MINEHILL AND SCHUYLKILL HAVEN RAILROAD. The following is the amount of coal transported over this road, for the week ending on Wednesday eve-ning last: 5,660 06 ning last: 39,589.00 Per last report, Total.

THE COAL TRADE. - Sent by railroad up to Thursday evening last .- Miners' Journa'.

Schuylkill Haven,	- ',		-	4,362.15
Pottsville,		-		$2,655 \cdot 15$
			-	7,018-11
Per last report,				58,156.46
				65,174.57

The receipts from the public works of Canada are rather less than those of last year, but a larger portion of the trade sought this city-hence the distress of " western New York!" The income is about \$100,000, and the interest on the debt is \$500,000, when completed, the difference will be still greater, and in the same direction.

"The business on the Long Island railroad for the present year has commenced very favorably. The receipts up to the 10th of March, as compared with last year, are .. \$3,256 \$10.081 2849 February 8,000 3,000 Ten days in March.... 1,117\$7,222 \$21,881 ...\$14,692 Increase in 1845.....

"This return does not include the profits from the boats, which are said to amount to a handsome sum. "On the Harlem railroad the collections are largely increased, and amount to fifty per cent. over last year, the same increase through the year will give them a receipt of \$210,000 for the year.

We find the above in the Express. It will be remembered that the Long Island road was not opened till November last; hence the increase in income. The receipts are about \$9,000 per month, but will no doubt increase greatly. The above rate of income does not clear ordinary expenses.

In the Michigan legislature, Mr. Pratt introduced a bill to incorporate the Michigan railroad company, and provide for and authorize the sale of the Central and Southern railroads.

The capitalists of Boston very coolly state that Judge Preble was somewhat in error, when an- From actual surveys and personal examination, it is nouncing their hearty co-operation in the Montreal and Portland railroad. They go for Boston and nothing but Boston.

The Hartford and Springfield railroad was built

the following:	1 .
Cost of the Hartford and New Haven railroad, 38 miles	\$1,100,000
Cost of the extension to Springfield 251 miles	600,000
Total 63½ miles	\$1,700,000
Number of shares12,000 Paid on each share\$100— Amount of loans and debts	\$1,200,000 500,00
	\$1,700,00

For the American Railroad Journal.

RAILROAD COMMUNICATION BETWEEN NEW YORK AND ALBANY.

With regard to the necessity of a railroad communication between New York and Albany, I believe there is but one opinion among the good citizens of Gotham-while the importance of the object is universally acknowledged; as yet but feeble efforts, and even these divided, have been made to accomplish it. The New York and Albany company, after a sickly existence of a few years, has at length yielded up the ghost. The Goshen and Albany company, the winsister of the former, still exists, but without the signs of life, and would ere this have been numbered among the things that were, but for the new life breathed into its charter by the legislature of 1844. It is now, however, in a state of relapse, and its healthy resuscitation can hardly be expected.

Under these circumstances, I would respectfully direct the attention of the merchants and forwarders of New York to another project of recent origin, and Paterson than via Piermont. of the highest importance to their interests. Efforts have been made, and so far successful, that a bill has already been reported by the railroad committee of the senate, for the incorporation of a company to construct a railroad from the city of Schenectady to the village of Catskill.

Respecting the feasibility of the proposed route, remark that in the fall of 1837, the writer of this assisted in the examination of a route for a canal across the country, from Schenectady to Catskill, when a very practicable line was found by continuing the level of the enlarged canal from the Schoharie creek, leaving the Mohawk valley, a little above and nearly opposite Schenectady, upon a level about 60 feet above the level of the canal in that city; from thence to tide water of the Hudson, at Catskill, is a descent of about 296 feet, the distance not exceeding 40 miles, and the route direct, level and gradually descending. field until the 9th December last.

route between the Mohawk and Hudson rivers. No Sir: In looking over the list of American railroads, grade need exceed 20 feet per mile, and the distance I observe that you state the cost of the Hartford and decidedly shorter than any other travelled road. The Springfield railroad, (No. 11) 251 miles long, to be distance from Albany and Troy to Schenectady is \$132,852. This is an error, which, I presume, has increased from 16 to more than 20 miles, with grades originated in this manner. A portion of this road much steeper than would be necessary on the Catsis located in Massachusetts, and a portion in Con-kill route; the whole distance from Catskill to Schenecticut; in the annual returns to the legislature, the nectady, as now travelled, is from 15 to 20 miles fur-

Should this road be constructed, passengers could return is made. The amount above stated is the cost leave New York in the morning, and sup at Saratoof that portion of the road which is located in Mas- ga in the evening. Another important advantage to sachusetts, as you will perceive by referring to the be gained by the city of New York, is the increased facilities for the transportation of merchandize westward. In addition to the time gained in the spring by the Hartford and New Haven railroad company, and fall, when the navigation above Catskill is closed by virtue of an amendment to the charter of the lat- by ice; the increasing difficulties at the Overslaugh, ter company; and the two roads should be considered and the great amount of lockage between Albany as one-being under the control of one board of di- and Schenectady, are wholly avoided, thus on the rectors. I have received the last report of the Hart- average shortening the time now required for the ford and New Haven company, from which I extract transportation of produce and merchandize between New York and Schenectady, at least 48 hours. Experience has proved, that short railroad are commenced and prosecuted with a much better prospect of final completion than long ones. The country is full of the evidences of the truth of this remark. Hence the construction of this road would form an important link of the chain, that must ultimately connect New York with the line of railroads from Albany to Buffalo. In conclusion-I know of no route of the same extent, where a railroad could be graded with more facility and economy; nor do I know of a route, either occupied or in prospect, where a better, or even as good a reward will be offered for the investment necessary for its construction.

SCHENECTADY.

We tender our sincere thanks to J. J. D. for his very friendly communication and kind promises. It is only by such gentlemen pointing out where we are wrong, and aiding us in the pursuit of truth, that the Journal can ever become, what we desire to make it, the manual of the shareholder in public works generally.

We acknowledge the receipt of copies of the late report of the South Carolina railroad company.

Our acknowledgement of the receipt of the map of the Paterson railroad was crowded out last week. It shows that, with much better ground, the distance from Suffren's, a point on the New York and Erie railroad, to New York, is 12 miles less via

The Carbon County Gazette contained lately a very good article on the vast benefits to be conferred on Pennsylvania by the New York and Erie railroad. By the bye, will either of these papers inform us whether they of the coal region experience any inconvenience from the closing of the canals during winter?

When speaking of the Harlem railroad, we mean the New York and Harlem railroad, and do not in any way refer to the railroad from Harlem to White Plains, of which we do not even know the name, or by what authority built or held.

The Hartford and New Haven railroad has declared a dividend of three dollars a share, from the earnings of the last six months. No income was derived from the road between Hartford and Spring-

From actual surveys and personal examination, it is ascertained that the route from Schenectady to Catsard and copper lastened A. No. 1 Barque Muskingum, kill is more direct, and the elevations can probably be overcome with easier grades than on any other for the above port—(from Cincinnati!)

ENLARGEMENT OF THE MORRIS CANAL.

We now give such portions of Mr. Trautwine's report as may be of interest to our

"The route surveyed (but which I think

"Between the towns of Ralston and Bloss-Blossburg; the latter place being exactly 500! feet above the former. This ridge presents no gaps properly so called, that can be availed of in the location of our road; but there its summit, of which I selected that which lies about 21 miles, north of Ogden's, as the most favorable for our purpose, when consiline crosses it, is 1,335 feet above Ralston,

"As my graded line from the summit to They are abundantly demonstrated in the 116-16 feet to a mile, it will be deviated from in the hill slopes of 100 feet to the mile;which, as on the west side of Burnt ridge,

> "The road from its location throughout on the side slopes of narrow and circuitous streams must necessarily consist of a series of curves. six driver engines of Messrs. Baldwin and Whitney, indeed I have seen them pass a curve of less than 100 feet radius, with perfect ease.

> "For crossing Roacing Branch at either of combinations for wooden bridges of large span. As this bridge will cross the stream at be carried over its top; and it should be well weatherboarded at the sides. This will be very small amount of work required on its abutments and approaches, its cost will be quite trifling, that of the entire woodwork

> "There will be several embankments and a few cuts, varying from 10 to 30 feet, but rarely reaching a total length of 100 feet, and some few sharp points of rocks to be blasted away. With these exceptions, the grading adopted; the grading and bridging being as

very similar to ours was graded, and a wooden superstructure without broken stone ballasting laid on it ready for the iron rails, at the cost of those two items, together with the bridging, will in our case exceed about \$3,-500 a mile, and if a flat bar of 21 inches by ton be laid, the entire cost per mile, including be about \$5,800 per mile.

"But I should by all means recommend several very important deviations from this plan, viz: 1st, to cover the entire graded surthem after they are laid; 2d, to Kyanize or Payenize thoroughly all the timber employed in the construction of the roadway, bridges, etc.; 3d, to employ a heavy bar rail about 2 inches wide at top, 2½ at bottom and 1½ deep; which I feel entirely confident, from observation, will be found greatly superior to the ordinary T rail as regards durability.

"These changes would increase the cost of the road to not more than \$10,000 per considered in connection with the importance of the work upon which it would be ex-

pended.

"Were the road a mere isolated one, without important connections at both ends, I those of the Chemung. should (if indeed I advised any road at all under such circumstances) recommend the lighter rail; but this is not the case with your contemplated enterprize. It forms a very short, but most important closing link in a great chain of internal improvements, extend-mile, and around curves of 300 feet radius. ing over all the northern, middle and southern States of the Union. It is part of the shortest line of improvements, by about 200 miles between the metropolis of our country and Buffalo on lake Erie; and consequently must immediately on its completion, form the most eligible route for the transportation of merchandize, etc., from the former city, together form, but presenting no general view of the ern States, not to mention the pleasure travelling from the south to the falls of Niagara, will, however derive some idea of their exmense quantities of anthracite from the coal tent and variety from the following "stateregion of Pennsylvania, to supply western ment" of moneys expended by the "Board New York, a great part of Ohio, etc., which of Works," in which are not included premust chiefly seek this route. These sources vious expenditures and liabilities, amounting of income, the security of which to your road, to some millions of dollars. The expendino one at all conversant with the topography tures only come down to the 1st July, 1844 of the country can for a moment doubt, supercede all necessity for entering into a detailed calculation of the probable revenue of outlay of 1844, though they are still suffithe road, as they at once ensure a profitable ciently formidable. return to a vastly larger amount of capital than can, without a most prodigal extravagance be employed in the construction of the

It will be observed that this and the Williamsport and Elmira railway have the same

"The mountain railroad leading from Rals-lend in view—the connection of the State ton to the neighboring coal mines, over ground works of Pennsylvania with those of New York, also with the New York and Erie railway, the latter being by far the more iman entire expense of but \$2,000 per mile; portant of the two to the State of Pennsylvaand from a comparison of that road with the nia. They are, therefore, to a great extent, line of my exploration, I do not think that competing lines; and their relative merits may be briefly given thus; the Blossburg route requires only 241 miles to effect a juncof an inch, weighing 29 tons at \$65 per tion, the Elmira route requires about 50 miles. The gradients on the former route are 100 spikes, splicing plates, etc., complete, would feet per mile, for 16 miles, with curves of 300 feet radius: on the latter the gradients are 45 feet per mile, with a minimum radius of 1,200 feet. The distance from Williamsport on the face with about 15 inches of coarsely broken west branch of the Susquehanna to Corning, stone, before laying the cross ties; with an N. Y., via Blossburg is 90 miles, and from additional depth of about 6 inches between the same point to Elmira it is only 75 miles. Taking into consideration the saving in distance, and the vast superiority in curves and gradients, the cost of transportation on the latter would not exceed half that on the former, if both were in operation. But the less eligible route only requires half the length of new railway. Of the costs of completion of the two lines we cannot speak with any confimile; or for a road 241 miles in length, to a dence, though the shorter line will of course total of but \$245,000, a trifling sum when be more expensive, as it crosses a ridge, while the longer passes through a gap in the mountain, long known as the most favorable passage from the waters of the west branch to

We are under the necessity of protesting strongly against one of Mr. Trautwine's positions, that an extensive business in freight can be carried on over grades of 100 feet per

	The Walland sanal is to be			ie

The Welland canal is to be finished this The tolls through, 26 miles, are 81 cents per barrel of flour, 113 cents per barrel of pork, 20 cents per barrel of ashes, coal and pig iron 50 cents per ton, boards 75 cents per M. feet and merchandize one dollar per ton. Vessels of 50 tons and upwards pav three dollars. The tolls on this canal are 3.2 mills per barrel of flour per mile. On the Erie canal they are one mill per barrel per mile. The tolls on coal are 50 cents for 26 miles, and the Schuylkill canal company exwith Philadelphia and Baltimore, to the west-condition of the various works, their total cost pects the freight on 108 miles to be only 30 cents after the canal is enlarged. The great size of the Welland canal renders high tolls necessary, and its trifling length prevents their being injuriously felt.

We are glad to find here the receipts for 1842; these were carefully left out when all the papers were publishing the increase in the trade of this canal. They were for 1841 £20,210 19s. 9d.; 1842, £23,946 19s. 6d.; 1843, £16,135 7s. 8d.; 1844, £25,573 3s. 10d. The small increase from 1842 to 1844 did not suit the views of certain persons. The reason of the sudden fall from 1842 to 1843 is to be found in the circumstance, that heavy losses attended all shipments of 1812, and numbers were ruined in Montreal and Que-The American trade in 1844 brought

of discriminating tolls said nothing of the di-tistical information" as to the probable income, would have received. It is the uniform poliversion of trade to the Welland canal in 1842, the recapitulation of which is: because it paid no toll to the State of New York; but the trade of 1814 passing by Oswego contributed to the revenue of the State, and to the business of our citizens. Discrimination may be defined thus: "it is better that the western trade should be sacrificed than that Oswego should be benefitted."

The other canals of the province are pretty much like the Chanengo, Black river and similar abortions here, of which we are disagreeably reminded by the tax-gatherer in his served that the present position of affairs only never failing rounds. Taken altogether, they has been considered. The committee have, deserve a high stand among the government works of this country; and, if disposed to bet, we would back them against any works in America for greatness of cost and smallness of income. As was observed by an engineer intimately acquainted with the public works of the province, "they are literally carrying out the views of Dean Swift's philosopher, whose highest ambition it was to confer on his country a race of sheep without any wool." (Journal, 1843, p. 274.) In fairness we must admit that their qualifications are beyond the possibility of doubt.

REPORT OF THE SURVEY OF THE PROJECTED LINE OF RAILROAD FROM STANSTEAD TO MONTREAL VIA SHERBROOKE AND ST. HYA-CINTHE-By Win. P. Crocker, C. E.

A copy of this report has also been kindly forwarded to us by the gentleman to whom we are indebted for the report of the board of works. We are thus enabled to give our The average being readers some idea of the nature of the route in Canada, or rather of one of the routes, for it appears that Mr. Crocker only examined this railroad will be found by the accompany-tions of, and the payments to, the sinking the circuitous route which appeared to pre- ing report from the engineer employed to be funds, are to go on the same as before, and sent better ground.

The line commences 21 miles within the State of Vermont, and enters Canada at the 15 miles, thence to St. Hyacinthe, 35 miles, thence to Longueuil, a little below Montreal, 403 miles. Total distance 1233 miles, and estimated at \$2,225,059, with the ordinary T rail, 56 pounds to the yard, estimated at 1d. currency per pound, a singular mode of reckoning, which for the benefit of readers on both sides of the lines, we will translate into for a distance of nearly 7 miles in two portions, and 791 feet per mile for 31 miles conare estimated at \$87,000.

"In the foregoing estimate it will be obhowever, every confidence in believing that the construction of the railway would cause an immense and immediate increase to every present branch of business and industry, and a corresponding beneficial result to the railroad proprietors."

They further observe,

"By the foregoing statement it would ap-

"The annual expense of working the railroad when constructed, is estimated on the results of several railroads in the United States Massachusetts:

The annual expense for the entire distance of 1233. miles would - £21,621 10s. At the rate of the Western railroad, which is believed to be the most expensive, it 29,782 10 would be £51.404

£25,702 Leaving a disposable surplus of

estimated at, say in round numbers, £550,

foregoing estimates are founded on correct village of Rock Island, thence to Halley, 12 data, that the railroad will yield a return equal miles, thence to Waterville, 11 miles, thence to about five per cent. on the capital invested to Sherbrooke, 10 miles, thence to Melbourne, without considering the progressive increase of traffic which its establishment will occa-

WESTERN RAILROAD.

The bill to increase the stock of this corporation was discussed in the senate, on Tues already well supplied with steamboats and day, and passed to a third reading by a large sail craft, from every inlet. But a road from majority. So far as we understand the views Hartford or Meriden, which shall nowhere of the stockholders, who have unanimously approach within twenty miles of the coast, voted to ask for the increase, they represent and passing through a dense manufacturing \$37 20, or £9 6s. cy. per ton. The highest that they have placed in the sinking fund, togradients we observe, are 711 feet per mile wards the payment of their debt, which maif not quite sufficient within itself, in its way tures thirty years hence, the sum of \$390,000 travel and freight to pay the interest on the tions, and 79\frac{1}{4} feet per mile for 3\frac{1}{4} miles continuous. The engines, cars and buildings sequently, the stockholders, including the other road could be, and would consequently State, have received on their 30,000 shares, command more of the long travel from New

the receipts up to those of 1842. The friends | The committee have appended some "sta- \$2 per share dividend less than they otherwise cy of the New England railroad companies, to keep the "income account" totally distinct from the "construction account." Had it been otherwise, the Lowell, the Worcester. the Eastern and other roads, would not have paid a dividend to this day. When the "construction account" of these roads is increased new stock is created to represent it, and the nett earnings are divided, after paying for the expenses, repairs, etc. The petitioners ask that there may be no invidious distinction made between them and other companiesthey do not wish to disturb the sinking funds, but simply ask the privilege of creating as much new stock, to be sold at not less than \$100 per share, as will represent the amount of actual nett earnings fairly belonging to "dividend account," but paid by them to the sinking funds, to be locked up for thirty years. This they consider to be a hardship, and greatly to the detriment of their property. The State has received this year a dividend of \$30,000 on its third, say 10,000 shares; but if the directors had been allowed to divide pear that the committee anticipate a trade in the real nett income, as other roads do, the certain specified items, amounting to £54,705. dividend would have been \$50,000, and the patriotic stockholders would have received in

like proportion. The bill, as passed and amended by the at the same rate as the Eastern railroad in senate, 27 to 4, provides that \$330,000 of the Massachusetts: in construction, from time to time, as the increased business of the road may render it necessary; and that the remainder, being the amount actually paid in out of the nett earnings, shall be added to the general receipts of the road, to be disposed of as the directors (four on the part of the State and five on the part of the private stockholders) may in their discretion think proper, viz: for repairs, depreciation or dividends, thus placing the stockholders of this road upon a par with those of other roads in the commonwealth; and it £29,003 cannot be denied that they are as deserving "The expenditure on the construction of as any others. In the mean time, the operawill be sufficient, at the end of thirty years, to redeem the whole debt, leaving the cost of "It may therefore be anticipated, if the the road represented by shares of \$100 each. -Boston Courier.

New York and Hartford Railroad .- A railroad through the interior of Connecticut from Hartford to New York, is one of the best openings for the investment of capital that presents itself in the whole Union. Unlike a road on the borders of the sound, it would have no competition—the borders are that \$60,000 of this amount was derived cost of the road. In addition to this it would

NICOLL'S PATENT SAFETY SWITCH for Railroad Turnouts. This invention, for some time in successful operation on one of the principal railroads in the country, effectually prevents engines and their trains from running off the track at a switch, left wrong by accident or design.

It acts independently of the main track rails, being

laid down, or removed, without cutting or displacing

only two Castings and two Rails; the latter, even if much worn or used, not objectionable.

Working Models of the Safety Switch may be seen at Messrs. Davenport and Bridges, Cambridgeport, Mass., and at the office of the Railroad Journal,

Plans, Specifications, and all information obtained

KITE'S PATENT SAFETY BEAM.

MESSRS. EDITORS.—
As your Journal is devoted to the benefit of the public in gen-eral I feel desirous to communicate to you for publication the following circumstance of no inconsiderable importance, which oc-curred some few days since on the Philadel-phia, Wilmington and Baltimore railroad.

On the passage of the evening train of cars from Philadelphia to this city, an axle of our large 8 wheeled passenger car was broken, but from the particular plan of the construction, the accident was entirely unknown to any of the passengers, or, in fact, to the conductor himself, until the train, (as was supposed from some circumstances attending the case,) had passed several miles in advance of the place where the accident occurred, whereas had the car been constructed on the common plan the same kind of acci-

dent would unavoidably have much injured it, perhaps thrown the whole train off the track, and seriously injured, if not killed many of the passengers.

Wilmington, Del., Sept. 28, 1810.

The undersigned takes pleasure in attesting of the value of Mr. Joseph S, Kite's invention of the Safety Beam Axle and Hub for railroad cars. They have for some time been applied to passenger cars on this road, and experience has tested that they fulbill this road, and experience has tested that they fulgy accomplish the object intended. Several instances of the fracture of axles have occurred, and in
such the cars have uniformly run the whole distance
with entire safety. Had not this invention been
used, serious accidents must have occurred.

In short, we consider Mr. Kite's invention as completely successful in securing the safety of property

and lives in railroad travelling, and should be used on all railroads in the country.

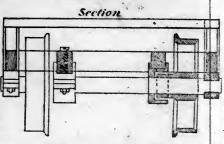

JOHN FRAZER, Agent,

GEORGE CRAIG, Superintendant,

A model of the above improvement is to be seen at the New Jersey railroad and transportation office, No. 1 Hanover st., N. York.

DATENT HAMMERED RAILROAD, SHIP And Boat Spikes. The Albany Iron and Nail Works have always on hand, of their own manufac-ture, a large assortment of Railroad, Ship and Boat Spikes, from 2 to 12 inches in length, and of any form of head. From the excellence of the material al-ways used in their manufacture, and their very gen-eral use for railroads and other purposes in this coun-try, the manufacturers have no hesitation in warranting them fully equal to the best spikes in market,

ing them fully equal to the best spikes in market, both as to quality and appearance. All orders addressed to the subscriber at the works, will be promptly executed.

JOHN F. WINSLOW, Agent.

Albany Iron and Nail Works, Troy, N. Y.

The above spikes may be had at factory prices, of Erastus Corning & Co., Albany; Hart & Merritt, New York; J. H. Whitney, do.; E. J. Etting, Philadelphia; Wm. E. Coffin & Co., Boston.

ACHINE WORKS OF ROGERS, KETCHum & Grosvenor, Patterson, N. J. The undersigned receive orders for the following articles, manufactured by them of the most superior description in every particular. Their works being extensive and the number of hands employed being large, they are enabled to execute both large and small orders with promptness and despatch.

Railroad Work.

Locomotive steam engines and tenders; Driving and other locomotive wheels, axles, springs & flange tires; car wheels of cast iron, from a variety of pat-terns, and chills; car wheels of cast iron with wrought tires; axles of best American refined springs; boxes and bolts for cars.

Cotton, Wool and Flax Machinery

of all descriptions and of the most improved patterns,

style and workmanship.

Mill gearing and Millwright work generally;
hydraulic and other presses; press screws; callenders; lathes and tools of all kinds; iron and brass

castings of all descriptions.

ROGERS, KETCHUM & GROSVENOR,
a45 Paterson, N. J., or 60 Wall street, N. York.

PATENT RAILROAD, SHIP AND BOAT The Troy Iron and Nail Factory keeps constantly for sale a very extensive assortment of Wrought Spikes and Nails, from 3 to 10 inches, wholast spites and Nans, from 5 to 10 hence, manufactured by the subscriber's Patent Machinery, which after five years' successful operation, and now almost universal use in the United States (as well as England, where the subscriber obtained a patent) are found superior to any ever offered in market.

Railroad companies may be supplied with Spikes having countersink heads suitable to holes in iron rails, to any amount and on short notice. Almost all the railroads now in progress in the United States are fastened with Spikes made at the above named factory—for which purpose they are found invalua-ble, as their adhesion is more than double any common spikes made by the hammer.

All orders directed to the Agent, Troy, N. York, will be punctually attended to.

HENRY BURDEN, Agent.

Spikes are kept for sale, at Factory Prices, by J. Spikes are kept for sale, at Factory Prices, by I. & J. Townsend, Albany, and the principal Iron merchants in Albany and Troy; J. I. Brower, 222 Water St., New York; A. M. Jones, Philadelphia; T. Janviers, Baltimore; Degrand & Smith, Boston.

* Railroad Companies would do well to forward their orders as early as practicable, as the subscriber is desirous of extending the manufacturing so as to keep pace with the daily increasing demand.

FRENCII AND BAIRDS PATENT SPARK ARRESTER.

ted to examine an improved SPARK ARRESTER, recently patented by

Our improved Spark Arrester have been extensively used during the last year on both passenger and freight engines, and have been brought to such a state of perfection that no annoyance from sparks or dust from the chimney of engines on which they are used is experienced.

These Arresters are constructed or

an entirely different principle from any hereu lore offered to the public. an entirely different principle from any heret tore offered to the public. The form is such that a rotary motion is imparted to the heated air, smoke and sparks passing through the chimney, and by the centrifugal force thus acquired by the sparks and dust they are separated from the smoke and steam, and thrown into an outer chamber of the chimney through openings near its top, from whence they fall by their own gravity to the bottom of this chamber; the smoke and steam passing off at the top of the chimney, through a caracious and unobstructed passage, thus arresting the sparks without impairing the power of the engine by diminishing the draught or activity of the fire in the furnace.

These chimneys and arresters are simple, durable and neat in appeara

ENGINEERS and MACHINISTS.

These chimneys and arresters are simple, durable and next in appearance. They are now in use on the following roads, to the managers and other officers of which we are at liberty to refer those who may desire to purchase or obtain further information in regard to their merits:

Mr. C. also announces that Railroads, and other works pertaining to the profession, may be constructed and under his advice or personal supervision. Applicaitons must be post paid.

RAILROAD IR N AND LOCOMOTIVE CUSHMAN'S COMPOUND IRON RAILS. TO IRON MANUFACTURERS. THE SUBtry imported to order and constantly on hand by A. & G. RALSTON Mar. 20tf 4 South Front St., Philadelphia.

PASCAL IRON WORKS,

WELDED WROUGHT IRON TUBES

From 4 inches to \(\frac{1}{4}\) in calibre and 2 to 12 feet long, capable of sustaining pressure from 400 to 2500 lba. per square inch, with Stop Cooks, \(T^*, L^*\), and other fixtures to suit, fitting together, with screw joints, suitable for STEAM, WATER, GAS, and for LOCOMOTIVE and other STEAM BOILER FLUES.

Manufactured and for sale by MORRIS, TASKER & MORRIS.
Warchouse S. E. Corner of Third & Walnut Streets, PHILADELPHIA.

NO IRON MASTERS.—FOR SALE.—MILL SITES in the immediate neighborhood of Bi-Ralston, Lyoming Co., Pa. This is the nearest point to tide water where such coal and ore are found together, and the communication is complete with Philadelphia and Baltimore by canals and railways. The interest on the cost of water power and lot is all that will be required for many years; the coal will not cost more than \$1 to \$1 25 at the mill sites, without any trouble on the part of the manufacturer; rich iron ore may be laid down still more chearly at the works; and, taken together. more chearly at the works; and, taken together, these sites offer remarkable advantages to practical manufacturers with small capital. For pamphlets, descriptive of the property, and further information, apply to Archibald Melntyre, Albany, to Archibald Robertson, Philadelphia, or to the undersigned, at No. 23 Chambers street, New York, where may be seen specimens of the coal and ore.

W. R. CASEY, Civil Engineer,

VALUABLE PROPERTY ON THE MILL Dam For Sale. A lot of land on Cravelly Point, so called, on the Mill Dam, in Roxbury, fronting on and erst of Parker street, containing 68,197 square feet, with the following buildings thereon st. nding.

Main brick bu lding, 120 feet long, by 46 ft wide, two stories high. A machine shop, 47x13 feet, with large engine, face, screw, and other lathes, suitable to do any kind of work

P: tte n shop, 35x32 feet, with lathes, wer's benel-

es, &c. Work shop, 86x35 feet, on the same floor with the pattern shor

Forge shop, 118 feet long by 44 feet wide on the ground floor, with two large water wheels, each 16 feet long, 9 ft diameter, with all the gerring, shafts, druins, pulleys, &c., large and small trip hammers, furnaces, forges, rolling mill, with large balance

wheel and a large blowing apparatus for the foundry. Foundry, at end of main brick luilding, 69x454 feet two stories high, with a shed part 45½x29 feet, containing a large air furnace, eurola, crare and corn oven

Store house—a range of buildings for storage, etc., 200 feet long by 20 wide.

Locomotive shop, adjoining main building, fronting on Parker street, 54x25 feet.

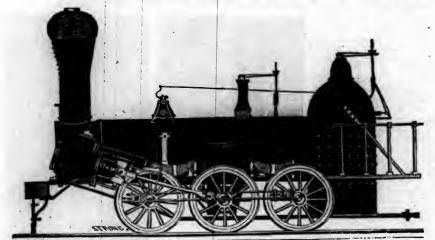

Also —A lot of land on the canal, west side of Parker st., containing 6000 feet, with the following buildings thereon standing:

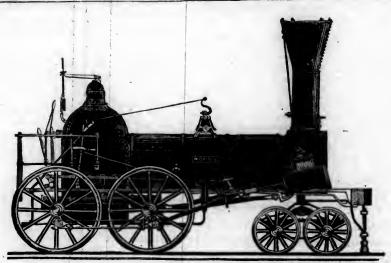

Boiler house 50 feet long by 30 feet wide, two sto-

Blacksmith shop, 49 feet long by 20 feet wide.

With Wheels of any dimensions, with their Patent Arrangement for Variable Expansion. Castings of all kinds made to order; and they call attention to their Chilled Wheels, for the T. neks of Locomotives, Tenders and Cars.

NORRIS, BROTHERS.

LINA RAILROAD COMPANY.

The Directors of the South Carolina Rail. road Company have the honor to submit herewith their First Annual Report, for the year ending on the 31st of Dec., 1844. Since the last annual meeting at Columbia for 1844. of the stockholders of the L. C. & C. R. R. Company, and of the So. Ca. C. & R. R. Company, the consolidation of these two Companies, under an act of the Legislature Fron 1st January to 1st July, of South-Carolina, bearing date the 19th December, 1343, has been perfected; and all the chartered "Rights, Privileges and Property" of both are now centered in and enjoyed by one corporation, under the name of the South-Carolina Rail road Company.

The gross receipts, current expenses, and From 1st July to 1st January, nett income, on the two Roads, previous to consolidation, for the year 1813, were: From 1st Jan. to 1st July, on

Hamburg Road, \$171,241 48 From 1st Jan. to 1st July, on Columbia Branch, 44,740 73

Total. . \$215,982 21 Current expenses on Hamburg Road. \$103,147 76 Current Expenses on Columbia Branch, 20,108 86 Interest on sterling Bonds and floating note debt,

Total, Nett income, \$33,725 59 From 1st July to Dec. 31, 1843. on Hamburg Road, \$177,074 03 From 1st July to Dec. 31, 1843, on Columbia Branch, . 49,835 01

\$226,904 04 Current Expenses on Hamburg Current Expenses on Columbia Branch, Interest on sterling Bonds, and floating note debt, 59,000 00

Directors declared, for the first half-year, a may legitimately be charged to current exdividend of \$1 per share; and from the penses. In the expenditures, however, last half-year \$1 25 per share, making for brought under this head, on the South Carothe year \$2 25 on each share, and equiva-lina Rail road, are included \$21,025 for

nett revenue would not seem to accord, on crs and chilled boxes, and \$775 for extra comparison, with the statements in the repermament machinery in the work-shops. port of 1843. In that exhibit, as the Com- If from these various appropriations to perpanies had not been consolidated, and the manent objects, and amounting in the aggreinterest on the sterling bonds and floating gate to \$41,698, be deducted \$23,561 53, debt of the L. C. & C. R. R. Company, the amounts expended on similar objects, as had been previously provided for out of the shown in the Report for 1843, we would funds of that Company, and charged in have \$18,027 to be deducted from \$21,305, their books—it was not, and very properly, the excess of current expenditures for 1844, directors on the 30th day of May last. It by the Auditor of the S. C. C. & R. R. which whould reduce that sum to \$3,278, being ascertained that \$350,000 had been Company, brought into the account of cur- and show that an increase of 20 per cent. on subscribed, it was voted that that sum conthe gross income of the Road from freight and stitute the capital stock of the corporation.

Three assessments, amounting to 25 per rent expenses, is now correctly embraced cent. on the legitimate current expenditures, cent. of the capital stock, have been made

FIRST ANNUAL REPORT OF THE SOUTH-CARO. all these charges for interest, it was necess, and exhibit the encouraging ary in a comparative exhibit of expendi- per cent. on the nett revenue tures and of net income for the two years, to embrace interest on bonds and note debt FIRST ANNUAL REPORT OF THE VERMONT in those for 1843, as they had been embodied in the consolidated Company account

> nett income, for the year 1844, on the Roads, as consolidated, were :

> receipts, \$244,035 14 Expenses, including 1 locomotive and extra burden cars, 185,438 07

> > Nett income, 59,597 07

1845, receipts, 288,835 81 Expenses, including 2 locomotives, patents, extra passenger and burden cars, and machinery, 207,234 24

> Nett income, \$31,598 57

From the above a dividend of \$1 50 was declared on each share for the first half year, and \$2 25 for the last half year, making \$3 75 on each share, and equivalent to 5 per cent. interest on the par cost on each share now represented in the company. From 59,000 00 the exhibit now made, it appears that the \$182,253 62 those of 1843 by \$89,967 70, and the nett profits by \$38,671 69, while the current expenses for the same period exceeded those of the previous year by \$21,805. statement goes to confirm, in part, a fact pot, passes about 200 yards to the east of previously brought to the notice of the stockholders, that an increase of business on a rail road does not necessarily involve a corresponding increase of current expenses, Road, including 3 locomotives, 111,673 16 where the Company is properly prepared with locomotives, and the requisite number 18,437 52 of cars to neet the business offered. The fixed capital is in the road bed, and an appropriation of but one-tenth of that amount for an increase of motive power, may more \$189,110 65 than double or quadruple the capacity of the Nett income, . \$27,987 36 Company to do the business offered, and at From which nett incomes the Board of a very inconsiderable augmentation of what lent to 3 per cent. on the par value of \$75 three new locomotives and extra wheels; on the Road stock. \$17,493 for new passenger and burden The above statement of expenditures and cars; \$2,400 for patents for spark arrest. Interes

result of 90

AND MASSACHUSETTS RAILROAD COM-PANT.

More than one million of dollars have The gross receipts, current expenses and been already subscribed to our capital stock -and the first assessment, of ten dollars per share, has been laid, payable on the first day of March next.

The success which has attended the Fitchburg Railroad, and the promise of ample remuneration which accompanies this enterprise, renders the early completion of the road to Brattleborough a matter beyond reasonable doubt.

The directors, regarding it as desirable to procure still further subscriptions for stock, have adopted a course destined to accomplish this object-and have taken steps preparatory to placing a portion of the road under contract, and to break ground at as early a day as may be practicable.

FIRST ANNUAL REPORT OF THE STOUGH-TON BRANCH RAILROAD CORPORATION.

400 shares of the capital stock having been subscribed for, on the 28th of May last, the corporation was duly organized by the election of seven directors, who then chose a president, an agent, a treasurer, and a clerk, and shortly after an enginaer.

Previous to this date, the route had been resurveyed, and soon after the road definitely located. It diverges from the Boston and Providence Railroad at the Canton de-Kinsley's forge; crosses the upper end of Franklin Bisby's (forge) pond; passes about 100 yards to the west of the widow Polly Bird's house; and terminates in the rear of the orthodox meeting-house, in the village of Stoughton, being just four miles in length. The steepest ascent is 45 feet per mile, and the curvatures, except those at each end of the road, not less than 1830 feet radius.

The receipts from stockholders have been \$38,075 00 From the Boston and Providence R. Co. 25,000 00

\$63,075 00 The expenditures have been as follows: Incidental expenses, |-\$828 40 Salaries of officers, 1,060 00 Graduation, masonry, fencing, and wood-en materials for, and laying of track, 22,482 45 5,520 54 26,203 14 5,519 75 132 46 Depots and turn table, Iron materials for the track. Land and damages, -Cash in the hands of the treasurer, 4,328 26 \$63,075 00

damages and depot lands, some \$30,000 (ap. convenient crossing at the Lowell road. proximately) has been paid for depot lands, Instead of crossing, as it now does, by short atlarge portion of which the directors expect curves and reverse curves, it will run to realize by the sale of such parts as are straight, in a manner similar to the crossing not needed for permanent purposes.

SECOND ANNUAL REPORT OF THE HART- There are now upon the road, 3 6-wheel locomotives. FORD AND SPRINGFIELD RAILROAD COR-PORATION.

The capital stock of the corporation remains as at the last annual report.

There has been expended during the year for superstructure, grading, bridging, masonry, lands, fencing, engineering and miscellaneous expenses, \$132,852 31-100,this amount has been furnished by the Hartford and New Haven Railroad Company report.

Early in December, the road was so far completed as to be opened for use, and the them until the public wants are satisfied. Hartford and New Haven Railroad Company with their own cars, engines, and men, commenced running daily, (Sundays ex-cepted,) over the same, four passenger and freight, at the several depots and turnouts,

AMERICAN RAILROAD JOURNAL.

PUBLISHED BY D. K. MINOR, 23 Chambers street, N.Y

Thursday, March 27, 1845.

WESTERN RAILI	ROAD		Rec	cipts for the	ne week en	
ing March 15:				1845.	1844.	
Passengers,	-		-	\$4,704	\$4,394	
Freight, etc.,		-		5,146	3,643	
Total,	-		-	\$9,852	\$8,037	

Nett gain in ten weeks, \$38,987—being 31 per ct. over last year, when the gain was \$185,000 over '43.

MINEHILL AND SCHUYLRILL HAVEN RAILROAD .-The following is the amount of coal transported over this road, for the week ending on Wednesday evening last: 4,549.01 Per last report, 45,189.05

49,747.06 Total, THE COAL TRADE. - Sent by railroad up to Thurs

day evening last.—Miners' Journa'.
Schuylkill Haven, 2,616-03 Pottsville, 6.562-11 Per last report, 65,174.57 71,736 68

Sent by canal up to Thursday evening last:

From Pottsville, 2,071.07
The canal was opened throughout on the 10th of March, but owing to stormy weather, no boats moved reported are in no very enviable condition. for several days after the opening.

No returns from Schuylkill Haven or Port Clinton.

The Tribune is not pleased with our remarks on the canals of New York, but like every other political paper in the State, cautiously avoids any notice of the State monopoly of western freight-and the immense injury inflicted on the farmer of western New York by this "peculiar institution." Our respective opinions on the relative merits of governmental and private works, may or may not be important, but here we have a fact which we must grapple with, or pass by as "an ugly customer." Every political Journal in the State has so far adopted the the revenue of the Erie canal might be somewhat dicity would be benefitted by the permission to an extent exceeding the entire income of the canal, they, the politicians, would lose a little patronage. He be a moment's hesitation in such a case.

But there are other causes why we shall have the misfortune (if such it be) to differ with all papers their estimate of the Montreal railroad. devoted to one object, and conducted mainly with the Though conducting a railroad Journal, and believing against the board of works, which will probably fall former is pretty bertain—for a time. railroads to be every way better adapted to this coundafter this year; that is, after all the money is gone. The N. York canals will be opened 15th April.

and would not comprehend, far less appreciate, the without which there is little prospect of successions. information be true, without respect to its being for board of works. or against the general cause which such journal advocates.

RAILWAYS OF NEW YORK.

The "annual report of the secretary of State reis 6381 miles, the cost \$19,606,737, the gross income quehanna, the Buffalo and Niagara Falls, the Lewyear." He might have added that some of the rereports sent in were little better than nothing.

When a railroad is in debt, and has occasionally to meet payments of principal as well as interest falling due, the work may earn well, though the shareholders for a time receive nothing; hence the actual amount paid in dividends does not give a fair view of the condition of the works. The reports will of course appear in the Journal, and it will be our duty closely to examine them, and aid our readers in arriving at correct conclusions as to the working of the system in this State. The rate per cent. of dividend is not given in the reports, and in filling up our table we may have committed some errors. Out of fourteen railroads, six only have declared dividends! indeed, we might say out of nineteen, for we presume that the roads which have not

The price of railroad iron has greatly adrailway and mining journals leads us to believe that out the year

Correspondents will oblige us by sending in their try than canals we are by no means slow in pointing [] A charter has been granted from Montreal to out any of their defects, as the last few numbers of the province line, so as to connect with either the our Journal will testify. Now, for example, with a Portland or Boston route, but we hear nothing decitariff or Texas journal, the case is different: they ad- sive as to the guarantee of two or three per cent. on mit nothing which does not favor tariff or Texas, a considerable sum, to aid the road in the province, course of a journal, which only asks whether the might say none. It will of course be opposed by the

> A complete survey of the routes from Montreal to the lines is indispensable, to show which route will be most advantageous to that city: for, as the capital must come thence, if it come from Canada, the first question is, which route is best for Montreal. Two lative to railroad statistics," is out. Of the fifteen routes, differing materially in character, have been railroads which have reported, the aggregate length surveyed, and found practicable, but we have not seen an attempt at an investigation of their comparfor 1844 \$1,768,472, the expenses for 1844 \$799,753, ative merits, though this must be done, and well done the earnings \$968,719, and the dividends \$516,491. too, before any decisive movement can be expected In this statement we have assumed the gross receipts in Montreal. A little exertion might secure an apof the 381 miles of the Albany and West Stock-propriation for a survey, though it should not be left bridge railroad at \$184,813, and its dividends at 6 to the board of works to carry it through, as no man per cent. on cost. The actual dividends of all these in the province would trust his own money in their roads little exceed 21 per cent.! The secretary says, hands, or would place any confidence in their state "The Buffalo and Black Rock, the Cayuga and Susments. We do not profess to know whether any course would secure the necessary amount of subiston, and the Lockport and Niagara Falls railroad scriptions, but there will be no chance of success companies have not reported to this office the present without a full and fair examination of the rival routes, by men whose skill and character will command the confidence of men of business.

> > We acknowledge the receipt of the reports of the New York railroads from some friend at Albany; of the argument of C. G. Loring, Esq., on behalf of the Eastern railroad company, from B. T. Reed, Esq.; of several pamphlets on the Schwikill navigation, and of the report of the Petersburg railroad company.

It appears that the legislature is about giving permission to the New York and Erie railroad company to make a branch to Newburgh and will revive the charter of the Goshen and Albany railroad. In connection with this latter move is the project of connecting the Paterson railroad with the Erie, 18 miles from Piermont, so as to make a cortinuous line from Jersey city to Albany. Should these plans ever be carried out, the last 18 miles of the Eric railroad would be useless, as all the freight vanced, and would range from 80 to 90 dollars in would go by Newburgh during nine months of the New York. A careful examination of the English year, and all the passengers by Jersay city through-

a considerable advance will be maintained for some The legislature of New York has imposed time, though the present rise must necessarily be, to canal tolls on freight carried over the Troy railroads, some extent, speculative. Still it has deterred the and it is proposed to impose the same on the Mohawk New Jersey railroad company from relaying their and Hulson railroad, with a very ingenious "im. track, and will probably have the same effect on the provement," as "additions," as often called here. Utica and Schenectady and Utica and Syracuse The length of the railroad is 17 miles; of the canal companies. The former of these companies peti- between the same points, 30 miles, on which latter tioned to be allowed to increase their capital \$500,- distance they intend to charge canal tolls. Each latter course. They fear that, if the farmer, and the 000; but, as they will require about 10,000 tons of ton (2240 pounds) of merchandize will therefore inhabitants of western New York, generally, were iron, they must ask for a million, or give up for the pay 60 cents canal tolls for the privilege of being allowed to select their own mode of transportation, present. This news will be a severe blow to the carried over 17 miles of railroad-very nearly as western States, especially Ohio and Michigan, where much as the railroad company would charge for minished; and, though western New York and this the spirit of private enterprize, so long kept down by transportation, including loading and unloading, governmental competition, was just beginning to wharfage, insurance, etc., were the trade open to show itself. Pennsylvania was fortunate enough to competition. Were the Eric railroad completed. get in nearly 10,000 tons before the rise, principally, the State would impose canal tolls on all freight and must indeed be blind, who imagines that there would if not exclusively, to aid in developing her resources passengers diverted from the Eric canal, and it is in coal and iron. Our friends "down east" will be well known that a vast number of emigrants and under the necessity of adding a million or two to others pass in boats with their furniture from Albany to Buffalo. As we observed some time since, the go-It appears that the Canadian "ministry" are vernment and the canals are out in full force against view of supporting that object, right or wrong. - bothered to death with complaints and serious charges the railways and the people, and the success of the

RAILWAY LEGISLATION.

On reading the numerous articles on rail-British Quarterlies during the last year, we there with reference to their "main line," railway somerset, and, in place of opposing Pennsylvania. the formation of corporations as hitherto, is now more likely to trench on the rights of the citizens in their favor. In the legislatures of Maine and Canada, the projected Atlantic and St. Lawrence railway is said to have carried all before it, and the guaranthe of $2\frac{1}{2}$ to 3 per cent. on a considerable loan by the province to a company appears to be confidently anticipated. The State of Massachusetts having wisely abstained from entering into competition with her own citizens, and having thus given fair play to private enterprize, finds her territory already so traversed by railways, that new projects partake, in many cases, of the nature of competing lines, and a sort of railway board has been formed to prevent the construction of too many roads, as in England. Even Vermont has been slightly agitated by the projected railroad to Burlington, and we again notice some very small symptoms of vitality now that Montreal appears to be regarded as the terminus, rather than that flourishing village. In New York we have applications for, and amendments to charters without end. From the very slight acquaintance with the trade, wants and resources of the country, possessed by most of our public men, from their want of general information, and above all, from their inability to grasp the great and complicated subject of railways, we anticipate nothing very favorable to the cause, unless by sheer good luck. The total omission of the subject in his message, by a governor leaving our contingent fund nearly the same of Mr. Wright's pretensions, to which we all as last year. luded at the time, demonstrates far too forcibly the truth of our not very compliment that the actual current expenses have by no tary observation. Any man-not steeped means been increased in proportion to the in political squabbles-could see that railway legislation would be the most difficult subject to handle of any to be brought for are from an influx of foreign travel and a ward during the session. > THE SALE OF THE PUBLIC WORKS. -THE DEBT AND HONOR OF THE STATE.

Mr. Herr, of Lancaster, recently made a long speech in our legislature, in favor of the sale of the main line of the public works. He contended that the integrity of the commonwealth could not be maintained without such sale; and that any member who argued to the contrary exhibited a lamentable ignorance of the real state of affairs. He carnestly advocated the payment to the utter-most farthing of the State deht, and said that in order to accomplish this, we must husband our means, always having a strict. regard to the interests of the people, upon whom we must rely in the final emergency -not by constant appeals to their patriotism for that term has lost its charm by its too frequent use, (patriotism and love of coubtry have of late years been a sovereign balm for all our ills) but by giving them an evidence that we never lose sight of their interest in all our deliberations.

His view was to stay the destructive powho needs no corroborating proof with those one can doubt, by looking at the cost of the licy of repudiation. Our means he regarded as ample, if properly applied—but in the first place, he thought that the price of the public works should be fixed at an available sum, or a sum likely to be obtained, and that rent members of the board of works, that penditure, that the auditor joined with the the people would sustain this course on the functionary uses the following language:— other fund commissioners, in refusing to pay part of the legislature. But if on the other to upon bringing up the disbursements to such the checks upon certain portions of those hand, the legislature should refuse to take works. And who can doubt but what the any further action in the disposition of the tained, it was found that while Mr. Ransom's auditor was right, when he looks at the fig public works, he for one should not be surprised if, before a twelvemonth, repudiation should be favored through the length and

Such is the onward march of railways, that this class of improvements in the eastern states is already decidedly preferred: and a great change is taking place in the public mind in this state and in Pennsylvania.

The contest for superiority between the Schuylkill Canal and Reading Railway, is looked upon with much interest by our citizens, and a year more will settle the question in favor of the cheaper transportation, at all seasons of the year, by the "better improvement of the age." The panacea in Pennsylvania, as well as in this state, appears to be to enlarge the canals; while all experience in England shows that small canals are the most profitable. We are not aware that a single canal in England has been enlarged, and the experiment on our Eric Canal is anything but satisfactory to our taxpaying citizens, or creditable to our engineering talents. It was estimated to cost \$12,-000,000-then \$23,000,000; and if ventured on again, and railwaws do not supersede its necessity, we predict that the sum required will greatly exceed this amount. It has been stated in our columns, and it is unconstitute a barrier to cheap transportation therefore, 85 cents. greater than the Alleghany ridge. The like Pennsylvania.

FIFTEENTH ANNUAL REPORT OF THE PE-TERSBURGH KAILROAD COMPANY.

The board of directors have the satisfac. tion of informing the stockholders, that the business of the road and the affairs of the company have improved considerably since the last annual meeting.

The receipts of transportation for the twelve months just ended, were \$122,870 81. This is \$5,141 28 greater than it was the year before. At the same time there was a considerable saving in the expenses at-tending the business. This saving amount-The amount of the expenses was \$49,972 33, and the interest \$5,745 98—in all, \$58,718 31.

The increase in the receipts and the sa-\$21,260 21 greater than it was the year before. The amount of the nett income was \$64,152 50.

We paid off during the twelve months gate charge per 100 lbs. on all merchandise \$41,887 72 of our debt and a dividend of 3 per cent. to the stockholders. Our whole debt (deducting the assets) is now only \$94, 592 98, about one half of which matures this year, and the remainder the year following.

The increase in the receipts was from passengers. In the freight there was a slight falling off; but this was only in the receipts, and was caused by the reductions made in our rates of transportation in October, 1843. These reductions, you may re-Coffee, Tinplate, Manufactured Tobaco and member, were made with the expectation This they have done; and although we have not yet felt their good effects in our receipts. yet we have every reason to believe that we will soon do so, as the quantity of freight last year increased about 2500 tons. If we have a similar rate of increase for the current year, it will add \$12,000 to our revenue. We have a fair prospect of even a larger increase than this, as the freight business has commenced much earlier and better this year than it did last.

Freight receipts for the month of February, 1844, \$5,847; same for the month just On the excepted articles above named the ended, \$7,487; increase for the month, \$1,-

The prospect of further increase in the 1845, and at the same time the restriction and the aggregate charge through from Bal-which prevented persons not citizens from timore to Wheeling is one dollar. travel of the road is also favorable. Besides the improvement we may expect in this item Receipts are given by the forwarders in of our business, from the improving condi-To those who are unacquainted with the Baltimore to deliver merchandise in eight tion of the country, we look for some from areduction of the high rate of fare charged on the Baltimore and Washington railroad, small amusement among those who have served that the rates of freight between which we presume will soon be made. The heard the situation in which the company is placed. Some time ago, it seems, so great was its prosperity, that it used to pay at the Rail road Company advertise to carry dry rate of 25 per cent., and then the greatest goods at 12½ cents and groceries at 10 cents to reduce it. This we have no doubt will be

carried into effect, as the directors of that | Train expenses: company have always expressed their intention to do it as soon as the power should be given them. A fair reduction of the rate on that road will add considerably to the truvel going between the north and south,

Repairs of engines and cost of Wages of men and cost of materials of all kinds, travel going between the north and south, and of course to ours.

But even with no increase in our receipts, we shall be abundantly able to provide for the debt falling due this year, and continue the dividend of three per cent. Next year we think the prospect is now certain, that we shall be able to extinguish the whole of the debt, and increase the dividend; and we believe the prospect of good and regular Net income, dividends thereafter is also as certain.

By order of the board of directors. H. D. BIRD, President. March 3d, 1845.

The Railroad Projects. - The two branch es of the legislature seem to be remarkably at variance in regard to some of the nume rous railway projects now before them; and from present appearances there is dange that the wishes, of not the rights of the peo ple will be seriously disregarded. In refer ence to the Farmingham petition, particularly, there is a singular disagreement between the two bodies. The house, by a very decided vote, has shown a disposition to, grant the prayer of the petitioners, while the Senate, with still greater unanimity, has declared against them.

There is some danger that our legislature may overstep its authority in these matters That authority is to guard the constitution 917,769 22 and laws against infringement, and to afford necessary protection to private rights. The general principles of legislative power are the same in their application to railway a 5.180 22 to manufacturing and other corporations 1,497 03 and it is a question whether the whole sub-1,157 16 ject of railway enterprizes should not be left to individual or private responsibility, under the operation of general laws, as is now the \$130,941 96 case with manufactures. We regret that the proposition submitted by Mr. Dwight, RAILROAD COMPANY FROM FEBRUARY 1st. 1844, To commissioners, has been so ill received in 120 86 ganized, would be a decided improvement upon the present embarrassing and expensive 5,602 06 mode of legislation upon a subject which has become, and is likely to continue for years,

> Dublin and Cashel Railway. - The direct 49,972 33 tors have completed a contract for the work 8,745 98 between Inchicore (near Kilmainham) and 48,408 13 Carlow. There is a difference of only 629 88 £1,500 between the estimate of the eng neers and the amount of the contract.

> > We understand that an iron steamer of ing built by Messrs. George Lunell and Co., is to embrace all the new improvements extant; she is to form one of the extensive the vessel in question, having this much ap. nal.

proved adaptation, with the determined intention of the eminent builders to outvic, if possible, even the most perfect, will produce such a boat as may justly entitle them to the name they already bear, and rank them among the first builders and engineers in this or any other quarter of the globe. - Mining Journal.

Increasing Adoption of Iron. - We find that the preference for iron in the construction of vessels is daily becoming more general and decided. Our accounts from all quarters intimate this growing preponerance in favor of metal over wood; in Liverpool there are innumerable inquiries for iron vessels, both for sailing and steaming purposes, and the demand has within the last few weeks been so peremptory and incessant, that we entertain no doubts but that, at the close of the year, the greatest difficulty will be experienced in obtaining iron for shipbuilding. The iron market in Liverpool has been much excited of late, and pig iron has been speculated in to aconsiderable extent; and pig iron, 1, 2 and 3, Scotch has been sold during the week at Glasgo, on 'Change. at 95s. net cash-the demand for consumption being very great—and doubtless will be much higher. The Low Moor company, on Monday, made a general advance of £1 per ton, and we hear that our occounts, published last week, respecting that and the Bowling company having bought largely of Scotch pig iron is incorrect. On the whole the brightest prospects may be confidently entertained for the trade, and the difficulty will not now consist in the limited demand, but the inadequate supply in the market. Mining Journal.

