surveyed the route of the above mentioned Railroad, exRoad will be 39 miles in length, and can be questions on the broad principle of public and of the traffic to Belgium, Germany, the Rhine, completed at a cost of \$690,000. laid with an general advantage, we should not notice these &c., which now goes by Ostend and Antwerp. greatest rise is 73 feet to the mile. We shall laying the lamentable ill-feeling which has so refer to this road again. Want of room cuts our notice short this week.

The most powerful establishment I ever visited, is the Copper Rolling Mill of Messrs. Phelps, Dodge & Co. It will well pay a visit of the curious. The machinery is driven by three water wheels, two of them of enormous size. The balance wheel is some eighteen feet in diameter. This, you will readily see, would would take a pretty high building to revolve in. The rollers are said to be the largest in the country; they would be apt to hurt a person's feelings to get between them when under full headway. Some fifteen bondred dollars worth of copper is turned out per day in sheets, besides a large lot in copper bars of various sizes. A piece of copper some twenty-our inches long, twenty wide, and three inches thick, is put between the rollers and comes but a large sheet, any thickness desirable, from one inch down to the thickness of a wafer. This mill has not been in operation for a day or two past, owing to the freshet in the Naugatuck. Here are employed some thirty-five men.—N. II. Courier.

IRON COLLIERS.—We learn that a number of capitalists in Philadelphia and New York, propose constructing a number of Iron Steam Colliers, similar to those plying between New Cas-tle and London, of about 700 tons burthen. to carry Coal by Sea from Richmand to New York and other Eastern ports. The trial made by the Errickson Propeller during the last season has demonstrated that Coal can be carried very cheap from Philadelphia by this mode of conveyance. - Minor's Journal.

GEOLOGY OF NEW HAMPSHIRE.—The Geological survey of Dr. Jackson has disclosed an unexpected amount of mineral wealth in the "Granite State." In the town of Bartlett, an iron mine has been discovered, possessing ore of excellent quality and of inexhaustibe amount. The locality was formerly worthless; it has re-cently been sold for \$10,000. In Eaton a vein of zinc ore was discovered, more abundant than that of Bristol, England. The mine will furnish zine sufficient to supply all New England. At Warren, copper ore was found, of such character and in such quantity as to warrant mining. In Jackson a vein of tin was discovered. Other valuable metals and ores were found, showing that New Hampshire is rich in mineral treasures.

Such facts establish the value of geological surveys. Massachusetts was one of the first to authorize such a survey; and the proposition for the survey encountered no little opposition from the "penny wise and pound foolish"—from those dear lovers of "the people," who are unwilling to take a shilling out of their puckets, that a dollar may be put in.—Hampshire Gazette.

LOCOMOTIVES AND STEAMBOATS IN FRANCE. It is officially stated that in 1842, there were in France 201 locomotives belonging to the different railroads, and 229 steamboats, representing a force of 35,000 horses, which conveyed in that year 996.826 tons of goods, and 2,515,991 passengers - Phil. Inq.

FRENCH RAILWAYS .- We have received several communications alvocating the respective merits of Dover and Calais, and Folkestone and Boulogne, as routes from London to Paris, and building thereon arguments for or against the North (Calais) and the Boulogne Railways. As we make it a rule never to enter into these

ELEVATION

MESSRS. EDITORS.—
As your Journal is devoted to the benefit of the public in general I feel desirous to communicate to you for publication the following circumstance of no inconsiderable importance, which occurred some few days since on the Philadel-phia, Wilmington and Baltimore railroad.

On the passage of the evening train of cars from Philadelphia to this city, an axle of our large 8 wheeled assenger car was broken, but from the par-ticular plan of the construction, the accident was entirely unknown to any of the passen-gers, or, in fact, to the conductor himself, until the train, (as was supposed from some circumstance attending the case,) had passed several miles in advance of the place where the accident occurred, whereas had the car been constructed on the common plan the same kind of acci-

dent would unavoidably have much injured it, perhaps thrown the whole train off the track, and seriously injured, if not killed many of the passengers. Wilmington, Del., Sept. 28, 1840.

The undersigned takes pleasure in attesting to the value of Mr. Joseph S. Kite's invention of the Safety Beam Axlc and Hub for railroad cars. They have for some time been applied to passenger cars on this road, and experience has tested that they fully accomplish the object intended. Several instances of the fracture of axles have occurred, and in such the cars have uniformly run the whole distance with active cafety. Had not this invention been with entire safety. Had not this invention been

used, serious accidents must have occurred.

In short, we consider Mr. Kite's invention as completely successful in securing the safety of property

In short, we consider Mr. Kite's invention as completely successivin a securing the safety of property and lives in railroad travelling, and should be used on all railroads in the country.

JOHN FRAZER, Agent,

JAMES ELLIOTT, Sup. Motive Power,

GEORGE CRAIG, Superintendant,

W. L. ASHMEAD, Agent.

AMERICAN RAILROAD JOURNAL,

AND GENERAL ADVERTISER

FOR RAILROADS, CANALS, STEAMBOATS, MACHINERY,

AND MINES.

ESTABLISHED 1831.

PUBLISHED WEEKLY, AT No. 23 CHAMBERS STREET, NEW YORK, AT THREE DOLLARS PER ANNUM.

SECOND QUARTO SERIES, Vol. I., No. 9.]

THURSDAY, FEBRUARY 27, 1845. [WHOLE No. 452, VOL. XVIII.

THE AMERICAN RAILROAD JOURNAL is the only periodical having a general circulation throughout the Union, in which all matters connected with public works can be brought to the notice of all persons in any way interested in these undertakings. Hence it offers peculiar advantages for advertising times of departure, rates of fare and freight, improvements in machinery, materials, as iron, timber, stone, cement, etc. It is also the best medium for advertising contracts, and placing the merits of new undertakings fairly before the public.

RATES OF ADVERTISING. One page per annum......\$125 00 One column "One square " 15 00 20 00 One page per month..... One column "One square" One square 8 00 Professional notices per annum.....

their orders as early as practicable, as the subscriber is desirous of extending the manufacturing so as to keep pace with the daily increasing demand. ja45

DATENT HAMMERED RAILROAD, SHIP and Boat Spikes. The Albany Iron and Nail Works have always on hand, of their own manufac-

adelphia; Wm. E. Coffin & Co., Boston,

TO RAILROAD COMPANIES AND MANufacturers of railroad Machinery. The subscribers have for sale Am. and English bar iron, of all
sizes; English blister, cast, shear and spring steel;
Juniata rods; car axles, made of double refined iron;
sheet and boiler iron, cut to pattern; tiers for locomotive engines, and other railroad carriage wheels,
made from common and double refined B. O. iron;
the latter a very superior article. The tires are
made by Messrs. Baldwin & Whitney, locomotive
engine manufacturers of this city. Orders addresengine manufacturers of this city. Orders addressed to them, or to us, will be promptly executed.

When the exact diameter of the wheel is stated in

mitred joints.
350 tons 2 by 15 feet in length weighing 4.68 3.50 21 1.26

68 3.0 with spikes and splicing plates adapted thereto. To be sold free of duty to State governments, or incor-

porated companies.

Orders for Pennsylvania Boiler Iron executed.

Railroad Car and Locomotive Engine tires, wrought and turned or unturned, ready to be fitted on the wheels, viz: 30, 33, 36, 42, 44, 54 and 60 indeed in the wholes discounted. ches diameter.

E. V. Patent chain cable bolts for railway car axles, in lengths of 12 feet 6 inches, to 13 feet 21,

Also, Patent hemp cordage for inclined planes and

canal towing lines.

Patent felt for placing between the iron chair and stone block of edge railways.

Every description of railway iron, as well as locomotive engines, imported at the shortest notice, by the agency of one of our partners, who resides in England for this purpose.

A highly respectable American Engineer resides in England for the purpose of inspecting all Loco-motives, Machinery, Railway Iron, etc., ordered

A. & G. RALSTON & CO., No. 4 South Front st., Philad., Pa.

MACHINE WORKS OF ROGERS, KETCH-um & Grosvenor, Patterson, N. J. The un-dersigned receive orders for the following articles, manufactured by them of the most superior descrip-tion in every particular. Their works being exten-sive and the number of hands employed being large, they are enabled to execute both large and small orders with promptness and despatch.
Railroad Work.

Locomotive steam engines and tenders; Driving and other locomotive wheels, axles, springs & flange and other locomotive wheels, axies, springs & flange tires; car wheels of cast iron, from a variety of pat-terns, and chills; car wheels of cast iron with wrought tires; axies of best American refined iron; springs; boxes and bolts for cars.

Cotton, Wool and Flax Machinery

of all descriptions and of the most improved patterns,

style and workmanship.
Mill gearing and Millwright work generally; when the exact diameter of the wheel is stated in he order, a fit to those wheels is guaranteed, saving o the purchaser the expense of turning them out inside.

NO IRON MANUFACTURERS. THE SUB-Seribers, as Agents of Mr. George Crane, of Wales, having obtained a patent in the United States for his process of smelling Iron Ore with Anthracite coal, and holding an assignment of the pa-tent obtained by the late Rev. F. W. Geissenhainer, are prepared to grant licenses for the manufacture of Iron according to Mr. Crane's principle. A. & G. RALSTON & CO.

No. 4 Sout Fronth st., Philadelphia, Pa.

TO RAILROAD COMPANIES AND BUILD ERS OF MARINE AND LOCOMOTIVE ENGINES AND BOILERS.

PASCAL IRON WORKS.

WELDED WROUGHT IRON TUBES

From 4 inches to 1 in calibre and 2 to 12 feet long, capable of sustaining pressure from 400 to 2500 lbs. per square incl. with Stop Cocks, Tr. Lr. and other fixtures to suit, fitting together, with screw joints, suitable for STEAM, WATER, GAS, and for LOCOMOTIVE and other STEAM BOILER FLUES.

Manufactured and for sale MORRIS, TASKER & MORRIS.
Warehouse S. E. Corner of Third & Walnut Streets, PHILADELPHIA.

TO IRON MASTERS.—FOR SALE.—MILL SITES in the immediate neighborhood of Biruminous Coal and Iron Ore, of the first quality, at Ralston, Lyouing Co., Pa. This is the nearest point to tide water where such coal and ore are found together, and the communication is complete with Philadelphia and Baltimore by canals and railways. The interest on the cost of water power and lot is all that will be required for many years; the coal will not cost more than \$1 to \$1 25 at the mill sites, without any trouble on the part of the manufacturer; rich iron ore may be laid down still more cheaply at the works; and, taken together, these sites offer remarkable advantages to practical manufacturers with small capital. For pamphlets, descriptive of the property, and further information, apply to Archibald McIntyre, Albany, to Archibald Robertson, Philadelphia, or to the undersigned, at No. 23 Chambers street, New York, where may be seen specimens of the coal and ore.

W. R. CASEY, Civil Engineer,

VALUABLE PROPERTY ON THE MILL Dam For Sale. A lot of land on Gravelly Point, so called, on the Mill Dam, in Roxbury, fronting on and east of Parker street, containing 68,497 square feet, with the following buildings

thereon standing.

Main brick building, 120 feet long, by 46 ft wide, two stories high. A machine shop, 47x43 feet, with large engine, face, screw, and other lathes, suitable to do any kind of work.

Pattern shop, 35x32 feet, with lathes, work bench es, &c.
Work shop, 86x35 feet, on the same floor with the

pattern shop.

Forge shop, 118 feet long by 44 feet wide on the ground floor, with two large water wheels, each 16 feet long, 9 ft diameter, with all the gearing, shafts, drums, pulleys, &c., large and small trip hammers, furnaces, forges, rolling mill, with large balance

wheel and a large blowing apparatus for the foundry.
Foundry, at end of main brick building, 60x451 feet, two stories high, with a shed part 451x20 feet containing a large air furnace, cupola, crane and corn oven.

Blacksmith shop, 49 feet long by 20 feet wide.

FRENCH AND BAIRDS PATENT SPARK ARRESTER.

TO THOSE INTERESTED IN Railroads, Railroad Director and Managers are respectfully invi-ted to examine an improved SPARI ARRESTER, recently patented b the undersigned.

Our improved Spark Arrester have been extensively used during the last year on both passenger and freigl. engines, and have been brought t such a state of perfection that no ar-noyance from sparks or dust from the chimney of engines on which they arused is experienced.

These Arresters are constructed on an entirely different principle from any necessary office to the putting. The form is such that a rotary motion is imparted to the heated at smoke and sparks passing through the chimney, and by the centrif-gal force thus acquired by the sparks and dust they are separated from the smoke and steam, and thrown into an outer chamber of the chimney through openings near its top, from whence they fall by their owr gravity to the bottom of this chamber; the smoke and steam passit g off at the top of the chimney, through a capacious and unobstructed passage, thus arresting the sparks without impairing the power of the engine by diminishing the draught or activity of the fire in the furnace.

These chimneys and arresters are simple, durable and neat in appearance. They are now in use on the following roads, to the managers and other officers of which we are at liberty to refer those who They are now in use

on the following roads, to the managers and other officers of which we are at liberty to refer those who may desire to purchase or obtain further information in regard to their merits:

THE NEWCASTLE MANUFACTURING Company continue to furnish at the Works, Store house—a range of buildings for storage, etc..

200 feet long by 20 wide.

Locomotive shop, adjoining main building, fronting on Parker street, 54x25 feet.

Also—A lot of land on the canal, west side of Parker st, containing 6000 feet, with the following buildings thereon standing:

Boiler house 50 feet long by 30 feet wide, two stories.

Company continue to furnish at the Works, situated in the town of Newcastle, Del., Locomotive and other steam engines, Jack screws, Wrought iron nected with Steamboats, Railroads, etc.; Mill Gearing of every description; Cast wheels (chilled) of any pattern and size, with Axles fitted, also with wrought tires, Springs, Boxes and bolts for Cars, Driving and other wheels for Locomotives.

The works and other steam engines, Jack screws, Wrought iron nected with Steamboats, Railroads, etc.; Mill Gearing of every description; Cast wheels (chilled) of any pattern and size, with Axles fitted, also with wrought tires, Springs, Boxes and bolts for Cars, Driving and other wheels for Locomotives.

The works being on an extensive scale, all orders

CUSHMAN'S COMPOUND IRON RAILS, etc. The Subscriber having made important improvements in the construction of rails, mode of guarding against accidents from insecure joints, etc. —respectfully offers to dispose of Company, State Rights, etc., under the privileges of letters patent to Railroad Componies, Iron Founders, and others interested in the works to which the same relate. Companies reconstructing their tracks now have an opportunity of improving their roads on terms very advantageous to the varied interests connected with

W. Mc. C. CUSHMAN, Civil Engineer Albany, N. Y.

Mr. C. also announces that Railroads, and other works pertaining to the profession, may be constructed under his advice or personal supervision. Applicaitons must be post paid.

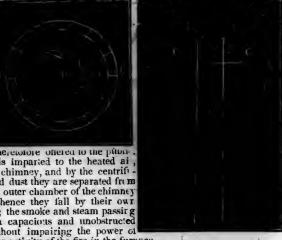

NICOLL'S PATENT SAFETY SWITCH for Railroad Turnouts. This invention, for some time in successful operation on one of the principal railroads in the country, effectually prevents engines and their trains from running off the track

at a switch, left wrong by accident or design.

It acts independently of the main track rails, being laid down, or removed, without cutting or displacing

It is never touched by passing trains, except when in use, preventing their running off the track. It is simple in its construction and operation, requiring only two Castings and two Rails; the latter, even if much worn or used, not objectionable.

Working Models of the Safety Switch may be seen at Messrs. Davenport and Bridges, Cambridgeport, Mass., and at the office of the Railroad Journal,

WESTERN RAILROAD REPORT. (Continued from page 125.)

Upon the organization of the present Board of Directors, on the 1st of March last, the subject of the passenger fares engaged their early atten-For the greater part of the preceding year, the fares for 1st class through passengers had been at the low rate of two cents per mile, and those for way passengers three cents. During the winter, the former had been raised to 21 cents. The Board, after mature deliberation, be determined, they have had regardraised the fare of first class through passengers to three cents per mile, and of 1st class way passengers to 31 cents-putting the 2d class at two-thirds of those rates, and these rates have that the construction of new railroads, to be conthe last year.

The Stockholders, generally, are doubtless aware, that for some time past a controversy has existed between the Directors of this Corporation and those of the Worcester Company, on the subject of the charges by the latter company for doing the business on their road, which comes from, or goes to the Western road. As it has been deemed necessary for the protection of the interests of this Corporation to apply to the Legislature for relief, by a petition, which is now Worcester Company shall receive, on merchan-pending before a Special Joint Committee of disc received from or carried to the Western that body, the undersigned deem it to be their road, 21 cents per ton for each mile the same duty to submit to the stockholders, as a part of passes on the Worcester road, -each corporation the history of their proceedings, a statement of to provide both for merchandise and passengers, the points at issue, and of the facts connected motive power, and its proportion of cars, and pay

As a general principle, the Directors of the Worcester Company have claimed that the receipts from the joint business—that is, from passengers and merchandise passing over the whole increase to the Worcester Company. As to flour, or parts of both roads—should be divided between the two companies, pro rata per mile, or Worcester 9 cents per barrel, over the whole of tween the two companies, pro rata per mile, or Worcester 9 cents per barrel, over the whole of according to the distance the passengers and the Worcester road, and pro rata for a part of it, merchandise were carried on each road,-deducting, before division of such receipts from bush to Boston, above 36 cents, the Worcester merchandise, for the use of each company, a Company to receive one-fourth of the sum so merchandise, for the use of each company, a specific sum for the expenses of loading and un- fixed. loading, and other local depot charges. In regard to such passenger receipts, some slight exceptions have, from time to time, been assented to, in favor of the Western Company, in addi- ried to, or brought from, the Western, and 2 the tion to an allowance to that company for the use same for those of the 2d class, provided, that of their passenger and baggage cars over the if the Worcester Company should reduce the Worcester road.

ness which comes from, or goes to, the Western \$1 10 per passenger, and \$1 26 per ton of merroad, at rates reduced below the local rates chandise, for the whole length of the Worcester charged for business passing on the Worcester road. road only, and below those charged by the Western Company for the same business.

Worcester Company, in December, 1843, havcould thus be procured, and as the session of the Legislature was advancing, they felt bound to apply to that body for relief. On commencing the benefit given by the award. To avoid the benefit given by the award. To avoid the benefit given by the award, the Western Directors agreement, referred to the arbitration of these ware compelled to reduce on all that class of by the parties, as fully as the Legislature could 40 cents was thus reduced to 15. do under the said petition," the award to take effect from January 1, 1814, and to be binding applied, through a committee, to the Worcester 15

of dissatisfaction therewith.

The hearing was had in May last, when the parties presented their various claims, and renewed propositions were made and rejected. After a full hearing, the arbitrators made their award, a copy of which is annexed hereto.

In this award, the arbitrators say, that in es tablishing a principle upon which a fair and reasonable profit to the Worcester Company is to

1. To what they deem to be the policy of the commonwealth as established by its legislation, continued to the present time. They are be-nected with roads already in use, is to be enlieved to be as low as the average charges upon couraged; and that the business brought to the most of the roads in the northern states, during old road, by such new road, is to be regarded as the last year. from other sources.

2. To the fact, independently of such condeals with the old road, as a large customer, bringing business in large masses.

3. To the fact, that to a certain extent the Western Railroad brings a new business to the Boston and Worcester Railroad.

Under these principles, they award, that the with this controversy, with their views of the its own depot expenses, and assume all risks on principles by which it ought to be decided.

