JOHN R. GROUT'S SELF-FEEDING FRICTION DRILL FOR DRILLING IRON AND OTHER METALS.

of two forms of my friction drill, for drilling place of taking it up and getting it punched. iron and other metals, of which I have It is 8 inches in height to the top of the made some mention to you. A is the bench frame, and weighs 10 lbs. The frame is form for the general purposes of the black- cast iron, and consists of two standards, Grout, 27 Stanton street, who will dispose smith. The frame consists of a bottom connected by a plate at top, by a bar 21/2 plate with a sliding poppet-head and two inches below the plate, and by a bolt  $2\frac{1}{2}$ fixed standards. These two standards are inches below the bar. The right hand standconnected at top by a bar which extends and is connected with the plate by a joint; ing a screw cut on it and playing through mandril passes down through the centre of quarter.

next to the spring is undulating, or made with held between them. force. The drill is self-feeding by the use finds it loose. simply of the spring and nut, thus constructed and operated; it is set to any feed the right-hand standard removed. by simply turning the thumb-screw; it is self I sell the drill at \$8, or at that rate for hollow auger for tenoning spokes; fig. 2, a to five months. the poppet-head, and has all the motions ne- with it. Very respectfully, &c. cessary for its purposes.

C is the railroad form of the drill, and is I herewith send you the engraved plates used for drilling the flat bar on the track, in

which we copy from the Supplement to Her- the other standard without touching it. On the plate and bar and bolt, and receives in the screw part there is a nut, one face of the lower end of it a bit so formed as to cut The promoters of the Bolton, Wigan, and which bears against the latter standard or through the iron for the body of the spike, Liverpool line, have offered to secure the an intervening washer, and the other face and at the same time countersink for the usual accommodation and advantages to the is acted on by a friction spring. The spring head. The nut and spring and thumbscrew is connected to the bar at top, and is acted are formed and operate precisely as in the on at its lower end by a thumb-screw, which bench drill. To put the drill on the bar, taps into the standard next to the arm. The turn off the tightening nut, swing out the spring is elliptical in form, receives the man-right-hand standard till the bar is taken into dril through it, and equals in width the di- the jaws, then draw the standards together ameter of the nut. The face of the nut with the tightening nut, till the bar is fast The drill is then four high parts and four low ones, passing worked as in the bench form of it. If the smoothly into each other at equal distances, bar is not sufficiently up from the rail to the high parts, only, in revolving the nut, enter the jaws, it is readily raised for that touching the spring. The nut inclines to purpose. This drill is found to be a most revolve with the mandril, and does so re. useful little tool on flat bar roads. The volve, if not acted on by the spring; but hole which it makes in railroad iron, the when the spring is brought to bear against quality of which is usually poor, is better it by the action of the thumb-screw, its than the punched hole; and it can be made motion is retarded,—the friction of each and the bar spiked with a saving of at least high part, in passing over the convex part four-fifths of the cost of taking the bar from of the spring, stopping it for an instant. In the track, getting it punched, &c. It is each of these retardations of the nut, the much saving also in preserving the iron and mandril advances through it, and presses its the wood rail, it being a means in the hands bit into the object to be drilled against the of the repairer which enables him to fasten poppet-head, with any required degree of down the iron without delay whenever he

#### AMERICAN RAILROAD JOURNAL

PUBLISHED BY D. K. MINOR, 23 Chambers street, N.Y.

#### Thursday, June 19, 1845.

#### FOREIGN RAILWAY PERIODICALS.

We avail ourselves of the earliest opportunity to acknowledge the receipt of several numbers of the London Railway Record,-a valuable work, and an efficient laborer in the cause-in exchange for the Journal. We are the more desirous to acknowledge the favor, as it is not common for English papers and periodicals, we believe, to send in exchange to those of similar character on this side of the water, from the fact, perhaps, that they always pay a duly on each sheet sent out by them, equal to 1d. sterling, or more than some of our papers are sold for. We shall be gratified to exhibit the numbers to engineers and others who desire to read them; and we will cheerfully order them for such as would have them regularly as published, and forwarded by the steamers or packets.

In our efforts to obtain the French railway paper, the Journal des Chemins de Fer, we have been less fortunate, even though requested by its editor to send ours, and offering to send his in exchange. We wrote to him in reply, accepting his polite offer, and have sent ours, every number, since 1st of March last. Yet we have neither received his paper nor any acknowledgment of our letter; but it will come yet, we are sure. There must be some mistake, not design, in the delay: therefore we shall continue to send ours.

#### READING RAILROAD

The following interesting view of the increase of the coal trade over this important railway must gratify every friend of the railway system, particularly in this State, where this class of intercommunication, as compared with canals, has been abused in legislative reports in no measured terms. Even the capacity of a railway to carry bulky freight has been doubted. It may sound strange, at this day, to state that there have been men in this State, who should have known better, and some occupying the situation of directors, who have gravely contended that "railways were only fit to carry passengers,-they could not carry heavy or bulky freight." But how is the fact? It is notorious that the first railway established in England, was to carry bulky freight-coal of little comparative value. The stock of this road, (the Stockton and Darlington,) is now the most profitable in Great Britain, and divides 15 per cent. annually. In this country the case is much stronger. The first railway we constructed was to transport large masses of granite at Quincy, and is very profitable. There was also, we believe, a short road in this State, in Orange or Ulster county, to transport iron ore. Col. Stevens, in 1812, proposed to Gouv. Morris, Gen. Schuyler and Gov. Clinton, a railway from the Hudson to lake Erie, in preference to a canal, to carry

Correspondents will oblige us by sending in their freight, and gave substantial reasons for his opinions, has intermitted its dividend, and cannot draw coal ing such jobs.—A model may be seen at this office. from the railroad, although it takes off all toll, in its competition with the railway, and guarantees freight at 65 cents per ton, 108 miles. J. E. B.

"The monthly report of the Reading Railroad Company for May, 1843, '44 and '45, presents the annexed statement of the receipts and business of the completion of the extension road to

#### PHILADELPHIA AND READING RAILROAD.

May, 1843. May, 1844. May, 1845. \$31,447 54 47,763 34 79,822 82 Receipts . Coal transported, 15,205 Receipts

tons . . 15,205 35,684 64,698
The business for May, 1845, has been considerably 35,684 more than the maximum estimate. Up to June 1st, the coal tonnage is over the estimate—800,000 tons for the year-rising nine thousand tons. In connection with this very favorable report and the immense improvement these increased receipts must produce in the affairs of the railroad company, we give a re-port of the business on the Schuylkill canal, for one week in each of the past three years.

BUSINESS ON THE SCHUYLKILL CANAL. Week ending June 10, '43. June 8, '44. June 7, '45. Coal transport-

ed, tons . . 18,095 11,869 5,796

For the same week the coal transportation of the Reading Railroad was as follows:

1843 1843 1844. 1845. 2,388 8,796 18,871 Coal transported, tons

It will be seen that these two works have changed places in the coal carrying trade of Eastern Pennsylvania. What the Schuylkill canal was, the Reading railroad will be, and judging from these returns, the Schuylkill canal will soon be what the Reading

108718

MOUNT CARBON RAILROAD—total tons.. 90,699 net increase is \$7,962.