The Iron Trade. - This important branch of commerce still continues its promising position, and, in proportion as the value enhances, speculators extend their operations. This evinces an anticipation of a still greater increase, and confirms our former opinthe house. Such a measure, judiciously of- ion, that the advantages are not merely present, and the effect of ordinary fluctuation, but permanent and perspective. All accounts testify the progressive ascendarcy of iron, and it is impossible to predict where \$130.941 96 one of engrossing importance. - Bost. Trav. it will stop. Most of the Welsh, Staffordshire, and Scotch ironmasters, have closed their books against any further orders at present, although the nominal prices may be quoted as follows :- Bars in Wales, 91. ton; ditto in London, 91. 10s.; pigs in Glasgow, No. 1, 4l. 10s.; ditto in Wales, 5l. 15s.; rail, 10l. 15s.; nail rod, 10l. 10s.; hoop, 111. 10s.; and steel, 121. A further nearly 300-horse power has commenced be- advance is looked for of 20s. per ton upon Staffordshire bars, hoops, sheets, and rods ship builders and engineers, at Bristol, which daily, as the difference in price between Welsh and Staffordshire metal must be maintained. This re-action in the British fleet of the Bristol general steam navigation market has had its effect on sweedish iron, company, who have steamers constantly ply-which, as well as steel, has, with in the last ing between the above place and the various week, shown an advance of 21. per ton; a Irish and many other stations. This come good deal of weighty business has been pany have adopted the use of Smart's elliptransacted, and the market, on the whole tical convex propellers, and it is expected has been well looking up. -Mining Jour-

has been remarked that England is a nation in Prussia and Germany, 2500; in France, prices. No fresh orders to any extent will, of grumblers, and its propensity for that 1600; Russia and the rest of Europe, 1500; we believe, now be taken, unless at the adand other advantages than other nations en-mile, will alone require 2,280,000 tons of to execute, as we are informed many of the joy. The enterprize of capitalists has given iron; and if the atmospheric principle be manufacturers have more orders on hand the middle and poorer classes speedier and adopted, the quantity will be more than dou-than they can supply for the next twelve cheaper conveyance than the old coach tra-bled. Taken in reference to the population of each country, he estimates that the length of railways finished or in progress give—in England, 11.78 miles to 100 for the straight of the straight of the straight of the straight of the straight axles for locomotive engines, made from the best pennsylvania iron. Straight axles for locomotive for outside connection engines. Frames for engines, of iron have not bought on speculation, is a local which is now fully ascertained; but any size. Cotton Servers of any length or size.

The Iron Trade .- All our advices still continue to represent the cheering revival which this trade has experienced within the last few weeks, and, at the same time prospects of a far greater advance are confidently held out. This expectation is founded chiefly on the growing consumption of that article for cases in which it was hitherto unappropriated-thus the buildings of iron rooofs, houses, and fire-proof fabrics have required in Liverpool alone upwards of 20,000 tons of cast and wrought metal during the last year; and 25,000 tons of plate and angle iron is now actually in use for the construction of iron ships and steam-boats.

abroad for foreign machinery of every kind.

But the chief cause to which this encourage, iron was designed by the construction and operation, requiring only two Castings and two Rails; the latter, even if much worn or used, not objectionable.

ESSES. EDITORS. M As your Journal is devoted to the benefit of the public in gen-eral I feel desirous to communicate to you for publication the following circumstance of no inconsiderable importance, which ocenrred some few days since on the Philadel-phia, Wilmington and Baltimore railroad.

On the passage of the evening train of cars from Philadelphia to this city, an axle of our large 8 wheeled passenger car was broken, but from the particular plan of the construction, the accident was entirely unknown to any of the passengers, or, in fact, to the conductor himself, until the train, (as was supposed from some circumstances attending the case,) had passed several miles in advance of the place where the accident occurred, whereas had the ear been constructed on the common plan the same kind of acci-

dent would unavoidably have much injured it, perhaps thrown the whole train off the track, and seriously injured, if not killed many of the passengers.

Wilmington, Del., Sept. 28, 1810.

The undersigned takes pleasure in attesting of the value of Mr. Joseph S. Kite's invention of the Safety Beam Axle and Hub for railroad cars. They have for some time been applied to passenger cars on this road, and experience has tested that they fully accomplish the object intended. Several instances of the fracture of axles have occurred, and in such the cars have uniformly run the whole distance with extra cars.

with entire safety. Had not this invention been used, serious accidents must have occurred.

In short, we consider Mr. Kite's invention as completely successful in securing the safety of property

and lives in railroad travelling, and should be used on all railroads in the country.

JOHN FRAZER, Agent,
GEORGE CRAIG, Superintendant,
W. L. ASHMEAD, Agent.

Fraction A model of the above improvement is to be seen at the New Jersey railroad and transportation office, No. 1 Hanover st., N. York.

Boston and Worcester railroad.

DATENT HAMMERED RAILROAD, SHIP and Boat Spikes. The Albany Iron and Nail Works have always on hand, of their own manufacture, a large assortment of Railroad, Ship and Boat Spikes, from 2 to 12 inches in length, and of any form of head. From the excellence of the material al-ways used in their manufacture, and their very general use for railroads and other purposes in this country, the manufacturers have no hesitation in warranting them fully equal to the best spikes in market, both as to quality and appearance. All orders addressed to the subscriber at the works, will be promptly executed. JOHN F. WINSLOW, Agent.

Albany Iron and Nail Works, Trdy, N. Y.

The above spikes may be had at factory prices, of Erastus Corning & Co., Albany; Hart & Merritt, New York; J. H. Whitney, do.; E. J. Etting, Philadelphia; Wm. E. Coffin & Co., Boston.

MACHINE WORKS OF ROGERS, KETCHum & Grosvenor, Patterson, N. J. The undersigned receive orders for the following articles,
manufactured by them of the most superior description in every particular. Their works being extensive and the number of hands employed being large,
they are achiled to account both large and well ar they are enabled to execute both large and small or-ders with romptness and despatch.

Railroad Work.

Locomotive steam engines and tenders; Driving and other locomotive wheels, axles, springs & flange tires; car wheels of east iron, from a variety of pat-terns, and chills; car wheels of east iron with wrought tires; axles of best American refued iron;

springs; toxes and bolts for cars.
Cotton, Wool and Flax Machinery
of all descriptions and of the most improved patterns,

style and workmanship.
Mill gearing and Millwright work generally; hydraulic and other presses; press screws; callenders; lathes and tools of all kinds; iron and brass

castings of all descriptions.

ROGERS, KETCHUM & GROSVENOR,

a45 Paterson, N. J., or 60 Wall street, N. York.

PATENT RAILROAD, SHIP AND BOAT Spikes. The Troy Iron and Nail Factory keeps constantly for sale a very extensive assortinent of Wrought Spikes and Nails, from 3 to 10 inches, manufactured by the subscriber's Patent Machinery, which after five years' successful operation, and now almost universal use in the United States (as well as England, where the subscriber obtained a patent) are found superior to any ever offered in that ket.

Railroad companies may be supplied with Spikes having countersink heads suitable to holds in iron rails, to any amount and on short notice all the railroads now in progress in the United States are fastened with Spikes made at the above named factory—for which purpose they are found invalua-ble, as their adhesion is more than double any com-mon spikes made by the hammer.

All orders directed to the Agent, Troy, N. York,

All orders directed to the Agent, Troy, N. York, will be punctually attended to.

HENRY BURDEN Agent.

Spikes are kept for sale, at Factory Prices, by I. & J. Townsend, Albany, and the principal fron inerchants in Albany and Troy; J.I. Brower, 22 Water St., New York; A. M. Jones, Philadelphia; T. Janviers, Baltimore; Degrand & Smith, Boston.

. Railroad Companies would do well to forward their orders as early as practicable, as the subscriber is desirous of extending the manufacturing so as to keep pace with the daily increasing demand. ja45

FRENCH AND BAIRDS PATENT SPARK ARRESTER.

THOSE INTERESTED IN Railroads, Railroad Directors ted to examine an improved SPARK ARRESTER, recently patented by

Our improved Spark Arresters have been extensively used during the last year on both passenger and freight engines, and have been brought to such a state of perfection that no annovance from sparks or dust from the chimney of engines on which they are used is experienced.

These Arresters are constructed on

an entirely different principle from any nereu ore offered to the public. The form is such that a rotary motion is imparted to the heated air, smoke and sparks passing through the chinney, and by the centrifugal force thus acquired by the sparks and dust they are separated from the smoke and steam, and thrown into an outer chamber of the chimney through openings near its top, from whence they fall by their own gravity to the bottom of this chamber; the smoke and steam passing off at the top of the chimney, through a carriers and unobstructed off at the top of the chimney, through a capacious and unobstructed passage, thus arresting the sparks without impairing the power of the engine by diminishing the draught or activity of the fire in the furnace.

the engine by diminishing the draught or activity of the fire in the furnace.

These chimneys and arresters are simple, durable and neat in appearance. They are now in use on the following roads, to the managers and other officers of which we are at liberty to refer those who may desire to purchase or obtain further information in regard to their merits:

E. A. Stevens, President Camden and Almboy Railroad Company; Richard Peters, Superintendant Georgia Railroad, Augusta, Ga.; G. A. Nicolls, Superintendant Philadelphia, Reading and Pottsville Railroad, Reading, Pa.; W. E. Morris, President Philadelphia, Germantown and Norristown Railroad Company, Philadelphia; E. B. Dudley, President W. and R. Railroad Company, Wilmington, N. C.; Col. James Gadsden, President S. C. and C. Railroad Company, Charleston, S. C.; W. C. Walker, Agent Vicksburgh and Jackson Railroad, Vicksburgh, Miss.; R. S. Van Rensselaer, Engineer and Sup't Hartford and New Haven Railroad; W. R. M'Kee, Sup't Lexington and Ohio Railroad, Lexington, Ky.; T. L. Smith, Sup't New Jersey Railroad Trans. Co.; J. Elliott, Sup't Metive Power Philadelphia and Wilmington Railroad, Wilmington, Del.; J. O. Sterns, Sup't Elizabethtown and Somerville Railroad; R. R. Chyler, President Central Railroad Company, Savannah, Ga.; J. D. Gray, Sup't Macon Railroad, Macon, Ga.; J. H. Cleveland, Sup't Southern Railroad, Monroe, Mich.; M. F. Chitenden, Sup't M. P. Central Railroad, 'Detroit, Mich.; G. B. Fisk President Long Island Railroad, Brooklyn. sident Long Island Railroad, Brooklyn.

Orders for these Chimneys and Arresters, addressed to the subscribers, or to Messrs. Baldwin & Whitney, of this city, will be promptly executed.

N. B.—The subscribers will dispose of single rights, or rights for one or more States, on reasona-

ble terms. Philadelphia, Pa., April 6, 1844. **. The letters in the figures refer to the article given in the Journal of June, 1844.

A GOOD SECOND HAND LOCOMOTIVE TO RAILROAD COMPANIES AND MANEngine, 6 wheels, weighing with wood and water about 10 tons, with Tender complete, made by bers have for sale Am. and English bar iron, of all
Baldwin, for sale by A. & G. RALSTON & CO.
Mar. 20, 1m. 4 South Front St., Philadelphia.

PRING STEEL FOR LOCOMOTIVES,
Tenders and Cars. The Subscriber is engaged made from common and double refined iron;
in manufacturing Spring Steel from 11 to 6 inches
in width, and of any thickness required: large quantities are yearly furnished for railroad purposes, and
wherever used, its quality has been approved of.
The establishment being large, can execute orders
with great promptitude, at reasonable prices, add the
quality warranted. Address

No. 4 Sout Fronth st., Philadelphia, I a.

10 RAILROAD COMPANIES AND BUILD L ERS OF MARINE AND LOCOMOTIVE ENGINES AND BOILERS.

PASCAL IRON WORKS.

WELDED WROUGHT IRON TUBES

rom 4 inches to \(\frac{1}{2}\) in calibre and 2 to 12 feet long, capable of sustaining pressure from 400 to 2500 lbs. per square inch, with Stop Cocks, T. L., and other fixtures to suit, fitting together, with screw joints, suitable for STEAM, WATER, GAS, and for LOCOMOTIVE and other STEAM BOILER FLUES.

Manufactured and for sale by MORRIS, TASKER & MORRIS.
Warehouse S. E. Corner of Third & Walnut Streets, PHILADELPHIA.

TO IRON MASTERS.—FOR SALE.—MILL SITES in the immediate neighborhood of Bi-luminous Coal and Iron Ore, of the first quality, at Ralston, Lyoming Co., Pa. This is the nearest point to tide water where such coal and ore are found together, and the communication is complete with Philadelphia and Baltimore by canals and railways. The interest on the cost of water power and lot is all that will be required for many years; the coal will not cost more than \$1 to \$1 25 at the mill sites, without any trouble on the part of the manufacturer; rich iron ore may be laid down still more chenny at the works and believe to the more cheaply at the works; and, taken together, these sites offer remarkable advantages to practical manufacturers with small capital. For pamphlets, descriptive of the property, and further information, apply to Archibald McIntyre, Albany, to Archibald Robertson, Philadelphia, or to the undersigned, at No. 23 Chambers street, New York, where may be seen specimens of the coal and orc.

W. R. CASEY, Civil Engineer,

VALUABLE PROPERTY ON THE MILL Dam For Sale. A lot of land on Gravelly Point, so called, on the Mill Dam, in Roxbury, fronting on and east of Parker street, containing 68,497 square feet, with the following buildings thereon standing.

Main brick building, 120 feet long, by 46 ft wide, two stories high. A machine shop, 47x43 feet, with large engine, face, screw, and other lathes, suitable to do any kind of work.

Pattern shop, 35x32 feet, with lathes, work bench-

es, &c. Work shop, 86x35 feet, on the same floor with the

pattern shop. Forge shop, 118 feet long by 44 feet wide on the ground floor, with two large water wheels, each 16 feet long, 9 ft diameter, with all the gearing, shafts,

drums, pulleys, &c., large and small trip hammers, furnaces, forges, rolling mill, with large balance wheel and a large blowing appearatus for the foundry.

Foundry, at end of main brick building, 60x45½ feet two stories high, with a shed part 45½x20 feet, containing a large air furnace, cupola, crane and

Store house—a range of buildings for storage, etc., 200 feet long by 20 wide.

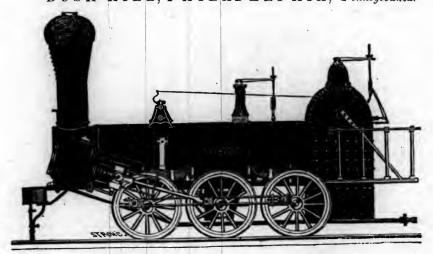

Locomotive shop, adjoining main building, fronting on Parker street, 54x25 feet.

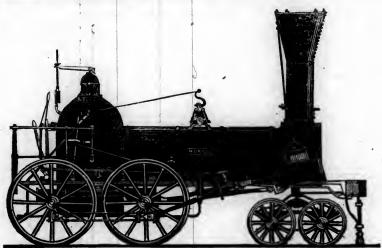

Also—A lot of land on the canal, west side of Parker st., containing 6000 feet, with the following buildings thereon standing:

Boiler house 50 feet long by 30 feet wide, two stories

Blacksmith shop, 49 feet long by 20 feet wide.

at the last election decided by a very large however, as it is, it would be borne with mark, that the gentleman to whom we are majority in favor of the sale. But this de-less difficulty, and some cheerfulness, if the indebted for the above paper is well known cision seems to have had very little effect relief desired so unanimously by the people to, and highly esteemed by, our ablest and upon the minds of some members. matter is a plain one. Are the Public Works sell your canals and railroads-disregard managed with as much economy by the the solemnly expressed wishes of the people sarily well known to many of the prominent State, as they would be by a Company? - and if repeated insults should render them citizens of Montreal, to whom we refer them Is it likely that the profits from the Public desperate, and serious consequences follow, for his standing in the capital, we proceed Works, as controlled by the State, will for upon your heads rest the responsibility. years to come prove more than equal to the You act not in the dark. By an overwhelmamount of the interest on the sum for which ing majority has this question been settled. they may be sold? In short, are the taxes Is it to be re-settled, re-examined—and shall more likely to be reduced by selling than by the will of the people be overruled and ety of causes which we cannot go into now retaining the Public Works; and will their shamefully disregarded by selfish, wreckless retention hold out a better prospect of the demagogues? Will gentlemen still doubt there is nothing to be done here at this time, ultimate payment of the State Debt than and hesitate? their sale? These questions seem to cover the whole ground.

Mr. Smith, of Lancaster, a few days since, made a very able speech in favor of the sale. He said that office-holder's who batten, and the office hunters who expect to batten on selves, to the people and our creditors. We the public spoils, strenuously resist the disposal of the Works, because to them they are all, every thing—life or death. He tottered, and said there was no truth. gave a table, showing the cost of our finish, Hobbes, the English philosopher, doubted, ed and unfinished lines, the interest at five until he denied the existence of matter, and per cent. for ten years, the expenditures and questioned his own personal identity-while revenue to 1844. The aggregates he made sacred writ gives us the history of a doubting

Cost,.....\$28,616,375 Expenditures,..... 9,831,286 Revenue, 9,286,644

From the above, he said it would appear that the original cost of our public works was \$28,616,375 01; the interest on the same, not including the interest on sums paid for surveys, lock-keepers, Canal Commissioners, &c., was \$14,211,382 06; the expenditures \$9,831,286 68, and the revenue \$9,286,644 26. Add the interest to the expenditures, and we had \$24,042,668 74. From this deduct the revenue, and there appeared an actual loss from these works of \$15,756,004 48.

He contended that the Works, instead of being profitable, were annually sinking us deeper in public debt. He believed, moreover, that in the hands of a Company, economically managed, they would yield a handsome income, and prove a profitable investment. Mr. S. also gave an official table, nadian projects, and ever anxious to forward have been occasionally sent to England from shewing that while the heavy tax-paying the cause of railways and of every undercounties had voted with great unanimity for the sale of the Main Line, those that had drawn more money for School purposes than Gazette copies of some numbers of the Jourthey had paid for State Taxes, had voted nal containing articles which may not be against the sale. Mr. S. concluded his re- without use. The principal one was pretty incapable of taking in at one view the great marks with this language:

"It need not therefore surprise us that the gentlemen from Centre and Cambria, should mill tax is no trifling burden. Oppressive, of its natural advantages.

The should be granted. Deny this; refuse to

"Our doubts are sometimes traitors, And make us lose the good we oft might win, By daring to attempt."

Such, sir. is the present case. To doubt the wisdom of this measure is treason to ourmay doubt too much, too long, and to our sorrow. Pyrrho of old, doubted until reason christian who would not believe unless he could lay his fingers into print of the nails, Interest at 5 per ct. for ten years, 14,211,382 and thrust his ruthless hand in the the pierced side of his crucified Lord. And gentlemen would compare unfavorably with the skeptic of old, both sacred and profane, if conviction failed to follow facts so clearly and conclusively established, and might continue to doubt, and doubt though an angel reasoned, or one rose from the dead."

GREAT WESTERN RVILWAY OF CANADA.

Some one has been pleased to forward us the Hamilton (Canada) Gazette, in which we are glad to perceive that public attention is again turning, and we hope not in vain, to the vast benefits which would be secured to the province and to the American travelling public, by the construction of a railway point opposite Detroit. We have on nume. pend for support. rous occasions alluded to this first of all Ca. taking of private enterprize, we send to the province, and the conclusion to which it argue sostrenuously against the sale. What comes as to the western terminus is now matters it to them and their constituents, placed beyond the reach of controversy by that our public improvements are increasing the great economy which has been intro. ful undertaking, though in foisting "State our burdens? What care they for a three duced in the working of railways, and, still works" on the people they are quite at home, mill tax, while they draw more out than they more so, by the obvious policy of making as we of New York, Ohio and Pennsylvania pay into the State Treasury? Wonder not this route to the west such an one as to detail they talk so lightly of our taxes, and generously hope that no country will com- fy competition—a position it may assume, if that some of our Canadian neighbors may plain of such a trifling burden. Sir, a three it only receive fair play in the development suspect their condition will be little better

most successful civil engineers, and is necesto make a few suggestions as to the proper mode of bringing this project to the attention of British capitalists: for, from a vari--of which the want of means is not oneor perhaps in Boston either.

The mode of bringing forward the claims of railways in England must be adopted "in extenso." The object of the work must be clearly stated, the cost at which that object can be accomplished must be given in such a manner as to carry conviction, and He tottered, and said there was no truth. thirdly, it must be shown that the end to be attained is sufficiently great to warrant the expenditure. Above all, it will be indispensable to avoid that vague grandiloquence so much in vogue when speaking of the " great west," as well as the gross exaggerations and foolish assumptions which characterize the documents of our canal commissioners and boards of public works; of these, by the way, we saw a specimen in an Oswego paper, where some lecture of Mr. Merritt, at Montreal, was reported, in which the repeal of the corn laws is demanded from England, and prohibitory duties on imports from the United States are asked from Canada to insure the success of the St. Lawrence canals! It is impossible to conceive anything so different from the productions of such men as Messrs. Merritt, Killaly etc., as the plain, clear, straightforward appeals of the projectors of useful and honorable works from the western extremity of Ontario to a in England to the public on whom they de-

Men of considerable ability and standing this country, and, generally, without success. The reason is that those sent out were generally cashiers or money brokers, than whom, no class of the community is more extensively noticed at the time in the upper points of a vast project, or they were, more or less, politicians by profession. It is useless to examine their relative demerits; they are quite sufficient to swamp any really use-With the re- when Messrs, Merritt and Killaly have "had

HUDSON AND MOHAWK RAILROAD.

A particular notice of this railway is required on many accounts. It was the first work of the kind in the State, it has exerted a powerful influence on the cause of railroads in New York, and has had no small share in contributing to our present disgraceful financial position; the possession of a system of canals hypothetically unrivalled in the world for their success, yet requiring taxation to meet their liabilities and, what is far worse, degrading the people of western New York below any community, within our knowledge, by denying them the right to judge for themselves in one of their most important transactions, that of selecting their own mode and time of sending their produce to, and receiving their supplies from, the Atlantic cities. We of course refer to the report of the State engineers, Messrs. Jervis, Mills and Hutchinson, in which they made out to the satisfaction of the politicians the vast superiority of canals over railways; hence, in a great measure, the State debt. With this brief allusion to a subject, to which we must recur very soon, we proceed to make a few remarks on the Mohawk and Hudson railroad.

This work was commenced by gentlemen whose means were quite adequate to the undertaking; but, as we observed on a previous occasion, their great ready been made to their hands. The Cayuga lake object was not to construct a good railroad, but to cry and the Cayuga and Susquehanna railroad furnish up the stock so as to be enabled to sell out at an adup the stock so as to be enabled to sell out at an advance. This being the case, there was little attention paid to the location or construction; the conse- at the bridge, and comes direct to the steamboat landquence was a very bad location and the ordinary cheap superstructure or plate rail, at an immense connects with the New York and Eric at Oswego. Which deducte we had cost. A substantial track, at a cost which the trade will not justify, is perhaps not unknown, but to in-The distance from Buffalo to New York by this Oswego trade.

tion reserved for the State of New York. We are route. sorry to say that this work does not stand quite alone: as the representative of the capabilities of railways! Ithaca and the New York and Erie railroad. so late as 1835.

The reader will say that there was no inducement to make a bad road, that they might cry up the stock quite as well while making a good work. True; but it will be found that works undertaken in the wrong spirit will be almost always executed correspondingly. And it is to this general remark that we desire at this time to draw particular attention. The spirit of private enterprize is just awakening, and it is probable, that two very important charters will be granted by the legislature: the right to construct a northern and an eastern railroad, the only works which can works be viewed by the first board of directors, as leading men in the first instance subscribe with the intention of permanently investing their own means, success is certain. For, their own judgment and income, and the cost of the work will be obtained with all desirable accuracy from educated and experienced civil engineers of character, the only class of engineers employed by men spending their own money, and we might add, seldom found associated with those spending the money of the public. See, the Erie canal, each more costly and less productive than its predecessor.

We have already expressed our satisfaction at the list of names to the application for a charter from New York to Albany, and must here add, that a late notice published by them to correct certain erroneous impressions circulated by their opponents, is everything that could be desired.

Boards of directors, animated by this spirit, will give the city a railroad such as she requires to the old and wealthy river counties, and the cities and villages from Albany to Buffalo, and a continuous railway to the capital of New England, running through a country thickly settled by a people contributing, per head, more to the business of railways than any other on earth.

BUFFALO AND NEW YORK AND ERIE RAILROAD.

After stating the seven (!) contemplated connections of the New York and Erie railroad with the central line from Albany to Buffalo the Ithaca Chronicle very pithily remarks:

"In the Babel strife of all these projects, their advocates seem to have forgotten that the desired connection of the northern and southern routes has alians, especially had better look at it. The Auburn and Rochester road sweeps across the Cayuga lake, ing, from whence boats can run at all seasons of the

Correspondents will oblige us by sending in their cur great expense to make a poor road was a distinc- route is probably somewhat less than by the Seneca

We knew this as well as the Chronicle, but, like our State furnishes another, or the other specimen of all others, have overlooked it. The communication this kind of engineering. Many of our readers will is as good as any proposed, and, leaving the central know the work to which we refer; the late Ithaca line well to the eastward, will find business from the and Owego-now the Cayuga and Susquehanna splendid country between Auburn and Buffalo, berailroad. The inclined planes on these roads have sides aid in such changes in the Ithaca railroad as been the astonishment of all engineers and persons may be required, but which are trifling compared at all acquainted with these matters, being made in with the construction of an entire new line. The defiance of the practice and experience of England proposed connection of the Erie canal with lake and this country, and one, the Mohawk railfoad, be- Ontario at Sodus bay gives also additional imporing actually referred to by the above State engineers tance to the route from Buffalo to New York via

THE COAL TRADE.

Notwithstanding the great increase in the quantity of anthracite coal mined in 1844, the stocks on hand this spring are unusually, if not indeed unprecedentedly low, though the winter has been mild, almost beyond anything on record, and though the navigation of the Delaware has been uninterrupted. Such was the scarcity that \$1 90 to \$2 00 per ton was paid from Philadelphia to New York, and the actual price of "egg coal" rose to six dollars per 2,000 pounds. With an ordinary winter, greatly increasing the consumption and entirely cutting off the supply from connect this city with the interior. Now if these Philadelphia by sea, the price would have increased to such an amount as to have been most severely felt mere speculations, they will soon sink to the level of by the poor in our northern cities, where the want of the Harlem, Long Island, Mohawk, etc., but if the fuel causes a degree of misery which must be seen to be believed. We should have been dependent on England and the British provinces for this necessary of life had the winter been severe. The fact is, that strong common sense will determine the probable the demand is increasing much more rapidly than the means of bringing coal to market. The Schuylkill and Lehigh navigations are, or ought to be, adequate to furnish four times the quantity of anthracite coal consumed in 1844, but it would appear that they cannot do it at present prices, hence other means must be looked to. We have already given some for example, our State works, since the opening of particulars about a new source, and hope, in a few weeks, to be able to speak confidently as to its capabilities and prospects of success. For the present we must conclude with observing, that we do not view every new work as a rival for the present trade, but rather as an auxiliary to bring an increased quantity to market without interfering with the business or prices of existing establishments.

> The friends of discriminating tolls say, if the State will abate one-fifth part of the tolls of the Eric canal route, and nothing on the Oswego, charging 28 cents on a barrel of flour from Buffalo to Albany, instead of 35 cents, against 20 cents from Oswego, and 8 cents on the Welland-together 28 cents, then the State would gain or keep \$250,000, which otherwise will be lost to the treasury by means of these rival canals, the Oswego and Welland. We will see. \$1,000,000

abstract from this revenue.... 200,000 Leaving

If by this modification, exclusively of
Eric canal tolls, Buffalo should take all
the Oswego trade, which amounts to 800,000 about one-eighth part of the whole, it would add at the reduced toll, to the 100,000 Buffalo route..... Yielding an aggregate of ... 990,000

But the State will have lost all toll on the Oswego route, 209 miles, which at the present rate on her one-eighth part of the trade would be

Which deducted from the \$900,000 leaves \$828,228 Here we have the result of discrimination, if crowned with complete success, annihilating all the

The following is extracted from that document.

the consideration of the defences of the sea- of transportation from New York to Plattscoast, and of the northern and northwestern burg, Sackett's Harbor or Buffalo, was from frontiers, consists in the facility and rapidity \$5 to \$12 per hundred. The present cost of interior communications. They are strict- to Plattsburg is 30 cents, and to the other ly means of defence, and incapable of being points named 60 cents per hundred. A 12. perverted to any purpose of conquest-a fea-pounder, which, at the cheapest rate, could ture which commends them to every friend not have been carried to Bussalos for less than cable. an equal and just rate of compensations. The facility afforded by \$200, may now be transported to the same tion, according to the service performed, the ocean to movements for the purposes of point in one fifth or one-eighth the time, for attack, is met by a facility of movement on \$24. In every point of view in which these United States, for the transportation of the cal force of the populous country between forts." those points may be concentrated at any intermediate place in a few hours. Were Philadelphia assailed or threafened, a movement of military force from Pittsburg, which but a short time since would have occupied always willing to pay, previous to the introfrom twenty to twenty-five days, could now be accomplished in five. Similar illustrations are furnished by various railroads and canals in different parts of the country; and, as the great secret of success in war is supposed to be the ability to oppose the many to the less than what was formerly paid for conveyfew, it is evident that in any defensive operations we shall be able to compete with, and to conquer any probable force that an invading enemy could bring against that portion of our territory which is intersected by these interior communications. Another consewith armies of very diminished numerical force, compared with those which have heretofore been necessary in our national conflicts, or those which are usually employed on the European continent.

"The expense of military operations will be reduced beyond any present means of exact calculation by the same facilities. Dur-"A third element, of great importance in ing the last war with Great Britain the cost

All, however, that is asked of the government, is that it should pay, for the service rendered it, in a much less ratio than it was duction of these lines of railroad, for increascd speed-while it is gravely contended by the post office department that the mails should be carried at not exceeding or even ance in mail wagons.

not, it is evident, be obtained) than the go. dition, the supplies of an army from a coun-road in England, greatly exceeds, and we vernment, which has contributed nothing to try abounding with them, and to transport have no hesitation in saving averages at least are ten-fold, aye, an hundred-fold to it, what an enemy is thus removed, and the conse. this, too, without taking into consideration they ever can be to all other interests. Let quences of the capture of large collections the relative weight of mails in this country us hear what a high public functionary, a of munitions of war or of subsistence, by a and in England, which, on leading routes in America, are three or four times heavier than on corresponding routes in England.

> The result of these conflicting views, on the part of the department and the railroad companies, has been to bring about rules of compensation which in our opinion cannot fail to work badly.

In section 20th of the late post office bill it is provided,

"That to insure, as far as may be practiland, furnished by the triumphs of genius works can be considered, their cost is as much mail, it shall be the duty of the postmaster and art in the application of steam power to actually added to the defensive means of the general to arrange and divide the railroad land carriage, and in the construction of nation, without any expense to the general go-routes, including those in which the service lengthened lines of canals. The speed with vernments, other than the subscriptions it is partly by railroad and partly by steamboats, which troops can be moved obviates the ne- has authorized to a few of them: and it may into three classes, according to the size of cessity of embodying large masses of them be affirmed, without exageration, that the ag. the mails, the speed with which they are at any point, and the amount of force required gregate of saving, in any future war in which conveyed, and the importance of the service; for the defence of any given post would consequently be diminished in proportion to the amount of military force that will be necessary tract for conveying the mail with any such reduction in the time necessary to concen- for defence, and in the cheapness of transpor- railroad company, either with or without trate it. The whole force along the whole tation afforded by railroads and canals now advertising for such contracts, provided, that line may be rendered available for the define existence, will be equal to the cost of their for the conveyance of the mail on any rail-fence of any point in that time; while, with construction. If, then, the making of these road of the first class, he shall not pay a out such means of communication, a sepa- works has been premature or improvident in higher rate of compensation than two hunrate army would be required at each city, reference to the means of the States that dred dollars per mile per annum, or than is harbor or military post, that was to be de-undertook them, and has involved them in now obtained by law; nor for conveying fended. This may be illustrated by facts pecuniary embarrassments, the national go the mail on any railroad of the second class, within the knowledge of all. Troops may vernment should not complain of an enter a greater compensation than one hundred now be brought from New York to the city prize that has placed these incalculable ad dollars per mile per annum; nor for carryof Washington in eighteen hours, in a con- vantages in its hands; and, if it cannot re- ing the mail on any railroad of the third dition requiring little or no repose to fit them lieve, will at least sympathize in the mis class, a greater compensation than fifty dolfor immediate action; and the whole physi- fortunes which have resulted from such of lars per mile per annum. And in case the postmaster general shall not be able to conclude a contract for carrying the mail on any of such railroad routes, at a compensation not exceeding the aforesaid maximum rates, or for what he may deem a reasonable and fair compensation for the service to be performed, it shall be lawful for him to separate the letter mail from the residue of the mall, and to contract, either with or without advertising, for conveying the letter mail over such route, by horse express or otherwise, at the greatest speed that can reasonably be obtained; and also to contract It has been alleged as a reason why the for carrying over such route the residue of mail should be carried lower on rail oads in the mail, in wagons or otherwise, at a slower America, that it is transported at a lower the service, on any railroad, is required to rate in England, but the fact is otherwise; a be performed in the night season, it shall be quence of no little moment flows from the great mistake having been made on this lawful for the postmaster general to pay 25 same cause: the power to defend ourselves head from the circumstance of the payment per cept in addition to the aforesaid maxion railroads in England being made per trip mum rates of allowance: and provided furper mile and in this country only per mile, so that, as many trips are made on leading two mails daily, it shall be lawful for the lines of railroad in England, and several postmaster general to pay such additional "The facilities afforded by canals and mails per day are carried on all of them, compensation as he may think just and reaestablished in this act."

stage road, over which the mail was formerly carried, between the same points; so that of them. the mail may really be very little expedited by it, and the department, on the standard run very slow and very irregularly, another portation of a mail of given bulk between adopted by it, will pay precisely in proportion of the same length very fast and with great two points, without reference to its being to the defectiveness of the road. Another company may have incurred great extra expense in improving, as much as possible, the grades of its road, in laying down the most perfect superstructure, in cutting down or tunnelling hills and bridging valleys, so as to approximate as nearly as possible to an air line, between points, and by the standard of the post office department it will find its compensation for the transportation of the that companies, other things being equal, then in proportion to the saving in time, we mail diminished precisely in the ratio of the directness of its route, and the inreased expedition procured for the mail on it.

Nor are these imaginary cases. Take for instance, the railroad which we have before referred to, between Baltimore and Philadelphia, which is ninety-nine miles long, and takes the place of a stage road of greater length; while the Baltimore and Ohio railroad, which is 179 miles between Balti- office bill seems to be confined to two cases, the department and cut down the compensamore and Cumberland, substitutes a stage road of about 130 miles: and yet, by the standard of the post office bill, a daily mail the matter, it can be of little importance to them, and of no great moment to the deon these two routes must be paid for at the the department to have more even than two partment if its offer was declined. Take, same rate per mile, although it is evident daily mails between two points, unless more again, for illustration, the two roads before that on any proper standard of distance, the than one train is run, in which case if the cited by us. The Baltimore and Philadelmail is really transported much farther in additional mail can be conveyed (as it is phia railroad, if run as it should be, say at being carried a given number of miles on where more than one daily mail is run) as the rate of at least twenty miles per hour, the Baltimore and Philadelphia, than on the freight or baggage, without the necessity of would take the mail between Baltimore and Baltimore and Onio railroad; and the gain an extra car or mail agent, it is rather ad- Philadelphia in five or five and a half hours, in time, and of course the accommodation to vantageous to a company to divide the mail, or in seven hours less than it could be in the department, on a comparison with the than to send it all by one train. As regards mail wagons, assuming the distance by the distance of stage transportation substituted night service, we can very readily see why stage road one hundred miles, and these last by a given number of miles on either rail- it should be in many cases less acceptable to to transport it at a speed of eight miles per road, is still more in favor of that between a company than day service, but we confess hour. The same saving in time only could Baltimore and Philadelphia.

But the strongest consideration against paying, as the postmaster general must un-Again, a railroad of given length may be der the bill, so much per mile for the transprecision. It is impossible not to see that transported on a straight or a crooked raildated in the second than the first case, and less cost. than it would be between the same ought reasonably to pay more, for it. Yet, points by stages or mail wagons, it be adoptaccording to the post office bill, both com- ed as a rule that the department will pay in all panies are to be paid the same sum for a cases, the compensation which would be redaily mail for the same distance. It is ob. quired for stage or wagon transportation, bevious that such a rule must necessarily lead tween the same points, but no advance on more or less, to bad and sluggish service; it, except where there is a saving in time, and portation of the mail, is equally well paid ing liberally where there was an equivalent sation, where it was of great moment to senot the department best guard itself against bad and reluctant service. Can there in which such lines can afford, where they are extortion by apportioning its inducements fact be a more reasonable supposition than as direct, or nearly so, in their course, as for railroad service precisely in the ratio of that railroad companies will be willing to the stage routes, by carrying the letter mail its importance to it, without reference to stan- give all possible expedition to the mail, if by express on horseback, and the newspaper dards of fair compensation which would on they are paid in proportion to the speed they mail in wagons. The day for such a system the one hand secure with certainty to the give, compared with stage transportation, has gone by. These expedients may answer department the service of railroads which and that on the contrary if they are paid a where the railroad is so indirect that not gave but little more expedition to its mails certain rate per mile, whether their roads be much time can be saved by it, or where it than parallel stage roads, and were therefore direct or indirect, or whether their trains run does not connect important points, and they comparatively unimportant to it, and would slow or fast, that even when on other consi- will enable the department to resist extortion be apt, on the other hand, to lose it the ser-derations they may be willing to run fast, in such cases. But where the service to be vice, or at any rate the best service of roads they will keep their schedules open, or in performed by a railroad is really of great which, on account of greater directness and other words require a long time to be allowed value to the department and the country, the high speed attained on them, it might be them, in order to avoid a risk of fines in the there is no plan to secure it, and to secure extremely important to command?

views-let us suppose \$200 per mile the cost of course be imposed for failures to counect. of mail transportation by wagons or post the standard proposed by us, would be as and Philadelphia the case is not quite so bad, follows, viz:

Between Baltimore and Philadelphia 100 miles of stage or wagon

Add for seven hours gain in time by railroad, at \$2,000 per hour,

Between Baltimore and Cumberland 130 miles of stage or wagon transportation, at \$200 per mile would cost

Add for seven hours gain in time, at \$2,000 per hour,

To make a practical application of our the standard of compensation, fines should equivalent for it.

and Cumberland, the department would of commodation afforded the department, would course not be justified in paying more than correct the present bad service on many imexcept in consideration of increased speed, greater control of hours, than it now has, roads. but would probably be justified in paying at increased expedition, and be attended with, least \$2,000 annually advance on stage or on the whole, no increase of expense to the Legislative report that the bill authorizing wagon transportation for every hour saved department, but rather a diminution. Noin time, on either of these routes. Now the thing can be worse than the present service distance between Philadelphia and Baltimore on many important routes. For instance, by the stage route being 100 miles, and be- between Baltimore and Philadelphia, from tween Baltimore and Cumberland 130 miles, eight to nine hours is allowed for a mail 000 in all) were distributed among seventythe prices which would be paid on these which ought to be conveyed at farthest in five towns in the state, and were held by 1094 routes for the transportation of the mail by five and a half or six. Between New York stockholders, as follows, viz: 740 stockholdbut five hours at the utmost is all that should 10; 130 from 10 to 20; 99 from 20 to 50; be required for the delivery of the mail be- 33 from 50 to 100; and 22 hold 1000 shares tween these cities. South of Petersburg, in lines, the most important in the United States, 14,000 the failures are of almost constant occurrence. We can readily conceive of this bad service when railroad companies are paid a fixed sum per mile, whether more or 26,000 of the mail, and whether the service is performed well or badly.

We beg leave respectfully to submit these \$40,000 suggestions to the new postmaster general, given by the standard we propose, but with this best service cannot be dispensed with

event of failure. In any case, and whatever its being well performed, but to pay a fair

ESSRS. EDITORS. As your Journal is devoted to the benefit of the public in gen-eral I feel desirous to communicate to you for publication the following circumstance of no inconsiderable importance, which occurred some few days since on the Philadelphia, Wilmington and Baltimore railroad.

On the presage of the evening train of cars from Philadelphia to this city, an axle of our large 8 wheeled passenger car was bro-ken, but from the particular plan of the construction, the accident was entirely unknown to any of the passen-gers, or, in fact, to the conductor himself, until the train, (as was supposed from some circumstances attending the case,) had passed several miles in advance of the place where the accident occurred, whereas had the car been constructed on the common plan the same kind of acci-

dent would unavoidably have much injured it, perhaps thrown the whole train off the track, and sericually injured, if not killed many of the passengers. Wilmington, Del., Sept. 28, 1840.

The undersigned takes pleasure in attesting of the value of Mr. Joseph S. Kite's invention of the Safety Beam Axle and Hub for railroad cars. They have for some time been applied to passenger cars on this road, and experience has tested that they fully accomplish the object intended. Several instances of the fracture of axles have occurred, and in such the cars have uniformly run the whole distance

with entire safety. Had not this invention been used, serious accidents must have occurred.

In short, we consider Mr. Kite's invention as completely successful in securing the safety of property

and lives in railroad travelling, and should be used on all railroads in the country.

DATENT HAMMERED RAILROAD, SHIP and Boat Spikes. The Albany Iron and Nail Works have always on hand, of their own manufacture, a large assortment of Railroad, Ship and Boat Spikes, from 2 to 12 inches in length, and of any form of head. From the excellence of the material always used in their manufacture, and their very general use for railroads and other purposes in this country, the manufacturers have no hesitation in warranttry, the manufacturers have no hesitation in warranting them fully equal to the best spikes in market, both as to quality and appearance. All orders addressed to the subscriber at the works, will be promptly executed. JOHN F. WINSLOW, Agent.

Albany Iron and Nail Works, Troy, N.Y.

The above spikes may be had at factory prices, of Erastus Corning & Co., Albany; Hart & Merritt, New York; J. H. Whitney, do.; E. J. Etting, Philadelphia; Wm. E. Coffin & Co., Boston.

MACHINE WORKS OF ROGERS, KETCH-um & Grosvenor, Patterson, N. J. The un-dersigned receive orders for the following articles, manufactured by them of the most superior descrip-tion in every particular. Their works being exter-sive and the number of hands employed being large, they are enabled to execute both large and small orders with promptness and despatch.
Railroad Work.

Locomotive steam engines and tenders; Driving and other locomotive wheels, axles, springs & flange tires; car wheels of cast iron, from a variety of pat-terns, and chills; car wheels of cast iron with wrought tires; axles of best American refined iron;

springs; boxes and bolts for cars.
Cotton, Wool and Flax Machinery
of all descriptions and of the most improved patterns,

of an descriptions and of the most improved patterns, style and workmanship.

Mill gearing and Millwright work generally; hydraulic and other presses; press screws; callen-ders; lathes and tools of all kinds; iron and brass

castings of all descriptions.

ROGERS, KETCHUM & GROSVENOR,
a45 Paterson, N. J., or 60 Wall street, N. York. OATENT RAILROAD, SHIP AND BOAT Spikes. The Troy Iron and Nail Factory keeps constantly for sale a very extensive assortment of Wrought Spikes and Nails, from 3 to 10 inches, manufactured by the subscriber's Patent Machinery, which after five years' successful operation, and now almost universal use in the United States (as well as England, where the subscriber obtained a patent) are found superior to any ever offered in market.

Railroad companies may be supplied with Spikes having countersink heads suitable to holes in iron rails, to any amount and on short notice. Almost all the railroads now in progress in the United States are fastened with Spikes made at the above named factory—for which purpose they are found invalua-ble, as their adhesion is more than double any common spikes made by the hammer.

All orders directed to the Agent, Troy, N. York,

All orders directed to the Agent, Troy, N. York, will be punctually attended to.

HENRY BURDEN, Agent.

Spikes arc kept for sale, at Factory Prices, by I. & J. Townsend, Albany, and the principal from merchants in Albany and Troy; J. I. Brower, 222 Water St., New York; A. M. Jones, Philadelphia; T. Janviers, Baltimore; Degrand & Smith, Boston.

** Railroad Companies would do well to forward their orders as early as practicable, as the subscriber is desirous of extending the manufacturing so as to keep pace with the daily increasing demand. ja45

WELDED WROUGHT IRON TUBES

From 4 inches to 1 in calibre and 2 to 12 feet long, capable of sustaining pressure from 400 to 2500 lbs. per square inch, with Slop Cocks, T. L. and other fixtures to suit, fitting together, with screw joints, suitable for STEAM, WATER, GAS, and for LOCOMOTIVE and other STEAM BOILER FLUES.

Manufactured and for sale by MORRIS, TASKER & MORRIS. Warehouse S. E. Corner of Third & Walnut Streets, PHILADELPHIA.

TO IRON MASTERS.—FOR SALE.—MILL SITES in the immediate neighborhood of Bituminous Coal and Iron Ore, of the first quality, at Ralston, Lyoming Co., Pa. This is the nearest point to tide water where such coal and ore are found together, and the communication is complete with Philadelphia and Baltimore by canals and railways. The interest on the cost of water power and lot is all that will be required for many years; the coal will not cost more than \$1 to \$1 25 at the mill sites, without any trouble on the part of the manufacturer; rich iron ore may be laid down still more cheaply at the works; and, taken together, these sites offer remarkable advantages to practical manufacturers with small capital. For pamphlets, descriptive of the property, and further information, apply to Archibald McIntyre, Albany, to Archibald Dabates. apply to Archioald Membyle, Abeally, to Archioal Mebertson, Philadelphia, or to the undersigned, at No. 23 Chambers street, New York, where may be seen specimens of the coal and ore.

W. R. CASEY, Civil Engineer,

Value of fund Dec. 31, 1844 . . . \$149,759 17

REPORT OF THE RENSSELAER AND SARATOGA RAILROAD COMPANY.

.The Rensselaer and Saratoga railroad, extending from the city of Troy to Ballston Spa, is 25 miles long. Cost of construction af said road . \$475,801 10

The receipts of the road from January 1, 1844, to December 31st, 1844, both days included, are: from passengers, on 19,871 through, are \$16,899 50; from passengers, on 18,698 way, \$6,739 11; from freight, \$6,903 13; from bridge tolls, \$8,959 85; from all other sources, \$2,430 05

The expenditures of the same period

41,931 64

are: for repairing and running the road, \$29,530 89; for dividends, \$10 500 10,030 89 00 The number of locomotive engines is 2; passen ger cars, 15; freight cars, 20; machine shops The average number of men in the employ of the mpany, is 29.

company, is 29. The number of miles run by passenger trains, is 20,090. The freight is run in same train with passengers. The number of miles run by horse power between Troy, Waterford, and the borough, is 8500.

GREAT NORTH OF ENGLAND RAILWAY, SEMI-ANNUAL REPORT.

We find in the supplement to the Rallway Times, of 22d February, a report from the directors to the proprietors-from which we

N. B.—This is the whole distance run by all the trains, the freight and passengers always running in connecti

4 make the following extracts. It will be seen in this, as in every other railway report, published this year, that there has been a large increase of business upon this road, which is only 45 miles in length; it is however connected with other roads, in a very favorable manner, which gives it a large amount of business, and enables it to make good dividends-say six per cent. Its stock is quoted in Herepath's share list, at £182, to £168, per share for 100 paid.

By their report it will be seen that the di. rectors are making vigorous efforts for the construction of several branches, which will add still more to their business and profits. This is the true plan to make railway stocks valuable.

It appears that the attempt to furnish the locomotive power, carriages and wagons for the Newcastle and Darlington junction company, has not been successful.

This company, as well as many others, has been at 'low water' mark, and had to pay 5 pr. ct. for money, whereas now they can get any amount required to renew their old honds as they fall due, at 31 per cent.-making a difference of nearly £5,000 in their interest account, or 1 per cent. on their capital.

Some of the shareholders appear to favor a plan proposed for leasing the road in perpetuity, at a stipulated annual income of 10 per cent. - after the fashion of our friends of the "Brooklyn and Jamaica" railroad company-which would make their stock worth 250, instead of 188 for 100 paid in, as it now sells; while others, and it would appear a large majority, disapprove, as they very justly contend that it will eventually, when other important works and branches are completed, be worth much more than £250 per share.

GREAT NORTH OF ENGLAND RAILWAY COM-PANY-GENERAL MEETING.

The half-yearly meeting of this company was held at the offices in Darlington, and by adjournment at the Sun Inn, on Tuesday, the 11th inst. The attendance of shareholders was unusally numerous, so much so, indeed, as to render an adjournment to a larger room necessary. It had been pretty generally rumoured that some proposition would be submitted to the meeting for leasing the line; and this, no doubt, gave rise to the more than ordinary bustle which was observable. The attendance from Thirsk, York, &c., was large (shareholders being conveyed gratuitously on these occasions); but the protracted nature of the business prevented our being able to procure a list.

The company's seal having been affixed to the register of shareholders,

Major Parker, (the secretary) read the following report:

From the annexed statement of accounts,

receipts for the half-year, ending December 000 tons of iron rails, at 7l. 15s. per ton, 31, 1844, amount to 54,048l. 6s. which, a price considerably below that at which compared with the corresponding half-year, they could now be bought. shows an increase of 15,481l. 7s. 8d. of which the passenger traffic has given 8,0511. the Stockton and Darlington railway com-6s., the merchandise, 1,167l. 6s. 10d., the pany, proposed to enter into a joint guaranmails, 983l. 0s. 11d., and the coals 2,829l tee of 5 per cent. on the capital required 14s. 4d., &c. &c.

amounts to 31,784l. 6s. 9J., out of which favourite sca bathing place of Redcar. the directors recommend that a dividend be amount of capital required is 36,000l., and declared, at the rate of 6 per cent. per an. the terms of the guarantee are for 21 years num-[that is, for the half-year, 31. on and should the profit exceed 5 per cent. every 1001. share, and 10s. on every 401. after defraying the working expenses, one share,] clear of Income Tax, and be made half of such excess is to be appropriated to payable on the 4th of March. This will the shareholders of the Redcar railway comamount to 23,820l. leaving a reserve fund pany, and the remainder is to be divided be of 7,964l. 6s. 8d.

view in leasing their coal dues for three geous to the Great North of England compa years, (of which the first year expired on ny. by the increased number of passengers the 30th November last) namely, to promote the permanent extension of that trade, seems of their line. likely to be fully realised; the number of tons of coal and coke carried up the line during the half-year being 82,469, against and are eligible for re-election. 41,097 tons in the corresponding period of the year before, and with every prospect of a still further increase.

The proprietors are already aware that the Great North of England directors entered into an arrangement with the Newcastle and Darlington junction company to work the line of the latter company, the Great North of England company finding the proprietors that, independently of the proslocomotive power, carriages, waggons, &c. It was soon discovered that such an arrangement could not be continued, without endangering the harmony that should subsist between railway companies so intimately connected. Your directors, therefore, from a wish to promote the most cordial feeling other railway in the kingdom, provided in between the two companies, on the Newcastle and Darlington company intimating their desire to withdraw from that arrangement, offered no impediment to their carrying out their wishes your directors requiring only to be reimbursed the amount actually expended by them on their coal engines, to adapt them for passenger traffic.

Since the 1st of January of the present year, the Newcastle and Darlington company have supplied their own locomotive power.

The shareholders will be glad to learn, that, in conformity with the power granted to the directors at the last general and at subsequent special general meetings, the necessary surveys of the proposed branch lines to Harrowgate, Knaresborough, Ripon, and Boroughbridge, as well as to Richmond, have been made, and all the necessary steps taken, in compliance with the standing orders of both Houses of Parliament. The lines are not of an expensive character, and from the great accommodation they offer to the public, as well as from their being legitimate branches of an existing railway, the directors confidently anticipate a favourable report from the Board of Trade. Acting on Repairs of way this impression, the directors have thought Ditto fences

the shareholders will perceive that the gross it advisable to enter into a contract for 5,

Your directors have, in connection with for the construction of about 8 miles of rail-The balance, after defraying the expenses, way, from the Middlesborough to the tween the guaranteeing companies. This The object which the directors had in small extension cannot fail to be advantait will cause to travel on the whole length

Mr. J. C. Backhouse and Mr. Thomas Smith retire from the Board by rotation

In conclusion, the directors congratulate their brother shareholders on the prosperous state of their affairs at the present moment and they would beg to call their attention to the peculiar position of the Great North of England railway, with reference to the various schemes about to be brought before Parliament for the extension of railways to the north and south of it, and to remind pect of increased receipts from the developement of their own traffic, such extension o railway communication, in connection with the Great North of England railway, cannot fail, in a few years, to render the shares of this company as valuable as those of any retains its present independent position, receiving the traffic that may flow into i from all quarters, giving to every company that may be connected with it the greates possible facilities, and acting towards al with the greatest impartiality.

