off at the top of the chimney, through a capacious and unobstructed passage, thus arresting the sparks without impairing the power of the engine by diminishing the draught or activity of the fire in the furnace.

These chimneys and arresters are simple, durable and neat in appearance. They are now in use on the following roads, to the managers and other officers of which we are at liberty to refer those who have desire to surphy so to be the information in regard to their merits:

on the following roads, to the managers and other officers of which we are at liberty to refer those who may desire to purchase or obtain further information in regard to their merits:

E. A. Stevens, President Camden and Amboy Railroad Company; Richard Peters, Superintendant Georgia Railroad, Augusta, Ga.; G. A. Nicolls, Superintendant Philadelphia, Reading and Pottsville Railroad, Reading, Pa.; W. E. Morris, President Philadelphia, Germantown and Norristown Railroad Company, Philadelphia; E. B. Dudley, President W. and R. Railroad Company, Wilmington, N. C.; Col. James Gadsden, President S. C. and C. Railroad Company, Charleston, S. C.; W. C. Walker, Agent Vicksburgh and Jackson Railroad, Vicksburgh, Miss.; R. S. Van Rensselaer, Engineer and Sup't Hartford and New Haven Railroad; W. R. M'Kee, Sup't Lexington and Ohio Railroad, Lexington, Ky.; T. L. Smith, Sup't New Jersey Railroad Trans. Co.; J. Elliott, Sup't Motive Power Philadelphia and Wilmington Railroad, Wilmington, Del.; J. O. Sterns, Sup't Elizabethtown and Somerville Railroad; R. R. Cuyler, President Central Railroad Company, Savannah, Ga.; J. D. Gray, Sup't Macon Railroad, Macon, Ga.; J. H. Cleveland, Sup't Southern Railroad, Monroe, Mich.; M. F. Chittenden, Sup't M. P. Central Railroad, Detroit, Mich.; G. B. Fisk, President Long Island Railroad, Brocklyn.

Orders for these Chimneys and Arresters, addressed to the subscribers, or to Messrs. Baldwin & Whitney, of this city, will be promptly executed.

N. B.—The subscribers will dispose of single rights, or rights for one or more States, on reasonable terms.

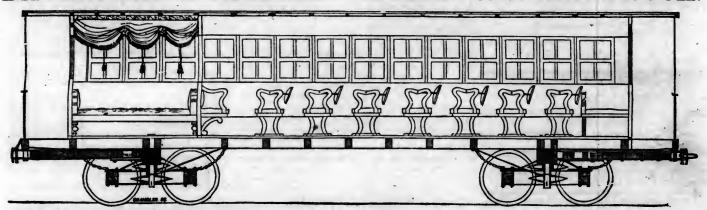

Philadelphia, Pa., April 6, 1844. **. The letters in the figures refer to the article given in the Journal of June, 1844.

Railroads. This particular method was invented by Charles W. Bentley, of Baltimore, Md., who has obtained a patent for the same from the Patent Office of the United States, under date of September 1st, 1843—and they are now already in successful operation in several of our larger Hotels and Public Institutions, Colleges, Alms Houses, Hospitals and Prisons, for cooking, washing, etc.; for Bath houses, Hatters, Silk, Cotton and Woollen Dyers, Morocco dressers, Soap boilers, Tallow chandlers, Pork butchers, Glue makers, Sugar refiners, Farmers, Distillers, Cotton and Woollen mills, Warming Buildings, and for Propelling Power, etc., etc.; and thus far have given the most entire satisfaction, may be had of D. K. MINOR, 23 Chambers st. New York.

The article is complete in itself, occupies but little space, is perfectly portable, and requires no brick work, not even to stand upon. It is valuable, not only in the saving of time and labor, but in the economy of fuel, as it has been ascertained by accurate measurement, that the saving in that article is fully two-thirds over other methods heretofore in use. They are now for the first time introduced into New York and Boston by the subscriber, who has the exclusive right for the New England states, New York and New Jersey, and are manufactured by

FORCE, GREEN & CO. New York.

## DAVENPORT & BRIDGES' PATENT CAR AND TRUCK.

DAVENPORT & BRIDGES CONTINUE TO MANUFACTURE TO ORDER, AT THEIR WORKS, IN CAMBRIDGEPORT, MASS. Passenger and Freight Cars of every description, and of the most improved pattern. They lso furnish Snow Ploughs and Chilled Wheels of any pattern and size. Forged Axles, Springs, Boxes and Bolts for Cars at the lowest prices. All order punctually executed and forwarded to any part of the country Our Works are within fifteen minutes ride from State street, Boston—coaches pass every fifteen minutes.

RAILROAD IRON AND LOCOMOTIVE
Tyres imported to order and constantly on hand
A. & G. RALSTON 4 South Front St., Philadelphia HE NEWCASTLE MANUFACTURING

THE NEW CASTLE MANUFACTURING Company continue to furnish at the Works, situated in the town of Newcastle, Del., Locomotive and other steam engines, Jack screws, Wrought iron work and Brass and Iron castings, of all kinds connected with Steamboats, Railroads, etc.; Mill Gearing of every description; Cast wheels (chilled) of any pattern and size, with Axles fitted, also with wrought tires, Springs, Boxes and bolts for Cars; Driving and other wheels for Locomotives.

The works being on an extensive scale, all orders.

Driving and other wheels for Locomotives.

The works being on an extensive scale, all orders will be executed with promptness and despatch.

Communications, addressed to Mr. William H. Dobbs, Superintendent, will meet with immediate attention.

ANDREW C. GRAY, ja45

President of the Newcastle Manuf. Co.

CUSHMAN'S COMPOUND IRON RAILS.

etc. The Subscriber having made important improvements in the construction of rails, mode of guarding against accidents from insecure joints, etc.

—respectfully offers to dispose of Company, State
Rights, etc., under the privileges of letters patent to
Railroad Componics, Iron Founders, and others interested in the works to which the same relate. Companies reconstructing their tracks now have an opportunity of improving their roads on terms very a vantageous to the varied interests connected vu. their construction and operation; roads having in use flat bar rails are particularly interested, as such are permanently available by the plan.

W. Mc. C. CUSHMAN, Civil Engineer,

Albany, N. Y.

Mr. C. also announces that Railroads, and other works pertaining to the profession, may be constructed under his advice or personal supervision. Applications must be post raid.

TO RAILROAD COMPANIES AND BUILD-ERS OF MARINE AND LOCOMOTIVE ENGINES AND BOILERS.

## PASCAL IRON WORKS.

## WELDED WROUGHT IRON TUBES

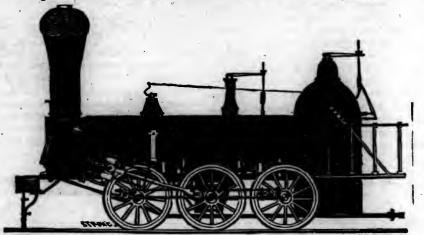

From 4 inches to 1 in calibre and 2 to 12 feet to capable of sustaining pressure from 400 to 2500 per square inch, with Stop Cocks, T. L., a other fixtures to suit, fitting together, with stop joints, suitable for STEAM, WATER, GAS, and LOCOMOTIVE and other STEAM BOILER FLE

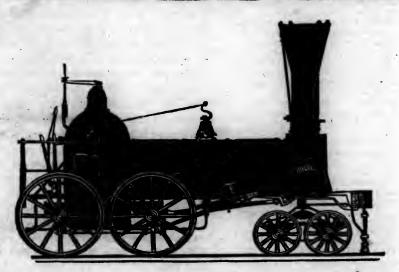

MORRIS, TASKER & MORRIS. Warehouse S. E. Corner of Third & Walnut Street PHILADELPHIA.

#### NORRIS' LOCOMOTIVE WORKS.

NORRIS, BROTHERS.

RAILROAD IRON,—THE MARY-LAND AND NEW YORK IRON AND Coal Company are now prepared to make contracts for Rails of all kinds. Address the Subscriber, at Jennon's Run, Alleghany County, Maryland. WILLIAM YOUNG, jy451m President.

TO IRON MASTERS.—FOR SALE.—MILL SITES in the immediate neighborhood of Bituminous Coal and Iron Ore, of the first quality, at Ralston, Lyoming Co., Pa. This is the nearest point to tide water where such coal and ore are found together, and the communication is complete with Philadelphia and Baltimore by canals and railways. The interest on the cost of water power and lot is all that will be required for many years; the coal will not cost more than \$1 to \$1 25 at the mill sites, without any trouble on the part of the manufacturer; rich iron ore may be laid down still more cheaply at the works; and, taken together, these sites offer remarkable advantages to practical manufacturers with small capital. For pamphlets, descriptive of the property, and further information, apply to Archibald McIntyre, Albany, to Archibald Robertson, Philadelphia, or to the undersigned, at No. 23 Chambers street, New York, where may be seen specimens of the coal and ore.

W. R. CASEY, Civil Engineer,

VALUABLE PROPERTY ON THE MILL V Dam For Sale. A lot of land on Gravelly Point, so called, on the Mill Dam, in Roxbury, fronting on and east of Parker street, containing 68,497 square feet, with the following buildings

Main brick building, 120 feet long, by 46 ft wide, two stories high. A machine shop, 47x43 feet, with large engine, face, screw, and other lathes, suitable to do any kind of work.

Pattern shop, 35x32 feet, with lathes, work bench-

es, &c.. Work shop, 86x35 feet, on the same floor with the pattern shop.

pattern shop.

Forge shop, 118 feet long by 44 feet wide on the ground floor, with two large water wheels, each 16 feet long, 9 ft diameter, with all the gearing, shafts, drums, pulleys, &c., large and small trip hammers, furnaces, forges, rolling mill, with large balance wheel and a large blowing apparatus for the foundry.

Foundry, at end of main brick building, 60x454 feet two trains high with a ched my 451-70 feet.

feet two stories high, with a shed part 45 x20 feet, containing a large air furnace, cupola, crane and

corn oven.

Store house—a range of buildings for storage, etc., 200 feet long by 20 wide.

Locomotive shop, adjoining main building, fronting on Parker street, 54x25 feet.

Also—A lot of land on the canal, west side of Parker st., containing 6000 feet, with the following buildings thereon standing:

Boiler house 50 feet long by 30 feet wide, two stories

Blacksmith shop, 49 feet long by 20 feet wide. For terms, apply to HENRY ANDREWS, 48 State st., or to CURTIS, LEAVENS & CO., 106 State st., Boston, or to A. & G. RALSTON & Co., 1atladelphia.

CYRUS ALGER & CO., South Boston Iron Company.

in the papers that several rails were removed of men than their own troops. from the Long Island Railroad on the 22d inst. near St. George's Manor, and that, but for the precautionary measure of sending out supine and emasculated condition of its peo- ancient capital of Russia; and it would be a a pioneer engine, in all probability a serious ple, gave a powerful stimulas to the extension still more easy matter to continue it in the diaccident would have occurred to the passenger train. This is a high handed measure and a liberal reward should be offered by the and a liberal reward should be offered by the president of the company for the detection and conviction of the villains who would thus hazzard the safety and lives of passengers to gratify their personal feelings. If they have just claims against the company prosecute, not persecute them. What would be said of the company or of an individual who having of Siberia to the pillars of Hercules. claims against any one of the Long Island farmers, which he might not be able to satisfy, or which he did not deem equitable to the not include those of Austria or Italy, nor does commercial relations between Russia and full amount claimed & therefore refused to pay it until it was adjusted—should set fire to his this system of circulation, and yet in that one peace continue, there will be no difficulty in crops? Would not the perpetrators of such thousand miles. crimes be execrated by all right minded persons, and punished by the laws of the land? to Asia.—In looking at the map of the rail-most assuredly and so also should those be Most assuredly and so also should those be who would jeopard the lives of passengers on a railroad to spite its managers. No acts Lisbon to Konigsberg, the capital of Eastern of the company can palliate the proceedings Prussia. The following is the enumeration of the people, or rather of a few rioters, as and length of the various railroads compowe are sure the people of Long Island are not sing this gigantic line: abettors of such a course-if they are it is with an ill grace that they complain that the company does not consult their convenience in running their trains.

We call upon the people of Long Island to ferret out the miscreants who have been guilty of this outrage-and upon the company to prosecute them to the extent of the law, and also to adjust and settle the difficulties between the company and the people-and at the same time to so arrange their business as to accommodate the business of the Island as the interests of the people and the company are identical.

## European Railroads.

The Evening Post of 2d inst. gives the following graphic description of the vertebral railroad (that is to be) in Europe.

European Railroads.—Those who thought last year that the railroad movement in Europe was merely speculative, now acknowledge their error, and begin to consider it in its true light, as one of those changes in the mode of intercommunication which mark an 11. era in the progress of civilization. The opposition to these projects came partly from the conservatives, who are in all countries opposed to any thing new, and from the miserable bureaucracy of some of the most enslaved states, who feared the extension of knowledge, and dreaded the facilities given

Long Island Railroad.—It is reported for the rapid movement of any other masses

which we extract from an English paper, does plying on the Caspian sea and keeping up it embrace many of the French and German Persia, Independent Tartary, and the provinroads. It is confined to one great Aosta of ces beyond the Caucasus. Thus, should house in the night, or destroy his cattle and line comprises a length of more than two a short time in travelling from the mouth of

Great Vertebral Railroad through Europ projected, a grand vertebral line of communication may be perceived, stretching from

1. From Lisbon to Madrid, still only projected, by an Anglo-Portuguese Spanish company, by Alcantara, Almaraz, Tala-vera, and Escalona, showing a length of

English miles.....
2. From Madrid to the frontier of France, near Bayonne, passing by Calatayel and Pampeluna, projected by an English com-

leme, Poictiers, and Tours; in course of execution; conceded to the company

From Orleans to Paris; conceded to a French company, and open to circulation from 1843. The Great Northern Line from Paris, by

Creil, Clermont, Amiens, and Arras, to Lille and Valenciennes; a line executed by the state, and almost terminated....

6. From the Frontier of France, or rather from Valenciennes to Brussels; execu-

Berlin, terminated. From Berlin to Stettin, along the Baltic

sea, terminated ... From Stettin, by Stolen, Dantzic, and El-bing, to Konigsberg, in course of execu-tion under the superintendence of the engineers of the Prussian government ....

This grand, European line will not stop short on the banks of the Pregel. If the The two great powers, however, of eastern emperor Nicholus gives permission, a com-Europe, one of them secure in the great ex-tent of its sovereignty, and the other in the Tilsit. Kowno, Wilna and Smolensko, to the and the prime minister of Austria, really anx-tocrat is at present constructing between the ious for the welfare and comforts of the peo-two capitals of his empire, a railroad which ple, provided they did not venture to think for themselves, projected and is now comple-a commercial town situated at the conflux of ting, a great chain of railroads, which will the Volga and the Oka, the rendezvous of soon intersect the great continent of the old the traders of Europe and central Asia. world, and diffuse the blessings of commerce From Nishnei-Novogorod steamers descend and interchange of thought, from the wilds the Volga to Kasan and Astracan. In this latter city the emperor of Russia has lately The enumeration of these great works, got several steamers built, for the purpose of the Tagus to the very centre of Asia.-Whilst looking forward to the realization of this magnificent work, we can announce with certainty that in the course of 1846 two considerable portions of the vertebreal line will be completed—one from Tours, by Paris and Brussels, to Cologne, and the other from Hanover, by Berlin, to Stettin.

## Tonawanda Railroad.

The railroad from Rochester to Batavia has, we understand, been rebuilt in a very substantial manner and laid with a heavy plate rail. It has also, within the last year, been connected with the road eastward, so that there is not now as formerly, the trouble of carting baggage through the city from the depot to the street and the reverse, as there was no depot building, we believe in Rochester, for this road. It always affords us pleasure to hear that a company that began early-and this was one of the earliest in operation in the state—and has had serious obstacles to encounter, has surmounted them and is able to renew and improve its works. We take the following extract from an article in the Rochester Democrat, and we congratulate the people of Rochester and all others interested upon the result of their efforts. They will yet lay a heavy edge rail upon their road.

"The proprietors who had never despaired of the success of their enterprize, began, about a year since, with renewed energy to redeem the reputation of the road, and res-100 tore its waning fortunes. Through the means of a loan based upon increased capital stock, they have within a year completed a connection with the Eastern railroad, through the city of Rochester, with a solid H rail, at an expense of about \$35,000, and re-construc-2,138 ted thirty-three miles of their road from Robetween Rochester and Buffalo for the accobeen used on this road.

The In addition to the above, the company have time saved in passing between Rochester and during the present season [1845] extended the 2203, tonnage 5282, and receipts £3355 at par."

### Railroads in Schuylkill County, Pa.

The following is from that excellent paper, the Miners' Journal, published at Pottsville. It is the commencement of precisely what we have long desired to see published by the newspapers in the vicinity of the different railroads. There are several railroads in different parts of the country, in relation to which we have not been able to obtain accurate or even any, details. It is so in relation to the numerous short roads in the coal region of Pennsylvania; we are therefore the more obliged to the editor of the Journal for having commenced a good work, in which we hope he will persevere, and join us in calling upon the editors of papers residing in other parts of the coal region, and indeed, upon all editors residing near any railroad in the United States, to obtain and publish, a concise description, with full details of them, similar to the one which we now give of the "Mine Hill and Schuylkill Haven railroad." If they will do so, we will re-publish all, and thus put in the possession of each, the details of all the roads; by which thousands of people will be furnished with very desirable information. What say you gentlemen of the press, will you obtain and publish a description of the roads in your vicinity?

Schuylkill county while the trade was in its other purpose, it will be data to refer to here-We commence with The Mine Hill and Schuylkill Haven Railroad. This road extends from Schuylkill Haven to the Broad early development of the railway system mountain a distance of 10 miles. It has in this country says the London Mining Jourthree branches-one of which extends up the nal, it was generally feared that the compa-4½ miles—another up Muddy Branch 3 miles, that. when the coaches were driven off the and another up Wolf Creek about 2 miles—common roads, the public would be subject to making the total length of the road at presum extravagant charges, which the caprice, the second week in August in the last three ent 191 miles.

Dutton and Fowler, the contractors, and Asa low the junctions of the West and North ities the public have been looking forward to Sprague, esq., the superintendent, for com-West branches of the Schuylkill, the rails for some time—"cheap travelling," and which pleting this work so thoroughly and so are of an average weight of about sixty will insure a greater traffic on the lines, and promptly. The whole work is thoroughly pounds to the yard; on the ascending track maintain their stability in these days of raildone with a heavy wooden superstructure, above the junction, thirty-six pounds to the and it is perhaps the best specimen of a rail-yard. These rails are secured by cast iron road with plate in the United States. The chairs, bolted or screwed into wooden sleepre-construction was completed on Satur- ers resting on mud-sills and placed at distan- the benefit of this reduction compared with day, July 5, a third or day train was put on ces of three feet apart. No steam power has last year: -Week ending July 19th, 1844,

Buffalo by the new structure is full one hour Muddy Branch lateral one mile with a dou-showing an increase of 2327 tons in traffic, or one-fifth the former time. A great portion ble track, and have determined to extend a while the difference in the money returns is of the debt created to accomplish this work lateral into the Swatara coal region about 8 only £954 less than formerly-viz., before has been paid by a sale of the increased stock miles, which will be commenced as soon as the reduction in June. For the week endthe company have fixed on the most eligible ing July 26th, 1845, the total receipts for pas-

LONG ISLAND RAILROAD.—The receipts upon this road are increasing rapidly. They were for the first sixteen days in August \$24,14011. This looks well, but it is only the beginning of what it might be, of what it will be, when the managers adopt a of the full benefit of the road. There are hundreds of people in this city who would like to live out of it, and especially on Long Island, if they could be assured that they could go and come at convenient dangers arising from narrow bridges, and narrow hours. To accommodate them trains must run frequently, and what is of equal importance, regularly conductor possible, passengers will thoughtlessly ex-

urb of New-York; and hundreds of families, which could and would avail themselves of a counagement, they may be always sure-as they will have many rivals for the "long travel,"

As a proof of the correctness of the policy for railroad companies, emenating from large cities, to adopt means to create business, we again refer to the report of the Dublin, Kingston and Dalkey railroad, which dents would occur here. will be found in No. 22, or 29th May of present volume. In that report is the following-when speaking of the causes of increase of business, "but there is one of those causes so peculiar that we desire especially to call your attention to it, as it has grown out of that system which you have long since sanctioned, and which after much discouragement has led to such gratifying results in the management of our undertaking, namely, that of endeavoring to create a traffic, and to increase it to the greatest possible extent, by affording to the public the utmost possible accommodation, and at the very lowest rates," and what do you suppose was the result of such a course of measures in the five years terminating 28th February last? It was an increase from 1,280,761 passengers in the year ending February 1840, to 2,234,-£59,833 per mile! Who will deny that the Long Island company may also divide nine per cent. if

RAILROAD ACCIDENT .- A sad accident occurred on the railroad at Albany, on the 21st inst., at the point where it crosses the main street towards the north, or broad-way, by which Mrs. Anthony was killed and Mr. Lyman injured, and the wonder is that all in the carriage were not killed. According to the report the blame rests entirely on the driver MOUNT CARBON RAILROAD—total tons....158,502 George Wilson, of Cohoes, as he was warned by the man in charge of the crossing not to attempt to pass, limbs was the consequence. Is he not liable to the

Now a word to the railroad company, who owe it to the community to use all possible precaution to avoid such accidents—would not substantial posts company the description, which, however, occupied with chains to stretch across the street on each side of the rail track, in charge of a careful resolute man have prevented this? It appears so to us, and we think it your duty to prevent a repetition of similar accidents in future.

The frequency, we like to have said the rapid in crease, of accidents on railroads demands energy and vigilance on the part of those in charge of them. rangements of this road will be seen. They must recollect that many of their passengers system which enables the people to avail themselves have little idea of the various ways in which accidents may occur; they are not familiar with the details, and should therefore be prevented from exposing themselves

We have often felt called upon to speak of the

Correspondents will oblige us by sending in their vance along the line of the road, especially at good strong chains stretched across streets, and a Jamaica, which will in a few years become a sub-swing bar, or a chain at the crossings of high ways which should be always in their place at the hour when the engine should be there, and opened to let try residence by means of the railroad, would enjoy teams pass if need be until the train is within sight more health and happiness. They must also court or hearing. Accidents, on railroads and steamboats, the Long Island business-of that, by proper man- are much more numerous in this country than in England, where the number of passengers who travel is much greater than here; and why is it so? Is it because those who have the management are held to a much more strictaccount? We think so and therefore believe that with greater care fewer acci-

> RAILROAD RECEIPTS continue favorable in this country as well as in Europe. The income on the Central, Georgia, railroad, was \$43,749 greater during April, May, June and July this, than for the same period last year, and \$70,698 greater than in 1843. They will be still greater next year and continue to increase. On the Western railroad the receipts this year, to 16th inst., were \$34,959 greater than last year. At a reduced rate of fare, we are of the opinion that the increase would have been still greater. Such has been the effect of reductions in England, especially on the Grand Junction railway, as was stated in our last number. Others might also be referred to, and we think the Long Island road will prove the truth of this position. They charge their "through" travel lower fares and give them higher speed, we believe, than any other rail-430, in the year ending with February 1845, which road in the country; we wish we could say as much enabled them to pay 9 per cent, on a road which cost in relation to their way-but they will learn wisdom.

> LEXINGTON AND OHIO RAILROAD .- It will be recollected that we recently published a statement in rethey manage properly,—if they accommodate the lected that we recently published a statement in re-people of the city and the Island as they may do? lation to this railroad from the Louisville Democrat, Look to it gentlemen. we have received a letter from a gentleman, an engineer of great experience, who is familiar with this road, its cost, its working, its present business and its future prospects, and he assures us that the estimate given in that statement is entirely within the mark, and may be implicitly relied on. So we think, unless the cost of iron is put too low, and would therefore put the cost of completion and furnishing at \$2,000,000. We are also of the opinion that the traffic is put to low. If the present road of 28 miles yet he presisted and the loss of life and maimed transports 11,000 tons of freight and 18,500 passengers, the road when worked its entire length, 93 miles, will transport more than three times that amount and number.

> > We consider this an important road to Kentucky which ought to be completed without delay-and we are encouraged to believe that it will be under the management of its present able and experienced president Wm. R. McKee, Esq. It certainly will if the people of Kentucky have any enterprize or public spirit-as it will lead to other works of the kind, and open to her city of Louisville an extensive business which she cannot otherwise obtain. By a

CANANDAIGUA AND CORNING RAILROAD .-- A preliminary survey has been made of the proposed route for a railroad from Canandaigua to Corning, deigned as a connecting link between the Albany and Buffalo and New York and Erie railroads. The distance to Corning is 69 miles and the estimated gate-ways into depots. With all the care of the con- cost of road, and appendages, ready for use is 950,-100 dollars, and its net income 119,252 dollars. Or at stated hours throughout the year-that is at cer- pose themselves in passing bridges and in entering 121 per cent. This estimate is based upon a supertain hours during the mild scason, and at other hours depots-structures too narrow, and therefore danger-structure similar to that of the Utica and Syracuse during the winter, and they should run early and ous, in the first place, have become still more so road, but the engineer Mr. Marvin Porter, recomlate, with or without passengers until the people by the increased width of the cars; and they mends a more expensive road—the use of heavier could see that they were sure to get home, up to a should therefore in all cases be made wider as soon iron and puts the cost at 1,306,530 dollars, and so do certain hour at all times, and then they will avail as it is possible to do so; and more effectual meas- we by all means, use the heavy rail, the cost is somethemselves of the railroad, and its stock will take a ures must be taken to avoid accidents at the cross-thing more, yet the expense will be less in the end, high stand in the market; and real estate will addings of high ways and streets. A careful man and the safety greater; therefore use the heavy rail.

Georgia Railroad and Banking Co.

We owe an apology to the gentlemen of this company, for the delay in publishing their report. A copy of it was received at an early date, but was mislaid, and forgotten, but the receipt of a second copy has reminded us amount expended on account of the extension marks on this subject, which, it appears to of our remissness and we now give the engi- of the road, up to this date: neer's report, including a statement of the receipts, from different sources for the year, omitting the monthly statement-and a detailed statement of expenses in working and sustaining the road; that our readers may compare them with the report of last year published in this Journal, pages 246 and 274.

Since the report of last year was made, the road has been extended 26 miles to Covington, and is therefore now 1371 miles in length including 43 miles of branches, when completed as it is to be by 1st Sept., it will be 2141 miles in length. It is to be connected at Decatur with the "State," or "Western may be required for the road this year. and Atlantic Railroad," which is also to be complete to Oostenaula river in September, when there will be a continuous line of railroad of 343 miles, and including branches, of excavations, I have every confidence that the 452, terminating at Charleston S. C., thus entire road will be ready for use by the time which, if she consults her own interest, and extends the railroad to the water-which must make her a place of business; but to move the present obstructions which arise the present time. from having "a carrying place," between the termination of the road and the shipping .-Great difficulties have been encountered, and overcome by this company, and they are now, we are gratified in being able to say, about to realize at least one important object for which they have labored, the completion of their road-and they will, we trust, soon realize another equally important consideration, viz. ample dividends, as they must at no the west, the state cannot expect to receive a distant day, from the amount of travel and remunerating traffic upon her road. With freight which is sure to pass over it.

Engineer's Department,) Geo. Railroad and Banking Co. Augusta, May 1st, 1845.

To the Hon. Jno. P. King, President;

SIR: -Since the date of my last annual report, our road has been extended to Covington, twenty-six miles west of its former position, as an avenue of trade between the terminus at Madison. During the same pe-west and the southern Atlantic states, that riod, the graduation and bridging upon the the Ohio now holds to the northern and midwhole line, with some immaterial exceptions, dle states, and will present equal claims upon have been completed.

the Little Stone Mountain, 17 miles above at a much less cost than upon the Ohio. Covington, and the iron (which has been de-

of the bridge contractor. Within a week, port. But as public attention has been called however, the bridge will be finished so as to to another route, to accomplish the same obpass the trains, and there will then be no far- ject, terminating on the Tennessee lower ther interruption to a rapid continuation of down, which may divide the friends of the the work to its final terminus.

Estimated cost of road, including

.\$162,148 89

Which amount will be sufficient to meet all further demands for construction of road, depots, &c., extend the warehouse at Augusta, and supply such additional machinery as

Leaving to be expended,

Notwithstanding the interruption to the progress of the work, from the magnitude of some of the bridges, and the almost impenetrable character of many of the rock securing that ancient city an amount of trade reported to the last annual convention of stockholders. In connection with the Western Tennessee would then be accommodated, and and Atlantic Railroad (which will be finished to the Oostenaula about the same time,) the Coosa would also be drained.

we shall then have a continuous line of railderive all the advantages which the railroads way from Augusta, of 250 miles-nearly are susceptible of affording her, she must re-double the length of our main line in use at

The extension of the Western and Atlantic railroad beyond the Oostenaula is, for the present, suspended in consequence of the absorption of the state appropriation upon the pers. road below it. It seems to me, however, that its early continuation to the Tennessee, appeals to too many of the incentives that control the actions of individuals and communities, to permit a long time to elapse before the work shall be again resumed. Without this extension to the navigable waters of it, she will not only add greatly to the revenues of her work, but elevate its character, for a mere local improvement, to that of a national thoroughfare, connecting the "fertile Maintenance of cars,.... 16,252 38 west" with all the important markets on the southern Atlantic slope. The completion of Deduct estimated actual the road to Chattanooga, will also place the Tennessee river in the same commanding the general government for appropriations, to

work, and consequently, delay its execution. The following statement will show the I have thought it proper to present a few reme, is so deeply interesting to us, both as citizens of the state and stockholders in our road

> While I am inclined to admit, that a route terminating on the Tennessee, at Gunter's landing, would have been preferable as the original design to that at Chattanooga, I am decidedly of the opinion, in view of the small amount necessary to complete the road as now laid out, and the impossibility of rais-\$894,000 00 ing the capital required to build it on the route proposed, in a satisfactory manner, that it would be both a waste of time and money, to deviate from the present track.

> > In expressing doubts whether the terminus selected for the state road on the Tennessee, at Chattanooga, was the best that could have been obtained, I am not insensible to the many and strong reasons which influenced its choice, and must confess, that even with all the lights now before me, any preference entertained for the Gunter's landing route, would be surrendered, if the navigation of the river between these points should be perfected. The whole of north Alabama and

> > The business of the road, and the expenses incurred in working it, during the year ending on the 31st of March, are shown in the following summary statement. A statement in detail of the several accounts below, will be found among the accompanying pa-

system can be brought about, I am unable to deavor to effect an arrangement which will insure a more perfect communication between this city and Savannah. The trans-immediate direction of Mr. Peters. portation upon the river is now not only dependent upon the stage of the water, but the freight lists of the steamboat companies exhibit rates for heavy articles—especially on those of little value—which, when compared 1,150 30 gation is not more perfect than that of the April 1. 1844, to April 1. 1845.

739 15 Savannah, may be considered extravagant.

Passengers,

and Cincinnati, a distance three times further than from Augusta to Savannah, the rates are only one half of those on the Savannah, or, one-sixth of them per 100 lbs. per mile.

Upon the Alabama river, the rates of freight are also greatly below those of the Savannah. But the chief difficulty on our river route is, the entire absence of boats calculated to run during the frequent low stages of the water. This difficulty will be considered surprising, when it is recollected items, and which could not now be replaced that the water on the most difficult bars, never, as I am informed, falls below a depth of 20 inches—a point which it reaches only once in a series of years. With this minimum depth of water, I am satisfied from the inquiries that I have made, that produce and merchandize can be transported between Augusta and Savannah, at all seasons of the year, provided fair loads can be obtained each way, at a cost of 51 cents per 100 lbs., inpreciation in value of boats. If an average of only half loads, or full loads one way, can be obtained, then 9 cents would cover costs,

'The importance of this subject to the revenues of our company, will be appreciated by those who witnessed the great loss of freight sustained by the road during last season-amounting, at the lowest estimate I can make, to \$15,000-probably much more.

The adjustment of our rates of freight, has heretofore been assigned to the engineer department; but as the extension of the road has greatly increased the importance and responsibility of this duty, I would respectfully suggest to the board the propriety of ap-

Before another meeting of our stockholders, the enterprize upon which they have been so long engaged, will be brought to a final termination; and I trust that they will then begin to receive an adequate return for their capital invested. The period chosen been enabled to get the work executed upon the most favorable terms, but a timely order

In closing this communication, I regret to state, that the company will shortly lose the efficient services of Mr. Peters, who has been associated with me, either on the construction of the road, or the management of its business, from the commencement of the work. His place at the head of the transportation department, will be filled by F. C. Arms, Esq., already favorably known to the stockholders, and who has been for some time fulfilling the duties of the office, under the

All of which, is respectfully submitted by your ob't serv't,

"The toll on a boat load of 50 tons of merchan-

half the cargo to be sugar, molasses, and articles enumerated at 5 mills, and the other half the cargo at 8 mills,..... 235 95

Gain to the owner on a single load, heavy and light articles; and on sugar, mo-lasses, coffee, nails, spikes, iron and steel, the ducts from Buffalo to Albany, would amount at the

Thus the transporter who brings a load of produce from Buffalo to Albany, of 50 tons and returns with a cargo of 50 tons of merchandize, makes a clear gain by the present reduction in the rates of toll, equal to \$113 90. And comparing the rates as established for 1846, with the rates of 1832, and there is a saving to the transporter on two cargoes as before referred to, of \$381 .15, equal to a reduction of one half since 1832."

The Words of Truth and Soberness .- The following extract from a letter dated Ballston Spa, July 24th, published in the Journal of Commerce, contains many important truths The in a very small compass, and we ask for They may rest assured that they have got these roads to build, an 36 exceeded those of the two years preceding the to take effect 1st of August. All non-enume than at any future period. It is therefore for

"I have also visited that omnium gatherum—Saratoga springs. It is crowded in the extreme. Boston is well represented there.— The enterprize of our down east friends in the railroad line—their successful efforts in diverting from us a portion of our trade, is with them a subject of exultation, which they the point or subject upon which they are now most excited. From what I have heard and seen since I left the city, I am convinced that that gigantic work will be executed. Then, when a great portion of our western trade shall be lost, New Yorkers will begin to reproach themselves for not having seasonably put forth their strong arms and held on to their own. This they can do by making the Erie railway. Extend the Harlem to Albany, and complete the Erie, and New York will be safe. Without these two great thoroughfares, much of her trade will be lost to her. She will be tapped at various points. British capitalists have resolved to construct a railroad from Toronto to Detroit, so as to drive more of the western trade down the St. Lawrence. This I have learned from the best authority. Is it not astonishing that, with a bonus from the state of \$3,000,000 our capitalists and business men in New York have not long since raised the three millions required by the late act of legislature? Talk with a Bostonian, and he cannot understand it. "What!" said one, the other day, "cannot the great city of New York raise this comparatively small sum for so great an object-one warranting such strong hopes of large dividends? I made the best explanation that the case admitted of, but almost hung my head for being a New Yorker.

"In regard to the Erie railroad, it must be vigorously commenced now or never. The legislature will grant no further favor, and I have reason to believe, that if the conditions favorable reception. of the act of the last session are not strictly complied with, the three million bonus will be irretrievably lost. The time for raising the three millions by subscription will never be extended. It is to be hoped, then, that our Rip Van Winkles will awake from their false security before the expiration of the term specified in the act. Our late calamity should teach capitalists a lesson. They should learn from it, that stocks may burn; that houses spirit is subsiding. and stores may burn; that mortgages too, may burn with the buildings which constitute their security. Let them then try another basket for some of their eggs-one that has proved such a favorite one with down easters. With them, railroad stocks are regarded as the best of investments."

How true the remark that "stocks may burn" and "houses and stores may burn" where is there an instance, either in this coun- ted at £250, per share for £100, paid in.

their interest to avail themselves of the prestry or in Europe of a judiciously located, ent exceedingly favorable law of the last leg-well constructed and well managed railroad works on this road are advancing rapidly, which does not pay a fair and regularly in- and it is anticipated that it will be in readicreasing interest upon the investment, in ad-ness for use by the 1st of may next. There dition to the benefits and conveniences which is much heavy work on this line, the tunnels it affords to the thousands—to the people |- being 6224 metres—about 33 miles, and the We know not one.

Railroad Lettings.

The directors of the Cheshire railroad are 52 metres or about 170 feet high. do not take much pains to suppress. The ready we understand, to receive proposals for great Northern railroad from Ogdensburgh grading the first section of their road, namely, in the United States interested in the extento lake Champlain, and thence to Boston, is that part of the route which lies between the sion and success of mineral works there, are Massachusetts line, at Winchendon, and now in England, busily engaged in selecting Keene, in New Hampshire.

> We learn from the Belknap Gazette that \$20,000 of the stock of the Boston, Concord and Montreal road is taken in Holderness, and that between \$200,000 and \$300,000 of the stock was subscribed for in Boston up to Friday last. A considerable amount of the stock has been subscribed for in this town.

It is said that the stock is nearly, if not quite, all taken up of the Portsmouth and Concord railroad.

More than half the embankment for the Northampton and Springfield railroad is graded and finished, and the rest will be ready as soon as it is needed for the rails. The bridge at Chicopee is progressing rapidly.

The union of short roads where it can be done strikes us as good policy, as it reduces expenses, and insures greater unity of action; Middleboro and Fall River railroads, have united in one corporation. An engineer we understand will at once proceed to survey the

The Ogdensburgh railroad commissioners are now in Boston, and have met with a very

road directors.

We could never see the policy, or the ne-

PANY,—This Co, it appears by the Railway Chronicle of July 19th, " have reduced railway dues," or charges, "33 per cent. on all land coalfield to river Tees for shipment.and that "mortgages too may burn, with the the trade," and well can they afford to re-

ROUEN AND HAVRE RAILROAD.—The viaduct over the Mirville is to have 50 arches of 10 metres, or 33 feet span each, and

Mining in America.—Agents for parties our best workmen, and engaging them for employment in America: no less than forty of the men at the Bishop Wearwouth Iron-Works have been tempted to give up their employment in England, and to proceed to the United States, to be employed in a manufactory there."

We are always pleased to learn that good mechanics, or other artizans are emigrating to this country—we can assure the editor of the Mining Journal that he need not fear that any of them will be under the necessity of returning again to England: nor need he be surprised to hear within a few years that some of them are iron masters, or manufacturers on their own account-nor even to hear that some of them are members of our state legislatures, or of congress.

Improvements in the Manufacture of Iron. We find the following in relation to the manufacture of iron in the Mining Journal we are therefore pleased to learn that the of 26th. July. At the late meeting of the stockholders in Randolph and Bridgewater, British Association, at Cambridge, Dr. Lyon Playfair read a report, prepared by Prof. Bunsen and himself, on the chemical changes occurring in iron furnaces. During many years the attention of scientific men on the continent had been directed to the employment as fuel of the combustible gases that escaped from the mouths of furnaces. Dr. Playfair and Prof. Bunsen have carefully examined the gasses taken from the different heights A further assessment of ten dollars per of the furnace, and gave tabulated results of share has been made by the Brattleboro rail-their analyses, the results of which were that for the depth of twenty-four feet down the body of iron hot-blast furnaces worked with coal there is no available heat for the melting cessity, of a railroad from Providence to of the metal, the whole of the heat for that Worcester, which it is now thought, will not extent of the furnace being employed in dissucceed, \$300,000 are still wanting and the tilling the coal. The important fact which they established by their experiments is, that in common hot-blast furnaces, as at present STOCKTON & DARLINGTON RAILROAD COM- employed, 91 per cent. of the heating power of the fuel is lost—that is, only nine parts out of one hundred are effective, the remaining portion being carried off in gases. It was proposed, therefore, to collect the gas as coals conveyed over their line from the Auck- it issues from the furnace mouth, and to employ it usefully in various parts of the works, This reduction has been made to enable the though they did not recommend the re-introcoal owners to meet the great competition in the trade" and well can they afford to reresearches had led them to the consideration buildings that constitute their security"-but duce their charges, as their stock stands quo- of a new system of manufacturing iron, which would produce a complete revolution in the

present mode, but they had not had sufficient time to digest the plan to authorize them to recommend it to the association; it would form the subject of their labors for the next

NICOLL'S PATENT SAFETY SWITCH for Railroad Turnouts. This invention; for some time in successful operation on one of the principal railroads in the country, effectually prevents engines and their trains from running off the track at a switch, left wrong by accident or design.

It acts independently of the main track rails, being

laid down, or removed, without cutting or displacing them.

It is never touched by passing trains, except when in use, preventing their running off the track. It is simple in its construction and operation, requiring only two Castings and two Rails; the latter, even if much worn or used, not objectionable.

Working Models of the Safety Switch may be

seen at Messrs. Davenport and Bridges, Cambridge-port, Mass., and at the office of the Railroad Journal, New York.

Plans, Specifications, and all information obtained on application to the Subscriber, Inventor, and Pa-tentee. G. A. NICOLLS,

Reading, Pa. ja45 MACHINE WORKS OF ROGERS, KETCH-um & Grosvenor, Patterson, N. J. The un-dersigned receive orders for the following articles, manufactured by them of the most superior description in every particular. Their works beingextensive and the number of hands employed beinglarge, they are enabled to execute both large and small o:ders with promptness and despatch. Railroad Work.

* THE AMERICAN RAILROAD JOURNAL W. R. CASEY, CIVIL ENGINEER, NO. 23 Chambers street, New York, will make surveys is the only periodical having a general circulation of estimates of cost and reports for railways, canals, roads, docks, wharves, dams and bridges throughout the Union, in which all matters connected machinery, and of patent rights for improvements relating to public works.

KITE'S PATENT SAFETY BEAM.

MESSRS. EDITORS.— As your Journal is devoted to the benefit of the public in gen-eral I feel desirous to communicate to you for publication the following circumstance of no inconsiderable importance, which occurred some few days since on the Philadelphia, Wilmington and Baltimore railroad.

On the passage of the evening train of cars from Philadelphia to this city, an axle of our large 8 wheeled passenger car was broen, but from the particular plan of the construction, the accident to any of the passen-gers, or, in fact, to the conductor himself, until the train, (as was supposed from some circumstances attending the case,) had pass ed several miles in advance of the place where the accident occurred, whereas had the car been constructed on the common plan the same kind of acci-

dent would unavoidably have much injured it, perhaps thrown the whole train off the track, and seriously injured, if not killed many of the passengers.

Wilmington, Del., Sept. 28, 1840.

The undersigned takes pleasure in attesting of the value of Mr. Joseph S. Kite's invention of the Safety Beam Axle and Hub for railroad cars. They have for some time been applied to passenger cars on this road, and experience has tested that they fully accomplish the object intended. Several instances of the fracture of axles have occurred, and in such the cars have uniformly run the whole distance

with entire safety. Had not this invention been used, serious accidents must have occurred.

In short, we consider Mr. Kite's invention as completely successful in securing the safety of property

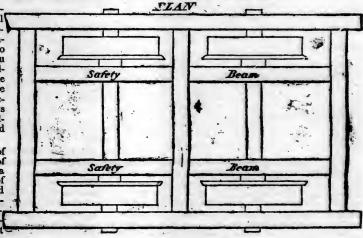

and lives in railroad travelling, and should be used on all railroads in the country.

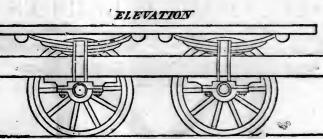

JOHN FRAZER, Agent,

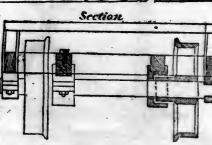

GEORGE CRAIG, Superintendant,

W. L. ASHMEAD, Agent.

JA model of the above improvement is to be seen at the New Jersey railroad and transportation office, No. 1 Hanover st., N. York.

DATENT HAMMERED RAILROAD, SHIP and Boat Spikes. The Albany Iron and Nail Works have always on hand, of their own manufacture, a large assortment of Railroad, Ship and Boat ture, a large assortment of Railroad, Ship and Boat Spikes, from 2 to 12 inches in length, and of any form of head. From the excellence of the material always used in their manufacture, and their very general use for railroads and other purposes in this country, the manufacturers have no hesitation in warranting them fully equal to the best spikes in market, both as to quality and appearance. All orders addressed to the subscriber at the works, will be promptly executed. JOHN F. WINSLOW, Agent.

Albany Iron and Nail Works, Troy, N. Y.
The above spikes may be had at factory prices, of Erastus Corning & Co., Albany; Hart & Merritt, New York; J. H. Whitney, do.; E. J. Etting, Philadelphia; Wm. E. Coffin & Co., Boston. ja45

Adelphia; Wm. E. Coffin & Co., Boston. ja45

PATENT RAILROAD, SHIP AND BOAT
Spikes. The Troy Iron and Nail Factory keeps Constantly for sale a very extensive assortment of Wrought Spikes and Nails, from 3 to 10 inches, manufactured by the subscriber's Patent Machinery, which after five years' successful operation, and now almost universal use in the United States (as well as England, where the subscriber obtained a patent) are found superior to any ever offered in market.

Pailroad companies may be supplied with Spikes

Railroad companies may be supplied with Spikes having countersink heads suitable to holes in iron rails, to any amount and on short notice. all the railroads now in progress in the United States are fastened with Spikes made at the above named factory—for which purpose they are found invalua-ble, as their adhesion is more than double any common spikes made by the hammer.

All orders directed to the Agent, Troy, N. York

All orders directed to the Agent, Troy, N. York, will be punctually attended to.

HENRY BURDEN, Agent.

Spikes are kept for sale, at Factory Prices, by I. & J. Townsend, Albany, and the principal Iron merchants in Albany and Troy; J. I. Brower, 222 Water St., New York; A. M. Jones, Philadelphia; T. Janviers, Baltimore; Degrand & Smith, Boston.

*** Railroad Companies would do well to forward their orders as carly as practicable, as the subscriber

their orders as carly as practicable, as the subscriber is desirous of extending the manufcturing so as to keep pace with the daily increasing demand.

FRENCH AND BAIRD'S PATENT SPARK ARRESTER.

70 THOSE INTERESTED IN Railroads, Railroad Director and Managers are respectfully invi ted to examine an improved SPARK ARRESTER, recently patented by

the undersigned.
Our improved Spark Arresters have been extensively used during the last year on both passenger and freight engines, and have been brought to such a state of perfection that no an noyance from sparks or dust from the chimney of engines on which they are used is experienced.

These Arresters are constructed o an entirely different principle from any heretotore offered to the public The form is such that a rotary motion is imparted to the heated air, smoke and sparks passing through the chimney, and by the centrifugal force thus acquired by the sparks and dust they are separated from the smoke and steam, and thrown into an outer chamber of the chimney through openings near its top, from whence they fall by their own gravity to the bottom of this chamber; the smoke and steam passing off at the top of the chimney, through a capacious and unobstructed passage, thus arresting the sparks without impairing the power of the engine by diminishing the draught or activity of the fire in the furnace.

These chimneys and arresters are simple, durable and neat in appearance. They are now in use on the following roads, to the managers and other officers of which we are at liberty to refer those who may desire to surphase or obtain furnation in regard to their mainters.

on the following roads, to the managers and other officers of which we are at liberty to refer those who may desire to purchase or obtain further information in regard to their merits:

** The letters in the figures refer to the article given in the Journal of June, 1844. ble terms.

BENTLEY'S PATENT TUBULAR STEAM BOILER. The above named Boiler is similar in principle to the Locomotive boilers in use on our Railroads. This particular method was invented by Charles W. Bentley, of Baltimore, Md., who has obtained a patent for the same from the Patent Office of the United States, under date of September 1st, 1843—and they are now already in successful operation in several of our larger Hotels and Public Institutions, Colleges, Alms Houses, Hospitals and Prisons, for cooking, washing, etc.; for Bath houses, Hatters, Silk, Cotton and Woollen Dyers, Morocco dressers, Soap boilers, Tallow chandlers, Pork butchers, Glue makers, Sugar refiners, Farmers, Distillers, Cotton and Woollen mills, Warming Buildings, and for Propelling Power, etc., etc.; and thus far have given the most entire satisfaction, may be had of D. K. MINOR, 23 Chambers st. New York.

PATENT BRIDGES' CAR AND

DAVENPORT & BRIDGES' IMPROVED PATENT IRON TRUCK FOR RAILROAD CARS, is presented above, and the attention of Railroad Companies is respectfully invited to the following description of their justly-

RAILROAD IRON AND LOCOMOTIVE CUSHMAN'S COMPOUND IRON RAILS. TO RAILROAD COMPANIES AND BUILDtyres imported to order and constantly on hand

Output

Cushman's Compound Iron Rails. To Railroad Companies and Builders.

To Railroad Companies and Builders.

To Railroad Companies and Builders. 4 South Front St., Philadelphia. THE NEWCASTLE MANUFACTURING

THE NEWCASTLE MANUFACTURING Company continue to furnish at the Works, situated in the town of Newcastle, Del., Locomotive and other steam engines, Jack screws, Wrought iron work and Brass and Iron castings, of all kinds connected with Steamboats, Railroads, etc.; Mill Gearing of every description; Cast wheels (chilled) of any pattern and size, with Axles fitted, also with wrought tires, Springs, Boxes and bolts for Cars; Driving and other wheels for Locomotives.

The works being on an extensive scale all orders

The works being on an extensive scale, all orders will be executed with promptness and despatch.
Communications addressed to Mr. William H. Dobbs, Superintendent, will meet with immediate attention.

ANDREW C. GRAY,

President of the Newcastle Manuf. Co.

guarding against accidents from insecure joints, etc.

—respectfully offers to dispose of Company, State
Rights, etc., under the privileges of letters patent to
Railroad Componies, Iron Founders, and others interested in the works to which the same relate. Companies reconstructing their tracks now have an opportunity of improving their roads on terms very a vantageous to the varied interests connected with their construction and operation; roads having in use flat bar rails are particularly interested, as such are permanently available by the plan.

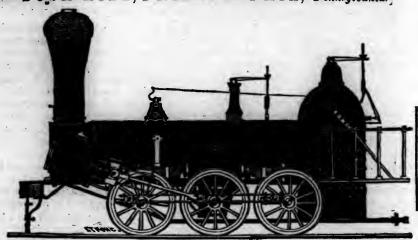

W. Mc. C. CUSHMAN, Civil Engineer,

Albany, N. Y.

Mr. C. also announces that Railroads, and other works pertaining to the profession, may be constructed under his advice or personal supervision. Applicaitons must be post paid.

NORRIS' LOCOMOTIVE

BUSH HILL, PHILADELPHIA, Pennsylvania.

MANUFACTURE their Patent 6 Wheel Combined and 8 Wheel Locomotives of the following descriptions, viz:

Class . 1. 15 inches Diameter of Cylinder, × 20 inches Stroke. × 24 14 × 20 " 145 te . . " 121 33 66 6: 66 \times 20 66 -" × 20 660 111 66 66 66 101 66 66 \times 18 66

With Wheels of any dimensions, with their Patent Arrangement for Variable Expansion. Castings of all kinds made to order: and they call attention to their Chilled Wheels for the Trucks of Locomotives, Tenders and Cars.

NORRIS, BROTHERS.

PASCAL IRON WORKS.

WELDED WROUGHT IRON TUBES

From 4 inches to 1 in calibre and 2 to 12 fe capable of sustaining pressure from 400 to per square inch, with Stop Cocka, T, other fixtures to suit, fitting together, wit joints, suitable for STEAM, WATER, GAS, LOCOMOTIVE and other STEAM BOILER F

Manufactured and for sale by MORRIS, TASKER & MORRIS.

Railroad Disasters.

to note the accidents on railroads.—We learn cents for motive power. says the Salem Register, from the Traveller, Portsmouth, Saco and Portland railroad, ran into each other yesterday morning, near Wells. One of the large cars was smashed 12 for use, 87,792 to pieces, but no person was injured.

There has been a perfect glut of railway accidents—on many railways, and sometimes more than one on each.

On the Birmingham railway, two. train going, in a mist, at the rate of thirty miles an hour, was driven into another; one person's leg was smashed, and several were bruised. An engine driver's leg was crushed while he was looking at an engine that was out of order.

On the Dover railway, one. In consequence of some mistake about lights, one train ran into another: a person's leg was broken, a second suffered dislocation of the jaw, a third injury to the spine, and more were

On the Eastern Counties, one. Two engines, one at each end, were employed to propel a train; there was a concussion, and several persons were badly hurt.

On the Midland railway, two. was killed by the swinging round of a truck on a turn table. A stoker's leg was smashed by the collision of two mineral trains.

On the Great Western, two. A guard was knocked off a platform while asleep.— A laborer, waked up from sleeping in a dangerous place, was frightened, ran in the way of a train, and was killed.

On the Edinburgh and Glasgow railway, one. A drunken porter was jammed between two carriages, and killed.

Of these nine bad "accidents" on six railways, there is but one—the last, if that can be accounted an exception—that was not the result of gross carelessness—but one which the smallest forethought and system might have prevented .- [London Speciator.]

Railways and Canals.—In the appendix and statement issued on behalf of the Grand canal company of Ireland, in the matter of the proposed railway to Cashel, there are given some curious details as to the effect of rail-way on canal property. Thus the Grand way on canal property. Junction canal, which forms the first ninety miles of water communication between London and Birmingham, had, in three years immediately preceding the opening of the railway, an annual revenue from tolls, ranging from £174,722 to £198,000 regularly increasing. Since the railway has been fully in operation, this revenue has varied from £121 139 to £113,012. The Rochdale canal is 33 miles long, and throughout the entire distance the Manchester and Leeds railway runs parallel to it. In three years previous from £62,069 to £59,259; In the last three years they have varied from £31,533 to £27, 165. The Kennet and Avon canal, are both the tolls of the former have fallen since the rates. railway was opened from £46,703 to £32,045, the expenses of transportation, including the from £330 to £180; Worcester and Bir-iron.

states that a most marvellous discovery has maintenance of the road. This is equal to mingham, from, £84 to £55; Kennett and been made at St. Etienne, of rendering glass 1-2 cent per ton per mile; applied to the 94 Avon, from £25 to £9; and Rochdale, from as malleable when cold as when first drawn miles of Reading road, would make the cost £150 to £61 1-2 while Coventry canal shares, from the pot. This substance, which is called of transportation on this road, per ton 47 cts. which were at one time as high as £1,200 But Mr. Pease estimates the expense of have fallen as low as £315.—[Herpath's

The English Iron Trade.

" The Iron Trade .-- The usual quarterly Stourbridge yesterday—the meeting at Dud-ley this day, for the settlement of prices, is looked forward to with much interest. Every These deliver daly 4,100 tons of coal, and description of manufactured iron having been reduced in price in the last thirteen weeks from 20 to 25 per cent, the great hope of the trade Wear and tear of cars as follows: 1600 now is, that it will not be any lower, if it should that the freight and gravel trains, on the wooden cars and 1500 iron cars, average cost not rise, though many begin to be thoroughly \$236. Total cost, \$731,600. Average load aware that too sanguine ideas were enter-4 tons each. According to Lowell rates for wooden cars, which would arise from the numerous speculations afloat; a very great number of these will not be carried out at all, and the consumption of iron of those which are, will be spread over a much longer period than was anticipated. The price of bar iron is now nominally 10l. per ton at the works, though many sales have been effected for considerably less; the demand is still dull, and it is evident stocks are accumulating.

"The business in iron, says a correspondent of the Mining Journal, has been very limited this week, in consequence of the near approach of the quarterly meetings of Staffordshire masters, at which a reduction was generally expected; at the Birmingham meet-ing, yesterday, a fall of 40 shillings was de-clared on Staffordshire iron, and it is thought likely that Welch will give way a few shillings per ton. In Scotch pig very little has been done—60 shillings being the highest at which buyers to any extent can be found. Russian and Swedish are not in request.

"English iron continues very flat; Staf-fordshire prices again reduced 2l. per ton, making the present selling price for bars Sl. per ton at the works. In Welsh no alteration. Scotch pig iron has been sold at lower rates, and may now be quoted at 60s. buyers, and 62s. 6d. sellers. The demand for English lead continues at quotations. Tin plates dull of sale. In spelter the market is not so to the opening of the railway the tolls ranged good; considerable sales reported in the early part of the week at 241., but it is now to be bought on easier terms."

Thus it will be seen that the prices of affected by the Great Western railroad, and iron are coming down again to reasonable

We have letters dated London July 16th, and of the latter, from £18,328 to £8,476.—
The Fourth and Clyde Navigation has gone from which we learn that railway iron could Striking Coincidence.-Mr. Pease, the down from £62,516 to £42,218: and the then be got for £9 per ton-less 5 per cent. manager of the greatest coal railroad in Union canal, which connects Edinburgh with for cash. It is thought by well-informed per-England, in his testimony before a committee of the house of commons, relative to the cost of carrying coal on the newly projected railroad from York to London, says, that 1-4 shares in the Grand Junction have fallen of 70 to 75 lbs, will require large amounts of the eveness of transportation including the form £320 to £180. We receive and Bir.

New York and Eric Railroad.

\$24,771 \$34,959

Excess' in 1835.\$10,188

In our number for 10th July, we announced the er suitable person could be selected to fill the station. tract from a private letter, written by a friend at our share more," will do the work.

be-and we have good reason to believe that he ishe will command the confidence of the capitalists, million of dollars already subscribed by a few individuals, who will doubt that the remaining two millions will be subscribed by the thirty thousand capitalists, merchants, and business men of this city within the next sixty days, if the subject is properly brought before them by the directors and the press? We do not-and therefore look forward, with entire coufidence to an early commencement of work again tion conveyed in his letter. upon the line, and to its energetic prosecution until opened to lake Erie.

We shall refer again soon and often, to the subject and annexed we give the proceedings of the board at its last meeting, and a list of the directors and officers.

Office of the New York and Erie R. R. Co. August 30, 1845.

At a meeting of the directors of the New-York and Erie railroad company held this day, the Hon.

Jas. Harper, after expressing his regret that his extensive private business put it out of his power to discharge the duties of acting president, tendered his resignation.

nis resignation.

Benjamin Loder, Esq., was thereupon duly elected president of the company.

Shepherd Knapp, Esq., and Samuel Marsh, Esq., were chosen to fill vacancies in the board.

The board now consists of the following mem-

Benjamin Loder, Jacob Little James Harper, Henry Sheldon, Silas Brown Henry Suydam, Jun. Daniel S. Miller, Henry L. Pierson, Robert L. Crooke, A. S. Diven, John Wood William E. Dodge, Stewart C. Marsh Shepherd Knapp,

By order of the board, T. S. Brown, acting secretary.

Correction of Errors.—In our efforts to correct appointment of James Harper to the presidency of those errors into which we have inadvertantly fal-New-York and Erie railroad company, and con-len, it sometimes occurs that we are led into others gratulated the community upon the event, believing less pardonable. This appears to be the case in at- and Montreal railroad. It will be about 50 miles as we did, that he might be eminently instrumental tempting to correct the figures, in our table of Amer- in length and is estimated to cost \$961,520 when in accomplishing that important work; we soon ican railroads, opposite the Petersburg and Roan-equipped ready for use. Maine is in a fair way to learned however, much to our regret, that his accepoke, or "Petersburg," railroad. We took the libbecome thoroughly aroused to the importance of
tance was merely temporary, or only until some otherty to publish in the Journal of 26th June, an exrailroads, and the motto of her young men, "one

Correspondents will oblige us by sending in their The appointment of Mr. Harper was looked upon, repeated solicitation through the Journal, to enable we have reason to believe, as an excellent one; and us to correct any errors in the tables of railroads and many of the friends of the road, who had become canals which might be discovered. By referring to disheartened, were again cheered with the hope of that number of the Journal it will be seen that othan early commencement, and vigorous prosecution, er important errors were pointed out in the extract of the work, only to be again disappointed when referred to beside those in the "Petersburg and Rothey learned that he declined the post. We were of anoke railroad," from which it will, we are sure, the number who thought he ought not to decline, but be inferred that the writer had no design to do injusrather to step boldly forward, assume the helm, and tice to his neighbors by the statement given. He set an example to the merchants, and capitalists of knew that we desired to give the facts—the simple this city, by subscribing at least one hundred thou-truth in these tables; and he is also aware, and we sand dollars to the stock of the company. He how- wish others to know, that we are always ready to ever thought, and acted differently; and therefore publish any proper statement from the parties interthe directors have made choice of Mr. Benjamin ested in explanation of those facts. It is however LODER-late a merchant of this city, but now retir- exceedingly unpleasant to be either inadvertently or ed from business with an ample fortune—to be the otherwise, made the instrument of casting unjust president of the company. We have but a slight imputations upon any one, but more especially upon acquaintance with Mr. Loder, but understand that those who have endeavored to aid us in giving corhe is a thorough, systematic business man, who has rect information; and we feel that injustice has been been eminently successful in his own business; done, unintentionally we presume, to us as well as that he has entire confidence in the early completion to our correspondent, in the letter of H. D. Bird, of the work, and the value of its stock as an Esq., president of the Petersburg railroad compainvestment, as is evinced by his subscription, ny-published in the hurry of business without comwhich is larger than that of any other person; and paring it with the original, in the Journal of the that he will devote his best energies to the vigorous 31st July—and republished Aug. 21st, to correct sevand economical prosecution of the enterprize. If eral typographical errors—in not giving entire that Mr. Loder is the man we have represented him to part of the letter of our correspondent from which his quotations were made-and especially the last line of it. Mr. Bird must be aware that in giving and business men of New-York; and, with the the statements of a writer, justice requires that his whole statement, in the connection, be given without. mutillation, unless the quotation is so made as to show that something is omitted; and on reflection. we are convinced that he will perceive that the omission of the last line of the extract given by us from our correspondent's letter, which was an essential one, furnishes the only foundation for the insinua-

It has been our misfortune in a few instances, to publish statements, from those in whom we had entire confidence-and therefore without the proper scrutiny-bearing upon others to which, could we have seen all the bearings, we should have applied the knife-or rejected them altogether-yet it has been, as it will ever be our aim to avoid personalities, and we have a right to expect that our correspondents will omit all private, or personal matters in their communications to the Railroad Journala work designed to aid the cause, not to injure its friends.

#### Railroad Convention at Poughkeepsie.

There is to be a railroad convention at Poughkeepsie, on the 16th of the present month, in relation to a railroad from New-York to Albany. It is to be hoped that the friends of this important work will show their interest in it by their attendance, and that measures will be taken which will ensure its early construction, upon that route which will accommodate the greatest number of people and amount of business. We shall probably refer to it again in our nuxt number."

#### Kennebec and Androscoggin Railroad.

We find in the last Portland Advertiser, a statement that Mr. Hall has made an exploration of a route for another railroad in Maine. It is designed to open a communication from Waterville, or some other town on the Kennebec river with the Portland

#### The Railroads of Belgium.

With a notice of the other modes of Internal Communication-translated and abridged from "La Belgique et les Belges," by Major G. T. Poussin, formerly of the U.S.E.

BY G. C. SCHAEFFER, C. E. For the American Railroad Journal.

Engines, Cars, etc.—On the first of January, 1845, the number was as follows, including those in repair or in construction.

Locomotives ...... 146 Wagons for merchandize, cattle, carriages, etc.. 1908

Average number of locomotives per myriametre, (5 1-5 miles) of road.

In England..... 4 France ..... 4 Germany ..... 2 United States, less than ..... 2

The greater part of these has been furnished by the Belgian shops-so famous for machinery of all kinds. The model selected was that of Stephenson with the latest improvements. These locomotives cost 38 to 40,000 francs each.

The government has also decided upon the construction of twelve new locomotives after the model of those furnished by the celebrated manufacturer, Wm. Norris, of Philadelphia. These are intended Receipts—1st class. 1,591,134 or 4 39 per passenge for the section of the Vesdre-the most unfavorable portion of the line both for grades and curves.

The cars are very well built, about 10 feet wide, with wrought iron wheels, and furnished with spring bumpers, and brakes; most of the passenger cars are covered.

MOVEMENT OF 1844; EXPENSE OF WORKING.-The movement of 1844 was over 347 miles; 143 locomotives, which together ran 2,485,305 kilometres, divided as follows.

1,632,155 kilometres by the passage trains, 853,150 " burden trains, the passenger trains constituting 651 per cent. of the entire movement.

Of the 143 locomotives it was necessary to fire up each day 48, or one third the entire stock. Similar proportion holds in France and in England; the proportion of engines fired in the United States is or 19 eents per mile. much smaller. The average travel of each engine fired has been 95 kilometres.

The expenses of 1844, amounting to 5,765,430 fr. gives 14,313 fr. 64 c. per kilometre of road, or 2 fr. 32 c. per kilometre of the travel.

Detail of expense of working.

ATLANTIC AND ST. LAWRENCE RAILROAD. A meeting was recently held at Portland for the purpose of arousing still more, the people of Portland, in relation to this road, and they the road and rather than not to have it each owner of real estate had better give one-third of it, and never receive a penny in return, as dividend or otherwise, than not to have it. The balance with the road will be worth lis, and second, because no other part of his this will be if carried through.

Quantity of fuel per engine per kilometre and property will give him as good returns as that which he puts into the stock of this road, when the road shall have been two years in use through.

> MONROE RAILROAD AND BANKING Co .-We perceive by the last Macon Messenger, that Andrew R. Moore and others, are about to contest the legality of the sale of this railroad and caution the purchasers not to take

> BOSTON, CONCORD AND MONTREAL RAIL-ROAD .- We have the report of the engineer, Wm. P. Crocker, Esq., of the survey from Concord to Haverhill N. H., passing through several important manufacturing villages and the romantic region of the Winnipissiogee lake in its way. This road is designed to open an easy communication between Boston, Lowell, Nashua, Concord and Haverhill, together with the upper valley of the Connecticut river, and also to reach Montreal if possible .--We had entertained the opinion that the upper valley of this river would be reached by a railroad from Concord to Lebanon, and thence up the valley of the river, but it appears that the good people of Hanover, Lyme and other towns on the river are something like the citizens of New-York, waiting on providence to make railroads for them, while the people of the inland manufacturing villages are more like the Bostonians " up and at 'em"-and thus make their own railroads, and we like them for it, therefore they will, if they "go ahead" receive the hearty cooperation of this Journal.

> From the report and the statistics which accompany it, we are led to entertain favorable views in relation to the route. The distance from Concord to Haverhill is 81 miles; and the estimated cost, including machinery and every thing ready for business \$2,090,-546 66.

According to the statistics of travel and transportation which must fall upon this road, it will be a good investment. The iuvestigation gives 68,000 tons freight, at an average of \$3,00, and 46,000 passengers at £2,00, making the gross receipts \$296,000, and the must be aroused, they cannot now do without expenses of working are put at \$84,000 leaving \$212,000 to be divided. The report gives very minute details and at considerable length, but we merely give the recapitulation and table of gradients.

The people on the line of the road appear more than the whole without; he must there- to be in earnest, and they will doubtless refore subscribe freely, he cannot afford to do ceive important aid from those interested in otherwise for two reasons; first, because on the line from Concord to Boston and also the completion of the road the real estate of from the citizens of Boston who have a

In the foregoing estimate for the superstructure the undersigned has adopted the present most approved rail, weighing 56 lbs. to the yard, with chairs of cast iron, spikes, longitudinal sills, sleepers, etc., such as are used upon the best constructed railroads.-The price of the rails he has computed at what is supposed to be their present cost, \$75 tion, and economy, it is unrivalled by any per ton. A difference of ten dollars per ton proportion for a greater or less variation.

excavation is computed for a road bed twenty The estimated cost from actual survey in the west—a proportion of the southern popfeet wide cuts, and fifteen feet wide on einbankments, with the usual slope of one and a half to one—and with a slope of an inch and H rail, in the most perfect manner, the cost be the great point of attraction. a half to the foot, in rock cutting. The prices, as will be seen, are such as will readily secure the services of the best and most effi-

cient contractors.

In conclusion the undersigned would remark that all his estimates having been made a very careful and minute survey; and in making them he has not been governed by a desire to present the cheapest possible rate at which a railroad can be constructed over this route; and he has endeavored to avoid the too frequent error of under-estimating the cost of projected works of this kind. He has been governed throughout by the supposition that the road, in all its parts, is to be of the best materials, made in the best manner, upon the most approved plan for a permanent, economical & thoroughly built railroad. And feels great confidence in saying that the construction of such a road with all its furniture and fixtures will not exceed the estimates here exhibited. Respectfully submitted, WILLIAM P. CROCKER.

Angust 1845. Civil Engineer.

ALTON AND SPRINGFIELD (ILL.) RAILROAD. We are pleased to see the people of Illinois Ve are pleased to see the people of Illinois route intersects the Welland canal, grand The importance of this connection between or rather the editor of the Alton Telegraph river navigation, port Dover and London the works of these two great states is not

81 miles.

-moving in relation to railroads. or rather to Alton passing through Springmoving on the subject.

NIAGARA AND DETROIT RAILROAD.-We for the like distance. find in the Detroit Free Press, the following prospectus of this road. It comprises much in small compass; places the enterprise fairly before the public-and will, we think, \$2,090,546 66 command attention.

The Niagara and Detroit rivers railroad is designed to connect Buffalo with Detroit, and extend the great western railroad in one continuous line from Boston to the head of lake Michigan, and ultimately to St. Louis.

road for a similar distance. It will be near-In the estimate for grading, the amount of and averages less than two feet in the mile. may extend to two and one half millions.

> Income.—One thousand people are supposed to pass through Buffalo daily, during the travelling season-from whence there is but to increase to two and one half millions of one means of communication to the west, dollars—half a million of which is to be ofnamely by lake Erie. The communication eastward is by the falls of Niagara, Canada, lake Ontario, the Erie canal, and the Buffalo and Attica railroad. Notwithstanding these numerous channels, the latter is selected as the basis on which a safe, durable, and profitable investment is anticipated.

It appears from the statistical returns furnished by the Secretary of State for New York, in March 1845, that during the year 1844, from December to April, five months, 63 persons, including way-passengers, passed each way, daily, over the Buffalo and Attica road.-although lake Erie was not, during this period, navigable-130 days X 136 passengers=17,680 at \$5=88,400. In May, October and November, the travelling increased to 126 each way. During this period the navigation of the lake is considered hazardous—78 days X252=19,968, at \$5= \$90,840. From June to September, four months travelling increased to 182 each way, 104 days X 364=37,856. An active competition from lake steamers, may at this season be looked for, during which the fare should be reduced to \$3-\$113,563-making in all for the three periods, \$301,804which would yield an interest of ten per cent. on the capital, and leave a rest of \$51,308 per year.

Way fare through Canada.—This part of the line is left to balance the repairs of the road and the expenses of management. Although no remuneration is estimated, the tion.

There plank roads, and various other communicamust be a railroad from Chicago to St. Louis, tions leading from numerous villages, and a dense agriculiural population in the interior, field; and it is quite time the people were to what will pass from point to point, is likethe travel and freight from which, in addition ly to yield the same returns as other lines

Future Prospects .- Having no population or travel, to create, to insure an immediate revenue-any additional calculation may be considered superfluous—but when wesee the travelling over Buffalo road increase from 136 passengers per day—when the western country is excluded-to 256, when the navigation of lake Erie is considered hazardous, and to 364 when fairly opened, notwithstanding the competition east of Buffalo-it cannot be considered unreasonable to double those numbers, when a perfect and better communication is opened to the eastern terminus of the western road, which may be passeed in 8 or 10 hours. Neither can it be in the price of iron, would change the cost ly in a straight line, having only two gentle tension of the same line to the confluence of of construction \$880 per mile, and in that curves in a distance of 222 miles. > Proposed plan of Proceeding .- The capital authorized by the existing act of incorporation is two millions, which it is proposed fered in the United States, half a million in Canada, and the residue in London. It is desirable no time should be lost in obtaining subscriptions for the capital, that the work may be early commenced, with a view of completing the same the ensuing year. In behalf of the shareholders.

> > W. HAMILTON MERRITT.

#### Williamsport and Elmira Railroad, and the Tioga Navigation and Railroad Company.

It will be recollected by our readers that we sometime since published the report made by Mr. Trautwine of his survey of a route for a railroad from Ralston to Blossburg, Pa., by which the two roads named above would be connected, thus opening an easy communication between the interior of Pennsylvania, her coal and iron region, with the state of New-York, her canals and railroads.

Mr. Trautwine was limited by other engagements in time, and therefore examined only one route, on which he found grades of one hundred feet per mile-but by a more thorough examination it is found that the connection between the two roads can be made with grades not exceeding 70 feet to the mile—as will be seen by the following statement furnished by a gentleman who was one of the party who made the recent examina-

The importance of this connection between

the map it will be seen that a road from Bal-connection. timore, via. York, Columbia, Harrisburg, his examination, was not sufficient to enable northern Pennsylvania, abounding in bitu-banville, Williamsport, Ralston and Bloss-him to survey other routes for the same purminous coal and iron. Both believed to be crow flies or by an air line does not exceed 285 miles, while by the way of Philadelphia, New York and Albany it is over 550 miles, and one of the peculiar features of the inland route is that it connects five great thoroughfares from the Atlantic south and west, viz. from Baltimore south & west: from Philadelphia to Pittsburg and west; from New-York westward by the New-York and Erie railroad and from New-York and all New-England westward by the northern, and longest in the world, line of railroad from Portland to Buffalo. The country through which this line will be constructed cannot be surpassed in this country for its fertility as an agricultural region, for its rich deposits of iron and coal, for its unrivaled water power, and its facilities for intercommunication are unequaled anywhere; and to complete this line of railroad there must be constructed 69 miles from Canandaigua to Corning; 30 vey and examination. A pathway had been miles from Blossburg to Ralston, the road re- previously cut through the woods to facilitate ferred to in the following article, and the the execution of the work. remaining link from Wrightsville to Harrisburgh, and perhaps a short link between Harrisburg and Williamsburg to straighten the line, the distance we do not know but less Williamsport and Elmira railroad, eastward probably than one hundred miles! will deny the importance of the early con-stream which rising near the summit of the struction, and the value of the stock as an investment of this road?

It has been much desired, since the railroad from Blossburg, in Tioga county, Pa., creek, about five miles above Ralston. to Corning in the county of Steuben, New-York, has been finished and in operation, and the level was carried up the first ascent, or the Williamsport and Elmira railroad, has creek hill next the Lycoming creek; and been made from Williamsport to Ralston, in thence crossing the Elkvalley to the summit Lycoming county, Pennsylvania, that a con- of the Elkridge, at an average elevation of nection by railway could be effected between 70 feet to the mile, the entire distance being Robert Faries, Esq., may before long be published for the full information of all interes-

It ri- the Elkridge. the present railroad at Saratoga Springs, and from thence reach the High Falls on Black river, in the town of Grey, Lewis county opposite the town of Turin; and then follow the valley of Black river to Sackett's Harbor, branching off to Kingston in Canada, by way of cape Vincent.

A thousand new routes for railroads might be suggested, which, if built, would promote the interest of individuals, and certain places, and accommodate a large number of people-yet the shareholders would not derive adequate return nor would the general benefits resulting to community in the increased value of property be sufficient to warrant the to belong. There are two classes of railroads which ought to be built,—the first is where great public interest will be promoted; where an easy, rapid and cheap communication will be opened between two important pointsand thereby benefit communities, these should be built even at the public expense if individual enterprize is not equal to the task. These should be built even if the immediate returns will not meet the interest of the outlay. other class is where many interests will be promoted, and the returns are sure to be ample, or remunerative to those who invest.-Wherever this is sure, there railroads aught to be allowed under general laws, without for having removed from my premises. a special charter.

BENTLY'S IMPROVED TUBULAR BOILER. We desire to call attention to the advertisement of Messrs. Force, Green and Co., manufacturers of this valuable article for private families, hotels and manufactories, etc., etc.-For all purposes where hot water is required in considerable quantities-for cooking, washing, bathing, or heating dwellings and factories, prisons etc., etc.; or for driving machinery requiring one to ten horse power, they will be found it is believed the cheapest, both in the first cost, and in the quantity of fuel required, and the most convenient of any boiler now in use. They are complete in themselves, and ready for use on making the necessary connections, without any brick work, and can be moved from place to place with as little trouble as a stove of equal weight, by disconnecting the water pipes. They have been in use it seems in Baltimore and Philadelphia, for two or three years as will be seen by the accompanying statements; and are also used extensively in and about in fuel of about two-thirds: which saving Boston. It is only recently, however, that would, in one year, nearly pay the entire exthe manufacture has been commenced in this pense of the new establishment. estimation in which they are held by those stitution. ing purposes.

of March, 1843.

Messrs. Bently, Randall and Co., Gentlemen,—Eor several years past, I have had in the wash-house of this establishment two large pots, set up in the usual way in brick, with furnaces below, for burning wood. The washing of the house is very large, and oc cupies the whole time of four or five women, rolling mill in this country. "The Montour and requiring a great deal of hot water, I found the two kettles quite incompetent to supply my wants, although they consumed expenditure, and of this class, we imagine an incredible amount of wood. After much the one indicated by the writer in the Argus persuasion, I consented that one of your Generators might be put up on trial in my washing department, but as we are so often humbugged by those new inventions, I determined not to interrupt my former plans, or remove any of my old fixtures, as I was quite incredulous of the advantageous result of the experiment. Your Generator has now been in operation in my washing-rooms for several weeks past, all the old kettles and furna ces have been removed, and the new arrangement is much more satisfactory and complete than I could have expected. Instead of the enormous quantity of wood formerly used in the old furnaces, I boil five times as much water now in half the time, and keep it boiling day and night, with about half a bushel of refuse coal, which I have heretofore paid for having removed from my premises. The cost of fuel now is nothing. The work is done in an expeditious, safe and superior manner, and if I could not immediately procure another of your Generators, I would do myself great injustice by parting with it for five times its cost.

t. I am respectfully, W. Gadsby.

Copy of a report of a Committee to the House of Refuge, Philadelphia.

The undersigned committee, appointed on the subject of Bently, Randall and Co.'s Steam Generator, report, they have had one of said Generators, with the necessary Boilers put into operation at the house of Refuge, which has been in use for several weeks, and from the experiments already made, the information received from the officers of the house that have had it in charge, the committee are decidedly of the opinion it obtains many advantages over the former plan for cooking and washing by steam, both as respects economy in time as well as in money. Under the former arrangement, there was consumed about nine barrels of anthracite mittee, for the reasons given, think there can be no doubt as to the propriety of purchasing for the use of the house of Refuge the aforesaid steam Generator, with the necessary fixpromptly attended to at this office.

142 Front street, New York.

Torders for the above will be received and promptly attended to at this office.

The following statements will show the tures for the cooking and washing at said in-They therefore recommend that who have used them for hot water and cook- an order be drawn for \$161 30, in favor of Morris D. C. Marsh, Agent for Bentley, Randall and Co., being in full for the accompa-National Hotel, City of Washington, 20th nying bill, all of wuich is respectfully submitted.

> THOMAS EARP. THOMAS TELL, Committee. M. L. D. Anson, PHILIP GARRETT, May 11, 1843.

Mill," at Danville, in this state, has gone into operation this week. The machinery, from the works of Haywood and Snyder, of Pottsville, is said to be a proud triumph of American art.

This mill is intended for the manufacture of railroad iron. It deserves the hearty good wishes of every American for its efforts to free us from another heavy link in the chain of our dependence upon British labor. - [Reading Gazette.]

St. Helen's Canal and Railway.-Mr. Pringle reported from the committee on Group (VV), that the object of the bill was merely to authorize the amalgamation of the Sankey Brook navigntion with the St. Helen's and Runcorn Gap Railway, that they had examined the allegations of the bill, and found the same to be true, and had gone through the bill and made several amendments thereunto.- Herapath.

We call the attention of our readers who are interested in railroad contracting, to the following notice of the Cheshire, N. H., railroad company; and at the same time, would say to the president of the company, send your notices earlier next time, that contractors at a distance may have a chance. TORS PROPOSITION

TORS. PROPOSALS will be received at Keene, N. H., until the 10th September, for the Grading, Masonry and Bridging, upon the First Division of the Cheshire railroad, extending from the State Line of Massachusetts, in Winchendon, to Keene, N. H.
Bide will be received for the career seth divisions.

Bids will be received for the same in sub-divisions, separately, until said time, the Board of Directors reserving until 13th of said September to make known their decision.

For Plans and Specifications reference may be had after the 25th instant to T. M. Edwards, Keene, W. S. Whitwell, Walpole, and L. Tilton, Fitzwil-

liam, N. H.
It is expected that the work shall be commenced as soon as may be after the contracts are closed. THOMAS M. EDWARDS,

President, Cheshire Railroad Company, W. S. WHITWELL, LUCIUS TILTON, Engineers.

36 It coal per week for cooking and washing, and under the present one but three barrels are required in the same time, making a saving in firel of about two third and in the same time, making a saving large for Accordance Locks Daily Roman." Its AWRENCE'S ROSENDALE HYDRAULIC value for Aqueducts, Locks, Bridges, Flooms and all Masonry exposed to dampness, is well known, as it sets immediately under water, and increases in

as it sets income solidity for years.

NICOLL'S PATENT SAFETY SWITCH for Railroad Turnouts. This invention, for some time in successful operation on one of the principal railroads in the country, effectually prevents engines and their trains from running off the track

at a switch, left wrong by accident or design.

It acts independently of the main track rails, being laid down, or removed, without cutting or displacing

It is never touched by passing trains, except when in use, preventing their running off the track. It is simple in its construction and operation, requiring only two Castings and two Rails; the latter, even if much worn or used, not objectionable.

Working Models of the Safety Switch may be seen at Messrs. Davenport and Bridges, Cambridge-port, Mass., and at the office of the Railroad Journal,

Plans, Specifications, and all information obtained on application to the Subscriber, Inventor, and Patentee. G. A. NICOLLS, ja45 Reading, Pa.

THE AMERICAN RAILROAD JOURNAL! is the only periodical having a general circulation throughout the Union, in which all matters connected with public works can be brought to the notice of all persons in any way interested in these undertakings. Hence it offers peculiar advantages for advertising times of departure, rates of fare and freight, improvements in machinery, materials, as iron, timber, stone, cement, etc. It is also the best medium for advertising contracts, and placing the merits of new undertakings fairly before the public.

#### KITE'S PATENT SAFETY BEAM.

MESSRS. EDITORS.—
As your Journal is devoted to the benefit of the public in general I feel desirous to communicate to you for publication the following circumstance of no inconsiderable importance, which oc-

On the passage of the evening train of cars from Philadelphia to this city, an axle of our large 8 wheeled passenger car was broken, but from the parwas entirely unknown to any of the passen-gers, or, in fact, to the conductor himself, until the train, (as was til the train, (as was supposed from some circumstances attending the case,) had passed several miles in advance of the place where the accident occurred, whereas had the car been constructed on the common plan the same kind of accident

the same kind of accident would unavoidably have much injured it, perhaps thrown the whole train off the track, and seriously injured, if not killed many of the passengers.

Wilmington, Del., Sept. 28, 1840.

The undersigned takes pleasure in attesting of the value of Mr. Joseph S. Kite's invention of the Safety Beam Axle and Hub for railroad cars. They have for some time been applied to passenger cars. Safety Beam Axle and Hub for railroad cars. They have for some time been applied to passenger cars on this road, and experience has tested that they fully accomplish the object intended. Several instances of the fracture of axles have occurred, and in such the cars have uniformly run the whole distance with entire safety. Had not this invention been used, serious accidents must have occurred.

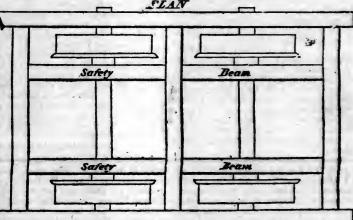

In short, we consider Mr. Kite's invention as completely successful in securing the safety of property and lives in railroad travelling, and should be used on all railroads in the country.

JOHN FRAZER, Agent,

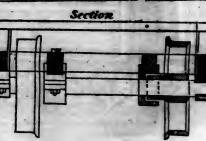

GEORGE CRAIG, Superintendant,

JAMES ELLIOTT, Sup. Motive Power,
W. L. ASHMEAD, Agent.

They have for some time been applied to passenger cars on the New Jersey railroad and transportation ja45

ELEVATION

DATENT HAMMERED RAILROAD, SHIF and Boat Spikes. The Albany Iron and Nail Works have always on hand, of their own manufacture, a large assortment of Railroad, Ship and Boat Spikes, from 2 to 12 inches in length, and of any form of head. From the excellence of the material always used in their manufacture, and their very general use for railroads and other purposes in this country, the manufacturers have no hesitation in warranting them fully equal to the best spikes in market, both as to quality and appearance. All orders addressed to the subscriber at the works, will be promptly executed. JOHN F. WINSLOW, Agent.

Albany Iron and Nail Works, Troy, N. Y.

The above spikes may be had at factory prices, of chimney of engines on which they are Erastus Corning & Co., Albany; Hart & Merritt, New York; J. H. Whitney, do.; E. J. Etting, Philadelphia; Wm. E. Coffin & Co. Boston. ja45

These Arresters are constructed on an entirely different principle from an entirely different principle from a such that a voter men.

PATENT RAILROAD, SHIP AND BOAT Spikes. The Troy Iron and Nail Factory keeps constantly for sale a very extensive assortment of Wrought Spikes and Nails, from 3 to 10 inches, manufactured by the subscriber's Patent Machinery, which confine areas a very extensive programment of the five reason of the state of the stat which after five years' successful operation, and now almost universal use in the United States (as well as England, where the subscriber obtained a patent) are found superior to any ever offered in market.

Railroad companies may be supplied with Spikes having countersink heads suitable to holes in iron rails, to any amount and on short notice. Almost all the railroads now in progress in the United States are fastened with Spikes made at the above named factory-for which purpose they are found invaluable, as their adhesion is more than double any com-mon spikes made by the hammer.

All orders directed to the Agent, Troy, N. York,

All orders directed to the Agent, Troy, N. York, will be punctually attended to.

HENRY BURDEN, Agent.

Spikes are kept for sale, at Factory Prices, by I.

& J. Townsend, Albany, and the principal Iron merchants in Albany and Troy; J. I. Brower, 222 Water
St., New York; A. M. Jones, Philadelphia; T. Janviers, Baltimore; Degrand & Smith, Boston.

*,* Railroad Companies would do well to forward their orders as early as practicable, as the subscriber

their orders as early as practicable, as the subscriber is desirous of extending the manufcturing so as to keep pace with the daily increasing demand.

#### FRENCH AND BAIRD'S PATENT SPARK ARRESTER.

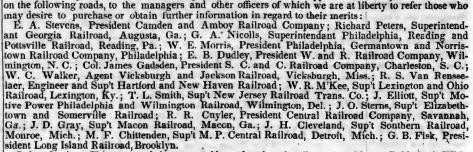

O THOSE INTERESTED IN Railroads, Railroad Directo and Managers are respectfully invited to examine an improved SPAR. ARRESTER, recently patented by the undersigned.

Our improved Spark Arrester: have been extensively used during the last year on both passenger and freight engines, and have been brought to such a state of perfection that no an noyance from sparks or dust from th

used is experienced.

These Arresters are constructed on an entirely different principle from any necessary onered w me The form is such that a rotary motion is imparted to the heated air. smoke and sparks passing through the chimney, and by the centrifugal force thus acquired by the sparks and dust they are separated from the smoke and steam, and thrown into an outer chamber of the chimney through openings near its top, from whence they fall by their own gravity to the bottom of this chamber; the smoke and steam passing off at the top of the chimney, through a capacious and unobstructed passage, thus arresting the sparks without impairing the power of the engine by diminishing the draught or activity of the fire in the furnace.

These chimneys and arresters are simple, durable and neat in appearance. They are now in use on the following roads, to the managers and other officers of which we are at liberty to refer those who

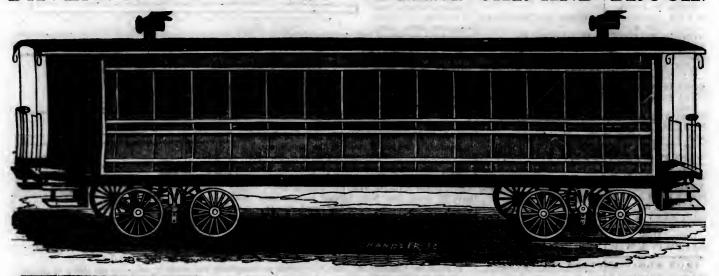

Orders for these Chimneys and Arresters, addressed to the subscribers, or to Messrs. Baldwin & Whitney, of this city, will be promptly executed.

N. B.—The subscribers will dispose of single rights, or rights for one or more States, on reasona-

ble terms. Philadelphia, Pa., April 6, 1844. .*. The letters in the figures refer to the article given in the Journal of June, 1844.

BENTLEY'S PATENT TUBULAR STEAM BOILER. The above named Boiler is similar in principle to the Locomotive boilers in use on our Railroads. This particular method was invented by Charles W. Bentley, of Baltimore, Md., who has obtained a patent for the same from the Patent Office of the United States, under date of September 1st, 1843—and they are now already in successful operation in several of our larger Hotels and Public Institutions, Colleges, Alms Houses, Hospitals and Prisons, for cooking, washing, etc.; for Bath houses, Hatters, Silk, Cotton and Woollen Dyers, Morocco dressers, Soap boilers, Tallow chandlers, Pork butchers, Glue makers, Sugar refiners, Farmers, Distillers, Cotton and Woollen mills, Warming Buildings, and for Propelling Power, etc., etc.; and thus far have given the most entire satisfaction, may be had of D. K. MINOR, 23 Chambers st. New York.

## DAVENPORT & BRIDGES' PATENT CAR AND TRUCK.

The growth of American Cities. THE COMMERCIAL INFLUENCE OF THE WEST

in reading recently Burke's "European Settlements in America," written in 1757—
eighty-eight years ago. The relative wealth
and population of American cities have
the great fulcrum of their future advance
the great fulcrum of the Xtlantic cities.

New-York, if she wills, can still hold her
present command over the western trade. changed wonderfully since then, while their in prosperity and population. Such is the as will test the energies of her merchants, progress seems almost miraculous. Nothing remarkable and overshadowing influence of the world will compare with the west upon the cities of America, in only sent time she is menaced by a spirit of comtheir advance in population.

flection. Boston is no longer the first city in America. New-York has become the Moved by this unerring conviction, we see the long as New-York remains at the head of its population. Yet the commanding situation of New-York, backed by the enormous trade of the West, has built up a city of the Concord and Burlington railway, portsmouth her own commanding position justly place with the Concord and Burlington railway, in must be largea-ter than even Alexandria or Thebes. So Portland, in Maine, by means of the St. Lawrence and Atlantic railway, Portsmouth in New-Hampshire, by a railway connecting with the Concord and Burlington railroad, her, it must irresistibly advance in wealth, and Boston, with its iron arms stratching to influence and nonviction, we see ter than even Alexandria or Thebes. So Portland, in Maine, by means of the St. Lawrence and Atlantic railway, Portsmouth her own commanding position justly place with the Concord and Burlington railroad, her, it must irresistibly advance in wealth, and Boston, with its iron arms stratching to influence and nonviction, we see the result of the western trade, where our state pride and her with the concord and Burlington railroad, her, it must irresistibly advance in wealth, and Boston, with its iron arms stratching to influence and nonviction, we see term than even Alexandria or Thebes. So Portland, in Maine, by means of the St. Lawrence and Atlantic railway, Portsmouth her western trade, where our state pride and her in the control of the western trade, where our state pride and the control of the western trade, where our state pride and the western trade, and Boston, with its iron arms, stretching to influence and population, until she will be growing Brooklyn, with its 40,000,) where in 1757 there were not 20,000. Philadel. phia likewise has run ahead of Boston, while New-Orleans, in forty-five years, under the western trade from New-York. Farther south, we perceive Baltimore struggling for the western trade with Philadelphia, by Mississippi, has already grown into a migh-means of railways and canals—and Savantier city than Boston.

known. It was referred to only as a vast wilderness. America was then bounded by the Alleghenies. Even in such speculative minds as Burke's, the settlement and future glory of the valley of the Mississippi were scarcely alluded to. To their minds, there seemed land enough on this side of the Alle.

The following tables of facts will confirm seemed land enough on this side of the Alleghenies for a hundred years to come. No monarchist could fully appreciate the progressive power and enterprize of the Anglo-Sax- that epoch, a little more than three years on race, perhaps we may rather say, of An- have elapsed, and look at the change in Bosglo-Saxon freemen. A hundred years have not elapsed, and our people have already crossed the Alleghenies, and advanced their settlements a thousand miles beyond that mountain barrier. No fancy was so wild as to imagine such a progress in 1757, but that very expansion has built up the great cities of America. The settlement of western ocean. For only twenty years, the wealth whole valuation. Now let us turn to New. of the teeming west has poured down that York, after the opening of the Eric caual. on an eminence as the commercial empori-let us compare the valuation of that year um of America. We have been both instructed and amused And Pittsburgh, the iron city of the west is canals or railways, in adding to the wealth

fifty years after the first breaking up of its petition on the part of wealthy, enterprizing ces of New-England, large towns which drive a considerable trade. Boston, the capital of Massachusetts Bay, is the first ordinary influences of western emigration, that there is not a city on the seaboard but what looks to the west as the only resource cial power of America. A city sustained what looks to the west as the only resource cial power of America. A city sustained of its future growth. To secure the western by that trade, can never languish, for the in-

> ORIGIN AND PROGRESS OF THE RAILWAY SYSTEM.—The details of the invention of steam vessels are pretty well known, but the communication by railroad has never yet in this country been traced to its origin. Now, it happened that a lew weeks since, a very satisfactory account of this new medium of communication has been given in two German periodicals—the Gazette of Cologne and the Sonntagsblatt or Sunday's Journal.— The latter is a weekly paper for general information and entertainment, forming a supplement to the Weser Zeitung or Weser Gazette, which is published daily at Bremen, the Tanse town on the Weser river. The reporter of the facts relating to the invention of railroads is a barrister living at Osterode, a Hanoverian town on the Hercynian mountain; his only object was to establish a fact, but he is otherwise in no way interested in the matter, and he claims no reward, for the original inventor who indeed, died several years ago. The subject being one of considerable interest to this country, I drew up the present paper embodying the substance of the barrister's German report; the letter is dated Osterode, the 20th March, 1845, and is inserted in No. 60 of the Sonntagiblatt, of April 6th. 1845.