GROUT'S FRICTION-DRILL .- We give in this numand made a near estimate of its cost. He was looked ber a description of an exceedingly useful and conveupon as little better than crack-brained. The Bos- nient instrument for railroad companies who have the ton and Worcester, Lowell, Providence, and New flat bar rail in use-which may require additional Haven and Springfield railroads superseding as holes to be made in it. Mr. John R Grout, who has many canals in their day, tells the story of the on- been for many years engaged as engineer on some ward march of this better improvement of intercom- of our western railroads, has made a Drill which munication to carry freight as well as passengers. It can be carried in one hand anywhere, and by raishas remained however for the Reading railway to deling the rail half an inch, and turning a thumbmonstrate the superiority of a railway over one of screw, it is made fast to the rail, when, with one hand the best canal in this country, which formerly divided upon a crank, a hole may be drilled through the rail above 20 per cent. For three years, we believe, it in half the time required by the ordinary mode of do-

> HARTFORD AND NEW HAVEN RAILROAD .receipts on this road (exclusive of mails) for May, 1845, were \$16,870 34 " 1844, " 8,456 51

completion of the extension road to 100,291 80 Springfield, ending June 9th, 1845 . Receipts for the corresponding months in 1844

Showing an increase of more than 100 per cent.—

The receipts on the Norwich and Worcester road for the first six days in June, show a gain of over six hundred dollars in the same six days of last year, although the fare now is about half what it then was. Very good evidence in favor of low fares.

At a meeting of the shareholders of the Norwich and Worcester Railroad Company, held in Norwich on the 2d instant, the following were chosen directors, viz :- John C. Holland, William P. Greene, and John A. Rockwell of Norwich; Alexander De Witt of Oxford; William Ward of Boston; Jacob Little, Alfred Brooks, Elilin Townsend, John Rankin, Samuel R. Brooks and David Groesback of New York; and A. W. H. Clapp of Portland. At a subsequent meeting of the Board, John C. Holland was chosen President of the company.

NORTHAMPTON RAILROAD .- The annual meeting of the stockholders of the Northampton and Springfield railroad was held at Boston, on Wednesday. last. James K. Mills, E. H. Robbins, and Samuel Henshaw of Boston, Philip Ripley of Hartford, John Chase of Cabotville, Eliphalet Williams and Erastus Hopkins of Northampton, were unanimous-ly re-elected directors. We learn that the business of the road to Cabot-

ville has fully answered all reasonable expectations. About 22,000 passengers were carried over the road in the first three months; and the net income of the road, after deducting the expenses of running, including all the expenses for repairs. &c. which, of course, must have been large, as they always are on a new road-was a little over nine per cent. on the cost of the These three months cannot, certainly, be regarded as more than a fair average of the business of the year And it should be borne in mind, in estimating the net income of this road, that it is much more expensive, per mile, to run so short a stretch of road, than it is a road of fifteen or twenty miles in

It is hoped that the road will be completed to Northampton by "Thanksgiving-time." The grading and bridging is going on rapidly. The completion of the road, however, will depend upon the success of the directors in obtaining iron. - Hampshire Gaz.

Providence Railroad .- The report of its financial condition is flattering, exhibiting a net income of \$177,590 for the year past, or over same period of 1844, of \$16,860 in re-

parative weekly statement of twenty-four having access to our own English papers,-Ayr.) which does not show a very fair increase; and some of them show a large in. We hope, however, that the thousands, aye, for the week.

The Herald very justly remarks, that

"The weekly returns of the railroads of Europe afford the best evidence of the productiveness of these works. The receipts of nearly every company in operation are very large, but the weekly increase is sufficient to create in the minds of those interested the most favorable anticipations for the future.

"The principal lines in Great Britain'regularly declare the following dividends:

The Grand Junction Railroad 10 per cent. per annum.

The Great North of England, 6 per cent. per annum.

The Great Western, 8 per cent. per annum.

The Liverpool and Manchester, 9 per cent. per annum.

The London and Birmingham, 10 pcr cent. per annum.

The Midland, 6 per cent. per annum. The York and North Midland, 10 per cent. per annum:

The Manchester and Birmingham, 5 per

cent. per annum.

"These roads have been constructed at an expense far beyond any thing of the kind tem in France, but also in Belgium, Holin this country, and notwithstanding the enormous running expenses, the dividends of some of them are very large.

States pay dividends equal to these, notwithstanding the great difference in the cost and current expenses in our favour, but in time. as our country improves, as population and business increases, as our resources become developed, the dividends of our works must world."

constantly repeated before our eyes, we can more as he can favor us with. be restrained from an immediate completion of the two great roads north and west from Major Poussin for his very acceptable letter, tionary engines, two systems; in dilatation New-York. > FOREIGN CORRESPONDENCE OF THE RAIL-ROAD JOURNAL.

The following letter from Major Poussin, a distinguished engineer of France, and formerly, if we recollect correctly, a member what we anticipate will prove to the Railroad Journal a valuable correspondence.

We are the more gratified in giving this, and promising more from the same source, as we hope thereby to become better acquainted, not only with the present condition and future prospects of the railway sysland, Prussia and Russia, and, indeed, in Europe generally. We are aware that the "Very few of the railroads of the United writer has as much upon his hands as ought to be asked of any man, yet when so much good may result to the cause in both countries, from a free interchange of reports, experiments, and results in each, through the columns of the Railroad Journal, we shall at the next session, in 1846. steadily increase, until they become as large feel justified in, and cannot well refrain as those of similar works in any part of the from adding to the labors of the gallant Ma. jor, to the extent, we hope and trust, of at It is singular that, with such evidence least one letter each month, and as many

In thus acknowledging our obligation to

[Foreign Correspondence of the Railroad Journal.] PARIS, May 8th, 1845.

No. 25 Boulevard Bonne Nouville.

Sir-I have received your letter of the speed.

I am for the present very much engaged with several lines of railroad in France,

The railroad system, by private enterprize, has gained considerably in France of late, and there is all probability that this remarkable fever of the public for railway investment will not abate for some time to come.

This remarkable change in the French of the U. S. Engineer Corps, under GEN. opinion is due in a great measure to the BERNARD, will be read with peculiar inte. influence of the results obtained in England rest by our numerous subscribers, as it has and in America. In these days, millions been by ourselves, as the introduction to of francs are readily subscribed for these schemes, whereas, a few years ago, they were unwilling to enter into the support of them. There are not less than four or five companies already organized, each with a capital of from 165 to 200 millions of francs, to bid for the charter, or privilege, of making and working lines from Paris to Belgium; to Lyons and Marseilles; to Bordeaux and Cette; to Tours and Nantes; to Chartres, Laval and Brest; to Rouen, Le Havre and Dieppe, and many other lines of minor importance.

> The Chambers, at their present session. will decide on the main lines; and most likely the secondary lines will be conceded

> Meantime, great efforts are making among practical engineers to improve the mode of locomotion, by the introduction of various new systems; namely, the atmospheric, with French modifications for the valves; the compressibility of air, with staalso making for renewing the experimenta tion of locomotion by steam on common roads; and important improvements are offered for the solidrity and security of trains on passing on small curves at high

I call the particular attention of your railway from Paris to Brest, as interesting, we have diverging from this city two rail- I shall endeavor, at my first leisure mo-directly, our American friends in various

fering a means of uniting more closely the the position of Portland cannot be mistaken afforded at the present day in travelling from interests of the two people, by the successful operation of steam navigation across the Atlantic, from a port of the United States upon the farthest waters of the Western this place. You are probably aware that at to this great sea port of France—the only one facing to the western world which is nor a speculation, nor a dream. The same a charter was granted for the construction completely out of all British influence in the eventuality of a war with that nation.

Renewing you my most sincere thanks for the interesting numbers of your valuable Journal, I remain, sir, very respectfully,

Your obedient servant, GUILLAUME TELL POUSSIN, Major du Genie.

The kind is of class and their ways used in their manufacture, and their very general use for railroads and other purposes in this country, the manufacturers have no hesitation in warrant-Arts":

DESCRIPTION OF ELLIS'S TURN-TABLE. BY B. ROTCH, ESQ. V. P.