£1,307,487 7 7 We desire to give our readers—and we wish we could reach every reading man in the Union-an idea of the spirit with which these meetings are conducted, and the estimate put upon railway property in England, and therefore give pretty full extracts from that part of the debate in relation to leasing the road—commencing with 4 the closing remarks of the chairman of the board of directors, Mr. G. H. Wilkinson, the Great North of England railway is con-clerks are now paid, and that said superin-

"I need hardly tell you that reports have gone abroad, certainly unfounded, of negociations being on foot for leasing this line to another company. There is no founda-tion for such reports; nor do the directors of this company contemplate any such proceeding. If they had, they would not have used the language in which you find that report couched. I may caution you, however, as to this matter of leasing our line. Of course it refers to a particular Company, who are extending in various directions their influence, and who may possibly hope to lay their hands upon this line also." would remind you that the interests of that in themselves. Their interests to the north of this line are undoubtedly identical with those of the Great North of England company; because the Great North of England railway, and the railways north of it, all form a portion of that great trunk railway which will connect the metropolis with the whole of Scotland; whereas, south of York, the interests of the party in question are totally distinct. Their interests are, not to circuitous direction. As soon as Churnet Valley line is made, by which 23 miles will be saved between the metropolis and Manthe rival lines on the western side of the kingdom and on the eastern, with which your railway is connected. And unless one the thanks of the millions. of the direct lines from London to York be made-I am not going to enter upon the polemics of the competing lines, by which there will be a saving of somewhere about forty miles between London and Yorkdonian line, will have decidedly the whipour line is fortunately so placed that under propriations, to wit:
no circumstances can it be otherwise than To said S. F. B. Morse, superinprofitable-for take away the line to Scotland, and still our line will be remunerative To said Alfred Vail, assistant, -yet in order to enjoy the full scope of our position and of our prosperity, we must have our line an integral part of the great line of communication between England

merous branches, which are of sufficient quired by the act of 1825, section 2 importance for any one board of directors It is further directed that the offices of to have under their control. The directors the said superintendent and assistants be ing it is, that it would be placing the under- o'clock, P. M. each day, Sundays exceptedparticular company are antagonist interests taking in the hands of those who could not For the transmission of each despatch would conduct it, (Applause, *

the capital account.

(To be continued in our next.)

MAGNETIC TELEGRAPH.

We are gratified to learn, as we do from carry the line by this, the most direct, line the following official statement, that the delivery, who shall be entitled to receive the of communication between the metropolis Postmaster General has taken the Magnetic and Scotland, but to carry it in another and Telegraph into the public employ. This is soon as these are effected, there will be still make the necessary arrangements for carryless comparison, in point of distance, between ing into successful operation the cheap postage law, and he will be sure to receive

Official.

POST OFFICE DEPARTMENT, March 29, 1845.

The appropriation of \$8,000 to meet the expenses of the Magnetic Telegraph between unless that be the case, the western side of Washington and Baltimore, being placed the island, by Churnet Valley and the Cale- under the charge of the Postmaster General; and it appearing that, under a previous aphand of you, and we shall no longer have propriation embracing the same object, which that which the full development of our pro- was made for the purpose of testing the perty requires, namely,-a thoroughly di-practicability and utility of said telegraph, rect line of communication between London the Secretary of the Treasury, under the and Scotland. It fortunately happens, gen-authority conferred by act of Congress, had tlemen, that our interests are identical, in appointed S. F. B. Morse superintendent, at this matter, with that which is the honest a salary of \$2,000 a year, and two assistpolicy, and the best policy, for the public, ants, Messrs. Alfred Vail and Henry J. Roin connection with carrying forward a direct line between the metropolis and Scotinspectors of wires, at a further allowance land; and I trust you will never lose sight of at least \$3,000 a year: Ordered, That of this great advantage, because, although said amounts be disbursed out of said ap-

\$1,000 tendent, at the rate of, pr year, 1,400 Do. H. J. Rogers, do.

Do. Two keepers of laboratory and inspectors of wires, at \$300 each,

the leasing of the line. In the first place, by the chief clerk of the department, as the come before it.

nected, or will become connected, with nu-tendent and assistants take the oath re-

of such a line should be locally resident- kept in the post offices at Washington and should know all the agents connected with Baltimore; and that the magnetic line be its working. We have seen enough of re-extended from the depot in Baltimore to the mote and distant direction to know that it post office as early as practicable; and that is most incompetent; and to know also that it be used at its present location until that it is a point of the greatest importance to is effected; that the offices in Washington have a local and personal supervision, in and Baltimore be kept open for the receporder to reap the whole benefit derivable tion and transmission of despatches from from a railway, and to have it under proper eight o'clock in the morning until ten control and management. But the great o'clock, A. M.; from one P. M. until three and main consideration with respect to leas- o'clock, P. M.; and from five till seven

in the nature of things have your true in there shall be paid, in advance, at the ofterests at heart in the mode in which they fice from which it is sent, by the applicant, one quarter of one cent for each telegraph-Mr. Allhusen (as we understood him) ic character. Upon the reception of a made some inquiry respecting the closing of despatch at either office, it shall be the duty of the officers to have the same translated in a fair handwriting, carefully enveloped and sealed, and the magnetic characters immediately destroyed, and to place the despatch in the hands of the penny-post for same compensation therefor as for the delivery of letters transmitted now by mail.

It is further ordered that the said superas it should be. Now let him adopt a liberal intendent and assistants in no case commupolicy with the railroad companies-paying nicate to, or permit to be seen by, any perchester, and as soon as the Caledonian line them well, and requiring many of them to son, the contents of any despatch, except is made, which I have no doubt it will be,—as increase their speed; and at the same time the individual or individuals to whom it may be addressed.

It is further ordered that the expenses attending the extension of the telegraphic line to the post-office in Baltimore, as well as all other contingent and incidental expenses, be paid, upon a statement of the expenses, and a certificate of the correctness thereof, by the superintendent, upon the order of the Postmaster General.

It is further ordered that the superintendent keep an accurate account of the income, as well as the expenditures, and report the same, at the end of each fiscal quarter, to the Postmaster General, to be applied to the payment of the expenses of the establishment, or so much as may be necessary; and that the superintendent pay the same, under the rules and regulations now applicable to payments by postmasters.

In consideration of the facilities allowed by the railroad company to the superintendent and his assistants in attending to the business of the telegraph, it is further ordered that the free use of the telegraph be conceded to said company for the transmission of communications relating to the business of their road. C. Johnson,

Postmaster General.

Canal Board and Canal Tolls. - The Canal 1,000 Board have resolved not to make any change in the rates of tolls as established for 1844, until the 1st July next, on which day the 600 board is to meet to revise and adjust the and Scotland. (Applause.) There are other matters which induce us to deprecate monthly, from the time of their qualification, transaction of such other business as may And that the salaries be paid the officers rates of tolls on the Canals, and for the

cents .- Miners' Journal.

We are obliged to the president, Mr. Wilkinson, for enabling us to correct the errors referred to in the following communication; and we again respectfully request those who detect errors in our tables, or statements, to do us a similar favor, and enable us to correct them at the earliest possible period -as accuracy in our statements is what we aim at.

Office of the Syracuse and Utica R. R. Co. Syracuse, April 7th, 1845. TO THE EDITOR OF THE RAILROAD JOURNAL.

DEAR SIR-I observe two errors in the statement of this company in your Railroad Journal, which I will thank you to correct-I mean in the table which of

is published on the 8th page usually.

You state the cost \$1,151,576. It should be \$1,-115,897. The secretary of State made the error in rights. his table by adding to the last sum \$35,678.42, which our report showed had been expended in 1844, and charged to construction. This expenditure was already included in the sum of \$1,115,897.

Another error is in stating the dividend at 7 per cent. Our capital is one million and the dividend was \$80,000, or 8 per cent. Very respectfully,

JOHN WILKINSON.

We have received the "remonstrance of the several railroad companies, on the line from Albany to Attica, against the several petitions for a reduction of their fare, the appointment of a commissioner, and compelling them to run in the night, in winter,"

We are, not unfrequently, amused, and much more frequently vexed, at the disposition of the people, or ests, and to the State at large, by the refusal of the ge-week.

well known that we are the strenuous advocates of the northwest to the Ohio river, and that we entertain an equally profound conviction that such refusal did not reflect the sentiments of the people of this comsengers, on railroads"-yet we desire to convince by monwealth. argument and example, not to compel by arbitrary, and, as we think it would be in this case, unjust the general assembly that the interests of the compalegislation. There are few, comparatively even of would not permit the Balamore and Ohio company the most experienced business men, who have not to terminate their road at Wheeling, the granting a given much attention, or devoted time to the investiright of way and confining its terminus to that city gation and management of the details of railroad was, in our deliberate opinion, on the part of many affairs, that understand the difficulties to be over- the respectful prayer of the northwest; which is come, and the constant efforts required from those intended to deny without the manliness of a direct who have the charge of even a short railroad. Hence refusal. it is that we often hear people making serious complaints of the management, and anathematizing the managers of railroads, because their views and opin-breach of the faith of the commonwealth pledged to ions are not followed; and it seems that an effort is the Baltimore and Ohio railroad company, and to managers of railroads, because their views and opinnow being made, not only to take from the companies the right of charging what their charters allow nies the right of charging what their charters allow way is granted or recognized, and it is well known them, but also to take from them the control of their roads, by the appointment of a commissioner.

way is granted or recognized, and it is well known that without such pledge the said company would their roads, by the appointment of a commissioner.

It is not enough that passengers travel at two or three times former speed, for the same, and even a less rate per mile; or that the railroad companies are restricted, some of them, from carrying freight al all, except when the canal is closed, and even then only by paying canal tolls, but there must be more restrictions more compulsion, and, as a matter of course, less

accommodation to the public.

The companies which compose this line of road have had a powerful competition on the canal-and they must soon re-lay their road with heavy iron, in order to keep pace with the requirements of the people; and therefore we are fully of the opinion that their managers should be left, without any further restrictions; and, if desirable, they should have fur-gigantic work which they have undertaken, and from which the business community have already derived so much benefit. Let the legislature sustain, rather than cripple, by unnecessary restrictions, works which add so largely to the comforts, the interests, and, may we not say, the years? of those who travel. We shall probably refer to this subject again. Cumberland.

RAILROAD MEETING.

At an unusually large and respectable meeting of the citizens of Wood co., Va., convened at the court house pursuant to notice, on Saturday, 21st ult., Col. J. G. Springer was called to the chair, and Wm. H. Safford appointed secretary. The object of the meeting having been explained by the chair, it was successively addressed by James F. Stephenson, Esq., of Tyler, Wm. A. Harrison, Esq., of Harrison, Cabell Tavener, Esq., of Lewis, and Gen. J. J. Jackson, Wood.

The following, among other resolutions, were passed, preceded by an indignant assertion of their

We, the people of Wood county, citizens of Virginia, in full county meeting assembled, solemnly impressed with the magnitude and importance of the interests of ourselves and our posterity now at stake -asking, and having asked of our fellow citizens, represented in the general assembly, nothing which has ever been refused to others—fully convinced that the continued rejection of an application so obviously just in itself, and if granted so advantageous to us and ours and to the whole commonwealth, would be an act of most flagrant and wanton oppression, sufficient to cancel the allegiance due from us under other circumstances; but trusting that our fellow citizens of other sections will not permit their repre-sentatives to persist in such injustice; and willing, therefore, to make a further appeal to their sense of right and duty, do resolve as follows:

1. Resolved, That we are deeply impressed with a

sense of the injustice done to us and our best inter-

Correspondents will oblige us by sending in their a few uneasy representatives of them, to apply legis-neral assembly, at its recent session, to permit the mmunications by Monday morning at laiest.

voting for it, a mere subterfuge, and a mockery of

3. Resolved, That a refusal, whether open or covert of a right of way to the Ohio river at any point not below the mouth of the Little Kanawha river, is a

4. Resolved, That it is an undeniable right, possessed by every portion of the people in every section of the commonwealth, to associate themselves toge-ther to carry on any lawful business, or to construct any road or other improvement, not directly interfering with the vested rights of others, having for its object the transportation of the products of their labor to the best markets; and the withholding by the legislature of corporate powers, or any other ordina-ry facility necessary to accomplish such object, is not only without precedent in the history of this commonwealth; but considering that similar privileges have been freely bestowed on almost every other portion of the State, is, in the highest degree, partial, unequal, unjust and oppressive.

Is it not strange that the legislature of Virginia should allow this important work to be thus retarded, when so many of her own citizens are to be benefitted by its early completion? It is certainly not a very great evidence of the progress of the intelligence of the age in Virginia. Of one thing, however, those interested may rest satisfied, which is that the road will be completed, notwithstanding the opposition of interested parties. It is only a question of time. It is quite too important a measure to be suspended at

By a late decision of the supreme court of North Carolina, Mr. F. E. Rives of Virginia, who it will be recollected purchased at auction, under a levy made at his instance, that part of the Portsmouth and Roanoke railroad within the limits of this State, is put in possession of the property, and he has ex-ercised the right acquired by the decision to stop the travel on that portion of the road. Consequently, the Portsmouth company has ceased its operations for the present altogether .- Wilmington Chron

Eric Canal.—At a meeting of boatmen recently held at Syracuse, for the purpose of establishing the prices of freight and passage for the coming season, it was resolved that the price of passage, including board, be 1½ cent per mile, or 1 cent per mile with out board, and that the price of freight be 19 cents per 100 miles for 100 lbs.-Jour. Com.

The Reading Democratic Press says-"A statement made by the Reading railroad company sets for the fact that the locomotive engine 'Manatawny,' weighing about 131 tons, from 1st July to 1st December, 1844, five months, made 81 trips on the road, transporting 16,120 tons of coal; the United States,' weighing about 18 tons, during the same time, 58 trips, with 21,205 tons of coal.

A dividend of three per cent, for the last six months has been declared on the Washington branch of the Baltimore and Ohio railroad.

Our Sales of Stocks are not corrected this

CANADIAN TRADE, DRAWBACK, ETC. saw stated in a Canadian paper, equal to 121 tion of the superior advantages to the merper cent. ad valorem. A few years since cantile man which this city holds out, even flour trade, or with the climate and country congress passed a law which put prohibitory with reference to the time of reaching Onthe province, a trade of long standing and of transportation, about one half of a very duty on oats being 50 per cent.) which had has a route to the west immeasurably supe-

The advantages of such a com- done speedily. disadvantages, in respect to situation and munication to these cities not only, but to the climate, and proved. from various statistical entire section of country through which such tables, its rapid annual increase in population a route may be established, has long been and in extent of trade.

"Mr. Merritt then entered on the second part of his subject, by pointing out the conduct necessary to be pursued by the imperial and provincial governments, in order to secure and retain this trade. On the one part Canada entering the ports of Great Britain; on the other, British products and manufac tures ought to be admitted into Canada duty with by tde province, on the opening of the canals, now in progress of construction, was shown by Mr. M., from an examination of our present revenues and resources; the increase of revenue from these canals alone, would, he argued, from the immense increase of transit, more than counterbalance the reduction of duties from the customs now levied.

" Mr. Merritt lastly adverted to the consequences which would result from such a lake Eric would be colonies of Great Britain, has done for her, as far as regards their consumption of her manufactures-a most extensive home marthe bonds which unite Canada to the mother them. And so it is with the two great rail- property to the company, and time to the

connection forever secure and permanent."

BOSTON AND BURLINGTON RAILROAD.

The Rutland Herald, of 3d inst., has the following, and many other remarks in relation to this work:

"Our Railroad. - We are glad to see that the true New England spirit is at length "The first part of Mr. Merritt's address arousing itself in view of the contemplated "He next proceeded to demonstrate that not, until quite recently, been plainly indibouchement of one to the entrance of an. vor with that power—the monical interest of the length and expense of transit by the ourself warranted in saying that this interthe Welland and St. Lawrence canals, lead. via Keene, Bellows Falls, Rutland and Buring past Montreal and Quebec, and showed lington, and at the time to have questioned about an hour and a half." that the latter route, when completed as this, would have been supposing our Boston above, and freed from all unnecessary re. friends entirely blind to their own interests, strictions, will be the cheapest and best, and and utterly incompetent to judge of the real

The Herald need not fear that the Bostoto their own interests." Of another city-

intimately together, would render British York and Albany; they are suffered to linger; and those few who have labored in their behalf for years have become disheartened and disgusted with such apathy-while Boston enjoys the advantage of her enlightened foresight and energy, in the rapid increase of business, and greatly enhanced value of her real estate.

> New York must, however, make these works in self defence—and had better do it

> > ACCIDENT ON THE RAILROAD.

"This morning, as the cars from Stoningunderstood and fully appreciated; but it has ton were coming towards Providence, when near Wickford, going nearly at the rate of the trade of this great country must ulticated, which of the many projected routes thirty miles an hour, the axletree of one of mately centre on the shores of lake Erie, would finally be determined upon. This the deck cars broke, and the car was nearly bringing within its scope several of the question we believe now to be settled, at destroyed—the next, being also a deck car, neighboring States of the Union; and that least if the people of western Vermont but was thrown entirely off the track, as were on the completion of the canals now in pro. do their duty. For ourself, we have long the forward wheels of one of the long pasgress an easy and direct communication had but one opinion in reference to this mat. Senger cars. Most miracuously no one was would be established with that part of the ter. Looking to Boston for the main source seriously injured, although there were nearly country, particularly should the canals be of power, which must give impetus to this 250 persons in the cars. Had the accident made continuous, by the province furnishing most desirable enterprize, we have had but occured further on the road, when passing tug boats, to tow the vessels from the de-little doubt as to which route would find fa-through a deep rocky cut, the loss of lives would have been great. By the judicious other. He instituted a comparison between our "New England capital." We now feel management of the conductor, Mr. L. Tucker, with the assistance of the engineers, and Erie canal, leading to the Hudson, and by est is decidedly in favor of the western route, a part of the passengers, the cars were replaced upon the track, after a delay of only

That these duties could be dispensed ing far into those regions which New York sengers in the car. By referring to the cut has heretofore deemed hers of right-and in his Journal, it will be seen that, if the axle draws to herself a large amount of business breaks in the journal, the car will not be mawhich New York might have had by one-terially affected by it, as the safety beam half the effort. There is this difference, then comes into use, and the axle and wheel however, in the two cities. The capitalists are kept in their place, and the car on the of Boston encourage, foster and sustain track-or, if it breaks near the centre, or bewhatever benefits Boston, but in New York it tween the safety beams, the wheels are kept is not so-there are but few, comparatively, in their place, and the car cannot well be of her rich men who care a straw for New thrown off the track, as in this case-breakcourse as he advocated. Canada would be. York-consequently they do not encourage ing and damaging those which followed .come, in effect, one entire warehousing and sustain those works important to her busi. Breaking the cars, however, is of small moport; the six States and territories adjoining ness operations, but rely upon what nature ment, when taken in comparison with breaking the limbs or necks of the passengers-It was so in relation to the Erie and Cham. the escape of whom, in this instance, is ket would be open to Canadian industry, and plain canals. New York was opposed to deemed almost miraculous; yet, the loss of

passengers, is a very important matter, pro- this, in the pursuit of regular business. For bably fully equal to the cost of "safety example: a steamboat leaves Pittsburgh beams" on all their passenger cars. If this he so what evenue has this or any other be so, what excuse has this, or any other coffee for St. Louis: and there, again, she real to offer for neglecting to attach this loads with wheat and lead for Cincinnati. simple apparatus, or a better one if they can, This is, or may be, a regular western voyto all their cars?

WESTERN INLAND NAVIGATION.

We give place to the following from the Cincinnati Chronicle, that the extent of our inland navigation, especially in the West, may be better understood; and to ask, if such are our rivers beyond the mountains, how long will it be before the majority of our population will be found along their margin and tributaries? Not long, we predict.

"The rolling flood of waters now poured along by the Ohio, and the vast distances to which products are borne by the numerous steamers upon its bosom, remind us of the great, and, compared with any other portion of the earth, most extraordinary extent of the inland navigation of the West. Let us take some particulars. It is considered a great voyage from New York to Liv-sible one, which in a few years will be comerpool; yet one may take a single steam-mon-the second a very probable one-and boat trip on the waters of the Mississippi the third an every day one. These three equal to that. Look at this:

1		IVIIIes.
New Orleans to Natchez, -		294
Natchez to mouth of Ohio, -		718
From the mouth to St. Louis,	-	172
St. Louis to Weston,	•	500
Weston to Council Bluffs, -		300
Council Bluffs to Fort Mandan,		824
Fort Mandon to the Yellow Stone		224

Total voyage, York to Liverpool-all performed inlandthe point of departure being one hundred miles from the sea! Such is one of the voyages that may be performed in the great valley of the West.

But take another: suppose a hoat takes in produce from Pittsburgh to New Orleans, and should there be chartered to take stores to the Fur Company's Fort, at the mouth of the Yellow Stone, and then returns to Pittsburgh, what will be her voyage?

		Miles.
Pittsburgh to Cincinnati, -		498

Louisville to Cairo, -	-	`•	345
Cairo to New Orleans,	•		1012
Return voyage, -	•	•	1494

Total voyage, Here are three voyages—the first a posvoyages make, together as the reader sees, more than fourteen thousand miles!

We add to this the following table on nav-18 igation on some of our rivers:-

		Miles.
Wabash river to Logansport,	•	454
Illinois river to Ottawa, -		270

This is but a part of the vast inland navi-24 gation of the West, and which explains the rapid growth of cities and towns so far from with a period when reductions had already the seaboard. These inland cities, too, are commenced, have been increased only in This is the length of a voyage from New destined to equal, if they do not surpass, the largest of those on the Atlantic shore.'

LONDON AND BRIGHTON RAILWAY.

We have been often amused, when reading, in the English railway papers, reports of the proceedings of the various meetings of railway proprietors, who not unfrequently appear to be as inquisitive as though they were in reality managing their own business reports with great apparent care, giving very extracts from the last semi-annual report of the directors of the London and Brighton Railway Company.

It will be seen that while the receipts of the company have increased 14 per cent. from passengers, and 9 per cent. from freights, the expenses of working have increased only 11 per cent.

The idea of crecting cottages along the Eight thousand miles might a steamboat line for those employed in repairing the road on many of our roads in this country-as But there are voyages continually per. there may thus be a more efficient police, on the line for the porters, platelayers, &c.,

There is another fact stated worthy o consideration, viz: that, by increasing the speed of one of the passenger trains, the public convenience has not only been promoted, but there is no doubt but that the profits of the company have also been increased. This is in accordance with the doctrine maintained in the Journal, that high speed and low fares for passengers, is the true policy in this country.

Director's Report. "Your directors, in meeting you on the present occasion, have much satisfaction in reporting the progressive state of improve-Now take a common Cincinnati voyage ment in your affairs—the present half year presenting the following result, as compared Receipts for passengers, 14 per cent. more, £14,450

Your directors call the attention of the proprietors to these figures, which show that, whilst your working expenses, compared the small ratio of 11 per cent., your receipts have augmented at the rate of 14 and 9 per

The road throughout is in good working order; some slips took place in the embankments and cuttings, during the rains in the fall of the year, the expense of the reparation of which will not exceed the ordinary, estimate.

The Engineer's establishment, for the maintenance of the way, has been reduced, -and the directors make their semi-annual and placed on a permanent footing of economy, and we have every reason to believe, full details, as will be seen by the following except under extraordinary circumstances, which cannot be foreseen, will never be exceeded.

In consequence of the great increase in the traffic, a further supply of engines and carriages will be required before the return of the summer season, for which purpose, the directors have availed themselves of the late advance in the price of their shares, and have sold the whole of those remaining unissued and forfeited, at an average price of 511, including the dividend, the proceeds of which sale they hope will meet the expense thus to be incurred.

In the report of the last half year, it was proposed to erect cottages at various points who would answer the purpose of a valuable

have the tendency to drive the trade of our state, as it will be compelled to cross city consumption. Ohio into other channels, but is one which, some rivers and many large streams at their if adapted, will warrant the state of Ohio mouths, where viaducts would be most exin imposing higher charges on property pensive and most liable to be carried away coming from the state of New York than by our annual freshets. The New Haven from elsewhere, and that it will be the duty and New York road would be immediately of this state to take measures to protect the abandoned if the project of a road from Hartinterests of her own citizens from this un. ford to New York were taken up in earnest. just aggression.

Resolved, That the governor be requested tion of our capitalists? forthwith to forward two copies of this resolution to the govenor of the state of New York, to be laid before the two branches of the general assembly of that state.

HARTFORD AND NEW YORK RAILROAD.

Mr. Editor-The project, recently started, of an inland railroud directly from Hartford and the editor has surely rendered it ridicuto New York seems to meet with very general favor. The pass of the mountain at Far. relied upon by its friends. The idea of sur revenue to the stockholder. All classes of mington has been carefully surveyed, and it veying a route by guess through a wilderis found that the road can easily be carried ness country, where the snow was some two through it. The mountain near Waterbury, the only other difficulty of a serious nature. is confidently supposed to be surmountable, and measures are now taken to determine the point beyond question-measures are also in progress to enlist the capitalists of established, before laying down rails! is al-Boston and New York in the enterprise, so together fresh and original. They are an soon as it shall be found to be unquestion. enterprising people "down East," and John ably practicable.

This road, if constructed, will pass through Farmington, Bristol, Plymouth, Waterbury, Danbury, and other towns beyond. The great advantages resulting from it to these towns, to the city of Hartford, and to this portion of the country generally, as well as he great value of the road when made, are very obvious. It will at once become the great thoroughfare between Boston and New York, being the only unbroken and completely land route between those cities. It will also receive all the New York travel that comes down the Connecticut River Railroad, and should that road be extended, as is contemplated, far up the Connecticut valley, and perhaps ultimately to Montreal, the great tide of northern travel to and from will pass through the Hartford and New York Railroad. The way travel on the road, as well as the transportation of freight from the large manufacturing places on the route,

its whole length, with the steamboats on the sound, and it is supposed will encounter, in and in some places exhausted—the supply ja451y

Is not the project well worthy the atten-ENTERPRISE. Con. Courant.

Portland Route. - The reader's attention Courier, reviewing some of the arguments in feet deep in October-upon this survey basing all the necessary estimates, even to "ten Bull is acquiring an appetite for gammon.

The canal—opening of navigation.—All vered in the United States.

We hear from DAVIS, BROOKS & CO., 21 Broad st., N. York. looks well in this quarter. We hear from the western section (under charge of Mr. Sutton.) that the repairs there are in such a state of forwardness, as to insure completion before the 15th, if nothing occurs that cannot now be anticipated. The new channel, at a switch left wrong by accident or desired. between Buffalo and Black Rock, will be finished if possible,—if not, the old channel laid down, or removed, without cutting or displacing will be used for a short period. Mr. Fay, them. the resident Engineer, left Albany where he was in attendance upon this Canal Board pair of the injury to the Waste Gate and Dam. He informs us that all will be completed there. Upon this section Dr. Mcsince at Tonawanda, superintending the re-LEAN has on a large force, and the repairs are rapidly progressing. The long slide this side of Pendleton, is in a state of forwardness; and the repairs generally, through

transportation, could be delivered at probably a dollar a cord less than the present prices.

The contemplated railroad from New Haven to New York wil have to compete, during the greater part of the year, and through its whole length, with the steamboats on the

New York, is a measure not only grossly its construction and repairs, more serious brought down by the railway during the unjust and inequitable, and one which will difficulties than a road across the interior of winter months being scarcely sufficient for

> Plank Road.—We understand that several of our most prominent citizens have taken stock in the plank road to be construct. ed along the Transit from this village to Williamsville. There are many considerations in favor of the construction of this road, such as will readily suggest themselves to our business men. A section of country which is now traversed by a road almost impassable for several months in the year, will thus be furnished with the means of is directed to an article from the Boston bringing its produce to our market and purchasing its supplies of our merchants. It favor of a road from Portland to Montieal. would increase the value of land, and pro-The idea is too absurd for serious comment, mote the settlement of that part of the country. The increase of travel would, we think, be such as, in a short time, to yield a handsome our citizens are interested in this enterprise. but more especially our merchants, who will we hope take hold of it with a determination to carry it through. The spirit of cents per rod for fencing"-and then coolly public enterprise has slumbered here, for the suggesting that it may be expedient to verify last few years, but this is an object of such by the use of instruments," the grades thus obvious utility that we think it will be regarded with favor by the most prudent .--Niagara Democrat.

> > RAILROAD IRON AND FIXTURES. THE Subscribers are ready to execute orders for the above, or to contract therefor, at a fixed price, deli-

at a switch, left wrong by accident or design.

It acts independently of the main track rails, being

It is never touched by passing trains, except when in use, preventing their running off the track. It is simple in its construction and operation, requiring at the time of high water, and has been only two Castings and two Rails; the latter, even if

Plans, Specifications, and all information obtained on application to the Subscriber, Inventor, and Patentee. G. A. NICOLLS, ja45 Reading, Pa.

the large manufacturing places on the route, will be very great, as the region of country through which it will pass, has no convenient water communication with any market.

Should this road be made, a branch could easily be constructed from Farmington through Unionville, Collinsville, and New Hartford to Winsted, thus opening to all the thriving manufactory region west of us, an easy communication with our city. We should also be benefitted in the reduced prices of wood, which, from the convenience of transportation, could be delivered at probably \$3.371 for Red Ash, Schuylkill, and \$3.25 lack Serews; Railroad Tunking Marinery Information in the convenience of transportation, could be delivered at probably \$3.371 for Red Ash, Schuylkill, and \$3.25 lack Serews; Railroad Pumping and Sawing Marinery in the convenience of the country in the convenience of the convenience of transportation, could be delivered at probably \$3.371 for Red Ash, Schuylkill, and \$3.25 lack Serews; Railroad Pumping and Sawing Marinery generally, through through through through through the section, promise a reasonable completion.—Niagara Democrat.

Coal.—The Schuylkill and Lehigh Canals are now open, but mining operations as yet progress but slowly, though a brisk business is anticipated for the coming season. The receipts by the Schuylkill Canal up to order, and also punctually, as a large quantity of the straight bar is kept constantly on hand.—Crank Axles, made from the best refined iron; Straight Axles, for Outside Connection Engines; Canal Axles, and Truck Frames; Railroad Pumping and Sawing Marinery.

Messes. Editors.— As your Journal is devoted to the benefit of the public in general I feel desirous to communicate to you for publication the following circumstance of no inconsiderable importance, which occurred some few days since on the Philadel-phia, Wilmington and Baltimore railroad.

On the passage of the evening train of cars from Philadelphia to this city, an axle of our large 8 wheeled passenger car was bro-ken, but from the par-ticular plan of the con-struction, the accident was entirely unknown to any of the passengers, or, in fact, to the conductor himself, un-til the train, (as was supposed from some circumstances attending the case,) had pass-cd several miles in advance of the place where the accident occurred, whereas had the car been constructed on the common plan the same kind of acci-

dent would unavoidably have much injured it, perhaps thrown the whole train off the track, and seriously injured, if not killed many of the passengers Wilmington, Del., Sept. 28, 1840.

The undersigned takes pleasure in attesting of the value of Mr. Joseph S. Kite's invention of the Safety Beam Axle and Hub for railroad cars. They have for some time been applied to passenger cars on this road, and experience has tested that they fully accomplish the object intended. Several instances of the fracture of axles have occurred, and in such the cars have uniformly run the whole distance with entire safety. Had not this invention been with entire safety. Had not this invention been used, serious accidents must have occurred.

In short, we consider Mr. Kite's invention as completely successful in securing the safety of property and lives in railroad travelling, and should be used on all railroads in the country.

JOHN FRAZER, Agent,
GEORGE CRAIG, Superintendant,
TA model of the above improvement is to be seen at the New Jersey railroad and transportation office, No. 1 Hanover st., N. York.

DATENT HAMMERED RAILROAD, SHIP and Boat Spikes. The Albany Iron and Nail Works have always on hand, of their own manufacture, a large assortment of Railroad, Ship and Boat Spikes, from 2 to 12 inches in length, and of any form of head. From the excellence of the material al-ways used in their manufacture, and their very general use for railroads and other purposes in this country, the manufacturers have no liestation in warranting them fully equal to the best spikes in market, both as to quality and appearance. All orders addressed to the subscriber at the works, will be promptly executed. JOHN F. WINSLOW, Agent.

Albany Iron and Nail Works, Troy, N. Y.

The above spikes may be had at factory prices, of Erastus Corning & Co., Albany; Hart & Merritt, New York; J. H. Whitney, do.; E. J. Etting, Philadelphia; Wm. E. Coffin & Co., Boston.

MACHINE WORKS OF ROGERS, KETCH-um & Grosvenor, Patterson, N. J. The un-dersigned receive orders for the following articles, manufactured by them of the most superior descrip-tion in every particular. Their works beingexten-sive and the number of hands employed being large, they are enabled to execute both large and small orders with promptness and despatch.
Railroad Work.

Locomotive steam engines and tenders; Driving and other locomotive wheels, axles, springs & flange tires; car wheels of cast iron, from a variety of pat-terns, and chills; car wheels of cast iron with wrought tires; axles of best American refined iron;

springs; boxes and bous for cars.
Cotton, Wool and Flax Machinery
of all descriptions and of the most improved patterns,

style and workmanship.

Mill gearing and Millwright work generally; hydraulic and other presses; press screws; callenders; lathes and tools of all kinds; iron and brass

castings of all descriptions.

ROGERS, KETCHUM & GROSVENOR,

a45 Paterson, N. J., or 60 Wall street, N. York:

PATENT RAILROAD, SHIP AND BOAT Spikes. The Troy Iron and Nail Factory keeps constantly for sale a very extensive assortment of Wrought Spikes and Nails, from 3 to 10 inches, wrought Spites and Tvairs, from a to 10 licines, manufactured by the subscriber's Patent Machinery, which after five years' successful operation, and now almost universal use in the United States (as well as England, where the subscriber obtained a patent) are found superior to any ever offcred in market.

are found superior to any ever offered in market.
Railroad companies may be supplied with Spikes having countersink heads suitable to holes in iron rails to any amount and on short notice. Almost all the railroads now in progress in the United States are fastened with Spikes made at the above named factory—for which purpose they are found invaluable, as their adhesion is more than double any common spikes made by the hammer.

All orders directed to the Agent, Troy, N. York, will be punctually attended to.

will be punctually attended to.

HENRY BURDEN, Agent.

HENRY BURDEN, Agent.

Spikes are kept for sale, at Factory Prices, by I.
& J. Townsend, Albany, and the principal Iron merchants in Albany and Troy; J. I. Brower, 222 Water St., New York; A. M. Jones, Philadelphia; T. Janviers, Baltimore; Degrand & Smith, Boston.

*A Railroad Companies would do well to forward their orders as early as practicable, as the subscriber is desirous of extending the manufacturing so as to keep pace with the daily increasing demand. ja45

Manufactured and for sale by
MORRIS, TASKER & MORRIS.
Warehouse S. E. Corner of Third & Walnut Streets, PHILADELPHIA.

TO IRON MASTERS.—FOR SALE.—MILL SITES in the immediate SITES in the immediate neighborhood of Bi-In the immediate neighborhood of infuminous Coal and Iron Ore, of the first quality, at
Ralston, Lyoming Co., Pa. This is the nearest
point to tide water where such coal and ore are
found together, and the communication is complete
with Philadelphia and Baltimore by canals and
railways. The interest on the cost of water power railways. The interest on the cost of water power and lot is all that will be required for many years; the coal will not cost more than \$1 to \$1 25 at the mill sites, without any trouble on the part of the manufacturer; rich iron ore may be laid down still more cheaply at the works; and, taken together, these sites offer remarkable advantages to practical manufacturers with small capital. For pamphlets manufacturers with small capital. For pamphlets, descriptive of the property, and further information, apply to Archibald McIntyre, Albany, to Archibald Robertson, Philadelphia, or to the undersigned, at No. 23 Chambers street, New York, where may be seen specimens of the coal and ore.

W. R. CASEY, Civil Engineer,

VALUABLE PROPERTY ON THE MILL Dam For Sale. A lot of land on Gravelly Point, so called, on the Mill Dam, in Roxbury, fronting on and east of Parker street, containing 68,497 square feet, with the following buildings thereon standing.

Main brick building, 120 feet long, by 46 ft wide, two stories high. A machine shop, 47x43 feet, with large engine, face, screw, and other lathes, suitable to do any kind of work.

Pattern shop, 35x32 feet, with lathes, work bench-

es, &c. Work shop, 86x35 feet, on the same floor with the

pattern shop.
Forge shop, 118 feet long by 44 feet wide on the ground floor, with two large water wheels, each 16 feet long, 9 it diameter, with all the gearing, shafts, drums, pulleys, &c., large and small trip hammers, turnaces, forges, rolling mill, with large balance wheel and a large blowing apparatus for the foundry.
Foundry, at end of main brick building, 60x454 feet two stories high, with a shed part 454x20 feet, containing a large air furnace, cupola, crane and corn oven. pattern shop.

corn oven

Store house-a range of buildings for storage, etc.,

200 feet long by 20 wide.

Locomotive shop, adjoining main building, fronting on Parker street, 54x25 feet.

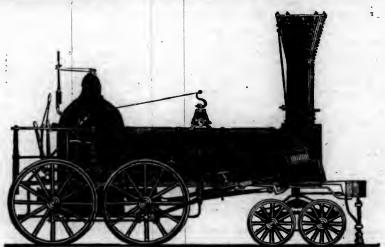

Also—A lot of land on the canal, west side of Parker st., containing 6000 feet, with the following buildings thereon standing:

Boiler house 50 feet long by 30 feet wide, two stories.

Blacksmith shop, 49 feet long by 20 feet wide.
For terms, apply to HENRY ANDREWS, 48
State st., or to CURTIS, LEAVENS & CO., 106
State st., Boston, or to A. & G. RALSTON & Co.,

NORRIS' LOCOMOTIVE WORKS

MANUFACTURE their Patent 6 Wheel Combined and 8 Wheel Locomotives of the following descriptions, viz:

Class 1, 15 inches Diameter of Cylinder, × 20 inches Stroke.

2, × 24 14 66 6: 66 66 \times 20 66 " 141 \times 20 6: 4. 66 " 46 66 121 66 44 46 20 66 66 5. 114 X 66 6, 101 \times 18

With Wheels of any dimensions, with their Patent Arrangement for Variable Expansion. Castings of all kinds made to order: and they call attention to their Chilled Wheels, for the Trucks of Locomotives, Tenders and Cars.

NORRIS, BROTHERS.

PANY-GENERAL MEETING.

(Concluded from page 229.)

prosperity of the company.

interest?

dertaking they had to borrow money at it.

The Chairman then formally moved that other railway in the kingdom. the report of the directors be approved and adopted.

Mr. John Shield, of Newcastle, then rose tainly not in accordance with the new system of ethics which the chairman had proto do that which would be most conducted to the duties which he had laid cive to its prosperity, and he submitted to the subject had been so prehend. As he had said, he proposed to lease the line. move a resolution as an amendment upon Mr. Oxley saw no more reason why be- grounds on which to discuss it. It appearthe chairman's motion that the report be adopt - cause they were offered 10 per cent. in per- ed that the worthy proprietors wished the ed. And his resolution was to this effect petuity at the present moment, when they meeting to pledge itself to accept a lease of That the meeting was of opinion that it paid only 6 per cent. they should give up would be for the interest of the shareholders of that which in the end, if they were true to the Great North of England railway company either to amalgamate with the New-lent to 250l. per share, be a great deal company, as men of business, which he castle and Darlington railway company upon more. They were well aware how that

Great North of England railway to some way so extremely valuable, and so great a company of undoubted stability, provided boon to the shareholders. Mr. Oxley said the directors had as yet not less than 10 per cent. in perpetuity upon Mr. Allhusen inquired whom Mr. Oxley found it almost impossible to close that ac. the total cost of the line shall be guaranteed was alluding to?

the main reason.

GREAT NORTH OF ENGLAND RAILWAY COM- terms of perfect equality, or to lease the honorble gentleman had made his own rail-

count. As the traffic was increasing so to the shareholders, such guarantee taking Mr. Oxley declined to name the party, largely, a large increase of means was recommencement from the 1st of January though he believed his allusion was pretty quired for conducting that traffic. The last past. He feared, from the principles algenerally understood. Having got hold of directors, for instance, had decided for the ready laid down, that the proposition of such a good traffic first of all, he worked steadily safety of the line that the coal traffic should a resolution would be fruitless. But the on until he made 10 per cent. spon the be managed upon a different principle; and gentlemen assembled around him would see outlay; and being thus enabled to bring his they had resolved to order betwen five and that if his motion were carried, every 100l. six hundred waggons of an expensive charshare would be worth 250l.; every 40l. acter, to hold five tons each, which when share would be worth 100l. and every 39l. per cent. too, either of themselves, or by got would cost between twenty five and thir. share would be worth 75%. These were the additional traffic they brought upon the ty thousand pounds, if not more. But the weighty arguments. It was for the share main line. In this way the Great North of company were fully aware that that outlay holders to balance them. All that he (Mr. would yield a large interest for the future purposes of the shareholders. That expen-perfect conviction, from his own knowledge not only 10 per cent. upon their original diture must come into the capital account; —for he should not have brought it forward capital, but, before many years were over, and while the directors were most anxious without good ground—that if the proposition to pay 10 per cent. upon double the amount. to keep it as low as they could, it was of the should be agreed to, this railway might either (Applause.) And he asked them whether utmost importance they should take such be amalgamated with the Newcastle and they would, under such circumstances, be measures as would add still further to the Darlington on terms of perfect equality, or willing to part with a concern which he held the line might be leased in perpetuity at the to have within it a mine of wealth. (Hear, Mr. Allhusen should like to know the rate of 10 per cent. upon its total cost. A hear.) As a proprietor himself, feeling an highest amount they paid in the shape of friend of his would second the motion, and interest in endeavouring to get the best reif they chose to adopt it, they might after- turn he could, he should be very sorry to Mr. Oxley observed that gentlemen were wards accept either alternative. It was for accept the present offer, tempting as it aware that in the first beginning of the un-them to choose which, and they might appear. There were many other dertaking they had to borrow money at it. nothing like so cheap a rate as it could be Mr. Allhusen, in rising to second Mr. they should not, particularly at this junc-borrowed now. They were at low water, Shield's motion, must say that he had the ture, entertain such an offer. When he and were glad to get large sums lent them same high feeling for the undertaking which looked to the south, he saw great thank railat 5 per cent., and that for a good number their worthy chairman had expressed. He of years. Their bonds, however, were believed the Great North of England line continually running out, and the amount was one of the most valuable in the king sanction of Parliament, could not fail to which they borrowed at 5 per cent. was gradually being reduced and replaced by thus, he knew, likewise, that a price was at-infinitely more important than at present. money borrowed at 3½ per cent. He was tached to every thing; and he considered If the working of the line were extravahappy in being able to tell the shareholders that that if they could secure 10 per cent. in gant, and if any saving could be effected when all the money now borrowed at 5, 4½, perpetuity, they would make a most excelby placing the working in other hands, then and 4 per cent. should have been paid off, lent sale of the line. and substituted by money borrowed at 31 Mr. Oldfield addressed the meeting at management were bad, and if leasing the per cent., there would be a saving to the great length, contending that the Great line would place it in a better position, it company of 5,000l. a.year—(applause)— North of England railway was a perfect would be desirable to take such an offer into which, they would observe, was one-half line—that its prospects had greatly improved consideration. reference to the density of the population-Mr. Allhusen said he was ready to forfeit the richness of the soil-and the flatness of mercial speculation, to any railway in Ircland. So far, our task is pleasant; but we must now reverse the picture, and notice some railway projects, which neither considered in themselves, nor in the manner in an offer would not be made to get it. capital, 400,0001.-37 miles long. The prospectus states that "it will pass through On the amendment being put, there were a very productive and populous country, nor that will be of greater public utility"-"that The dividend was declared payable on the traffic immediately available on the line the 25th of February, instead of the 4th is very considerable, and the levels of the country are favourable to the undertaking, the line can be constructed at moderate exwill prove highly remunerative to the share-

If shareholders can be found, which we doubt, to invest their money in this hopeful scheme, it would remunerate some one, but not those who subscribe for shares. We should like to see the sections, traffic tables, and engineer's report; does he pledge himself to the truth of the statements in the

A railway in this direction is not required; the country through which it is proposed is were the ethics of the worthy chairman that ited at present, to a description of those pro- mountainous, uncultivated, and very thinly they ought to remain independent, and re- jects in other parts of Ireland-the ma-populated. There is no trade or produce to be taken. It was quite plain, from the being able conscientiously to recommend to Any one who state thats a railway is possible speech of the chairman, that no offer would the notice of English capitalists, all the through the country described, at a reasona-Irish Railway schemes now before the publible expense, and that it would be likely to Mr. Baxter asked if that was the way in lic; for, we are satisfied that nothing would prove remunerative to the shareholders, must placed in the prospectus.

iron and coal field, the traffic on this line will, there is no engineering difficulty. in our opinion, be much greater than the projectors calculate. Let us now look to the west the line from Dublin to Cork, to be contern part of Ireland. The only railway ap- structed under the superintendence of the niscorthy, the villages of Stones and Gorey, proved of in this part of Ireland, is one to Irish Board of Works, (save the mark!) but and on by the coast to Kingstown and Dub-Galdway, through Athlone, starting from the Parliament very properly refused the job, lin. Bad as the others are this is worse, the Cashel line at Portarlington. The Dublin and left the field open to private enterprise. country poor and difficult to a degree, it and Mullingar line, with branches to Longford and Athlone, has been disapproved of; erick and Waterford stands next in importthis we cannot understand. The Great Wes- ance, and an important line it is without tern is rather a round to Galway, but it doubt; the portion from Limerick to Tiptakes in the important town of Athlone in perary will carry all the Dublin traffic, and its route, which is a sufficient justification there is no doubt but the produce of the infor the bend to that place; but, why the terior will be brought to Limerick by it for

Two other projects have just come outother has been disapproved of, we are at a shipment: the traffic to Waterford from loss to conjecture. We can well understand loss to conjecture. We can well understand Clonniel is at present very great, the land is why the branch from Mullingar to Athlone rich, populous, and well cultivated. We should be lopped off, but why the line to look on this as a very desirable investment. Longford should be, we cannot see the slight. The Cashel Company oppose this line strongest reason. By rejecting this to Longford, ly, or rather they wish to substitute a line of all hope of an extension to Sligo, a far more their own, going over the same ground, from important part than Galway, is lost, and the Tipperary to Limerick, and leaving the other towns of Carrick on Shannon and Boyle, portion alone; this is not quite fair—to se-for an extension from Athlone would be a lect the best paying portion, and leaving the directly competing line to the Shannon, on country without the other part, such policy which, as we before stated, the Government which, as we before stated, the Government as this will not answer; fair play must be have expended a large sum in rendering natheir motto, if they wish to succeed. What vigable, and they would be bound to oppose has become of the extraordinary pamphlet, the line thus competing.

By the present decision, if final, a district of country, from Westport to Balbriggan, the entire breadth of Ireland, and from for the present, but it is a good line and Enniskillen to Athlone, one quarter its easily made. length, is shut out from the benefits of railway communication, and this surely should not be. We hope that Parliament will reverse the decision of the Board of Trade, and allow the Dublin and Longford line to source of revenue, as will also be the paspass—minus the branch to Athlone. Neithsenger traffic, the country is very favorable

to New York, \$1 80.

The following are the rates of freight from Richmond and the Schuylkill to eastern ports: To Boston...... 1 87 to 2 00 To Portland. 98

To New York ....

to Cumberland, 178 miles, 25 cents per 100 lbs. of deeply concerned in the passage of the bill and the to by the directors of the lower route.

dize generally.

From Cumberland, by wagons, to Wheeling, 125

the Pennsylvania canals, the charges are for drygoods, \$1 121; groceries, 871 cents; coffee, 75 cents; cutlery, 871 cents; earthen and china ware the same, to Pittsburg.

#### ADVANCING BACKWARDS!

We find in the Baltimore American of the 11th inst, in the proceedings of the city council, the following, to wit: "Mr. Barnum submitted a resolution nd- requiring the railroad companies to take up the different tracks leading from the outer depots into the city, on or before the 1st day of March, 1846, and making every car or steam engine passing through the city after that time liable to a fine of \$20 for each and every offence;" which reminds us much of a certain long-eared animal that is sometimes seen exhibiting his superior sagacity by resisting the most conclusive arguments, and most cogent reasoning, which can be brought to bear upon him. We know nothing of Mr. Barnum, nor the motives which led to the canal collector at Cleveland, says: him to make such a proposition. We do, however, know that the true interests of Baltimore are to be promoted by a very different course from that proing notice of their proceedings, taken also from the American, of a previous day; from which it will be seen that the ordinance, allowing the engines to pass through the streets to the wharf, and thereby 179 reducing materially the expenses of transporting heavy freight-especially coal and iron.

The time will come when legislators, both municipal and State, will learn that the lesser must yield cial city, and of a whole community, must be sub- of the bill. ject to the fewest possible restraints-and in no city of the Union, with which we are acquainted, is this freedom from rexatious restraints, of more importance than in Baltimore. It has the elements of an extensive and prosperous business; yet, as it has to compete with the larger northern cities, it should be for transportation and travel.

There are few persons, probably, not familiar with such matters, who would form anything like a correct opinion of the expense of keeping up an establishment of horses, etc., for moving the cars from and to the outer depot of the Baltimore and Ohio railroad By the last report it was stated at over \$18,000; and for the current year it would probably amount to Portsmouth the fare will be \$1 75. near \$25,000-most of which would be saved if permitted to use locomotives to the termination. And upon this evidence that a policy more liberal than formerly has prevailed.

"The bill which passed the second branch of the city council on Monday evening, authorizing the Baltimore and Ohio railroad company to extend a branch of its road to a suitable point on the south

Correspondents will oblige us by sending in their coffee and manufactured tobacco; and 35 cents per important results which are likely to flow from its 100 lbs. for groceries, dry goods, and other merchan-dize generally concurrence of all branches of the corporation.

From Cumberland, by wagons, to Wheeling, 125 miles, 75 cents; and to Brownsville 50 cents, and thence to Pittsburgh 10 cents per 100 lbs.—thus reaching the Ohio river at Pittsburg 95 cents, and Wheeling for \$1 10 per 100 lbs.

By the Baltimore and Susquehanna railroad, and the Pennsylvania canals, the charges are for dry by a vote of 20 yeas to 5 nays. The bill now only by a vote of 20 yeas to 5 nays. The bill now only requires the signature of the mayor to become a law.."

We are surprised to find that the mayor has veloed the ordinance avove referred to. We trust however that it will be adopted, notwithstanding his veto.

ACKNOWLEDGEMENT .- We have received since our last the annual report of the managers of the Delaware and Hudson canal company, which will be found entire in our columns. Also the annual report of the president of the Madison and Indianapolis railroad company—to which we shall refer more particularly in a subsequent number.

We learn from the Painesville Telegraph' that the Cleaveland Herald, (a paper which we never see) says the northern section of the canal has been open since the 28th ult. A letter from R. Howe, Esq., resident engineer, dated Columbus, April 1st.

"The canal is now navigable as far south as Roscoe, and by the last of the week will be navigable as far as Dresden, Zanesville, etc. The lock rebuild-ing near Webbsport, and also those on the Scioto, posed by Mr. Barnum; and so think the council, of below Chilichothe, commonly known as Tomlin-which he is a member, as appears from the follow-son's locks, are to be completed by the 10th of April instant, about which time navigation will be open through to Portsmouth."

The Williamsport, (Md.) Banner, says the Baltimore Sun, from an authentic source learns that Col. Cole, the president of the Chesapeake and Ohio canal company, is now in New York making arrangements for the sale of the bonds, and that Gov. Pratt has expressed his determination to use what into the greater good—that the business of a commer. fluence he possesses for carrying out the provisions

> The New York canal board have resolved to make no change in the present rate of tolls, until the 1st of July next; on which day they will meet to adjust the tolls and transact other business.

We understand that the day line, over the allowed to avail of every possible advantage of a Long Island railroad, is to be run until further noliberal municipal policy in relation to its avenues tice on Mondays, Wednesdays and Fridays only, via Norwich and Worcester, and return from Boston to New York on alfernate days, at the usual hours.

> EASTERN RAILROAD.—The fares upon this road have been reduced as follows: To Lynn, 25 cents; to Salem, 40; to Marblchead and Beverly, 45; to Ipswich, 70 cents, and to Newburyport \$1. The season tickets are also proportionably reduced. To

The Providence, the Taunton and the New Bedford have also, we understand, announced a reducwe congratulate the company and the community tion in their fares, to take effect on the 1st day of May ensuing. The Salem papers announce that the fare between Salem and Boston has been reduced. The directors of the Eastern railroad are desirous to reduce the fare through the whole route to Portsmouth, but in consequence of an obligation existing  and Buffalo to reduce their fare, and to run night trains in winter; and also to appoint renew our own remonstrance against this constant interference with railroad companies, which have, by great exertions, combles them to accommodate the public -yet nagement and of its monopoly character. have by no means completed them.

REMONSTRANCE of the several railroad com. panies, on the line of railway from Albafor a reduction of their fare, the appointment of a commissioner, and compelling public. them to run in the night in the winter.

night at all seasons, etc.

invested in this line; the intimate connection that exists between a proper administraspective interests and comforts of those who travel upon it; and the indispensable requisites to such management; we trust that we ducting their business is calculated to bring great number of shareholders, in such prosites to such management; we trust that we shall be allowed to say, that there are very who have petitioned for legislative action in this matter.

Almost the whole civilized world is now planning of railways. They are destined to occupy most of the important avenues of travel through all countries. The influence which they exercise is much wider than a superficial glance would suggest. They exert an immense moral influence, and extend our acquaintance, our means of information and improvement, and our sympathies, with every step which they advance. No other mode of land transportation has yet been devised, combining speed, safety and capacity, bearing any comparison with the railway.

Very large capital is required for their construction; constant care for their successful operation; and as permanent a character in their structure as is attainable.

which either could conduct the business.

ment itself, and not to the form of manage. fits would follow. ment. We make these suggestions because

When we consider the amount of capital are distributed along the line of the respective sections, under there charge. We are practically prohibited from carrying freight except in the winter, which is instances except upon this line the privilege line, and generally higher. of carrying freight is not restricted, which forms an important element in railway pro. all that is valuable to the owner. If these shown such a rate would be unjust and unfits, we are in that respect concluded.

We have the active and strong competiin addition that of the lake Ontario and Os- perty is so far destroyed. wego route upon the western half of it. The very small amount of capital that is required to establish a business upon the canal, enables the owners of boats to fix a low price of fare, and accordingly a large proportion of those to whom time is not valuable, travel upon the canal.

It has been found useless to reduce our fare with the view to draw business from the canal, for the price is instantly reduced in a corresponding ratio there, and thus the large capital upon the railway is rendered unproductive, while a line of boats carrying freight with their passengers at low fare can do a successful business.

In winter the number of persons travelling by the railway is reduced to about one-fourth of the number in midsummer, notwithstanding which, by reason of the severity of our climate, and our heavy snows, our expenses are then equal to any other part of the year.