It appears that the original inventor of the New-York and Ohio forced the construction An increase of \$20,250,000 in only three railroad system was the late principle engine of the Erie canal, which literally united the years, which is the more enormous, as it is neer Mr. Frederichs (Frederics,) son of a miner in that part of the Hercynian district which belongs to Hanover. His talent for mechanics was soon perceived by an influenavenue, and already it has placed New-York That great work was opened in 1825, and tial gentleman, the director of the mines, who solicited the Hanoverian government to furnish him with the means for increasing his 1825, " " 112,211,926 114,019,533 Institute the interest of increasing his practical knowledge in mechanics and generally cultivating his mind by a tour through 1828, " " 14,019,533 Europe. The request was granted, and cinnati in that once wilderness valley, after An increase of near \$13,000,000, or 121 young Frederies set out on a tonr of several the lapse of forty-five years, contains a thriper cent, in the same time as Boston increasing population of 75,000 inhabitants.—ed its valuation \$20,000,000. These figures mines of Galicia, and it was there that the

chest, which may be filled up with minerals valuable. to the weight of from sixty to eighty cwt the Queen of Westphalia visited the Hercynian district, the director of the mines, M. excursion from the pit to the "Pucherich." King, attended by ten gentlemen of his court, mounting the first vehicle; and the Queen, was accomplished in five minutes. Witness es still living are :-- M. von Meding, minister of state and of the cabinet; M. Albert, principal counsellor of mines (Oberbergath); chinen director); and Dr. Jordan, assayer of ing like excitement in the iron market-prithe mint (Muengwardein), at Elansthal, a Hanoverian town of the Hercynian district. Several years afterwards, when M. Frederics, whom he found engaged in executing a draw-arrival of the next steamer.

thought occured to him of constructing a new ing. "This is,' said M. Frederics, "intenmachine for the easier conveyance of heavy ded for an english gentleman, who wishes to pears that 112 of the projected railways have aity compelled him further to consider it.— we here are not a set of blockheads." to the extent of £14,794,000; together formAt that time, before the French invasion of Thus this invention was transferred to ing a total capital of £58,452,900. These 112 Hanover, the leading silver mine of the Hercynian mountain was the "Dorothy;" but ter, advocated it zealously. He led the way miles—a greater length of 2,860 the road from it to the "Pucherich," where in introducing and establishing it in this the lines now in operation in the kingdon. the ore is refined, and from that place to the country; he pointed out to the most influen- The average cost per mile is therefore £15,

During the previous session of 1844, 31 distance of three quarters of an hour, being ses, carriages, and time; he explained his bills for new railways were passed, the auplaced in a valley, the road from the first place to the latter goes downwards; as to the minerals, they were carried in carts drawn by horses, but on account of their heaviness and the nearly impassable road, only small quantities could be at a teme transported.—

These circumstances compelled Frederics assistance, supported and recommended the form the properties of the properties of the properties but his plan in a printed form before the public, all which could not be done without the public, all which could not be done without the public of the public further to consider and to perfect his plan of new invention, but his exertions were more loans the average cost was £19,148, or £1, a new conveyance, and he finally invented prominent and longer continued. The efficiency of steam in propelling vessels having sanctioned. The projectors of late railways, locomotive engine, and a cart to run from the been ascertained, this new invention was (it therefore, seem to have been more liberally pit to the "Pucherich," and thence to the sil- is not precisely known by whom first) com- inclined in their provisions for the construcver melting house. The cart is a four wheel-bined with that of Mr. Frederics, and the tion of their lines than heretofore; and though ed one, and on its frame is placed a wooden new medium of communication rendered more we are willing to concede that lines of the present day are capable of being made for The account of the origin of the railroad much less than what they cost years ago, we

"A new method of enabling locomotive ficiency appears; and refers, in support of his statement, to witnesses still living.— which is now very generally acted upon throughout Europe.—University, London. tion. The principle on which it acts is, that tion. The principle on which it acts is, that when the locomotive engine arrives at the foot of the inclined plane, the common wheels von Meding, caused a carriage of the invention of M. Frederics to be fitted up for an Parliament in England.—We find the folthe same axles, but of only one-fifth of the diameter. A raised rail is used on the incline to suit the smaller diameter of the wheels which now come into play, and the attended by the ladies of her suite stepping exceeds the estimate furnished sometime since, large wheels being lifted off the rail, act as into the second carriage, which closely followed the first. They started at the same more than 300 miles. Notwithstanding this is thus enabled to ascend an incline which it time, and the walking distance of 45 minutes impresse extension of the railways of the could not do with wheels of the usual diamimmense extension of the railways of the could not do with wheels of the usual diameter; and this was shown to be the case by Mr. Erskine's model, which easily ascended an incline of 1 in 16, with the small wheels, whereas, with the common wheels it stood still.—(Not new, ed. C. E. and A. Journal.)

The editor of the Civil Engineer and Arces ranging from £7 10s. to £8, per ton for chitects Journal is certainly correct in saying bar-and Scotch pig 65 to 70s. though quo-that there is nothing new in the above plan then in an advanced age, was taken ill, he ted much higher. This looks favorable for of Mr. Erskine. A similar model was exsent to the barrister to frame his last will.—the railway cause. We shall probably be hibited and we believe a patent was taken The latter did so, and next waited on him, able to give a list of the new projects on the outfor the plan, several years ago in this coun-

would increase your receipts-make it for the intershow different results.

Astonishing increase in the value of Railway Shares.

The following statement was prepared from our English Railway Journals some weeks since, with the view of showing our citizens by comparison what will be the character of railroad investments in those important roads terminating in this city.

Here we see an actual increase, of over 40 per cent, in the average value of the shares in thirty difand 20th July 1845, a period of less than eight thagena, New Grenada, with Mr. George M. Totten, certainly looks well.

January and July. This increase is not ideal, but ting a canal from Carthagena to the river Magdabased upon a steady yet regular increase of business lena, about 100 miles. The route of this canal we and dividends.

NEW YORK AND ERIE RAILROAD. - We give on another page the businesslike address of the new president of this company, and we ask for it the candid attention of our citizens. The time has now arrived when we must all act in this matter. It will not do for us to say to our neighbor go and subscribe -let us rather say come with us, and take as many shares as you can pay for in three years—it will be the best investment you can make. Six per cent. is to be allowed on the amount paid in, until a single track is completed to lake Erie-after which it will, we doubt not, be seven, eight, nine and ten per cent., as the business finds its way over it, during the first in than is necessary—therefore look to it. four years, after its completion. But that is not all, we shall be able to live better and cheaper than we do now-and those who work at day labor, or who drive a cart, or work at mechanical pursuits, will be benefitted by the increase of business-and those who sell goods, or own houses and stores, will be benefitted by the increased demand. Come then one and all, let us go and subscribe-two millions only are required-\$1,000,000 being already secured by a few. Let therefore one hundred men take \$10,000 The increase thus for this year over last year, is each—and one hundred take \$5,000, and two hunonly \$29,910. Reduce your fare gentlemen, if you dred take \$1,000, and three hundred take \$500, and five hundred take \$100, and five hundred take each est of people to travel on your road-then you will \$100-and the whole amount will be taken by seventeen hundred persons taking from 1 to 100 shares each. Where is the business man in this city, whose face would not crimson with shame, in all time to come, at the mention of the New York and Erie railroad should the efforts of the present able board of directors fail of success ! That it may not fail, let all who have any regard for the city of their residence—any regard for their own self respect hereafter, go and put their name to the books.

ferent railways between the 30th of November 1844 from our friend Mr. J. C. Trautwine now at Car- vacuum was nearly the same at both ends. This

understand to be most of the way in a natural water course, some part of which has a sufficient depth of water, while other parts require to be deepened, which is to be done by the steam excavating machine placed in a boat; and a portion of the line will be excavated through solid ground, from one point to another on the natural channel, and this materially shorten the distance.

Mr. Totten employs the natives mainly to perform the hand labor, but his assistants and superintendents cannot claim that privilege. It is cheering to know that light is dawning upon those fertile regions, and equally gratifying that their public works are to be constructed and managed by our own engineers and enterprizing citizens.

RAILROAD CONVENTION.-The convention called at poughkeepsie for the 16th inst. in relation to the New York and Albany railroad is near at hand and we hope all the friends of that important work will be there, and that the proceedings of the convention will show that the great object in view, is to construct a railroad from this city to Albany. Let the route of the road be an after consideration, to be decided by the instruments, and the amount of business and travel, to be ascertained by competent and disinterested men, but let those who assemble at Poughkeepsie, resolve to furnish the capital and have the road buill.

To RAILROAD CONTRACTORS .- The attention of our numerous readers, interested in the letting of contracts on railroads, is called to the notice of the Harlem railroad, in another page. This company now advertize to put under contract twenty one miles, extending from the present terminus at White Plains to near the north line of the county. We hope they will not only put it under contract, but also complete it in the shortest possible period-and then go on with the work without delay, until they open a first rate road to Albany-if they intend to do it at all. We mean to hold you to your contract gentlemenand see that the \$500,000, is properly appropriated and expended-and you have no more time to do it

TTO OUR SUBSCRIBERS.—We desire to say one word. To express our thanks to those who have. by promptly paying for the Journal to the close of the current year, enabled us to make it what it is. To those who have not yet paid for the present volume we would say please remit by return mail, and thus enable us to carry it through the year with increased spirit and usefulness. To those who are indebted for past years-some two, three, some five. or more years! What shall we say? What would you say to us, if our relative positions were changed? Will you please inform us in a letter, containing the amount due, according to a statement which we send you? We rely fully upon a prompt, and favorable, response to this appeal-shall we be disap-

ATMOSPHERIC RAILWAY .- It is stated in Herapath's Journal that some experiments have been made to exhaust the two lengths of tube, 5 miles in length together, by the engines at one end. The result was that, in 5 minutes 12 inches vacuum were obtained out of 29.8, and that eventually they got it up to CARTHAGENA CANAL.—We are pleased to hear 27'4 inches and maintained it there for kours. The

By the arrival of the steam ship Caledo-curing to them a large profit in the excess of that those services were for the benefit of the nia at Boston, we have full files of the Eng-their market, over the par value. lish Railway and Mining Journals to the latest dates, which contain much of interest in relation to railways-the iron trade, mines, mous cost of parliamentary, legal, engi-financial operations, in their parliamentary etc., etc.

ly laborious session, at least so far as the railway interest is concerned.

One hundred and twelve new railways have been sanctioned, the length of which is to be raised for their construction is £58,452,-900, --- which allows £15,262, per mile, without including the amount authorised to be raised by loan, if that is included they have allowed £20,438, or over one hundred thousand dollars per mile! At the previous session 819 miles were granted, making nearly six thousand miles of railroad in Great Britain, a teritory not three times as large as the state of New York! and this is only the commencement of the system there!! Who can predict the end---and the results?

The late half yearly reports are showing a steady and certain increase of business on most of the English railroads; the natural and certain result of reduced charges.

The "Great Western," or London and Bristol road, 118 miles long with 102 miles of branches, has recently made its twentieth semi-annual report, from which we gather some interesting facts.

It appears that they have carried, within the six months, 963,337 passengers or about 60,000 more than for the corresponding period last year, or 5,235 per day, an average of 36 miles each. The receipts during the same period were £432,325, and the expenses £158,367, or 35.4 per cent. of the whole receipts. After paying all expenses, interest, and the lease of some of their branches, they which he thought could not be better timed divide 4 per cent. for six months. Its stock is than on that day. It was a testimony of gratquoted at £230, for 100 paid.

The expenses of working the road during the last three years, have been for each half year as follows, viz. from 30th June to 31st Dec. 1842. 36 per cent. of the receipts, the next six months to 30th June 1843, 37.7—to Dec. 31 1843, 34.4...to June 1844, 34.4... to Dec. 1844, 32-6 and from Dec. 31st, 1844 valuable services. To recite those services to June 30th, 1845---35.4 per cent. or an average of 35.2 per cent.

of £25 each to the amount of £2,325,000, That he would not attempt to do, but he for the purpose of carrying out their plans would remind them that many of those serof extension by new lines & branches. These portant situation of secretary and superinis governed by an honest purpose; such are shares are to be distributed pro rata among tendent of the line, that seems never to occur the men who deserve to be sought by all com-

examinations—liberal expenditures in this gent and discreet men, may economize largeworking of the line for all time to come.

In every depart-We give the following general abstract of ment, of their negotiations with bodies or inexpenditure on this work to show the enorneering, and right of way or land expenses. and even in their legal proceedings, Mr. Parliament was prorogued by the queen All these, except the engineering and even Saunders had always been ready, in season in person, on the 16th inst., after an unusual- those look to us as excessive; yet we are de- and out of season, by day and by night, at cidedly in favor of making the most thorough the expense of his social enjoyments, and even of his domestic comforts, to give the company the advantages of his assiduity, his talent, department, if made by competent and dili- his knowledge, and his great experience of our large and complicated affairs. For such 2860 miles, a greater length than is now in ly, not only in the first outlay, but also services it was not too much to present him a use in the Kingdom ! the capital authorized which is of far more consequence in the testimonial of their respect, as thanks and gratitude were scarcely sufficient. The only question then that remained for the directors to consider was the way in which that testimonial should be offered. The testimonial presented to Mr. Saunders in August last was incomplete, inasmuch as it could only be regarded as the testimonial of the subscribers, and not of the company at large. It had occurred to the directors that the most gratifyo ing form in which to render that testimonial would be to give him an interest in that property, the prosperity of which he had so highly promoted. Their first intention was to present him a portion of the reserved fifth shares, but a legal difficulty having arisen as to how that would effect their capital, it occured to them to adopt a similar mode of proceeding, by presenting to him such a number of those fifth shares at par, the premiums on which would amount to the g same sum as was proposed if they had given him the number of shares originally intend-3 ed. That was the proposition he was directed to make to the propritors, and he did not o think that they could satisfactorily seperate There appears to be a disposition in some to pass their summer with their families and friends if they did not do an act of justice to their old, well-tried, and meritorious servant, to reward liberally their faithful and perse- and carry with them the reflection that they vering officers, as will be seen by the testi- had done that which would be conducive to monial of the Great Western company to his coinfort, and gratifying to the feelings of their secretary Mr. Saunders-at the close of his family. Since writing the above we have received the circular of the committee, which was appointed to make inquiry along the line in relation to the present transportation and travel which would fall upon the road if built. The report is exceedingly favorable-yet it does not state the whole truth—the reality when the road is completed will far exceed give a few extracts from it-by way of sus

Rome and Cape Vincent Railroad.— This road—to which we made a brief allusion yesterday—is designed as a principal avenue between lake Ontario, the great re-When once well made the expense of man-business of the upper lakes is mainly to be shareholders who carry this work through, ural resources, in connection with a first rate and more creditable to the officers who shall railroad to lake Champlain, and thence to direct its affairs to a successful issue, than every important city and town in New Engtern and Canadian trade-Ogdensburgh will ber own citizens.

The great object of Boston is, unquestion-We take the following article from the ably, to divert the western and Canadian * See the address of the directors, page 589, - burgh it is beyond the natural route to New and therefore have to look to other papers for

becomes a matter of importance to the business men of this city to adopt measures which will still secure the advantages which nature and art has given them. They should move in time to prevent a turn of the current of trade too far to the north—and to us it appears that the Rome and Cape Vincent railroad will, in a great measure, accomplish that object.

Cape Vincent, it will be observed, is situated at the lower extremity of the lake, and opposite the important town of Kingston, in Canada; and about ninety miles from Rome, on the Erie canal, and the great western line of railroad. The route is mainly through a region of country rich, not only in agricultural, but also in mineral productions and inhabited by an enterprizing population. The route, it has been ascertained, is a favorable one; having no difficult grades or curves, and the road may be constructed, in the best manner, within the average of the cost of American railroads. And it is believed that the local traffic and travel of the region traversed by this road will be as great as that of almost any other section of the state, of equal extent, especially as there is little probability of a rival route nearer than Oswego on the one side and Ogdensburgh on the other. During nearly one-half of the year it will command the entire business of Canada west, from a point nearly opposite Ogdens-burgh to the head of the lake, and a fair proportion at all seasons; and also of the great north western travel through Michigan, when a railroad shall have been-as it surely will be-constructed from Kingston to Toronto and Hamilton, to connect with the "Great Western Canada railroad" to Port Sarnia, or some other port on the Huron river. In addition to these sources of business it will, of course, share with Oswego and Ogdensburgh in the immense business of lake Ontario; thus insuring to it an amount of travel and transportation which will yield large returns upon its cost, and at the same time open another important avenue for the trade of this city—too important, it seems to

us, to be lost sight of.

The distance from Cape Vincent to Rome is about ninety miles, and from Rome to New York two hundred and sixty miles-or from lake Ontario to this city three hundred and fifty miles; & from the same point to Boston it does not vary much from four hundred miles-but from Ogdensburgh the distance is about equal. Is it not important then that this road should be speedily built, that our own citizens in Jefferson and St. Lawrence counties, and our Canadian neighbors may still continue their business relations with us, instead of being diverted to other markets, and to other associations?

The Cincinnati Gazette .- Can any of our friends inform us if that excellent paper --- above named---has gone to Texas? We received it regularly until recently, but we Kingston railroad. If the people generally interested in that work, could see it in its true likely to take that course. When at Ogdens. The smoke, of its locomotive for several weeks

the Baltimore American.

cars started from Cincinnati the day before Stourbridge. J. M. L & W. H. Scovill. for Xenia, the track having been opened for brick, manufactured at South Amboy, I have goods may be conveyed from New York to Cincinnati by the lake route. The completion of the railroad to Sandusky will shorten the time. Yet we shall have nothing to fear from this competition if our road to the Ohio were finished and that great river made navigable at all seasons. We shall command the sale of Watson's Perth and Baltimore will be specified and for the sale of Watson's Perth and Baltimore will be specified and for the sale of the sale of the Engant for the sale of Watson's Perth this great enterprize to an early completion.

"4.—That every subscriber to the said share on his subscription, become the purchaser of any bond or bonds issued pursuant to the act of 14th May, 1845, shall be entidy opening of the whole line of railroad from that city to Sandusky on lake Erie. The Kearney Fire Brick, and consider them at tled at any time before the maturing of such Gazette of the 20th inst. says that a train of least equal to any others, not excepting the bond, or bonds, to exchange the same to an amount equal to his said subscription for stock to this company at par."

TO THE PUBLIC.

In making the above announcement of the open-

call for the "Kearney" brick again.

J. PATTON, JR.

J. PATTON, JR.

The systematic efforts making by neighboring cities to obtain a large share of the trade of the great West, imposes upon our business men and capitalists the necessity of adopting immediate measures to retain such portion of the trade as we are entitled to by our position and great natural advantages—great it must be admitted, but not sufficient them. to the city and state of New York, the Eric railroad, we beleive, will be, when once opened from the Hudson river to lake Eric.

Who can estimate the importance of a com-munication at all seasons of the year with a porroad for ready communication with the Atlantic.—
In addition to which, at its termination, it opens upon our great inland seas, the trade of which is rapidly approximating in value to that of all our foreign commerce although yet but in its infancy. If our Atlantic commerce should be exposed to the dangers incident to foreign invasion, how vastly would such an internal communication increase in importance and magnitude. Through this avenue importance and magnitude. Through this avenue can be reached most expeditiously the Western and South-Western cities, Cincinnati, St. Louis and New-Orleans, and a large portion of the travel and merchandize would, almost of necessity, find its way through this route to the valley of the Missis-

the Baltimore and Ohio railroad to the Ohio at Pittsburgh. That enterprizing city, starting with unexampled energy from her late disaster, is displaying an unconquerable spirit which must in the end bring success to her steady and determined efforts.

We honor the Pittsburghers for their ensured agracity. They will not rest satis-

sent in exchange, appear to us to leave no reasona-ble doubt on this most important question.

To these considerations must be added the great

improvements in motive power which have recently been made, and which have demonstrated fully that railroads can, and do, compete successfully in the transportation of articles of heavy merchandize with any other mode of conveyance. While the completion of this road will thus stimulate every department of business and add millions to the value of the property within the reach of its influence, it cannot fail in dispensing these blessing to the public, to enrich in a still greater proportion the holders

of its stock.

With regard to the indebtedness of the Company, the amount of which is about 600,000, the board is the amount of which is about 500,000, the board is happy to be able to state that, owing to the liberality manifested by the principal creditors, the time of payment for most of it has been extended on satisfactory terms. The sum of \$496,639 37, is in the shape of 6 and 7 per cent. certificates, payable on the 1st of January, 1849. The holders of about one-half the remainder have agreed to settle by taking certificates of the same character, and the residue, including an amount due for work recently done on the Shawangunk summit, is in course of settlement, as the means of the Company will permit.

As an inducement for capitalists to subscribe, in-terest as will be seen above, will be paid upon the instalments, until the road is completed. This the Company will be able to do from the surplus earnings of the 53 miles of road already in operation, and such additional portions as may successively be brought into use. Should the requisite amount be at once subscribed, the whole road may be completed within three years from next spring—more than half of the work necessary to prepare the en-tire line for the rails having been done, and the sur-

Thus the whole work on which about \$5,000,000, has been expended will be represented by stock, and debts to the amount only of \$1,350,000.

debts to the amount only of \$1,300,000.

It may be proper here to state, that of the \$3,000,-000 required to be raised by subscription, more than one million of dollars have been pledged in large sums by a very few friends of the road, leaving less than two millions to be raised by additional subscriptions to secure the full benefit of the recent act of

the Legislature.

In view of the advantages of this important work, and the great inducements to subscribe to the stock of the company, the board earnestly commends it to the favorable consideration of the citizens of New-York, every one of whom, be he poor or rich, every business man, no less than the holder of real estate, has a deep interest in its early completion. completion.

In conclusion, the directors ask the aid of their fellow citzens to this the greatest public work of our country, in the advantages of which more than one million of the inhabitants of this city and state will participate. There is no other work in which they have so deep an interest; and in view of its para-

1838, is one and a half million of dollars; be the great point of attraction. but if the road be constructed of the heavy

ed to pass through Buffalo daily, during the dollars-half a million of which is to be oftravelling season-from whence there is but fered in the United States, half a million in one means of communication to the west, Canada, and the residue in London. It is namely by lake Erie. The communication desirable no time should be lost in obtaining eastward is by the falls of Niagara, Canada, subscriptions for the capital, that the work falo and Attica railroad. Notwithstanding completing the same the ensuing year. In these numerous channels, the latter is selec-behalf of the shareholders. ted as the basis on which a safe, durable, and profitable investment is anticipated.

It appears from the statistical returns furnished by the Secretary of State for New York, in March 1845, that during the year 1844, from December to April, five months, 63 persons, including way-passengers, passed each way, daily, over the Buffalo and Attica miles of said railroad, extending from the present road.—although lake Erie was not, during this period, paying all and account of the present line of Westchester county. this period, navigable-130 days X 136 passengers=17,680 at \$5=88,400. In May, October and November, the travelling increased to 126 each way. During this period the navigation of the lake is considered tree line for the rails having been done, and the surveys completed.

The directors cannot doubt that if the subject of the New York and Eric Railroad were now for the New York and Eric Railroad were now for the first time presented to our citizens, without any collateral advantages and based upon its own intrinsic merits, it would commend itself forcibly to their favorable consideration; but added to the other inducements are those of the release by the state of the \$3,000,000 loan, and the reduction of the old stock from \$1,500,000 to \$750,000, making altogether a bonus of \$3,750,000 to the new stockholders.—

Thus the whole work on which about \$5,000,000 which would yield an interest of 10 per ct. on which would yield an interest of 10 per ct. on the capital, & leave a rest of \$51,308 per year.

Way fare through Canada. This part of the line is left to balance the repairs of the road and the expenses of management. Although no remuneration is estimated, the route intersects the Welland canal, grand river navigation, port Dover and London

JOHN CHILDE, Engr. plank roads, and various other communications leading from numerous villages, and a dense agricultural population in the interior, the travel and freight from which, in addition to what will pass from point to point, is likely to yield the same returns as other lines all Masonry exposed to dampness, is well known, for the like distance. for the like distance.

Future Prospects.—Having no population or travel, to create, to insure an immediate revenue—any additional calculation may be considered superfluous—but when wesee the promptly attended to at this office. travelling over Buffalo road increase from

be the conclusion arrived at by any careful and intelligent inquirer. There is not space in an address of success. By order of the board.

of this character to go into an elaborate argument on this point, and it is the less necessary as the impression seems now to have become very general, if not notiversal, that if the road can be completed it must pay large dividends. The results obtained on the acciton already in use prove this. The great length of the work, the productiveness of the country throwhich it passes and to which it leads, the absence of all danger of injurious competition from rival routes, the numerous branches already existing or in contemplation exceeding in the aggregate the length of the main trunk, the immense market which this city will afford, for agricultural products of every description, and the boundless country whose inhabitants must be supplied with merchandize to be sent in exchange, appear to us to leave no reasonaly in a straight line, having only two gentle rapid increase of travel each succeeding year, curves in a distance of 222 miles. The grade so long as emigration continues to flow to is in no place over 15 feet for short distances, the west—a proportion of the southern popand averages less than two feet in the mile. ulation to make their annual tour to the The estimated cost from actual survey in north—and the falls of Niagara continues to

Proposed plan of Proceeding .- The capi-H rail, in the most perfect manner, the cost tal authorized by the existing act of incorpomay extend to two and one half millions.

Income.—One thousand people are suppost to increase to two and one half millions of lake Ontario, the Erie canal, and the But may be early commenced, with a view of

W. HAMILTON MERRITT.

TO RAILROAD CONTRACTORS.

SEALED PROPOSALS will be received at the Office of the New York and Harlem Railroad line of Westchester county

Plans, profiles and specifications will be ready for the inspection of contractors on the 15th of September, when the engineers will be in attendance, to render all requisite information.

Contractors not known to the company or engineer, will be expected to produce testimonials of their capacity, ability and experience; and the best security will be required.

The work must be commenced immediately after

contracts are closed, vigorously prosecuted, and com-pleted by the first day of May next. By order of the Extension Committee.

ALLAN CAMPBELL, Chief Eng'r.

NOTICE TO RAILROAD

CONTRACTORS.

SEALED PROPOSALS will be received at the office of the Connecticut River Railroad Company, at Northampton, until the 15th of September proximo, for the graduation, masonry, and bridging, of that part of the Connecticut River Railroad between Northampton and Greenfield.

NICOLL'S PATENT SAFETY SWITCH for Railroad Turnouts. This invention, for some time in successful operation on one of the principal railroads in the country, effectually prevents engines and their trains from running off the track at a switch, left wrong by accident or design.

It acts independently of the main track rails, being laid down, or removed, without cutting or displacing

them

It is never touched by passing trains, except when in use, preventing their running off the track. It is simple in its construction and operation, requiring only two Castings and two Rails; the latter, even if much worn or used, not objectionable.

Working Models of the Safety Switch may be seen at Messrs. Davenport and Bridges, Cambridge-

port, Mass., and at the office of the Railroad Journal, New York.

Plans, Specifications, and all information obtained on application to the Subscriber, Inventor, and Pa-tentee. G. A. NICOLLS, Reading, Pa.

KITE'S PATENT SAFETY BEAM.

MESSES. EDITORS.—
As your Journal
is devoted to the benefit of the public in gen-eral I feel desirous to communicate to you for publication the following circumstance of no inconsiderable importance, which oc-curred some few days since on the Philadel-phia, Wilmington and Baltimore railroad.

On the passage of the evening train of cars from Philadelphia to this city, an axle of our large 8 wheeled passenger car was broken, but from the par-ticular plan of the con-struction, the accident was entirely unknown to any of the passengers, or, in fact, to the conductor himself, until the train, (as was supposed from some circumstances attend-ing the case,) had passed several miles in advance of the place where the accident occurred, whereas had the car been constructed on the common plan the same kind of acci-

dent would unavoidably have much injured it, per-haps thrown the whole train off the track, and seriously injured, if not killed many of the passengers.

Wilmington, Del., Sept. 28, 1840.

The undersigned takes pleasure in attesting of the value of Mr. Joseph S. Kite's invention of the Safety Beam Axle and Hub for railroad cars. They Safety Beam Axle and Hub for railroad cars. They have for some time been applied to passenger cars on this road, and experience has tested that they fully accomplish the object intended. Several instances of the fracture of axles have occurred, and in such the cars have uniformly run the whole distance with entire safety. Had not this invention been used, serious accidents must have occurred.

In short, we consider Mr. Kite's invention as completely successful in securing the safety of property and lives in railroad travelling, and should be used on all railroads in the country.

JOHN FRAZER, Agent,

GEORGE CRAIG, Superintendant,

They have for some time been applied to passenger cars on this road, and experience has tested that they fully accomplish the object intended. Several instances with entire safety. Had not this invention as completely successful in securing the safety of property and lives in railroad travelling, and should be used on all railroads in the country.

JOHN FRAZER, Agent,

GEORGE CRAIG, Superintendant,

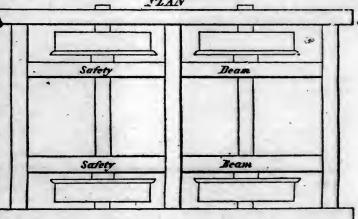

W. L. ASHMEAD, Agent.

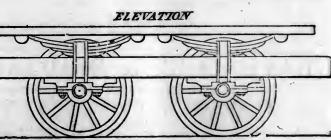

They have for some time been applied to passenger cars on the securing the safety of property and lives in railroad travelling, and should be used on all railroads in the country.

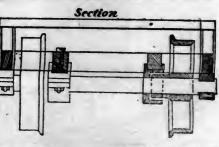

JAMES ELLIOTT, Sup. Motive Power,

W. L. ASHMEAD, Agent.

They have for some time been applied to passenger cars and the new Jersey railroad and transportation office, No. 1 Hanover st., N. York.

DATENT HAMMERED RAILROAD, SHIP and Boat Spikes. The Albany Iron and Nail Works have always on hand, of their own manufacture, a large assortment of Railroad, Ship and Boat Spikes, from 2 to 12 inches in length, and of any form of head. From the excellence of the material always used in their manufacture, and their very general use for railroads and other purposes in this country, the manufacturers have no hesitation in warrantthem fully equal to the best spikes in market both as to quality and appearance. All orders addressed to the subscriber at the works, will be promptly executed.

JOHN F. WINSLOW, Agent.

Albany Iron and Nail Works, Troy, N. Y.

The above spikes may be had at factory prices, of Erastus Corning & Co., Albany; Hart & Merritt, New York; J. H. Whitney, do.; E. J. Etting, Philadelphia; Wm. E. Coffin & Co. Boston. ja45

These Arresters a an entirely different The form is such that

PATENT RAILROAD, SHIP AND BOAT
Spikes. The Troy Iron and Nail Factory keeps
constantly for sale a very extensive assortment of
Wrought Spikes and Nails, from 3 to 10 inches,
manufactured by the subscriber's Patent Machinery, which after five years' successful operation, and now almost universal use in the United States (as well as England, where the subscriber obtained a patent) are found superior to any ever offered in market.

Railroad companies may be supplied with Spikes having countersink heads suitable to holes in iron rails, to any amount and on short notice. Almost all the railroads now in progress in the United States are fastened with Spikes made at the above named factory—for which purpose they are found invalua-ble, as their adhesion is more than double any com-

mon spikes made by the hammer.
All orders directed to the Agent, Troy, N. York,

will be punctually attended to.

HENRY BULDEN, Agent. Spikes are kept for sale, at Factory Prices, by I. & J. Townsend, Albany, and the principal Iron mer-chants in Albany and Troy; J. I. Liower, 222 Water St., New York; A. M. Jones, Philaderphia; T. Jan-viers, Baltimore; Degrand & Smith, Beston. ** Railroad Companies would do well to forward

their orders as early as practicable, as the subscriber is desirous of extending the manufcturing so as to keep pace with the daily increasing demand.

FRENCH AND BAIRD'S PATENT SPARK ARRESTER.

O THOSE INTERESTED IN Railroads, Railroad Director: and Managers are respectfully invied to examine an improved SPARh ARRESTER, recently patented by he undersigned.

Our improved Spark Arresters ave been extensively used during the last year on both passenger and freight engines, and have been brought to such a state of perfection that no an novance from sparks or dust from the chimney of engines on which they are

These Arresters are constructed on the public an entirely different principle from any necessities one to the public The form is such that a rotary motion is imparted to the heated air smoke and sparks passing through the chimney, and by the centrifusmoke and sparks passing through the chimney, and by the centrities and force thus acquired by the sparks and dust they are separated from the smoke and steam, and thrown into an outer chamber of the chimney through openings near its top, from whence they fall by their own gravity to the bottom of this chamber; the smoke and steam passing off at the top of the chimney, through a capacious and unobstructed passage, thus arresting the sparks without impairing the power of the engine by diminishing the draught or activity of the fire in the furnace.

These chimneys and arresters are simple, durable and neat in appearance. They are now in use on the following roads, to the managers and other officers of which we are at liberty to refer those who may desire to purchase or obtain further information in regard to their merits.

on the following roads, to the managers and other officers of which we are at liberty to refer those who may desire to purchase or obtain further information in regard to their merits:

E. A. Stevens, President Camden and Amboy Railroad Company; Richard Peters, Superintendant Georgia Railroad, Augusta, Ga.; G. A. Philadelphia, Pa., April 6, 1844. ble terms. ja45 . The letters in the figures refer to the article given in the Journal of June, 1844.

BENTLEY'S PATENT TUBULAR STEAM BOILER. The above named Boiler is similar in principle to the Locomotive boilers in use on our Railroads. This particular method was invented by Charles W. Bentley, of Baltimore, Md., who has obtained a patent for the same from the Patent Office of the United States, under date of September 1st, 1843—and they are now already in successful operation in several of our larger Hotels and Public Institutions, Colleges, Alms Houses, Hospitals and Prisons, for cooking, washing, etc.; for Bath houses, Hatters, Silk, Cotton and Woollen Dyers, Morocco dressers, Soap boilers, Tallow chandlers, Pork butchers, Glue makers, Sugar refiners, Farmers, Distillers, Cotton and Woollen mills, Warming Buildings, and for Propelling Power, etc., etc.; and thus far have given the most entire satisfaction, may be had of D. K. MINOR, 23 Chambers st. New York.

The article is complete in itself, occupies but little space, is perfectly portable, and requires no brick work, not even to stand upon. It is valuable, not only in the saving of time and labor, but in the economy of fuel, as it has been ascertained by accurate measurement, that the saving in that article is fully two-thirds over other methods heretofore in use. They are now for the first time introduced into New York and Boston by the subscriber, who has the exclusive right for the New England states, New York and New Jersey, and are manufactured by

CURTIS & RANDALL, Boston; and by
FORCE, GREEN & CO. New York.

PATENT CAR AND TRUCK DAVENPORT & BRIDGES'

WILLIAM YOUNG,

President.

TO IRON MASTERS.—FOR SALE.—MILL SITES in the immediate neighborhood of Bituminous Coal and Iron Orc, of the first quality, at Ralston, Lyonning Co., Pa. This is the nearest point to tide water where such coal and ore are found together, and the communication is complete with Philadelphia and Baltimore by canals and railways. The interest on the cost of water power and lot is all that will be required for many years the coal will not cost more than \$1 to \$1 25 at the mill sites, without any trouble on the part of the manufacturer; rich iron ore may be laid down still more cheaply at the works; and, taken together, these sites offer remarkable advantages to practical manufacturers with small capital. For pamphlets, manufacturers with small capital. For pamphiets, descriptive of the property, and further information, apply to Archibald McIntyre, Albany, to Archibald Robertson, Philadelphia, or to the undersigned, at No. 23 Chambers street, New York, where may be scen specimens of the coal and ore.
W. R. CASEY, Civil Engineer,

Boston courier of 4th inst., to show, not share in any corporate property, and what is lent investment. The first instalment of only the sagacity of the veteran editor, but still more unfortunate, our whole available twenty dollars per share, is payable on the only the sagacity of the veteran editor, but also to express our regret that the fate usual to those who are in advance of the age in ity of the city where we earn our daily bread. which they live, has fallen to his lot. It we have a desire that the Commonwealth, pany will be met without unnecessary delay. Certainly does not follow, though many people cannot understand how it can be otherwise, that he who advocates a particular improvement has a direct personal interest in Courier advocates particular measuresthough it may not increase the value of his house or his store. To him it is enough that it will benefit Boston, and promote the interest of his fellow citizens, and therefore it is
that we the more regret to learn that he has not houses and stores and shares of corporate property to be benefited by the accomplishment of these enterprizes, the importance of which he foresaw so many years ago, when many others, who claim much credit for their sagacity and efforts, doubted.

OGDENSBURG RAILROAD.—Is it important to the advancing prosperity of Boston, that there should be an avenue between the city and the great western lakes? No person who looks at the map, and considers the advantages that are offered by the immense regions which border on those lakes, will hesitate for a moment to answer this question in the affirmative. The question is presented to our citizens almost daily, and is met with a decided, yes. Then comes another question -What direction shall that avenue take, and at what point shall it touch one of those lakes, or the stream which connects them with the Atlantic ocean? And the answer to this in. this road. terogation is hardly less decided and uniform and make no more ado about it.

The editor of this paper was one of a small number of gentlemen, who held a series of meetings near twenty years ago, at a private room in State street, to deliberate upon the and Boston, and to talk over the expediency of calling a public meeting to take the matter into consideration. Subsequently a meeting -not a very large one-was held, and the

of the people:—and it seems to us, that this rail during the present autumn, if iron can project of a railroad to Ogdensburgh is one be obtained at a reasonable rate. The reof the most important, in view of the im- mainder of the route will be renewed early its success; and we can well see why it has mense internal commerce which it assuredly in the next season. been, and is, that the editor of the Boston would bring to Boston, that has yet been presented. It is one, which seems to stand by St. Johnsbury Vt. Caledonian of the 9th inst. itself, and appeals to the good sense and judgement of our fellow-citizens, without ref. the Atlantic and St. Lawrence railroad will cerning the water power of Rochester, and or on the seaboard, in a few hours. This we give rise to others, and that Maine will event- its manufacturing resources : ually have her full share of railroads, by which she can bring her rich forrests of lumber of various limbers of various limber ber of various kinds to market.

Hartford and New Haven Railroad. The annual meeting was held at Hartford on Wednesday. The following gentlemen com-

pose the new directors, viz:

Chas. F. Pond, David Watkinson, Hartford; Elisha Peck, Jas. Boorman, Henry Young, New York; Fred. R. Griffing, Guilford; Jas. S. Brooks, Meriden; Chester W. Chapin, Springfield; Jas. Brewster, New Haven;

At a subsequent meeting of the directors Chas. F. Pond was unanimously re-elected be a fair beginning and we doubt not the re-President; Horatio Fitch, Secretary; and sult. Jas. H. Wells, Treasurer.

A Saving in Fuel on Railways .- We understand that two eminent French engineers and ship builders of Havre-de-Grace have come over to London for the express purpose of taking out a patent for the saving of fuel in the propelling of locomotives on railways, and also for steam vessals. The saving is by a concentrated heat power, when less than a quarter of the regular quantity of coal or coke is required, whilst it will have a much larger force than at present, and unattended to meet them on equal terms. with the fear of an accident. The invention and the leading directors of the different railways throughout France, where a patent is also being taken out.—[Mining Journal.]

Rochester.

"Shall it become a manufacturing city," seems now to be a question commanding the attention of many of her prominent citizens as we learn from the "Democrat" of the 2nd inst. At a meeting on 29th ult, a committee appointed at a previous meeting, reported that they had obtained subscriptions of \$20,-000, and promises for \$16,000 more, towards the establishment of new manufactures, and after a free discussion the following resolution was offered and unanimously adopted.

"Resolved, That in the opinion of this meeting, every person owning property in this city is deeply interested in the establishment of such new manufacturing business as shall serve to employ the water power of the city to greater advantage, and at the same time to furnish employment for the industry

and enterprize of our citizens.

An additional committee of twenty-two gentlemen were appointed to circulate subscriptions for stock, and take such other measures as they may deem proper to forward the work. The following are their names: S. C. Jones, L. Brooks, J. Field, E. Peck, Wm. Pitkin, E. Moore, Wm. Mc-Kuight, L. Selye, A. Hubbell, J. W. Saw-yer, D. Perrin, W. Brewster, J. Haywood, C. H. March, N. Cherr, F. L. W. G. H. Mumford, N. Osborn, E. Lyon, Wm, Kidd, F. Starr, G Cobb, D. and L. Graves, and J. Graves.

The meeting adjourned to meet again next Friday evening.

The wonder to us is, that Rochester has not before adopted this course, it is not even now too late-and we therefore look forward to the period when she will not only employ all the water power now unoccupied, but also introduce the use of steam power for the same purpose. Rochester will ultimately become as famous for her cotton and woollen mills as for her flouring mills. Let there

Projected Railroads in Canada.

We find the following remarks in relation to the canadian railroads, in the St. Louis New Era of 27th August. We agree fully with the editor-a friend of other years, in his remarks that " they should be carefully observed by our government, and proper steps taken to counteract them" by the construction of other roads that we may be able

"The projected railroads in Canada, says the has been patronized by the Minister of Marine, editor, will have an important effect on that region. The railroad from lake Ontario to lake Huron will be very important for commercial purposes, and also a very great engine of power in case of war. These Canadian roads should be carefully observed by our government, and proper steps taken to counteract them. Roads should be made so as to enable our government to concentrate a powerful military force upon any part of our frontier in the shortest possible period of time. Railroads as means of national defence now become indispensable, on account of the canals, railroads and steamships of Great Brit-

We admire the enterprize of our Canadian neighbors, and also the liberality of the home government-more indeed than their judgsimilar works so much needed in the wes-Charleston and Savannah through Ohio,

must do in self defence—less than this would be inexcusable in our people when our powerful neighbor is opening an easy communication from the Atlantic ocean to, and between the great lakes.

The period is not distant, we desire our friend of the New Era to bear in mind, when the important lines we have mentioned will each be able to run a train of cars with a thousand passengers to that immense depot which is to be built for their accommodation in his own growing yet now infant city, St. Louis. Who is there now living that can read its destiny? who can foretell its splendor when it becomes the central city, and capital of this great nation? Whoever he may be that can—he hardly dare do it, as it would inevitably subject him to the ridicule of his wiser? neighbors who see it not, and, therefore they will not believe that it can oc-

We hope to have leisure soon to call attention to the importance of early action in relation to the extension of the southern road to the Mississippi. South Carolina and Georgia have accomplished much under the circumstances. They have together constructed over six hundred and fifty miles of railroad, and it is now the duty of the adjoining states of Tennessee and Alabama, to extend those lines into their fertile regions, by which their own people will be greatly benefited and the enterprize of the people of Georgias and South Carolina will be more justly rewarded. We shall call upon Tennessee to move first—and soon, now is the favorable moment

The Iron Trade. - The following remarks in relation to the iron trade are from the last London Mining Journal, of the 2nd August. The closing remarks of the editor are exceedingly appropriate and just, and we hope they may have their proper influence upon the iron masters of Great Britain.

The consideration of the circumstances affecting that staple commodity of so large a portion of the kingdom-iron-is always of immense importance, and becomes particument in some of their expenditures—and we useful application in the arts is daily being hope to see them press forward their contem- vastly extended. In addition to the immense plated railroads in Canada West, as that if demand for sheet-iron for the purposes of shipnothing else, will insure the construction of building all round our coasts, its application to smaller articles of commerce for domestic tern states. Let them complete their rail-tity, but the greatest, increase in the future and agricultural uses consumes a vast quanroads between lake Ontario and Huron, or demand for iron will be for railways, both Detroit, and we shall then have, not only a here and on the continent. In this country railroad from the termination of the New alone, the numerous gigantic undertakings York and Erie—indeed from Buffalo, thro' which have already received the royal assent, Pennsylvania and Ohio to Detroit in Michi-ble before the approaching prorogation, legal are estimated at 1800 miles, and it is probagan, to Chicago in Illinois and to St Louis powers will have been given for the construc in Missouri! but also a connection between tion of two thousand three hundred miles of it and the present great lines from Baltimore, railway, the majority of which being double lines, we may take in round numbers at 8000 miles of rails, to which must be added chains, Tennessee, Kentucky, Indiana and Illinois | bolts, sleeper iron, extra lines and machinery The following gentlemen were appointed and thus be able to concentrate any desirable at stations, besides what is required for the a committee to collect facts and statistics con-force, either at any given point on the lakes, working stock, which will, of course, be put

be required in the next two years, without ly make of South and North Wales, Stafford-reckoning a single pound for foreign demand shire, Yorkshire, Lancashire, the north of England, and in Scotland, is estimated at number of furnaces in Belgium, France, and 6700 tons per week, and as more furnaces other parts of Europe, or the "go-a-hend" will continually be blown in, and in each style in producing iron, which the Americans session fresh railway schemes will be ready are attempting, it is certain that a large de- to be proceeded with, a continual and regumand for iron in England will arise from lar weekly make of iron may be depended the foreign railway schemes, many of which appearent this source alone for years to come. have already broke ground, and all are anx. The question now arises—will this apparent ious to begin. For the last three or four ly prosperous state of things be of that stable months the iron trade has been in a desponding benefit to all concerned in the iron trade, as ing state, declining prices and increasing from the nature of things it ought? We stocks have continually harassed the manu-trust it will--it is true, on other occasions of facturers, and occasional strikes of the men, unexpected prosperity, prices have run up te when an unavoidable decrease in wages was a most unhealthy figure, large fortunes have announced, added to the gloom; there is, how-been made in an incredible short time, only ever, now a prospect of steady demand for to be lost again on a sudden withdrawal: in iron for many years, the continuance of which the excitement of the receipt of extensive or-

in hand to be ready on the cempletion of the A regular demand of 12,000 tons per week lines, creating at least a demand for railway would employ all the furnaces at bresent in iron, amounting to 1,200,000 tons, which will make, and double their produce. The week-

even as high as 70 to 80 per cent. were made on the workmen's wages, but no sooner was the bubble burst, than an attempt at an equivalent reduction caused strikes and outbreaks, dissipation, and complete idleness. Having thus seriously felt the evils of wide fluctuations in the market, it is to be hoped the masters---and it rests with themselves---will prevent unusual excitement in the trade---let them as a body be content with a good profit, and not attempt to grasp'a fortune in a day, because that profit is good---let them secure to the workmen a fair, nay, even a liberal, return for his toil and danger; and instead of those ruinous changes in price which make trade a game of chance, and which defies calculation, they will secure a very large, and, what is better, a long-foreseen steady return for their capital; it is only under such circumstances the trade can really flourish, and, with a steady determination to pursue such a course under the approaching demand, it much depends on the masters themselves.—'ders, and the securing high prices, additions' must flourish, and that for years to come.

WESTERN RAIL BOAD _ Receipts for week anding	1

Sept. 6	eipts for w	reek ending 1844
Passengers		\$11,109 7,829
Total	\$19.726	\$19.058

1	MOHAWK AND LIUDSON.—The receipts from Ja-
1st	to Sept. 1st were as follows:-
	184446,089
	1845

Increase .... The business of the Philadelphia and Reading railroad, for the week ending August 30th 1845, as compared with the corresponding week in last year, was annexed: 1844. 1845. Increase. Passengers, \$17,635 04 \$28,022 52 \$10,387 43 13,119 22,792 Coal, tons. 9,673

There is scarcely a railroad in this country the business of which increases faster than this to Reading, and yet the price of its shares gradually decline, and the credit of its loans is with difficulty maintained at about 65 per cent. Why is it? Railroads at the east, doing anything like the amount of business done by the Reading road, are all at much higher

Railroad receipts generally continue favorable, resenting a steady increase over last year. On the Central road of Georgia the receipts have been,

	1843	1844	1845
April	\$7,486 88	17,676 87	32,686 94
May	10,107 07	50,092 59	33,213 23
	7,707 43	10,808 04	13,902 49
July	8,080 77	12,103 64	23,520 08

Total .... \$33,332 15 60,681 14 103,430 74 Showing a gain of \$43,749 in four months of this year over the same period of last year, and more than seventy thousand over that of 1843.

PHILADELPHIA AND READING RAILROAD.—A comparative statement of the business on the philadelphia and Reading railroad for the month ending August 31:

August 31: 1843. 1844. 1845. Business...\$52,219 35 \$76,997 60 \$127,113 33 102,921

#### Useful Information.

Americans who contemplate an excursion to Europe, and especially to the continent, by the way of London, will find the tabular statement of railroads, steam-packets, distances and fares-given in this number, exceedingly convenient. A stranger in London, having to make a tour on the continent, will be much relieved by having before him a list of the various steam packets to, and railroads on the principal English railroads.

#### New York and Eric Railroad.

It affords us much pleasure to be able to say that two millions of dollars have been subscribed to the stock of this company, up to last night. The directors seem to have resolved themselves into a committee of working men, and have done the people of this city great service, and themselves much credil, by their efforts; and we feel assured that their success thus far will stimulate them to renewed exertions which will be crowned with entire success: and that within thirty days the books for subscription will be closed-when many will be left to regret that they did not " find time to call at the office and take a few shares," or "to renew thetr former subscriptions," which they must do, or they will not be entitled to participate in the pleasure, and the credit, and the advantage, of being of the few who will in reality build the New York and Erie railroad.

BRANCHES AND FEEDERS TO THE NEW YORK AND ERIE RAILROAD. - We have more than once spoken of the branches and feeders to the New York and Erie railroad, and have said that they will exceed in length the main stem. We now say that, including the canals, they will, within seven years from this date, exceed twice the length of the main stem.

## The Railroads of Belgium.

With a notice of the other modes of Internal Comm nication-translated and abridged from "La Belgique et les Belges," by Major G. T. Poussin, formerly of the U.S.E.

BY G. C. SCHAEFFER, C. E. (Concluded.) For the American Railroad Journal.

The whole movement for 1844 was 560,000 tons. the receipts for which were 4,338,050 francs.

Proportion of the receipts for transportation of men 1,500 fr.; breakmen 900 francs. freight to total receipts.

In Belgium	per cent.
England23	
France20	66
Germany	**
United States 98	66

The freight is divided into three classes with th following prices.

1st class, about 21 cents per ton per mile. 24 11 4 66 3d " " 51 66

The goods are sent home or not as may be lesired, for this service an extra charge is made.

A discount of 10 per cent. is made for 1st class goods on a full car load, and for 2d and 3d class on any 4 to 41 tons. Another reduction of 20 per cent. is made on certain articles for exportation, foreign goods in transit, etc.

Average fare per ton per mile in various countries.

In Belgium 21 cents per ton per mile. England 61 France 31 5 Germany U. States 41 51 "

RAILROAD POLICE.

The police of the Belgian roads seems to be admirably arranged and well managed. No one is permitted to plant trees, open sand pits or quarries, make thatch or any combustible roof or deposite any combustible matters within 22 yards of the outer boundary of the roads. Infringements against these the continent, with the rates of fare by each. We or any other provisions for the safety of travel, are are preparing and shall soon give a similar list of punished by six months to two years imprisonment and a fine of 50 to 200 francs; when personal injury results, the offender is subject to the usual penalties of the penal code.

When an accident is the result of negligence or misconduct of officers or employees of the road, the offender is subject to a fine of 16 to 200 francs, and according to the injury to passengers, the amount is varied from 50 to 200, 500 or 1000 francs.

The administration of the police of the road is given to overseers of the road, inspectors and inspectors-general-these are sworn officers and are ordered to report all infringements of the laws .-The inspectors-general are clothed with judicial

All carriages and omnibusses running to the railroad stations are likewise under the supervision of the police.

### ADMINISTRATION.

The working of the railroads belongs to a special department with a director-general, under the immediate orders of the minister of public works.-There are four branches of service; 1st general administration; 2nd car department; 3d locomotive department; 4th transportation department. Each of these has a responsible chief with officers, etc., the whole amounting in number to 945, under a regularly arranged discipline; with promotion only according to actual practical knowledge.

Every officer receives his appointment from the king, on the nomination of the minister of public works, and can be neither nominated nor promoted except after examination. The minister acts with the advice of the director-general.

The highest salaries under the director are 6,300 trancs for second class inspectors; the engineers, architects, etc., receive 3,300 francs; chief of bureau 2,800 francs, chief of station 2,700 francs; 1st class clerks 2,000 francs; conductors 2,400 fr. chief of shop 2,500 fr.; machinists 2,000 fr.; fire-

A twentieth of the net product is divided among those officers who have it in their power to exercise any influence upon the profits of the road.

### PENSION AND RELIEF FUNDS

The pension fund is instituted for the widows and orphans of all officers of the railroads and public works, not connected with the engineer, army, navy or other department of government.

The relief fund is for the benefit of the workmen.

The pension fund is founded on a deduction from the salary of every officer, married or single, of 3 Mr. Gerard Ralston, of London, for a long and inper cent. on 5,000 francs and over, to 2 per cent. on teresting letter. Mr. Ralston's position, as an emito 20 per cent of her husbands salary at the time of the consumption of iron, and to form opinions of his death, the amount proportioned to the num- in relation to that branch of business especially ber of children under age-when more than five, 3 which must be useful to the readers of the Journal per cent. in addition is given for each minor.

draws as above 3 per cent., etc.

per cent. of his salary for funeral expenses, etc.

aged gratuitously by a commission of six officers of should be borne in mind that the extension of the the railroad and one of the public works.

#### RELIEF FUND.

This fund is based upon a deduction of 1 per cent. on the salaries of the workmen. Appropriations from this are made,

1st To workmen temporarily wounded or otherwise disabled in the service of the railroad.

2nd To workmen permanently disabled, by wounds or otherwise.

3d To the widows and families of workmen losing their lives in the service.

Those who are dismissed or voluntarily leave the service lose all right to the fund and cannot withdraw the deduction.

system, we may remark that the author has with demand shall be supplied from American mines and much sagacity, pointed out many things in detail furnaces. which as examples or otherwise are matters of peculiar interest. We have with hardly any exception followed him in all these, convinced that many valuable lessons may be learned from them, even where circumstances prevent an exact imitation.

We would particularly ask attention to the system of pensions and relief which in their details are evidently arranged upon the most benevolent principle.

The subject is worthy of the serious considera tion of companies. No man ever performs his duty more faithfully than when he feels that he is secure in a good place for life, with a prospect of promotion, according to his merits and with the comfort able reflection that his wife and family are secure from want after his death. It is perhaps not possible to follow out this plan in all its details in our own country; but we are convinced that the company following it most closely, will be best served to learn are extending in our country. and at the cheapest rate. If motives of benevolence will not suffice, we are quite certain that mere dollar and cent considerations, (heaven help the souls of those creatures who are moved by no other) would dictate some such course of proceeding.

We have in our eye a case strongly illustrating our argument. An excellent and able employee of a company was cut down in wages, and obliged to give up his situation; various attempts were made to fill his place cheaply. At last a memorial in his favor was presented to the company, signed by hundreds of the regular travellers on the road, and he was again employed at his former salary-but not until the company had lost more than the difference for which they had higgled would have amounted to in a year. We mention no names-qui capitille facit.

Foreign Correspondence.

We are again indebted to our esteemed friend all below 2,500 francs. If the wife dies first, this nent merchant in London, and his connection with are forming in France on this principle, will contribution is refunded. The widow receives 16 this country, enables him to survey the whole field as well as to our iron manufacturers and dealers In case of the death of both parents, the guardian generally-who ought to be, but are not its readersreceives for each child, one-third of the pension to we therefore give such extracts from it as may be which the widow would have been entitled, and useful and interesting to those who are in any way when there are more than three, each additional one to be affected by the immediate unparalleled demand for iron in Europe, in consequence of the extraordi-Within three days of the death of an officer or nary extent, 2860 miles, of railways authorized by employee, his widow or relatives are entitled to 5 the late session of parliament-which is nearly as profit by the invention which bids fair to much as had been previously authorized in Great come into very general use. You know it The funds of the widows and orphans are man- Britain since the introduction of the system. railway system is by no means confined to Great Britain; but that it pervades all Europe, and is to be introduced into the British possessions in India and the West India islands. Indeed, a gentleman, a civil officer under the government in the island of Jamaica, Mr. Mc Geechy, is now in this country for the purpose of examining our railroads, in order that he may avail himself of any suggestions which may present themselves to his mind, on comparing our cheap mode of construction with the very expensive mode adopted in England.

With such a prospective demand for iron, we hope the advice of our correspondent, to "our countrymen of Pennsylvania, Maryland, New Jersey and New York, to push the iron trade with all In concluding this notice of the Belgian railroad their vigor," will be followed, until the American

(Foreign Correspondence of the American Railroad Journal.

# 21 TOKEN HOUSE YARD ) London, August 22, 1845.

Dear Sir :- I shall be happy to write to you occasionally, for you say what I communicate may be useful to the railway cause, in which I feel the deepest interest; for by no other means can the disadvantages we labor under in our immensely extended empire be counteracted so efficiently as by rap. id and cheap means of conveyance of intelligence, passengers, and merchandize, by those astonishing improvements of modern times-the Electro-Magnetic Telegraph and the railway system, both of which I rejoice iron trade with all the vigor and enterprize

I recently visited the Atmospheric railway and Coryden line, not yet in operation, but will be in the course of six or seven weeks. You will, I am sure, be very much pleased with the drawings and plans in the two numbers of the Pictorial Times, of Aug. 2nd and 9th, I send you, herewith. If you will read the description with the drawings before you, there will be no difficulty in understaning this most philosophical and beautiful system of railway, which I think will probably compete succassfully with the locomotive system. In the course of eight months we shall have the "North Devon" of fifty fire-proof material may be abundantly em-

miles partially in operation, which, together with the Dublin and Kingston in Ireland and the Croyden near London, and several lines give some most interesting practical results, from which I augur a great extension of the system. Our countryman Pinkus, of Philadelphia exhibited this beautiful principle in a model, so long ago as 1835 or 36 I think, to a number of Americans in London, who were delighted with it. This ingenious man, like many other inventors, has been interfered with and set aside, and will never, I fear, is intended to extend the Corvden Atmospheric on to Portsmouth 75 miles, and the act of Parliament passed the House of Commons but was not reached by the House of Lords for the want of time. It will however be taken up the first thing at the commencement of the next session of the upper House. It is also thought that it will be adopted on the great London and York line, about 200 miles, which will also get its charter early at the next session of Parliament. You will see by the Railway Chronicle, I sent you by the last steamer on the 19th inst., that Parliament has just sanctioned 112 railways to the extent of very near 2,900 miles, which, at 500 tons per mile of double track, for plant as well as for motive power, will require a good quantity of iron (1,450,000 tons,) which must be forthcoming in the years '46 and '47; so that there is no prospect of much reduction in the price of iron for some years to come, particularly if the Atmospheric becomes the favorite system, as this requires at least 20 per cent more of iron for the plant, though not for the propelling power, which being stationary will not be subjected to such frightful wear and tear as the locomotive power. I therefore hope our countrymen of Pennsylvania, Maryland New Jersey and New York etc., will push the in their power-they need not fear low prices-for the consumption, so long as the world is blessed with peace, must go on increasing in a much greater ratio than ever before; and my only fear is that high prices will check consumption of this invaluable metal. There is no article whose use is so much stimulated by low prices as iron, and there is none which is sooner checked, as regards consumption, by high prices than iron. After the fearful fires of Pittsburg, Quebec, and New York, we ought all to be advocates for low priced iron, so that in rebuilding those unfortunate towns this invaluable

in being obliged to pay 25* dollars more per plete your great New York and Eric road. great impediment, to the extension of the invaluable railway system in our country, being ever removed.

The novelties in the railway world here are, first, the completion of a double line of house-Grissel and Peto, who contracted with the Northern and Eastern counties railway company to extend this line through Cambridge and Ely to Norwich, which was done by this enterprizing house, in the best possible manner—they purchasing the land, iron, locomotives, and all other materials, as well asdoing the road formations, constructing stations etc., etc. For this energy they were rewarded by a bonus of £25,000, and if they had failed in performing their contract they would have been mulcted in a heavy penalty. If a railway company had undertaken to make this road, they would have been a longer time in getting the concessions of the land than this enterprizing house were in completing the whole road. I will only mention to you one more remarkable circumstance. News was brought by railway from Sunderland to London, 303 miles, in 7 hours and 27 minutes, or 401 miles per hour. The himself to the enterprize, unil he had accomplished object of this dispatch was to commanicate the result of the election at Sunderland, for which purpose the "Times" had an express train. George Hudson was elected over the anti-corn law league candidate, Col. Thompson. On some parts of the road the speed was astonishing; from Darlington to York, 45 miles, the distance was done in 52 minutes: and occasionally the rate was a mile in 48 seconds, or at the velocity of 75 miles per hour; and if this had been kept up all the way to London, the whole distance would have been performed in little more than four hours; but much time was lost on the London and Birmingham railway, between Rugby and London, owing to the inefficiency of the engine power (where they have Berry's old fashioned four wheeled engine,) and the absence of the chief superintendent of the and determined to accomplish the great object in tractors naturally look for them. line. All the distance from Sunderland to Rugby was made on roads under the direction of Mr. Hudson, and every thing under his management is perfectly well done. How will this performance compare with what is done on our metropolitan railway! the Camden and Amboy!! between the great

Our railway friends in America cities of New York and Philadelphia? Oh certainly labor under serious discouragement that you had a Hudson in New York to comton for their iron than their brethren in Great It is rather disparaging to the metropolitan is advertized for contract. "This portion of Britain; and I fear there is no prospect of this city of America, that no man of sufficient the road can be easily constructed, and we energy, judgment, talent and good will, and and the cars running, by the 4th of July possessing the confidence of his fellow citi-next. zens, can be found among its 400,000 souls, ly important work. If George Hudson had expected that it will be ready for the 'iron Railway, of 92 miles in length, in 12 months it under his charge, he would, without fail, bridge across the Manhan river has been and 3 days This was performed by one complete it in three or four years. How completed some days, and that across the would it do to import Mr. Hudson for this Mill river is nearly done. Both are fine purpose? I was in hopes that your late structures. The masonry of them are noble mayor, Mr. Harper, would have been wil-specimens of that kind of work." ling to undertake and able to carry through, this great work, which really ought to be completed with as little delay as possible, particularly after the great liberality of the New York legislature to the company.

Mr. Casey.

importance of the early construction of the New YORK AND ERIE RAILROAD; and have deeply regretted that for so long a period, there was no one in this community, possessing the necessary qualificaor could be induced, to come forward and devote what will yet be esteemed one of the most important benefactors of their race; but we will regret no longer, nor will we, at present, consent even to the imchants of our city for a helmsman; who, with his associate directors, mainly from the same class alsoenterprizing, high-minded and wealthy merchantswill, from this time, move onward steadily, but him better returns even than what he retains surely, as he has already done in his own affairs, to the accomplishment of the great object in view, ample and entire success. The president, or leading officer of such a work as this, must be a man of mind, industry, character and wealth-all of which he view, we may well believe, when we see him head the subscription list with two hundred thousand dollars, or 1-15th of the whole amount required, and then take his station at the wheel, resolved to carry the noble ship into port, or sink with his colors nailed to the mast; and we are willing to risk our reputation as a prophet upon their success if he and his associates will work harmoniously together, and adopt the plan of completing, and bringing into use, and thus rendering available, section after section of the road, until it is completed.

# Connecticut River Railroad.

The extension of this road from Northampton to Greenfield, says the Hampshire Gazette,

The road between Northampton and Cabto come forward and carry through that vast- otville is progressing rapidly, and it is now

Thus we see link after link of important roads commenced and completed with scarcely an effort, in New England, and simply because the people have the sagacity to see that by the expenditure of a portion of their P. S. I have just received your Railroad property in the construction of railroads Journal of the 24th July, containing my let-they render the remaining part more valuater of the 4th July, which I am pleased to ble than the whole was before, like the farlearn meets your views, as well as those of mer, who gave a third of his farm to one daughter as a marriage portion, and found We agree fully with our correspondent as to the after a time that what remained, yielded him more net profit than the whole did before---and so on the marriage of his second daughter he divided his farm again, and still found tions—the pecuniary ability, the considence of the that his profits from his one-third were greabusiness community, and the disposition to take the ter than when he occupied the whole. The laboring oar in this great work-who was willing, secret lay in the fact that he applied the same labor to the part, as he had before to the whole, and obtained greater crops. So will works of the age; and thus render to his fellow citi- it be with the people who judiciously invest zens the greatest possible benefit, and acquire for a part of their property in railroads; what himself a name among those who are esteemed as remains will yield greater profits, because better markets are furnished and the expense portation of Mr. Hudson, "the railway king" of of reaching them greatly reduced, but here England, as we have found, we fully believe, one as the comparison ends, it is not like the farmer good as he; from the same walk of life too-the mer- who gave away two-thirds, and only derived the profits from what remained. In this case that which is invested in railroads will yield with its improved cultivation, and thus he will be doubly benefitted.

## Atlantic and St. Lawrence Railroad.

We find in the last Portland Advertiser. the call of a meeting of subscribers to the stock of this company, for the 25th inst., for the purpose of organization. Of course the terms of the act of incorporation have been complied with, as we also learn from the Advertiser, which says:

"We announce with most hearty gratifica tion, that the subscription of the first million of the capital of the Atlantic and St. Law rence railroad company is completed !

The corporators have accordingly issued the call for the first meeting of the subscribers, which is fixed for the 25th of September.

This certainly evinces both enterprize and energy in the people of Portland, who have been the principal movers in this important matter. It is only another evidence, however, among the many which we have already had presented to our mind, that the road will be constructed, and that too, with all possible therefore is hereby given that the first meetdispatch. It shows what a few intelligent, ing of said corporation will be held at the enterprizing men can do among intelligent City Hall in Portland in the state of Maine, people, when they have a good cause, and ber next at three o'clock in the afternoon, for resolve to succeed. There is much yet to the purpose of organizing said corporation, if that is the cause of this decision, and we be done before the great object is accomplish- and to that end

and then make them responsible for all their Such are the conveniences and advantages of railroads; that those residing in the interior of New Jersey are not to be confined ing between different lines when they have mond; Charles Cobb; John Neal; George ry wagons for freight, whilst the people of by competent professional ability-which af James L. Wm. P. Preble; Josiah S. Little; John William Kimball; Eliphalet Greely."

#### Vermont Central Railroad.

We are not a little surprized to learn that yet we discover neither, and therefore we beg policy to enlighten us, that we may be as wise as others. Possibly something like the following may have had its influence-viz. "if we can induce the 'Fitchburg' to unite with us, instead of with the Rutland line, we may thus defeat our rival on the west side of the mountain, and secure the whole Boston-wise travel and freight "-if so, they will find that this knife cuts both ways, as the Lebanon line will be sure to become a rival on the north of them, and the Rutland on the south, notwithstanding their efforts to prevent it. There are some things which may, and others which must be done; and we believe it to be the interest of the community, and consequently of the sharehol ders, to allow railroads to connect wherever it can be done with facility, and there can surely be no more natural connection of two important roads than at the mouth of White river, between Boston and Burlington, and it will surely be done too, whatever may be the decision of the present board of directors. There is now to be three principal lines of railroad through Vermont, in a north-westerly direction from Boston to lake Champlain and Canada, and the gentlemen of the central route may as well "give it up" now as hereafter. It is useless for local interest, can imagine no other; to undertake to resist

the onward progress of the system of railrectors.

" In board of directors, Boston, Aug. 29, 1845, the following resolves were adopted by an unanimous vote:

THE AMERICAN RAILROAD JOURNAL is the only periodical having a general circulation throughout the Union, in which all matters connected with public works can be brought to the notice of all persons in any way interested in these undertakings. Hence it offers peculiar advantages for advertising times of departure, rates of fare and freight, improvements in machinery, materials, as iron, timber, stone cement, etc. It is also the best means for advertisoum for advertising contracts, and placing the merit of new under takings fairly before the public.

# KITE'S PATENT SAFETY BEAM.

MESSRS. EDITORS.— As your Journal FLAN is devoted to the benefit of the public in general I feel desirous to communicate to you for publication the following circumstance of no inconsiderable importance, which oc-curred some few days since on the Philadel-phia, Wilmington and Baltimore railroad. Safety Ream On the passage of Safety Bean

the evening train of cars from Philadelphia to this city, an axle of our large 8 wheeled passenger car was broen, but from the particular plan of the construction, the accident was entirely unknown to any of the passen-gers, or, in fact, to the conductor himself, until the train, (as was supposed from some circumstances attend-ing the case,) had pass-ed several miles in advance of the place where the accident occurred, whereas had the car been constructed on the common plan the same kind of acci-

dent would unavoidably have much injured it, perhaps thrown the whole train off the track, and seriously injured, if not killed many of the passengers.

Wilmington, Del., Sept. 28, 1840.

The undersigned takes pleasure in attesting of the value of Mr. Joseph S. Kite's invention of the Safety Beam Axle and Hub for railroad cars. They Safety Beam Axle and Hub for railroad cars. They have for some time been applied to passenger cars on this road, and experience has tested that they fully accomplish the object intended. Several instances of the fracture of axles have occurred, and in such the cars have uniformly run the whole distance with entire safety. Had not this invention been used, serious accidents must have occurred.

In short, we consider Mr. Kite's invention as completely successful in securing the safety of property and lives in railroad travelling, and should be used on all railroads in the country.

JOHN FRAZER, Agent,

GEORGE CRAIG, Superintendant,

GEORGE CRAIG, Superintendant,

W. L. ASHMEAD, Agent.

They have for some time been applied to passenger cars on this road, and transportation office, No. 1 Hanover st., N. York.

Section

ELEVATION

DATENT HAMMERED RAILROAD, SHIP and Boat Spikes. The Albany Iron and Nail Works have always on hand, of their own manufacture, a large assortment of Railroad, Ship and Boat Spikes, from 2 to 12 inches in length, and of any form of head. From the excellence of the material always used in their manufacture, and their very general use for railroads and other purposes in this country, the manufacturers have no hesitation in warranttry, the manufacturers have no nestitation in warranting them fully equal to the best spikes in market, both as to quality and appearance. All orders addressed to the subscriber at the works, will be promptly executed. JOHN F. WINSLOW, Agent.

Albany Iron and Nail Works, Troy, N. Y.

The above spikes may be had at factory prices, of Erastus Corning & Co., Albany; Hart & Merritt, New York; J. H. Whitney, do.; E. J. Etting, Philadelphia; Wm. E. Coffin & Co., Boston. ja45

These Arresters are constructed on an entirely different principle from an The form is such that a rotary motified to the best spikes in market, between extensively used during the least part of the wave been extensively used during the least part of the wave been extensively used during the least part of the wave been extensively used during the least part of the wave been extensively used during the least part of the subscriber at the works, will be promptly to such a state of perfection that no an-noyance from sparks or dust from the control of the part of the part

PATENT RAILROAD, SHIP AND BOAT Spikes. The Troy Iron and Nail Factory keeps constantly for sale a very extensive assortment of Wrought Spikes and Nails, from 3 to 10 inches, manufactured by the subscriber's Patent Machinery, which after five years' successful operation, and now almost universal use in the United States (as well as England, where the subscriber obtained a patent) are found superior to any ever offered in market.

Railroad companies may be supplied with Spikes having countersink heads suitable to holes in iron rails, to any amount and on short notice. Almost all the railroads now in progress in the United States are fastened with Spikes made at the above named factory—for which purpose they are found invalua-ble, as their adhesion is more than double any common spikes made by the hammer.

All orders directed to the Agent, Troy, N. York,

will be punctually attended to.

HENRY BURDEN, Agent.

Spikes are kept for sale, at Factory Prices, by I. & J. Townsend, Albany, and the principal fron merchants in Albany and Troy; J. I. Brower, 222 Water St., New York; A. M. Jones, Philadelphia; T. Janviers, Baltimore; Degrand & Smith, Boston.

*A Railroad Companies would do well to forward their orders as early as practicable as the subscriber.

their orders as early as practicable, as the subscriber is desirous of extending the manufcturing so as to keep pace with the daily increasing demand. ja45

# FRENCH AND BAIRD'S PATENT SPARK ARRESTER.

10 THOSE INTERESTED IN Railroads, Railroad Directors and Managers are respectfully invi-ted to examine an improved SPARK ARRESTER, recently patented by the undersigned.

Our improved Spark Arresters

These Arresters are constructed on an entirely different principle from any heretofore offered to the public.

The form is such that a rotary motion is imparted to the heated air, smoke and sparks passing through the chimney, and by the centrifugal force thus acquired by the sparks and dust they are separated from the smoke and steam, and thrown into an outer chamber of the chimney through openings near its top, from whence they fall by their own gravity to the bottom of this chamber; the smoke and steam passing off at the top of the chimney, through a capacious and unobstructed passage, thus arresting the sparks without impairing the power of the engine by diminishing the draught or activity of the fire in the furnace.

These chimneys and arresters are simple, durable and neat in appearance. They are now in use on the following roads, to the managers and other officers of which we are at liberty to refer those who may desire to purchase or obtain further information in regard to their merits:

on the following roads, to the managers and other officers of which we are at liberty to refer those who may desire to purchase or obtain further information in regard to their merits:

BENTLEY'S PATENT TÜBULAR STEAM BOILER. The above named Boiler is similar in principle to the Locomotive boilers in use on our Railroads. This particular method was invented by Charles W. Bentley, of Baltimore, Md., who has obtained a patent for the same from the Patent Office of the United States, under date of September 1st, 1843—and they are now already in successful operation in several of our larger Hotels and Public Institutions, Colleges, Alms Houses, Hospitals and Prisons, for cooking, washing, etc.; for Bath houses, Hatters, Silk, Cotton and Woollen Dyers, Morocco dressers, Soap boilers, Tallow chandlers, Pork butchers, Glue makers, Sugar refiners, Farmers, Distillers, Cotton and Woollen mills, Warming Buildings, and for Propelling Power, etc.; and thus far have given the most entire satisfaction, may be had of D. K. MINOR, 23 Chambers st. New York.

The article is complete in itself, occupies but little space, is perfectly portable, and requires no brick work, not even to stand upon. It is valuable, not only in the saving of time and labor, but in the economy of fuel, as it has been ascertained by accurate measurement, that the saving in that article is fully two-thirds over other methods heretofore in use. They are now for the first time introduced into New York and Boston by the subscriber, who has the exclusive right for the New England states, New York and New Jersey, and are manufactured by

FORCE, GREEN & CO. New York.

# DAVENPORT & BRIDGES' PATENT CAR AND TRUCK

DAVENPORT & BRIDGES CONTINUE TO MANUFACTURE TO ORDER, AT THEIR WORKS, IN CAMBRIDGEPORT, MASS. senger and Freight Cars of every description, and of the most improved pattern. They lso furnish Snow Ploughs and Chilled Wheels of any pattern size. Forged Axles, Springs, Boxes and Bolts for Cars at the lowest prices. All order punctually executed and forwarded to any part of the country Our Works are within infleen minutes ride from State street, Boston—coaches pass every fifteen minutes.

Philadelphia to Pittsburgh through Harrisburg.

## Philadelphia and Pittsburg .--- Continuous Railroad

We have for some time time noticed the workings, in the interior of Pennsylvania of the right spirit on this, to Philadelphia all-important subject, and we were surprize to find a Philadelphia paper raising object tions to it, or advocating another route, b the construction of which the travel would mainly go round Pennsylvania.

To us it has been matter of surprize that so little has been said and done in favor of the exceedingly favorable route discovered which was published in the Railroad Journal in 1841. We shall have occasion to restate railway, can be had. We have said provements which had been made in the that report soon and are gratified to see that we had the charity to suppose the written group of interior Pennsylvania moving, as they will be sure to arouse the right spirit suspect the editor of a paper, guilty of being tain Huddart's contrivance for varying the and action in Philadelphia and there is no ration, between Philadelphia and Baltimore, tance from the centre of the rope, so that people within our knowledge who more need for the ignoble purpose of injuring his own to be aroused to a knowledge of their own state, and the city in which he lives. Ex-same distance from the central strand, was true interest on a large scale.

The Harrisburg Argus is ernest in its advocacy of a direct line of railroad, from Philadelphia to Pittsburgh, on "Pennsylvania grounds" and in reply to some arguments from other quarters, holds the following lan-

show that the distance to Pittsburgh, by way hours. We shall carry 500,000 passengers of Harrisburg and the valley of the Juniata is annually over the route, as it will be the carry that principle into effect. The wire nearest and best route from the seaboard to rope consists of a hempen core, and the horizon-rope consists of a hempen core, and the object of his machinery is to carry that principle into effect. The wire By the survey of Jonathan Knight, made in the Ohio, and also the nearest route to lake tal section of which exibits seven equal cir-1841, and 1842, the Baltimore and Ohio rail- Erie. way, when completed to Pittsburgh will be 339 miles in length, 179 of which has been ican, we can construct a branch from Cham-central circle, and also each other. Round finished to Cumberland, and 160 miles, not bersburg to the Baltimore and Ohio road.ished road, is 84 feet per mile, for several not permit us;—and in the next, if permiscentral core is of hemp, (as is the core of the miles, on both sides of the Parr's Ridge, bestion could be obtained, the distance by this rope,) it is surrounded by six wires,—the distance of the rounded by six wires,—the distance of the core of the rounded by six wires,—the distance of the core of the rounded by six wires,—the distance of the core of the rounded by six wires,—the distance of the core of the is the yeavy grade that the number of tons do not uqual half the number per train which to Hancock and from thence to Chambersburg, the rope exibits forty-nine equal circles, (thirty-nine equal circles, thirty-nine equal circles, the control of the years of years of the years of years are taken over the Philadelphia and Columbia road. The trains averaged on the Baltimore and Ohio road in 1839, 24 tons, in 1840.

This is 97 miles and between 40 and the centres of the hempen cores of each the centres of the hempen cores of the h 21.3 tons, in 1841, 19.2 tons, thus decreasing that. This is 97 miles and between with the age of the road. The unfinished portion of 160 miles from Cumberland to Pittsburgh has a grade over the Allegheny mountains for 30 miles of 57 to 66 feet per mile, 21 feet higher than the maximum grade through Pennsylvania. By the surveys of Col. Chas. Schlatter made in 1839. 1840 and 1841 by the authority of the state, the distance between Harrisburg and Pittsburgh is only 229½ miles and the grade is in through Pennsylvania is about 80 miles near-no place steeper than 45 feet per mile, the er than by a branch into Maryland. This depth in mines, a heavier load may be lifted maximum on the Philadelphia and Columbia together with the fact, that Baltimore inter-with equal power whenever the wire rope is railroad. Col. Schlatter, was three years est would control the company, and put disemployed and with able assistants examined criminating tolls on freight and passengers preferable in the fixed rigging of ships; three different routes, giving preference to the passing through the Cumberland valley, and its value for railway purposes has been one by way of Juniata which is only 229½ would force every thing to Baltimore to the proved by decisive tests. As long as hempen miles in length.

prejudice of Philadelphia. Under such cir-ropes were used on the Blackwall railway, Let us then look at the distances, and cumstances, who would construct the branch there were often two or three breakasge a-day. show the effect of his opposition to a rail-from Chambersburg to Hancock, even if Since these have been superseded by the iron Maryland should grant the privilege?

A continuous railway through Pennsylvania from Philadelphia to Pittsburg is demanded by the best interest of the commonwealth. and the Philadelphian who opposes it, is an enemy to these interests, and if he does boast of being a Native American, he is no true son of Pennsylvania, native or adopted, and carries no Pennsylvania heart in his bosom.

ON THE MAMUFACTURE OF WIRE ROPES. By Mr. Carpmael.—This manufacture has grown up within the last four or five years. Till the year 1839-40 there were no real wire ropes in this country, i. e. no manipulation of wire, first producing strands, and then combining these strands into a single each, throughout its course, being kept at the Cumberland to Pittsburgh, before our own tension. The characteristic difference between the mechanical principles of the mancles,—six round a central one; these, accor-But says the editor of the Native Ameri-ding to a known geometrical law, touch the this central core are six strands, formed exstrand, producing a regular hexagon. Having exhibited the machines by which Mr. Newall lays the wires in the strands, avoiding all twist, Mr. Carpmael stated some of the purposes to which this manufacture had been applied. He premised, that the greatest strength is obtained when wire made of hard iron is used. Ropes thus manufactured are stronger, lighter, and cheaper, than From this it will be seen that the route hempen cordage bearing equal weights; conwire, there have not occured more than 12

The Manufacture of Steel.—We have be-fore referred says the London Mining Journal, to the the exibition of mineral productions at Berlin, as having attracted the attention of the chiel miners and iron masters on the continent, from the important nature of the subjects introduced. In following up our notices, we this week translate the following paper on steel, with the different processes adopted in mixing ores and casting:

Preparation of the Ore. - The ores for the production of cast-steel are very fusible, possesses a large portion of manganeseferous qualities, but only a small quantity of lime. This ore is a mixture of hydropidated iron and specular iron-the residues are of argillaceous schiste. After their extraction, they are washed and separated from the quartz; the ores are afterwards roasted, which is genthe following ordeals:---

The Large Furnace. - The mixtures are made as follows .---

20 per cent. of ore, not roasted or burnt;

74 per cent. of ditto-roasted;

6 per cent, manganese.

100, to which is added,5 per cent. of calcarous stone.

The greater part of the high furnaces consume wood as a fuel, but lately they have made some trials, at Siegen, to employ coke, which has answered all the purposes of wood, if it were not that the casting afinery itself with less facility, but the quality is the same. The production of white shining metal is a portion of steel, but there are middling qual-

This important subject is again before the British public; and it would appear, from time much cheaper. The manufacture of graphic process. Mr. Farraday concluded Engineer and Architect's Journal for June,

nal in fie, and the entire receipts for tolls du-ring fifty years after it is completed, with other privileges of great value-will, we should suppose, be ample inducement for capitalists in England to furnish the necessa-

Journal was the first scientific work to bring before the public Mr. Galloway's plan for constructing a railroad in the desert, and uniting Suez, Grand Cairo and Alexandria by a few hours journey, instead of many days, so it has now the means of calling attention to a much greater and more magnificent project for uniting the Atlantic and Pacific, saving to the vessels of Europe 8,000 miles, and to those of America 12,000 miles in voyaging to China and the East, opening a new world to the enterprize of the old one, connecting the mother country with her distant colonies-obviating the present difficult and dangerous passage by cape Horn, twice under the burning sun of the tropics, and contributing more than any discovery since that of the mariner's compass and those made by Columbus, to the vast objects of commerce and civilization, the enrichment of many and the enlightenment of more. To Don Jose de Garay, assisted by the Mexican government, is the honor of planning, surveying and demonstrating this magnificent project due, to Mr. alderman Vickers the credit of appreciating its consequences and capabilities, and adopting it and bringing it before the British public. The distance across the Isthmus is 120 miles, the length of the river with its coast of Mexico, proceeding from thence to plicitly trusted and not interferred with—that winding which is navigable, is 40 miles, and China, etc., and all vessels bound to the Pathey are left to do, and not to argue—this is nal to be cut is 49 miles.

The following extracts from a circular just issued by alderman Vickers, will exhib-

it the progress of the undertaking.

Don Jose de Garay, who is now in London, conceived the execution of this grand project; and the Government of Mexico appreciating its vast importance granted to him woods, cotton, indigo, coffee, sugar, cocoa, the most ample concessions, in case he should cloves and other spices, cochineal, ivory, ment, that the chairman rather under-stated succeed in carrying it out. Fortified with this concession, and the countenance of the direction of Don G. Moro (an Italin engineer), a scientific commission, the members of which, after an examination of the Isthmus for upwards of a year, made a report, in the most favorable terms, as to the praced out by a press of other matter. ticability of the undertaking. The Mexican officers Don Manuel Robles and Don Jose the Great Western is a song of triumph, and now so valuable property. While we are Gonzales (whose services the government its notes were joyously taken up and re-echoed satisfied that Mr. Saunders has well deserved had placed at the projectors disposal), took by the shareholders present at the General all he has obtained, it is but justice to the tant concessions made to Don Jose Garay by rehearsed comprises the Berks and Hants, the that there are not many who would have been the Mexican government are: First—Pow-oxford and Rugby, the Monmouth and Hereford, the Oxford, the Oxford, Worcester and Wolverhampton, and to receive for ton, the Wilts, Somerset and Weymouth, and to this amity of co-operation and unity of manfifty years (commencing from the day that the South Wales; all of them fresh and pow- agement, that the esprit du corps which unites communication shall have been effected between the two oceans), all tolls and dues actween the two oceans), all tolls and dues accruing from transit, both by means of a caa celbration of the victories of a campaign

# Baltimore and Ohio Railroad.

This company have reduced the fare on the Washington Branch, from \$2, to \$1 60, and to 4 cents per mile for way passengers. We are gratified with this movement, because we believe it will advance the interest of the company. It is possible that we may, in this instance, be mistaken in our views, but we feel great confidence in the opinion that it will be otherwise. There is now one other part of the line, between New York and Washington, where a reduction should be made. The charge between New York and Philadelphia, as compared with other rallroads, is oppressive. There is not another line of railroad in the country, where, in our opinion, so favorable results would follow the reduction of fare as between this city and Philadel-Philadelphia, would pass over the road, where one Great Britain. now passes. It would give new life and energy to

reduced on the railroads.

#### New York and Eric Railroad.

We stated in our last, that the subscriptions to the stock of this road amounted to \$2,000,000. We managed. are now able to say that it has been increased by over \$500,000, leaving less than \$500,000, to be obtained, which will now soon be accomplished, and then the books will be closed. The closing of the books of this company, upon subscription of three millions, insures the early completion of the workbut that, by itself, important as we consider it, will be trifling in comparison with those numerous branches, extensions, and connecting roads, which are sure to follow speedily upon its completion-to the extent of several times its length. Of these, however, we will speak more at length hereafter; and close this, by calling the attention of those holding the old stock, to the advertisement of the company, in this number of the Journal, in relation to its ex-change for new. This is an important and an im-tations as in the Mining Journal of last Saturday. perative measure and should not be delayed-therefore we shall refer to it again, soon.

We desire to call the attention of our readers to the article in this number, in relation to the rival routes for a railroad from this city to Albany. The time has arrived when we look for action, action, ACTION, on this important subject, and we ask the Poughkeepsie Telegraph and other papers along the river, to republish this article, that the whole matter may be fully understood.

THE POWER OF STEAM AND THE EXTENT OF ITS USE.-It is said in the Mining Journal, that the power of steam in Great Britain, is equal in its effects annually to the labor of 270,000,000 men, in a population of only 28,000,000.

tations as in the Mining Journal of last Saturday. Scotch Pigs have been sold yesterday and to-day at 72s. 6d. and 75s.—according to terms of delivery; there are buyers at 72s. 6d. but no sellers under 75s. At the meeting of the masters, on the 27th inst., it was agreed to continue their quotation at 65s., but they will not sell under 75s. to 80s. There is a partial strike among the men, and others have given notice. In foreign nothing fresh.

THE ARRIVAL OF THE BRITTANIA, at Boston, has furnished us with the following English Journals and periodicals, viz: Herapaths Railway Journal, Railway Times, Chronicle, Record, and Express, the Mining Journal, Civil Engineer, and Architects Journal, Mechanics Magazine and the London Philosophical Magazine and Journal of Science, from each of which we shall endeavor to select something useful to our readers.

The present indications in the iron trade, are, There is a gradual advance in the price of iron, that prices must advance, as will be seen in our ar-The quotations in the London Mining Journal of ticle on that subject. The adjournment of parliament has by no means abated the growing spirit for new railways. It is well said by a writer in the Mining Journal, that "the impetus for railway making, has been given, and nothing will check it until every town in the kingdom is accessible by a railway"-of course the iron business must be greatly increased. It is estimated by the same writer that two thousand miles of railroad will be chartered by the next, and one thousand miles by the succeeding parliament, and that consequently there will be an increased demand, during the next three years, for 2,855,000 tons of iron 1 or 950,000 tons per annum, for home consumption. Who can estimate the comforts which this new enterprize will give to the laboring community? It gives new life to business in wavs innumerable. It is said that 1,233,-000 tons of iron will be required in the year 1848 for railroads in England alone-to supply which will employ 100,000 laborers, and consume 13,000 tons of ore, and 20,000 tons of coal per day, during the year. Twice as many laborers and mechanics will be employed in the construction of the works, In the same excellent journal of 30th August, we and machinery required on them when completedfind the following which shows a decided improve- besides those engaged in new enterprizes, growing ment in prices—and we have no doubt, from the out of the construction of these railroads. It is indications, that there is to be a material advance in difficult indeed, to define the limit of their influences the price, which will be sustained for a considera-upon the people and country. The results must be phia. At \$2, each, we have no doubt but that ble time, owing to the extraordinary demand to be seen to be realized. Even the boldest speculator three, and probably five citizens of New York and created by the extension of the railway system in upon future events, hardly dare give utterance to the truth, as it will become his imagination, as it

#### New York and Albany Railroad.

We published a short time since a letter from John Childe, engineer on the Springfield and Northamp-ton railroad, advocating the construction of a railcalled the river route. We give below, a statement from Albany to Boston, all those portions of margin of, or in the river, crossing sevemade two or three years since, as to the relative merits of the interior and river routes by Edwin F. Johnson, civil engineer; in which the conclusions arrived at are very diffierent from those contained in the letter of Mr. Childe. As the matter stands, it is incumbent upon Mr. Childe, having taken the offensive, to make good if he can do so, by reference to facts and by argument, the position he has assumed.

"Statement of Edwin F. Johnson, chief engineer of the New York and Albany railroad, submitted to the legislature of New York in 1843 pending the application for a charter for a railroad along the of the trade at Albany and Troy. east margin of the Hudson river."

The route selected by the New York and Albany railroad company, for the location of within the state of New York and near to its their road between New York city and Dutchess county, passes from the Harlem river into direct course, and distinguished for its very the Croton valley, where it occupies the only favorable grades, and cheapness of cost. suitable ground on which a railway can be constructed east of the Hudson river, with-so situated as easily to connect with the upin the limits of the state of New York.

Upon the northern portion, two or more routes or variations in the route, are consid-important tributary from the east; and that ered practicable by which the line may be about 50 miles of the portion of the main placed nearer to or farther from the river. line nearest to New York city could be made On this portion, the line as surveyed and to constitute a part of the continuous line matters will readily comprehend the suffirepresented on the annexed map, and on leading from New York, inland, to Boston ciency of an estimate which allows for the which the estimates of cost are based, is the by the way of New Haven, Hartford, etc.

The company in the discharge of their farthest practicable from the river.

The whole route on this line from New acterized by very favorable features. It lies with the choice which they were compelled cost in favor of the interior route, its superito make. The line selected as above descriority rests, as above stated, upon other and miles and for much of the remainder of the distance traverses the plains of Schodac and of Dutchess county.

New York city and protecting it as far as difficulties and expense have been greatly unthe Highlands, is located, of necessity, for Prior to the construction of the railway most of the distance, immediately on the Connecticut and Massachusetts within, and at high or low water, is not stated) is repre-

Upon this line, from the description gived of great moment to so locate the New en, there are marshes to be crossed by piling York and Albany road, as to reclaim as or otherwise; heavy excavations in rock with several deep thorough cuts. The road is also to be protected from injury on the river side by walling or docking for much of the tance in its bearing upon the interests of New distance. In fine the work is generally of York city to that of preventing a diversion such a character as to render it exceedingly difficult, if not impossible, even under the most careful examination and measurement to make any other than an approximate estimate of the cost.

Those who are experienced in such matters understand fully the difficulties of making constructions in water, and with even a very limited knowledge of the general character of the route, can appreciate the claims to confidence of an estimate which places the cost of a roadbed for a double track from Harlem river to Rhinebeck, with a super-structure for a single track "similar to the one laid on the Boston and Albany Railroad" at the average cost of only 20,000 dollars per mile!

Those also who are experienced in such right of way for a railroad between New York and Albany, on the proposed river line

It is unnecessary, however, to dwell upon bed, passes near the east line of the state: be- higher considerations, affecting deeply the tween it and the Hudson river in Putnam commercial interests and prosperity of New

The preservation of the ascendancy of river is from 15 to 20 miles, and it has one tirely precluded the idea of a route in that New York, in her control, over the internal principal summit situated near the north line direction. The possibility of obtaining a lev- and external commerce of the country and el or nearly/level line situated directly upon the cheapening of provisions in her markets From this summit the grade descends southerly, at an average of about 8 feet per from the great expense and other consider
country bordering upon the Hudson river. mile, and northerly at the rate of 16 feet per ations equally powerful and cogent, the idea and hence nothing will be lost, while much mile, the maximum grade being 30 feet per of building a road in that position, if ever semay be gained by selecting a more easterly line.

The declaration that the river line can be of the eastern or interior route, those whose passed in very much less time, and operated

possible at the present session of the legis as appears by the published reports, is about lature, the claim for which is supported by 2 per cent in favor of the river line, effected what purports to be a survey and estimate of cost probably, in a great measure by the crossing of a line running along or near the east mar- of the bays already alluded to. This differted at less expense than the one selected by minutes difference in the time of passing both the New York and Albany railroad compa-routes, a consideration practically of no importance.

The river line is also represented to have a ed, of preserving the commercial supremacy of of the report and map of this survey that the maximum grade or inclination of 13 feet less

effected with the eastern railroads at New capital of £58,452,900, were authorized. In of which £53,090,893 is paid up, and £32,-Haven, by a branch occupying an eligible addition to these, there were 196 other proposition for developing the resources of the jected railways, not yet before parliament, sive of small branches, deviations, connect-country, not exceeding about 40 miles in ex-involving a capital of £160,200,000 and the tent, the means for constructing 8 miles of amount deposited in advance upon this, is the registered shareholders are liable is £96, which, will doubtless be forthcoming as soon £9,913,312, from which it would appear that 245,650, of which, averaging a deposit at £21

along the margin of the Hudson river is adopted to Albany and another along the shores of Long Island sound to New Haven, the city of New York must, before she can derive any benefit from a connection by a continuous line of railroad with Albany and Boston, incur an expenditure of not less than six to seven millions of dollars, the productiveness of which, (supposing it to be possible to obtain that amount) from the powerful competition of the cheapest steam navigation in the world, on the Hudson river and Long Island sound, is to say the least problemati cal, and which cannot under any reasonable view be accomplished before the trade now rapidly passing to a rival city shall become so firmly established in its new channel as to be irretrievably lost, or if reclaimed at all, only with the greatest difficulty.

I might proceed to show how, if the ap plication for a charter on the river line should plish what has been already done. be successful,* and the construction of a road commenced on that route, the city of New York would probably lose the advantage now possessed of having exclusive access by railroad to the bridge over the Hudson river at Troy and to the point where the Erie and Champlain canals form their first junction with the Hudson river, but I cannot believe that such a charter will be granted in contravention of the best interests of the city and country, and in violation of a high moral obligation on the part of the constituted authorities to protect the rights of those who are and for some time have been, laboring faithfully to accomplish in the most judicious manner the trusts committed to their charge.

Edwin F. Johnson, Chief Eng. N. Y. & A. R. R. Co. Office of the New York and Albany R. R. January 24th, 1843.

The Railway System and its Progress. We have often called attention to the as tonishing progress of the railway system.-Few even of the most observing among us realize its rapid growth. Mr. Thomas Gray is the reputed projector of the use of railroads for travel and transportation, except for coal and mining purposes-in England, and he only dates the commencement of his efforts in relation to the system in 1820, or only twenty-five years ago! and now there are 77 railways completed and in progress, with an authorized capital of over £85,000,000; and 139 applications before parliament, during the past session involving a capital of

By this course, also, a connection can be £96,245,650, of which 2,860 miles, with a gress, the amount of capital is £85,370,723, dom. This however is matter of opinion; ving £296,280,345 to be called up.