This is based on the then existing merchandise tariff. If the Western Company should increase the rates of such merchandise, -but if the Western raise the rate from Green-

As to passengers, the award provides that the Western pay to the Worcester Company 24 cents per mile for each 1st class passenger carfare of passengers on their road below the On the other hand, the Directors of this com-pany claim, for a variety of reasons, that a dis-from the sums to be paid by the Western Com-

At the time of the award, the local passenger fare on the Worcester road was \$1 50, but to-The proposition made to the Directors of the wards the close of the year, the Directors of that Company suddenly, and without notice, reduced ing been declined by them in writing, January their local fare to \$1 25,-inaking it for the in-9th, 1844, for reasons which led the Directors of terest of joint passengers to buy separate tickets this Company to think that no satisfactory change on each road; and thus destroy the only eviagreement, referred to the arbitration of three were compelled to reduce on all that class of gentlemen, "with power to hear and determine passengers, 25 cents each-the number of which, all matters which might be brought before them in 1844, was about 57,000. The allowance of

for one year from that date, and thereafter for Directors, for a proportional reduction of the 24 three months from date of notice by either party cents per mile, to be paid by the Western under the award, and instructed the committee, in case it was denied, to give the notice to terminate the award, and to apply to the Legislature for relief. The Worcestor Directors declined to make the change; and some time afterwards, on Jan. 15, 1845, gave to the Western Company notice of their intention to put an end to the award, and to make a new proposition to the Western Company.

Such a proposition was made on the 23d of January. But although the Board held an adjourned meeting on that day, for the purpose of receiving and considering it, it did not come to hand until after the meeting was dissolved, and the subject was thus left in the hands of a Committee of the Board. The proposition was deliberately considered by them, and declined, Jan. 25th. At a subsequent meeting of the Board, the subject was brought to their attention, siderations of public policy, that the new road and they concurred in the opinion of the committee.

This, like all the other proposals of that company, with some unimportant exceptions, was based upon the principle of a division pro rata per mile, varying, however, from former ones, in professing to give to each company an equal profit on joint business, by a provision to ascer-tain the expenses, of all kinds, of each company, in doing its whole business, and the interest on the capital of each, and dividing the passenger expenses and half the interest of each, by the number of passengers carried one mile,—and the merchandise expenses and half the interest, by the number of tons carried by each one mile, and that "the difference between the results thus obtained should be the difference in the rate per mile," to be established on the two roads for the joint business. The Directors of the Western Company believe that very serious disputes would arise, in carrying out the details of this plan; and, in proof of this, it is only necessary to state, that the mode of making up the expenses of 1844, by the two companies, varies so much, that those of the Worcester Company average, on the miles run by the trains, \$1 05 cents per mile; and those of the Western about 63 cents per mile. To bring the latter to the ratio of the former, more than \$200,000 must be added to the expenses of the Western road in 1844. But, independent of that difficulty, the Directors of the Western Company think this proposition is objectionable in principle, in common with all the others, in disregarding the provisions of the Legislature for favoring business brought by new roads, and all the claims before crimination should be made upon all such business in favor of this company; that the Worcespanies has been governed by the terms of this
award since January 1, 1844. Under it the
in behalf of the Western Company, all the busiWestern Company have paid the Worcester
Western Company have paid the Worcester Legislation of the worker to be established from upon the tariff of prices to be established, from time to time, on this class of business, giving to that company the power, with a fair income without this business, to require on this a rate of charges which may, in fact, be nearly prohibi-

In view of all these considerations, no alternative seems to remain, but to pursue the inquiry before the Committee of the Legislature, and obtain, if practicable, a final decision of these vexed questions.

THE GREAT BRITAIN STEAMER. VOYAGE FROM BRISTOL TO BLACKWALL.

The capabilities of this colossal vessel have been very fully tested within these few days. We have deemed it necessary, notwithstanding the crowded state of our columns, to devote some space to furnish particulars of this interesting event, which we trust will be acceptable not only to the scientific, but to the general reader of this Journal. We give a drawing of the vessel, and we feel assured that all who have seen the original, will admit that our artist has been happy in his portraiture. For the account of the voy age subjoined, we are in a great measure indebted to our respectable contemporary, the "Bristol Gazette:"

The Great Britain left Kingroad on Thursday evening, the 23d Jan. At 7 o'clock the anchor was lifted, but it was 9 before it was fairly got up, having become entangled with the mast and rigging of a schooner which was run down at King-

road some six or seven weeks ago.

the ship was got under weigh. At 9 35 P.M., she was abreast the Holms, the wind being fresh first with new inachinery) to cool; the consequence of this was that not much progress had been made up to this time, and it was past midnight before the ship was off the Naas lights. By this time the mirth down-stairs had waxed fainter and fainter, and most of the passengers had turned in, which brings us to the conclusion

the breeze increased to a gale, the wind veered round to the S.S.W., and a very heavy, rolling Brit cross sea set in. At 6 30, the Hangman's hill End was bearing S.S.W., 4 miles. In this manner ing

the pulse might beat 20, and then she rose again to the billows and bounded over all. On examining the mischief done, it was found that three of her starboard bow's bull eyes had been stove in with their frames; the diagonal bands of the forecastle deck buckled, the wood work started two inches upwards, a portion of the carved figure-head carried away, and the iron sheathing on both the larboard and starboard bows rent in two places, and the massive wood of the bulwarks split. In the opinion of Capt. Hosken, the sea that struck her could not have been less than 60 feet high; the vessel lies 20 feet above the water, and the wave struck 40 feet over her bows. The water which rushed in swept the carpenter and his wife out of their berths, and did a good of mischief besides to the wood work of their cabin. The Britain, no ways baffled by the shock, continued to hold her course; at 1 20 P.M. she was off Pentire Point; 145, her engines were making 134 revolutions, and her speed was 84 knots with three spencers and stay-sail set. At 4 P.M. the revolutions were 124, and her speed still 82 knots; Among the gentlemen on board were Capt. Lushington, R.N.; Capt. Crispin, R.N., commander of her Majesty's yacht the Victoria and Albert; Mr. Lloyd, principal engineer at the Woolwich Dock-yard; Mr. Joseph Reynolds, of the Royal Yacht Club; Capt. Claxton, R.N.; St. Agnes head bearing to the speed was increased to 9½ knots; tions, and the speed was increased to 9½ knots; the weather had also moderated, and the four spencers, jib, and square mainsail, were set. At Cant. Brown, of the merchant service; Mr. I. and rounded the Land's End. At 10 40 P.M., the ship was off the Lizard, going still at the rate of the Royal Yacht Club; Capt. Claxton, R.N.; spencers, 110, and square mansalt, were set. At Capt. Brown, of the merchant service; Mr. I. 8 45 P.M., the Great Britain passed the Light K. Brunel; Mr. T. R. Guppy; Mr. F. P. Smith, the patentee of the screw; Mr. Edward Jas. Maude, civil engineer; Mr. Christopher Hill, E.C.S.; and Mr. P. P. Bailey, C.E. The vessel was under the command of Lieut. Hosken of the ship during the day; she not only never lost way at all that when the concention of wind the standard of the ship during the day; she not only never lost way at all that when the concention of wind the standard of the ship during the day; she not only never lost way at all that when the concention of wind the standard of the standard of the ship during the day; she not only never lost way at all that when the concention of wind the standard of the R N., the late gallant commander of the Great lost way at all, but when the opposition of wind Western. During the time occupied by dinner, and waves was at its utmost, made progress at the rate of from 4 to 5 knots an hour, which continued to increase up to 7, 8, 9, and 10, and 10₂. Now it is perfectly obvious that no paddle steamer from W.S.W.; cloudy, with frequent showers Now it is perfectly obvious that no paddle steamer of rain. At 15 minutes after 10 the engines were in the world could have done it. In the rolling slowed, and continued so for about an hour and and pitching sea which the Great Britain expea half, in order to let the bearings, which had rienced, one of the paddles would almost have become heated (a thing which always occurs at been constantly out of water, and the other, by first with new machinery) to cool; the consepeded and throttled in its motion, whilst on the other hand, the screw, when the vessel was pitching the most, never, except once or twice, was in sight, and then only for a moment; the effect of this was to keep a constant propelling power on the ship. This is not merely matter of speculation, it is matter of history. The Great of the first day's narrative.

The wind had been blowing fresh for the last two hours, but as the morn of Friday approached to hours, but as the morn of Friday approached to hours, but as the morn of Friday approached to hours, but as the morn of Friday approached to hours, but as the morn of Friday approached to hours, but as the morn of Friday approached to hours, whilst the Great to hours. Lundy the whole 24 hours; whilst the Great Britain succeeded in getting round the Land's End at 45 minutes past 8 o'clock the same even-

we continued to work on, the gale freshening On Saturday morning, at 2 45, they passed every minute, and the sea increasing; the light the Eddystone, but at such a distance that the clouds which flitted past the moon occasionally light could hardly be perceived; at 5 15 A.M., giving forth slight showers of rain. About this were off the Start, and the progress now made time a heavy surf stove in one of the lights forward was very rapid, the wind being favorable and the ward. At from 6 to 7 we came off Ilfracombe; weather moderate. At 9 45 they were off the the wind had now veered round to the North-Bill of Portland; at 10, off Weymouth, the beauwest, and the gale continued to increase with a tiful white cliffs of the coast looking in the lovely cross heavy sea. At 10 o'clock we were off sunshine of the morning, which was like one in Lundy; the gale continuing with the addition of the spring cbb, the wind still N.N.W., the ship steering W. by N., and making 5½ knots against the sea, with 13 revolutions of the engines. We At 10 30, off St. Alban's Head. At 11, threw do not know that it is necessary for us to repeat the log and found they were going 11 knots an the particulars of the wind and weather. When we say that for hours it blew a stiff gale from the North-west, on a spring cbb in the Bristol Chanbrass, is attached to electric wires, which being nel, our nautical readers will be able to fully brought into connection with the works of a dialcomprehend what it was the Great Britain had plate on board by the action of electricity, cause to encounter, and what it was she triumphantly the hands of the dial to revolve, and thus mark and easily surmounted. About 15 miles south the speed at which the vessel goes. It is cerof Lundy, and a little after 12 o'clock, a tremen-tainly an ingenious invention, but it may be dous sea struck her on her starboard bow. The doubtful whether the having a man constantly to effect was to completely stop the huge ship whilst watch it, will not be an insuperable objection to its constantly coming into general use. Mr. P.

P. Bailey is the inventor.

and a half. The Great Britain went by her hand-over-hand, having gained five miles on her from the time she was first in sight. The Great Britain then proceeded on her course up the river in the same gallant style, without any slackening of her speed, although the gale continued to blow the weight with the pull when working is e right in her teeth with still increasing force. to 85 tons on the bearings of the main shaft. Owing to the severity of the weather, the river was crowded with more than the usual number of vessels of all sorts and sizes, through which the Britain threaded her course with as much facility as a wherry. When opposite Graves-end, a large cluster of vessels stretched from very nearly bank to bank, and in passing through them the bowsprit of a collier brig came in con-tact with the Britain about midships, and was broke off like a carrot. Capt. Hosken afterwards Britain passed, or as some said was drifting at sides 26 water closets. the time. She reached Woolwich at half-past 3, and immediately blew off her steam and adopted in consequence of its offering two-thirds slackened her speed. The Great Britain, in a less resistance than hemp, a great point going short time after leaving Woolwich, reached her head to wind. destination at Blackwall, where immense crowds flowing, she had to swing round, and in so doing she presented a singular appearance, for Britain amount to 4,943 yards * when lying athwart the river, she actually occupied nearly the whole breadth from bank to boats of wood in the davits, and one large lifebank.

On her arrival, a testimonial was presented

Though many descriptions have been given of the Great Britain, we are induced to insert the following, as being the most clear and succinct that we have seen, and which we copy from an interesting pamphlet just published by Captain Claxton, entitled "A Description of the Great Britain steam-ship," &c. Britain steam-ship," &c.

The screw is of six arms, 15 feet 6 inches diameter, 25 feet pitch, and weighs 4 tons.

The main drum is 18 feet diameter, and drives chains, weighing 7 tons.

The screw shaft drum is 6 feet diameter, and the weight with the pull when working is equal it .- Herapath.

The cylinders are 4 in number, 88 inches each; stroke 6 feet; power, 1000 feet. The condensers are of wrought iron, 12 feet by 8, and 5 deep.

Under the whole space of the engines up to the top, the angle irons are doubled.

The upper main and saloon decks are of wood, the two cargo decks are of iron. The officers and seamen are all accommodated on two decks under the forecastle.

From the ship's bottom to the upper deck, runs said that he had no alternative but to run the on either side, for the whole length of the engines Britain on shore, to run down a sloop which was and boiler space, a strong iron partition, forming just ahead of him, or to carry away the bowsprit below the coal bunkers; and above the servants of the brig, and even that might have been avoided accommodations on one side, engineers' cabins had not the brig sheered her anchor just as the and stokers' accommodations on the other, be-

She has six masts, fitted with iron rigging,

The plain sails of a 52 gun frigate, had assembled to witness her arrival. In taking i. e. without counting royals, stay sails, and up her moorings at Blackwall, as the tide was steering sails, number something short of 5,000 yards of canvas, and the plain sails of the Great boat on deck; they are built according to a patent taken out by Mr. Guppy, and are capable of

The length of the keel is 289 feet; total length 1 st. The facility afforded in carrying canvas, in-322 feet. Beam 51 feet. Depth, 32 feet 6 inches. clination or heeling over not affecting the motive At 12 45, they passed the Needles, those singnlar masses of rock at the end of the Islc of Wight.

At 12 0 p.m., they passed Lymington, and at 2 ment, 3,443 tons.

Tonnage by old measure-craft, if sail be carried to any extent with the minutes to send off despatches.

At 2 25 they had gone by Cowes, and at 3 10 passed the Apollo troop-ship at Spithead, and were loudly cheered by the officers and men who crowded the decks. At a quarter to 2 on Sunday morning the country of the ing, the Great Britain anchored in the Downs, increasing to 21 inches at the ends.

Ten iron sleepers run from the engine-room, only for a few seconds at rare intervals, while 17 p.m., Saturday, and the Dungeness point at gradually diminishing in number to the fore end with paddles the hollow of the seas constantly She had thus run 320 nautical miles of the ship and under the boilers, the platform of leave both wheels exposed, and if the throttling from the Longships to her anchorage in the which they support—in midships they are 3 feet were not attended to, the most serious conse-Downs, in 29 hours, being on the average 10½ 3 inches in depth, supported by angle irons in the form of inverted arches, and at a short dis-the form of inverted arches, and at a short dis-in going into docks and basins. As a paddlebefore 8 the ship was again under way. The wind had shifted during the night, and now blew attends from from the W.N.W. The scene was a lively and exciting one; more than one hands. strong from the W.N.W. The scene was a lively and exciting one; more than one hundred sail centre, and 24 inches in the bearings; in the to the wind, the paddle-boxes and their appendwere at anchorage in the Downs, and as the rough, before turned, it weighed 16 tons. It has ages creating nearly one half of the whole resist-Great Britain passed by them, many an admirbeen lightened by a hole of 10 inches diameter, ance of the body, to say nothing of the paddleing and wondering glance was directed towards bored through. A stream of cold water passes box, boats, and the attendant tons of iron-work in through the cranks and this hole when the ensuch ships as have them. 6th. The case with a.m. she went by Deal; at 8 25 passed in view gines are at work. of Ramsgate; at 8 55 the Britain rounded the North Foreland and came in sight of Margate. The screw shaft is in one long and two short effect between the two systems, if, from damaged nor coupling parts. The part next the engine, machinery, it becomes necessary to disconnect, and the solid, 28 feet by 16 inches diameter. The holand let the propellers revolve; and by no means report was "by the deep, three." At 30 minutes low intermediate shaft 65 feet, by 2 feet 8 inches the least advantage is the getting rid of the top report was "by the deep, three." At 30 minutes low intermediate snait of inches, beet 6 inches, weight of frames, shafts, wheels, &c., &c., which Hull steamer, one of the fastest sea boats out of and also 16 inches diameter. The total length are all represented by shafting below the centre of gravity, acting really as so much ballast in all screw ships; and lastly, the comparative security from the shot of an enemy. The pamphlet contains many other remarks worthy of quotation, but the subject has already occupied so much space that we must now tear ourselves from

> ERIE EXTENSION CANAL.—Since this canal has been completed, the forwarders of Cleveland, and those engaged in business on the northern part of the Ohio canal, are beginning to inquire what effect it will have on their business. The distance from Beaver, the southern termination of the Cross-cut, to Cleveland, is 143 milesand from Beaver to Erie, 136 miles—difference in favor of Erie, 7 miles. The charter provides that the tolls on the Extension shall not exceed the rates charged on the State canals of Pennsylvania. To illustrate the difference of tolls charged on these routes, a correspondent of the Cleveland Herald gives the following comparative table of the rates on each canal, on several leading articles, passing from the river to the

Iuno .

#### AMERICAN RAILROAD JOURNAL. PUBLISHED BY D. K. MINOR, 23 Chambers street, N.Y.

Thursday, February 27, 1845.

Want of space has prevented our noticing numerous interesting topics, on some of which we had prepared 'articles. Hunt's Merchants' Magazine contained two interesting articles, one on the postage question, the other on "railways." The New York Farmer and Mechanic, a new paper, to which we alluded some weeks since, which occupies the ground between the purely agricultural and mechanical papers and the daily press, has given to the public some able articles, with excellent illustrations. Messrs. Jordan & Co. have kindly forwarded to us Mr. Webster's argument on "vested rights," in the case of the Lowell railroad, from which, however, we find it impossible to give any satisfactory extracts, and the whole is entirely too long for the Journal. We are again indebted to a friend for legislative documents: the reports of the comptroller and canal commissioners of New York, to which we shall refer in our next. Lastly, Mr. Ellet's letter to the president of ing February 15: the Chesapeake and Ohio canal co. has also escaped attention. This letter comes in at a very good time. It shows the causes of the remarkable success of the English canals, (see our table,) and, though the matter was well known to engineers, and a few others, Mr. Ellet has given a variety of details which are useful to us all. The English canals are very small, In 1844..... consequently cheaply constructed and managed; they do two to three times the business of the Erie canal, with locks of half the size; the tolls are reasonable, about one cent per ton per mile, as on the Erie canal, the only canal in America which pays interest and expenses, and they are navigable almost throughout the year. This last circumstance has escaped Mr. Ellet's observation, though it is the grand we are wrong the Miners' Journal or the Carbon County Gazette will please correct us. On the whole, the facts in the letter cannot be too well studied by the directors of the Schuylkill navigation company; and while enlarging his canal, the president will be enabled by this letter to enlarge his own ideas of the coal trade, for a million of tons per annum, which he appears to regard as almost past comprehension, is much below the average trade of some of these little English canals. The facts contained in Mr. Ellet's letter form a severe critique on the present intentions of the company, and indeed on all the "enlargements" which have been proposed in this country. How Mr. Ellet contrived to overlook the greatest of all objections to canals, north of the Potomac, their being closed four to five months yearly, it is not for us to say.

MIDLAND RAILWAY.—Receipts for half year ending 31st Dec., 1844, £276,139. Expenses, £123,337. Nett, £152,793.

We particularly request statements of the traffic of The following appears to us a suitable form each week and of the corresponding week of last year for advertising fares and times of starting, for failroads generally.

WESTERN RAILROAD.-Receipts for the week end-\$5,188 Passengers, \$3,330 5,614 4.793 Freight, etc., \$10,802 \$8,123 Total.

HOUSATONIC RAILROAD .- The receipts of the Housatonic railroad in round numbers, were, In 1842.....

The average increase per annum is \$29,000. The receipts for January, 1845, were...\$18,824 05

The net increase over 1844 is.... Of the business of 1811, about \$127,000 was locat and \$23,000 were received from passengers and freight between New York and Albany.