This ingenious invention obviates one of the greatest objections to the turn-table, which is, its being supported on numerous small friction-rollers under its outer edge, as well as on a central pillar. The object of these rollers is to facilitate the turning of the table when the heavy weight of an engine or carriage is upon it; but this weight is so excessive, that coming, when passing over the table unequally, first on one edge as it enters upon it, and then on the other, as it passes from it, the table gets pressed down, first on one side, and then on the other, with such rapidity and violence of strain as to cause a great noise of successive jarring blows, and a constant derangement and damaging of the

Ellis's turn-table prevents all this, by doing away with these rollers, and allowing the outer edge of the table to rest firmly, and without rollers, on a solid support, or circular bed, made to receive it. It is also supported on a central pillar, on which the centre of the table bears firmly and steadily at the same time. When the table is left in this condition, which may be called its position of res', the bearings are so firm that the engines and carriages roll steadily over it without noise or jar, just as if it were a part of the railway itself; but the central pillar is so arranged as to be easily acted upon by a compound lever, on the principle of the lever of a weighing machine, and the table chine by adapting a steelyard and weights to day in the week, except Sunday. this compound lever; and, when it is required to turn a carriage or engine on the table, it southern tier of counties, and were it only is rolled on to it while remaining firmly and for the intrinsic beauty of the lake, and its steadily in its rest position, and, when the combination of cultured farms and beautiful

This plan is very simple, very effective, and saves an immense amount of wear and tear in the items of turn-tables. It has already been extensively adopted.

The project of building a railroad up the valley of the Connecticut to Windsor, Vermont, is attracting a good deal of attention. The Caledonian, published at St. Johnsbury, in reference to the object of the bers have for sale Am. and English bar iron, of all June, says:—"We have known for some short time that this project was on foot—motive engines, and other railroad carriage wheels, made from common and double refined B. O. iron; intelligence were engaging in it, and deter-inined to push it onward. The stock of a mined to push it onward. The stock of a engine manufacturers of this city. # FRENCH AND BAIRD'S PATENT SPARK ARRESTER.

NO THOSE INTERESTED IN Railroads, Railroad Directors and Managers are respectfully invi-ted to examine an improved SPARK ARRESTER, recently patented by the undersigned.

Our improved Spark Arresters have been extensively used during the last year on both passenger and freight engines, and have been brought to such a state of perfection that no annoyance from sparks or dust from the chimney of engines on which they are

used is experienced.

These Arresters are constructed on an entirely different principle from any necessione offered to the public. The form is such that a rotary motion is imparted to the heated air, smoke and sparks passing through the chimney, and by the centrifugal force thus acquired by the sparks and dust they are separated from the smoke and steam, and thrown into an outer chamber of the chimney through openings near its top, from whence they fall by their own gravity to the bottom of this chamber; the smoke and steam passing off at the top of the chimney, through a capacious and unobstructed passage, thus arresting the sparks without impairing the power of the engine by diminishing the draught or activity of the fire in the furnace.

These chimneys and arresters are simple, durable and neat in appearance. They are now in use on the following roads, to the managers and other officers of which we are at liberty to refer those who

Paterson, N. J., or 60 Wall street, N. York.

NICOLL'S PATENT SAFETY SWITCH for Railroad Turnouts. This invention, for some time in successful operation on one of the principal railroads in the country, effectually prevents engines and their trains from running off the track at a switch, left wrong by accident or design.

It acts independently of the main track rails, being

laid down, or removed, without cutting or displacing them.

It is never touched by passing trains, except when in use, preventing their running off the treck. It is simple in its construction and operation, requiring only two Castings and two Rails; the latter, even if

working Models of the Safety Switch may be seen at Messrs. Davenport and Bridges, Cambridgeport, Mass., and at the office of the Railroad Journal, New York.

Plans, Specifications, and all information obtained on application to the Subscriber, Inventor, and Patente G. A. NICOLLS, Reading, Pa.

THE AMERICAN RAILROAD JOURNAL is the only periodical having a general circulation throughout the Union, in which all matters connected with public works can be brought to the notice of all persons in any way interested in these undertakings. Hence it offers peculiar advantages for advertising times of departure, rates of fare and freight, improvements in machinery, materials, as iron, timber, stone, cement, etc. It is also the best medium for advertising contracts, and placing the merits of new undertakings fairly before the public.

## KITE'S PATENT

SAFETY BEAM.

# ELEVATION

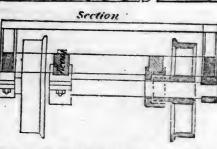

the same kind of acci-dent would unavoidably have much injured it, perhaps thrown the whole train off the track, and seriously injured, if not killed many of the passengers. Wilmington, Del., Sept. 28, 1840.

The undersigned takes pleasure in attesting of the value of Mr. Joseph S. Kite's invention of the Safety Beam Axle and Hub for railroad cars. They have for some time been applied to passenger cars on this road, and experience has tested that they fully accomplish the object intended. Several instances of the fracture of axles have occurred, and in such the cars have uniformly run the whole distance with entire safety. Had not this invention been

used, serious accidents must have occurred.

In short, we consider Mr. Kite's invention as completely successful in securing the safety of property

#### PASCAL IRON WORKS.

## WELDED WROUGHT IRON TUBES

From 4 inches to 1 in calibre and 2 to 12 feet long, capable of sustaining pressure from 400 to 2500 lbs. per square inch, with Stop Cocks, T. L. and other-dixtures to suit, fitting together, with serew joints, suitable for STEAM, WATER, GAS, and for LOCOMOTIVE and other STEAM BOILER FLUES.

Manufactured and for sale by MORRIS, TASKER & MORRIS.
Warehouse S. E. Corner of Third & Walnut Streets, PHILADELPHIA.

TO IRON MASTERS.—FOR SALE.—MILL SITES in the immediate neighborhood of Bituminous Coal and Iron Ore, of the first quality, at Ralston, Lyoming Co., Pa. This is the nearest point to tide water where such coal and ore are found together, and the communication is complete with Philadelphia and Baltimore by canals and railways. The interest on the cost of water power and lot is all that will be required for many years; the coal will not cost more than \$1 to \$1 25 at the mill sites, without any trouble on the part of the manufacturer; rich iron ore may be laid down still more cheaply at the works; and, taken together, these sites offer remarkable advantages to practical manufacturers with small capital. For painphlets, manuacturers with small capital. For painpinets, descriptive of the property, and further information, apply to Archibald McIntyre, Albany, to Archibald Robertson, Philadelphia, or to the undersigned, at No. 23 Chambers street, New York, where may be seen specimens of the coal and ore.

W. R. CASEY, Ciril Engineer,

65 43 THE CAPACITY OF THE PHILADELPHIA AND READING RAILROAD .- Morse's Tele. 135 00 75 18 graph .- A correspondent of the Washington capacity of this road for the transportation of coal may be vastly augmented. Messrs. \$248,107 80 Baldwin & Whitney, of Philadelphia, offer to haul down this road 100 iron cars with 5 tons of coal in each, or 500 tons in the \$198,458 66 whole, at the rate of 9 miles per hour! Now, 14,670 00 days would give an aggregate transportation amount of capital (\$1,000,000) subscribed, and of 3,756.000 tons. They think, however, the first instalment paid, on Tuesday last. by the aid of extra engines and the use of 22,172 84 Morse's telegraph, they might, by possibility, he able to start a train every thirty minutes. be able to start a train every thirty minutes. This would enable them to send to the Dela-7,494 75 ware twenty-four thousand tons per day, or 311 55 the enormous quantity of seven millions five 5,000 00 num. The cost of transportation of coal on Pintsburgh, and with the line of canal extending efficient engineer and superintendent of the na river.-Jour. Com. transportation, machinery, and motive power, estimates at from 35 to 38 cents per ton for clared a dividend of 3 per cent. upon the stantly making, this rate will be greatly recapital stock, and payable on the 10th July duced. It is thought the motive power alone next, from the nett earnings for the year will not exceed 151 cents, and may ultimately be reduced to 10 cents per ton. Under The dividend on the stock registered at these circumstances, no canal, with lockages the transfer agency, at the Bank of the and delays, can ever be made to compete no time to be lost.