> nings of which is now over six per cent. per the lines completed or in progress. annum in gross-which will increase to nine or ten per cent., in less than ten years—this dividend is however of less value, far less, siderable premium, as are some of those at in this country, than the increase in the valces of the country.

reading the following article in the Railway stock exchanges: Express—an excellent, and we believe the Paid up on lines completed or in proworld, published in London. Its statements Paid up on railways before parliament.. will appear to many, as the result of a mania, Do. for branches, etc..... or of wild speculation—but not more so country as in Europe.

jects. In 77 railways, completed or in pro-expansive state of the country's resources.

country, not exceeding about 40 miles in ex-involving a capital of £160,309,000, and the ing links, etc., the nominal capital for which as the New York and Albany railroad is completed up to the point of junction.

If this course is not pursued and the line with the plans of the projectors, there will commercial circulation. We have also 196 have been £368,000,000, or \$1,840,000,000, railways projected, but not yet before parliainvested in railways and railway property in ment, of which the average deposits amount Great Britain alone! It may however, with entire certainty be said that all of them will not be constructed, yet it is equally certain, mercial circulation is £9,913,312. There or at least very probable, that many others are also a number of small branches and denot now agitated will be projected, and con-viations, in progress and in prospect, involstructed within the next ten years—and we ving a capital of £27,000,000, on which the have not a doubt but that a larger amount of deposits amount to £3,350,000. The total capital, than is here given, will be invested in share for every two of the population. The railroads in Great Britain, prior to the year total capital represented by railways, paid up 1860—or within fifteen years, nor that £50, and to be paid up, is £368,000,000, or about 000,000, or \$200,000,000, of British capital £16 per head to the whole population; and will be invested in railroads out of the kingit may, nevertheless, become true with much amount required if the whole of the schemes less effort than has been required to accom- projected should be carried out. Many of them, however are competing lines; some If Great Britain can accomplish so much rendered unnecessary by the formation of in her small territory, where the land is own-branches, etc., from existing lines. Taking, ed by a few, what may we not accomplish in however, only one half of the amount remainthis country, where every man almost is in- ing to be called up for the new lines, as beterested in the soil and is to be benefited by ing as much as the legislature is likely to its increased value, arising from the extenwhich the country will probably be called sion of such improvements? We have al-upon to furnish for new railways in the ready in this country, near 4,000 miles of course of the next four or five years, in addirailway in successful operation—the net ear-tion to £32,279,000 remaining unpaid upon

> We may remark, however, that of the lines completed or in progress, representing a capital of £85,370,723, many are at a conue of real estate and property generally, We may fairly add one-third to the capital from the developement of the natural resour. represented by the first for premium; and we have then the following as the total capital already invested in railways and liable to We have been led to these remarks by be acted upon by speculation on our various

NICOLL'S PATENT SAFETY SWITCH for Railroad Turnouts. This invention, for some time in successful operation on one of the principal railroads in the country, effectually prevents engines and their trains from running off the track

at a switch, left wrong by accident or design.

It acts independently of the main track rails, being laid down, or removed, without cutting or displacing them

It is never touched by passing trains, except when in use, preventing their running off the track. It is simple in its construction and operation, requiring

only two Castings and two Rails; the latter, even if much worn or used, not objectionable.

Working Models of the Safety Switch may be seen at Messrs. Davenport and Bridges, Cambridge-port, Mass., and at the office of the Railroad Journal, New York.

Plans, Specifications, and all information obtained on application to the Subscriber, Inventor, and Pa-tentee. G. A. NICOLLS, ja45 Reading, Pa

THURSDAY, OCTOBER 2, 1845.

[WHOLE No. 483, VOL. XVIII.

THE AMERICAN RAILROAD JOURNAL W is the only periodical having a general circulation throughout the Union, in which all matters connected with public works can be brought to the notice of all persons in any way interested in these undertakings. Hence it offers peculiar advantages for advertising times of departure, rates of fare and freight, improvements in machinery, materials, as iron, timber, stone, cement, etc. It is also the best medium for advertising contracts, and placing the merits of new undertakings fairly before the public.

R. CASEY, CIVIL ENGINEER, NO. 23 Chambers street, New York, will make surveys estimates of cost and reports for railways, canals, roads, docks, wharves, dams and bridges of every description, with plans and specifications. He will also act as agent for the sale or purchase of machinery, and of patent rights for improvements relating to public works.

# KITE'S PATENT SAFETY BEAM.

MESSRS. EDITORS.—
As your Journal is devoted to the benefit of the public in general I feel desirous to communicate to you for publication the following circumstance of no inconsiderable importance, which oc-curred some few days since on the Philadel-phia, Wilmington and Baltimore railroad.

On the passage of the evening train of cars from Philadelphia to this city, an axle of our large 8 wheeled passenger car was bro-ken, but from the par-ticular plan of the con-struction, the accident struction, the accident was entirely unknown to any of the passen-gers, or, in fact, to the conductor himself, until the train, (as was supposed from some circumstances attending the case,) had passed several miles in advance of the place where the accident oc-curred, whereas had the car been constructed on the common plan the same kind of acci-

dent would unavoidably have much injured it, perhaps thrown the whole train off the track, and seriously injured, if not killed many of the passengers.

Wilmington, Del., Sept. 28, 1840.

The undersigned takes pleasure in attesting of the value of Mr. Joseph S. Kite's invention of the Safety Beam Axle and Hub for railroad cars. They Safety Beam Axle and Hub for railroad cars. They have for some time been applied to passenger cars on this road, and experience has tested that they fully accomplish the object intended. Several instances of the fracture of axles have occurred, and in such the cars have uniformly run the whole distance with entire safety. Had not this invention been used, serious accidents must have occurred.

In short, we consider Mr. Kite's invention as completely successful in securing the safety of property and lives in railroad travelling, and should be used on all railroads in the country.

JOHN FRAZER, Agent,

GEORGE CRAIG, Superintendant,

JAMES ELLIOTT, Sup. Motive Power,
W. L. ASHMEAD, Agent.

They have for some time been applied to passenger cars of the safety of property and in securing the safety of property and lives in railroad travelling, and should be used on all railroads in the country.

JAMES ELLIOTT, Sup. Motive Power,

W. L. ASHMEAD, Agent.

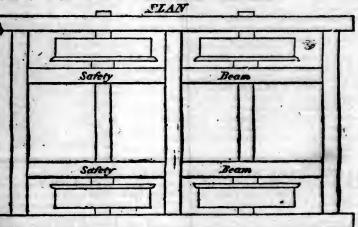

They have for some time been applied to passenger cars of the safety of property and in securing the safety of property and lives in railroad travelling, and should be used on all railroads in the country.

JOHN FRAZER, Agent,

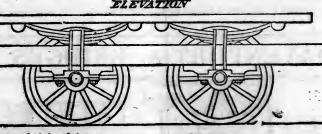

GEORGE CRAIG, Superintendant,

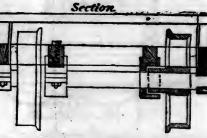

W. L. ASHMEAD, Agent.

They have for some time been at the New Jersey railroad and transportation office, No. 1 Hanover st., N. York.

DATENT HAMMERED RAILROAD, SHIP and Boat Spikes. The Albany Iron and Nail Works have always on hand, of their own manufacture, a large assortment of Railroad, Ship and Boat Spikes, from 2 to 12 inches in length, and of any form of head. From the excellence of the material always used in their manufacture, and their very general use for railroads and other purposes in this country, the manufacturers have no hesitation in warranting them fully equal to the best spikes in market, both as to quality and appearance. All orders addressed to the subscriber at the works, will be promptly executed. JOHN F. WINSLOW, Agent.

Albany Iron and Nail Works, Troy, N. Y.

The above spikes may be had at factory prices, of Erastus Corning & Co., Albany; Hart & Merritt, New York; J. H. Whitney, do.; E. J. Etting, Philadelphia; Wm. E. Coffin & Co., Boston. ja45

PATENT RAILROAD, SHIP AND BOAT
Spikes. The Troy Iron and Nail Factory keeps
constantly for sale a very extensive assortment of
Wrought Spikes and Nails, from 3 to 10 inches, manufactured by the subscriber's Patent Machinery, which after five years' successful operation, and now almost universal use in the United States (as well as England, where the subscriber obtained a patent) are found superior to any ever offered in market.

Railroad companies may be supplied with Spikes having countersink heads suitable to holes in iron rails, to any amount and on short notice. Almost all the railroads now in progress in the United States are fastened with Spikes made at the above named factory—for which purpose they are found invalua-ble, as their adhesion is more than double any com--for which purpose they are found invaluamon spikes made by the hammer.

All orders directed to the Agent, Troy, N. York,

will be punctually attended to.

HENRY BURDEN, Agent.

Spikes are kept for sale, at Factory Prices, by I. & J. Townsend, Albany, and the principal Iron mer-chants in Albany and Troy; J. I. Brower, 222 Water St., New York; A. M. Jones, Philadelphia; T. Jan-viers, Baltimore; Degrand & Smith, Boston. ** Railroad Companies would do well to forward

their orders as early as practicable, as the subscriber is desirous of extending the manufcturing so as to keep pace with the daily increasing demand.

FRENCH AND BAIRD'S PATENT SPARK ARRESTER.

O THOSE INTERESTED IN Railroads, Railroad Director and Managers are respectfully invited to examine an improved SPARK ARRESTER, recently patented by the undersigned.

Our improved Spark Arresters have been extensively used during the last year on both passenger and freight engines, and have been brought to such a state of perfection that no annoyance from sparks or dust from the chimney of engines on which they are

used is experienced.

These Arresters are constructed on an entirely different principle from any heretofore offered to the public.

The form is such that a rotary motion is imparted to the heated air, smoke and sparks passing through the chimney, and by the centrifugal force thus acquired by the sparks and dust they are separated from the smoke and steam, and thrown into an outer chamber of the chimney through openings near its top, from whence they fall by their own gravity to the bottom of this chamber; the smoke and steam passing

off at the top of the chinney, through a capacious and unobstructed passage, thus arresting the sparks without impairing the power of the engine by diminishing the draught or activity of the fire in the furnace.

These chimneys and arresters are simple, durable and neat in appearance. They are now in use on the following roads, to the managers and other officers of which we are at liberty to refer those who

on the following roads, to the managers and other officers of which we are at liberty to refer those who may desire to purchase or obtain further information in regard to their merits; E. A. Stevens, President Camden and Amboy Railroad Company; Richard Peters, Superintendant Georgia Railroad, Augusta, Ga.; G. A. Nicolls, Superintendant Philadelphia, Reading and Pottsville Railroad, Reading, Pa.; W. E. Morris, President Philadelphia, Germantown and Norristown Railroad Company, Philadelphia; E. B. Dudley, President W. and R. Railroad Company, Wilmington, N. C.; Col. James Gadsden, President S. C. and C. Railroad Company, Charleston, S. C.; W. C. Walker, Agent Vicksburgh and Jackson Railroad, Vicksburgh, Miss.; R. S. Van Rensselaer, Engineer and Sup't Hartford and New Haven Railroad; W. R. M'Kee, Sup't Lexington and Ohio Railroad, Lexington, Ky.; T. L. Smith, Sup't New Jersey Railroad Trans. Co.; J. Elliott, Sup't Motive Power Philadelphia and Wilmington Railroad, Wilmington, Del.; J. Cleveland, Sup't Southern Railroad, Monroe, Mich.; M. F. Chittenden, Sup't M. P. Central Railroad, Detroit, Mich.; G. B. Fisk, President Long Island Railroad, Brooklyn.

orders for these Chimneys and Arresters, addressed to the subscribers, or to Mesers. Baldwin & Whitney, of this city, will be promptly executed.

N. B.—The subscribers will dispose of single rights, or rights for one or more States, on reasonation.

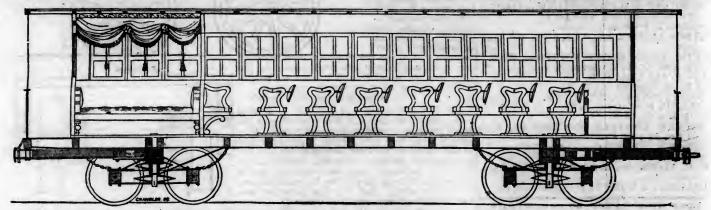

ble terms Philadelphia, Pa., April. 6, 1844. ja45 . The letters in the figures refer to the article given in the Journal of June, 1844.

BENTLEY'S PATENT TUBULAR STEAM BOILER. The above named Boiler is similar in principle to the Locomotive boilers in use on our Railroads. This particular method was invented by Charles W. Bentley, of Baltimore, Md., who has obtained a patent for the same from the Patent Office of the United States, under date of September 1st, 1843—and they are now already in successful operation in several of our larger Hotels and Public Institutions, Colleges, Alms Houses, Hospitals and Prisons, for cooking, washing, etc.; for Bath houses, Hatters, Silk, Cotton and Woollen Dyers, Morocco dressers, Soap boilers, Tallow chandlers, Pork butchers, Glue makers, Sugar refiners, Farmers, Distillers, Cotton and Woollen mills, Warming Buildings, and for Propelling Power, etc., etc.; and thus far have given the most entire satisfaction, may be had of D. K. MINOR, 23 Chambers st. New York.

The article is complete in itself, occupies but little space, is perfectly portable, and requires no brick work, not even to stand upon. It is valuable, not only in the saving of time and labor, but in the economy of fuel, as it has been ascertained by accurate measurement, that the saving in that article is fully two-thirds over other methods heretofore in use. They are now for the first time introduced into New York and Boston by the subscriber, who has the exclusive right for the New England states, New York and New Jersey, and are manufactured by

FORCE, GREEN & CO. New York.

### DAVENPORT & BRIDGES' PATENT CAR AND TRUCK.

DAVENPORT & BRIDGES CONTINUE TO MANUFACTURE TO ORDER, AT THEIR WORKS, IN CAMBRIDGEPORT, MASS. Passenger and Freight Cars of every description, and of the most improved pattern. They iso furnish Snow Ploughs and Chilled Wheels of any pattern and size. Forged Axles, Springs, Boxes and Bolts for Cars at the lowest prices. All order punctually executed and forwarded to any part of the country Our Works are within fifteen minutes ride from State street, Boston—coaches pass every fifteen minutes.

Beyond their present course instead of attempting to arrest the propoduce 5 per cen an iron-master have built two furnaces, if one quite little enough to provide this vast addi-

Shall we look abroad for assistance?-

time, and will require an immense expenditure of money.

In order to produce the presumed extra quantity of 1,233,000 tons in the third year from the presume, 244 new furnaces (with all their appendages), must be provided their acts of parliament, could be induced to the company, and that deviations from the presumed extra orders equally over three years? And, if the presumed extra orders equally over three years? And, if their acts of parliament, could be induced to the company, and that deviations from the present line of canal for a total length of 8

ges and mills, work shops, tram-roads and railway companies to slacken their speed, It was agreed that an increased capital of railroads above and under ground, carriages and extend the time for completing their unformal for manufactured dertakings to five or seven years. It might shapes of £15 each, and that each proprietor goods, and a variety of tools and implements, he knows that the quantity is more likely to be exceeded than otherwise.

Next, as to the probable outlay consequent on these 244 new furnaces. It cannot be reckoned at less than £20,000 per furnace, out any actual return for their capital, and that each properties and that each properties be so with cautious, calculating, individuals; but it will not be so with public companies, he was shares in addition to each one present would rather pay any price for iron, than pay per annum be paid on deposits and calls on out any actual return for their capital, and or £4,880,000. Many an iron master would congratulate himself, if his past outlay were the shares. The advance in the price of iron

ing an average increase of 65,454 tons per as moderate as our estimate for the future. | will afford an excellent excuse for exceeding

Railways vs. Canals.

We find the following article on this subject, to the London Railway Express a new journal recently Some of your readers may be surprised at established. Such is evidently the tendency, and

A general inclination appears to exist on would have made as much iron as is now tion to the supply of minerals, to turn boys the part of canal proprietors to convert their made with two? Would he keep ten fur- into men, and to convert ordinary laborers canals into railways. The proprietors of the naces in blast, employing ten sets of foun- into skillful colliers, miners, mechanies, foun- Kennet and Avon canal met at Reading on ders, fillers, &c., if nine furnaces could pro- ders, fillers, finers, puddlers, and rollermen. Tuesday, and agreed to apply to parliament for powers to make their car al into a railway. refuse orders upon orders, at remunerating Foreign countries will feel the difficulty The Great Western railway company had prices, as he has done in the last six months, much more than ourselves, and, after all nearly ruined their carrying trade to and from if his present furnaces would furnish an adtheir exertions to satisfy their own wants, Hungerford. The canal is 93 miles long, they will be obliged to come here for a sup that is 57 cut (from Newbury to Bath,) and The increased demand can be met in no ply, when time and enterprize, money and 36 of river navigation. The intention is to other way than by a vast extension of mining men, have enabled us to meet the demand convert the 57 miles of cutting into a railway; this will give a line between Bath and New-We have hitherto presumed that there bury, will shorten the distance from Bath and the iron works; new steam engines for pump-ing, winding, blowing, hammering, and roll-tionment of the orders for railway iron over the Box Tunnel. The Great Western coming; new carriages for conveying the min- a period of three years, so that in each suc- pany have got a bill for making a branch erals to the furnaces and the iron to the ship-ceeding year there will be a progressively from Reading to Newbury and Hungerford, ping places. All this must be a work of increasing demand. But, will it be so? Are

in the next two years, reckoning each fur-take so friendly and so prudent a course, present line of canal for a total length of 8 nace to produce 5000 tons of iron per annum. would not new railway companies be sure to miles will be required in improving the curves furnaces. Thus, more than 120,000 tons of are convinced that the price of iron will go erage of £8000 per mile, or for the whole before iron has reached its maximum price, line, by being concentrated in one incline of Five hundred tons per furnace may seem and thus accelerate, and still further aug- one in 53 for about two and a quarter miles to the inexperienced to be an over-statement; ment, the advance. Symptoms of this move in length. The distance from London to but when the iron master calculates upon ment are already too evident to be mistaken. Bath will be three miles and a half shorter

ATLANTIC AND ST. LAWRENCE RAILROAD COMPA-NY.-We learn from the Portland Advertiser that produce by the Little Miami railroad and the white Thursday was a day of triumph and festival at Portland, it being the day appointed for the organization of the St Lawrence railroad co. The British and will be in a few years. Cincinnati will yet reap American flags were flying over the City Hall, and rich harvests from her railroads and canals. Twenin various parts of the city.

The meeting of the stockholders was called to order by judge Preble, and the mayor chosen to preside. John Neal was chosen clerk of the corpora-John Smith, Josiah S. Little, James L. Farmer, signed by about 200 merchants in the city, has been now almost certain, that the "Western and Atlantic

land, John A. Poor, of Bangor, Ezra F. Beal, of plete the subscription for stock.

ALBANY AND SCHENECTADY RAILBOAD.-An important change in the honr of departure from Albany goes into operation to-day. The one o'clock train has been brought forward to nine o'clock in the morning in order to take travellers at once west, whenever the boat (as will be the case at this seasion of the year) is detained by the fog. Heretofore passengers who have arrived after 71 o'clock, have had to wait all this morning before they could leave for the west.

"WEAR OF RAILROAD IRON."-A well-written article on the "wear of railroad iron," on different engineer, in reply to our article published by us, on 31st July, from the Boston Courier of the 15th of that month, accompanied by the remarks of "J"our next.

"Suspension Aqueduct."-We have received from Mr. John A. Roebling, an exceedingly interesting description accompanied by a drawing, of the "suspension aqueduct," recently constructed by him, over the Alleghany river, at Pittsburg, for the passage of the Pennsylvania canal into that city.-We have looked with no little interest, for this description, as this is, we believe, the first work of the kind ever constructed, and are therefore greatly obliged by the opportunity of presenting our readers with the first full account of a work so creditable to his enterprize and skill. We shall give it with the illustration in our next number.

" ANOTHER RAILROAD ROUTE," is received and will appear in our next, notwithstanding the writer's insinuation of "undue influence." We will simply remark that no person ever spoke to us in relation to the project referred to; and that we have learned, by an intercourse with society of near forty years, that none are more liable to the charge of being operated upon by "undue influences" than those who are most ready to cast the imputation upon others.

Miami and White Water, Ohio canals

We learn from the Cincinnati Gazette-and we thank the editor for his courtesy in sending it to us again, as we missed it sadly—that the Miami canal breach would be repaired so as to be navigable again on the 16th inst., but that the Lawrenceburgh branch of the White Water canal, would not be navigable under three or four weeks. This is much to be regretted, as the business season will now soon be over It is however gratifying to learn, as we do, from the Gazette, that Cincinnati is realizing the fruits of her enterprize, in the daily receipt of large quantities of water canal. The present receipts are however only a drop in the bucket, in comparison to what they ty years more will produce changes which will astonish her most sanguine friends.

Rutland Railroad.

The Bunker Hill Aurora says that Mr. Gilbert

And the effort will succeed too, who will believe that the Boston merchants will not meet the overtures of western Vermont.

Credit to whon it is due.

There are two reasons why those who copy articles from other journals, should acknowledge the source from whence they were derived; 1st, that he who adopts them, may not be chargeable with their errors, if they are not correct; 2ndly and mainly, that he who puts them forth may have his due, if they are useful. Our reason for alluding to the subject, is simply to request those, who avail themselves of our labors-which, by the by, we are always desirous they should do, will either disguise kinds of substructure, by James Herron esq., civil them by clothing them in more appropriate language, that we may use them again to better purpose, or put on the appropriate ear mark, that we may pass them by; as it is exceedingly vexatious to not of the editor-is received, but it came too late be led, by a slight alteration in the introduction, to for this number, and will therefore find a place in republish ones own paragraphs. On "second sober thought" we should never mistake, from its lack of polish, or finish, our own work, even if we saw it on the locomotive "galaxy" on the Middlebury and Rutland route to Boston, or even upon any of the southern or western lines of road, though when looking upon one object and thinking of another, we might not detect its origin.

Monroe, Georgia Railroad.

We noticed some time since, the sale at auction, of this railroad and its appendages, to J. Cowles, esq. and others, in accordance with notice previously given, for \$155,100, and in a subsequent number. we published a paragraph from the Macon Messenger, which intimated an intention on the part of Andrew R. Moore and others, to contest the sale as illegal. Since then we have endeavored to ascertain the facts in relation to the sale, and we have reason to believe that the sale was not only legal, but fortunate also, as the purchasers are able and ready to complete that part of the road not yet finished, and also to put the whole line in good repair, and efficient working order, that the people along its line may begin to derive some advantage from it.

We have, at different times, during the past ten years, published notices of this work; but have not until recently, understood its proper position, nor appreciated its value. On examination, we are at a loss to know why it is called the " Monroe railroad" in as much as it does not pass through, nor within many miles of any place of that name-but commences at Macon, the termination of the Central road from Savannak, of 190 miles in length-and passes through Forsyth, Griffin and other towns, the distance of 101 miles to Atlanta, about five miles west of Decatur in Dekalb county. It is at this point, we believe, that the "Georgia and South Carolina railroads," from Augusta and Charleston 312 miles in length terminates; and the "Western and Atlantic road" of about 140 miles in length, to the Tennessee line at Rossville, commences. Thus it will be seen that the Monroe railroad is to form the connecting link between the Central road from Savannah, and the state, or Western and Atlantic road, to the Tennessee line, and with the "Hiwasse railroad," from, or near the line, 98 miles north-easterly to Knoxville. There can now, we think, be littion, and took the oath of office. The directors cho has completed his survey, and the profile and esti-tle doubt, but that operations will be again, at no sen are as follows :- William P. Preble, of Portland, mates of the railroad from Bellows Falls to Bur-distant day, resumed on the "Hiwasse," which was James Deering, of Westbrook, John Mussey, John lington, are exhibited at No. 9 Merchants' Ex-nearly, or quite graded some years ago, and then B. Brown, John Anderson, Eliphalet Greely, St. change. An address in behalf of this railroad, abandoned for want of means to go on. It is also

road" will be continued from Rossville, to Chattanooga on the Tennessee river and from thence to Nashville 130 miles, thus opening a communica- company have been forwarding coals and iron tion with middle Tennessee, Kentucky and Ohio, from their own wharf to Norwich by water, by Steamboats on the Cumberland river to Nash- as being cheaper to them than taking them ville. By this route, the cotton bagging and provisions, from Kentucky and Ohio, which now find their way to New Orleans and around the capes of Express" of 29th August, for the purpose of giving Florida, to Savannah and Charleston, and then to both sides of the question, as it has been intimated the interior of Georgia, over the railroads, a distance of over 2300 miles, at an enormous expense, will pass up the Cumberland about 200 miles to Nashville, and then over the railroads to Atlanta, about 300 miles, and from this point, it may pass over the Monroe road to Macon and Savannah 101, or 291 miles; or to Augusta and Charleston 172, or ally—as we have not, and never have had any ex-312 miles. Who that looks at this subject understandingly, will not see the importance, especially to Savannah and the interior of Georgia, of having the Monroe road put in good working condition as early as possible? Not only from its serving as a connecting link between the central and state roads, from Savannah to Tennessee, but also as it is to become the connecting link between the road from ness on main lines and general routes. Thus far Charleston and Augusta, and the West Point and Montgomery railroad in Alabama. The company which owns the the Monroe road, also have the control of the charter for a railroad from Griffin, on the Monroe road, to West Point, 68 miles, where it will connect with the railroad to Montgomery, now in use, in the direct line to Mobile and New Orleans; and it is an important fact, with which we were not, until recently acquainted, that this short line of sixty eight miles, and the distance from Griffin to Atlanta about fifty miles, where the Monroe road connects with the line to Charleston, are the only remaining links to be completed, to open a steam route of travel, by steamboat and railroad, from Bangor in Maine, to New Orleans and Texas! Thus it will be seen that this "Monroe road," and its branch from Griffin to West Point, occupies a position of find them. vast importance; as, with its three arms pointing from Griffin northwardly, southeasterly, and southwesterly, it commands the passes from Savannah to Alabama, to Tennessee, and also from Charleston to Alabama and New Orleans. It is in reality to be the "Turn table" for four other important railroads. and it becomes the purchasers to put it in the best possible order, at the earliest period, and when they have done this, we hope they may derive a liberal return for their investment.

We shall soon refer to this subject again, in connection with the extension from the Tennessee river to Nashville and to St. Louis.

Oswego and Syracuse Railroad.

We have taken much interest in the success of and convenience, connecting two important mediums of travel, and transportation, by the shortest possible route of favorable connection.

The route of this road is an exceedingly favorawhich \$200,000 has been subscribed at Oswego, Syracuse, and along the line; and now the combalance of \$150,000. We understand that the right small amount to the capital, to insure an immediis investing millions to obtain? We shall see,

Canals cheaper than Railways.

"A Norwich paper says that the railway on their own rail.'

We copy the above from the "London Railway by some of our subscribers—and we believe them to be warm and true friends also-that we do not give canals a fair chance with railroads, or in other words, that we stand so very upright between the two, that we actually lean a little over towards railroads. Possibly it may be so, though surely not intentioncept a general interest, to be promoted or injured by the success or depression of either-but after an early examination of the subject, we came to the conclusion, a long time since, that canals, for general use, were to be numbered with things that have been, while railroads would become the popular, the common, if not the universal mode of transacting busiwe have not seen cause, nor do we now, to change of the establishment. that opinion; but on the contrary, every year's experience serves to convince us, more fully if possible, that we were and are correct in the belief that canals must yield generally to railroads, except un-der peculiar circumstances. We should therefore der peculiar circumstances. We should therefore be gratified to learn that our highly esteemed friend who recently desired to convince us that, in the "old dominion," at least, it would be better to go on and complete their canal system to the Ohio, than to adopt railroads—had changed his views and come out an advocate of railroads, as in that way only, will he allow us to say it? can he most speedily and effectually develope the resources of that time-honored commonwealth, which we know he loves as his own mother.

As we desire to give both sides of this really important question, we give the paragraph at the head of this article, and will give others like it when we

For the American Railroad Journal. Grand and Important Discovery.

This is a project to use the elasticity of atmos pheric air as a prime mover of machinery. The idea is derived from its application, after compression, to air-guns. But the great difficulty in the present case is, or as it has hitherto existed, how to receive and accumulate it in a vessel from which to allow its escape in the just quantum of body sufficient to force a piston and by this piston to move a lever, without unnecessary loss; and at the same time to keep the reservoir of power undiminished. Of these two great difficulties, the projector considers the last the most important to be overcome and this work, as promising to be one of great utility the only hindrance to the application of this, perhaps, more powerful agent than steam, to the propulsion of boats. He establishes his theory upon the fact that a square inch of air will counterbalance a weight of 14 lbs., that it can be compressed ble one, and its estimated cost only \$350,000-of into 1551 parts less than its natural volume, as Buffon has it in his translation of Hales. To overcome the difficulty referred to, the projector, Sig. missioners offer to the capitalists of this city, the Gonzaga of Rio de Janeiro, claims the merit, and has no objection to sell the privileged right of his of way has been mostly obtained, and that it only invention. He further announces that besides the remains for the city of New York to subscribe this agent in question he has others derived from the power of the pinion, lever of the first order, penduate commencement of work upon the line, and an luin, blocks, etc., etc., powers, these, well known in early completion of the road—and will it not be mechanics, and possibly these projects may have done? shall it be said that New York hesitates to been, in their application and combination, the same iron from this establishment has, wherever subscribe \$150,000 to a work which will secure to with which the Chinese in their last war with the it has been used, taken precedence of the her own storehouses, the business for which Boston English, were seen to keep boats in motion without best charcoal irno manufactured in this part

For the American Railroad Journal. New Anthracite Furnace.

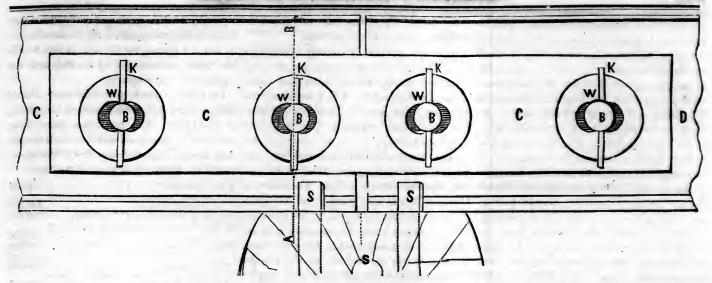

We are indebted to an estimated friend, for the following description of the new anthracite furnace recently erected by ex-governor Porter, and Michæl Burke Esq. at Harrisburg Pa. and we avail of this opportunity to express to him our thanks for his repeated favors, during a series of years past, in aid of the railroad cause. This account of the successful operation of this new furnace, will be very acceptable to all who are interested-and who is not?-either in the extension of the manufacture of iron, or in the construction of railroads, and we shall always be gratified and obliged by receiving similar accounts of other new works.

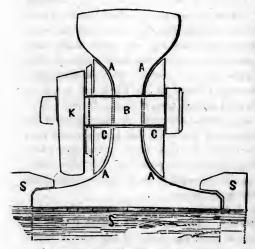

The large anthracite furnace recently erected at Harrisburg, by ex governor Porter and Michæl Burke esq., has now been in operation for more than two months, and the success of what is still considered by many as an experiment, is a source of pleasure to the friends of the iron interests, as it must be gratifying to the enterprizing proprietors

The height of the stack is about forty feet. and the diameter at the boshes, eleven feet. The blast is furnished by an engine of about sixty horse power, driving two cast iron blowing cylinders of five feet diameter and five and a half feet stroke. But one blowing cylinder is in use at present however, as this one furnishes sufficient blast for one stack, the two cylinders and the machinery being calculated to furnish blast for two stacks, as it is the intention of the proprietors to erect the second stack during the coming season. The ore and coal is lifted vertically from the ground to the top of the stack by means of a water balance, which receives its supply from a reservoir at the top of the furnace, the water being forced up into this reservoir by means of a pump worked by the engine.-The ores used in the Harrisburg furnace, are procured from Chesnut Hill, near Columbia, and from Cumberland county, about five miles from Harrisburg. These ores are mixed in about equal quantities before the charges are put in the furnace; the coal is procured from Wyoming valley.

The furnace produces at present eleven and a half tons per day, or about eighty tons per week. With the two stacks in operation, this furnace will consume about twenty thousand tons of anthracite coal per annum, and an equal amount of iron ore.

The proprietors of the Harrisburg furnace. have understood their true interest, and have paid more attention to the quality than the quantity of iron produced by their furnace.-The result has more than realized the most sanguine anticipations of their friends, as the of the state.

Leave New Brunswick and intermediate places.

The steamboat Statesman leaves Greenport for Sag Harbor twice each day, on arrival of the trains from Brooklyn.

Baggage crates will be in readiness, at the foot of Whitehall street, to receive harmonic properties.

the Brooklyn side.

merchants and others, an extensive medium of advertising. The circulation of the Semi-Weckly Courier (published on Mondays and Thursdays) is believed to be more extensive than that of any other similar Boston Newspaper. This publication embraces all the reading matter of the Daily, the Foreign and Domestic Markets, Review of the Boston Market, Prices current, and Ship News, prepared with great accuracy. The Weekly Courier contains as much of the matter of the daily as can be crowded with great accuracy. The Weekly Courier contains as much of the matter of the daily as can be crowded into a sheet of the same size, without ship news, prices current or advertisements.

Our extions to obtain and publish authentic information on all topics proper for the columns of a newspaper,—the state of trade, the prices of merchandize, the current news of the day, and the political movements in the various sections of the country will not be abated. The marine department of the Courier has been inferior to none in copiousness or accuracy of detail, and it will be our endeavor to maintain its reputation in this respect.

BOSTON COURIER, DAILY, SEMIWeekly and Weekly.

The Daily edition of the Courier, presents to merchants and others, an extensive medium of adcipal railroads in the country, effectually prevents engines and their trains from running off the track engines and their trains from running off the track. at a switch, left wrong by accident or design.

It acts independently of the main track rails, being

laid down, or removed, without cutting or displacing

them

them.

It is never touched by passing trains, except when in use, preventing their running off the track. It is simple in its construction and operation, requiring only two Castings and two Rails; the latter, even if much worn or used, not objectionable.

Working Models of the Safety Switch may be seen at Messrs. Davenport and Bridges, Cambridgeport, Mass., and at the office of the Railroad Journal, New York

New York.

Plans, Specifications, and all information obtained on application to the Subscriber, Inventor, and Patentee. G. A. NICOLLS,

Reading, Pa.

"may have against them, with this exception only,
"that in case any holder or holders of the capital
"stock of said company heretofore issued and certi"fied, or purporting to be paid in full, shall not with"in six months from the passage of this act, surren"der to the company their stock certificates, and re"ceive or offer to receive therefor, for every two 'ceive or offer to receive therefor, for every two 'shares of stock heretofore issued, one share of stock to be hereafter issued, then all such stock heretofore "to be hereafter issued, then all such stock heretofore issued, and not so surrendered, shall not be subject to the provisions of this law; but the state shall re"tain the right to claim upon such outstanding stock, and the said company shall pay into the treasury of
"the state, upon the order of the comproller, any and
"all dividends upon such outstanding stock, and the
"comptroller shall apply the same to the credit of
"said company, until the state shall receive in such
"dividends, so much of their said debt of three mill"ions of dollars and the interest thereon as would be "ions of dollars and the interest thereon, as would be
"the proportion of such outstanding stockholders to
"pay, provided the whole debt of three millions of
"dollars and interest thereon were collected ratably
"from all the stock of said company now outstand-"ing."

By section 9th, of the same law, it is provided that, "it shall be the duty of the president and sec"retary of said company, within thirty days after the
"expiration of the six months mentioned in the last preceding section, to file with the comptroller of the state, a statement of all stocks that shall not "have been exchanged in pursuance of the provis"ions of the last preceding section; and whenever
"any dividend upon the stock of the said company
"shall be made, it shall be the duty of the board of
"directors to notify the comptroller of such dividend,
"and upon payment of the dividend aforesaid into "the treasury, the comptroller shall furnish to said "company a receipt for the portion of such dividend belonging to any stock not surrendered and ex"changed in pursuance of the last preceding section of this act, and said company shall surrender to
"the holders of such stock the receipt of said comp"troller in lieu of said dividends."

Ingion daily, at 8 o'clock a.m. and 2 p.m. Distance, 28 miles. Fare \$1.25.

On Sunday but one train, 5 o'clock a.m. from Lexington, and 2 o'clock p.m. from Frankfort.

The winter arrangement (after 15th September to 15th March) is 6 o'clock a.m. from Lexington, and 9 a.m. from Frankfort, other hours as above. who neglect to avail themselves of the provisions of the act, it is made the duty of the company, within thirty days from the 14th of November, "to file "with the comptroller a statement of all stocks that "shall not have been exchanged" agreeably to the provisions of this act, the dividends on which must be paid into the state treasury, rendering that class of stock practically of no value to the holder. The board of directors consider it their duty to protect the interests of the stockholders by giving all possible publicity to that portion of the law relating to the outstanding stock, that all may have an opportunity for an early compliance with the provisions of the act. By order of the board of directors.

THE AMERICAN RAILROAD JOURNAL! is the only periodical having a general circulation throughout the Union, in which all matters connected with public works can be brought to the notice of all persons in any way interested in these undertakings. Hence it offers peculiar advantages for advertising times of departure, rates of fare and freight, improvements in machinery, materials, as iron, timber, stone, cement, etc. It is also the best medium for advertising contracts, and placing the merits of new undertakings fairly before the public.

CASEY, CIVIL ENGINEER, NO. 23 Chambers street, New York, will make surveys estimates of cost and reports for railways, canals, roads, docks, wharves, dams and bridges of every description, with plans and specifications. He will also act as agent for the sale or purchase of machinery, and of patent rights for improvements relating to public works.

KITE'S PATENT SAFETY BEAM.

MESSRS. EDITORS.—
As your Journal is devoted to the benefit of the public in gen-eral I feel desirous to communicate to you for publication the following circumstance of no inconsiderable importance, which oc-curred some few days since on the Philadel-phia, Wilmington and Baltimore railroad.

On the passage of the evening train of carsfrom Philadelphia to this city, an axle of our large 8 wheeled passenger car was broken, but from the particular plan of the construction, the accident was entirely unknown to any of the passengers, or, in fact, to the conductor himself, un-til the train, (as was supposed from some circumstances attending the case,) had pass ed several miles in advance of the place where the accident occurred, whereas had the car been constructed on the common plan the same kind of acci-

dent would unavoidably have much injured it, perhaps thrown the whole train off the track, and seriously injured, if not killed many of the passengers. Wilmington, Del., Sept. 28, 1840.

The undersigned takes pleasure in attesting of the value of Mr. Joseph S. Kite's invention of the Safety Beam Axle and Hub for railroad cars. They have for some time been applied to passenger cars on this road, and experience has tested that they fully accomplish the object intended. Several instances of the fracture of axles have occurred, and in such the cars have uniformly run the whole distance

with entire safety. Had not this invention been used, serious accidents must have occurred.

In short, we consider Mr. Kite's invention as completely successful in securing the safety of property and lives in railroad travelling, and should be used on all railroads in the country.

PATENT HAMMERED RAILROAD, SHIP and Boat Spikes. The Albany Iron and Nail Works have always on hand, of their own manufacture, a large assortment of Railroad, Ship and Boat Spikes, from 2 to 12 inches in length, and of any form of head. From the excellence of the material always used in their manufacture, and their very general use for railroads and other purposes in this country, the manufacturers have no hesitation in warranting them fully equal to the best spikes in market, both as to quality and appearance. All orders addressed to the subscriber at the works, will be promptly executed.

JOHN F. WINSLOW, Agent.

Albany Iron and Nail Works, Troy, N. Y.

Albany Iron and Nail Works, Troy, N. Y.

The above spikes may be had at factory prices, of Erastus Corning & Co., Albany; Hart & Merritt, New York; J. H. Whitney, do.; E. J. Etting, Philadelphia; Wm. E. Coffin & Co., Boston. ja45

DATENT RAILROAD, SHIP AND THE SHIP

adelphia; Wm. E. Coffin & Co., Boston. ja45

PATENT RAILROAD, SHIP AND BOAT
Spikes. The Troy Iron and Nail Factory keeps
constantly for sale a very extensive assortment of Wrought Spikes and Nails, from 3 to 10 inches, manufactured by the subscriber's Patent Machinery, which after five years' successful operation, and now almost universal use in the United States (as well as England, where the subscriber obtained a patent) are found superior to any ever offered in market.

Railroad companies may be supplied with Spikes having countersink heads suitable to holes in iron rails, to any amount and on short notice. Almost all the railroads now in progress in the United States are fastened with Spikes made at the above named factory—for which purpose they are found invaluable, as their adhesion is more than double any common spikes made by the hammer.

All orders directed to the Agent, Troy, N. York, will be punctually attended to.
HENRY BURDEN, Agent.

Spikes are kept for sale, at Factory Prices, by I. & J. Townsend, Albany, and the principal Iron mer-chants in Albany and Troy; J. I. Brower, 222 Water St., New York; A. M. Jones, Philadelphia; T. Jan-viers, Baltimore; Degrand & Smith, Boston. ** Railroad Companies would do well to forward

their orders as early as practicable, as the subscriber is desirous of extending the manufcturing so as to keep pace with the daily increasing demand, ja45

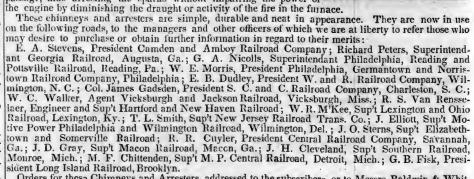

FRENCH AND BAIRD'S PATENT SPARK ARRESTER.

TO THOSE INTERESTED IN Railroads, Railroad Directors and Managers are respectfully invited to examine an improved SPARK ARRESTER, recently patented by the undersigned.

Our improved Spark Arresters have been extensively used during the last year on both passenger and freight engines, and have been brought to such a state of perfection that no an-

These Artisets are constructed on an entirely different principle from any heretofore offered to the public. The form is such that a rotary motion is imparted to the heated air, smoke and sparks passing through the chimney, and by the centrifugal force thus acquired by the sparks and dust they are separated from the smoke and steam, and thrown into an outer chamber of the chimney through openions are not in the sparks and they fall by the interest. through openings near its top, from whence they fall by their own gravity to the bottom of this chamber; the smoke and steam passing off at the top of the chimney, through a capacious and unobstructed passage, thus arresting the sparks without impairing the power of

the engine by diminishing the draught or activity of the fire in the furnace.

Orders for these Chimneys and Arresters, addressed to the subscribers, or to Messrs. Baldwin & Whitey, of this city, will be promptly executed.

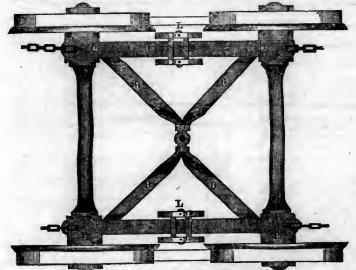

N. B.—The subscribers will dispose of single rights, or rights for one or more States, on reasonalle terms.

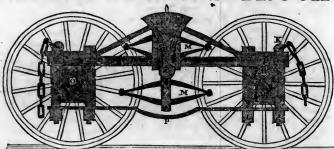

The letters in the ferrors refer to the article given in the Legal of Legal (1944).

** The letters in the figures refer to the article given in the Journal of June, 1844.

BENTLEY'S PATENT TUBULAR STFAM BOILER. The above named Boiler is similar in principle to the Locomotive boilers in use on out Railroads. This particular method was invented by Charles W. Bentley, of Baltimore, Md., who has obtained a patent for the same from the Paten Office of the United States, under date of September 1st, 1843—and they are now already in successful operation in several of our larger Hotels and Public Institutions, Colleges, Alms Houses, Hospitals and Prisons, for cooking, washing, etc.; for Bath houses, Hatters, Silk, Cotton and Woollen Dyers, Morocco dressers, Soap boilers, Tallow chandlers, Pork butchers, Glue makers, Sugar refiners, Farmers, Distillers, Cotton and Woollen mills, Warming Buildings, and for Propelling Power, etc., etc.; and thus far have given the most entire satisfaction, may be had of D. K. MINOR, 23 Chambers st. New York.

DAVENPORT & BRIDGES' PATENT

DAVENPORT & BRIDGES' IMPROVED PATENT IRON TRUCK FOR RAILROAD CARS, is presented above, and the attention of Railroad Companies is respectfully invited to the following description of their justlycelebrated invention.

These Trucks are adapted as well for eight-wheeled passenger cars as for baggage and freight ears, giving to each a more agreeable and easy motion than any other Truck heretofore constructed or in use. They are simple in

than any other Truck heretolore constructed or in use. They are simple in their construction, combining strength and great durability, although weighing at least twelve hundred pounds less than the common Trucks. Besides these excellences, by reason of the elasticity of the braces, B, B, B, B, as seen in the drawing, and the other peculiarities of construction, made for inside or outside bearing, the weight is equalized upon all the wheels, and yet any one car off. Being bound, and having as it were but four joinings, they are protected from injury by lateral strains, and in case of damage are easily repaired.

These excellences have been fully tested by use, for a long time, on the Eastern, the Fitchburg and Long Island railroads; and for proof of the above stated superiority of these Trucks over all others, we refer to the experience of those who have used and run them.

CAMBRIDGEPORT, April I, 1845.

Railway Speed Unparalleled.

We announced in a previous number the extraordinary performance of the private express of the applause. London Times, from Sunderland to London, 303 miles in 7 hours 30 minutes running time, with the news of the election of Mr. Hudson. This was considered the greatest performance on record. The gentlemen who performed this feat, left Bishop-Wearmouth at 17 minutes past 4 o'clock p.m. and arrived at the Times office in London, 307 miles, at 25 minutes past 1 a.m., 9 hours and 8 minutes; of which 4 miles or 28 minutes, was in coaches; 1 hour and 10 minutes lost at the twelve stopping places; and 7 hours and 30 minutes in accomplishing the 303 miles in the railway cars. The election news was put in type, the paper worked off and the same gentlemen left the Times office on their return at 2 o'clock and 50 minutes, the eastern station at 3 hours 5 minutes and were again back at Sunderland with the Times containing the result of the election at 10 hours 57 minutes a.m.; having performed the past four they were seated in the special train, distance, 614 miles in 18 hours and 40 minutes, including 8 miles by coaches, twenty-four stoppages and I hour and 25 minutes at the Times office in London; or at the rate of 41 miles per hour, for 15 entered the station yard at Darlington, where hours running time.

The distance to London was performed within 5 minutes of the time fixed and would have been done 10 minutes within the time, but for delays on the London and Birmingham road, in consequence of the special train at Darlington, and accompation the special train at Darlington, and accompation the special train at Darlington, and accompation to the Times office, fell, and the shafts of the old fashioned engines. This may be considered the special train at Darlington, and accompation to the Times office, fell, and the shafts of the old fashioned engines. This may be considered quite rapid enough for all practical purposes and o'clock, having performed the journey from lay of about three minutes, which ought to business operations, yet we shall soon be able, both Darlington, a distance of forty-five miles, in be deducted from the above, and that would in Europe and this country to communicate intelligence at several hundred times this speed—by the line the speed was incredible, the train at one hours and twenty-seven minutes.

The following account from the Railway Express will give a better idea of this wonderful performance than anything we can say.

The result of the polling for the Sunderland election, which took place on Thursday last, was published in the Times exclusively that office by a special messenger, who travmiles, in about eight hours. The express returned to Sunderland with a large number of the Times containing the intelligence, and arrived there shortly after ten o'clock in the morning, while the proceedings connected with the official declaration of the poll were

The entire credit of organizing these ginot deemed advisable to proceed at any rate gantic railway operations is due to Mr. Jas. approaching that velocity. This will ac-Allport, manager of the Newcastle and Dar-count for the length of time occupied on the lington Junction railway, whose intentions whole, though on different parts of the road were ably seconded by the various gentlemen the speed was almost incredible. It is also attached to the railway establishments whose proper to state that much time was lost beservices were brought into requisition. The tween Rugby and London, on the London special train reached Sunderland before the and Birmingham line, from the inefficiency termination of the preceedings connected of the engine power, and the faulty arrangewith the official declaration of the poll, and ments made in the absence of the chief superwhile the voice of the returning officer an- intendent of the line. The train would have nouncing the result was yet resounding from arrived in London much earlier than it did the hustings, to the manifest astonishment of had the London and Birmingham railway his worship and the gentlemen by whom he been able to advance it at the same rate as on was surrounded, a copy of the Times, pub- the lines from Sunderland to Rugby, all of lished that same morning in London, up-which are under, and do infinite credit to the wards of 300 miles from the scene of action, management of Mr. Hudson. Additional parwas placed in his hands, and other copies ticulars will be found in the following time were distributed among the vast assemblage, table:

whose feelings, thus excited to the highest pitch, burst forth in one universal shout of

A circumstance in all respects so extraordinary requires that this general account should be completed by minute details of the achievement. In the vicinity of Mr. Hudson's committee-room, in Bishop-Wearmouth, a carriage was in readiness to convey the travellers to the railway station of the Branding Junction. now incorporated with the Newcastle and Darlington railway, in Monk-Wearmouth; and exactly at seventeen minutes past four o'clock Mr. Allport, accompanied by Mr. Lockie, of the Newcastle Journal, who reported the proceedings for the Times, took his seat in the vehicle, and drove off amidst the cheers of those assembled to witness the departure. At twenty-four minutes to which a powerful engine was attatched and in one hour-that is to say, at twenty-four minutes past five o'clock—the special train the engine was detached, and another belonging to the great North of England railway company substituted. Messrs. N. Plues and In Union-street, Blackfriars, the horse attachtime proceeding at the rate of a mile in fortyperformed in little more than four hours !--From various causes, however, that was impossible, as from the nature of the curves and formance of the journey from Sunderland. gradients on some parts of the way, it was

Railway travelling 303 miles..... 7 30 E. Oxley, directors of the company joined ed to one of the coaches in which the party

The party left the Times office at 10 mineight seconds, or at the astonishing velocity utes to three o'clock, and at 5 minutes past 3 of seventy-five miles an hour! When prothe special train quitted the Euston-square ceeding at this astonishing rate the motion of station for Sunderland, where the party arivthe train was scarcely perceptible, there ed at 57 minutes past 10 o'clock, the distribeing none of that rocking motion of the car- bution of the Times having, in that short inriages observable on broad guage lines, when terval, been effected over nearly the whole going at a much slower rate of speed.— of England. This extraordinary feat is altoon Friday morning, having been conveyed to that office by a special messenger, who tray. The operation of writing was performed with gether without a parallel. And it is a reelled the entire distance, upwards of 303 ease under these circumstances, and not the markable fact, equally creditable to the saslightest apprehension of danger was felt by gacity of Mr. Allport, as to the efficiency of any of the party. Had it been possible to the various railway establishments between maintain this speed throughout, the journey Newcastle and London, that, with one exfrom Sunderland to London might have been ception only, above noticed, there was not a deviation of more than five minutes from the times previously calculated upon for the per-

> On the special train reaching York from Sunderland, the monster bell of York Minster was rung for the first time in honor of Mr. Hudson's election. The tone of the great St. Peter was heard for many miles round the ancient city, which was on this occasion a scene of universal rejoicing.

> The official declaration of the poll took place on Friday morning at the hustings in front of the Exchange, in High-street. A large crowd assembled to witness the proceedings, but the greatest order prevailed. The return was declared as follows:

Majority for Mr. Hudson 128 In returning thanks Mr. Hudson said, " Here is the Times newspaper of this mornling just put into my hands. Here, gentlecial engine was despatched yesterday after-some days. noon at half-past four o'clock, with the result and of which you ought to be proud." The and fixtures are complete throughout. Mayor also referred to the astonishing achievenot think could have been done. It was unparalleled, and might never occur again in their lifetime. Indeed, it was a thing to be remembered and talked about as long as they lived. It demonstrated the immense public advantages of the railway system.

NEW FURNACE AT READING PENNSYLVANIA .-We take the following notice of the new furnace of Dr. ECKERT, from the Reading Journal of 30th August. It should have been inserted at an earlier day, that our readers may be apprised of the progress made in the manufacture of iron in this country.-It is becoming daily more and more important that the manufacture should be extended as widely as possible, as it is evident to us, from the present indications in Europe, that we must rely mainly up on ourselves for a supply of iron to construct our railroadsduring the next ten years. The demand in England will be nearly equal to its ability to supply-therefore we must make renewed efforts to supply ourselves-which we may, and shall do, if our capitalists will make themselves acquainted with the subject. A wider field or richer harvest is scareely to be found in this country for enterprize and capital, than the manufacture of iron.

We were in error last week in stating that the new furnace had commenced operations. It was 'blown in' on Tuesday last .-During the day and evening, and every day and evening since, it was visited by hundreds of our citizens, all of whom seem to take a peculiar pride and pleasure in this establishof the hands in starting a new enterprize of this kind. The proportions of coal, ore and limestone were not properly filled in, and fears were entertained on Wednesday that the furnace would be clogged or "chilled," as it is technically termed. The timely arrival of Mr. Perry-a gentleman of much ex-been invented by Mr. S. J. Gold, an engineer perience in the anthracite iron business, en- of this city, which, if the results obtained gaged by the proprietors to start the concern with a working model are a fair basis for process overcome. At this writing, (Friday air might be attained by the application of morning) the furnace may be said to be successfully blown in—although as is usual upon propeller has, it is claimed, a vast advantage avoidably omitted, in consequence of the amount of starting a new concern, no iron of any conserver the paddle, inasmuch as it runs through other matter previously in hand.

ment which had been effected by Mr. All-nace must be a proud era in the life of Dr. wheel has no centre, so far as resistance port. He said, that gentlemen and his own George N. Eckert, one of the proprietors, is concerned, and moves under the direct inson, accompanied by a special messenger for under whose superintendence it was built.—fluence of the whole power applied; or in the Times, went away yesterday from Sun- We have seen him week after week, and other words the entire power applied, or very derland, shortly after the termination of the month after month laboring assiduously in nearly so, is expressed in the velocity obtained, poll, and they had returned with this sheet urging forward the work. In rain and in Mr. Gold's propellers are affixed to the beacon of the prosperity of Reading to her ets in the ordinary paddle wheel. own citizens and all the country adjacent—

EARNINGS OF THE BUFFALO AND NIAGARA FALLS RAILROAD for the month of Sept., 1845....\$4,010 22

Difference.... \$1.049 13

We have received, by the arrival of the Cambria at Boston, full files of the different London Railway and Mining Journals of the latest dates. The accounts in relation to the iron trade, show a disposition among the iron masters to advance the price.-The quotations do not vary much from those of 29th August, though hoops and sheet are quoted higher; yet there is a decided tendency to advance. It can hardly be otherwise, when there are so many railroads to be made. The following extracts from communications made to the Mining Journal by those familiar with the trade, will be of interest to many of our readers.

Iron.-Welsh and Staffordshire very firm at quo ations; in Scotch pig several sales made this week at 80s., which is now the lowest price with dealers, some of the masters demand 90s. In Swedish iron and steel there has been very little doing since the publication of last week's Mining Jaurnal.

Communicated by Messrs. Whitcomb and Barton, It affords us pleasure to learn that it is well Old Broad Street.—English bar iron continues firm tained and constantly increasing its circulation.

at quotations; in Scotch pig iron business has not been so brisk this week, but holders refuse to sell under 77s. 6d. cash, and 80s. four months, adding interest; Welsh and Staffordshire iron sells freely at advanced rates, and a further rise confidently ex-pected. In rails very large orders are daily appearing in the market, both for immediate and future delivery, and there are now no sellers under £10 10s, for the latter.

We find many interesting matters in our foreign railway journals, which will be noticed in our next. One of great importance is the atmospheric railway, five miles of which, on the Croydon line, is so far advanced as to have been tried several times with entire success. The exhaustion of the 5 miles of tube was effected with one engine and a vacuum of 26 inches obtained.

The experiments were of course made with great care, yet a speed as high as 65 miles was attained at one point and an uniform speed of 43 miles was carried through on one trip, or 5 miles in 7 minutes.

There are still various opinions in relation to the success of the system-that of course_so there was in relation to the Erie canal, so also, of the success BY RAILROAD. in relation to the Eric canal, so also, of the success on Pottsville and Port Carbon—total....292.093 of railroads and locomotive engines. Many were disappointed and others probably will be in relation to this new plan.

> We shall give next week such concise accounts as we find in the English journals.

> The Dublin and Drogheda railway working expenses are said, in the Railway Express, to have been reduced to 31 per cent. of the gross receipts.

New York and Eric Railroad.

In accordance with notice previously given, the subscription books were opened on the 8th ult, and closed on the evening of Saturday the 4th inst., giving only twenty four working days to fill up the subscription of three millions of dollars. The directors have given evidence of their fitness and abilefforts in this instance. It now becomes the duty of the subscribers, to show equal promptness and energy in the performance of their part of the business, that the directors—who not only work without pay, but also subscribe and pay more than any others may be encouraged to renewed efforts to complete what they have so successfully commenced.

Oswego and Syracuse Railroad.

We are pleased to learn that the commissioners now here, to obtain subscriptions to a part of the capital for this road, are progressing, and that they have a fair prospect of success. There ought to be no delay in the matter, as there are enough here directly interested in the property along, and at the termini of the line, to take the amount, besides the general interest which this city has in the work.

Hunt's Merchants Magazine.

We have before us the number for October. was as usual, out punctually; and, as usual, also, it contains a vast amount of useful reading, and should be in the possession of every business man in the country. The list of contents covers nearly two pages, under the following general heads, viz: Commerce before the christian era; the government and currency; the commerce and progress of Chili; sketches of trade and manufactures in Belgium; the mining system of Chili; the champaigne districts of France; ocean steam navigation; progress of English railways; mercantile law department; Commercial Chronicle and Review; commereial statistics; railroad and canal statistics; nautical intelligence, and mercantile miscellanies.

It affords us pleasure to learn that it is well sus-

Manchester and Leeds Railway Company

Eighteenth semi-annual meeting. The 18th half yearly meeting of this company, was held on the 3d of September, in Manchester, when a lengthy and very satisfactory report was made to the shareholders. This road is sixty miles long, very crooked, and with steep gradients, and has cost up to 30th June last, £3,372,240 9s. of which £1,487,389, is paid up capital, and £1,884,851 9s. raised by loans. The business of the last six months, exceeds that of the corresponding six months of last year, by £23,-892 12s. 9d., notwithstanding, perhaps we ought to say, in consequence of " an important reduction having "been made early in the year, on the passenger fares "and in the rates on certain classes of merchandize," The gross receipts for the six months, were £153,-279 10s. 8d., and the total expenses including rates, taxes and duty, £52,046 18s. 1d., leaving a balance of £101,232 12s. 7d. The gross receipts for the year, were £315,098 19s. 8d., and the expenses £110,247 2d. leaving a balance of £204,851 19s. 6d., or 61 per cent., on the total expenditure; but a large proportion of the outlay was raised by loans, it enables them to divide 8 per cent. on the amount raised by shares and have a considerable surplus on hand.

The present indications for increased business on the numerous railways in England are exceedingly favorable-and that our readers may see what has been the increase of receipts upon this road, notwithstanding the reduction of charges; we give the following comparative statement of the first six months of 1843, '44 and '45.

The number of passengers booked during these periods, were, in the first six months of 1843-552. 639, same period in 1844-673,605, and in 1845-851,497, thus showing an increase in 1844 over the previous year, of 120,966, and in 1845, of 177,892 over 1844-showing conclusively the influences ity for the station they occupy, in the result of their of reduced charges, on the business of the country.

> The extract marked for insertion, is unavoidably omitted until our next number.

The editor of the Railway Times, has the following remarks upon the meeting of this company, viz. "The most important feature of this most busy week, is unquestionably the meeting of the Manchester and Leeds company—an undertaking which in spite of its enormous cost, and the steepness of its gradients, continues to carry, with increasing profit, a mass of traffic, in proportion to its extent, second to none in the kingdom. Indeed it may be said of the Manchester and Leeds railway co. that their business is becoming too great 'embarrass de

Railway Cars, Progress of Improvement.

We understand that the Eastern railroad, from Boston to Portland, have recently put several new cars upon their road, which, for convenience, comfort and elegance, surpass every thing of the kind yet seen on American railroads—and when we say that, . we can make no further comparison, as the European cars do not, we are informed, at all compare with ours. The following description is from one who has rode in them-which we intend soon to do-and, as it may lead other companies, that we could mention, to give their numerous passengers similar comforts, for equal and superior compensation; we publish it for the good of all parties-not forgetting, by any means, the enterprizing manufacturers, Messrs. Davenport and Bridges, of Cambridgeport, near Boston.

Each car seats about 70 persons; each seat is a separate arm chair, made to turn on a pivot, and is.

covered with red velvet plush. The cars are 91 feet whitewashing, which this commission will certain- For the American Railroad Journal. wide, which gives ample room for each passenger; ly put on with no sparing hand, should be the means (they are about one foot wider than cars are usu- of getting an additional loan to "complete the ally built,) instead of carpeting the floor, they have works" and make the board "comfortable." a double floor; the top one is of cherry, and black walnut, laid in diamond form—the sides of the cars not help picturing to our mind's eye the almost ma- designer and contractor, has supplied the are lined up with branch mahogany. In place of a tioned cars they have ever seen—cost \$2,200 cach.

The article of Mr. Herron on the wear of railroad iron, should be read with care. We can speak from our own observation, in relation to the superior ease to the passenger, when passing over that part of the road where his plan of superstructure is adopted, as compared with that on other parts of the road; and it follows, we think, of course that the iron will last longer upon it than upon the simple crosstie. This plan has frequently been referred to in this Journal. In the number for Nov. 15, 1840, Aug. 1, 1841, and July 1, 1842, will be found references to it, and we shall probably be able soon to give some further account of it. We shall endeavor to do so that if it is superior and not more expensive, it may be introduced upon some of the numerous railroads soon to be constructed.

Portland Railroad .-- Canadian Affairs.

late Montreal paper that the subscriptions in that unknown at the "Institution of Civil Engineers." city did not reach £100,000 (\$400,000), Of the As friends of private enterprize we might rejoice at two millions frequired for Canada only \$500,000 the failure of the last set of government works in were allotted to the province and this-for the city this quarter of the globe, but as friends of railroads, of Montreal-trifling amount, has not yet been the great improvement of the age and so admirably raised! Wire Suspension Aqueduct over the Allegheny River at Pittsburg. The work recently constructed under this superintendence of John A. Roebling, the place of the old wooden structure, which originally was built by the state of Pennsylvania, at the western termination of the Penn-

sylvania canal.

The council of the city of Pittsburg, by whom, in consequence of an arrangement with the state, the tolls on this aqueduct are of late received, and who are bound to keep the work in repair, decided on rebuilding, and after considering various plans, adopted that of Mr. Roebling, and entered into contract with him, to reconstruct the communication for the gross sum, including the removal of the old ponderous structure and the repair of the piers and abutments, of \$62,000, a very small sum indeed for a work of such magnitude. As this work is the first of the kind ever attempted, its construction speaks well for the enterprize of the city of Pittsburg.

The removal of the old work, was commenced in September, 1844, and boats were passed through the new aquaduct in May 1845. This work consists of 7 spans of 160 feet each, from centre to centre of pier; the trunk is of wood, and 1140 feet long, 14 feet at bottom, 161 feet on top, the sides 81 feet deep. These as well as the bottom, are composed of a double course of 21 inch white pine plank, laid dioganally, the two courses and stiffness, sufficient to bear its own weight, and to resist the effects of the most violent storms. The bottom of the trunk rests upon transverse beams, arranged in pairs of 4 feet apart; between these, the posts which support the sides of the trunk, are let in with dovetailed tenons, secured by bolts. outside posts which support the side walk and towe path, incline outwards, and are connected with the beams in a similar manner.-Each trunk post is held by 2 braces, 21×10 inches, and connected with the outside posts by a double joist of 21×10 inches. The trunk posts are 7 inches square on top, and 7×14 feet long and 16×6 inches, the space between two adjoining is 4 inches. It will be observed, that all parts of the framing are double with the exception of the posts, so as to admit of the suspension rods; each pair of beams is on each side of the trunk, supported by a double suspension rod of 11 inch round iron, bent in the shape of a stirrup, and mounted on a small cast iron saddle, which rests on the cable; these saddles are on top of the cable, connected by links, which

diminish in size from the pier towards the dations, upon which the weight of 700 perchcentre. The sides of the trunk rest solid es of masonry rest. The stability of this against the bodies of masonry, which are part of the structure is fully insured, as the erected on each pier and abutment as bases, resistance of the anchorage is twice as great for the pyramids which support the cables.—as the greatest strain, to which the chains These pyramids which are constructed of three can ever be subjected. blocks of a durable hard sand stone, rise 5 The plan of anchorage adopted on the feet above the level of the sidewalk and tow-aqueduct, varies materially from those methpath, and measure 3×5 feet on top, and 4×61 ods usually applied to suspension bridges, feet in base. is so great, that no doubt is entertained, that each of the several arches would sustain itself, in case the woodwork of the next one adjoining should be consumed by fire. The woodwork in any of the arches separately may be removed and substituted by new material, without effecting the equilibrium of the next one.

The original idea, upon which the plan has been perfected, was to form a wooden trunk, strong enough to support its own weight, and stiff enough for an aquaduct or bridge, and to combine this structure with wire cables of a sufficient strength to bear safely the great weight of water.

The plan of this work therefore is a combination, which presents very superior advantages, viz. great strength, stiffness, safety, durability and economy.

This system for the first time successfully carried out on the Pittsburg aquaduct, may hereafter be applied with the happiest results to railroad bridges, which have to resist the powerful weight and great vibrations which result from the passage of heavy locomotives and trains of cars.

REMARK .- The quantities in the following table are calculated for a depth of water of 4 feet, which has been in the aquaduct ever since the opening. The depth contemplated, was 31 feet, a greater depth is at present required, on account of the raising of spension next to the trunk.

abundantly applied. The bars are painted the bottom of the canal by bars and sediment which beyon to be removed before the level. which have to be removed before the level can be lowered.

For the American Railroad Journal.

Wear of Railroad Iron.

An article under this head appeared in the United States Gazette of July 19th, and I see it has been copied into the American Railraad Journal of the 31st, with the following remarks:

"The following article from the Boston Courier of July 15th, contains some valuable facts in relation to the wear of the 56 lbs. iron of the second

perience, greatly exceeds the usual estimate of the value of this item, it would be well to call the attention of engineers to this important subject, with a view to provide some adequate remedy."

It to be inferred that this experience "will apply to all other railways."

As I predicted the rapid wear of the rails filled in, on account of the frost, which has,

gone the rounds without contradiction; so far reasoning on which my opinion was formed, its powers of endurance to the utmost stretch. as I have seen, states the whole freight, passengers and baggage, that passed over the roads differently constructed. Lowel road in 7½ years, up to July 1845, at 840,000 tons, one half of which, or 420,000 and blocks of granite, firmly imbedded in a tons, passed over the second track, rendering consolidated bed of rubble, or gravel, three the iron upon it unserviceable to a great extent. feet deep and seven wide, thus forming a most The writer says:-

"We have at last the means of forming a very safe estimate of the durability of a 56 pounds, to

Lowell road, was first brought into use in 1838, after the 'fish-belly rail' had been found inadequate. The new rail was of the H pattern—the form now most generally approved."

renewals of the iron made:

"They will be compelled to make additional re-newals this year, and probably to change the iron on the whole of this ten miles in the course of next year. The durability of this rail may, therefore, be set down at 500,000 tons. The lowest estimate we 1,000,000, etc., etc.

not only surprize, but even dismay, in the road, page 4: the minds of those who have embarked their capital in railroads, to learn in addition to highly inexpedient, on account of the experience already afforded here as well as upon our own road, sparing expense, with a view to permanency; and cost, if I recollect aright, nearly double the average cost of the best tracks in the union. Yet I, for one, am by no means to the T and H rails when laid on stone.surprized at the result. In fact, I had the And, as the hard signifec granite of the Lowtemerity to predict, in a conversation held ell road, would not wear out like the soft however, by a very experienced eye, and close with Major Whistler, at Spring field in 1841, of the iron would be reconstituted by the iron that the track and machinery of the Lowell ed in the former. road, would be worn out with much less use than that of any other road in the union.-And again, without having seen it in the expressed in regard to the rapid wear of the and hammering will separate imperfect welmeantime, I repeated the prediction about eighteen months ago, in Jones Hotel, in this ject were formed, and freely expressed, ten In the distance laid upon my plan, there city, in a conversation with Mr. P. T. Jackson, the president of the company, in the was first proposed. I then predicted its utter showing, in every instance, the clearest evipresence of Mr. John Tucker, the president failure, in a discussion on the subject with dence of imperfect welding. Some of these of the Reading railroad. I did not pretend C. Crozet esq., then principal engineer of rails have had the split end cut off, and were to say how many tons would wear it out, I could only form a comparative estimate between it and other tracks more judiciously constructed.

the Lowell iron was foreseen, and predicted, and I doubt not, there were many other en- rails and machinery, and greatly lessen the ed to market, which is less than six-tenths gineers, who came to the same conclusions expense of adjustments. I did, regarding it.

The article referred to, which has thus and machinery of this road, I will state the certainly, as may well be conceived, tested that the public may correctly estimate how

Civil engineer. No. 277, S. 10th street, Philadelphia.

We have a few remarks to offer on the above. It work, as well as to the adjustments, and re- pose the new 60 pound rails are worn out is said that the rails on the Lowell road are destroyed moval of the rails, as none of the timbers by five millions of tons, (the rails laid upon and Mr. H. gives some sound reasons to show that had been broken by last winter's frosts, aid my track, however, marked R, I found, when the iron on that road will fail more rapidly than ed by the heavy engines, as was confidently undamaged by rust, weighed but 59.2 lbs. on any other in this country. We should be pleaspredicted by some distinguished members of per yard; while those more generally laid ed to see a statement of the number of gross tons the profession, who had the modesty, at the on the new track, marked T, weight 61·12 which have passed over these rails, the velocities of same time, however, to confess themselves in- lbs. per yard) and that they cost \$6,500 per capable, of adjusting and repairing it, a feat mile. The old iron will be worth fully two- of skill, that we see has been accomplished, thirds the first cost. The writer in the Bost the rails when removed and their present market vaas far as required, by two common laborers. ton Courier allows \$4,700 per mile for the lue, from some gentleman connected with the road. As two men have been found ample to old 56 lbs. rails of the Lowell road; but to We do not know whether the rails are worn out, keep in adjustment and repairs, those three be very safe, I will allow only \$4,000 for the crushed, or merely taken away because inadequate to the larger engines now coming into use. In short, we have a mere newspaper statement and not a parupon which little more than the empty cars screw bolts, which affords great facility in ticle of engineering information on the subject. On return, were laid upon my plan, an addition- removing and replacing them. It has been only too many roads such information cannot be obtained, because there is no one capable of investigating the subject and presenting it to the public, if the tracks were laid on gravel, the two five cents each, which would be a little more but the Lowell road was long under the direction of Mr. Storrow, a gentleman peculiarly qualified by experience and scientific attainments to give a complete exposition of all the circumstances attending and affecting the wear of the rails on that work. His views would have great weight with the profession and through them with that portion of the community taking an interest in railways.

The condemnation of the superstructure of the Lowell road is also quite too sweeping. Admitting it to be most injudicious to place the iron on granite tons, gives six hundreths $(\frac{6}{100})$ of a cent per crossties without any intervening substance, it by ton per mile, as the value of the wear of iron, no means follows that the mere interposition of a crossties without any intervening substance, it by small block of wood would not in a great measure applies only to the Lowell granite track, and remedy the defect, or, better yet, that a continusuch others as may be similarly constructed. ous wooden sill under the L or bridge rail might A part of the expense of transporting coal not convert this into the best superstructure in this on the Reading railroad, consists in the re-country. We hope that this or some other expedi-With regard to the repairs of the bridges, turn of the empty cars to the mines, which ent may be tried before banishing the granite ties pass up on the adjoining track. And as the and substituting the usual-we might almost say, wear of the iron will be in a measure pro- the stereotyped superstructure of New England, first portionate to the weight, but in a less ratio introduced by Messrs. McNeill and Whistler on the

An engineer who has kept his eye on all the improvements in railways, considers the want of a means of easy adjustment to be a radical defect in all plans of superstructure yet adopted. A concise statement of the superior facility which Mr. H.'s system presents for this operation would unquestionably be of interest to many of our readers. We think we have seen it stated in the English scientific journals that the process of "Kyanizing" is generally considered Multiplying 116 cents by 94 miles, gives to have failed in imparting any durability worthy cents, as the cost of railway per ton of of notice to timber used in railways, but Payne's process appears to be highly spoken of. As yet, however, there is no process for this purpose which Here then, are two extreme cases. We can be considered as fairly established, nor can it be of the crossing castings, at switches etc., will have on the one hand, the Lowell granite said, according to our views, that the discussion on

remembered that the original 36 lbs. rail at Liverpool was for 6 ton engines at 10 miles per hour and we scarcely exaggerate when we say that the wear and strain from 16 to 18 ton engines at 40 miles per hour are twenty times as great. We freely admit that our opinion on the subject may not be deemed very weighty, but we are pretty confident that, with track and machinery well kept up, the wear of iron rails will form a very small proportion of the cost of transportation on railways. On the other hand the durability of timber has fallen very far short of the expectations of even the least sanguine.

AMERICAN RAILROAD IRON.—The Montour company at Danville have made arrangements to supply railroad iron to re-lay the track from Lancaster to Harrisburg at \$70 per ton. We learn that the Mine Hill and Schuylkill Haven co. have also contracted with the Montour company, for iron to re-lay their light track, and also to extend the road

to Tremont in the Swatara region.

There are now three establishments for the manufacture of railroad iron in this country, all of which Turner.

given rail under given conditions of traffic and size have sprung into successful operation under the of engine could be even approximated. It must be tariff of 1842. If the tariff remains unchanged, competition will soon cause American railroad iron of a superior quality to be parchased as cheap as the English supplied us with iron from 1836 to 1840 It is estimated that the expense will be from twenty-when there was no duty upon this article. We shall allude to this subject again next week.—Miner's Hudson River Railroad.—We learn that funds

> TONAWANDA RAILROAD COMPANY.—The following persons were, on the 18th instant, elected directors of this company for the ensuing year, viz: Hemen J. Redfield, Benjamin Pringle, Chas. M. Lee, Thomas Kempshall, Joseph Field, Samuel Dana, James Brisbane, Thomas H. Newbold, Lewis Brooks, George H. Mumford, Asa Sprague, William F. Weld and Frederick Whitlesey. At a subsequent meeting of the directors, Hemen J. Redfield was elected president, and Thomas Kempshall vice president

> RAILROAD FROM LOCKPORT TO ROCHESTER .- A meeting, numerously attended, was held at Lockport on the 12th inst., on the subject of a railroad from that place to this. The following gentlemen were appointed a committee to open books, and to receive subscriptions: Lot Clark, William O. Brown, John P. Smith, Asa W. Douglats, and Orsamus

RAILROAD TO CHICOPEE.—The directors of the Connecticut river railroad company, at their recent meeting, voted to construct a branch railroad from Cabotville to Chicopee falls, a distance of two miles.

HUDSON RIVER RAILROAD.-We learn that funds for the survey of a railroad route on the east bank of the Hudson, from this city to Albany, have been provided, and that John B. Jervis, Esq. has been engaged as chief engineer. He will enter upon his duties in about a fortnight.

Measures are in progress for the survey of a rail-road from Salem, Mass., to Andover, to intersect with the Boston and Maine railroad, and shorten the route to Lowell.

Books have been opened for a telegraphic com-munication between Boston and Portland, with the privilege of extending the same to Brunswick, Bath and Bangor.

The iron shipbuilders, Messrs. Hodgson and co. of Liverpool, are building an iron ship of 1200 tons burden, the first of a line of steamers between New York and Liverpool.

The eastern mail will hereafter be conveyed to Cincinnati by railroad from Xenia.

MACHINE WORKS OF ROGERS, KETCH-1 um & Grosvenor, Patterson, N. J. The undersigned receive orders for the following articles, manufactured by them of the most superior descrip-tion in every particular. Their works beingexten sive and the number of hands employed beinglarge, they are enabled to execute both large and small or-

ders with promptness and despatch.
Railroad Work.
Locomotive steam engines and tenders; Driving and other locomotive wheels, axles, springs & flange tires; car wheels of cast iron, from a variety of patterns, and chills; car wheels of cast iron with wrought tires; axles of best American refined iron; springs; boxes and bolts for cars.

Cotton, Wool and Flax Machinery

of all descriptions and of the most improved patterns,

style and workmanship.

Mill gearing and Millwright work generally: hydraulic and other presses; press screws; callen-ders; lathes and tools of all kinds; iron and brass

castings of all descriptions.

ROGERS, KETCHUM & GROSVENOR,

a45 Paterson, N. J., or 60 Wall street, N. York.

POR SALE, AT A SACRIFICE—A LOCO-motive Engine, 4 wheels and Tender. Cylinders 10 in. dia., Stroke 16 in., Cylinders inside of smoke box. Weight of engine, with wood and water, about 9 tons. This engine and tender are new, ter, about 9 tons. This engine and tender are new, and of the best materials and workmanship. If required, would be altered to a 6 wheeled engine.

Also, 1 20-horse High Pressure Steam Engine. 2 8-horse

1 Upright Hydraulic Press.

All of which will be sold low, on application to
T. W. & R. C. SMITH.

Alexandria, D. C.

NICOLL'S PATENT SAFETY SWITCH PASSENGER LINES, SOUTH AND for Railroad Turnouts. This invention, for some time in successful operation on one of the principal railroads in the country; effectually prevents engines and their trains from running off the track at a switch, left wrong by accident or design.

It acts independently of the main track rails, being laid down, or removed, without cutting or displacing

them

It is never touched by passing trains, except when in use, preventing their running off the track. It is simple in its construction and operation, requiring only two Castings and two Rails; the latter, even if much worn or used, not objectionable.

Working Models of the Safety Switch may be seen at Messrs. Davenport and Bridges, Cambridge-port, Mass., and at the office of the Railroad Journal

ew York.

Plans, Specifications, and all information obtained on application to the Subscriber, Inventor, and Patentee.

G. A. NICOLLS,

ja45 Reading, Pa.

CEORGE VAIL & CO., SPEEDWELL IRON Works, Morristown, Morris Co., N. J.—Manufacturers of Railroad Machinery; Wrought Iron Tires, made from the best iron, either hammered or rolled, from 1\(\frac{1}{2}\) in thick.—bored and turned outside if required. Railroad Companies wishing to order, will please give the exact inside diameter, or circumference, to which they wish the Tires made, and they may rely upon being served according to order, and also punctually, as a large quantity ing to order, and also punctually, as a large quantity of the straight bar is kept constantly on hand.— Crank Axles, made from the best refined iron; Straight Axles, for Outside Connection Engines; Wro't. Iron Engine and Truck Frames; Railroad Jack Screws; Railroad Pumping and Sawing Machines, to be driven by the Locomotive; Stationary Steam Engines; Wro't. Iron work for Steamboats, and Shafting of any size; Grist Mill, Saw Mill and Paper Mill Machinery; Mill Gearing and Mill Wright work of all kinds; Steam Saw Mills of simple and economical construction, and very effective fron and Brass Castings of all descripio ns.t ja451y

O RAILROAD COMPANIES AND MAN TO RAILROAD COMPANIES AND MAN-ufacturers of railroad Machinery. The subscri-bers have for sale Am. and English bar iron, of all sizes; English blister, cast, shear and spring steel; Juniata rods; car axles, made of double refined iron; sheet and boiler iron, cut to pattern; tiers for loco-motive engines, and other railroad carriage wheels made from common and double refined B. O. iron the latter a very superior article. The tires are made by Messrs. Baldwin & Whitney, locomotive engine manufacturers of this city. Orders addressed to them, or to us, will be promptly executed.

When the exact diameter of the wheel is stated in

the order, a fit to those wheels is guaranteed, saving to the purchaser the expense of turning them out inside. THOMAS & EDMUND GEORGE, N. E. cor. 12th and Market sts., Philad., Pa

KITE'S PATENT SAFETY BEAM.

MESSES. EDITORS.—
As your Journal
is devoted to the benefit of the public in gen-eral I feel desirous to communicate to you for publication the following circumstance of no inconsiderable importance, which oc-curred some few days since on the Philadel-phia, Wilmington and Baltimore railroad.

On the passage of the evening train of cars from Philadelphia to this city, an axle of our large 8 wheeled passenger car was broken, but from the particular plan of the construction, the accident was entirely unknown to any of the passengers, or, in fact, to the conductor himself, until the train, (as was supposed from some circumstances attending the case,) had passed several miles in advance of the place where the accident occurred, whereas had the car been construct-ed on the common plan the same kind of acci-

dent would unavoidably have much injured it, per-haps thrown the whole train off the track, and seriously injured, if not killed many of the passengers.

Wilmington, Del., Sept. 28, 1840.

Wilmington, Del., Sept. 28, 1840.

The undersigned takes pleasure in attesting of the value of Mr. Joseph S. Kite's invention of the Safety Beam Axle and Hub for railroad cars. They have for some time been applied to passenger cars on this road, and experience has tested that they fully accomplish the object intended. Several instances of the fracture of axles have occurred, and in such the cars have uniformly run the whole distance with entire safety. Had not this invention been used, serious accidents must have occurred.

In short, we consider Mr. Kite's invention as completely successful in securing the safety of property and lives in railroad travelling, and should be used on all railroads in the country.

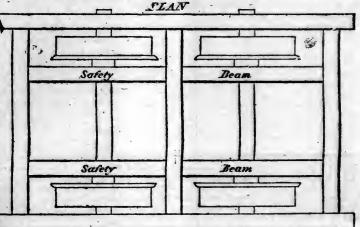

and lives, we consider Mr. Kite's invention as completely successful in securing the safety of property and lives in railroad travelling, and should be used on all railroads in the country.

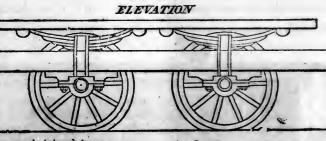

JOHN FRAZER, Agent,

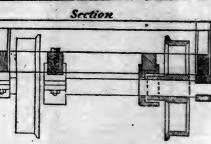

GEORGE CRAIG, Superintendant,

W. L. ASHMEAD, Agent.

The A model of the above improvement is to be seen at the New Jersey railroad and transportation office, No. 1 Hanover st., N. York.

PATENT HAMMERED RAILROAD, SHIF and Boat Spikes. The Albany Iron and Nail Works have always on hand, of their own manufacture, a large assortment of Railroad, Ship and Boat ture, a large assortment of Railroad, Ship and Boat Spikes, from 2 to 12 inches in length, and of any form and Managers are respectfully inviof head. From the excellence of the material alted to examine an improved SPARK ways used in their manufacture, and their very general use for railroads and other purposes in this country, the manufacturers have no hesitation in warrant.

Our improved SPARK Arresters ing them fully equal to the best spikes in market,

ing them fully equal to the best spikes in market, have been extensively used during the both as to quality and appearance. All orders addressed to the subscriber at the works, will be prompted by executed. JOHN F. WINSLOW, Agent.

Albany Iron and Nail Works, Troy, N. Y.

The above spikes may be had at factory prices, of Erastus Corning & Co., Albany; Hart & Merritt, New York; J. H. Whitney, do.; E. J. Etting, Phil.

These Arresters are constructed on an entirely different principle from an The form is such that a rotary motion.

which after five years' successful operation, and now off at the top of the chimney, through a capacious and unobstructed almost universal use in the United States (as well passage, thus arresting the sparks without impairing the power of as England, where the subscriber obtained a patent) the engine by diminishing the draught or activity of the fire in the furnace. are found superior to any ever offered in market. .

Railroad companies may be supplied with Spikes having countersink heads suitable to holes in iron rails, to any amount and on short notice. Almost all the railroads now in progress in the United States are fastened with Spikes made at the above named factory-for which purpose they are found invaluable, as their adhesion is more than double any common spikes made by the hammer.

All orders directed to the Agent, Troy, N. York

All orders directed to the Agent, Troy, N. York, will be punctually attended to.

HENRY BURDEN, Agent.

Spikes are kept for sale, at Factory Prices, by I. & J. Townsend, Albany, and the principal Iron merchants in Albany and Troy; J. I. Brower, 222 Water St., New York; A. M. Jones, Philadelphia; T. Janviers, Baltimore; Degrand & Smith, Boston.

** Railroad Companies would do well to forward their orders as early as practicable, as the subscriber

ble terms. Philadelphia, Pa., April 6, 1844. ** The letters in the figures refer to the article given in the Journal of June, 1814.

BENTLEY'S PATENT TUBULAR STEAM BOILER. The above named Boiler is similar in principle to the Locomotive boilers in use on our Railroads. This particular method was invented by Charles W. Bentley of Bolistone M. J. I. Principle to the Locomotive boilers in use on our Railroads. This particular method was invented by Charles W. Bentley, of Baltimore, Md., who has obtained a patent for the same from the Patent Office of the United States, under date of September 1st, 1843—and they are now already in successful operation in several of our larger Hotels and Public Institutions, Colleges, Alms Houses, Hospitals and Prisons, for cooking, washing, etc.; for Bath houses, Hatters, Silk, Cotton and Woollen Dyers, Morocco dressers, Soap boilers, Tallow chandlers, Pork butchers, Glue makers, Sugar refiners, Farmers, Distillers, Cotton and Woollen mills, Warming Buildings, and for Propelling Power, etc., etc.; and thus far have given the most entire satisfaction, may be had of D. K. MINOR, 23 Chambers st. New York.

The article is complete in itself, occupies but little space, is perfectly portable, and requires no brick work, not even to stand upon. It is valuable, no only in the saving of time and labor, but in the economy of fuel, as it has been ascertained by accurate measurement, that the saving in that article is fully two-thirds over other methods heretofore in use. They are now for the first time introduced into New York and Boston by the subscriber, who has the exclusive right for the New England states, New York and New Jersey, and are manufactured by

CURTIS & RANDALL, Boston; and by
FORCE, GREEN & CO. New York.

DAVENPORT & BRIDGES CONTINUE TO MANUFACTURE TO ORDER, AT THEIR WORKS, IN CAMBRIDGEPORT, MASS Passenger and Freight Cars of every description, and of the most improved pattern. They lso furnish Snow Ploughs and Chilled Wheels of any pattern and size. Forged Axles, Springs, Boxes and Bolts for Cars at the lowest prices. All order punctually execued and forwarded to any part of the country Our Works are within fifteen minutes ride from State street, Boston-coaches pass every fifteen minutes.

Nashville and Atlantic Railroad.

We take the following exceedingly appropriate and forcible remarks from an address delivered by Dr. J. Overton, of Nashville, Ten, before a convention held in the city on the 3d of July last, in relation to that construction of a railroad to the Tennessee river at Chattenooga, there to connect with the Georgia roads to Savannah and Charleston. It would seem that not another word need be said on the subject to induce the legislature, now in session to grant a charter authorizing a few of the people to invest their own money in a way which will advance the prosperity the convenience and the intelligence of all who reside within its influence; yet all cannot see the subject in its true light, as Dr. Overton does, and therefore we have taken the liberty of referring to it at some length in another place, in the hope of aiding in a measure which we consider an interview with the profound and accompanded to the specimen of this coal, from the cannot see the subject in its true light, as Dr. Over-

Georgia, that has already effected so much, two millions, and he regarded it as entirely is extended to complete the remaining fifty-six miles to the Tennessee river. Thus it gaged and pledged by the strongest induces we are already in sight of the great and growing west, and the obstacles to overgone are nothing compared with what have received that the control of the great are nothing compared with what have received the state of the regarded it as entirely been. He would not, however, enlarge on this topic, as all must see its vast and abi-ding importance.

The increase in the value of real estate in place, he said that been established by expectations are nothing compared with what have received the form true third the control of the regarded it as entirely been. He would not, however, enlarge on this topic, as all must see its vast and abi-ding importance.

The increase in the value of real estate in place, he said that been established by expectations are nothing compared with what have received the state of the production of the regarded it as entirely been. He would not, however, enlarge on this topic, as all must see its vast and abi-ding importance. and growing west, and the obstacles to overcome are nothing compared with what have already been surmounted.' The balance of the labor required to make a railroad, the road, to wit: the remaining fifty-six miles to Chattanooga, on the Tennessee river, is under contract, and the grading and massonry completed. The Hon. J. P. King, formerly a senator and now the president of the Georgia railroad, in a report of the condition of the progress of the road in Georgia made, this portion of the labor can be done as well and that it is so shut out from market, exent and the progress of the road in Georgia made, this portion of the labor can be done as well and that it is so shut out from market, exent of the progress of the road in Georgia, made this portion of the labor can be done as well and that it is so shut out from market, except on the 1st of May 1845, says: 'the engineer and much cheaper with slave labor, than by at select periods of the year, that its produce gives us the following gratifying intelligence, any other kind. This fact he believed had is diminished one-third in value by the cost that our anxious and arduous labors are been demonstrated by the construction of some of transportation, having no choice of mardrawing to a close, and that in September of the turnpikes in middle Tennessee. Two-kets either as to time or place. It was estinext, cars loaded in Augusta may be carried thirds of the labor then necessary to con-mated by a northern railroad committee, that

an chain, by the Tennessee river, nature community to construct the road in two years seems to have invited the enterprize of Geor- without embarrassment, if they chose to prosgia to a connection, social, political and com- ecute the work with energy. mercial with the great and growing west.—
It may be safely asserted that no other work in the Union can be compared with this in construction of this road would be a profitashould be afflicted with a war.' He concurred fully in this view of the subject; and felt satisfied that the citizens of Tennessee could and would, when this matter was fully investigated by them, do that portion of the work vicinity of the place where this road would be represented by them. The present is the result of the place where this road would be represented by the place where this road would be represented by the place where this road would be represented by the place where this road would be represented by the place where the road would be represented by the place where the road would be represented by the place where the road would be represented by the place where the road would be represented by the place where the road would be represented by the place where the road would be represented by the representation and the would be represented by the re of vast importance, even greater in a national than in a local or pecuniary point of view.

Doctor Overton said "he would now discuss the practicability and advantages of the gas. That gentleman had examined the process of the state, Dr. Troost, in reference to the physical character of the country between Nashville and Chattanoocuss the practicability and advantages of the gas. That gentleman had examined the structed for the purpose of transporting coal, proposed road. He had labored to acquire country with great care; and he believed a and that some of the most profitable roads in correct information on the subject, as he was route could be selected from the town of the United States, were engaged now in the correct information on the subject, as he was unwilling to be misled himself or to mislead others, and should give the results of his incomines. The distance from Charleston to Nashville was 597 miles-of these, 136 single exception of about five miles; that this mine, by means of a railroad, at 5 or 6 miles were in the state of South Carolina, 311 in Georgia, and 130 in the state of Tennessee. This left the smallest part of the great work of connecting the heart of our gap in the mountain, out of which flow the present average prices of coal. Digreat work of connecting the heart of our

> Splendid Iron Bridge over the Neva .-Messrs. Bury, Curtis, and Kennedy, the celebrated engineers of Liverpool, have received instructions from the emperor of Russia to construct an iron bridge of powerful dimensions to be erected over the river Neva at St. Petersburg. This river is at present crossed by three bridges of boats only, and in the winter season the damage done to them by the ice is so considerable that it has been determined to erect the bridge in question; and it is probable at a future time the other two will be replaced by bridges of iron. length of this bridge is 1,078 feet, and will consist of seven arches-the centre one being 156 feet span; and the three on each side 143 feet, 125 feet, and 107 feet respectively.

Wear of Railroad Iron.

This subject is attracting attention in the right quarter. Those who are familiar with it in all its pearings begin to speak out. The communication of S, in this number, is directly to the point and " more of the same sort."

oncord and Lebanon N. H. Railroad.

We understand says the N. H. Patriot, that the directors of the Northern railroad have located their road over the route surveyed by way of Franklin, It will be seen by an advertisement in this paper, that proposals are invited for the grading of the road."

We have been looking for this announcement and are gratified by its appearance.

If the recollection of our early days is correct, this liberal returns to those who invest their capital and of great advantage to the people along its line. We could say much in relation to this road, and in railroad, at the mouth of White river, if it were necessary but it is not as the road is sure to be built. road, when completed. Some truths require argument to convince people that they are truths others are so self evident that argument is quite unnecessary-and we consider this question as belonging to this latter class—so will the public when the roads are ready for use-and their connection will follow as a matter of course.

It does not follow however that there should not Keene and also by the way of Brattleboro-but the reverse is the fact. There should be, and will be a connection between all the roads running from the seaboard at, and east of Boston towards lake Champlain and Montreal, by means of a railroad up the valley of the Connecticut river from Hartford or rather from Greenfield, Mass .- as there is now a railroad almost to that place-to Canada line. Business will require that railroads shall, in all practicable cases connect, that it may have every possible facility for and the fewest restrictions upon, an too by experience that these connections will pro-READING RAILROAD .- A comparative statement of mote rather than interfere with the different roads, the business of the Philadelphia and Reading rail- especially in New England, where, we again assert, that every strip of territory thirty miles in width from Week ending Sept. 30, 1843...\$12,446 68...8,137 10 and the Kennebec, will from its own resources, suphave no definite account, if so, we shall be much specified to any gentlement of the first and the Kennebec, will from its own resources, suphave no definite account, if so, we shall be much specified to any gentlement of the first and the Kennebec, will from its own resources, suphave no definite account, if so, we shall be much specified to any gentlement of the first and the Kennebec, will from its own resources, suphave no definite account, if so, we shall be much specified to any gentlement of the first and the Kennebec, will from its own resources, suphave no definite account, if so, we shall be much specified to any gentlement of the first and the Kennebec, will from its own resources, suphave no definite account, if so, we shall be much specified to any gentlement of the first and the Kennebec, will from its own resources, suphave no definite account, if so, we shall be much specified to any gentlement of the first and the Kennebec, will first any gentlement of the first and the Kennebec, will first any gentlement of the first and the Kennebec, will first any gentlement of the first and the Kennebec, will first any gentlement of the first and the Kennebec, will first any gentlement of the first and the f

and money in attempting to oppose others, as we do not hesitate to say that the four great lines now under consideration in New England, from the seaboard to lake Champlain and Canada will be built. Opposition may retard for a little time but it cannot prevent their construction.

Nashville and Atlantic Railroad.

The people of Nashville and middle Tennesse have put the ball in motion; and if they understand their own interest, and appreciate the value of their undeveloped resources, they will not relax their efforts until they have constructed a good railroad from Nashville to the termination of the Georgia railroads, which we understand is to be on the Tennessee river at Ross' landing, or Chattanooga,

Very considerable efforts were made some years since, and several railroads were commenced in Tennessee, and large amounts expended upon them, but we are not aware that there is a single mile of railroad now in use in the state+-therefore the people, and especially those of middle Tennessee, owe it to themselves, to open from their capital, a way out of their state, by which they can reach the seaboard, or a market on the Atlantic, in the cheapest very acceptable. We shall always have room for and most expeditious manner. It is indeed, becoming a matter of vital importance to the prosperity of the state to the early development of her resources, the opening of her mineral regions, the working up of forests of timber, the cultivation of her millions of fertile acres, that new avenues to market should be opened from her capital to the Atlantic, to the Mississippi, and to the Ohio.