The receipts show that the local business of the road will soon be abundantly sufficient to pay a fair interest on its cost. Although the through thusiness consideration with us in New York, and we cannot is rapidly increasing, it is comparatively of mode-help thinking, that it is not altogether unworthy of rate importance. Though the winter of 1843 and notice, even in the coal regions of Pennsylvania. If 1844 was very favorable, and the Housatoric road we are wrong the Miner's Javeral or the Coal without competitors for New York and Albany business, the receipts showed an unexpectedly large proportion of way freight and travel. -[Jour. of Com.]

> MINEHILL AND SCHUYLKILL HAVEN RAILROAD .-The following is the amount of coal transported over this road, for the week ending on Wednesday eve 4,553-10 24,068-13 ning last: Per last report,

> 28,624-03 LIVERPOOL AND MANCHESTER RAILWAY. - Receipt for half year ending 31st December, 1844, £141,252 Expenses, £64,885. Nett profits, £76,367 Dividend, 41 per cent. Reserve, £15,099. Capital £1,785,090.

4,714·09 1,732·12 Pottsville, 6,446-21 35,692.01 Per last report, 42,338-22 For the American Railroad Journal.

GENTLEMEN-Acting in conformity with your request, and my promise, to furnish you with some details connected with the construction of the New York and Harlem railroad, between Williams' bridge and White Plains, I have now briefly to notice them for publication in your Journal. Your's truly,

E. SHOTWELL.

Leaving Williams' bridge distant from the City Hall 13 27 miles, the location occupies the valley of the Bronx river as far as the present termination at White plains, distant from Williams' bridge 11 93 miles, or an aggregate of 25 20 miles from the city. The amount of straight line is 9 72 miles, and that of curved line is 2.21 miles, and the longest straight line is about 2 miles. The radius of curvature varies from 1,146 feet to 5,730 feet. There are 5 bridges on Howe's plan over the Bronx river on the 2d, 4th, 9th and 12th miles, the least length being 861 feet, and the greatest, 172 feet. The superstruc-

THE PARMERS AND THE RAILROADS.

We have already given our own views on the advantages the farmers and inhabitants of western New York generally would derive from the permission to send the products of their industry and skill to market by that mode of transportation, which their own ern praries in abundance. A practical wool ideas of their own interests would lead them to prefer; we have given extracts from the many spirited and sound remarks on the anticipated benefits to the agricultural interest from the contemplated Montreal railroad, but we now, for the first time, find the subject directly in competition. They comprise how-than all, to put an end to all possibility of fearlessly approached by a paper of western ever the bulk of our staple products. New York, the Niagara Democrat, published at Lockport, on the line of the Erie canal. It will be seen that the view here taken is substantially the same as that taken by us, they do better, because of our proximity to when pointing out the vast additional income market. the farming interest might secure from the use of railways throughout the year, by selling at a high price articles which cost little-in many instances, nothing-instead of being chained down to endless poverty railroad conveyance. Poultry from the exby a hopeless competition with the cheap treme western counties of this State, is findlands of the west, in the production of flour, ing a good market this winter in New York pork, beef and wool.

" The Agricultural Interest and prospects of Western New York.—This is a subject per-haps more appropriate to the especial organs "If space and time allowed, we could enhaps more appropriate to the especial organs of the agricultural interest; but as yet we large upon the substitutes which the western that is approaching, or in fact, may be said hereafter, if the task do not fall into abler now to exist, in reference to the agricultural hands." interests of our region. No one has failed to observe that our farmers are meeting with especial attention of the Rochester Democrat, a powerful competition, that must increase as the cheap lands, the open praries, and easily cleared regions of that vast agricultural district, are rapidly coming under the plough. Facility and cheapness of transportation have so nearly obviated distance, as to leave little ground for hope that our advantage in getting monopoly, says that we are hostile to "westto market will much help us in the way of competition. Take, for example, the staple ern New York." This is one among a thou-the flour manufact product of western N. York—wheat. That sand proofs of the truth of our remark, made Black Rock, etc. which is raised as far off as Wisconsin, on a few weeks since, that many regard the lands that have within five years been bought people of New York and of the western at ten shillings per acre-fenced, broken up and prepared for seed for less than five dollars per acre-has been passing our doors, its transportation to Buffplo costing less than tractors, speculators and politicians as "westone, on reflection, that a western New York farmer must have more than ten cents the advantage in transportation, upon his from twenty-five to fifty dollars per acre soil, to place him on a par with the cheaply purchased, easily subdued and productive soil of By way of throwing a tub to the whale, the counties, in this State! the west. And so in reference to other staple loss to the farmer on the sale of his wheat by of the prarie lands, the animal cheaply raised, and fattened as it were by the bounties of nature, comes in direct competition with ours, also very properly alluded to as oppressive; piness, who does not rejoice at all these evithat has been carried through our hard win. but the real difficulty under which the farmer dences of the rapid approximation of the reters, and even summered at a greater expense of western New York, and, consequently, mote sections of our vast republic."

west tells us that he can make pork for from twelve to fourteen shillings per 100 pounds The farmer of western New York will tell you that \$3 is not a remunerating price. Coarse wool may be produced upon the westgrower of one of the western counties of this State, who has now a large flock on the western praries, told us recently that he had no are but light producers of corn, and in that business cannot compete to any extent with the west. In cheese, our farmers cannot compete in price with the west; with butter,

"As wheat, salted beef, pork, etc., become less and less desirable or profitable staples, other productions must be substituted. Fresh pork, beef and mutton will hereafter find a good eastern market, by means of the winter and Boston. Cities are rapidly increasing their population in our midst, and furnishing more and more a home market for a variety

have not seen that their attention has been New York farmer is to depend upon, under brought to a view of the very important crisis a decline of his old staples, and may do so

We recommend the above remarks to the and the members of the late "canal convention," as it was very properly called, for it overlooked everything else. By the bye, that well conducted paper, referring to our pretty plainly spoken objections to the State ern New York." This is one among a thou-States as existing for the Erie canal. The Democrat considers a few forwarders, conthink the interests of these few individuals, of a small class of our citizens, of very trifling importance, as compared with those of the vast

than our competitors of the west have been western New York generally, labored, was subjected to in wintering. The farmer of the not hinted at, nor do we see it even mentioned in the Oswego papers, when opposing the "discriminating tolls," so highly lauded at Buffalo and Rochester. Indeed the "enlargement" of the Erie canal is recommended to aid the interests of western New York: this is taking off the mask; the enlargement is to cheapen transportation from the west, of course doubt that coarse wool from the west would to reduce the value of wheat lands in western soon be sold in Buffalo for one shilling per New York, to increase, if not to perpetuate pound. These are the articles coming most the taxes to support the canals, and, worse bettering the condition of the agricultural classes for many years to come. But, with such views as those we copy from the Niagara Democrat, generally prevailing among the farmers, we will not permit ourselves to doubt that "the emancipation of the New York farmer is at hand"—we refer especially to the farmer of " western New York."

> We have just time to give the following from the last Rochester Democrat. We are most happy to find that, after all, we agree pretty well as to the greatest question now before "western New York;" the incalculable advantages which would be conferred on that magnificent district by giving fair play to the energies and enterprize of its citizens.

> "The following table—for which we are indebted to Mr. Witt, agent of the Boston road-presents some interesting facts to the western miller and farmer. It will be seen that during the past year, nearly 150,000 barrels of flour have been carried from Albany, on the road, to points west of the city of Boston. There is no doubt that this great work, by cheapening the transportation, has greatly increased the consumption of flour. And this increase principally benefits the western trade. Formerly, all the towns east of Springfield, procured their flour from Boston; and much of that used to be southern flour. Now every barrel is from the westthe flour manufactured in Rochester, Oswego,

"But this is but a single article. This important thoroughfare affects, advantageously, the demand for very many other western products. The farmer receives a penny a pound more for his pork, poultry, beef, etc., during the winter season, than he would if ten cents per bushel. It will occur to any ern New York;" we, on the other hand, this road was not in operation. It enables the merchant to send fresh pork from Monroe county to Liverpool! And nothing is more common now than to find upon a table in Boston, poultry killed forth-eight hours previously in Wayne, Ontario and Onondaga

"These facts reveal a mighty revolution products, beef and pork. Beef, the product western competition, was brought prominently in the locomotive powers of the land we live forward at the convention; the State tax was in; and he must take but a narrow view of what constitutes national greatness and hapNEW YORK AND ERIE RAILROAD.

The cost of transportation from Buffalo to Albany is two cents per ton per mile on an average; late in the fall it is sometimes much higher, but will be said to unload itself. The cost of transportation from Buffalo to Albany is two cents come known and appreciated, the company purchased from Mr. C. Vanderbilt the three fall it is sometimes much higher, but will be said to unload itself. considerable quantity of flour to Boston via in its management. The whole quantity the Western railroad. for 1844 was only 154,413 barrels, yielding an income of \$38,603, at 25 cents per barrel, and, allowing 20 per dent. to be profit, producing only a nett income of \$7,720. The smallness of the flour trade via the railroad is certainly remarkable.

Three cents per passenger per mile is spoken of as a low fare. We confess that we From local travel from Authink this almost as much too high, as the freight on flour is too low. When a traveller arriving at Albany, finds he can reach New York for \$2 50, and that \$6 is the fare to Boston, his choice is soon made, omitting entirely the attractions of the unrivalled posiion and general advantages of New York. It would be folly to attempt to rival the Hudson, but at the same time, we have great faith in low rates of fare for passengers, and believe that a moderate reduction would aid the interests of the Western railroad. Lastly, we consider the principle of charging steady customers more than mere transient ones, to be radically defective. We are aware that this may be necessary where the principal reliance is on a through business, but generally speaking, the opposite policy should prevail. For example, we know that it has been found judicious on a road charging one dollar through, to charge those going and returning the same day no more, and this policy has been found to be attended with complete success, the local travel having been increased to an almost incredible extent. On long roads some modifications would be required, but it is the great secret of successnot for a few years, but of permanent success seldom be thought of where this principle is Owned by the company carried out.

LONG ISLAND RAILROAD REPORT. (Continued.)

Ferry Boats .- In the estimate of last year these important auxiliaries, authorized by the charter, were omitted, the hope having been long cherished that they would be furnished by other parties. Upon the opening of the

line, however, it became necessary to provide them, and a reluctance was evinced by the directors of the eastern railroads to form a line with this company, without the concurrence of the steamboat proprietors, connected have however given such copious extracts

After carefully perusing the report of the paralyze our commerce before our government could, by any possibility, according to the present position of things, apply any preventive.

To remedy this defect, he thinks it the part

formation we require, to obtain anything like a clear view of the case. For example, we understood some years since, that a certain rate of interest on the cost of that portion of average 726 cents per barrel throughout the Haven, boats of established reputation, and the road between Brooklyn and Jamaica was to be paid out of the earnings of the entire road, before any dividend could be paid to the stockholders, and that the interest on the debt to the State was regularly paid; yet we'do not see either of these items in the statement; the company are told that they possess a road nearly 100 miles long, and, in the "statement," we find "cost of road, \$1,500,000," obviously conveying the idea, that this is the cost of the road from Brooklyn to Greenport, which we understand is not the case; it should also be stated whether the receipts include the fare on the steamers from Greenport to Stonington and Norwich; the "assetts," as the engines, lots, steamers, etc., are very singularly called, might have been given somewhat in detail. These are some of our objections to the report, which is also drawn up in a very rambling manner, so that in endeavoring to lick it into shape we were obliged to skip over eight or ten pages after the introductory paragraph, to find the cost of the road and other important statements, which should precede general and speculative remarks.

One of the leading inducements with the legislature in granting corporate privileges, is that full and accurate statements of the condition of such corporations be periodically made for the information of the community In the report of the Long Island railroad company, the interest of the State debt does not appear in the "statement," no allusion is made to the Brooklyn and Jamaica railroad with its prior claim on the receipts, nothing is said of the large amount of damages which must be paid for the injury inflicted on the citizens in the vicinity of the tunnel, nor do we see apy estimate of the sum required to equip the road for a large business in freight and paslegislature, but it does not satisfy us.

BRITISH NAVAL POWER ON THE LAKES.

In the last Southern Literary Messenger, 1,884,640 22 in an elaborate article, Lieut. Maury consi-1,500,000 00 ders the necessity of an increase of our naval force upon the lakes, and shows that by means of the Welland, St. Lawrence and Rideau canals, England could, in case of war, so take command of the lakes with her steamers-After carefully perusing the report of the passing through the canal from the ocean-

The present governor general is universally esteemed, and the job was commenced Now, however, comes the grand feature of under his predecessor, but we would venture chine, Beauharnois and Cornwall canals-efficiently, the manly and dignified post of speed. The Cornwall canal has been open se. harnois canal administration" owed its existveral years, the Beauharnois is to be completed ence, and to whom the Beauharnois canal

> We select the following from the London Mining Journal:

South DEVON RAILWAY .- The tenders for former coming within nine miles of Montreal, (wenty-four engines-sixteen of 33-inch cylin-We find remarks similar to the above in the latter reaching, at its south-western extre- der, or about 45-horse power, and eight of 12horse power-were received in the early part of he week, at Exeter, by Mr. Brunel, and the authorities of the South Devon Railway, which is contracts were taken by Boulton and Watt and Messrs. Rennie—the amount, from 40,000l. to 50,000l. The principal Cornish engineers and

PATENT CONVEX PROPELLERS .- So much than half the width of those on the St. Law- may pass the Beauharnois canal, and, if vic. interest having been excited by the success attending the application of Mr. Smart's new propellers to steam-ships, that the inventor has been induced to forward a model of the invention to London, which may be inspected at his agents, Messrs. Jukes, Coulson & Co., Clement's lane.

> COMMUNICATION BETWEEN EGTPT AND IN-DIA .- Mr. Galloway, the engineer, has just left Paris, en route to Egypt, to commence this great work, projected by his brother, the Bey, ten years ago. This work must be looked upon as the first link of the grand chain of railway communication from the Mediterranean, so generally advocated, and so obviously necessary between England and her Indian possessions, and her recently acquired colony in China.

> ELECTRIC TELEGRAPH. The construction of the electric telegraph between London and Gosport, at a cost of £24,000, is nearly completed.

THE ATMOSPHERIC RAILWAY SYSTEM .- The South Devon Railway Company, under the advice of Mr. Brunel, their engineer, have concluwith 4 feet water, which of course limits the in Canada. We have understood that very for the supply of 12,000 tons of cast-iron pipes for the atmospheric apparatus, being the quantity required for the entire, distance from Exeter to Plymouth (fifty-two miles). The terms of Welland canal, there has been nothing done location of this canal is openly denounced by the contract require that about twenty miles of the distance (from Exeter to Newton) shall be completed and opened for traffic in the ensuing summer.

THE IRON TRADE .-- Our readers have been already prepared for a most favourable report of the quarterly meeting of ironmasters-the result of which has fully realized the best expectationsand from all districts our advices tend to the general conclusion, that the iron trade is in a more litary operations, as far as we can learn; this tions of military gentlemen were overwhelmed healthy condition than it has assumed for a long time past.

The meeting took place on thursday, and at

ulation—despondency was banished from the of the iron trade, that they will realize a sum of seven hundred thousand, Sandusky city six countenances of the former wee-stricken iron-fully 25 per cent. more than they would have hundred and sixty-eight thousand, Toledo six makers; and the entire assembly of the iron done this time last year. The new company at hundred thousand. Chicago, we have not the in October last, the ironmasters generally manifested a determination to maintain the then existing prices, but that at the meeting at Dudley, the following Saturday, three large houses in the in the month, and a large amount of orders still district declared a reduction of 1t. per ton. This remain on their order-book. step was said to have been taken by these influential firms in order to meet the prices of a number of smaller houses, who were notoriously underselling those who abided by the prices fixed at the former quarterly meeting. Notwith-standing, however, this reduced price—arguing, as it did, a bad prospect for the future—the iron trade, during the last quarter, gradually continued to improve, and at the end of six weeks an advance of 10s. per ton took place. Affairs progressed favourably, and at Dudley last week a further advance of 10s. was agreed upon. It was under these flattering circumstances that the meeting assembled on Thursday. The meeting confirmed the two advances of 10s. each—so that it may be estimated at an advance of 20s. per ton upon the prices declared at the Dudley meeting in October. Bar and hoop-iron fetches from 6l. to 6l. 10s. per ton; pig-iron from 3l. 10s. to 4l. At these prices parties gladly bought, for fear that, considering the buoyant state of the market, there may be a further advance. The furnaces in South Staffordshire are in full work, The and there is generally throughout the iron districts a demand for labour. It is also satisfactory to state that the miners—the coal and ironstone getters—are in the receipt of at least 25 per cent. higher wages than they were two years

We have endeavoured to obtain from the best authority the cause of this sudden, and, as it is likely to prove, permanent prosperity of the iron trade. All attribute it to the great demand for railways upon the continent, and in this king-dom. It is not only for the rails that iron is re-quired, but for engines, calculated that for every ton of iron required for the trains on a railway, aton is used for engines, tenders, waggons, carriages, tools, &c. If the 240 railway speculations now before Parliament were carried, the property of the iron trade would exceed all calculation. The line of railway which creates most interest among the ironmasters, is the projected one between Oxford and Wolverhampton, brought forward under the auspices of the Great Western. Many of them are largely interested in this line. The opposing line is from Tring, through Worcester, to Wolverhampton, under the auspices of the London and Birmingham. The fight between the two great leviathan companies (the Great Western and the London and Birmingham) is expected to be very severe, and the ironmasters look upon the anticipated contest with very great anxiety. There is no fear that the price of iron will be altered at the meeting at Dudley to-day.

In Wales the news is of the most cheering description—all the works seem to be fully employed, and orders both large and valuable are pouring in. The Cwm Celyn and Blaina Iron-Works, during the last three months, have made an extraordinary quantity of iron, and the diffi-culties which the proprietors of those works have had to meet, whatever change is made, will now, it is hoped, give place to better things, and will be for good. There is a rumor affoat that the Ebbw Vule and Sirhowy Iron Company affair is not yet settled, and that there will be another sale of them by public auction: if this do happen, we may expect, from the present prospects

makers; and the entire assembly of the iron done this time last year. The new company at hundred thousand. Chicago, we have not the trade, Welsh, Scotch, and English, appeared to Cwm Celyn are pushing on the works with great returns from, but we suppose it may equal he full of confident hope for the future. It will vigor: it appears that during the month ending Toledo. be recollected, that at the Birmingham meeting Dec. 29th, more iron was manufactured there the bbl. than in any previous month since the establishment of the works. More than 1200 tons of rails, besides bars and roughed down, were made with-

blast on Monday last.

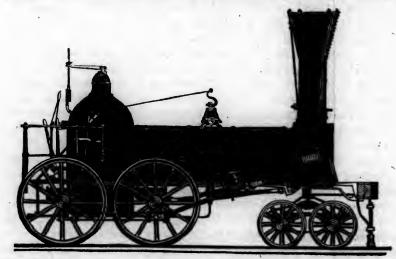

WHEAT FROM THE LAKES.—Cleveland sends to say nothing of other exports. Figures in a off about four million bushels, Detroit we suppose about a million and a half, Milan upwards Journal.]

The flour is counted in bushels at 5 to Toledo. The official return for all the leading ports will be published as soon as they are received at our office .- Toledo Blade.

[Let those unaccustomed to contemplate the vastness and growing importance of the business resources of the West, examine this simple The Blair Iron Works are again in partial statement of facts. Rising of eight million bushoperation, one of the furnaces having been put in els of wheat, more than equal to 1,600,000 barrels of flour, from six points on the Lake coast! This amount will feed a million of souls,

#### KITE'S PATENT SAFETY

Safety

Safety

FLAN

ELEVATION

MESSRS. EDITORS.— As your Journal is devoted to the benefit of the public in gen-eral I feel desirous to communicate to you for publication the following circumstance of no inconsiderable importance, which oc-curred some few days since on the Philadel phia, Wilmington and Baltimore railroad.