It will be found that none of the companies east of Attica have been able to divide over 8 per cent. for the last year. The Attica and Buffalo railroad company have made about 14 per cent., which results from the very small cost of that road. It was almost graded by nature; is free from bridges or any expensive structure, and upon less business affords more profit than any other part of the line. The experience and business well as first class passengers. of that company therefore form no criterion for the others upon the route. It has cost but about \$10,000 per mile, while all the tion of the passage fare upon the railways, others, except the Tonawanda considerably because the stockholders have relied upon we might fail. exceed \$20,000 per mile.

We have found that in order to keep the railways in suitable repair, the expenses are our business, because it will render us una mit that the manner in which the line is steadily increasing: that all the receipts ble to keep our railways up to the condition operated in winter through snow and storm, over 8 per cent. are required for such ex- necessary to do the business in safety, and has been such as to entitle it to commendapenses and necessary improvements. proper management will always appropriate it will deter us from attempting to make an very limited in winter; so much so that a the receipts beyond a reasonable remunera- iron track, and capitalists from furnishing single car daily each way upon a part of the tion to the stockholders, to the improvement the means necessary for that object. of the road; and an accumulation of a pecuniary surplus is out of the question .-Every company upon this line east of Attica the Hudson river, will not be just. is compelled to expend its whole receipt over 8 per cent. in the repairs and improvement bly for that object, we beg leave to say, that hazardous to run in the night than in the of its road and property.

The following table compiled from the reis the fourth cent per mile that mainly pays sary improvement remote and uncertain.

The terms of and perhaps their substantial character has the bill presented, would however interfere resulted from the legislation in respect to with our urrangements, and prevent our conthem, and from the fact that the proprietors tinuing to carry them. It would change are assured of stability in their business li-the practice of any difference in fare that mited only to a pecuniary profit of 10 per ct. there may be between through and way pas-In all the railroads in New Jersey, Penn. sengers. Indeed the effect of the bill could the most difficult part of the year in which sylvania and the southern States, the rates not be otherwise than embarrassing to us, to perform our business. While in all other of fare are believed to be fully equal to this and as we suppose that the object of the petitioners is to produce a uniform rate of three The tolls or receipts upon the railway, is cents per mile, if we have satisfactorily are inadequate the capital cannot be with favorable to us, we suppose that there will drawn, because it is then practically lost. If be little object in the bill which requires the tion of the canal upon the whole line, and therefore the receipts are impaired, the pro- fares for the year to be annually fixed on the 1st of February.

Another matter asked for by the petitionports of the present session, will show that it ers is the appointment of a commissioner to direct the operations of the line. We do the stockholders, and this cannot be taken not perceive what possible benefit could enfrom them without prostrating the value of sue to the public by such an appointment. their property now, and rendering its neces- What is such an officer to do? can he better control the operations of the companies than the directors, who have had experience, and who are interested in their success? Can he better direct as to the manner of running the roads, their repairs, the kind or capacity of engines, or how to overcome the many embarrassments incident to our business? Should his directions be contrary to the opinions of the directors, it would by no means be certain that he was right, or that his sug-gestions were prudent. Unless such an officer is sought for to advance the interest of some locality, we can see no reason for ask. ing his appointment, and if that is the reason, we feel assured that the measure is wrong.

> It has been objected that we stop over night in the winter, that we thus delay passengers and the mails. This again we feel assured is matter with which the petitioners are not fully acquainted and have not considered in all respects. So far as regards the mails, the arrangement is made with the full approbation of the postmaster general. He understands the severity of our winters, and he has said to us that it was better for the public to fix such an arrangement in winter as we could most probably perform, rather than to undertake to do that in which

We have considered this to be in all recharters, because it will be disasterous to spects the most proper course; and we subwith the expedition required; and because tion rather than opprobrium. The travel is line is sufficient. There is not travel enough We trust that we have already shown for more than one line. The route is so long in the day time.

We consider that it is at all times more we have for two years past carried emigrants day time. In the night the engineer cannot so well detect any failure in his machine as instead of politicians by trade, we should in the day time. Generally in winter it re- have seen a different state of things. quires two or more engines to overcome the These cannot so well be worked in unison in the night as in day time. In winter by reason of the cold, the liability of the engine of the axles and wheels to break is much greater than in summer. All these considerations make it very certain, we believe, that our course in not running in the night in the winter best consults the safety and comfort of passengers. We think that the great majority of travellers approve of it -and should it be found that a limited number residing a few miles beyond the point where the train stops, do feel inconvenience, and would prefer to go on, they should reflect, that an equal number may be put to the same, or indeed more difficulty, by being compelled to get up and travel in the night, because such persons desire to reach home before morning. We should very often run the hazard of being stopped in the night by snow, and it may well be questioned whether it would not be such an act of indiscretion to attempt to run all night in the winter, as to subject us to serious liabilities. As soon as the conditions of the tracks will justify us in running in the night, we uniformly the nett profits of the past year amount to commence in the spring. Under a full review of our course in this respect, we feel the clearest confidence, that it is judicious, and will be sustained by a reflecting and in-

We have presented in as brief terms as possible some of the very numerous objections which may be made to the several propositions in relation to this line of railway, which are pending before your honorable body. We feel confidence in thus pre-senting our views, and we trust that they will be found to be in harmony with those which may be entertained by the legislature.

DELAWARE AND HUDSON CANAL REPORT.

We have received the following statement and report in relation to the operations and conditions of this company, which we cheerfully give to the readers of the Journal. It affords us pleasure to publish such reports. They show what can be accomplished by enterprize and perseverance—even when serious obstacles are to be overcome, as in this case. There are many who recollect the period when this company had its dark days -but they are we feel assured, not again to be encountered while such men manage as we find in the annexed list.

Could our State works have been managed by such men from their commencement, Tons ......

To the Editor of the Raile. Journal: "SIR: Enclosed is a report of the Delaware and Hudson canal company, with a statement of the business for the year ending March 1, 1845.

"The capital of the Delaware and Hudson canal co. consists

the State of New York,

of 20,000 shares, of \$100 each \$2,000,000 Amount of debt guaranteed by 800,000

\$2,800,000

"The amount of profits for the year ending March 1, 1845, were \$250,948 36equal to 13 per cent on the capital stock. " Amount of dividends declared during

the year 1844-10 per cent. Yours, J. J. D. April 11, 1845.

REPORT, ETC.

In again meeting the stockholders, the managers are much gratified to be able to sabinit a statement of another year's business, showing continued and increased prosperity on the part of the company.

On reference to it, it will be found that \$258,948 36. Comment is unnecessary further than to say, that during the year coal was sold at unparalleled low prices, and that the demand greatly exceeded the ability

of the company to supply.

The canal, railroad and mines are all in excellent order for the prosecution of another year's business, and it will be resumed at the proper time with energy and spirit. The banking privileges granted to the company by special act, expired on the 19th of November last. For several years past it has not been deemed expedient or profitable to make any other use of them than to circulate the company's own bank paper, in its canal and coal payments. The board has not, therefore, thought it advisable to ask for a renewal of the privilege. The circulation is in the course of redemption, and the bu-Thos. Y. How, Jr.—Treas'r Auburn and siness is now simply that of a canal and coal company.

Although the price of coal still remains Heman J. Redfield-pres't Tonawanda rail- very low, the managers have entire confidence in the continued prosperity of the company; and as a special report in relation to its affairs is to be submitted to this meet. ing, they deem it unnecessary to enter into further details. By order of the board of JOHN WURTS, President. managers,

WABASH AND ERIE CANAL

We find in the Cincinnati Gazette of 3d inst. the following remarks in relation to the grant made by Congress of the public 22 lands, for the purpose of completing this important canal. We join earnestly in the 50 sound advice given, by the editor of the Gazette, to the people of Indiana; let them 42 proceed cautiously, devise the right plan. and then select honest men to carry it into successful operation.

"The appropriation of one half the unsold lands in the Vincennes District, Ia. by 22.547 Congress to complete this Canal excites a And well it may, for the grant is a large amount to about half a million of acres. in this country and Great Britain respect. one, and the work in itself grand. The first These, if properly husbanded, would fur ively, leaves no room for doubt as to the

ional grant, is not strange. It is right that immediately, as those appropriated for the less efficient than Mr. Morse's. The opethey should rejoice over it, and that we building of the Canal from Lafayette to Terre rator stands with an index before him, by should sympathise with them. For that Haute have been, and issuing Scrip upon which he is to guide his movements; and grant if rightly used may be made the them, we should be in favor of borrowing by means of a corresponding index at the means, in part, of reviving State credit, as enough money, (if it can be obtained,) to other end of the line, the characters or it should be made a means unquestionably complete the work; pledging not only the symbols are pointed out as the magnetic of State wealth. We say, if rightly used. lands but the tolls and water rents upon the influence operates. It is thus requisite that And surely there cannot be much doubt as Canal, and even the Canal itself, if necessal observers be always present at both ends to this. Indiana has suffered enough, we ry, for its repayment—and then push the work of the line, and if the observer is not watchall know, from improvident public managers to completion with all possible despatch.— ful, he may miss some of the information to make her prudent on this subject; to The value of the lands would be more than indicated by the telegraph. convince her that her public works should doubled, the moment the Canal should be be entrusted to honest, business men; to completed, and thus would the means of rein its construction. It works with facility

#### KITE'S PATENT SAFETY BEAM.

Safety

Safety

MESSRS, EDITORS.— As your Journal is devoted to the benefit of the public in general I feel desirous to communicate to you for publication the following circumstance of no inconsiderable importance, which occurred some few days since on the Philadel-phia, Wilmington and Baltimore railroad.

On the passage of the evening train of cars from Philadelphia to this city, an axle of our large 8 wheeled passenger car was bro-ken, but from the particular plan of the construction, the accident was entirely unknown to any of the passen-gers, or, in fact, to the conductor himself, until the train, (as was supposed from some circumstances attending the case,) had pass-ed several miles in advance of the place where the accident occurred, whereas had the car been constructed on the common plan the same kind of acci-

dent would unavoidably have much injured it, per-haps/thrown the whole train off the track, and seriously injured, if not killed many of the passengers.

Wilmington, Del., Sept. 28, 1840.

The undersigned takes pleasure in attesting of the value of Mr. Joseph S. Kite's invention of the Safety Beam Axle and Hub for railroad cars. They have for some time been applied to passenger cars on this road, and experience has tested that they fully accomplish the object intended. Several instances of the fracture of axles have occurred, and in such the cars have uniformly run the whole distance with entire safety. Had not this invention been

and lives in railroad travelling, and should be used on all railroads in the country.

JOHN FRAZER, Agent,

GEORGE CRAIG, Superintendant,

W. L. ASHMEAD, Agent. GEORGE CRAIG, Superintendant, W. L. ASHMEAD, Agent.

A model of the above improvement is to be seen at the New Jersey railroad and transportation office, No. 1 Hanover st., N. York.

युक्त with entire safety. Had not this invention been used, serious accidents must have occurred. In short, we consider Mr. Kite's invention as completely successful in securing the safety of property

Boston and Worcester railroad.

PATENT HAMMERED RAILROAD, SHIP and Boat Spikes. The Albany Iron and Nail Works have always on hand, of their own manufac-ture, a large assortment of Railroad, Ship and Boat Spikes, from 2 to 12 inches in length, and of any form of head. From the excellence of the material al-ways used in their manufacture, and their very gen-eral use for railroads and other purposes in this coun-try, the manufacturers have no hesitation in warranting them fully equal to the best spikes in market,

ing them fully equal to the best spikes in market, both as to quality and appearance. All orders addressed to the subscriber at the works, will be promptly executed. JOHN F. WINSLOW, Agent.

Albany Iron and Nail Works, Troy, N. Y.

The above spikes may be had at factory prices, of Erastus Corning & Co., Albany; Hart & Merritt, New York; J. H. Whitney, do.; E. J. Etting, Philadelphia; Wm. E. Coffin & Co., Boston.

ACHINE WORKS OF ROGERS, KETCH-MACHINE WORKS OF ROGERS, KETCH-um & Grosvenor, Patterson, N. J. The lun-dersigned receive orders for the following articles, manufactured by them of the most superior descrip-tion in every particular. Their works beingexten sive and the number of hands employed beinglarge, they are enabled to execute both large and small or-dess with promotors and despatch. ders with promptness and despatch.
Railroad Work.

Locomotive steam engines and tenders; Driving and other locomotive wheels, axles, springs & flange tires; car wheels of cast iron, from a variety of pat-terns, and chills; car wheels of cast iron with wrought tires; axles of best American refined iron; springs; boxes and bolts for cars.
Cotton, Wool and Flax Machiner

of all descriptions and of the most improved patterns,

with and workmanship.

Mill gearing and Millwright work generally; hydraulic and other presses; press screws; callenders; lathes and tools of all kinds; iron and brass

castings of all descriptions.

ROGERS, KETCHUM & GROSVENOR,
a45 Paterson, N. J., or 60 Wall street, N. York.

PATENT RAILROAD, SHIP AND BOAT Spikes. The Troy Iron and Nail Factory keeps constantly for sale a very extensive assortment of Wrought Spikes and Nails, from 3 to 10 inches, manufactured by the subscriber's Patent Machinery, which after five years' successful operation, and boy which after five years' successful operation, and boy which after five years' successful operation, and now almost universal use in the United States (as well as England, where the subscriber obtained a patent) are found superior to any ever offered in market.

Railroad companies may be supplied with Spikes having countersink heads suitable to holes in iron rails, to any amount and on short notice. Almost all the railroads now in progress in the United States are fastened with Spikes made at the above named factory—for which purpose they are found invalua-ble, as their adhesion is more than double any com-

mon spikes made by the hammer.
All orders directed to the Agent, Troy, N. York, will be punctually attended to.

Spikes are kept for sale, at Factory Prices, by I. & J. Townsend, Albany, and the principal fron merchants in Albany and Troy; J. I. Brower, 222 Water St., New York; A. M. Jones, Philadelphia; T. Janviers, Baltimore; Degrand & Smith, Boston.

* * Railroad Companies would do well to forward their orders as early as practicable.

their orders as early as practicable, as the subscriber is desirous of extending the manufacturing so as to keep pace with the daily increasing demand. a415

### FRENCH AND BAIRDS PATENT SPARK ARRESTER.

THOSE INTERESTED IN Railroads, Railroad Directors ARRESTER, recently patented by

Our improved Spark Arresters have been extensively used during the last year on both passenger and freight engines, and have been brought to such a state of perfection that no annoyance from sparks or dust from the chimney of engines on which they are used is experienced.

These Arresters are constructed on in entirely different principle from any neverbore offered to the public. The form is such that a rotary motion is imparted to the healed air, smoke and sparks passing through the chimney, and by the centrifugal force thus acquired by the sparks and dust they are separated from the smoke and steam, and thrown into an outer chamber of the chimney through openings near its top, from whence they fall by their, own gravity to the bottom of this chamber; the smoke and steam passing off at the top of the chimney, through a capacious and unobstructed passage, thus arresting the sparks without impairing the power of the engine by diminishing the draught or activity of the fire in the furnace.

These chimneys and arresters are simple, durable and neat in appearance. They are now in use on the following roads, to the managers and other officers of which we are at liberty to refer these who may desire to purchase or obtain further information in regard to their merits: The form is such that a rotary motion is imparted to the heated air,

A GOOD SECOND HAND LOCOMOTIVE TO RAILROAD COMPANIES AND MANER and Engine, 6 wheels, weighing with wood and water about 10 tons, with Tender complete, made by bers have for sale Am. and English bar iro, of all Baldwin, for sale by A. & G. RALSTON & CO.

Mar. 20, 1m. 4 South Front St., Philads phia.

Juniata rods; car axles, made of double refined iron; sheet and boiler iron, cut to pattern; tiers for locomotive engines, and other railroad carriage wheels, manufacturing Spring Steel from 14 to 6 inches the latter a very superior article. The tires are in width, and of any thickness required: large quanimade by Messrs. Baldwin & Whitney, locomotive tities are yearly furnished for railroad purposes, and engine manufacturers of this city. Orders addresswherever used, its quality has been approved of, sed to them, or to us, will be promptitude, at reasonable prices, and the with great promptitude, at reasonable prices, and the the order, a fit to those wheels is guaranteed, saving to the purchaser the expense of tuning them out inside.

Thomas & Edmund Grow, Agent, 1543

N. E. cor. 12th and Market sts., Philad., Pa.

THE NEWCASTLE MANUFACTURING
Company continue to furnish at the Works, situated in the town of Newcastle, Del., Locomotive and other steam engines, Jack screws Wrought iron work and Brass and Iron castings, of all kinds connected with Steamtpats, Railroads, etc.; Mill Gearing of every description; Cast wheels (chilled) of any pattern and size, with Axles fitted, also with wrought tires, Springs, Boxes and bolts for Cars; Driving and other wheels for Locomotives.

The works being on an extensive scale, all orders.

W. Mc. C. CUSHMAN. Civil Engineer.

The works being on an extensive scale, all orders will be executed with promptness and despatch.
Communications addressed to Mr. William H.
Dobbs, Superintendent, will meet with immediate attention.

ANDREW C. GRAY, ja45

President of the Newcastle Manuf. Co.

Allroad Iron and Locomotive Tyres imported to order and constantly on hand A. & G. RALSTON

Mar. 20tf 4 South Front St., Philadelphia.

HE NEWCASTLE MANUFACTURING Company continue to furnish at the Works, mated in the town of Newcastle, Del., Locomotive and other steam engines, Jack screws Wrought iron park and Brass and Iron castings, of all kinds contact the state of the park and Brass and Iron castings, of all kinds contact the park of the park and Brass and Iron castings, of all kinds contact the park of the park and Brass and Iron castings, of all kinds contact the park of the park their construction and operation; roads having in use flat bar rails are particularly interested, as such are permanently available by the plan.

W. Mc. C. CUSHMAN, Civil Engineer,

Albany, N. Y.

Mr. C. also announces that Railroads, and other works pertaining to the profession, may be constructed under his advice or personal supervision. Applicaitons must be post paid.

O RAILROAD COMPANIES AND BUILD T ERS OF MARINE AND LOCOMOTIVE ENGINES AND BOILERS.

#### PASCAL IRON WORKS.

#### WELDED WROUGHT IRON TUBES

From 4 inches to 1 in calibre and 2 to 12 feet long, capable of sustaining pressure from 400 to 2500 lbs. per square inch, with Stop Cocks, Tr. Ls. and other fixtures to suit, fitting together, with screw joints, suitable for STEAM, WATER, GAS, and for LOCOMOTIVE and other STEAM BOILER FLUES.

Manufactured and for sale by MORRIS, TASKER & MORRIS. Warehouse S. E. Corner of Third & Walnut Streets, PHILADELPHIA.

TO IRON MASTERS.—FOR SALE.—MILL SITES in the immediate neighborhood of Bituninous Coal and Iron Ore, of the first quality, at Ralston, Lyoning Co., Pa. This is the nearest point to tide water where such coal and ore are found together, and the communication is complete with Philadelphia and Baltimore by canals and railways. The interest on the cost of water power and lot is all that will be required for many verse. and lot is all that will be required for many years; the coal will not cost more than \$1 to \$1 25 at the mill sites, without any trouble on the part of the manufacturer; rich iron ore may be laid down still more cheaply at the works; and, taken together, these sites offer remarkable advantages to practical manufacturers with small capital. For pamphlets, manuacturers with small capital. For pamphies, descriptive of the property, and further information, apply to Archibald McIntyre, Albany, to Archibald Robertson, Philadelphia, or to the undersigned, at No. 23 Chambers street, New York, where may be seen specimens of the coal and ore.

W.-R. CASEY, Civil Engineer,

VALUABLE PROPERTY ON THE MILL

Dam For Sale. A lot of land on Gravelly
Point, so called, on the Mill Dam, in Roxbury,
frorting on and east of Parker street, containing
68,497 square feet, with the following buildings
thereon standing.

Main brick building, 120 feet long, by 46 ft wide,
two stories high. A machine shop, 47x43 feet, with
large engine, face, screw, and other lathes, suitable
to do any kind of work.

to do any kind of work.
Pattern shop, 35x32 feet, with lathes, work benches, &c.
Work shop, 86x35 feet, on the same floor with the

pattern shop.

Forge shop, 118 feet long by 41 feet wide on the ground floor, with two large water wheels, each 16 deet long, 9 ft diameter, with all the gearing, shafts, drums, pulleys, &c., large and small trip hammers, lurnaces, forges, rolling mill, with large balance

wheel and a large blowing apparatus for the foundry. Foundry, at end of main brick building, 60x451 teet two stories high, with a shed part 451x20 feet, containing a large air furnace, cupola, crane and corn oven.

Store house--a range of buildings for storage, etc.,

200 feet long by 20 wide.

Locomotive shop, adjoining main building, fronting on Parker street, 54x25 feet.

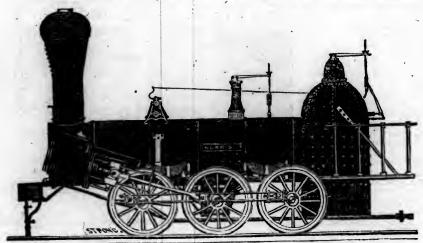

Also—A lot of land on the canal, west side of Parker st., containing 6000 feet, with the following

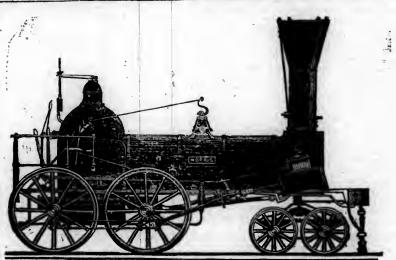

buildings thereon standing: Boiler house 50 feet long by 30 feet wide, two sto-

Blacksmith shop, 49 feet long by 20 feet wide.

Ulster, 124l.; York and North Midland, weight was 77 cwt. The engines employed 1,070.—From Mr. J. Will's Liverpool Share to drive this screw consisted of four cylinders, each \$8 inches in diameter, with six feet stroke, working with steam at 41 lbs. pressure, and cutting it off at one-sixththe length of the stroke. The connecting rods act directly in pairs upon crank pins, at either end of the main shaft, 17 feet long by 28 inches in diameter. Upon the main shaft is a toothed drum, 16 feet diameter, around which work four pitched chains, encircling also a lower drum, 6 feet in diameter, upon the propeller shaft. The chains work quietly and smoothly; and, when the engines are making 18 revolutions per minute, the speed being nearly 2.95 to 1, the screw makes about 53 revolutions per minute. A considerable portion of this shafting was 30 inches diameter, hollow, and formed of two courses of plates, three-fourths of an inch thick, rivetted tegether.

The slip of the screw was also discussed at length, and it appeared that in one trial (the engines making 182 revolution, the speed of the vessel being 121 knots) the speed of the vessel was as 907 to one of the screw. The details of the dimensions of the boilers were given, but owing to the seasickness of the stokers on the voyage, no account of the consumption of fuel could be given. The account of the trial trips in the British Channel, and of the voyage from Bristol to London, abounded in curious facts. It appeared that with the engines making 181 revolutions, the speed of the vessel would be 112 knots, and the slip of the screw 13 per cent.; even during the voyage round, with a heavy gale dead against her, she made upwards of 91 knots. The ship behaved remarkably well, steered well, and, although disadvantageously loaded, with no weight in her bottom, she rolled easily. In the heaviest weather the engines worked uniformly, and never made those variations in speed, which are observed in steamboats when the 17 ft.6 in. aft. Our limits will not permit us to paddle-wheels are alternately plunged deeply

In the conversation which ensued, and in year, as compared with the corresponding trated by numerous drawings and models to which Sir Charles Napier, Captain Hosken, will give, should the same ratio of increase of the water-tight bulkheads in preventing dangers from a leak in parative advantages of the paddles and the any one compartment, in case of fire, and screw were discussed. It was allowed, that £653,678 or over three millions of dollars. for tying and stiffening the vessel, were for sea-going steamers, the screw possessed Birmingham and Gloucester, 2,677l.; strongly insisted upon. The action of the great advantages, and particularly for war Chester and Birkenhead, 514l.; Eastern screw propeller was then fully treated, and steamers, the present construction of which Counties, 2,1731.; Edinburgh and Glasgow, from the tabulated result of the experiments, Sir Charles Napier condemned in toto. Few 1,934l.; Glasgow, Paisley, and Greenock, on several kinds of screws, it appeared, that, men have had more opportunities of forming 161l.; Glasgow, and Ayr, 1,597l.; Grand with the Archimedes the greatest velocity a more accurate opinion, as he has directed Junction, 51641.; Great North of England, of the vessel (which was 6.375 knots) was his attention to the subject for upwards of 1,932l.; Great Western, 16,117l; Liver attained with a screw 5 feet 9 inches in di- twenty years, having been interested in and pool and Manchester, 3,2451.; London and ameter, the angle of which was 193 degrees. commanded in her first voyage, in 1821, the Birmingham, 5,411l.; London and Brighton, speed of the versel to that of the screw, was versel that ever went to sea, and which conversely. London and Croydon, 1,214l.; as '787 to 1. Subsequent alterations in very data cargo from London to Paris direct, Manchester and Birmingham, 3,413l.; form gave improved results, and governed without transhipment. Capt. Hosken gave Manchester, Bolton, and Bury, 636l.; Manchester and Leeds, 5,043l.; Midland Rail. Britain. It was of wrought iron, with six as a weatherly ship, and of the screw as a way, 10,314l.; Newcastle and Carlisle, 1, arms, 15 feet 6 inches in diameter, with a means of propulsion at sea. The discussion 6331.; North Union, 2,8891.; Preston and pitch, or helix, of 25 feet to one revolution, was adjourned until next Tuesday, (March

#### AMERICAN RAILROAD JOURNAL.

PUBLISHED BY D. K. MINOR, 23 Chambers street, N.Y.

#### Thursday, April 21, 1845.

NEW YORK AND ALBANY RAILROAD.

The passage of the following very important resolution would seem to render the construction of a railroad hence to Albany almost certain. The complete failure of the Hudson and Mohawk railroad prevented the citizens of Albany from embarking in similar projects for some years, but the success of t heir efforts to aid the Western railroad has fortunately shown them that skill and character can succeed in undertakings far less promising than those which have turned out worthless where these attributes existed only in minute quantities. We have nothing definite as to the charters which are asked for by the rival companies.

Phelps, Pruyn, Ramsey, Spears and Wescott.
His hon the recorder offered the following resolution, which was unanimously adopted:
Whereas, an application is now pending before the legislature for an act to provide for the construction of a railroad from the city of New York to the city of Albany, on the east side of the Hudson river, And, whereas the establishment of such a com-

munication with the commercial metropolis of the State is, in the opinion of the board, highly desirable, and would tend greatly to promote the interests

and prosperity of Albany,
Resolved, therefore, that the common council of power towards the construction of said road, and for that purpose consent and agree to take on their part the like action, to extend aid to the same, by the loan of the credit of the city, in the same manner, and to the like extent and amount, as was heretofore done in relation to the Albany and West Stockbridge railroad. A true extract from the minutes.

J. H. H. PARSONS, Clerk Com. Coun.

#### RAILROAD IRON.

The Portland Advertiser shrewdly observes that, by the time they want their iron, say a year or two hence, the price will be considerably lower than at present. We perceive by our late railway journals, that purchases and orders are to the smallest possible extent in England, and, when we consider that the average price two years ago was £8, and that it is now reported at £14 per ton, it is pretty clear that railway system in the United States. We are sorry to say that we rely on competition in England; for the American iron-masters appear to consider railderstood from pretty good authority that not a bar of while the other will pass through the chief towns,

Correspondents will oblige us by sending in their T rail has yet been rolled in the three great anthra-viz: Chatham and London on the Thames, Wood-mmunications by Monday morning at latest.

T rail has yet been rolled in the three great anthra-viz: Chatham and London on the Thames, Wood-stock, Oxford, Brantford, Hamilton and St. Cathammunications by Monday morning at latest.

informant could not ascertain that even flat bars had rine's to Queenston."—[Detroit Journal.] been rolled in the "iron region" of the United States! The exorbitant price at this moment effectually deters any new undertakings, as a reaction is naturally expected; but those works which for the last year or two have been holding out such large promises, might have shown us something, for we have not heard of a single mile of railway of American T rail which is traversed by the locomotive. In judging of the price hereafter, it must be remembered, An act to revive certain provisions of the act incortant the consumption of iron is increasing from a porating the Great Western railway company, variety of causes, and that the extreme low prices of 1844 are almost as unlikely as they are certainly undesirable. In the course of twelve months we hope that rails may be quoted at £8 per ton, a fair price in 1835, and a profitable one now. As we observed some time since, the high price of railroad iron will be severely felt by our western friends in Ohio, Michigan, and Indiana, and by the agricultural interest generally, for that first of all pursuits has more to expect from the extension of the railway system than from any other course, to raise it from the depressed condition in which it lies.

#### ZINC MINES OF NEW JERSEY.

Mr. Francis Alger, of South Boston, a gentleman well known for his devotion to the study of mineralogy, has published a small pamphlet on the zinc mines of Franklin, Sussex county, N. Jersey. This district has long been famous among geologists, and now bids fair to become as interesting to the manufacturer. These beds extend about four miles, and are supposed to contain "the only deposite of oxide

At a meeting of the common council of the city of Albany, held at the city hall in said city, on the 13th day of April, 1815: present the mayor and recorder, aldermen Archer, Bleecker, Coley, Goold, Haswell, Hanson, McCollom, McKnight, Penuy, Phelps Pruyn, Ramsey, Spears and Wescott. bed visibly exposed at Sterling is more than 600 ft.; its depth we will assume to be 100 ft., which will be as deep as it can be conveniently drained. Its average width cannot be less than 4 It. Now, 000 x 4 x to admit 100 = 240,000 cubic feet of ore, each of which contains 170 lbs. of red oxide. Again, 240,000 x 170 = 40,800,000 lbs. of red oxide, which, vielding 81 per ct. of pure metal, gives of it, 33,048,000 lbs. This, multiplied by 6 cents, the average market value of zinc, will give \$1,982,889—the value of zinc within the limits mentioned. Nature has provided every limit the limits mentioned. Nature has provided every limit to call advantage that could be wished for the easy circus and the contained to the co this city, in case of the passage of the act aforesaid, local advantage that could be wished for the easy will afford all the facilities and assistance in their exploration of the mines; and embracing every expense preparatory to the reduction of the ore, including its reduction also, it is pretty well ascertained that the metal may be obtained in the large way at a cost not exceeding three cents per pound. Here, then, there would be a clear profit, deducting the cost of buildings, and the expenses of transportation to market, of nearly \$1,000,000. If we suppose the quantity of ore consumed daily to be ten tons, (a small estimate) only five years will be required to work up the ore contained in the space mentioned."

#### " CANADIAN RAILROAD.

"We are happy to learn by a correspondence in the "Chatham Gleaner," that the subject of con-structing a railroad from Windsor, opposite this city, to the Niagara river, is again being agitated in the province. There can be no doubt that this work making a connecting link between our Central rail-road and the New York and Massachusetts roads, and thus forming an almost unbroken chain from competition in England will remove this veto on the Boston to Chicago-would yield a profitable and increasing revenue.

road iron as unworthy their notice. We have un-

Here we have two charters, where one road is almost too much to be expected, even with perfect harmony and unity of action in the leading men of that entire section of the province.

The following acts were passed during the late session of the Canadian legislature:

An act to incorporate the St. Lawrence and Atlantic railroad company.

and to enable them to carry on that work

An act to amend an act passed in the sixth year of the reign of his late majesty king William the fourth, entitled, An act to incorporate the city of Toronto and lake Huron railroad company.

We are under obligation to J. E. Bloomfield, Esq., for Mr. Morrison's report on "a reduction of fare and the appointment of a railroad commis-

The report takes decided ground against both, and from many of the remarks we are glad to perceive that our legislators are becoming better acquainted with the subject of public works, properly so called, and begin to comprehend the vast difference between works to facilitate the intercommunication of our citizens and works to extort money in the shape of taxes, or by other equally disagreeable means as the state monopoly of western freight.

We are obliged to defer our remarks on the Central railroad, but will endeavor to give them and the report of the president in the next number. In this number we give the report of the engineer nearly entire.

We tender our thanks to the Hon John A. Dix, of the U. S. senate, for valuable congressional

The bill releasing the Erie railroad company from the State lien of three millions, on certain conditions, has just passed.

The legislature of Pennsylvania has refused rage width cannot be less than 4 ft. Now, 600 x 4 x to admit the Erie railroad within the borders of that

MESSRS. EDITORS.--As your Journal is devoted to the benefit of the public in general I feel desirous to communicate to you for publication the following circumstance of no inconsiderable importance; which occurred some few days since on the Philadel-phia, Wilmington and Baltimore railroad.

On the passage of the evening train of cars from Philadelphia to this city, an axle of our large 8 wheeled passenger car was bro-ken, but from the particular plan of the construction, the accident was entirely unknown to any of the passen-gers, or, in fact, to the conductor himself, until the train, (as was supposed from some circumstances attending the case,) had passed several miles in advance of the place where the accident occurred, whereas had the car been constructed on the common plan the same kind of acci-

dent would unavoidably have much injured it, per-haps thrown the whole train off the track, and seriously injured, if not killed many of the passengers.

Wilmington, Del., Sept. 28, 1840.

The undersigned takes pleasure in attesting of the value of Mr. Joseph S. Kite's invention of the Safety Beam Axle and Hub for railroad cars. They have for some time been applied to passenger cars on this road, and experience has tested that they fully accomplish the object intended. Saverally fully on this road, and experience has tested that they fuly accomplish the object intended. Several instances of the fracture of axles have occurred, and in
such the cars have uniformly run the whole distance
with entire safety. Had not this invention been
used, serious accidents must have occurred.
In short, we consider Mr. Kite's invention as completely successful in securing the safety of property
and lives in railroad travelling, and should be used on all railroads in the country.

DATENT HAMMERED RAILROAD, SHIP and Boat Spikes. The Albany Iron and Nail Works have always on hand, of their own manufacture, a large assortment of Railroad, Ship and Boat Spikes, from 2 to 12 inches in length, and of any form of head. From the excellence of the material al-ways used in their manufacture, and their very general use for railroads and other purposes in this country, the manufacturers have no hesitation in warranting them fully equal to the best spikes in market,

ing them fully equal to the best spikes in market, both as to quality and appearance. All orders addressed to the subscriber at the works, will be promptly executed. JOHN F. WINSLOW, Agent.

Albany Iron and Nail Works, Troy, N. Y.
The above spikes may be had at factory prices, of Erastus Corning & Co., Albany; Hart & Merritt, New York; J. H. Whitney, do.; E. J. Etting, Philadelphia; Wm. E. Coffin & Co., Boston.

MACHINE WORKS OF ROGERS, KETCH-um & Grosvenor, Patterson, N. J. The un-dersigned receive orders for the following articles, manufactured by them of the most superior descrip-tion in every particular. Their works being axien sive and the number of hands employed being large, they are enabled to execute both large and small orders with promptness and despatch.
Railroad Work.

Locomotive steam engines and tenders; Driving and other locomotive wheels, axles, springs & dauge tires; car wheels of cast iron, from a variety of pat-terns, and chills; car wheels of cast iron with wrought tires; axies of best American refined iron; springs: boxes and bolts for cars.
Cotton, Wool and Flax Machinery

of all descriptions and of the most improved patterns,

Mill gearing and Millwright work generally, hydraulic and other presses; press screws; callenders; lathes and tools of all kinds; iron and brass castings of all descriptions.

ROGERS, KETCHUM & GROSYENOR, a45 Paterson, N. J., or 60 Wall street, N. York.

PATENT RAILROAD, SHIP AND BOAT Spikes. The Troy Iron and Nail Factory keeps constantly for sale a very extensive assortment of Wrought Spikes and Nails, from 3 to 10 inches, manufactured by the subscriber's Patent A achinery, which after five years' successful operation, and now almost universal use in the United States (as well as England, where the subscriber obtained a patent) are found superior to any ever offered in market.

Railroad companies may be supplied with Spikes having countersink heads suitable to holes in iron rails, to any amount and on short notice. Almost rails, to any anicont and off short notice. Almost all the railroads now in progress in the United States are fastened with Spikes made at the above named factory—for which purpose they are found invaluable, as their adhesion is more than double any common spikes made by the hammer.

### FRENCH AND BAIRD'S PATENT SPARK ARRESTER.

TO THOSE INTERESTED IN Railroads, Railroad Directors ted to examine an improved SPARK

Our improved Spark Arresters have been extensively used during the last year on both passenger and freight engines, and have been brought to such a state of perfection that no an-novance from sparks or dust from the

chimney of engines on which they are used is experienced.

These Arresters are constructed on an entirely different principle from any necetotore offered to the public. The form is such that a rotary motion is imparted to the smoke and sparks passing through the chimney, and by the centrifugal force thus acquired by the sparks and dust they are separated from he smoke and steam, and thrown into an outer chamber of the chimney through openings near its top, from whence they fall by their own gravity to the bottom of this chamber; the smoke and steam passing off at the top of the chimney, through a capacious and unobstructed passage, thus arresting the sparks without impairing the power of the engine by diminishing the draught or activity of the fire in the furnace.

Orders for these Chimneys and Arresters, addressed to the subscribers, or to Messes. Baldwin & Whitney, of this city, will be promptly executed.

N. B.—The subscribers will dispose of single rights, or rights for one or more States, on reasona-

ble terms Philadelphia, Pr., April 6, 1814. ** The letters in the figures refer to the article given in the Journal of June, 1844.

A GOOD SECOND HAND LOCOMOTIVE Engine, 6 wheels, weighing with wood and water about 10 tons, with Tender complete Baldwin, for sale by A. & G. RALSTON & CO. Mar. 20, 1m. 4 South Front St., Philadelphia. The Subscriber is engaged in manufacturing Spring. Steel from 1½ to 6 inches the latter a very superior article. The tires are in width, and of any thickness required: large quantities are yearly furnished for railroad purposes, and wherever used, its quality has been approved of. Sed to them, or to us, will be properly executed. The establishment being large, can execute orders with great promptitude, at reasonable prices, and the the order, a fit to floose wheels is guaranteed. Saving quality warranted. Address

NORRIS, BROTHERS.

ald, what appeared to us the somewhat sinalthough this point is disputed by Judge
gular advertisement of certain Boston capreble and Mr. Poor—at least as good aupitalists, in which the people of Canada are
thorities as Mr. Fairbanks—but is it not
informed that "for various reasons"—upon
much more much and will it not,
America find their market?—where are the the nature of which the advertisers were consequently, require a much larger capital to construct a railroad through the formulation and provisions consumptive constructs and Atlantic Railroad) route, so called, is not the one calculated to promote the interests of the Canadas." After stating features of the Maine route are as peculia few of the "various reasons," why we arly favorable as those by Concord are the rican fishing and lumbering establishments begged humbly to differ from our disinterested advisers, and held that the "Portland land is little over 100 miles from our fron- tisfy the most careless observer that Portroute, so called," was the identical line of tier, while Boston is more than double that land possesses a combination of advantages interest, we added, that, we were, neverthe of the traffic must, before reaching the At-less, perfectly open to conviction, and that lantic seaboard by the latter route, traverse finitely superior to those offered by Boston whatever the opponents of that route upwards of 100 miles further than by the or any other of the Atlantic ports. would condescend to mention the nature of former, we ask, even Mr. Fairbanks, whetheir "various reasons," we, on our part, ther he means to say, that the mere local were ready to give them every attentive and traffic upon the route he advocates will, respectful consideration. Whether in consequence of our certainly not unreasonable or freight, pay the interest upon the capital rence—it being little over 100 miles from request or not, we cannot say, but we find expended in constructing upwards of 100 our frontier line, while Boston is nearly 230 miles of railroad, (certainly not less than miles from it. This advantage is further dated St. Johnsbury, Vt., and signed "Erastus Fairbanks," in which the writer comes ing. difficult and mountainous country? If tween that line and Portland, it having been to the assistance of the Boston advertisers, it will not, our Canadian traffic must help ascertained to be singularly well adapted for and states his "various reasons" in favor of in doing so; in short, unless there be a reather a railroad, and offering, from the head waster to be charged the concord and Fitchburgh, and sonable prospect that the rates to be charged ters of the Connecticut river, an easy course against that via Portland. This letter will ed on the route by Concord to Boston, will to the Atlantic, uninterrupted by highlands, be found in another column, and to it we be less than one half those to be charged and consequently, requiring a comparatively

that they are based upon two positions, and remarks, however, apply merely to the questumed, and which they have hitherto retwo only. First, that the country through tion of the relative advantages which Can. ceived via the Eric Canal and New-York. which the Concord and Fitchburgh line adian travel and traffic would derive from will pass, is more wealthy and more densely the existence of a railroad connecting the inhabited than the district of Maine, which St. Lawrence with the Atlantic seaboard, cess that pilots are not required, perfectly the Portland route will traverse; and, con-supsosing it to be a matter of no conse-safe and sheltered when attained, and rarely sequently, that the mere local traffic will be quence whether the southern terminus of if ever obstructed by ice in the winter. Its greater and more profitable by the first than the line was at Boston or at Portland; but geographical position is also most favorable by the second route. And, secondly, that this is by no means the case, for, independent for British trade, and, the railroad connectas that portion of the route now constructed dent of the shortness of the line, and the ing it with Montreal once made, Portland from Boston to Concord has paid so well, there is every prospect that its extension hold that "various" and good "reasons" British Royal Mail Steam Packets, its hartothe province line would be proportionately profitable, from the internal trade of the munication with Portland would be more rior to that of Boston, and it being, in the country through which it passes alone, with advantageous to Canada than with Boston, actual distance of the voyage, some 30 or

fying us that the construction of a railroad extent of foreign trade and travel using the from Portland to our Province line, there to line. It is, and most justly calculated, that be connected with one from Montreal, would by the construction of a railroad connect. not be equally so to the stockholders, and ing the waters of the St. Lawrence with infinitely more advantageous to the com- those of the Atlantic, Canada would not the Portland route runs, is one of the nost merce of Canada. It may be as Mr. Fair-banks states, that the country traversed by the line of road he advocates is comparative-country, which she now possesses, but that

PORTLAND AND MONTREAL RAILROAD. | ly wealthier and more fertile than that be her carrying trade would, in consequence. We noticed, in a late number of the Her-tween Portland and the Canadian frontier—be incalculably increased, and Montreal

road best calculated to promote Canadian distance, and that, consequently, our share which render it peculiarly adapted to the

would beg to direct the attention of the reader; for, while we consider Mr. Fairbanks' arguments extremely inconclusive, we do not mean to say that they are unworthy of consideration.

The proportion of the reader that through Maine to Portland, it must small expenditure upon its construction, and be evident, that, for this "reason" alone, proportionately moderate rates of charge for its use when completed. Then, Portland route so called," is the one calculated to promote the interests of the Canadas. We, of course, argue in the be-Having, then, perused Mr. Fairbanks' lief that the one line of railroad is just as blishments, among which an enormous reasons," we think the reader will grant certain to be constructed as the other. These amount of western produce is annually concountry through which it passes alone, without reference to what may be called the
Foreign traffic, that "the stock will consequently be all taken," and the work will be
constructed without delay.

Now, if Mr. Fairbanks' positions be
correct, they certainly go to prove that a
gradual extension of the Boston and Conthus secured, still no one contemplates that

and Rhode Island, and unquestionably of tages upon them and their children—not of Boston. Of this we entertain not the equal value in an agricultural point of view, only opening up their country and facilihaving by far the most extensive lumbering tating their internal communications, but der the vast and enduring advantages this tonnage. Now, the people of the State of mereial emporia in North America. When- and other branch of business connected with Maine have, in so far as they can do, pledged ever we are satisfied that, from whatever it, and its environs. This question, which blind indeed if they fail to see the great ad. not until then .- Montreal Herald. vantages its completion must confer upon them-advantages altogether independent of the mere profit received upon the capital invested in the work, although that, we doubt not, will be fairly remunerative.

These are a few of our reasons for presuming to differ from Mr. Fairbanks and those who insist that, "the Portland route, so called, is not the one calculated to promote the interests of the Canadas." the contrary, we think it emineutly calculated to promote our interests: 1st, on account of its comparative shortness; 2d, on account of the natural facilities existing for its construction; 3d, on account of its terminating in the very centre of the most extensive market for the produce of the west; in particular. In conclusion, we would beg the attention of the friends and opponents of the Portland line to the following extract from the Buffalo Commercial Advertiser.-Fas est et ab hoste doceri-let us not despise the opinions of our rivals.

"It will be seen by the following that the project of constructing a railroad from the St. Lawrence, at Montreal, to the Atlantic, at Portland, goes on swimmingly. The route is so feasible, and the road will so certainly pay, that, notwithstanding the magnitude of the undertaking, we have no doubt it will be rapidly pushed on to com- this all important railroad, seems to be this: pletion. For all articles of western product, whether exportable or consumed in the New

communication with the Atlantic. We cannot, however, permit ourselves to doubt the structure as far as the line of Massachuleaving a balance laid out in the construction of the people setts. And hence, it only remains for the tion of the road of \$10,037 80. A dividend

of it, than ever heretofore. In July, when It has been a subject of deep regret to the the receipts were lowest, they averaged \$82 was finished with a good T rail, and about Company, that on the 28th of March, last, per day; in November and December, for near seven weeks, they rose to \$200, but for a large portion of the year, they have ranged

from \$100 to \$130 per day.

Exclusive of the road repairs, done by contract, for which a preference is given, where practicable, the other expenses for officers, clerks, machinists, mechanics, persons are constantly employed. As a good deal of valuable work is continually being added to the machinery, cars, buildings, &c., it is not easy to state the precise amount, which should be charged to the expenditures. The horse power used on the plane and the transhipment of all freights at the hill depot, must make the expenditures appear large for the business done. An efficient change in this respect will, it is hoped, in time be effected. By the tabular statement annexed. it will be seen that the way passengers during the year amounted to 8,359, the through passengers 6,236, receipts from them \$14. 910 80. The freight transported was about 11,486 tons; the charges for freight \$25,-362 68, being an increase over last year, of 3,149 passengers, 3,556 tons of freight, and \$18,211 67 in tolls. As the average extension of the road the ensuing year, will rather exceed that of the last, the receipts will probably not fall short of \$50,000.

That until July last, the road did not reach a convenient point for taking freight. that the mode of transportation is new and has not yet superseded other modes along the line, that the motive power of the Company did not permit them to take all the freight offered, and that they cannot yet afford to reduce the rates as they will, when they have more facilities for doing business, are sufficient reasons for the present limited When the road business and receipts. reaches Indianapolis, which contains near 5,000 in abitants, and is the centre of a re-There will be when ties or strings are sawn from old trees gion not surpassed in the Union for combinabout \$50,000 of debts, principal and interest to be paid within a year, for a portion of which, temporary loans must be made. AMERICAN RAILROAD JOURNAL.

PUBLISHED BY D. K. MINOR, 23 Chambers street, N.Y.

Thursday, May 1, 1845.

In our last we gave the remaining portion of Col. Gadsden's report on the South Carolina company. It contains a variety of details, and of practical information, which will be perused with interest.

The article at the beginning of this number from the Montreal Herald, puts the railroad thence to to be opposed by the Worcester road, in every possi-Portland in more favorable light than any article ble shape, and by all legal means. The rates of fare which has fallen under our notice. We found it in fixed by the commissioners, and agreed upon by the which has fallen under our notice. We found it in which has fallen under our notice. We found it in the Portland Advertiser, which paper very properly gave it without comment. Even the engineering advantages are given better than in any of the numerous documents we have seen, not excepting the report of the engineers. We observed in the Jourreport of the engineers. We observed in the Journal of the 27th March, "the first question is, which route is best for Montreal?" and it will be seen that view pervades the Herald's remarks. The construction of a railroad from Saratoga to Whitehall will give a communication by steam between Montreal and New York and Boston during the season of business, and as the Portland route must compete with these formidable rivals, it cannot afford to lose any advantage it possesses-the saving in distance being immensely the greatest. This advantage is of course appreciated to some extent by all, but it would occupy some space, and require some days' unremitting attention to discuss it thoroughly. If the through business be very great, it will be difficult to overrate its effects in competing with the route via Boston or the St. Lawrence.

Our Vermont exchanges generally are full of railroad matters, and we hope the Green Mountain State will not much longer form one of the two or three States without a single railroad-an unenviable distinction in our eyes.

The Newburyport Herald well remarks that the Bostonians seem to be stretching their arms all over the country. A year ago or more they obtained control of the Reading railroad, one of the most costly and unprofitable, but at the same time useful roads in the country. It cost, if we remember rightly, not far from ten millions of dollars, runs directly to the coal mines of Pennsylvania, and by the facility of transportation which it offers, has cheapened the price of coal nearly two dollars per ton, from what it would have cost without this road. Yet the stockholders of the road have never received any dividend, owing to the heavy debt incurred, and the stock had sunk to about nineteen dollars per share. The Bostonians have not yet got a dividend; but they will a year or two hence, as the receipts are continually increasing. Now the capitalists and brokers of Boston have taken hold of another of the bankrupt southern railroads—that from Wilmington to Weldon. This very firm. Cargo sales of white ash Schuylkill Total...

perfectly straight, yet it has been so miserably managed that, though the receipts are \$300,000 a year, it has never paid a dividend—the expenses swallowing up the receipts. This is the case with all the roads in the southern country: for, although they are cheaply constructed, and the travel is great, they are badly managed, and the transportation is not sufficient to indemnify their proprietors. The Bostonians have now taken hold of the stock, and have sent on a committee to investigate matters, so that probably in a few years they will make it a profitable road.

WESTERN AND WORCESTER RAILROAD. In the western and worcester Railroad.—In the supreme judicial court, on Monday, a petition was presented by R. Fletcher, Esq., on behalf of the Western railroad, praying the court to appoint three commissioners to settle the rate of fare for passengers and freight, to be paid by the Western road to the Worcester, in accordance with the act of the legislature passed in March lest gislature, passed in March last.

An order of notice was directed to be issued, to be

served on the president of the Worcester road—and publication to be made in the Daily Advertiser, re-

turnable in thirty days.

It is understood that the prayer of this petition is

commissioners, who, after a hearing of the parties, should fix a tariff of prices.

The right of the legislature to pass the act in question, and several grave and serious questions of law involving the rights of the Worcester corporation, will be raised, which bid fair to keep the matter from final action for some time.-[Atlas.]

CENTRAL RAILROAD.

The reports of the president and engineer of the Central railroad, published in the Savannah papers, give a very full and satisfactory exposition of the affairs of the company, so much so, that had we space and time. we should be glad to publish them entire.-We were prepared for a very favorable account of the business of the last season, as the results of our own observation, for we have frequently had occasion to notice the system and regularity with which the extensive and increasing business of the road has been conducted, and the ability and faithfulness exhibited by each and all of its officers. But we have been most agreeably surprised with the very favorable results which these two reports of the president and engineer have developed. We were not prepared for the very prosperous state of affairs that has been exhibited to us, and it must be gratifying not merely to stockholders, but to the public at large, to learn that the revenue of the company has exceeded the expectations of the most sanguine friends, and its expenses fallen short of the very liberal estimate made by the engineer.

We are constrained to curtail these very interesting but elaborate reports, and condense them into synopsis, which we will endeavor to make as intelligible to our readers as possible, with a regard to succinctness.

The earnings of the road in cash, ending the 3d December, 1844, was \$337,857 79. The whole expense of repairs of road and machinery, etc., for the same period, was \$147,719 52, leaving the net receipts, \$180,-138 27. The amount received from other sources during the same period, was \$127,-854 59-making a total of receipts from all sources, for the year ending 3d December, 1844, of \$455,212 38. The whole expenditures for the same period, comprising road expenses, bank expenses, deposites, law expenses, road bonds, etc., amount to \$415,. 658 15—leaving a balance on hand 3d December, 1844, of \$39,554 23.

The condition of the company on the 7th of April, was as follows: Total liabilities, including those of the bank and road of every kind, \$696,948 91. Resources, independent of the road, depots, machinery and appurtenances, \$270,168 18-of which \$58,339 45 is allowed for depreciation and bad debts, leaving a total of assets of \$205,-386 45. The road with its fixtures, are estimated at cost, viz: \$2,653,202 01. The business of the road is progressing beyond The earnings of the all expectations. months of December, January, February and March, amount to \$142,337 92, exceeding the earnings of the same months last year, \$29,753 53. Placing the net receipts of the road at \$200,000 per annum, for the next three years following December, 1845, which is a low estimate, the president calculates that by the 1st of December, 1848, the company will be free of debt, and the stockholders will own a road unencumbered and which will yield them at least 10 per ct per annum.

During the past year, the stock of the

dollars per share to fifty, and the bonds from seventy-five cents on the dollar, to par .-The bank notes are promptly redeemed on presentation, and are bankable in all the banks of the city.

The condition of the road is much improved, and is as good now as ever it was.

For a business of \$450,000 per annum, which the engineer considers a reasonable estimate, the whole expense of operating the road, would not exceed \$200,000.

The annual deterioration of the railroad iron is fixed at 5 per cent.

The above is a very imperiect synopsis of these very interesting reports. The operations of the company have in every respect exceeded expectation, and must be very satisfactory to the stockholders, affording them a positive assurance of the ultimate (and at no distant day) profitableness of the work, and that although for a time their investments have been unproductive, they will very soon realize a remunerating return.