This point being settled, the next question is, in which direction shall the first effort be made? To the Mississippi, or to the Atlantic? This question will be found a favorable route to construct, yielding may be answered differently in Tennessee, by those who would be first accommodated, and benefited by railroads, but those who view the subject in its general bearings only-who have a general, without favor of its connection with the Central, Vermont any local interest, there can be, we imagine, but one answer; and that will be, towards the Atlantic, by the shortest route yet to be constructed; of course and as sure, we think, to connect with the Central therefore to the termination of the Georgia railroads at Chattanooga, which is, as we are informed by good authority, only about one hundred and thirty miles from Nashville, the heart of the state.

We have, in years gone by, taken some pains to look at, and into, the subject of connecting the great West with the Atlantic, St. Louis, and its five thousand miles of navigable rivers with the seaboard and without being obliged to make the circuit of also be a connection with the road by the way of cape Florida, we came to the conclusion that with all the avenues that may be made northward and eastward, there is certain to be one also to the nearest point on the Atlantic, which is through Tennessee, to meet the noble works of Georgia and Charleston at the Tennessee river.

These works have progressed to an extent little known by the people of this country. They are nearly half completed to St. Louis, and as we said at the commencement of this article, "the people of Nashville and middle Tennessee have put the ball in motion" as will be seen by an article in this easy and cheap movement. And it will be found number of the Journal, which we take from a very able address made by Dr. J. Overton, of Nashville, to the convention assembled there on the 3d of July last.

If the people of this country generally understood

28, 1844. 16,974 33.12,720 13 port a well constructed and economically managed obliged to any gentleman who will furnish us with 27, 1845. 29,619 43.22,465 7 railroad. It is therefore folly and worse than that,

the subject of railroads—their influences upon, and man will be converted to a thousand purposes, and the Railroad Journal, to which he pays so high a advantages to society, as well as the gentleman who by her own citizens too, instead of sending to other compliment, instead of relying upon a stray numaddressed that convention, there would be little states, or to Europe, for the necessary implements ber, he will find that it yields neither to the Argus need of urging them to the construction of such of domestic life. See to it then, ye patriotic sons nor to any other paper in the country, in zeal or libworks; they would, it appears to us, readily join in of Tennessee, and if you would furnish the people erality—we say nothing about its ability, towards bringing about a system of measures in our gov- with accurate and useful information, publish ex- new projects of railway communication; and posernment, which would render it obligatory upon every man possessing property, to contribute his relative proportion towards the construction of such facts may by relied on, and its reasoning is based northerly from the Utica and Schenectady road, up works, he of course retaining an interest in them, on what is now recorded in the history of past exand having a voice in their management, propor- perience; truth-truth an hundred times proved by useful to that isolated region "in the north, far, tionate to the amount paid by him, even if it be but experience, which is more strange than fiction, far, away from railroads and canals," as he reprefive dollars, five hundred, or five thousand. There may be found in that address—which should be read sents it, and much less expensive to make than a are however very few, not directly interested and by every man in Tennessee. engaged in their construction and management, that do appreciate their value-their necessity indeed un- in giving an able communication signed "Atlander the present circumstances of society—as well as tic," published in the Georgia Constitutionalist, from if he makes the experiment, that it will give him Dr. Overton, of course the only reliance must be upon the efforts of individuals; upon the few who see and appreciate their value, to agitate the subject in the interior, as those on the seaboard. and disseminate correct information among those to be benefitted, and who in that region will not be? by the construction of a railroad from Nashville to intersect the Georgia railroads at Chattanooga. The importance of such a work cannot be fully appreciated, until it has been some years in operation; though its influences will be seen and felt, from the first blow of the pick axe and thrust of the spade, in the new life and energy it will give to business and the enhanced value of property along its line and beyond its terminus.

If any doubt this assertion let them look upon the map and see that, by the completion of this short link of 130 miles, there will be a new steam route, and the shortest possible from the Mississippi, at the mouth of the Ohio river, to the Atlantic; a new region of fertile soil, and immense deposites of rich minerals brought to the light of day, and to the use of man, by this easy, speedy, and cheap conveyance to market. The cotton bagging, bacon, corn, and tobacco of Kentucky, Ohio, Indiana, Illinois and Missouri will reach the interior of Georgia, Alabama, and South Carolina, over this road and its connections, by a route of 5 or 6 or 700 miles, and in five to six or seven or eight days, instead of descending the Mississippi to New Orleans, around the cape of Florida, to Savannah or Charleston, and thence by railroad, making a voyage of 2,300 to 2,500 miles, requiring 30 to 40 days, or nearly equal to a voyage from Charleston to Liverpool.

Nashville, it will have acquired such an impetus It may be that this proposed line is of that class, if designed, they did not wear out, but they were not of that, notwithstanding it will there meet the steamboats on the Cumberland river, it will be speedily though it did strike us very forcibly, that it would continued on to the Ohio, at some suitable point in pay neither five nor three per cent, to its stockholits course to St. Louis, and also in a southwesterly ders in the way of dividends. In this however, we direction to Memphis-thus securing to Nashville may be entirely mistaken, and to show our readithe advantages to result from being upon one of the ness to be convinced of our error, and to make all immense thoroughfares between the Atlantic and possible amends for the injury we have done, by the form, and in the Boston and Lowell road parallel the states west of the Mississippi, which, within candid expression of our first opinions, we assure rails of 55 lbs. per yard, with 3 feet bearings, have half a century will number at least as many as there the writer of "another railroad route," in this numare now east of that river.

important is it for early and energetic action by the be done on the proposed road, together with any eslegislature of Tennessee now in session. "Another Railroad Route."

In the Journal of 4th September, at page 572, we introduced a project for a railroad, with the above caption. We found an article in the Argus, which proposed the construction of a railroad from Saratoga Springs, in a northwesterly direction to the High Falls, in Lewis county, and from thence along Sacket's Harbor, with a branch to Cape Vincent .-This project struck us at the reading, as one of the thousand which have been started, by those who would be benefitted by a work of the kind, rather der them unfit for subsequent usc. than by those who would be likely to build the road, and we spoke of it under that impression—as we do of other new projects when presented to our consideration, without ever having conversed with any one on the subject, and certainly without the most distant idea that any "secret opposition had been at work" or any "undue influence had been bro't to with, it is said, quite too much favor-believing as we do, that railroads should be built wherever the resources of a region will be developed, if the peoprofitable, must pay a large dividend. Many rail-

roads would be profitable to a large portion of the consequence of the increase given to the value of property; such roads however should be built by When this road shall have been completed to the people and property to be benefitted by the work. so, then it should be built, but it did not so strike us, ber, that we shall promptly and cheerfully publish Looking at the subject in this point of view, how any facts or statistics of the business which would

we give a part in this number of the Journal. Its duce him to believe that latteral roads, branching off road nearly parallel to, and not very far, at the farthest, from one of the best railroads and the very best canal in the country; he will at all events find, er dreamed.

For the American Railroad Journal.

Wear of Railroad Iron.

Several articles have appeared in your Journal upon the subject of the "wear of railroad iron;" it appears to me that the recital of a few facts, will aid in the discussion of this matter.

I have not seen the communication of Mr. Ellet, to which your correspondent "R. of Delaware" althe valley of Black river to Watertown and ludes, but I understand from his statement, that Mr. Ellet assumes that the transportation of 500,000 tons of coal or other freight, over a railroad will destroy the rails or injure them to such an extent, as to ren-

> It is further stated that the "Liverpool and Manchester railroad and the Boston and Lowell railroad have found it necessary to renew their rails after having borne 420,000 and 500,000 tons."

The rail adopted originally, by the Liverpool and Manchester company, (the first railway which was used to any extent in England for passenger travelbear upon us." We usually look at new projects ing) was the elliptic or fish-bellied rail, weighing 35 lbs. to the yard, with 3 feet bearings, intended for engines weighing from 6 to 8 tons.

The same rail both in form and in weight, was ple to be benefitted can and will meet the expense of adopted by the Boston and Lowell company in 1834, it. We are not of those who think a railroad to be I think, being the first, or it may be, the second company, which brought the edge rail into use in this country, this rail was also intended for engines of people, if they never paid 5, or even 3 per cent., in the same class as those introduced upon the Liverpool and Manchester railroad.

These rails proved to be too light in both cases for engines even of the class for which they were sufficient strength for the weight which they had to support, and, as a necessary consequence, they broke. On the Liverpool and Manchester road, parallel rails, weighing from 60 to 75 lbs. per yard (five different kinds) with bearings of 3 feet to 5 feet, have been substituted for the original, or elliptic been made to take the place of the earlier patterns. The change in both cases having been made to make the rail suitable to the load which it has to

Engines of much greater weight are used on all railways now, than were those in use ten years ago, are now made to weigh from 12 to 24 tons; this is the true cause of renewing the rails on the Liverpool and Manchester and the Boston and Lowell railways.

I have known an instance of a railway on which nessee, in which the rich minerals now useless to in, to the writer, that if he becomes a subscriber to a plate rail after having performed its office for some

6 years or more with engines in use upon it for which the rail was calculated, say 8 tons, to be at the end cities, that the rails of the Liverpool and Manchesof that period in very tolerable condition, yet when ter line was intended. heavier engines and trains of another road were brought upon it, temporarily, the rails of the road means of transportation because such a rail would in question were almost destroyed in the course of not support an engine of 20 tons with its load of influence brought to bear on you. We supnine months. Such an effect might be anticipated, 600 tons, traveling 20 miles per hour? it is obvious; still this case is precisely analogous to the cases of the Liverpool and Manchester and Boston and Lowell railroads, referred to by your corres-

At page 288 of Pambour, the following statement which had passed over the Liverpool and Manchester railway in the space of 21 months, had reduced the weight of the rail very inconsiderably.

"On May 10, 1831, on the Liverpool line, a mal-"On May 10, 1831, on the Liverpool line, a malleble iron rail 15 fect in length, carefully cleaned, weighed 177 lbs. 10½ oz.; on February 10, 1833 the same rail taken up by Mr. J. Locke, then resident engineer on the line, and well cleaned as before, weighed 176 lbs. 8 oz.: it had consequently lost in 21 months a weight of 18½ oz. The number of gross tons that had passed on the rail during that time, we estimated at 600,000 tons. Thus we see that with so considerable a tonnage, and with the valority of the motion on that railway, the annual velocity of the motion on that railway, the annual loss of the rail was only 1-268 of its primitive weight, so that it would require more than a hundred years to reduce it to half its present strength."

Wear of rails on the Stockton and Darlington railway, (from Wood.)

"Malleable iron rails 15 feet long over which locomotive engines pass, weighing from 8 to 11 tons, wagons and their load 4 tons cach."
"86,000 tons passed over in a year, exclusive of

engines and wagons."
"Weight of rail 1 cwt. 241 lbs." "Loss of weight in 12 months 8 oz."

Other railway companies besides the Liverpool and Manchester and the Boston and Lowell have changed their rails; for example, the Stockton and Darlington commenced with a rail of 28 lbs. to the yard, subsequently changed for one of 35 lbs., and finally to one of 64 lbs. On this rail was 2,560 tons of coal transported, daily, prior to 1839, or at the rate of upwards of 800,000 annually. The London and Birmingham railway company have also changed their rail from 50 lbs. per yard to one weighing 65 and another pattern weighing 70 lbs. per yard. The Great Western rail has been increased from 44 lbs. per yard, which is the weight of the rail for the first 28 miles from London, to one weighing 62 lbs. per yard, both being supported continuously, or upon longitudinal bearings.

I trust that enough has been said to show that changing the rails upon a railway is not proof that the change has been made because the rails have worn out. With about as much propriety one might assert that the Erie canal had not answered the purpose for which it was constructed, because it is being thrown aside for another of greater capacity, for one capable of admitting the psssage of larger boats. The railways of the present day with the engine now used is a very different thing from the railways and engines of 1825 and 1830: for example, in the conditions stipulated by the directors of the Liverpool and Manchester company, in 1829, when they offered a premium of £500 "for an engine weighing 6 tons, capable of drawing on a level plane a train of carriages of the gross weight of 20 tons, including tender and water tank, 10 miles per hour;" it was required that the said engine "with its complement of water in the boiler, must at most not exceed 6 tons, and a machine of less weight will be preferred, if it draw a proportionate weight."

Would it be reasonable to decry railways as a

Another Railroad Route.

On a journey, passing through your city, will be found, it will be perceived that 600,000 tons a friend put into my hands your Journal of cent route we are in favor of too, because it the 4th ult., and pointed out to me an article is a part of our plan, we think these roads on page 572, headed "Another Railroad Route." Unfortunately, we live (in the estimation of some folks) out of the world, because we have settled down in northern New York, in the Black river country, and therefore our plans and suggestions and those of disinterested travellers, are to be treated with ridicule and held up to the world sarcastically by those who are so happily situated as to need no "other railroad route." It is not very important to know whether you wrote the article in question from your own knowledge or by information, but we Black river folks at least, disagree with you when you publish to the world that a railroad route from or near Saratoga springs and thence reach the high falls on Black river in the town of Greig, Lewis county, opposite Turin, and then follow the valley of Black river to Sacket's Harbor, branching off to Kingston in Canada by way of Cape Vincent is a project which if built would

> promote the interest of individuals and certain places and accommodate a large number of people, 'turn, nor would the general benefits resulting to community in increased value of property be sufficient to warrant the expenditure."

> and disabuse the public mind.

the public in your first article of the first co-chandize to the west and bringing back the lumn of your Journal, that "it is also the surplus produce, as well as for those emigrathis is so, which I cannot doubt, what an in- We could at least vie with the more favored jury then, have you done us in thus condem-portions of our state, and Lewis and Jeffer-

It was for such engines and such loads and velo- ning a feeble effort of ours to get relief in our neglected and sequestered situation. We have a right to suppose that some secret opposition has been at work and some undue pose you are in favor and approbate the Ogdensburg and lake Champlain route, the Saratoga and Whitehall route, Rome and Watertown route, Syracuse and Oswego route. So are we. The Watertown and Cape Vinwill be built, we think they are wanted, and we also think that the "other railroad route" in question will be built; but to the subject.

Before you condemn let the subject be examined. Take the map and suppose yourself at Ballston or Saratoga springs, from there mark the spot where the Moose and Black rivers unite, then follow down the Black river and mark again Watertown, the centre and capital of Jefferson county; then mark again Sacket's Harbor, and Cape Vincent. By this route, lake Ontario at Sacket's Harbor, can be reached from Albany in a distance of 163 miles, and Cape Vincent, which is opposite Kingston in Canada, in 180 miles. You can add the distance to New York city and Boston. And here let me ask you for a shorter route from the Hudson to lake Ontario? - This route is feasible and 139 miles of railroad is all that is lacking to unite us to our commercial cities: 56 of the 139 miles, is the distance from Sacket's Harbor to the high falls, and the yet the shareholders would not derive adequate re-rise is gradual and a trifle over 400 feet .-This route, besides being the shortest to Boston and New York city, will have no state You quote the article, or its sentiment, from tolls to pay; it is an inland route, which in the Albany Argus, which paper latterly has connection with its summer termination opened its columns, and indeed, invited dis-Sacket's Harbor, which is a military post, is cussion on suchlike projects, and has shown, of no small consequence in a state and na-I think, a more liberal spirit in railroad mat-tional point of view; it would carry all the ters than the Journal you are the editor of fashionable travel from Saratoga and Ballston has. We consider your article which I al- in the summer season to Niagara and the lude to, as wholly gratuitous, and the only lakes; it would take the whole travel from amends we can ask or hope at your hands is Canada West in the summer in connection that you will permit me to correct your error with steamboats on the lakes, as the shortest route to the Atlantic; and in the winter it I claim this at your hands. Your Jour- would of necessity as well as being the shortnal is received as a text book in many parts est route, take the whole travel in connection of this state and the eastern states, on railroad with the Canada railroad, of Michigan, north subjects, and what you condemn or approve part of Illinois, Wisconsin and Iowa; it can and does exert an influence for good or would rival the Erie canal and the railroad for evil in the minds of many. You tell on its banks, for the transportation of merbest medium for placing the merits of new ting west. I say nothing of the benefit that undertakings fairly before the public." If our country would secure in the operation.

son alone would increase in a much greater tion of the recent accidents on the Eastern Counties, their approbation and support to so beneficial proportion in population in the first ten years after the road was built than any other counties. We have the means, the materials, enterprize and men and we only want the facilities.

I refer you to the Albany Argus of 17th ult., to a communication dated on lake Huron, 3d September, signed "J." and headed "The Great West-the Present and Future." In speaking of the facilities afforded by our Canada neighbors for reaching lake Ontario and of the comparative prices of transportation from the west to Buffalo and Oswego, he closes the communication as follows:

"Looking at the clear probability of this tendency of trade and travel on to lake Ontario through the Canadian improvements, it will soon become important for us in New York to decide and to act upon the best course to draw both towards the Hudson river. The fact that tolls are required upon our central line of railway, is stimulating Boston to attempt to monopolize this trade and travel by a railway over the Green mountain to Burlington and an extension of this line from Platsburg to Ogdens-

"The prospect of the success of such a work is not perhaps quite equal to the magnitude of the design; yet if accomplished, it would be no aid to New York. In looking forward to results from any other position at the west, the intelligent mind, free from prejudice or local attachment, will scarcely fail to come to the conclusion that this trade, will to a large extent flow down the St. Lawrence unless our canals shall be improved and the tolls properly graduated; and unless there shall be established a good railway communication between lake Ontario and the Hudson river at Albany."

In your remarks, above referred to, you say:

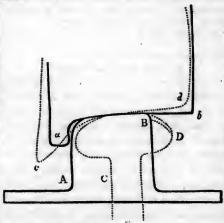

to be built. The first is where great public interest will be promoted: where an easy, rapid and cheap communication will be opened between two impor-tant points and thereby benefit communities—these should be built at the public expense if individual enterprize is not equal to the task. These should be built even if the immediate returns will not meet the outlay. The other class is where many interest will be promoted, and the returns are sure to be am-ple or remunerative to those who invest."

Now, sir, "J," from lake Huron points to our route, and in my humble opinion, it comes within your rules.

To conclude, I say that although we live in the north, far, far away from railways and canals, we cannot with complacency see our hopes and projects ridiculed or laughed at. I trust we will succeed in getting hereafter a more favorable opinion from you, of our route, and I may, perhaps, awaken curiosity in some persons to examine and fall in with to any one and possibly good may result. the project, who now, like yourself, may have prejudged our case, saving that this plan is to promote the interests of individuals

Infringement of Patent.

Railway Improvement.-The following statement from the Mining Journal, shows that some of our joint were "out," even a quarter of an inch, Yankee inventions are esteemed valuable by English engineers and machinists.

"We have always been opposed to mothe bevelled flange instead of mounting and nopoly of every description, and particular-cutting, would press against the side, and the ly infringements of patents—the produce of years of toil, anxiety, and expense, to the inventive mind of the projector. A trial was been taken off the line, and we understand instituted on Wednesday last, at the northern Newton v. the Grand Junction railway company-for an infringement of patent; a We perceive that it is becoming quite the order of case which excited considerable interest in the railway world in that vicinity. the railway world in that vicinity. The ac-tion was to recover compensation from the much inconvenience to travellers. We should like Grand Junction railway company, for the infringement of a patent taken out by the annexed articles from the Wolverhampton Chroni. plaintiff on the 15th of May, 1843, for imcle and Leeds Mercury, may be read without injury provement in the bearing of axles of railway carriages, and other axles, where great We are glad to hear that Wolverhamp-friction existed. A plea had been attempted ton is about to take its proper place as a to be put in, that the plaintiff was not the original central railway station; we have been ginal inventor; but that it was a communitoo long in the back ground, and have no and certain places and not the public and that doubt that not only our fellow-townsmen, but it is, as you say ironically, "another railroad route."

| Can, from Boston, who had sold it to him when at Liverpool in 1843, but which was overruled by the court. The invention is one of great importance in diminishing the wear and tear of locomotive engines. It consists in lining the semicircular brass 'step' of the axle which rested on the axle, and

ness, which was prevented from spreading nearly 600 miles. and yielding to the pressure by a brass fillet along its edge. The step was lined by first or 'journal,' as it was called, running in the alloy while in a state of fusion: this alloy, in cooling, adhered to the tin, and beclosely to the journal, or axle, which revolved it. The great advantage of this arrangement is, that it diminishes friction in preventing the heating of the axles, in needing a smaller supply of oil, and in enabling the bearer to run for a much longer time without the necessity of renewal or repair. Mr. Fothergill, foreman to Sharp and co., stated that he had been many years employed in the manufacture of railway carriages, and that this improvement was new to him, until the appearance of the patent in 1843. It was a very great improvement, and extremely useful in diminishing friction and the eminent engineer to the London and Birmingham line, Mr. Fairbairn, of Manchester, Mr. Benjamin Cubitt, Mr. Thomas Wilkinson, foreman to Boulton and Watts, Soho Works, Mr. Benjamin Lewis, Mr. Edward M'Connell, engineer to the Birmingham and Gloucester railway company, and many other first rate engineers, all bore testimony to the general advantage of this invention .-Mr. Michael Allison, of the locomotive department to the Liverpool and Manchester railway company, also corroborated the benefits derived from it, and that there had been a very great and marked improvement in the running of the engines since the introduction of this method; the Kingfisher, the Heron and the Ostrich, were fitted up with these railway accomplishes. The public are too and liberality, to which, however, the bearings. Formerly the brass bearings on the last to regard a railway with exclusive refer, ficial effects of a railway establishment in old construction, would run from 400 to 1000 miles; they now could run, if fitted with holders, and the quotations of the stock mar-ed. By offering well-paid employment in this patent, from 4,000 to 10,000 miles. The ket, occasionally, perhaps, diversified by active districts through which it passes a Kingfisher had run 20,000, and the bearings cidents, extortion, and official impertinence. were still in good condition. A bearing was produced that had run 32,000 miles without repairs. The jury, after giving due consideration to the importance of the case—as it ly but surely effected by the traffic of a rail-ample it sets of giving fair wages, but alaffects the patent inventions of the scientific way across a country previously unembraced so by diminishing the supply, and equalizing men in this country generally, where rail-by its iron arms are either unknown, forgot-it with the demand. All the trades and manways and machinery are so rapidly on the ten, or unheeded. Yet do they deserve to ufactures summoned by a railway to aid in increase—returned a verdict for the plaintiff be recorded, and the crude opinions of the of £1,000, which gave universal satisfaction to the engineering gentlemen present. It is really "too bad" that a company like the Grand Junction railway—one of the most profitable lines in the united kingdom—and the employment of industry, and the wealth which that employment gentlement gentlement and the wealth which that employment gentlement and the wealth which that employment gentlement gentl should resort to such an illiberal action as erates; and this has not been done merely by miner, the mason and the bricklayer, the

Preparations are making for the relaying of the Hartford and New Haven railroad with the heavy

PROVIDENCE AND WORCESTER RAILROAD.—At a meeting held on Wednesday, the following named gentlemen were elected directors for the current year. The Cincinnati Gazette, speaking of the result of this enterprize, says:

The result will be that our city will add one more arm by which she stretches her influnence and control far into the interior of this rich valley, (the Whitewater) while it will be put in reach of a valuable market. It will now rapidly develope its resources, and as it is said that every tree cut down in the western forests puts a spindle in motion at the

ny .- Greenfield (Mass.) Gazette.

A railroad is now in operation from Cincinnati to Xenia, and proposals are invited for the continu-ation of the same to Columbus. The Cleveland people are moving for the construction of a railroad from that city to Columbus; thus completing a railroad communication from the Ohio river at Cincinnati, to Cleveland. There is already a canal in operation from Portsmouth (on the Ohio) to Cleveland,

It is proposed to extend the Louisa railroad from Gordonsville to Harrisonburgh in Virginia, with a view to its being hereafter continued to Parkersburg on the Ohio.

The Stockholders of the Chesterfield railroad co. have determined to charge only so much for transportation hereaster, as will enable them to declare a dividend of six per cent.—Riehmond Enq.

Madison and Indianapolis Railroad.—The report of business on this road for the week ending 27th Sept. shows a handsome increase over the preceeding week, which was one of the heaviest since the open-ing of the road. Passengers 292 and produce and merchandize in large quantities.

"We hope" says the editor of the State Journal,

that every one will preserve these weekly statements, that they may have at hand, at all times, facts showing what has been contended for by those conversant with the subject, that the ratio of increase of business, or receipts of the road, are more than equal to the square of the distance of its extension.

We hope so too, for this is an important fact which ought to be, though it is not generally known. Extend the line and the income will increase in a compound ratio.

South Carolina Railroad.—The increase of bussouth Carolina Rallroad.—The increase of business on this road for the last 9 months, ending 1st of October inst. has been \$123,333. The following are the receipts for the last 4 years, commencing on the 1st of Jan. of each year, and ending on the 30th Sept. each embracing a period of nine months, viz: 1842, \$234,351; 1843, \$256,908; 1844, \$300,774; 1845, \$357,684. These sums are exclusive of the profits of the S. W. R. R. Bank, and the contract for carrying the U. S. Mail.—Charleston Patriot.

sures for the completion of a railroad between Charleston and Nashville. The mayor of the city presided, and speeches were made by Col. Gadsen, and Richard Yeadon.

STEAM CANAL PACKETS.—A meeting was held in Reading last week, for the purpose of considering the feasibility of forming a company, to place a line of steam packets on the enlarged canal in the spring, to ply between that place and Philadelphia. It proposed to carry about 100 passengers and 20 tons of merchandize at low rates, and run through the complete was a monitated to confer on a line nearly 40 miles in length, between Brookville and Cambridge, to complete the canal. At this juncture a company procured is said that the work will be prosecuted with vigor.

Trail.

Providence and Worcester Railway.—The whole of the stock of this road has been subscribed, and it high rates of fare charged by the railroad company, instigated this movement.—Miners' Journal.

BALTIMORE AND OHN

Great Western Mail leaves Baltimore every morning at 7½ and Elicott's Mills, Frederick, Harpers Ferry, Martinsburgh and Hancock, connecting daily each way with—the Washington Trains at the Relay. House seven miles from Baltimore, with the Winchester Trains at Harpers Ferry — with the various railroad and steamboat lines between Baltimore and Philadelphia and with the lines of Post Coaches between Cumberland and Wheeling and the fine Steamboats on the Monongahela Slack Water between Browns-ville and Pittsburgh. Time of arrival at both Cumberland and Baltimore 5½ P. M. Fare between "siock of said company heretofore issued and certimical and and Baltimore 5½ P. M. Fare between through to Wheeling \$11 and time about 32 hours.

The said company shall be released from all liabilities with the said company shall be released from all liabilities of P. M. Fare between "may have against them, with this exception only, that in case any holder or holders of the capital "stock of said company heretofore issued and certimical and and Baltimore 5½ P. M. Fare between through to Wheeling \$11 and time about 32 hours.

The said company shall be released from all liabilities of P. M. Fare between the state any demand which the state "may have against them, with this exception only, "that in case any holder or holders of the capital "stock of said company heretofore issued and certimical and time about 32 hours.

Said the New York and Eric Railrom.

May, 1845, it is provided that, if within 6 years from the passage of the law the company shall be released from all liabilities and a branch to Newburgh, in Orange county, then "the said company shall be released from all liabilities and a branch to Newburgh, in Orange county, then "the said company shall be released from all liabilities and with the lines of Post Coaches the said company shall be released from all liabilities and the said company shall be released from all liabilities and the said company shall be released from all liabilities and the said company s "and the right to craim upon such outstanding such,"
"and the said company shall pay into the treasury of
"the state, upon the order of the comptroller, any and
"all dividends upon such outstanding stock, and the
"comptroller shall apply the same to the credit of
"said company, until the state shall receive in such 'dividends, so much of their said debt of three mill-"ions of dollars and the interest thereon, as would be
"the proportion of such outstanding stockholders to
"pay, provided the whole debt of three millions of
"dollars and interest thereon were collected ratably 'from all the stock of said company now outstand-

By section 9th, of the same law, it is provided that, "it shall be the duty of the president and sec"retary of said company, within thirty days after the
"expiration of the six months mentioned in the last 'preceding section, to file with the comptroller of the state, a statement of all stocks that shall not "have been exchanged in pursuance of the provis"ions of the last preceding section; and whenever
"any dividend upon the stock of the said company
"shall be made, it shall be the duty of the board of
"directors to notify the comptroller of such dividend,
"and upon payment of the dividend aforesaid into
"the treasury, the comptroller shall furnish to said 'company a receipt for the portion of such dividend "belonging to any stock not surrendered and ex-"changed in pursuance of the last preceding section "of this act, and said company shall surrender to "the holders of such stock the receipt of said comp-"troller in lieu of said dividends."

It will be seen that on or befere the 14th of No-It will be seen that on or befere the 14th of November next, each and every holder of the stock of the company must decide whether he will avail himself of the provisions of this law by surrendering his stock and receiving one share for every two shares thus surrendered. With reference to holders who neglect to avail themselves of the provisions of the act, it is made the duty of the company, within thirty days from the 14th of November, "to file "with the comptroller a statement of all stocks that "shall not have been exchanged" agreeably to the "shall not have been exchanged" agreeably to the provisions of this act, the dividends on which must be paid into the state treasury, rendering that class of stock practically of no value to the holder. The board of directors consider it their duty to protect board of directors consider it their duty to protect
the interests of the stockholders by giving all possible publicity to that portion of the law relating to
the outstanding stock, that all may have an opportunity for an early compliance with the provisions
of the act. By order of the board of directors.

398t T. S. Brown, Acting secretary.

OFFICE OF THE NEW YORK AND Eric Railroad Company. No. 50 Wall st. New York 4th October, 1845.

Notice is hereby given that the sum of three millions of dollars, required by the law of May 14th, 1845, has been subscribed to the capital stock of 25,000 to 30,000 made weekly.

35 ly

The Subscribers are ready to execute orders for the above, or to contract therefor, at a fixed price, delivered in the United States.

The Subscribers are required to make a payment of five dollars on each share, at the office of the company, on or before Thursday, the 16th of October inst.

By order of the board of Directors. T. S. Brown, Acting Secretary.

CASEY, CIVIL ENGINEER, NO. 23 Chambers street, New York, will make surveys estimates of cost and reports for railways, canals, roads, docks, wharves, dams and bridges of every description, with plans and specifications. He will also act as agent for the sale or purchase of machinery, and of patent rights for improvements relating to public works.

KITE'S PATENT SAFETY BEAM.

SLAN MESSRS. EDITORS.—As your Journal is devoted to the benefit of the public in gen-eral I feel desirous to communicate to you for publication the fol-Safety Beam lowing circumstance of no inconsiderable importance, which oc-curred some few days since on the Philadel-oo phia, Wilmington and Baltimore railroad. On the passage of the evening train of cars from Philadelphia Safety Beam to this city, an axle of our large 8 wheeled

Section

the same kind of accident would unavoidably have much injured it, perhaps thrown the whole train off the track, and seriously injured, if not killed many of the passengers.

Wilmington, Del., Sept. 28, 1840.

passenger car was bro-ken, but from the par-

ticular plan of the con-struction, the accident

was entirely unknown to any of the passen-gers, or, in fact, to the conductor himself, un-

til the train, (as was

supposed from some circumstances attending the case,) had passed several miles in advance of the place

where the accident occurred, whereas had the car been construct-

ed on the common plan

Wilmington, Del., Sept. 28, 1840.

The undersigned takes pleasure in attesting the value of Mr. Joseph S. Kite's invention of the Safety Beam Axle and Hub for railroad cars. They have for some time been applied to passenger cars on this road, and experience has tested that they fully accomplish the object intended. Several instances of the fracture of axles have occurred, and in such the cars have uniformly run the whole distance with entire safety. Had not this invention been used, serious accidents must have occurred.

In short, we consider Mr. Kite's invention as completely successful in securing the safety of property and lives in railroad travelling, and should be used on all railroads in the country.

JOHN FRAZER, Agent,

GEORGE CRAIG, Superintendant,

A model of the above improvement is to be seen at the New Jersey railroad and transportation office, No. 1 Hanover st., N. York.

PATENT HAMMERED RAILROAD, SHIP and Boat Spikes. The Albany Iron and Nail Works have always on hand, of their own manufac-ture, a large assortment of Railroad, Ship and Boat spikes, from 2 to 12 inches in length, and of any form and Managers are respectfully invior head. From the excellence of the material alled to examine an improved SPARK ways used in their manufacture, and their very general use for railroads and other purposes in this counth ways used in the country of the material alled to examine an improved SPARK are stated by eral use for railroads and other purposes in this country undersigned. eral use for railroads and other purposes in this country, the manufacturers have no hesitation in warranting them fully equal to the best spikes in market

rails, to any amount and on short notice. Almost all the railroads now in progress in the United States are fastened with Spikes made at the above named factory—for which purpose they are found invaluable, as their adhesion is more than double any common spikes made by the hammer.

All orders directed to the Agent, Troy, N. York,

will be punctually attended to.

HENRY BURDEN, Agent.

Spikes are kept for sale, at Factory Prices, by 1. & J. Townsend, Albany, and the principal Iron mer-chants in Albany and Troy; J. I. Brower, 222 Water St., New York; A. M. Jones, Philadetphia; T. Jan-viers, Baltimore; Degrand & Smith, Beston. ** Railroad Companies would do well to forward

their orders as early as practicable, as the subscriber is desirous of extending the manufcturing so as to keep pace with the daily increasing demand.

FRENCH AND BAIRD'S PATENT SPARK ARRESTER.

NO THOSE INTERESTED IN Railroads, Railroad Directors

Our improved Spark Arresters have been extensively used during the large them fully equal to the best spikes in market, both as to quality and appearance. All orders addressed to the subscriber at the works, will be promptly executed. JOHN F. WINSLOW, Agent.

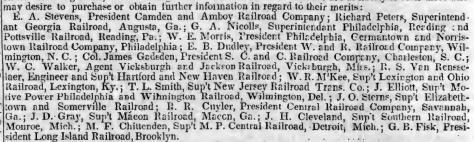

Albany Iron and Nail Works, Troy, N. Y.

The above spikes may be had at factory prices, of Erastus Corning & Co., Albany; Hart & Merritt New York; J. H. Whitney, do.; E. J. Etting, Philadelphia; Wm. E. Coffin & Co. Boston. ja45

Rew York: J. H. Whitney, do.; E. J. Etting, Philadelphia; Wm. E. Coffin & Co. Boston. ja45

DATENT RAILROAD, SHIP AND BOAT Spikes. The Troy Iron and Nail Factory keeps constantly for sale a very extensive assortment of Wrought Spikes and Nails, from 3 to 10 inches, manutactured by the subscriber's Patent Machinery, which after five years' successful operation, and now almost universal use in the United States (as well as England, where the subscriber obtained a patent) are found superior to any ever offered in market.

Railroad companies may be supplied with Spikes having countersink heads suitable to holes in rails, to any amount and on short notice. Almost rails, to any amount and on short notice. Almost States (Stevens, President Camden and Amboy Railroad Company; Richard Peters, Superintend.

Orders for these Chimneys and Arresters, addressed to the subscribers, or to Messrs Baldwin & Whitney, of this city, will be promptly executed.

N. B.—The subscribers will dispose of single rights, or rights for one or more States, on reasona-

le terms.

Philadelphia, Pa., April 6, 1844.

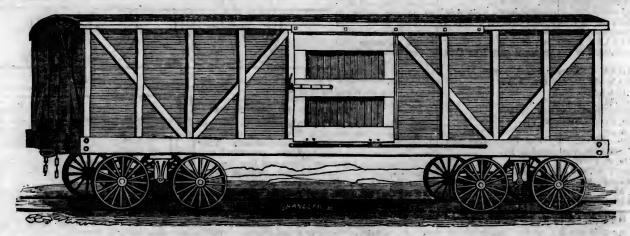

** The letters in the figures refer to the article given in the Journal of June, 1844. ble terms.

BENTLEY'S PATENT TUBULAR STEAM BOILER. The above named Boiler is similar in principle to the Locomotive boilers in use on our Railroads. This particular method was invented by Charles W. Bentley, of Baltimore, Md., who has obtained a patent for the same from the Patent Office of the United States, under date of September 1st, 1843—and they are now already in successful operation in several of our larger Hotels and Public Institutions, Colleges, Alms Houses, Hospitals and Prisons, for cooking, washing, etc.; for Bath houses, Hatters, Silk, Cotton and Woollen Dyers, Moroeco dressers, Soap boilers, Tallow chandlers, Pork butchers, Glue makers, Sugar refiners, Fariners, Distillers, Cotton and Woollen mills, Warming Buildings, and for Propelling Power, etc., etc.; and thus far have given the most entire satisfaction, may be had of D. K. MINOR, 23 Chambers st. New York.

The article is complete in itself, occupies but little space, is perfectly portable, and requires no brick work, not even to stand upon. It is valuable, no only in the saving of time and labor, but in the economy of fuel, as it has been ascertained by accurate measurement, that the saving in that article is fully two-thirds over other methods heretofore in use. They are now for the first time introduced into New York and Boston by the subscriber, who has the exclusive right for the New England states, New York and New Jersey, and are manufactured by

FORCE, GREEN & CO. New York.

DAVENPORT & BRIDGES' PATENT CAR AND TRUCK

DAVENPORT & BRIDGES CONTINUE TO MANUFACTURE TO ORDER, AT THEIR WORKS, IN CAMBRIDGEPORT, MASS Passenger and Freight Cars of every description, and of the most improved pattern. They iso furnish Snow Ploughs and Chilled Wheels of any pattern and size. Forged Axles, Springs, Boxes and Bolts for Cars at the lowest prices. All order punctually executed and forwarded to any part of the country Our Works are within fifteen minutes ride from State street, Boston—coaches pass every fifteen minutes.

AILROAD IRON AND LOCOMOTIVE! RAILROAD IRON AND LOCOMOTAL TYPE Types imported to order and constantly on hand by

The Iron Trade of Europe.

This branch of European industry, great as it has always been considered, is assuming a still more important aspect. The demand for railways, ships, buildings and bridges all of which are comparative—which has been caused, partially, through in the lower Loire, that had not been at work the new applications of the article is now and will ly new applications of the article, is now and will investments of capital must be speedily made in its manufacture, both in Europe and this country, or the prices will be so high that important enterprizes will be checked in their progress and suspended before completion. We recently published an article from the London Mining Journal on the probable demand and means of supplying it, which ought to be read by our iron masters and capitalists more generally than it can be unless republished, as we requested, by those with whom we exchange. It appears to us that more useful information could not be given to their readers.

We now give another article on the same subject

neavy transactions have taken place in pig iron, at £4, though many holders are not selling under £4 10s. per ton; bars are quoted at £9, with considerable business doing, and the prevailing opinion is, that prices must go up. The Staffordshire iron masters

The Paramir slower in the amendration of the amendration of the amendration of the fort, La Rochelle, Bayonne, and Toulon.—

The Paramir slower is the taken being structed at Brest, Cherbourg, Indret, Roching of cast metal is adopted, and has the prices of Baucin, in the Jura, the gas from the ligh furnaces is employed for heating a steam engine that works the bellows. At the manufactory of Ichoux and Pontens, structed at Brest, Cherbourg, Indret, Roching of cast metal is adopted, and has under an advance of 20s. per ton on bars, and 10s, on pigs. There is nothing in the present aspect of affairs to lead us to doubt, but that these prices will be maintained, or even still further advanced, as the demand for The building of iron vessels, which less than Meuse and Montblainville, gas is used for railway iron must continue for years. We half a century ago, would have been looked puddling from a refining furnace, heated with a century ago, which is the anxioty to garring more re-icharcoal and a mixture of dry wood. The utmost profit that this demand will create, the nown, not only in this country, but all over heating of steam boilers by gas is now genprice is not forced up to that unhealthy state, which will be sure to cause a reaction, ininvention and the perseverance of man will throughout France being a great saving of flict a corresponding stagnation in the trade, accomplish. There is a general rise in iron fuel. I have made the above few remarks, and destroy the very object which the parties now taking place all over the continent, in as they show that, both in France and Bel-concerned had in view, while, by keeping at fair and even largely remunerating prices, a navigation speculations. sound, healthy, and long continued course of prosperous trading will be the result, benefi- the iron trade on the continent, the following cial alike to the capitalist, the miner, and the quotations, that have been made from official consumer. Since writing the above, we returns, may also be interesting to your rea-have received the following interesting re-ders:—at the last contract entered into al marks from an intelligent correspondent:-

and extensive are the contracts that have per than in France, where iron is on the rise been entered into by the iron masters of Eng-to a great extent. At the foundries of Saint land and the continent, to meet the demands Dizier it is daily becoming higher, half rock that are so rapidly on the increase, not only iron being at £14 10s. to £15 per ton; the report, we may have more to say in relation to it. for railway material but iron for ship build- fine iron of Berry is at £19 15s., and wrought ing, now making so wonderful a progress iron at £20 16s.; the general average price report of the president and directors of the all over Europe, and even in the east and at the private forges is, for cast iron from £7 west Indies. We understand (as we predicted some time ago), there is likely to be selling at £6 5s. to £6 10s. the 100 kil., or United Kingdom and on the continent, as the vance. The following is the progress maditional shares of their stock on the 21st of iron masters are so pressed for supplies, and king at the forges at Terrenoire and Lorne, August, the proceeds of which are to be ap

In Scotland The French government is also making of fuel is reduced by 30 and 40 per cent. heavy transactions have taken place in pig great improvements in the amelioration of At the forges of Bauclin, in the Jura, the gas have issued circulars to the trade, informing them that no further orders can be taken iron, with a steam engine of thirty horse facture of iron. At Orthes the refining, only hope that in the anxiety to realize the upon as a chimera, is daily gaining more re-

"The iron trade is daily becoming of rails was £12 10s. to £13 per ton, and chairs try, but in France, Belgium, Sweden, and the north of Europe, as railways progress, gust last, and this is even 12s. to 16s. cheat caster Union, & can the control of Europe, as railways progress, gust last, and this is even 12s. to 16s. cheat caster Union, & can the control of Europe, as railways progress, gust last, and this is even 12s. to 16s. cheat caster Union, & can the control of Europe, as railways progress, gust last, and this is even 12s.

circulars, announcing that they have ad as for heating the air of the high furnaces. vanced the price of bars 20s. and pigs 10s. At Lorrette the steam engine boiler is heated the pressure for iron, to supply the new lines for several years, has been reconstructed, and ty of the ready material on hand to meet the produced from the coal mines of the departemergency. The iron masters never were ment. This furnace produces cast metal of so busy as at present in Wales, Staffordshire, a very superior quality for moulding. The and other large mining districts, and at good proprietor of the work at Pont Eveque, in remunerating prices; the furnaces have not the department of the Isere, has been maonly been increased, but are in full work king some very extensive and important exnight and day, as there is no lack of ore and periments to submit cast metal to puddlecoal. The progress that has been made age when in a liquid state, immediately it within the last six years in this country, in comes from the high furnaces, the results of the building of iron steamers, and many of which have been most satisfactory, as, by them of very large magnitude, the Great this new method, they can pass through the Britain to New York, the Hindostan and the puddling furnace nine to ten loads of cast ta to Suez, and many others of minor ton-only six; it yields the same quantity of one great advantage is, that the consumption charcoal and a mixture of dry wood. The enterprize; but, let our own miners and iron "As connected with the present position of masters be on the qui vive, and no foreign nation can compete with them, for although there is plenty of ore on the continent, they have not the facilities of machinery, and, more particularly, they want a good supply Brussels for rails and chairs, the price of of coal, the chief assistant to all extensive

Harrisburg Railroad.
We have neither received the report, nor the Lancaster Union, & can therefore only give the following statement, in relation to the condition of the work, which we find in the Pittsburg Gazette of 11th inst., should we be so favored as to receive a copy of the

"We have received a copy of the annual railway contractors wish to proceed with lo- in the department of La Loire, the gas from propriated to the remaining unfunded debts comotive speed. Several of the large firms the high furnaces is used for heating the in South Staffordshire have issued printed steam engines that work the bellows, as well balance of the road. The directors con-

being relieved from the financial embarrass ers interested will subscribe the necessary ments under which they have heretofore la-amount. bored, by the most troublesome debts of the company having been funded or otherwise field, New Haven, and Bridgeport have alsettled.

The whole debt of the company is now \$645,929. The revenue of the company for the past financial year was \$71,538, and the expenses proper of the road and company \$34,800. The expenses for keeping in repair the wooden track between Elizabethfown and Harrisburg, was \$8,678, or \$482 per mile, while the 18 miles between Dillersville and Elizabethtown has been only \$1,408, or \$78 25 per mile, being less than one-sixth of the flat rail. The bad condition of that part of the road has been the cause of a considerable falling off in the freight business over it. The directors, however, anticipate a very largely increased freight business when the contract which has been entered into to lay the whole road with H rails shall have been completed."

The Magnetic Telegraph.

This important discovery appears to meet with less opposition, and greater favor, than any other of equal utility that has ever been presented to the consideration of an intelligent people. There is a simplicity about it which enables every one, who views it, to comprehend and appreciate its utility, burgh, perhaps the most extraordinary, as though they may not understand the cause which produces such astonishing results.

progress making in its extension in this country.-We have no doubt but that within a few years, the wires will be placed along the line of every important railroad, and reach from one seaport to another, and from each seaport to every important inland city and town in the Union. When one city have them for their own protection. Their extension will astonish many, and wonderfully facilitate the business operations of the country.

Atlantic and Mississippi Telegraph. Henry O'Reilly, Esq., writing from Harris-

gratulate the stockholders on the prospect of our citizens, we hope business men and oth-

We understand that the citizens of Springready secured depots in their respective towns. -Hartford Courant:

We find the following account of the establishment at St. Petersburgh under the management of our countrymen, Messrs Eastwick, of Philadelphia, Harrison, and Winaus, of Baltimore, in the London Mining Journal. There was, we believe, an energetic competition between these gentlemen, and several English manufacturers, for the contractors to supply the Russian railroads with machinery, cars etc, and we consider it high credit to our countrymen as mechanics that it was decided in their favor .-They will, we are sure, justify the confidence reposed in them by the Russian government.

Mr. Norris also of Philadelphia, at Viennd.

Colossal Manufacturing Establishment .-There is now in full operation at St. Peterswick and Harrison, the famed locomotive entent, in which 3500 men are constantly im- earnestly requested to send delegates. ployed, and in the conducting of which there the latest and in the conducting of which there this route a week or two since as the best ing the central line of the telegraph for this to the establishment. week. We are promised a plan of the works with a more particular account of the methods adopted; and as the principles upon which such a gigantic affair is conducted must be interesting, we shall have much pleasure in laying the particulars before our caders. [Mining Journal.]

Great Luxembourg .- We hear upon authority that the concession of the line from Brussels to Namur has been obtained by the Great Luxembourg railway.

Switzerland is taking measures to have railways, even among her mountains. One of her projects is for forming a line from Geneva to join one of the great French lines. - Germany, also, will have railways to join the principal French ones. In a few years, all the principal places of the entire continent will be united by these roads of iron. A treaty has been made between the Belgian and French governments, for enabling the carriages of the railway which join the French northern at the frontier, to run each on the other's line without unloading. When Switz-We should like also to obtain a description erland and Germany shall have their railways, of the establishment under the direction of it is to be hoped they will have the good sense to adopt a similarly enlightened

Pottsville, Sunbury and Eric Railroad .-There was a meeting held at Pittsburg on the well as gigantic commercial establishment 20th ult., northern and western Pennsylvawhich can be found in the history of the nia, favorable to the construction of the "Potts-The following gives us but a limited idea of the world, ancient or modern. Railroad Companies.

We recently addressed a circular to the different railroad companies in the United States, in which we offered to insert their standing advertisements to occupy one-fourth of a column, and to send them two copies of the Journal, one by mail as published, and the other half bound at the close of the year, for twenty dollars. We have long felt the want of some publication, either weekly or monthly, in which may be found the advertisements of all the railroads and steamboats on the principal routes in the countrywhere a traveller in New York may ascertain at what time he can arrive at, and depart from, Boston, Portland, Montreal, Buffalo, Detroit, Cincinnati Philadelphia, Baltimore, Washington, Richmond, Charleston, Savannah and other important points, in one paper and in convenient form. Such a publication we have thought would be exceeding convenient to the multitude of travellers in these days; and, with the view of furnishing such a publication, at an early day, either in, or in connection with, the Railroad Journal; we made this proposition to the railroad companies first, in the belief that they would cheerfully respond to it, as by doing so, they will contribute materially to the future prosperity of the Journal, and at the same time, it is believed, to their own interest, and to the convenience of many

We have already received authority from the following named companies, to insert their advertisements on the terms proposed, and we confidently anticipate similar orders from most, if not all of the other companies; as we have not yet had a single where they can, at so little cost, promote their own in the kingdom has its railway facilities." passengers, and at the same time so materially contribute to the permanence and future prosperity of There never was a period so fortunate for invest-

Late Foreign News.

We have received, by the Hibernia, through Adams and Co.'s express, our regular files of London railway and mining journals to the latest dates, viz. Herapath's the Times and Record of the 1st, the Express of the 3d inst., and the Mining Journal of the 27th ult., and also Le Chemin de Fer Belge, from some unknown friend, who will please accept our thanks for his attention.

We have also a few lines from our respected friend in London, which will be very acceptable to those engaged in the manufacture of iron in this country, though not so acceptable to those interested in the construction of railroads. It is however entirely in accordance with our own views on the subject. Iron must advance. The demand will be greater than the supply unless large additional investments are immediately made in the manufacture; no greater restriction need be imposed upon the extension of railroads than will arise from the difficulty of obtaining iron.

The inducements for extending the system in England continue to increase in a manner almost incredible. The rapid increase of receipts on the different railways and especially on those which have reduced their rates, during the current year and consequently the great increase in the value of railway property, may be seen from the following statement.

Increased Value of Railways .- The improvement in the incomes of existing railways still continues, and during the last two months amount to upwards of £200,000 on comparison with the corresponding two months of 1844. The lines which have reduced their fares most liberally are the greatest gainers. At this rate of increase of income the value of the railway property of the country is becoming greater by upwards of £2,000,000 sterling per month

Is it surprising, with such results from past investments, that the surplus capital seeks for similar returns? Not at all; and therefore we may anticipate an extension in railways in Great Britain unfavorable reply. We therefore feel assured that until, as was well said by a looker on, "every town interest, and render an important service to their even so will it be in this country, if our capitalists will now engage in the manufacture of iron to meet our own wants.

for some years, be equal, or nearly so, to the foreign supply; and the demand here will be greater than it has ever been and will continue to increase for years to come; prices must of course range high and afford large returns for capital and insure a stability in the business and an extension in the manufacture, which will astonish the most sanguine.

Railway Speculations in England.

There appears to be great apprehension in some quarters, that sad disasters are to follow the present railway rage, or mania, as it is termed; but we do not so apprehend. To us it appears only a desire of the many to invest their means-be they small or great-in that business which will yield thus were ruined. It is useless to tell you, because them the best returns; and it fortunately so happens that the very best investment that can be made, is in a branch of business which gives constant employment, and good pay to thousands of their own pedple, increases the value of almost every kind of demand for iron that is really unheard of before property—and is a source of great convenience and in my long experience of the iron trade. The prieconomy, both in time and money, to all who have ces are as follows: Glasgow pigs 100s. per ton in occasion to travel; thus benefitting all by the expenditure, and keeping the money passing rapidly from hand to hand and still within the country. It is doubt before another month goes round, that we may possible that a few speculators, those who have little to lose, may be thrown off the track, that however is of little consequence, when those who have money to invest, and those who have property to be enhanced in value, and those who have hands to labor are all-all benefitted by the construction of railroads. There is little danger of a crisis in railway affairs so long as they are built for years to come, high prices may be looked for, with the surplus capital of the country, and pay a better rate of interest than most other kinds of invest-

Self-Acting Break.

An interesting and important experiment was made, says the London Railway Record, of 1st October, "on Monday last with Mr. Thornton's patent self-acting railway break, at the Hassock's station favor in this country, and I hope from the developof the London and Brighton railway, before Gen. ments on the Croydon railway and the south Devon Pasley, Capt. Heaviside" and others. On the first experiment at the rate of 30 miles per hour, the car-tion, that the sanguine expectations of its friends riage was detached from the engine, upon which the break dropped into gear, without any known agency to those in the carriage, and stopped the carriage in 30 yards, to the astonishment of all. The He has been robbed of the reputation and profit of next experiment was made at 35 miles an hour and the invention, but I still hope justice will be done to on the carriage being detached came to a rest in 35 yards. The third experiment was at the rate of 45 his behalf, and I hope he will yet do well. In Germiles an hour and with the same success, on the many, the railways are carried on slowly, compared breaks being permitted to act, the carriage came to with this country. The king of Hanover is maa rest in 45 yards.

iments were entirely successful and satisfactory, and two years more. In this country, it would have it is believed that it will be reported favorably upon by Gen. Pasley, to the board of trade.

Iron Trade.

"There has been," says the Mining Journal of 27th Sept., "a very brisk trade during the week in Glasgow pig iron, and the market continues animated with an upward tendency. Sales have been made at 85s, net cash, which is a rise on last quotations, at this price holders are firm, and few appear disposed to accept it. Contracts have been offered at 80s., and refused; holders asked 90s. per ton; the price generally may be quoted at 87s. 6d. net cash, though a few parcels may be picked up at 85s. From the reports of the iron masters throughout the north, there is very little doubt but that there will be a very great rise this season, not only in pig, but in every description of iron, as the demand dal21 TOKEN HOUSE YARD. London, October 3, 1845.

Absence in Germany, has prevented me from busy that I have but a moment to tell you that the further advance, as the price is now the result of bonafide railway orders, not as before, in the spring, when speculators anticipating an immense consumption for railway purposes, bought recklessly, and not having capital enough to sustain themselves until the real consumptive demand sho'd come round, as it has now, were compelled to sell at low prices and you know as well as I do, the immense number of railways in progress, and of the immense consumption of iron for general purposes in a period of unexampled prosperity now prevailing, which cause a the Ctyde, merchant bars at Cardiff £9 per ton, and railway bars at Cardiff £12 per ton, and I have no quote £1 per ton additional for each of these kinds. So that our American iron masters need fear no competition from this country; they may charge \$100 per ton for rails with the most perfect composure, and fear no rivalry from England. Istrongly advize them to go into the manufacture of iron with great spirit and increased capital, not doubting that and an unlimited control of their own market may be expected for years. In the meantime high prices will diminish consumption, and the makers will be gradually found to lower prices, and I hope they will be more satisfied to do a large business at moderate prices than a small business at very high rates. The atmospheric principle is increasing in public railway, and other lines that will soon be in operawill be realized. You recollect our countryman Pinkus of Philadelphia, is the inventor of this beautiful and most philosophical plan of railway. him. Parties here are interesting themselves in king one of 92 miles, from Hanover to Hamburg, It was the opinion of those present that the exper- but he has been two years about it and will take been made in twelve months; as there are no difficulties in the way. I hope to write again soon, and am now most truly yours. G. RALSTON.

Railroad Improvements in Georgia,

And a comparative statement of the cost of a royage

lished in the Augusta, (Ga.) Constitutionalist. It has roads would be made—and in their train an imbeen since republished in several papers in the south. The writer is evidently a gentleman of abil- the extensive mines, of that region would be sure to ity, who thoroughly understands the subject; and is follow; thus giving new life to enterprize, indeeply interested in the success of the Georgia railroads. He shows clearly how by extending them
into Tennessee, they may be made more useful to
the people, and more profitable to the shareholders—
of a charter, which will insure the early construcand at the same time sources of great economy in tion of the road.

ments in the business, as the demand abroad will, (Foreign Correspondence; of the American Railroad Journal.) the shipping of produce from an Atlantic, over a gulf port.

We were aware that there must be a material difference in the expense of shipping cotton, and writing to you for several weeks, and now I am so other produce from the southern Atlantic and the gulf ports; but had never seen a comparison of exthe past three weeks, and there is every prospect of greater than a fewer seen a comparison of exgreater than we had supposed, and it must operate powerfully in favor of the Atlantic ports when proper facilities for reaching them from St. Louis, or even from Nashville, are completed. Even if the expenses were equal both ways, the difference in time and climale would be sufficient to insure to the Atlantic ports, with good railroad facilities, a large share of the business, which now goes to New Orleans from above the point at which the railroad shall touch the Mississippi, near the north of the Ohio, or at St.

> There are many intelligent people who would be loth at this time to believe, and still more loth to admit even if they believed, that a railroad from the Mississippi at the mouth of the Ohio, or St. Louis to the Atlantic at Charleston or Savannah, could compete with that noble river, or at all interfere with the business of New Orleans-now a mighty city, but still in embryo-yet a well constructed single track railroad, between those two points, would find ample employment, and yield rich returns to its proprietors the first year after its completion; and in less than ten years from the opening of the road, a double track on one line only, would not be able to accommodate the business. There will, beyond all question in our minds, be at least three lines of railroad from the Mississippi river to the southern Atlantic ports, two of which if not all of them are sure to connect with the present railroads of Geor-

> There appears to us to have been, not only much enterprize, but exceedingly good judgment and great foresight evinced by the gentlemen of Georgia, who planned, and have thus far executed the railroads in that state. To strike those mighty rievrs as high up as possible, was their true policy-as the country below must then open other avenues in self defence, or rather to be on an equal footing with those above them-whereas, had the lower route been first opened, it might have been a long time before this upper one would have been completed; but complete this and the others are sure to follow.

It is to be hoped that the legislature of Tennessee, now in session, will, at an early day, grant a liberal charter for a railroad from Nashville to Chattanooga, to connect there with the state, or Western and Atlantic road of Georgia, which will now be speedily completed, by which an easy and cheap avenue to market, will be opened to middle Tennessee; and new life given to every department of industry, and increased value given to every species of property within reach of its influences. There cannot be a doubt but that the completion of this road in three years would enhance the value of property in Tennessee to an amount at least three times its cost; and from Charleston to Liverpool, and from New Orleans it is difficult to estimate, with any degree of accuracy, the advantages which would result to the peo-The following well written article was first pub- ple from its early construction. Chesapeake and Ohio Canal.

We copy the following statement, originally published in the Albany Evening Journal, from the National Intelligencer-as we are not favored with an exchange with the Journal-for the purpose of congratulating the numerous friends of the canal upon the prospect of a speedy completion of that work to Cumberland; where they anticipate from the coal and iron mines of that region, ample and remunerating business.

We are gratified by the prospect of another noble avenue being soon in use for the transaction of business between the vast mineral region of the Alleghenies and the large cities of the Union, as we are fully of the opinion that the increasing population and the rapid development of our agricultural and manufacturing resources will at an early day require all that the people will be disposed to construct. The resources of this country are beyond computation; and but one in a thousand justly appreciates the energy and enterprize of our people, hence it is, many suppose that our improvements are going ahead of our necessities. It will, however, soon be discovered that there will be ample business, at remunerating prices, for all, if their managers will adopt that system which shall give to the people the greatest accommodation at the lowest possible rates. These rates are to be arrived at by experiments guided by sound discretion and careful management and not by the efforts of rival companies to ruin each other.

We hold that no class of people are better entitled to liberal returns upon their investment than those who invest in railroads and canals, for the reason that their profits are always delayed and oftentimes tractors during this month, and is to be comuncertain, while the thousands, who run no risk, are pleted within two years. almost invariably benefited, therefore the rates charged for the use of such works should always be such as will insure fair returns, yet such as will at the same time induce the greatest possible amount of

field, with harness fairly on, and branches reaching into the very bowels of the mines, and will have all its arrangements made to meet—and successfully too announcing that further orders could not be

A sound currency, and abundant capital, in-commending the attention of contractors to warmly.

New York, October 9, 1845.

Dear Sir: Pursuing our recent conversaequal to any in the Union. By holding at tion in relation to the contract lately entered through the town be successful, what living Augusta, he has the advantage of a constant into by myself and others, constituting the choice of seaports, and can, at the shortest no-firm of Gwynn and Co., with the Chesapeake tice, avail himself of the temporary advantages and Ohio canal company, for the unfinished of either. No location could possibly offer work of the canal, I have to state that our only in Birmingham, but throughout the midmore advantages as a depot for export than contract amounts to \$1,625,000, including

The work extends over a distance of fifty chants, to rejoice at the extension of our im- miles, commencing at dam No. 6, a few miles the centre of the midland metropolis-less provements, which must so rapidly increase above Hancock, and ending at the town of time than it takes our merchants and manunot only the quantity, but the variety of its Cumberland, in which distance work has al- facturers who reside at Edgbaston, Highgate, ready been executed equal to 31 7-10 miles, Smallheath, etc., to walk to their dinners. leaving to be done that which is equal to 18 3-10 miles.

> The amount of cost will serve to give you done, and I will only state on this point that brought £60, or 2,400 per cent. it embraces the completion of a tunnel, (the arching of which will require 5,000,000 of carried between Manchester and Patricroft bricks) dams, locks, aquaducts and culverts, besides a considerable amount of heavy ex-the hour started during certain periods of the cavation.

The contractors contemplate sub-letting the greater part of this work, and are now prepared to exhibit this part to bidders, and receive applications for it. One or more of the contractors will remain on the line for this purpose until after the 20th instant, when subcontracts will probably be entered into, so far as the bids are found to be satisfactory. Any of your friends that may be disposed to examine the work will be cordially welcomed and kindly treated, and I trust their visits may prove of mutual advantage. The contractors are already prepared with money sufficient to fulfil all sub-contracts they may enter into.

It may not be amiss for me to state that those disposed to examine the work to be done as they may prefer, and at either place may readily find horses to convey them along the line of work, and be directed either to the contractors or engineers of the company in charge of the line.

The work must be commenced by the con-

Railway Gossip.

The London Railway Chronicle has the following among much other gossip.

Iron foundries are said to be about to be

we hope therefore, that wise counsels will govern One circular intimated an advance of 10s. in the directions of these two companies, and that per ton on nail rods. An advance on pig iron both will be so managed as to give to the proprietors of from 5s. to 10s. per ton has also taken

Their experience of railways has taught them to appreciate their value. Birmingham Advertiser says :- " Should the present contemplateread gt railway lines -and the rapid increase of the property, not land districts? Dudley, Tipton, Wednesbury, Bilston, Stourbridge, Westbromwich, and Walsall will be only a ten minutes ride from

The highest rise which has yet taken place in any shares is instanced by those of the Wakefield, Pontefract and Goole. Shares an idea of the heaviness of the work to be on which £2 10s. have been paid last week

> During the Eccles race week the passengers exceeded 40,000. As many as six trains in day. Before the reduction of fares, these races hardly made any sensible difference in the usual traffic receipts.

> Steam Carriages on the Prairies.- The following paragraph from the Sangamo (III.) Journal announces another prospective innovation upon the ancient manners and customs of the prairies. We wonder what the prairie wolves will say to such company? We shall doubtless hear from them when this machine is in full operation.

The Sangamo Journal states that Gen. Semple, one of the senators in congress from Illinois, is about to perfect an experiment which he has been laboring at for several years. He proposes to run locomotives on ordinary level roads. He has already surveyed and marked out a natural level route from Springfield to Alton, and expects very shortly to run can be conveyed on the Baltimore and Ohio railroad either to Hancock or Cumberland, little importance, if success should otherwise crown his efforts.

> Railroad from Woonsocket to Dedham, Mass .- A meeting is called at Dedham next Friday, to take measures for the construction of a railroad from Woonsocket, through Norfolk county, to Dedham.

> Railroad from Lexington to Maysville, Ky.—We see from the Maysville and Lexington papers, that active preparations are being made to obtain a charter for a railroad from Maysville to Lexington at the approaching session of the legislature.

Wilton Railroad.—The managers of this road are progressing with their subscription; something more than one-half of the requisite amount of stock is al-This canal has a powerful rival already in the established at Boulogne, to be worked by coals imported from Wales.

The canal has a powerful rival already in the established at Boulogne, to be worked by coals imported from Wales.

Circulars have been issued in the iron trade announcing that further orders could not be arrangements made to meet—and successfully too announcing that further orders could not be received unless at an advance of 1l. per ton. The directions of these two competition than either of the other routes.

The directions of these two companies and the properties are said to be about to be ready taken up, on or near the line of the road, for commencing the first division as far as East Wilton, which will probably be completed in the course of 1846. The remainder of the route is considered practicable and feasible to Marlow and on to Connecticut river. It is at least 13½ miles nearer to Boston that may be broady taken up, on or near the line of the road, for commencing the first division as far as East Wilton, which will probably be completed in the course of 1846. The remainder of the route is considered practicable and feasible to Marlow and on to Connecticut river. It is at least 13½ miles nearer to Boston that may be broady taken up, on or near the line of the roady taken up, on or near the line of the roady taken up, on or near the line of the roady taken up, on or near the line of the roady taken up, on or near the line of the roady taken up, on or near the line of the roady taken up, on or near the line of the roady taken up, on or near the line of the roady taken up, on or near the line of the roady taken up, on or near the line of the roady taken up, on or near the line of the roady taken up, on or near the line of the roady taken up, on or near the line of the roady taken up, on or near the line of the roady taken up, on or near the line of the roady taken up, on or near the line of the roady taken up, on or near the line of the roady taken up, on or near the line of the roady taken u

The Susquehanna Democrat states that the differences between the Delaware and Hudson canal comboth will be so managed as to give to the proprietors and also to the people and the business operations of the community the greatest possible benefit.

"The Chesepeake and Ohio canal, as will be seen by the following letter from a friend, ham. The proposition seems to meet with best open acceded to by the railroad company claimed by them have been acceded to by the railroad co.

Bridge over the Niagara River .-- A writer in the

agara river at a point below the falls, where it is only 332 feet wide. The writers calculations are made for a bridge of a single stone arch, and the pracsingle some at all doubted. Supposing, says the writer, the bridge to be 350 feet long and 30 feet wide, there would be room for a railroad track, a carriage way, and side walk for foot passengers. It is estimated to cost as follows: \$5.000

Excavation in the bank for foundation ... Plank centre 440 feet long, 30 feet wide, 8 feet thick, 1,300,000 ft. plank \$7.....

Expenses and putting up of centre

Stone masonry, 22,000 cubic yds. \$4..... 10,000 88,000 Contingencies 8,000

...\$120.000 It is supposed that an iron suspension bridge could be constructed at a less rate, but the objection would be that the public would not have perfect confidence in its safety, at least so the writer thinks.

The Regent's canal, London, has been purchased by a new railway company, for upwards of 109,000.
The new railway will run through the heart of London, and connect the Great Western, London, and Birmingham, and Eastern Counties railways.

Inproved Locomotive.—A new engine, called the Condor, has lately been constructed for the Liverpool and Manchester railway company, by their su-

perintendant engineer, Mr. Durance. The improvements consist in having a double firebox, the combustible gases being consumed in the second, which would otherwise escape in an unconsumed state. By this means a considerable increase of heating power is obtained, and consequently an increased speed. We understand that the fuel used is coal, instead of coke.

The auxiliary screw steamer Massachusetts, which sailed from New York on the 15th of Sept., reached Liverpool on the 3d inst., after a voyage of seventeen days and a half, allowing for the difference of longitude between Liverpool and New York. The following remarks upon her voyage are from a passcnger

We have had a succession of variable winds short intervals of calms, and a great deal of cloudy, rainy, and foggy weather. We also have had a considerable proportion of head winds, not very fresh, and have never furled our topgallant sails but once on account of the strength of the wind—we have never reefed topsails. The motive power of the ship has been in use alone, or aided by the canvas, ten days, twenty-one hours, and has performed its duty excellently well. The new rig works to a charm; and all who have witnessed the combined efforts of the steam and sails, are perfectly satisfied of the value of the former as an auxiliary to a good modelled sailing packet."

BOSTON COURIER, DAILY, SEMI-Weekly and Weekly.

The Daily edition of the Courier, presents to merchants and others, an extensive medium of advertising. The circulation of the Semi-Weekly Courier (published on Mondays and Thursdays) is believed to be more extensive than that of any other believed to be more extensive than that of any other similar Boston Newspaper. This publication embraces all the reading matter of the Daily, the Foreign and Domestic Markets, Review of the Boston Market, Prices current, and Ship News, prepared with great accuracy. The Weekly Courier contains as much of the matter of the daily as can be crowded into a sheet of the same size, without ship news, prices current or advertisements.

Our extrons to obtain and publish authentic information on all topics proper for the columns of a news-paper,—the state of trade, the prices of merchan-dize, the current news of the day, and the political movements in the various sections of the country will not be abated. The marine department of the Courier has been inferior to none in copiousness or accuracy of detail, and it will be our endeavor to maintain its reputation in this respect.

TERMS OF SUBSCRIPTION. For the Daily Courier, for one year, in advdnce \$8,00 For the Semi-Weekly Courier, for one year. 4,00 For the Weekly Courier, for one year 2,0 JOSEPH T. BUCKINGHAM. EBEN B. FOSTER.

BOSTON AND MAINE RAILROAD.

Upper Route. Boston to Portland via, Charlestown, Somerville, Malden, Stoneham, South Reading,

Reading,

Stoneham, South Reading, cipal railroads in the country, effectually prevents engines and their trains from running off the track

at a switch, left wrong by accident or design.

It acts independently of the main track rails, being laid down, or removed, without cutting or displacing them.

It is never touched by passing trains, except when in use, preventing their running off the track. It is simple in its construction and operation, requiring only two Castings and two Rails; the latter, even if

much worn or used, not objectionable.

Working Models of the Safety Switch may be seen at Messrs. Davenport and Bridges, Cambridgeport, Mass., and at the office of the Railroad Journal, New York.

Plans, Specifications, and all information obtained on application to the Subscriber, Inventor, and Patentee. G. A. NICOLLS,

Reading, Pa.

Notice is hereby given to the holders of stock of the New York and Erie Railroad company, that by the terms of the 8th section of the Act of the 14th May, 1845, it is provided that, if within 6 years from the passage of the law the company shall complete a single track from the Hudson river to lake Erie as and a branch to Newburgh, in Orange county, then "the said company shall be released from all liabil-"ity to pay to the state any demand which the state "may have against them, with this exception only, "that in case any holder or holders of the capital "that in case any holder or holders of the capital "stock of said company heretofore issued and certi"fied, or purporting to be paid in full, shall not with"in six months from the passage of this act, surren"der to the company their stock certificates, and re"ceive or offer to receive therefor, for every two
"shares of stock heretofore issued, one share of stock
"to be hereafter issued, then all such stock heretofore
"issued, and not so surrendered shall not be arbited." "issued, and not so surrendered, shall not be subject to the provisions of this law; but the state shall retain the right to claim upon such outstanding stock, and the said company shall pay into the treasury of the state, upon the order of the comptroller, any and "all dividends upon such outstanding stock, and the "comptroller shall apply the same to the credit of "said company, until the state shall receive in such "dividends, so much of their said debt of three mill-"ions of dollars and the interest thereon, as would be "the proportion of such outstanding stockholders to "pay, provided the whole debt of three millions of "dollars and interest thereon were collected ratably "from all the stock of said company now outstand-

By section 9th, of the same law, it is provided that, "it shall be the duty of the president and sec"retary of said company, within thirty days after the "expiration of the six months mentioned in the last "preceding section, to file with the comptroller of "the state, a statement of all stocks that shall not "have been exchanged in pursuance of the provisions of the last preceding section; and whenever "any dividend upon the stock of the said company "shall be made, it shall be the duty of the board of district to retify the correctles of each divided." "directors to notify the comptroller of such dividend,
and upon payment of the dividend aforesaid into
the treasury, the comptroller shall furnish to said
company a receipt for the portion of such dividend belonging to any stock not surrendered and exchanged in pursuance of the last preceding section "of this act, and said company shall surrender to "the holders of such stock the receipt of said comp-"troller in lieu of said dividends."

It will be seen that on or befere the 14th of November next, each and every holder of the stock of the company must decide whether he will avail himself of the provisions of this law by surrendering his stock and receiving one share for every two shares thus surrendered. With reference to holders who neglect to avail themselves of the provisions of the act, it is made the duty of the company, within thirty days from the 14th of November, "to file "with the comptroller a statement of all stocks that "shall not have been exchanged" agreeably to the provisions of this act, the dividends on which must be paid into the state treasury, rendering that class of stock practically of no value to the holder. The board of directors consider it their duty to protect the interests of the stockholders by giving all possible publicity to that portion of the law relating to the outstanding stock, that all may have an opportunity for an early compliance with the provisions of the act. By order of the board of directors.

398t

T. S. Baown, Acting secretary. ing his stock and receiving one share for every two shares thus surrendered. With reference to holders

KITE'S PATENT SAFETY BEAM.

MESSRS. EDITORS.—
As your Journal is devoted to the benefit of the public in general I feel desirous to communicate to you for publication the following circumstance importance, which oc-curred some few days since on the Philadel-phia, Wilmington and Baltimore railroad.

On the passage of the evening train of cars from Philadelphia to this city, an axle of our large 8 wheeled passenger car was broken, but from the particular plan of the construction, the accident was entirely unknown to any of the passengers, or, in fact, to the conductor himself, until the train, (as was supposed from some circumstances attending the case,) had passed several miles in advance of the place where the accident occurred, whereas had the car been construct-

MERRICK & TOWNE, do.

HINCKLEY & DRURY, Boston.

C. C. ALGER, Stockbridge Iron Works, Stockbridge, Mass. have for some time been applied to passenger cars on this road, and experience has tested that they fully accomplish the object intended. Several instances of the fracture of axles have occurred, and in such the cars have uniformly run the whole distance with entire safety. Had not this invention been used, serious accidents must have occurred.

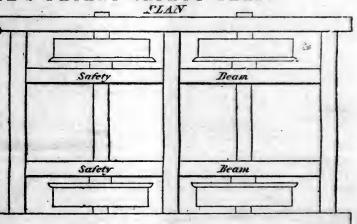

In short, we consider Mr. Kite's invention as completely successful in securing the safety of property and lives in railroad travelling, and should be used on all railroads in the country.

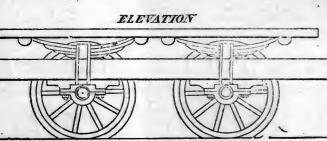

JOHN FRAZER, Agent,

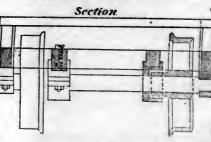

GEORGE CRAIG, Superintendant,

W. L. ASHMEAD, Agent.

A model of the above improvement is to be seen at the New Jersey railroad and transportation office, No. 1 Hanover st., N. York.

PATENT HAMMERED RAILROAD, SHIF and Boat Spikes. The Albany Iron and Nail Works have always on hand, of their own manufacture, a large assortment of Railroad, Ship and Boat Spikes, from 2 to 12 inches in length, and of any form of head. From the excellence of the material allow ways used in their manufacture, and their very genurnoses in this country of the spikes purposes in this country of the spikes purpose in the spikes purpo eral use for railroads and other purposes in this country, the manufacturers have no hesitation in warrant-

is desirous of extending the manufeturing so as to keep pace with the daily increasing demand.

ja45

FRENCH AND BAIRD'S PATENT SPARK ARRESTER.

Our improved Spark Arresters have been extensively used during the

ways used in near manufacture, and their very general use for railroads and other purposes in this country, the ranufacturers here to destitation in warranting them fully dependence. All orders addressed as severities at the works, with perputpible and experiments and difference and the works, with perputpible control, and the several the works, with perputpible control.

The above spikes may be had at factory pires, of the above spikes may be had at factory pires, of the above spikes may be had at factory pires, of the above spikes may be had at factory pires, of the above spikes may be had at factory pires, of the above spikes may have been never the works, with a factory keeps constantly for sale a very extensive assortment of Wrought Spikes and Nails, from 3 to 10 inches, manutactured by the subscriber of harding the spikes and walls, from 3 to 10 inches, manutactured by the subscriber of harding the spikes and walls, from 3 to 10 inches, manutactured by the subscriber of harding the spikes and walls, from 3 to 10 inches, manutactured by the subscriber of harding the spikes and walls, from 3 to 10 inches, manutactured by the subscriber of harding the spikes and walls, from 3 to 10 inches, manutactured by the subscriber of harding the spikes and walls, from 3 to 10 inches, manutactured by the subscriber of harding the spikes and walls, from 3 to 10 inches, manutactured by the subscriber obtained a patent of wrought Spikes and Nails, from 3 to 10 inches, manutactured by the subscriber obtained a patent are found superior to any ever offered in market.

Railroad companies may be supplied with Spikes having countershik heads suitable to holes in from the fall of the spikes and walls are spikes and walls and the spikes and walls are spikes and walls are spikes and walls are spikes and the progress in the United States are fastened with Spikes made at the above named factory—for which purpose they are found invaluable, as their adhesion is more than double any common spikes made by the home.

All orders directed

ney, of this city, will be promptly executed.

N. B.—The subscribers will dispose of single rights, or rights for one or more States, on reasona-

ja 45

le terms.

Philadelphia, Pa., April 6, 1844.

** The letters in the figures refer to the article given in the Journal of June, 1844.

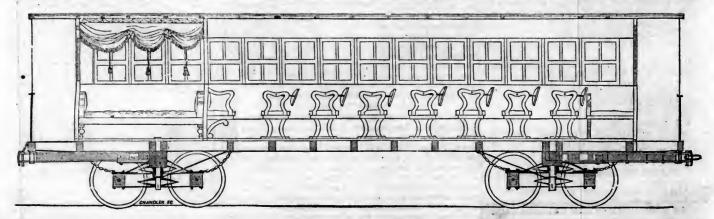

ja

Railroads. This particular method was invented by Charles W. Bentley, of Baltimore, Md., who has obtained a patent for the same from the Patent Office of the United States, under date of September 1st, 1843—and they are now already in successful operation in several of our larger Hotels and Public Institutions, Colleges, Alms Houses, Hospitals and Prisons, for cooking, washing, etc.; for Bath houses, Hatters, Silk, Cotton and Woollen Dyers, Morocco dressers, Soap boilers, Tallow chandlers, Pork butchers, Glue makers, Sugar refiners, Farmers, Distillers, Cotton and Woollen mills, Warming Buildings, and for Propelling Power, etc., etc.; and thus far have given the most entire satisfaction, may be had of D. K. MINOR, 23 Chambers st. New York.

The article is complete in itself, occupies but little space, is perfectly portable, and requires no brick work, not even to stand upon. It is valuable, no only in the saving of time and labor, but in the economy of fuel, as it has been ascertained by accurate measurement, that the saving in that article is fully two-thirds over other methods heretofore in use. They are now for the first time introduced into New York and Boston by the subscriber, who has the exclusive right for the New England states, New York and New Jersey, and are manufactured by

CURTIS & RANDALL, Boston; and by FORCE, GREEN & CO. New York.

DAVENPORT & BRIDGES' PATENT CAR AND TRUCK.

DAVENPORT & BRIDGES CONTINUE TO MANUFACTURE TO ORDER, AT THEIR WORKS, IN CAMBRIDGEPORT, MASS Passenger and Freight Cars of every description, and of the most improved pattern. THE NEWCASTLE MANUFACTURING Company continue to furnish at the Works, situated in the town of Newcastle, Del., Locomotive and other steam engines, Jack screws, Wrought iron work and Brass and Iron eastings, of all kinds conwork and Brass and roll easings, of an Andes con-nected with Steamboats, Railroads, etc.; Mill Gear-ing of every description; Cast wheels (chilled) of any pattern and size, with Axles fitted, also with wrought tires, Springs, Boxes and bolts for Cars; Driving and other wheels for Locomotives.

The works being on an extensive scale, all orders will be executed with promptness and despatch.

Communications addressed to Mr. William H.

Dobbs, Superintendent, will meet with immediate attention.

ANDREW C. GRAY, ja45 — President of the Newcastle Manuf. Co.

CUSHMAN'S COMPOUND IRON RAILS.

TO RAILROAD COMPANIES AND BUILDERS OF MARINE AND LOCOMOTIVE
improvements in the construction of rails, mode of
ENGINES AND BOILERS. guarding against accidents from insecure joints, etc. -respectfully offers to dispose of Company, State Rights, etc., under the privileges of letters patent to Railroad Componies, Iron Founders, and others interested in the works to which the same relate. Com-panies reconstructing their tracks now have an opportunity of improving their roads on terms very advantageous to the varied interests connected with their construction and operation; roads having in use flat bar rails are particularly interested, as such are permanently available by the plan.

W. Mc. C. CUSHMAN, Civil Engineer,

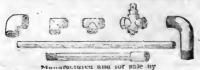

Albany, N. Y.

Mr. C. also announces that Railroads, and other works pertaining to the profession, may be constructed under his advice or personal supervision. Applications must be post paid.

PASCAL IRON WORKS.

WELDED WROUGHT IRON TUBES

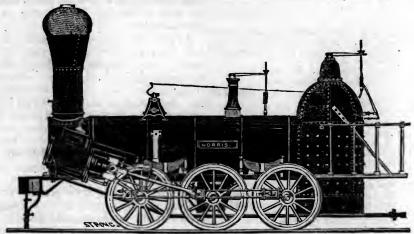

From 4 inches to 1 in calibre and 2 to 12 feet long, capable of sustaining pressure from 400 to 2500 lbs. per square inch, with Stop Cocks, Tr. Ls, and other fixtures to suit, fitting together, with screw joints, suitable for STEAM, WATER, GAS, and for LOCOMOTIVE and other STEAM BOILER FLUES.

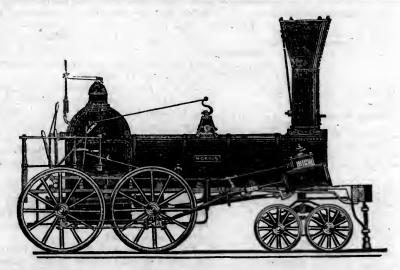

MORRIS, TASKER & MORRIS. Warehouse S. E. Corner of Third & Walnut Streets, PHILADELPHIA.

NORRIS, LOCOMOTIVE WORKS.

1	
	Taking the statement A, and beginning
1	on the debit side, it will be observed that the
	following are shown, viz:
1	1 (1)

and every expenditure now incurred being necessarily taken out of the revenue. There has been expended, however, the sum of \$48,-419 44 properly applicable to this account, being for settlement of claims for right of way, interest on the debt to Messrs. Baring, and the cost of placing the money in England, the construction of bridges, improve-ments at depots, and various other items; and this sum the board have directed to be considered as part of the expenses of the current year. There is also included in this amount, the sum of \$10,270 paid to contractors for making the road, which, at the time of the last report, was in litigation; so that the whole sum now unsettled of this class of debts, amounts to only \$2,150.

2. That the amount expended in cars, engines, etc., for the accommodation of the coal trade has been \$118,803 98, which includes the sum of \$38,216 74 disbursed in the previous year.

3. That the city of Baltimore six per cent. stock has been reduced since the last annual report, \$20,000; which sum was set apart as a sinking fund, for the redemption of the million loan, incurred on account of the construction of the Washington branch road; making, together with \$15,000 heretofore set apart for the same purpose, and the accumulations of quarterly interest reinvested as they accrue, the sum of \$37,000.

Then by reference to the credit side it will be seen:

1. That the "loan at six per cent for the purpose of taking stock in the Washington branch road," is placed at \$1,000,000, as it was originally, instead of \$985,000, as in last year's statement; the board having ordered that the \$15,000 of bonds belonging to this account, which were cancelled, and upon which, in October 1843, a "sinking fund," was commenced, should be restored, and placed in such position as to accumulate by the quarterly interest.

2. That the debt of Messrs. Baring, Brothers and Co., now stands at \$153,708 95, being \$50,000 less than last year. It may be proper here to remark, that the remittance of this sum was made on the first of May last, five months before the payment was due, and at a saving of interest for the difference of time.

By the statement B it will be seen that the revenue of the road for the year ending the 30th Sptember last, has amounted to \$738,603 18, being \$79,983 20 more than the revenue of last year.

Of the expenses of working the road and keeping it in order, shown by this statement, it is gratifying to observe that, while there has been a considerable increase in the trade and travel, there has been comparatively but a trifling increase in the expenses; except in the item of repairs of bridges, which is upwards of \$49,000 greater than that of last year, and to which more particular reference will hereafter be made.

following are shown, viz:

The net receipts from the business of the main stem, over and above the expenses, inof Harper's ferry" is the same as stated in dependently of its connection with the Washlast year's report, the capital being absorbed, ington branch, amount to the sum of \$375,-

785 91, being nearly five and a half per

cent upon the capital.

that entire period, and especially since its tive power. completion to Cumberland.

year; the receipts from all sources during liest practicable period. the year, and the disbursements on all accounts for the same period, together with the

ultimo.

By this statement, it will be seen that the company have on hand the following, viz:

Leaving......
City stock on hand..... 40,096 59 Debt due by the Washington branch road, which is the same as cash.... Borrowed from the reve-

nue for the purpose of the coal trade, and to be refunded out of that ... \$118,803 98

that trade...... 28,202 98- 90,601 00

And to which may be added the divi-dend of 3 per cent. to be received from the Washington branch road......

Making in all.....\$264,085 98 Of this, the board have applied to the resources of the company as borrowed from tion.

The condition of the track west of Harenced in procuring the timber in sufficient construction. quantity for its repair from the southern In regard ly obviated.

Appended to this report will be found a table showing the aggregate number of passengers, and the amount in tonnage of the various articles of produce and merchandize
menced in 1838, of gradually renovating the
of the temporary support which had been transported over the road on each year for entire line to Harper's Ferry with a substan- put under the arch during its repair, and for the last ten years, and the gross revenue retial edge rail, such as is used west of that assisting it while deprived of the counter ceived from the same. We have not a doubt but that with reduced fares the increase in 1845 over the previous year would have been as much greater than the increase of 1844 over 1843, as it is now smaller. That is, if the fares had been reduced the increase of 1845 would have been at least \$16,539 instead of 8,539. It is im-

Correspondents will oblige us by sending in their portant to insure an increase of the increase, instead likely to follow reduced, than increased, fares. Such has been the case in England and so it will be in of last year this country.

The following statement of the business on the Housatonic railroad is from the Bridgeport Standard of 7th inst. We are gratified to know that the track will so soon be relaid with heavy iron; and we hope that the anticipations of the editor may be fully realized, as the people of Bridgeport deserve success for their enterprize in opening a communication so far interior. It has been their misfortune, not their fault, that their road has not been in better repute and more productive.

Increase. The rapid increase of business on this road, not-The rapid increase of business on this road, not-withstanding the strong prejudice in the public mind against the plate rail, inclines us to the opinion that the road may ultimately prove profitable to all the stockholders, both old and new—and we recommend to those who hold the old stock, not to be in haste to sell at the present rates. The company will com-mence laying the H rail in a few days, and will complete it through the whole line early next spring; and if the experience of other roads, where the rail has been changed from plate to H, is any criterion by which to estimate the productiveness of this, the

of the Housatonic, the resources of which when developed will be found abundantly sufficient to pay large dividends to the stockholders from the local

READING RAILROAD .- A comparative statement of the business of the Philadelphia and Reading railroad, for the second week in Oct., in years 1843, 1844 and 1845:

Week ending Oct. 14, 1843...\$13,233 06...8,710 00
" " 12, 1844... 15,559 14.11,532 00
" " 11, 1845... 28,931 73.20,519 00 For the Third Week.

Week ending Oct. 21, 1843...\$14,079 23...9,244 00 " " 19, 1844... 15,528 93.11,209 00 " " 18, 1845... 27,539 68.19,584 00

South Carolina Railroad,-The Charleston Cou-

.. for three months....1845 357,684

Add three months to come, suppo-

portant to insure an increase of the increase, instead of a decrease of the increase; and this will be more likely to follow reduced than increased fares. Such over 1844 of \$56,910—and this presuming that the three best months in the year are not to exceed those

Railroad Companies.

We recently addressed a circular to the different railroad companies in the United States, in which we offered to insert their standing advertisements, to occupy one-fourth of a column, and to send them two copies of the Journal, one by mail as published, and the other half bound at the close of the year, for twenty dollars. We have long felt the want of some publication, either receitly or monthly, in which may be found the advertisements of all the railroads and steamboats on the principal routes in the countrysteamboats on the principal routes in the country—where a traveller in New York may ascertain at what time he can arrive at, and depart from, Boston, Portland, Montreal, Buffalo, Detroit, Cincinnati, Philadelphia, Baltimore, Washington, Richmond, Charleston, Savannah and other important points, in one paper and in convenient form. Such a publication we have thought would be exceeding convenient to the multitude of travellers in these days; and with the view of furnishing such a publication and, with the view of furnishing such a publication, at an early day, either in, or in connection with, the Railroad Journal; we made this proposition to the railroad companies first, in the belief that they would cheerfully respond to it, as by doing so, they will contribute materially to the future prosperity of the Journal, and at the same time, it is believed, to their own interest, and to the convenience of many travellers.

We have already received authority from the following named companies, to insert their advertisements on the terms proposed, and we confidently an-ticipate similar orders from most, if not all of the other companies; as we have not yet had a single unfavorable reply. We therefore feel assured that where they can, at so little cost, promote their own interest, and render an important service to their passengers, and at the same time so materially con-tribute to the permanence and future prosperity of this Journal, they will generally, and we hope uni-tersally send in their advertisements, and also the

by which to estimate the productiveness of this, the receipts of the Houstonic railroad will, ere long, be sufficient to pay a dividend on the old stock, after paying expenses and 8 per cent. on the new.

The Journal belongs to the cause—not to any interest of the Houstonic railroad will, ere long, be sufficient to pay a dividend on the old stock, after dividual or company—therefore we feel that we have a just claim after devoting to it so much time and effort, with so little return or benefit, during the longs to the cause—not to any interest of the caus past fourteen years—upon every railroad company, engineer and railroad shareholder in the country, for their best efforts to extend its circulation, as it is the only one of the kind in the Union, and was the first established any where, though there are now eight or ten in London, all liberally supported by ADVERTISING.

We desire to return our cordial thanks to the following companies for their prompt and favorable reply; and as cordially desire an opportunity to return thanks to every other company in the country for a similar layor.

Boston and Providence; Boston and Maine; Norwich and Worcester; New York and Erie; Baltimore and Ohio; Baltimore and Susquehannah; Richmond, Fredericksburg and Potomac; Central, Georgia and Lexington and Ohio.

We have the pleasure to add the two following named companies, to the list of yearly subscribers at twenty dollars a year, viz. the READING and the Georgia railroads.

Locomotion .- " It appears from the Boston papers, that the number of passengers between Boston and New York, by the different routes, for the month of September last, was 19,314, or at the rate of 231,000 per year."

We find the above in the Journal of Commerce, rier says: A correspondent furnishes the following statement of the receipts of the railroad since 1842: would require 82 post coaches per day carrying 9 Receipts for the entire year of 1842.....\$381,294 passengers each—for every week day in the year, to

passengers on the Troy and Greenbush railroad, for the projected line." 6 weeks ending 5th of August, was 19,334, -cqual It appears to us that every intelligent man in the to 12,890 per month, or 154,000 per year. The num-country would arrive at the conclusion "that oppober of passengers carried on the Hudson river is site Detroit must be the western termination" of the the south side of lake Erie, if they desire to retain about 3000 a day for 8 months, or 720,000 a year." main line whatever other termination its branches may

all thrown into the shade by the travel on the English most direct lines are the lines for travellers and busiroads, viz:-Number of passengers on the Great ness, by which railroads are sustained, whatever may Western road from London to Bristol, 1844, 1,998,- be the wishes and interests of individuals, compa-000; -- on the London and Birmingham road, for nies, or towns. 1844, 1,096,000."

It would require seven hundred and nine post coaches daily, each carrying nine passengers between London and Bristol.

Western and Atlantic (Ga.) Railroad .- It will be seen by the advertisement in another page that this road is now open to Cartersville in Cass county, and that it is to be opened still further to Coosa depot on yesterday, contains the following: 20th November. We do not find this place on the latest maps and will thank the engineer, Mr. Garnett, to give us its location; and at the same time inform us of the progress he is making towards the Tennessee river; that we may know how soon we can reach Nashville by railroad in that direction.

Magnetic Telegraph .- The Journal of Commerce says that "a continuous line of heavy leaden pipe was yesterday laid down across the East river, for the purpose of conveying the electro-magnetic fluid upon the New York and Offing line of Telegraph."

There is a possibility we should think that this leaden pipe will get "hooked" by some of the an-indication in Philadelphia, of a spirit of c-oopera- of the Niagara and Detroit rivers railroad company. chors which plough that ground.

American Railroad Speed .- We have been informed that the Express train with the English mails and passengers by the Hibernia came from Boston over the Long Island railroad in 2 hours and 20 minutes running time-a rate of 40 miles per hour. The night being clear, and signal lights being prepared in expectation of the express, the train had a clear track and there was neither accident, obstruction nor danger. The engine was the "Brooks," manufactured by Rogers, Ketchum and Grosvenor, of Paterson, N. J. The managers of the Long Island railroad have predicted from the first that they would attain the speed of 40 miles per hour—and they have ourselves-nor-let-others-do-anything-policy is neidone it.

There is no road probably in the country where high speed may be attained with more safety than on the Long Island. They will yet perform it in lowing spirited resolutions:—

1st. That it is the determination of this meeting lower from Middletown to the Harry

The Cleveland, Columbus and Cincinnati railroad company has been organized, by the election of a president, secretary, and board of directors. Cleveland Herald expresses great confidence that the work will be pushed on to completion.

We take the preceding statement from an exchange paper, not receiving the Cleveland Herald, we are of course unable to have early intelligence of the movements at that important point, will the editor please remove this inconvenience, as we desire to be early apprised of the movements along this impor-

The stockholders of the Boston, Concord and Montreal railroad, will meet in this town, says the Concord N. H. Patriot of October 16th, on Wednesday exceed, that of the main lines. next, to choose directors, etc.

The Toronto Patriot, we understand-we do not receive it—says that "The more we see on the sub-

The same paragraph states that "the number of site Detroit must be one of the western termini of Erie road is finished, the chain will be complete to

The same writer well remarks that the above "is have, unless he looked through Toronto glasses.

A convention for the purpose of considering the expediency of reviving the project for constructing a railroad from Sunbury, on the Susquehanna, to Erie, was to be held at Ridgeway, Elk county, on the 21st inst. There is a convention called in Danville for the 29th inst. relative to the proposed construction of a railroad from that place or its vicinity to some point on the Reading railroad, and the Williamsport (Lycoming co.) Gazette, received

A railroad convention will be held at this place on Friday the 31st instant, for the purpose of devising ways and means for the construction of a continuous railroad from Philadelphia, by way of the West Branch, to some suitable termination connecting with the public works of New York. It is ex-pected that delegates will be here from Philadelphia and several of the eastern counties, and from the southwestern counties of New York. The citizens of the counties contiguous to the proposed route, who feel an interest in the project, are invited to send delegates to this convention.