On the passage of the evening train of cars from Philadelphia to this city, an axle of our large 8 wheeled passenger car was broken, but from the particular plan of the construction, the accident was entirely unknown to any of the passengers, or, in fact, to the conductor himself, until the train, (as was supposed from some circumstances attending the case,) had passed several miles in advance of the place where the accident occurred, whereas had the car been constructed on the common plan the same kind of acci-

dent would unavoidably have much injured it, perhaps thrown the whole train off the track, and seriously injured, if not killed many of the passengers.

Wilmington, Del., Sept. 28, 1840.

Wilmington, Del., Sept. 28, 1840.

The undersigned takes pleasure in attesting of the value of Mr. Joseph S. Kite's invention of the Safety Beam Axle and Hub for railroad cars. They have for some time been applied to passenger cars on this road, and experience has tested that they fully accomplish the object intended. Several instances of the fracture of axles have occurred, and in such the cars have uniformly run the whole distance with entire safety. Had not this invention been used, serious accidents must have occurred.

In short we consider Mr. Kite's invention as completely

In short, we consider Mr. Kite's invention as completely successful in securing the safety of property

and lives in railroad travelling, and should be used on all railroads in the country.

JOHN FRAZER, Agent,
GEORGE CRAIG, Superintendant,
W. L. ASHMEAD, Agent.
A model of the above improvement is to be seen at the New Jersey railroad and transportation office, No. 1 Hanover st., N. York.

which after five years' successful operation, and now almost universal use in the United States (as well as England, where the subscriber obtained a patent) are found superior to any ever offered in market.

Railroad companies may be supplied with Spikes having countersink heads suitable to holes in iron

rails, to any amount and on short notice. Almost all the railroads now in progress in the United States are fastened with Spikes made at the above named factory—for which purpose they are found invaluable, as their adhesion is more than double any common spikes made by the hammer.

All orders directed to the Agent, Troy, N. York, will be punctually attended to.
HENRY BURDEN,

Spikes are kept for sale, at Factory Prices, by I. & J. Townsend, Albany, and the principal Iron merchants in Albany and Troy; J. I. Brower, 222 Water St., New York; A. M. Jones, Philadelphia; T. Janviers, Baltimore; Degrand & Smith, Boston.

*** Railroad Companies would do well to forward.

their orders as early as practicable, as the subscribe is desirous of extending the manufacturing so as to keep pace with the daily increasing demand. ja45

PATENT HAMMERED RAILROAD, SHIP
and Boat Spikes. The Albany Iron and Nail
Works have always on hand, of their own manufacture, a large assortment of Railroad, Ship and Boat
Spikes, from 2 to 12 inches in length, and of any form
of head. From the excellence of the material always used in their manufacture, and their very general use for railroads and other purposes in this couneral use for railroads and other purposes in this country, the manufacturers have no hesitation in warrant

ufacturers of railroad Machinery. The subscribers have for sale Am. and English bar iron, of al sizes; English blister, cast, shear and spring steel Juniata rods; car axles, made of double refined iron Juniata rods; car axles, made of double refined from; sheet and boiler iron, cuit to pattern; tiers for locomotive engines, and other railroad carriage wheels, made from common and double refined B. O. iron; the latter a very superior article. The tires are made by Messrs. Baldwin & Whitney, locomotive engine manufacturers of this city. Orders addressed to them, or to us, will be promptly executed.

When the exact diameter of the wheel is stated in the order, a fit to those wheels is guaranteed saving.

the order, a fit to those wheels is guaranteed, saving o the purchaser the expense of turning them out in side.

RAILWAY IRON, LOCOMOTIVES, ETC.

Railway Iron, flat bars, with countersunk holes and mitred joints.
350 tons 2 by 15 feet in length weighing
280 " 2 " 1 " "
70 " 11 " 1 " "
80 " 11 " 1 " " 3.50 21 1.26

with spikes and splicing plates adapted thereto. To be sold free of duty to State governments, or incorporated companies.

Orders for Pennsylvania Boiler Iron executed.
Railroad Car and Locomotive Engine tires,
wrought and turned or unturned, ready to be fitted on the wheels, viz: 30, 33, 36, 42, 44, 54 and 60 inches diameter.

E. V. Patent chain cable bolts for railway car axles, in lengths of 12 feet 6 inches, to 13 feet 21, 223, 3, 31, 31, 31, and 31 inches diameter.

Chains for inclined planes, short and stay links, manufactured from the E. V. cable bolts, and proved

at the greatest strain.

India rubber rope for Inclined planes, made from New Zealand wax.

Also, Patent hemp cordage for inclined planes and canal towing lines.

Patent felt for placing between the iron chair and

Every description of railway iron, as well as lo-comotive engines, imported at the shortest notice, by the agency of one of our partners, who resides in England for this purpose.

A highly respectable American Engineer resides in England for the purpose of inspecting all Loco-motives, Machinery, Railway Iron, ctc., ordered through us.

A. & G. RALSTON & CO. No. 4 South Front st., Philad., Pa.

MACHINE WORKS OF ROGERS, KETCH-um & Grosvenor, Patterson, N. J. The un-dersigned receive orders for the following articles, manufactured by them of the most superior descrip-tion in every particular. Their works being extensive and the number of hands employed being large, they are enabled to execute both large and small or-ders with promptness and despatch. Railroad Work.

Locomotive steam engines and tenders, Driving and other locomotive wheels, axles, springs & flange tires; car wheels of east iron, from a variety of pat-terns, and chills; car wheels of east iron with wrought tires; axles of best American refined iron; springs; boxes and bolts for cars.

Cotton, Wool and Flax Machinery

of all descriptions and of the most improved patterns, style and workmanship.

Mill gearing and Millwright work generally; hydraulic and other presses; press screws; callenders; lathes and tools of all kinds; iron and brass castings of all descriptions,

ROGERS, KETCHUM & GROSVENOR, Paterson, N. J., or 60 Wall street, N. York.

TO IRON MANUFACTURERS. THE SUB-Wales, having obtained a patent in the United States for his process of smelting Iron Ore with Authracite coal, and holding an assignment of the pa-tent obtained by the late Rev. H. W. Geissenhainer, are prepared to grant licenses for the manufacture of Iron according to Mr. Crane's principle.
A. & G. RALSTON & CO.

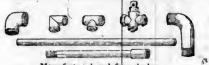

No. 4 Sout Fronth st. Philadelphia, Pa.

TO RAILROAD COMPANIES AND BUILD ERS OF MARINE AND LOCOMOTIVE ENGINES AND BOILERS.

#### PASCAL IRON WORKS.

WELDED WROUGHT IRON TUBES

From 4 inches to 1 in calibre and 2 to 12 feel long, capable of sustaining pressure from 400 to 2500 lbs. per square inch, with Stop Cooks, T. L. and other fixtures to suit, fitting together, with screw joints, suitable for STEAM, WATER, GAS, and for LOCOMOTIVE and other STEAM BOILER FLUES.

Manufactured and for sale by
MORRIS, TASKER & MORRIS.
Warehouse S. E. Corner of Third & Wulnut Streets, PHILADELPHIA.

TO IRON MASTERS.—FOR SALE.—MILL SITES in the immediate neighborhood of Bituminous Coal and Iron Orc, of the first quality, at Ralston, Lyoming Co., Pa. This is the nearest point to tide water where such coal and ore are found together, and the communication is complete with Philadelphia and Baltimore by canals and railways. The interest on the cost of water power railways. In einterest on the cost of water power and lot is all that will be required for many years; the coal will not cost more than \$1 to \$1 25 at the mill sites, without any trouble on the part of the manufacturer; rich iron ore may be laid down still more cheaply at the works; and, taken together, these sites offer remarkable advantages to practical manufacturers with small capital. For pumphlets, manufacturers with small capital. For pamphlets, descriptive of the property, and further information, apply to Archibald McIntyre, Albany, to Archibald Robertson, Philadelphia, or to the undersigned, at No. 23 Chambers street, New York, where may be seen specimens of the coal and ore.

W. R. CASEY, Civil Enginer,

VALUABLE PROPERTY ON THE MILL Dam For Sale. A lot of land on Gravelly Point, so called, on the Mill Dam, in Roxbury, fronting on and east of Parker street, containing 68,497 square feet, with the following buildings thereon standing.

thereon standing.

Main brick building, 120 feet long, by 46 ft wide, two stories high. A machine shop, 47x43 feet, with large engine, face, screw, and other lathes, suitable to do any kind of work.

Pattern shop, 35x32 feet, with lathes, work bench-

es, &c. Work shop, 86x35 feet, on the same floor with the

pattern shop.
Forge shop, 118 feet long by 44 feet wide on the ground floor, with two large water wheels, each 16 feet long, 9 ft diameter, with all the gearing, shafts, drums, pulleys, &c., large and small trip hammers, turnaces, forges, rolling mill, with large balance wheel and a large blowing apparatus for the foundry. Foundry, at end of main brick building, 60x454 feet, two stories high, with a shed part 454x29 feet.

containing a large air furnace, cupola, crane and corn oven.

Store house-a range of buildings for storage, etc., 200 feet long by 20 wide,

Locomotive shop, adjoining main building, fronting on Parker street, 54x25 feet.

Parker st., containing 6900 feet, with the following buildings thereon standing:
Boiler house 50 feet long by 30 feet wide, two sto-

ries.

Blacksmith shop, 49 feet long by 20 feet wide.

Reading, Pa.

#### FRENCH AND BAIRDS PATENT SPARK ARRESTER.

NO THOSE INTERESTED IN Railroads, Railroad Director and Managers are respectfully invi ted to examine an improved SPARI ARRESTER, recently patented by the undersigned.

Our improved Spark Arrester: have been extensively used during the last year on both passenger and freigh engines, and have been brought t such a state of perfection that no ar novance from sparks or dust from the chimney of engines on which they arused is experienced.

These Arresters are constructed or an entirely different principle from any necessors oncrea to me publi The form is such that a rotary motion is imparted to the heated air smoke and sparks passing through the chinney, and by the centrifugal force thus acquired by the sparks and dust they are separated from the smoke and steam, and thrown into an outer chamber of the chimne through openings near its top, from whence they fall by their own gravity to the bottom of this chamber; the smoke and steam passing off at the top of the chimney, through a capacious and unobstructe passage, thus arresting the sparks without impairing the power of the engine by diminishing the draught or activity of the fire in the furnace.

These chimneys and arresters are simple, durable and neat in appearance. They are now in use on the following roads, to the managers and other officers of which we are at liberty to refer those who

may desire to purchase or obtain further information in regard to their merits:

E. A. Stevens, President Camden and Amboy Railroad Company; Richard Peters, Superintendant Georgia Railroad, Augusta, Ga.; G. A. Nicolls, Superintendant Philadelphia, Reading and Pottsville Railroad, Reading, Pa.; W. E. Morris, President Philadelphia, Germantown and Norristown Railroad Company, Philadelphia; E. B. Dudley, President W. and R. Railroad Company, Wilmington, N. C.; Col. James Gadsden, President S. C. and C. Railroad Company, Charleston, S. C.; W. C. Walker, Agent Vicksburgh and Jackson Railroad, Vicksburgh, Miss.; R. S. Van Rensselaer, Engineer and Sup't Hartford and New Haven Railroad, Vicksburgh, Miss.; R. S. Van Rensselaer, Engineer and Sup't Hartford and New Haven Railroad, Trans. Co.; J. Elliott, Sup't Motive Power Philadelphia and Wilmington Railroad, Wilmington, Del.; J. O. Sterns, Sup't Elizabethtown and Somerville Railroad; R. R. Cuyler, President Central Railroad Company, Savannah, Ga.; J. D. Gray, Sup't Macon Railroad, Macon, Ga.; J. H. Cleveland, Sup't Southern Railroad, Monroe, Mich.; M. F. Chittenden, Sup't M. P. Central Railroad, Detroit, Mich.; G. B. Fisk, President Long Island Railroad, Brooklyn.

Orders for these Chimneys and Arresters, addressed to the subscribers, or to Messrs. Baldwin & Whiney, of this city, will be promptly executed.

N. B.—The subscribers will dispose of single rights, or rights for one or more States, on reasonamay desire to purchase or obtain further information in regard to their merits:

** The letters in the figures refer to the article given in the Journal of June, 1814. ble terms

VAIL, PROPRIETOR OF THE SPEED-S. well Iron Works, near Morristown, N. J., can supply at short notice railroad companies and others with the following:

Wrought Iron Tyres made from the best iron and of any given diameter, and warranted to be sound in the welding. Railroad companies wishing to order, will be pleased to give the exact inside diame-ter or circumference to which they wish the tyres made, and they may rely upon being served accord-ing to order, and also punctually, a large quantity in the straight bar is kept constantly on hand. Crank axels for locomotive engines, made from the best Pennsylvania iron. Straight axles for locomotives for outside connection engines. Frames for engines. Wrought iron work for steamboats, and shafting of any size. Cotton Screws of any length or size. Railroad Jack screws, a late invention, and highly approved. Self-acting pumping apparatus for rail-road water stations. He refers to the following gentlemen:

Baldwin, Vail & Hufty, Philadelphia; Wm. Norler, N. York.

THE NEWCASTLE MANUFACTURING Company continue to furnish at the Works, situated in the town of Newcastle, Del., Locomotive and other steam engines, Jack screws, Wrought iron work and Brass and Iron castings, of all kinds conon Parker street, 54x25 feet.

Also—A lot of land on the canal, west side of arker st., containing 6000 feet, with the following any pattern and size, with Axles fitted, also with wrought tires, Springs, Boxes and bolts for Cars. Boiler house 50 feet long by 30 feet wide, two sto-ges.

CUSHMAN'S COMPOUND IRON RAILS, etc. The Subscriber having made important improvements in the construction of ruils, mode of guarding against accidents from insecure joints, etc. -respectfully offers to dispose of Company, State Rights, etc., under the privileges of letters palent to Railroad Componies, Iron Founders, and others interested in the works to which the same relate. Com-panies reconstructing their tracks now have an opportunity of improving their roads on terms very advantageous to the varied interests connected with their construction and operation; roads having in use flat bar rails are particularly interested, as such are permanently available by the plan.

W. Mc. C. CUSHMAN, Ciril Engineer, Albany, N. Y.

Mr. C. also announces that Railroads, and other works pertaining to the profession, may be constructed under his advice or personal supervision. Applicaitons must be post paid.

NICOLL'S PATENT SAFETY SWITCH for Railroad Turnouts. This invention, for ris, Philadelphia; N. Campfield, Savannah, Ga.; J.
& S. Bones, Augusta, Ga.; D. F. Guez, N. Orleans,
La.; Adam Hall, N. York; J. P. Allaire, N. York;
william Parker, Boston, Mass.; George W. Schuyengines and their trains from running off the track engines and their trains from running off the track ja4q at a switch, left wrong by accident or design.

It acts independently of the main track rails, being

laid down, or removed, without cutting or displacing

It is never touched by passing trains, except when in use, preventing their running off the track. It is simple in its construction and operation, requiring only two Castings and two Rails; the latter, even if much worn or used, not objectionable.

Working Models of the Safety Switch may be seen at Messrs, Davenport and Bridges, Cambridgeport, Mass., and at the office of the Railroad Journal,

Reading, Pa.

ATLANTIC AND PACIFIC RAILROAD.

We meet with this "magnificent project" in almost all our exchange papers, and now we find the subject brought before a meeting of the stockholders of the Western important subject. railroad, on the 12th inst., by P. P. F. Degrand, Esq. We are so much accustomed to examine projects in a somewhat close, or, as the mathematicians say, rigorous manner, that we are in a great measure incapable of Worcester long wharf. appreciating the magnificence or the utility of a railroad hence to the Pacific. When we see this great city shut out during five months of the year, from all communication with the rich river counties and the cities from we need never despair in a good cause." Albany and Troy to Buffalo, and the vallies of the Mohawk and the Genesee, and the equally fine country around the Seneca and Cayuga lakes, we feel little inclination to undertake a work fifty times more difficult, but with means and results by no means in proportion. But the transcendental is more highly esteemed in the meridian of Boston than here, and we frankly admit that it never was our "forte." We give a few of Mr. Degrand's remarks.

"A continuous railroad, from Boston to the mouth of Columbia river, is imperatively called for by national considerations, which can neither be overlooked or neglected with

our Charlestown navy yard, in thirty days, all the parts, numbered and fitted, to build in three weeks, a fleet of war steamers, on the Pacific; and you can also transport the car-

#### SHIP CANAL ACROSS THE AMERICAN ISTHMUS.

Survey of the Isthmus of Tehuantepec, executed in the Years 1842 and 1843, with the intent of Atlantic and Pacific Oceans, and under the

road communication is indeed the truly scienand attended with immense difficulties at Nicaragua, him to make an exact estimate. Many circumtific way of securing the bonds of union for we find it practicable and easy at Tehnandene." we find it practicable and easy at Tehnantepec.

territory will become a part and parcel of excavation whatever exceeding the usual limits our own selves, instead of being an isolated would be required. The highest point to be people, and another nation, as suggested in Surmounted is at the Portello de Tarifa, a pass between the mountains only 200 metres (656 feet) above the level of the Pacific, and 160 mètres above the mount of the Malatengo. "In view then of all these advantages, let There is an abundance of water, which may be applied with great facility to the service of the accomplished in a brief space of time, and canal, being derived from the Chicapa or Chimthus add to our national renown, and add also alapa and its confluent the Monetza, and from a to our road a branch somewhat longer than more considerable river, the Ostuta, which, like the former, flows into the lagoons not far from the town of Tehuantepec. The grand condition of a good harbour at either extremity of the line pend upon it, Mr. President, it will be done; seems capable of being amply fulfilled in this for I see men about me able to mould public case. The mouth of the Coatzacoalcos, 700 In- mêtres wide, and with never less than twentydeed, after what we have already accomplished one feet of water on its bar, quite enough to float a frigate, is, according to Balbi, 'the finest port formed by any one of the rivers that discharge themselves into the Gulf of Mexico, not even excepting the Mississippi.' Hitherto it had been very generally supposed that no harhour could be established on the Pacific side; but Signor Moro has cleared up this difficulty. The Establishing a Communication between the lagoons near Tehuantepec have a depth seldom less than five or six mètres, and this could easily Superintendence of a Scientific Commission be increased by dredging, the bottom being appointed by the Projector, Don Jose DE nothing but mud and shingle. The Boca Barra, by which they empty themselves into the ocean. The American isthmus reaches from Te- is not obstructed by a true bar, but a little way huantepec and the Coatzacoalcos on the north, within it there is an accumulation of sand which to Darien on the south, a length of five hundred might be destroyed with extreme facility, whilst and seventy-five leagues, and is traversed the cause of its deposit might be effectually re-through its whole extent by a range of mountmoved. The isthmus is but scantily peopled, tains, continuous at either extremity with the but it was once possessed by a dense and thriv-great chains that form the spines of both conti-ing population until the devastations of the bucnents. Nine different parts of this isthumas cancers converted it into a wilderness. There have been proposed, at various times, as offering is no reason why it might not again become as impunity.

"This railroad is the only scientific way of defending the Oregon territory. By means of it, you can, in case of war, transport from our Charlestown navy yard, in thirty days, Isthmus of Panama (properly so called), of Ni- and the abundance of cattle and resources of all caragua, and of Teluantepec.