#### RAILWAYS IN CANADA.

The Quebec Gazette states, on the autho-

than to publish the several acts in relation ced, the Western Canada, Ontario and Huroad will be speedily quilt, andthat it will ligence has been received by the last packet, its class.

be a good paying stock.—When the new to the effect that a warm interest has been track is laid on the eastern roads, the pas- excited in London on our behalf, and that sengers by the morning run will dine here, arrangements are in progress of formation to and take the boat at Oswego the same eve- co-operate with the Canadian people in effect-The prospectus 256 48 troit will then be accomplished in two days, has been received by Mr. Sheriff Jarvis, and to Chicago in three days .- Syracuse printed in London, accompanied by a map of the proposed line, with distances marked, "A word to the wise is sufficient." A col. running from Toronto to Goderich. Several umn of comment upon this paragraph would meetings have been held in this city to carry not add anything to its force. It should, into operation this much desired object-one however, have the effect to open the eyes of that cannot fail to increase the value of sily calculated. The commencement of such a work in Canada would prove of incalculable benefit and importance, hardly to be exceeded by their utility after completion. Employment would be afforded to our poor-39 30 Union, writing from Pottsville, says: "The er settlers, and emigrants of that class newly arriving; new tracks of country would be opened up, new settlements formed, and the impetus given to trade by the facilto supply engines which they will guarantee ities of railroad transport, would, in a brief space of time, work a wondrous change in cin our mercantile world. - Toronto Herald.

NORTH BRANCH CANAL, PA .- A slip from it would be practicable to start down a train the office of the Wilkesbarre Democrat says every hour; this would give, for 24 hours that the books were opened for subscription to 12,000 tons per day, and for the year of 313 the stock of the North Branch canal, the whole

This work was originally known in the Lethe New York State line, in the county of Bradford, near the village of Athens. AMERICAN RAILROAD JOURNAL.

PUBLISHED BY D. K. MINOR, 23 Chambers street, N.Y

Thursday, June 26, 1845.

CORRECTION OF OUR TABLES.

We publish the following extract from a letter with the hope of eliciting other similar corrections when errors are detected. We find it exceedingly difficult to obtain accurate information in relation to many railroads, and are therefore the more indebted to those who oblige us.

We also acknowledge the receipt of a letter from "a subscriber," pointing out the subtraction of 100 miles from the length of the "London and Birmingham," and the addition of an equal number of miles to the length of the "Great Western" railroad in England. We are truly obliged to him for his civility in enabling us to correct these errors-and equally so for his liberality in doing it without subjecting us to expense, when he might, with much propriety, have done so.

"While I think of it, I will correct the statement in relation to the road over which I preside, and two additional roads, in your list of 'American Railroads.

"Instead of Richmond and Fredericksburg, it should be 'Richmond, Fredericksburg and Potomac.'

" Its length is 76 miles, instead of 611.

"Its gross income for the	ne fiscal year, ending the
1st of April last, was	\$185,243
"Its net income was -	85,688
"Its whole cost, -	1,454,171
"Its dividend,	6 per cent.

"The 'Richmond and Petersburg' railroad cost \$800,000, instead of \$1,200,000, as stated in your list as yet it pays no dividend.

"The 'Petersburg and Roanoke' railroad cost about \$950,000, instead of \$260,000, as stated, and pays 3 per cent. The gross and net income in the list are right." 6

We are obliged to the editor of the "Free Press," of Detroit, for his prompt reply to our request, editorially, for an exchange—as it enables us to learn the condition and prospects of the railroads in Michigan. We hope he will find the Railroad Journal worth the exchange, and useful to the cause in which Detroit and Michigan especially has so deep an interest. We shall keep an eye upon their movements-sustain the right-expose, where we can, the plans of speculators-and endeavor always to promote the success of the cause of railroads, which is destined to produce results in this country, as well as elsewhere, little anticipated by the many, and scarcely imagined by the few.

By the annexed statement, it appears that the freighting business on the Central railroad of Mich-

Europe, and has probably been produced by short mile. crops in 1844.

CENTRAL RAILROAD. Receipts for May, 1845: \$8,888 55 Passengers, Freight, -Do. for May, 1844: Passengers, - 13,459 87 Freight, -22,142 81 Do. for May, 1843: Passengers,

We find in the Burlington Free Press, the following comparative statement of the grades on the Rutland and Central, or Windsor and Montpelier routes to Burlington, Vt., credited to the "Atlas" -"Boston Atlas" we presume-an excellent paper with which we, unfortunately, are not favored;

Freight,

7,995 76

bid political sheet. Can this statement be correct? [From the surveys: the survey of the Rutland route not having been published, the grades of that route have been taken from the manuscript report of the

though possibly we might be, if we published a ra-

engineer.] Central route, from Con- | Rutland route, from Connecticut river to lake necticut river to lake Champlain. Grades, feet Champlain. Grades, feet Miles Miles to the mile. distance. to the mile. distance. Level40-54 5 to 2019.81 5 to 2012 20 to 30 20 to 3015.93 30 to 40.....12-01 30 to 40 40 to 50 14.55 40 to 50 9 50 to 60 102.84 60 to 7045

This shows a very decided preference for the Central grade; but there is doubtless something wrong in this matter—and we learn that a new survey of the Rutland route is being made under the direction of Edwin F. Johnson, Esq.

NEW YORK RAILROADS.

The following railroad charters were renewed, amended and granted by the legislature at its last session, while the application of the New York and Albany and the New York and New Haven companies were defeated:

"Syracuse and Oswego railroad, (renew); Wes-"Syracuse and Oswego railroad, (renew); Western lakes to lake Champlain, (renew); Troy and Greenbush; New York and Erie, (relinquishes \$3,000,000 lien, etc.); New York and Harlem, (authorizes extension to Albany); Watertown and Rome, (renew); Watertown and Cape Vincent, (renew); Goshen and Albany, (amend); Canaudaigua and Corning; Attica and Hornelsville; Seneca lake to New York and Erie railroad."

HARTFORD AND NEW HAVEN RAILROAD. The receipts on this road (exclusive of mails) for May, 1845, were - - \$16,870 34 00. do. do. 1844, - - 8,456 51 8,456 51 Receipts for the first 6 months since the

completion of the Extension road to Springfield, ending June 9th, 1845, 100,291 80 Receipts for the corresponding months, in 1844,

Showing an increase of more than 100 per cent. We take the above from the Courant to show the influences upon roads now in use, of extensions and connections with other roads.

CONCORD (N. H.) RAILROAD.

"The report of the directors of the Concord rail-

Correspondents will oblige us by sending in their igan fell off largely during the month of May, this road to the stockholders at their late annual meeting, mmunications by Monday morning at latest.

year, as compared with 1844; and was even less shows that the amount of capital stock of the road and its appear. than in 1843. This is very different from the reports of most other railroads in this country and in miles, and the maximum grades, 15 8-10 feet per

> "The income of the road the last year amounted to \$181,842, of which the passenger department afforded \$90,545; freight \$90,099; and rents and in\$8,888 55
> 6,736 00 of which \$11,528 were for road repairs; \$9,708 for
> wood and oil; \$6,393 for taxes, and \$55,302 for
> taxes and engines and other expenses. Net income
> \$98,913. Two dividends were declared, one of six
> \$8,682 94 and the other of seven per cent.—[Bost. D. Adv."]