We find the preceding in the United States Gazette. It shows that the people of interior Pennsylvania are moving-though we have not seen much

It appears to us that the people of Philadelphia are more disposed to prevent their neighbors from accomplishing important enterprizes, even if their own interest would be promoted thereby, than to undertake such as are sure to advance their own immediate as well as prospective interest. The capitalists and business men of Philadelphia ought now to move en mass in favor of a continuous railroad to Pittsburg-and also to connect with the New York and Erie railroad, at Elmira, or Corning, or other suitable point; and the more points of connection through the coal region the better. This do-nothingther generous nor just; and we hope that more liberal views, and acts will be adopted.

Railway Meeting .- The citizens of Middletown,

hat a road be built from Middletown to the Hart-

ford and New Haven road.
2nd. That a committee be appointed to procure subscriptions to defray the expenses of surveys.

That a committee be appointed to procure statistics and direct surveys; with power to appoint a treasurer, draw funds, and to call another meeting.

As a matter of course in due time, similar meetings will be held in every village, in the vicinity of main lines of railroad, where there are facilities for manufacturing purposes, or desirable locations for genteel retired residences. When the principal main lines shall have been constructed, and even before, in many places, the branches, or laterals will be commenced, and, within fifteen years their length or number of miles, will equal, if it does not

Erie Railroad Extension and Receipts .- The people of Erie, Pa., are about to concentrate their efforts for the construction of a railroad along the ject in the various journals that fall under our eye, Erie railroad terminates. From Erie to Cleveland, suggestion. Believing, as all must, that the Amerthe more inclined do we feel to the belief that oppo-Ohio, a route has been selected, and by the time our lican travel is the great object, it by no means fol-

Cincinnati.

Of course the period has arrived for the movement of the people in every town and village along any portion of the travel between the east and west The th ey must have a road completed from Dunkirk to Cleveland, and thence to Cincinnati and to the Michigan roads, by the time the New York and Erie road is ready for use, or travel between Cincinnati and Chicago, and the Hudson river will nearly all of it pass through Canada, as they are sure to have a railroad at an earlier day.

Rival Lines in Canada West.

In a late number we gave it as our opinion that the two lines across Canada to Detroit had agreed upon a common route, and we supposed our authority to be pretty safe. It is with regret we perceive that, at a meeting in Windsor, opposite Detroit, the "Niagara and Detroit rivers railroad company" have determined to bring forward their line in opposition to the "Great Western railroad company." As formerly observed both roads have the same termini, but the latter is to go via Hamilton at the western extremity of lake Ontario. It is not for us to decide on the relative merits of the two lines, but it is for us to say that both parties are bound by every consideration to prevent two lines being built where only one can be supported, or, what would be equally unfortunate, to see the entire project abandoned. The following extract from the prospectus as published in the St. Catharine's Journal, gives the views

"The Niagara and Detroi time and saves an expense to "This board would not had of the Western Central rails ged in the most direct line to whom the management of it Great oronto and iagara and Western railroad Detroit rivers no objection railroad pense to each passenger of from 2 35 to \$4 3 d not have objected to unite in one common ral railway at Detroit, thence in an eastward t line to connect Toronto, Hamilton and Fent of these lines was entrusted deem it adviouscettion is urged to their decision." Great Western company should be nearly twice those of the Niagara and Detroit rivers company which is 222 miles long. Again, the road from Rochester to Lockport will reduce this difference of 23 miles to an inconsiderable amount. But we shall confine ourselves to a single point in the way of

tance. This subject was pretty fully examined by made to send the produce of these mines to market. of the utmost importance that the line through Ca- pleted within a specified period. With these pledgand travel to which it can offer superior facilities; for-unlike the American and Canadian press, politicians and speculators-we have uniformly scouttrade" to or by any single communication between the Atlantic and the lakes. It is not in our power at present to pursue this topic; but it will unquestionably occupy much of our attention, if prominent men in the United States have taken a deep interest in the Niagara and Detroit rivers line, as apmany influential men in Boston, New York, Albany and Detroit, and if it be true as reported to us, that the Great Western railroad company have met with every encouragement in England and have actually enlisted the railway King himself.

Baltimore and Ohio Railroad.

We have been favored with a copy of the annual report of the directors of this company for the past year. It is full and explicit, showing the entire past year, and a tabular statement of the receipts ten years.

In former years when the Journal was published weekly and in its present form, we had ample space to give such reports entire, but for several years past, when the Journal was issued semi-monthly or monthly, and in octavo size, we could not conveniently give as many reports entire as we desired; but having again resumed the large size and frequent publication, we shall be able hereafter to lay before our readers such of the annual reports as are made by companies which give comparative statements of their business for several years past and others containing matters of interest to them.

We now give the nineteenth annual report of the pioncer American railroad company; and we ask for it an attentive perusal. This company have 221 miles of road including the Frederick branch in use, which with all its appendages for transacting a business that has produced a gross income of \$738,703 during the past year, has cost them \$9,423,-000. The account current shows a gross amount of ened rulers wield the government of those states receipts of \$12,143,065 84, it is true, but it will be seen that \$3,181,005 11 of state bonds are deposited with the Messrs. Barings of London, not sold, and there is also \$40,096 59 of Baltimore city stock "on hand," the balance is cash in hand.

Without the advantage of experience this work was commenced, the first stone laid on the 4th of July 1828, and with the above amount of capital-which would scarcely have paid the legal and parliamentary expenses and land damages, in England, for will interfere with the "James river and Kanawha" such a road-it has been put into successful opera-line of improvement from Richmond to the Ohio tion. It will be seen by comparing the receipts for river. And the objection of a part of Pennsylvain 1840, and to \$738,603, in 1845, or nearly doubled construction of a railroad direct from Harrisburg to Mr. Herron's letter of October 11th, in relation

roads on the southern shore of lake Erie, render it bute largely to its construction, if it should be comwith any rival for that portion of the western trade Maryland and still more gallant Baltimore, put forth time than it would be otherwise built. their energies and utmost efforts to accomplish what was then justly considered one of the greatest works of modern times; and under ordinary circumstaned the idea of diverting or securing "the western ces the work would have been before this time, completed to the Ohio; but the unexampled revulsion of 1837-8 and 9, compelled the company to suspend operations when they had completed but a little more than one half the distance, though we suppose that nearly or quite two-thirds of the expenditure necessary to carry the work through, has been made, pears to be the case from numerous letters from as extensive surveys and examinations of the country west of the present terminus have been made.

It may well be said of this company that they have contributed largely to the cause of railroads in and have paid dearly for the reputation of being storm in which so many foundered-sunk to risenot yet; and when after having refitted their ship, which had been thrown by a tornado upon an inhospitable coast, they ask to be permitted to re-commence their voyage for their port of original destination and for which they have the original papers, they are met, by those who formerly solicited them part of the expense, with the reply, no! you did not accomplish the voyage within the time specified, therefore we will neither pay what we agreed to nor though many of our own people desire and will be largely benefitted by it. Therefore they are com- the business between the east and the mighty west. pelled, for the present at least, to suspend their voyage and to make fast to a rock in the midst of the ocean-or rather a mountain in the forest-until more liberal views predominate and more enlightthrough whose teritory it is desirable to pass, and that time is not distant. The spirit of the age is onward. Railroads tend to enlarge and liberalize the views of mankind. It will be soon seen that the construction of one railroad leads surely to the construction of another, and that to another and so on.

The objection made by "old Virginia"-by this we mean the eastern part of the state-to the termination at Parkersburg, if we understand it, is that it the years 1835, 1840 and 1845, in which period they nia to its termination at Pittsburg is, that it will inhave increased from \$281,312 in 1835 to \$391,069 87 terfere with their state works, and also prevent the

lows that the business of the country is unworthy of in the last five years, and it may with truth be said Pittsburg. These objections may all be valid and doubt but that the early completion of the Baltimore and Ohio railroad through to Parkersburg or other Mr. Casey in a paper published in this Journal In the early history of this enterprize, as in all suitable point of termination on the Ohio, would insome years since, in which he advocates the route time since, Maryland, it is true, wielded the labor- sure the construction of the James river line of imthrough the heart of the country in preference to the ing oar, yet Virginia and Pennsylvania through provement, by a railroad, of course, over the mounline near the northern shore of lake Erie. On the whose territory, one or both, the road must pass, to tain, to the Ohio, at an earlier period than it will be other hand, the connection of this city with the reach the Ohio river, yielded a ready and cordial made it the Baltimore and Ohio railroad terminates west by the New York and Eric railroad and the assent; and not only so, but also agreed to contri- finally at the coal region; and so, on the other hand, if it were to be continued from Cumberland to Pittsburg, it would insure the construction of a continunada should be so constructed as to be able to cope es of public faith by two neighboring states, gallant our railroad from Pittsburg to Philadelphia in less

> People oftentimes do from example or necessity. what they might not do, even though their interest would be promoted by it, as matter of course or inclination. And it will be in a few years better understood by the mass and the selfish, that the true way to have improvements of this kind, is to encourage, not to resist those who are able and willing to construct them, simply because they will not pass their door. They will learn that one great work induces another, and another, thereby affording eventually the greatest possible accommodation to the greatest number, though every individual may not be equally benefitted.

It appears to us, if we may be allowed to express the United States. They have had great experience an opinion, that this company has a just claim upon Virginia for the right of way to the Ohio river; the pioneers in the introduction and establishment of a claim of the company, however, weighs as but a system which will revolutionize the habits of the feather in comparison with the right of the publicpeople and cause the earth to give forth its riches the millions who will pass over it, if properly built both of soil and minerals, with a far more liberal to the right point—and we do not he sitate to say that cost of the work, its receipts and expenses for the hand. We may safely say that they have paid the people of Virginia have too much regard for the millions for their experience; and in the advan-general interest and too much respect for individual for passengers and tonnage, during each of the past tages of that experience every railroad company in rights, to stand in the way of the early completion the country is now largely participating, and yet af- of this noble enterprize, especially when so many ter many years of great effort, having rode out the of her own citizens on its line will be so mush benefitted; and more especially as its construction will insure early and successful action on her own main line, from the mouth of the Kanawha to Richmond.

> The true policy is to build as many lines as possible between the Atlantic and Mississippi; the more avenues the more trade and travel, and at the lowest rates possible; whereas, with only one or two to make the voyage, and even agreed to defray a main lines over the mountains, high rates and poor accommodations are the sure result, as on some of our present Atlantic lines where there is no rivalry. There will be good business for all the lines which even allow you to enter our harbor! No, not even the people are willing to pay for; the only difficulty will be to build avenues enough to accommodate

> > We have by the Great Western our London and Mining Railway Journals to the 8th inst, but we find very little new or interesting. Indeed they are so filled with advertisements that there is no room for anything else. The Railway Times of 4th October has two supplements of 32 pages each, making 96 pages in all, or 2 of tables, 12 of reading and 82 of advertisements!

The prices of iron are much the same as reported by the Hibernia; it will however advance. The meeting of the Staffordshire iron masters was held at Dudley on 26th ult. preparatory to the quarlerly meetings, and though strictly private, yet it is known that there was a general feeling for another advance.

It is proposed to build a railway from London to Newcastle expressly for freight; coals to London and miscellaneous freights in return. It is estimated to cost £4,000,000, and to carry 3,000,000 tons of coal.

to the wear of railroad iron, the expense of keepcrowded out by the Baltimore and Ohio report- midst of it. which we desired to give entire-but have been obliged to omit the table, showing the business of ten years past, which we shall give next week.

For the American Railroad Journal.

I notice in your last paper, some doubts on the efficacy of Kyanizing, as a method of preserving holders is to be held, to organize, etc., on the timber—derived as you think, from notices in the 11th of October. "We do not know (says English papers. As one of your subscribers, I would be much obliged if you would look up and are of a speedy commencement and complepublish any facts or opinions on this subject, that tion of this work, but viewing it as we do, of has characterized them as in some degree may be within your reach. The evidence I have great importance to the intermediate country hazardous. Parliament has been asked to seen, has all been on the other side, and I would be and to the whole state, we earnestly hope it interpose its authority—coroners have annexglad to learn the truth of the matter.

Yours &c.

Besides the above, we are also questioned by Mr. Herron as to our authority for doubting the value of Kyanizing. Besides the discussion in the "Civil Engineer," to which we presume the latter gentleman refers, we distinctly remember to have seen a statement in some English journal-we are unable to say which-to the effect, that large quantities of timber prepared in this way, had rapidly decayed. In the mean time, any of our readers who may have seen the same statement or its contradiction, will, we hope, not hesitate to confirm our view, or, if we be in the wrong, to set us right. This is one of those very few cases in which a total defeat is preferable to victory. Some method of increasing the durability of timber, and if possible, its hardness, which should be simple, cheap and efficient, would be of inestimable value in this country, and the almost total neglect with which this subject has been regarded by the managers of our railroads, says as little for their knowledge of their own interests as for their skill and enterprize.

Columbus and Cincinnati Railroad.

The editor of the Cincinnati Daily-says that in a recent tour, he twice visited Columbus, the seat of government, where he found numerous evidences of increasing prosperity and rapid growth. After speaking of the numerous public institutions he says that Columbus is probably the best built town of its size in the Union, and that it has the "largest hotel in cubic fect in the United States." We should like to look at it, especially as he says also that its proprictor Mr. McNeil has taken great interest in the railroad from Columbus to Xenia; that :-

"Mr. Medberry, the engineer has just completed his second survey, and located the principal points. The distance is about fifty-two miles, and there are but four variations from a straight line. Between these points, the road and the ascent and descent so small, that it is not easy to conceive of less. The country through which it passes is one of unrivalled beauty and fertility. In many places it is a natural meadow, and there is very little there graze thousands of cattle and sheep .-The farmers are rich, and live, as the phraze is, "at home"-casting their eyes, like Abraham, over the broad acres where their cattle, sheep, horses and mules repose on the soft green of velvet meadows-growing fat, to be hereafter exchanged for 'the current money of the merchant.' It is pleasant to

importance be made, and that they will be made we have strong confidence."

ter does not give the road as much credit as it would principally on the facts of leakage and expense be entitled to on account of the increased value of the land—a dollar an acre? yes much more than that average would be added to the value of every acre of land within 15 miles of it, and half a dollar to the next 15 miles on each side. Few people duly appreciate the value of railroads in this respect .will be straight. The country is a plain, but are always ready to serve you with despatch, and at comparatively cheap rates.

Lake Eric Railroad.

From Dunkirk to Cleveland, Sandusky and the West.—Having extended our journey from Cincinheavy timber. Most of it is fenced in, and nati to Columbus and Cleveland, we avail ourselves of the present opportunity to call upon our friends along the lake shore, and to give them an intimation that the Canadians are quite disposed to save them all further trouble in relation to a railroad along the south side of lake Erie, as it is their intention to have an excellent railroad at an early day between Buffalo and Detroit, and between Toronto avoided .- 2. A double line of railway requires and Port Sarnia, which will answer all their purposes; and perhaps they may allow the people of Ohio engines of 100 horse power, he requires only

We are fully of this opinion and should like it obliged to do in some instances, unless measures are

Atmospheric Railway -- Railway Accidents.

The following article, abridged by the editor of the London Mining Journal, from the Perth and Dundee Advertiser, contains matter of interest to the railway world. If Mr. Pinkus has succeeded in making the improvements therein specified, he is surely entitled to high commendation, and rich reward.

The number of accidents on our railways may be promptly commenced and vigorously ed heavy deodands-and the press is constant its power which may cripple and discourage "fourth estate" lengthens, or circumscribes, However this may be, that such a road its efforts as its pages can otherwise permit. -to the schemes of inventive genius, for the York and Boston, and who is bold enough to gations, their own interest, as well as that of the public, will insure its being preferred .-And whatever it might be on the completion Mr. Henry Pinkus (the first patentee of the Clegg and Samuda (the Croydon line) is con-"That this work can be executed we have structed on the same principle. Some emino doubt, if exertions commensurate with its nent engineers have strenuously opposed the atmospheric method of propulsion. Their objections (as appears from the evidence before the commons, 15th May, 1844,) rested of working; though they all agree in acknowledging the great security of life and limb which it affords. Mr. R. Stephenson, who is at the head of the profession, stated before the committee on the Croydon and Epsom railway; that, in his opinion, "the atmospheric principle's safety is nearly perfect." It remains therefore merely to prove its practicabilitythat is, that the inordinate loss of power by leakage (equal to 51 horse power per mile.) and the heavy expense for fixed engines-viz., 300 horse power for six miles-can be overcome and dispensed with. It is said that Mr. Pinkus has accomplished this; and the promoters of our new railways should acquaint themselves with the particulars of his discoveries. We have only space to enumerate them.—1. The long valve is dispensed with; hence the leakage complained of is entirely only a single propelling tube.—3. Instead of live in such a country, and pleasant to look to establish ferries across the lake and avail themupon such prosperity."

Ch. Eng. and Gen. Agent. 815. *44 ly Augusta, Oct. 21 1845.

N ICOLL'S PATENT SAFETY SWITCH for Railroad Turnouts. This invention, for some time in successful operation on one of the principal railroads in the country, effectually prevents engines and their trains from running off the track at a switch, left wrong by accident or design.

It acts independently of the main track rails, being laid down, or removed, without cutting or displacing them.

It is never touched by passing trains, except when in use, preventing their running off the track. It is simple in its construction and operation, requiring only two Castings and two Rails; the latter, even if much worn or used, not objectionable. Working Models of the Safety Switch may be

EORGE VAIL & CO., SPEEDWELL IRON Works, Morristown, Morris Co., N. J.—Manufacturers of Railroad Machinery; Wrought Iron Tires, made from the best iron, either hammered or rolled, from 1\(\frac{1}{4}\) in to 2\(\frac{1}{4}\) in thick.—bored and turned outside if required. Railroad Companies wishing to order, will please give the exact inside diameter, or circumference, to which they wish the Tires made and they may rely upon being served according to the control of th made, and they may rely upon being served according to order, and also punctually, as a large quantity of the straight bar is kept constantly on hand.— Crank Axles, made from the best refined iron; Wro't, Iron Engine and Truck Frames; Railroad Jack Screws; Railroad Pumping and Sawing Machines, to be driven by the Locomotive; Stationary Steam Engines; Wro't, Iron work for Steambasts and Shafting of any size; Grist Mill, Saw Mill and Wright work of all kinds; Steam Saw Mills of simple and economical construction, and very effective from and Brass Casting and very effective Passengers by the Locomotive in Richmond, Va., at 12½ to 1 p.m.; arrive in Petersburgh, arrive in Weldon, N. C., at 10 p.m.; Passengers by the Charleston, S. C., at 6 a.m. Iron and Brass Castings of all descripio ns.t ia451v

TO RAILROAD COMPANIES AND MAN-ufacturers of railroad Machinery. The subscribers have for sale Am. and English bar iron, of all sizes; English blister, cast, shear and spring steel; Juniata rods; car axles, made of double refined iron; sheet and boiler iron, cut to pattern; tiers for loco-motive engines, and other railroad carriage wheels, made from common and double refined B. O. iron; the latter a very superior article. The tires are made by Messrs. Baldwin & Whitney, locomotive engine manufacturers of this city. Orders addressed to them, or to us, will be promptly executed.

When the exact diameter of the wheel is stated in

the order, a fit to those wheels is guaranteed, saving to the purchaser the expense of turning them out inside.

AMERICAN RAILROAD JOURNAL, AND GENERAL ADVERTISER

FOR RAILROADS, CANALS, STEAMBOATS, MACHINERY,

AND MINES.

ESTABLISHED 1831.

PUBLISHED WEEKLY, AT No. 23 CHAMBERS STREET, NEW YORK, AT THREE DOLLARS PER ANNUM.

SECOND QUARTO SERIES, Vol. I., No. 45.]

THURSDAY, NOVEMBER 6, 1845.

[WHOLE No. 488, Vol. XVIII.

THE AMERICAN RAILROAD JOURNAL! is the only periodical having a general circulation throughout the Union, in which all matters connected with public works can be brought to the notice of all persons in any way interested in these undertakings. Hence it offers peculiar advantages for advertising times of departure, rates of fare and freight, improvements in machinery, materials, as iron, timber, stone, cement, etc. It is also the best medium for advertising contracts, and placing the merits of new undertakings fairly before the public.

KITE'S PATENT SAFETY BEAM.

MESSES. EDITORS.— As your Journal is devoted to the benefit of the public in gen-eral I feel desirous to communicate to you for publication the following circumstance of no inconsiderable importance, which occurred some few days since on the Philadel-phia, Wilmington and Baltimore railroad.

On the passage of the evening train of cars from Philadelphia to this city, an axle of our large 8 wheeled enger car was broken, but from the particular plan of the construction, the accident was entirely unknown to any of the passengers, or, in fact, to the conductor himself, until the train, (as was supposed from some circumstances attending the case,) had pass ed several miles in advance of the place where the accident occurred, whereas had the car been constructed on the common plan the same kind of acci-

dent would unavoidably have much injured it, perhaps thrown the whole train off the track, and seriously injured, if not killed many of the passengers.

Wilmington, Dcl., Sept. 28, 1840.

The undersigned takes pleasure in attesting of the value of Mr. Joseph S. Kite's invention of the Safety Beam Axle and Hub for railroad cars. They have for some time been applied to passenger cars on this road, and experience has tested that they fully accomplish the object intended. Several instances of the fracture of axles have occurred, and in such the cars have uniformly run the whole distance

such the cars have uniformly run the whole distance with entire safety. Had not this invention been used, serious accidents must have occurred.

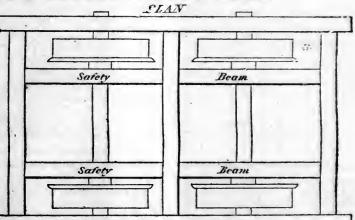

In short, we consider Mr. Kite's invention as completely successful in securing the safety of property and lives in railroad travelling, and should be used on all railroads in the country.

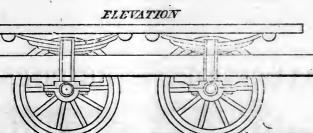

JOHN FRAZER, Agent,

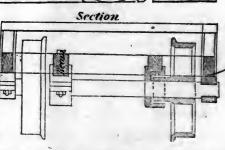

GEORGE CRAIG, Superintendant,

W. L. ASHMEAD, Agent.

The A model of the above improvement is to be seen at the New Jersey railroad and transportation office, No. 1 Hanover st., N. York.

DATENT HAMMERED RAILROAD, SHIF and Boat Spikes. The Albany Iron and Nai Works have always on hand, of their own manufacture, a large assortment of Railroad, Ship and Boat Spikes, from 2 to 12 inches in length, and of any form of head. From the excellence of the material always used in their manufacture, and their very general use for railroads and other purposes in this country, the manufacturers have no hesitation in warrant-

chants in Albany and Troy; J. I. Browet, 222 Water St., New York; A. M. Jones, Philadelphia; T. Jan-viers, Baltimore; Degrand & Smith, Beston. ** Railroad Companies would do well to forward

their orders as early as practicable, as the subscriber is desirous of extending the manufcturing so as to keep pace with the daily increasing demand.

FRENCH AND BAIRD'S PATENT SPARK ARRESTER.

O THOSE INTERESTED IN Railroads, Railroad Director and Managers are respectfully invi-ted to examine an improved SPARK ARRESTER, recently patented by the undersigned.

Our improved Spark Arresters bave been extensively used during the

teral use for railroads and other purposes in this country, the manufacturers have no hesistation in warranting them fully equal to the best spikes in market, both as to quality and appearance. All orders addressed to the subscriber at the works, will be promptly executed. JOHN F. WINSLOW, Agend.

Albany Iron and Nail Works, Troy, N. Y. The above spikes may be had at factory prices, of Erastus Corning & Co., Albany; Hart & Merritt, New York; J. H. Whitney, do.; E. J. Etting, Philadelphia; Wm. E. Cotlin & Co. Boston. ja45

PAFENT RAILROAD, SHIP AND BOATT

Are subscriber's Patent Machinery; which after five years' successful operation, and now almost universal use in the United States (as well as England, where the subscriber obtained a patent are found superior to any ever offered in market.

Railroad companies may be supplied with Spikes having countersink heads suitable to holes in iron rails, to any amount and on short notice. Almost all the railroads now in progress in the United States (as well as England, where the subscriber obtained a patent are found superior to any ever offered in market.

Railroad companies may be supplied with Spikes having countersink heads suitable to holes in iron rails, to any amount and on short notice. All orders di

Orders for these Chimneys and Arresters, addressed to the subscribers, or to Messrs. Baldwin & Whitney, of this city, will be promptly executed.

N. B.—The subscribers will dispose of single rights, or rights for one or more States, on reasona-

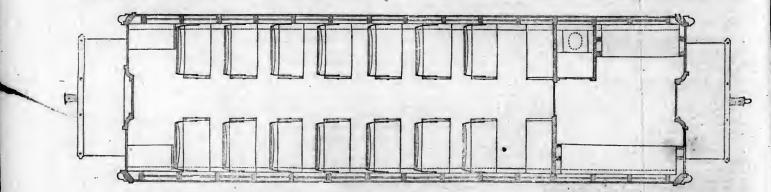

ble terms Philadelphia, Pa., April 6, 1844. ** The letters in the figures refer to the article given in the Journal of June, 1844. ja45

BENTLEY'S PATENT TUBULAR STEAM BOILER. The above named Boiler is similar in principle to the Locomotive boilers in use on our Railroads. This particular method was invented by Charles W. Bentley, of Baltimore, Md., who has obtained a patent for the same from the Patent Railroads. This particular method was invented by Charles W. Bentley, of Baltimore, Md., who has obtained a patent for the same from the Patent Office of the United States, under date of September 1st, 1843—and they are now already in successful operation in several of our larger Hotels and Public Institutions, Colleges, Alms Houses, Hospitals and Prisons, for cooking, washing, etc.; for Bath houses, Hatters, Silk, Cotton and Woollen Dyers, Morocco dressers, Soap boilers, Tallow chandlers, Pork butchers, Glue makers, Sugar refiners, Farmers, Distillers, Cotton and Woollen mills, Warming Buildings, and for Propelling Power, etc., etc.; and thus far have given the most entire satisfaction, may be had of D. K. MINOR, 23 Chambers st. New York.

The article is complete in itself, occupies but little space, is perfectly portable, and requires no brick work, not even to stand upon. It is valuable, no only in the saving of time and labor, but in the coonomy of fuel, as it has been ascertained by accurate measurement, that the saving in that article is fully two-thirds over other methods heretofore in use. They are now for the first time introduced into New York and Boston by the subscriber, who has the exclusive right for the New England states, New York and New Jersey, and are manufactured by

CURTIS & RANDALL, Boston; and by FORCE, GREEN & CO. New York.

DAVENPORT & BRIDGES' PATENT CAR AND TRUCK.

DAVENPORT & BRIDGES CONTINUE TO MANUFACTURE TO ORDER, AT THEIR WORKS, IN CAMBRIDGEPORT, MASS senger and Freight Cars of every description, and of the most improved pattern. They lso furnish Snow Ploughs and Chilled Wheels of any pattern size. Forged Axles, Springs, Boxes and Bolts for Cars at the lowest prices. All order punctually execued and forwarded to any part of the country Our Works are within fifteen minutes ride from State street, Boston—coaches pass every fifteen minutes.

The sea-board to manifest the preponderating travel on the terminus of the railroad is only 11 or 12 days Hudson river over any other route in the United States. South of New York, and on The names on the directory are a satisfacthe Philadelphia line, the travel is unusually The whole of the sums subscribed will be Philadelphia and Washington, and the result even now adds greater profits to the companies, while it undeniably advantages the public.

sary to say that the travel must increase.—

In looking over what we have written, we predominate. There is but one exception, passengers have fallen off, while that of freight is steadily increasing. The fare between here and Boston (\$5,) is too high, while the freight tariff is very low. We have reason to believe that in a few months, low fares will rule on the western railway. It is said that \$3 will be the rate between here and Boston. The competition of the Hudson river must be met, or it will be impossible to retain business.

The increase of the local travel in New England, has naturally produced that strong, pervading railway feeling, which has excited the more surprise, as the eastern people are noted for their calculating coolness. But there is "method in their madness!" New England contains a dense population, and manufacturing prevails in every town .-

Elmira and Williamsport Railroad.

The subscription of \$3,500,000 to the stock of the New York and Erie railroad having be feared, for the company has already been on the great southern line. The fare has struction of that work, and of a railroad conincorporated by the provincial legislature.—
been lately reduced 50 per cent. between necting it with Seneca lake and the northern line of railroads, it seems to us that the great importance to the citizens of Elmira of the completion of the Elmira and Williamsport road, must be manifest. The many advan-South of Washington and throughout all tages the New York and Erie railroad will country have in common, strengthens and the southern states, the travel is greater than possess over the northern chain, will doubtless last year, though the increase is not so great secure a larger proportion of the travel from as in the northern states. On the Mississippi, the great west to New York, and make Elmi-Ohio and Missouri rivers, it is hardly necestra a point of much importance, if the peculiar position she will occupy is properly improved. These mighty rivers, water a country where If the Southern road is completed it will open The amount of travel in all directions, is production springs up under the very touch an avenue for the travel going south, which very heavy. The boats on the lakes are of civilization. The number of steamers on cannot but prove a great thoroughfare. Elmore overrun, both with passengers and the western rivers is increasing, but we per- mira would then be a point where great thorfreight, than at any time since 1836. Though ceive, as we have long since apprehended, oughfares cross each other, and where the the number of steamers and propellers has that passengers go up the Ohio and Missis travel must leave one to take the other. This more than quadrupled since then, the cry is sippi, rather than down that river to New of itself, if there were no other consideration, still for more, to meet the demands of the Orleans. Chicago, Cincinnati and Pittsburg would make the construction of that road of heavy emigration, and the large mercantile draw them in that direction, because from vast importance to the future prosperity of travel of this very active year. It is not the thence, it is easier and cheaper to get to New our village. But the travel would be a mattravel of mere hordes of spectators, as was York. The gradual extension of all the the case in '36, but rather men seeking lines of railways and canals, from the Atlan with that of the freighting business, which a new home, who go with the determinatic seaboard into the western and southwest the commerce between the states of New tion to live by their labor. Such is sound tern states, is having the effect of drawing York and Pennsylvania would cause. If the the travel by the great northern routes to the construction of that road has heretofore been We understand also that the travel on the seaboard. Thus these artificial rivers and deemed of much importance by our citizens, railway between here and Buffalo, was nev- roads have entered into a direct and success- how much more important does the certainty er heavier. It is a steady tide, which flows on without a cessation from day to day.— Ohio. These new ties widen and strengthen mentioned make it? The business of 1844 was good, Yet most fortunately it does not weaken New their construction will be light, and will but this is better. The travel increases in Orleans, for the extent of country yet dependence until it reaches the Hudson, where dent upon that city is enormous. The ferture dent upon that city is enormous. The ferture dent upon that city is enormous. It will not be necessary for the citit

tance, if a demonstration is made which ap-ton. pears to have any of the elements of success. And if there were no other interests which are at stake, the connection of the work with best command the attention of the capitalthe others which are certain to be constructed, would give it an importance which would afford better accommodations; the profits procure friends and assistance if thoroughly arising from railroads are greatest on those known and appreciated. The position in which Elmira stands in relation to the road, ber of passengers that are carried at the pres- in full operation from New York and Bosmakes it the duty of her citizens to take such ent time to Boston, amount to 30,000 annu-ton to the remote extremes of the Union, the measures as will concentrate the efforts of all ally from Brookline, 15,000 from Brighton foreign intelligence can be so quickly transwho are interested in the road. To do this through Brookline, and 6,000 from west mitted, and will at once (for no combination is the work of time. Its commencement Roxbury; to say nothing of Jamaica Plain. can be extensive enough to suppress it) be so ought not to be delayed. If the efforts of all interested could be concentrated, we think that not a doubt would exist as to the possibility of providing the means for building the committee of which Hon. Luther Metcalf is news is spread through the country.

The possibility of being able to do so chairman, was directed to procure statistics. Speculation will still exist, but it we shall be so that the country. would richly compensate for the effort.-Elmira Republican.

Woonsocket and Dedham Railroad.

Thus we see the people of New England constantly projecting new lines of railroad. No sooner is one line decided upon than another is agitated. Here we find a new line, to commence at Woonsocket on the line of the proposed Providence and by the Great Britain is of the highest im- burgh American has the following respecting Worcester road, and designed to traverse the country intermediate between the Boston and Providence and the Boston and Worcester roads, or to connect stuffs is so decided that present prices may with the Worcester road at some point; thus will they continue to add one road after another until every village of any considerable business in New England, has its railroad facilities.

"We learn, says the Boston Traveller, from the Norfolk American, the particulars of a meeting held in Dedham on the 14th tions are very heavy, and when the farmer inst. in behalf of the proposed railroad from is naturally bringing his whole crop to mar-Woonsocket, R. I., to Dedham. Statements ket, it is of the first moment to him that he were made to the meeting, in reference to should be at once aware of the change in the tons of finished iron per week. the increase of business and travel on the market. When the advance is large the contemplated route. In the towns of Wat-difference of the few days in getting his in-tons of railroad iron for the Mad river railerford, Blackstone, and the immediate vicin- formation may thus make it to him a matter road; for the Miami road 850 tons, for which ity of Woonsocket, the business in raw ma- of profit or loss on his whole crop. terials and exports was said to have increased 25 or 30 per cent., within twelve months; struction of the railway between Boston and the Sandusky and Mansfield city road, of and the travel even more. So in Belling-Buffalo will make a difference of at least which 800 tons have been furnished. These ham, Medfield and Medway, there had been three days in the time of transmiting the facts may give an idea of the importance of a great increase. Routes had been surveyed late very important foreign intelligence.from Woonsocket to Medway, and from the express trains on the railway will scatter two directions, to Dedham—viz: ter the tidings far and wide through the western remsylvania. They are owned by a company in Boston, of which thence, in two directions, to Dedham—viz: through Medfield and west Dedham; and tern states, at least three days before the farthrough north Wrentham, Walpole, and the mer would have heard of it without a railpensive construction, and affording a larger titles him. amount of business. It was stated that the The ordinary grain purchases in the course citizens of Woonsocket, since the Providence of three days, at this active business season and Worcester railroad had been decided of the year, in the states of Ohio, Indiana, upon, were in favor of the route through Illinois, Michigan and Wisconsin, are enor-burgh Gazette, that the burnt aqueduct on the Dedham to Boston, as the most direct, in mous. 1	From	Syracuse to	66						
		Utica to							

Those rates are much lower than last year.

construction by the Eastern railroad company) is progressing rapidly, and that it will in all probability be completed by the 1st of July next.

Cheshire Railroad .- The Claremont Eagle states that a meeting was held in that town on Monday, and \$57,000 subscribed to the capital stock of Ches

The Great Western Railroad .- We learn that Mr. Commissioner Ewart has returned from London, and reports that the entire stock of the Great Western railroad has been subscribed for in London, and the first instalment paid. The stock was above par at Hamilton.

is in accordance with information received by us a Railway, Steamboat, Canal Packet and Stage Coach some days since, and we trust it may prove true, as ADVERTISER, OF DIRECTORY, in connection with the we deem the early construction of a railroad across Railroad Journal. It appears to us that a sheet of the peninsula of great importance to this city and this kind, in which the traveller will find a notice to the northwestern states.

his opinions therefore will be esteemed good authority in this matter; especially as they were formed and committed to paper at an early period and placed in the hands of an eminent gentleman in Canada as early as the year 1837, and given to the publates of the 18th, and Liverpool of the 19th ult. tire confidence in their correctness.

Those who know Mr. Casey, will place much matters. confidence in his judgment and entire confidence in cating and constructing works of this kind, as to and Warwickshire, and some even from Wales .al or local interest. So high, indeed, is our estimate lowing: of his judgment and opinion, that we always feel

that he has not underrated the evils which will be arguments, a most successful example.

The Press.

We desire to acknowledge in a proper manner, the courtesy and liberality of the conductors of the press, and especially those whose papers we receive in exchange for the Journal.

For several years after the commencement of this Journal, its course was onward-onward-with a smooth track-few curves and no heavy gradesbut a change came over the whole scene, and the Merchandize, manufactures, poultry, leather etc. Railroad Journal was thrown once entirely from the at about the same rates per cwt. as pork and beef. track; and lay for several months out of service, it was however repaired and put again to service, but Gloucester Railroad .- We understand that the rail-the injury received by its mishap and other causes, toad from Beverly to Gloucester (now in process of too well understood to require to be named, seemed still to prevent it from "keeping up to time," which, in railroad matters, is of all things most disastrons; another change, however, we are gratified to be able to say, is now taking place, and the Railroad Journal begins sensibly to feel its influences—and for hire railroad, upon the condition that it runs through this favorable change we are much indebted to the Claremont, to unite with the Central road at Chase's courtesy and liberality of the conductors of the press, who have so generally and so kindly inserted our recent circular, and called the attention of those to it who are interested in railroad matters.

We are calling now upon ALL the railroad companies in the Union, as companies, to sustain the Journal by advertising in it, as they do in the news-The above paragraph from the Hamilton Gazette papers-and thus enable us to present to travellers, of the mode, and the hour, of leaving, and the rates We publish in this number an able communica- of farc between each important point in the country, tion from W. R. Casey, Esq., C. E., in relation to will be found exceedingly convenient to all; and it this work. Mr. Casey is a gentleman of science is our intention, if we meet with suitable encourand experience in his profession; of mature judg- agement from the railroad companies, in reply to our ment and a close observer of men and things; ex- recent circular to them, to publish such a sheet in ceedingly cautious in expressing opinions until he connection with the Railroad Journal, and while we has thoroughly investigated and maturely consider- make our profound acknowledgements for past cied the subject in all its bearings; when he is frank vilities and kindness towards the Railroad Journal and fearless in their expression and clear and forci- generally, and ourselves especially, we venture to ble in argument in their support, yet always candid solicit a favorable recommendation of this appenand courteous to though severe upon, an opponent; dage to the Journal and especially that the attention of Railroad Companies, Steamboat managers, Canal Packet owners and Stage proprietors be called to it.

Late European News.

The Caledonia has arrived, bringing London lic in the April number of this Journal in 1840 and We have our regular files of the Railway and Minow, after more than eight years, reiterated with en- ning journals, to the 18th inclusive, from which we learn that the movement is still onward in railroad

The iron trade is unusually brisk and prices were the candor and integrity of his opinions, indeed advancing. The meeting in Birmingham on the those who know him best are fully aware that the 9th October, was attended by gentlemen from nearhonor of his profession and the importance of so lo- ly all the iron works of Staffordshire, Shropshire afford the greatest possible benefit to the greatest Much interest was excited and after very little denumber, for the least amount of expenditure, always bate an advance of £1 per ton was decided on. In takes precedence of his own or any other individu- the Mining Journal of the 18th, we find the fol-

"English iron continues in extensive demand, but without any alterations from the quotations in last week's Mining Journal. Several large transactions mnd them sustained by his. He was the first to come out against the entire system of government works here as well as in Canada. Time has fully coroborated the accuracy of his views as regards the state of New York and we fear that a very few years will only too truly prove that he has not underrated the evils which will be week's Mining Journal. Several large transactions have taken place in railway iron, and makers are now asking £12 and upwards. Scotch pig iron is not so good; sellers at 92s, 6d. cash. Welsh and Staffordshire pig iron has been delt largely in at higher rates. Foreign iron is more inquired for, but holders are not disposed to sell at present, extended to the evils which will be

We find several articles of interest which we are entailed on the province by their neglect of his ad-obliged to omit until our next, as we have already monitions enforced as they were, by that best of all more in type than we have room for; they will not lose their interest however, by a week's delay.

Locomotives Wanted.

We find in the London Railway Record, of October 15th, the following statement, viz:

The London and Birmingham company advertise that they are "desirous of contracting for delivery, on the railway, at the earliest possible period, of *twenty* passenger, and *ten* freight engines, of the greatest power that may advantageously be employed, being not less than 1,000 square feet of evaporating surface.'

Here is a fine opportunity for our friends at Patterson, Philadelphia and Newcastle, to show their skill.

Georgia Railroad.

The information in the advertisement of the Georgia and the Western and Atlantic railroads which will be found in this number of the Journal, will be very acceptable to travellers who desire to pass through that region. It now behoves those in- do before she gets ready to compete, at Pittsfield, terested in the Central road, the Monroe, Georgia for it. and the Montgomery and West Point, Alabama railroads, to urge on the repair and completion of Falls line? the road from Macon to Atlanta, in order to avail For the American Railroad Journal. themselves of the advantages of a connection with the State road towards the Tennessee river, and the Georgia road to Augusta and Charleston; and also those interested in the roads from Charleston to Atlanta, as well as from Savannah to Macon, will find that short and only remaining link, from Griffin on the Monroe road, to West Point, a distance, if we recollect, of about 65 miles-yet to be constructed, but not yet commenced—to open a steam communication, by railroads and steamboats between Bangor in Maine and New Orleans.

That much abused road, "the Monroe"-which felt under the auctioneers hammer, a few months since, together with its other leg, by which a conplay a very important part as a connecting link between four other important roads, viz: between the road from Charleston to Atlanta, and the road from West Point to Montgomery, and eventually to Mobile; and also between the Central road, from Savannah to Macon, and the West Point and Montgomery road, and also with the Western and Atlantic road, from Atlanta to the Tennessee river, and at no distant day to Nashville and the Mississippi river at some point. Thus it will be seen that the "Monroe, Georgia, railroad," which has probably received more curses than its unfortunate share-holders received coppers from it, is about to become one of the most important and useful, and we hope profitable roads in the country. Let its owners complete it in the most substantial, and manage it in the best possible manner; by which they will it is an attempt to bring forward the more merit, and insure a liberal return for their investment. They now have every inducement to ex- offered by this route to the city of New York, ert themselves to complete these connections, so de- and some of the most flourishing parts of sirable not only to the travelling and business com- the west. It does not dwell on the beneficial munity, but also to those interested in the railroads effect the road must have on the general now in use, who have, for so many years struggled prosperity of the province—and especially to complete their noble works.

We have often telt called upon to commend the efforts of the people of Georgia to the notice, and nent residents of the country-but it investiimitation of the people of other states; and it now gates the claims of the Great Western railaffords us much real pleasure to congratulate them way to rank as an important link in the best though now a secondary consideration, may, ere upon their success, and the near approach of their chain of communication between the west long, rival the through trade in importance. It is works to completion. We hope to be better ac- and the waters of the St. Lawrence and the with these great and, as I believe, irresistible advanquainted with them before another summer.

Pittsfield and North Adams Railroad.

has been appointed engineer of this road, which is road. By the former it will receive travel- If we suppose the western travel to go via Buffa-

setts-about 20 miles-and ultimately to Williamstown, Bennington, Whitehall and north to Burlington Vermont. If this first link shall be made, and we presume it will be, as they are not in the habit, in Massachusetts, of commencing an enterprize of this kind until they have counted the costthe entire chain will be sure to be completed, thus securing an important feeder to the Western railroad; and, what is of far greater importance to the people of Vermont, giving them, when at Pittsfield, a choice of the Boston or New York markets, at about the same distance, by the Housatonic or the Albany -that is to be-railroad, or by the Western and Worcester roads.

Boston has now decidedly the advantage over New York, in this matter-having a first rate road

How is this to effect the Rutland and Bellows

Some Remark

On the Great Western Railroad, C. W. By W. R. CASEY, C. E.

As this project is now receiving the attention its it for their interest to aid in the early construction of unless defeated by local jealousies or interests, some Journal (April 1840) quoted and condensed from "an unpublished memoir written in 1837, in which year a copy was given to the Hon. John Hamilton derstand the grounds on which I stated (Mem. 1837): of Queenston, U. C." There are at this moment in view-the diversion of the travel from lake Erie nection is to be formed with the Montgomery road to a railway across the Canadian peninsula to Deand steamboats on the Alabama river—is yet to troit. These are the Niagara and Detroit rivers company. I had been assured that a compromise had been effected and that the road would have two termini at the east-Hamilton on Ontario and Buffalo on lake Erie-but as this appears to be incorrect, a discussion of the comparative merits of the rival lines will necessarily take place. During the last eight years I have bestowed much attention on this greatest of all engineering works yet projected in Canada and time has only served to confirm the opinions committed to paper in 1837. It was then observed:

"The aim of this paper, is to place in their true light the objects and advantages of the Great Western railway. It does not profess to embrace all the merits of the question, but prominent and the very peculiar advantages on that part through which it will pass, for this is much better understood by the perma-Hudson.

We are informed that Frederick Harback, esq., the grand feeders of the Great Western rail-feeder"-the Hudson. to extend from Pittsfield to North Adams Massachu-lers and emigrants from both provinces, as lo to Detroit and that a branch be made to Hamilton

well as from the northern parts of New York and of the eastern states embarking on the St. Lawrence and on lake Ontario; by the latter, travellers and emigrants from all parts of the world, by the way of New York.—Now, it is obvious that the Western railroad is the best possible route for the former, and it remains to be shown, that it offers the quickest, easiest, cheapest and earliest route to the country west of Sandusky for all travellers by the Hudson, whether they take the direct route across Ontario, or continue on the New York railroads to the Falls."

Now as one line has its eastern terminus at Bertie opposite Buffalo on the waters of lake Erie, 222 ready for it-whereas New York has much yet to miles from Detroit, and as the other has its eastern terminus on the waters of lake Ontario 200 miles from Detroit, it is obvious that there cannot even be an attempt at rivalry for the trade and travel of the latter inland sea. Independently of the above difference in distance, the line terminating at Buffalo must be extended to Ontario which would make it nearly 50 miles longer than the line via Hamilton. But the Canadians have comparatively little trade on lake Erie; it is true that considerable quantities importance merits with every prospect of success, of American produce pass from one lake to the other in British vessels, but the actual trade of the provremarks on its peculiar advantages may not be ince is principally confined to lake Ontario and will without interest to the readers of the Journal. A probably remain so, as there are no important placommunication on this subject appeared in this ces above the Falls; should any such arise, they will assuredly be on or near railways to Ontario .-With this brief but general view the reader will un-

"In comparing the routes by Bertie and two companies having substantially the same end Hamilton they have been considered only as valuable to travellers by the St. Lawrence and Hudson rivers, and even in this point of view, the superiority of the latter is evident, railroad company and the Great Western railroad but it would be preposterous to overlook the vast advantages which a railway through the heart of the peninsula would confer on the province, as compared with the benefits to be derived from a road skirting the northern shore of lake Erie. The route by Bertie sacrifices the shipping of Ontario, opens the least possible extent of country and is anything but Canadian in its objects, though it is readily admitted, that it will find favor with the inhabitants of Buffalo and perhaps with some of the railroad companies to the westward of Syracuse."

To the loss of all Canadian business must be added that of northern New York and New England via Ogdensburg. Should the contemplated railway to the latter place be constructed, there would be another powerful argument in favor of a terminus on Ontario and as near as possible to Detroit. Indeed these are the distinguishing characteristics of the line to Hamilton-it completes the communication by steam from Ontario to Detroit by the shortest route. As regards one of the two "grand feeders" -the St. Lawrence-the Great Western is not only the better line, but the best possible. Then again the way business of the finest part of the province is already considerable, is rapidly increasing and tages in its favor, that the Great Western enters the "These two rivers may be considered as lists to compete for the business of the other "grand

the least favorable supposition for the Great Western line-then will the distance be increased about 23 miles. If we assume that part of the American vidends for the first few years at least, however ultravel will go by Ontario, the point of divergence timately successful: every improvement in steam will be Syracuse and the distance 395 miles via is insignificant; but there are 160 miles less of railway via Hamilton than via Buffalo, hence the latter will be the more economical route and, for some years to come, the more expeditious. A line direct from Rochester via Lockport would connect Rochester and Hamilton by a nearly straight line, and thus reduce the difference in distance of the two routes from Rochester to Detroit, via Buffalo and via Hamilton, to a mere trifle. It is probable also that a line below the ridge or "mountain" would be more productive than one from Buffalo to Hamilton keeping on the upper table.

At the present time, however, it is useless to discuss what might be done; the great question is how can we with the least possible expenditure render a railway across Canada most productive, not some years hence, but as soon as completed? A railway from Hamilton to Detroit would now take the "lion's share" of the western travel if constructed, as it ought to be, so as to average 30 miles per hour, and so as to be adapted to that velocity.

the great lakes, I have endeavored to show the vast strength. importance of the route via lake Ontario to the cities of New York and Boston, giving them as it 1840. does, an earlier communication in the spring with Detroit than can be had by any route to lake Erie, not only through New York but even through Pennsylvania. The extreme variations in the opening of lake Erie, and the early period at which we may confidently depend on the navigation of lake Ontario, present advantages for the transportation of early principal features in the business of the Great Western railroad. It also possesses a minor advantage for American or Canadian ports on the St. Clair river or lake Huron may be shipped at some point on the Thames, as high up as it may be convenient to strike that river and thus the cost of transportation over 50 or 60 miles of railway will be saved; again, descending to lake Ontario, western produce might be carried 140 miles from the waters of St. Clair to the former lake at rates which might occasionally tempt from the present cheap but circuitous route Engineers in this country. via the Detroit river, lake Erie and the Welland

We may compare the merits of the rival lines in another manner. Instead of considering the Hudson and the St. Lawrence as the "grand feeders," we will divide the sources of business thus:

- 1. The travel and trade of Canada.
- 2. The travel and trade of New England, via lake Champlain and Ogdensburg, of that part of New York near the waters of Ontario and the St. Lawrence as well as all light and valuable early and late freight from New York and Boston for a rich district of the western states.
- 3. The present western travel taking the Albany and Buffalo line to the eastward of Syracuse.

Now suppose both lines in operation: then the Great Western being sure of the two first can compete forthe third under such advantageous circumstances as will certainly enable it to divert a large portion at Syracuse.

obliged to carry at such tow rates as to prevent dinavigation renders the boats of Erie more formida-Hamilton, against 400 via Buffalo. This difference ble rivals to both lines, but these same improvements on Ontario directly aid the Great Western in competing with the route via Buffalo either by lake or railroad to Detroit. In fact the latter line of railway has to compete with both lakes: the Great Western, on the contrary, derives much of its importance from the position of lake Ontario with a navigation almost uninterrupted and certainly always free during the entire season of business and

However opinions may differ on certain points, it is notorious, that the Niagara and Detroit rivers railroad "opens the least possible extent of country and is anything but Canadian in its objects" and that it does not accommodate the travel of a large portion of New England and New York. The Great Western is Canadian, offers the greatest facilities to the business of the northern districts of growing subject of the day, railroads. New York and New England, avails itself fully of the peculiar advantages of Ontario and, thus prepared for the struggle for the other part of the western travel, throws the gauntlet to the superb steamer In the paper on the Great Western railroad and of Erie, a more formidable foe than most persons should be adopted with great caution on passenger subsequently in another on the "spring trade" via imagine and one who has never yet put forth his trains-though it may be introduced on slow freight

I conclude with another extract from the Journal

will be shorter than any other—the easiest, be gratified to know that the cause will be as much because the night will be passed in steamthe western part of Erie open long before road by the same gentleman. However long its completion the eastern. freight which will ultimately become one of the may be delayed, it will, when completed, become, at once, the great western thoroughfare, for its advantages over any other route which may be briefly alluded to; freight destined which can be projected, are owing to natural themselves of the advantage of his experience. causes which no competition can affect."

Engineers' Club.

The following extract from a letter received at our pigeon holes, we therefore give it a place in the Journal, in the hope that it may be useful to the cause: and that it may induce action in favor of the early formation of an Institution of Civil

The project was spoken of, and movements made in relation to it, several years since; but at that time the members of the profession were too busy to devote their time, and since the revulsion, they have had too little to do, to feel any interest in such a society, consequently nothing has been done. But now, when a brighter day is dawning upon us, which will, we hope, light every member of the profession to active and profitable employment, is the an institution, where may be collected and preserved full, or partial, but accurate accounts, or descriptions of the different works constructed by the profession in this country.

This journal will be always open to those who put forth a hand in furtherance of such a cause—and we now call upon those gentlemen who have heretofore been active, and also upon others, to give us their views upon it.

competing line with the boats of lake Erie may be seeing it again upon an honorable footing; to have onfessed ones self to be an engineer, was almost antamount to a refusal, when employment was sought, and even now, we see important works placed in the hands of incompetent, rather than competent men, because it is supposed by many, that an educated person cannot, in the nature of things, be a practical one.

"As an engineer, I shall be happy to contribute my mite towards the support of your Journal, so far as my humble abilities will admit. There are elements enough in this country to support half a dozen journals well, but so long as we are denied a place among the honorable professions, and consid-ered as we are, by many, as the mere tools of speculative directors; we must be content to let all past experience and history of our internal improve-ments sink into oblivion."

"Very respectfully and truly yours."

Cast Iron Crank Axles for Locomotives.

We are often called upon to yield up some old and generally received opinion-yet we do not always, more than others, yield opinion to experience -by the constant innovations made by original and vigorous minds, called into action by the great and

The following communication, gives important information, which should be known to all interested; yet so closely are we wedded to the opinion that "pot mettle" will break, that we must say it trains with propriety-until it has been thoroughly tested.

We have entire reliance upon the statements "The Great Western railway will offer made in the communication, as we know the parthe cheapest and quickest route, because it ties who have made this experiment, and we shall boats, and the earliest, because Ontario and chilled drivers," introduced first, we believe upon this

> We hope this improvement-if it be one-will be tested on other roads, and we feel assured that Mr. Millholland will cheerfully furnish such details as will enable those desirous to make a trial, to avail

For the American Railroad Journal.

As every improvement that will reduce the cost of transportation on railroads, is of interest to a large his office, has too much truth in it to be hid away in class of the readers of your Journal, I give you the result of an experiment that has been tried on the Baltimore and Susquehanna railroad, and thus far successfully. It is the substitution of a cast iron crank axle, for the wrought or faggoted iron one, on

An engine with a cast iron crank axle has been running regularly on the road since the 15th June last; the greater part of the time with the borthen trains, but for upwards of 7 weeks, with a passenger train. The axle was cast by Mr. J. Watchman of this city, of the best cold blast "Maryland" iron, and weighed before it was turned, 1,150lbs., costing at 6 cents per lb., \$69. The cost of turning was not more than half that of turning for the same entime for efficient movements for the establishment of gine, a wrought iron crank axle, which weighed 1,164 lbs. and cost in the rough, \$291. The cast iron axle is somewhat larger in the journals than the wrought iron, and is heavier in the cranks, although the wrought iron one weighs more in the rough, in consequence of the redundant quantity of iron left on the latter when it comes from the forge, and which is to be taken off by the lathe.

. The locomotive was constructed at Lowell, but has been much improved by alterations made in the Again, the line from Buffalo to Detroit, having since 1840—no profession has suffered anything like on the crank axle, outside of the wheels, and four no connection with Ontario and being merely a the engineering, and I had almost despaired of ever inside; of which the too nearest the wheels carry a

portion of the weight, so that the weight on the jour-sing numbers I wrote for, and three numbers of the railway rage, or mania, as it is termed; but nals outside, is in some measure relieved by the in-present volume. ner bearings. The engine has an additional pair of wheels behind the boiler, so that if any accident wrote me-from July 1810, to January 1846." should happen to the crank axle, the wheels behind ther damage. The entire weight of the engine, is from a letter received by us, from a subscriber who 25,800 lbs.; weight on crank axle 14,000 lbs.; on discontinued the Journal in 1840, than is usually the wheels behind the boiler 3,300 lbs., and on the found in our letters. It is directly to the point, and most other kinds of investment." truck, 8,500 lbs. When required, the weight too good a joke to keep, especially when the examresting on the hinder wheels, can be transferred to ple set is so good; and, as we have "a few more of the driving wheels by a contrivance which is at-the same sort left "which will be much more usetached to the frame of the engine for that purpose, ful in the hands of the profession and others, who and which is frequently brought into requisition on have the early volumes, than upon our shelves, we

cave. The same rule is adopted with much advan-desired, at the same rate. tage in turning wrought iron axles.

the wheels behind the cow-catcher-no damage hav- since. ing been done to any part of the engine, it was thus shown that the cast axle can bear without injury the sudden and violent strain to which it was subjected by this accident, as well as the wrought iron crank axle. There is therefore good reason for believing that this improvement, which will so materially reduce the cost of replacing a broken crank axle, may with perfect safety be introduced into general use.

The credit of this improvement is due to Mr. James Millholland, the intelligent superintendent of machinery of the Baltimore and Susquehanna railroad company, who was also the first to introduce that of using cast iron chilled driving wheels of large diameter, which has since been adopted on several other roads, and which makes a great saving in the cost of repairs of engines.

Baltimore, October 27 1845.

For the American Railroad Journal.

OFFICE BUCK MOUNTAIN COAL COMPANY, Philadelphia, October 25, 1845.

\$72,000. It strikes the Lehigh river at the distance quantities sent to this country. of 15 miles above Mauch Chunk.

Railway Speculations in England.

In our number for 23d October, we made a few remarks in relation to the present disposition in England, for investments and

we do not so apprehend." We closed our remarks by saying that "there is little danger ot a crisis in railway affairs so long as they country, and pay a better rate of interest than

To these remarks of ours, the editor of the Sun very courteously replies as follows:

"We fear our able contemporary is over sanguine, Is English capital so vast that it can furnish five hundred millions of dollars for one enterprize withthat capital must be withdrawn? Even supposing all the roads to be well located, the sudden change the wages of labor, in the cost of manufacturing, and other effects consequent upon the opening of the projected railways, imply transitions without a par-allel in any age or nation, in their rapidity, the great value of the interests involved and the numentirely off the track, by a large hog getting under case, to complete a set commenced many years seriously affected, by the results of the speculation, for we never occupied a safer position as to our currency and freedom from European monetary influ-ences. But speculations are contagious, and it is our duty to discourage any policy that would draw us into the tornado now circling around our Europaid the two laborers, who have been employed pean relations with fearful portent. Every new enability to carry it on carefully measured by our means and the productiveness of the investment.— The rapid accumulation of New England capital, over it, besides freight and passengers, etc., which invested in well located roads and profitable manuwhere now appropriate to themselves the largest share of the fruits of agricultural labor, without the turist, since he abandoned the better principle of he three miles 450 feet of went hand in hand with his present isolated occu-You might have made pation—has lost all power of competition. Hence agriculture and manufactures is accomplished—and there never were greater facilities for "a treaty" than now exist in the United States—then, and not railroads to every nook and corner of our land.-But not before."

It is possible that the apprehension of the editor is well founded. There might perhaps be reason for it, if there were any grounds for the question propounded in his second sentence, viz: "Is English capital so vast that it can furnish five hundred millions of dollas, for one enterprize, within two years, without disastrous results to those interested in other enterprizes, or securities from which the capital is to be drawn?" But as there is not, as will be seen by the following statement, any just cause for the question, there are no good reasons, in our opinion, for serious apprehension of disaster so long as the speculations in railways; and said "there expenditures are made within the kingdon, appears great apprehension in some quarters, and, as we said before, from "the surplus cap-"Yours of the 14th inst, is received, also, the mis-that sad disasters are to follow the present ital of the country," and in works which

" pay a better rate of interest than most other or to be wasted in bloody wars, most of it kinds of investment."

parliament."

amounts :- allowing £15,000, or about \$75, need be apprehension of disaster. this be a fair statement, and we must say England and France, but also, and to an will not be ample surplus capital to carry out the system in England, even if parliament should continue to charter from 1,000 to 1,500 miles each year, until every town of any considerable business in the kingdom has its railway facilities? and, so long as parliament sets its face against lines got up merely as rivals to those already granted-and all mere speculative plans and projects, and only grants those lines which are required now, or are necessary to develope the resources of some region not yet accommodated by such facilities, or calculated to reduce the expenses of living to the masses in the cities, and large towns, and at the same time promote the interests of the same class in the agricultural and mineral regions of the countrythere need be no apprehension, we imagine, of disaster from this large extension of the new system, and enormous investment of capital.

jewelry, plate, high living and dissipation; works.

By refering to the Railroad Journal of ting the throats, not only of their enemics, mind-however it may appear to others-October 2nd, No. 40, page 626, the editor but also of their own people, by tens and that while parliament holds a tight and honwill find an able article from the London hundreds of thousands; or if it were loaned est rein over the numerous and noisy appli-Mining Journal on the "iron trade," in which to foreign nations, and expended by them in cants, and sanctions none which will injurihe will find the statement that "the number public works, or murderous wars, without ously interfere with those already sanctioned; of miles for which railway acts were passed either paying the interest, or refunding the and only such as it is shown by good evilast session, is 2841," and a little farther on, principal, then might disaster and ruin be apthe same writer says that "we are justified prehended—but, so long as it is judiciously modated by a railway, there will be far more in supposing that not less than 2000 miles of expended at home, in works which enhance benefit than injury resulting from the largest railway will be sanctioned by parliament the value of property in the country, in a few extension possible of the system in England. next year, and at least 1000 miles in the year years to an amount far greater than the entire Indeed it may be said, and truly, according following." He then says, "allowing three outlay of capital as is usual with railroads, years for completion, one-third of each of and furnishes increased demand, and of course these quantities" must be provided for "in a better compensation for the labor of the alone—to say nothing of the other propereach year after the passing of the acts of country, and at the same time reduces the ty-of England, which arises solely from Accordingly, capital must be provided for hours for labor, and consequently to a conthe construction of 5841 miles of railroad siderable extent, reduces the poor rates, sufficient to construct over one thousand miles within five years, and it will be, according though it enables the property holder to pay to this writer, required in the following even higher taxes, we cannot see why there

000, per mile, for the first year 947 miles, or We have said so long as parliament sets and is in substance, as follows, viz: \$71,025,000; for the second year, 1,614 its face against lines merely rival, or specumiles and \$121,050,000; for the third year, lative, we have no fear of disaster in conse-1,947 miles and \$146,025,000; for the fourth quence of these large investments in railroads; year, 999 miles and \$74,925,000; and for the yet it is not only possible, but probable, that fifth year, 334 miles and \$25,050,000-or many people will be ruined by dabbling in total in five years \$438,075,000, instead of schemes of speculators; in a species of gam-"five hundred millions in two years" as in. bling and robery which is always carried timated by the editor of the Sun. Now if on in densely populated places, not only in that we consider it marked not only with great equal extent, comparatively, in this country, whose whole aim, study and prayer—if they alent. It is also possible and even probable, num. that parliament may be misled by interested parties, and those parties may even be of its own body—as designing men often get into her own territory—which she will have done parliament, as well as into other public before the year 1860-or within fifteen years bodies-expressly for the purpose of promo- from this time-she will be much better able ting their own interest, even if need be, at to carry on a vigorous warfare against the the public, or any bodies' expense except nations of Europe either singly or combined, their own; but this class of works, we have than if she had not invested a dollar in them, and we are also of the opinion that there reason to believe, will be comparatively small; and much the greatest proportion of those which are sanctioned by parliament will be next ten years, which would not only, not sources, and promote the prosperity of some but would largely increase their business and region of the kingdom, whose relative advantages have not yet been properly improved, or promote the comfort of the millions, to an have been changed by improvements in oth amount much greater than the entire cost. If this amount of capital, in addition to er sections; thus constantly working to equalize the business facilities of the country, by what is usually wasted for such purposes, elevating the depressed—rather than by deders, and especially the editor of the Sun, to were to be expended in useless show, dress, pressing those who are interested in existing look back this day sixteen years, and com-

The last arrival, the Hibernia, brought us being sent out of the country to pay for cut- information which shows conclusively to our dence, will promote the permanent interest of some region of country not now accomto the following statement from one of the late English papers, that the annual increase in the value of the present railway property cost of living, and increases to the laborer the the increased business, and reduced expenof railroad a year, even at the enormous cost of \$75,000 per mile.

> The statement above referred to, is, we believe, from the London Railway Chronicle,

"The revenue from the railroads of England, in the months of July and August, amounted to £1,-362,127, an increase of £207,630, as compared with the receipts of July and August 1844. It is "estimated that the increase this year of the gross revenue of the railroads will be over £1,000,000, nearly the whole of which will be clear profit, as "on most of the lines the working expenses have been economized. If however, a quarter of a million is allowed for increased expenses, there will still be left £800,000, or about \$4,000,000, as "the clear increase of net profit for the year 1845."

Now this £800,000 or \$4,000,000 of increased clear net income, from the railways of candor, but also with a thorough knowledge and especially in this city, where there are England, is a fair rate of interest, in England, of the subject-who will pretend that there not only hundreds, but thousands of men upon £20.000,000, or \$100,000,000, which will therefore be the actual increase in the value of the railway property of England make any—is to devise some scheme by during the year 1845, and will of itself be which they may possess themselves of the sufficient to construct, as we said before. property of others, without giving an equiv-over one thousand miles of railroad per an-

of England, when they assembled at Liver-ment as rapidly as could be desired, under the with the Buffalo committee, Messrs, E. Walpool to witness the unheard of-and by many circumstances. unlooked for-performance of the locomotive engine which was to haul twenty tons. on a level railway, at the astonishing speed of are very encouraging. We understand that ten miles an hour! It was at that trial that letters were received from the agent, by the Hamilton, in which they say in relation to one of the first railway accidents occurred, and one of England's truly great men, MR. Huskisson, lost his life; and it was at that sing of the stock. In the first instance, there trial that the engineers and mechanics of England achieved a victory of far greater importance than that of Waterloo, or indeed of all the victories of all her warriors combined! After contemplating the won-the agent to sift out and scatter the jobbing least elevation and depression, on which pasderful performance of that day, let us trace and gambling applicants, and now that the sengers may be conveyed from point to point, the progress of improvements which have been made up to the present period; and then look forward a quarter of a century! Who can realize the improvements and changes which are sure to follow in the paths of railroads and the magnetic telegraph!

Syracuse, Courtland and Binghamton Railroad .-The Binghamton Republican has the following:

"The stock of the New York and Erie Railroad, thanks to the energy and perseverence of the president and directors of the ecute the work. Indeed, we learn from a source which we think entitled to credit, that the commissioners to locate the road in this county, have accepted their appointment, and will enter upon the discharge of their duties

the present fall.

In view of these facts, we think a move the construction of the Syracuse, Courtland and Binghamton railroad. If the New York and Erie railroad is constructed, and all fears upon that subject have been dispelled, there can be no doubt that money subscribed to make the branch to Syracuse, and thence to Oswego, would prove a profitable investment. It is admitted on all hands, that a more favorable route for a railroad, cannot sooner performed. be found in the state; and in no other way can lake Ontario be so easily or so directly connected with the city of New York .-Now, emphatically, is the time to revive the prepared to carry the question before the to us. next legislature."

And the Syracuse Western State Journal, has the following:-

"Had we not better talk about a plank road from this place to Courtland?"

By no means, we say-not a word about a " plank road." We "go the whole" for a railroad on that line, as whatever gets on to it, will be sure to reach New York before it does Boston.

Atlantic and St Lawrence Railroad.

The board of directors and other officers recently elected to manage the affairs of this railroad company, says the Portland Advertiser, are steadily and laboriously at work in prosecuting this great enterprize.

"Parties of engineers have been for some ted and ordered printed. weeks past in the field, and we believe that

"Recent accounts from England, in reference to the stock of the Canada side of the road, he speaks of very favorable success, in dispowas an apparent eagerness to obtain this stock, immediate mission at an early day.'

mission.

NICOLL'S PATENT SAFETY SWITCH for Railroad Turnouts. This invention, for some time in successful operation on one of the principal railroads in the country, effectually prevents engines and their trains from running off the track

It is never touched by passing trains, except when in use, preventing their running off the track. It is simple in its construction and operation, requiring only two Castings and two Rails; the latter, even if much worn or used, not objectionable.

Working Models of the Safety Switch may be seen at Messrs. Davenport and Bridges, Cambridge.

Safety Beam Axle and Hub for railroad cars. They have for some time been applied to passenger cars on this road, and experience has tested that they fully accomplish the object intended. y accomplish the object intended. Several instances of the fracture of axles have occurred, and in such the cars have uniformly run the whole distance with entire safety. . Had not this invention been

used, serious accidents must have occurred.

In short, we consider Mr. Kite's invention as completely successful in securing the safety of property and lives in railroad travelling, and should be used on all railroads in the country.

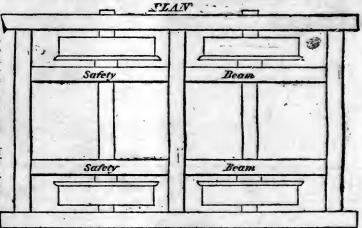

JOHN FRAZER, Agent,

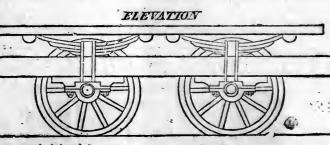

GEORGE CRAIG, Superintendant,

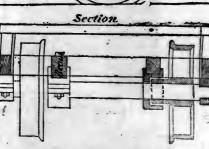

W. L. ASHMEAD, Agent.

** The letters in the figures refer to the article given in the Journal of June, 1844.

BENTLEY'S PATENT TUBULAR STEAM BOILER. The above named Boiler is similar in principle to the Locomotive boilers in use on our Railroads. This particular method was invented by Charles W. Bentley, of Baltimore, Md., who has obtained a patent for the same from the Patent Office of the United States, under date of September 1st, 1843—and they are now already in successful operation in several of our larger Hotels and Public Institutions, Colleges, Alms Houses, Hospitals and Prisons, for cooking, washing, etc.; for Bath houses, Hatters, Silk, Cotton and Woollen Dyers, Morocco dressers, Soap boilers, Tallow chandlers, Pork butchers, Glue makers, Sugar refiners, Farmers, Distillers, Cotton and Woollen mills, Warming Buildings, and for Propelling Power, etc., etc.; and thus far have given the most entire satisfaction, may be had of D. K. MINOR, 23 Chambers st. New York.

The article is complete in itself, occupies but little space, is perfectly portable, and requires no brick work, not even to stand upon. It is valuable, no only in the saving of time and labor, but in the economy of fuel, as it has been ascertained by accurate measurement, that the saving in that article is fully two-thirds over other methods heretofore in use. They are now for the first time introduced into New York and Boston by the subscriber, who has the exclusive right for the New England states, New York and New Jersey, and are manufactured by

FORCE, GREEN & CO. New York.

DAVENPORT & BRIDGES' PATENT CAR AND TRUCK.

DAVENPORT & BRIDGES CONTINUE TO MANUFACTURE TO ORDER, AT THEIR WORKS, IN CAMBRIDGEFORT, MASS. Passenger and Freight Cars of every description, and of the most improved pattern. They lso furnish Snow Ploughs and Chilled Wheels of any pattern, and size. Forged Axles, Springs, Boxes and Bolts for Cars at the lowest prices. All order punctually execued and forwarded to any part of the country. Our Works are within fifteen minutes ride from State street, Boston—coaches pass every fifteen minutes.

RAILROAD IRON AND LOCOMOTIVE USHMAN'S COMPOUND IRON RAILS. To RAILROAD COMPANIES and BUILDty A. & G. RALSTON
Mar. 2016

A South Front St., Philadelphia.

PASCAL IRON WORKS. THE NEWCASTLE MANUFACTURING Company continue to furnish at the Works, situated in the town of Newcastle, Del., Locomotive and other steam engines, Jack screws, Wrought iron work and Brass and Iron castings, of all kinds connected with Steamboats, Railroads, etc.; Mill Gearing of every description; Cast wheels (chilled) of the pattern and size with Ayles fitted also with

any pattern and size, with Axles fitted, also with wrought tires, Springs, Boxes and bolts for Cars; Driving and other wheels for Locomotives. The works being on an extensive scale, all orders will be executed with promptness and despatch. Communications addressed to Mr. William H. Dobbs, Superintendent, will meet with immediate attention.

ANDREW C. GRAY, and President of the Newcastle Manuf. Co.

-respectfully offers to dispose of Company, State Rights, etc., under the privileges of letters patent to Railroad Componies, Iron Founders, and others interested in the works to which the same relate. Com-panies reconstructing their tracks now have an op-portunity of *improving* their roads on terms very acvantageous to the varied interests connected wa their construction and operation; roads having in use flat bar rails are particularly interested, as such are permanently available by the plan.

W. Mc. C. CUSHMAN, Civil Engineer,
Albany, N. Y.

Mr. C. also announces that Railroads, and other works pertaining to the profession, may be construct-ed under his advice or personal supervision. Applicaitons must be post paid.

WELDED WROUGHT IRON TUBES

From 4 inches to 1 in calibre and 2 to 12 feet long, capable of sustaining pressure from 400 to 2500 be. per square inch, will Stop Cocks, Tr. L. and other fixtures to suit, fitting together, with screw joints, suitable for STEAM, WATER, GAS, and for LOCOMOTIVE and other STEAM BOILER Fuzz.

Manufactured and for sale by MORRIS, TASKER & MORRIS. Warehouse S. E. Corner of Third & Walnut Streets. PHILADELPHIA.

RAILROAD IRON.—THE MARY-LAND AND NEW YORK IRON AND

Coal Company are now prepared to make contracts for Rails of all kinds. Address the Subscriber, at Jennon's Run, Alleghany County, Maryland. WILLIAM YOUNG

President. iv451m TO IRON MASTERS.—FOR SALE.—MILL SITES in the immediate neighborhood of Bituminous Coal and Iron Ore, of the first quality, at Ralston, Lyoming Co., Pa. This is the nearest point to tide water where such coal and ore are found together, and the communication is complete with Philadelphia and Baltimore by canals and railways. The interest on the cost of water power and lot is all that will be required for many years the coal will not cost more than \$1 to \$1 25 at the mill sites, without any trouble on the part of the manufacturer; rich iron ore may be laid down still more cheaply at the works; and, taken together, these sites offer remarkable advantages to practical manufacturers with small capital. For pamphlets manufacturers with small capital. For pamphlets descriptive of the property, and further information apply to Archibald McIntyre, Albany, to Archibald Robertson, Philadelphia, or to the undersigned, a No. 23 Chambers street, New York, where may be seen specimens of the coal and ore.

W. R. CASEY, Civil Engineer,

VALUABLE PROPERTY ON THE MILL Dam For Sale. A lot of land on Gravelly Point, so called, on the Mill Dam, in Roxbury, fronting on and cast of Parker street, containing 68,497 square feet, with the following buildings

Main brick building, 120 feet long, by 46 ft wide, two stories high. A machine shop, 47x43 feet, with large engine, face, screw, and other lathes, suitable to do any kind of work.

Pattern shop, 35x32 feet, with lathes, work bench-

es, &c.
Work shop, 86x35 fect, on the same floor with the pattern shop.

Forge shop, 118 feet long by 44 feet wide on the Forge shop, 118 feet long by 44 feet wide on the ground floor, with two large water wheels, each 16 feet long, 9 ft diameter, with all the gearing, shafts, drums, pulleys, &c., large and small trip hammers, furnaces, forges, rolling mill, with large balance wheel and a large blowing apparatus for the foundry. Railway Traffic.

We recently published a concise description of the Belgian railways and their management; a part the 'season' for watering places, have in like heavy merchandize. Under these circumof which has been republished in Herapath's Jour-manner, produced a rise in the average re-stances, such rapid speed would not be re-nal, showing that there is a general desire, even in turn of each passenger. Thus for the first quired as for passenger trains, and conse-England, to know what is doing, and how it is done, in relation to railways in other countries. We now give a further statement of operations on the Belgian railways up to 1st of September—showing a regular increase in the receipts of over 100,000 francs, per month, and in August 160,000 francs, considered to short distances, the variation of consumption is subject, and the conservation month, and in August 160,000 francs, considered to short distances, the variation of consumption is subject, and the over corresponding months last year.

Thus it will be in our country, especially when our railroads are managed upon a uniform and judicious system, which has for its object to afford the greatest possible accommodation to the public, for the lowest rates of charge which will insure liberal and

increasing returns to the shareholders.

" L'Independance, Belgian paper, contains the following interesting statistics connected with the working of railways in Belgium:

"The traffic returns of the railways in Belgium, from the month of August have been most satisfactory. The progressive improvement in the receipts has continued in a very marked manner, and actually exceeds all previous calculation. In August 1844, the total receipts amounted to 1,205,000 francs; in the corresponding month of the present year, there has been an increase of 160,000 francs, in the following proportions, namely, 80,000f. on the passenger traffic, 7,000f. on personal luggage, and 73,000f on the goods' traffic. A greater improvement, under similar circumstances, and with the same tariff, could scarcely be hoped for .-The difference between the returns of July and August, is 140,000 francs in favor of the latter, almost the whole of which sum (180,-000f.) is derived from the passenger traffic, the remainder is made up of 14,000f. on the luggage, and 18,000f. on the goods' traffic, although there was a decrease in the quantity, as well as in the weight of the merchandize. In July, 353,256 passengers travelled by railway, inclusive of the transport of military and special trains; in August, the number rose to 368,489, or 25,000 more, during very bad weather and a very unfavorable season for travelling. The present month is, of all the months of the year, that in which of all the months of the year, that in which foreign travellers most move about, and in which our own tourists generally avail themselves of the season for their expeditions; and taking into consideration that these two classes of passengers are for the most part, says: first and second class passengers, it is curious to observe the distribution of the passenger ing daily brought before the public, for the traffic; thus in June, the proportion of the investment of capital, we observe, during the number of passengers of the first class, was past few days, one of a most important nanumber of passengers of the first class, was past few days, one of a most important nacomposed. It will also show that railways may be
larger cent.; in July, it rose to 12 per cent., ture, and which, if carried out, must lead to
profitable, even for the transportation of the heaand in August, to 143 per cent. on the total
the most beneficial results, to the inhabitants number carried. The proportion of second of the metropolis and its environs, as well as class passengers was, in June, 243 per cent, the whole southeastern part of the island, construction of railways will have on the dein July 27²/₄ per cent., and in August 30½ per and the coal proprietors of Northumberland velopement of the mineral riches of the earth, cent.; and, consequently, the third class pasand Durham. This is no less than the conhas, perhaps, never entered the minds of senger traffic fell from 64½ per cent. to 59½, struction of a railroad through the whole many who are thoroughly conversant with and from that to 544 per cent. in the same distance from Newcastle-upon Tyne to Lon-the details of their several routes: yet little months. It is not improbable that the con-don-an undertaking which, though at first doubt is there but that many household lux-

tion is trifling. 2f. 13c. in August.

Newcastle and London Coal Railway.

the capital is put at £5,000,000, which gives from such a road, will reduce the cost of coal to consumers in and about London, and along its line, full 20 per cent. or at least £1,000,000, per annum, and its entire cost in five years, even in competition with good ship navigation. The Mining Journal

"Among the many schemes which are betinuance of the rains had some effect in pro-ducing these results, by driving the third involving the outlay of £5,000,000, would but even many of the middle classes—will class passengers into the second class carria-doubtless repay; with handsome interest, the come into very general use; among these

ges, and in like manner operating on the investment of the capital. It is not intended Certainty of increase under judicious management. second class traffic to the first class carriages. that this shall be a passenger line, but to be "The movement of foreign travellers and constructed solely for the transit of coal and cipally confined to short distances, the varia- article of consumption is subject, and the The returns are-1f. 09c., high price which it always maintains in the 1f. 08c., and If. 15c. The average returns market, under such circumstances, there apon the gross number of passengers is as fol-pears to be an absolute necessity for some lows: 1f. 76c., in June, 1f. 92c. in July, and means of conveyance, whereby a regular supply of coal can always be obtained, and The following table shows the returns for the price in consequence kept at a steady figure. The arrival of the colliers in the Thames, is a matter at present, of the greatest uncertainty-dependant on the winds and state of the weather-while the easing the pool from the crowded state in which it now is, would, in itself, be a subject of the greatest benefit to the general commercial traffic of the port of London. On the completion of such a line, trains travelling at about fif-Total......7,235,674f. 35c. 8,074,001f. 04c. | teen miles an hour, would perform a journey "Thus it will be seen that the improve- in a day and night, while the colliers are fused; that it manifests itself in every month, and its continuance can scarcely be doubted. London market 20 per cent. at least, under The receipts of the present, exceed those of the present prices, and the formation of last year by 838,326f. 69c., or eleven and a such a means of conveyance would prevent half per cent.; whilst the budget of ways all competition with the midland collicries, and means shows only an increased expenditure (under this head) of 3½ per cent. The preferred by the London consumer, for gross receipts, which were, in 1844, 11,230, its cleanliness, the Staffordshire and Lanca-000f., and which, it was calculated, would shire coals producing a white ash, which run up to 11,600,000f., will in all probabilispreads over everything in the vicinity of ty, this year, amount to 12,500,000f. The the fire-place. The calculation as to the reaverage return per kilometre, which, from turn is easily ascertained—as, at the same 1837 to 1840, was below 16,000f., and from rate as the London and Birmingham compa-1841 to 1843, 18,000f., was 20,000f. in 1844, ny charge per ton per mile, 2,000,000 tons of coals alone would pay the working ex-penses of the line, and this is only half the This important projected railway, appears to importation annually into London alone, leahave been taken hold of in carnest. The distance ving the remainder, and the goods and interfrom Newcastle to London is 280 to 300 miles; and mediate traffic, as profit to the shareholder, the capital is put at £5,000,000, which gives from which is estimated at ten per cent. on the

Mineral Railways.

It may be both interesting and instructing to our readers to know some of the important uses to which railways are applied in England. It will show conclusively their utility, and importance, in developing the resources of a country. The Mining Journal has the following exceedingly appropriate remarks on the subject, and the annexed list of roads, with a list of articles of which their principal traffic is

"The vast influence which the universal

ous other productions of the mineral kingdom, scribe the details of his engine, but our sciit is pure mine iron, from the celebrated Monwill find, in every direction, markets alike
entific readers will understand the enormnus
tour's ridge ore without any admixture of cinnumberless and insatiable. These producpower at command, when it is understood der iron, we think there is every probability have hitherto lain in useless profusion, only is brought to a temperature very much be-attainable by the wealthy, from the excess-ive cost of transit; but when the districts are may, consequently, be said to be in a frozen ican mechanical skill in heavy manufactures. traversed in every direction by railways, restate, and when a portion of this is admitted We congratulate Pennsylvania on this new ers of mineral property, and these products perature raised a force is exerted far greater dition to supplying our own railroads will raised and distributed among the community, than from steam, while the enormous weight soon become an article of export. Thus borhoods, dispensing comfort, and increasing is true that a vessel of sufficient strength is her debts with her iron coin." the civilization of mankind in general. It necessary to contain the expansive fluid, and "We have seen at this place is an interesting subject to notice the peculi of corresponding weight, but as its capacity rails manufactured by the same company, for ar minerals which each of our projected rail need be so much less than that of a boiler of the Harrisburg and Lancaster railroad, which ways will aid in more general distribution; the steam engine, the perfection of this ap- is said by those competent to judge, to be suand we have selected the following, stating paratus will probably revive the investiga-perior to any imported rail ever used in this the productions likely to form a large pro-ition into the means of navigating the air; country.

portion of their trafic, viz: "Ambergate, Nottingham, and Boston, coal, iron, stone; Dudley, Madely, and Iron Bridge, iron; Direct London and Holyhead, silver, lead, copper, slate, stone; Erewash Valley, motive engine, which promises to be of concoal, ironstone, etc.; Great Eastern and Western, iron, coal, anthracite, copper, lime, salt; tern, iron, coal, anthracite, copper, lime, salt; working man, named John Thomas, of Crow-an, iron, coal, anthracite, copper, lime, salt; working man, named John Thomas, of Crow-an, iron, coal, anthracite, copper, lime, salt; working man, named John Thomas, of Crow-an, iron, coal, anthracite, copper, lime, salt; and working man, named John Thomas, of Crow-an, iron, coal, anthracite, copper, lime, salt; working man, named John Thomas, of Crow-an, iron, coal, anthracite, copper, lime, salt; working man, named John Thomas, of Crow-an, iron, coal, anthracite, copper, lime, salt; working man, named John Thomas, of Crow-an, iron, coal, anthracite, copper, lime, salt; working man, named John Thomas, of Crow-an, iron, coal, anthracite, copper, lime, salt; working man, named John Thomas, of Crow-an, iron, coal, anthracite, copper, lime, salt; working man, named John Thomas, of Crow-an, iron, coal, anthracite, copper, silver, and iron, coal, anthracite, copper, lime, salt; working man, named John Thomas, of Crow-an, iron, coal, anthracite, copper, silver, and coal, Coast, coal, stone, limestone; Irish West motives, the novelty being in having a com-Coast, beautiful marbles, lead, iron, slate, and plete and efficient condensing apparatus atlime, building stone, marble and lead; Nottingham, Ambergate, and Manchester, coal, and fuel is required to go double the distance lime, gritstone, limestone; Oxford and Worcester extension, coal, ironstone, and lime that noise is avoided which has hitherto pre-correctly informed." stone; Rhondda and Ely Valleys, coal, ironstone and limestone; Shropshire Mineral, is a great nuisance on the railway; the waste coal, lime, and iron; Staffordshire and North of steam is so little, that steamboats might land, coal, lime, iron, copper, tin, zinc, etc.

New Motive Power .- The London Mining Journal has the following notice of what it terms a new motive power.

hitherto the great obstacle to the success of lime, gritstone; Bridgewater and Minehead, weight of apparatus for sufficient motive from the Untied States." lias lime, slate, and copper ore; Bradford, power-but, in the carbonic acid engine, we Swansea, copper, iron; Cumberland Union, interest the publication of the specification."

\$60,474 39 This shows an increase in the month of Septemer, 1845, over the same month in 1844, of \$60,474, The increase is a fraction more than 20 per cent.

We have received a "Circular letter to the stockwere carried from Boston to Albany via New York said at the close of the letter,

"Should the extreme low rates of fare on the river and sound continue, and become a permanent benefit, or without loss to the stockholders, is in the minds of a majority of the board, doubtful; but -231,453 they are united in the opinion that the experiment 69,751 should be tried."
62,071 The letter is s

The letter is signed by George Bliss and William Jackson, Esqrs., a committee of the directors and both gentlemen well known in the railway world, who appear quite satisfied with the conclusions at which they have arrived-though we are not, and shall therefore refer again to their circular.

The English, not satisfied with 8 or 10 Railway Journals whose labors are devoted exclusively to that cause, are adding a sort of supplement to other papers. Thus the Economist, a very able weekly publication, tacks on an additional sheet which is calls the "Railway Monitor." An article from a late number has been copied into many of our newspapers and will undoubtedly be perused with much interest, as it gives a condensed and general review of all railways either in existence or chartered. In another number we find an article commencing as follows:

"The Construction of Railways by Governments or Private Enterprize. -- It has long been a subject of grave political and economical discussion, how far desirable that the government of a country should undertake or interfere with, matters of indus try and even public national improvements. In some of the old European states, and in France in particular, every employment and occupation is less or more under the particular surveillance of the state, from the internal management of a boarding school to the construction of a railway."

The Monitor then observes, further on:

"To appreciate fully the comparative advantages

been left, as much as possible, to private enterprize, and to the continental countries, where everything has been retained, as far as practicable, under the direct superintendance and management of the state. Whether we look to the extent to which great im-provements have been carried, or to which they minister to the convenience and advantage of the public. the contrast is very striking.

"Our attention is called to this subject by the pre-sent extraordinary state of the public mind in re-gard to railway undertakings, and by the fact that it has with many become a question of grave doubt whether the advantages of the system adopted by us whether the advantages of the system adopted by us will not deny, much as we place an implicit faith in the ultimate advantages of free competition in all matters, that there are apparent serious evils con-nected with our system, from which that of state regulation, pursued on the continent, is free. But we believe the disadvantages of our system will be found either more apparent than real, or, at least, that they are more than counterbalanced by other advantages."

The writer obviously labors under the misapprehension that all has been left to private enterprize here as in England, in place of which the great line of railway of the state of New York executed by private enterprize is not permitted to enter into comholders of the Western railroad corporation upon petition with the Erie canal, a government work.the fares and income of 1845." It is well known He may therefore add to the other evils of the systhat there has been a falling off in the passenger re-tem, monopolies of the most odious character .ceipts for the through travel. This is ascribed to the This whole subject has been thoroughly discussed rivalry by the sound, by which route passengers in the columns of this Journal during the last six years, the system is pretty nearly abandoned as refor \$2 to \$2 50. Doubts are expressed as to the pos- gards the continuation of old or the commencement sibility of carrying over the Western railroad at of new works in all the states, and the policy of selsuch rates without ruining the work, though it is ling out will not improbably be broached in New York and Michigan the coming sessions. Pennsylvania, Illinois and Indiana have already disposed of some of their works and Canada is alone at arrangement for the next season, it may be necessary and best, to meet it, by running a special train for through passengers, at very low rates; provided it can be done without an essential interference with the way business. Whether this can be done with nine years and, during that period, private enterprize has slept. It is now, however, awakening and we have no fear that the results will not confirm the accuracy of the conclusions at which the "Monitor" has arrived. We send a few numbers of the Journal which will perhaps be of interest as containing facts which show the immeasurable superiority of private enterprize over government jobbing -of good faith over repudiation; for it is to the latter that we are indebted for that stain on our national character which no amount of "glory" can wipe

> "The Iron Times" is another large railway paper of which we have been shown one number. It contains a well reasoned article on the so called "railway mania" in England and we very much fear that many people will not live to enjoy the pleasure of seeing that country in our "glorious" condition, A.D. 1837. A few hundred gamblers may be ruined but the nation is advancing in wealth and power more rapidly and on a better basis than during any former period. We hope to see some little of this "mania" here, where it may be truly said railways excite scarcely any interest-so little, that, had the directors of the Erie merely offered the stock to the public, as in England, they would have secured no subscription worthy of notice.

LONDON RAILWAY RECORD .- We would call the attention of our readers who desire more particular and general accounts of English railway matters, to the advertisement of the Railway Record in our advertising columns. This excellent Journal is conducted by John Robertson, Esq., A.M., who has been to each its due. We should like however to see one of the two systems, we have only to look to England connected, we understand, with the railway press from its commencement. We receive it regularly and find it ably conducted, and shall frequently draw in regard to wear and tear of rails. This is an imlargely upon it, in aid of our own labors. Speci-portant subject, and wrong impressions are calculamens of it may be seen at this office and it can be ted to do great injury in the cause of internal imobtained through Adams & Co., or Harnden & Co., provement, arresting, perhaps, their progress. In advantages of their noble state. or Wiley and Putnam. Or we will, on receipt of the number of 16th ult., I see you had a short and the money, order it for our friends at a distance, if good article; may be I shall follow it up; but I am they desire it.

Copies, also of Herapath's Railway Journal, from regular duties." the Railway Chronicle, the Railway Express, Railour office, for all of which orders will be forwarded superintendent of a railroad, to furnish the facts to oblige those who may desire to obtain them.

Kyantzing.

We have been favored with the following remarks from a well known and experienced engineer .-They contain the first definite information on the results of experience on railways in this country which we have as yet met with, though we cannot doubt that others might do something towards establishing the value of this process. The timber referred to-spruce-decays very rapidly as we well know; hence it would appear that the process of incompleting it through to Louisville, though Kyanizing has in this instance been submitted to a they expended a large amount of money, very severe test. If such information follow the expression of our doubts on any project connected with the management or construction of railroads, we shall hereafter be found very frequently calling in question the value of such propositions.

For the American Railroad Journal.

In a recent number of the Journal, I notice some brief remarks touching Kyanizing. Herewith you have a fact supporting the advantage and success of the process, which you may use in any way you judge best.

In 1843 I prepared 1,400 spruce cross-ties by immersion in a solution of sulphate of copper. One of these days when sufficient time has elapsed, you shall know the result.

The Taunton and New Bedford railroad company, in Massachusetts, prepared in the spring and feet long, 6x6 inches, by Mr. Kyan's process. During the past summer, 1845, they were carefully inspected and no evidence of decay was perceptible; a single stick selected indiscriminately, was taken out of the track with a view to a critical examination. It was split open and presented as sound an appearance in every respect as new wood. The spike holes were as sound and the wood as elastic as the first day the spikes were driven. Spruce is probably the least durable wood which could be it would rot in the situation of a cross-tie, in five years. The writer of this article has watched the history of Kyanizing with much interest, and does not recollect any authentic statement of its failure, while he has seen a great many of its success.

Wear and Tear of Railroad Iron.

We agree fully with the writer of the letter from which we take the following extract. "Reliable information" on this subject is of great importance and we therefore desire to receive from each railroad company in the Union, such information on this not only so, they would not only raise the example, not only by subscribing to the capsubject as they may have acquired by experience, up money but they would go themselves and ital but also by enlightening the people upon to the close of the current year; giving the shape, fight the peaceable citizens of Mexico, if once the value of such works and also by giving weight per yard, number of years in use, character in each year, present condition of the rails, etc.; in lives and fortunes to acquire more territory them under way, to carrying them forward of traffic, amount in tons which has passed over it short, any facts which may tend to establish truth .-He says:

so much occupied, that I have little time to spare

We will only say that we esteem it certainly as which they may have learned by their experience on this important subject for publication in the Railroad Journal; we hope they will acknowledge us to be good judges.

Lexington and Ohio Railroad.

This railroad though one of the early ones commenced in the country, has made no progress towards completion for several years past. Its early projectors were not successful \$19,575 per mile, for 93 miles.

and enable her people to compete successthe banner was raised, sacrificing their health, the proper and necessary attention to getting and extend the power of political demagogues, and there will be no difficulty in raising the

"I suggest that you procure reliable information a spade and scarcely a dollar be contributed partly completed to improve the great natural

The time has arrived for the people of Kentucky to unite in the completion of this road to Louisville and not only so, but also to extend it eastward towards virginia, there way Times and the Mining Journal may be seen at one of the "regular duties" of every engineer and connect with the contemplated great work from the mouth of Guyandotte to Richmond or still higher up to connect at Parkersburg, where it must eventually come, with the Baltimore and Ohio railroad. These two roads united will bring through Kentucky for more than 250 miles a portion of the immensetravel between the seaboard and the great west. They must not, however, be content with this; they must also construct another line either to Nashville or to Knoxville, or better still, to both places, and thus open an \$250,000, on the line between Frankfort its easy and cheap communication with the states present, and Louisville its intended western of Tennessee, Alabama, Georgia and South terminus. It will be recollected that we pub. Carolina, who need and must have large lished in a recent number of the Journal quantities of her products, even if they get (July 17th,) a statement of the expenditures them by the way of New Orleans and the upon the entire line and an estimate of the capes of Florida, a distance nearly as great cost of completing the road through from and twice as hazardous as a voyage to Eu-Frankfort to Louisville and relaying the track rope. To us here it seems strange indeed, from Lexington to Frankfort, thus making it that no movements have been made in Kenin fact a new road. The estimate was made tucky towards the completion of this and the by an engineer of great experience, W. R. commencement of other lines of railroad, McKee, Esq., the present engineer and one when we see so clearly what would be their of the lessees of the road, who is well ac- influence upon the development of her abunquainted with the ground and condition of dant resources and prosperity. If the people summer of 1840, about 1,700 spruce cross-ties, 7 the line. His estimate is \$1,820,320, or of Kentucky would raise \$500,000 a year for three years, then \$750,000 a year for There can be little doubt, in our mind, of three years, and then a million of dollars a the productiveness of this road when com- year for four years, and expend the whole pleted through to steamboat navigation at amount, \$7,750,000, judiciously, within the Louisville; and we would call upon the ten years, in the construction of railroads in people of Kentucky to put forth a very small the direction indicated by us above, or otherportion of their energy and public spirit for wise, as may be more desirable, the property the completion of this their only work of im- of the state would increase in value to an selected for track, and it cannot be questioned that provement except their excellent turnpikes, amount equal to twice the cost of the railwithout being submitted to some preserving process at all calculated to develope her resources roads, over and above what it will increase without them; or in other words, if the vafully with those of other states. If it was a lue of property in the state under the ordinawar to acquire teritory, which they do not ry course of events will increase, during the need, instead of an expenditure to improve next ten years thirty millions of dollars, conthat which they now have and sadly neglect, struct four hundred miles of railroad at the there would be no difficulty in raising an cost of ten millions and the property in the amount of money in Kentucky within one state will increase fifty millions of dollars in year which would make this entire line value! Let the prominent, able and leading equal to the best railroad in the Union. And men of the state come forward and set the when not a hand would lift a pickaxe or amount requisite to construct five hundred

people than in any other way possible.

the millions to be scattered by the countless a map that you may see the different routes." multitudes who will pass between St. Louis -a mighty city yet to be-and the seaboard.