The distance from ocean to ocean, across the through the canal to renew their provisions at Pacific; and you can also transport the car- Isthmus of Panama, is only forty miles. Were easy prices, in the isthmus, so that they might penters, riggers, caulkers, blacksmiths and sail our judgment, therefore, to be formed from a devote a greater portion of their holds to the devote a greater portion of their holds to the makers, as well as the sailors, marines and mere inspection of the map, an inclination to stowage of merchandise. Lastly, among the officers, to man the fleet. You can transport consider this point the most eligible would be in-advantages offered by the Isthmus of Tehuanthe cables, anchors, sails, rigging, guns, mus- evitable. The space that divides the two seas tepec, not the least considerable is the mildness kets gunpowder, balls, all the other materials is greater at Nicaragua, namely; ninety-five and salubrity of its climate, precisely in those kets gunpowder, balls, all the other materials and munitions of war. You can thus take at once, as if by enchantment, the command of the Pacific, and of the China, Japan and India seas, both with your private and public armed ships.

The pacific is greater at relatagua, namely, matery-live land satisfies where the assistance of European workmen would be required. This matter was workmen would be required. This matter was bear to offer considerable advantages. Lastly, sufficiently tested in 1830, when an abortive attempt was made to found a French colony in the isolated by the projectors of the colony, fully deluded by the projectors of the colony, and the second state of the colony, appears to be the least suited. "The Oregon territory, now a distant land, for the accomplishment of the object contem- found themselves from the moment of their arrival destitute of all resources, having neither food

Moro speaks with becoming diffidence, not being stances he thinks would combine to reduce the rate of cost below the European average; never-. The breadth of the isthmus in a straight line theless, he takes for his standard of comparison China. A communication sent from England, by the Cunard line, reaching Boston in 12 days, will, by Morse's telegraph, instantly reach the mouth of Columbia river, whence a swift steamer will carry it to China, in 12 days more!

Ometres (130 miles,) but the greater part of this standard control on the south by lago in and extensive plains, and on the Atlantic side by the circumstances; and in applying that standard course of the Coatzacoalcos, which can easily be to his own project, he purposely disregards many favourable circumstances, and exaggerates others of a contrary nature. The result is, that be executed would be comprised between latitude 16° 36′ and 17° 3′ N., including a space would probably not exceed 85,000,000 france pleted for less than £2,500,000 sterling.

turn might be realized by a moderate toll, even tion on the summit, is 25 miles; the distance routes may then be set down at \$9 per ton. On should we found our calculations on the existing from Beaver to the junction is 90½ miles, from a boat load of 40 tons, \$36. Railroads in Vermont.-We learn from the Vermont Patriot that Mr. T. J. Carter has surveyed a route for a railroad from the mouth of the White river to Burlington. It tral railroad" from Boston to Canada, to be connected with the road now in operation between Boston and Concord, N. H. From Concord to the Connecticut, where the White river unites with it, the distance is about 50 struction of a road.

Commencing at the mouth of the White river, (four miles below Dartmouth college.) the survey followed up the valley of that river, through the towns of Hartford, Sharon and Royalton to Bethel; thence up the west branch of the river through Randolph and Braintree to the summit in Roxbury; thence down Dog river, through Northfield and Berlin, to the Onion river; thence through the valley of that river to Burlington. The route traversed is about 100 miles in length, and the surveyor is of the opinion that the

ing more than 40 miles level, and nearly are deeply interested in the early completion is the fourth vessel of this description which three-fourths of the entire distance less than of this road, and it will bring them much has been launched from our wharves within

some further work is to be done before it can

be opened for travel.

We learn that considerable excitement has been produced in Fitchburg by the location of the depot-it being upon land owned by the president of the railroad company, at some distance from the village. It is thought that officer, in selecting the site, looked more to his own private interest, than to the public accommodation .- Wor. Pal.

Albany and Buffalo Railroad .- A public meeting has been held at Buffalo, to remon-

and the several rival interests to exact the highest endurable fare, and to run at the most seasonable hours for their particular section, without regard to securing travel over the entire line of the road, induces frequent changes in the hours of arrival and departure on one section to compel companies owning contignous sections to be more compliant in their arrangements-often breaks up for days the continuation of trains-interrupts prior arrangements of travellers-stops wholly for to take effect from the 1st of March hours their progress—impels the travelling regret exceedingly to find that the board have community to other channels, and calls loud made no material reduction in the tolks, comand to appoint a commissioner with power to ous, but cheaper routes.—Phil. North Amer. supervise the same.

and Erie railroad, as follows:

Resolved, That the citizens of western N. York are intimately interested in the speedy completion of the New York and Erie rail-

the spirit of these resolutions. - Jour of Com.

Madison and Indianapolis Railroad .- Unnotices, that it will be conducted in future ed.—Phil. Inquirer. with renewed zeal. The board are generally

30 feet per mile."—Wor. Pal.

Fitchburg Railroad.—The freight cars ran over the road to Fitchburg last week, but on their hands; but on the contrary, the cash be moved by two 16-inch cylinders, with 2 for this surplus will freely circulate among feet stroke, making her power equal to about

of transportation. - Greencastle Visitor.

Michigan Central Railroad .- This road

From Boston to Albany, Albany to Buffalo, 24 Buffalo to Detroit, 66 12 Detroit to St. Joseph, -St. Joseph to Chicago, Rochester Democrat.

Tolls upon the Pennsylvania Public Works We have received a copy of the rates of toll fixed by the board of canal commissioners

The Illinois Canal Loan .-- On the 14 inst. At the same meeting a resolution was of-Governor Ford transmitted a message to the fered and adopted, in favor of the New York Illinois legislature, stating the conditions upon which the foreign bondholders are willing to advance a sufficient amount of money to complete this work. The able Springfield cor-

inclinations will admit of a high rate of speed will be prosecuted with all possible despatch. most beautifully, and as she went was christand heavy freights in operating it, there beWe wish it every success. Our citizens here tened by the name of "E. I. Dupont." This nominations, will then cease to be a drug up. She is to use Loper's propellers, which are to a 90-horse engine. The machine is of the Our Merchants and others will not only best description, and made by Betts, Harlan find it to their advantage to patronize this & Hollingsworth of this city. The E. I. company in the transportation of their mer- Dupont is calculated to make a daily trip chandize, but contribute much to the early each way between Wilmington and Philacompletion of the work. It is a cheap mode delphia, for the carriage of freight and passengers .- Philadelphia Post.

Railway Luggage Labels.—An ingenious will be in full blast to Kalamazoo the ensu-method for labelling boxes and packages to ing summer; and a bill is now pending in be conveyed by luggage trains on railways, strate against the high charges, and frequent changes of hours, on the line of railroad between that city and Albany. the following resolution embraces the substance of the whole, as far as they relate to this matter. Resolved, That the variety of chartered companies, owning sections of the line of railroad from the Hudson river to lake Erie, and the several rival interests to ever the several rival r with pen and ink; the outward wrapper of each packet is absorben, so that the ink is pre-vented from being blotted, and the paper on which the lables are printed is made adhesive in the same manner as the post office stamps. Thus in the space of two minutes half-a-dozzen lables may be prepared and stuck upon the packages, and mistakes and confusion avoided. The invention is a prevention to losses, and deserves patronage .- Lon. Times.

ly upon the legislature to exercise its powers pared with the present rates, and that it seems the thirty-eight principal railways in Great of prescriptive regulation of the summer and to be their fixed determination to drive the Britain, amounts to three millions and a quarwinter trains, and the rates of fare thereon, trade from our State works to more circuit- ter or more-exactly £3,264,450. This traffic has been carried on upon 1,522 miles of railway, and 234 miles of branch lines, making in all 1,756 miles. This revenue is £450,000 more than the corresponding half of last year. It is chiefly owing to the improvement in the trade of the country, and only slightly to the increase in the extent of lines opened to the public. It represents an respondent of the St. Louis Republican thus improvement of nearly ten millions in the road, and thereby, among other great benefits, to acquire an effectual tendency to correct that they cannot and will not be complied the commencement of 1844. This revenue with by this legislature, and, unless great y amounts to about £4,000 per mile per annum, Albany, and to surely induce the travel from the lower Ohio and Mississippi to a more the lower Ohio and Mississippi to a more with the exception of a few mad brains.

This revenue the commencement of 1844. This revenue amounts to about £4,000 per mile per annum, of which let us take £1,600 for working expendence of the commencement of 1844. This revenue amounts to about £4,000 per mile per annum, and to surely induce the travel from the lower Ohio and Mississippi to a more with the exception of a few mad brains. with the exception of a few mad brains, num for dividend, indicating a market value speedy and less expensive route to and from in the region of the canal—but what unhestatingly say, that the idea of paying the full amount of interest upon our whole debt after the total sum available this half-year for interest upon our whole debt after the total sum available this half-year for interest upon our whole debt after the total sum available this half-year for interest and dividends will be about £2,000,000, the expiration of ten years, which would exceed \$700,000 annually, including the school of the country at 20 years' purchase, a sum debt, is too preposterous to be entertained for of £80,000,000. But, as many of the lines der the new arrangements entered into between the legislature and the company havtween the legislature and the company having control of this work, we infer from recent greatly reduced, nothing will be accomplishestimate, while some are in course of construction and not open for traffic, it may be The Delaware State Journal of Tuesday, near the truth to say that at the commenceenterprizing and business men, and with the says: "A new steamboat was launched from ment of 1845 we start with a national propresent organization, S. Merrill, Esq., presi-the ship yard of Messrs. Harris, on Thursday perty in railways worth not less than £100,-dent, we have every confidence that the work afternoon; she slid into her proper element 000,000.—Railway Chronicle.

AMERICAN RAILROAD JOURNAL

PUBLISHED BY D. K. MINOR, 23 Chambers street, N.Y.

Thursday, March 6, 1845.

NEW YORK AND ALBANY RAILROAD.

This project has been kept alive for some years by a few spirited individuals, who, with much trouble and some loss of time and money, have preserved a most valuable charter, always holding themselves in readiness to surrender it into the hands of any asso. ciation of gentlemen, whose influence, character and wealth were adequate to the successful accomplishment of this great and-to the city of New Yorkunrivalled undertaking. It is with the liveliest satisfaction we announce that, a few days since, a num_ ber of gentlemen, whose ability to carry through the project is beyond all doubt, obtained, from the persevering individuals, above alluded to, the charter, rights, surveys, etc., of the New York and Albany railroad company, for \$50,000. These latter gentlemen have secured their object, the construction of the work, and the new association have now in their hands, at a cost of little more than three hundred dollars per mile, a charter, and a mass of information, to acquire which, would have cost them at least the sum paid and the loss of an entire season. Those unacquainted with these subjects will be surprised to learn the large expenditures incurred for such purposes. In their report of 7th October, 1843, Messrs. Allen and Brown, the then president and vice president, of the New York and Erie railroad company state the expenses under the head of " miscellaneous," salaries of officers, clerkship, printing, legal expenses etc., \$230,366 93, just five hundred dollars per mile, besides engineering, \$331,318 79. On the Western railroad, the Croton aqueduct, and numerous other works, large expenditures were also incurred for similar purposes, and necessarily so, for we desire to draw no invidious comparisons, but merely to show that the new company start with the immense advantages of an admirable charter and of very extensive surveys, together with a variety of information, at the very small cost of \$50,000.

Having stated the facts, we will conclude with the hope, that this noble undertaking will be viewed as a great work of civil engineering; that it will not fall into the hands of a set of politicians or stock jobbers; that it will be regarded by the community as a permanent investment, and, lastly, that the distinguished gentlemen, under whose direction it is to be constructed, will not be unmindful that the Empire State boasts not to this day of a single railway of the first order in this country, far less in England.

We particularly request statements of the traffic of LONG ISLAND AND NORWICH AND WORCESTER HALL-

Again, we know that \$2,500,000 is a moderate esing and renewing; hence a gross income of \$\$00,- well. 000 from the road alone is required to divide 6 per cent., when the stock will of course be at par for investments. This estimate does not include steamers to cross the sound.

also numerous, and uniformly lower than those of the Pertinax. Long Island road, though by their statement to the legislature of Massachusetts their condition is far superior to that of the latter work. With an expenditure of \$2,170,366 they have an income of \$230,674. netting \$99,464, besides paying \$50,798 interest on debts and loans-in fact clearing \$150,000, very nearly seven per cent., yet only three per cent. were divided, and on 1st of March the stock sold for 71. With a less favorable statement the stock of the Western railroad has risen to par, and, unless they fear the loss of the New York travel, we are as much puzzled to account for the low price of this stock as for the high price of the stock of the Long Island railroad. At the same time, it is possible that the prices give their true relative values. The cost of running both these roads is given much below that in Massachusetts, per track per mile, about \$1,500, and we know of no reason for crediting the directors and engineers of either with skill, character or acquirements superior to those of the best works in that State. Allowing \$100,000 per annum for expenses, there would still remain \$130,000 for dividends, just 6 per cent. for the year 1844. If the reports of these companies are entitled to any confidence we can only say to speculators "de gustibus," etc.

We tender our thanks to P. P. F. Degrand, Esq., of Boston, for the reports of the Massachusetts railways, from which we have completed our table for 1814. We shall of course give such extracts as may be important, and may perhaps draw from them some views of interest to our readers.

The remarks in Herapath's article, in another page, will be found amusing. They can find out to the actual state of the old ones.

We had expected to give our readers some account of Coleman's mode of ascending inclined planes by locomotives, with the opinions of the numerous scientific gentlemen who have examined it, but shall expect it next week,

We owe a heavy debt of gratitude to the press generally for the very flattering manner in which During the last month more than 25,000 shares they have been pleased to notice our labors, and for out of 30,000 the total number of shares of the Long an excellent list of exchanges. It would be unfair Island railroad have been sold at prices varying from not to mention the Philadelphia press, which has 76 to 80, and closing on 1st March at 78. It is not been in both respects particularly generous. We do probable that many shares have been purchased for not presume to claim the slightest notice of the value investment, the only transactions in which we take of the Journal, but wherever the subject of railways any interest; still it may not be altogether uscless to is important we must think that we are entitled to examine the actual value of the stock with the scan-the courtesy of an exchange, yet the only points of ty information vouchsafed to us by the directors. If which we have any reason to complain, are the very the road were entirely free from debt, finished and ones where railways are the leading topic of the day. fully equipped for its business in freight and passen- We allude to Boston, Albany and Montreal. The gers, it it had for some years regularly paid 5 per St. Catharine's Journal is our only exchange from cent, to the stockholders from a trade furnished by the the province of Canada, though they are obliged to Island, and therefore free from competition, having refer to the pages of the Journal, when they attempt at the same time a fair reserve to meet contingencies to discuss their general policy with reference to puband renewals of road and machinery, the stock would lie works. Again, in Albany, at this very time, they then be worth about 80 as an investment. To a cer- are in want of the information in late numbers, in tain its present value each reader must trust to his order to fully understand the present most anomalous own fancy.

Candition of affairs in this State, We are sorry that while engaged in earnest and frequently able discustimate of the cost of such a road complete with a sin-sions on their own railways, they should feel so utgle track; we also know that \$150,000 per annum is terly indifferent to the success of the great cause a reasonable estimate of the cost of running, repair-throughout the Union, and unwillingly bid them fare-

Sir John Rennie has been appointed president of the institution of civil engineers, in place of Jas. Walker, Esq., resigned. Herapath has a savage attack on Mr. Walker, who, we should suppose, did The sales of Norwich and Worcester shares are not neglect the admonition of his countryman, Sir

In the legislature of New York they are acually discussing the propriety of restricting the Mohawk and Hudson and Troy roads from carrying freight during the summer! The next step will be include the N. York and Erie, Harlem and Long land railways, and the "system" may be completed by preventing all the railways in the State from carying passengers during the season of navigation.

We affect to pity the Hindoo who worships the little about new projects; we are kept in the dark as magnificent Ganges, but, when we see men of some education, and not withoutpretensions to respectabijity publicly prostrating themselves before this muddy divinity, " four by forty, with slopes two to one," we are overwhelmed with disgust and mortification.

> From all we near, the "Loper" is likely to supercede the "Ericsson" or. Emerson" propeller

STATE WORKS OF NEW YORK.

The income and expenses of the canals for 1844 will be found in our table of State works. We have also given the original cost, without the deficiencies, as heretofore. The comptroller gives the following summary view:

"The annual interest on \$30,461,303 84, the cost of all the State canals, and the enlargement of the Eric canal, at 51 per cent., State debt, is,

The nett revenue from all the State canals for the year ending 30th Sept., 1814, after deducting the cost of collection of tolls and of the

Excess of revenue over 51 per cent. on the cost of canals, \$128,396 80

canals of about six per cent. per annum. This favorable result is produced mainly by the revenue of the Erie canal, which yields \$2,154,234 79, while all the other canals produce only \$243,990 81.

"The preceding estimate does not include Chenango canal the ascertained loss to the treasury of \$3,515,-700, on account of loans of State stock to railroad corporations. If this sum be added to the cost of our system of internal improve- the amount allowed for breaches of contract ment, it shows a total outlay of \$33,977, under the suspension law of 1842. 003 84. The annual interest paid from the lowances of this character are as follows: treasury on account of these loans to insol- On the Erie canal enlargement, \$204,858 87 vent railroads, is \$191,986 50."

The total debt. "direct and contingent," is \$28,068,413 26. Of the "contingent liabilities," \$1,650,000 may be pronounced safe, which, together with the "Astor stock," etc., Ithaca and Owego railroad company, \$200, suspension law of 1842." 000 to the Catskill, and \$3,000,000 to the unjust. The comptroller says,

"At the time the suspension law passed men continued to pursue the course which all possible expedition.

public works of more than three millions of public opinion having changed, the compttoldollars, which has since been paid, and now ler and his friends have of course followed, forms a portion of the stock debt. shows that these works were carried forward in a manner so loose and improvident, that, with a corps of engineers costing the State a hundred and forty thousand dollars per year, it could not be ascertained during the session of 1842 within a million and a-half of dolwhich is the average interest on the present lars of the sum due contractors and others, - \$1,675,371 71 although two separate calls were made, with this object solely in view.

April, 1842.

"The following statement shows in the maintenance of the canals, is 1,803,768 51 first column the estimate given in that report of the amount unpaid for work done at that time; and in the second column is given the sums actually paid for arrearages to contrac-"This shows that the entire canal system tors and others, to the close of the last fiscal of the State pays interest on the cost of the year, viz: year, viz:

Young for his remark- good earnest; the surveyor is now here, hareasons for pronouncing it both impolitic and ably "close shooting" in an estimate; for the ving commenced at Concord, and is taking a

there was an unliquidated debt against the had given satisfaction for many years, but and, because economy is popular, are now as much in favor of retrenchment as they were, a few years since, anxious to incur the greatest possible expenditures. It is the comptroller who has changed, not the engineers.

We have here some more of the "beauties of government engineering," and another lesson to the people to retire as quickly as pos-"The second call before referred to (Ass. sible from the construction of public works, doc. No. 173,) was answered on the 8th of leaving all such matters to private enterprize which alone possesses the means, skill and integrity indispensable to success.

ST. LAWRENCE AND ATLANTIC RAILROAD.

This is the imposing name of the contemplated railway between Montreal and the Atlantic at Boston or Portland. We have, from the very first movements in this matter up to the present time, kept our readers aware of the various efforts made to insure the construction of this work at an early period. It is generally believed, that a favorable charter will be obtained from the Canadian parliament, now in session, and some are even so sanguine as to rely on pecuniary aid from the province. Of the probability of this we know nothing; but reasoning from experiencenot only there, but in the great States of New York, Pennsylvania and Ohio-we see little Oneida river improvement, 3,944 66 prospect of anything more than nominal aid from the colonial treasury, already supposed inadequate to the completion of the St. Lawarrearages before given, \$2,550,595 59, and rence canal. Although the rare incidents of this nature which have occurred are unpleasant, we think it will be discovered they are not of less value to the railway public than those of a more the Welland will pay interest and expenses; agreeable kind; nay, perhaps more so. Out as to the St. Lawrence canal there is no hope. of so many schemes, two hundred and fiftynine (see "Journal" for Dec. 14th, p. 1,503.) it may be of more importance to learn which among them are faulty, than what are the merits and features of those that are sound. However, whichever way the balance be, past our comprehension. All Upper Canada Mr. Herapath has labored in both, and on will be supplied from New York from six the whole, we cannot but express our gratification of the results obtained.