If this road gives such returns when the line of of which it forms a part is only 75 miles in length, what will it give when that line is extended to Burlington and to Canada—and when the Ogdensburg and lake Champlain road shall have been completed -as they surely will be? The question may be answered by demonstration within five years.

MADISON AND INDIANAPOLIS RAILROAD.

The following, from the Indianapolis Journal of 12th inst., is as gratifying to us, as it will be beneficial to the company and the people, for whose use the loan has been made. We had an introduction to Mr. Lanier, when in New York, and anticipated much pleasure from making his acquaintance; but were under the necessity of being absent from the city, and therefore missed the opportunity. It affords us, however; much pleasure to say that we were impressed with the opinion that the company were fortunate in their selection of an agent, under the peculiar circumstances in which the noble State of Indiana is at this time placed-and we are therefore truly gratified to learn that he has been successful in his mission.

"Good News .- We have just received intelligence that J. F. D. Lanier, Esq., has succeeded in obtaining a loan, in the cities of New York and Philadelphia, on favorable terms, of \$50,000, for the Madison and Indianapolis railroad company. This intelligence is from a source entitled to reliance."

DIVIDEND.—The Boston and Providence railroad company have declared a dividend of three and a half dollars per share, payable 1st of July at the Phœnix bank.

Although I have, in this the line of the railway, and a prosecution is examination of the causes now at work, and statement, assumed 400 miles of railway, as the effect of like causes in past time, will be probable to be completed in 1845, I fear we "The great hazard that is incurred by the the statement most likely to approximate have not anything near enough surplus lalax custom in our State, in that respect, is nearest to the truth. How nearly correct bour in the country, to accomplish this work often imminent. A morbid feeling prevails the following statement may be, time only in the time. For a great portion of the work skilled labour is necessary; and most of this has hitherto been procured from the manufacturing counties of the kingdom, and principally from the iron districts. In these departments, such activity now prevails as to have increased the demand above the supply; some of the works in Staffordshire are actually prevented from increasing their operations; because of the great difficulty of securing labour to carry them on. It is quite true, that in the agricultural districts, we have surplus hands; but these are not skilled, and will require long training to be of effec-tual assistance. The increase in the price of skilled labour (an unerring test of the demand), instead of immediately procuring more, has, to some extent, the reverse effect. With the great increase of wages in Staffordshire (from 50 to 80 per cent.), most of the

days in the week.

The home consumption of iron for general purposes will at least equal that of last year; because, although, as stated by the correspondent, "Justus," the high price will cause wood and other materials to be used, in many cases, instead of iron, still this will be amply counterbalanced by the increased use of iron branch roads, terminating at, and connecting for ship-building, and requirements for new works consequent on the increased demand distant when the transportation of coal from this ful obliging manner. for manufactures and the improved state of region will be stated at millions, instead of huntrade: the same causes will nearly, in like dreds of thousands of tons! manner, affect the foreign exports; for, although this trade has been checked for a time by the rapid rise here, we must remember the stocks abroad are exhausted, and, as shown by the late orders of the United States, forthcoming report of the Engineer, who has road which was so peculiarly an experiment as the merchants in this country are now au- now nearly completed the survey, and the comthorised to buy at times' prices. WINSLOW, Agent.

Albany Iron and Nail Works, Troy, N. Y.

The above spikes may be had at factory prices, of Erastus Corning & Co., Albany; Hart & Merritt, New York; J. H. Whitney, do.; E. J. Etting, Philadelphia; Wm. E. Coffin & Co., Boston.

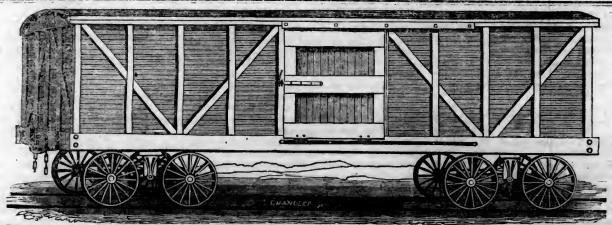

TO RAILROAD COMPANIES AND MAN-ufacturers of railroad Machinery. The subscri-bers have for sale Am. and English bar iron, of all sizes; English blister, cast, shear and spring steel; Juniata rods; car axles, made of double refined iron; sheet and boiler iron, cut to pattern; tiers for loco-motive engines, and other railroad carriage wheels, made from common and double refined B. O. iron; the latter a very superior article. The tires are made by Messrs. Baldwin & Whitney, locomotive engine manufacturers of this city. Orders addresssed to them, or to us, will be promptly executed.

When the exact diameter of the wheel is stated in the order, a fit to those wheels is guaranteed, saving to the purchaser the expense of turning them out inside. THOMAS & EDMUND GEORGE, N. E. cor. 12th and Market sts., Philad., Pa.

PATENT RAILROAD, SHIP AND BOAT Spikes. The Troy Iron and Nail Factory keeps constantly for sale a very extensive assortment of Wrought Spikes and Nails, from 3 to 10 inches, manufactured by the subscriber's Patent Machinery, which after five years' successful operation, and now almost universal use in the United States (as well) almost universal use in the United States (as well The bridge that it will be necessary to as England, where the subscriber obtained a patent)

All orders directed to the Agent, Troy, N. York,

their orders as early as practicable, as the subscriber is desirous of extending the manufeturing so as to keep pace with the daily increasing demand. ja45

DAVENPORT & BRIDGES CONTINUE TO MANUFACTURE TO ORDER, AT THEIR WORKS, IN CAMBRIDGEPORT, MASS. Passenger and Freight Cars of every description, and of the most improved pattern. They lso furnish Snow Ploughs and Chilled Wheels of any pattern and size. Forged Axles, Springs, Boxes and Bolts for Cars at the lowest prices. All order punctually executed and torwarded to any part of the country Our Works are within fifteen minutes ride from State street, Beston-coaches pass every fifteen minutes.

NEW JERSEY RAILROAD AND TRANSPORTATION COMPANY.

FRENCH AND BAIRD'S PATENT SPARK ARRESTER.

TO THOSE INTERESTED IN A Railroads, Railroad Directors and Managers are respectfully invited to examine an improved SPARK ARRESTER, recently patented by the undersigned.

Our improved Spark Arresters have been extensively used during the last year on both passenger and freight engines, and have been brought to such a state of perfection that no annoyance from sparks or dust from the chimney of engines on which they are used is experienced.

These Arresters are constructed on an entirely different principle from any heretotore offered to the public. The form is such that a rotary motion is imparted to the heated air, smoke and sparks passing through the chimney, and by the centrifugal force thus acquired by the sparks and dust they are separated from the smoke and steam, and thrown into an outer chamber of the chimney through openings near its top, from whence they fall by their own gravity to the bottom of this chamber; the smoke and steam passing off at the top of the chimney, through a capacious and unobstructed

off at the top of the chimney, through a capacious and unobstructed passage, thus arresting the sparks without impairing the power of the engine by diminishing the draught or activity of the fire in the furnace.