It is only for the people of Kentucky to will it, and they may have it. Will they do so ?

We give annexed, a statement of the receipts and expenditures during the past 21 years, upon the 28 miles of road now in use, and leased for a term of years to Messrs. McKee and Swigert for \$17,000 a year.

Watertown and Cape Vincent Railroad

The following extract from a letter received at this office shows that substantial evidence has been given by the people along the line of this contemplated road, of their intention to have it constructed. We hope they may be successful in their intended application in the cities.

"We are actively engaged in our railroad project, but it requires time to satisfiv the road in Oswego and Oneida counties. When former article-of the longest lines and great ward will cross the Mississippi far above

miles of railroad in Kentucky within ten this is accomplished we shall give the cities est thoroughfares in this Union; and accomyears thus confering greater benefits upon the an opportunity to take the balance of the modating a vast number of travellers, be-Adopt this course, and by the time the ready commenced a survey of their road, be- of at least--if we call this route 300 miles, main line shall be completed from Louis- ginning where our's terminates at Cape Vin- and the other 550 miles, allowing 15 miles ville through Lexington to the Virginia cent, and to continue west until it strikes the per hour, and three cents per mile fure, with line near Guyandotte, or to the Ohio still road from the head of the lake to Detroit. one cent a mile for expenses on each routehigher up, the people of Indiana will take it The stock for this last road is all taken in sixteen hours in time and ten dollars in money, up opposite Louisville and carry it forward England, and it was once settled to construct and avoid riding a part of one night. That to Vincennes, and the people of Illinois and it from Toronto to Port Sarnia, but the last is to say, let two persons leave Baltimore at Missouri, to Vandalia and St. Louis; thus account from England is, that it is to be 9 A. M. one going by the way of Philadelgiving Kentucky the benefit of a share of made from Hamilton to Detroit. I enclose phia, New York and Albany, to Canandai-

Railroad Meetings.

Blossom's hotel, for the purpose of taking efficient means to complete a continuous line of railroad between the cities of Rochester and Philadelphia, Nicholas G. Chesebro was appointed chairman, and Henry O. Hayes, secretary. M. H. Sibley, Esq., and Mr. Jared Wilson were appointed delegates to the Williamsport, Pa., railroad convention on the 31st October.'

A meeting was also held at Elmira in relation to the same subject, the proceedings of which we give at some length.

This is moving in the right quarter in an prominently before our readers in No. 36, or as from Philadelphia to Canandaigua-is really one of the most important unfinished lines in the country. When completed, it will be one of the most direct, and the distance from Baltimore to Canandaigua will not much, if any, exceed 285 miles, while by the way of Philadelphia and New York it this is not all, it will form a connecting link between more important lines than any other road of its length in this country if not in the world. Its parallel cannot be found. At At Harrisburg it will connect with the line from Philadelphia to Pittsburgh, and at Williamsport with the contemplated line from Philadelphia to lake Erie at Erie-at Elmira, or Corning, or both, it will intersect the Louis give us an opportunity to add this road New York and Erie railroad from New to our list? It is becoming a matter of too Albany to Buffalo, and at Rochester with the St. Louis New Era, of the 21st October, people of its importance to them. We shall steamboats on lake Ontario, thus, in a distance should lead the people of that region to early shortly have \$300,000 of the stock taken in of less than 300 miles, connecting directly action. The people of St. Louis must move this county, and \$200,000 on the line of the with seven-instead of five, as we said in our soon and vigorously, or the main line west-

stock. Our Canadian neighbors have altween the north and the south, by a saving gua, and the other by the way of York, Harrisburgh and Williamsport, the latter would "A meeting of the inhabitants of Canandai-reach there in twenty hours for \$12, while gua, says the Ontario Repository, was held at the other would be thirty-six hours and forty minutes, and he would, at the same rate per mile as the other, pay twenty-two dollars!

But we will not pursue this subject farther now, as we shall probably soon refer to it again, and more at length, when we receive the proceedings of the two conventions, one at Danville on 29th, and the other at Williamsport on 31st ult., when we may go more into detail.

"Railroad Convention at Cleveland .- By a circular from a committee appointed by the This is moving in the right quarter in an citizens of Toledo, we learn that a railroad important matter. We brought this subject convention is to be held at this place on Thursday of next week, to take into consi-4th of September last, and endeavored to deration the importance of uniting Buffalo show that this route—from Baltimore, as well and Toledo by railroad, so as to divert the travel from the northeastern states to the northwest from passing through the British provinces."

So says the Cleveland Plaindealer. It is time for the people along the contemplated line from Buffalo to Cleveland, Sandusky and Toledo, to move in this matter. We have repeatedly called their attention to it is 550 miles. It also passes through some within the last three or four years, knowing of the most fertile and richest mineral regions that efficient movements would soon be made in the State, abounding in water power. But on the Canada side. Those movements have been made—the stock is said to have been taken in England, and the road will surely be constructed, opening the most direct route possible from lake Ontario, from Rochester Baltimore it will connect with the great and Buffalo, to Detroit and the west; southern line through Washington, and the therefore it is quite time for those interested great western, to Cumberland and the Ohio. in the line on the south side of the lake to be moving.

St. Louis and Chicago or St. Joseph's

When will the citizens of Illinois and St. York to lake Erie, and at Canandaigua much importance for them to let it remain with the railway from Portland, Boston and thus quiet. The following remarks in the

tion of the four great lines from the Atlantic propriety of aiding in the construction of a observation it may fall. Every day develops at St. Louis, viz: from Savannah and Charles- road from Chicago or St. Joseph's so as to stronger reasons why this chain of intercomat St. Louis, viz. from Savannan and Charlesstrike the Mississippi near to this place. munication should be carried into practical ton through Nashville; from Baltimore

The first link in this line of communication operation, and removes doubts from the minds through Virginia, southern Ohio, Indiana and Illinois; from Philadelphia to Pittsburgh, field." and through central Ohio, Indiana and Illinois; from New York, by the New York nia, northern Ohio, Indiana and Illinois; and investigation will be thorough, final and short; and field, to consult upon, and devise some meand Erie railroad, northwestern Pennsylvafrom Boston, through New York, Canada West, Michigan, a corner of Indiana to Chicago, and thence to Galena, or St. Louis, of Georgia, and Alabama have too deep an interest in has been directed to the construction of railor both!!!

This, we are fully aware is laying out work upon a large scale; and many will smile at what they may be pleased to term tion; and then to Macon and Savannah an early posed of at the east. All that it wants is con-"the editor's enthusiasm," but whether they smile in incredulity or in approval-or whether they doubt or believe, it matters not-as certain as the tide of emigration continues to set westward, just so certain will to believe, that an immediate impulse will be ed us to make a statement below of some of Mississippi river-at some point-and we hesitate not to say that, in our opinion, no point on that noble river presents so many claims the part of our citizens, and by a number of to be made the common termination as St. Louis. There is one important recommendapeople of St. Louis have any just claims. Do they ask us to "name it?" It they do an investigation of the whole affair. They we will tell them-action! ACTION!

"Galena and Chicago Railroad .- The Chicago Journal urges that steps be taken to construct a railroad from that place to Gale-The route lies over a level fertile country that will sustain a dense population and yield a vast amount of agricultural produce. It would also terminate in the richest lead region in the world, and would form a close connection between the valley of the Mississippi river and the lakes. A liberal and adsome years ago, and is still in force, and under it a road might now be constructed.

"The Journal states that if such a road were made it would carry to Chicago much lead, and a large agricultural trade that now goes from Rock river to St. Louis. This are lawyers of our own state, and of high repis probable; and it should remind the people of St. Louis of the necessity and propriety of constructing other roads and improvements and sufficient title, and that by the purchase so as to concentrate as much trade at this point as is practicable, and thus make amends for whatever we may lose by the laudable enterprize of other portions of the country. If other towns and cities put forth their energies in the construction of railroads for their own benefit, and St. Louis shall lie inactive and do nothing, she will lose that prominent position which she has acquired and to which she is entitled by her superior natural advan-

Williamsport and Elmira Railroad.

Public notice was given in the papers of the village of Elmira, that the citizens of Elmira and vicinity would meet on Saturday, the twenty-fifth inst., at the Eagle tavern, to consider and interchange views relative to the completion of the Williamsport railroad, from Ralston to this place, and thus connect the improvements of the two great States, New York and Pennsylvania. At the appointed time and place, large numbers of the citizens interested in this noble project assembled, and among them were seen the most active, intelligent and enterprizing part of the population of this part of the valley of Che-

The meeting was called to order by the Hon. Samuel G. Hathaway, Jr., who stated to the assemblage in detail the object of the meeting, and the advantages that would result to this village and vicinity, by the rapid completion of this great connecting link between the two states—he also remarked upon and showed that Elmira was not the only place of large business that would be materially benefitted by the completion of this long contemplated work-Geneva, Canandaigna and Rochester, and the large villages east of Geneva, filled with their iron, coal. and hardware merchants and dealers, who furnish western New York with these staples of the state of Pennsylvania, would also be very much benefitted, and ought to be her coal mines.

William Hoffman, of the town of Elmira,

lage of Elmira, was appointed secretary.

following persons delegates in pursuance of ed to 2 o'clock, p.m. said resolution :-

Simeon Benjamin, James Hepburn, Silas Haight, J. D. Baldwin, Warren Mills, Wm. Maxwell, I. B. Gregg, Wm, Hoffman, John Hamilia, Dr. E. L. Harming, Dr. E. L. Hamilia, Stevens, Samuel Patridge, Noah H. Robin-committee, to be the directors of the road.

On motion of Simeon Benjamin, it was be authorized and requested, in case he is untend in his place.

Col. Hathaway hoped that the delegates who should be unable to attend, would be active in procuring some suitable person to represent them in the said convention, as it was desirous to have as large a number as possible, to represent the feelings and interest felt in the completion of this work by the citizens of this village and vicinity.

It was Resolved, on motion of Col. Hathrelation to this improvement be appointed by the president, to consist of three persons.

All who of the village of Elmira, was made president; George B. Wood, secretary. took part in discussion, did it in a spirit clearly William Hoffman, of the town of Elmira, Williamsport Railroad.—We are gratified evincing that, while the friends of this route

those of other roads, they are determined to conduct their own operations forward to entire completion.

This looks very like going ahead, and we have much confidence in the success of the enterprize, and shall be gratified to see their notice to contractors .-We shall be sure to insert it with a flourish if it is sent to us in time, which they will surely do if they know their own interest: at least we think so.

" Columbus and Cleveland Railroad .large public meeting has been held at Millersburgh, Holmes county, which resolved to tender and solicit an examination of the tract from Wooster to Mt. Vernon through Millers burgh, for the road. The advantages of this route are very favorably set forth, in various aspects, and, in the event of that route being the result should be to impair these receipts, it will be selected, they propose that the county of the duty of the board to revise the rates now adopted, Holmes subscribe to \$30,000 of the stock .-The counties along the route selected ought to come forward and subscribe liberally to the stock."

The people of Holmes county must subscribe more than \$30,000, if they would have the road come their way, that amount would not build more than 2 to 21 miles. That wont do; that amount would hardly pay the interest on the increased value which the The latter valley is penetrated by a railroad conroad would give to the property of the county.

Cleveland and Pittsburgh Railroad .- The commissioners and stockholders of the Cleveland and Pittsburgh railroad company will hold a meeting at Ravenna on the 29th inst. lue over thirty-three per cent." for the purpose of electing officers and organizing the company. The important work of with spirit, and pushed through.

Col. S. Dodge has for some weeks past been engaged in making a survey of the route But if all can be raised together and nearly alike, between Cleveland and Wellsville, and we understand will complete the survey to this city to-day. The route is found to be very feasible, the grade light, and the road one of lie leader .- Portland Adv. easy and cheap construction.—Cleveland Herald.

Cleveland is truly waking up. A railroad to Columbus and Cincinnati, another to Pittsburgh, for which the surveys are now making.

Mexican Gulf Railway. - From the following, which we find in the New Orleans Picayune of 3d November, we learn that New Orleans is beginning again to put forth her energies in the way of railroads. We like this-and would ask, when will

" Among the various improvements of public importance going on in and about this city at present, we take pleasure in alluding to that of the Mexican Gulf railway, commenced some years since, and now going ahead bravely. We look upon this work as one of the most important ever undertaken in our city or state, and rejoice at the prospect of its final comptetion. Not only is it important in a commercial point of view, but when finished it will afford facilities for the finest game and fish markets in any city of the south, besides conveniences for fine bath-

ing and the enjoyment of the breezes of the gulf.
"This road is now open a distance of seventeen miles, and by reference to the advertisement in another column, it will be seen that on and after Thursday next, an extra train of cars will leave the depot road as Millaudon's canal, opening to lake Lery, and affording the finest hunting grounds for sportsmen.

The passenger tall will continue to later the deposition of the fine and affording the finest hunting grounds for sportsmen.

The passenger tall will continue, as at present, to connect daily (Sundays excepted) with the train from Augusta, and the stage from Griffin.

(CHAS. F. M. GARNETT.

Chief Engineer.

"Besides this, thousands of our citizens who have never visited the sugar estates during the grinding season, may be accommodated with a sight of the interesting process of making sugar, as the road runs along through several very extensive and productive plantations. We are only astonished, in fact, that a work of such acknowledged importance should have been permitted so long to lie dormant."

Reduced Fares .- The directors of the Richmond and Fredericksburg railroad company have adopted a table of reduced rates of travel on that road, which is 10 go into effect on the first of December. nection with this action the following resolution was

with the opinion of the committee of citizens of Fred ericksburg and others, who believed the reductions therein made on the present rates will increase the receipts of the company from its local travel, but if and to make such changes in the same as may seem to be called for by the interest of the stockholders."

they will not find it necessary to raise them again.

A Fact for Farmers.—At a late railroad meeting in New Hampshire, Governor Hubbard pointed out a striking contrast between the valleys of the Connecticut and of the Merrimack within that state. necting it with a market—the former is not, as yet. He said:
"That while the farms in the rich and fertile val-

ley of the Connecticut were gradually diminishing in value, those on the banks of the Merrimack, be-

This is a fact, not for farmers only, but for all who study the great rules of public economy. If we have every assurance will be taken hold this enhancement of landed values in one section were the necessary cause of depressions elsewhere, there would be nothing gained for the general wealth. without increasing the public burdens for that purpose, the addition to the common prosperity is a result to be sought by every sound statesman and pub-

The shrinking of the paper on which engravings have been printed to such an extent as to produce se-rious difficulties, has recently been determined by the fact that, on preparing a railway in England, it was found that the engraved chart gave the elevation at a particular place at 413 feet, while the actual levelling proved to be 422 feet; and the plate itself was found to correspond with the latter measurement.— This discrepancy was ascertained to have originated from the practice of hanging the printed sheets on â line in a damp state, when the gravitation prevented the horizantal from being so great as the vertical contraction. This contraction was found to be often Nashville railroad? Will the Picayune please inform us? It is quite time.

"Among the various innered at the contraction was found to be often equal to one in 40, and even 1 in 36, or 3 feet in 200 in the longitudinal, and 5 feet in 200 in the vertical direction. This is an important fact for engineers

Brady's Bend Iron Works, near Pittsburgh, support eighteen hundred persons, including women and children. These works manufacture little else than railroad iron, for which there is a constant de-

WESTERN AND ATLANTIC RAIL-road. The Western and Atlantic Railroad is now in operation to Marietta, and will be opened to Car-

tersville, in Cass county, on the 20th of October-and to Coosa Depot, (formerly known as Borough's,) on the 20th of November.

The passenger train will continue, as at present,

NEW YORK AND HARLEM RAIL-Road Company.—Winter Arrangement: On and after Monday, Novem-

ber 3d, the cars will run as follows: Leave City Hall for Harlem (125th street,)
Morrislana, Fordham, Williams' Bridge, Hunt's
Bridge, Underhill's Road, Tuckahoe, Hart's Corners, and White Plains—7:30 and 10:30 a.m., and 1 and 3.30 p,m.

Extra trains for Yorkville, Harlem, Morisiana, Fordham, and Williams' Bridge, leave 27th street 7 a.m. for Williams' Bridge. Leave City Hall 9 a.m. (to Harlem only) and 11:30, 2:30, and 4:30 p.m. for Williams' Bridge.

Leave White Plains for City Hall-8:10, 11:10 a.m, and 1.45, 4.10 p.m.

Leave Tuckahoe for City Hall-8-20, 11-20 a.m. and 1.55, 4.20 p.m.

Leave Williams' Bridge for City Hall—745, 845, 1145 a.m. and 1245, 215, 345, 445, and 545 p.m. Leave Morisiana for City Hall-8-10, 9-10, and 10

a.m., and 12·10, 1·10, 2·40, 4·10, 5·10, and 6·10 p.m. be called for by the interest of the stockholders."

The freight train will leave City Hall at 12.45 p.m.

We are gratified to see the growing disposition at and leave White Plains at 11.10 a.m. All freight the south to test the theory of low fares, and we trust must be at the City Hall between the hours of 10.30

a.m. and 12:30 p.m. The White Plain trains will stop, after leaving the City Hall, only at the corner of Broome street and the Bowery, Vauxhall Garden and 27th street.

An extra car will precede each train, 10 minutes before the time of starting from the City Hall, and will take up passengers along the line.

The City Hall and 27th street line will run every minutes from 7.30 a.m. to 8 p.m.

The City Hall and 27th street night line will run every 20 minutes from 8 to 12 o'clock.

On Sundays the trains will be regulated according to the state of the weather.

THE LONDON RAILWAY RECORD,
Edited by Mr. John Robertson, A. M.,
(connected from the commencement with the Weeliy Railway press of England.)

The Railway Record is acknowledged to be the leading English Railway Journal, and is published twice a week in London, namely on Wednesday and Saturday. It contains copious and correct reports (by special reporters) of all railway meetings in the United Kingdom; ample Share Lists and Traffic Tables, showing the length, cost, capital and selling prices in the principal markets, with Editorial articles on the leading Railway topics of the day. The Railway Record contains also, a complete resume of French, Belgian and other foreign Railway affairs.

Subscriptions 13s. per quarter, to be transmitted in advance to Messrs. Dawson and Sons, Ca....................... st. London. Office 153 Fleet street, London. 46

BOSTON COURIER, DAILY, SEMI-Weekly and Weekly.
The Daily edition of the Courier, presents to

merchants and others, an extensive medium of advertising. The circulation of the Semi-Weckly Courier (published on Mondays and Thursdays) is believed to be more extensive than that of any other similar Boston Newspaper. This publication embraces all the reading matter of the Daily, the Foreign and Domesuc Markets, Review of the Boston Market, Prices current, and Ship News, prepared with great accuracy. The Weekly Courier contains as much of the matter of the daily as can be crowded into a sheet of the same size, without ship news, prices current or advertisements.

Our extions to obtain and publish authentic information on all topics proper for the columns of a news-paper,—the state of trade, the prices of merchan-dize, the current news of the day, and the political movements in the various sections of the country— will not be abated. The marine department of the Courier has been inferior to none in copiousness or accuracy of detail, and it will be our endeavor to maintain its reputation in this respect.

TERMS OF ISUBSCRIPTION. For the Daily Courier, for one year, in advdnce \$8,00

J. EDGAR THOMPSON,

Ch. Eng. and Gen. Agent. Augusta, Oct. 21 1845.

NICOLL'S PATENT SAFETY SWITCH for Railroad Turnouts. This invention, for some time in successful operation on one of the principal railroads in the country, effectually prevents engines and their trains from running off the track

at a switch, left wrong by accident or design.

It acts independently of the main track rails, being laid down, or removed, without cutting or displacing

them.

It is never touched by passing trains, except when in use, preventing their running off the track. It is simple in its construction and operation, requiring only two Castings and two Rails; the latter, even if much worn or used, not objectionable.

Working Models of the Safety Switch may be

seen at Messrs. Davenport and Bridges, Cambridgeport, Mass., and at the office of the Railroad Journal,

New York.

Plans, Specifications, and all information obtained on application to the Subscriber, Inventor, and Patentee.

DAVIS, BROOKS & CO., 30 Wall st. N. Yark

OFFICE OF THE NEW YORK AND Eric Railroad Company. No. 50 Wall st. New York: September 13, 1845.

"fied, or purporting to be paid in full, shall not with-in six months from the passage of this act, surren-der to the company their stock certificates, and re-"ceive or offer to receive therefor, for every two "shares of stock heretofore issued, one share of stock "to be hereafter issued, then all such stock heretofore "issued, and not so surrendered, shall not be subject "issued, and not so surrendered, shall not be subject "to the provisions of this law; but the state shall re"tain the right to claim upon such outstanding stock,
"and the said company shall pay into the treasury of
"the state, upon the order of the comptroller, any and
"all dividends upon such outstanding stock, and the
"comptroller shall apply the same to the credit of
"said company, until the state shall receive in such "dividends, so much of their said debt of three mill-"ions of dollars and the interest thereon, as would be "the proportion of such outstanding stockholders to "pay, provided the whole debt of three millions of "dollars and interest thereon were collected ratably from all the stock of said company now outstand-"ing."

By section 9th, of the same law, it is provided that, "it shall be the duty of the president and sec"retary of said company, within thirty days after the
"expiration of the six months mentioned in the last preceding section, to file with the comptroller of "the state, a statement of all stocks that shall not thave been exchanged in pursuance of the provis-tions of the last preceding section; and whenever any dividend upon the stock of the said company shall be made, it shall be the duty of the board of "directors to notify the comptroller of such dividend,
"and upon payment of the dividend aforesaid into
"the treasury, the comptroller shall furnish to said
"company a receipt for the portion of such dividend belonging to any stock not surrendered and ex-"changed in pursuance of the last preceding section "of this act, and said company shall surrender to "the holders of such stock the receipt of said comp-"troller in lieu of said dividends."

It will be seen that on or befere the 14th of November next, each and every holder of the stock of the company must decide whether he will avail himself of the provisions of this law by surrendering his stock and receiving one share for every two shares thus surrendered. With reference to holders who neglect to avail themselves of the provisions of the act, it is made the duty of the company, within thirty days from the 14th of November, "to file with the comptroller a statement of all stocks that "shall not have been exchanged" agreeably to the provisions of this act, the dividends on which must provisions of this act, the dividends on which must be paid into the state treasury, rendering that class of stock practically of no value to the holder. The board of directors consider it their duty to protect the interests of the stockholders by giving all possible publicity to that portion of the law relating to the outstanding stock, that all may have an opportunity for an early compliance with the provisions of the act. By order of the board of directors.

398t T. S. Brown, Acting secretary.

NEW YORK AND ERIE RAILROAD Company. The Stockholders of this company are hereby notified that an instalment of Five dollars on each share of the new stock, on which not more than five dollars has been paid, is required to be paid at the office of the company, No. **50**Wall street, on or before Wednesday, the 10th day
of December next. By order of the board of Directors. NATHANIEL MARSH, Secretary. rectors. NATHANIEL MA New York November 5, 4845.

KITE'S PATENT SAFETY BEAM.

Messas. Enitors.— As your Journal is devoted to the benefit of the public in gen-eral I feel desirous to communicate to you for publication the following circumstance of no inconsiderable since on the Philadel-20 00 phia, Wilmington and 8 00 Baltimore railroad.

On the passage of the evening train of cars from Philadelphia to this city, an axle of our large 8 wheeled passenger car was bro-ken, but from the particular plan of the construction, the accident was entirely unknown to any of the passengers, or, in fact, to the conductor himself, until the train, (as was supposed from some circumstances attending the case,) had pass cd several miles in advance of the place where the accident occurred; whereas had the car been constructed on the common plan the same kind of acci-

dent would unavoidably have much injured it, perhaps thrown the whole train off the track, and seriously injured, if not killed many of the passengers.

Wilmington, Del., Sept. 28, 1840.

The undersigned takes pleasure in attesting of the value of Mr. Joseph S. Kite's invention of the Safety Beam Axle and Hub for railroad cars. They have for some time been applied to passenger cars on this road, and experience has tested that they fully accomplish the object intended. Several instances of the fracture of axles have occurred, and in such the cars have uniformly run the whole distance with entire safety. Had not this invention been used, serious accidents must have occurred.

In short, we consider Mr. Kite's invention as completely successful in securing the safety of property

and lives in railroad travelling, and should be used on all railroads in the country.

JOHN FRAZER, Agent,

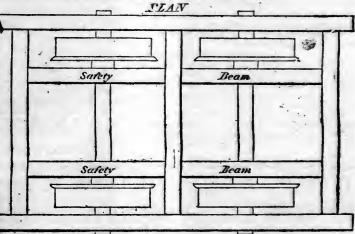

GEORGE CRAIG, Superintendant,

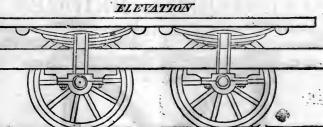

JAMES ELLIOTT, Sup. Motive Power,

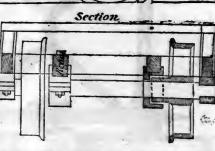

W. L. ASHMEAD, Agent.

A model of the above improvement is to be seen at the New Jersey railroad and transportation

office, No. 1 Hanover st., N. York.

DATENT HAMMERED RAILROAD, SHIF and Boat Spikes. The Albany Iron and Nail Works have always on hand, of their own manufac-ture, a large assortment of Railroad, Ship and Boat Spikes, from 2 to 12 inches in length, and of any form of head. From the excellence of the material al ways used in their manufacture, and their very general use for railroads and other purposes in this country, the manufacturers have no hesitation in warrant. Our improve

are found superior to any ever offered in market.

Railroad companies may be supplied with Spikes having countersink heads suitable to holes in iron

All orders directed to the Agent, Troy, N. York, will be punctually attended to.

HENRY BURDEN, Agent.

Spikes are kept for sale, at Factory Prices, by I.

& J. Townsend, Albany, and the principal Iron merchants in Albany and Troy; J. I. Brower, 222 Water St., New York; A. M. Jones, Philadelphia; T. Janviers, Baltimore; Degrand & Smith, Boston.

* * Railroad Companies would do well to forward their orders as early as practicable, as the subscriber is desirous of extending the manufacturing so as to keep pace with the daily increasing demand.

ble terms. e terms. Philadelphia, Pa., April 6, 1844. ia45

BENTLEY'S PATENT TUBULAR STEAM BOILER. The above named Boiler is similar in principle to the Locomotive boilers in use on our Railroads. This particular method was invented by Charles W. Bentley, of Baltimore, Md., who has obtained a patent for the same from the Patent Office of the United States, under date of September 1st, 1843—and they are now already in successful operation in several of our larger Hotels and Public Institutions, Colleges, Alms Houses, Hospitals and Prisons, for cooking, washing, etc.; for Bath houses, Hatters, Silk, Cotton and Woollen Dyers, Morocco dressers, Soap boilers, Tallow chandlers, Pork butchers, Glue makers, Sugar refiners, Farmers, Distillers, Cotton and Woollen mills, Warming Buildings, and for Propelling Power, etc., etc.; and thus far have given the most entire satisfaction, may be had of D. K. MINOR, 23 Chambers st. New York.

BRIDGES' PATENT DAVENPORT &

DAVENPORT & BRIDGES' IMPROVED PATENT IRON TRUCK FOR RAILROAD CARS, is presented above, and the attention of Railroad Companies is respectfully invited to the following description of their justlycelebrated invention.

These Trucks are adapted as well for eight-wheeled passenger cars as for These Trucks are adapted as well for eight-wheeled passenger cars as for baggage and freight cars, giving to each a more agreeable and casy motion than any other Truck heretofore constructed or in use. They are simple in their construction, combining strength and great durability, although weighing at least twelve hundred pounds less than the common Trucks. Besides these excellences, by reason of the elasticity of the braces, B, B, B, B, as seen in the drawing, and the other peculiarities of construction, made for inside or outside bearing, the weight is equalized upon all the wheels, and yet any one car off. Being bound, and having as it were but four joinings, they are protected from injury by lateral strains, and in case of damage are easily repaired.

These excellences have been fully tested by use, for a long time, on the Eastern, the Fitchburg and Long Island railroads; and for proof of the above stated superiority of these Trucks over all others, we refer to the experience of those who have used and run them.

RAILROAD IRON.—THE MARY-LAND AND NEW YORK IRON AND Coal Company are now prepared to make contracts for Rails of all kinds. Address the Subscriber, at Jennon's Run, Alleghany County, Maryland.
WILLIAM YOUNG,

President.

TO IRON MASTERS.—FOR SALE.—MILL SITES in the immediate neighborhood of Bituminous Coal and Iron Ore, of the first quality, at Ralston, Lyoming Co., Pa. This is the nearest point to tide water where such coal and ore are found together, and the communication is complete with Philadelphia and Baltimore by canals and railways. The interest on the cost of water power and lot is all that will be required for many years the coal will not cost more than \$1 to \$1.25 at the mill sites without any trouble on the part of the mill sites, without any trouble on the part of the manufacturer; rich iron ore may be laid down still manufacturer; rich iron ore may be laid down still more cheaply at the works; and, taken together, these sites offer remarkable advantages to practical manufacturers with small capital. For pamphlets, descriptive of the property, and further information, apply to Archibald McIntyre, Albany, to Archibald Robertson, Philadelphia, or to the undersigned, at No. 23 Chambers street, New York, where may be seen specimens of the coal and ore.

W. R. CASEY, Civil Engineer,

VALUABLE PROPERTY ON THE MILL Dam For Sale. A lot of land on Gravelly Point, so called, on the Mill Dam, in Roxbury, fronting on and east of Parker street, containing 68,497 square feet, with the following buildings

68,497 square leet, with the following thereon standing.

Main brick building, 120 feet long, by 46 ft wide, two stories high. A machine shop, 47x43 feet, with large engine, face, screw, and other lathes, suitable to do any kind of work.

Pattern shop, 35x32 feet, with lathes, work bench-

es, &c. Work shop, 86x35 feet, on the same floor with the

pattern shop.

Forge shop, 118 feet long by 44 feet wide on the ground floor, with two large water wheels, each 16 feet long, 9 it diameter, with all the gearing, shafts, drums, pulleys, &c., large and small trip hammers, furnaces, forges, rolling mill, with large balance wheel and a large blowing apparatus for the foundry. Foundry, at end of main brick building, 60x451 feet two stories high, with a shed part 451x20 feet, containing a large air furnace, cupola, crane and

corn oven.

Store house—a range of buildings for storage, etc., 200 feet long by 20 wide.

Locomotive shop, adjoining main building, fronting on Parker street, 54x25 feet.

Also—A lot of land on the canal, west side of

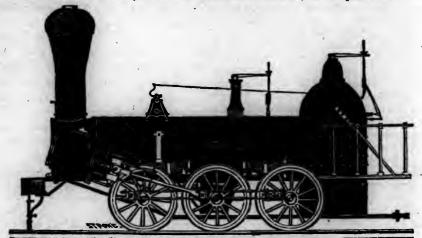

Parker st., containing 6000 feet, with the following buildings thereon standing: Boiler house 50 feet long by 30 feet wide, two sto?

Blacksmith shop, 49 feet long by 20 feet wide. For terms, apply to HENRY ANDREWS, 48 State st., or to CURTIS, LEAVENS & CO., 106 State st., Boston, or to A. & G. RALSTON & Co., Chuadelphia.

CYRUS ALGER & CO., South Boston Iron Company.

NORRIS' LOCOMOTIVE WORKS.

BUSH HILI., PHILADELPHIA, Pennsylvania.

MANUFACTURE their Patent 6 Wheel Combined and 8 Wheel Locomotives of the following descriptions, viz:

Class 1, 15 inches Diameter of Cylinder, × 20 inches Stroke.

15 inches Diameter of Cylinder, × 20 inches Stroke. \times 24 14 × 20 66 4 . 3, 66 66 121 66 " \times 20 " 66 4. × 20 26 66 " 66 66 66 66 66 66 66 \times 18 101

With Wheels of any dimensions, with their Patent Arrangement for Variable Expansion. Castings of all kinds made to order: and they call attention to their Chilled Wheels for the Trucks of Locomotives, Tenders and Cars.

NORRIS, BROTHERS.

Railroad Convention at Danville, Pa.

Allegheny.

umberland; Thomas Structhers, Warren; Robert Frick, Northumberland.

After the president returned thanks, Mr. said, that as he had been among the original tives, who have retained over three millions projectors of the Danville and Pottsville rail- of dollars for their enterprize, and last, not for us to give more of the speeches than to road, he wished to state the objects for which least, to the consumers, who, by the construc- show the general grounds upon which the it had been commenced, and, if possible, to show the additional reasons for its completion. He said the trade of the state, it was prices they have hitherto paid for their suppassed, and shall take another opportunity to now evident, was not dependant upon its lumber of the state, it was play. This business, however, only in its inber and its agricultural produce. The de itiary progress, and when connected, as it give our views upon it in connection with velopments of time had exhibited a mineral must be, with the great coal and iron region another line—we mean that from Williamswealth that far exceeded our previous notions of the Mahanoy, with the iron trade of Mon-port to the interior of New York.

tour's hill, that has risen so rapidly into imof importance, and the researches had thrown open fields, that emphatically invited the industrious and the enterprizing to partake of the treasure. In the short space of twenty years, our views had materially changed years, our views had materially changedour agricultural and commercial notions had extended to a manufacturing policy, that pro- stated that two years ago we had two anthra- munication between Philadelphia and lake mised a richer and much more glorious re-cite furnaces in blast. Now we had twenty- Erie is employing the thoughts and engrossward. And now, when the public mind was seven in successful operation, producing over ing the attention of every reflecting man of filled with the evidences of a well directed 200,000 tons of metal per annum, and con-business among us; longer, then, to delay measure—with the developments that have suming over 500,000 tons of coal. About action on this momentous subject would arfollowed, and are still presenting themselves 40 rolling mills had also gone into operation gue indifference on our part to our own fuon every side of us-with the certainty that during the same period, and when we con-ture welfare as individuals, and utter disrethe wealth of Pennsylvania lies as much un-template this rapid and unexampled increase, gard of the prosperity of the commonwealth der the surface as upon it—it would not be which, according to the nature of things, to which we owe allegiance as citizens. difficult to realize the advantages of improvemust continue, there can be no doubt of the Therefore, ments that conduct us to the treasures that provision that will be necessary to accommolie within our territory. The fact also that date the trade. At present the product of the the raw material of the country was south of furnaces was over 16,000 tons per annum, from Danville or Sunbury, as may hereafter the Hudson, that the mineral developments but when the business of some half dozen be found to be most advantageous, to Wilwere as yet in Pennsylvania, that the cheap-others in the neighborhood was added, the liamsport and thence to lake Erie by the est and best propelling power in the world is the production of the region through which the consumption of coal not less than 100,000 this convention is deeply impressed with a our work passes, that the agricultural pro-tons. To this may be added again the busi-sense of the vast importance of thus opening duce necessary to sustain us was the staple of ness of the rolling mill and foundries, which an avenue for conducting the immense comour state, that the population, the climate and would make the business of Danville worth merce of our inland seas, so rapidly augthe market, were among the objects that con-looking after, and give importance to the menting, to the Atlantic seaboard, with retribute to our importance, and now, to enable work which was now under consideration. ciprocal trade from the cities there, and espesess, we have only to inquire into our re-sources, and to appropriate them to our use. Williamsport and Elmira roads, and the fact ing a passage for the products of the farm, sources, and to appropriate them to our use. that all this trade was shut from the market the forest and the mines in the northwest reposition. The anxiety of our neighbors on it to market. But without going into the every side of us to secure the avenues and particulars, or of calculating the advantages maintain a monopoly, is not less encouraging: and when we look at the inexhaustible ville and Pottsville railroad, he said it was received a very decided conviction that the connection with the Susquehanna, at the junc-|sent and prospective advantages, would not to the Shamokin coal fields, and thence to

Our Table of American Railroads .- We shall endeavor to correct this table by the annual reports and other means as they come to hand, and shall be obliged to those having the data for correcting us, if they will promptly point out any error into which we may fall from not being able always to determine precisely what is the cost of the work, nor what proportion is chargable to stock paid and what to loans. We aim to state the facts in each individual case, but find it exceedingly difficult in many cases to obtain any statement from authority on which we can rely-not being able to visit them personally-and our circulars asking information of general interest, even when post paid, are not in 3 many cases answered.

We have made material alterations in the figures opposite several roads, in this number, and shall be greatly obliged to parties interested, for corrections if they detect errors.

Harlem Railroad .- The carnings of the Harlem at \$20,000 a mile. This is quite too low. The der seven years, upon the amount expended under the very best manner, that high speed may be at- ment; we hope, therefore, that they will be encoutained with entire safety. Will \$20,000 per mile raged to extend the road beyond the capital, towards construct such a road on this route? Will the en- the lake. gineer please enlighten us ?

give the different lines, the distance to its place of last week.

destination, usual fare, and the principal hetels, he termini of the route. Our object is to publish these lists in connection with each railroad advertisement for the convenience of those who wish to visit those places. Will the gentlemen in charge of the different railroads, or some one of their conductors, oblige us with such a statement? If they will we will endeavor to reciprocate the favor. The sooner we receive the list the more useful and satis-

Coal and Iron .- The Resources of Pennsylvania .-The remarks of Mr. Sanderson, of Philadelphia, made at the Danville railroad convention, which will be found in this Journal, are to the point. Mr. Sanderson was one of the early advocates of railroads in Pennsylvania. He takes a comprehensive and just view of the resources of that great state, and sees the necessity of concert of action and energy to develope them; but unfortunately for himself, he, like some others we could name, is in advance, by many years, of those around him who would be most benefitted, and who hold the purse strings. He may predict, and give the best possible reasons for his views and quote past experience, as he does in these remarks, yet the million cannot reason of the future from the past. There are really but few who realize justly that " what has been may be again" and even more so, and thus profit by their sagacity. Of this exceedingly small number is Mr. Sanderson; at least, he comes within the few who reason justly in relation to the future prospects of the country, though he may not profit by it as he ought and as we hope he may in the management of his excellent hotel-the "Franklin House," -in Philadelphia, where the traveller will find good fare at all hours and at reasonable rates.

Madison and Indianapolis Railroad .- "We are informed that the directors, at their late meeting in Madison, unanimously voted to direct the purchase of the heavy of rail for the road between Edinburgh and Indianapolis."

We agree fully with the editor of the State Sentirailroad for the month of October, were, we under- nel that this is good policy; make a good road in the stand, \$17,255 74, showing an increase of \$5,947 52 first place if you can, and as will be learned from over the same month of last year. Contracts have the Journal, there can be no difficulty in doing so been made for the completion of the road to Somers, while the earnings of the road enable the company twenty-four miles beyond White Plains, and a large to pay from 8 to 10 per cent. dividend upon the new number of men are at work upon it. The cost of capital, or that portion furnished by individuals. the extension of the road is put down, as we learn, The state, it will be seen, receives no dividend unroad destined to compete with the Hudson river, be- its management, consequently those who finish and tween this city and Albany, should be constructed in manage it will derive large returns for their invest-

Kyanizing.—We made a material error in the ington Union, says the Ledger, that a contract has article signed L, on this subject, in our last. In speaking of the number of cross-ties prepared we make the writer say "1,400" and "1.700," whereas make the writer say "1,400" and "1,700," whereas timore is secured to the company to the end of the it should be fourteen thousand and seventeen thousand the company agreeing to sand. The error is not material so far as it con- allowed by law; the railroad company agreeing to cerns the effect of the process, but we like always run an extra line between ten o'clock at night and to give our friends full credit for all they do and es-six o'clock in the morning, thus materially expediting the mail, and securing to the company a large

time, as it not only supplies a deficiency and cor- course. It will also be seen that such is the reputa- zation and rational liberty. rects an error in one table-that of American rail-tion of this house, the shares went up immediately roads-in which our readers take a deep interest, to 900 francs, their par value being 500 francs. but it also enables us to supply a manifest deficiency and to correct an awkward error on another table, ence of railroads upon man, are sound and practiwhich we often find it somewhat difficult to do to cal. He says truly that "it is by the constant coning and for his prompt action in providing the is best and most conducive to human happiness." means to supply deficiencies and fill blanks; if it were not for our diffidence, we should say to the ers who have the management of that department reader, who has not already done so, "go and do to the inquiries of the writer in relation to the cost

RAILROAD OFFICE, Madison, Ind., Nov. 4, 1845.

For the American Railroad Journal.

That the Madison and Indianapolis railroad may stand right in your table of American Railroads, I submit the following as its present condition, which should be inserted at the proper place, No. 85.

Length, 56 miles; cost, \$1,746,907.68-\$1,561,-798-72 expended by the state—and \$185,108-96 expended by the company; loans and debts, \$50,000; there would be great economy introduced into the income 1843, gross, \$22,110.23, net, \$8,638.70; dividend, 8 per cent.; 1844, gross, \$39,031.14, net, \$10,-065.05; dividend, 9½ per cent.

Note.-The state derives no dividend for seven years, if the company finish the road in three years.

The receipt for the present year will be at least ports. \$60,000. The remaining 30 miles of the road [making in all 86 miles] are now under contract; the grading is about half done and we are confident that the road will be completed in about 15 months.

advanced will pay for two copies of the Railroad letter of July 24th, together with a file of your vat-Journal, which you will please send to me for the uable Journal, for which I return you my best thanks, next year, commencing first January.

Yours respectfully, S. M.

We give the following extracts from Mr. Herron's track, which will be given in our next, as it came too late to hand for this number.

of coal in a year and five days from its completion.

"I send you by Adams & Co.'s express, for insertion in the Journal, a small stereotype plate of my railway track, with an accompanying article, the Company O'Neill for 37 years and some months. referring to the cut, and descriptive of it, as laid upon the Reading railread.

For the American Railroad Journal.

"The article, you will perceive, gives the dimensions and quantity of materials used, details of cost and particulars regarding the sublimated timber, its cost, etc., etc., not hitherto published.

"I have had the stereotype cut ready for some time, but have delayed the publication until the magic number of 800,000 tons of coal had actually passed over it. This has taken one year and five companies will take place in respect to the Lyons and this company, in the Journal of 30th ult., we days to accomplish.

"Your doubts about Kyanizing are likely to elicit some highly important facts on the subject, that may be of lasting benefit to the country. We want facts, well authenticated facts, for or against, with responsible names vouching for them. All who furnish correct circumstantial information on the subject, opened through from Paris to Lille until May next are truly public benefactors."

The views of the writer in relation to the influour taste; the writer will therefore please accept our tact of the people with each other that they will thanks for this evidence of his sagacity in foresee- learn how to know each other and appreciate what most conducive to human happiness.

We ask the special attention of those of our readof working railways in this country. He desires to compare the expenses of management in the difis to the writer of this letter-Major Poussin, formerly a member of the U.S. Eng. corps-to whom they are indebted for the work on the Belgian railways, upon which we have drawn so liberally during the past summer, we trust they will furnish us with the details in full sought by him. If each anaual report of each company contained those details management of our numerous railroads. Economy is often learned by comparison. Almost every com- cient. pany will be able to learn something new and perhaps, also, to communicate something to others; at One-third the net profit will then belong to the state. from the general adoption of such a system of re-

> (Foreign correspondence of the Railroad Journal.) PARIS, RUE RICHER, September 11th, 1845.

Enclosed is five dollars which with that already an absence of two months, and found at home your

The most important news about railways at this this date, much practical progress. time is the late adjudication of the line from Paris to Belgium, for a term of 38 years to the Company Rothschild, which has succeeded by its irresistible recent letter, preliminary to the description of his power and influence to swallow up five competing companies, so that the Company Rothschild presented itself alone to obtain the concession of the There passed over it, as will be seen, 800,000 tons line. The shares went up immediately after the government decission in favor of M. Rothschild, to 900 francs, they being worth at par 500 francs.

A small branching to Fampaun was conceded to

and the Strasbourg line.

The number of companies already formed for dearer than with us? Very truly yours, these lines is large, and continues to increase, so great is the people's favor for railway shares, and indeed for all sorts of shares; for we have seen in these later days new societies formed for objects of the most doubtful character.

Strasbourg lines or for the Northern, and that the house of Rothschild will extend its powerful grasp over the main arteries of the country. This appears to me the unavoidable conclusion of the present competition between rival companies.

Our great line to Belgium will not be completely for there remains some work yet undone which will

The following letter is very acceptable. Its con-had the ability to "swallow up" all its competitors fairly established, to the great convenience of traveltents are exceedingly appropriate, especially at this for the line to Belgium, and thus walk over the lers, but particularly to the great advance of civili-

> I have no doubt that the new system of communication by steam on land and on water will do much more for real practical liberty than all the best theories in the world. It is by the constant contact of the people with each other that the people will learn how to know each other, and appreciate what is best and

European railways differ little in their construction, either in France, England, Belgium, Germany, or Italy; the system of construction is all over the same; the only difference is in the weight of the rails. Heavy rails, say 32 kilograms per metre, is becoming now generally adopted on account of the riferent countries; and when we inform them that it gidity it presents, and the better stability of loco:no tives in passing on such structure. Cross-ties of wood is the usual mode of understructure, and, in some cases, string pieces are also adopted. The nature of the wood and the mode of using it differ in each country according to the resources of the land as to timber. Essays of cross-ties of iron have been made, but without any advantage. Various schemes of preserving timber have likewise been resorted to, but do not prove completely effi-

As to the machinery, it is all over the same, viz: heavy and powerful locomotives of the English or all events much of interest and utility will result American models. The American model of Norris' establishment is becoming more and more justly appreciated, and consequently is in fair demand.

American wagons, accommodating 60 or 90 persons, are also becoming of use. Such carriages are to be met with on German railways and in Belgium. My Dear Sir: I have just returned to Paris, after I am myself in favor of long carriages resting on 8

> Atmospheric systems of locomotion continue to occupy the scientific world, but has not made, up to

> I am about experimenting a new system of this description within a few days, and will let you know the result.

> My late work on Belgium, as well as all my other works on the United States, are to be found at Mr. Bossange's, New York.

The report sent by you was charged letter postage. Those reports contain none of the information I am desirous of obtaining, to wit: cost of fuel, quantity consumed, cost of repairs of locomotives per ann. materials and labor, number of miles run, number of In a few weeks we shall have a more important trains, number of engines employed, men employed. In adjudication, that of the line from Paris to Lyons a word, I should like to ascertain correctly whether the working of an American railroad is cheaper or

LE MAJOR G. T. POUSSIN.

# The Baltimore and Ohio Railroad, And the opposition of Virginia to its extension.

It may be recollected by our readers that, It is most likely that the same combination of in republishing the 19th annual report of commented freely, though not discourteously, upon the opposition of Virginia and Pennsylvania, to a renewal of the right of way to the Ohio. In the course of those comments we made the following remarks, viz:

"The objection made by 'old Virginia'-by this we mean the eastern part of the state—to the termi-Foreign Correspondence.

We have the pleasure of giving another interesting letter from our Paris correspondent. It will be great line of communication between the metroposeen from this letter that the "company Rothschild" lis of France, Belgium and the German states, to its termination at Pittsburgh is, that it will interfere with the 'James river and Kanawha' line of improvement from Richmond to the Ohio river. And the objection of a part of Pennsylvania seen from this letter that the "company Rothschild" lis of France, Belgium and the German states, to its termination at Pittsburgh is, that it will inter-

fere with their state works, and also prevent the con- may be a comma too much or too little, as we struction of a railroad direct from Harrisburg to Pittsburg. These objections may all be validand just, reading room. They are as follows, viz: reading room. They are as follows, viz: "Commentary.—Fine reasoning this! How with that the early completion of the Baltimore and Ohio railroad through to Parkersburg or other suitable point of termination on the Ohio, would insure the construction of the James river line of improvement, the property of the Pennsylvania railroad from Philade phia to Pittsburg, now in agitation, for Baltimore reach Pittsburgh first, by her railroad, and tappin the Ohio trade at that place, carry it to Baltimore by a railroad, of course, over the mountain to the Ohio, at an earlier period than it will be made if the Baltimore and Ohio railroad terminates finally at the coal region; and so, on the other hand, if it were to be continued from Cumberland to Pittsburg, it would insure the construction of a continuous railroad from Pittsburg to Philadelphia in less time than it would be otherwise built.

an opinion, that this company has a just claim.

Virginia for the right of way to the Ohio river: the claim of the company, however, weighs as but a feather in comparison with the right of the public—the millions who will pass over it, if properly built to the right point—and we do not hesitate to say that the people of Virginia have too much regard for the general interest and too much respect for individual rights, to stand in the way of the early completion of this noble enterprize, especially when so many of this noble enterprize, especially when so many of this noble enterprize, especially when so many of was no just claim at all) has already been granted by Virginia. The Baltimore company have the right of way to the Ohio at Wheeling. But reversible to be duped by this reasoning, and we have no doubt will continue to refuse.

"The 'just claim' alluded to, (which however was no just claim at all) has already been granted by Virginia. The Baltimore company have the right of way to the Ohio at Wheeling. But reversible to the mere assertion of the mere asserti "It appears to us, if we may be allowed to express an opinion, that this company has a just claim upon Virginia for the right of way to the Ohio river: the main line, from the mouth of the Kanawha to Rich-

mond.
"The true policy is to build as many lines as possible between the Atlantic and Mississippi; the more avenues the more trade and travel, and at the lowest rates possible; whereas, with only one or two main lines over the mountains, high rates and poor accommodations are the sure result, as on some of our present Atlantic lines where there is no rivalry.— There will be good business for all the lines which the people are willing to pay for; the only difficulty will be to build avenues enough to accommodate the business between the east and the mighty west."

Which were copied by the Baltimore American, of 2d inst., with the following in ap proval, viz:

"THE RAILROAD JOURNAL, reviewing the last annual report of the Baltimore and Ohio road, has some just and sensible observations worthy of particular attention in our sister states, Pennsylvania and Virginia. It speaks of the early beginning of our great enterprize—of the cordial assent of Virginia and Pennsylvania to the passage of the road through their territory—of the difficulties which the company had to encounter from its being a pioneer work in the progress of which experience and knowledge in the construction of railroads had to be purchased dearly, and of the further difficulties caused by the commercial revulsions of 1837, 1838

It is well

"We quote the following passages from the Journal's article, with the remark that this is the lan-guage and these the views of an impartial observer whose comprehensive knowledge on the subject of which he treats is not likely to be perverted by pre-

The Richmond Whig, of the 5th inst., copies that portion of our article republished by sition with other states; and we might not be the Baltimore American, and probably from far wrong in saying that they probably never that paper, as a paragraph of some impor- would have been leaders in such measures. tance in the argument is omitted, and also It is better, however, we cheerfully admit, to as we have not the bene is and pleasure follow in a good cause than never to engage of an exchange with the, "Whig," though in it, and we therefore concede to them much we have sent the Journal to it for seve-credit for what they attempted to do-even ral weeks together, at three or four dif though neither have been very successful in ferent periods within the last fourteen years, their efforts. but never received a paper in return-and comments upon it with its usual ability and our public works are to be resumed, and it courtesy. But that our readers may have is much to be hoped that those states which the benefit of its remarks, we give them in have been unsuccessful in their efforts will grades and the curves-for after all the INfull, and we believe correctly, though there profit by their past errors.

had to copy them with pencil in a public

"Commentary.—Fine reasoning this! How will it promote the Pennsylvania railroad from Philadelphia to Pittsburg, now in agitation, for Baltimore to reach Pittsburgh first, by her railroad, and tapping the Ohio trade at that place, carry it to Baltimore? And how pray, is it to promote the completion of the railroad from James river to Guyandotte, that Baltimore reaching the Ohio first at Parkersburg has tapped the trade of the river at that point, and trained it off to Baltimore? More absurd and under the control of the river at the point, and trained it off to Baltimore? monstrable propositions were never addressed to the common sense of two great communities, and they are so plainly so, that the Railroad advocate does not bring forward one single argument plausible or

ing the adage that 'beggars have no right to be choosers' and the other one, that you 'should not look a gift horse in the mouth,' she arrogantly claims the right to select her own Terminus on the Ohio, not merely disregardful of the interests of the Virginia works, but with the view to supplant them. hope it will never be submitted to."

It is possible that the editor of the Whig might not have been quite as severe if he had read the whole of the article from which the extract was made; and more especially if he had been familiar with the course of the Journal for years past; and it is even possi ble-though not very probable, since the editor of the Richmond Whig says otherwisethat there may be some truth in the assertion, even without argument to sustain it, that the completion of the Baltimore and Ohio railroad to the Ohio at Parkersburg, or Pittsburg, or even to both places, might facilitate the construction of the other works alluded to in

It is well known to those who have been in active life during the past 25 years, that neither Pennsylvania nor Virginia have moved in the construction of a public work until an example had been set them, nor indeed until they were driven into it in self-defence-or, rather, to sustain their relative po-

The time has now arrived, however, when

The people, the business community, desire. and must have, facilities for travel and transportation. Neither Boston, New York, Baltimore, nor even Richmond, nor, indeed, all of them combined, constitute the people.-These cities, large and prosperous as they are, are only drops in the great waters-or form but a small part of the business community of this country; and, indeed, the present population of the country is only in the infancy of its growth. Where then will be its power at manhood? even at the close of another half century? very far beyond the Alleghenies; yet the products of its industry must be brought over, or around those mountains, and its supplies from the seaboard have also to reach their destination by one or another of the different channels of communication now in use or to be formed. The difficulty is to be in constructing them in a proper manner, as fast as they will be required. It is important, therefore, that those which will afford the best facilities, to the greatest number of people, in the shortest period of time, on the most favorable terms, and at the least outlay of capital should be first undertaken and completed. It is not the construction of works designed especially, or even mainly, to benefit a particular city, or section of a state, which should be first undertaken: but rather those which will benefit the masses, by opening easy communication between important points, revive the industry and confidence of the people; and thus develope the resources of the greatest extent of country. Such are the works that Virginia needs-and such works she may have if she sets herself about it in earnest; yet it is not to be effected by an attempt to bring the whole of the ascending trade on the Ohio te Richmond-by prohibiting the approach of other works to the Ohio between the mouth of the Kanawha and Pittsburg-or even Wheeling. Let the people of Virginia construct their mair work from the present termination, or other suitable point near, of their James river canal, over the mountain, to, or near the mouth of the Guyandotte. Our present opinions are decidedly in favor of the southern route. They may be erroneous, if so we desire to be set right. This line once completed to the canal at, or in the vicinity of Lynchburgh, and ultimately to Richmond, then may the people of that city begin to realize their anticipations. Whatever leaves the Ohio upon this line, destined for the northern and eastern states, or middle and eastern Virginia, will be most certain to pass through Richmon; but if the main line reaches as far north as Staunton, a large amount of its business will pass down the valley, and of course to Baltimore. It strikes us therefore that, if the distance, the STRUMENTS, and not the towns or villages,

route are us favorable as those on the norther, it should, as a matter of interest to Virwill begin to talk—when they have actually events of that day, when the cars shall run through ginia, be adopted. The business on this line taken possession of her soil, and begin to imfrom the Ohio river to the Atlantic, will pass prove the general interest, then you will see hesing the desired event. We give the reports of over about 450 miles of Virginia territory; them stir about. In this way we imagine the superintendent and engineer in full, that they and thus afford facilities to as many of her the interest of the main line will be promoted may be on record for future reference. As we now citizens as any one line in the state can; yet and the work advanced, by the completion of find much convenience and advantage in being able a very large portion of them will not be di- the Baltimore and Ohio road to Parkersburg, to refer to the early volumes of the Journal, so, at rectly—though they will be indirectly—be- without interfering materially, if at all, with period even if we do not nefitted by it; therefore other lines should its business from Guyandotte. It appears to period, even if we do not. be constructed, wherever they can be, for the us, therefore, that the true policy of Virginia benefit of those who cannot use this line, is to construct her main line, and as many There will eventually be a line, we have not branches as she can, and at the same time let a doubt, up the valley, an extension of the other people, who will do so, expend their Winchester and Potomae, and there will be capital, and construct all the railroads they numerous branches connected with the main please, within her borders-the more the lines, yet none of them are likely to reach better. up into the northwestern counties, unless the Baltimore and Ohio shall be allowed to reach opinion, we would merely say that the course them in its course to Parkersburg.

works of this kind, it is an easy matter for ny, participates more of the disposition of legislators to say where it shall be laid, and "the dog in the manger," than does that of with the legislature; and so, we imagine, it will prove in the permission given this combined the company by increasing their busithis country. The best route should always quite as much as to the company, therefore be selected for great thoroughfures between the company confers as much benefit as it important points, instead of consulting the interest of a few individuals, or any particular place. The route to Parkersburg is said to be much the most favorable, and it is in a us, from the mistaken impression that the good direction for the extension of the line through the interior of Ohio; it will also accommodate a much larger number of the citizens of Virginia than if it terminates at Wheeling; while the distance from the mouth of Guyandotte to Parkersburg is such as to give to the lower, or Richmond route, a decided advantage in relation to all business desided for lower Virginia and an expenses of transportation. We shall refer to this subject to the lower Virginia and an expenses of transportation. destined for lower Virginia, and an equal again. chance for much that is destined for more northern points. It will hardly be contended, we imagine, that the business of northwestern tors, together with a report from Wm. Durbin, Jr., Virginia, at and above Parkersburg, will de-superintendent, and from R. M. Shoemaker, Esq., scend the Ohio, and pass over the road to chief engineer of this company, to the stockholders, Richimond, it will be much more likely to ascended and pass over the Pennsylvania works, on the 20th of October last, from which we learn whereas, if the Bultimore road was completional to the contract, and to be comted, it would accommodate a large number pleted to Springfield by the first of August next; at of the citizens of Virginia, and make a large which period it is expected that the Little Miami amount of the business on the Ohio, which railroad will be completed to the same point, thus cannot be "trained" off to Richmond, tribu- opening a railroad communication from lake Erie, tary still to a portion of her citizens, instead at Sandusky city, to Cincinnati. of driving it around them to Pittsburg.

the Bultimore and Ohio road to Parkersburg, of the company.

or other suitable point of termination on the Ohio, would insure the construction of the quaintance of ours—whose first introduction to the notwithstanding the editor of the Whig says | The charter was granted January 5th, 1832-the in a matter of this magnitude, unless they of May following. Thus it will be seen by its inches, on which the iron bar will be spiked.

Re- fic and be more durable than any heretofore only 21 by 5 inches; this iron is too light to spectfully submitted. sustain heavy freight trains, without constant repairs; a permanent and substantial railway can only be secured by using a much heavier board of directors, I herewith submit an esti-will no doubt be found sufficient to cover the bar than any now laid down on your road.

dusky city to Bellevue, will likewise require thorough repairs next season. It is not proposed to rebuild this division until the company can provide heavier iron to supply the place of the present light bar, which is but 21 by 5 inches of a very inferior quality, and having been in use upwards of eight years, is much worn and broken.

The heavy drafts made on the earnings of the road prior to June last, to meet contractors' estimates south of Tiffin and other liabilities of the company, together with the cost of additional machinery, shops, etc., left too small a sum at our disposal to keep the track in as good condition as it should have been. The whole amount expended during the last two years in repairing track, rebuilding several large culverts, opening ditches, repairing water stations, sidings, etc., average but \$120 per mile per annum, and this too on a wooden road built in 1840 with the light iron bar before described. This sum was wholly in- viz: adequate to keep the road in good adjustment, and far below the amount annually expended per mile on the best iron roads in the country. Additional water stations will be required next year—at least one between Sandusky and Bellevue, and another between Bellevue and superstructure partly laid, to be finished Republic.

The machinery has been increased within the last year, and materials procured for a large additional number of freight cars to be to be completed by the first of June, 1846. built this winter. Provision has been made for a sufficient number of platform cars to transport the iron for your road south of Tif- first of August, 1846. R. M. SHOEMAKER, Engineer. After the reading of the reports they were accepted and approved. The stockholders then proceeded to the election of directors for the ensuing year which resulted in the choice of the following named gentlemen, viz:

C. L. Boalt, L. G. Harkness, Huron co.; F. M. Follet, Erie co.; John Carey, Wyandotte co.; A. McConnell, Hardin co.; A. Ransom, Seneca co.; I. S. Gardner, Logan co.; S. Keener, Champaign co.; W. Hunt, Clark co.

The stockholders then adjourned. Anson Howard, Chairman; W. Lawrence, Secy.

\$511,218 07 The Sandusky Clarion says that "It is understood the railroad office will be removed to Sandusky city, that John Carey, one of the new directors will be elected president, and a Mr. Flynn, formerly cashier of the Norwalk bank, will be secretary and treasurer. I. S. Gardner, is the director selected in Logan county, and is favorably known as a first rate business man. Robert Patterson, will no longer be the secretary and treasurer. He has served the railroad in various capacities for thirteen years with an ability and fidelity that has given universal satisfaction.

> Wm. Hunt, the late president of the board has managed the affairs of the company, so as to promote its interests and reflect honor upon himself. Never have officers deserved more richly the approbation of those interested in the road.

Western and Atlantic Railroad.—The marks in his late message in relation to this

"In the execution of the law of the last legislature relative to the Western and Atlantic The minimum radius of curvature is 2000 railroad, I have not been enabled to sell or complete it. The proposition to sell was met by no corresponding offer to buy. The terms, which were in some respects limited to executive discretion, were published in several gazettes of the state, and intended to secure equal privileges to the two branch railroads connecting with the State road. It is the part of honorable duty, if at any period the state should sell this road, that those branch roads should be placed on a basis of perfect equality. But whether sold or retained, hastened or delayed in its progress, it should be regarded as the fixed policy of the state, that its ultimate completion must be effected toward the termi-The superstructure being built is of heavy ni originally designated. The necessity and and set down on the public street, which is and substantial material; it consists of a sill wisdom of this work, notwithstanding the inconvenient to us and in inclement weather 7 by 14 inches, cross-ties 9 inches base, 9 in-wasteful outlays of money upon it, will be ilextremely uncomfortable to them. with submitted, which shows that 52 miles of next session of the legislature. the road are now in successful operation, and that the income from it for the first month, and at a distance of 20 miles only, has been \$1,200. Other and important facts are stated in the report, which will doubtless commend themselves to your consideration. *

"However advantageous the immediate extension of the road to Cross Plains may be, an increase of the public debt cannot now be recommended. To hasten slowly was once the remark of successful ambition. Its force should not now be lost upon us, when we have profitable examples of reasonable delay in other enterprizes of like character, and as heavy burthens are overlaying the public credit. If the extension be urged, it should be made upon the funds and credit of the road, with a limitation that a certain amount shall not be exceeded-and that too at periods when the work may be done economically and advantageously to the state."

most beautiful granite is now opening in this state road; and we hope, also, a branch to West town on the the Batchelder (late Thompson) Point. farm, says the Keene Sentinel, within half a mile of the railroad line. The contractor for the very extensive masonry near Branchville, will probably save \$2,000 by this discovery. The side hill is now covered with the blocks already excavated. Mr. Britton is the contractor. Messrs. Parmelee & Co. are erecting their villages of shantees near the 'Surry Summit,' and along the line beyond, and will this week put in the spade, shovel and pickaxe in earnest."

The people of New Hampshire, as well as of every other state in the union, will make many imjured as to make it necessary to amputate the leg
routest discoveries, little dreamed of before when below the knee, is now considered out of danger. portant discoveries, little dreamed of before, when they construct railroads. Railroads are truly " mineral roads," which point out hidden treasures to those who use them rightly. They will develope sources of wealth to the people where barrenness was only found before.

The Claremont Eagle says "that the good people in Claremont and on the line are wide awake on the subject of extending the Cheshire road on the cast side of the Connecticut to the present location of the Central road at Chase's island, near Windsor bridge.

The Claremont Eagle says "that the good Portsmouth, clerk.

chosen, comprising the same individuals in each corporation, as follows:
Alexander Ladd, Richard Jenness, James W. Emery, John P. Lyman, Wm. P. Jones Alfred W. Haven, Portsmouth; George W. Ela, David Davis, Concord; Joseph Cilley, Nottingham; David Pecker, Raymond; Wm. Plumer, Jr., Epping; Gardner

We are also informed that the engineer, Mr. T. G. Carter, under whose superintendence the surveys have been made, presented his plans and profiles of the different lines surveyed, which were quite satisfactory, entirely answering the anticipations of those interested in this important enterprize.

It is understood that measures were taken to fur-ther the work as rapidly as possible.—Statesman.

Gloucester Railroad.—We understand that the railfrom Augusta, and the stage from Griffin.
CHAS. F. M. GARNETT.

"The report of the chief engineer is heretime to be lost. Let them apply for a charter at the progressing rapidly, and that it will in all probability be completed by the 1st of July next. It will form a new era in the history of the very pleasant and good old town of Gloucester, and help to make it one of the most fashionable watering places in the country. We learn that the brick hotel is already underand crossties, to relay the entire road from of the benefits of the railroad.

> Portland and Augusta Railroad .- Mr. Hayward, the engineer, has nearly completed his location and survey of this road. He will be in Augusta in a few days to say just whose houses shall be torn down, whose gardens cut up, and where the grand depot shall be. We beg him to spare our shanty and the "old oak" that shelters it.—Augusta Banner.

We are authorized to say that the grading, mason-ry-and superstructure for the entire route of the extension of the Fall river railroad, to the junction with the Old Colony, in Braintree, was contracted for on the 4th inst., on favorable terms, to be completed on the first day of August next; thus completing the contracts, for one more line to Boston, be renewed, and made what we all have long through the densely populated and thriving manushed it to be."

We are gratified in being able to announce the We are gratified in being able to announce the long through the densely populated and Bristol counties.

We are gratified in being able to announce the long through the densely populated and thriving manufacturing villages of Norfolk and Bristol counties.

We are gratified in being able to announce the long through the densely populated and thriving manufacturing villages of Norfolk and Bristol counties.

Old Colony Railroad.—On Saturday, the 8th inst., the directors and stockholders of this corporation, with a large number of invited guests, made an excursion to Plymouth, to celebrate the opening of the road, it being the first time that a train of cars has run the whole distance. They left the station at south Boston soon after ten o'clock, with two engines drawing thirteen cars, and four hundred and fifty passengers; at the different stations on the road, which are thirteen in number, other gentlemen joined the company, and by the time they arrived at Plythe company, and by the time they arrived at Plymouth, which was in two hours and a half, the party consisted of about eight hundred in the whole.— Among the guests were the Hon. John Quincy Adams, Daniel Webster, the venerable Judge Davis, of this city, John Davis, of Worcester, several of the clergy, the presidents and directors of other railroad corporations.

Thus the people of Boston and of Massachusetts are opening new arteries from the heart to the extremeties in every direction. So will it be eventually in connection with all our large cities and states. The right spirit is rising in New York and in Philadelphia-and, indeed, throughout the country.

Albany and Troy to Buffalo, Winter Arrangement. The third run of cars from Buffalo to Troy and Albany, has been taken off. The trains now leave Albany, has been taken off. The trains now leave Syracuse as follows: two a day east and west. For the east at 7 A. M. and 8 P. M., connecting with the boats on the Hudson, both at Troy and Albany.—For the west at 7 A. M. and 6 P. M. The cars arrive at Syracuse from the east at 6 A. M. and 5 P. M., from the west at 6 A. M. and 7 P. M.

NEW YORK AND ERIE RAILROAD Company. The Stockholders of this company are hereby notified that an instalment of Five dollars on each share of the new stock, on which not more than five dollars has been paid, is required to be paid at the office of the company, No. 50
Wall street, on or before Wednesday, the 10th day
of December next. By order of the board of Directors. NATHANIEL MARSH, Secretary. New York November 5, 4845.

GEORGIA RAILROAD. FROM AUGUSTA to ATLANTA-171 MILES. This Road in connection with the South Carolina Railroad and

Goods consigned to S. C. Railroad Co, will be forwarded free of commissions. Freight payable at Augusta.

J. EDGAR THOMPSON,

Ch. Eng. and Gen. Agent. Augusta, Oct. 21 1845.

NICOLL'S PATENT SAFETY SWITCH for Railroad Turnouts. This invention, for some time in successful operation on one of the principal railroads in the country, effectually prevents engines and their trains from running off the track

at a switch, left wrong by accident or design.

It acts independently of the main track rails, being laid down, or removed, without cutting or displacing

It is never touched by passing trains, except when in use, preventing their running off the track. It is simple in its construction and operation, requiring only two Castings and two Rails; the latter, even if much worn or used, not objectionable.

Working Models of the Safety Switch may be seen at Messrs. Davenport and Bridges, Cambridgeport, Mass., and at the office of the Railroad Journal, New York.

Plans, Specifications, and all information obtained on application to the Subscriber, Inventor, and Patentee.

G. A. NICOLLS, Reading, Pa.

GEORGE VAIL & CO., SPEEDWELL IRON Works, Morristown, Morris Co., N. J.—Manufacturers of Railroad Machinery; Wrought Iron Tires, made from the best iron, either hammered or rolled, from 1\(\frac{1}{2}\) in thick.—bored and turned outside if required. Railroad Companies wishing to order, will please give the exact inside diameter, or circumference, to which they wish the Tires made and they may rely upon being served accord. made, and they may rely upon being served according to order, and also punctually, as a large quantity of the straight bar is kept constantly on hand.—Crank Axles, made from the best refined iron; Straight Axles, for Outside Connection Engines; Straight Axies, for Outside Connection Engines; Wrot. Iron Engine and Truck Frames; Railroad Jack Screws; Railroad Pumping and Sawing Machines, to be driven by the Locomotive; Stationary Steam Engines; Wro't. Iron work for Steamboats and Shafting of any size; Grist Mill, Saw Mill and Paper Mill Machinery; Mill Gearing and Mill Wright work of all kinds; Steam Saw Mills of simple and economical construction, and very effective ple and economical construction, and very effective fron and Brass Castings of all descripions.t

ja45ly TO RAILROAD COMPANIES AND MAN-ufacturers of railroad Machinery. The subscri-bers have for sale Am. and English bar iron, of all sizes; English blister, cast, shear and spring steel; Juniata rods; car axles, made of double refined iron; sheet and boiler iron, cut to pattern; tiers for loco-motive engines, and other railroad carriage wheels, made from common and double refined B. O. iron; the latter a very superior article. The tires are made by Messrs. Baldwin & Whitney, locomotive engine manufacturers of this city. Orders addressed to them, or to us, will be promptly executed.

When the exact diameter of the wheel is stated in

the order, a fit to those wheels is guaranteed, saving to the purchaser the expense of turning them out inside. THOMAS & EDMUND GEORGE, ja45 N. E. cor. 12th and Market sts., Philad., Pa. 31 lia45

FROM AU-171 MILES. NorWich AND WORCESTER RAIL-171 MILES. Road. On and after May 22, 1845, Trains will leave as follows, viz:-Accommodation Trains, daily,

except Sunday. Leave Norwich, at 6 a.m., and 41 p.m. Leave Worcester, at 10 a.m., and 41 p.m.

BOSTON COURIER, DAILY, SEMI-Weekly and Weekly. The Daily edition of the Courier, presents to

The Daily edition of the Courier, presents to merchants and others, an extensive medium of advertising. The circulation of the Semi-Weckly Courier (published on Mondays and Thursdays) is believed to be more extensive than that of any other similar Boston Newspaper. This publication embraces all the reading matter of the Daily, the Foreign and Domesuc Markets, Review of the Boston Market, Prices current, and Ship News, prepared with great accuracy. The Weckly Courier contains as much of the matter of the daily as can be crowded into a sheet of the same size, without ship news, priinto a sheet of the same size, without ship news, prices current or advertisements.

Our extions to obtain and publish authentic information on all topics proper for the columns of a newspaper,—the state of trade, the prices of merchandize, the current news of the day, and the political movements in the various sections of the country—will not be abated. The marine department of the Courier has been inferior to none in copiousness or accuracy of detail, and it will be our endeavor to naintain its reputation in this respect.

# KITE'S PATENT SAFETY BEAM.

MESSRS. EDITORS.—
As your Journal
is devoted to the benefit of the public in gen-eral I feel desirous to communicate to you for publication the following circumstance of no inconsiderable since on the Philadelphia, Wilmington and Baltimore railroad.

On the passage of the evening train of cars from Philadelphia to this city, an axle of our large 8 wheeled passenger car was broken, but from the particular plan of the construction, the accident was entirely unknown to any of the passengers, or, in fact, to the conductor himself, until the train, (as was supposed from some circumstances attend-ing the case,) had pass-ed several miles in advance of the place where the accident oc-curred, whereas had the car been constructed on the common plan the same kind of acci-

the same kind of acci-dent would unavoidably have much injured it, per-haps thrown the whole train off the track, and serious-ly injured, if not killed many of the passengers. Wilmington, Del., Sept. 28, 1840.

The undersigned takes pleasure in attesting of the value of Mr. Joseph S. Kite's invention of the Safety Beam Axle and Hub for railroad cars. They safety Beam Axle and Hub for railroad cars. They have for some time been applied to passenger cars on this road, and experience has tested that they fulgraccomplish the object intended. Several instances of the fracture of axles have occurred, and in such the cars have uniformly run the whole distance with entire safety. Had not this invention been used, serious accidents must have occurred.

In short, we consider Mr. Kite's invention as completely successful in securing the safety of property

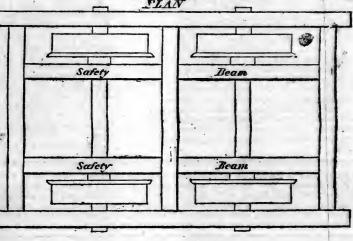

and lives in railroad travelling, and should be used on all railroads in the country.

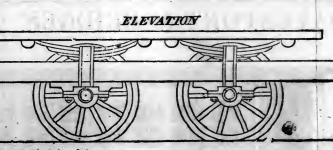

JOHN FRAZER, Agent,

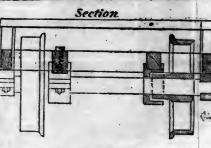

GEORGE CRAIG, Superintendant,

A model of the above improvement is to be seen at the New Jersey railroad and transportation

office, No. 1 Hanover st., N. York.

DATENT HAMMERED RAILROAD, SHIP and Boat Spikes. The Albany Iron and Nail Works have always on hand, of their own manufac-ture, a large assoriment of Railroad, Ship and Boat Spikes, from 2 to 12 inches in length, and of any form of head. From the excellence of the material always used in their manufacture, and their very genways used in their manufacture, and their very general use for railroads and other purposes in this country, the manufacturers have no hesitation in warranting them fully equal to the best spikes in market, both as to quality and appearance. All orders addressed to the subscriber at the works, will be promptly executed.

JOHN F. WINSLOW, Agent.

Albany Iron and Nail Works, Troy, N. Y.

The above spikes may be had at featurer wices of chimney of engines on which they are

# FRENCH AND BAIRD'S PATENT SPARK ARRESTER.

O THOSE INTERESTED IN Railroads, Railroad Directors and Managers are respectfully invited to examine an improved SPARK ARRESTER, recently patented by Railroads, Railroad Directors

the section. JOHN F. WINSLOW, Agent.
Albany Iron and Nail Works, Troy, N. Y.
The above spikes may be had at factory prices, by the subscriber of the above name and actory—for which aler adhesion is more than double any come non spikes made at the above name factory—for which purpose they are found invaluable, as their adhesion is more than double any come non spikes made at the above name factory—for which purpose they are found invaluable, as their adhesion is more than double any come non spikes made at the above name.

Albany Iron and Nail Works, Troy, N. York, and the principal from increase in the United States are constructed on an entirely different principal from the smoke and sparks passing through the chinney, and by the centrifugation to the heated air, which alter five years' successful operation, and now almost universal use in the United States are fine to the subscriber obtained a patient are found superior to any ever offered in market.

Railroad companies may be supplied with Spikes having countersink heads suitable to holes in iron trails, to any amount and on short notice. Almost all the railroads now in progress in the United States are fastened with Spikes made at the above name factory—for which purpose they are found invaluable, as their adhesion is more than double any common spikes made by the hammer.

All orders directed to the Agent, Troy, N. York will be punctually attended to.

HENRY BURDEN, Agent.

Spikes are kept for sale, at Factory Prices, by the Juris of the principal from increases are assented to the principal from increases and the principal from increases and the principal from increases are assented as a practicable as the principal from increases are assented to the agent, Troy, N. York, will be punctually attended to.

situated in the town of Newcastle, Del., Locomotive
and other steam engines, Jack screws, Wrought iron
work and Brass and Iron eastings, of all kinds connected with Steamboats, Railroads, etc.; Mill Gearing of every description; Cast wheels (chilled) of
any pattern and size, with Axles fitted, also with
worder times Springs Royas and botte for Cast. wrought tires, Springs, Boxes and bolts for Cars; Driving and other wheels for Locomotives.

The works being on an extensive scale, all orders will be executed with promptness and despatch. Communications addressed to Mr. William H. Dobbs, Superintendent, will meet with immediate attention.

ANDREW C. GRAY, ja45

President of the Newcastle Manuf. Co.

CUSHMAN'S COMPOUND IRON RAILS J etc. The Subscriber having made important improvements in the construction of rails, mode of guarding against accidents from insecure joints, etc. —respectfully offers to dispose of Company, State Rights, etc., under the privileges of letters palent to Railroad Componies, Iron Founders, and others interested in the works to which the same relate. Companies reconstructing their tracks now have an opportunity of improving their roads on terms very a"vantageous to the varied interests connected their construction and operation; roads having in use flat bar rails are particularly interested, as such are permanently available by the plan.

W. Mc. C. CUSHMAN, Civil Engineer,

Albany, N. Y.

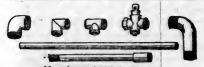

Mr. C. also announces that Railroads, and other works pertaining to the profession, may be constructed under his advice or personal supervision. Applicaitons must be post paid.

O RAILROAD COMPANIES AND BUILD ERS OF MARINE AND LOCOMOTIVE ENGINES AND BOILERS.

### PASCAL IRON WORKS.

# WELDED WROUGHT IRON TUBES

From 4 inches to 1 in calibre and 2 to 12 feet long, capable of sustaining pressure from 400 to 2500 lbs. per square inch, with Stop Cocks, T. L., and other fixtures to suit, fitting together, with screw joints, suitable for STEAM, WATER, GAS, and for LOCOMOTIVE and other STEAM BOILER FLUES.

Manufactured and for sale by
MORRIS, TASKER & MORRIS.
Warehouse S. E. Corner of Third & Walnut Streets, PHILADELPHIA.

RAILROAD IRON.—THE MARY-LAND AND NEW YORK IRON AND Coal Company are now prepared to make contracts for Rails of all kinds. Address the Subscriber, at

Jennon's Run, Alleghany County, Maryland.
WILLIAM YOUNG,
jy451m President TO IRON MASTERS.—FOR SALE.—MILL SITES in the immediate neighborhood of Bituminous Coal and Iron Ore, of the first quality, at Ralston, Lyoming Co., Pa. This is the nearest point to tide water where such coal and ore are found together, and the communication is complete with Philadelphia and Baltimore by canals and railways. The interest on the cost of water power and lot is all that will be required for many years the coal will not cost more than \$1 to \$1 25 at the mill sites, without any trouble on the part of the manufacturer; rich iron ore may be laid down still now hearly at the works, and their together. manufacturer; rich iron ore may be laid down still more cheaply at the works; and, taken together, these sites offer remarkable advantages to practical manufacturers with small capital. For pamphlets, descriptive of the property, and further information, apply to Archibald McIntyre, Albany, to Archibald Robertson, Philadelphia, or to the undersigned, at No. 23 Chambers street, New York, where may be seen specimens of the coal and ore.

W. R. CASEY, Civil Engineer,

VALUABLE PROPERTY ON THE MILL Dam For Sale. A lot of land on Gravelly Point, so called, on the Mill Dam, in Roxbury, fronting on and east of Parker street, containing

Main brick building, 120 feet long, by 46 ft wide, two stories high. A machine shop, 47x43 feet, with large engine, face, screw, and other lathes, suitable to do any kind of work.

Pattern shop, 35x32 feet, with lathes, work bench-

es, &c. Work shop, 86x35 feet, on the same floor with the pattern shop.

pattern snop.

Forge shop, 118 feet long by 44 feet wide on the ground floor, with two large water wheels, each 16 feet long, 9 ft diameter, with all the gearing, shafts, drums, pulleys, &c., large and small trip hammers, turnaces, forges, rolling mill, with large balance wheel and a large blowing apparatus for the foundry. Foundry, at end of main brick building, 60x454 feet two ctories high with a shad may 65x400 feet.

feet two stories high, with a shed part 45, x20 feet containing a large air furnace, cupola, crane and corn oven.

Store house—a range of buildings for storage, etc., 200 feet long by 20 wide.

Locomotive shop, adjoining main building, fronting on Parker street, 51x25 feet.

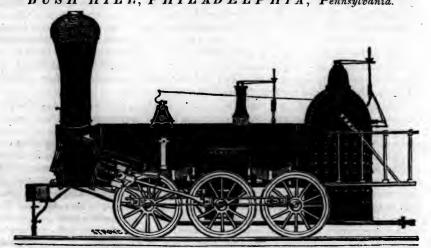

Also-A lot of land on the canal, west side of Parker st., containing 6000 feet, with the following buildings thereon standing:

Boiler house 50 feet long by 30 feet wide, two sto-

Blacksmith shop, 49 feet long by 20 feet wide.
For terms, apply to HENRY ANDREWS, 48
State st., or to CURTIS, LEAVENS & CO., 106
State st., Boston, or to A. & G. RALSTON & Co., Emiadelphia.

NORRIS, BROTHERS:

Sunbury, Eric and Pittsburgh Railroad.

The following article published in a recent number of the United States Gazette contains matter of

tion-and from Ridgeway to Erie and to Pittsburgh

The distance from Ridgeway to Pittsburgh is said

About 200 miles of this line passes through a rebest quality, from which it may always have both for three miles to Le Boeuff creek near Wa cure a share of their commerce, by less rail-

in connection with the proceedings of a meeting held creek, flowing into lake Erie, from which to Pittsburgh by Sinnemahoning-110 miles at Toledo, Ohio, on 25th October and another at summit it descends to lake Erie harbor by an -together 393 miles. What if this distance Cleveland, on the 8th inst., in relation to a railroad easy grade. from Buffalo, along the south shore of take Erie, through Erie, Cleveland, Sandusky, and Toledo to Sunbury and Erie railroad, in his report to Chicago. These projects are intimately connected, the managers says:—"It appears that the lakes, and less money than to complete and may well be grouped, and considered together. They are of vast importance to the regions of country through which they pass, and which they connect, and deserve, as they will most surely receive the early and decided action of all parties interested.

gaged in commercial business, must be con- dam is 4301 feet—all of which may be ad- embark in the enterprize. It is estimated that vinced of the want of a connection with the vantageously overcome by locomotive power, 800,000 passengers are now annually passengers and the Objection and western states lakes of the northwest and the Ohio river of and that it is in no case necessary to increase sing between the eastern and western states, the west, by some means. Business is flowing eastward. New York and Boston during
all the commercial convulsions of the few
past years, have not neglected to keep the avceed 20 feet per mile, and on 2-3ds none over
line on the maintenance of trade in "perpetual motion" but have enues of trade in "perpetual motion" but have also formed new throughfares through which the rich and varied products of the west are poured into their markets, in vast quantities, abounds, and thus extra locomotive power and west by some means, burdens even adding largely to the wealth of thousands in adding largely to the wealth of thousands in may be used with advantage." In this place thought by its weight. During 1844, \$8,-

her commerce is annually decreasing by rea-quality—this with the other advantages this but from it, the rest can, in some measure be her commerce is annually decreasing by reason of the energy of N. York and Boston and Baltimore, in furnishing a cheap and speedy means of transportation, to and from the great west. Philadelphians open your purses, open your eyes to your geographical position, take the map of your state, in your hands and examine the route of the railroad that heads this article—Philadelphia and Pottsville are join-mate can be made of the cost of such a work mate can be made of the cost of such a work mate can be made of the cost of such a work mate can be made of the cost of such a work most extensive tract of fertile land known in the world, thousands on thousands of necessity of the such as a shorter and easier with lake region within the United States, at 280,000 square miles, and adds it is twice as gers and freight, not only cheaper but more rapidly than any other in the United States. We refer again to Mr. Miller. "It will not of course be expected that, an accurate estimate and a large part of surpassing fertility."

Bordering the rest can, in some measure be route for it, the rest can, in some measure be route for it, the rest can, in some measure be route for it, the rest can, in some measure be route for it, the rest can, in some measure be route for it, the rest can, in some measure be route for it, the rest can, in some measure be route for it. States for permanency, and soon will be by from as careful calculation, however, as I am a canal admitting steam vessels of two hundred tons burden. Pottsville at a small cost experience I have had in constructing similar.

Who can conceive the prospective extent can be connected with Sunbury, by finishing works in a similar country. I believe that of that population, who can conjecture the Sunbury the route of the Eric and Pittsburgh heavy iron rails including turnouts, stations, commerce between that population and the railroad, passes up the West Branch of the warehouses, machine shops, land damages east. Going east we shall have the surplus Susquehanna (at Williamsport uniting with and engineers' expenses, the sum of \$9,508, produce of 12,000,000 busy and industrious the Elmira railroad) to the mouth of the Sin- 000, or \$33,000 per mile will be required." people. Going west, we shall have all the nemahoning, up this river to the head of The cost of a single track with turnouts and luxuries and necessaries for that population. Elk creek, down Elk to Jacob's Mill, one all contingencies at this rate would be about Those of the east will get their bread from mile above Ridgeway, situated at the con-fluence of Elk creek and Clarion river—at would be for the extra distance through a bi-wearing fabrics and other products of every

ny river two miles above Warren. At War-no profit whatever be made on transportation. to be about 110 miles, and the grades exceedingly fa- ren the Allegheny is crossed and followed to The advantage of this connection over all the mouth of the Brokenstraw—up the valley other routes, is that there are no steep grades, tance to Erie is not given but it will not probably of this stream and its tributary Harris creek, no short curves, no high bridges, cheap fuel, wary much from 120 miles. gion abounding in bituminous coal and iron of the this to Big French creek, and by the valley with the lakes and Pittsburgh-and thus seusiness and fuel.

We give this communication entire, long as it is, to Le Boeuff summit, at the head of Walnut bury with Erie, will require 283 miles, branch

whole distance from Sunbury to Erie is 283 that one connection. miles, and in this distance are five summits, this point, a branch to Pittsburgh might di-tuminous coal region, and the rich iron coun-sort, of every mechanic and manufacturer.

verge which would be about 110 miles long, try of western Pennsylvania. This road at descending the whole distance, and having no \$33,000 per mile will cost \$4,950,000, or grade exceeding 12 feet in a mile. From a single track, about \$3,000,000. Mr. Milinterest in relation to the proposed railroads from Ridgeway the line to Eric passes up the valler estimates that 100 passengers carried dai-Philadelphia to Eric and to Pittsburgh. Ridgeway the line to Eric passes up the valler estimates that 100 passengers carried dai-ley of the Clarion to Johnsonburg, and then ly for 340 days in a year, in each direction This plan proposes a line in common, "a main takes the west fork and continues to its head, at a toll of two cents a mile, and 50,000 tons stem," from Philadelphia to Ridgeway in Elk county which rises near the south branch of the Te- of freight each way per annum, at two cents -- that is the Reading and other roads in continua- onista—from thence following the Teonista to per ton per mile, will pay the repairs and su-Cranberry swamp from which the water flows perintendence, and yield an income of more into Teonista creek, and also into the Alleghe than 8 per cent. on the investment, supposing

> French creek. The line then continues down and that Philadelphia may thus be connected is a few miles greater than the Juniata route, Of this route Mr. Miller, engineer of the still it will require less road to be made to connect Philadelphia with both Pittsburgh and

Any one acquainted with the resources contwo of which, Cranberry swamp and Le tiguous to our northwest lakes, and large ri-Boeuff are of small consequence; that the to-vers of the west, will not doubt a moment tal amount of rise and fall from the surface that the trade and travel pouring into this road, Philadelphians and particularly those en water of lake Erie, to that of the Sunbury will fully compensate the stockholders, who their cities, and to the states of which they are we will state for the information of those un-the metropolis.

travel in consequence, we will say will seek practice on the atmospheric line. this route, because it is the nearest to the Atlantic, of any practicable way, grades easier, mospheric train to remain at rest until the emptying into the heart of the iron region. fully as cheap, and all tending to furnish quick train of the rival line has passed at full speedy and low transit. There is 2400 feet speed, and then getting into motion from a surveyed, a route up Little Fishing creek, to state of rest, the atmospheric train finds but Williamsport, a distance of about forty miles, Erie railroad, our northern rival, and about little trouble in outstripping the other. These 4000 feet less than the Baltimore and Ohio "racing" trains have continued the trial of railroad, our southern rival for the Ohio trade; their strength during the whole of the past we have no grades but those admitting locomotives with heavy trains, and without extra power, while our rivals will be compelled have their road over the steepest of ours, 33 mospheric has been in no way overstated by designed to connect the little Schuylkill railfeet per mile.

the value of their position in regard to the train, consisting of five passenger coaches, west, and that generally little is known of drawn by the "White Horse of Kent" (a the importance of that trade: this should not most powerful locomotive engine, made by from, the Pottsville and Danville railroadbe, now is the time to secure to this city, Stephenson & Co., and regarded as the pat- but in no way competing with it for the coal commerce without stint, a trade that during tern card of engines supplied from that celethis generation will realize more wealth to brated locomotive manufactory,) and an at-

# Atmospheric Railway.

We find the following remarks, in relation to experiments made on the Croydon railway, in the London Railway Record of 1st inst. They are, we think, well calculated to convince those who have been sceptical and may possibly induce those, who the speed; and ladies, instead of dreading have been compelled to acknowledge the advantage the open carriages, as on locomotive lines, of the system, on high grades and short lines, to are to be found riding in the leading carri-

# The Croydon Atmospheric Railway.

The Croydon atmospheric railway, which last week was specially worked for that por-tion of the community most interested in daily, and the public at large have been allowed to gratify their curiosity by travelling with trains at stated periods of the day.

The result of all the workings which have hitherto been considered by the company and Mr. Samuda as experimental, for the purpose of training the men in the efficient discharge of their duty, has been of the most satisfactory nature. As far as the public case is concerned, the matter is now set at rest. The iar superior speed, the increased luxury of travelling, and the absence of all apprehension of danger during the rapid transit of mocrat says: trains, must determine that point.

The local circumstances of the line are peculiarly favorable for the institution of a comparison between the rival modes of locomotion; and the engineer of the atmospheric line has availed himself of that circumstance to satisfy the public practically of the superiority of his system over that of his rival.

which only one month since would have been but about nine miles more grading to con-consented to serve.

This commerce and the multitude who must regarded as a fable, is now the almost daily nect it with the Little Schuylkill railroad,

The usual plan of operation is for the atand present week, and must by this time have satisfied those who have watched the result, that the superior speed claimed for the atits advocates. On Thursday last a trial of It is said Philadelphians have never known speed took place between the Dover quick Philadelphia and the people of our state by ten times than the cost of the means by which it is to be secured.

mospheric train, consisting of seven passenter than the cost of the means by ger coaches. The atmospheric slacked its speed and allowed the locomotive train to it will become an important feeder. pass at full swing, and then taking up the chace, passed its adversary in less than two

The comfort is as prominent a teature as

mospheric system on this railway is one of such deep interest to shareholders, and the advantages of the system, and beneficial influence it will exert on railway property, so little understood generally that we shall the sand her honor placed above represent railway matters, has been continued at work little understood generally, that we shall take another opportunity of entering on these matters more fully. In the mean time we re-

# Cattawissa Railroad.

We perceive, says the U.S. Gazette, that there is to be a meeting of the stockholders of the Cattawissa railroad company, in this city on the first day of December, on the subject of the road, its means, location and probable advantage. The Blumesburg De-

"We understand that the stock has lately changed hands, and that the road is soon to be completed to the Susquehanna river. The road has been purchased by a company of sic merits of its location, and as the cheapest the advance paid.

The annual meeting of the Wilmington and Randonly feasible route from Philadelphia to The annual meeting of the Wilmington and Randonly feasible 13th the Susquehanna river, and from thence to leigh [N. C.] railroad company was held on the 13th lake Erie, and not like other projects we wot list. The receipts of the year ending 1st October, of for the nurnose of merely advancing the We allude to the fact of the Dover and of, for the purpose of merely advancing the Brighton railways running parallel to the interest of land speculators, stock jobbers and Croydon atmospheric line for nearly the obscure villages, which have nothing more whole of the distance at present worked; thus to recommend them than puffs of wind, hills, affording the locomotive and atmospheric valleys, tunnels, and inclined planes. The trains an opportunity of running side by side. road is already graded for about forty miles To catch or overtake "an express" train, from the Susquehanna river, and requires

and thus make a continuous railroad from Philadelphia city to the Susquehanna river, which passes through a valuable iron and coal region, without any very deep cuttings, tunnels or inclined planes. This portion is to be commenced as soon as the road is completed to the river at Cattawissa.

This road, if we understand the matter, is road with the Susquehanna at, or near, the mouth of Cattawissa river, and it will thus be nearly parallel to, and not very distant trade, we believe, as it penetrates another range of valleys, north and west from Port Clinton, on the Reading road, and to which

Wabash and Erie Canal.—At a public meeting of chace, passed its adversary in less than two miles, and continued its course till its fiery friend was lost sight of in the distance!

The comfort is as prominent a teature as urging upon the legislature the adoption of such mea sures as will secure the desired effect. Also the following resolution was adopted:

Resolved, That the interest of our foreign bondholdof the system, on high grades and short lines, to ages of the train, so free from all annoyance into use on "long lines," as well as short ones.