It is a proper occasion to speak of the claims of the managers and officers of this road to public favor and confidence. We have no hesitancy in saying that their duty has been discharged with fidelity, and with an eye single to the interest of the company and stockholders. All the money has been made that could have been, and none has been expended uselessly or unnecessarily. Very few accidents have occurred, the property of the road has not been injured by the carelessness or ignorance of its servants; the transits of the passenger and freight trains have been regular and uninterrupted, and a system of method and order has prevailed in every department. The president, R. R. Cuyler, Esq., has proved himself a capable and efficient officer. His position at first was an embarrassing one, for he was elected to succeed a master spirit, one whose place it was difficult to fill in any community. But he has sustained himself most worthily-agreeably disappointing those who were disposed to disparage him, and fully realizing the expectations of these who knew and could appreciate his merits. The engineer, L. O. Reynolds, Esq., is identical with the entire work, as a faithful, vigilant and competent officer; and the agents generally, (and we believe we know them all,) for their application to business, and accommodating and gentlemanly deportment, are deserving of the support of their employers, and the favor of the public. This much we are bound to say, as the sentiments of those who are interested in the Central railroad at this end of the route.

setts railways is pretty well known, but few sylvania have quailed. here are aware that next in order come South consideration—the objects aimed at, and the ing been at first rejected in that country,

company has risen in market, from twenty means of the projectors. It is very easy with unlimited means, to build a railroad which shall carry passengers comfortably, but when capital is scarce, and the total trade of the country by no means great, it becomes very difficult to decide, firstly, whether the trade will warrant a railway, and, secondly, whether the means can be procured. After these two questions are answered in the affirmative, there are other considerations, secondary, it is true, but still very important, as the kind of road, the precise nature and extent of the accommodation required, etc. Nothing appears more simple and natural than this view of the case, vet. it is very certain that it was never thought of in the majority of works in the Union. But in the "Central railroad," it has been kept constantly in view, and this work furnishes an excellent illustration of what a correspondent, a few years since called the "adaptation of expenditure to income," "that great principle without which engineering is unworthy to rank as a liberal profession." No less than 190 miles have been put in successful operation by the expenditure of \$2,581,723; and making all reasonable allowances for the easy nature of the gound, it must be admitted that it forms a striking, if not mortifying contrast, with many of our works, both public and private. For example, the Chenango canal, the Mohawk and Hudson railroad, the Genesee valley canal, the Long Island and Harlem railroads, in which the great principle above alluded to has been wholly overlooked. The entire road is in excellent order, as we learn from a friend who lately passed over it, and who was particularly struck with that quiet order and regularity which result from the calm enforcement of a correct system of The width of track is five feet discipline. on all the southern roads. We believe this guage was introduced there by our townsman, Horatio Allen, Esq., C. E., now of the firm of Stillman, Allen & Co., of the Novelty Works, one of our largest engineering establishments. Many of our machinists think this the best width, and it certainly appears to have been much liked in the south, where, all things considered, the railway is pretty well established in the public favor, and where it has succeeded under cir-We take the above from the Macon (Ga.) cumstances more difficult than those before Messenger. The reduced rate of insurance on the larger class of vessels and their cargoes, which will necessarily lts friends are confident that it will be good and will last for many years, until the inpass through the Cornwall and Beauharnois as well as the Lachine Canal—downward—and thereby for. We have already stated the Norwich rize the erection of iron railroads. It is avoid all risk from the rapids-will no doubt very nearly counterbalance the advantages possessed by the smaller craft.

Connecticut Valley Railroad.-It will be strange if, among all the plans which have been suggested, there should not soon be a scribed, and in Lancaster and Groton, about railroad from the Atlantic to Montreal .-One route suggested is to extend the Springfield and Northampton road up the Connecticut Valley to the Canada line. The Windstructed through that village. sor, Vt., papers state that efforts are makenterprise.

vertiser.

Memoranda .- On the 31st January, the Lake was first closed by ice off this place; on the 15th February, the ice broke up, and from the 22d vessels might have arrived and departed at any time from this port westwardly; on the 9th March, the S. B. St. Clair, from Cleveland, first boat down, came into this port, thence to Cattaragus; on the 12th, the S. B. United States, first boat out of Buffalo, pushed out through the ice on the Canada shore, and since that date no boat has been able to leave Buffalo until this morning, April 3d, when the Lexington with much difficulty succeeded in crowding through several miles of ice, and reached this place at 4 this afternoon.

It may now be said that navigation is open to Buffalo for steamboats. Sail vessels will be compelled to hold on a few days longer .- Dunkirk Beacon.

We learn from the Keene Sentinel that New Hampshire. The subscription in the town of Keene had reached \$158,000, and \$300,000 of the 600,000 required, the Sentinel affirms, would be secured last week.

The advantages anticipated from it about \$3500 per mile. are, that it will form a shorter communi positive information in regard to it. In very costly, and where there is little toll, Worcester only \$75,000 have been sub. the road will not pay the interest. \$100,000 more. The subscriptions in the latter place, however, as we have already

the estimate of Mr. Paine, for a long time tive safety fuse. - Mining Journal.

Hartford and New Haven Railroad .- the agent, and always largely interested in None was claimed from Beaver, we suppose for the same reason.

The business of this railroad has received a new impulse since its extension from Hart who history, was from fifteen to twenty per ford to Springfield, and its connection with day, including way passengers. It is now seems that the New York regulations not the Western Railroad. The receipts upon 145,000 a year—equal to 464 per day. only encourage their own productions in this way, but go beyond into an exclusive policy, ed to \$16,675, against \$7,340 in March best known, best managed, and longest established stage routes of the whole country. Ploughman.

> Railroad in the Valley of the Connecticut. It appears by the Windsor, Vt., papers that a determined effort is now making to extend the Valley Railroad northerly, as far as White River, in Hartford, Vt., immediately, with a view of stretching northward to the Canada line, and Montreal, at no distant day. Meetings have been lately held at Charlestown, N. H. and Windsor, Vt., and other places, to take the usual preliminary measures to move along with this great and important enterprise.

Plank Roads. A very successful report on Plank Roads has been made by Mr. Whittlesey, agent for the citizens of Ohio, on the utility and feasibility of Plank Roads from an inspection of those already established in Canada. In that territory they have in successful operation a road from Port Stanley to London, 26 miles, which strong expectations are entertained that the has been built one or two years. A road Fitchburg Railroad will be carried through from Hamilton to Port Dover, on Lake Eric, 371 miles of which are in operation. East from Toronto there is a road of 10 miles, planked, which has been 11 years in use. Roads are already graded, and a number are about being made, all leading directly Worcester and Nashua Railroad -This towards our Lakes, the country being genecontemplated road extends from Nashua, rally level. The cost of grading, ditching, through Groton and Lancaster, to Worces. and timber for these plank roads averages

As to durability, it was ascertained that cation from the terminus of the Western the plank, after two years wear with sand, Railroad, and also of the Norwich Railroad had worn only one quarter of an inch; the at Worcester, to the great manufacturing grit sand penetrates the wood and forms a towns on the Merrimac; that nearly all the hard coating; the surface wear is not as interior of New Hampshire will more readily great as the wear by rot. About twenty receive by it their flour, and such other ar. dollars per mile will be required the first ticles as are obtained by the way of the year in repairs. The motion is very easy, Western road; and that manufactured goods and eight miles an hour is a fair average from the Merrimac will more easily find with a light buggy. In heavily timbered their way by it to New York, Albany, &c. countries these roads can be cheaply made, road had concluded to take \$400,000 of the only a temporary and economical substitute stock, which they are authorized to do. We -for the true and permanent method, it is believe such is the case; but we have no not to be denied, is the iron one; but it is

OHIO COAL TRACK.

Office of the Board of Public Works, Columbus, O., April 12, 1845.

GENTLEMEN :- The Board has received, and had under consideration, a petition signed by many of the most respectable business men and citizens of Cleveland, praying for a reduction of the present Tolls on mineral coal, and on boats used in trans. Board would remark, that, although it may the annual product of iron in the world :porting the same. The principal reasons be true that such additional shipments have urged in said petition, appears to be that coal cannot be brought to Cleveland at sufficiently low rates to compete, in the Lake follow as a matter of course that a still fur. gium, 145,867; Germanie, Customs Union, market, with coal delivered at Erie by the ther reduction will yet more increase the 127,538; Sweden, 72,772; Austrian Mon-Pennsylvania Eric Canal, unless the toll on aggregate of tolls; on the contrary, it is archy, 59,100; Spain, 12,500; Sardinia, the Ohio Canal is reduced, the toll on the easy to perceive that a point may be reach- 12,250; Poland, 9,200; Germany, not in Eric Canal being merely nominal. From ed, below which any further reduction of Customs Union, 7,175; Tuscany, Norway, the best information at hand, it appears tolls would be highly impolitic. that the coal field of the Penn. Erie Canal may be considered as lying between Green- ject, and in view of the known advantages Portugal, 420. ville and Sharon, the former being 62½ miles, which Cleveland possesses over Erie in point and the latter 88½ miles from Erie, giving of location and facility of approach for vesan average distance of 76 miles from Erie sels and steamboats, the Board are inclined iron in the civilized world; the United to coal of good quality. The toll on the to think that a further reduction of the toll States stands next to Great Britain, and Penn. Erie Canal is 13 mills per 1,000 lbs. on coal is not necessary to enable Cleveland France next. The United States produce per mile; on the Ohio Canal it is 3 mills per 1,000 lbs. per mile for the first twenty would therefore respectfully decline making miles, and then one mill per mile; -on both any modification of the rates of toll on coal the canals the toll on boats is 2 cents per at this time. By the Board, mile. By reference to the Collectors returns, it will be found that of the 540,000 bushels of coal received at Cleveland during To Messrs J. BLAIR, EDW. CLARK, & the past year, 510,000 bushels were cleared at Akron, showing that it came from the mines near Tallmadge and Clinton; and the remaining 30,000 bushels came from the iron companies are preparing to enter into ja45 Trenton mines and was cleared at Dover, extensive business in Alleghany county. A short computation will show that the toll The Mount Savage Company is pushing on a cargo of 1,000 bushels coal from Greenville to Erie, a distance of 621 miles, will chinery and taking large contracts for ore be \$9,19, and from Sharon to Erie, 881 with a view of starting another furnace. miles, \$12,85. -On the Ohio Canal the toll The Baxton and New York Canal and Iron on a like cargo of 1,000 bushels from Clin. Company are preparing to expend a million will be found to be \$8,52; showing a diffe. on a large business in the coal and iron in use, preventing their running off the track. It is rence in favor of Clinton over Greenville of trade. The Mineral Mining Company are rence in favor of Clinton over Greenville of trade. The Mineral Mining Company are 67 cents per 1,000 bushels. Now, it is true that all the coal delivered at Cleveland is not shipped at Clinton, yet it is true that seventeen-eighteenths of the receipts of last year were from points paying no more toll more extensive, and are referred to with the control of the safety seventeen about Cumberland are likewise becoming the construction and operation, requiring company are only two Castings and two Rails; the latter, even if much worn or used, not objectionable.

Working Models of the Safety Switch may be seen at Messrs. Davenport and Bridges, Cambridge-port, Mass., and at the office of the Railroad Journal, New York. year were from points paying no more toll more extensive, and are referred to with than Clinton, and some of them much less. pride. - Alleghanian. If we make the calculation for Trenton, we shall find that the toll on a similar cargo Extract of a letter from S. H. Kneass, Esq., from that point to Cleveland, a distance of 103 miles, is \$14,13. This, it must be admitted, shows a difference of \$1,28 per 1,000 tracted with George M. Totten to make the bushels in favor of Sharon over Trenton: yet the Board are of opinion that this small difference of but little more than a cent for difference of but little more than a cent for tract. They complain that they are placed or circumference to which they wish the Tiere difference of but little more than a cent for every 10 bushels, is more than counterbal-anced by the increased facilities for navigation offered by the Ohio Canal. It is believed that the depth of water afforded by the depth of water afforded by the Penn. Eric Canal, will be no more than After a close application of the soil of the straight Axles, for Outside Connection Engines; the Penn Eric Canal, will be no more than After a close application of their powers to Wro't. Iron Engine and Truck Frames; Railroad Straight Axles, for Outside Connection Engines.

toll on coal, is the belief that a former Indeed, it was impossible for the party to

KITE'S PATENT SAFETY BEAM.

M ESSRS. EDITORS.— As your Journal is devoted to the bene-fit of the public in gen-eral I feel desirous to communicate to you for publication the following circumstance of no inconsiderable of no inconsiderable importance, which oc-curred some few days since on the Philadel-phia, Wilmington and Baltimore railroad.

On the passage of the evening train of cars from Philadelphia to this city, an axle of our large 8 wheeled passenger car was bro-ken, but from the parficular plan of the con-struction, the accident was entirely unknown to any of the passengers, or, in fact, to the conductor himself, until the train, (as was supposed from some circumstances attending the case,) had passed several miles in advance of the place where the accident occurred, whereas had the car been constructed on the common plan the same kind of acci-

dent would unavoidably have much injured it, perhaps thrown the whole train off the track, and seriously injured, if not killed many of the passengers.

Wilmington, Del., Sept. 28, 1840.

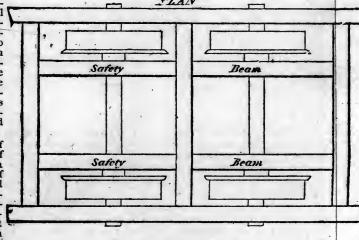

Wimington, Del., Sept. 28, 1840.

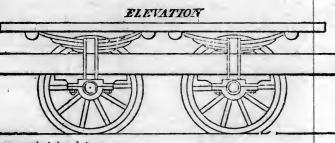

The undersigned takes pleasure in attesting of the value of Mr. Joseph S. Kite's invention of the Safety Beam Axle and Hub for railroad cars. They have for some time been applied to passenger cars on this road, and experience has tested that they fully accomplish the object intended. Several instances of the fracture of axles have occurred, and in such the cars have uniformly run the whole distance with entire safety. Had not this invention been used, serious accidents must have occurred.

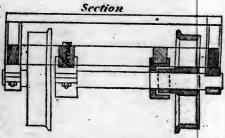

In short, we consider Mr. Kite's invention as complete!

In short, we consider Mr. Kite's invention as completely successful in securing the safety of property

JOHN FRAZER, Agent,
GEORGE CRAIG, Superintendant,
JA model of the above improvement is to be seen at the New Jersey railroad and transportation ja45

W. R. CASEY, CIVIL ENGINEER, NO. 23 Chambers street, New York, will make surveys, estimates of cost and reports for railways, ca-nals, roads, docks, wharves, dams and bridges of every description, with plans and specifications. He will also act as agent for the sale or purchase of machinery, and of patent rights for improvements relating to public works.

S AMUEL NOTT, CIVIL ENGINEER, SURveyor and General Agent, Bangor, Me. Railroads, Common Roads, Canal, Factory and Mill Sites Towns, Farms, Wild Land, etc., surveyed. Plans and Estimates for Buildings, Bridges, etc., prepared, and all appertaining business executed.

DATENT HAMMERED RAILROAD, SHIP and Boat Spikes. The Albany Iron and Nail Works have always on hand, of their own manufacture, a large assortment of Railroad, Ship and Eoat Spikes, from 2 to 12 inches in length, and of any form of head. From the excellence of the material al-ways used in their manufacture, and their very general use for railroads and other purposes in this country, the manufacturers have no hesitation in warranting them fully equal to the best spikes in market, both as to quality and appearance. All orders addressed to the subscriber at the works, will be promptly executed.

JOHN F. WINSLOW, Agent.

Albany Iron and Nail Works, Troy, N. Y.

The above spikes may be had at factory prices, of Erastus Corning & Co., Albany; Hart & Merritt, New York; J. H. Whitney, do.; E. J. Etting, Philadelphia; Wm. E. Coffin & Co., Boston.

MACHINE WORKS OF ROGERS, KETCH-um & Grosvenor, Patterson, N. J. The un-dersigned receive orders for the following articles, manufactured by them of the most superior description in every particular. Their works beingextensive and the number of hands employed beinglarge, they are enabled to execute both large and small or-

PATENT RAILBOAD, SHIP AND BOAT Spikes. The Troy Iron and Nail Factory keeps constantly for sale a very extensive assortment of Wrought Spikes and Nails, from 3 to 10 inches, manufactured by the subscriber's Patent Machinery, which after five years' successful operation, and now almost universal use in the United States (as well as England, where the subscriber obtained a patent) are found superior to any ever offered in market.

Railroad companies may be supplied with Spikes having countersink heads suitable to holes in iron rails, to any amount and on short notice. Almost all the railroads now in progress in the United States are fastened with Spikes made at the above named factory—for which purpose they are found invalua-ble, as their adhesion is more than double any common spikes made by the hammer.

All orders directed to the Agent, Troy, N. York,

All orders directed to the Agent, Troy, N. York, will be punctually attended to,

HENRY BURDEN, Agent.

Spikes are kept for sale, at Factory Prices, by I & J. Townsend, Albany, and the principal Iron mer chants in Albany and Troy; J. I. Brower, 222 Water St., New York; A. M. Jones, Philadelphia; T. Janviers, Baltimore; Degrand & Smith, Boston.

* Railroad Companies would do well to forward their orders as early as practicable as the authoristics.

their orders as early as practicable, as the subscriber is desirous of extending the manufacturing so as to ja45 keep pace with the daily increasing demand. ja45

FRENCH AND BAIRD'S PATENT SPARK ARRESTER.

70 THOSE INTERESTED IN ARRESTER, recently patented by

Our improved Spark Arresters have been extensively used during the last year on both passenger and freight engines, and have been brought to such a state of perfection that no an-noyance from sparks or dust from the chimney of engines on which they are

used is experienced.

These Arresters are constructed on an entirely different principle from any here ofore onered to the paone. The form is such that a rotary motion is imparted to the heated air, smoke and sparks passing through the chinney, and by the centrifugal force thus acquired by the sparks and dust they are separated from the smoke and steam, and thrown into an outer chamber of the chinney

Mar. 20, Im. 4 South Front St., Philadelphia. Juniata rods; car axles, made of double refined fron; sheet and boiler iron, cut to pattern; tiers for loco-sheet and boiler iron, cut to pattern; tiers for loco-sheet and carriage wheels, motive engines, and other railroad carriage wheels, in manufacturing Spring Steel from 1½ to 5 inches the latter a very superior article. The tires are in width, and of any thickness required: large quantities are yearly furnished for railroad purposes, and wherever used, its quality has been approved of, sed to then, or to us, will be promptly executed. The establishment being large, can execute orders with great promptitude, at reasonable prices and the understanding the promptive executed. When the exact diameter of the which is stated in the order, a fit to those wheels is guaranteed, saving to the purchaser the expense of tuning them out inside.

JOAN F. WINSLOW, Agen', 15a3 Albany Iron and Nail Works, Troy, N. Y. 15a45 N. F. cor. 12th and Market sts., Philad. Pa.

THE NEWCASTLE MANUFACTURING

THE NEW CASTLE MAN OF ACTUMING
Company continue to furnish at the Works,
situated in the town of Newcastle, Del., Locomotive
and other steam engines, Jack screws, Wrought iron
work and Brass and Iron castings, of all kinds connected with Steamboats, Railroads, etc.; Mill Gearing of every description; Cast wheels (chilled) of
any pattern and size with Ayles fitted also with any pattern and size, with Axles fitted, also with wrought tires, Springs, Boxes and bolts for Cars; Driving and other wheels for Locomotives.

The works being on an extensive scale, all orders will be executed with promptness and despatch.

Communications addressed to Mr. William H.

Dobbs, Superintendent, will meet with immediate attention.

ANDREW C. GRAY, President of the Newcastle Manuf. Co.

CUSHMAN'S COMPOUND IRON RAILS

tet. The Subscriber having made importat improvements in the construction of rails, mode n guarding against accidents from insecure joints, etc.

respectfully offers to dispose of Company, State Rights, etc., under the privileges of letters patent to Railroad Componies, Iron Founders, and others interested in the works to which the same relate. Companies reconstructing their tracks now have an opportunity of improving their roads on terms very advantageous to the varied interests connected with their construction and operation; roads having in Tenson Manufacture as Agents of Mr. George Crane, of Wales, having obtained a patent in the United States for his process of smelting Iron Ore with Anarctic coal, and holding an assignment of the patent to obtained by the late Rev. F. W. Geissenhainer, are prepared to grant licenses for the manufacture of Iron according to Mr. Crane's principle.

A. & G. RALSTON & CO., ja45

WELDED WROUGHT IRON TUBES

From 4 inches to 1 in calibre and 2 to capable of sustaining pressure from 40 per square inch, with Biop Cocks, other fixtures to suit, fitting together, joints, suitable for SFEAM, WATER, LOCOMOTIVE and other STEAM BO

nufactured and for sale by MORRIS, TASKER & MORRIS. Warehouse S. E. Corner of Third & Wajnut Streets PHILADELPHIA.

TO IRON MASTERS.—FOR SALE.—MILL SITES in the immediate neighborhood of Bituminous Coal and Iron Ore, of the first quality, at Ralston, Lyoming Co., Pa. This is the nearest point to tide water where such coal and ore are found together, and the communication is complete with Philadelphia and Baltimore by canals and railways. The interest on the cost of water power and lot is all that will be required for many years; the coal will not cost more than \$1 to \$1.25 at the mill sites, without any trouble on the part of the manufacturer; rich iron ore may be laid down still manufacturer; rich iron ore may be laid down still more cheaply at the works; and, taken together, these sites offer remarkable advantages to practical manufacturers with small capital. For pamphlets, descriptive of the property, and further information, apply to Archibald McIntyre, Albany, to Archibald Robertson, Philadelphia, or to the undersigned, at No. 23 Chambers street, New York, where may be seen specimens of the coal and ore.

The ascending Messrs. Davenport & Bridges. It reads

We have thus presented a brief outline of one of the best and safest investments of the

LEHIGH CANAL AND LEHIGH AND SUSQUE-HANNA RAILROAD TRANSPORTATION.

We have been informed that much difficulty has arisen for want of a connection between the transportation lines upon the frame of a railroad carriage with side truss Lehigh canal and those upon the Lehigh and frames united with diagonal braces, as this Susquehanna railroa t. And that goods destined for Mauch Chunk from Wilkesbarre king these frames of iron, or other metal; must be accompanied by an agent to insure but what I do claim as my invention, is matheir delivery at this place, otherwise they king the trusses of the truck frame that are are left at White Haven without being for-warded. This line is becoming of much twisted diagonal plates, of arch plates, and importance, much of the produce used here tie bars, so arranged and bolted together as and in the vicinity, being brought from the to embrace and secure the pedestals as devalley of the Susquehanna. If we have scribed, by which arrangement I obtain the been correctly informed the present arrangement cannot be too severely condemned; if weight, and employ the pedestals for the our informant is mistaken we hope those in double purpose of holding the boxes of the terested will correct us. If the transporta- wheel axles, and connecting the tie bars of tion companies think an advertisement in the trusses."

Possessing these advantages, and others the Gazette is unnecessary, or that they are

We find the above in the Carbon County Gazette. It shows how little some people understand their true interest, and the ralue of advertising. We admire the liberality of to this course, in self-defence, to avoid being himself made what is sometimes called a "standing advertisement." It reminds us of the modest and reasonable requests, not unfrequently made of us, to furnish a written description, giving the length, grades, curves, cost, etc., etc., of all the railroads in the United States-or that we will furnish the inquirer with a single number of the Journal containing all this information for six cents! and it has occurred that we have received such a request from an entire stranger, by mail, when the letter was charged with postage!! Perhaps the editor of the Gazette rather than not oblige them!

IMPROVED TRUCK FRAME FOR RAILROAD CARS.

We find in the Journal of the Franklin Institute, for April, the following specification in relation to the Iron Truck Frame of thus, viz :-

The connections between the pedestals of this truck frame, instead of being made by means of solid pieces of timber extending from one pedestal to another on each side, are, by means of two tie plates of iron bolted. together through the pedestals, one being above and the other below; above the upper tie plate, and extending from one pedestal to the other, there is an arch plate connected with the pedestals by the same bolts that secure the tie plates. The two truss frames are connected together by means of diagonal iron plates bolted to the pedestals, and so twisted and connected in the middle as to form the opening for the king-bolt that secures the truck and car together.

Claim-" I do not claim making the truck has been known before, nor do I claim maMAGNETIC TELEGRAPH ACROSS THE ATLANTIC.

we cannot speak from actual knowledge, needful to be known in these parts." and should be glad of information on the subject. The plan suggested for establish if he did not print a sheet every other week ed, and as large as a pipe stem, from Nova Great Britain." Scotia to the coast of Ireland. This, as is thought, may be accomplished by winding the wire upon reels, and arranging it on board a steamer so as to be reeled off as fast as the boat goes, and dropped the whole width of the Atlantic. The writer says:

"Its gravity would sink it to the depth where water was so dense as to be of equal telegraphic communication with Europegravity, and of course beyond the reach of a difficult question, truly, to answer-not any kind of collision. Beginning and ending upon a bold shore, beyond the reach of anchors, it would be out of harm's way, and exposed to but two kinds of accidents, viz: from separation by its own weight, and the loss of the coating with which the metal must be protected. The steamer Gt. Britain would carry more wire of this size than would extend to Europe, and its cost I think would be less than a million of dollars."

Surprising as it may seem, when its results are considered, this is not a chimerical idea. It may be realized at no distant day And then we shall receive news from Eu rope in a breath of time, and as fresh as the lightning's flash. We may stop our press to announce an event which occurred but a few seconds before on the other side of the water. Nor will this be much more marvellous than the changes which have been wrought by the aid of science, within the past century, as well in the transmission of intelligence from the other continent, as in the facilities for spreading it through the cities and villages of our own country. Now we are impatient if the steamer is delayed beyond twelve or thirteen days on the voy. age from Liverpool; and in four and twenty hours after her arrival the intelligence she brings has become old news in every village within a hundred miles of Boston.

A little more than a hundred years ago, the Boston News Letter, the first newspaper published in Boston, was printed on a half sheet of pot paper, once a week. In August, 1719, the publisher of the News Letter gave process of constructing has been simplified the following notice:

"The undertaker of this News Letter in January last gave information that after

A writer in the New York Tribune sug- printed every other week a whole sheet; gests a plan for bringing Old England with- whereby that which seemed old in the forin speaking distance of us, by means of mer half sheet, becomes new now by the whether it is the invention of some other five months; so that by the sheet we have individual; our impression is, that a scienti- retrieved about eight months since January ence of thin cream." fic gentleman of this city, not Prof. Morse, last, and any one that has the News Letter

Afterwards the publisher gave notice that

"Thirteen months behind with the foreign news!" What would the news mongers of 1845 say to such a catastrophe?

We copy the above article from the Tra veller. We have more than once been ask ed how long it will be before there will be a more difficult enterprize, however, than many which have been accomplished within the past half century.

> For the Railroad Journal. TELEGRAPHS.

The recent improvements in the construction of Telescopes will render more perfect the system of visual telegraphs, and may lessen perhaps materially the superiority of the magnetic telegraph. The improvements to which we particularly allude are those made by the Earl of Rosse, as described in the North British Review, and other scientific journals. The article in the Review contains a very full account of the labors of the Earl, in his efforts to improve the reflecting telescope, and by which it appears obtained at a comparatively small expense.

His improvements consist principally in the two systems. the composition of the speculum metal, the mode of casting, of giving the exact parabolic forms, and of polishing.

A speculum of three feet diameter is found to possess a greater magnifying power than of six feet diameter has just been completed, and cheapened, it is only necessary to state that in casting sixteen plates for three feet public occurrences of Europe, to made up chinery moved by steam power, (a small en. munication.

which deficiency, and to render the news gine of two horse power,) with a precision newer and more acceptable, he has since unattainable by hand. The speculum of six feet diameter, just completed, was "polished in six hours," and with "the same facility Morse's telegraph. By the way, as often as sheet, which is easy to be seen by any one as a smaller speculum;" and, what is altowe see those words, Morse's telegraph, we who will be at the pains to trace back for gether new, the polishing was effected by ask ourselves whether the magnetic tele- mer years, and even this time twelve months "placing the speculum in a cistern of water, graph, which is justly exciting so much adwe were then thirteen months behind with and using for the polishing material simply miration, really is Morse's telegraph, or the foreign news, and now we are less than "the peroxide of iron, at about the consist--we were then thirteen months behind with and using for the polishing material, simply

The great cost of reflecting telescopes of is entitled to the credit of first developing to January next (life permitted) will be ac- a high magnifying form has heretofore conthat wonderful power of magnetism; but commodated with all the news from Europe sisted in the great expense and difficulty of forming the speculum, and as this appears now to be overcome, it is reasonable to infer ing telegraphic communication across the during the winter, he would make it up in that a very great improvement may result Atlantic is, to run a copper wire, well cover the spring, "when ships do arrive from in the system of visual telescopes. The magnifying power of Herschel's great telescope has been estimated at 6,000. The three feet speculums of Rosse have an equal or greater power. With telescopes like these, the telegraphic stations may be so far removed from each other as to lessen very materially the expense of conveying intelligence; and if combined with the Drummond light, which is not costly to produce, the telegraphic signs may be read distinctly by night as well as by day, and at all times when the atmosphere is not obscured by fogs, rain or snow.

While the Earl of Rosse has been thus successful in improving the reflecting telescope, it appears by recent accounts that another gentleman, M. Jaunitz, in France, has been nearly equally successful in improving the achromatic, or refracting telescope having been able to form lenses of much larger dimensions than any heretofore constructed.

From the preceding, it will be perceived that the system of visual telegraphs will, in all probability, he very greatly improved, and that shortty, and that any comparison instituted between it and the magnetic telethat an immense magnifying power may be graph, in the present state of the former, would not show the actual relative merits of.

In concluding our remarks upon this subject, we will state, that a method for the quick transmission of intelligence has been proposed, differing entirely from the two modes above referred to. This latter mode the four feet speculum of Herschel. One consists in placing the intelligence or article to be conveyed in a hollow cylinder, which and others are in progress, of 8 and 10 feet is impelled with great velocity through a diameter! To show to what degree the tube of a suitable size, by atmospheric pressure, upon the same principle that motion is effected upon the atmospheric railway. This last mode has merits which seem not to be as yet fully appreciated, and should be fairly fourteen years' experience, it was impossible speculums "not one was defective." The tested before any measures are taken to eswith half a sheet a week to carry on all the grinding and polishing is all done by ma- tablish a general system of telegraphic com-

AMERICAN RAILROAD JOURNAL

The iron trade

PUBLISHED BY D. K. MINOR, 23 Chambers street, N.Y.

Thursday, May 8, 1845.

This number of the Journal has been delayed somewhat in consequence of the prevailing moving mania of our city-but as "moving day" does not usually come but once a year, we hope not to be thus delayed again.

The Hon. John A. Dir will please accept our thanks for valuable public documents.

ELECTRO MAGNETIC TELEGRAPH.

We are indebted to Francis O. G. Smith, Esq. the author, for a copy of the Vocabulary for Secret Correspondence, by means of the Electro Magnetic Telegraph, for which he will please accept our thanks. We hope soon to see the wires extended from Baltimore to Boston, that its utility may be better appre ciated, and more widely enjoyed. We also trust that it may not be made subservient to the few, but enjoyed by all alike-first come first served.

The Pennsylvania Inquirer says that "the railway between Paris and Orleans pays well. In one week the receipts were nearly \$1,000, and the total receipts since the opening of the present year, have been nearly a million of dollars. In one week they carried 35,497 passengers. It is valuable stock."

"Nearly \$1,000" a week, and "nearly a million of dollars since the opening of the present year," do not correspond—which is correct?

A suit for damages was tried last week in Norris town, brought by James Jones against the Philadelphia and Reading railroad company, for the recovery of damages for the destruction by fire of the plaintiff's mills, in Upper Merion township, caused by sparks from the locomotive. "The defendants contended that the increased risk

of the destruction of the plaintiff's mill by fire, was a part of the damage he had sustained by the location of the road so near his mill, and that the contingency of its destruction by fire communicated from the defendants' locomotives, in their ordinary use, was a part of the damages which he must have considered he might sustain at the time he gave the release for all such damages, and that he was, there-fore, already paid for this damage, if it occurred without any default of the defendants or their agents. The court concurred in this view of the case

The jury returned a verdict for plaintiff of \$3,658.

[Ledger.]

The destruction of property by fire from locomotives is becoming oppressive to the people—and it is high time that measures were adopted to prevent so frequent a repetition of them. We find in the Evening Post a letter dated Brookhaven, L. I., May 5th, giving an account of a destructive fire in the woods, destroyed timber, fences, cord wood, a house and two barns; and since that date, the same letter states,

near Suffolk station-by which large amounts of pro-stant efforts to effect so desirable an object. perty have been destroyed, and many poor people made to suffer. This should not be, if there is a possibility of avoiding it, which we believe may be done at triffing expense to each engine, viz by use of the improved smoke stack, of French & Baird, of Philadelphia—as it is not uncommon at the south, we are informed, to carry cotton bales in open cars attached to a locomotive having one of these stacks.

RAILROAD ACCIDENTS.

It is but a day or two since we were congratulating ourselves to a friend, the superintendant of an eastern railroad, that there had been very few serious accidents for some time past, on our railroadsbut on opening the Traveller we find that a man was killed on the track of the Lowell railroad Friday morning, about two miles from the city having been run over by the 11 o'clock train, going up.-The man was walking towards Lowell on the left hand track, and seeing a merchandize train coming down, stepped on to the other track, not perceiving that the passenger train was immediately behind him going up, and supposing, as is presumed that the bell and noise of both engines proceeded from the merchandize train. The passenger train struck him, knocked him across the rails, and ran over him, cutting his arm nearly off and his body almost in two. and of course killing him instantly. His name was Valentine Gay, a respectable citizen of Lyman, Me."

An accident may occur in this way without blame to those who manage the engine-yet it should incite them to double diligence, as it is known to us all that people will walk on the track and expose their own lives, while others are so criminally careless, that they allow their cattle to run on the track, and thus expose the lives of the hundreds who are obliged to travel-indeed we have been told of instances in which cattle have been salted on the track, March, 1845 and when killed by the locomotive, the company prosecuted and put to heavy costs.

Such baseness can hardly be credited in a christian community. When detected, it should be visited with the severest punishment—as should also all carelessness in those who manage railroads

Railroad companies should be fully projected in their rights, and allowed liberal profits and privileges; and then the rights, safety and lives of their passengers should be rigidly and unceasingly guarded in return.

MONTGOMERY AND WEST POINT RAILROAD-GEORGIA.

This, together with several other railroads, has not been found in our list of American Railfoads, for the reason that we could not obtain what we supposed to be an accurate account of it. We have just received from an unknown hand the following statement, which enables us to place it in the list, as we desire to, and shall always do, when we receive the necessary facts in relation to other railroads.

The Montgomery and West Point railroad will be, when completed, 89 miles long-of which is now finished 40 miles, graded only 23 miles, not yet commenced, 26 miles. The cost thus far has been \$520, 000-of which, \$350,000 has been raised by sale of stock, and \$170,000 by loans and debts incurred. They have 4 locomotives, 3 passenger and 20 freight this road for the week ending on Wednesday evecars. The gross earnings for 1844 were \$35,000, and its expenses \$20,000. The original price of shares was \$100-yet, like many other important, near the Medford depot, on the 14th of April, which but unfinished works, there are few or no sales by which its present value can be arrived at. It will, however, we think, eventually be completed, and there has been three other fires from the same cause give a good return upon the investment—and it be along the same road, viz: 29th April, near the same hoves those engaged in its management, and inte-Total,

Correspondents will oblige us by sending in their place, May 2d, east of Carmans river, and May 3d, rested in its completion, to make vigorous and con

-	stant enorts to enect so destrable an object.

will long preserve, we hope, a citizen who result of the quarterly meeting at Birming-

well merited consideration.

"The motive assigned by the American papers for displacing Mr. Beasley is curious enough. 'You have made a fortune,' they say to him, 'turn out for some one else.' Strange logic! According to this, one might ask, what estimate would be placed by the American Government upon a functionary who, by his prodigalities and carelessness, should succeed in being sold out twice a Shropshire pig iron. £6 10s. Still though into the product of the maintain the great rise would be unable to maintain the great rise which has taken place. But, as we have more than once maintained, the price of iron which has taken place. But, as we have more than once maintained, the price of iron tracking the price of iron so far from receding, has not yet reached its limit; and the issue of the meeting on cutside if required. Railroad Companies wishing to order, will please give the exact inside diameter, or circumference, to which they wish the Tires made, and they may rely upon being served according to the price of iron tracking the production of the meeting on production of the price of iron tracking the price of iron t pire to public office? In this case it would be precisely the occasion to sing, with Beranger-

upon the soil of the Union !"

We cut the following just tribute, to the on hearing of Mr. Pickett's nomination to prosperity of the iron trade than any in pro-

we take the following passage:

"You having resided so many years in Ha-

fully.'"

THE IRON TRADE.

of time, will materially affect the progress of railways; yet, eventually, and at no distant day; it will work its own cure, by "Steam navigation, now one of the most lant day, it will work its own cure, by above, or to contract therefor, at a fixed price, delimportant elements of the prosperity of Hadrawing large amounts of capital into the vered in the United States. manufacture of iron, and thus, by a brisk competition, furnish an abundance of iron at reduced prices.

We take the following short article on the

April, which says:

"We have, in a former number, already making bar iron about £12, and hoops £12 Beasley will lose in him a consul—firm, enlightened, and full of energy; but Havre will long preserve, we hope, a citizen who result of the quarterly preserve as to the long preserve, we hope, a citizen who result of the quarterly preserve as to the long preserve. enjoys among all classes of our population a ham, on Thursday last, more especially as it was generally believed that the masters would be unable to maintain the great rise possible disastrous effects. Apart from the great inconveniences arising to the manufacturing industry of the country, the prostaturing industry of the country, the prostration of labor it may yet entail, and the crippling of commercial enterprize, in more Sont des gens heureux!'

A number of the Union!"

possible disastrous effects. Apart from the great inconveniences arising to the manufacturing and Sawing Machines, to be driven by the Locomotive; Stationary Steam Engines; Wro't. Iron Engine and Truck Frames; Railroad Pumping and Sawing Machines, to be driven by the Locomotive; Stationary Steam Engines; Wro't. Iron work for Steamboats, and Shafting of any size; Grist Mill, Saw Mill and crippling of commercial enterprize, in more respects than one; apart from the pernicious effects it must have upon our ship building, (a department promising a few months ago ja451y

gaged in the trade with the United States, to afford a more permanent medium for th the U. S. Senate, addressed a highly com-spective)—and apart from the indirect detri-plimentary letter to Mr. Beasley, from which mental influence, the high price must have upon the stability of the trade itself-apart, we say, from all these present and positive we think we may say generally to those in rise—the injury caused, primarily to the terested in the commerce of the place, we holder, and secondarily to the working pophope and trust that the Senate, by declining ulation, will be incalculable; and, sooner or to ratify the appointment, will allow you to later, come that reaction must. If, from no The Journal de l'Arrondisement du Havre, retain the office which you have so long other cause, the introduction of foreign meafter copying from an American paper a no-filled to the honor of your country. Where tal, whether castings from Belgium, or the tice that Mr. Pickett, of New Orleans, had ther you be destined in the course of events raw material from India—aye, and even the been nominated as the successor of R. G. to remain in place, or to spend the remain. United States of America—will effect that the ground that he, Mr. B., had made a for assured of the friendship and esteem of all sightedness delayed. Meanwhile, though who have had an opportunity of knowing the prices have been quoted so high, the mar-"Mr. Beasley has fulfilled the duties of you as we do, and in speaking of you, we ket continues firm, with a good business do-

> RAILWAY IRON.—A contract was entered into in this town, on Saturday, for 21,000 In England the price of iron seems to be tons of rails, at £12 a ton; to be delivered it should continue for any considerable length ning in October. The purchase is made by a Glasgow house.—Liverpool Times.

KITE'S PATENT SAFETY BEAM.

MESSES, ÉDITORS. As your Journal is devoted to the benefit of the public in general I feel desirous to communicate to you for publication the following circumstance of no inconsiderable importance, which oc-curred some few days since on the Philadelphia, Wilmington and Baltimore railroad.

On the passage of the evening train of cars from Philadelphia to this city, an axle of our large 8 wheeled passenger car was bro-ken, but from the particular plan of the con-struction, the accident was entirely unknown to any of the passen-gers, or, in fact, to the conductor himself, un-til the train, (as was supposed from some circumstances attending the case,) had passed several miles in advance of the place where the accident occurred, whereas had the car been constructed on the common plan the same kind of acci-

dent would unavoidably have much injured it, per-haps thrown the whole train off the track, and serious-ly injured, if not killed many of the passengers. Wilmington, Del., Sept. 28, 1810.

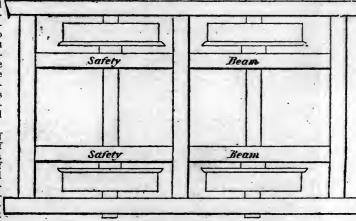

The undersigned takes pleasure in attesting of the value of Mr. Joseph S. Kite's invention of the Safety Beam Axle and Hub for railroad cars. They Safety Beam Axleand Hub for railroad cars. They have for some time been applied to passenger cars on this road, and experience has tested that they fully accomplish the object intended. Several instances of the fracture of axles have occurred, and in such the cars have uniformly run the whole distance with entire safety. Had not this invention been used, serious accidents must have occurred.

In short, we consider Mr. Kite's invention as completely successful in securing the safety of property and lives in railroad travelling, and should be used on all railroads in the country.

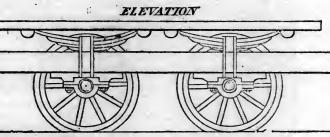

JOHN FRAZER, Agent,

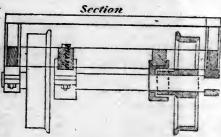

GEORGE CRAIG, Superintendant,

A model of the above improvement is to be seen at the New Jersey railroad and transportation office, No. 1 Hanover st., N. York.

SLAN

W. CASEY, CIVIL ENGINEE .NO. Chambers street, New York, will make veys, estimates of cost and reports for railways, canals, roads, docks, wharves, dams and bridges of every description, with plans and specifications. He will also act as agent for the sale or purchase of ma-chinery, and of patent rights for improvements relating to public works.

SAMUEL NOTT, CIVIL ENGINEER, SUR-veyor and General Agent, Bangor, Me. Rail-roads, Common Roads, Canal, Factory and Mill Sites Towns, Farms, Wild Land, etc., surveyed. Plans and Estimates for Buildings, Bridges, etc., prepared, and all appertaining business executed.

Wm. Parker, Esq., Engineer and Superintendent Boston and Worcester railroad."

PATENT HAMMERED RAILROAD, SHIP Works have always on hand, of their own manufac-ture, a large assortment of Railroad, Ship and Boat Spikes, from 2 to 12 inches in length, and of any form of head. From the excellence of the material al-ways used in their manufacture, and their very genways used in their manufacture, and their very general use for railroads and other purposes in this country, the manufacturers have no hesitation in warranting them fully equal to the best spikes in market, both as to quality and appearance. All orders addressed to the subscriber at the works, will be promptly executed. JOHN F. WINSLOW, Agent.

Albany Iron and Nail Works, Troy, N. Y.
The above spikes may be had at factory prices, of Erastus Corning & Co., Albany; Hart & Merritt, New York; J. H. Whitney, do.; E. J. Etting, Philadelphia Wm. E. Coffin & Co., Boston.

MACHINE WORKS OF ROGERS, KETCH-um & Grosvenor, Patterson, N. J. The un-dersigned receive orders for the following articles, manufactured by them of the most superior description in every particular. Their works beingextensive and the number of hands employed beinglarge, they are enabled to execute both large and small or-

ders with promptness and despatch.

Railroad Work.

Locomotive steam engines and tenders; Driving and other locomotive wheels, axles, springs & flange and other too motive wheels, axies, springs & nange tires; car wheels of cast iron, from a variety of pat-terns, and chills; car wheels of cast iron with wrought tires; axies of best American refined iron; springs; boxes and bolts for cars. Cotton, Wool and Flax Machinery

of all descriptions and of the most improved patterns, style and workmanship.

Mill gearing and Millwright work generally; hydraulic and other presses; press screws; callenders; lathes and tools of all kinds; iron and brass

castings of all descriptions.

ROGERS, KETCHUM & GROSVENOR,
a45 Paterson, N. J., or 60 Wall street, N. York.

PATENT RAILROAD, SHIP AND BOAT Spikes. The Troy Iron and Nail Factory keeps constantly for sale a very extensive assortment of Wrought Spikes and Nails, from 3 to 10 inches, manufactured by the subscriber's Patent Machinery, manufacture to the which after five years' successful operation, and now almost universal use in the United States (as well as England, where the subscriber obtained a patent) are found superior to any ever offered in market.

Railroad companies may be supplied with Spikes having countersink heads suitable to holes in iron rails, to any amount and on short notice. all the railroads now in progress in the United States are fastened with Spikes made at the above named factory—for which purpose they are found invalua-ble, as their adhesion is more than double any com-mon spikes made by the hammer.

All orders directed to the Agent, Troy, N. York, will be punctually attended to.

HENRY BURDEN, Agent.

Spikes are kept for sale, at Factory Prices, by I. & J. Townsend, Albany, and the principal Iron merchants in Albany and Troy; J. I. Brower, 222 Water St., New York; A. M. Jones, Philadelphia; T. Janviers, Baltimore; Degrand & Smith, Boston.

*** Railroad Companies would do well to forward the subscriber of the subscriber.

their orders as early as practicable, as the subscriber is desirous of extending the manufcturing so as to keep pace with the daily increasing demand. ja45

The works being on an extensive scale, all orders will be executed with promptness and despatch.
Communications addressed to Mr. William H.
Dobbs, Superintendent, will meet with immediate attention.
ANDREW C. GRAY, ja45
President of the Newcastle Manuf. Co.

Albany, N. Y.

Mr. C. also announces that Railroads, and other works pertaining to the profession, may be constructed under his advice or personal supervision. Applications must be post paid.

Railroad Componies, Iron Founders, and others interested in the works to which the same relate. Companies reconstructing their tracks now have an opportunity of improving their roads on terms very adjusted by the roads of the same relate. Comportunity of improving their roads on terms very adjusted by the roads of the same related by the fact that the late Ref. F. W. Obsermanier, and others interest to provide the representation of Iron according to Mr. Crane's principle.

A. & G. RALSTON & CO., No. 4 Sout Fronth st., Philadelphia, Pa. panies reconstructing their tracks now have an op-portunity of *improving* their roads on terms very ad-vantageous to the varied interests connected with use flat bar rails are particularly interested, as such are permanently available by the plan.

W. Mc. C. CUSHMAN, Civil Engineer,

Albany, N. Y.

CUSHMAN'S COMPOUND IRON RAILS etc. The Subscriber having made importate improvements in the construction of rails, mode n guarding against accidents from insecure joints, etc.

—respectfully offers to dispose of Company, State thracite coal, and holding an assignment of the particular of the privileges of letters patent to Railroad Componies, Iron Founders, and others in are prepared to grant licenses for the manufacture terrested in the works to which the same relate. Componing to Mr. Grang's minighted to grant licenses for the manufacture terrested in the works to which the same relate.

TO RAILROAD COMPANIES AND BUILD ERS OF MARINE AND LOCOMOTIVE ENGINES AND BOILERS.

PASCAL IRON WORKS.

WELDED WROUGHT IRON TUBES

From 4 inches to 1 in calibre, and 2 to 12 feet long, capable of sustaining pressure from 400 to 2500 lbs. per square inch, with Stop Corks, Tr, Lr, and other fixtures to suit, fitting together, with screw joints, suitable for STEAM, WATER, GAS, and for LOCOMOTIVE and other STEAM BOILER FLUES.

Manufactured and for sale by MORRIS, TASKER & MORRIS.
Warehouse S. E. Corner of Third & Walnut Streets, PHILADELPHIA.

TO IRON MASTERS.—FOR SALE.—MILL SITES in the immediate neighborhood of Bi-luminous Coal and Iron Ore, of the first quality, at Ralston, Lyoming Co., Pa. This is the nearest point to tide water where such coal and ore are found together, and the communication is complete with Philadelphia and Baltimore by canals and railways. The interest on the cost of water power and lot is all that will be required for many years; the coal will not cost more than \$1 to \$1 25 at the mill sites, without any trouble on the part of the manufacturer; rich iron ore may be laid down still more cheaply at the works; and, taken together, these sites offer remarkable advantages to practical manufacturers with small capital. For pamphlets, descriptive of the property, and further information, apply to Archibald McIntyre, Albany, to Archibald Robertson, Philadelphia, or to the undersigned, at No. 23 Chambers street, New York, where may be seen specimens of the coal and ore.

W. R. CASEY, Civil Engineer,

W. R. CASEY, Civil Enginery.

State st., Boston, or to A. & G. RALSTON & Co.,
Fauadelphia.

LOCOMOTIVE NORRIS' WORKS

MANUFACTURE their Patent 6 Wheel Combined and 8 Wheel Locomotives of the following descriptions, viz:

Class 1. 15 inches Diameter of Cylinder, × 20 inches Stroke. × 24 1.4. 33 66 66 \times 20 3, 141 122 6: \times 20 66 4, 66 66 -7 66 66 \times 20 66 66" 5, 115 12 (1 $10\frac{1}{2}$ 6, 66 " 66 66 44 \times 18

With Wheels of any dimensions, with their Patent Arrangement for Variable Expansion. Castings of all kinds made to order: and they call attention to their Chilled Wheels, for the Trucks of Locomotives, Tenders and Cars.

NORRIS, BROTHERS.

RAILWAYS IN SCOTLAND.

We give from Herapath's Railway Journal the following "Report of the Railway Department of the Board of Trade, on the ion respecting them. Schemes for extending railway communication in Scotland," for the purpose of showing the views of that body in relation to railways.

Railway Department, Board of Trade Whitehall, 13th March, 1845.

equivocal designs, and limit their further on the outer sphere. ance to such undertakings as will prove indisputably beneficial to the country. It will derogate the right, not only of passively recommending, but actively promoting, such discountenance, with equal pertinacity, any the globe; to the globe also is attached a schemes whose objects are problematical.-At present, we are not prepared to speak more in detail, as it would be obviously premature to publish statements which might only serve to impede the government in its measures."

VALE'S GLOBE AND TRANSPARENT CELES-TIAL SPHERE.

We have seen this very ingenious and useful instrument, and had it explained by the inventor, and particular problems resolved, questions answered and points illustrated with a simplicity

and clearness that satisfied us that this instrument must be a valuable acquisition to the teacher, it has another recommendation, at least to us, as it goes on the railroad plan. A gentleman with us observed that he had learned more in the short explanation given in half an hour, than he had before in months, and that he had had subjects clearly explained in a few minutes on which he had troubled himself during a voyage without success.

We shall not attempt to describe minutely this instrument, it should be seen by every teacher and amateur in person, and described by Mr. Vale himself, which he is always ready to do. The cut which we now present conveys but a poor idea, because the instrument itself possesses every motion real and apparent which is exhibited in nature, or the effects of which we see; it is a model of nature, and at every movement we see the thing to be explained, and comprehend it with a word; but as it has several motions, all made by hand, and though extremely simple, yet when used by a person unaccus tomed to it, we can easily conceive that he might give it every movement but the right. We therefore again recommend that it be seen, and in the first instance, explained by be a move made to establish Atlantic steamthe inventor.

the terrestrial within, and the celestial in communication, but also in steam ships upon transparent sections without; in the figure the Atlantic-being very far behind Boston accompanying this, we see only the terrestial in both these elements of prosperity. It is (consisting of the principal circles and points energetic action be found among those who vered in the United States

The principal merit of the instrument and natural advantages. consists in a moveable figure, representing a broad surface representing a moveable horizon to the traveller, or ship, shown in the cut. The traveller moves to any part of the earth, his horizon follows him; he goes phenomena of the heavens are seen, and in exhibition of the antipode at each station, gives a clear idea in one lesson of the figure of the earth, and of the prominent locations.

We merely say that this globe and sphere which can be performed on both globes. It is also convertible into a planetarium of much simplicity, and supplying the deficiencies of the older kind. It is also a universal sundial, and it will resolve the most dif ficult problems in astronomy and spherics by forming triangles on the sphere.

A friend present who had just returned from a voyage, and while at sea had learned the use of the quadrant, sextant, etc., rethe latidude at sca. In two minutes it was done, to the perfect satisfaction of those who stood round, the ship's place was shown on the earth, the sun's place in the heavens, and how, from its mere altitude at noon, the latitude of the ship was found, was exhibited; our friend could perform the operation at sea, but had sought in vain for its explawas shown; and the precision of the equinoxes made so plain that a child would have understood it. From its simplicity it could and ought to be introduced into our public schools. Mr. Vale is well known in New York as a teacher of navigation, and may be found in May, and after, at 3 Franklin

We are gratified to learn that there is to quired, would be altered to a 6 wheeled engine. ships from this port. THE AMERICAN ATLANTIC STEAM NAVItraveller, or ship, and his antipode (not shown GATION COMPANY. - In the Senate, on the enterprises as it deems advisable, while it will in the cut) specked at the top and bottom of 6th inst., Mr. Bockee, chairman of the select committee of eight senators to whom was referred the bill for the renewal and extension of the American Atlantic Steam Navigation Company's charter, made a favorable report, and recommended the bill to a third reading. He stated that the objects round the world, and at every step the entire of the company were of great national importance; that Congress, at its last session, passed an act brought forward and promoted a moment, by a swivel motion, the antipode by the company, authorizing the Post Masis seen, and all his phenomena. For the ter General to make contracts for carrying mere teaching of geography, the movement the American foreign mails in steamships, of this traveller to every great city, and the and that they had reserved to themselves the option of taking the steamships employed in carrying the foreign mails, for the service of the navy in case of war. He considered, therefore, that the charter was necessary to carry out the views of the geneperforms every problem in a rational manner, ral government. The bill passed with only two negatives, and with some unimportant amendment was returned to the assembly for their concurrence. The charter is for twenty-four years, and a capital of two millions in \$100 shares. In the afternoon of the same day, the bill was referred by the House to the standing committee on trade and manufactures, to report complete. On Wednesday, the report was brought in, recommending the assembly to concur in the amendment of the Senate, which the House agreed to. The main question was then quired the rationale of the manner of getting taken by yeas and nays, and the bill passed unanimously, save one vote.

> CALEDONIAN RAILWAY. - We are credibly informed, that this railway company is about to being before the public an important project connected with their line, which will embrace the greater portion of the breadth of Scotland, from Berwick to Air, and will intersect the Caledonian line at the point near Lanark, where the Edinnation on board the ship. Why the sun was burgh, Glasgow, and northern branches sometimes too fast and at others too slow, diverge. This important stop is in compliance with the suggestions of the Board of Trade, and it is probable the prospectus will be published in our paper next week-Mining Journal.

AMERICAN RAILROAD JOURNAL.

PUBLISHED BY D. K. MINOR, 23 Chambers street, N.Y.

Thursday, May 15, 1845.

ERRORS will sometimes occur in well regulated establishments, and they may sometimes therefore be expected in ours-and will, we hope, be overlooked, when the past cannot be remedied. It is ex-either by mischievous types, or roguish boys-as we were in the two last numbers of the Journal. By some means, either accidental or designedly, the figures \$250,000, standing in the column of the "cost," in the table of "American Railroads," opposite "No. 8-Berkshire railroad," are out, and all the figures in that column are elevated one line above their proper place: by which operation the Charlestown branch railroad is represented as having cost \$2,-388,631!, and the Norwich and Worcester road was built for the trifling sum of \$87,000 !!, and the West Stockbridge road is made to cost only \$7,585,202!!!, 156 miles in length, over mountains and broad rivers, appears to have cost only \$8,431!!!!, and so of all the rest down to "No. 46-Morris and Essex," which, having nothing else to do, has gone in search of the cost of the "Berkshire"—thus equalizing the number chaps.