These chimneys and arresters are simple, durable and neat in appearance. They are now in use on the following roads, to the managers and other officers of which we are at liberty to refer those who may desire to purchase or obtain further information in regard to their merits:

E. A. Stevens, President Camden and Amboy Railroad Company; Richard Peters, Superintendant Georgia Railroad, Augusta, Ga.; G. A. Nicolls, Superintendant Philadelphia, Reading and Pottsville Railroad, Reading, Pa.; W. E. Morris, President Philadelphia, Germantown and Norristown Railroad Company, Philadelphia; E. B. Dudley, President W. and R. Railroad Company, Wilmington, N. C.; Col. James Gadsden, President S. C. and C. Railroad Company, Charleston, S. C.; W. C. Walker, Agent Vicksburgh and Jackson Railroad, Vicksburgh, Miss.; R. S. Van Renselaer, Engineer and Sup't Hartford and New Haven Railroad, W. R. M'Kee, Sup't Lexington and Ohio Railroad, Lexington, Ky.; T. L. Smith, Sup't New Jersey Railroad Trans. Co.; J. Eiliott, Sup't Motive Power Philadelphia and Wilmington Railroad, Wilmington, Del.; J. a45 Paterson, N. J., or 60 Wall street, N. York.

TICOLL'S PATENT SAFETY SWITCH N for Railroad Turnouts. This invention, for some time in successful operation on one of the principal railroads in the country, effectually prevents engines and their trains from running off the track

at a switch, left wrong by accident or design.

It acts independently of the main track rails, being laid down, or removed, without cutting or displacing

It is never touched by passing trains, except when in use, preventing their running off the track. It is simple in its construction and operation, requiring only two Castings and two Rails; the latter, even if much worn or used, not objectionable.

Working Models of the Safety Switch may be

een at Messrs. Davenport and Bridges, Cambridgeport, Mass., and at the office of the Railroad Journal, New York.

Plans, Specifications, and all information obtained on application to the Subscriber, Inventor, and Patentee.

AMERICAN RAILROAD JOURNAL,

AND GENERAL ADVERTISER

FOR RAILROADS, CANALS, STEAMBOATS, MACHINERY,

AND MINES.

ESTABLISHED 1831.

PUBLISHED WEEKLY, AT No. 23 CHAMBERS STREET, NEW YORK, AT THREE DOLLARS PER ANNUM.

SECOND QUARTO SERIES. VOL. I., No. 27.1

THURSDAY, JULY 3, 1845.

[WHOLE No. 470, Vol. XVIII.

is the only periodical having a general circulation throughout the Union, in which all matters connected with public works can be brought to the notice of all persons in any way interested in these undertakings. Hence it offers peculiar advantages for advertising times of departure, rates of fare and freight, improvements in machinery, materials, as iron, timber, stone, cement, etc. It is also the best medium for advertising contracts, and placing the merits of new undertakings fairly before the public.

DAVIS, BROOKS, & Co. N. Y. [See Adv.] A. & G. RALSTON & Co. Philad. Pa. [See Adv.] THOMAS!& EDMUND GEORGE, Philadelphia.

THE AMERICAN RAILROAD JOURNAL R. CASEY, CIVIL ENGINEER, NO. 23 Chambers street, New York, will make surveys the only periodical having a general circulation of every description, with plans and specifications. He will also act as agent for the sale or purchase of machinery, and of patent rights for improvements relating to public works.

KITE'S PATENT SAFETY BEAM.

MESSRS. EDITORS.—
As your Journal is devoted to the benefit of the public in general I feel desirous to communicate to you for publication the fol-Safety lowing circumstance of no inconsiderable importance, which oc-curred some few days since on the Philadelphia, Wilmington and Baltimore railroad.

On the passage of the evening train of cars from Philadelphia to this city, an axle of our large 8 wheeled passenger car was broken, but from the par-ticular plan of the construction, the accident was entirely unknown to any of the passen-gers, or, in fact, to the conductor himself, until the train, (as was supposed from some circumstances attend-ing the case,) had pass-ed several miles in advance of the place where the accident occurred, whereas had the car been constructed on the common plan the same kind of acci-

dent would unavoidably have much injured it, perhaps thrown the whole train off the track, and seriously injured, if not killed many of the passengers.

Wilmington, Del., Sept. 28, 1840.

Wimington, Del., Sept. 28, 1840.

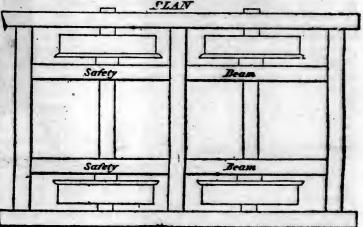

The undersigned takes pleasure in attesting of the value of Mr. Joseph S. Kite's invention of the Safety Beam Axle and Hub for railroad cars. They have for some time been applied to passenger cars on this road, and experience has tested that they fully accomplish the object intended. Several instances of the fracture of axles have occurred, and in such the cars have uniformly run the whole distance with entire safety. Had not this invention been used, serious accidents must have occurred.

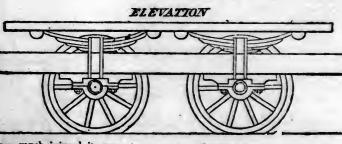

In short, we consider Mr. Kite's invention as completely successful in securing the safety of property and lives in railroad travelling, and should be used on all railroads in the country.

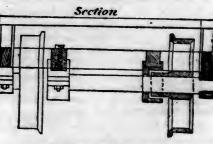

and lives in railroad travelling, and should be used on all railroads in the country.

JOHN FRAZER, Agent,
GEORGE CRAIG, Superintendant,
W. L. ASHMEAD, Agent.

The A model of the above improvement is to be seen at the New Jersey railroad and transportation page.

TO IRON MANUFACTURERS. THE SUBscribers, as Agents of Mr. George Crane, of
Vales, having obtained a patent in the United
tates for his process of smelting Iron Ore with Anwater for his process of smelting Iron Ore with An-States for his process of smelting Iron Ore with Anstates for his process of shieting from for with America coal, and holding an assignment of the patent obtained by the late Rev. F. W. Geissenhainer, are prepared to grant licenses for the manufacture of Iron according to Mr. Crane's principle.

A. & G. RALSTON & CO.,

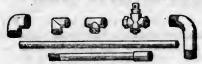

No. 4 Sout Fronth st., Philadelphia, Pa.

O RAILROAD COMPANIES AND BUILD ERS OF MARINE AND LOCOMOTIVE ENGINES AND BOILERS.

PASCAL IRON WORKS.

WELDED WROUGHT IRON TUBES

From 4 inches to } in calibre and 2 to 12 feet long, capable of sustaining pressure from 400 to 2500 lbs per square inch, with Stop Cocks, T. L. and other fixtures to suit, fitting logether, with screw joints, suitable for STEAM, WATER, GAS, and for LOCOMOTIVE and other STEAM BOILER FLUZS.

Manufactured and for sale by MORRIS, TASKER & MORRIS.
Warehouse S. E. Corner of Third & Walnut Streets, PHILADELPHIA.

TO IRON MASTERS.—FOR SALE.—MILL SITES in the immediate neighborhood of Bi-Ralston, Lyoming Co., Pa. This is the nearest point to tide water where such coal and ore are found together, and the communication is complete with Philadelphia and Baltimore by canals and railways. The interest on the cost of water power and lot is all that will be required for many years; the coal will not cost more than \$1 to \$1 25 at the mill sites, without any trouble on the part of the manufacturer; rich iron ore may be laid down still more cheaply at the works; and, taken together, there eiter offer manufactures to execute the control of the control of the manufacturer. more cheapity at the works; and, taken together, these sites offer remarkable advantages to practical manufacturers with small capital. For pamphlets, descriptive of the property, and further information, apply to Archibald McIntyre, Albany, to Archibald Robertson, Philadelphia, or to the undersigned, at No. 23 Chambers street, New York, where may be seen specimens of the coal and ore.