" Mr, Herapath will, should nothing of an unforseen nature intervene to prevent him, proceed in the course of a few weeks to Dub to point out to Mr. Neal, that he is injuring lin, to make experiments on the Dalkey line and further investigate the atmospheric system.

"Stirring and many important events in the railway world have marked the past year; we hope shortly to be enabled to give some review of them.

"This, the first month of the new year, we expect will be crowded with meetings, preparatory to the next session, as well as to relieve, in some measure, the business of those which usually take place at a later period, in February and March, when parliament pared with arrangements that will enable us to supply our subscribers with the first and best of information.

" With these few observations we bid adieu we know it will unfold.

ATLANTIC AND ST. LAWRENCE RAILROAD.

Mr. John Neal, in one of his interesting letters on the Montreal railroad, has confounded the "duty" with the "toll" on wheat. American wheat going to England, via the St. Lawrence, pays a duty of three shillings sterling per quarter to the province; it is then admitted into England on paying the almost fess that, after our numerous articles and nonominal duty of one shilling; so that the to- tices of the Montreal railroad during the last tal duty on American wheat via the St. Law- three or four months, we did not expect to be rence is only four shillings per quarter, or twelve cents per bushel, of which nine cents route not in this State. We repeat that, by go into the provincial, and three cents into the promising everything, the Portland project imperial treasury. (The duty on potatoes imported into this country, is ten cents per bushel; and on wheat twenty-five cents per bushel; still vast quantities of the former are he will sink it in the estimation of all those who imported from England, France and the understand that work and the western trade.

into Boston annually. By Boston we meant ly appreciate when too late. New England, but even here we were wrong, Had we known this earlier, it would have modified our remarks in the last Journal on the smallness of the flour trade to Boston via

Our ideas on the subject of the public works of Canada are well known to our readers. We believe it will be some time before even the Welland will pay interest and expenses; How Mr. Neal expects to rival the route, via the Hudson and Oswego to Upper Canada, by the railroad to Montreal and thence by the St. Lawrence canals to lake Ontario, is to eight weeks earlier than the opening of the St. Lawrence between Kingston and Montreal. In saying this we merely wish his cause by overrating its advantages, than which, nothing is more dangerous to a new project. The great advantage of the Portland route is that it is the shortest; this is an advantage of the utmost importance, and if the difference actually be 100 miles, as has been stated, then will it be hard indeed for Boston to compete with that route for the trade of Montreal. We would also inform Mr. Neal that such assertions as "it is admitted will have met. We hope to be fully pre by the Railroad Journal, of New York," etc., will do us no harm and his cause no good. All those who have given attention to these subjects for any length of time, know that to the old year, and greet the new, with energies prepared to meet the abundance of labor to point out the vast advantages of the contemplated Great Western railroad, and we will cheerfully accept any better statement of the benefits to be conferred on the western trade by the Welland canal than is to be found in our Journal some years back. If this be the New York, and not the American Railroad Journal, then have we most lamentably failed in our main object; and we convery ingeniously quoted as adverse to any will be seriously injured, and that if he unundertake to connect its success in any way with the success of the St. Lawrence canal,

it in the manner requested. A custom house ed out an error in the Journal in speaking committee some very important advice, the

GREAT WESTERN RAILWAY OF CANADA.

We find in a late number of the Oswego Palladium an account of a meeting at Goderich-near the outlet of lake Huron, we believe-to again draw public attention to this great project. The peculiar advantages of a railroad connecting lakes Erie and Huron, or St. Clair formed the subject of a paper in this Journal a few years ago. Since that time, however, the board of works has been established, and, acting in conformity with the fixed usage here among similar bodies, has commenced a course of similar engineering: that is, they in every way discourage all attempts at private enterprize, and spend the money of the public on some job of their own, or on undertakings which their ignorance of the trade and resources of the country, as well as of the principles of engineering necessarily turn into failures. Now, when the money of the province is pretty nearly gone, we find the people of Canada east and west suddenly seized with the railway fever in the very depth of winter. We are glad to see this, even at this late hour, because it will ultimately lead to the true course to success.

It has always appeared strange to us, that the government, or some leading men in the province, did not, and indeed do not now, bring this project to the attention of British capitalists. It is entirely free from all the objections to being in any way dependent on the good faith of government, or on legislation, beyond the mere charter: it must command at once, and forever, an immense business, for its natural advantages render competition impracticable. The magnitude of the undertaking also is not such as to present insuperable difficulties, though the amount required would still be large; perhaps not less than the estimated cost of the Welland canal, about four millions of dollars for a continuous line from Hamilton to Detroit. The meeting referred to of course look to a termination on lake Huron, and a branch from some convenient point-perhaps London-would not only accommodate the business of the country, but also a large number of passengers for the north-west, and a great amount of freight in both directions. Indeed we are not sure that flour cannot be delivered at Oswego or Kingston from lake Huron via Goderich and Hamilton, quite as cheaply as via the St. Clair river and lake, the Detroit river, lake Erie and the Welland canal. As regards time, the valuable spring trade, and facility of navigation, there can be no comparison; generally neighboring provinces!) Mr. Neal has point- Besides this, however, we gave the Portland speaking, goods would reach Chicago and

route to the west.

NEW YORK AND ERIE RAILROAD.

In another page will be found an account of a meeting at Buffalo, at which the New cessary to secure a good route to this city by vania in favor of their legislature granting the company permission to locate parts of their railway in that State. Its importance is very generally admitted here, though there appears little desire to subscribe to any extent. We regret, however, to observe, that Mr. Baker, in his report to the canal commissioners, makes some statements which say very little for the regard of the company for their duty to the State, to the shareholders, or to the responsible and respectable position in which they are placed. According to Mr. Baker's view of the case, they are throwing away all the advantages conferred on them by the State, by neglecting certain provisions, which neglect places them entirely at the mercy of the legislature, besides giving twofold energy to their numerous enemies. It is lamentable also to see such communications as appeared lately in one of the principal morning papers, obviously by authority, for Expended for new engines and cars.. the views there presented are followed up in Total..... several subsequent editorial articles, in more production contains a violent attack on the Miners' Journal, for the article given at length in our last from that well conducted paper, on the petition of the company to the legislature of Pennsylvania. Whether that article warrants anything of the sort, our readers must determine for themselves; also, whether or not we answered it in the right spirit. These may appear trivial circumstances to some, but it becomes a company, which has load of odium to work off, to be careful in cially of those whose established character as follows:

STEAM BOAT LOPER.

This little steamer, destined for the trade of the Dismal Swamp canal, in North Carolina, made an experimental trip yesterday, previous to her final departure for the scene of her usefulness. That this experimental 76 trip was in the highest degree satisfactory to both her owners and constructors, the follow-00 ing record of her performance will suffice.

The "Loper" left the navy yard shears at 16 13 minutes before 1 o'clock, and was abreast of fort Mifflin, a distance of eight miles, by government survey, at 7 minutes before 2 76 P. M.; and this too against a heavy head wind and the flood tide.

After rounding to, and passing abreast of the fort at 1½ minutes of 2 P. M., she arrived 31 at the shears at 20 minutes before 3 o'clock.

Taking into consideration that this was but an experimental trip, with new machinery, propellers, etc., we cannot but assert that in every respect it is a great performance; one, 53 too, calculated to reflect credit upon all con-1,528 80 cerned. To say that sixteen miles were accomplished by an ordinary propeller canal 37,757 89 boat, with and against a Delaware flood tide. The other expenditures of the corporation in 106 minutes, is no mean praise. Need we reputable style, of course. This unfortunate during the year ending November 30, 1844, say more than that the machinery, hull, etc., are from Merrick and Towne, and that her 31 propellers are those of Captain Loper, to account for the successful result of the trial of 51 the boat to which we allude.

This result adds another to the many proofs previously recorded, that the Loper propeller will of necessity make its way among those requiring the means of propelling boats for transportation on rivers and canals.

The engine of the boat to which we allude 38 is of the manufacture of Messrs. Merrick and Towne, of Southwark. Their name alee not merely a character to establish, but a large Total. 137,036 14 have work of the kind. We would not thus The income of the corporation during the have spoken of this boat, but that in bidding concerned in her construction.—U. S. Gaz. EXPL SION OF A LOCOMOTIVE EN-made by the lightning in the sides of the fire-box sengers, for Folkestone, and returned to Boulogne, GINE BOILER, IN AMERICA.

ces attending the supply of water, the perfect action of the safety valves, and other circumstances started again at 10, with a great number of pasthe Lake country." dent; but he found sufficient evidence of the perfect action of the engine in every particular. After a lengthened inquiry into all the causes which could produce the result, he arrived at the conclusion that the lightning flash had suddenly heated the boiler to a high temperature, and that steam of immense elasticity was instantaneously generated, which had thus burst the boiler and produced the effects described.

This conclusion of Dr. Lardner's does not appear to me to be warranted by the facts; and I shall offer a few observations on the subject.

Adam Smith has quaintly described a philosopher to be a man whose business is to do nothing and to speculate on every thing. Nevertheless these speculations are extremely useful, except when they tend to satisfy inquiries by false reasoning. They hen retard the progress of science by diverting the mind from the real track of discovery by substituting ingenious reasoning for practical deductions. Of this character appears to be the explanation so often given of the explosion of steam boilers, ascribing it to the sudden generation of steam of immense elas-ticity by overheated metallic surfaces. No facts have ever proved the correctness of this theory; and many cogent reasons can be adduced against it. In the present case, however, the facts appear directly opposed to this explanation; while a very sufficient explanation can be otherwise given.

The mechanical force of the lightning was sufficient after it had spent its fury on the ening parts of the engine were bent and broken in every direction; while the holes in the fire box, with the edges turned inwards, clearly shew the place where the lightning entered. That the place where the lightning entered. That the lightning rent the crown of the fire box from the sides, is the obvious conclusion; and if this were done, the reaction of the steam of the ordinary elasticity used in locomptive boilers would act like a rocker, and be quite sufficient to carry away the boiler in the manner described, as the result of many boiler explosions has already proved. Dr. Lardner grounds his opinion upon the clear evidence of the action of steam, in the effect produced; but we do not require the pres-ence of steam of greater density than that of ordi ary locomotive engines, provided the rent made in the fire-box were sufficiently large to produce all the effects which are described. The absence of all appearance of the metal being overheated, which Dr. Lardner has described, is also against the theory he has propounded; while the mechanical disruption of the fire-box, by the passage of the lightning from the outer to the inner case, is what might be expected to arise from the reculiar construction of that part in so violent a shock as occurred in the present instance. The additional vent given to the steam through the three large holes

MESSES. EDITORS.— As your Journal is devoted to the benefit of the public in gen-eral I feel desirous to communicate to you for publication the following circumstance of no inconsiderable importance, which oc-curred some few days since on the Philadelphia, Wilmington and Baltimore railroad.

On the passage of the evening train of ears from Philadelphia to this city, an axle of our large 8 wheeled passenger car was broken, but from the particular plan of the construction, the accident was entirely unknown to any of the passen-gers, or, in fact, to the conductor himself, until the train, (as was supposed from some eircumstances attending the case,) had passed several miles in advance of the place where the accident oceurred, whereas had the car been constructed on the common plan the same kind of acci-

dent would unavoidably have much injured it, perhaps thrown the whole train off the track, and seriously injured, if not killed many of the passengers.

Wilmington, Del., Sept. 28, 1840.

The undersigned takes pleasure in attesting of the value of Mr. Joseph S. Kite's invention of the Safety Beam Axle and Hub for railroad cars. They have for some time been applied to passenger cars on this road, and experience has tested that they fully accomplish the object intended. Several instances of the fracture of axles have occurred, and in such the cars have uniformly run the whole distance with entire safety. Had not this invention been with entire safety. Had not this invention been used, serious accidents must have occurred.

In short, we consider Mr. Kite's invention as completely successful in securing the safety of property

and lives in railroad travelling, and should be used on all railroads in the country.

AMERICAN RAILROAD JOURNAL,

AND GENERAL ADVERTISER

FOR RAILROADS, CANALS, STEAMBOATS, MACHINERY,

AND MINES.

ESTABLISHED 1831.

PUBLISHED WEEKLY, AT No. 23 CHAMBERS STREET, NEW YORK, AT THREE DOLLARS PER ANNUM.

SECOND QUARTO SERIES, Vol. I., No 11.1 THURSDAY, MARCH 13, 1845. [Whole No. 454. Vol. XVIII.

THE AMERICAN RAILROAD JOURNAL PATENT RAILROAD, SHIP AND BOAT is the only periodical having a general circulation persons in any way interested in these undertakings. Hence it offers peculiar advantages for advertising times of departure, rates of fare and freight, improvements in machinery, materials, as iron, timber, stone, cement, etc. It is also the best medium for advertising contracts, and placing the merits of new undertakings fairly before the public.

Spikes. The Troy Iron and Nail Factory keeps throughout the Union, in which all matters connected wrought Spikes and Nails, from 3 to 10 inches, Railway Iron, flat bars, with countersunk holes and with public works can be brought to the notice of all manufactured by the subscriber's Patent Machinery, which after five years' successful operation, and now almost universal use in the United States (as well as England, where the subscriber obtained a patent)

are found superior to any ever offered in market.

Railroad companies may be supplied with Spikes having countersink heads suitable to holes in iron rails, to any amount and on short notice. Almost all the railroads now in progress in the United States are fastened with Spikes made at the above named factory—for which purpose they are found invalua-ble, as their adhesion is more than double any common spikes made by the hammer.

All orders directed to the Agent, Troy, N. York,

will be punctually attended to.
HENRY BURDEN, Agent.

HENRY BURDEN, Agint.

Spikes are kept for sale, at Factory Prices, by I.

& J. Townsend, Albany, and the principal from merchants in Albany and Troy; J. I. Brower, 222 Water
St., New York; A. M. Jones, Philadelphia; T. Janviers, Baltimore; Degrand & Smith, Boston.

** Railroad Companies would do well to forward their orders as early as practicable, as the substitute.

their orders as early as practicable, as the subscriber is desirous of extending the manufacturing so as to keep pace with the daily increasing demand. | ja45

DATENT HAMMERED RAILROAD, \$HIP P and Boat Spikes. The Albany Iron and Nail Works have always on hand, of their own manufac-ture, a large assortment of Railroad, Ship and Boat Spikes, from 2 to 12 inches in length, and of any form of head. From the excellence of the material always used in their manufacture, and their very general use for railroads and other purposes in this coun-try, the manufacturers have no hesitation in warranting them fully equal to the best spikes in market, both as to quality and appearance. All orders addressed to the subscriber at the works, will be promptly executed. JOHN F. WINSLOW, Agent.

Albany Iron and Nail Works, Troy, N. Y.

The above criber way to had at factory with the state of th

The above spikes may be had at factory prices, of Erastus Corning & Co., Albany; Hart & Merritt, New York; J. H. Whitney, do.; E. J. Etting, Philadelphia; Wm. E. Coffin & Co., Boston.

TO RAILROAD COMPANIES AND MANufacturers of railroad Machinery. The subscribers have for sale Am. and English bar iron, of all sizes; English blister, cast, shear and spring steel; Juniata rods; car axles, made of double refined iron; sheet and boiler iron, cut to pattern; tiers for loco-motive engines, and other railroad carriage wheels, made from common and double refined B. O. iron; the latter a very superior article. The tires are made by Messrs, Baldwin & Whitney, locomotive engine manufacturers of this city. Orders addressed to them, or to us, will be promptly executed.

When the exact diameter of the wheel is stated in

the order, a fit to those wheels is guaranteed, saving to the purchaser the expense of turning them out inside.

THOMAS & EDMUND GEORGE,

12th and Market sts., Philad., Pa. a45

RAILWAY IRON, LOCOMOTIVES, ETC.
The subscribers offer the following articles for

4.68 3.50 1.26

with spikes and splicing plates adapted thereo. To be sold free of duty to State governments, or incorporated companies.

Orders for Pennsylvania Boiler Iron executed.
Railroad Car and Locomotive Engine tires, wrought and turned or unturned, ready to be fitted on the wheels, viz: 30, 33, 36, 42, 44, 51 and 60 inches diameter.

E. V. Patent chain cable bolts for railway car axles, in lengths of 12 feet 6 inches, to 13 feet 21,

22.3, 3, 31, 31, 31, and 31 inches diameter.

Chains for inclined planes, sho t and stay links, manufactured from the E. V. cable bolts, and proved at the greatest strain.

India rubber rope for Inclined planes, made from lew Zealand wax.

Also, Patent hemp cordage for inclined planes and

canal towing lines.

Patent felt for placing between the iron chair and stone block of edge railways.

Every description of railway iron, as well as locomotive engines, imported at the shortest notice, by the agency of one of our partners, who resides in

England for this purpose.

A highly respectable American Engineer resides in England for the purpose of inspecting all Locomotives, Machinery, Railway Iron, etc., ordered through us.

A. & G. RALSTON & CO. No. 4 South Front st., Philad., Pa.

MACHINE WORKS OF ROGERS, KETCH-um & Grosvenor, Patterson, N. J. The un-dersigned receive orders for the following articles, manufactured by them of the most superior descrip-tion in every particular. Their works being extensive and the number of hands employed being large, they are enabled to execute both large and small or-

ders with promptness and despatch.

Railroad Work.

Locomotive steam engines and tenders; Driving and other locomotive wheels, axles, springs & flange tires; car wheels of cast iron, from a variety of patterns, and chills; car wheels of cast iron with wrought tires; axles of best American refined iron; springs, bores and bolts for ears.

springs; boxes and bolts for cars.
Cotton, Wool and Flax Machinery
of all descriptions and of the most improved patterns,

Mill gearing and Millwright work generally; hydraulic and other presses; press screws; callenders; lathes and tools of all kinds; iron and brass castings of all descriptions.

ROGERS, KETCHUM & GROSVENOR, Paterson, N. J., or 60 Wallistreet, N. York.

TO IRON MANUFACTURERS. THE SUBscribers, as Agents of Mr. George Crane, of Wales, having obtained a States for his process of smelting Iron Ore with Anthracite coal, and holding an assignment of the patent obtained by the late Rev F. W. Geissenhahner, are prepared to grant licenses for the manufacture of Iron according to Mr. Crahe's principle.

A. & G. RALSTON & CO., 1245.

TO IRON MASTERS—FOR SALE—MILL

SITES in the immediate neighborhood of Butter to purchase or obtain further information in regard to their merits:

E. A. Stevens, President Camden and Amboy Railroad Company; Richard Peters, Superintendant Philadelphia, Reading and Railston, Lyroning Co. Pa. This is the nearest point to tide water where such coal and ore created and the communication is complete with Philadelphia and Bultimore by canals and railways. The interest on the cost of water power and lot is all that will be required for many years; the coal will not cost more than \$1 to \$1 \text{ \$\text{ \$\

ter or circumference to which they wish the tyres made, and they may rely upon being served according to order, and also punctually, a large quantity in the straight bar is kept constantly on hand. Crank axels for locomotive engines, made from the best Pennsylvania iron. Straight axles for locomotives for outside connection engines. Frames for engines. Wrought iron work for steamboats, and shafting of any size. Cotton Screws of any length or size. Railroad Jack screws, a late invention, and highly approved. Self-acting pumping apparatus for rail-road water stations. He refers to the following gentlemen:

Baldwin, Vail & Hufty, Philadelphia; Wm. Norler, N. York.