We shall not, we trust, be prosecuted for the thirtysix libels, twice told, of which we plead guilty in the premises, as we have detected, corrected and acknowledged the wrong before it was pointed out to us even by the injured parties. But let us once catch the rascal who committed the deed-and-

RAILROAD ACCIDENTS.

It is painful to record the numerous accidents on railroads-and it is equally painful to think that many of them result from carelessness, either of those who have charge of the roads or trains, or-which is quite as frequent-of those who suffer. There is, however, another source prolific of serious accidents. We have often observed that, in the construction of bridges and depots, there is not space enough between the posts for the passage of cars of the width of those in common use; and in many cases where there is a double track, they are too near together; so near, indeed, that a man would be crushed if he happened to be caught between two passing trains, or a loaded car, on the other track-as recently occurred on the Philadelphia and Reading railroad. Now one thing is certain, and should therefore be, as far as possible, guarded against. We all know that men will be thoughtless sometimes, and intently and necessarily engaged at others, so as to be wholly unconscious of approaching danger; therefore, in the construction of railroad bridges, and the entrance to depots, there should always be space allowed for a person to stand, or pass; or the cars should be made narrower, and thus allow sufficient space. In the construction of new, or rebuilding of old structures, this subject should be well considered.

to give credit, to that excellent paper, the Pottsville ning last: "Miners' Journal," for our reports of the Pennsylvania coal trade

"The demand for coal is very brisk at present, particularly for large white ash, and the price has advanced. A large portion of the Schuylkill valley, and the whole of the Mill Creek region, remains cut off from the market, in consequence of the roads being taken up to widen the tracks between the Reading railroad and the connection. The Mill Creek road will be ready in about three weeks. The Little Schuylkill railroad, at Port Clinton, has been com-

" Vessles are very scarce at Philadelphia, to carry coal to eastern ports, and freights have advanced."
Freights from Pottsville to Philadelphia, 70 cents, to New York, \$1 80.

> MIAMI CANAL .- The water, says the Cincinnati Gazette, is to be let out on the 20th inst., to make general repairs, and will remain out two or three weeks.

TIDE WATER CANAL.—The Baltimore American ays: "We are gratified to find from the following letter from our correspondent at Havre de Grace, pleted, and the first train of cars departed from that that the trade on this important work is rapidly and place on Thursday last.

When further progress is made steadily increasing. When further progress is made. in the completion of works having for their object the ready and cheap transportation of anthracite coal to the Pennsylvania canals, and thence to the Chesapeake bay, by means of the Tide Water canal, there is no doubt that Baltimore will participate largely in the lucrative and prosperous trade that will be opened."

HAVRE DE GRACE, May 1, 1845. GENTLEMEN: Since the opening of the canal, this season, the number of arrivals of boats has been 600 of which 285 have been towed to Philadelphia, and 205 to Baltimore, making 80 boats in favor of Philadelphia. There have cleared from this place north-wardly, up to this date, 528 boats; to the same date last year, 392 boats, which is an increase in favor of this year, thus far, of 136 boats.

RAILROADS AND CANALS 'IN OHIO.

We learn from the Cincinnati Gazette, that Mr. Mills, who negotiated the loan in Boston for completing the railroad from Sandusky to Cincinnati, had reached the latter city; and that energetic measures will be adopted for its early completion in a substan tial manner. The editor of the Gazette wisely urges that the structure be of the most permanent kind rather than that it be completed in the shortest possible period. In this we cordially agree with him, and hope to see that his opinion of the managers of the work is correct, when he says, of the directors,

"They will look to one thing, as, after all, the important matter-durability. For they, or any company, will save time and money, if not life, in such an undertaking, who make this the test; and this the sensible directors of the Miami and Mad River road understand perfectly well. We may assure our readers, then, of this—that the work will be finished just as soon as it can be safely done."

> The directors of the Concord railroad have declared a dividend for the last six months of six per cent. This makes a dividend of thirteen per cent. for the last year, with a respectable surplus on hand.

> We always record, with pleasure and pride, the extraordinary performances of American machinery, and especially of American locomotive engines. The following statement is taken from the Pottsville "Miners' Journal," of 10th inst. This engine hauled what would load the largest ship which sails out of the port of New York.

"The greatest draught ever made over any railroad in the world, was made on Tnesday, by Wm. Norris & Co.'s new engine, the Atlantic, over the Pottsville and Philadelphia road. The Atlantic started from Schuylkill Haven on Tuesday, with 150 tron cars, weighing 390 tons, and containing 744 tons, one hundred weight of coal, total weight, exclusive of weight of engine, 1,134 tons, one hundred weight. This enormous train and weight she started without aid, and during the whole draw from Schuyl-Amount transported on Swatara railroad, during kill Haven to Phlladelphia, she never once slipped - 2959 6 2 a wheel, or required assistance from other engines, but performed her work alone and beautifully, and May 3d. 5758 in a shorter time than has been made before over the road by any engine with a coal train. She broke but two couplings in the whole draw between Schuyl-

Guar.

> NICOLL'S PATENT SAFETY SWITCH for Railroad Turnouts. This invention, for some time in successful operation on one of the principal railroads in the country, effectually prevents engines and their trains from running off the track

at a switch, left wrong by accident or design.

It acts independently of the main track rails, being laid down, or removed, without cutting or displacing

It is never touched by passing trains, except when in use, preventing their running off the track. It is simple in its construction and operation, requiring only two Castings and two Rails; the latter, even it

much worn or used, not objectionable.

Working Models of the Safety Switch may be seen at Messrs. Davenport and Bridges, Cambridgeport, Mass., and at the office of the Railroad Journal,

Plans, Specifications, and all information obtained on application to the Subscriber, Inventor, and Patentee. G. A. NICOLLS,

Reading, Pa. -far better for all interested in cheap carriage or circumference, to which they wish the Tires made, and they may rely upon being served accordhave both canal and railroad.

There are situations where a canal would ing to order, and also punctually, as a large quantity of the straight bar is kept constantly on hand.—
Crank Axles, made from the best refined iron; Straight Axles, for Outside Connection Engines; interest, to economize the transit of property, and serve the general interest of trade.

If the ample accommodation that is within our reach, is given to this trade, we may reasonably expect, at no great lapse of time after the work shall have been completed, its enhanced magnitude will be such, as to ad-Iron and Brass Castings of all descriptions.

KITE'S PATENT SAFETY BEAM.

MESSES. EDITORS.— As your Journal is devoted to the benefit of the public in gen-eral I feel desirous to communicate to you for publication the following circumstance of no inconsiderable or no inconsiderable importance, which oc-curred some few days since on the Philadel-phia, Wilmington and Baltimore railroad.

On the passage of the evening train of cars from Philadelphia to this city, an axle of our large 8 wheeled assenger car was broken, but from the particular plan of the con-struction, the accident was entirely unknown to any of the passengers, or, in fact, to the conductor himself, until the train, (as was supposed from some circumstances attending the case,) had pass-ed several miles in advance of the place where the accident occurred, whereas had the car been constructed on the common plan

the same kind of accident would unavoidably have much injured it, perhaps thrown the whole train off the track, and seriously injured, if not killed many of the passengers Wilmington, Del., Sept. 28, 1840.

The undersigned takes pleasure in attesting of the value of Mr. Joseph S. Kite's invention of the Safety Beam Axle and Hub for railroad cars. They have for some time been applied to passenger cars on this road, and experience has tested that they fully accomplish the object intended. Several instances of the fracture of axles have occurred, and in such the cars have uniformly run the whole distance with entire safety. Had not this invention been used, serious accidents must have occurred.

In short, we consider Mr. Kite's invention as completely successful in securing the safety of property

In short, we consider Mr. Kite's invention as completely successful in securing the safety of property and lives in railroad travelling, and should be used on all railroads in the country.

JOHN FRAZER, Agent,

GEORGE CRAIG, Superintendant,

The A model of the above improvement is to be seen at the New Jersey railroad and transportation ja45

Mr. L. ASHMEAD, Agent.

L. Ashmed in securing the safety of property states and the lower in securing the safety of property states and the lower in securing the safety of property states and lives in railroad travelling, and should be used on all railroads in the country.

JAMES ELLIOTT, Sup. Motive Power,

W. L. ASHMEAD, Agent.

L. Ashmed in railroad companies would do well to forward their orders as early as practicable, as the subscriber is desirous of extending the manufacturing so as to office, No. 1 Hanover st., N. York.

R. CASEY, CIVIL ENGINEER, NO. 23

Chambers street, New York, will make surestimates of cost and reports for railways, caveys, estimates of cost and reports for lankays, canals, roads, docks, wharves, dams and bridges of every description, with plans and specifications. He will also act as agent for the sale or purchase of machinery, and of patent rights for improvements relating to public works.

SAMUEL NOTT, CIVIL ENGINEER, SURveyor and General Agent, Bangor, Me. Railroads, Common Reads, Canal, Factory and Mill Sites Towns, Farms, Wild Land, etc., surveyed. Plans and Estimates for Buildings, Bridges, etc., prepared, and all appertaining business executed. - REFERENCES. .

DATENT HAMMERED RAILROAD, SHIP and Boat Spikes. The Albany Iron and Nail Works have always on hand, of their own manufac-Works have always on hand, of their own manufac-ture, a large assortment of Railroad, Ship and Boat Spikes, from 2 to 12 inches in length, and of any form of head. From the excellence of the material al-ways used in their manufacture, and their very gen-eral use for railroads and other purposes in this coun-try, the manufacturers have no hesitation in warrant-ing them fully even to the best children in warranttry, the manufacturers have no nestigation in warranting them fully equal to the best spikes in market, both as to quality and appearance. All orders addressed to the subscriber at the works, will be promptly executed. JOHN F. WINSLOW, Agent.

Albany Iron and Nail Works, Troy, N. Y.

The above spikes may be had attlactory prices of

The above spikes may be had atlactory prices, of Erastus Corning & Co., Albany; Hart & Merritt, New York; J. H. Whitney, do.; E. J. Etting, Philadelphia; Wm. E. Coffin & Co., Boston.

Acelphia; w.m. E. Conin & Co., Boston.

MACHINE WORKS OF ROGERS, KETCHum & Grosvenor, Patterson, N. J. The undersigned receive orders for the following articles,
manufactured by them of the most superior description in every particular. Their works beingexten
sive and the number of hands employed beinglarge,
they are enabled to execute both large and small orders with promptness and despatch.

Railroad Work.

Locomotive steam engines and lenders. Driving

Locomotive steam engines and enders; Driving and other locomotive wheels, axles, springs & flange tires; car wheels of cast iron, from a variety of patterns, and chills; car wheels of cast iron with wrought tires; axles of best American refined iron;

springs; boxes and bolts for cars.
Cotton, Wool and Flax Machinery
of all descriptions and of the most improved patterns,

style and workmanship.

Mill gearing and Millwright work generally;
hydraulic and other presses; press screws; callenders; lathes and tools of all kinds; iron and brass

castings of all descriptions,
ROGERS, KETCHUM & GROSVENOR,
A45 Paterson, N. J., or 60 Wall street, N. York.

PATENT RAILROAD, SHIP AND BOAT Spikes. The Troy Iron and Nail Factory keeps Spikes. The Troy from and year ractory keeps constantly for sale a very extensive assortment of Wrought Spikes and Nails, from 3 to 10 inches, manufactured by the subscriber's Patent Machinery, which after five years' successful operation, and now almost universal use in the United States (as well a part of the subscriber detailed. as England, where the subscriber obtained a patent) are found superior to any ever offered in market.

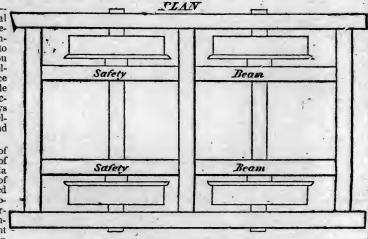

Railroad companies may be surplied with Spikes having countersink heads suitable to holes in iron rails, to any amount and on short notice. Almost all the railroads now in progress in the United States are fastened with Spikes made at the above named he as the result of the state at the above hamed factor.—for which purpose they are found invaluable, as their adhesion is more than double any common spikes made by the hammer.

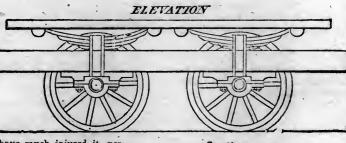

All orders directed to the Agent, Troy, N. York,

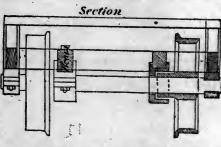

will be punctually attended to.

HENRY BURDEN, Agent. Spikes are kept for sale, at Factory Prices, by I. & J. Townsend, Albany, and the principal Iron merchants in Albany and Troy; J. I. Brower, 222 Water St., New York; A. M. Jones, Philadelphia; T. Janviers, Baltimore; Degrand & Smith, Boston.

* Railroad Companies woulddo well to forward their orders as early as western!

FRENCH AND BAIRD'S PATE SPARK ARRESTER

10 THOSE INTERESTED IN Railroads, Railroad Directors

Our improved Spark Arrester, have been extensively used during the last year on both passenger and freight engines, and have been brought to such a state of perfection that no anaoyance from sparks or dust from the chimney of engines on which they are used in experienced.

used is experienced.

These Arresters are constructed on These Arresters are constructed on an entirely different principle from any heretotore offered to the puone. The form is such that a rotary motion is imparted to the heated air, smoke and sparks passing through the chimney, and by the centrifugal force thus acquired by the sparks and dust they are separated from the smoke and steam, and thrown into an outer chamber of the chimney through openings near its top, from whence they fall by their own gravity to the bettom of this chamber; the smoke and steam passing off at the top of the chimney, through a capacious and unobstructed passage, thus arresting the sparks without impairing the power of the engine by diminishing the draught or activity of the fire in the furnace. These chimneys and arresters are simple, durable and neat in appeara

ENGINEERS and MACHINISTS.

The engine by diminishing the sparks without impairing the power of the engine by diminishing the draught or activity of the fire in the furnace. They are now in use on the following roads, to the managers and other officers of which we are at liberty to refer those who may desire to purchase or obtain further information in regard to their merits:

THE NEWCASTLE MANUFACTURING
Company continue to furnish at the Works, situated in the town of Newcastle, Det.; Locomotive and other steam engines, Jack screws, Wrought from work and Brass and Iron castings; of all kinds connected with Steamboats, Railroads, etc.; Mill Gearing of every description; Cast wheels (chilled) or any pattern and size, with Axles fitted, also with wrought tires, Springs, Boxes and bolts for Cars; Driving and other wheels for Locomotives.

The works being on an extensive scale, all orders will be executed with promptness and despatch.

W. Mc. C. CUSHMAN, Civil Engineer,
Albany, N. Y.

The Works being on an extensive scale, all orders will be executed with promptness and despatch.

Albany, N. Y.

Mr. C. also announces that Railroads, and other works pertaining to the profession, may be constructed under his advice or personal supervision. Applications must be post paid.

WELDED WROUGHT IRON TURE

per squate inco other fixtures to oints, suitable

Manufactured and for sale by MORRIS, TASKER & MORRIS. Warehouse S. E. Corner of Third & Walnut Streets, PHILADELPHIA

TO IRON MASTERS.—FOR SALE.—MILL SITES in the immediate neighborhood of Bituminous Coal and Iron Orc, of the first quality, at Ralston, Lyoming Co., Pa. This is the nearest point to tide water where such coal and ore are point to tide water where such contains to the count together, and the communication is complete with Philadelphia and Baltimore by canals and railways. The interest on the cost of water power and lot is all that will be required for many years; the coal will not cost more than \$1 to \$1 25 at the mill sites, without any trouble on the part of the manufacturer; rich iron ore may be laid down still manufacturer; rich iron ore may be laid down still more cheaply at the works; and, taken together, these sites offer remarkable advantages to practical manufacturers with small capital. For pamphlets, descriptive of the property, and further information, apply to Archibald McIntyre, Albany, to Archibald Robertson, Philadelphia, or to the undersigned, at No. 23 Chambers street, New York, where may be seen specimens of the coal and ore.

W. R. CASEY, Civil Engineer,

VALUABLE PROPERTY ON THE MILL Dam For Sale. A lot of land on Gravelly Point, so called, on the Mill Dam, in Roxbury, fronting on and east of Parker street, containing

68,497 square feet, with the following buildings thereon standing.

Main brick building, 120 feet long, by 46 ft wide, two stories high. A machine shop, 47x43 feet, with large engine, face, screw, and other lathes, suitable to do any kind of work. to do any kind of work.

Pattern shop, 35x32 feet, with lathes, work bench-

es, &c.
Work shop, 86x35 feet, on the same floor with the pattern shop.

Forge shop, 118 feet long by 44 feet wide on the ground floor, with two large water wheels, each 16 feet long, 9 ft diameter, with all the gearing, shafts, deet long, 9 if diameter, with all the gearing, shalls, drums, pulleys, &c., large and small trip hammers, furnaces, forges, rolling mill, with large balance wheel and a large blowing apparatus for the foundry.

Foundry, at end of main brick building, 60x45½ feet two stories high, with a shed part 45½x20 feet, containing a large air furnace, cupola, crane and

corn oven.

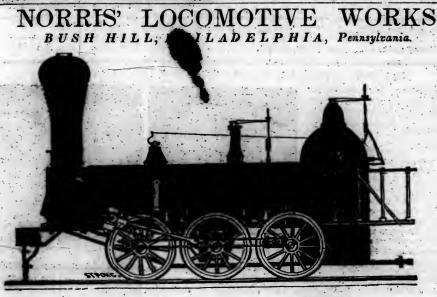

Store house—a range of buildings for storage, etc., 200 feet long by 20 wide.

Locomotive shop, adjoining main building, fronting on Parker street, 54x25 feet.

Also—A lot of land on the canal, west side of Parker st. containing 6000 feet with the fall. Parker st., containing 6000 feet, with the following

buildings thereon standing: Boiler house 50 feet long by 30 feet wide, two sto-

Blacksmith shop, 49 feet long by 20 feet wide.
For terms, apply to HENRY ANDREWS, 48
State st., or to CURTIS, LEAVENS & CO., 106
State st., Boston, or to A. & G. RALSTON & Co., Finuadelphya.

MANUFACTURE their Patent 6 Wheel Combined and 8 Wheel Locomotives of the following descriptions, viz:

Class 1, 15 inches Diameter of Cylinder, × 20 inches Stroke. 14 × 24 66 3. 147 " \times 20 6 124 .. 41 × 20 " 66 66 " 5. 111 33 20 66 X 66 101 66 \times 18

With Wheels of any dimensions, with their Patent Arrangement for Variable Expansion. Castings of all kinds made to order: and they call attention to their Chilled Wheels, for the Trucks of Locomotives, Tenders and Cars.

NORRIS, BROTHERS.

RAILWAYS IN SCOTLAND.

We give from Herapath's Railway Journal the following "Report of the Railway Department of the Board of Trude. on the Schemes for extending railway communication in Scotland."

(Continued from page 303.)

The leading public objects which it appears to us to be important to keep in view,

1: The traffic of Glasgow (including the district of which it is the centre) with Liv-England.

Forth and Clyde, with same places.
3. The traffic of Edinburgh (and its district) with Liverpool, Manchester, and the west of England (the traffic with London and the east of England being assumed to place in the construction of the locomotive found a more efficient and economical subbe sufficiently provided for by the east coast line.)

ern counties of Scotland are already pro-Berwick line.

tance, the Caledonian line, however, has to from £20,000 to £25,000. Experience liar construction. pass the range of hills which runs across the has fully proved that no saving, either in Dumfries line, and to attain the requisite elevation by gradients of great severity.—
It becomes, necessary, therefore, to examine in many cases, cheaply constructed lines that discrimination. Nothing can be more fallacious than a mere comparison of gradients upon two lines, without reference to their peculiar circumstances. the nature of these gradients more in detail, have been worked at an equal or less expentages of the Caledonian, as a trunk line, in an average velocity as lines constructed at portance than their absolute inclination. nctual distance, may be neutralized by the twice the expense. character of its inclinations.

and Hawick scheme would afford greater hus there proposed by the Caledonian scheme local accommodation to the southern coun-ties, and therefore command greater local as regards the branch generally, we were satraffic, we are not of opinion that this addi- tisfied that it was likely to bring a large actional local traffic could be at all sufficient cession of traffic and to afford much public to compensate for the additional cost of con- advantage, more especially from the supply struction and working; and, therefore, we of coals which it would furnish to all the think that if any scheme for connecting towns and districts adjacent to the main

On the whole, therefore, we have arrived Caledonian is most likely to do so. Upon at the conclusion that the Caledonian scheme this point, we are aware that the commis- in its integrity appears to us, on public grounds, to be deserving of preference.

This, as we have already stated, appears to us to involve the rejection of the Glasgow, Dumfries, and Carlisle line, and also of any scheme from Edinburgh to Carlisle, proposed as a competing scheme, to the Caledonian. The Edinburgh and Hawick line, for the accommodation of the district, does not fall within this description. It will unquestionably afford considerable local adcentral, as giving better trank communica- degree of economy has been introduced in vantage to the district traversed, including are the seats of a thriving woollen manufacture. The benefit conferred on all this district will be great, by lowering the price of coals, which are now carted at a heavy expense from the vicinity of Dalkeith, and by affording a communication with Edinburgh. If constructed cheaply, the traffic may be sufficient to afford a moderate remuneration to the North British Company, by whom it is undertaken, and of whose Dalkeith line it will be a feeder; and although this is a point which we should have wished to investigate more fully, if we could have commanded the requisite time and evidence, and to which we beg to direct the attention of the committee on the bill, we do not, as at present advised, see any sufficient reasons to the contrary to induce us to report an opinion adverse to the measure, upon public grounds.

There are some facts connected with the experience of existing railways in Scotland which would make us hesitate in concluding that railways, if constructed with economy, may not be supported even in localities where the existing traffic appears insufficient for that purpose.

Between Arbroath and Forfar there was towns is only 8,707 and 9,620 respectively; there are only a few small intermediate villages, and the traffic in the direction of the line was quite inconsiderable. Now, there are 90,000 passengers, in the course of the nel below the town of Glasgow, and partly a support rather than a burden to the main year, conveyed by the railway, and its reby arches across the streets and the Clyde.

On the whole, therefore, the cost of contion of an unnecessary line might not be The Dundee and Arbroath railway, likealthough only 17 miles in length, and, therefore, too short to be worked with advanrailway to be worked as against 170 hy the the difference of levels, this latter object ous condition, paying a dividend of from 5

AMERICAN RAILROAD JOURNAL.

PUBLISHED BY D. K. MINOR, 23 Chambers street, N.Y Thursday, May 22, 1845.

NEW YORK AND ERIE RAILROAD.

We congratulate the people of this city, the southern tier of counties, the "great west" and the company, upon the result of the legislative proceedings in relation to this important work. Although the legislature has but partially done its duty towards the people of the southern part of the State, in its legislation in relation to the New York and Erie railroad, yet they have done something; and now, if the people of this city, and along the line of the road, will but do their duty, and subscribe promptly the three millions of dollars required to secure the benefit of the recent legislation, we may, in a few years, enjoy all the benefits resulting to a city like this from an easy, cheap, rapid and uninterrupted communication with the interior.

It is to be hoped and presumed that the company will adopt energetic measures to obtain an early subscription to the stock of the company, and then to resume active operations on the work.

We have not yet received a copy of the law, which we understand, relinquishes, on certain conditions, the lien of the State for its former loans, and cannot therefore speak understandingly in relation to it; especially as no two of the newspapers that we have seen agree in their notices of it; we believe, however, that the principal features are to relinquish the State lien for three millions, when the company shall have obtained subscriptions to an equal amount and have paid in and expended \$750,000 on the work; and that when the \$3,000,000 subscription shall have been paid up and expended on the work, then the company may issue their bonds for an equal amount, which shall be sold by the comptroller, and also expended upon the work. These bonds to be secured by the entire work, upon which over ten millious of dollars will have been expended, and the interest upon them to be paid to the comptroller. It also provides, we understand, that the present holders of old stock shall exchange it two shares for onc.

The law is not what it should have been, yet it will ensure the completion of the read, and the rapid prosperity of this city, and the region through which it will pass, if the managers will set diligently to work, adopt judicious measures, and carry them rigidly into operation.

They will of course, we presume, concentrate their forces on the castern portion of the line, and bring short sections successively into use, and thus make every mile as completed contribute its share of business to the whole line in use.

It has also occurred to us that they might with pro-

WESTERN RAILWAY AND THE READING.

East Albany, has presented an important fact in rail-dor. way information, to wit, that iron in pigs, blooms and rolled, is transported by contract (to take it at the pleasure and convenience of the railroad company) at rates that are less than by the river, and Merchants' Magazine, an exceedingly interesting coasting craft, taking insurance into calculation. article in relation to our New York canals, and es-This conforms to information in a letter by the last pecially to the enlargement of the Eric canal, from the steamer, "that railways in England are everywhere pen of John B. Jervis, Esq., civil engineer; and depriving the canals of a great part of their business, and even much of the coasting trade. It is under- acknowledge the source from whence it came. stood the contract price is something less than two cents per ton per mile from Albany to Boston. Even two cents per ton per mile, taking into consideration the heavy grades of 83 feet to the mile over the a portion, and still be overstocked with good things, Western railroad, limits the capacity of action to 80 not even though the article belonged more appropritons the working, and to 100 tons the maximum load, atchy to our Journal, but by some mistake, perhaps, much lower in proportion than is charged for coal got on the wrong track. We have however done our transported over the Reading railway, 11 cent per best to place it on the right track again, and will ton per mile: such, however, is the favorable loca- merely say to the writer that our columns have alor descending line from the coal mines to the Schuyl shall be careful hereafter to keep the switch in watchtrain with either Norris' or Baldwin & Whitney's tion of measures which ought not to have been unengines of 16 to 18 tons. The latter class of loco-dertaken. motives have drawn 156 iron cars, containing 769 tons of 2210 each. The rate of transportation on the Reading railroad, therefore, is high, compared with the Western railroad of Massachusetts. These low rates, however, must not be the guide for charges on all other railways. Much depends on the quantity and the nature of the trade, with the class of gradients going to and from the scaboard. In the case of the Western railway, we presume the ascent to the summit, from tide water at Albany to Boston, is from twenty-five to thirty-three per cent. more favorable than from the Connecticut river west. There is no difficulty in the locomotive on the Reading railway taking up the ascending grades of 19 feet to the mile, all the empty cars, and all the freight required for the interior. This gives it superior advantages to any railway in the United States, and we mistake much, if this road, under eastern management, does not pay a greater dividend than any railway in the United States. We perce've that the Schuylkill canal, by its side, is in the course of "enlargement," a doubtful policy-taking into view the cost of the same-by our experience, to secure cheap transportation. In the latitude of Pennsylvania, a canal, compared with a railway, loses one year in three; in this State it is nearly one in two. This is a great item to take into consideration, where a steady coal trade, like that from the Schuylkill valley, is to be contended for. The railroad giving constant employment to the mines, while the canal, as observed, would cause them to lose about one year in three.

RAILBOADS.

Hon. William Jackson recently made an interesting speech, at a meeting of the friends of a railroad from Worcester to Pro-Mr. Jackson has long been familiar with railroads, in the capacity of stocksubject of railroads. His speech abounds with inferesting facts and illustrations. He

days you may see an engine with a train of the case with multitudes. cars containing about 100 tons of merchandise, passing from Albany over the Berk, is the most important to the capitalist, viz., shire mountains at the rate of 10 or 12 miles the value of railroad stock as an investment. lbs. over those mountains 25 miles per day. nic. In reference to two of these roads, Mr. Divide the load of this engine by 1200 and J. remarks, that they "are competitors for horse is every day, fair or foul, doing the a view of cheapening transportation, by the work of 663 of your horses. And he does encouragement of competition between two the work with the aid of only four men; - railroads. If they act as competitors, they yours, with four-horse teams, would require destroy each other. By a division of the show the annual expense of maintaining this single road, doing all the business, could afteam to be about \$11,000. Similar items ford to reduce greatly." All southern roads

With such facts before the mind, it is no them. malter of surprise that railroad transporta tion is cheap. Coal is transported 90 miles New England railroads, which stand well at over the Reading, Pa., railroad, at a cost of the stock board, are presented in a tabular 45 cents per ton, and it is expected that the form, as follows :expense will be reduced to 37 cents.

In regard to the estimates of passengers which will pass over a contemplated road, Mr. Jackson gives a good many interesting facts, showing that the actual always exceeds the estimated number of passengers. The estimated number of passengers be-tween Boston and Lowell, before the Lo-well road was built, was 37,440. The actual average number between those two cities alone, for the last six years, without including those brought to the Lowell road by other roads, has been over 100,000. estimate for the Worcester road was 23,500 Before the opening of the Western and Norwich roads the number reached 78,000.-The original estimate of the eastern road was 121,700. The number now exceeds 500,000. The estimate for the Fitchburg was 71,791. The first half year of running about half the road, nearly 10,000 more passengers were carried than were estimated for the whole road a whole year.

The increase of passengers on all our rallroads, said Mr. Jackson, has surprised every body, and yet there is no necromancy or mystery about it to any one who has been in a position where all the elements which are working to produce this result are in sight. His own experience and example, he observed, would perhaps afford as good an illustration as any other. He was seven and a half miles from Boston, and carried on a manufacturing busines of the same kind and about a similar extent for twenty years.

Mr. Jackson presented another fact, which in relation to your teams will show an an-nual aggregate expense of about \$120,000." territory sufficiently populous to support

IMPROVED RAILROAD CARS.

We have had occasion more than once to an hour, or 100 miles per day, stops included. All northern railroads pay good dividends, speak in terms of commendation of the Iron ded. One of your horses might carry 1200 but the Stonington, Norwich and Housato-Truck Frame and superior passenger cars, built by Messrs. Davenport & Bridges, of you have the requisite number of horses for the same business. Either, without the 25 miles in a day, say 167; and four times other, would be good property; together, this number, or 668, could carry this load they afford a practical illustration of the folly pecially on the Long Island road. An easy, Cambridgeport, near Boston, now in use on 100 miles in a day-and hence the iron of two charters for the same business, with spacious and well ventilated car is of much greater importance to the success of a railroad than the companies seem to imagine. Who that has once rode in such a car would 167 men. The interest on the cost of such proceeds, as is now the case between these not willingly pay an extra price rather than an engine, amount expended for its repairs, roads, they are only doomed to half pay, and to be confined in a "box," as is the case on wages of the four men, with wood and oil, the public to high charges forever, which a some railroads, where they are endeavoring some railroads, where they are endeavoring to "wear out their old cars" before they

We give in another page, a description, with engravings, of the "improved iron truck frame," above alluded to, and shall give in our next, and succeeding numbers, different views of the cars made by Messrs. D. & B., both external and internal, and also of their improved freight car; in the hope that they may be more generally used-especially on long lines.

THE IRON TRADE.

We have received by the steamer Britannia the English Railway and Mining Journals to 3d inst. We find in the Mining Journal of April 19th, the following remarks upon the Iron trade, viz:-

"Although the ironmasters at Wolverhampton, and the preceding quarterly meetings, had evinced such readiness to advance for the eleven subsequent years, it was more the price of their metal, and, even in the than 411 millions—and this, too, in spite of face of a quotation already high to an extent two severe pecuniary revulsions in the latter without a parallel, had ventured to increase period. Mr. Jackson said it was the opinion it, the public looked with much confidence to the last and decisive meeting at Dudley, gain of property in the city, attributable expecting a modification, if not an importsolely to the instrumentality of railroads, ant reduction, in the prices previously fixed on; these anticipations have not, however, been realised. At the quarterly meeting at Dudley, last Saturday evening, the ironmas-Gazette, for the purpose of saying that we Wolverhampton, and which, as the determifully concur in the above opinions, and have nate figure for the metal now, may be quotnot a doubt of their entire accuracy. We ed as follows:-Bars, £12; common nail have often said, and now repeat, that the rods, £12; rails, £14; hoops, £13; plates, city of New York would, in ten years, be the £14; sheets, £14; pigs, (Shropshire,) £6 rossing by building the New York and Frie 10s.; pigs, (Staffordshire,) £6 10s. This gainer by building the New York and Erie, decision to maintain the advance fixed on a and the New York and Albany railroads, by fortnight since, is justified by various con--Before there was a railroad, he went to a tax upon its real estate, even if it never re- current circumstances. The ubundance of the city once a week with a horse and ceived a dollar in the way of dividends; orders, the full engagement of the different chaise, and spent a day about it. Instead but if properly constructed and managed, of an hour's hard work for black of an hour's hard work for black of an hour's hard work for black of the constructed and managed, of an hour's hard work for himself and horse, they would, in addition to the enhanced value crease in the wages of the miners, all war-stay half an hour, one hour, or more, and which they would give to property, yield return when ready, without the loss of five from \$1,000,000 to \$2,000,000 net reve-arranged quotation. Still, we are far from minutes. Hence, he now went every day, nue within ten years after their completion, considering it either wise or beneficial;—

while in many cases it is but nominal-in judicial."

From this it appears that there was a determination to persist in demanding these high rates. We find, however, in the same journal, of the 26th April, the following remarks, viz .-

"We have, for the past several weeks, recorded the rise in price of iron, while we have, in common with many others, considered it too rapid to be permanent. When £4 5s., now quoted at £10 to £11, it may very well be imagined, that the ironmasters must be doing a good 'trade' at present prices, if they could 'live' before. But it appears, from the course taken within the past ally to the point of estimates and traffic. few days by some of the principal parties determination to reduce the price of bars, which we are informed on good authority, has been settled at 40s. per ton, with the ina stop to the excessive prices, wages, and, further, the rivalry which is naturally expected from new works being established, and old works resumed. Our impression is, that the demand for iron, although it may such as to warrant the advance in price, and their fingers.' Some of the Welsh ironmasters are progressing at a railroad pacethey can afford to do so with present prices; but let them take care that they do not destroy themselves."

The Journal of 3d inst. has the following, which shows that the contemplated reducthe trade.

"A meeting of some of the most influential Staffordshire ironmasters was held on Scotland. Thursday last, at Birmingham, when it was resolved to take off the last advance of £2 is a proper and necessary part of such a ern lines, it was better to take a circuit of per ton upon manufactured iron, which, it system. Aberdeen is a town of 64,000 in- six miles, for the purpose of placing the will be remembered, we referred to in our habitants, the seat of considerable trade and towns of Arbroath and Dundee in the main remarks of last week."

It seems, however, that speculators have got hold of the trade, and there is no telling what may be the result, unless the manufacturers keep the control in their own hands.

" The iron market is much firmer in Scotch pigs, the speculators again turning their attention to it; 85s. has been paid within the in connection with Dundee, Perth, Edinrisks, was even declined by the partythe terms were subsequently accepted by another less cautious trader."

3. A branch two furlongs in length, to afford access to additional station room in

We are not aware of any objections to these branches on public grounds.

DAVENPORT & BRIDGES' IMPROVED PATENT IRON TRUCK FOR RAILROAD CARS, is presented above, and the attention of Rallroad Companies is respectfully invited to the following description of their justly-celebrated invention:

Fig. 1 of the drawing above represents a top view or plan of our Improved Railroad Truck. Fig 2 is a central, longitudinal and vertical section. C, Fig. 1 and 2, represents the arched bars of the side trusses; they consist of two long bars of plate iron, (about three inches wide by seven eighths of an inch thick,) bent into the shape as seen in drawing 2. Each of them is placed directly over a flat and straight tie bar, A, which extends from one end to the other, as seen in Fig. 2. These parts, so arranged, receive between their ends the ends of diagonal cross bars or braces, B, which are united at their centres by being clasped and welded, as seen in Fig. 1. The bars so composing what may be considered as side trusses and diagonal cross braces, rest at their ends upon four pedestals, F, F, which receive the bearings or boxes for the axles to run on. Another flat tie bar, P, extends from the under side of one of the pedestals to that of the other, on the same side of the frame, and the whole is secured together by eight bolts, J, J, passing down through the ends of the several bars, A, B, C, and the pedestals, and on each side of the journals of the axles; O, O, in the positions represented in the drawings. From the above it will be seen that there are two bolts to each pedestal, and that this number is all that is requisite for the full security of the bars and pedestals together. The body rests and moves upon two sectional supports, D D, arranged on the sides of the truss frames, as seen in Fig. 2; they extend somewhat, or a sufficient distance above the truss frames, and are jointed at their lower ends by means of a bolt, L, which rests upon the top of the lower spring, M, which spring rests upon a bolt passing through the lower part of the inverted strap, E, which strap passes over and rests upon the top part of the upper spring, M, which is placed within the truss frame, and rests upon the top of the bar, A.

Two bands, N, N, are passed entirely around the central part of each truss frame, the object of the motive Engine, 4 wheels and Tender. Cylinsame being to transfer the strain, or a portion thereof, of the spring, from the tie bar, A, to the arched bar, C.

These Trucks are adapted as well for eight, wheeled passenger cars as for haggage and freight cars.

These Trucks are adapted as well for eight-wheeled passenger cars as for baggage and freight cars, giving to each a more agreeable and easy motion than any other Truck heretofore constructed or in use. They are simple in their construction, combining strength and great durability, although weighing at least twelve hundred pounds less than the common Trucks. Besides these excellences, by reason of the elasticity of the braces, B, B, B, B, as seen in the drawing, and the other peculiarities of construction, the weight is equalized upon all the wheels, and yet any one may be raised so as to pass any inequality on the rails without lifting either of the other wheels from the track, thus rendering it almost impossible to run a car off. Being bound, and having as it were but four joinings, they are protected from injury by lateral strains, and in case of damage are easily repaired.

These excellences have been fully tested by use, for a long time, on the Eastern, the Fitchburg and Long Island railroads; and for proof of the above stated superiority of these Trucks over all others, we refer to the experience of those who have used and run them,

CAMBRIDGEFORT, April 1, 1845.

DAVENPORT & BRIDGES.

MINERAL RESOURCES OF PENNSYLVANIA.

With a territorial domain of 47,000 square miles, this, the keystone of the States, has richer intive resources than any other state in the Union: its population in 1684 only 7000, was in 1840 nearly 2,000,000 rits agricultural products exhibit a corresponding increase: it yields abundantly both anthracite and bituminous coal. In 1820 only 365 tons of anthracito were sent to market, in 1830 the quantity reached 174,737 tons, in 1840 it was 865,414, and in 1844, 1,631. 699-showing that the trade has nearly doubled within four years. The region where bituminous coal abounds, embraces 21,000 square miles, and at least 2,000,000 tons are annually mined in the state. Iron is very abundant in the state; also, marble, limestone, zinc, copper and lead.

NICOLL'S PATENT SAFETY SWITCH for Railroad Turnouts. This invention, for some time in successful operation on one of the principal railroads in the country, effectually prevents engines and their trains from running off the track

at a switch, left wrong by accident or design.

It acts independently of the main track rails, being laid down, or removed, without cutting or displacing

It is never touched by passing trains, except when in use, preventing their running off the track. It is simple in its construction and operation, requiring only two Castings and two Rails; the latter, even it

much worn or used, not objectionable.

Working Models of the Safety Switch may be seen at Mesers. Dayenport and Bridges, Cambridgeport, Mass., and at the office of the Railroad Journal, New York.

Plans, Specifications, and all information obtained on application to the Subscriber, Inventor, and Patentee. G. A. NICOLLS, ja45 Rading, Pa.

KITE'S PATENT SAFETY BEAM.

M As your Journal is devoted to the benefit of the public in general I feel desirous to communicate to you for publication the following circumstance of no inconsiderable importance, which oc-curred some few days since on the Philadel-phia, Wilmington and Baltimore railroad.

On the passage of the evening train of cars from Philadelphia to this city, an axle of our large 8 wheeled passenger car was broken; but from the particular plan of the construction, the accident was entirely unknown to any of the passen-gers, or, in fact, to the conductor himself, until the train, (as was supposed from some circumstances attending the case,) had passed several miles in advance of the place where the accident occurred, whereas had the car been constructed on the common plan the same kind of acci-

dent would unavoidably have much injured it, perhaps thrown the whole train off the track, and seriously injured, if not killed many of the passengers.

Wilmington, Del., Sept. 28, 1840.

The undersigned takes pleasure in attesting of the value of Mr. Joseph S. Kite's invention of the Safety Beam Axle and Hub for railroad cars. They have for some time been applied to passenger cars on this road, and experience has tested that they fully accomplish the object intended. Several instances of the fracture of axles have occurred, and in such the cars have uniformly run the whole distance

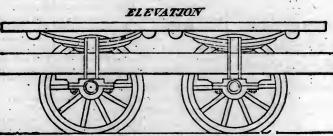

with entire safety. Had not this invention been used, serious accidents must have occurred. In short, we consider Mr. Kite's invention as completely successful in securing the safety of property

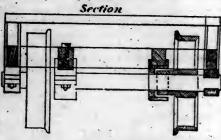

and lives in railroad travelling, and should be used on all railroads in the country.

JOHN FRAZER, Agent,
GEORGE CRAIG, Superintendant,
W. L. ASHMEAD, Agent.

The model of the above improvement is to be seen at the New Jersey railroad and transportation office, No. 1 Hanover st., N. York.

Safety Beam

R. CASEY, CIVIL ENGINEER, NO. 23 V . Chambers street, New York, will make surveys, estimates of cost and reports for railways, canals, roads, docks, wharves, dams and bridges of every description, with plans and specifications. He will also act as agent for the sale or purchase of machinery, and of patent rights for improvements relating to public works.

SAMUEL NOTT, CIVIL ENGINEER, SUR-veyor and General Agent, Bangor, Me. Rail-roads, Common Roads, Canal, Factory and Mill Sites Towns, Farms, Wild Land, etc., surveyed. Plans and Estimates for Buildings, Bridges, etc., prepared, and all appertaining business executed.

DATENT HAMMERED RAILROAD, SHIP and Boat Spikes. The Albany Iron and Nail Works have always on hand, of their own manufacworks have always on hand, or here own manufac-ture, a large assortment of Railroad, Ship and Boat Spikes from 2 to 12 inches in length, and of any form of head. From the excellence of the material al-ways used in their manufacture, and their very genways used in their manufacture, and their very general use for railroads and other purposes in this country, the manufacturers have no hesitation in warranting them fully equal to the best spikes in market, both as to quality and appearance. All orders addressed to the subscriber at the works, will be promptly executed. JOHN F. WINSLOW, Agout.

Albany fron and Nail Works, Troy, N. Y.
The above spikes may be had at factory prices, of Erastus Gorning & Co., Albany; Hart & Merritt, New, York; J. H. Whitney, do.; E. J. Etting, Philadelphia; Wm. E. Coffin & Co., Boston.

MACHINE WORKS OF ROGERS, KETCH-um & Grosvenor, Patterson, N. J. The un-dersigned receive orders for the following articles, manufactured by them of the most superior descrip-tion in every particular. Their works beingexten sive and the number of hands employed beinglarge, they are enabled to execute both large and small orders with promptness and despatch.

Railroad Work.

Locomotive steam engines and tenders; Driving and other locomotive wheels, axles, springs & flange tires; car wheels of east iron, from a variety of patterns, and chills; ear wheels of cast iron with wrought tires; axles of best American refined iron; springs; boxes and bolts for cars.

Cotton, Wool and Flax Machinery

of all descriptions and of the most improved patterns, style and workmanship.

Mill gearing and Millwright work generally; hydraulic and other presses; press screws; callenders; lathes and tools of all kinds; iron and brass

castings of all descriptions.

ROGERS, KETCHUM & GROSVENOR,

a45 Paterson, N. J., or 60 Wall street, N. York.

PATENT RAILROAD, SHIP AND BOAT
Spikes. The Troy Iron and Nail Factory keeps
constantly for sale a very extensive assortment of
Wrought Spikes and Nails, from 3 to 10 inches,
manufactured by the subscriber's Patent Machinery,
which after five years excessful operation, and now which after five years' successful operation, and now almost universal use in the United States (as well as England, where the subscriber obtained a patent) are found superior to any ever offered in market.

Railroad companies may be supplied with Spikes having countersink heads suitable to holes in iron rails, to any amount and on short notice. Almost all the railroads now in progress in the United States are fastened with Spikes made at the above named factory—for which purpose they are found invalua-ble, as their adhesion is more than double any com-

mon spikes made by the hammer.
All orders directed to the Agent, Troy, N. York,

will be punctually attended to.

HENRY BURDEN, Agent.

Spikes are kept for sale, at Factory Prices, by I. & J. Townsend, Albany, and the principal fron mer-chants in Albany and Troy; J. I. Brower, 222 Water St., New York; A. M. Jones, Philadelphia; T. Jan-viers, Baltimore; Degrand & Smith, Boston. *,* Railroad Companies would do well to forward

their orders as early as practicable, as the subscriber is desirous of extending the manufcturing so as to keep pace with the daily increasing demand. ja45

THE AMERICAN RAILROAD JOURNAL is the only periodical having a general circulation throughout the Union, in which all matters connected with public works can be brought to the notice of all persons in any way interested in these undertakings. Hence it offers peculiar advantages for advertising times of departure, rates of fare and freight, improvements in machinery, materials, as iron, timber, stone, cement, etc. It is also the best medium for advertis-ing contracts, and placing the merits of new under-takings fairly before the public.

TLAN

ELEVATION

IVA As your Journal is devoted to the benefit of the public in gen-eral I feel desirous to communicate to you for publication the following circumstance of no inconsiderable importance, which occurred some few days since on the Philadelphia, Wilmington and Baltimore railroad.

On the passage of the evening train of cars from Philadelphia to this city, an axle of our large 8 wheeled passenger car was bro-ken, but from the par-ticular plan of the construction, the accident was entirely unknown to any of the passen-gers, or, in fact, to the conductor himself, until the train, (as was supposed from some circumstances attending the case,) had passed several miles in
advance of the place
where the accident occurred, whereas had
the car been constructed on the common plan the same kind of acci-

dent would unavoidably have much injured it, perhaps thrown the whole train off the track, and seriously injured, if not killed many of the passengers.

Wilmington, Del., Sept. 28, 1840.

The undersigned takes pleasure in attesting of the value of Mr. Joseph S. Kite's invention of the Safety Beam Axle and Hub for railroad cars.. They Safety Beam Axle and Hub for railroad cars. They have for some time been applied to passenger cars on this road, and experience has tested that they fully accomplish the object intended. Several instances of the fracture of axles have occurred, and in such the cars have uniformly run the whole distance with entire safety. Had not this invention been used, serious accidents must have occurred.

Section

short, we consider Mr. Kite's invention as completely successful in securing the safety of property In short, we consider Mr. Kite's invention as completely successful in securing the safety of property and lives in railroad travelling, and should be used on all railroads in the country.

PASCAL IRON WORKS.

WELDED WROUGHT IRON TUBES

From 4 inches to \$\frac{1}{4}\$ in calibre and 2 to 12 feet long, capable of sustaining pressure from 400 to 2500 lbs. per square inch, with Stop Cocks, \$\tau_*\$, \$\tau_*\$, and other fixtures to suit, fitting together, with screw joints, suitable for STEAM, WATER, GAS, and for LOCOMOTIVE and other STEAM BOILER FLUES.

Manufactured and for sale b MORRIS, TASKER & MORRIS. Warehouse S. E. Corner of Third & Walnut Streets, PHILADELPHIA.

TO RON MASTERS.—FOR SALE.—MILL SUTES in the immediate neighborhood of Bitumineus Coal and Lou Orc, of the first quality, at Ralston, Lyoming Co., Pa. This is the nearest point to tide water where such coal and ore are found together, and the communication is complete with Philadelphia and Baltimore by canals and railways. The interest on the cost of water power and lot is all that will be required for many years; the coal will not cost more than \$1 to \$1 25 at the mill sites, without any trouble on the part of the manufacturer; rich iron ore may be laid down still more cheaply at the works; and, taken together, more cheaply at the works; and, taken together, these sites offer remarkable advantages to practical manufacturers with small capital. For pamphlets, descriptive of the property, and further information, apply to Archibald McIntyre, Albany, to Archibald Noertson, Philadelphia, or to the undersigned, at No. 23 Chambers street, New York, where may be seen specimens of the coal and orc.

W. R. CASEY, Civil Enginer,

VALUABLE PROPERTY ON THE MILL V Dam For Sele. A lot of land on Gravelly Point, so called, on the Mill Dam, in Roxbury, fronting on and east of Parker street, containing 68,497 square feet, with the following buildings

thereon standing.

Main brick building, 129 feet long, by 46 ft wide, two stories high. A machine shop, 47x43 feet, with large er gine, face, serew, and other lathes, snitable to do any kind of work

Pattern shop, 35x32 feet, with lathes, work bench-

es, &c. Work shop, 86x35 feet, on the same floor with the pattern shop.

Forge shop, 118 feet long by 44 feet wide on the ground floor, with two large water wheels, each 16 feet long, 9 it diameter, with all the gearing, shafts, drums, pr. lays, &c., large and small trip hammers, turnaces, terges, rolling mill, with large balance wheel and a large blowing apparatus for the foundry. Foundry, at end of main brick building, 60x454 feet two stories birth, with a shed mark 45x29 feet.

feet two stories high, with a shed part 45 kx20 feet, containing a large air furnace, cupola, crane and corn oven.

Store house—a range of buildings for storage, etc., 200 feet long by 20 wide.

Locomotive shop, adjoining main building, fronting on Parker street, 51x25 feet.

Also—A lot of land on the canal, west side of Parker st., containing 6000 feet, with the following buildings thereon standing:

Boiler house 50 feet long by 30 feet wide, two sto-

Blocksmith stop, 49 feet long by 20 feet wide.

A. & G. RALSTON

Mar. 20tf 4 South Front St., Philadelphia. THE NEWCASTLE MANUFACTURING Company continue to furnish at the Works, situated in the town of Newcastle, Del., Locomotive and other steam engines, Jack screws, Wrought iron work and Brass and Iron castings, of all kinds connected with Steamboats, Railroads, etc.; Mill Gear-ing of every description; Cast wheels (chilled) of any pattern and size, with Axles fitted, also with wrought tires, Springs, Boxes and bolts for Cars; Driving and other wheels for Locomotives.

The works being on an extensive scale, all orders will be executed with promptness and despatch. Communications addressed to Mr. William H. Dobbs, Superintendent, will meet with immediate attention.

ANDREW C. GRAY, ja45

President of the Newcastle Manuf. Co.

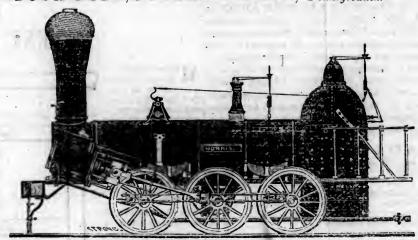

CUSHMAN'S COMPOUND IRON RAILS etc. The Subscriber baving made importat improvements in the construction of rails, mode n guarding against accidents from insecure joints, etc. respectfully offers to dispose of Company, State Rights, etc., under the privileges of letters patent to Railroad Componies, Iron Founders, and others interested in the works to which the same relate. Companies reconstructing their tracks now have an opcortunity of improving their roads on terms very advantageous to the varied interests connected with their construction and operation; roads having in use flat bar rails are particularly interested, as such are permanently available by the plan.

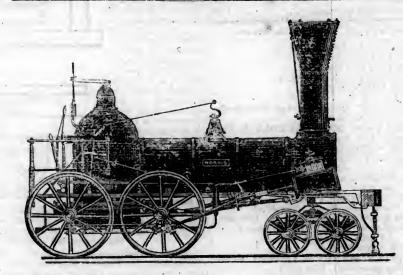

W. Mc. C. CUSHMAN, Civil Engineer;
Albany, N. Y.

Mr. C. also announces that Railroads, and other works pertaining to the profession, may be constructed under his advice or personal supervision. Applicaitons must be post paid.

NORRIS' LOCOMOTIVE

BUSH HILL, PHILADELPHIA, Pennsylvania.

MANUFACTURE their Patent 6 Wheel Combined and 8 Wheel Locomotives of the following descriptions, viz:

Cluss 1, 15 inches Diameter of Cylinder, × 20 inches Stroke.

may safely enough take it for granted it will not only show nebulæ well, but any other ter in point of light is equal to a Newtonian in easy, appreciable quantity, the parallax of the nebulæ themselves; -finally, having "The Lemairean of 4 feet diameter is presented to us original portraits of the moon the telescope on it, and with the entire aper- equal to a Newtonian of 57 inches and four- and of the sidereal heavens, such as man has never dared even to anticipate,-will it "The Lemairean of 3 feet is equal to a by daguerreotypic aid administer to us copies founded upon truth, and enable astro-"And the Lemairean of 6 feet is equal to nomers of future ages to compare the moon and heavens as they then may be, with "By substituting, then, the Lemairean the moon and heavens as they were? Some so little aberrations had this brilliant image form for the Newtonian, the present 3 feet of these questions will be answered affirthat I could have measured its distance from Newtonian will be made as effective as if it matively, others negatively, and that, too, and position with any of the stars in the were 43 inches diameter, and the 6 feet as very shortly; for the noble maker of the no-field with a spider's line inicrometer, and a if it were 86 inches in diameter; or the blest instrument ever formed by man "has power of 1,000, without the slightest diffi- quantity of light in each telescope, after the cast his bread upon the waters, and will, culty; for not only was the large star round, alteration, will be, to its present light, as 7 with God's blessing, find it before many

A NOVEL VIADUCT, TRULY.