We shall endeavor to keep our readers apprised

The result of the application of the attemption of the attemption of the system.

American Railroad Iron.-We ask the attention of our readers and especially of railroad companies, Col. Crozet, civil engineer, to Mr. Lyons, of Rich. from those nett earnings. Respectfully yours.

the agents.

Mr. Herron's Plan of Superstructure.-We give in this number a description and estimate of the cost of Mr. Herron's plan of superstructure with an it. We shall keep our eye upon those three miles, and our readers apprized of its performance. We great saving of machinery and iron.

History of the Coal Trade of the Schuylkill re gion, Pa. We very cheerfully give, [see advertizing columns] the card of Mr. Bannan a place in the Journal. It relates to a matter in which this community has an abiding as well as a burning interest, and we know of no gendeman better qualified to write its history. It will afford us pleasure to be instrumental in the sale of the work.

Thanks to the friend who sent us the Logan Gazette; he will perceive, however, that we had al-

### Harlem Railroad.

We learn, by their advertisement in another column, that this company will apply to the legislature, at its ensuing session, for permission to extend their road to Albany. It is much to be desired that a road should be constructed between this city and Alters in the country granted, amended and extended; yet little progress has been made, comparatively nothing but engineering done, and that mainly at the engineer's expense, under that charter which has now nearly expired.

Now another company comes forward and proposes to construct a road, and of course has to encharter, and now, therefore, comes the contest. A word of advice to both parties-unite-unite your forces, gentlemen, and work together, then we shall probably have a road to Albany.

# Great Western Railway, C. W.

We learn, from the best authority, that the entire stock of this company has been taken in England by a few of the leading capitalists, and that 15 per cent. on the entire amount, \$6,000,000, has been paid up. That fact alone, shows that it is not, and will not be, in the hands of speculators. The stock commands a high premium in London, and is at 6 per cent. advance at Hamilton.

Arrangements are now making to commence operations by the 1st of December, and the road is to be in full operation by the autumn of 1848! This is nearly equal to the present English mode of making and furnishing an entire line of 92 miles in twelve months and a few days, by one contracting firm.

This road is to commence at Windsor, opposite Detroit, and pass through London to Hamilton, 190 miles, and then probably be continued to Fort Erie, opposite Buffalo, or to Niagara Falls direct, and Paid in on each share..... ract-thus uniting the interests of both Buffalo and will be a fine opportunity to make a first rate investment of capital, and a beautiful display of engineering skill, and of the mechanic arts.

# Virginia--Internal Improvements.

Reference has been made to a letter addressed by

Correspondents will oblige us by sending in their to the advertisement of the "Montour Iron Compa- mond, on the subject of completing the line of comny," of which Messrs. Murdock, Leavitt & Co. are munication between the eastern and western sections of Virginia. The Richmond Enquirer, of Wednesday, contains that letter, and accompanies its publication with a series of remarks, from which we take the following, which appears to us both just illustration which will enable any one to understand and appropriate, and we trust that such counsels will prevail at the coming session of the legislature. Let the people of Virginia give proper attention to should like to see more of it in use. It would be a the cultivation of the soil, and at the same time construct suitable main lines for travel and transportation, and then invite northern men of enterprize to occupy their vacant lands, and join with them in the improvement of their unsurpassed water power, and the working of her rich mines, and they will soon find their affairs to wear a very different aspect. "Old Virginia" will be herself again, and again assume her proper relative position among the states of the union, which she has lost by the improvident course of her sons-not her daughters, for they are proverbially good managers-but which may be regained by a wise and vigorous system of cultivaready published the report of the superintendent and tion and improvement of the soil, and a judicious extension of her works of internal improvement. It is only for the people of Virginia to will it, and then to act in accordance with that determination, Will they do it? We shall see. The editor says:

> "The letter of Col. Crozet discloses to us the important fact, that the route to Parkersburg from Baltimore, is impracticable for all useful purposes, and that our central improvement has nothing to fear bany—and that the different interests should be harmonized. The subject has been a long time under consideration and discussion; one of the best charters in the country granted, amended and extended a point from which the competition with our route

> would be very little greater than that from Pittsburg.
> "But whether greater or less, we would no longer enact the dog in the manger to our brethren of that portion of the state. It seems we cannot be connected with them in trade, by railroad or otherwise, as the route from Staunton to Parkersburg is also impracticable. It is idle to expect their trade to de-scend to the Great Kanawha—they have no imcounter the opposition of those having the original provements from the interior to that river. And if a railroad were given them to accommodate that trade, it would be a link in their desired connection with the Baltimore road.

"We see, therefore, no ground for unnecessary jealousy among the friends of improvement. The northwest, the central line and the southwest may all unite in one common cause, and with the aid of those in the east, who have always favored their views, added to such as are now daily heard to say, 'we ought heretofore to have gone for these improvements, and will no longer oppose them, a reasonable hope may be indulged, that the ensuing session of the legislature will be characterized and chronicled in after time, as the great one in the cause of internal improvement and education."

# Table of American Railroads.

The following is precisely what we wish to receive from those who have the means to detect and correct errors in this table, and we are much obliged to the gentleman who sent it to us. Will others please do likewise?

For the American Railroad Journal.

I give you the following facts as connected with the Buffalo and Niagara Falls railroad company. 

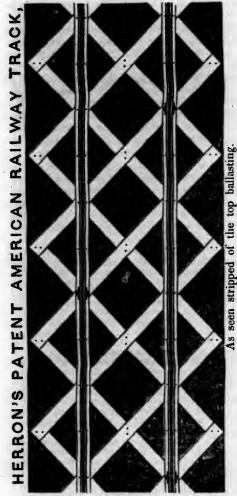

The gross earnings of the road are calculated Rochester. This is a magnificent project, and it from June to June of each year, and therefore I do not give them.

> 3 per cent. dividend was declared on the 1st June last, and 3 per cent, has lately been declared out of the nett earnings of the 6 months ending 3d November, the company having still on band a reserve fund

Herron's Patent Railway Track.

For the American Railroad Journal.

The cut is a plan of the railroad track invented and patented by Mr. James Herron, C. E., as it is dation. laid upon the Philadelphia and Reading railroad, between Valley Forge and Phænixville. It is represented as seen before the trellis foundation was

The trellis, or diagonal sills, represented in white, are 3 inches thick, 8 inches wide, and 14 feet 9 inches long. These sills are of sawed white pine piece at the time it was subjected to the process. timber. They were laid upon the clay embankments and in the wet cuts, without any ballasting under them; but little way below the surface of the timber in the and it will be seen, they make an angle of about forty- generality of cases, it could not reach, and arrest, foundation for supporting the rails, as shown in the cut. These sills are not notched into each other where they cross, but are secured together, on the centre line and extremities, by two spikes driven in each made the first successful application of it, by hycrossing.

White pine and hemlock string pieces, 5 inches thick, 8 inches wide and about 20 feet long, are laid an engine or car, by any means be thrown off the diagonally upon the latticed sills, and are united to rails, it will not likely result in any serious damage, each other at their ends, by a suitable scarfing. The as the trellis sills are covered by the ballasting, leavstring pieces were dressed to a thickness where they ing nothing exposed, as the cross sills are, for the rest upon the intersections of the lattice; the inner wheelsto "bump" upon, and thus shatter the carriages. side being made † of an inch thinner than the outer And, as the string pieces and rails are strongly sefor the purpose of inclining the surface of the rails cured, they will serve as guards to keep the carriato suit, as nearly as possible, the conical form of the ges from running off the embankments. Cases

ing upon the string pieces, with which they regular-|continued on, in two instances, for more than a ly break joint, while the latter are evenly sup-mile before the men upon the cars discovered it. ported by the strongly combined elastic trellis foun-

The rails, string pieces and trellis sills, are secured together upon this track, by ‡ inch screw bolts, two at each intersection of the lattice. And the ends of the rails are joined by chairs of wrought iron of a new design.

The fastenings used upon this track are more than fifty per cent, heavier than those Mr. H. used upon his Baltimore and Susquehanna track; but, for the generality of railways throughout the United States, the common hook spike fastening would be quite sufficient and would materially reduce the first cost of the track. Mr. Herron has, however, devised a more perfect system of adjusting fastenings than any he has hitherto put in practice, by which the rails and string pieces could be removed, replaced and adjusted, without disturbing the ballasting, or the sub-structure. Those fastenings will also afford great additional facility in the taking out, and replacing any of the trellis sills that may require it; which can be done on any of his tracks, without stopping the trade of the road, but with the more improved fastenings to the extent of the whole tim-

The whole of the timber used in this track underwent an antisceptic process. A solution of the bichloride of mercury being forced into the wood by a pressure of 100 pounds on the inch, the air being exhausted, by which nearly half a gallon of solution was forced into each cubic foot of timber. The strength of the solution was 1 pound of sublimate to 15 gallons of water, with the exception of 9,500 feet laid between the 28 mile post and Phoenixville lons of water. *-

The simple soakage of timber in this solution, for a sufficient length of time, [Kyan's process] has almost universally proved successful, both in the large quantities thus prepared in England, as well as in the more limited application of it, hitherto made in the United States. And where an occasional piece of timber has been found to decay, in some of the large lots thus prepared in England, [for as yet there is no evidence of any timber prepared with corrosive sublimate having rotted in the United States | there is much reason to suspect that it was owing to decomposition having too far advanced in the heart of the

As the penetration by soakage, however, extends five degrees with the line of the rails. A second the decay in progress at the centre, hence the more course, of the same sized sills, laid nearly at right effectual process of forcing the solution into the angles on the former, make together, the latticed body of the timber, to perfect saturation, has been adopted by the British admiralty, and on some of the more recently constructed railways in England, as well as by Mr. Herron, who is believed to have draulic pressure, in the United States.

Security on this track is nearly perfect, for should ed by the heavy black lines, have a continuous bear- more wheels were thrown off the rails, yet the train MANENT RAILWAY.

November 15th, 1845.- This track has now been opened to the heavy trade one year and five days, during which time eight hundred thousand tons, of 2240 lbs., of coal have rolled over it. The gross tonnage of the coal trade, cars and engines being added to the above, will make about 1,310,000 tons. And the whole rolling tonnage, including freight, passengers, etc., probably, 1,400,000 tons.

The excellent condition of the track at this time and the ease of motion with which the cars roll over it, are proverbial.

The quantity and cost of materials and workmanship, per mile of track, were as follows, viz: 8 633 cubic feet [103 600 ft hm Lof white

6,033 cubic feet [ 103,000 ft. b.m.] of white	
pine at 15 2-3 cents	\$1,352.55
8,633 cubic feet of timber impregnated	
with the bichloride of mercury, by hy-	
draulic pressure, at 5 12-100 cents per	•
eubic foot	442.00
7,794 lbs. of wrought joint chairs, screws	
caps and bolts, at 8 cents	623.52
7,575 lbs. of hook headed screw bolts and	
nuts i inch diameter, at 7i cents	587.06
2,000 lbs. of Burden's 7 inch boat spikes,	
at 51 cents	110.00
2,143 lbs. cast iron washers for bolts at	
3 cents per pound	61.30
<u> </u>	

Cost of materials exclusive of rails....\$3,179.43 93 tons of H rails, 59 2 lbs. per yard of bar at \$60 per ton...... 5,580.00 Workmanship, constructing and laying track, about. .....

Cost of one mile of Herron's patent

The above account does not, of course, include the cost of widening the cuts and cinbankments, removal of slips, loose stone, solid rock, and ditching; nor the distribution of materials, straightening of damaged iron, cost of hydraulic Kyanizing apparatus; timber and other materials left, and since used upon other parts of the road, etc.

When spikes are used to secure the rails, instead of screw bolts, the cost will be very considerably reduced, and as timber may generally be had at onethird less than the above price, and as it may be preserved with chloride of zinc, the cost of No. 2 track laid with heavy iron will be from seven to eight thousand dollars per mile.

For the purpose of extending the benefits of thi improvement as widely as possible, Mr. Herron has determined to render his patent charge merely nominal, by merging it in cost of construction, while the latter will be fixed, in accordance with the usual prices, at a fair moderate estimate for mechanical labor; and it will be found by comparison, to be in many cases, much lower than the prices that have been paid for the better description of tracks in use. Thus, for the construction of No. 1 track, with screw bolt fastenings, and all his more recent improvements, at the present price of labor, he will charge one thousand dollars per mile.

No. 2 track, under the same circumstances, will be constructed for eight hundred dollars per mile.

These prices may have to be slightly increased in the southern states or wherever labor is high.

Companies will thus get the benefit of Mr. H.'s engineering experience and skill in perfecting their superstructures, while it will be clearly to his interest to execute the work in the most substantial and wheels in use upon the road. The rails, represent have occurred, where a car axle broke, and one or faithful manner, that will make it in truth a PER-

### Georgia Railroad and its Extension.

We are indebted to an intelligent friend for an interesting letter, from which we make the following extracts, in relation to the contemplated extension of the Georgia railroad. We were under the impression that the connection of the Georgia and to be constructed on his plan. Central roads with Alabama or the Montgomery and West Point railroad, was to be effected by a road from Griffin, or some suitable point on the Monroe road to West Point, about 65 miles-but we learn from this letter that it is contemplated to construct a railroad from Atlanta, the termination of the Georgia road, direct to West Point, about 85 to 90 miles, which wilt be considerably shorter than by the way of Griffin. It is also in contemplation, we learn, to construct a railroad from Macon to Columbus, and thus open an easy communication between the best cotton region of Georgia, and Alabama and Savannah. This will greatly increase the business of the Central railroad and of Savannah. It is to be hoped that both of these extensions will be speedily commenced; and also that the Western and Atlantic road will be completed to the Tennesee river, without delay. The advantage to be derived from it use. He will also find copious extracts from the will be proportionably much greater than the outlay report of the committee appointed by parliament to required to complete it. The writer says:

"I have no doubt of the early extension of the Western and Atlantic railroad to the Tennesee river, at Rossville [Chatanooga]. With the exception profitable; yet we were of the opinion that it should of a short tunnel of some 1200 feet, and the superstructure of a few bridges, the entire road is ready in railroads, that it might be exploded if a humbug for the reception of the rails. That the continuation of this road to Nashville will be undertaken and ac- safety to the locomotive system. complished within a few years, no one who will consider its commanding position, can for a moment question. It brings Nashville within 570 miles of the system, since last year, of which we shall enthe Atlantic at Charleston, and opens to us at once deavor to give some account before long. the heart of the great west-affording an outlet for

"As commanding as the position of our road is, in reference to the trade of the west, it is not the less so in relation to the travel between the north and decidedly in favor of making experiments in France. southwest. The great northern and southern mail now traverses the whole length of our road from Augusta to Atlanta, 171 miles, and thence is carried hope on the arrival of the next steamer. in stages 136 miles, via Newmas and West Point, to the head of the Montgomery railroad. It is over this route that the connection by railroad between Atlanta and the Montgomery railroad will be formed, and not by the zigzag track via the Monroe railroad that you suggest. As soon as the country has recovered entirely from the effects of its former excesses in all sorts of speculative projects, this connection - which not only affords an avenue for northern travel, but will also receive that from Tennesee to New Orleans—will be undertaken and and send us his paper. completed. Its length will only be about 85 or 90 miles to its junction with the Montgomery and West

Point railroad. " On the north of us, the present route of the great mail and travel is circuitous, and encounters occasional delays unavoidable upon ocean navigation. These difficulties it has been proposed to overcome, either by a road from Waynesboro' on the Wilmington and Weldon railroad, by Fayetteville, Cheraw and Camden to the South Carolina railroad at Gadsden, or by a continuation of the Raleigh road tion, as there is just room for another column of figto the same point."

The "old north state" must be aroused to action on this connection between her works and those of South Carolina. It will never do to have such a break in such a line.

For the American Railroad Journal.

MR. EDITOR. A London paper states that the Atmospheric railway system has of late been so greatly improved by Pilbrow, that new roads in Great Britain, to the extent of one thousand miles, are about

Your Journal has published from time to time notices of atmospheric railways; but neither in it nor elsewhere have I seen any account of the cost of their construction. Have you any such information in your possession? If so, its publication would doubtless interest many of your readers.

ENQUIRER.

You noticed, some time ago, the receipt from F. O. J. Smith, of a book called "Vocabulary for secret correspondence, by means of the electro magnctic telegraph." Is the work for sale in this city?

If "Enquirer" will examine the volume of the Railroad Journal for last year, 1844, he will find a very full description of the atmospheric railway as then in use on the Kingston and Dalkey road, with illustrations and estimates of cost for constructing and working, as compared with the other mode in investigate the merits of the system. Indeed, the space devoted by us last year to this new mode of working railways, was greater than many thought be thoroughly understood by all who are interested -and adopted if superior in point of economy and

Great improvements, however, are said to have been made, both in the construction and working of

The description given by us last year was from its productions some hundred miles shorter, from the Mr. Samuda, one of the patentees, and may theremouth of the Ohio, than by any other route to an force be supposed to be put in the most favorable light -but we have now before us the report of M. Mallet, a French engineer, who visited Kingston for the purpose of making experiments. His report was

We shall probably be able soon to give the result of recent experiments on a more extended scale, we

In relation to the "vocabulary of secret corres pondence," we cannot say whether or not they are for sale in this city. They were, we believe, printed by order of congress.

Canal Tolls for October 1845 .- The editor of the monthly statement of receipts of tolls on the different canals, a statement also of the expenses of collection,

We have now before us the statement for October which has a column showing the expense of collection of tolls, but not of superintendence, and tending locks. Will the editor do us the further favor to add another column still, showing the cost of superintendence and lock tending? We desire to publish these statements regularly in the journal, as we shall be able to do from the Atlas, which we now find a regular and acceptable visitor.

There will be little trouble in making this addiures, as will be seen, if fine type is used. The Atamount collected for toll in the month of October on the several canals, and also the expenses of collection, that is, the amount paid to the collectors and that the entire road should be made within their clerks, the canal boat inspectors, etc. The extra the limits of our government; and that a'll

penses of collection are retained by the collectors out of the tolls of each month and the balance of the tolls is placed to the credit of the treasurer. In the following statement, the first column shows the profollowing statement, the first column shows the proceeds deposited to the credit of the treasurer for -the second shows the expenses of collectors' offices and the salaries of inspectors—the third column shows the gross amount of tolls for the month of October on all the state canals.

The expenses of collection on the Chenango caabout \$150. These expenses do not include the charges for superintendence, lock tending, etc., which amount to about half a million of dollars per annum.

Railroad Meetings in Ohio.

We take from the Ohio State Journal, of 12th inst., the following account of a meeting held at Toledo on the 25th of October, for the purpose of considering the subject of a railroad from Buffalo. along the southern shore of lake Erie to Toledo, and thence to Chicago, or to some point in Illinois, with a view to its extension to St. Louis. We concur fully with the editor of the State Journal in the opinion that "this road is one of vastly greater importance than any or all others now proposed in and from the northern section of our state;" and therefore we hope to see it taken hold of with the right spirit, and prosecuted with vigor even until it reaches the Mississippi in more places than one.

The proceedings appear to have been first published in the "Toledo Blade"-an implement of war well known in the Maumee country, though we have not been gratified for many a year by a sight of its beautiful polish and exquisite edge, though we occasionally hear the sound of its high tempered metal, as it severs a limb or a head, from some luckless wight, who comes recklessly within its sweep. Possibly we may see it again-aye, and feel it too-its influences we mean, in favor of this important work in which so many will soon become deeply engaged. This is one of those works which cannot be allowed

At a numerous meeting of the citizens of the city of Toledo, Lucas county, Ohio, held Albany Atlas will please accept our thanks for his at the old court room in said city, on the 25th attention to our request, that he would add to his day of October, 1845—Richard Mott, the mayor, was called to the chair, and Junius Flagg appointed secretary.

The object of the meeting having been explained, the Hon. H. D. Mason, the Hon. Elisha Whittlesey, and Jesup W. Scott, Esqs, thereupon offered the following resolutions which were unanimously adopted:

Resolved, That the time has arrived when a railroad, to connect the north Atlantic states with the states of the northwest, should be constructed. That the united exertions of both these great sections are required an l should, without delay, be put forth for the a-tainment of this object. That the interess of the stockholders and of a large portion of las says "The following statement shows the the people along its line as well as conside: ations arising from love of country, require that the entire road should be made within

attempts, within the states, to forestall action on the route, by encouraging the construction of a road to pass through the territory of a number, sent probably by mistake, or for some purforeign government, should be met by a determined spirit, that we will not rest until this work shall have its entire route fixed on

the soil of our republic.

Resolved, That it is the opinion of the meeting, that the efforts exerted by several American citizens, and communities, to withdraw from their usual direct and national channels the products and the travel of the western and southwestern states, and to open new, circuitous and unnatural channels through the province of a foreign power, for their transit and passage, to the states and cities bordering on the Atlantic, should be counteracted, by showing to the American people the practicability and greater advantages of the route on the south shore of lake Erie for the construction of a railroad, and by showing the amount of business such road we entertain a deep and abiding conviction: and would necessarily perform; and the loss the we would just wisper in the ear of the editor of the country would sustain, if such efforts shall be Herald particularly, and the people of Cleveland successful.

Resolved. That it is expedient to appoint a committee to confer with such persons and the interior, in connecting Cincinnati with our beaucorporations on the south shore of lake Erie titul city." Railroad Meeting at Cleveland

We find in the Cleveland Herald, of 10th inst, a pose, as we have not before in years received a number of the Herald, though we have sent the Journal to it for many months—the following account of the intended to advance the public interests, he proceedings of a meeting held in that city on the 8th inst., for the purpose of consulting and confering in relation to the railroad from Buffalo to Toledo and

The meeting was addressed by E. Whittlesey, of Trumbull county, and H. D. Mason, of Toledo, who had passed over the proposed route from Toledo to Michigan city, for the purpose of ascertaining the character and resources of the counties through which the line would probably pass. We give at length Mr. Whittlesey's remarks, as they are directly to the point, and may be useful to the subject under consideration.

Of the importance of this road to the people along its entire line, and to the multitudes who will emigrate westward, and would pass over it if finished generally, that they must not content themselves with "spending their energies and means in 'penetrating gold" as well as "statistical information," and "inlake Erie more deeply interested in this work, or

ndividuals, in grading a track and laying down the superstructure of a railroad from the Maumee river to Sandusky city, and from thence to Huron; and while he had no doubt the gentlemen who had charge of the work then thought, and had seen no reason for changing the opinion, that the line selected. although important as a link of the road, was the last that should have been undertaken. His object in referring to what had taken place was not to bestow any censure upon those who had charge of the work, but to find the cause for the apathy that had existed for some time past in regard to this road, in ihe failure to prosecute the work after it was commenced. It was known to the gentlemen present, that a company had been incorporated some years since, to construct a railroad from Toronto, on lake Ontario, to Port Sarnia, at the outlet of lake Huron, and that the British government had recently subscribed liberally towards the work; and he expressed it as his opinion that the road would be constructed, inasmuch as it would open an extensive tract of uncultivated land for settlement, and the policy of the present government now being to win the confidence of her subjects in the province referred to, by acts of kindness and liberality. This route was fathe construction of a railroad from Toledo to "in aid of the railroad along the south shore of lake vorably considered by different sections of Erie." There is no other place on the south side of New York east of Buffalo, and different companies proposed to form connections with it, as should best advance the interests of the sections of the country they represented. In tant day be extended on the north side of lake Gentlemen, who are in favor of construct- Ontario to Kingston, it was proposed by one ern market, and the travel on such routes ing a railroad along the south shore of lake company to construct a railroad from Route would concentrate.

Erie, which would ultimately connect Buffato cape Vincent, and to connect with the Calo with the Mississippi, assembled in the hall nada road at Kingston. That the Canadian of Lorain county, was appointed president, that city to Ogdensburgh had been liberally and B. F. Wade, of Ashtabula county, secgranted another charter for a radiroad from The meeting being organized, John W. Bertie, nearly opposite to Buffalo, to Sand-Allen, of this city, called upon Elisha Whit- w ch, near Detroit, and the construction of pointed by the chairman. Whereupon, Jetelsey and Judge Mason to communicate this road was favorably considered by the cisup W. Scott, Henry Bennett, James Myres, what statistical information they had obtained to tize of Buffalo. A portion of the citizens of Michigan were in favor of the last mentioned route, in their late tour between Toledo and Michigan were in favor of the last mentioned route, inasmuch as it would connect. Mr. Whittlesey thereupon responded in by crossing the Detroit river, with the Cenbstance as follows:
That the citizens of Toledo were induced bably prefer the Toronto and Port Sarnia On motion, Resolved, That the second to invite a meeting of the citizens on the south route, to a route on the south side of lake shore of lake Erie, to take into consideration Erie, and they might connect the Central railthe propriety of renewing their efforts to con- road with it, in the vicinty of Fort Gratiot. struct a railroad which should ultimately Whatever the citizens of Canada or the preconnect Buffalo with the Mississippi river, sent government might do to create facilities Resolved, That a committee of three be from the measures which were actively pro- for business or intercommunication, he should secuted to divert the travel and the products witness with satisfaction; but he hoped the channels, and turn them through the pro- American capitalists, whether they should vince of Upper Canada. He reminded the seek investments in a foreign province to the gentlemen present, that in 1836 a company abandonment of a route in their own counwas incorporated to construct a railroad from try, vastly more advantageous to them in a mee river, with the right to extend it to Fort tlemen at Boston and New York to desig-Defiance; and that a considerable sum of nate the trade they expected in either city

# Sale of Another Railroad.

Ohio Railroad Company.-We find in the Sandusky Clarion, of the 11th inst., a notice of the board its supply, produced more than one million emigrants in one day. A railroad would not of public works of Ohio, offering to receive proponine hundred thousand bushels. There had convey all the emigrants to the west, but a sals "for the purchase of the property, right of way, been shipped from Michigan city, 90,000 road so straight, with so low grades, and permanent fixtures and chartered franchises" of the bushels, and it was expected that two vessels cheaply constructed, and rates corresponding. Ohio railroad company, extending the entire diswould take from 10 to 12,000 bushels more, and that the navigation would close with advantageously, to both parties. The questate line, or about 175 miles. The Ohio railroad tion received from Chicago, the spring would ergies, the products of the west and southwest Will Wm. Durbin, Esq., or Cyrus Williams, Esq.,

believe, discontinued upon it four or five years since, of course great losses will be sustained by those who furnished the capital expended in grading, piling and bridging, as it is well known that works of this kind decay more rapidly when out of, than when in, use; but as a good road is of more importance to the people than the dividends upon the stock, it may better be given to any company, or individual who will complete it in a proper manner, and manage it properly, than to have it remain as it is-useless and an eyesore to those who have invested ca-

The present is a fortunate period for putting it up for competition; and we hope it will be taken hold of by capitalists who will make all necessary arrangements this winter for commencing operations early in the spring, and then prosecute the work to an early completion; but if such a company cannot be found to purchase it, or even to take it as a gift, then we would recommend to the legislature of Ohio, at the coming session, to offer a bonus of \$500,000, in three annual instalments, to the right sort of a company that will put it in successful operation within that period. It would be the best investment they could make of that amount of capital, as this road will form a base line with which will be connected numerous lateral roads extending westwardly to the Ohio river. 'If, however, the state legislature declines further aid to this important work, as we suppose it will, then we say to the people of the twenty-five northern counties of the state, better would it be for your prosperity to be taxed one million of dollars in four years than not to have this road built that said permanent fixtures, right of way -if the Canadians should, as they surely will, construct one on the other side of the lake-even if you ed to the state of Ohio if the purchaser shall never receive a penny in the way of dividends.

The following is the notice referred to.

OFFICE OF THE BOARD OF PUBLIC WORKS, ? Columbus, Oct. 30, 1845.

In pursuance of a joint resolution of the general assembly of the state of Ohio, providing "for the sale of the personal property, fixtures, right of way, etc., of the Ohio rail-road company, and for other purposes," passed March 12, 1845, the board of public works will receive proposals, at their office in Columbus, until the 24th day of December next, for the purchase of the, right of way, permanent fixtures and chartered franchises of said company. Proposals may be made for the whole line, extending from the Maine, where they have a mine rf excellent heme-Pennsylvania state line to the Maumee river, tite ore. or for separate sections, as follows: 1st, for all that portion lying east of Cleveland-2d, for all that portion lying between Cleveland—2d, also have the effect to promote the manufacture in this country. We ought not for the future import a single pound of railroad iron, having the means to manufacture it, as soon as energy can be directed to that portion lying between Sandusky city and surprized, if in any quantity; and we should not be surprized, if in a few years, our railroad iron was on the Sandusky river—4th, for the remaining portion, lying between the Sandusky rithan Figlish iron now commands. ver and the Maumee river. Proposals will tions of said line of road than those above named.

For terms and conditions of sale, reference may be had to the joint resolution above cited. By order of the board.

O. Follett, President.

The following extract from the joint resolution of the general assembly, will show the conditions and terms on which the road is to be sold:

Resolved, by the general assembly of the state of Ohio, That the board of public works of be and they are hereby authorized to sell to the highest bidder, or dispose of in the manner they shall consider most advisable for the interests of the state, after having given not less than thirty days' notice, by public advertisement of the time and place of sale, all the bash and Eric canal, is 380 miles. Including the tisement of the time and place of sale, all the personal property belonging to the Ohio railroad company, that now is, or may hereafter come into the possession of said board; and THE SUBSCRIBER, EDITOR AND PUBcome into the possession of said board; and said board is hereby authorized to sell or dispose of such property, on a credit of not exceeding five years, and take notes, bonds, or other evidences of debt, bearing interest, and well secured for the payment of the same; and the notes and bonds so taken shall be payable at the state treasury, and the interest thereon shall be navable annually.

HE SUBSCRIBER, EDITOR AND PUBlisher of the Miners' Journal for the last sixteen years, has been engaged, for the last year in collecting the materials for a work, for which he has secured the copy right, in the following words:—"A history of the Anthracite Coal Trade of Schuylkill and the adjoining Counties, Geological and Statistical, accompanied with Maps of the different Regions, the Improvements, Investments, Capacity, etc., embracing a complete and authentic history to the thereon shall be navable annually.

Resolved, further, That said board shall, in like manner, with like credit and security, sell and dispose of the whole or next first the manner of the whole or next first the manner of the whole or next first the manner of the manner of the whole or next first the manner of the man sell and dispose of the whole or part of the right of way, permanent fixtures and chartered franchises of said company; and the person or persons, or body corporate, becomperson or persons, or body corporate, becoming the purchaser of such permanent fixtures, right of way and chartered privileges, may exercise, use, possess and enjoy the same, or so much thereof as may be purchased, as fully as the same could have been enjoyed fully as the same could have been enjoyed by the said Ohio railroad company, provided that said permanent fixtures, right of way and chartered privileges shall become forfeited to the state of Ohio if the purchaser shall not, within five years commence, and within ten years complete said road, or so much thereof as shall have been purchased by such the said of Ohio if the purchaser shall not. Pottsville, Nov. 13, 1845. BENJ. BANNAN. and chartered privileges shall become forfeitthereof as shall have been purchased by such person or persons, or body corporate, provided that the state of Ohio shall not, in any manner, be bound or pledged to furnish any means whatever for the completion of said

forwarded free of commissions. Freight payable at Augusta.

J. EDGAR THOMPSON,

Ch. Eng. and Gen. Agent. Augusta, Oct. 21 1845.

NICOLL'S PATENT SAFETY SWITCH for Railroad Turnouts. This invention, for some time in successful operation on one of the principal railroads in the country, effectually prevents engines and their trains from running off the track

at a switch, left wrong by accident or design.

It acts independently of the main track rails, being laid down, or removed, without cutting or displacing

them.

It is never touched by passing trains, except when in use, preventing their running off the track. It is simple in its construction and operation, requiring only two Castings and two Rails; the latter, even it

much worn or used, not objectionable.

Working Models of the Safety Switch may be seen at Messrs. Davenport and Bridges, Cambridgeport, Mass., and at the office of the Railroad Journal,

New York

Plans, Specifications, and all information obtained on application to the Subscriber, Inventor, and Pa-tentee. G. A. NICOLLS, Reading, Pa.

GEORGE VAIL & CO., SPEEDWELL IRON Works, Morristown, Morris Co., N. J.—Manufacturers of Railroad Machinery; Wrought Iron Tires, made from the best iron, either hammered or rolled, from 11 in. to 21 in thick.—bored and turned outside if required. Railroad Companies wishing to order, will please give the exact inside diameter, or circumference, to which they wish the Tires made, and they may rely upon being served according to order, and also punctually, as a large quantity of the straight bar is kept constantly on hand.— Crank Axles, made from the best refined iron; Straight Axles, for Outside Connection Engines; Wro't, Iron Engine and Truck Frames; Railroad Jack Screws; Railroad Pumping and Sawing Machines, to be driven by the Locomotive; Stationary Steam Engines; Wro't. Iron work for Steamboats, and Shafting of any size; Grist Mill, Saw Mill and Paper Mill Machinery; Mill Gearing and Mill Wright work of all kinds; Steam Saw Mills of simple and economical construction, and very effective fron and Brass Castings of all descripions.t

TO RAILROAD COMPANIES AND MAN-ufacturers of railroad Machinery. The subscri-bers have for sale Am. and English bar iron, of all sizes; English blister, cast, shear and spring steel; Juniata rods; car axles, made of double refined iron; sheet and boiler iron, cut to pattern; tiers for locomotive engines, and other railroad carriage wheels, made from common and double refined B. O. iron; the latter a very superior article. The tires are made by Messrs. Baldwin & Whitney, locomotive engine manufacturers of this city. Orders addressed to them, or to us, will be promptly executed.

When the exact diameter of the wheel is stated in the order a fit to those wheels is manufactured.

the order, a fit to those wheels is guaranteed, saving to the purchaser the expense of turning them out inside.

BOSTON COURIER, DAILY, SEMI-Weekly and Weekly.

The Daily edition of the Conrier, presents to merchants and others, an extensive medium of advertising. The circulation of the Semi-Weekly is a confidence and Thursdays is merchants and others, an extensive meatum of advertising. The circulation of the Semi-Weckly Courier (published on Mondays and Thursdays) is believed to be more extensive than that of any other similar Boston Newspaper. This publication embraces all the reading matter of the Daily, the Foreign and Domesuc Markets, Review of the Boston Market, Prices current, and Ship News, prepared with great accuracy. The Weckly Courier contains as much of the matter of the daily as can be growded as much of the matter of the daily as can be crowded into a sheet of the same size, without ship news, prices current or advertisements.

Our extions to obtain and publish authentic information on all topics proper for the columns of a newspaper,—the state of trade, the prices of merchandize, the current news of the day, and the political movements in the various sections of the country— will not be abated. The marine department of the Courier has been inferior to none in copiousness or accuracy of detail, and it will be our endeavor to maintain its reputation in this respect.

# AND GENERAL ADVERTISER

FOR RAILROADS, CANALS, STEAMBOATS, MACHINERY,

AND MINES.

# ESTABLISHED 1831.

PUBLISHED WEEKLY, AT No. 23 CHAMBERS STREET, NEW YORK, AT THREE DOLLARS PER ANNUM.

SECOND QUARTO SERIES, Vol. I., No. 49.

THURSDAY, DECEMBER 4, 1845.

[WHOLE No. 492, Vol. XVIII.

THE AMERICAN RAILROAD JOURNAL is the only periodical having a general circulation throughout the Union, in which all matters connected with public works can be brought to the notice of all persons in any way interested in these uudertakings. Hence it offers peculiar advantages for advertising times of departure, rates of fare and freight, improvements in machinery, materials, as iron, timber, stone, cement, etc. It is also the best medium for advertising contracts, and placing the merits of new undertakings fairly before the public.

MESSRS. EDITORS.—
As your Journal
is devoted to the benefit of the public in gen-eral I feel desirous to communicate to you for publication the following circumstance of no inconsiderable importance, which occurred some few days since on the Philadelphia, Wilmington and Baltimore railroad.

On the passage of the evening train of cars from Philadelphia to this city, an axle of our large 8 wheeled passenger car was broken, but from the particular plan of the construction, the accident was entirely unknown to any of the passengers, or, in fact, to the conductor himself, until the train, (as was supposed from some circumstances attending the case,) had pass ed several miles in advance of the place where the accident occurred, whereas had the car been constructed on the common plan the same kind of acci-

dent would unavoidably have much injured it, perhaps thrown the whole train off the track, and seriou ly injured, if not killed many of the passengers. Wilmington, Del., Sept. 28, 1840.

The undersigned takes pleasure in attesting of the value of Mr. Joseph S. Kite's invention of the Safety Beam Axle and Hub for railroad cars. They have for some time been applied to passenger cars on this road, and experience has tested that they fully accomplish the object intended. Several instances of the fracture of axles have occurred, and in such the cars have uniformly run the whole distance with entire safety. Had not this invention been used, serious accidents must have occurred.

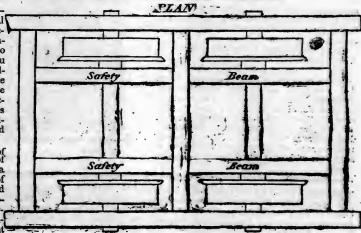

In short, we consider Mr. Kite's invention as completely successful in securing the safety of property

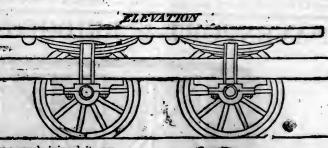

and lives in railroad travelling, and should be used on all railroads in the country.

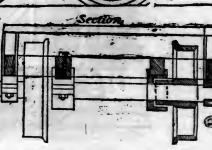

JOHN FRAZER, Agent,

GEORGE CRAIG, Superintendant,

The A model of the above improvement is to be seen at the New Jersey railroad and transportation office, No. 1 Hanover st., N. York.

DATENT HAMMERED RAILROAD, SHIF ture, a large assortment of Railroad, Ship and Boat Spikes, from 2 to 12 inches in length, and of any form of head. From the excellence of the material always used in their manufacture, and their very general use for railroads and other purposes in this country, the manufacture of the material always used in their manufacture, and their very general use for railroads and other purposes in this country, the manufacture of the ma eral use for railroads and other purposes in this country, the manufacturers have no hesitation in warrant. Our improve

keep pace with the daily increasing demand.

FRENCH AND BAIRD'S PATENT SPARK ARRESTER.

Our improved Spark Arresters have been extensively used during the

the undersigned.

The manufacturers have no hesitation in warranting them fully equal to the best spikes in market both as to quality and appearance. All orders addressed to the subscriber at the works, wire promptly executed.

JOHN F. WINSLOW, Jone 1.

Albany Iron and Nail Works, Troy, N. You have been brought to use a steep constant from the construction of the

viers, Baltimore; Degrand & Smith, Boston.

** Railroad Companies would do well to forward their orders as early as practicable, as the subscriber is desirous of extending the manufcturing so as to keep pace with the daily increasing demand.

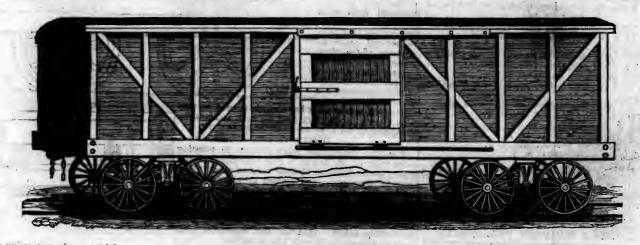

** The levels in the nature of the subscriber will dispose of single rights, or rights for one or more States, on reasonable terms.

** The levels in the nature given in the Journal of June, 1844.

** The levels in the nature given in the Journal of June, 1844.

ENTLEY'S PATENT TUBULAR STEAM BOILER. The above named Boiler is similar in principle to the Locomotive boilers in use on our Railroads. This particular method was invented by Charles W. Bentley, of Baltimore, Md., who has obtained a patent for the same from the Patent Office of the United States, under date of September 1st, 1843—and they are now already in successful operation in several of our larger Hotels and Public Institutions, Colleges, Alms Houses, Hospitals and Prisons, for cooking, washing, etc.; for Bath houses, Hatters, Silk, Cotton and Woollen Dyers, Morocco dressers, Soap boilers, Tallow chandlers, Pork butchers, Glue makers, Sugar refiners, Farmers, Distillers, Cotton and Woollen mills, Warming Buildings, and for Propelling Power, etc., etc.; and thus far have given the most entire satisfaction, may be had of D. K. MINOR, 23 Chambers st. New York.

# DAVENPORT & BRIDGES' PATENT CAR AND TRUCK.

PAVENPORT & BRIDGES CONTINUE TO MANUFACTURE TO ORDER, AT THEIR WORKS, IN CAMBRIDGEPORT, MASS. Passenger and Freight Cars of every description, and of the most improved pattern. They lso furnish Snow Ploughs and Chilled Wheels of any pattern, and size. Forged Axles, Springs, Boxes and Bolts for Cars at the lowest prices. All order punctually executed and forwarded to any part of the country? Our Works are within fifteen minutes ride from State street, Boston—coaches pass every inteen minutes.

RAILROAD IRON AND LOCOMOTIVE CUSHMAN'S COMPOUND IRON RAILS.

Tyres imported to order and constantly on hand
A. & G. RALSTON Cushman's Compound IRON RAILS.

The Subscriber having made important improvements in the construction of rails, mode of 4 South Front St., Philadelphia. THE NEWCASTLE MANUFACTURING Company continue to furnish at the Works, at the Works, situated in the town of Newcastle, Del., Locomotive and other steam engines, Jack screws, Wrought iron work and Brass and Iron castings, of all kinds connected with Steamboats, Railroads, etc.; Mill Gearing of every description; Cast wheels (chilled) of any pattern and size, with Axles fitted, also with wrought tires, Springs, Boxes and bolts for Cars; Driving and other wheels for Locomotives.

The works being on an extensive scale, all orders

The works being on an extensive scale, all orders will be executed with promptness and despatch.

Communications addressed to Mr. William H. Dobbs, Superintendent, will meet with immediate attention.

ANDREW C. GRAY, ja45

President of the Newcastle Manuf. Co.

guarding against accidents from insecure joints, etc. —respectfully offers to dispose of Company, State Rights, etc., under the privileges of letters patent to Railroad Componies, Iron Founders, and others interested in the works to which the same relate. Companies reconstructing their tracks now have an opportunity of improving their roads on terms very advantageous to the varied interests connected with their construction and operation; roads having in use flat bar rails are particularly interested, as such are permanently available by the plan.

W. Mc. C. CUSHMAN, Civil Engineer,

Albany, N. Y.

Mr. C. also announces that Railroads, and other works pertaining to the protession, may be constructed under his advice or personal supervision. Applicaitons must be post paid.

TO RAILROAD COMPANIES AND BUILD T ERS OF MARINE AND LOCOMOTIVE ENGINES AND BOILERS.

we e first de 2.

London, Central Railway Terminus.—We Monmouth canal was held at Newport, on with small trucks of stone and lime behind as near to one point as possible the terminus for carrying out the object of the meeting." of the different railroads in cities and large villages. We have always felt that travellers and freight should have as little trouble as possible in getting from one depot to another. Railroads are designed to transport persons and things for which the owners of the railroad are to be paid, and those who pay for this service ought first to be accommodated, rather than the people who happen to live in the cities and towns, and keep a hotel, or have consumed 2,448 tons of coal, and lifted drive a carriage, cart or omnibus. Hotels, carriages, and carts are supposed to be brought into use to be employed by those who need, or desire their services, not to oppress those who do not want them, as it would seem to be supposed in some places we could name. And by forming central, or joint stations where it can be done-and it can be done almost anywhere if in London-much incon-fected, we trust the noble marble staircase would be avoided.

that they are endeavoring to effect this desira- Bridge instead. ble object in London as well as in other cities and towns in England.

"At the court of common council, on Thurs-scribed. day, the question of the central grand termination of the papers, suggesting that it should be invested in founding "Hudson Almshoupresentation of a petition from the directors of ses" for the widows and children of those who was certainly a very unlucky one with the Direct London and Manchester railway company (Rastrick's line,) for leave to purchase the Farringdon market for a great central terminus. The petition was presented by Mr. King, and duly seconded."

A company, with a capital of 300,000l. for establishing iron works, has been formed under the title of the "Swansea and Dulais railway company" for the manufacture of rails and merchant iron. Messrs. Manby and school children made an excursion from Bir- (8th) one freight t Brothers, engineers.

are on foot, says the Railway Record, of 15th Oct., between the directors of the Thames Tunnel and a party of capitalists, headed by a gentleman most favorably known in the lisle. And the Sunderland Herald informs railway world, for the purchase of the tunnel, us that part of the Newcastle and Darlington with the view of carrying a railway direct from the junction of the Eastern Counties' and Blackwall lines, to a point on the Greenwich line, whence the Croydon, Brighton and Dover lines diverge.

Railways in Spain .- The Madrid Gazette mentions the arrival of Mr. Brunel at Madrid England, says the Railway Chronicle, was hogs, and sheep too numerous to mention, with a party of English engineers to carry on the works of the north of Spain.

them. It was commenced in 1801, opened in 1803, and the men of science of that daywe cannot say that the respectable name of Stephenson was not among them—tested its capabilities, and found that one horse could draw some 35 tons at six miles in the hour, and then, with prophetic wisdom, declared that railways could never be worked profitawhich our French neighbors are not yet quite used. The old Croydon railway is no longer which our French neighbors are not yet quite used. The genius loci must look with wondecided, points to the movements in England der on the gigantic offspring of the little railway which has swallowed up its own sire. Lean mules no longer crawl leisurely along the little rails with trucks of stone, through Croydon, once perchance during the day, but the whistle and the rush of the locomotive, and the whirr of the atmospheric, are now heard all day long. Not a few loads of lime, but all London and its contents, by comparison-men, women, children, horzes, dogs, oxen, sheep, pigs, carriages, merchandize, food—would seem now-a-days to be passing prietor and the southwestern. The excel-through Croydon, for day after day more than lence of the site for a west end terminus is one hundred journeys are made by the three

> Oftentimes in every hour during daylight the Londoner may transport himself to the Chalk Downs, and be freshened by the pure every step.

# Railroad Accidents.

Is there no remedy for the frequent and

was certainly a very unlucky one with the trains on the Western railroad. We have already recorded the collision of the first for the railway. Left at home in dismal ne-freight train on the morning of the 7th, with glect in days of stage coaches, they now form a yoke of oxen at Westfield, by which one animal was killed outright, and the other hurt so much that it was obliged to be sacri-(of hard toiling weavers) made an excursion ficed, besides throwing the locomotive, tender to Brighton, when the children were taken and ten freight cars off the track, and damthere and back at a little more than a shilling aging them quite seriously, as well as delaya head. A week or so ago, upwards of 7000 ing all the trains of the day. On Saturday, into the rear of We rarely hear of an one forward of it, while latter was stopping at the Chester Factories depot, by which the locomotive of the first train was injured to the amount of \$2000, and five cars of the last broken to pieces, and their contents of live hogs let loose too violently for their comfort. Five of them were killed. On Friday (7th) a passenger train ran over and killed two cows west of Pittsfield; the locomotive was not injured nor the train thrown off; and on the same day a flock of sheep were run into by another train, and some twenty or more killed. Quite a slaughter house, truly! including the ox run over and killed on the Friday previous (Oct. 31st,) last week's work The earliest railway for public traffic in would sum up: three oxen, two cows, five one passing from Merstham to Wandsworth, without saying anything about the locomothrough Croydon; a small single line, on tives, cars and freight, smashed up, all of which a miserable team of lean mules or which somebody must pay for. Most fortu-

Eric Railroad.—The following gentlemen were chosen, on Saturday, directors of this great enterprize, with perfect unanimity, by 19,924 ballots:

Benjamin Loder, Stephen Whitney, Silas Brown, Henry Shelden, Daniel L. Miller, Stewart C. Marsh, Jacob Little, Henry Suydam, Jr., W. E. Dodge, Shepherd Knapp, Samuel Marsh, Robert L. Crooke, A. S. Diven, Elmira, John Wood, Thomas Tileston, Canadian Smith, Smith, Hower, Ramsdell, Negoburgh. Corneilus Smith, Homer Ramsdell, Newburgh.

Springfield and Northampton Railway.—This road will be opened for travel some time in the present payable on the 8th inst.

The Nashua and Lowell railroad corporation has declared a semi-annual dividend of five per cent., payable December 1st.

### Notice to Railroad Contractors.

Proposals will be received at the office of the Pittsfield and North Adams Railroad Corporation in Pittsfield, Mass., until the 20th of December next,

of 181 miles of Roadway.

2d. For furnishing the Timber, Chairs and spikes and laying the Superstructure.

3d. For furnishing Materials and Building a side of the Roadway.

The approximate quantities are as follows, to wit: 600,000 cubic yards of Excavation and Embankment.

6.500 perches of Masonry.

500 feet of Bridging.

43,000 chestnut or white oak Cross-ties, 5 inch face 7 inches between faces and 7 feet long.

in. x 18 feet long.

150,000 feet board measure, Hemlock sills 3 in. x 8 in. x 6 and 12 feet long.

from Hemlock 5 in. x 2 in.

45 tons of Hook Head Railroad Spike.

90 tons of Cast Iron Chairs.

Plans, Profiles, Specifications etc., will be ready for examination on and after the 15th December.

FREDERICK HARBACH, Resident Engineer.

Office of the Pittsfield and North Adams Railroad Corporation.

Pittsfield, Nov. 26th 1845.

For the American Railroad Journal.

CLEVELAND, OHIO, November 25th, 1845.

Sin: In a late number of your valuable Journal I perceive that you are asking for information about the movements of the Cleveland, Columbus and Cincinnati railroad company. This is the title of somewhat of a misnomer at present. It was then designed that it should make a road from Cleveland through Columbus to Cincinnati, but action was so long delayed that other companies were subsequently organized, and now occupy that part of the line between the two last mentioned cities. The Little Miami company has a road in full operation, extending from Cincinnati to Zenia, 65 miles, and from there to Columbus, 50 miles. Another company called the "Columbus and Zenia," has surveyed and located a road that will be speedily put under contract. Our road, therefore, will only go to Columbus, but with the others a continuous line will be formed between the lake and river.

A company was organized this fall, under the charter referred to, by the selection of the following named persons as directors: Samuel Medary, Wil- the gristle. A railroad between the two cities would named persons as directors: Samuel Medary, Wil. go on paying increased dividends, till every rood of liam Neil, W. L. Sullivant and R. E. Neil, all of land in the broad basin of the Mississippi sustaind Columbus, and John M. Woolsey, Richard Hilliard, its man. Very respectfully, etc., P. M. Weddell, Henry B. Payne and John W. Al-

Dividends.—The Delaware and Hudson canal len, all of Cleveland. They subsequently elected company have declared a dividend of five per cent., John W. Allen president, William Neil treasurer, and Albert G. Lawrence secretary.

The directors have now two separate companies of engineers surveying the country, and intend to keep them employed till all the information shall be acquired necessary to a judicious location. Whatever line may be taken, the expense for grading, the great source of expenditure on the eastern roads, will be trifling. It is believed that at present prices 1st. For the Graduation, Masonry and Bridging a substantial road with heavy iron can be made for \$12,000 per mile, including the right of way. The distance to Columbus will be about 140 miles, and to Cincinnati about 255 miles. If this line is made, as it should, and I think will be, the whole distance heavy, substantial Post and Rail fence upon each may be easily travelled in twelve hours, and with some of our fast boats on the lake, a gentleman may breakfast in Cincinnati one morning, and dine, if not breakfast, the next day in Buffalo, and may sleep the next night in your city.

That there will be a very great business in the transportation of passengers and property on this line, there can be no doubt. Of all the travellers at Cincinnati bound east, not more than one in nine 500,000 feet board measure, Hemlock sills 3 in. x 8 hundred, as near as can be ascertained, comes to the lake at all, and yet the number is considerable.-From the central parts of the state very few do so. Nearly all the merchants and others below 100 miles 70,000 fence rails 12 feet long, either split from from the lake cross the mountains, and if they go to thrifty Chestnut of a size not less than 5 New York, it is after having passed through Baltiin. x 2 in. measured across the centre of more and Philadelphia, where they make many of the smallest end, or sawed from Spruce their purchases, and as to others, compel your dealers timber with square edges, 5 in. x 11 in. or oftentimes to sell at reduced rates under the threat of returning to the more southern cities to complete 18,000 Chestnut fence posts, holed with 4 holes 71 their stocks. Your merchants, therefore, have a feet long and measure not less than 8 in. x deep interest in drawing all the travellers they can 4 in. across the centre of the smallest end, to the lake in the first place before their pockets are lightened elsewhere.

The country through which the road will pass is all good, and much of it of exceding fertility, and its products are mainly, north of Columbus, of a character that must be carried to a market, that is, they are not cattle and hogs that can carry themselves. The road will probably be so distant both from the canal and the Mad river railroad, reaching the lake at Sandusky, as not to suffer or make them suffer unduly. At Cincinnati, the last mentioned road and ours will come into competition for the lake business, but the through business will be but a small part of what each will have to do. That there will be way business enough to support both I have little doubt.

The harbor of Cleveland is 60 miles nearer Bufthe company as originally chartered in 1836, but is falo than Sandusky, and is always accessible. Not a steamboat goes through lake Erie that does not stop at it. The Ohio canal and Ohio and Pennsylvania both terminate here and would without any railroads make it a place of considerable importance.

> I think \$600,000 may be furnished in Ohio toward making our road, perhaps more. Will not New York and Boston feel a pecuniary interest sufficient to induce them to take the residue of the stock, or a part of it, and loan enough money to finish it on a pledge of the road? They had better invest their money in this road, than in some they have made, and in more that they talk of.

What is now the city of Cleveland, 15 years ago had 1000 people, Cincinnati 30,000, and the whole state 900,000. Now we have 12,000, Cincinnati 100,000, and the state 1,900,000, and we are yet in

matters, the choice of "a speaker, a governor sense, aided by judicious and liberal legisla the possibility that a portion of his party will do it. Let her legislature charter a company pise party trammels and names," and says:

interests, to come up manfully and earnestly one-third of the stock, when the other twoduty; if there ever was a time for the man of narrow prejudices and selfish propensities to make a noble sacrifice for the good and honor of his country, this is the time! This Parkersburg, thus accommodating her northis no time for a halting, wavering, doubtful western counties without cost to herself, and policy."

Now we see no more reason to "despise party trammels" at this time than at any other; they ought always to be "despised," and become as good as new. honest, independent, action should be as much sought in the election of a "speaker" a "governor" or a "U. S. senator," as in le- ing remarks in relation to a rival line of railroad gislating on the subject of "canal, McAdamized and railroad improvements." In these matters, says the editor:

"Party names must be forgotten, and par--be he whig or democrat-who loves this er accommodation to the public and better returns, good "Old Dominion," not only for what she has been, but for what she is and for what he hopes she yet will be; every man who would many equally good judges in our own country, that not be willing to hear the cries of repudiation for railroad companies to "benefit the public, is to and distress and ruin ringing from the north to the south, and from the east to the west, must boldly come to the rescue, drive back every encroachment, resist every innovation; trample upon the petty feelings and unworthy designs of the partizan, and make one more vigorous, determined and tremendous effort for the sake of the prosperity and peace of this the mother of states and statesmen.-Yes! let all who are of this heart and this mind, " stand together," work together, fight

and fight together, if need be, to make the "Old Dominion" what she ought to be and may be; but we imagine it will be a long while before that period arrives if they still "resist legislature for the incorporation of a compa- has yet undertaken, or she will be distanced in the innovation" upon their time honored preju- ny to construct a railroad from Schenectady race of improvement now about to be commenced. dices; "mother of states and statesmen" she to this city, on the south side of the Mohawk may have been, but it has been her ruin; river. The notice is signed by many well holders in the Wilmington and Raleigh railmuch better would it now be for her if she known, influential, enterprizing and wealthy road company was held in the town of Wilhad given birth to industry, enterprize and citizens of this place and Troy. It is obviming ton last week, beginning on Thursday.

The attendance of stockholders was unusuperseverance, as they would have improved time, on this route to afford two railroads ally full. That portion of the stock held by

"STAND TOGETHER," says the editor of the al and manufacturing resources, and have price, which two will insure, the travel will Petersburg, Va. Republican. It is amusing kept her at the head of the list of these Uni-soon be more than doubled. As a means of to read the remarks of the Republican.—ted States, instead of putting her upon the reducing the exorbitant charges demanded on When he happens to agree with the domin- "sliding scale" from which her "statesmen" ant party of the legislature—as in political will never lift her, though a little common and a U. # Rival Lines of Railroad.

The Utica Gazette, of 24th Nov., has the followbetween Schenectady and Utica. Such is the natural consequence of "high fares and low speed for passengers" on such a thoroughfare as that along lic dissatisfaction, and perhaps call for legisthe Mohawk valley. Two dollars, or at most \$2 50, with an average of twenty-five miles an hour, bey animosities must be buried. Every man tween Buffalo and Albany, would give much greatas we think, to the shareholders. We coincide fully with Mr. Hudson, the English railway king, and benefit themselves." "Promote your own interests, but carry with you the interest of all whom it affects." "Do good to yourselves, but take others along with you in your prosperity, instead of thriving at their expense." This is the true policy for all to pursue-and it is the only policy for the managers of railroads to pursue if they would be prosperous and carry with them the approbation of an enlightened community.

Thirteen miles an hour, on such a line, is not enough, and four cents a mile is too much-and these errors must be corrected, or the people will have another railroad; whereas, we think reduced rates of We agree most cordially with the editor, fare, and increased speed, in accordance with the that it is the duty of all to unite, stand, work "spirit of the age in which we live," would prevent a rival line. The editor of the Gazette says:

" Another Railroad to Schenectady .- Our

the present railroad, this project is a matter of interest to every inhabitant of this section, not only as personal advantage to him in travelling, but as the means of continuing this which the present high fares and the reduction on other routes have materially tended to transfer.

"We understand that it is contemplated to

Rates of Fare-Comparative Statement.-The following comparative statement of rates of fare and speed on several different railroads would seem to here, between the charges on these roads-some of them must derive very large, or others very small profits. We shall refer again to this subject soon:

"The exorbitant rates of fare, time of running, and general management of the railroads between Rochester and Schenectady, public complaint, the justice of which may be seen by a comparison, in those particulars, with several other roads on our main routes. The following statement and comparison is believed to be nearly accurate, and exhibits a contrast which would seem to justify the pub-

lative or other redress	:					
	Miles.	Time.		7 Fare.		
Long Island railroad	96	3 1	nrs.			cts
Providence to Boston	40	11	66	1	00	66
Boston and Portland	115	5	66	3	00	66
Albany and Boston	205	12	66	5	00	66
Schenectady to	1-			-1		
Greenbush via Troy	28	.1	"		50	66
Baltimore and Phil.	.96	51	66	2	00	"
Roch. to Canandaigus	a 29	21	46	1	13	"
" Auburn	77	5	66	3	00	66
" Syracuse	100	7	"	4	00	66
" Utica	152	12	"	6	00	"
" Schenectady	228	18	"	9	00	"

These roads enjoy an entire monopoly they are accumulating large surplus funds and the public have a right to know why they run at half the speed, and charge double the fare of other roads."

Wilmington and Raleigh Railroad Co.

The following report is taken from the Wilmington Chronicle of the 19th ult. It is the only account of this road that has reached us in a long time-except in the shape of complaints of its management-and, though it is not as favorable as we eaders have doubtless observed that notice could wish, yet we hope to hear that it is doing bethas been given of an application to the next ter. The "Old North State" must do more than she

The tenth annual meeting of the stockher soil, and developed her boundless miner handsome profits, and with the reduction of the state of North Carolina, was represented

Dr. F. J. Hill, of Brunswick, was chosen chairman of the meeting, and Jas. Griswold, of Wayne, and Thomas Loring, of Wake, secretaries.

On the first day of the meeting, the president of the corporation, gov. Dudley, submitted on behalf of the directory a report of their operations and the affairs of the road for the year ending October 1st. The committee appointed at the previous annual meeting to examine the books and accounts of the company, consisting of Alexander McRae, James Griswold, and Wm. S. Baker, also made a report of a statistical character. They found everything correct.

From these reports we extract some particulars of general interest.

The above table shows that the receipts on the road alone were greater during the year 1845 than either of the four preceding except 1841. In 1841 the fare through the line was \$20; it is now, and was during the whole of the year ending Oct. 1st, \$12; so that the exhibit proves an increase of travel and freight transportation on the road, mostly travel, of upwards of sixty per cent. over 1841.

Gov. Dudley was desirous (for reasons of presidentship of the company, and tendered his resignation of the same. He was prevailed upon however to serve another year, and was re-elected. P. K. Dickinson, Samuel Potter, John Hill, James T. Miller, O. G. Parsley and Gilbert Potter, all of Wilmington, were chosen directors on the part of the stockholders, and James S. Battle, of Edgecombe, James Griswold, of Wayne, Edward P. Hall, and A. J. De Rosset, Jr., of Wildirectors on the part of the State.

Central, Georgia Railroad, Extension.

We find, in the Macon Messenger of Nov. 6th, the proceedings of a meeting of the shareholders of this company in relation to its extension to Columbus. The report of the president speaks of two routes having been examined, one from Macon, at or near the present termination of the road, and the other from Barnesville, on the Monroe railroad, about 40 miles beyond Macon; but the preference is given to the former, though it will require the construction of a greater length of road, by about 25 miles, yet the distance by the latter will be about 15 miles greater.

The president said:

"That this board, in the month of May last, instructed the engineer of this company, Mr. Reynolds, to make such an examination of the country between Macon and Columbus, as would enable the board to determine by what route the Chattahoochee river could be reached, by a railroad, from the Ocmulgee, at the lowest cost. The board did not feel authorized, or consider it necessary, to go to any considerable expense in making this examination, if a mere reconnoisance of the country would enable them to form a proper judgement."

Our object being to lay before our readers the information furnished by the engineer in relation to, rather than the reasoning of the directors for, their choice between the routes, we give the report of the engineer only, yet the opinions expressed in the following paragraph taken from the president's report, accord so entirely with our own that we give erly direction, crossing Tobasafkee creek; them a place in the Journal in the hope that thence across Icheconno creek, following the they may have influence with those who think one of its branches, called, Deep creek, and extension which ever route may be adopted, the summit between the Icheconno and Flint will form a part of the line frem Savannah to river. We then descend to the valley of the

Mr. Cuyler, the president, says, that:

"If the connection be directly with the Central railroad at or near its depot in Macon, the increase of business on the Central road from points above Macon, carried on without the cost of transferring loads from one set of cars to another, will enable its directors, and make it their interest, to place freights at a point much lower than could possibly be done on a line which would termioate at the Monroe depot, and begin again at the Central dea private nature,) of withdrawing from the pot; and such reduction would necessarily be not only on goods brought from points beyond Macon, but also from Macon and along the entire line of road. The unlading and lading of cars and drayage of loads for a mile, is a matter of heavy expense imposed on goods and produce, highly injurious to the people at large, and generally, not subserving any interest, unless it be the interest of dray owners who haul for hire. That interest is comparatively small, and even without a railroad mington, were by Gov. Graham appointed connection, could, it is obvious, be destroyed, if railroad companies, which connect alone be such a portage, should determine to take it into their own hands. Portage between the termini of railroads tends to increase the charge to travellers and freighters, and more money is lost by the people of a town who travel and transact its commercial business, where a porterage is insisted on, than can be gained by the inhabitants, of whatever occupation, by keeping it up."

The annexed report of Mr. Reynolds enables us to form an idea of the country through which he passed. This extension is of much importance to the Central road-and we can appreciate the motives of the company in selecting the lower route for a connection with Alabama. They thereby command the business of the finest cotton region of the state, and what is of importance, avoid connection with another road, or keep the entire man-

agement in their own hands.

Engineer's Office, C. R. R. Savannah, Oct. 15, 1845.

R. R. Cuyler, Esq., President:
Sir: By your direction I made a reconnoisance of the country between the cities of Macon and Columbus, in May last, with a view of ascertaining whether a favorable line for a railroad existed between those two cities. As this examination was made rather curso-rily, I cannot speak definately as to the distance, cost, or exact location of a railroad route between these points, but I can say, with confidence, that a favorable line may be established, and I have no doubt the distance will fall short of one hundred miles; my observations led me to believe that the following would be the most practicable route, viz:

Leaving the city of Macon in a soutwestpursuing the valley of this creek we reach Flint by a small stream, called Beaver creek,

elaggee creek, about 10 miles below the if any less. I am very respectfully, your connection between the internal improvements of the state of Pennsylvania and the of the Patchelaggee and ascend to the summit between Flint and Chattahoochee rivers; here the branches of the Patchelaggee interlock with those of the Upotoy, which-empties ter of the report of the president and directors tant object. into the Chattahoochee a few miles below be referred back to the board of directors, Columbus. We therefore follow the valley with a request that they will take such furof this creek until we gain the valley of the ther action, in relation to procuring the prop-Chattahoochee, and then take the low grounds er amendments to the charter, or effecting the up to the city.

That portion of the route between the city of Macon and the Flint river will afford a very favorable line, with a wide choice of Secretary. ground; and for a considerable distance beyond the Flint, a good location may be made.

From the summit to the Chattahoocheesome 20 miles—the country is hilly and broken, and will require a careful instrumental examination to select a good line. The toagine the difficulties of constructing a road would not be greater.

There is a great abundance of pine timber of the best quality throughout the whole distance; and as the lands are for the most part in the list of those formally called upon to of little value for cultivation I have no doubt do so-possibly from the fact that the Journal ble terms. It has been suggested to me that a route might be found, lower down the country, which would not be less favorable, and would come nearer the rich cotton lands of that we cannot omit the opportunity of saying Bradford, Lycoming, Columbia, Northumthe lower counties. I cannot give an opinion a good word in favor of it; and as our hand berland and other counties in Pennsylvania, on this point, but think it worthy of a careis in, we desire to say, that the spirit maniElmira on the first Wednesday in December ful examination.

# Railroad Meeting at Albion.

A large and respectable meeting was recently held at Albion, Orleans county, New York, for the purpose of taking into consideration the propriety of extending the railroad There is a portion of the distance, viz: be-appointed to draft resolutions, expressive of from Lockport to Rochester, and thus openrailroad in Canada West, from the Niagara river, to Windsor, near Detroit. The following officers were appointed, viz:

"President-Hon. Alexis Ward, of Albion. than the route direct from Macon, but I im- "Whereas, public attention has recently "Vice Presidents-Hon. T. J. Paterson, Dr. D. Carpenter, of Brockport.
"Secretaries—Sandford E. Church, of Al-

bion; Botsford Fairman, of Medina.

" Dr. L. C. Paine, of Albion, briefly stated the objects of the convention and the meaobjects into effect.

"N. Davis, Jr., Esq., from the committee on resolutions, reported the following among

others:

"Whereas, the Lockport and Niagara falls railroad company have been authorized by law to extend their road from Lockport to Rochester, and whereas the company have resolved that such extension shall be made by the direct route between those two points leading through Orleans county,

"Therefore, Resolved, That it is the sense company and of the several villages on the line of the canal as well as of the adjoining country, demand that the canal route should be adopted as the location of the road."

We omit most of the proceedings, but can not omit the following, as it is the spirit of the people in every part of the country. The people have "resolved that we will not consent that our neighbors should travel forty miles an hour, and we in a line boat, nor that our wheat, from lack of facilities, should reach the market behind that of Michigan and Ohio."

That is the spirit to which we alluded, when we said that the completion of the Baltimore and Ohio railroad to Parkersburg would insure the construction of their main line from Guyandotte to Richmond. "We will not consent for others to travel 40 miles an hour, and we in a line boat." That is the spirit which is to build many a railroad in this country.

from Lockport to the city of Rochester, inclusive, on the 6th day of November, 1845, pursuant to notice, and in accordance with a call from a committee appointed at a former meeting, the Hon. Alfred Babcock was appointed president, and Gen. Abner Hubbard, of Murray, and Wm. W. Ruggles, Esq., of Gaines, secretaries.

measures as might be deemed expedient for appropriate remarks being made by him, he plete the railroad communication from the closed by introducing to the convention C. B. Gennessee river to the falls of Niagara—in Gen. Whitney, of Niagara Falls, Lot Clark, Stuart, Esq., of Rochester, the engineer of connection with this railroad, a railroad and Esq., of Lockport, C. B. Stuart, Esq., of in a very able and lucid manner; showing from thence through Canada, a railtoad to the importance of the road, by connecting the Great Western railway, through Canada Resolved, That in the opinion of this mee Secretary.

or of transportation.

"The convention was addressed by Hon. if there is a direct route. H. Gardiner, of Lockport; Hon. A. Ward, Resolved, That, should the great Western of Albion; and Hon. L. Clark, of Lockport, railroad from Detroit through Canada, termihis appeal."

Here are rival lines. This is one of the of this meeting that the best interests of the progress of meritorious works. The "Ridge ton railroad will take him to Queenston, and road" formerly had several flourishing villocation of the canal a short distance south, upon which new villages sprung up. A railroad along the "Ridge" would in some measure restore the old villages. Hence the rivalry. Both are so feasible, that the question may turn upon the superior influence of ing, is not to be doubted: and if built will day to give unto those who have an abun interest than the falls; an accommodation to dance, and withhold from those who have not. The gentlemen of the "Ridge" must therefore be moving if they also do not intend to go on " a line boat."

Railroad Meetings

The following notice of the proceedings of a meeport "Democrat." It is a movement in the right spot. Let them persevere.

In the month of October the Housatonic road received \$15,637, an increase of 30 per cent. on that month of last year. The old debts are paying off, and its new rail is laying down, so that a portion will be in readiness for winter service, and a safe line of transit from New York to Albany via Western railroad.

THE SUBSCRIBER, EDITOR AND PUBlisher of the Miners' Journal for the last sixteen lisher of the Miners' Journal for the last sixteen years, has been engaged, for the last year in collecting the materials for a work, for which he has secured the copy right, in the following words:—"A history of the Anthracite Coal Trade of Schuylkill and the adjoining Counties, Geological and Statistical, accompanied with Maps of the different Regions, the Improvements, Investments, Capacity, etc., embracing a complete and authentic history to the present time, to which will be appended a Synopsis of the Iron Trade."

It is our intention to embrace everything of intention

It is our intention to embrace everything of interest in the work, connected with the trade, up to the beginning of the year 1846, prepared and arranged with a view of continuing the publication, at periods of five or ten years, with such additions as the

increased trade will warrant. These branches of tradelhave assumed an importance which will wartradeshave assumed an importance which will warrant such a publication; and he feels confident, that with the proflered aid of several gentlemen and the statistics already in his possession, he will furnish the public with a work, which, if not one of the most interesting in its details, it will be of great value to those engaged and interested in these branches of business. ches of business

As soon as the Maps, etc. are prepared, and some idea can be formed of the probable expense of publishing the work, proposals will be issued for the same. All the tracts of Coal land will be designated on the Map of the Schuylkill Coal Region, which will accompany the work.

DAVIS, BROOKS & CO., 30 Wall st., N. York.

NEW YORK AND HARLEM RAIL-Road Company.—Winter Arrangement.

On and after Monday, November 3d, the cars will run as follows: Leave City Hall for Harlem (125th street,) Morrisiana, Fordham, Williams' Bridge, Hunt's Bridge, Underhill's Road, Tuckahoe, Hart's Cor-ners, and White Plains—7:30 and 10:30 a.m., and 1 and 3.30 p,m.

Extra trains for Yorkville, Harlem, Morisiana, Fordham, and Williams' Bridge, leave 27th street 7 a.m. for Williams' Bridge. Leave City Hall 9 a.m. (to Harlem only) and 11:30, 2:30, and 4:30 p.m. for Williams' Bridge.

Leave White Plains for City Hall—810, 11-10 a.m., and 1.45, 4.10 p.m.

Leave Tuckahoe for City Hall—8-20, 11-20 a.m., and 1-55, 4-20 p.m.

Leave Williams' Bridge for City Hall—7.45, 8.45, 11.45 a.m. and 12.45, 2.15, 3.45, 4.45, and 5.45 p.m. Leave Morisiana for City Hall—8:10, 9:10, and 10 a.m., and 12:10, 1:10, 2:40, 4:10, 5:10, and 6:10 p.m.

The freight train will leave City Hall at 12:45 p.m. and leave White Plains at 11:10 a.m. All freight must be at the City Hall between the hours of 10:30 a.m. and 12:30 p.m. The White Plain trains will stop, after leaving the City Hall, only at the corner of Broome street and the Bowery, Vauxhall Garden and 27th street.

An extra car will precede each train, 10 minutes before the time of starting from the City Hall, and will take up passengers along the line.

The City Hall and 27th street line will run every 6 minutes from 7:30 a.m. to 8 p.m.

The City Hall and 27th street night line will run every 20 minutes from 8 to 12 o'clock.

On Sundays the trains will be regulated according to the state of the weather.

THE LONDON RAILWAY RECORD,
Edited by Mr. John Robertson, A. M.,
(connected from the commencement with the Weekly Railway press of England.)
The Railway Record is acknowledged to be the

ly Railway press of England.)

The Railway Record is acknowledged to be the leading English Railway Journal, and is published twice a week in London, namely on Wednesday and Saturday. It contains copious and correct reports (by special reporters) of all railway meetings in the United Kingdom; ample Share Lists and Traffic Tables, showing the length, cost, capital and selling prices in the principal markets, with Editorial articles on the leading Railway topics of the day. The Railway Record contains also, a complete resume of French, Belgian and other foreign Railway affairs. way affairs.

Subscriptions 13s, per quarter, to be transmitted in advance to Messrs. Dawson and Sons, Ca. st. London. Office 153 Fleet street, London. 46

THE AMERICAN RAILROAD JOURNAL is the only periodical having a general circulation throughout the Union, in which all matters connected with public works can be brought to the notice of all persons in any way interested in these uudertakings. Hence it offers peculiar advantages for advertising times of departure, rates of fare and freight, improvements in machinery, materials, as iron, timber, stone, cement, etc. It is also the best medium for advertising contracts, and placing the merits of new undertakings fairly before the public.

#### KITE'S PATENT SAFETY BEAM.

MESSRS. EDITORS.—
As your Journal is devoted to the benefit of the public in gen-eral I feel desirous to communicate to you for publication the following circumstance of no inconsiderable

On the passage of the evening train of cars from Philadelphia to this city, an axle of our large 8 wheeled enger car was broken, but from the par-ticular plan of the construction, the accident was entirely unknown to any of the passengers, or, in fact, to the conductor himself, un. til the train, (as was supposed from some circumstances attending the case.) had passed several miles in advance of the place where the accident occurred, whereas nad the car been constructed on the common plan the same kind of acci-

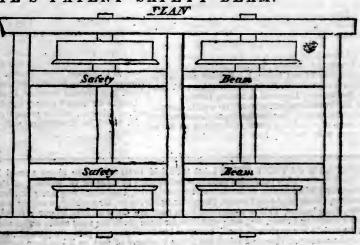

the same kind of acci-dent would unavoidably have much injured it, per-haps thrown the whole train off the track, and serious-ly injured, if not killed many of the passengers. Wilmington, Del., Sept. 28, 1840.

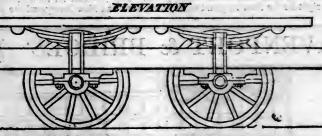

and lives in railroad travelling, and should be used on all rails in the country.

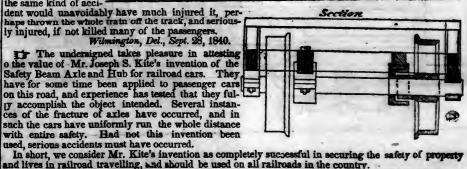

JOHN FRAZER, Agent,

GEORGE CRAIG, Superintendant,

The A model of the above improvement is to be seen at the New Jersey railroad and transportable effice, No. 1 Hanover st., N. York.

PATENT HAMMERED RAILROAD, SHIP and Boat Spikes. The Albany Iron and Nail Works have always on hand, of their own manufac-Works have always on hand, of their own manufacture, a large assortment of Railroad, Ship and Boat Spikes, from 2 to 12 inches in length, and of any form of head. From the excellence of the material always used in their manufacture, and their very general use for railroads and other purposes in this country, the manufacturers have no hesitation in warranting them fully equal to the best spikes in market, both as to quality and appearance. All orders ad-

last year on both passenger and freight carefully executed.

JOHN F. WINSLOW, Agent.

Albany Iron and Nail Works, Troy, N. Y.

BENTLEY'S PATENT TUBULAR STEAM BOILER. The above named Boiler is similar in principle to the Locomotive boilers in use on our Railroads. This particular method was invented by Charles W. Bentiey, of Baltimore, Md., who has obtained a patent for the same from the Patent Office of the United States, under date of September 1st, 1843—and they are now already in successful operation in several of our larger Hotels and Public Institutions, Colleges, Alms Houses, Hospitals and Prisons, for cooking, washing, etc.; for Bath houses, Hatters, Silk, Cotton and Woollen Dyers, Morocco dressers, Soap boilers, Tallow chandlers, Pork butchers, Glue makers, Sugar refiners, Farmers, Distillers, Cotton and Woollen mills, Warming Buildings, and for Propelling Power, etc., etc.; and thus far have given the most entire satisfaction, may be had of D. K. MINOR, 23 Chambers st. New York.

The article is complete in itself, occupies but little space, is perfectly portable, and requires no brick work, not even to stand upon. It is valuable not only in the saving of time and labor, but in the economy of fuel, as it has been ascertained by accurate measurement, that the saving in that article is fully two-thirds over other methods heretofore in use. They are now for the first time introduced into New York and Boston by the subscriber, who has the exclusive right for the New England states, New York and New Jersey, and are manufactured by

FORCE, GREEN & CO. New York.

DAVENPORT & BRIDGES' PATENT CAR AND TRUCK

DAVENPORT & BRIDGES CONTINUE TO MANUFACTURE TO ORDER, AT THEIR WORKS, IN CAMBRIDGEPORT, MASS. Passenger and Freight Cars of every description, and of the most improved pattern. They iso furnish Snow Ploughs and Chilled Wheels of any pattern, and size. Forged Axles, Springs, Boxes and Bolts for Cars at the lowest prices. All order punctually executed and forwarded to any part of the country. Our Works are within fifteen minutes ride from State street, Boston—coaches pass every lifteen minutes.

#### Railway Miscellany.

a cigar in a railway carriage on the Dublin and in the consideration of the bill." Drogheda railway! "Served him right."

The Brighton railway company have offered the post office department to carry a mail every train, between London and Brighton, which would be nearly every hour in the day.

Who will not admit, even if there is "no poetry in railways," the truth of the two last lines in the tend itself to the Black and Caspian seas." following verses?

#### "No Poetry in Railways."

The following beautiful verses appeared a day or two since in the *Morning Chronicle*. They are from the pen of a gentleman till recently connected with the active conduct of that journal, and most favorably known through several literary productions:

No poetry in railways! foolish thought No poetry in railways: 1001sh thought
Of a dull brain, to no fine music wrought,
By mammon dazzled, though the people prize.
The gold alone, yet shall not we despise
The triumphs of our time, or fail to see
Of pregnant mind the fruitful progeny
Ushering the daylight of world's new morn.
Look up we doubters, he no more forlored. Look up, ye doubters, be no more forlorn! Smooth your rough brows, ye little wise: rejoice, Ye who despond: and with exulting voice Salute, ye earnest spirits of our time The young improvement ripening to her prime, Who, in the fullness of her genial youth, Prepares the way for freedom and for truth, And breaks the barriers that, since earth began, Have made mankind a foreigner to man.

Lay down your rails, ye nations, near and far: Yoke your full trains to steam's triumphal car; Link town to town; and in these iron bands Unite the estranged and oft embattled lands. Unite the estranged and oit embattled lands. Peace and improvement round each train shall soar. And knowledge light the ignorance of yore:
Men, joined in amity, shall wonder long
That hate had power to lead their fathers wrong;
Or that false glory lead their hearts astray,
And made it virtuous and sublime to slay.

Blessings on science! When the earth seemed old. When faith grew doting, and the reason cold, 'Twas discovered that the world was young, And taught a language to its lisping tongue:
"Twas she disclosed a future to its view, And made old knowledge pale before the new.

Blessings on science! In her dawning hour Faith hit her brow, alarmed for ancient power; Then looked again upon her face sincere, Held out her hand, and hailed her sister dear; And reason, free as eagle on the wind,
Planed o'er the fallow meadows of the mind,
And, clear of vision, saw what seed would grow
On the hill slopes, or in the vales below; What in the sunny south or nipping nord, And from her talons dropped it as she soared.

Blessings on science, and her handmaid steam!
They make Utopia only hall a dream; And show the fervent of capacious souls, Who watch the ball of progress as it rolls, That all as yet completed, or begun, Is but the dawning that precedes the sun. CHARLES MACKAY.

" The Leviathan Air Engine .- One of the most important announcements of the present week is that the above engine, which has for as a tractive power on the Shrewsbury, Chester, and Crewe junction railway. The enorter, and Crewe junction railway. The enormous power of the machine, and the success of the experiments which are reported to have q is so great, that the type founders are doing 5d. respectively. The numbers conveyed on eminent scientific men, have attracted to the quires have found their way into print, that subject the attention of all Europe. We extend the printers have been thrown out of their pect that the curiosity of the public will be calculations, and the supply is not adequate "The average rate for carriages taken on

Warsaw and Vienna Railway.-" The great line of railway from Warsaw to Vienna is being carried out with most amazingactivity. In June last the part between War-saw and Grodzisk was opened; on the 21st of September, the section between Grodzisk and Ruda was finished; and in like manner it is expected that the portion between Skine-vire and Lorviez will be completed before the end of the year."

Advantageous Rates for Passengers and Goods on English Railways.—We noticed last week a clever paper, printed for private circulation, on the adaptation of official returns of railway traffic to the general pur-poses of statistical inquiry, from the pen of Mr. Graham, the secretary, we believe, of the Statistical society. We take the opportu-

nity of extracting the following:
"The average rates of 22 English railways for first class passengers, on five half "Coal.—The Wolverhampton Chronicle mentions a rumour that Mr. F. Wrightson, of Birmingham, has been directed by the lords of the admiralty to make an analysis of the different kinds of coal in Great Britain. An inquiry of the same kind has been come of England, and the lowest, 1.87d., by the Durham junction.

"The average rates on the same 22 lines nies that (as generally alleged) he ever said for second class passengers, on the same five before a committee of parliament, that it was returns were 1.915d., 1.955d., 1.876d., 1.902d., 1.957d. On the last return, 10 were above The doctor, who dates from Paris, says: "I the average, and 12 below it. The highest beg to inform you that I never gave any evi- rate, 2.7d., was charged by the Eastern coun-

"The average rates for third class passento, which was contradicted when it first appeared. You will perceive the impossibility same five returns were 1.41d., 1.185d., 1.247d., of my having made such assertion when you 1.204d., 1.251d. On the last return, 5 were remember that it has been well known to all above the average, and 11 below it; the highwho are conversant with the history of steam est rate, 1 6d., was made by the Great North of England, and the lowest, 0.9d., by the versed by the steam ship Savannah, about 20 London and Croydon and the Lancaster and Preston. The Chester and Birkenhead had a fourth class, at the rate 0.33d., which was "Greece.—Railways, proscribed at Rome, discontinued during the period of the second return of the tables.

"As there is but slight variation in the rates for horses and carriages, live stock and coals, over the four returns, an average is ta-ken for the whole period. The average rate for horses, taken on 21 English railways, is 4.14d. Of these, 13 are above the average, and 8 below it. The highest charges were of the experiments which are reported to have q is so great, that the type founders are doing 5d. respectively. The numbers conveyed on been made with it to the satisfaction of many nothing else but casting for it. So many estable lines were, however, very small. The

"The average rate for carriages taken on satisfied by the committee on the Shrewsbury to the demand. If, therefore, gentlemen hapand Crewe junction railway bill, since the pen to find themselves dubbed plain Mr., they power to be employed on a projected line, as will know the reason."

and Birkenhead, not included in the average plan of erecting two piers in the waterway, and it is absurd—it is worse than absurd—to charged 12d. on returns 1 and 2; but had resupporting a centre chain of great span, there say that the large extension of an existing duced the rate to 8d. on 3 and 4. This result is under the supporting a centre chain of great span, there is say that the large extension of an existing duced the rate to 8d. on 3 and 4. This result is under the supporting a centre chain of great span, there is say that the large extension of an existing duced the rate to 8d. on 3 and 4. This result is under the supporting a centre chain of great span, there is say that the large extension of an existing duced the rate to 8d. on 3 and 4. This result is under the supporting a centre chain of great span, there is say that the large extension of an existing duced the rate to 8d. on 3 and 4. This result is under the supporting a centre chain of great span, there is no parallel between the two shores, and a great saving to the country. There is no parallel between traffic.

4 below the average. The highest rate, 4d., pense for approaches will be very trifling. fic exists between its termini, or in other was charged by the Birmingham and Glou- On the Middlesex side there is very little to

"The average rate for pigs on 9 English railways is 0.344d. Of these, 4 are above, Gloucester and the London and Southwestern, and the lowest rate, 0.17d., by the Newcastle and Carlisle.

"The above averages having been taken on those lines only of which the returns were perfect during two years, but as they include the most extensive lines, and are located in the works to be executed and for every ne- to the number in one or two weeks. They all parts of England, the averages may be

purposes is, that all the surplus produce of la-bor must be conveyed to its market or locali-the capital engaged in it. According to the ty of consumption. Common roads will soon be superseded, except for very short distances, by railways, as the means of such conveyless than £8,000, being about 9 per cent. ance, and there can be no doubt that a well upon the proposed capital, part of which may digested system of tabulating the traffic of so very probably not be required. The whol large a portion of the produce of the land and tolls will be so much clear profit, as the outof local trade throughout the kingdom,"

The pamphlet is worthy of attention, as

don Railway Record.

Ranelagh Suspension Bridge.—A company has been brought forward for the construction of a bridge across the Thames, from a point between Chelsea hospital and the Groswenor canal, to the Surry shore near the red house, at Battersea. The necessity of such liament may be looked forward to as certain. which will require about fifty thousand tons a structure, as a public work, is now very In conclusion, we must observe that while more. From this statement, our readers can generally admitted, and the distance between Vauxhall and Battersea bridges is very great and includes an immense mass of buildings, and a large population. The commissioners of metropolitan improvements, indeed, in their plans accompanying their report to the house of our readers as may be looking out for a dotted with manufacturing towns and villages of commons, on proposed improvements in solid remunerative and permanent investment. so closely located as to form almost a continuous continuous and permanent investment. of commons, on proposed improvements in this district, have laid down roads, apparently with the express view of leading to a communication with the Surry side of the river, at the point proposed by the promoters of the Ranelagh bridge.

"It has been decreed, as was well said by Mr. Parker, at the Oxford and Wolverhamp-ton meeting on Tuesday, that the people of day to make our own iron.

"The average rate for coals is 1.83d. per masonry, etc., while the two chains will not said that the manufacture of gas could never ton per mile, taken on 22 English railways. be of any considerable length, and consequent answer as a commercial speculation, because "The average rate for the conveyance of ly, as the strain will be less, they may either only a certain number of candles were made cattle on 9 English railways is 153d. Of be made to bear a greater weight, or they and used before gas was invented; or as well these, 3 are above the average and 6 below may be safely constructed with a smaller might it have been said at the time printing it. The highest rate, 2d., was charged by quantity of iron than under the old system. was introduced, that its extension ought to be the Birmingham and Gloucester, and the The arrangement of the structure, although curbed because before its introduction a certowest, 09d., by the Newcastle and Carlisle. very simple and obvious, is, we believe, en-"The average rate for sheep on 9 English tirely novel, and is worthy of the rising rerailways is 0.3d. Of these, 5 are above, and putation of the engineer, Mr. Bird. The exis projected because a certain amount of trafcester, and the lowest, 2d., by the London and be done, and such property as it will be ne- projection of a railway. A railway, in a is vacant, and of comparatively little value, where there was very little traffic before, the and consequently the item of compensations, completion of a railway will cause a traffic and 5 below the average. The highest rate, usually so large in concerns of this nature, unthought of to be established." 05d., was charged by the Birmingham and cannot in any event amount to any considerable sum, especially as all the parties affected Coal on the Line. - In the spring of the preare favorable to the undertaking, on account sent year there were but two anthracite furthe value of all property in the locality.

all parts of England, the averages may be considered fair."

The general scope of the writer's argument is thus stated:

"The basis of the argument for the utility of these tables as applied to general statistical purposes is, that all the surplus produce of lapurposes is, that all the surplus produce of lapurposes is the capital engaged in it. According to the

-Railway Times.

caster and Preston, and the lowest, 4d., by The proposed bridge is intended to be upon this country shall travel by railways. The York and North Midland. The Chester the suspension principle. Instead of the old people have made such a decree themselves will consequently be effected in pile driving, railways and canals. As well might it be

"It does not always follow, that a railway cessary to purchase on either side of the river great measure, creates its own traffic; and

#### AMERICAN RAILROAD JOURNAL.

PUBLISHED BY D. K. MINOR, 23 Chambers street, N.Y.

#### Thursday, December 11, 1845.

Railroad meeting in Bedford, Pa ..

More railroads.....

THE COAL TRADE-SCHUYLKILL VALLEY.

It will be seen that the amount of coal sent this week by railroad is 5,850 11. The snow storm in the early part of the week blocked up the lateral roads so that it has been almost impossible for the cars to pass over them.

The canal is closed for the season.

A letter from Pinegrove states, that the navigation on the Branch canal, closed on the 28th inst. We shall have no further reports from Pinegrove until next spring.

Canal Tolls .- Amount of tolls received on all the New York state canals, in each of the following years, viz:

Tanana Tanana	4th week in Nov.	Total to 30th No
1839	\$5,041	
	20,190	
	21,734	
	5,380	
	14,747	
	25,584	

The above is the entire amount of tolls for the season of 1845 to the close of canal navigation-exceeding the very heavy tolls of 1844 by the sum of \$200,088.—Albany Argus, Saturday.

The Kingston Chronicle says, "The Kingston and Toronto railroad committee have given to Mr. Cull, civil engineer, final instructions to proceed with a preliminary survey of the whole line from Wolf island to Toronto, and he has commenced the work."-Oswego Whig.

The Beauharnois canal, in Canada, 12 miles long, around the Cascades and Ceder rapids, is completed.

#### To Railroad Contractors.

We gave in our last the proposals of the Pittsfield and North Adams railroad company, and they will be found in another page of this, for the graduation, masonry, materials for, and laying the superstruc ture, and fencing eighteen and a half miles of railroad from Pittsfield to North Adams.

These proposals are given in a form and place that suits us admirably. They are given in a detailed and definite manner which enables those at a distance, who desire to compete for either of the items, to understand and propose without the trouble and expense of a journey. We therefore commend the subject to the notice of other companies who are about receiving proposals, and will on our own, as well as on their account, make one suggestion which we feel assured will be for our mutual—though much more, we hope, for their, than our, interest-viz: allow more time for competition, bring more competitors into the field, and thus save money to the comadvertising! a very important matter to the RAILafter years of short supplies of fuel. Will you bear this in mind gentlemen?

Another Road to be made immediately, as will be seen by the following proposals from the Boston, Connotice, as we feel assured that good bargains will levelling and filling, were both just and timelyeffect that object—their principal mistake lies in havness here offered, to give their immediate attention to the matter. There is no time to be lost, unless they mean to lose an opportunity of being instrumental in the "improvement of the ways;" the aveof good old New Hampshire, Gop bless her; upon ful Connecticut, where it bids adicu to the territory sun never sets; and it is therefore possible that we vest of disappointment. may be a little selfish in this matter, as with a good railroad up the valley of that river we should be or let it be as it is. Use the water for man

likely to revisit the scene of more than one childish frolic; though, in doing so, it is probable that we should find—alas! only the places where, not the madcaps with whom we so often engaged in the sports of boyhood.

#### Boston, Concord and Montreal Railroad.

Proposals will be received for the Grading and Masonry of this Road, from Concord, N. H., to the Connecticut river at the mouth of Ammonoosue river, till the 23d inst. Specifications, Profiles, Surveys, etc., may be obtained of the Engineer, William P. Crocker, at Meredith Bridge, who will furnish any desired information in relation to the subject. Bids will be received for the whole line or any part of it; and it will be expected the work will be commenced as soon as may be after the contracts are closed.

Sealed proposals may be made to either of the Directors, or the Engineer, and will be considered by the Board at the Eagle Coffee House, in Concord, on Tuesday the 23d instant.

JOSIAH QUINCY.

President B. C. and M. Railroad. December 2, 1845. 2t 50

Farmington Canal, or

New Haven and Northampton Railroad. - The communication of "P," in this number of the Journal, in relation to these works, should be well considered by the parties interested in them, before they decide upon making "two bites of a cherry." not now worth eating, instead of engrafting upon the stem a different kind of fruit, say, if you please, the "apple," which is sure to yield abundantly when cultivated properly on the right kind of soil. The idea of making a railroad along the line of the Farmington canal is by no means of recent date. It has been for years so evidently in accordance with the spirit of the age, and offered inducements to those pany while it, at the same time, gives us more tor interested so far greater than the canal can possibly afford, that it arrested the attention of a gentleman ROAD JOURNAL, when it is just getting up steam, of intelligence and much practical experience both in canals and railroads, several years ago, as may be seen by referring to the Railroad Journal for June 15, 1840, page 360. The views put forth in that communication by Mr. Holcomb, in relation to the eord and Montreal railroad company, and we would propriety of abandoning the canal entirely, and concall the attention of our contracting readers to the structing a railroad upon its bed and towing path, by be made on this line where the managers are so though somewhat in advance of the age, as it had prompt to take a hint, and avail themselves of not then become fashionable to turn canals into railthe true medium of arresting attention. It is be- ways-and they have lost nothing of their force by youd all question, for the interest of the company to the lapse of time, but gained decidedly, both here invite a vigorous competion for their work, and it and in Europe, under circumstances similar to those strikes us they have get upon the right track to in connection not only with the Farmington, but also with many other of our canals. The same subject ing made the discovery at so late a period; we will was again alluded to by us in the Journal of 3d July however endeavor to remedy that by calling special-last, page 427, when we again placed the views of ly upon those desirous to engage in the kind of busi- Mr. Holcomb before our readers, in connection with an article from the N. Haven Courier, taking almost the same ground. We now give another well written article on the same subject, from a source entitled to the entire confidence of those most deeply nues of trade and travel, we mean, not the manners interested in the matter, and will not omit so good an opportunity to caution those having the managewhose soil we drew our first breath, and spent our ment of the business, to look well to the present inearly years, and towards whose bleak hills and dications of the times, and be sure that they do not fruitful valleys we often look back with fond affec- make an "improvement," which will require to be tion, even though it is near forty years since we left again improved before it will produce the greatest the haunts of childhood, on the banks of the beauti- good to the greatest, or even any good to the greatest number; or, indeed, yield any return to those who of the youthful queen, upon whose dominions the have, for so many years, had only a plentiful har-

Let them make a good railroad in place of the canal

ing purposes wherever it is available, and make a railroad which will increase the business many fold, and then accommodate the whole without the canal better than with it. The railroad alone will in a few years, if not at once, be profitable; but with the canal kept in readiness for use along side, neither will yield returns to those who have invested, or may hereafter invest, their capital in them. The true policy, as we think, if any change is made, is to make it thorough, and a good railroad instead of a poor canal. "P." is ready to back his opinions in relation to cost of grading, and his name is at the service of those who would avail of his offer.