THE NEWCASTLE MANUFACTURING Company continue to furnish at the Works, and other steam engines, Jack screws, Wrought iron work and Brass and Iron castings, of all kinds connected with Steamboats, Railroads, etc.; Mill Gearing of every description; Cast wheels (chilled) of any pattern and size, with Axles fitted, also with wrought tires, Springs, Boxes and bolts for Cars, Driving and other wheels for Locomotives.

panies reconstructing their tracks now have an op-portunity of improving their roads on terms very ad-vantageous to the varied interests connected with their construction and operation; roads having in use flat bar rails are particularly interested, as such are permanently available by the plan.

W. Mc. C. CUSHMAN, Civil Engineer Albany, N. Y.

Mr. C. also announces that Railroads, and other works pertaining to the profession, may be constructed under his advice or personal supervision. Applicaitons must be post paid.

ICOLL'S PATENT SAFETY SWITCH k S. Bones, Augusta, Ga.; D. F. Guez, N. Orleans, cipal railroad Turnouts. This invention, for S. Bones, Augusta, Ga.; D. F. Guez, N. Orleans, cipal railroads in the country, effectually prevents William Parker, Boston, Mass.; George W. Schuy-

ja4c at a switch, left wrong by accident or design.

ING
It acts independently of the main track rails, being laid down, or removed, without cutting or displacing

It is never touched by passing trains, except when in use, preventing their running off the track. It is simple in its construction and operation, requiring only two Castings and two Rails; the latter, even if much worn or used, not objectionable.

Working Models of the Safety Switch may be seen at Messrs. Davenport and Bridges, Cambridgeport, Mass., and at the office of the Railroad Journal, New York.

MAINE RAILROAD EXTENSION COMPANY.

In conformity with the act of incorporation the stock has been fully subscribed for; and the and the tolls for the use of the main road, which company was duly organized by the choice of we do not doubt will prove advantageous to both directors. The survey and location were commenced in May, and the contracts for the graduation, masonry and superstructure concluded. The road commences at a point on the Boston and Maine Railroad in Wilmington, three-fourths of a mile east of Lubber Brook, passes near Wood-end village in Reading, through the westerly part of the village of South Reading, North Malden and Malden-thence over the marshes and across the Mystic river to Somerville-thence over the Middlesex Canal, crossing Charlestown Neck under the Medford turnpike road and, the Winter Hill road-thence over the marshes to the Back Bay in Charlestown-thence by a bridge west of the State Prison and across Charles River to Boston-thence between Haverhill and Canal streets to the public square at the head of those streets. The entire length of the railroad is 17; miles. Four miles of the track are laid, and the remainder of the road will be ready for the superstructure as soon as the season opens sufficiently in the spring to permit the laying of the rails.

The total amount of capital paid in up to De-. \$428,225 00 cember 1, 1844, was . . \$129 76 Other receipts,

THIRTEENTH ANNUAL REPORT OF THE BOSTON AND PROVIDENCE RAILROAD CORPORATION.

The business of the road during the past year has yielded a considerable increase, in each branch of trade, compared with the three preceding years, without involving any increase in the expenditures, and future prospects in regard to receipts and expenditures are encouraging. The increase of receipts was principally derived from what is termed the local business of the road.

The Long Island Railroad, connecting the city of New York and Greenport, was open for travel in August last, and, in connection with the New England railroads terminating on Long Island Sound, affords a new line of communication between Boston and New York. It was deemed due to the public convenience to make such a connection with the Long Island and Stoning on Railroads as should render this line useful, by a prompt and uninterrupted passage between the two cities. Thus far, it has not commanded sufficient travel to remunerate this company for the expense incurred.

The trade on the Dedham Branch Railroad has continued to be satisfactory, and during the last summer warranted an increase in the number of trains. The passenger house, at the depot in Dedham, was enlarged last fall, to meet the wants of an increasing amount of travel.

In anticipation of the opening of the Stoughton Branch Railroad, which enters this road in Main Road, .

FIRST ANNUAL REPORT OF THE BOSTON AND Canton, fourteen miles from Boston, we have entered into an arrangement with that corporation in regard to operating the Branch Railroad, parties. For the accommodation of the pusi-ness of this branch road, we have constructed an engine house at the junction of the Decham Branch with the main road, and a store house in

> Preparations for the extension of a second track, from Roxbury to the Dedham Branch junction, a distance of eight and a half miles, have been made, and it is expected that it will be completed in May next. This portion of the road is more curved than any other, and being traversed by the Dedham trains in addition to those which run over the whole length of the road, requires the facilities and safety which a double track affords, to prevent accidents and

> During the past year the residue of the sleepers originally laid down have been replaced by new ones. The average duration of the sleepers, which were principally of white cedar, has heen between seven and eight years.

> As the durability of the iron rail has been a source of much speculation, we have taken pains to ascertain particularly the state of the rails on this road, and while they exhibit evidence of wear and tear arising from the action of the trains, we are happy to say that their general condition, taken in connection with the amount of renewals since the road was opened for travel in 1834, warrants the conclusion, that this important item of construction will never become one of serious expenditure; that a small annual appropriation will maintain the rails in good condition for all time; this opinion is sustained by the fact that in ten years of use to which the rails have been subjected, only 750 new rails, (about 2) per cent of the whole number), have been put into the track; a large proportion of this number were originally of inferior quality when laid down.

> The cars and engines are in the same condition as at the date of our last report, with exception of a small addition to the former.

> On the 31st ultimo we made a careful estimate of the present value of the cars, engines, and other personal property of the corporation, which had been charged to the account of construction, and have charged against such depreciation from the cost to income account, the sum of forty thousand dollars, and deducted the same from the cost of construction:

> The amount of capital paid in is \$1,860,000 00

The amount expended on account of construction during the past \$11,660 78

The reduction of the freight on Coal on he Pennsylvania Canals will, it is supposed, nable Pittsburg to supply Philadelphia with ituminous coal. The cost of the transortation will be about \$3 09 per ton.

This is "coming it rather strong." rom canal to railways, besides crossing the lleghany mountains, for 3 of a cent per ton er mile, is something new under the sun.

f the partners. s a chance that the Erie Canal will be en- and likely to be steady and progressive. \$237,238 46 larged throughout during the lifetime of This we consider mainly attributable to the

these-boats, and have had them so constructed as to fit the enlargement, with no other alteration than taking off the guards.—Journal of Commerce.

The New Packet Steamer Decatur .- We yesterday examined this new vessel. She was launched, a short time since, from the yard of Currier & Townsend, by whom the hull was built. She new lies at the wharf of Messrs John Wood & Son, by whom, together with John Porter, Esq., she is owned. She is to be propelled by "Bard's Patent Propellor,"—that is, two submerged paddles, revolving upon two cylinders of iron, just by the stern post, one on each side—the cylinders pass into the vessel, and connect insi te with the engine. Outside, therefore, the only machinery which is to be found, is the two paddles, and the two shafts or cylinders to which they are annexed; and these submerged, and close to the vessel, under the run. Mr. Bard, the patentee of these double propellers, is now a resident of Boston, we are informed, and formerly of Maine. His plan is said to be a great improvement on that of Hunter, and others. The iron work, engine and boiler, are all made, and to be put into working order, by Seth Adams & Co., of South Boston.

Besides the "Propellers," there will be fore and aft sails, rigged upon two masts, schooner fashion. There will be neither topsail nor bowsprit. The length of the Decatur is, on deck, 105 feet, with 22 feet beam. She is a handsome model, with clean run good bows, and flush decks, about 145 tons.

Yesterday, they were just getting the boil-er on board. It is a huge, iron, cylindrical chest, with furnace attached-massively fastened with clamps, rivets and bands, and weighs about ten tons.

This steamer is to ply, as a regular packet, between this port and Boston; and is to be handsomely fitted for passengers, as well as properly arranged for the carriage of freight .- Newburyport Herald.

FOREIGN EXTRACTS.

The Iron Trade, Railways and Ship Build-To ing.—It gives us sincere satisfaction to lay arry coal 400 miles with several changes before our readers a flattering account of the iron trade. Never do we remember a period when its prospects were brighter, or its improvement more decided. Our information from all quarters is gratifying, that from the north more particularly so. In Durham it Iron Freight Barges .- There have recent. value has been materially enhanced, and the y been built at the Archimedes works, foot trade in Newcastle has received such an imf Thirty-third street, six iron barges, which pulse, as to warrant us in holding out most re to form a daily line on the Hudson, be-sanguine hopes, both to owners of property, ween New York and Troy. BAILWAYS OF MASSACHUSETTS AND CANALS OF NEW NORE

The railways of Massachusetts which have been in operation for one or more years have cost \$23,-000,000, and yield a nett revenue of 61 per cent. on that amount. The canals of New York yielded last condition of the roads of this State. In the aggreyear 6 per cent. on their cost. Here, however, the similarity ends. The railways of Massachusetts would sell to-morrow for more than they cost: the canals of New York would not bring half cost; even the ardent predictions of their projectors." the Erie canal would not command the twenty millions of dollars laid out on it. The railways of Massachusetts are used throughout the year for the transportation of both passengers and freight, the canals of New York are navigable during seven months of from which are derived the aggregate income of \$1, the year for the transportation of freight. The farmer of Massachusetts may send his fresh meat, butter, etc., to market by any railway, or other mode of conveyance he may prefer, at any season of the year; the results for the year 1843.
the farmer of New York is strictly prohibited from "The railroads of Massachusetts ranged about the the use of railways during the summer, because that same for that year."

he pleases-in summer, because the rate of speed is alties, proper statements of the condition of every too low to carry fruit, meat, butter, etc., without spoil-railway company in the State. It is openly asserted ing, and in winter, because the canal is frozen up, in the public prints that the reports of some compa-Massachusetts are leading to the extension of those if unfounded, would subject the writer or the pub-York have always been an incubus on private enter- ment; and deservedly so. prize, and, we may safely assert, that the line of railtal and private works: the former cripples the eneragement to its own extension.

MR. EDITOR: I was pleased to see in a late numtracks, which, I trust, will be universally tried and our citizens, adopted. The accidents which result from want of adjustment of switches are very numerous, and it is not saying too much, that Mr. N. has provided a remedy for a very serious defect in the tracks as now in

It is not wonderful that railroad corporations are tired of examining new patent machinery and fixtures, but the safety switch of Mr. N. really deserves consideration. MASSACHUSETTS.

[The above is from a source which entitles it to be received with confidence. -Ed. Journal.]

RAILWAYS OF NEW YORK.

The official document containing the reports of the ble and some remarks. We select two of the latter, and shall be happy to find the second borne but by the document itself; as for the first, it is so notoriously wrong, that the writer is probably trying the gullibility of the public; in the manner of the governor, who, after a long dissertation on the canals, their immense cost and the deep interest taken in them by the public, turns to the comparatively neglected subject of education, and its limited funds, with the sarcastic observation that "it is pleasant to turn" "to subjects the most vital to republican institutions."

"This report for 1844 exhibits a very flattering gate, they have reached a stage of successful operation, far beyond the most sanguine anticipations. Like our public canals, the other great arm of internal improvements, their career has outstripped even

"By reference to the cost of construction given in the table, and deducting the cost of the Schenectady and Troy, and the Albany and West Stockbridge roads, from which no revenue is derived, the total cost of the other roads is shown to be \$17,197,251, 100,016. From this statement results \$17,197,251: 1,100,016::1:64 or 6 4-10 per cent. on the capital invested.

"This is an increase of nearly one per cent. over

> We acknowledge the receipt of the reports of the Massachusetts railways from H. Williams, Esq., treasurer of the Boston and Worcester railroad, also from W. R. Lee, Esq., superintendent of the Providence railroad. We are indebted to C. M. Keller, Esq., of the patent office, for the annual report of the commissioner of patents.

> Will some friend oblige us with a copy of the last report of the Camden and Amboy railroad company !

A late number of the Philadelphia Ledger contains a "Prospectus for a loan of \$500,000," for the enlargement of the Schuylkill navigation, signed various railway companies to the legislature is not by C. Ellet, C. E., and dated New York, March I, yet out. The Albany Argus gives the principal ta- 1845. This is the first we have heard of this affair, or we should at once have warned our citizens to have nothing to do with it. Its success is based on carrying freight on a canal at the rate of 30 cents for 108 miles or 41 2-3 cents from New York to Albany, less than half the cost by the Hudson!

> We perceive that the gentlemen alluded to in our last, as having taken hold of the New York and Albany railroad, are now in Albany laying their views before the railroad committee of the legislalature. They propose to construct a road of the first order, over which the distance may be run in five hours. On the other side, the friends of the Harlem demand a charter to enable them to connect their railroad-if it may be called such-with the Boston and Albany line in Columbia county. We cannot for a moment entertain a doubt as to the course the legislature will adopt. The immediate construction of a first rate railway is the end the new company have in view, the name of the Harlem railroad at once conjures up a gambling, unproductive and miserable affair, caring nothing for the accommodation of the public, and in which no man would ever think of making an investment.

> A meeting has been called in Boston to discuss the policy of uniting the Worcester and Western railroads, under the title of the Boston and Albany railroad.

STATE WORKS OF NEW YORK.

Having given the financial condition of the canals, we now lay before our readers are nearly completed. such extracts from the report of the canal commissioners as may be required to com- Of lockages at Alexander's lock, three miles plete the view of the public works of New

"The navigation on the canals was commenced on the 18th of April, and closed on the 26th of November.

"From the commencement to the close, there were but few interruptions to navigation; which interruptions, and the causes of them are particularly stated in other parts of this

report.

"The amount of tolls received on the canals, his been much greater during the last

than in any preceding year.

"Brats have carried as heavy cargoes as heretofore, but the great increase of business on the canals has materially added to the number of lockages."

The amount expended by the commissioners on all the works during the past year is \$720,449 93. Of this sum, \$418,692 06 were for the enlargement of the Erie canal, and \$202,106 67 were for the Genesee vallev canal.

" Lockages.—A table showing the number of lockages at Alexander's lock, three miles west of Schenectady, from 1824 to 1844, in-

clusive, is hereto appended.

table, that the number of lockages in 1844 ply of water to-do nothing, for, such is, from this reservoir would not be required for was greater than in any other year, with the exception of 1841. The increase of 1844. over 1843, was about 5.000, and about 2,000 ness. The best plan would be for the State it. In view of the deficiency of water expelockages in 1841, was occasioned by the large themselves, to give them away, or, failing an increased demand will continue to be made amount of materials board for work then in that, to abandon them to the frogs. Indeed, the commissioners are now of the opinion the progress of construction on the enlargement of the canal, and not by the greater quantity of ordinary freight transported.

in 1811.

"Although the number of lockages on any day the past season, may not have been so great as to tax the single locks to their utmost capacity, if bouts had arrived regularly above and -voters. and below the locks, so that no time would be lost in filling and emplying them when no in length, extending from the city of Utica to water to supply the short levels from Dansboat passed; yet the delay at times, from the village of Binghampton, in the county of ville north to the Canescraga feeder, a distance irregularity of the arriving of boats, was Broome, where it unites with the waters of of about three miles, is obtained from Mill such as to make it exceedingly inconvenient the Chenango and Susquehanna rivers at their creek, a very inconsiderable stream, which to navigators at all the single locks east of junction. "There is a very large number of bridges on this canal. Many have been repaired the past season, and more will require it the next.

"One new double track bridge has been west of Schenectady, from 1824, when the built in the city of Utica across the canal on

venience of that place.

"The bottom of the canal has been thoroughly cleared out in many places, the banks have been strengthened, and good navigation maintained, with but little interruption during the season. There was, however, a time that want of water was experienced on the summit, occasioned in part by the drought, but this was of short duration.

"From the decayed state of the chambers of the locks, a very great increase of leakage takes place, which, combined with the unusual increase of lockages, renders an additional

supply of water necessary.

"The capacity of all the reservoirs and feeders, was, during the past season, taxed to its utmost extent, and notwithstanding a deficiency of water was experienced, and for a short time the summit level was so low that boats could not float upon it. If the drought had continued one week longer, the navigation must have been suspended for a time.

"The commissioners, in their annual report of last year, at page 70, described the destruction of the Kingsley brook reservoir, and nango canal are giving out, and that this vile stated the probable expense of repairing at political job, as well as its twin brother, the \$8,000. They also stated that they were "It will be seen by an examination of this Genesec valley canal, has not a sufficient sup of the opinion that the water to be furnished the navigation of the canal,' and therefore had not directed the superintendents to repair less than in 1841. The great number of to sell them out, or, if no purchasers present rienced last summer, and for the reason that

The Aqueduct.—We paid a visit last week ware exhibits, and perform their portion of works of internal improvement belonging to to the new aqueduct, now being constructed the task, and there can be no doubt as to the state, and report the result to the next by Mr. J. A. Roebling, across the Alleghany. Since the commencement of the work, Within a few days past a Bill has passed Mr. Roebling has faboured with the utmost Another Railroad Open .- On Thursday both branches of the Pennsylvania Legisla- perseverance, day and night, to complete it whistle from a new quarter, and our eyes, Canal Company. This Canal is one of the the first of April. The suspension ropes, in a short time, with a view of the new en unfinished works of the State, although it which extend from pier to pier in the form of gine "Northampton" as she came puffing in was about four fifths completed some three an inverted arch, are to consist of seven to our Depot with the first train of cars upon or four years ago; and the object of the pre-strands of wire, each strand being about the Northampton and Springfiled Railroad, sent legislation is to induce its completion three inches in diameter. Four of these from Cabotville. On Friday at 31 P. M. by individuals, who will be entitled to hold strands are already finished across the en-The Bear Mountain Railroad, which was pervious to water and consequently not liaporium of the Union-while another winds noticed in this paper some two or three ble to be weakened or impaired by the ropes, will be a firm and strong structure, capable, not only of sustaining its own weight, but, also, of bearing up as much additional work as a lattice work bridge would do. In effect, the trunk is a lattice work bridge without arches, like those across the Beaver river. The ropes being suspended across strong stone towers placed upon the piers, are in fact inverted arches, capable of sustaining more than double the additional weight which the letting in of the water would place upon the trunk,-the trunk itself is an independent, strong and immovable structure: so that when finished, the aqueduct will not be liable to be moved, either from the swell of water or the effect of storms.

The wires are carried across the river traverses the whole distance upon ropes unwinding the wire from the reels as it goes. The ropes are moved by horse power.

The splices of the wire are made by placstrongly, that sufficient force will break the wire, but will not affect the splice. We saw this satisfactorily tested.

When finished, the large ropes are to be will enable him to do it efficiently and expeditiously. Labor and energy on the part of the contractor, have done every thing in trunk is yet to be put up, he is confident of Empire S ate. being able to do it within a short time af-

The work is one which will be a credit not only to Mr. Roebling, but to our city, composed as it is of the manufactures of our unsurpassed Chronicle.

that something or other must be done to formation, easily get over all that was then to machine, useless and valueless, and the cost

finished the trunk alone, without the wire ruinous schemes by plausible adventurers; also to make the railways yield the accommodations which the community has a right to expect. We are not prepared to discuss greater here than in Europe. At any rate, we of New York know that such men as the sense of honor, and success in civil engineering, would present insuperable bars to their advancement. In Massachusetts, the system from one pier to another, by a wheel which fortiori, better than in Pennsylvania, an acwhich brings men of a higher grade into public life. Many entertain the idea that construct railways wherever they please, leaving it to the common sense of the public to look after their own interests as sharewrapped by machinery—the invention, we holders, and trusting to the spirit of private helieve, of Mr. Roebling himself, which enterprise to prevent imposition by wholethe latter plan, but unfortunately it is im. in the "Times," could come to a correct practicable in New York, as it conflicts with the first of April, and if it is not completed the purity of our republican canal instituby that time, which is doubtful, as the whole tions in a manner not to be tolerated in the hand. But when the various raunifications

Pat., Monday.

have enough to do to steer clear of error, in something when of no use for their original the numerous schemes before it and from the impossibility of its obtaining that information necessary for such a report within great expense. They can only be approach. erally, and more particularly by those in any reasonable time. We will mention one ed at points distant from each other, and are Massachusetts, where they are about estab-lishing a Board somewhat on the English lishing a Board somewhat on the English went to Leeds he was so fully, as he thought, construction or position, they become like plan. It appears to be generally conceded, satisfied that he could, with his previous in the iron castings of a great and expensive

each other for greater strength, so that when prevent the public from being drawn into be done, that he made his arrangements to leave Leeds in three days. However, such he found to be the difficulty in obtaining information and weighing that which he received, and in examining the plans, sections, and part of the ground, and inquiring into this question now, but it strikes us, that the the nature and character of the trade of the difficulty in the way of filling a Railway district, that though he exerted himself to an Board with competent members will be much extent which overpowered his physical abilities, it cost him sixteen instead of three days before he could leave Leeds, and then a great deal was left unfinished. The same Stephensons, Rennies, &c., would never rise happened at Manchester, where he was above the rank of assistants on our State a much longer time, and at Newcastle and works, where liberal acquirements, a high work. He has been heard to say that twelve months' incessant and undivided attention at the several places together, would not be enough to enable him to report satisfactorily to himselt on the schemes now will work better than in New York, and, à out. If, then, such be the labour required by a man of most active habits and intimately account of the more advanced state of society quainted with all the principles and bearings of railways from their very origin, what time must be required by gentleman almost fresh to the subject, and who have ing the two ends together and winding them the true plan is, to pass some general law not half, and, perhaps, we may say, not a with fine annealed wire, and it is done so under which individuals may associate and tenth the facilities of getting and eliciting true information that he has?