We find the following notice of a "novel railway viaduct" in the London Mining Journal, of 19th April. The writer says that,

"A model has been prepared of the viaduct designed by Messrs. Leahy, the engineer of the Cork and Bandon line, for the intended crossing over the mail coach road and valley at Chetwynd, situated about four miles from Cork. The extreme height of the viaduct is 82 feet over the valley, which is passed by three equal spans, each 240 feet; the centre and the two abutment piers are of stone, in a bold and enriched Doric style, which has an exceedingly pleasing effect. The model is one-twelfth of the full size, and this proportion is strictly preserved in all its parts; the construction is very handsome, extremely simple and novel; the greater number of its parts are of uniform size and shape, and, curious to say, there is neither a mortice and tenon joint, or a spike or nail in the entire structure, nor will there be any necessity of centering for its erection. All these peculiar features of the design will reduce the expense of its construction far bemoon was inevitable, as it was the first oc-ultation which had been observed with that them; will it tell us why the satellites of has been subjected to a most rigid test, by observed by its noble maker; and very face as discs of nearly white light, sometimes tal weights, equivalent to over 1000 tons on loading its entire surface with a pile of methe real structure, and yet it sustained the There is no viaduct in Europe constructed on this principle, which, from its great simplicity, cheapness and efficiency, will enable companies to construct railways in localities where otherwise they could not be attempted -and for this reason it promises to be of national advantage. The other bridges and viaducts on this line are of similar character; we may allude to that intended for the Bauden river,, crossing as a chaste continuance of the arch and truss principle, combining beauty with strength and economy in a high degree."

is involved in impenetrable mystery*

"The only telescopes in point of size comparable with Lord Rosse's 3 feet and 6 feet

We shall be greatly obliged to any gently obliged to We shall be greatly obliged to any gentails of this viaduct.

AMERICAN RAILROAD JOURNAL.

PUBLISHED BY D. K. MINOR, 23 Chambers street, N. Y

Thursday, May 29, 1845.

CLEVELAND, COLUMBUS AND CINCINNATI RAILROAD. Since the article in relation to the Sandusky and Cincinnati railroad was written, we have received the Delaware (Ohio) Gazette, in with we find an account of "a meeting of the commissioners appointed by the general assembly at the last session, for the organization of the Columbus railroad company, the Cleveland, Columbus and Cincinnati company, and the Columbus and Sandusky company, held at Mansfield on the 1st day of May, 1845, in pursuance of previous notice: John W. Allen, of Cleveland, was appointed chairman, and D. T. Fuller, of Delaware,

"After a discussion of the several charters and routes between Cincinnati and Columbus and the lake, on motion of S. Finch, of Delaware, a committee of two commissioners named in each charter was appointed by the chair, to examine the several charters; and report under which it is expedient to organize—also, to report upon such other matters as they may deem advisable. Under this resolution, the chairman appointed Sandford S. Bennett, George H. Busby, Irad Kelley, James Purdee, Sherman Finch and Hiram Randolph; and, on motion of Jas. Purdee, the chairman was added to the committee, and the meeting adjourned to 3 o'clock, P.M.

3 o'clock, P. M. "The meeting was again organized, and the committee appointed in the morning made a written report, recommending that a company be formed under the Cleveland, Columbus and Cincinnati charter, and the amendments thereto made at the last session of the legislature, and that the commissions of that company cause books to be opened for subscriptions for the stock necessary for the construction of a road from Cleveland to Columbus; which report was accepted, and so it was determined by the commissioners of the three routes, that that terminating at Cleveland should be adopted.

The commissioners on the Cleveland, Columbus and Cincinnati route, subsequently stated that they had fixed on the 3d Monday in June for opening books and subscriptions to the stock, at the following places, and under the direction of the gentlemen

whose names are annexed to each, viz:

Correspondents will oblige us by sending in their H. Williams and B. Powers. At Eden, in Delaware for in the short crops of wheat in 1844. We look county, S. Scott, H. E. Randolph and Israel Potter.

At Bucyrus, Josiah Scott, John Caldwell and Samuel Myers. At Auron, Josiah Tracey and Tower

PRINCIPAL CONTENTS.

"Also resolved, that Sherman Finch, Hosea Williams and Benjamin Powers, of Delaware, be a committee of correspondence with authority to call subsequent meetings of the commissioners, when they shall deem it expedient."

These two lines from Sandusky and from Cleveland to Cincinnati, appear to be competing lines.

We take it for granted that the "Mad river and Sandusky" line will be completed at all events, and connected with the Miami road, and thus open a line from the lake to the Ohio at Cincinnati. Of course a line from Cleveland, through Columbus, will not be very far distant, at least for a part of the way, to us good policy to run westerly from Cleveland, and connect with the Mad river road, and thus open a continuous railroad to Cincinnati, and at the same time a portion of the Great Western Railroad from New York to the Mississippi. . We do not however pretend to put our limited knowledge of the matter in competition with those who are familiar with it, but rather make these remarks to elicit the facts. We shall of course go for the earliest possible completion of a railroad from the lake to the Ohio at Cincinnati, and then for another further east.

CENTRAL RAILROAD, MICHIGAN.

"By the accompanying table," says the Detroit Free Press, "it will be perceived that the receipts for freight for the first five months of the present fiscal year are less than one-half of those for the same period of the preceding year, owing to the great falling off last season in the usual wheat-crop in this State. The receipts for passengers, however, it will be seen, are increased about in proportion to the extension of the road since last spring. Although the aggregate receipts for the first five months of this year are over \$16,000 short of last year's receipts for the same period, yet it will be seen that they are nearly double what they were in the same period year before last, when the receipts for the year fell only a few dollars short of \$150,000. If our farmers are blessed with as good a crop of wheat this season, as there is now every reason to anticipate, and from the flattering prospect of increased travel on the road, we see no reason to doubt but that the receipts for the year will yet come nearly or quite up to the estimate of the board of internal improvement in their last annual report, which was \$275,000.

Receipts on this road for the first five months of the three last fiscal years:

One word to the editorial corps of Detroit .-These extracts are made from the only Detroit paper which has come to us in years-and this appears to have come from a friend, "S. S.," who will please accept our thanks for giving us an opportunity to speak of the railroads in Michigan. We have frequently sent the Journal to the Detroit papers, and requested an exchange, but whether we are to place their "declinature" to the account of the high estimation in which they hold their own papers, or the low estimation of ours, or both, we are at a loss to determine, and will not ask, as we have no hesitation to say that we can be quite as useful to them as they to us-yet we should be well pleased to receive a paper from Detroit, that we may be able to speak of their public works occasionally as they merit.

THE COAL TRADE .- SCHUYLKILL VALLEY.

The demand for coal continues brisk, and the red ash men are now busy in supplying the orders for New York dealers, the demand for this kind of coal having commenced much sooner this year than last. The rails on the Schuylkill valley railroad are now laid as far up as New Philadelphia, and the

shipments from that quarter are rapidly increasing.
The bridge over the Schuylkill and the laying of the rails through the deep cut on the Mill creek road will be completed to-day or Monday, giving access to several of the collieries on the Mill creek for shipments. The whole road, it is believed, will be completed in the course of next week.

The shipments by railroad are increasing considerably, reaching 15,549 02 tons this week. By canal, 5,748 10. Total for the week, 21,297 12 tons. Freights to Philadelphia 70 cts., to N. York, \$1.80. By railroad, from Pottsville and Port Carbon \$1.10 from Schuylkill Haven, \$1, toll included.

The doctrine of " low fares and high speed for passengers" is becoming the order of the day, and must prevail. The Railway Times of May 3d, says-" The Eastern Counties railway company have announced their intention of reducing their fares and increasATMOSPHERIC RAILWAY.

we gave, in the last August number of the Journal, numerous engravings and full dein operation by Messrs. Clegg & Samuda, subscribed. from Kingston to Dalkey, in connection with the Dublin and Kingston railway. It will also be recollected that those two eminent engineers, Messrs. Brunel and Stephenson, took opposite sides on the subject. and that each based his opinions on actual experiments made by themselves on the road. Of course there has been no little interest felt in the result of the year's operations; and we are gratified in being able to is to be made at the time of subscribing, the on the Reading railroad: give the animal report of the directors, which directors are to make an allotinent of the lishing beyond a question the correctness of the policy adopted by that company—and should be by a'll others-" of endeavoring to greatest extent, by affording to the public the for the transaction of the business of the culars: u'most possible accommodation at the very lowest rates." We ask for this report an attentive perusal by all who take an interest in the success of railroads in this country, as we are now again upon the threshold of a rapid extension of-and, we hope, important improvements in-the railroad system generally. It needs not the wisdom of a prophet, or the son of a prophet—nor do we claim the honor of being either the one or the other-to predict, that, in a few years, the railroad interest of this country will become one of the predominant and overshadowing interests of the country; hence the necessity of its being properly managed and governed in its infancy.

ATLANTIC STEAM NAVIGATION CO.

We copy the following letter in relation to this important matter from the Journal of Commerce. We shall now see American Atlantic steam ships. There is, at times, much in a name-even if it be rarely met with—as we shall learn ere long in this case; and we trust that our government will contribute largely to the success of the enterprize, and thus ensure the construction of a if necessary, into efficient steamships of war, a species of defence in which we are, in comparison with other nations, sadly deficient.

"The public are aware that the State legislature, with a promptitude and liberality which call for our warmest acknowledgments, granted the above named company an act of incorporation, the particulars of which, for general information, I beg to subjoin.

company, which is to continue for twenty. four years from the present time.

to accomplish anything we may be disposed in neglecting what should be done, or in atto undertake to ensure ample supplies for all tempting what cannot be safely accomplished. Their aim will be to complete the road at the earliest practicable period."

WHITE WATER CANAL.

The Cincinnati Gazette has the following very just remarks in relation to the benefits resulting from internal improvements, or canals and railroads. It is true, as the editor remarks, that there has been much mismanagement in their construction-we say a great waste of public money, which would not have been done with private funds-yet, with all the errors, and losses, and disapnow is, far more wealthy, and prosperous, and powerful, with her present canals and railroads, even if their cost had been paid by der, yet enough has been done to show that a tax upon the property of the country, and there is no need of the west depending on tolls only sufficient were charged to pay their current expenses, or keeping them in repair-yes, even if they had cost double what they have. Says the Gazette,

"The White Water Valley canal is fast progressing to completion, and will, in all human probability, be ready for the fall business to Cambridge city. Already, we feeder dam just below Connersville. Ohio is moving vigorously in relation to her aqueducts over Garrison creek, just above Laurel, and over White Water, just below Laurel, will be the last work finished this side of Connersville. But we understand We presume, therefore, that we shall two, if not three lines of railroad, besides of July with our friends at Connersville by

"With all the burden and disgrace of a public debt which we do not pay, we would this day rather it should continue to hang more and Ohio railroad. These two great provements, and with all its unpopularity advocated such a scheme. We know it was wrongly managed, but this we never countenanced or apologised for. The White Water canal will make this valley the rich-"The directors of both branches of the est and most independent part of the world. ork. . . to impede our progress to wealth the most "Mr. Mills has just returned from the unbounded. Few of for efficient action in extending and com- us fully appreciate the benefits of canals, RAILROADS IN NEW ENGLAND.

The vigorous movements of the New England people at this time in relation to the construction of railroads northwardly from Boston, Hartford and Portland, indicate a spirit of enterprize characteristic of the descendants of the pilgrims. There are now three distinct lines-we may say four a part of the way-upon which great efforts will be made by the inhabitants near them, and by their respective friends in the cities in which they are designed to terminate, for an early breaking of ground, and prosecution of the

There cannot, we are surc, be a doubt of the construction of a railroad up the valley of the Connecticut river, in continuation of that now in course of construction to Northampton-at least as far as the mouth of White river, and thence to Burlington via Montpelier, and probably to Wells' river and still higher up. To doubt this, would be a libel on the character of the people of that beautiful valley. We know them too well to believe that those who were first, and foremost, and deepest in the Merino sheep understand, has the water been let in at the trade, in its earliest history in this country, The will be the last to avail themselves of the advantages of railroads.

There will also, and of course, be a railroad to Brattlebero' in continuation of the Fitchburgh road, which will find its way across the Green mountains at some favorawill, in a few years, not only have at least have an opportunity of celebrating the 4th ble point before it reaches Windsor, and thence to Rutland and Burlington. To doubt this would be a libel upon the people of Boston-than whom, we would sooner libel any other people on earth: as we cherish-though almost an entire stranger to with the roads from the city of New York, and conveniences of the White Water canal. their persons-a high admiration of them, or rather of their acts.

There will most assuredly be also another line from the Fitchburgh road, through Keene in New Hampshire, to Bellows Falls, in Vermont, or to some point above there. Of this we feel assured: first, from the determination manifested by the Keene geonle who attended the convention in Boston last September, for the purpose of extending the Fitchburgh road northward—as well as from the present movements of the people on the line. We well recollect the assurance given by Mr. Edwards, of Keene, who desired a suspension of action, when the convention ments, we learn, with regard to the purchase tage farm house, as they have driven out the decided to act under the call, which was for log cabin, and our posterity will enjoy in the purpose of taking means to construct a road to Brattleboro' from Fitchburgh. He told them that on the day they were ready to run cars from Fitchburgh, around New Hampshire, through Brattleboro' to Bellows Falls, they, the New Hampshire people,

much more direct line from one of those Windsor, Vermont, on the 11th day of June with the railroad movements in Canada, as places to the other; and their movements next. to take measures preparatory to the well as in the States. By referring to the map have been in accordance with that assurance; immediate opening of books for subscriptions to the capital stock of the Connecticut and the road will be built at an early day. and Passumpsic river railroad company; and to Detroit is much less by this than by any It is not yet certain whether these two lines to take such other measures as may be deem. other route; and that, by the construction will unite there, and pass up the valley of ed expedient to hasten the commencement of this road, it will become a thoroughfare the Connecticut on the east or west side, to and completion of a railroad, under the charthe mouth of White river, or whether there its course, connect with, or intersect the will be one on each side of the river. Time routes of the following roads, either now in will determine.

After these-and possibly before themwill be the road from Concord, in New Hampshire, in continuation of the Lowell and the Nashua and Concord roads, to the direct medium of communication between mouth of White river, opposite Lebanon, Montreal, on the one hand, and Boston and there to connect with the Connecticut val. New York on the other.' The call is signed ley road, or up the valley of the Merrimac, by the mayor and other gentlemen of Hartto Meredith bridge, and Plymouth, and thence ford, Ct., by the president of the Western to Haverhill and Wells river -or perhaps Northampton, and by some of the principal both-and thence to Burlington and Canada citizens of Brattleboro', Windsor, Putney, line somewhere. This road must be built Hartland, Hartford, Norwich, Thetford, Bradby the people on its line, and those interested ford, and Barnet, Vt.' in the three roads from Boston to Lowell, Nashua and Concord, unless they are willing triot, of May 22d, and says, to give up the main travel and business from Canada, which would of course take the report of the railroad commissioners is in fa- the towns of Hamilton and London, and this railroad down the Connecticut valley, unless vor of the route from Concord, by way of was done for the purpose of securing it as a there was one equally favorable over this route. These considerations, we hold, are have examined another route, which, starting The eastern termination must be somewhere quite sufficient to ensure the early commence. at Concord, strikes Contoocook river, at on the Niagara river, and the western termiment and eventual completion of these lines. Boston is deeply interested in them; indeed and up that stream until it meets the route or St. Clair rivers, or on both, branching off she will be under the necessity, and not is stated to be Suc wilcontact at London. The precise points of these terwithout the inclination, of putting her broad The report suggests to all concerned whether the stockholders, all of whom, whether resiand vigorous shoulders to the wheel, to pre- the interests of the corporation and the pub- dents or non-residents of the province have vent, if possible, the construction of a rail. lic would not be promoted, by making the a voice according to the amount of stock road from Portland to Montreal, and thus prevent the business and travel of the Canadas to the mother country, from reaching the Atlantic without her deriving toll from it, as to be 52 80 feet per mile. is now the case. A few years—less than ten-will see the cars passing over them at Montreal railroad, the report fully adopts the of the road. The stockholders here will be the rate of twenty miles an hour; but even route proposed by the corporation, which satisfied with having the points of Hamilton that, with all the counter interest of Boston, will not, we think, prevent the construction bridge; thence to Meredith bridge and vilor tity of the stockholders—indeed they cannot of another, and a shorter line from the At- lage; Holderness village, Plymouth, etc., to lantic to the Canadas. Portland, though Haverhill, and thence up the Connecticut comparatively small, will make a vigorous, and we think a successful effort to become the sea port of the Canadas: and many people any town on said river between those towns London, is about 240 miles, and from Buffawill pass from Montreal to Boston, and the as may be judged necessary to meet a rail lo to the same place is about 255 miles, reverse, by the way of Portland.

The annexed extracts show that the people are moving in the valley of the Connecticut, as well as in the valley of the Merrimac .-The first is from the Boston Courier, and says that,

"A meeting of those in favor of extending railroad communication from the southern part of the State of Vermont, up the Hamilton Gazette of 19th inst., and copy it "The route from Hamilton to Chatham,

CHENANGO CANAL.

We are encouraged a little in the hope that, as the resources of the country on its southern borders are more thoroughly developed, it may do something towards paying its expenses. The Binghampton Courier, of 15th inst., says, "The tolls collected at this port, last year, it will be recollected, exhibited a graaverage amount actually paid on the whole tifying increase of business at this point of the Che-We learn from the following paragraph number of shares, instead of being one hun-nango canal-having more than doubled upon the dred dollars, is only sixty seven. On that preceding year. The collector informs us that the amount the road pays a good income, and receipts of this year, so far, show a considerable inshares now sell at \$70 each, which is above crease over last year. As the resources of the counthe actual, though less than the nominal par try are developed, new sources of wealth and elements of trade are discovered and brought into profienemies as did its predecessor, in time of . This would be found true, we doubt not, table requisition. We have a strong soil fitted to a very diversified production, extensive forests abounding in valuable timber, and abundant water power; and these, the energy of our industrious inhabitants is rapidly making available to the supply of their wants and the production of wealth. A few days since a float containing thirty thousand cubic feet of timber, came some seventy miles down the Susque-Journal of Commerce, which announces the hanna, and was locked into the canal at this place, successful accomplishment of the new bound for Troy. This is a new experiment for this aqueduct for the canal over the Alleghany region, and is likely, it is said, to prove a profitable

THE BROAD GARGE

The London Railway Times has the following in relation to the wide track for railways, viz:

completed the work, we shall hold him to his promise to furnish us a full description of it for publication:

"The water was let in the new wire suspension aqueduct between Pittsburgh and Alleghany on Thursday evening, 22d inst."

ham, it is the intention of the Grand Junction co. to carry on the broad gauge from Birmingham (in addition to the narrow) to Liverpool and Scotland! It is added, that surveys having been made of their line; the practicability of this scheme, at a moderate cost, has been ascertained. If effected, the journey between London and Edinburgh and Glasgow would be reduced to about 7 hours, and that to Liverpool to 31 hours. The connection with Ireland would be manufactured for the purpose at the Mersey Alleghany, on Thursday evening, 22d inst., iron works. The weight of metal previously but was drawn off again the same evening also improved, as the Chester and Holyhead railway would possibly see it to be their interest to adopt the wide gauge.'

DAVIES' IMPROVED RAILWAY BREAK.

There cannot be a question us to the necessity of some improvement in the "break" for railway carriages; and as the following description of a new plan which has been put upon some of the carriages of the London and Birmingham railway, is spoken of in a very favorable manner, we give it from the London Mining Journal, of 3d May, and ask attention to it from those who are engaged in the manufacture of cars, or in charge of railroads in this country.

"At the Society of Arts on Wednesday evening last, a paper was read descriptive of .The editor of the Advertiser says, very justly, that, a new railway carriage break, the invention

of Mr. David Davies, and which we may being found as effective on the Euston in-lif- not supported at the present quotations' safely state possesses advantages found in no cline as three on the old system. Mr. Rotch will, at least obtain such a price, that while other yet introduced, and which, at the same expressed some surprise that an invention of it not only pays a good per centage on the time, is free from all the serious objections so much importance to the public safety and capital employed, will give to the collier and hitherto urged against the old carriage breaks. convenience, was not more warmly support- miner, as well as to all other operatives, fair Mr. Davies having explained the mechanism ed by the directors of railways generally, or wages-this is all that can be required or of his invention by a large diagram on the that even on the London and Birmingham looked for, and with this, we feel assured, all wall, Mr. Rotch, V.P., made some interestine, where it was found so efficient, they implicately in our columns give some valuable statistics prepare his hearers for appreciating the ad-much, however, as they had the welfare of and points for consideration—that a certain vantages of this invention, he explained to the public at heart, they were compelled to animus pervades the writers is only natural; them the action of the old break, viz: that consult their engineers, which circumstance but it is only fair to look on both sides of the of a wedge being driven down between the too often prevented the introduction of use- question." peripheries of the fore and hind wheels; the ful inventions. He was, however, happy to instant this action took place, a powerful say, since he had been in the room a letter strain was produced on the end of the axle, had been handed to Mr. Davies, from an inagainst which one side of the nave of the wheel was pressed, and the free side of the and Birmingham line, in which ample testicircumference still having an inclination to mony was borne to the value of this brenk, will also act as agent for the sale or purchase of marrevolve, a twisting action was the result and a positive action was the result and a positive action was the result and a positive action. revolve, a twisting action was the result, and an opinion expressed that, by confining which eventually produced a fracture of the the cost to a moderate amount, they must axle. Another objection was the shaking make their way in all railway establishand groaning noise to which the passengers ments." in every break carriage were subject, causing considerable fear among the females, and inducing all parties who had been at all experienced in railway travelling to avoid the break carriage as they would a perfect nuisance. Mr. Davies' break removes all these objections; it consists of a series of eight levers, placed beneath the framework of the Mining Journal in that paper of 3d May. carriage, one end of each projecting to a level with the circumference of the whoels; the past few months, to which we have from to the purchaser the expense of turning them out in-these levers each turn on a falcoun in the time to time directed attention, and the general turn on a falcoun in the time to time directed attention, and the general turn on a falcount in the time to time directed attention, and the general turn on a falcount in the time to time directed attention, and the general turn of the circumference of the whoels; these levers each turn on a falcrum in the time to time directed attention, and the geouter rail of the frame-thus making the neral improvement in the iron trade, has been short arm of the lever that which grips the most encouraging-while, as might naturally wheel, and the long one projecting within be expected, would be the case under such Works have always on hand, of their own manufacthe framework; these long arms are con-nected to two cross levers, which are acted and prices quoted or imagined, which any appen by a diagonal bar, which, being put in one possessing a knowledge of the trade it-ways used in their manufacture, and their very genmotion by a winch handle on the roof acting self, must have been well aware could never eral use for railroads and other purposes in this counon a serey, each of the four wheels are be maintained. We last week noticed the up, the manufacturers have no hesúation in warrantgrasped at two opposite points, the same as considerable rise which has taken place, if clasped by a pair of pineers, by which grip a far greater power is applied with the most perfect ease—while the pressure being an article appended to these remarks, is, in

Albany from and Nail Works, Troy, N. Y. most perfect ease-while the pressure being an article appended to these remarks, is, in cqually distributed, there is no strain upon the axle, and the motion of the carriage is checked with the greatest possible rapidity.

Abany from and Nair Works, I vol. N. I.

The above spikes may be had at factory prices, of Erastus Coming & Co., Albany; Hert & Merritt, New York; J. H. Whitney, do.; E. J. Etting, Philadelphia; Wm. E. Coffin & Co., Boston. The whole arrangement of the levers is of sent. The demands of the colliers, and the most simple description, and so smooth others employed, have, we admit, been met and perfect is the action, that a gentleman by the masters with a liberality corresponpresent, who had paid much attention to the dent with the advance in prices, and the proworking of this break, stated he had enden- fits which they derive; but there is a limit, which after five years' successful operation, and now vored, under all circumstances, to detect any and glad are we to find that the ironmasters almost universal use in the United States (as well roise or grinding in its action, both in the lave of their own accord, determined to pre-carriage and on the roof, but that in all cases it worked perfectly smooth, and free from which must result from a reaction. The deanything which could be of any possible an-mand for iron, more especially bar, and rail- rails, to any amount and on short notice. Almost novance; and further, that while descend- way iron, for the next three years, can be are festered with Spiles mode at the United States ing inclines with the old break, the guard pretty well ascertained or calculated upon, factory—for which purpose they are found invaluawas compelled to keep up a firm pressure and that alone will not only keep the present ble, as their adhesion is more than double any comwith his bands to retain the break in its works in active operation, but may justify a place, while the action of the screw in the one described, was so perfect, that the mo- and we caution those who would embark cament the break was applied, the handle might be left without any fear of slipping, or the levers losing their hold. It appears there and we caution those who would emour carried the break was applied, the handle might pital, from hastily rushing into undertakings be left without any fear of slipping, or the levers losing their hold. It appears there moment, yet, it must be remembered, require St., New York; A. M. Jones, Philadelphia; T. Janare six carriages on the London and Birmingham line to which these breaks are afing on operations, but expended in the 'plant.'
"We feel satisfied that with prudence on
all the others—one break carriage in a train
the part of the ironmasters, the price of iron."

**Railroad Companies would do well to forward
their orders as early as practicable, as the subscriber
is desirous of extending the manufeturing so as to
keep pace with the daily increasing demand.

THE IRON TRADE.

It is somewhat important for us here to keep well informed in relation to the iron trade in England; we therefore give the following remarks of the editor of the London the latter a very superior article. The tires are made by Messrs. Baldwin & Whitney, locomotive engine manufacturers of this city. Orders addressing the latter a very superior article. The tires are made by Messrs. FRENCH AND BAIRD'S PATENT SPARK ARRESTER.

TO THOSE INTERESTED IN Railroads, Railroad Directors and Managers are respectfully invited to examine an improved SPARK ARRESTER, recently patented by the undersigned.

Our improved Spark Arresters have been extensively used during the last year on both passenger and freight engines, and have been brought to such a state of perfection that no an-noyance from sparks or dust from the chimney of engines on which they are used is experienced.

These Arresters are constructed on an entirely different principle from any heretotore offered to the public. The form is such that a rotary motion is imparted to the heated air. smoke and sparks passing through the chinney, and by the centrifugal force thus acquired by the sparks and dust they are separated from the smoke and steam, and thrown into an outer chamber of the chimney through openings near its top, from whence they fall by their own gravity to the bettom of this chamber; the smoke and steam passing off at the top of the chimney, through a capacious and unobstructed passage, thus arresting the sparks without impairing the power of the engine by diminishing the draught or activity of the fire in the furnace.

the engine by diminishing the draught or activity of the fire in the furnace.

These chinneys and arresters are simple, durable and neat in appearance on the following roads, to the managers and other officers of which we are at history to refer those who may desire to purchase or obtain further information in regard to their merits.

RAILROAD IRON AND PIXTURES. THE Subscribers are ready to execute orders for the above, or to contract therefor, at a fixed price, delivered in the United States.

DAVIS, BROOKS & CO., 21 Broad st., N. York.

MACHINE WORKS OF ROGERS, KETCH-um & Grosvenor, Pauerson, N. J. The un-dersigned receive orders for the following articles, manulactured by them of the most superior descrip-tion in every particular. Their works being exten-sive and the number of hands employed being large, they are enabled to execute both large and small orders with promptness and despatch. Railroad Work.

Locomolive steam engines and tenders; Driving and other locomotive wheels, axles, springs & flarge tires; car wheels of cast iron, from a variety of patterns, and chills; car wheels of cast iron with wrought tires; axles of best American refined iron;

springs; boxes and boits for cars.
Cotton, Wool and Flax Machinery
of all descriptions and of the most improved patterns,

style and workmanship.
Mill gearing and Millwright work generally;

hydraulic and other presses; press screws; callenders; lathes and tools of all kinds; iron and brass

castings of all descriptions.

ROGERS, KETCHUM & GROSVENOR,

a45 Paterson, N. J., or 60 Wall street, N. York

NICOLL'S PATENT SAFETY SWITCH for Railroad Turnouts. This invention, for some time in successful operation on one of the prin; cipal railroads in the country, effectually prevents engines and their trains from running off the track

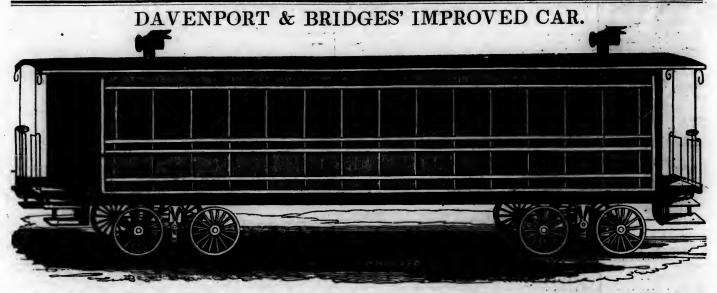

at a switch, left wrong by recident or design.

It acts independently of the main track rails, being laid down, or removed, without cutting or displacing.

It is never touched by passing trains, except when in use; preventing their running off the track. It is simple in its construction and operation, requiring only two Castings and two Italis; the latter, even if,

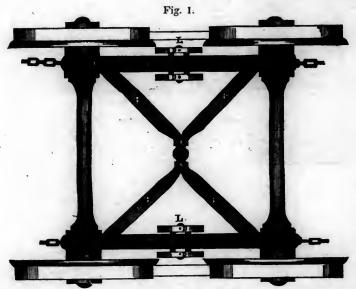

rolled, from 11 in. to 21 in thick.—bered and turned outside if required. Railroad Companies wishing to order, will please give the exact inside diameter, or circumference, to which they wish the Tires made, and they may rely upon being served according to order, and also punctually, as a large quantity of the straight bar is kept constantly on hand.—
Crank Axles, made from the best refined iron; Straight Axles, for Outside Connection Engines; Wrot, Iron Engine and Truck Frames; Reihead Jack Screws; Railroad Pumping and Sawing Machines, to be driven by the Locomotive; Stationary Steam Engines; Wrot, Iron work for Steemboats, and Shafting of any size; Griet Mill, Saw Mill and Paper Mill Machinery; Mill Gearing and Mill Wright work of all kinds; Steam Saw Mills of simple and general large statements. rle and economical constituction, and very effective Iron and Brass Castings of all descriptions.

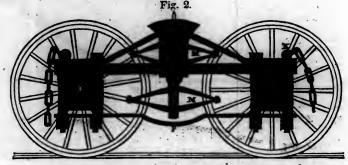

ja45iv

DAVENPORT & BRIDGES CONTINUE TO MANUFACTURE TO ORDER, AT THEIR WORKS, IN CAMBRIDGEPORT, MASS. Passenger and Freight Cars of every description, and of the most improved pattern. They also furnish Snow Ploughs and Chilled Wheels of any pattern and size. Forged Axles, Springs, Boxes and Bolts for Cars at the lowest prices. All orders punctually executed and forwarded to any part of the country. Our Works are within fifteen minutes ride from State street, Boston—coaches pass every fifteen minutes.

DAVENPORT & BRIDGES' IMPROVED PATENT IRON TRUCK.

DAVENPORT & BRIDGES' IMPROVED PATENT IRON TRUCK FOR RAILROAD CARS, is presented above, and the attention of Railroad Companies is respectfully invited to the following description of their justlycelebrated invention:

Fig. 1 of the drawing above represents a top view or plan of our Improved Railroad Truck. Fig. 2 is a central, longitudinal, and vertical section. C, Railroad Truck. Fig. 2 is a central, longitudinal, and vertical section. C, Fig. 1 and 2, represents the arched bars of the side trusses: they consist of two long bars of plate iron (about three inches wide by seven-eighths of an inch thick,) bent into the shape as seen in drawing 2. Each of them is placed directly over a flat and straight tie bar, A, which extends from one end to the other, as seen in Fig. 2. These parts, so arranged, receive between their ends the ends of diagonal cross bars or braces, B, which are united at their centres by being clasped and welded, as seen in Fig. 1. The bars so composing what may be considered as side trusses and diagonal cross braces, rest at their ends.

by being clasped and welded, as seen in Fig. 1. The bars so composing what may be considered as side trusses and diagonal cross braces, rest at their ends upon four pedestals, F, F, which receive the bearings or boxes for the axles to run on. Another flat tie bar, P, extends from the under side of one of the pedestals to that of the other, on the same side of the frame, and the whole is secured together by eight bolts, J, J, passing down through the ends of the several bars, A, B, C, and the pedestals, and on each side of the journals of the axles, O, O, in the positions represented in the drawings. From the above it will be seen that there are two bolts to each pedestal, and that this number is all that is requisite for the full security of the bars and pedestals together. The body rests and moves upon two sectional supports, D D, arranged on the sides of the truss frames, as seen in Fig. 2; they extend somewhat, or a sufficient distance above the truss frames, and are jointed at their lower ends by means of a bolt, L, which rests upon the top of the lower spring, M, which spring rests upon a bolt passing through the lower part of the inverted strap, E, which strap passes over and rests upon the top part of the upper spring, M, which is placed within the truss frame, and rests upon the top of the bar, A.

Two bands, N, N, are passed entirely around the central part of each truss frame, the object of the same being to transfer the strain, or a portion thereof, of the spring, from the tie bar, A, to the arched bar, C.

These Trucks are adapted as well for eight-wheeled passenger tars as for baggage and resight cars, giving to each a more agreeable and easy motion than any other Trucks heretofore constructed or in use. They are simple in their construction, combining strength and great durability, although weighing at least twelve hundred pounds less than the common Trucks. Besides these excellences, by reason of the elasticity of the braces, B, B, B, B, as seen in the drawing, and the other wheels from the track

CAMBRIDGEPORT, April 1, 1845.

KITE'S PATENT SAFETY BEAM.

MESSRS. EDITORS. M As your Journal is devoted to the benefit of the public in general I feel desirous to communicate to you for publication the following circumstance of no inconsiderable importance, which oc-curred some few days since on the Philadel-phia, Wilmington and Baltimore railroad.

On the passage of the evening train of cars from Philadelphia to this city, an axle of our large 8 wheeled passenger car was broken, but from the particular plan of the con-struction, the accident was entirely unknown to any of the passen-gers, or, in fact, to the conductor himself, un-

have for some time been applied to passenger cars on this road, and experience has tested that they fully accomplish the object intended. Several instances of the fracture of axles have occurred, and in such the cars have uniformly run the whole distance

such the cars have uniformly run the whole distance with entire safety. Had not this invention been used, serious accidents must have occurred.

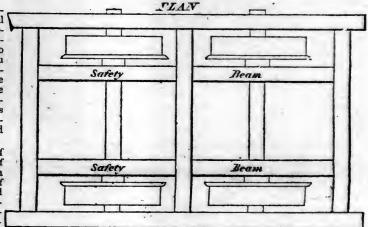

In short, we consider Mr. Kite's invention as completely successful in securing the safety of property and lives in railroad travelling, and should be used on all railroads in the country.

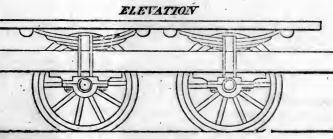

JOHN FRAZER, Agent,

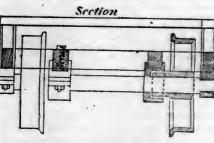

GEORGE CRAIG, Superintendant,

W. L. ASHMEAD, Agent.

The A model of the above improvement is to be seen at the New Jersey railroad and transportation office, No. 1 Hanover st., N. York.

States for his process of smelting Iron Ore with Anthracite coal, and holding an assignment of the pa-tent obtained by the late Rev. F. W. Geissenhainer, are prepared to grant licenses for the manufacture of Iron according to Mr. Crane's principle.

PASCAL IRON WORKS.

WELDED WROUGHT IRON TUBES

From 4 inches to 1 in calibre and 2 to 12 feet long, capable of sustaining pressure from 400 to 2500 lbs. per square inch, with Stop Cocks, T., L., and other fixtures to suit, fitting together, with screw joints, suitable for STEAM, WATER, GAS, and for LOCOMOTIVE and other STEAM BOILER FLUES.

Manufactured and for sale by MORRIS, TASKER & MORRIS. Warehouse S. E. Corner of Third & Walnut Streets, PHILADELPHIA.

O IRON MASTERS.—FOR SALE.—MILI SITES in the immediate neighborhood of Bi-tuminous Coal and Iron Orc, of the first quality, at Ralston, Lyoming Co., Pa. This is the nearest point to tide water where such coal and ore are found together, and the communication is complete with Philadelphia and Baltimore by canals and railways. The interest on the cost of water power and lot is all that will be required for many years; the coal will not cost more than \$1 to \$1 25 at the mill sites, without any trouble on the part of the manufacturer; rich iron ore may be laid down still more cheaply at the works; and, taken together, these sites offer remarkable advantages to practical manufacturers with small capital. For pamphlets, descriptive of the property, and further information, apply to Archibald McIntyre, Albany, to Archibald Robertson, Philadelphia, or to the undersigned, at No. 23 Chambers street, New York, where may be seen specimens of the coal and ore.

W. R. CASEY, Civil Engineer,

The ship)—must recommend it immediately for universal purposes, as one of the greatest be shipped to Ogdensburg, through the ship economists ever yet introduced. It ought canal which connects lakes Ontario and to be remarked that the force is only calculated for three seconds' duration; but, as lake waters. the present power can be augmented for railway use by three or four pairs of air-from Ogdensburg to Lake Champlain was condensers, such a leviathan motive power made by the state of New York, at an excan be supplied, as would draw all the car-pense of \$30,000. By this survey it was riages which the Birmingham Company ascertained that the road, one hundred and possess, at once; as two condensers and this twenty miles in length, could be built for engine will equal fourteen of the present about \$2,000,000. The route is through locomotives, and go at a rate of thirty miles the counties of Clinton, Franklin and St. per hour, drawing, at the least, 420 tons. If Lawrence, a territory not surpassed, for agrithe present horse-power locomotives do draw cultural purposes, by any portion of the state a train of 40 tons, at a rate of 25 to 30 miles of New York, of equal extent. The population per hour, then this engine, being 14 times the of these three counties is supposed to be power, should move at the same speed 560 tns. about 136,000, and is rapidly increasing. In

OGDENSBURG.

It is thus that the Boston people look at and encourage all enterprises which promise annual value of the agricultural producto contribute to the prosperity of their city. tions was \$4,476,849, and of manufactures They invite applications to them for aid in \$4,898,049. About \$3,000,000 have been inconstructing such works, even though in vested in manufactures. The mineral wealth State, who desire to expend their money on neighboring states, as are likely to increase of this region is said to be immense. There your roads, and in improving your unrivalled their business, and thus enhance the value ties about one hundred and fifty furnaces, of their property. We hope our own favored forges, bloomeries and rolling-mills, and the city will now come forward and put its state has recently established a prison on the shoulders to the wheel, and ensure the line of the proposed road, where five hundred speedy completion, in the most substantial convicts are to be employed in manufacturmanner, of THE railroad of this country—the ing iron.
These facts show that the lusiness of the NEW YORK AND ERIE—a work which will, country between the termini of the proposed when completed, produce an influence for railroad is very considerable, and of course good upon this city, equal at least to that of the road would derive from it much benefit the Erie canal. Its entire cost will be saved and income. in ten years from its completion, in the reduced cost, and improved quality, of living be carried on over this road; and it is pretty and travel to the people of the city of New evident that a merchant in Boston, forward-York alone, in addition to the greatly en- ing goods west, would adopt this route, beno truer remark, than that "we cannot afford dred miles of railroad or canal transportation. long been satisfied that a railroad from Bosof stock required was subscribed the first day why it would not bring to Boston a very that the books were open for that purpose, and then learn that the work is to be immediately which now goes to New York. It will be speak from personal observation; but from

manner; to an early completion. That day them a very considerable portion of the exwill be an era in the annals of the city of

Railroad to Ogdensburg .- It is now unwhich is situated at the foot of navigation Ogdensburg productions of the great West can as well

In 1840, a thorough survey of the route RAILROAD COMMUNICATION FROM BOSTON TO 1840 there were three hundred and ninety stores in these counties and in Essex, which lies near the road, south of Clinton county,

But it is believed by the friends of this

We see no reason why this route would lers for pleasure would find it a most desir-

In fact, we do not see why this route would not be the shortest, cheapest, quickest, and safest, from Boston to the great West, both for travellers and merchandise.

We understand commissioners from Northern New York will be in town in a few weeks, to ask the aid of our capitalists in constructing this road. We hope their visit will not be in vain, for we fully believe that such investments will be safe and profitable, Erie, as to Buffalo, or any other point on the and that the road will be of great utility to Boston and all New England.

RAILROADS IN NEW HAMPSHIRE:

We find the following remarks in the Boston Courier of 29th May, and can assure the editor of that excellent paper, and the people of our native State, that we also are highly gratified to learn that the right spirit is aroused in the people of New Hampshire -and we will also say a word to them in private-viz: repeal your restrictive and stringent laws-adopt a liberal course towards those who are willing to invest their capital among you, for the improvement of your property, as well as the advancement of their own interest. Impose all proper and necessary restrictions, but never punish yourselves by keeping other people out of your water power, and thereby enhancing the value of your lands.

Capitalists are sometimes cautious animals. They are much more likely to be caught by gentle than violent means. Repeal your personal liability, and your unanimous consent clauses, and New Hampshire will rapidly increase in population, enterprize and wealth-and, of course, in intelli-

We have some recollection of the characroute that a great trade with the West will ter of the route, having passed over it many years since, from Concord to Lebanon, and thence to Montpelier and Burlington, (Vt.,) hanced value of real estate. ### AMERICAN RAILROAD JOURNAL.

PUBLISHED BY D. K. MINOR, 23 Chambers street, N.Y.

#### Thursday, June 5, 1845.

HIGH FARES-BALTIMORE AND WASHINGTON RAILROAD. The remarks by the editor of the National Intelligencer, in another column, in relation to the rate of fare on this railroad, cannot, we believe, be necessary or appropriate; as we take it for granted-even the public the application of their respective Patents though the editor had "made some inquiry on the for a Plenum and Vacuum Ventilation and Warmsubject"-that the reports that "the directors of the Baltimore and Ohio Railroad Company have determined not to reduce the fare of \$2.50 per passenger, now charged on the Washington branch," of thirtyeight miles-cannot be correct.

Loud and just complaints have long been made by the travelling community at the high charges on this road, but they have been submitted to with a better grace than would otherwise have been the case, in consequence of the bonus, fifty cents on each passenger, which they had to pay the State-a very unwise and unjust tax, as we think, upon travellers who have occasion to pass from Baltimore to Washington. This has, if we recollect right, been assigned by the directors as a reason for not reducing the fare, until voluntary legislation should allow them to do so without its falling entirely on the company -but prorata on the State and the company. There was legislation upon this subject during the late session of the legislature of Maryland, and we understood that the company was authorized-and we supposed that they were inclined-to act under it, and meet the loud calls, not only of the travelling community, but also, as we think, by their own interest, by a considerable reduction of their present charge. And we shall not believe that they are about to disappoint the reasonable expectations of the community, until their own acts compel belief. Such a course would, in our opinion, be exceedingly unwise on their part; nothing would tend more to raise up a strong and successful opposition by post coaches, which will surely be patronized by many who are the fast friends of railroads. Low fares, high speed, and an obliging and conciliating course to those who must -or from choice will-travel, is the true policy for railroad companies; and we have too much confidence in the sagacity of the managers of the Baltimore and Ohio Railroad, to credit these reports; but to confer on the subject with a committee to be appointed by the stockholders of the Boston and Worist the period, we believe, designated in the law, at which a reduction may be made. which a reduction may be made.

Montreal is taken from the American Travellerand this statement, low as it is, is higher on some part of the route than the reality. From New York increasing its business and income. We shall be to Albany the fare, or charge for passage, is only 25 truly gratified to chronicle its entire recovery from cents! and a good berth included, only 50 cents!! its embarrassments, as well as its having undergone

Correspondents will oblige us by sending in their presume the Traveller is, as it is always, quite at | and will be, a source of great prosperity to the peo home in such matters.

"CHEAP FARE .- Persons travelling now-a-days rewards. can go almost for nothing:

From New York to Albany, 150 miles per and packet boat thence to Whitehall, 77 From Whitehall to St. Johns by steamboat, 150 miles.... From St. Johns to Laprairie, by railroad, 15 9 miles.... 0 50 Total, 401 miles .....

#### WARMING AND VENTILATING BUILDINGS.

We ask the attention of our readers to the following card; and bespeak for the gentlemen, whose names are attached to it, an examination of their mode of operations by those who desire to introduce a superior and economical system of warming and ventilating buildings.

JORDAN L. MOTT AND JOSEPH CURTIS-Offer to ing of hospitals, almshouses, prisons, churches, hotels, factorics, ball and court rooms, dwelling houses of the first class, as well as those built for many families, (also, chimneys that smoke during variable winds,) ships' cabins, steam and canal boats, railroad cars and privies.

Orders received, and exhibitions of our means of operating, are to be seen at No. 264 Water street.

The editor of the Portland Advertiser has the following, headed "facts for railroads:"

"The Troy Daily Whig says-' passengers who left Montreal on Monday morning, by the Francis Saltus, reached this city in time for the Albany on Tuesday morning.

"Twenty-four hours from Montreal to Troy—36 hours to New York. We will put them through from Montreal to the ocean in ten hours."

UTICA AND SCHENECTADY RAILROAD COMPANY. At an election for directors of the Utica and Schenectady Railroad Company, held on the 2d inst., the

nectady Railroad Company, held on the 2d inst., the following persons were elected:
Erastus Corning, Albany; Nicholas Devereux, Utica; Nathaniel S. Benton, Little Falls; Alonzo C. Paige, Schenectady; John Townsend, Albany; Lewis Benedict, do.; James Hooker, Poughkeepsie; Thomas W. Olcott, Albany; Marcus T. Reynolds, do.; Gardner G. Howland, New York; J. Phillips Phœnix, do.; E. T. T. Martin, Utica; Livingston Spraker, Montgomery county.
Erastus Corning was unanimously re-elected pro-

Erastus Corning was unanimously re-elected president, and Gardner G. Howland, vice president of the company.

#### BOSTON AND WORCESTER RAILROAD.

At the annual meeting of the stockholders of the Boston and Worcester Railroad, on Monday afternoon, the following gentlemen were chosen to be directors for the ensuing year: Nathan Hale, David Henshaw, Daniel Denny, Eliphalet Williams, Na-thaniel Hammond, John Hathaway, Abraham T. Lowe, Benjamin F. White, Samuel Greele.

A vote passed at a special meeting of the stock-holders of the Western Railroad, proposing a union of the two companies, and appointing a committee investigate the subject—to confer with the committee of the Western Road, and to report on the whole sub-The following statement of cheap travelling to for the purpose.—[Bost. D. Adv.]

#### HOUSATONIC RAILROAD.

This road appears to be steadily and at a fair rate From Albany northward we are not familiar, but permanent repairs, so as to become what it should,

ple of Bridgeport, whose public spirit descroes rich

	The receipts of the Housatonic Railroad were in	a

> We would call the attention of the directors to the following extract from the report of the Dublin and Kingstown railway. It is evidently the true policy to be pursued by the managers of railways from large cities into the agricultural districts. They should "endeavor to create a traffic, and increase it to the greatest extent, by affording to the public the utmost possible accommodation, and at very low rates." Here is the great secret of paying nine per cent. dividend on short

when speaking of the various causes of their quired than usually falls to the lot of one eminent success, and which enables them to make a dividend of nine per cent., that

tion to it, as it has grown out of that system operation. which you have long since sanctioned, and which, after much discouragement, has led to such gratifying results in the management of our undertaking, namely, that of endeaand at very low rates.

"One great object which we have steadi-We have therefore continued to run the Dalkey trains every half hour, up to 9 o'clock at night, alling these complaints, asked whether those

"We are, however, confirmed in our conviction of the soundness of this policy by the preparations which are now being made in of the disadvantageous manner in which from Philadelphia to Baltimore. The Union

"Notwithstanding these apparent discouragements, our confidence is unshaken in the ultimate, complete and entire success of the atmospheric system, and a highly gratifying evidence of the extent to which public attention has been directed to it, has been lect committee of the house of commons, consisting of some of the most distinguished members, to enquire into the system.

Now we ask, if such a system has been so exceedingly successful in the vicinity of Dublin, would it not be equally and even more successful in the vicinity of New York and Brooklyn, if adopted and carried out with a spirit of conciliation and mutual interest? Let the attempt be made, and we shall, at no distant day, seldom find Long Island railroad stock in the market—at any price. It will be too valuable to be handled in Wall street often.

#### THE UNITED STATES MAIL AND THE RAILROADS.

We find the following very just remarks in the United States Gazette, in relation to the complaints of the post office department that the railroad companies are 'monopolies,' and that they are unreasonable in their demands for transporting the mail. It has become quite fashionable for many people to speak of associated enterprizes, or incorpor-The directors say in their last report, ated companies-where more capital is reman-as "monopolics;" or that these associations enjoy advantages for which they "There is one of those causes so peculiar, render no equivalent, and that the people are that we desire especially to call your atten. not equally benefitted by their successful That such remarks should be heard from some quarters is by no means surprising, but that intelligent practical business men should join in them is to us truly voring to create a traffic, and to increase it astonishing; and especially so in relation to the greatest extent, by affording to the to railroads which have done, and are doing public the utmost possible accommodation, so much to facilitate business generally, and especially in the transportation of the mails, but more especially in the economy of time -the poor man's capital-to say nothing about the reduced cost to the traveller. We have sometimes, when listening to, or readwho made them would be any better pleased if these "monopolies" were to be struck entirely, and at once, out of use!!!

#### "THE POST OFFICE DEPARTMENT-RAILROAD COMPANIES-JUSTICE AND MONOPOLIES.

We find in the Tribune the following statement: NEW YORK AND ERIE RAILROAD.

"The following statements in relation to the cost of this road, its connection with tributary works, and its probable productiveness, are prepared for the in-formation of those who may become subscribers te the capital stock.

1. OF THE COST OF THE WORK.

The cost of a single track, with heavy rails, from the Hudson to lake Erie, the State loan being relinquished, will be represented by......\$8,100,000 Stock of comp'y heretofore issued 1,500,000 

Estimate for outfit of engines, cars and other furniture......1,000,000

Bonds to be issued for......3,000,000

Equal to \$20,200 per mile, the length being 450 miles.

If under the provisions of the recent law, the old stock should be exchanged for new, then this sum ....\$9,100,000 out. 750,000 would be subject to a reduction of about.

In which case the road would stand the stockholders in . . . . . . . . . . . . . . . . 8,350,000 or \$18,500 per mile

Cost as compared with other important and productive railroads, with heavy rails and adapted both to the transport of tonnage and passengers:

Length. Cost per mile. Camden and Amboy railroad, 61 miles ... \$52,458 Boston and Worcester do. 44 do. ... 66,229 Worcester and Albany do. 156 do. ... 49,270 Norwich and Worcester do. 66 do. ... 32,826 do. 34 do. . . 60,000 do. 94 do. . . 100,600 Reading Baltimore and Ohio do. 188 do. . . . 40,550 Baltimore and Wash. do. 38 do. . . . 47,368 Balt. and Susquehanna do. 50 do. ... 51,724

Of these the two first mentioned, and the Reading, have a double track.-The average cost per mile of the whole of these together is \$55,600.

to Buffalo, as stated in the comptroller's that on the Boston and Albany line last late report, cost an average of \$30,700 per year, yielding \$3,174 per mile, the result mile, though, excepting the first 16 miles, would be of net receipts \$1,428,300, which furnished only with flat bars.

It is apparent, therefore, that to the stock. holders, the cost per mile of this road will be less than half that of the principal works of similar character. - Even those in the above list which have but a single track, making together over 500 miles, cost on an average but a trifle less than \$42,000 per mile.

The cost of this work, including the proceeds of the state loan, and the whole amount of the old stock, will not exceed \$26,000 per mile, completed and furnished.

If to this be added a reasonable estimate of the lands gratuitously ceded for the roadway, and for stations, depots, and other purposes, equal to at least \$2500 per mile, the total value of the investment is equal to Old stock...... \$29,500 per mile, or 40 per cent more than its cost to the stockholders at \$20,200 per mile as first stated, and over 50 per cent. more than its cost at \$18,500 per mile, as stated in case of a reduction of the old stock.

This statement may reasonably satisfy those who have imbibed erroneous impressions upon the subject, that the funds heretofore employed in the construction of this dently applied.

A statement derived from official docu-should only be equal to the average net ments, of the prices paid on several import- earnings of the road from Albany to Boston ant public works in progress at the same the results would be as above stated. time in this and adjoining states, conclusively shows that the prices paid on this work were earnings at \$1,343,500, about 1 per cent. on lower than on those works by a per centage the cost less than the result of the above varying from 25 to 80, and in some items comparison with the line from Albany to even more.

the facts as to what has been done, the products, or business, on the route during character of the work performed, and the the time to elapse before the completion of prices paid, have no hesitation in challeng- the work, or for travel and traffic to and ing a comparison of this with other works, from the lakes, or for transporting the mails. and believe it may be safely affirmed that no They also guardedly avoided allowing all similar amount of expenditure on other publithe advantage which is likely to result in lic works has produced an equal amount or respect to profits from the great length of value of results.

The cost of the eastern division of the road from Piermont to Goshen was \$29,000 road, are in contemplation or completed: per mile, that is, exclusive of the outfit and of the pier, docks, &c., which are constructed not for this division merely, but for the whole road, and cost about \$220,000.

-IN RELATION TO THE PRODUCTIVENESS

of the work when completed.

It may be advantageously compared with the railway extending from Boston to Worden to Worden Boston Boston to Worden Boston to Worden Boston to Worden Boston to Wor cester, and thence to Albany, 200 miles, 7. Chenango canal.........97 which together cost an aggregate of \$10,-600,280, averaging a trifle more than \$53,000 per mile. The rails are of heavy iron, and there is a double track from Boston to Worcester, nearly one-fourth of the whole Aggregate distance on this road... distance.

The net earnings of the entire line in 1844 amounted to..... Equal within a fraction to 6 per cent. on the entire cost. The net income per mile averaged.....

Supposing the business on this road should The line of roads extending from Albany only be equal in proportion to its length to is over 17 per cent. on \$8,350,000, the cost in round numbers of this work, with its fixtures and equipment at \$18,500 per mile.

> If the addition of a double track on this roud for a like proportion of the distance, as on that from Boston to Albany, be allowed for at the rate of \$10,000 per mile, amounting to about \$850,000, and making the total net earnings as above stated, would be equal to 151 per cent.

> But since the cost of this work to the company as stated, viz: \$8,350,000, comprises Of existing debt.... Bonds to be issued .....

Stock for the construction .... \$3,000,000 

8,350,000 It results that the net income as above sup-216,000 amounting yearly to .....

and leave a balance of .... equal to 251 per cent. (\$1,211,250) on 4,750,000 of Middletown.

point near Goshen,....90
2. Do. Utica to Binghampton.85 65 miles. 200 3. Do. Ithaca, connecting with Cayuga lake......38 950 320 320 " 340. 66 220 66 8. Chemung & C. Lake canal.100
9. Genesee Valley canal.....120 320 400 Total length of these tributa-

.....750

Besides the above, other branches are in contemplation, and likely, at no distant period, to be undertaken, sufficient to extend the lines of tributaries to 900 miles, or 3,174 double the length of the main trunk, and the number of miles of this work to be passed over by them to more than 3000.