W. R. CASEY, Civil Engineer,

VALUABLE PROPERTY ON THE MILL Dam For Sale. A lot of land on Gravelly Point, so called, on the Mill Dam, in Roxbury, fronting on and east of Parker street, containing 68,497 square feet, with the following buildings thereon standing.

Main brick building, 120 feet long, by 46 ft wide, two stories high. A machine shop, 47x43 feet, with large engine, face, screw, and other lathes, suitable to do any kind of work.

Pattern shop, 35x32 feet, with lathes, work bench-

es, &c.
Work shop, 86x35 feet, on the same floor with the

Work shop, 80x35 feet, on the same noor with the pattern shop.

Forge shop, 118 feet long by 44 feet wide on the ground floor, with two large water wheels, each 16 feet long, 9 ft diameter, with all the gearing, shafts, drums, pulleys, &c., large and small trip hammers, furnaces, forges, rolling mill, with large balance wheel and a large blowing apparatus for the foundry.

Foundry, at end of main brick building, 60x451 feet, two stories high, with a shed part 45x20 feet.

feet two stories high, with a shed part 451x20 feet containing a large air furnace, cupola, crane and

corn oven.

corn oven.

Store house—a range of buildings for storage, etc.,

200 feet long by 20 wide.

Locomotive shop, adjoining main building, fronting on Parker street, 54x25 feet.

Also—A lot of land on the canal, west side of Parker st., containing 6000 feet, with the following buildings thereon standing:

Boiler house 50 feet long by 30 feet wide, two stories.

Blacksmith shop, 49 feet long by 20 feet wide.
For terms, apply to HENRY ANDREWS, 48
State st., or to CURTIS, LEAVENS & CO., 106
State st., Boston, or to A. & G. RALSTON & Co.,
Fanadelphia.

will be executed with promptness and despatch.
Communications addressed to Mr. William H.
Dobbs, Superintendent, will meet with immediate attention.

ANDREW C. GRAY, President of the Newcastle Manuf. Co.

CUSHMAN'S COMPOUND IRON RAILS

etc. The Subscriber having made importat improvements in the construction of rails, mode n guarding against accidents from insecure joints, etc.—respectfully offers to dispose of Company, State Rights, etc., under the privileges of letters, patent to Railroad Componies, Iron Founders, and others interested in the works to which the same relate. Companies reconstructing their tracks now have an opportunity of improving their roads on terms very advantageous to the varied interests connected with Mar. 20tf

4 South Front St., Philadelphia.

THE NEWCASTLE MANUFACTURING
Company continue to furnish at the Works, situated in the town of Newcastle, Del., Locomotive and other steam engines, Jack screws, Wrought iron work and Brass and Iron castings, of all kinds connected with Steamboats, Railroads, etc.; Mill Gearing of every description; Cast wheels (chilled) of any pattern and size, with Axles fitted, also with wrought tires, Springs, Boxes and bolts for Carsing Driving and other wheels for Locomotives.

The works being on an extensive scale, all orders

The works being on an extensive scale, all orders

It is clear that the whole order of to the unfortunate being who has not money perienced but slight variations, and foreign things is soon to be completely revolutionized, and the sooner we are prepared for the inside of these carriages were lined with the shade lower. Towards the end of the week, great change the better. We are now in a commonest flannel, it would be a mere act the market has been well supported, more state of transition, and it is somewhat singu- of humanity; but when we look at the especially in the heavy lines, while prices lar that, while we are in this position, we manner the London vehicles are fitted for have been secured in several of the newest projects, evidencing that a disposition still we now experience. All those not directly proffits wrung from the sorrowing humbler continues, on the part of the public, to emengaged in land or agricultural pursuits, classes, is it too much to ask these hard-bark in enterprizes of this nature. The Staffordshire and Shropshire Junction shares left off with a disposition to advance, having may militate against our good old notions of whether they can look upon the sufferings been done at a premium. The Dublin and English society, stern necessity commands of their poor fellow-creatures for the saving Kilkenny, and the Cork and Bandon railit, and the village must be reduced to the of a few shillings to each carriage, and after way companies have passed the ordeal of lawyer, the doctor, the carpenter, and the all, it is doubtful whether the increased trafsmith. It is true that this may make very fic consequent upon such an alteration, to be reported to the House, and the Waterlittle difference to the real state of the coun-try or the people, for we are migratory in our habits, and those most tied to home be-would not more than pay the outlay; or whether the pleasure of doing a good action proved, and the clauses are being considered our habits, and those most tied to home be-

nounced as safe, and it is hoped, that they will shortly open a wide field for the employment of the labouring population.'

SELECTED RAILROAD, CANAL, AND MISCELLANEOUS ITEMS.

CANADA RAILROAD.—A meeting was held at Windsor, Canada, on the 15th inst., for the purpose of fixing upon the western terminus of the proposed road in Canada, from Toronto, or a point opposite Buffalo, to lake Huron. The meeting discussed the different routes proposed, and concluded upon Sandwich, (opposite De-troit,) as the western termination. The distance troit,) as the western termination. estimated is 210 miles.

At a meeting of the board of directors of the Little Miami railroad at Xenia, it was unanimonsly determined to continue the road to Springfield by the Yellow Springs. The distance will be 19 miles, being a mile and a half shorter than the Clifton route.

MADISON AND INDIANAPOLIS RAILROAD .-The president of the railroad has furnished the Madison Banner with the following abstract of business done on the road during the months of March, April and May last.

Passengers on the route inward—through 799. way 1041. Receipts from inward passengers, \$1976 96.

Inward freight-321 hhds, bacon, 25,377 lbs, bacon in bulk, 311 bbls. pork and lard, 340 kegs of lard, 4522 bbls. flour, 14,888 bushels of wheat, 7949 of corn, 513 fruit, 150 flaxseed, 29,907 lbs. furniture, etc., 22,407 lbs. tobacco, 52,163 lbs. hemp, 4285 lbs. feathers, 13,550 lbs. hides and leather, 100,922 lbs. unspecified freight, 308,820 feet sawn timber, 73 tons of hay, about 10 tons of other articles, and 140 cords of wood—for which the tolls charged amounted to \$3,542 25.

The through passengers outward, during the same period, numbered 956; but the full number of way passengers outward, as well as that of the way freight, can only be ascertained from the books at Columbus. The outward freight started from Madison, however consisting of dry goods, groceries, iron, and various articles, during the month of March, amounted to 281 tons 1300 lbs .- in April, 332 tons 200 lbs .- in May, 381 tons 900 lbs.—besides 200 tous railroad iron, and more than that amount of timber for the repair or construction of the road. The actual receipts from tolls amount to \$11,400, or \$3000 more than was received last year in the same months.

tons, passengers 50, and receipts \$146 per day.

half that of last year; but most other articles have largely increased. The increased distance is 21-2 miles. The passenger car has for about a week gone five miles north of Columbus, and before the end of the month, the train will run to Edinburgh, on 11 miles of new road, making the whole distance 56 miles from Madison.

The grading and bridging of the train will run repairs. Navigation on that part of the canal will be suspended for a few weeks.

The grading and bridging of the thirty miles from Edinburgh to Indianapolis have been put under contract on favorable terms, and there can is good news for Central Indiana.

the road to Kenton, 40 miles south, by the 1st of other new improvements, the Messrs. Norris November. - Seneca Adv.

BALTIMORE AND OHIO RAILWAY COMPANY .- The directors on Thursday declined to accept the resignation of the presidency, tendered by Hon. Louis McLane, but determined to appoint a president protempore. Samuel Jones, Esq., was elected to that

Bills have passed the New Hampshire legislature to incorporate the Great Falls and Conway railroad, the Portsmouth, New Market and Concord railroad, and the Portsmouth New Market and Exeter railroad.