> Our opinion therefore, is that the Board will not venture to report in detail on the schemes brought before it. If it should, it will be at a great risk to its own character, and the interest of the public. No man, as some rivalry. We confess our leaning to was observed in two very able articles lately the ground, with the plan and section in his of trade, the bearings of new schemes on existing lines, the requirements of peculiar lo-Many speculations have been affort re. calities come to be considered, it is extremespecting the course the Board of Trade ly difficult, and we think impossible, for any would pursue with the railways. Some ex. body of men, however industrious and talenthe circumstances of the railways, and unless by a cool and deliberate inspection others that it would merely give an opinion of the locality, and making themselves mas-

ple waste of money, however great it may in comfort by a new line, which cannot be unless very glaring. What will be the conbe, nor to a short period. A railway once put in competition with the sacrifice of so sequence? Why work will be done which be, nor to a short period. A railway once put in competition with the sacrifice of so sequence? made is a fixture, and, if badly laid out, per-petuates its injury. For though another may

The cases we have mentioned show the individuals suffer by it ad infinitum, and be constructed, it is two to one if the desire very great care that is necessary in the de-hundreds of thousands, perhaps millions, of keeping as far off as possible, and the cisions of the Board of Trade. We do not spent in a mischievous rather than a beneficommendable principle of not allowing exist adduce them to deter the Board from the cial object. Rash and daring decisions are, ting lines to be unnecessarily interfered free exercise of its power, nor to prejudice therefore, to be deprecated, and however with, do not drive it as much the other side of the public; but if possible to increase its desirable it may be for promoters of schemes

railway subjects is easy, let him take the Board's decision will be a matter of no time to digest and mature its opinions than up the Churnet Valley case, and he will find ordinary importance. Government will, no to adopt error. it difficult to say anything on one side, to which an equally good set off may not be made on the other. That the Churnet is a very good line no man doubts; that it is the line which ought to have been made, and would have been made, if it had not been for the blundering conduct of the government officer, is equally certain, but the difficulty is, since the Grand Junction and Manchester and Birmingham are in existence, to say whether this very good and proper line shall now be made or not. If one says that it ought not, he is met by the question, "Shall all that large and populous district between the Derby Junction, and Grand Junction, and Manchester and Birmingham railways be left unprovided with a railway, and the 400,000 inhabitants of Manchester, the capital of the manufacturing districts, be sent for ever miles further round, to support the monopoly of an ill judged line?" If on the other hand, be contends that it ought to be made, he is met directly by the following argument, "Is there not already a very good railway communication with Manchester by lines which have done the public good service? If you destroy railway property thus, by competing lines, who will invest their money in such property?-and what will be the consequence, but an abandonment of schemes highly advantageous to the country?"

Now who would hastily decide in the face of such conflicting and powerful arguments ! We are in favour of the Churnet line, but we candidly admit, that the arguments on the other side are very weighty, but not so much so, as those given by us in our last. in favour of the Caornet.

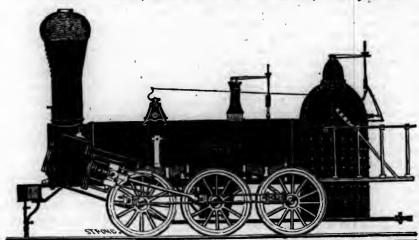

The Brighton is another case of difficulty, though not equal to the former. A line is made through the recommendation of the Government officer, which ought never to have been, and the question is, whether the one originally laid out, ought now to be granted. To our mind it ought not. The public, we admit, would have been carried via Shoreham, on a much better line, and more comfortably, and for the benefit of commerce, Shoreham, on account of its harbour, not Brighton, is the proper place to reach first. The voice of reason was, however, not heard or not listened to, and the present Brighton line was made at an enorpublic is carried in a shorter time than it

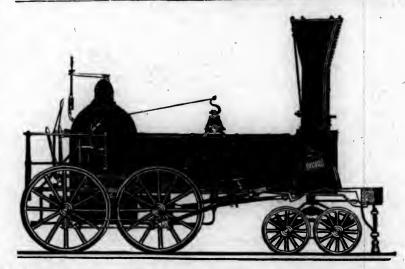

Neither is the mischief confined to a sim-that the public would gain nothing except and Parliament will hence sanction the error,

LLEVATION

MESSRS. EDITORS.—
As your Journal is devoted to the benefit of the public in gen-eral I feel desirous to communicate to you for publication the following circumstance of no inconsiderable importance, which ocsince on the Philadel-phia, Wilmington and Baltimore railroad.

On the passage of the evening train of cars from Philadelphia to this city, an axle of our large 8 wheeled passenger car was bro-ken, but from the particular plan of the construction, the accident was entirely unknown to any of the passengers, or, in fact, to the conductor himself, until the train, (as was supposed from some circumstances attending the case,) had passed several miles in advance of the place where the accider toc-curred, whereas had the car been constructed on the common plan the same kind of acci-

dent would unavoidably have much injured it, perhaps thrown the whole train off the track, and serioushaps thrown the whole train on the last ly injured, if not killed many of the passengers.

Wilmington, Del., S-pt. 28, 1840.

The undersigned takes pleasure in attesting of the value of Mr. Joseph S. Kite's invention of the Safety Beam Axle and Hub for railroad cars. They have ftr some time been applied to passenger cars on this road, and experience has tested that they fuly: cco nplish the object intended. Several instances of the fracture of axles have occurred, and in such the cars have uniformly run the whole distance with e tire safety. Had not this invention been u ed, serious accidents must have occurred.

In short, we consider Mr. Kite's invention as completely successful in securing the safety of property and lives in railroad travelling, and should be used on all railroads in the country.

JOHN FRAZER, Agent,
GEORGE CRAIG, Superintendant,
W. L. ASHMEAD, Agent.

The Model of the above improvement is to be seen at the New Jersey railroad and transportation office, No. 1 Hanover st., N. York.

construction, \$9,430 83.

The claims and accounts outstanding, are estimated at \$505 93.

BOARD OF TRADE AND THE RAILWAYS.

If the Board of Trade continue as it has begun it will merit the gratitude of the conntry. Its decisions on the Kent lines have been as judicious as they are just. Some of the schemes rejected are, no doubt, very good things, but the principle which seems to have guided the Board is a proper balance between the wants of the public and protectic interests are to be totally disregarded. tion of existing railway interests. If present Companies can and will do that for the public which they ought, the Board has shown a disposition to support them and to Herods Herod, in the way of government crush meddling interlopers. Such conduct meddling and mismanagement. We queswill give a stability to railway property and encourage legitimate enterprise, and is therefore both right and proper. But nothing the Board has yet done will admit of the inference which has been drawn from it by some. They think because it has to a certain extent protected railway property that it will crush all new schemes which affect Our conclusions from present railways. what it has done are very erroneous if it is so. We believe the Board will protect existing railways so far only as the public by that protection can be benefitted. If existing lines cannot serve the public as it should be served, then new lines to other parties will be granted, though these new lines should interfere with old ones. It would indeed be very hard if one portion of the country must be for ever damnified to support railways either not well planned in the beginning or not sufficiently comprehensive, or from circumstances incapable of rendering that service to the community which is want. ed. We are of opinion that such lines, though respected to a certain extent, will not be fenced round by the Board of Trade in their monopoly.- Heapath's.

NEW PROJECTED RAILWAYS.

of trade with regard to railways, which we the reins. The ultimate designs of the board advertisement, for 1000 tons of cast-iron rails, have arranged on a more convenient plan. of trade are, on their own confession, to buy as published in the Mining Journal of the We regret exceedingly that want of space up all the railways in the country and possess 4th inst. The contract was taken by Messrs. the gross errors and flagitious transactions of the engineers will become the members of an the railway department. We have repeated English Corps des Ponts et Chaussees, a rely deprecated these interferences with private sult which no well thinking man will desire cern, headed by the experience of Mr. enterprize, for we are convinced that the re- to see produced, for it must both morally and Buckland, are impressed with the superiori-

The rejection of the Salisbury, Ex-There has been expended for land and eter and Falmouth line is a prominent instance of mal-administration, and has no grounds on which it can be justified. Here is a railway proposed to pass along the existing mail route, protecting a valuable line of traffic, communicating with important towns, and having for its terminus the packet port of Falmouth, and the large and wealthy mining districts of Cornwall. The saving in the journey to Falmouth would be 46 miles, one hour and a half, and 10s., and yet all these facts are overlooked, and because there apath's. is a line of railway from London to Bristol, and another from Bristol to Exeter, the pub-Many cases of great flagrancy might be adduced, but the rejection of the Salisbury and Iron Works (and subsequently an additional Falmouth line furnishes a case which outtion even whether the continent could produce any parallel to this proceeding, which is equally mischievous and unjustifiable.

> We would seriously urge upon engineers prospects before them. neers are in a state of thraldom, the mining engineers are threatened, and the marine en-nal. gineers have reason to apprehend a new attack. Three or four years ago it would have passed belief that such things should be meditated, it is even now almost incredible that they have been carried into effect. It is painful to reflect that our most eminent engineers -men who have given the profession an universal reputation—should now be dependent for employment on the fiat of a military enplans, estimates and designs are to be subjected to the judgment of such an individual. At present the chain is but light, yet the Stephensons, Brunel, Locke, Cubitt, Braithwait, Rastrick, Macneil and Vignoles, are as 1837, 206,000 tons. 1840, 284,000 tons. effectually exposed to dictation of the board of trade, and as completely at its mercy as it is well possible to conceive. The chain may be drawn tighter, the board of trade may become more exacting, and more meddling, but

MISCELLANEOUS ITEMS.

Midland Railway. - This Company have ordered 6 new passengers engines of a very powerful description. They are to have 6 wheels, 51 feet driving wheels, and 33 feet leading and trailing wheels; 15 inch cylinders; 22 inch stroke; and are to weigh 18 tons, of which 11 are on the driving wheels. They have also ordered two new goods engines of 20 tons each, 6 wheels 43 feet, all coupled. The stroke is to be 24 inches, but the cylinders the same as those of the passenger engines. These engines it is computed will be about, 250 horse power .- Her-

Cashel (Irish) Railway .- There have been 4000 tons of rails for this undertaking. contracted for by Messrs. Cruttwell Allies, and Co., of the Cwm Celyn and Blaina large quantity), at £8. 6s. per ton delivered. They are of the same pattern as those introduced with so much success on the Dublin and Drogheda Railway, patented by Mr. Thomas Evans, of Dowlais Iron-Works, and weigh 92 lbs. per lineal yard, which we believe to be the heaviest rail yet introduced. the position in which they now stand, and the prospects before them. The railway engi. The excellent and powerful machinery at these works is well calculated for turning these monster rails out well. - Mining Jour-

Exportation of Iron.—It is satisfactory to observe, that notwithstanding the almost prohibitory duties in France, Germany, and the United States, the export trade in Iron is still on the increase; and, as the railway system extends in foreign countries, which it must inevitably do, a demand will be created for the articles, the extent of which it is difficult to over estimate. The exports gineer, necessarily incompetent and that their at present are equal to about a third of our entire production, and are in themselves greater than the entire production of 1823.

1837, 206,000 tons. | 1840, 284,000 tons. 1838, 271,008 " 1841, 376,000 " 1839, 269,000 " 1842, 381,000 " 1843, 460,000 tons.

Cast Iron Rails .- The committee of the our engineers have had the bit put in their above company met last week for the pur-We give below the decisions of the board mouth, and it is with the board of trade to pull pose of receiving tenders, agreeable to their deprives us of the opportunity of exposing themselves of them, and it then follows that Buckland, Stothert, and Co., Maesteg Ironsults will prove of most serious injury to the community and to the engineering profession the most serious injury to the community and to the engineering profession them the public. We expect all therefore, as a half feet each, weighing 105 lbs. per lineal engineers are already engineers and as shareholders, to make the government officials. firmest stand in behalf of the rejected lines eighteen to twenty feet each, and are debellied order, and designed, we understand, blast. by Mr. W. Brunton, of Eagle's Bush. The rail and chair are so ingeniously contrived as to form one casting: and although requiring to be moulded in a three part box, yet Mr. Brunton has so arranged this ap paren'ly expensive method of molding, that they are made and turned out of hand with equal facility and cheapness as the common tram plate. We understand that a rail very similar to the above was introduced thurty years since at the Butterley Iron-Works, with great success, by Mr. Brunton, and subsequently on a railroad communicating with Port Talbot. Should the expectations of the committee be realised, as to the greater durability, as well as less resistance to the waggons, together with a better adhesion of locomotive-engines, on their castiron rails, as compared with those of malleable iron, a great revolution will soon be introduced in the construction of railways, as well as a considerable saving. We, however, confess to having our doubts upon these points .- Mining Journal.

Iron. Trade-England and France. While the English Government has of late years been gradually liberating our iron trade from every sort of restriction, the French have been hedging in theirs with every imaginable sort of fiscal protection. Mark the results. In 1841 the quantity of coal raiswhole quantity of coal raised in France. In observed, it appeared very weak, and, though England the average quantity of coal raised of large size, could crawl only with difficul-Journal.

was £2. 16s. per ton delivered here; the lowest number of furnaces in operation at fore the meeting of the Paris academy of sci-future.—Leeds Times.

termined to put the same practically to the any period during the year was 51, and the ences some specimens of cold drawn fron and test. The rail now selected is of the fish greatest 70-being the number at present in other tubing. A few years ago the only tu-

> Caution to Engineers-Verdict of Man. slaughter .- A few days since the boiler at Mr. Morris's iron-works, Park-lane, Tipton, exploded, and killed a boy who was employed on the works. At the inquest on the body, it was proved by the evidence of scientific men, and from a careful examination of the broken boiler, that it must have become empty and red-hot, in consequence of noglect on the part of the engineer, who was absent from the engine when the explosion took place, and that it would not have happened if he had used common care and attention to his duties: it was also proved that the boilers and all the machinery were in perfect order, when H. Thompson, the man at fault, took charge of the engine, after it had been working through the night. The the engineer was committed for trial. - Mining Journal.

Iron Steam Ships. - A new war steamer less than 51 per ct. has been launched at Liverpool, named the and has two engines of 55-horse power.

Geological Curiosity.—(From a Corres ed in this country was at least ten times the pondent).—A few days since, as a miner, quantity raised in France; and in the same named W. Ellis, was working in the Peny. year four tons of iron were made in this darran Mine Works, at forty-five yards country for every ton made in France. The depth, he struck his mandril into a piece of coal consumed in the iron works alone of shale and, to the surprise of the workmen, Great Britain rather more than doubled the a frog leaped out of the cleft. When first within the year by each person employed in coal mines was 253 tons; in France, it was liarities were observed; its eyes were full only 116 tons. In France, 47,800 persons sized, though it could not see, and does were employed in producing one-fourth the not now see, as, upon touching the eye, it quantity of iron produced in Great Britain evinces no feeling. There is a line indicaby 42,400. The prices of iron to the conting where the mouth would have been, had sumer in France are from 100 to 250 per it not been confined, but the mouth has not even succeeded in making herself independent of foreign supplies; the quantity has been forced to develope itself in an anof coal imported in 1841 was within a trifle gular form appears a sufficient supplies. of half the quantity raised; and nearly 50, having grown in very confined space, even 000 tons of British iron was imported-pig. if the hollow in the piece of shale, by coriron being subject to a duty of £3. 2s. 6d., responding to the shape of the back, did not and plates, bars, and rods, to a duty varying place the matter beyond a reasonable doubt. ding, a large number of individuals having from £3. 7s. 4d. to £16. 14s. 9d.—Mining The frog continues to increase in size and weight, though no food can be given to itand its vitality is preserved only by breathjaw. Mr. W. Ellis, with a view of giving his prize as much publicity as possible, has deposited it at the Name of them will, ing through the thin skin covering the lower deposited it at the New Inn, Merthyr, where it is exhibited as "the greatest wonder in already been spent in preliminary requirethe world, a frog found in a stone forty-five nsumption, 219,000. Total, 346,200 tons. The average price for the twelve months s £2. 16s. per ton delivery to the twelve months. feet from the surface of earth, where it has

bing made in France, for gas and other purposes, except lead tubing, was made by hand. In England iron drawn tubing (by heat) without soldering, was first made, and was imported, by special permission, into France, on account of its vast superiority over hand made soldered tubes. Within the last two years the French have, in this branch of manufacture, eclipsed the English, for they now, by pressure, draw tubing cold, and it is in every respect perfect; indeed, much more perfect than the hot drawn tubing.

TRAFFIC RETURNS OF FRENCH RAILWAYS FOR THE YEAR 1814. (From the Journal des Chemins de fer.)

Seven railways 3331 miles in length, costing 205 millions of franks (8,200,00%) or at the rate of 24,625l. per mile. The receipts for the past year amount to about 21,274,300 franks, (850,972l.), or at the rate of 2,556l. per mile per annum, by deducting 50 per ct. from that sum for working expenses, we have 1,278l., which would pay a dividend of rather

The largest amount of the aggregate traf-Iron Prince, thegreatest novelty in which is fic for any month during the year, was carhaving an iron deck, also iron bulwarks, and ried in the month of September; although iron rigging; she is 108 feet in length, dou-the maximum traffic on the Versailles, left ble lapped and rivetted, rigged as a three and right bank, and on the St. Germain was masted schooner, and propelled by the screw, carried in June; that upon the Strasburg and the Gard in July; that of the Paris and Rouen in September; and that of the Paris and Orleans was carried in October.

> Bolton and Leigh Railway.—The engineers of the Liverpool and Manchester railway are engaged in making surveys of the Bolton and Leigh and Kenyon and Leigh Junction lines, with a view to the improvement of the gradients and inclines. It is understood that the Liverpool and Manchester intend to render the former line, which they have lately purchased, much more efficient, and to make the means of communication between Bolton and Leigh and Manchester more frequent than at present.—Man. Guar.

> Dublin and Drogheda Railway. - The amount for passengers and parcels during the

> Railway Speculators — We believe that the consequences of the decisions of the board of trade, no matter what they be, will be most disastrous to several towns in the West Riembarked their capital, and speculated far be-yond their means, in the hope of realizing immense profits from their gambling enter-prize. But of course it is not possible that ments; and hence the anxiety of the speculators to know the fate of their respective undertakings. The decision of the board of trade may be considered as almost decisive, and those projects which they do not recom-