> A glance at this statement cannot fail to produce conviction that the business of the main trunk, both in passengers and tonnage, must be greatly augmented by the intersecting railways and canals referred to, and especially in the case of the railways in the winter.

Let any one consider the probable yearly travel and traffic to and from Buffalo, passing, including the distance between this city and Piermont, 340 miles, on this road; cost as above stated, \$9,200,000; then the and add to it that from Canandaigua, 320 miles, that from Ithaca and the steamboat route on Cayuga Lake 250 miles, and that from Utica 200 miles, and consider what proportion of the business which is to support \$600,000 these roads, and make them profitable as 3,000,000 independent works, is thus to pass over this main trunk 3, 4, or 5 times as many miles 4,750,000 as on them, and he must conclude that they will very essentially augment the profits of this work.

#### THE PROPERTY OF THE COMPANY CONSISTS OF

7 miles double track at the western ter-

177 miles of roadway ready for super. structure, on about half of which the bridges are complete.

40 miles nearly prepared for the superstructure, and other portions commenced.

Timber for 250 miles of superstructure, and a large quantity of timber for piles, cross ties, bridges, &c.

road, and grants of land for the most important depots and stations.

Permanent settlements with the owners of road.

Surveys, maps, &c., of the whole line of the road, and final locations of 350 miles. Locomotives, cars, &c., on 53 miles.

Pile driving machines, earth cars, engines. tools, and stock in machine shop, chairs, and other castings.

Cost under the present laws, \$1,350,000. The net income of the eastern division for the current year is estimated at \$60,000.

It is sometimes amusing to read the arguments, or assigned reasons, in railroad controversies, for and against particular routes. The advantages of railroads are now so highly estimated, that it sometimes occurs that very candid and honorable men allow their fancy or their interest to place themselves or their rivals in an awkward or ridiculous light. Standing, as we do, in a position uninfluenced by local projectslooking, as we desire, and intend, upon every individual work as a link in a vast system—we are often amused by the controversies carried on between parties interested in rival lines. The following extract from a long communication in the Rutland Herald, signed "Mount Holly Gap," is of this class :-

Vermont Railroad.—The arguments used in Western Vermont in favor of the route, via Mount Holly Gap, are-

1st. That it would open to the Boston Otter Creek, that now do their business at New York.

2d. That Western Vermont abounds in iron, marble, slate, manganese, and other articles not found on the central route.

3d. The population is greater to the square mile, on the western side of the mountains,

Pier, docks, machine shop, &c., at Pier-is generally at an average of four feet deep, the Boston and Burlington road, thus giving and remains, as a matter of course, longer on the ground than on the western route.

The logic of the Vermont Watchman, in favor of the central route, would be, 1st, The road would pass in sight of a splendid State House, surrounded by lofty mountains, which render the scenery picturesque, awfully grand, and sublime. 2d. That the central route is peculiarly adapted to applying The right of way for 325 miles of the the motive power to runners on the bob-sled principle, thus avoiding the necessity of purchasing that expensive item in the construction of ordinary railroads, railroad iron at adjoining lands for erecting and forever the present high prices. 3d, That the curves maintaining the fences on 220 miles of the on the central route, like the Mississippi river, winding to all points of the compass, like traverse sailing on the ocean, would facilitate the onward course in a head wind; while with adverse winds, no alternative would be left, but to pull the tap at Rutland, run to the quarantine ground at New-York, via Whitehall and Saratoga, and there to ride until the Boston health officer arrived with a certificate of All Well.

We can assure those interested in these apparently rival routes, that it is hardly worth their while to expend their ammuwill ere long be convinced that both routes are exceedingly favorable for a railroad, and that both are sure to be built within a very few years. There cannot, it seems to us, be a doubt in the mind of any well-informed man, that there will be a railroad from Bosseen on referring to the map, that a road via Rutland encloses a large section of the most productive part of New England, which now trades with New York. Is it to be supposed that Boston will leave this rich field out of her fold when she is cutting the ditches and erecting the barriers to turn the current of business to her doors? Not so, tral route is not built; but it will be builtand Boston will also contribute liberally to market a section of country bordering on its construction, because it will be a good try, not only rich in agricultural products, and sure basis. but possessing vast manufacturing resources, which has been always tributary to her.both lines.

than on the east. And that the grand list of the western counties is larger in proportion to the population and extent of territory, than that of the counties bordering on the central route.

The construction of both these lines, however, will not secure to Boston the whole trade of that region, by a long way—as the trade of that region, by a long way—as the trade of that region, by a long way—as the trade of that region, by a long way—as the trade of that region, by a long way—as the trade of that region, by a long way—as the trade of that region, by a long way—as the trade of that region, by a long way—as the trade of that region, by a long way—as the trade of that region, by a long way—as the trade of that region, by a long way—as the trade of that region, by a long way—as the trade of that region, by a long way—as the trade of that region, by a long way—as the trade of that region, by a long way—as the trade of that region, by a long way—as the trade of that region, by a long way—as the trade of that region, by a long way—as the trade of that region, by a long way—as the trade of that region, by a long way—as the trade of that region, by a long way—as the trade of that region, by a long way—as the trade of that region, by a long way—as the trade of that region, by a long way—as the directors have no hesitation in warranting the manufacturers have no hesitation in warranting the manufacture.

Tool have the construction of both these lines, how ways used in their manufacture, and their very general use for railroads and other purposes in this country, the manufacturers have no hesitation in warranting the manufacturers have no hesitation in warranting the manufacture have a long way—as the manufacture have a long way—as the manufacture have a long way—as the snow more than six inches deep, while the road,—or more properly the New York and

a choice of markets.

It may be said by some, that we are wild in our views, and visionary in our anticipations. Well, then, let it be so said-that will not prevent the rapid extension of the system, nor the construction of lines of railroad over natural routes, any more than the disbelief of many intelligent men in this city and state prevented the construction of the Erie and Champlain canals.

Non-reduction of Fare on the Rail-ROAD BETWEEN WASHINGTON AND BALTI-MORE. - We have noticed for some time past intimations through the press, that, contrary to general and reasonable expectation on the part of the travelling public, the Directors of the Baltimore and Ohio Railroad Company have determined not to reduce the fare of \$2 50 per passenger, now charged to travellers on the Baltimore and Washington branch. Having made some inquiry upon this subject-one of great interest to the travelling public-we regret to learn, from a source entitled to respect, that, although there has not yet been any action nition in efforts to disparage either -as they by the Board of Directors, it is thought there will be no reduction of the fare between Washington and Baltimore. Now this, we take leave to say, will be not only a sore disappointment to the community, but a public grievance, the rate being now so much above all other rates of travelling by railroad in various parts of the Union. It is ton to Burlington, via Rutland. It will be a fact, that persons can now travel from New York to Boston for \$3; and we have lately seen it advertised that persons may travel from New York to Montreal for a like sum! Now, it is most unreasonable as well as impolitic, on the part of the Wash. ington and Baltimore Railroad Company, so we conceive, that they should charge so much higher than the rest; and we still indulge the hope that the Directors will make the expected reduction to take effect rest assured: therefore this line will receive from the first of June. If this be not done, largely of her liberal aid-even if the cen-the Railroad Company may expect that travelling by the cars between this city and Baltimore will greatly fall off, and that an impetus will be given to the excellent line of stages now running between the two investment—as it will open a region of councities, which will place them on a permanent

PROGRESS OF RAILWAYS.

The following remarks in relation to the Chester and Birkenhead railway will apply equally well to almost every railroad, either in this country or in England; and we know of no better mode of illustrating their steady advance than by giving similar statements of their comparative receipts during certain

periods of each succeeding year. "Nothing can be more conclusive," says the editor, "of the steady advance of railways, and the increasing favor which they meet from the public, than an unbiased review of their relative receipts for merchandize and passengers, during two or more distinct periods. As the census of a nation portrays at once its progress or decline, and the wealth of its commerce, as either enhanced or depreciated, so the statistics of a national undertaking may fairly be consulted as a criterion of its success. It is in taking the comparative increase of our several lines that we have, from time to time, presented a cheering account of the present position and future favorable prospects of railways generally, and we now furnish a few succinct and plain statements, respecting the progress of one line, not in itself of any great importance, as connected with enormous traffic, or immense through communication, but one of the minor projects, whose revenues are unaided by any impulse, but that of steady and sterling utility, and, therefore, a more satisfactory test of the general value of similar undertakings. The Chester and Birkenhead railway has a total number of 16,500 shares, 5,000 being original, at a price of 50%, and issued at par; 5000 half-shares at 25l. each, issued at 20l.; and 0.500 new 50l. shares, issued at 17l. The 9,500 new 50l. shares, issued at 17l. first are now in the market, at somewhat a shade better than par; the second at a premium of 4l., and the last are quoted at no less than 44l. We will now consider how far the success of the undertaking has hitherto warranted this favorable quotation .-From the 1st of January to the 30th June, 1843, the number of passengers on the line had been 99,782, paying an amount of 99151. 19s. 9d. From the 1st January to the 30th June, 1844, the number of passengers had been 126,055, and the amount paid by them 11,341/. 5s. 7d., being an increase in the six months of 25,273 passengers, and 1425l. 5s. 10d. During the latter period the capital account presented an amount of disbursements of no less than 518,989l., including 135,792l. for land and compensation, 209,-957l. for works on roads, and nearly 200,-000l. for parliamentary, law, and engineering expenses; while the revenue account Sd. for various incidental expenses. To meet these heavy preliminary demands, 514, 5351. 18s. was raised by calls on the three several classes of shares, by mortgages, premiums, and loans, and a deduction of 21, 3181. 5s. being made from the debt account for the sale of lands, and materials, and for the discharge of a turnpike bond, the original expenditure was reduced to 497,6711. showed a further disbursement of 8732l. 9s.

9s. 4d.—leaving 16,914l. 8s. 8d. in favor of of the water trap, the heated water passes the company on the capital account, and along and ascends through a series of reber of passengers had been 147,6181, being warmed." an increase of 21,5631, and an amount of ceeding half-year of 26,387 passengers, and the manner set forth."-Jour. PATENT RAILROAD, SHIP AND BOAT Spikes. The Troy Iron and Nail Factory keeps constantly for sale a very extensive assortment of Wrought Spikes and Nails, from 3 to 10 inches, manufactured by the subscriber's Patent Machinery, which after five years' successful operation, and now almost universal use in the United States (as well as England, where the subscriber obtained a patent)

Railroad companies may be supplied with Spikes having countersink heads suitable to holes in iron rails, to any amount and on short notice. Almost all the railroads now in progress in the United States are fastened with Spikes made at the above named factory—for which purpose they are found invalua-ble, as their adhesion is more than double any common spikes made by the hammer.

All orders directed to the Agent, Troy, N. York,

### FRENCH AND BAIRD'S PATENT SPARK, ARRESTER.

NO THOSE INTERESTED IN Railroads, Railroad Director and Managers are respectfully invi-ted to examine an improved SPARI

ted to examine an improved SPARI-ARRESTER, recently patented by the undersigned.

Our improved Spark Arrester have been extensively used during the last year on both passenger and freight engines, and have been brought to such a state of perfection that no annoyance from sparks or dust from the chimney of engines on which they are chimney of engines on which they are used is experienced.

These Arresters are constructed on an entirely different principle from any nerectore offered to the public. The form is such that a rotary motion is imparted to the heated air, smoke and sparks passing through the chimney, and by the centrifugal force thus acquired by the sparks and dust they are separated from the smoke and steam, and thrown into an outer chamber of the chimney through overnings near its top from whence they fall by their own through openings near its top, from whence they fall by their own gravity to the bottom of this chamber; the smoke and steam passing off at the top of the chimney, through a capacious and unobstructed passage, thus arresting the sparks without impairing the power of the engine by diminishing the draught or activity of the fire in the furnace.

the engine by diminishing the draught or activity of the fire in the furnace.

These chimneys and arresters are simple, durable and neat in appearance. They are now in use on the following roads, to the managers and other officers of which we are at liberty to refer those who may desire to purchase or obtain further information in regard to their merits:

E. A. Stevens, President Camden and Amboy Railroad Company; Richard Peters, Superintendant Georgia Railroad, Augusta, Ga.; G. A. FOR SALE, AT A SACRIFICE - A LOCOmotive Engine, 4 wheels and Tender. Cylinders 10 in. dia., Stroke 16 in., Cylinders inside of smoke box. Weight of engine, with wood and water, about 9 tons. This engine and tender are new, and of the best materials and workmanship. If required, would be altered to a 6 wheeled engine.

DAVIS, BROOKS & CO., 21 Broad st., N. York.

MACHINE WORKS OF ROGERS, KETCH-um & Grosvenor, Patterson, N. J. The un-dersigned receive orders for the following articles, manufactured by them of the most superior description in every particular. Their works beingextensive and the number of hands employed beinglarge, they are enabled to execute both large and small orders with promptness and despatch.

Railroad Work.

Locomotive steam engines and tenders; Driving and other locomotive wheels, axles, springs & flange tires; car wheels of cast iron, from a variety of patterns, and chills; car wheels of cast iron with wrought tires; axles of best American refined iron; springs; boxes and bolts for cars.

Cotton, Wool and Flax Machinery

of all descriptions and of the most improved patterns,

style and workmanship.

Mill gearing and Millwright work generally; hydraulic and other presses; press screws; callen-ders; lathes and tools of all kinds; iron and brass castings of all descriptions.
ROGERS, KETCHUM & GROSVENOR,

Paterson, N. J., or 60 Wall street, N. York.

TICOLL'S PATENT SAFETY SWITCH for Railroad Turnouts. This invention, for some time in successful operation on one of the principal railroads in the country, effectually prevents engines and their trains from running off the track

at a switch, left wrong by accident or design.

It acts independently of the main track rails, being laid down, or removed, without cutting or displacing them.

It is never touched by passing trains, except when in use, preventing their running off the track. It is simple in its construction and operation, requiring only two Castings and two Rails; the latter, even if much worn or used, not objectionable.

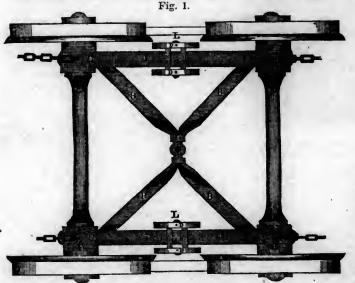

Working Models of the Safety Switch may be

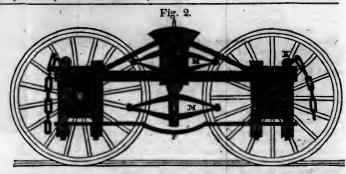

een at Messrs. Davenport and Bridges, Cambridgeport, Mass., and at the office of the Railroad Journal, New York.

Plans, Specifications, and all information obtained on application to the Subscriber, Inventor, and Pa-tentee. G. A. NICOLLS, Reading, Pa.

GEORGE VAIL & CO., SPEEDWELL IRON Works, Morristown, Morris Co., N. J.—Manufacturers of Railroad Machinery; Wrought Iron Tires, made from the best iron, either hammered or outside if required. Railroad Companies wishing to order, will please give the exact inside diameter, or circumference, to which they wish the Tires made, and they may rely upon being served according to order, and also punctually, as a large quantity of the straight bar is kept constantly on hand.—Crank Axles, made from the best refined iron; Crank Axles, made from the best refined iron; Straight Axles, for Outside Connection Engines; Wro't. Iron Engine and Truck Frames; Railroad Jack Screws; Railroad Pumping and Sawing Machines, to be driven by the Locomotive; Stationary Steam Engines; Wro't. Iron work for Steamboats, and Shafting of any size; Grist Mill, Saw Mill and Paper Mill Machinery; Mill Gearing and Mill Wright work of all kinds; Steam Saw Mills of simple and economical construction, and very effective Iron and Brass Castings of all descriptions. fron and Brass Castings of all descriptions.

DAVENPORT & BRIDGES CONTINUE TO MANUFACTURE TO ORDER, AT THEIR WORKS, IN CAMBRIDGEPORT, MASS. Passenger and Freight Cars of every description, and of the most improved pattern. They also furnish Snow Ploughs and Chilled Wheels of any pattern and size. Forged Axles, Springs, Boxes and Bolts for Cars at the lowest prices. All orders punctually executed and forwarded to any part of the country. Our Works are within fifteen minutes ride from State street, Boston—coaches pass every fifteen minutes.

DAVENPORT & BRIDGES' IMPROVED PATENT IRON TRUCK FOR RAILROAD CARS, is presented above, and the attention of Railroad Companies is respectfully invited to the following description of their justlycelebrated invention:

Fig. 1 of the drawing above represents a top view or plan of our Improved Railroad Truck. Fig. 2 is a central, longitudinal, and vertical section. C, Fig. 1 and 2, represents the arched bars of the side trusses: they consist of two

Railroad Truck. Fig. 2 is a central, longitudinal, and vertical section. C, Fig. 1 and 2, represents the arched bars of the side trusses: they consist of two long bars of plate iron (about three inches wide by seven-eighths of an inch thick,) bent into the shape as seen in drawing 2. Each of them is placed distanced and welded, as seen in Fig. 1. The bars so composing what may be considered as side trusses and diagonal cross braces, R, which are united at their ends upon four pedestals, F, F, which receive the bearings or boxes for the axles to run on. Another flat tie bar, P, extends from the under side of one of the pedestals, A, B, C, and the pedestals, and on each side of the frame, and the whole is secured together by eight bolts, J, J, passing down through the ends of the several bars, A, B, C, and the pedestals, and on each side of the journals of the axles, O, O, in the positions represented in the drawings. From the above it will be seen that there are two bolts to each pedestal, and that this number is all that is requisite for the full security of the bars and pedestals together. The body rests and moves upon two sectional supports, D D, arranged on the sides of the truss frames, as seen in Fig. 2; they extend somewhat, or a sufficient distance above the truss frames, and are jointed at their lower ends by means of a bolt, L, which rests upon the top of the lower spring, M, which sirp laced within the truss frame, and rests upon the top of the bar, A.

Two bands, N, N, are passed entirely around the central part of each truss frame, the object of the same being to transfer the strain, or a portion thereof, of the spring, from the tie bar, A, to the arched bar, C.

These Trucks are adapted as well for eight-wheeled passenger cars as for baggage and freight cars, giving to each a more agreeable and easy motion than any other Truck heretofore constructed or in use. They are simple in their construction, combining strength and great durability, although weighing at least twelve hundred pounds less than t

## KITE'S PATENT SAFETY BEAM.

MESSRS. EDITORS. is devoted to the benefit of the public in general I feel desirous to communicate to you for publication the following circumstance of no inconsiderable importance, which occurred some few days since on the Philadelphia, Wilmington and Baltimore railroad.

On the passage of the evening train of cars from Philadelphia to this city, an axle of our large 8 wheeled passenger car was broken, but from the particular plan of the construction, the accident was entirely unknown to any of the passen-gers, or, in fact, to the conductor himself, until the train, (as was supposed from some

dent would unavoidably have much injured it, perhaps thrown the whole train off the track, and serious-ly injured, if not killed many of the passengers. Wilmington, Del., Sept. 28, 1840.

The undersigned takes pleasure in attesting of the value of Mr. Joseph S. Kite's invention of the Safety Beam Axle and Hub for railroad cars. They Safety Beam Axle and Hub for railroad cars. They have for some time been applied to passenger cars on this road, and experience has tested that they fully accomplish the object intended. Several instances of the fracture of axles have occurred, and in such the cars have uniformly run the whole distance with entire safety. Had not this invention been used, serious accidents must have occurred.

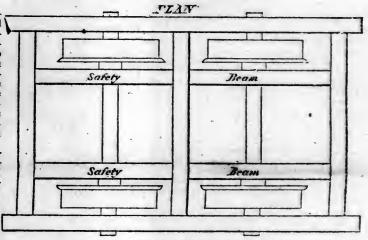

In short, we consider Mr. Kite's invention as completely successful in securing the safety of property and lives in railroad travelling, and should be used on all railroads in the country.

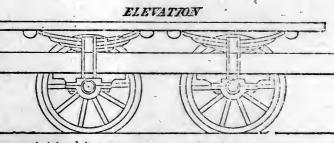

JOHN FRAZER, Agent,

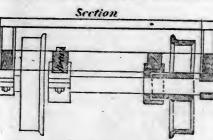

GEORGE CRAIG, Superintendant,

W. L. ASHMEAD, Agent.

The A model of the above improvement is to be seen at the New Jersey railroad and transportation office, No. 1 Hanover st., N. York.

TO IRON MASTERS.—FOR SALE.—MILI SITES in the immediate neighborhood of Bituminous Coal and Iron Ore, of the first quality, at Ralston, Lyoming Co., Pa. This is the nearest point to tide water where such coal and ore are found together, and the communication is complete with Philadelphia and Baltimore by canals and railways. The interest on the cost of water power and lot is all that will be required for many years; the coal will not cost more than \$1 to \$1 25 at the mill sites, without any trouble on the part of the manufacturer; rich iron ore may be laid down still more cheanly at the works; and taken together more cheaply at the works; and, taken together, these sites offer remarkable advantages to practical manufacturers with small capital. For pamphlets, descriptive of the property, and further information, apply to Archibald McIntyre, Albany, to Archibald

apply to Archibald McIntyre, Albany, to Archibald Robertson, Philadelphia, or to the undersigned, at No. 23 Chambers street, New York, where may be seen specimens of the coal and ore.

W. R. CASEY, Civil Engineer,

VALUABLE PROPERTY ON THE MILL Dam For Sale. A lot of land on Gravelly Point, so called, on the Mill Dam, in Roxbury, fronting on and east of Parker street, containing 68 497 source feet, with the following buildings. 68,497 square feet, with the following buildings thereon standing.

Main brick building, 120 feet long, by 46 ft wide, two stories high. A machine shop, 47x43 feet, with large engine, face, screw, and other lathes, suitable to do any kind of work.

Pattern shop, 35x32 feet, with lathes, work bench

es, &c. Work shop, 86x35 feet, on the same floor with the pattern shop.

Pattern snop.

Forge shop, 118 feet long by 44 feet wide on the ground floor, with two large water wheels, each 16 feet long, 9 ft diameter, with all the gearing, shafts, drums, pulleys, &c., large and small trip hammers, turnaces, forges, rolling mill, with large balance wheel and a large blowing apparatus for the foundry.

Foundry, at end of main brick building, 60x45±, feet true trips high, with a ched rout 45: 90 feet.

feet two stories high, with a shed part 451x20 feet containing a large air furnace, cupola, crane and corn oven.

Store house-a range of buildings for storage, etc., 200 feet long by 20 wide.

Locomotive shop, adjoining main building, fronting on Parker street, 54x25 feet.

Also—A lot of land on the canal, west side of Parker st., containing 6000 feet, with the following building the area of the line. buildings thereon standing:

Boiler house 50 feet long by 30 feet wide, two sto-

Blacksmith shop, 49 feet long by 20 feet wide.
For terms, apply to HENRY ANDREWS, 48
State st., or to CURTIS, LEAVENS & CO., 106
State st., Boston, or to A. & G. RALSTON & Co., Finnadelphia.

THE NEWCASTLE MANUFACTURING Company continue to furnish at the Works, situated in the town of Newcastle, Del., Locomotive and other steam engines, Jack screws, Wrought iron work and Brass and Iron castings, of all kinds connected with Steamboats, Railroads, etc.; Mill Gearing of every description; Cast wheels (chilled) of any pattern and size, with Axles fitted, also with wrought tires, Springs, Boxes and bolts for Cars; Driving and other wheels for Locomotives.

The works being on an extensive scale, all orders.

The works being on an extensive scale, all orders will be executed with promptness and despatch.
Communications addressed to Mr. William H.
Dobbs, Superintendent, will meet with immediate attention.

ANDREW C. GRAY. attention.

President of the Newcastle Manuf. Co.

terested in the works to which the same relate. Companies reconstructing their tracks now have an op-portunity of *improving* their roads on terms very advantageous to the varied interests connected with their construction and operation; roads having in use flat bar rails are particularly interested, as such are permanently available by the plan.

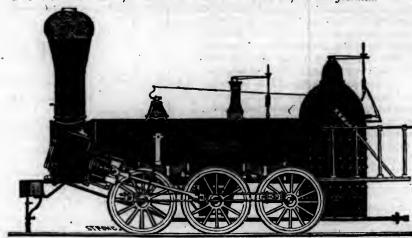

W. Mc. C. CUSHMAN, Civil Engineer,

Albany, N. Y.

Mr. C. also announces that Railroads, and other works pertaining to the profession, may be constructed under his advice or personal supervision. Applicaitons must be post paid.

#### NORRIS' LOCOMOTIVE WORKS

BUSH HILL, PHILADELPHIA, Pennsylvania.

MANUFACTURE their Patent 6 Wheel Combined and 8 Wheel Locomotives of the following descriptions, viz:

NORRIS, BROTHERS.

We find in the London Mining Journal, claims worth canvassing or recording. of 19th April, the following in relation to It says that,

"The claim to the projectorship of railpresent successful state, is contended for with as much energy as other inventions of son monopolised the entire credit; but lately his claims have been strenuously contested, than one competitor. The Scotsman newsdenies his title to being the promulgator of the idea, 'that locomotives might be made to travel at the rate of twenty miles an hour.' in its columns a series of articles in which nal. that opinion and the specific development of railway travelling was broached, and con. tends that, previously to that date, no public advocacy or defence of the system had appeared. Again, a pamphlet has lately been published by a Mr. Wilson, in which he warmly espouses the cause of a friend, Mr. Thomas Gray, whom he declares to have been, as far back as the year 1818, the great originator of the railway scheme. The pretensions of Mr. Gray certainly appear to us well founded, and even superior to any yet advanced; we have before us an address which he circulated in the great commercial districts of Manchester, Liverpool, Leeds, Birmingham and the metropolis, in the year above mentioned; and there can be no doubt but that in it he explicitly proposes the very same system of railway communication which is now generally adopted; its advantages, now tested by experience, he then prognosticated; he illustrated the benefits accruing, in a commercial, agricultural, and social view, by the application of mechanic power for the purpose of land conveyance, and he detailed the method of carrying out his propositions in a very elaborate work,

which passed through five editions. In this

more comprehensive publication, Mr. Gray

opened out his masterly and expansive sys-

tem, urged the establishment of one direct

trunk line throughout the country, and, at

intervals, diverging to localities whose con-

nection was indisputably desirable. Such

was Mr. Gray's theory in 1818, and such, after perceiving their own errors in neglect-

ing it, Sir. R. Peel and Mr. Gladstone, in

1845, pronounced the only correct principle.

This alone would establish the foresight and

We are inclined to believe that the late the first projector of railways for travelling. Col. Stevens, of Hoboken, N. J., was the earliest projector of railways for passengers. We are not sure of the date of his first pubway travelling, and its adaptation to inter-lication on the subject, but we find on page national and social communication in its 36 of the first volume of the Railroad Journal, a communication from him, accompasimilar magnitude have invariably elicited. nying a pamphlet of his, bearing date May For some considerable period, Mr. Stephen. 15, 1812, which sets forth, in his usually clear and forcible manner, the superiority of railroads over canals; not only for travel, if not shaken, by the rival claims of more but also for transportation of agricultural products, and other heavy articles of traffic. paper, in no diffident terms, asserts itself the first public expositor and advocate of the The claims of Mr. Stephenson are not dated; present railway system, and, without detrac- and those of the "Scotsman" go back only ting from the merits of Mr. Stephenson, as to the year 1824—and those of "Mr. Thos. a successful practical engineer, fearlessly Gray" to the year 1818—while the views of and matter, would not have occurred. But Col. Stevens were laid before Congress in May, 1812! full six years earlier than the It proves that in the year 1824 it published earliest claim referred to in the Mining Jour-

> We are not disposed to claim for a countryman, credit to which he is not justly entitled; nor are we willing to see him deprived of honors to which he has just claims; especially in a matter of such vast importance as that under consideration—a discovery which is to work greater results than almost any other of modern days.

That his claim may be fairly appreciated we re-publish, from the Railroad Journal of January 14th, 1832, the introduction to the pamphlet of Col. Stevens, explanatory of the system of internal improvement, which he, at that early day, conceived, and urged upon the General Government as a national work. How truly prophetic! or what far-reaching sagacity!! Few men have lived in this country who possessed equally accurate views of the rapid advancement and future greatness of these States.

. It is possible that other claimants may come forward, who can show prior claims: if so, it will then be time enough to give the early speculations of Col. Stevens on the subject, which we shall probably be able to do by the aid of his gifted sons, who probably have his papers, which will doubtless sustain his claims to even earlier period.

"DOCUMENTS TENDING TO PROVE THE SU-PERIOR AUVANTAGES OF RAILWAYS AND STEAM CARRIAGES OVER CANAL NAVIGA-TION .- N. YORK, T. & J. SWORDS, 1812."

THE RAILWAY SYSTEM AND ITS PROJECTOR. | ing to the honor; but the above are the only by Col. J. Stevens, of Hoboken, New Jersey, to the canal commissioners of New York, before a spade had been struck in the ground, for connecting lake Erie with the Hudson by a railroad in preference to a canal:.

> "INTRODUCTION. - The following documents, on a subject calculated, I should suppose, to attract public attention, are committed to the press from an estimation of their importance, and from a full conviction of the practicability of the proposed improvement. On a subject of such deep interest to the community at large, I presume no apology will be necessary for the liberty I now take of laying before the public private communications.

> "Had the subject matter of this publication been exhibited to public view in the shape of an entire, and connected essay, written expressly for the purpose, numerous repetitions and inaccuracies, both in style I am inclined to believe, that the desultory manner in which it is now handled, and the unavoidable repetitions necessarily resulting therefrom, will render it more generally im-

> " Although my proposal has failed to gain the approbation of the commissioners for the improvement of inland navigation in the State of New York, yet I feel by no means discouraged respecting the final success of the project. The very objections their committee have brought forward serve only to increase, if possible, my confidence in the superiority of the proposed railways to ca-

> "So many and so important are the advantages which these States would derive from the general adoption of the proposed railways, that they ought, in my humble opinion, to become an object of primary attention to the national government. insignificant sum of two or three thousand dollars would be adequate to give the project a fair trial. On the success of this experiment a plan should be digested, 'a general system of internal communication and conveyance' adopted, and the necessary surveys made for the extension of these ways in all directions, so as to embrace and unite every section of this extensive empire. It may then indeed be truly said, that these States would constitute one family, intimately connected, and held together in indissoluble bonds of union.

"Should the national government be induced to make an appropriation to the amount above stated, an experiment could soon he made, either in the vicinity of this city or at Washington, as may be deemed most expedient.

"But the attention of the general government is urged more imperatively to this object from the consideration of the great na-Under the above title a pamphlet appeared tional importance in a fiscal point of view. the claims of Mr. Gray, but other collateral in this city just twenty years ago—from lf any reliance can be placed on the calcu-circumstances still more fully confirm them, which we extract, in this place, the intro-lations I have made, the revenue which this and we think that for that gentleman alone duction, referring to a subsequent page for mode of transportation, when brought into has been advanced any decisive proof of title explanation of, and comments on it. THE COAL TRADE.—SCHUYLKILL VALLEY.
The shipments this week amount to 24,668·13 tons; 18,871-08 by railroad, and 5,597-08 by canal, showing a considerable increase over last week's shipments. In the course of two or three weeks, the shipments will reach 30,000 tons per week from this

The increase from the Lehigh region over last year so far, is about 24,000 tons.

The retail price of coal has advanced 25 cents per ton in Philadelphia.—[Miners' Journal.]

	46,991	91	228,137	93	\$181	146 0	

The above table gives the receipts of the road for ten months, from 1st August, 1843, to June 1, 1844,

Correspondents will oblige us by sending in their being \$46,991 91; and for the corresponding ten for carrying coal to Hartford, Ct., and furmonths, in the subsequent year, or from August 1, 1844, to June 1, 1845, being \$228,137 93-showing an increase during the latter period of \$181,146 02 -the road being only half completed during the first term, and completed when earning the income of the second. If we estimate the receipts of the remaining two months, viz: June and July of this year, in the same ratio as that of the month of May just received, viž: \$32,496 81, it will give \$64,992 62, making the annual income of the road from August 1, 1844, to August 1, 1845, \$293,130 55.

#### READING RAILROAD.

The coal tonnage passed over this road the las week, exceeded 18,000 tons; and during the month 60,000 tons. Arrangements are made to bring down 80,000 tons this month. Should there be no disappointment with the miners, it is calculated to transport 100,000 tons per month, by the month of September. At this rate the wishes of the most sanguine friends of this important railway will be more than

EASTERN RAILROAD,-The annual meeting of the region.
The shipments from this region last year, to June 8th, were by railroad, 120,896-17—by canal, 90,741
—total, 211,637-17. This year, to the same period, by railroad, 217,191—by canal, 62,329—total, 279, 279.

520. Increase over last year's shipments, 66,882-03

Stockhold was held at Portsmouth on Monday last.—
The directors of the last year were re-chosen, viz:
D. A. Neale and Stephen A. Chase, of Salem; B.
T. Reed, of Boston; Ichabod Goodwin, of Portsmouth; John D. Lang, of North Berwick; Josiah Calef, of Saco; Charles E. Barrett, of Portland. stockholders of the Portland, Saco and Portsmouth

A statement, signed by the president, shows that the total receipts for the year ending May 31, were \$131,404-18; the total expenditures, excluding interest, were \$51,822-26. The interest paid was \$19,410-06. So that the net profits were \$62,171-86. Of this, \$51,594 have been paid in dividends. The net earnings have been 72-10ths per cent. Those of the preceding year were 4 93-100ths.—[Port. Adv.]

[Correspondence of the Railroad Journal.] Philadelphia, June 8th, 1845.

I have made a visit to, or had "a day at RICHMOND," the far-famed coal depot of the state of those improvements. Reading Railroad Company, by which I have learned its wonderful capacity for business. They are getting their piers all nearly ready for use-at which may be moored, and receive loading at the same time, 78 vessels! sand tons of coal, on shipboard daily!!

It is gratifying to see the order, regularity and precision with which the cars are dis. give out. tributed from the main track, upon the 14 different piers, and to the different vessels;

There were 780 loaded cars brought in number unloaded and sent out again on Sadepot.

nished with the Loper-instead of the Ericsson-propeller. It appears that Eriesson's propellers are all giving place to Loper's improvement-which bids fair to become extensively used. Two of the government revenue iron steamers—the Spencer, with Hunter's submerged wheel, and the Legare, with Ericsson's, have been supplied with Loper's in place of those first introduced; and the prospect now is, that there will be a large number of vessels built with this apparatus as colliers, or to carry coal from here, and from Pottsville also-as they design to have them pass through the enlarged Schuylkill canal, to the mines, and there take on board 100 to 150 tons of coal, and then proceed directly to their port of destination, either through the Delaware and Raritan canal, or by sea, as may be preferred.

The vessel visited is called the "Col. John Stevens," after the late venerable Col. John Stevens, of Hoboken, who was one of the earliest projectors, not only of railroads for commercial purposes, but also of propellers for vessels. Indeed, he was among the earliest and most enlightened patriots of our country, who foresaw, and at an early day predicted, its rapid advancement and future greatness, in consequence of the introduction of steam power, canals and railroads; and few, very few indeed, have contributed more than he did to the present advanced The Col. John Stevens is 100 feet in length, 23-feet 8 inches beam and 6 feet draught of water, and of 156 tons, custom-house measurement. but she will carry in addition to her machinery, fuel and necessary apparel, 170 tons and from which may be discharged ten thou. of coal. She is schooner rigged, and well fitted for a sea boat, and therefore as safe as any other vessel, even should her machinery

It is believed that boats of her class can perform the voyage, via the canals, to Hartand again collected upon the main track, ford, her port of destination, unload, take in and taken off by the different engines to the return freight, if any offers, and be back mines; to be again brought back loaded, and here and ready to take in coal in a week, or discharged, and thus keep up a continued cir. cight days at the extent; which, at present cuit between the mines and the depot at Rich. rates, \$2 per ton, will give large returns upon the capital invested.

She has one of Merrick & Towne's vion Friday night, and an equal or greater usually denominated the Locomo ive boiler, brating engines, and a tubular, or what is which are exceedingly compact, occupying turday, 7th iast, before 2 P. M. But I will very little space, and, apparently, do credit leave all description until I obtain the draw. to their manufacturers; and the vessel itself ing, or ground plan of the depot-which is appears to be built in the most substantial promised me by the very gentlemanly engiwill be sufficient for her trip to and from neer, Mr. Manning, who has charge of the Hartford; which, at \$5 per ton on board, will amount to only \$75-leaving a very I have also visited a new vessel built here handsome amount over and above expenses.

OGDENSBURG AND CHAMPLAIN.

go to New York via the Northern Canal and falo. the Hudson, but even during the summer,

over our central railway line, is 525 milesnear 200 miles further.

The New York roads, located along the line of our canal, are compelled to pay tolls of the canal upon all freight passing over them-equal to 35 cents for each barrel of flour-and on the average \$5 per ton for merchandise.

The New York and Erie Road will be 580 miles in length, and from its high grades and curvatures, can never compete with our northern route.

We are informed that an excellent route with low grades may be located through Vermont. Upon our northern route the curves are large, and grades under 40 feet per mile at the maximum. For a description of our route we refer to the report of the state engineer made to the legislature in 1841. This survey was made by the state at a cost of \$30,000. Maps of all the sections, in detail, with drafts of the structures, are deposited in the office of the secretary of state at Albany.

When the Harlaem railroad shall be ex tended to Albany, as it will be within two years, can it be expected that the Western Railway over the Berkshire mountains will take much of the freight coming over the in proportion to that granted-grudgingly central railway of our state? We think not Springfield, at less cost than from Buffalo to the same point, considering the tolls paid by the central line.

Merchandise by the Cupard steamers for Canada West, under the late law of Congress, would take our route to its destina-

There is another view entitled to consideration. The New York city capitalists State street. have their hands full to build rival roads, and will not to any great extent take our stock. If the road be built very soon, a majority of the stock must be held by eastern terest them fully in the successful construction and operation of the road-but they have little capital to spare, and even that little is needed for our iron manufactures. Is it not desirable that owners of New-Eng. roads.

the whole winter, a great advantage to land railways should control the direction of our road, and thus have the power to We admit that, during the season of canal conduct the whole line to the western lakes. navigation, the western produce crossing our They can never expect an identity of inrailroad, and destined for foreign consump- terest between themselves and the proprie-

The charter of our northern railway is flour for domestic consumption, would seek highly favorable and exempt from all tolls its best market, the manufacturing districts to the state. No legislature will venture to of New England, over Eastern railways. impose charges and restrictions upon it. The distance of railway from Boston via The northern section has had no share in Burlington to Ogdensburg, is but from 320 the large state expenditures for public inito 340 miles (as the route through Vermont provements, and would always successfully may be located.) From Boston to Buffalo, resist any such imposition. Besides, numerous other railroads in the state would have a common interest in preventing such a precedent.

If the views presented by us are deemed worthy of consideration, we hope that the Northern Railroad will have a high place in connection with the road to Burlington, and that a common unity of interest will promote the speedy construction of both.

Very respectfully, your ob't servants HIRAM HORTON, JNO. LESLIE RUSSELL, N. P. GREGORY, Of the N. Y. Legislature. A. C. MOORE, S. C. WEAD, Com'rs of Northern Railroad. Malone, N. Y., May 23, 1845.

Here we find our own citizens, and members of our own Legislature, proposing to put the control, or "direction" of this road into the hands of the capitalists of a rival city! This is, however, the natural course for them to pursue, when they have not the means among themselves, and can neither obtain aid from their own State Legislature, we admit-to the southern tier of counties —freight could pass on a railway from and profusely squandered in the more favor. Ogdensburgh via Burlington and Boston to ed sections of the State—nor from the capit ed sections of the State-nor from the capitalists of their own favored city of New York, to whose prosperity and greatness they The railroad connecting the lakes Cham- have contributed their full share. It is na plain and Ontario, would take a large por-tural that they should, under the circum tion of the passenger travel in the summer. stances, look abroad for aid, and to no place so naturally as to Boston, where enterprises of this kind are estimated valuable in pro tion, as 60 days' time would be gained over portion to the benefits they are likely to a passage through the Gulf of St. Lawrence. confer on their city, rather than for the prospect of speculation in their stocks in

The people of Boston however have the sagacity to see that the stocks of their roads which promise most benefit to the trade of business men. Our citizens will subscribe their rapidly growing city, are also the most for all within their ability-enough to in- sure to give them liberal and steadily increasing returns upon their investment. Hence the readiness and liberality of their aid in the construction of well located railTHE OREGON RAILROAD.

The Baltimore American, one of the best conducted papers in the country, has the following remarks upon this magnificent protion, would, when affoat on Lake Champlain, tors of the central line from Albany to Buf. ject. We have refrained from expressing an opinion upon it, that we might listen to the echo, from the far off hills of the great west, the north, the east and the south; as many a man, now living, will hereafterwhile standing upon the most elevated points of the Rocky Mountains, in the vicinity of the most favorable pass-listen to that unearthly sound, the steam whistle of the locomotive, as the engineer gives warning to the astonished herds of buffalo that are grazing upon the track in advance of the train, which only a few days before left the falls of the Willametta, or the mouth of the Columbia river.

> The proposition of Mr. Whitney was, and is still, deemed by many considerate people, as an idle visionary scheme; and so, within our recollection, was an emigration to that out-of-the-world place, called Ohio! "The New Connecticut"-as that part of it bordering on lake Erie was called but a few years since-was a place to be talked of by many, but visited only by a few adventurous spirits, who were given up, when once fairly on their way, as lost to their friends, and never to return! Where now is "the New Connecticut?"-not three days' time from the very heart of New England !! Where will Oregon be a quarter of a century hence? Only twenty-five days' distant !!! Let those who doubt recollect this. Why, it will be asked, should it be so? Let the answer bo found in the enterprise, the energy and the indomitable love of freedom and adventure, of the American people, together with the thirst for more territory by her politicians, and consequently the necessity imposed upon the Government of providing for the defence of our territory on the Pacific, which is to be the great battlefield of universal free. dom to mankind. It is, in our opinion, from the shores of the Pacific ocean that the monarchical governments of the old world will attempt, if they design ever to make the effort, to arrest the progress, or to suppress the existence of republican institutionshence the necessity for early action in opening an easy, rapid and ample mode of inland communication, to act in concert with our navy, which ought, and is to be speedily increased by the construction of steam ships.

> " Railroad to the Pacific .- Mr. Whitney's plan for a continuous railroad from lake Michigan to the Pacific ocean proposes that the Government shall grant of the public lands a strip sixty miles wide along the route,

proceeds of this land to constitute the fund for building the road. The proposed grant \$20,000 per mile; making for the whole who travel. work an aggregate cost of some fifty millions of dollars.

"At the first view this seems like a fanciful project, fit only to amuse the imagination. cation of the road at Norwich, to avoid the But when it is considered more closely, it acute radius now objected to. The cost of appears to be simply a mode of disposing of the change will be about \$25,000. The a certain amount of Government land, in a stupendous in design, and calculated, if ac- good will of the travelling community to complished, to secure the most important results. The specified grant of the public domain would be regarded as well disposed of, if it could be exchanged for such a work as is here suggested. The chief matter of concern to the Government, then, in respect to this project, would be to provide that the lands should not be parted with except as the road progressed-in other words, to take care improvement, the benefit of which in gene. ington, which are taking a large amount of that for every sixty square miles of land a mile of road should be secured.

"The object of the road of course would be, not to develope in so mature a fashion the resources of the wilderness through which it would run, but to open a communication with China and the east, by which New York and Canton could be brought within a few weeks of each other. It does not matter then that the whole route of the road would be through an unsettled country, because the work would derive its value and importance from the points connected, and not from the region traversed by it. great extent of prairie between the Missis-know of in the annals of railroad charges, most. sippi and the Rocky Mountains would be favorable to the construction of a road-provided the deficiency of timber could be sup-

"Mr. Whitney's plan was submitted to the last Congress, and a report on the subject came from the committee on roads and canals through the chairman, Mr. R. D. Owen, of Indiana. They reported that the project was worthy of the most serious attention, but that, as sufficient time was not then alnot recommend any immediate specific action. The committee added, that while they should not advise over-hasty action upon it, yet, as the road would be constructed by an domain was rapidly appropriated in each succeeding year, the plan, it practicable and expedient, should not be delayed."

People's Advocate, that it is necessary for the bring about results which the company will authorizes them to extend their road to Alinterest of the company to consult the safety regret not having avoided, by making their bany, on condition that they expend \$500, and good will of the travelling community; charge more in accordance with public opi. 000 the first year, complete fifty miles of should be better satisfied if we could feel which are necessarily seriously injured by it.

Take, for example, the lines of railroad would be as well cared for when there is between New York and Rakimora.

Sent road to White Plains, and finish the entire road in three years. Their capital stock, viz; 2,950,000, and of which about not, as when there is "great competition on veller may go by the Camden and Amboy not increased by the new bill.

Worcester Railroad Co. have it in contemplation to effect an alteration in the logreat competition on the various routes obtain a fair share of the travel."

## FRENCH AND BAIRD'S PATENT SPARK ARRESTER.

To THOSE INTERESTED IN Railroads, Railroad Directors and Managers are respectfully invi-ted to examine an improved SPARK ARRESTER, recently patented by the undersigned.

Our improved Spark Arresters have been extensively used during the last year on both passenger and freight engines, and have been brought to such a state of perfection that no an-noyance from sparks or dust from the chimney of engines on which they are used is experienced.

These Arresters are constructed on an entirely different principle from any heretotore offered to the public, The form is such that a rotary motion is imparted to the heated air, smoke and sparks passing through the chimney, and by the centrifugal force thus acquired by the sparks and dust they are separated from the smoke and steam, and thrown into an outer chamber of the chimney

the smoke and steam, and thrown into an outer chamber of the chimner the smoke and steam, and thrown into an outer chamber of the chimner the smoke and steam, and thrown into an outer chamber of the chimner the smoke and steam passing off at the top of the chimner, through a capacious and unobstructed passage, thus arresting the sparks without impairing the power of the engine by diminishing the draught or activity of the fire in the furnace.

These chimneys and arresters are simple, durable and neat in appearance. They are now in use on the following roads, to the managers and other officers of which we are at liberty to refer those who may desire to purchase or obtain further information in regard to their merits:

RAILROAD IRON AND FIXTURES. THE Subscribers are ready to execute orders for the above, or to contract therefor, at a fixed price, delivered in the United States.

DAVIS, BROOKS & CO., 21 Broad st., N. York.

MACHINE WORKS OF ROGERS, KETCH-1 um & Grosvenor, Patterson, N. J. The undersigned receive orders for the following articles, manufactured by them of the most superior description in every particular. Their works beingexten-sive and the number of hands employed beinglarge, they are enabled to execute both large and small orders with promptness and despatch.
Railroad Work.

Locomotive steam engines and tenders; Driving and other locomotive wheels, axles, springs & flange tires; car wheels of cast iron, from a variety of pat-terns, and chills; car wheels of cast iron with wrought tires; axles of best American refined iron;

springs; boxes and bolts for cars.

Cotton, Wool and Flax Machinery
of all descriptions and of the most improved patterns,

style and workmanship.

Mill gearing and Millwright work generally;
hydraulic and other presses; press screws; callenders; lathes and tools of all kinds; iron and brass

castings of all descriptions.

ROGERS, KETCHUM & GROSVENOR,

a45 Paterson, N. J., or 60 Wall street, N. York.

ICOLL'S PATENT SAFETY SWITCH for Railroad Turnouts. This invention, for some time in successful operation on one of the principal railroads in the country, effectually prevents engines and their trains from running off the track at a switch, left wrong by accident or design.

It acts independently of the main track rails, being laid down, or removed, without cutting or displacing

outside if required. Railroad Companies wishing to order, will please give the exact inside diameter, or circumference, to which they wish the Tires made, and they may rely upon being served according to order, and also punctually, as a large quantity of the straight ber is kept constantly on hand.—Crank Axles, made from the best refined iron; Straight Axles, for Outside Connection Engines; Straight Axles, for Outside Connection Engines; Wro't. Iron Engine and Truck Frames; Railroad Jack Screws; Railroad Pumping and Sawing Machines, to be driven by the Locomotive; Stationary Steam Engines; Wro't. Iron work for Steamboats, and Shafting of any size; Grist Mill, Saw Mill and Paper Mill Machinery; Mill Gearing and Mill Wright work of all kinds; Steam Saw Mills of simple and economical construction, and very effective ple and economical construction, and very effective from and Brass Castings of all descriptions. ja451v

# KITE'S PATENT SAFETY BEAM.

MESSRS. EDITORS.— As your Journal is devoted to the benefit of the public in gen-eral I feel desirous to communicate to you for publication the following circumstance of no inconsiderable importance, which oc-curred some few days since on the Philadelphia, Wilmington and Baltimore railroad.

On the passage of the evening train of cars from Philadelphia to this city, an axle of our large 8 wheeled passenger car was bro-ken, but from the par-ticular plan of the construction, the accident was entirely unknown to any of the passengers, or, in fact, to the conductor himself, until the train, (as was supposed from some circumstances attending the case,) had pass-ed several miles in advance of the place where the accident occurred, whereas had the car been constructed on the common plan

the same kind of acci-dent would unavoidably have much injured it, perhaps thrown the whole train off the track, and serious ly injured, if not killed many of the passengers.

Wilm ngton, Del., Sept. 28, 1840.

The undersigned takes pleasure in attesting of the value of Mr. Joseph S. K. e's invention of the Safety Beam Axle and Hub for railroad cars. The have for some time been applied to passenger cars on this road, and experience has tested that they fully accomplish the object intended. Several instances of the fracture of axles have occurred, and in such the cars have uniformly run the whole distance with entire safety. Had not this invention been

with entire safety. Had not this invention been used, serious accidents must have occurred.

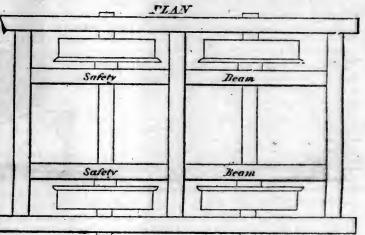

In short, we consider Mr. Kite's invention as completely successful in securing the safety of property

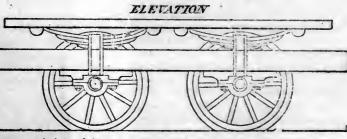

and lives in railroad travelling, and should be used on all railroads in the country.

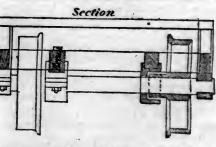

JOHN FRAZER, Agent,

GEORGE CRAIG, Superintendant,

The A model of the above improvement is to be seen at the New Jersey railroad and transportation office, No. 1 Hanover st., N. York.

TO IRON MANUFACTURERS. THE SUBscribers, as Agents of Mr. George Crane, of Wales, having obtained a patent in the United States for his process of smelting Iron Ore with Anthracite coal, and holding an assignment of the pa-tent obtained by the late Rev. F. W. Geissenhainer, are prepared to grant licenses for the manufacture of Iron according to Mr. Crane's principle. A. & G. RALSTON & CO

No. 4 Sout Fronth st., Philadelphia, Pa

TO RAILROAD COMPANIES AND BUILD ERS OF MARINE AND LOCOMOTIVE ENGINES AND BOILERS.

#### PASCAL IRON WORKS.

## WELDED WROUGHT IRON TUBES

From 4 inches to I in calibre and 2 to 12 feet long, capable of sustaining pressure from 400 to 2500 lbs. per square inch, with Stop Cocks, T., L., and other fixtures to suit, fitting together, with screw joints, suitable for STEAM, WATER, GAS, and for LOCOMOTIVE and other STEAM BOILER FLUES.

Manufactured and for sale by MORRIS, TASKER & MORRIS.
Warehouse S. E. Corner of Third & Walnut Streets, PHILADELPHIA.

TO IRON MASTERS.—FOR SALE.—MILL SITES in the immediate neighborhood of Bituminous Coal and Iron Ore, of the first quality, at Ralston, Lyoming Co., Pa. This is the nearest point to tide water where such coal and ore are found together, and the communication is complete with Philadelphia and Baltimore by canals and railways. The interest on the cost of water power and lot is all that will be required for many years; the coal will not cost more than \$1 to \$1 25 at the mill sites, without any trouble on the part of the manufacturer; rich iron ore may be laid down still manufacturer; rich iron ore may be laid down still more cheaply at the works; and, taken together, these sites offer remarkable advantages to practical manufacturers with small capital. For pamphlets, descriptive of the property, and further information, apply to Archibald McIntyre, Albany, to Archibald Robertson, Philadelphia, or to the undersigned, at No. 23 Chambers street, New York, where may be seen specimens of the coal and ore.

W. R. CASEY, Civil Engineer,

VALUABLE PROPERTY ON THE MILL Dam For Sale. A lot of land on Gravelly Point, so called, on the Mill Dam, in Roxbury, fronting on and east of Parker street, containing

68,497 square feet, with the following buildings thereon standing.

Main brick building, 120 feet long, by 46 ft wide, two stories high. A machine shop, 47x43 feet, with large engine, face, screw, and other lathes, suitable to do any kind of work.

Pattern shop, 35x32 feet, with lathes, work benches, &c. Work shop, 86x35 fect, on the same floor with the

pattern shop.

Forge shop, 118 fect long by 44 feet wide on the ground floor, with two large water wheels, each 16 feet long, 9 ft diameter, with all the gearing, shafts, drums, pulleys, &c., large and small trip hammers, furnaces, forges, rolling mill, with large balance

wheel and a large blowing apparatus for the foundry.
Foundry, at end of main brick building, 60x45½
feet two stories high, with a shed part 45½x20 feet,
containing a large air furnace, cupola, crane and corn oven.

-a range of buildings for storage, etc., Store house-

200 feet long by 20 wide.

Locomotive shop, adjoining main building, fronting on Parker street, 54x25 feet.

Also—A lot of land on the canal, west side of

Parker st., containing 6000 feet, with the following buildings thereon standing:

Boiler house 50 feet long by 30 feet wide, two sto

ries.

Blacksmith shop, 49 feet long by 20 feet wide.