BY THE CAMBRIA, which arrived at Boston on the 4th inst., we have received our regular files of the London Railway and Mining Journals-and also through the kindness of an esteemed friend in London, and the politeness of Professor Morse, who came passenger, we have duplicates of some and er heard of any that has made more business than extra papers of much value, together with letters it was able to accommodate, or that was so unselfish containing intelligence of importance to all in this as to make business for a canal by its side, unless country, interested in the extension of the railway system. We find many matters of absorbing inte-humbly submit whether the continuance of the carest in these papers and letters, which we shall give nal will not jeopard both projects, for the following in the next number, the present one being mainly in type when our journals came to hand, thus denying us the pleasure of giving, at least one of the letters in addition to the few extracts and comments for the roadbed may be put down at double, and will which we have room this week.

The panic, or revulsion, as it is termed, has had the effect to depress railway shares considerably, even the best dividend paying of the roads, as will average par value of these shares is £72 63s. 8d.; 15s. 8d.; and on the 15th November it was £116 17s. 3d.—showing an average decline of £2 18s. 8d.! This has, of course, given much alarm to holders, and especially to those who have been speculating largely on small capital in doubtful or rival shemes, but those who have invested in legitimate lines, and understand the subject, will not, we imagine, be disposed to rush into the market, but will hold on for a time until the present excitement subsides. Nor will this depression and alarm interfere at all with those works already commenced; but they will be vigorously pushed forward to completion.

We give this list of roads, cost and present value of shares, for the purpose of reference hereafter and shall take occasion to refer to it by way of showing se or fall of the market value of the shar

The prices of iron vary but little from 25th Oct. to 15th Nov. Rails have advanced a trifle, and Scotch pig has receded, as will be seen by the following quotations of the two dates; there is little chance, however, for a decline, as the demand must continue enormous.

October 25th. November 15th. Price of rails, ....£11 10s. to 12. Scotch pig ...... 4 2s. 6d. to 4 5s.

For the American Railroad Journal.

New York, December 1st, 1845.

New Haven and Northampton Railroad. I understand that measures are about being taken to construct a railroad on the banks of the New Haven and Northampton canal. Feeling some interest in that work, I ask the use of your columns to throw out a few suggestions for the consideration of those who have the control of that work.

What I would principally urge upon their attention, is not the propriety of the work in view, but the manner of carrying it out. I allude to maintaining the canal; thus keeping up two works for the accommodation of a business that has not heretofore been found adequate to the repairs of one .-Railroads, it is true, make husiness, but I have nevit was in the construction of the railroad itself. I reasons.

First, the additional cost of the railroad, will form no trifling consideration. The cost of preparing necessarily after this additional outlay, be extremely imperfect, should the exact line of the towing path be adhered to, and should it not, the additional cost would be considerably beyond what I have mentionbe seen by the following list of fifteen roads. The ed. When I say it would be extremely imperfect, I allude to the numerous small curves in the canal the average amount paid on them £56 63s. 8d. many of which cannot be of more than 200 feet ra-The average market value on 25th October was £119 dius; and on our best railroads, 2000 feet is the minimum. To be sure, these are admitted on steep grades, whereas upon the proposed work, they would occur upon a level. But even upon a level, a radius of curvature of 200 feet, cannot be thought of in connection with high speed and safety, and without these requisites the work had far better not be undertaken. For the day has passed when it was only necessary to build some sort of a railroad, to secure the patronage of the public. Railroads are becoming so numerous, especially in the region where this is to be located, that the travelling community has grown bold enough to demand to be carried both with safety and speed. And I will here take the liberty to predict, that in ten years, and perhaps less, the speed of passenger trains upon all the railroads in the country, will be doubled, and in place of from fifteen to twenty miles per hour, we The observation of every one must satisfy him of this fact.

> How shortsighted then will it be in the directors [of the sound judgment and professional however sagacquestion, to construct a railroad which would scarce. ly admit, compatible with safety, the average speed than the whole width and limits [with perhaps oc- affair. casional departures from these] of the canal, will

Again, should the project of maintaining the canal be abandoned, the plan suggested by a correspondent of the Journal, June 1840, of using the bot-

. Does P mean filling the canal, or ditching the sides of the rail track?

cient width is obtained, might be availed of; but should the proposed plan be insisted upon, [which, Siamese twins like, would never be able to accomplish anything because retarded by its other half,] the towing path, culverts, aquaducts and bridges would all require to be widened, and at a very heavy expense. The towing path was originally ten feet in width, but upon embankments it is now scarcely more than seven. It cannot be supposed for a moment that the present width will answer, or even the original, bearing in mind the conditions of speed and safety. Nothing less than twelve feet, and the common width is at least fifteen, will at all answer. The number of culverts and bridges to be lengthened in a country so abounding in streams and roads, is very large. Of the latter, there cannot be less on the eighty miles of canal, than 160, which require another condition besides lengthening that of raising. They are now some eight feet above the water line, and six above the towing path. To raise them sufficiently, would not only be attended with considerable expense, but render them difficult and inconvenient [now sufficiently so] to cross.

Again, it cannot be so long since an accident has happened to the canal—the washing away of an embankment, or something of the kind, occasioned by the water of the canal, that the directors require to be reminded that canals are subject to such accidents, and this canal in particular-owing to the loose sandy soil through which it passes. From this cause, as an accident would not be likely to happen to the canal without affecting the railroad, the latter as well as the former, would be liable to constant interruptions, diverting business into new channels, which frequently never returns.

As to the capability of a railroad to do all the business that might offer on the route, no one can doubt for a moment; and as to the capabilities of railroads to do freighting business profitably, and especially freighting and passenger business combined, which would be the character of the business on this work, it is only necessary to look over the reports furnished weekly by you in the Journal.

At once then, and forever, let them abandon the canal, a work, as time has proved, conceived in error, [although the offspring of a master mind, the late James Hillhouse, ] and I might almost say, supplied with water by the tears of the orphans and widows of impovrished stockholders! [but that would be most too much of a flourish,] and construct a permanent and substantial railroad. Your correspondent, in the article above alluded to, a part of which you lately republished, accompanied by some shall travel at a speed of from thirty to forty miles. judicious and well timed remarks on this subject, estimated the cost of the improvement at about \$6,-300 per mile, which I then thought sufficiently high; but the price of iron having considerably advanced since that period, a corresponding addition must be ity of one of their number, Henry Farnam, esq., civil made to this estimate. The preparation of the road engineer, I have the highest opinion,] of the work in bed is estimated in that article at between \$1,300 and \$1,400, and I will enter into contract with ample sureties to perform the work for that amount, of the present time. In order to remove this diffi. and you are authorized to furnish my name to any culty, [the abruptness of the enrves,] nothing less person that shall desire it in connection with this

There are several other matters that I shall pass by without comment, for fear of burdening you with too lengthy a communication; such as the cost of al cost of constructing and maintaining the railroad; the cost of either numerous viaducts, or swing bridtom or to wingpath at pleasure, by ditching the the maintaining the canal, independent of the addition-former, or by throwing down the latter 'till a suffiges, [and in the latter event, coupled with the exges, [and in the latter event, coupled with the expense of attendance,] for crossing the canal as the towing path shifts from one side to the other; or the

the highest standing in the profession] employed to

It appears by the report that the immediate object of the directors is to construct a railroad along the line of the canal to Bristol Basin, a distance of about the sea-board, than to convey thither the water, [some twenty-seven miles, and from thence departing entirely from the route of the canal, to Collinsville, a clever little village which has been brought into existence by the manufacture of the celebrated Collins be questioned whether the waste by leakage, evapoaxes, a distance of about thirty-nine miles. Mr. T. estimates the cost at \$15,171 per mile, or the gross sum of \$595,591; a sum which three years since, by adhering to the line of the canal for the railroad and abandoning it for purposes of navigation, would have been nearly sufficient to have constructed a railroad to Northampton, a distance of about eighty struct at least sixty-five miles, counting the superstructure at Mr. T.'s estimate. What object the di- date of my last report, and an account of ex- ton above the market price at that time. rectors can have sufficient to induce them to carry their proposed work to Collinsville, it is difficult to see, unless it is in connection with the Western railroad at Pittsfield, by continuing up the, from here, rugged valley of the Farmington, especially since a more desirable connection would be made at Westfield, where the Western railroad crosses the canal; since I venture the opinion that the amount of axes, [it is true, I say nothing of other materials,] which the railroad would carry in several years, [I am supposing that they forge pick axes as well as oth ers] would scarcely be equal to the number required to hew its way through the rough and rugged region track. This step was unavoidable, as the enormously in the mean time, and the agent about Collinsville.

This departure from the canal is the more surprising, since the only outlet possessed by this region of country is at present the canal [it can only shun it by crossing over, and proceeding to Hartford] which the canal now enjoys and to which the railroad, as next of kin, though not of affection, would fall heir.

I learn by the report in question, that a principal object of the directors in keeping up the canal, is to furnish water power for manufacturing establishments, yet to be built along its banks-admitting that the freighting will mostly be done by railroad. To a certain extent this may be, and doubtless is, a judicious measure; but it certainly cannot be necessary or desirable to keep up eighty miles of canal to furnish to a few manufacturing establishments, at a low rent, the small amount of water furnished by the Farmington river and the Sohthwick pondsfrom whence the principal supplies of water are obtained. The water power must be furnished at a low rent, or in a country so abounding in streams and still unappropriated water powers, there will be few to avail themselves of them, especially since it has already become a much mooted point, whether water power is desirable where it involves any, however inconsiderable, transportation to and from the sea-board or navigable streams; and I am told that in the eastern part of Pennsylvania, about Philadelphia, and in Delaware, about Wilmington, one vicinity having the Schuylkill, etc., and the other dence with these gentlemen, during which last three days of the session, and it was bethe Brandywine, etc., affording unrivalled water powers, steam power, from its economy, [coal, it is true is cheap] and certainty, is obtaining a decided preference.

Since writing the above, I have seen the report of pears by the report, there is a fall of something like water of the Southwick ponds, at the northern outfall of sixty feet in half a mile. And finally, would it not be cheaper to transport the goods, wares and merchandize, from the former point [Farmington] to forty miles by feeder and canal,] for turning the factory wheels; and although the fall would be perhaps double by adopting the latter course, yet it may ration, etc., would not restore the equilibrium.

Very truly yours,

ENGINEER'S DEPARTMENT W. & A. R. R. ? October 22d, 1845.

Railroad Meetings.

We give place with pleasure, this morning, to the proceedings of a meeting held at the ra falls, on the subject of a bridge over the Niagara river. We are informed by Major Stuart, that the meeting was numerously attended, and much enthusiasm manifested. I will be seen that Mr. Buchanan, formerly Moved by J. Cummin British consul at New York, was president by Thos. C. Street, Esq. of the meeting. He was much delighted with the project, and proposed to take a liberal share of stock. The citizens of Canada agree to take one-half the amount, \$100,000, and three-fourths of the remainder has already been engaged on this side, and will be subscribed as soon as the charter is obtained .-The project is one of great importance to this city, and we hope our citizens will keep this in mind, and also the great improvements now going on at the falls.—Rochester paper.

A numerous meeting of gentlemen from the Niagara and Gore districts, Canada, and the state of New York, took place at the Clifton Hotel, Niagara Falls, on Wednesday, the be a committee to collect statistics, with a 19th November.

James Buchanan, Esq., of Drummondville was called to the chair.

Jasper T. Gilkeson Esq., of Hamilton, was appointed secretary.

Mr. Stuart, C. E. of the Lockport and Rochester railroad, explained the objects and vast importance of the proposed bridge; demonstrated that it was quite practicable, at a moderate cost.

Mr. Centre, of Lockport, and General Whitney of the falls, both expressed their conviction of the great advantages offered by the intended bridge, while Mr. Carroll, one of the directors of the Great Western railroad, was of opinion that such bridge-if constructed-would command the terminus of the Great Western railroad. Other gentlemen offered their views, and a general opinion prevailed of the immense benefits of the proposed connection between the two countries, as it would be of infinite service to the inhabitants and railroad companies on both sides of the line, while it would probably adelphia, has recently, in company with Ma-with the east by steam? prove the best paying stock in the world.-After some further conversation, it was,

Resolved, That to promote the objects of this meeting, a committee of five gentlemen, from Canada and the state of New York, be

Resolved, That Sir Allen N. MacNabb, G. S. Tiffany, W. H. Merrit, J. Cummings, Veaux, C. B Stewart, Joseph Centre, Esqs., of the state of New York, do compose the said committee.

Moved by J. Cummings, Esq., seconded

That Mr. Buchanan do vacate the chair, and the same be taken by Mr. Carroll.

S. Buchanan, Chairman; I. T. Gilkeson, Secretary.

Resolved, That the thanks of this meeting be given to Mr. Buchanan for his conduct in

Mr. Street here addressed the meeting on the propriety of obtaining statistical information, he therefore proposed the subjoined res-

olution which was agreed to:

Resolved, That Lot Clark, Samuel De Veaux, Joel McCollum, James Buchanan, James, Cummings, and W. H. Merrit, Esqs., view to show the probable support which will be given to the proposed bridge.

P. Carroll, Chairman; J. T. Wilkson,

Secretary.

Suspension Bridge at Niagara Falls.

We find the following notice in the Utica Gazette, and a similar one in the Philadelphia Ledger. We are gratified to learn that public attention is turned seriously to this constructed below the falls upon the most approved plan, by which the American and Canadian railroads may be connected, and it will of itself be a curiosity worth a long journey to look at.

Should such a structure be decided on, Mr. Charles Ellet, Jr., of Philadelphia, or Mr. John A. Roebling, of Pittsburg, may gather new laurels in that branch of engineering.

Economy, safety and efficiency will, we think, be promoted by the union of short and appointed, who will frame the necessary bill continuous railroads. Unity of action is esor application to their respective legislatures, pecially desirable in railway management, for an act of incorporation, with a capital not and we are therefore pleased to learn, as we exceeding £75,000 (\$300,000.) do from the following, which we find in the True Sun, that the committee of the Worcester Clisson House, on the Canada side of Niaga-Thos. C. Street, Esquires, of Canada West, and Western railroads have agreed upon ra falls, on the subject of a bridge over the and Lot Clark, G. W. Holley, Samuel De terms of union. We hope the shareholders will ratify this agreement if it is an equitable one; and we should like now to see a union of the roads west of Albany, under a management which will increase the speed and reduce the charges—and thereby double, we hope, its receipts in a few years. Who will not join in this desire?

> "We understand from the Albany Citizen that the committee appointed for the purpose by each of the above corporations, have agreed upon the terms for the union of these two roads under one corporation, to be called the Boston and Albany railroad company.-Among the terms agreed upon, we have been informed one is that the stockholders of the Worcester railroad, for every five shares of their stock are to receive six shares in the new company. The agreement is to be acted upon by the stockholders of both corpora-

tions."

Railroad to Lake Eric .- We take the following from the St. Louis New Era, of 18th ult., for the purpose of repeating the remark of the writer, that "now is the time for St. Louis to act." The writer says:

"While our eastern friends are stirring with their various railroads, all with a view subject. Let there be a suspension bridge to secure the trade of the western valley, does it not become us of the west to second their efforts, and commence a work here and meet them half way. I notice there has been a meeting of the citizens of Toledo, in Ohio, at which a project for a railroad was recommended, commencing at Toledo, on the Maumee river, and extending through Indiana to some point in Illinois, with a view to its termination at St. Louis.

" Now, what will our capitalists and enterprizing business men do to further the exer-

"Will not those who are most deeply inlocalities in the vicinity of Niagara falls, with terested in the future prosperity of the city a view of ascertaining the practicability of a confer together and recommend something to men, consisting of Messrs. Curtenius, De suspension bridge across the Niagara river, be done to promote the object in view? Shall Veaux, Stuart, Cummings, Street, and Car. "There is a point, about a mile and a hall we be slumbering all the time, and fold our arms in quietness, as if we had no part or lot convenience to the people in having these buildings in the matter?

"If nothing can be done in our own state, to establish a system of internal improvement can we not appeal to our friends in the neighgreat work of uniting the east and west?

"To this point a railroad must one day. sooner, or later, centre, and those who are on the alert to secure first the completion of a road directed to this city will derive immense

advantages.

" It needs only a glance at the map to point city, and that, in my humble opinion, is to Vandalia and Terre Haute, on the Wabash, and so on through Lafayette to the lake at

"I hope, sir, the attention of the public will be aroused to this important subject, and that meetings will soon be held to take into consideration the whole matter.

" Now is the time for St. Louis to act, and what is done let it be done quickly."

Our citizens, says the Pittsburg Gazette, will be no little gratified to read the proceedings of the railroad meeting in Bedford. As information on the subject of the right of way extends, the people of Pennsylvania will be doubt they will be successful. found acquiescing in the justice of yielding this grant. It is one of those questions which only needs to be examined with unprejudiced minds to secure conviction. We hope our Philadelphia friends will yet see this subject in its true light. We should be sorry to differ with them, or to see hard feelings engendered in the western and southwestern portions of the state, against that city on this question. We want to see her go on with her Sunbury railroad, and we wish to unite with her in amicably procuring the necessary legislation, and as far as our means will admit, in helping her to build the branch to this city; but we are pursuaded that a good deal depends upon her course in respect to permitting the Baltimore road to terminate at Pittsburg. The feeling on this subject is so deep in this whole section, that irritation, deep in this whole section, that irritation, heavy, substantial Post and Rail fence upon each however improper, will certainly be excited side of the Roadway. by pertinacious opposition on the part of our eastern sister. If Philadelphia would lose anything by that road coming to Pittsburg, we might acquiesce. But we are satisfied this will not be the case, it will require a great deal of equanimity of temper to sit quiet under an irreparable injury done to the southwestern part of the state, as well as to our state works, should Philadelphia opposition frustrate the just demand made.

We fully concur with the editor of the Gazette, in the opinion that "information on the subject of the right of way" is only necessary to induce the people of Pennsylvania to acquiesce in the justice of granting it to the Baltimore and Ohio railroad company, o reach the Ohio at Pittsburg. With the same propriety might the people of Philadelphia, or any other city, object to having houses and stores erected within their boundries by Bostonians, or others from abroad, because the rents would be carried out of Philadelphia. Yet we apprehend that the expenditure of the capital in erecting the buildings, and the increased value given to property thereby, and the

erected by which they may have a choice of location, will be more than equivalent to the inconvenience of having the rents carried out of Philadelphia for expenditure. And then, again, there is at least boring states to lend us a helping hand in the an equal chance that the rents derived from this first outlay, will be invested in new buildings_at least such will be the influence of the construction of a good railroad through almost any part of the state. The advantages to Pennsylvania will far ontweigh, at least an hundredfold, any disadvantage which may by possibility result to Philadelphia. Indeed, we feel assured that Philadelphia will be diout the direction of a road leading from this rectly benefitted by every main line of communication from the west to the Atlantic, even those through Virginia and Georgia, as well as through her own territory. Their influences will spread in every direction-but especially northward, through all the Atlantic cities, and If Philadelphia does not receive her full share of benefit, it will be because her citlzens do not improve the natural advantages of their position.

> More Railroads.—By a notice in another column, it will be seen that the enterprizing citizens of Shelbyville and Shelby county, are about to make an energetic attempt to construct a branch railroad from Shelbyville to Edinburg, the present depot of the Madison and Indianapolis railroad. We have no

A railroad is also talked about from Centreville to Connersville, or some other point on the canal line between that place and Cambridge. One half of the stock will be taken at Centerville. Go ahead, and we'll can be formed of the probable expense of publishing the work, proposals will be issued for the same. All the tracts of Coal land will be designated on the Map of the Schuylkill Coal Region, soon have an extension of the same to this place. - Indiana State Sentinel.

That is the way it will work-make one railroad, others are sure to follow.

NOTICE TO RAILROAD CONTRAC-tors. Proposals will be received at the office of the Pittsfield and North Adams Railroad Corporators. Proposals will be received at the office of the Pittsfield and North Adams Railroad Corporation in Pittsfield, Mass., until the 20th of December next, 1st. For the Graduation, Masonry and Bridging of 18½ miles of Roadway.

2d. For furnishing the Timber, Chairs and spikes and laying the Superstructure.

3d. For furnishing Materials and Building a

and laying the Superstructure.

3d. For furnishing Materials and Building a

The approximate quantities are as follows, to wit: 600,000 cubic yards of Excavation and Embank-

6,500 perches of Masonry.
500 feet of Bridging.
43,000 chestnut or white oak Cross ties, 5 inch face
7 inches between faces and 7 feet long.

500,000 feet board measure, Hemlock sills 3 in. x 8 in. x 18 feet long.
150,000 feet board measure, Hemlock sills 3 in. x 8

in. x 6 and 12 feet long.

70,000 fence rails 12 feet long, either split from thrifty Chestnut of a size not less than 5 in. x 2 in. measured across the centre of the smallest end, or sawed from Spruce timber with square edges, 5 in. x 11 in. or from Hemlock 5 in. x 2 in.

18,000 Chestnut fence posts, holed with 4 holes 7 feet long and measure not less than 8 in. x 4 in, across the centre of the smallest end.

45 tons of Hook Head Raitroad Spike. 90 tons of Cast Iron Chairs.

Plans, Profiles, Specifications etc., will be ready for examination on and after the 15th December.

Bridge, Underhill's Road, Tuckahoe, Hart's Corners, and White Plains—7:30 and 10:30 a.m., and 1
and 3:30 p.m.

Extra trains for Yorkville, Harlem, Morisiana, Fordham, and Williams' Bridge, leave 27th street 7 a.m. for Williams' Bridge. Leave City Hall 9 a.m. (to Harlem only) and 11-30, 2-30, and 4-30 p.m. for Williams' Bridge.

Leave White Plains for City Hall-8-10, 11-10 a.m., and 1-45, 4-10 p.m.

Leave Tuckahoe for City Hall—8-20, 11-20 a.m., and 1-55, 4-20 p.m.

Leave Williams' Bridge for City Hall—7:45, 8:45, 11:45 a.m. and 12:45, 2:15, 3:45, 4:45, and 5:45 p.m.

Leave Morisiana for City Hall—8:10, 9:10, and 10 a.m., and 12:10, 1:10, 2:40, 4:10, 5:10, and 6:10 p.m.

The freight train will leave City Hall at 12:45 p.m. and leave White Plains at 11:10 a.m. All freight must be at the City Hall between the hours of 10:30 a.m. and 12:30 p.m. The White Plain trains will stop, after leaving the City Hall, only at the corner of Broome street and the Bowery, Vauxhall Garden and 27th street.

An extra car will precede each train, 10 minutes before the time of starting from the City Hall, and will take up passengers along the line.

The City Hall and 27th street line will run every 6 minutes from 7.30 a.m. to 8 p.m.

The City Hall and 27th street night line will run every 20 minutes from 8 to 12 o'clock.

On Sundays the trains will be regulated according to the state of the weather.

to the state of the weather.

THE LONDON RAILWAY RECORD,
Edited by Mr. JOHN ROBERTSON, A. M.,
(connected from the commencement with the Weekly Railway press of England.)

The Railway Record is acknowledged to be the
leading English Railway Journal, and is published
twice a week in London, namely on Wednesday
and Saturday. It contains copious and correct reports (by special reporters) of all-railway meetings
in the United Kingdom; ample Share Lists and
Traffic Tables, showing the length, cost, capital and
selling prices in the principal markets, with Editorial articles on the leading Railway topics of the
day. The Railway Record contains also, a complete
resume of French, Belgian and other foreign Railway affairs. way affairs.

Subscriptions 13s, per quarter, to be transmitted in advance to Messrs. Dawson and Sons, Called St. London. Office 153 Fleet street, London. 46

BOSTON COURIER, DAILY, SEMI-Weekly and Weekly.

The Daily edition of the Courier, presents to merchants and others, an extensive medium of advertising. The circulation of the Semi-Weckly Courier (published on Mondays and Thursdays) is believed to be more extensive than that of any other believed to be more extensive than that of any other similar Boston Newspaper. This publication embraces all the reading matter of the Daily, the Foreign and Domesuc Markets, Review of the Boston Market, Prices current, and Ship News, prepared with great accuracy. The Weekly Courier contains as much of the matter of the daily as can be crowded into a sheet of the same size without whit newspaper. into a sheet of the same size, without ship news, prices current or advertisements.

ces current or advertisements.

Our extions to obtain and publish authentic information on all topics proper for the columns of a newspaper,—the state of trade, the prices of merchandize, the current news of the day, and the political movements in the various sections of the country—will not be abated. The marine department of the Courier has been inferior to none in copiousness or accuracy of detail, and it will be our endeavor to maintain its reputation in this respect.

He will also act as agent for the sale or purchase of machinery, and of patent rights for improvements relating to public works.

#### KITE'S PATENT SAFETY BEAM.

MESSRS. EDITORS.— As your Journal is devoted to the benefit of the public in general I feel desirous to communicate to you for publication the following circumstance oo since on the Philadel-phia, Wilmington and Baltimore railroad.

On the passage of the evening train of cars from Philadelphia to this city, an axle of our large 8 wheeled passenger car was broken, but from the pargers, or, in fact, to the conductor himself, until the train, (as was supposed from some circumstances attending the case,) had pass-ed several miles in advance of the place where the accident occurred, whereas had the car been constructed on the common plan the same kind of acci-

dent would unavoidably have much injured it, perthen would unavoid the many factor in personal thrown the whole train off the track, and seriously injured, if not killed many of the passengers.

Wilmington, Del., Sept. 28, 1840.

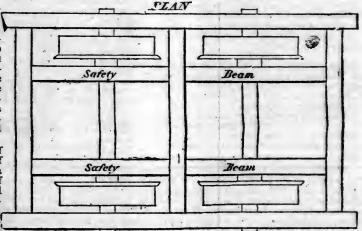

The undersigned takes pleasure in attesting of the value of Mr. Joseph S. Kite's invention of the Safety Beam Axle and Hub for railroad cars. They have for some time been applied to passenger cars on this road, and experience has tested that they fully accomplish the object intended. Several instances of the fracture of axles have occurred, and in such the cars have uniformly run the whole distance with entire safety. Had not this invention been used, serious accidents must have occurred.

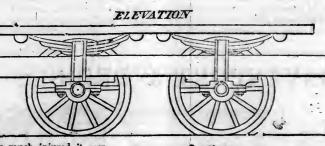

In short, we consider Mr. Kite's invention as completely successful in securing the safety of property and lives in railroad travelling, and should be used on all railroads in the country.

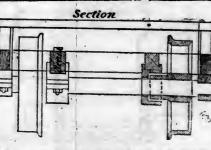

JOHN FRAZER, Agent,

GEORGE CRAIG, Superintendant,

The A model of the above improvement is to be seen at the New Jersey railroad and transportation effice, No. 1 Hanover st., N. York.

DATENT HAMMERED RAILROAD, SHIP and Boat Spikes. The Albany Iron and Nail Works have always on hand, of their own manufac-

their orders as early as practicable, as the subscriber is desirous of extending the manufeturing so as to keep pace with the daily increasing demand.

BENTLEY'S PATENT TUBULAR STEAM BOILER. The above named Boiler is similar in principle to the Locomotive boilers in use on our Railroads. This particular method was invented by Charles W. Benttey, of Baltimore, Md., who has obtained a patent for the same from the Patent Office of the United States, under date of September 1st, 1843—and they are now already in successful operation in several of our larger Hotels and Public Institutions, Colleges, Alms Houses, Hospitals and Prisons, for cooking, washing, etc.; for Bath houses, Hatters, Silk, Cotton and Woollen Dyers, Morocco dressers, Soap boilers, Tallow chandlers, Pork butchers, Glue makers, Sugar refiners, Farmers, Distillers, Cotton and Woollen mills, Warming Buildings, and for Propelling Power, etc., etc.; and thus far have given the most entire satisfaction, may be had of D. K. MINOR, 23 Chambers st. New York.

The article is complete in itself, occupies but little space, is perfectly portable, and requires no brick work, not even to stand upon. It is valuable not only in the saving of time and labor, but in the economy of fuel, as it has been ascertained by accurate measurement, that the saving in that article is fully two-thirds over other methods heretofore in use. They are now for the first time introduced into New York and Boston by the subscriber, who has the exclusive right for the New England states, New York and New Jersey, and are manufactured by

CURTIS & RANDALL, Boston; and by FORCE, GREEN & CO. New York.

## DAVENPORT & BRIDGES' PATENT CAR AND TRUCK.

DAVENPORT & BRIDGES CONTINUE TO MANUFACTURE TO ORDER, AT THEIR WORKS, IN CAMBRIDGEPORT, MASS. Passenger and Freight Cars of every description, and of the most improved pattern. They iso furnish Snow Ploughs and Chilled Wheels of any pattern, and size. Forged Axles, Springs, Boxes and Bolts for Cars at the lowest prices. All order punctually executed and forwarded to any part of the country. Our Works are within fifteen minutes ride from State street, Boston—coaches pass every fifteen minutes.

THE NEWCASTLE MANUFACTURING

The works being on an extensive scale, all orders will be executed with promptness and despatch. Communications addressed to Mr. William H. Dobbs, Superintendent, will meet with immediate attention.

waters into snowy whiteness, as they hurry mitted; that what is termed a shaky plank Ships.—In Belgium, (says our Paris letter,) past the dark evergreen of the tufted islands can be used, provided the shake or crack ap an iron carriage has been constructed on one in the channel,' the zealous missionaries and proaches a perpendicular split; and that of the railways; and though, it may turn out steel clad soldiery bowed before the cross, plank four inches in thickness are preferable dearer at first than ordinary carriages, it is beto a less thickness. It may be necessary lieved will eventually be found cheaper. If so, here to give reasons for these last opinions. iron carriages on railways may become the A four inch plank, of course, is stiffer than order of the day: especially as it is believed "As early as 1688, the 'Soo' was a place one of less thickness. In getting to its place, they present greater security and more advan-of great and favorite resort by the traders and no matter how well you prepare the ground, tages, in every respect, than wooden ones. In voyagers on their way to Mackinaw from there will be more or less strength and width France, and particularly in Paris, iron is beway strain on the plank, which must effect a coming every day more and more extensively "At this present time this ancient congress three inch plank to such an extent as to basten employed in place of wood for building; and ground of the aborigines, has a fort, a fur its wear; not so, or at least to so great an as the French have always been accustomed trading establishment, a small cluster of dwel- extent, will a four inch plank be effected; so to use much more wood in their edifices than lings, and a mixed population of the French, when you have worn off the first inch of we have, the demand for iron will be im-English and half breeds—in all not exceed your four inch plank, the remaining three mensely increased, even if it only partially ing one half the number of native Americans inches having found a solid and firm bed, take the place of wood in the construction of will, in our opinion, do longer service by far houses and buildings. In France, one half, "As Mackinaw was the head quarters, and than if it had originally been laid three or at least one fourth of the bridges under the Soo' a favorite stopping place for the inches thick. We are also of the opinion and over railways will have to be constructed of iron. Moreover the government has deisle of Beauty the rendezvous, and St. Ma- obvious, no plank should be laid more than termined that, in the course of a short time, several steamships of iron, of a large size, shall be constructed; and even private merchants have begun to have their vessels built of iron. Add all this to the enormous dcmand for rails, etc., for the railways, and you will see that, on comparing the annual production of France, the position I have taken up—that France cannot supply her demand for iron, and that she must apply to England to help her-is correct. I might have added, that it is seriously proposed to do away with wooden sleepers and blocks of stone, as supporters for the rails on the chemins de fer, substituting iron; but the present demand is great enough, without counting probablities. Yet, notwithstanding the undeniable incapacity of France to supply the iron of which our best efforts in aid of the construction of others on the same plan. We take the following from the months to execute, they remain firm: and that, cost what it may, she must not apply to though, notwithstanding, in addition to the though, notwithstanding, in addition to the perfidious Albion! The Mines Reunies company has taken on lease, for eighty-three years, the railway from St. Etienne to Lyons. The Mining Journal had previously announcd that the same company had taken on lease the Givers railway."

#### Thursday, December 18, 1845.

THE COAL TRADE-SCHUYLKILL VALLEY.

The quantity sent this week by railroad is 10,464 which will be increased next week, if we are not visited with another snow storm.

The supply of anthracite coal sent to market in 1845 will vary little from two millions tons. In 1844, the quantity sent to market was 1,631,669 tons-increase in 1845, about 370,000 tons.

The Eastern railroad has declared a semi-annual dividend of four per cent.

The Portland railroad has declared a semi-annual dividend of three per cent.

#### Rochester and Lockport Railroad.

The directors of the above company, at a meeting held in this city on the 25th ult., appointed Charles B. Stuart, Esq., of Rochester, chief engineer. Mr. Stuart is a gentlemen whose scientific acquirements and large experience eminently fit him for the responsible station to which he is chosen. He has been engaged for fifteen years on various railroads in this and other states.

Last summer he was employed to construct the "Tonawanda Connection," through Rochester, a all concerned.

Besides his appointment as chief engineer, Mr. Stuart is empowered to act as a commissioner for and shall not hesitate to yield it all the aid-little with the other business operations of that country?

ing other important business connected with the pro-

We trust he will give the citizens of New York an opportunity to subscribe to the stock, as the construction of this road, and its connection with the Great Western, C. W., by a bridge is of great importance to New York, as well as to Albany and Boston, as it will give a winter communication to Canada and the west, uninterrupted by ice. We understand about \$250,000 of the stock to the road is already engaged, and its friends are fast taking up the balance. . The entire stock of the bridge is engaged, conditioned upon procuring a charter this winter. Its cost will be about \$200,000-span 750 feet, placed 200 feet above the stream, and about 11 milesbe low the falls, in full view of the cataract and the whirlpool.

#### Chemung Railroad.

The survey of the route of the Chemung railroad for which a charter was obtained last winter, with a capital of \$250,000,] has been completed. It is to connect the head of Seneca lake with the New York and Erie railroad, and the Williamsport and Elmira railroad, at or near Elmira, in Chemung county, N. Y. The route surveyed intersects the N. York and Erie about five miles northwest of Elmira, and is 171 miles from the head of the lake at Jefferson. The grades will not exceed those of the New York and Erie, and the estimated cost is \$235,000.

#### Our Foreign Correspondence.

We present to the consideration of our readers in this number another letter from our able and observing friend in London.

The information given, and the opinions expressed by him, in relation to the atmospheric railway, are in accordance with the opinions formed by us on the subject, after looking at it through the medium of the foreign journals, as it has been from time therefore give in the Journal at an early day one or have been presented for the consideration of the European public.

Like the railway system itself, the importance of the matter has brought numerous competitors into the field, and there are at this time many able minds are prosecuted, we are lead to believe that at no disway of improvement until it is fully established by experience.

The idea of our correspondent of adopting this Pacific, across the isthmus of Darien, is both bold and new to us; and, though we were somewhat startled at first at the idea of crossing that neck of land, 70 miles in width, in about 100 minutes! yet the first party that makes the journey-on the condition, however, that they have good and sufficient ty of the isthmus, that the train may be sure not to run off at the further end of the track, into the Pacific!! In all seriousness we say, however, if the

Correspondents will oblige us by sending in their the purpose of receiving subscriptions and transact- though it may be -of our feeble, instead of "influential" pen. We shall, at all events, not lose sight of, as we deem it, this vastly important subject, butwatch the progress of the system, and if it is successful in England, endeavor to aid in its application to this line.

> The great extent of roads chartered during the last session of parliament, and the enormous demand for other purposes, has carried up the price of rails to £12 per ton, delivered on board of ship in Wales, which is almost equivalent to a prohibition of exportation to this country, and it will, we hope, stimulate our own capitalists, and iron masters, to exert themselves to furnish an ample supply at an early day for our own use; and we are checred with the indications of such a result which meet us in our present visit to the keystone state, as well as elsewhere, of which we hope to give some account soon. If we would extend our roads we must make preparations to supply our own iron, and especially if the atmospheric system shall be adopted, as a much larger quantity will be required, which cannot be got abroad, if they carry out one quarter of their own projected works.

> The demand for professional services, both engineering and legal, and public advertising, has been wonderful during the past autumn. Its like has never been, and we hope it may never again be, known.

We heartily concur with the writer in his good wishes for the employment of our American engineers, and comparatively poorly paid editors, in our own country. The pressure, however, upon these professions ceased in a great degree on the 30th ult., as upon that day all projects must have been registered, or they could not come before parliament at the approaching session. The London Gazette, extra, published on the 15th of November, must have been a curiosity—as it contained no less than fire hundred and forty-three large folio pages, of advertisements solely. We desire to renew our acknowto time presented to our consideration; and we shall ledgements to our attentive correspondent for his letters and other favors, especially for "Bradshaw's two of the numerous plans, with illustrations, which Railway Guide," for November, and the London Times and extra, of same date, containing a complete list of all the railways constructed, chartered and projected, in Great Britain, up to its date of publication; from which it appears that the number completed and in use is 47, costing £70,680,877; the engaged upon it; and from the advances already number chartered and in course of construction made, and the energy with which the investigations is 118, or about 2,900 miles, which are estimated to cost £67,359,325. The number projected, in additant day it will assume a very different position in tion to the foregoing, is 1,263! of which, 218 have the estimation even of those able and independent paid a deposit of over 5 per cent., amounting to minds which make it a rule to admit nothing in the £11,171,727, and to comply with the resolutions of the house of lords, must pay a further amount of £9,595,464; and on 402 lines a deposit of 10 per cent, is required and much of it paid, and which, if mode of communication between the Atlantic and all paid, will amount to £38,369,109-making upon these 620 projected lines an actual deposit, before they can be acted upon in parliament, of £59,136,300, or about two hundred and ninety-five millions of dollars!!! The remaining projects, 643 in number, we have already become quite familiar with, and have not yet registered their prospectuses, and have reconciled to it—and are quite desirous to be one of not therefore paid up the 10 per cent. on their estimated capital. The total number made, chartered and projected, is 1,428, and if, of the average length breaks on the cars, in descending the western declivi- of those made and making, viz: 28 miles each, will give 39,984 miles of railroad in Great Britain. But of this amount probably not more than one-half will be constructed within the next fifteen years, or about trust which he performed to the full satisfaction of atmospheric lines now in course of construction, 1,200 miles, at a cost of about £18,000,000 a year; and in contemplation in England shall be successful and who will say that this cannot be done, if done -then shall we entirely approve of the proposition, in a regular business way, without interfering at all

For the American Railroad Journal No. 21 Token House Yard, London, November 16th, 1845.

My DEAR SIR: I am very much obliged for your favor of the 6th October, and also for the numbers of your Railroad Journal, which were very acceptable, as I had not received the usual supply for some time before.

· I am happy to say the atmospheric railway system is becoming more and more promising, and I think the day is not very distant when locomotives will be among the "have been's"-" fuimus" is the motto of the Bruce family in Wales, the descendants of Rob't Bruce, king of Scotland. So the locomotive must adopt the same motto before many years to pass .-The practical difficulties in the way of the economical management of the atmospheric system will be removed by the application of the ingenuity and experience of the numerous clever men that will soon be engaged in developing the great resources of this beautiful philosophical system, and I shall be disappointed if another year does not decide in its favor over the locomotive railway. You will find in the Railway Record, of November 15, now sent, observe Mr. Samuda says he can carry the atmospheric railway over the Mendip hills without cutto extend the railway between Harrisburg and Pittsburg, across the Allegheny, with branches and ex-60 miles in length. How I should like our countrymen to have the honor of introducing it between Porto Bello and Panama, across the Isthmus of Darien, short of 70 miles long, where the difficulties to be overcome are not nearly so great as between Philadelphia and Columbia, where a double track of railway of 82 miles long has been made for four books. As rails are principally made in South offices. Never was such activity prevailing, and if millions of dollars! It is disgraceful to the commercial world that this short line of communication quick and inexpensive, between the Atlantic and Pacific oceans, by which some 10,000 miles of most dangerous navigation would be prevented, is not made without any further delay. For the trifling expense of 21 millions of dollars could this vastly ed, although much disaster and suffering has been gineers and surveyors, as well as newspaper editors sengers and merchandize across from the Atlantic bona fide and rational schemes now have any chance come over here to find it. to the Pacific in less than one hundred minutes, which by the stormy cape Horn require as many to more than consume all the capital that ought to inst, filled with advertisements of contemplated raildays of most disagreeable and dangerous navigation. be devoted to this species of improvement. This is a species human power.

For the American Railroad Journal.

I observe in an extract from the Sunbury American, that the T rails manufactured at the Montour works, are reduced to the exect length of 18 feet by one operation of circular saws at each end, as the rail comes hot from the rollers.

The process is different at the great iron works in South Wales. At the Dowlais works in 1837, they completed their engagements, is our ardent wish. cut off one end in this manner and immediately presented the sawed end to the finisher, who stood in a trench so as to bring the rail [when lying on the der their charge, of its position, objects and capafloor covered with cast iron slabs] to the proper hight for working. I enquired of Mr. Evans the manager, why they did not cut off both ends at once ourselves. We desire to put it on record for future allowing for the contraction [in place of letting the reference. The writer of the letter says: manager, why they did not cut off both ends at once bar cool, marking the length, heating it again and then cutting it off at the mark.] He answered that the heat was not uniform and consequently they would have a difference of half an inch in the length of the bars.

At Cyfarthfa, the second end was cut off cold by a powerful chisel worked by machinery; and a small matter was pointed out to me by Mr. Crawshay, as important. The bars are reversed so as to cut from the bottom to the top of the rail, leaving a bur on the upper part to be dressed off with the file, in place of a depression as formerly when they cut

from the top to the bottom.

The manufacture of these rails was all done by piece work and cach set of men had their own mark. The ballers and rollers of the day charge, had one mark and those of the night, another, placed on the side near the middle of the rail. If on inspection the rail was not properly welded, or rolled in the wrong way fas to the laminæ whether vertical or horizontal] it was thrown out. The man who squared the end put his mark on it. The other end the same, and the striaghtener his mark on the top in the middle. All that passed inspection were paid for according to the stamps.

While writing it may be well to mention other facts that may not be generally known. Rolled bars are brittle when the strain is in the direction of laminæ, and tough, when at right angles to the laminæ, as was shown to my satisfaction. I was also informed that the two ends of the same bar are of unequal tenacity; that which passes last through the rollers and upon which the mannfacturer's name is stamped in ordinary flat bars, being the worst.

If you think the above remarks of any use, they are at your service. Yours respectfully,

New York, December 5, 1845. B. AYCRIGG.

#### The Canal of the Dique,

Or Carthagena and Magdalena Canal.-We have before spoken of this work, which is progressing so successfully under the management of our countryman, Mr. George M. Totten, aided by John C. Trautwine of Philadelphia; yet our knowledge of it was so limited, that we could not give much definite information in relation to it, nor can we now, yet we cannot deny ourselves the pleasure of republishing the following very complimentary and we doubt not, just, remarks of the governor of Carthagena, in his message to the legislature, when speaking of the canal, which we copy from the N. Y. Herald. From our knowledge of the gentlemen in charge of the work, we cannot doubt of the entire success of the undertaking, especially if the estimates have been based on their own examinations and they are allowed to carry it through in their own way, as they will be very likely to do if the present governor continues in the chair of state.

benefitted by their skill and efforts, we have not a bearing, with seriousness, and with a few doubt, and hope they may reap golden rewards in words. return for their labors, deprivations and self-denials and return safely to their friends, when they shall have

We shall be greatly obliged to the gentlemen, or either of them for such an account of the work uncity as will enable us to give our readers a much more intelligible idea of it than we now possess

"I send you the annual message of the governor of this province to the legislative chamber. You will see that he there speaks in high terms of your countryman, Mr. Tot-large and respectable meeting was held at ten, who is engaged in building the canal of Ebensburgh on the 29th ult., at which reso-Magdalena. and Mr. T. receives the credit due for his ex- and the following resolutions in relation to ertions in conducting it.

Translation of that part of the Governor's Message relating to the Canal of the Dique.

"The most important of all which, is the excavation of the canal of the Dique, progresses with activity, in conformity with the contract made with Mr. G. M. Totten, who, directing and superineending the work himself, advances in a most satisfactory manner.

"I was one of those who previously feared that the opening of the canal might be frustrated by some error in its management, or in the calculation of its cost, or other impediment, which might not have been foreseen, and therefore it was my first care, on taking charge of this government, to go, personally, (7th July) to see the work, and examine it throughout, that I might be able to form an exact judgment upon an enterprize which so much interested me, as a Carthagenian, as a How grati-Granadian, and as a governor. fying to me was that inspection! My doubts were at an end; the canal will be opened, and opened in less time than was at first calculated. In the Semanario, you have seen the monthly result of the excavation; and the junto of direction of the Dique, having sent a commission to revise the measurement, found the quantity excavated to be 144,644 cubic yards, making a difference of 36,394 yards more than those published from the redoubt, from the work done during the month of which the engineer has not yet made his return; and is proof of his probity and the exactness of his reports-so much the more, as the difference is in his favor. In the exposition which will be made to you by the junto of direction, this subject will be treated of more at length.

Railroad Meetings.

A full report of the railroad meeting held at Philadelphia on the 10th inst., will be given in the next number, accompanied by some remarks of the editor of the Journal, who is at this time absent, and attended the meeting. He speaks of it as being very enthusiastic, and that the right spirit prevailed, except, perhaps, a little jealousy of the Baltimore and Ohio railroad.

Railroad Meeting at Ebensburgh .- A the Dique, between this city and the river lutions were passed in favor of a continuous This canal progresses well, railroad between this city and Philadelphia, the Baltimore and Ohio railroad:

> Resolved, That while we believe the construction of a continuous railroad from Harrisburgh to Pittsburg to be of most vital importance to the interests of the entire commonwealth, as she will thereby open a channel through her own borders for the immense trade of the Mississippi valley and the great northern lakes, yet are we convinced that the completion of such a road would in a great measure fail in securing that important object, should any other point than Pittsburg be adopted as a termination for the Baltimore and Ohio railroad.

> Resolved, That while we believe it to be the duty of the legislature to grant a charter for a centre route, we also hold it to be a duty, in order to promote the general welfare and prosperity of our beloved commonwealth, to grant to the Baltimore and Ohio railroad co. the right of terminating their road at the city of Pittsburg as a terminus of that road at Wheeling, Parkersburgh or the mouth of Fishing creek, would inflict deep and lasting injury upon our interests, whether social, mercantile or agricultural.

> This is a just and liberal view of the matter, and one which every intelligent and well

informed man, will finally take.

Delegates were appointed to the the railroad convention to be held in Harrisburgh ports of Mr. Totten, which proceeds, without on the 2d Monday of January next, a convention, by the way, in which this county ought to be largely represented .- Pittsburg Advertiser.

Railroad Convention in Nashville, Tenn.

Nov. 24th 1845 .- At 11 a.m. the delegates met in the hall of the house of representatives, and were organized by the appointment of the following officers :- Nathan Green of Frank-"I cannot do less here than improve this occasion to express to you, in deference to vidson, William Martin of Smith, vice-presi-

ded into quadrilles, bathed in sweet, worked of the meeting. JONAS E. THOMAS, Chairman.

Clevelund and Pittsburg Railroad

We put upon record the report of Col. Dodge, in relation to this important line of road between the lake and the Ohio, as we do many similar reports, as a matter of reference for the profession, as well to hit him we would send a copy of the Journal as an indication that we should be always obliged to him for a copy of his report, as we are to every member of the profession, who appreciates the object and ctaims of the Journal, by sending for publication in which they may be connected, or acquainted. It is

Cleveland and Pittsburg Railroad. By Col. S. Dodge, Engineer.

In accordance with your request, I organ-

The route pursued, commences at Merwin street, in the city of Cleveland, and ascends mouth of Kingsbury's run; from thence up said run to Kinsman street, 3 miles from the place of beginning. From this point another

The object of this double termination is, to avoid the drayage up the steep grades of the The expense would be little more than laying down the track, the ground being nearly level, and composed of sand and gravel.

From the head of Kingsbury's run, the road winds along the side hill to Newburgh, with a grade of 40 feet ascent to the mile. It then This railroad communication would not descends to the valley of Mill creek, and continues up the same near the turnpike road to Hudson. From thence it takes a more eastit crosses said turnpike road, and continues Thus, while we would find the west look- near it to Salem, at the head of the east fork ports and cities—the south in her turn would of Beaver; from thence it continues down look to the hardy sons of Tennessee and said creek to a small run leading from the above lake Erie, and 546 feet above the Ohio In view of all these high and solemn con-lat Wellsville; from thence it continues down

ring prosperity, may all be supplied from our the proposed railroad enterprize as one which down said creek 6 miles to Wellsville, and

The most difficult portions of the route are between Martin's Mill and Wellsville, a distance of 4 miles. From the Yellow creek summit to the crossing of the west fork of Beaver, the crossings of Mill creek, Mahoning, Island creek, Cuyahoga river, Tinkers as for our own convenience; and if we knew where creek, and the grading from Cleveland to the head of of Kingsbury's run, a distance of 3 miles, are also expensive. The balance of the road presents few difficulties, and the whole may be pronounced a favorable route.

The greatest ascent is on the 90 chains below Martin's mill on Yellow creek, being 108 places, viz: 120 chains on Yellow creek; 216 chains between Yellow creek summit and Beaver; and 80 chains descending from the west to the east fork of the Beaver, where it has been necessary to raise the grade to 80 feet to the mile. There are a few short grades of 66 feet to the mile; but the most of the line is below twenty feet.

There will be one tunnel one hundred and fifty-four, yards in length, on Yellow creek; one curve of one thousand feet radius, and several below fourteen hundred feet. On no other portions of the road will it; be necessary to adopt curves of less than two hundred feet radius.

In the following estimate the road has been divided into three divisions.

The first extends from Cleveland to Raven. na, a distance of 37 miles. 25 chains. The second from Raven-

na to Salem, The third from Salem to Wellsville,

Whole distance, 96 miles. 69 chains. The excavations are estimated eighteen feet wide, with slopes of twelve inches in base to eight inches rise. The embankments thirteen feet wide with the same slopes.

The track to be composed of a double course of longitudinal timbers, connected together with ties eight feet long, three feet assunder and five by six inches in diameter.

The upper wood rail to be secured by a flat bar of iron weighing eighteen pounds to the yard.

It must be admitted that a T or H rail would be preferable, but would cost about four thousand dollars more per mile, estimating the iron at seventy dollars per ton, and weighing fifty-six pounds to the yard, the usual weight of such rails.

The crossings of streams and deep ravines where earth sufficient to make the embankments is not furnished by the excavations,) will be truss work of wood.—Recapitulation.

Second "Third " Add for damages, contingent expenses, depots, water stations, and locomotives ..... 200,000 00

Total expense when fit for use....1,006,068 27 Respectfully submitted. S. Dodge, Engineer

A CARD.

HE SUBSCRIBER, EDITOR AND PUBlisher of the Miners' Journal for the last sixteen years, has been engaged, for the last year in collecting the materials for a work, for which he has secured the copy right, in the following words:—"A history of the Anthracite Coal Trade of Schuylkill and the adjoining Counties, Geological and Statistical, accompanied with Maps of the different Regions, the Improvements, Investments, Capacity, etc., embracing a complete and authentic history to the present time, to which will be appended a Synonsia present time, to which will be appended a Synopsis of the Iron Trade."

It is our intention to embrace everything of interest in the work, connected with the trade, up to the beginning of the year 1846, prepared and arranged with a view of continuing the publication, at periods of five or ten years, with such additions as the increased trade will warrant. These branches of trade have assumed an importance which will warrant such a publication; and he feels confident, that with the proffered aid of several gentlemen and the statistics already in his possession, he will furnish the public with a work, which, if not one of the most interesting in its details, it will be of great value to those eagaged and interested in these branches of business ches of business

As soon as the Maps, etc. are prepared, and some idea can be formed of the probable expense of publishing the work, proposals will be issued for the same. All the tracts of Coal land will be designated on the Map of the Schuylkill Coal Region, which will accompany the work. which will accompany the work.

NORWICH AND WORCESTER RAIL-Road. On and after May 22, 1845, Trains will leave as follows, viz:—

Accommodation Trains, daily, except Sunday. Leave Norwich, at 6 a.m., and 41 p.m. Leave Worcester, at 10 a.m., and 41 p.m.
The morning train from Norwich, and the

morning and evening trains from Worcester, connect with the Boston, Western, and Hartford and Springfield railroads.

New York Train, via Steamboat. Leaves Norwich for Worcester and Boston, every morning except Monday, upon the arrival of the boat from New York, about 2 a.m. Leaves Worcester for Norwich and New York, at 51 p.m., daily, except

Now York Train, via Long Island Railroad.—
Leaves Norwich about 3 p.m., for Worcester and
Boston, daily, except Sunday. Leaves Worcester
for Norwich and New York, at 71 a.m., daily, except Sunday, and arrives in Norwich at 91.

Freight Trains. Daily, except Sunday.

Fares are less when paid for Tickets, than
when paid in the cars.

when paid in the cars.

EMERSON FOOTE

Superintendent.

AWRENCE'S ROSENDALE HYDRA-ulic Cement. This cement is warranted equal to any manufactured in this country, and has been pronounced superior to Francis' "Roman." Its value for Aqueducts, Locks, Bridges, Flooms and all Masonry exposed to dampness, is well known, as it sets immediately under water, and increases in

as it sets immessions solidity for years.

For sale in lots to suit purchasers, in tight paperad harrels, by JOHN W. LAWRENCE,

143 Front street, New York.

Orders for the above will be received and promptly attended to at this office.

SUMMER ARRANGEMENT-FARE

By the Great Southern Mail Line, via Washington City, and the only line that now issues through tickets south, to Weldon and Charleston, S. C., whereby the traveller gains 24 hours in advance of those who take the Bay route. This is the only line that carries the great southern mail to Richmond, Petersburgh, Weldon, and Charleston, S. C.

Direct to New Orleans, and at the following reduced rates of fare, viz: Through tickets from Baltimore to Charleston, \$21: whereby the traveller saves \$\frac{1}{2}\$ 25. Bear in mind that this is the great Southern Mail Line, and the only one that issues a southern Mail Line, and the only one that issues a south. through ticket South. Those who patronize it will save their money and time. Through Tickets from Baltimore to Charleston 21; Baltimore to Weldon 10; Baltimore to Petersburg 750; Baltimore to

Richmond 77.

Fast Mail Line.—Leave New York at 9 a.m. and arrive in Philadelphia at 31 p.m.; arrive in Balti-more at 11 p.m.; arrive in Washington at 3 a.m.; arrive in Fredericksburg at 9 a.m.; arrive in Richmond, Va., at 12½ to 1 p.m.; arrive in Petersburgh, Va., at 3 p.m.; arrive in Weldon, N. C., at 10 p.m.; arrive in Wilmington, N. C., at 12 m.; arrive in Charleston, S. C., at 6 a.m.

Passengers by the above line will arrive at Richmond by 11½ o'clock p.m. and Petersburg, Va. by 2½ o'clock p.m., through to the former city in twelve hours, and to the latter in fourteen and a half hours, (and in cight hours less time than by the Bay route,) and to Charleston, S. C., in fifty-one to fifty-two hours after leaving Baltimore, and do not incur the rich of any detention at intermediate points at the contraction. risk of any detention at intermediate points as those do who take the Bay route.

Way Mail Schedule .- Leave New York at 5 o'clock p.m. and arrive in Philadelphia at 10 p. m.; arrive in Baltimore at 21 p.m.; arrive in Washington at 7 p.m. From Philadelphia by steamboat.— Leave Philadelphia at 6 a.m. and arrive in Baltimore at 1 p.m.; leave Baltimore at 5 p.m. and arrive in Washington at 7 p.m.

For further information and through tickets apply at the Southern office, adjoining the Washington railroad ticket office, Pratt street, Baltimore. STOCKTON & FALLS.

THE AMERICAN RAILROAD JOURNAL is the only periodical having a general circulation throughout the Union, in which all matters connected with public works can be brought to the notice of all persons in any way interested in these undertakings. Hence it offers peculiar advantages for advertising times of departure, rates of fare and freight, improvements in machinery, materials, as iron, timber, stone, cement, etc. It is also the best medium for advertising contracts, and placing the ments of new undertakings fairly before the public.

SLAN

ELEVATION

MESSRS. EDITORS.—
As your Journal is devoted to the benefit of the public in gen-eral I feel desirous to communicate to you for publication the following circumstance of no inconsiderable importance, which oc-curred some few days since on the Philadel-phia, Wilmington and Baltimore railroad.

On the passage of the evening train of cars from Philadelphia to this city, an axle of our large 8 wheeled passenger car was broken, but from the particular plan of the construction, the accident was entirely unknown to any of the passen-gers, or, in fact, to the conductor himself, until the train, (as was til the train, (as was supposed from some circumstances attending the case,) had passed several miles in advance of the place where the accident occurred, whereas had the car been constructed on the common plan.

the car been constructed on the common plan
the same kind of accident would unavoidably have much injured it, perhaps thrown the whole train off the track, and serious
ly injured, if not killed many of the passengers.

Wilmington, Del., Sept. 28, 1840.

The undersigned takes pleasure in attesting
of the value of Mr. Joseph S. Kite's invention of the
Safety Ream Arle and Hub for railroad cars. They
have for some time been applied to passenger cars
on this road, and experience has tested that they fully accomplish the object intended. Several instances of the fracture of arles have occurred, and in
such the cars have uniformly run the whole distance
with entire safety. Had not this invention been
used, serious accidents must have occurred.

In short, we consider Mr. Kite's invention as completely successful in securing the safety of property
and lives in railroad travelling, and should be used on all railroads in the country.

JOHN FRAZER, Agent;
GEORGE CRAIG, Superintendant,

GEORGE CRAIG, Superintendant,

A model of the above improvement is to be seen at the New Jersey railroad and transportation
ja45

PATENT HAMMERED RAILROAD, SHIF and Boat Spikes. The Albany Iron and Nai. Works have always on hand, of their own manufac-ture, a large assortment of Railroad, Ship and Boat Spikes, from 2 to 12 inches in length, and of any form of head. From the excellence of the material always used in their manufacture, and their very general use for railroads and other purposes in this country, the manufacturers have no hesitation in warranting them fully equal to the hest entire in malest

FRENCH AND BAIRD'S PATENT SPARK ARRESTER.

TO THOSE INTERESTED IN Railroads, Railroad Directors and Managers are respectfully invited to examine an improved SPARK ARRESTER, recently patented by

ways used in their manufacture, and their very general use for railroads and other purposes in this country, the manufacturers have no hesitation in warranting them fully equal to the best spiles in market to this as to quality and appearance. All orders and dressed to the subscriber at the warranting them fully equal to the best spiles in market to this as the property of the subscriber and the warranting them fully equal to the best spiles in market to the subscriber and the warranting them fully equal to the best spiles in market.

The above spiles may be had at factory prices, of Erasux Corning & Co., Albany; Hart & Merritt, New York; J. H. Whitney, do.; E. J. Etting, Philadelphia, Wm. E. Coffin & Co. Boston. jad5

PATENT RAILROAD, ShIP AND BOAT

These Arresters are constructed on an attentive different principle from any network of the control of the subscriber obtained a patent which after five years' successful operation, and work of the property to any ever offered in market.

Railroad companies may be supplied with Spikes having countersals heads suitable to holes in iron rails, to any amount and on short notice. Almost all the railroads now in progress in the United States and the properties of the control of the spikes and the properties of the control of the contr

BENTLEY'S PATENT TUBULAR STEAM BOILER. The above named Boiler is similar in principle to the Locomotive boilers in use on our Railroads. This particular method was invented by Charles W. Bentiey, of Baltimore, Md., who has obtained a patent for the same from the Patent Office of the United States, under date of September 1st, 1843—and they are now already in successful operation in several of our larger Hotels and Public Institutions, Colleges, Alms Houses, Hospitals and Prisons, for cooking, washing, etc.; for Balth houses, Hatters, Silk, Cotton and Woollen Dyers, Morocco dressers, Soap boilers, Tallow chandlers, Pork butchers, Glue makers, Sugar refiners, Farmers, Distillers, Cotton and Woollen mills, Warming Buildings, and for Propelling Power, etc., etc.; and thus far have given the most entire satisfaction, may be had of D. K. MINOR, 23 Chambers st. New York.

The article is complete in itself, occupies but little space, is perfectly portable, and requires no brick work, not even to stand upon. It is valuable not only in the saving of time and labor, but in the economy of fuel, as it has been ascertained by accurate measurement, that the saving in that article is fully two-thirds over other methods heretofore in use. They are now for the first time introduced into New York and Boston by the subscriber, who has the exclusive right for the New England states, New York and New Jersey, and are manufactured by

FORCE, GREEN & CO. New York.

#### DAVENPORT & BRIDGES' PATENT CAR AND TRUCK

DAVENPORT & BRIDGES CONTINUE TO MANUFACTURE TO ORDER, AT THEIR WORKS, IN CAMBRIDGEPORT, MASS. Passenger and Freight Cars of every description, and of the most improved pattern. They lso furnish Snow Ploughs and Chilled Wheels of any pattern, and size. Forged Axles, Springs, Boxes and Bolts for Cars at the lowest prices. All order punctually executed and torwarded to any part of the country. Our Works are within fifteen minutes ride from State street, Boston—coaches pass every inteen minutes.

RAILROAD IRON.—THE MARY-LAND AND NEW YORK IRON AND Coal Company are now prepared to make contracts for Rails of all kinds. Address the Subscriber, at Jennon's Run, Alleghany County, Maryland.
WILLIAM YOUNG,
jy451m President.

TO IRON MASTERS.—FOR SALE.—MILL SITES in the immediate neighborhood of Bituminous Coal and Iron Ore, of the first quality, at Ralston, Lyoming Co., Pa. This is the nearest point to tide water where such coal and ore are found together, and the communication is complete with Philadelphia and Baltimore by canals and railways. The interest on the cost of water power and lot is all that will be required for many years the coal will not cost more than \$1 to \$1 25 at the mill sites, without any trouble on the part of the mill sites, without any trouble on the part of the manufacturer; rich iron ore may be laid down still manufacturer; rich iron ore may be laid down still more cheaply at the works; and, taken toget her, these sites offer remarkable advantages to practical manufacturers with small capital. For pamphlets, descriptive of the property, and further information, apply to Archibald McIntyre, Albany, to Archibald Robertson, Philadelphia, or to the undersigned, at No. 23 Chambers street, New York, where may be seen specimens of the coal and ore.

Portsmouth and Concord Railroad.

The stockholders residing in Portsmouth, of the Portsmouth and Concord railroad, held a meeting in the temple, on Monday evening last, to hear the report of the engineer of his surveys of the different routes between this town and Concord. The meeting was called to order by James W. Emery, Richard Jen-ness was chosen chairman, and James W.

Emery, secretary.

The meeting being organized, Mr. Carter the engineer, read a report of his surveys, and gave what he believed an exact estimate in detail, of the expense of constructing the entire road from Portsmouth to Concord.-Without going into the detail of his calcula-tion here, we give the whole cost of the road in round numbers, including all the expense of construction, and furnishing the road with reasonable and fair estimate. Mr C. stated road of easy and cheap construction. He also read an able dissertation of the great advantamouth and the country through which this road is to pass, and detailed to some length the business which must of necessity be done by this road, rendering investments in its

"Clute and Scabury's Improved Patent Heat Generator .- The active agent is a common blower, acting on a coal fire in the common boiler grate, from which the heat and flame pass over a bar which brings them into close contact with the boiler, which they follow to the farther end. Here, instead of passing up into the flue, the unconsumed gasses pass down into a lower reservoir or outlet; from which they escape into the chimney, into which a strong current of atmospheric air is admitted perhaps two feet above the re-servoir. This air being heavier than the heated gasses, bears them down; and in fact all the gasses usually escaping from fuel and forming smoke, heated air, etc., are retained in the fire chamber and consumed, except the carbonic acid gas, (incombustible) which alone passes off, hardly warm, through the chimney. All besides is retained and consumed in the formation of steam. Any offensive gases which may be generated by the manufacture carried on by the help of the engine to which this apparatus is attached, may be conveyed into the fire chamber and made not merely harmless but useful.

Railroad Improvements.—We learn from an authentic source, says the Macon Messenger, that the Boston and New York association of capitalists, who recently purchased the Monroe railroad, are determined not only to finish, and put in complete repair their entire road to the state terminus, immediately; but that they are also determined to build the road to Columbus with the least possible delay.

The contracts for furnishing timber for relaying the Monroe road, have all been taken. The delivery of which is to commence by the 1st of December, and to terminate on the 1st of March.

The road to Columbus will be speedily commenced, and prosecuted to completion with despatch.

The Nashua road has recently declared a semi-annual dividend of 5 per cent. The first installment on the stock of the Nashua and Groton railroad [to-wards Worcester,] has been called for, and the whole line to Worcester will undoubtedly be put in course of construction in no long time. When completed the time and distance between here and New York will be much lessened.

Missing Numbers of the Railroad Journal. The present number of the Journal will complete the volume for 1845. Possibly some of the subscribers may not have received all the numbers; or they may have been mislaid-if so, we shall endeavor to furnish them on receipt of a list of those desired to

13 One word to those who have commenced receiving it, without ordering the back numbers from commencement of the volume. You will perceive the west side of the Alleghenies-but from various by the title page and index that as a matter of record, it will be useless without the numbers from January last-therefore, if you take our advice, you will enclose by mail another year's subscription in addition railroads on the north and on the south of her, which to that already paid, and order the back numbers of afford greater facilities for travel and transportation the volume for 1845—and have a perfect volume for than the works of Pennsylvania—which consist of the past, and the numbers for the ensuing year, as

only the current volume of the Journal, we say, with ticipated; and therefore it is found to be essential to found to contain much of interest to them—and well of the mighty prize to be realized from the increase worth their attention. The volumes previous to 1845 ing business of the Mississippi valley, to have a may be had half bound, at \$2 per volume, or less than subscription price.

Errata.-In "making up" the number for Dec. 11th, in the communication on the "New Haven was a transposition of several lines, in the last paragraph on page 792; also in the same paragraph, second line from bottom of page, for "crossing the towing path," read "using the towing path." P shall receive closer attention next time.

We have received from the joint executive committee of the "New York and Hartford railroad via Danbury," their report on the business and surveys, and had prepared at the expense of some considerable attention, a review of the various matters, of special interest which it contains, for this number, but find we must defer it, with several other notices and communications of importance, for our next, which will be the first number of volume II, second quarto series.

Railroad Dividend .- The directors of the Boston and Worcester railroad have declared a dividend of first day of January.

We have received by the Acadia our regular files of railway papers, full, as usual, of highly interesting intelligence to those in any way interested in the many railway schemes of this country. The discussion of the various plans of the atmospheric system occupies a large space, and its importance no doubt merits great attention.

We have only space to-day, to quote from a letter dated, London, December 3, the price of pig and "I give you a few lines, merely to railway iron. tell you the state of the iron market. In Glasgow the iron masters demand £5 per ton, while speculators are, in the present great demand for money and apprehended panic, willing and anxious to sell at 75s., or £3 15s. per ton. At Cardiff the best cold blast pig iron is at £5 10., but iron masters will not sell, for they want everything they can convert into rails. Merchant bars not in such demand as rails, and can be had at £9 5s. to 9 10s. per ton, while railway iron, at the Welsh shipping ports, is at £12 per ton, with some concession of 3 or 4 per cent. for cash. All the commercial and monetary classes look with the utmost anxiety to president Polk's message on the 1st December, fearing that it may contain the same style of matter as he uttered in the 4th March last, and that war may be the inevitable consequence."

Philadelphia and Pittsburg Railroad Direct

Philadelphia has at length moved in relation to this great work. The only wonder with those who stand at a distance, and look at the great field in which so many are contending for the business of the mighty west, is that she has not before been aroused to action. The time was when Philadelphia possessed a large share of the business from causes she has now a less proportion than would seem to fall legitimately to her share. This change has been effected by the construction of canals and a combination of the two kinds of improvement, instead of a continuous line of either. This has been And to those interested in railroads, whe have found less efficient and less profitable than was anentire confidence, that the previous volumes will be the prosperity of Philadelphia, and to the securing continuous and direct railroad between Philadelphia and Pittsburg.

This important matter has been under considera tion at Pittsburg, and along the contemplated line, and Northampton railroad," it will be seen there for a length of time; but until very recently we have perceived but little indication of interest in, or movement in relation to, the matter in Philadelphia. There seemed to us to be an indifference to the work pervading the city of Philadelphia, which surprized us-and we were therefore the more gratified to learn, on our arrival in that city, a few days since, that there was to be a meeting on the evening of the 10th, at the museum, in accordance with a call made by more than five hundred of the principal firms and business men of the city, for the purpose of adopting measures for the construction of a railroad from Harrisburg to Pittsburg, and thus open a continuous railroad from the Ohio to Philadelphia. We, of course, attended the meeting, and were well pleased with the spirit evinced. The stanch men of the city were there—the merchant, the manufacturer, the professional man and the men cf various occupations were there. The meeting was organized by 4 per cent, for the last six months, to be paid on the the appointment of an eminent merchant, Thomas P. Cope, Esq., to preside; and by the appointment of other eminent gentlemen on his right and on his left, to support the chair. When the organization was complete, the call for the meeting was read; a few remarks from the chair were made, and then the meeting was addressed by Wm. M. Meredith, Esq., who pointed cut, in a forcible manner, the vast importance, indeed the absolute necessity, of the early construction of a railroad to Pittsburg. At the close of his remarks, Mr. Meredith offered a series of resolutions, which were seconded by Henry D. Gilpin, Esq., who followed, and gave some interesting and important statistics, illustrating forcibly the importance of action-early and efficient action.-The meeting was next addressed by Isaac Hazlehurst, Esq., who took broader ground, opened a wider field than those who preceded him. He took the ground that this was in truth a movement in favor of a railroad from Philadelphia, via Pittsburg, to Cincinnati. Mr. Hazlehurst stated that, of the business of the west, four-fifths of the whole which reaches the Atlantic, goes to New York and Boston, and only one-third of the balance, or one-fifteenth of the whole reaches Philadelphia; hence the necessity of a continuous direct railroad from the Ohio river to the Atlantic, by the way of Philadelphia. John J. McCahen, Esq., next addressed the meeting, and expressed the opinion that the route proposed was the best and most feasible; and said he believed it might be constructed without carrying a dollar out of the state-but seemed to apprehend some difficulty in obtaining the act of incorporation-and suggested the propriety of having some connection with, or dependence upon the canal commissioners, in order to avoid interference with, or opposition from the state works. One word, if we may take the liberty, on this point, keep clear of state works, and canal commissioners; better, far, defer the entire work for a year or two, than to connect it in any manner with state works. States can build works, but not as well as a company, or individuals, but in the management or operation of a railroad, or machine shop, a state is sure to be robbed, swindled, gouged and made bankrupt by political demagogues, and designing knaves, who obtain places of trust for which they are unfit. The management of the Columbia railroad a few years ago—of the present we are not informed—should satisfy every Pennsylvanian of the impolicy of further extensions of state works, Far better to give liberal charters to responsible companies, and thus allow private capital to develope the resources of the interior of the state, by the coneast to west, and put out its numerous branches to have more to say on the subject hereafter; yet we sufficient hight to allow the passage of locomotives the north and to the south, through every fertile val- desire at this time to say to the people of Pennsyl- entirely through the mountain. For the American Railroad Journal. Bear Mountain Railroad.

Six: My attention has been called to a pamphlet a charter for this work if it was asked—even if the ports in relation to the Bear Mountain railroad and length of road by locomotive power, and without ed and located by myself; and as I was absent at sufficient space for the basins on the canal, for the the time you visited our region, I am inclined to behe not only advocated the construction of a direct lieve that you make these suggestions from a want coal reservoirs, each 3,000 feet in length. Two of the Baltimore and Ohio company to terminate their having been misrepresented to you; and I therefore sit and transhipment of coal, during the season of road at Pittsburg. He reasoned correctly, as we be- wish to discuss with you through the columns of the navigation, and will contain about 30,000 tons. Wheeling, would be much more injurious, and in- and also to give you such information as you might the cars will be unloaded as they stand in the train,

Before proceeding to notice your suggestions, althan an equal chance for everything destined for the designed. This road is, as you have correctly stated, Atlantic, and especially for Philadelphia and New 28 miles in length from the mouth of the coal tunnel tended for the deposit of coal during the winter York, but drive them from us, and compel them to to the Pennsylvania canal, and its entire length, months, is of different construction from the others,

The advantages of this grade for coal transportaeach per day, will carry from the mines to the canal

in which another part of the state is deeply interested coal measures and cut off four good workable veins elevation of the road and the tunnel." of coal, is 800 lineal yards, and the entire length of the tunnel when driven through the mountain will point, [the anticipated advantages of which may dis-

It is proposed to erect a large breaking and screenportion of those states are to be largely benefitted by run upon the track, and also to unfasten itself at the

The principal white ash veins of this region, are cipal point for the manufacture of iron. When the tunnel is completed through the mountain, it is believed that there will be at least 100,000 tons of white ash coal and 25,000 tons of iron transported over the road from Rausch Gap, and not less than 25,000 tons of freight, such as limestone, merchandize, etc., returned to the same point. By the present arrange-

We have about 3,500 feet parallel to the canal, with an average width of 280 feet. This gives us construction of a side canal, and for three parallel and the coal deposited without detaching any of them, or waiting for boats to convey the coal away. The coal will pass from the reservoirs to the boats withservoirs, in a similar manner to that by which the cars are unloaded. The third reservoir being inand will contain about 180,000 tons.

Thus you see this road was designed by its pronearly all of the bad navigation, which often delays lel to the canal, will be 311 miles. The road has a jectors for an extraordinary business, and all the arboats two or three days in as many hundred miles, uniform grade for its entire length, descending from rangements are commensurate with the magnitude

The alterations which you propose are specified in the following extracts from your report: "It may perhaps be a subject for consideration, whether it is seven miles an hour, will transport over the road as the summit near Cold Spring Gap to near the outlet Virginia by the Chesapeake and Ohio canal com- mines with the empty cars. Three engines of this both. The latter change will lessen the height of Such a reduction of the grade will increase someties afforded for breaking and screening the coal at The length of the tunnel required to reach the the mouth of the tunnel, caused by the difference in

"While suggesting a change in the plan at this We give a brief report of the proceedings of the be 2800 lineal yards. This tunnel is to be cut for appear on further examination and reflection,] it

may not be improper to speak of another alteration at the lower terminus, which is, to enlarge the dimensions of the coal reservoir by making it equal in length to the canal basin, or sufficient in magnitude for the deposit of coal during the winter season."

"A space of 70 feet in width, 2000 feet in length, and 20 feet in height, which latter is about equal to the elevation of the grade line of the road above the ground at the point, will contain all the coal that can be mined during the suspension of navigation, other matters in your report worthy of notice, but in the present paper I wish to confine myself to the alterations which you suggest.

In order to derive any considerable benefit from the reduction of grade proposed in the above extract by the sum of \$13,308. from your report, it would of course be necessary to adopt a level grade from the summit to the mouth of the tunnel. This would reduce the height of the bridge over Williams valley about 40 feet, and diminish its cost \$20,000. This alteration would also between the grade of the road, and that of the tun- the alteration. nel, would of course prohibit the passage of locomotives from the main stem of the road through to Rausch Gap, and consequently all the transportation to and from this point must be done by horse power at a very considerable increase of cost.

A comparison of the difference in cost of constructing and working the road upon the two plans, is as follows:

By the Present Arrangement. Interest on extra cost of Williams Valley bridge, \$20,000, at 6 per cent\$1,200 00 Do. on cost of planes and fixtures, \$1,000, at 6 per cent..... Do. on additional cost of engines to obtain extra power for elevating the coal, \$1,000 at 6 per cent..... Extra fuel for do..... Services of two men at the head of the planes, 312 days each, at \$1 00 per day. Per annum. By the Change Proposed. Interest on cost of three extra locomotives, \$24,000, at 6 per cent.....\$1,440 00 Repairs and renewal of do., 15 per cent... 3,600 00 other of the kind in the United States." .. 2,028 00 Three engineers, 312 days, at \$2 00 each per day 1,872 00 Three firemen do., at \$1 00 do..... Extra cost of transporting 100,000 tons of coal from the Gap to the south end of the tunnel, at 3 cents per ton 3,000 00 Transhipment and extra cost of transporting 50,000 tons of iron, limestone and merchandize, to and from the same point,

Per annum\$15,876 00

Deduct cost by the present arrangement. 2,568 00

Difference in favor of retaining the present

In the above estimate, the cost of oil and cotton waste for the extra locomotives, is not taken into account, as it is offsett against the oil required by the machinery of the planes. The calculation is based upon an annual coal transportation of 540,000 tons, 100,000 tons of which are to come from Rausch Gap, and 50,000 tons of freight, other than coal, from the same point.

From the above it will be seen that after the road has been three years in operation, the investment by if it does not exceed 1000 tons per day." There are the proposed change of grade, will exceed the amount or four years after the road goes into operation, it required upon the present plan by about twenty thousand dollars, and the annual cost of working the road, including the interest on that investment, would

The additional cost of transporting the passengers and freight, passing to and from the rich agricultural district, lying north and west of the coal basin, is not included in the estimate. That the amount of this transportation will be very considedo away with the planes for elevating the coal at the rable, is evident to every one who is familiar with breaking and screening houses, costing about \$1000 the trade of this district, and all this trade must pay and dispense with the services of two men at the an additional tax upon its transportation, should the head of these planes, for unloading and changing change which you propose be made in the grade of the cars. On the other hand by this change of grade, the road. Indeed my own opinion is, that if this the power of the engines would be diminished fifty change would effect a saving in the first cost of the per cent. for downward transportation, and conse-road, of one hundred thousand dollars, instead of quently double the number of engines would be re- twenty thousand, it would not be advisable to make present arrangement. The difference in elevation cent. on the one hundred thousand dollars sawed by

It is this narrow policy shown in the design of fitness in the arrangements, and the extreme desire to save a few thousand dollars in the cost of conname of railroad.

In relation to the alterations which you suggest at the lower terminus of the road, allow me to say, that because we have but 1200 feet of coal reservoir under contract, it does not follow that we do not intend have contracted for but three locomotives, we never intend to augment the number.

Although you propose a change which could only be deemed advisable upon a road intended for a limited amount of business, it seems that you did, in some measure, appreciate the value of the road, and from your report: "A project which, whether considered in reference to the benefits it promises to the public, or to the certain and lasting advantage to those who may embark in it, is not surpassed by any

A careful consideration of the past, and prospec tive increase of the coal trade, will show you, that with our acknowledged advantages, the business on this road will, in a few years, far exceed the amount which I have estimated in the foregoing calculation

The consumption of coal during the past three years, has increased about thirty per cent. per annum; and the amount sent to market during the present season will be 2,100,000 tons, affording, it is 5,000,000 tons.

grade.....\$13,308 00 coal districts nearly as follows:

Schuylkill	2,000,000	tons
Lehigh	600,000	66
Lackawana		40
Wyoming	600,000	44
Lykens Valley	300,000	44
Pine Grove	200,000	64
Bear Mountain	800,000	86

With a trade of 800,000 tons per annum in pros pect, and with a certainty as great as anything in the future can be, of reaching this amount, in three would appear to me to be extremely injudicious to make the change in the grade which you propose; and if the data upon which the foregoing calculabe greater than the cost of working it as projected, tions are made are correct, as I believe they are, you will doubtless agree with me, that such a change is neither expedient nor desirable.

Very respectfully, yours, I. SPAULDING. Chief Engineer B.M.R.R.

Harrisburg, December 20, 1845.

For the American Railroad Journal Pennsylvania Railroads.

The state of Pennsylvania is eventually to become the "railroad state," owing to its vast mineral wealth which seeks egress from its mountains by this modern and cheap mode of transportation. Pennsylvania has already about five hundred and fifty miles of railroad in main lines, and about sixty miles of quired for a given amount of coal transportation it, as the extra cost of working the road upon this laterals or feeders in Schuylkill county alone; most that will be necessary for the same amount by the change of plan, would pay an interest of over 13 per of which are constructed in the most permanent manner, and are capable of bearing engines of the first class. The improvements in this part of the state, which is generally known by the name of the many railroads in the United States; the want of coal region, are as yet in a state of infancy. New projects are continually heard of, such as railroads, furnaces, rolling mills, etc.; and in no part of the struction, saved too generally in the wrong place, country is there more individual enterprize than in which has caused them to prove but a libel on the this county. The amount of coal shipped from this region this year, by railroad and canal, amounts to one million and fifty-five thousand tons; the railroad company having taken down seven hundred and ninety-two thousand tons themselves; and the whole amount will reach, by the first of the year, one milto increase its length and capacity, as the business of lion one hundred thousand tons. The advantage the road shall require, any more than because we the Reading railroad has been to this region is incalculable-having destroyed a monopoly, and given such advantages to the dealers, by the use of their cars at the mines, and offering other advantages which has made the coal trade what it is, and made it advantageous for the dealer to carry on operations through the winter, which is done to a great extent, coal region; as appears from the following extract The Mine Hill and Schuylkill Haven railroad company are making an extension of their road, seven and a quarter miles in length, and forms a junction with the Good Spring Creek railroad, about two miles below its terminus, at the town of Tremont. The work is in a forward state of progress, and is being constructed in the most permanent manner; the grading will be finished by the 1st of June next, and the iron laid [T rail] immediately, so that cars may pass over the road by the month of August. This road opens one of the richest coal fields to the Philadelphia market in the region, and is known by the name of the "Swatara," the only outlet which it has had heretofore being by railroad to Pine Grove, and from thence to the Baltimore market, by the believed, a very scant supply. Calculating on the Union canal, which is generally unfit for navigapresent consumption an increase of twenty-five per tion. Already are the owners of property patiently cent. per annum, for the next four years, the amount waiting for the completion of this extension before required to supply the demand in 1849, will be they commence the construction of their lateral roads, some of which will be from two to three miles This amount may be furnished by the different in length. As soon as the main stem of a plant reaches a certain point, it sends forth its branches

ket for the mineral or the produce, and increasing David S. Brown. the value of property in the vicinity.

Your's truly,

For the American Railroad Journal. Catawissa Railroad.

In your paper of the 27th Nov., I perceive an extract from the "Bloomsburg Democrat," which announces to the world that the stock of this company the meeting was called. The Bostonians state at large; and can be contemplated only has been purchased by another "company of wealthy have, he remarked, reached the great west by with the most painful apprehensions by this gentlemen on account of the intrinsic merits of its location, and as the cheapest and only feasible route from Philadelphia to the Susquehanna river, and from thence to lake Erie," and not like other projects we wot of, for the purpose of merely advancing the interest of land speculators, stock jobbers, and obscure villages, which have nothing more than "puffs of wind, hills, vallies, tunnels and inclined planes" to recommend them.

Now if the writer had confined himself to the mere annunciation of the fact, and had said all that was possible in favor of its location, I should have looked upon the matter as one of their puffs that induced its original stockholders (the bank of the United States) to foolishly expend their money in devising and prosecuting a scheme so totally without prospect or business to sustain it. I should also have regarded it as necessary to sustain the stomachs of from some cause or other, to prefer this to "any othupon imaginary advantages, and in doing so to traduce, and misrepresent other works "we wot of," I will invite your readers to reverse, and apply the aspersions of the writer, to this most outrageous humbug. The facts relating to this "feasible route' are told in a few short sentences, and no doubt before these "wealthy" ourselves expend their money of the old company there is yet 11 miles to grade and that the distance from Tamaqua to the summit tunnel is 13 miles, with a vertical rise of 940 feetthat two miles are graded with an elevation of 60 feet to the mile-that the balance has to be overcome by three inclined planes, on a grade of 66 feet to the the meeting, upon the subject which the meetmile—and that the part that is finished [35 miles] is carried over "vallies" on viaducts, and along the sides of mountains, on retaining walls that would put Christ church steeple to the blush. These facts when looked into will probaly astonish the "new stockholders" as much as this miserable puff does.

Your obedient servant, ONE WHO KNOWS.

construction of a continuous line of railroad and increasing benefit. from this city to Pittsburg, held last evening in the Chinese saloon, was one of the largest in the Chinese saloon, was one of the largest vigorously made in the cities of Boston, New and most respectable that has been held in York and Baltimore, and showed the natural this city for a long time. sist—that favors of this nature should be re-question as to the best route from Philadel. men to compose the committees called for by

The Sunbury American thus describes the manner in which the iron T rail for railroads these 6000 subscribers, 1050 are yet wanted.

"In order to make the T rail, the iron is heavy flat bars, about three inches in width properly come within the province of their These bars are then cut into pieces, something less than three feet in length. A num-ber of the pieces, probably 15 or 20, are then placed together, making a square bundle or practically acquainted with such matters, to faggot, weighing 400 pounds. is then placed into one of the furnaces and brought to a white heat, when it is drawn out on a small iron handcart, and conveyed to the rollers. The great weight and intense heat of such a heavy mass, requires considerable skill as well as strength, in passing it through the rollers. The bar, as it passes through, is caught and supported by iron levers, fastened to chains, that are suspended on pulleys from above. The first bar passes through the square grooves of the rollers three or four times, before it is run through the dif-ferent grooves that gradually bring it to the form of the edge or T rail, as seen upon our railroads. Through the last grooves it pass-five or six times before it is completed. It is then placed on a small railway carriage, subscribers here for a further payment of £3 on a track 18 feet wide, and hauled up about 20 feet, when the rail comes in contact with two circular saws, one of which is placed on each side of the railway. These saws revolve with great rapidity, and the moment the rail, still red hot, reaches them, the red sparkling iron saw dust is scattered in every direction. The rails are thus cut off square at each end, exactly 18 feet long, apparantly as easy as if they were made of tough hick-ory wood. The rail is then dragged to the pile and left to cool, perfectly finished. The rails we saw made were intended for the Harrisburg and Lancaster road, and weighed fifty-one pounds to the yard, or something more than three hundred pounds each. These are said to be first rails ever made with anthracite iron in this or any other country, and are, we believe, superior to any that have ever been imported."

" Montreal and Atlantic Railroad .- A meeting of the provisional committee of this railroad was held at the secretary's office on locomotive is proved by persons still living, Monday evening, for the purpose of taking who rode in it. The distance requiring a into consideration the advices received from the agent in London by the last packet, and for taking steps to advance the objects of the The inventor subsequently executed a drawassociation. It appears, by the agent's account, that 3,000 shares have been taken up in England, the first instalment on which, of "wishes to run my new cart in his own country, as I do here. The survey is to be completed by the 1st day of January next, at which period it is fully expected that the whole of the 6000 shares—that is, the bal. -will be subscribed for in England and this country. This done, operations might com-mence at once; and as for the remaining 6000 shares, there would be little difficulty in disposing of them; the contractor for the iron would take 1000 shares, and the consubscribers here for a further payment of £3

The survey on the Passumpsic railroad route between Haverhill and Wells river, is in progress and a report will soon be made. On the Vermont Central railroad the location of the restrict of th equal footing."-Montreal Times.

"Origin of Railways.—The original inventor, it now appears, of the railway system, was the late engineer, Mr. Fredericks, of Hanover. He first thought of constructing a machine for the conveyance of heavy loads, while visiting the mines of Silesia, and he subsequently invented iron rails, exactly as they now are in use; also a locomotive engine and a cart to run from the Dovittry silver mine, upon the Haregnion mountain, Hunover, to the place of refinement, Pucherich, a distance of about an hour's drive The cart was a four wheeled one, and on its frame was a wooden chest, filled with the mineral of from 60 to 80 cwt. The guide sat upon the driving box like a coachman, and was able by pressure, to direct or arrest the cart at any rate of speed. The evidence connected with this origin of the railway and walk of forty-five minutes was thus performed upon it by the king and queen in five. ing for an English gentleman, who, as Mr. Fredericks said a short time before his death, posited in the bank. The number of shares great care in executing my work, in order to taken here is 1950, on which £1 currency per share has been paid. This is the present state of affairs as far as is known. Now, the act of incorporation provides that 6,000 shares shall be subscribed for before the company goes into operation, by the appointment of a boats, the steam locomotive was also intro-

Welch, Isaac Hazlehurst, John K. Kane, committee of thirteen, who shall have the duced. These important facts have just been management of the railroad in its constructure, and they show that the claims of nine, though clothed with extensive pow-tion made by others, are not to be sustained. Thus the world is indebted to Germany for four of the most important inventions; those

> American Iron, and at the South.—The Dallas county (Al.) Gazette mentions that there is at this time, and has been for some years past extensive iron works in successful operation in Talladega county, in that state, and these works are now producing her iron of all sizes and are in the contract of the county, in that state, and these works are now producing bar iron of all sizes and castings of every variety in great abundance. By persons who have used the iron produced at this forge, the Gazette is informed that it is quite equal to the best Swedes brought to this country, and that it can be purchased about as cheap as the article of the same quality can be purchased in New York. In the vicinity of this force there abound inexhaustible beds of cast said

That is the way it works we shall make iron for export in a few years at this rate.

New York Canal Tolls.—The canal tolls received during the 2d week of November show the enormous sum of \$144,173, an excess over the corresponding week last year of \$47,475. The aggregate for the season to the 14th inst. inclusive is \$2,510,131, being

1COLL'S PATENT SAFETY SWITCH for Railroad Turnents for Railroad Turnouts. This invention, for time in successful operation on one of the principal railroads in the country, effectually prevents engines and their trains from running off the track at a switch, left wrong by accident or design.

It acts independently of the main track rails, being laid down, or removed, without cutting or displacing

It is never touched by passing trains, except when in use, preventing their running off the track. It is simple in its construction and operation, requiring only two Castings and two Rails; the latter, even if much worn or used, not objectionable.

Working Models of the Safety Switch may be seen at Messrs. Davenport and Bridges, Cambridgeport, Mass., and at the office of the Railroad Journal, New York.

when paid in the cars.

EMERSON FOOTE Superintendent.

AWRENCE'S ROSENDALE HYDRA-ulic Cement. This cement is warranted equal to any manufactured in this country, and has been pronounced superior to Francis' "Roman." Its value for Aquedutet, Locks, Bridges, Flooms and all Masonry exposed to dampness, is well known, as it sets immediately under water, and increases in

as it sets innusolidity for years.

For sale in lots to suit purchasers, in tight paperled barrels, by JOHN W. LAWRENCE,

Lawrence Street. New York.

142 Front street, New York.

To Orders for the above will be received and promptly attended to at this office. 32 1y

SUMMER ARRANGEMENT-FARE REDUCED.

REDUCED.

By the Great Southern Mail

Line, via Washington City, and the only line that now issues through tickets south, to Weldon and Charleston, S. C., whereby the traveller gains 24 hours in advance of these who take the Bay route. This is the only line that carries the great southern mail to Richmond, Petersburgh, Weldon, and Charleston, S. C. Charleston, S. C.

Charleston, S. C.

Direct to New Orleans, and at the following reduced rates of fare, viz: Through tickets from Baltimore to Charleston, \$21: whereby the traveller saves \$\frac{1}{2}\$ 425. Bear in mind that this is the great Southern Mail Line, and the only one that issues a through ticket South. Those who patronize it will save their money and time. Through Tickets from Baltimore to Charleston \$21\$; Baltimore to Weldon \$\frac{1}{2}\$ 10; Baltimore to Petersburg \$\frac{1}{2}\$ 50; Baltimore to Richmond \$\frac{1}{2}\$.

Fast Mail Line.—Leave New York at 9 a.m. and arrive in Philadelphia at 3½ p.m.; arrive in Baltimore at 11 p.m.; arrive in Washington at 3 a.m.; arrive in Fredericksburg at 9 a.m.; arrive in Richmond, Va., at 12½ to 1 p.m.; arrive in Petersburgh, Va., at 3 p.m.; arrive in Weldon, N. C., at 10 p.m.; arrive in Wilmington, N. C., at 12 m.; arrive in Charleston, S. C., at 6 a.m.

Charleston, S. C.. at o a.m.

Passengers by the above line will arrive at Richmond by 11½ o'clock p.m. and Petersburg, Va. by ½ o'clock p.m., through to the former city in twelve kours, and to the latter in fourteen and a half houra, (and in eight hours less time than by the Bay route,) and to Charleston, S. C., in fifty-one to fifty-two hours after leaving Baltimore, and do not incur the risk of any detention at intermediate points as those do who take the Bay route.

Way Mail Schedule.—Leave New York at 5 o'clock p.m. and arrive in Philadelphia at 10 p.m.; arrive in Baltimore at 2; p.m.; arrive in Washington at 7 p.m. From Philadelphia by stemboat.—Leave Philadelphia at 6 a.m. and arrive in Baltimore at 1 p.m.; leave Baltimore at 5 p.m. and arrive in Washington at 7 p.m.

On Sundays the trains will be regulated according to the state of the weather.

THE LONDON RAILWAY RECORD.

Edited by Mr. John Robertson, A. M., (connected from the commencement with the Week, y Railway press of England.)

The Railway Record is acknowledged to be the leading English Railway Journal, and is published twice a week in London, namely on Wednesday and Saturday. It contains copious and correct reports (by special reporters) of all failway meetings in the United Kingdom; ample Share Lists and Traffic Tables, showing the length, cost, capital and selling prices in the principal markets, with Editorial articles on the leading Railway topics of the day. The Railway Record contains also, a complete resume of French, Belgian and other foreign Railway affairs.

Subscriptions 13s. per quarter, to be transmitted in advance to Messrs. Dawson and Sons, Ca. st. London. Office 153 Fleet street, London. 46

London. Office 153 Fleet street, London.

DOSTON COURIER, DAILY, SEMIWeekly and Weekly.

The Daily edition of the Courier, presents to merchants and others, an extensive medium of advertising. The circulation of the Semi-Weekly Courier (published on Mondays and Thursdays) is believed to be more extensive than that of any other similar Boston Newspaper. This publication embraces all the reading matter of the Daily, the Foreign and Domesuc Markets, Review of the Boston Market, Prices current, and Ship News, prepared with great accuracy. The Weekly Courier contains as much of the matter of the daily as can be crowded into a sheet of the same size, without ship news, prices current or advertisements.

Our extions to obtain and publish authentic information on all topics proper for the columns of a newspaper,—the state of trade, the prices of merchandize, the current news of the day, and the political movements in the various sections of the country—will not be abated. The marine department of the Courier has been inferior to none in copiousness of accuracy of detail, and it will be our endeavor maintain its reputation in this respect.

For the Daily Courier, forone year, in advence \$8.00

For the Daily Courier, for one year, in advance \$8,00 For the Semi-Weekly Courier, for one year. 4,00 For the Weekly Courier, for one year. 4,00 For the Weekly Courier, for one year. 2,00 For the Weekly Courier, for one year. 2,00 EBIN B. FOSTER.