A railroad from Worcester to Brattleboro' through Barre, is in contemplation. .

CONNECTICUT RIVER ROUTE OF THE VERand partially laid out the route of the Central for the last two months, completing one locomorailroad, from the Cheshire bridge, opposite twe each and every week.—Phila. Post.

Charlestown, N. H. (where the Cheshire road may meet,) to the mouth of White river. The INVENTION.—We are informed (savs the editor).

on or near the line of the proposed railroad from Hartford to New York, via Plymouth and Dan-

Under the direction of the corporators of the Atlantic and St. Lawrence railroad company, Mr. Hall has recently made a farther explora-tion of routes for the road. This is the promised continuation of the reconnoisance made last fall. By that survey, one principal route was examined and found to be feasible. The recent undertaking has given a further view of the whole country between Portland and the Canadian frontier, and has indicated two or three other general lines, by which a railroad communication may be effected, under very favorable conditions.

The people of Cincinnati are rejoicing over the completion of the Miami canal, by which a regular and direct communication is established between Cincinnati and Toledo (at the head of Maumee bay): on lake Erie. The Miami canal extends from Cincinnati to Defiance, and is 178 The average freight for customs has been 36 miles in length. At Defiance it strikes the great ns, passengers 50, and receipts \$146 per day.

The amount of bacon, pork, etc., is less than making the entire line of canal from Cincinnati

A NEW ENGINE.—()ne of the most strongly and beautifully constructed engines we ever saw passed our office on Saturday. We were insample and cool it, break out the tunip and passed our office on Saturday. We were insample and cool it, break out the tunip and passed our office on Saturday. We were insample and cool it, break out the tunip and passed our office on Saturday. Note—As soon as the asset of the surface of the su be scarcely a doubt but before two years the formed that it was built expressly for high speed for the Long Island railroad company, to make the trip between Brooklyn and Greennot, 97 the trip between Brooklyn and Greenport, 97 miles, in 2 1-2 hours, with 300 passengers, inlaborers are at this time busily engaged in laying the timber from this place south upon the
track of the above road. For a short distance
it is now ready for the iron, and is rapidly progressing towards completion in other respects,
tt is expected a train of cars will run to Carey,
16 miles south from this place, at farthest by the
late of August, and it is contemplated to complete

the trip between Brooklyn and Greenport,

have adopted on this engine, we notice a handsome brass reservoir which is secured to the side of the boiler, holding half a gallon of oil. From this reservoir, there are several copper pipes, leading to the different journals, and each sup-plied with a cock for letting down the oil upon the journals at pleasure. This arrangement gives the engineer an opportunity of oiling the engine while running at so rapid a rate.

Messrs. Norris are now constructing a second engine of the same description for the Long Island railroad company, which will be com-pleted in a few days. They have now employed at their works, 320 workmen, completing orders which they now have on hand, for a number of locomotives for the governments of Aus-MONT CENTRAL RAILROAD.—Mr. Whitwell tria, Hongary, and Baden, and with this com-and his assistants have completed the survey, pliment of men, they are now, and have been

Charlestown, N. H. (where the Cheshire road may meet,) to the mouth of White river. The distance is 30 1-2 miles, and the grades are low and entirely favorable for the construction of a railroad.

Another New and Important Railroad Invention.—We are informed (says the editor of the United States Gazette,) by J. Hancock, Esq., patent agent in this city, that letters patent railroad. HARTFORD AND NEW YORK RAILROAD.—
At a convention of delegates from sundry towns on or near the line of the proposed railroad from Hartford to New York via Plymouth and Don Hartford to New York, via Plymouth and Dan-bury, a committee of seven was appointed to Desiderata to the whole community. The cost procure a survey of the route, and make arrange- of applying it to railroads already in use will ments for opening the books of subscription to not exceed, we understand, the ordinary exstock, as follows: Jas. Goodwin, E. G. Howe, penses of repairs, &c., but on the contrary, will Wm. L. Cowles, R. H. Hotchkiss, G. W. Barserve to lessen them; besides having a tendency tholomew, J. L. M. Scoville, Fred. S. Wildman. to keep animals off the track. The speed, it is said, can also be increased to 60 miles an hour, or more, with perfect safety to life and property.

Passengers.—Those who are not acquainted with the facts, would be astonished to learn the great amount of travel up and down the Con-necticut valley. Three lines of stages run re-gularly between Northampton and Springfield two of them connecting with the railroad at Cabotville, and one at Springfield. There is also another line running through Amherst to Cabot-ville. On Friday last, the two lines from Cabotville to Northampton—which carry at low fare—brought up about fifty passengers. The next day they were similarly freighted, and it was estimated that the other two lines swelled the number of passengers to about 100. On Monday nearly the same number came up. On a line of such travel, can a doubt exist that a railroad will be good stock !- Northampton Cour.

To discover the Proportion of Silver CONTAINED IN COPPER ORE.—To a sample of one ounce add flux red tartar, 1 ladle; nitre, 1 do.; lime, 1-2 do.; borax, 1-2 do.; fluor spar, I do.; red lead, I do.; mix well with the ore and melt in a wrought iron crucible (if a stone one only can be obtained, add I ounce of iron,) about eight minutes, in a brisk heat, will be aufficient; for the last five minutes the assay should be incessantly stirred with an iron rod; pour the nity, will attract, or be attracted, by the silver,

# AMERICAN RAILROAD JOURNAL.

PUBLISHED BY D. K. MINOR, 23 Chambers street, N. J.

Thursday, July 3, 1845.

RAILROADS IN CANADA.

During the past winter and spring we have be stowed much attention on the proposed railroads from Montreal to Portland, and from Ontario to Huron There has been quite enough said and written, and the time for action is at hand. We not only did our part as faithful chroniclers of passing events, likely to influence these great works, but we also went so far as to point out what we considered the course to success. A gentleman is to be sent out from Montreal to London to lay the merits of the "Atlantic and St. Lawrence railway" before British capitalists, and, singularly enough, it is proposed to associate with him one who has played a leading part in drawing the province into the construction of a system of gigantic canals, about as many times greater than the productive canals of England, as the trade they are to accommodate is less. We particularly cautioned the friends of the Great Western railway against this error. Above all things we recommended an avoidance of those visionary and bombastic statements which have led to such unfortunate expenditures in this and the western States, and a close adherence to the system which has led to such brilliant results in England and Massachusetts: that is-to examine well the cost and income of the project before offering the stock to the public. Of the Atlantic and St. Lawrence railway we have seen merely a report of a preliminary survey, and some general statistics, and therefore do not feel ourselves warranted in forming, far less expressing, an opinion as to the actual value of the investment.

But with the Great Western railway, the case is different. The country is easy and well known, the winter is less severe than at Albany, and, what is of more importance than all the rest, the trade is already there to an extent far greater than is required to make the work eminently successful. Again, the kind and amount of trade and travel may be easily ascertained at Detroit and Buffalo, so that one or two well informed men of business, who enjoy the confidence of their fellow citizens, aided by an engineer of skill and character, might, in a few months, prepare a statement which could be fearlessly submitted Lawrence railway have any chance with British capitalists, we must think that the Great Western railway is-with fair play-certain of success. And here we may observe, that local jealousies and rival schemes abound there as every where else. The schemes abound there as every where else. The road is to be carried down the lake to Toronto, and of the Schuylkill canal, and at its terroinus in

shore of lake Huron. As the American travel will ble conviction, that like causes produce like ef all go by Detroit, and as that is the eastern terminus feets everywhere.—Philadelphia Paper. or the only railroad likely to be carried across the peninsula of Michigan, it is obvious that the best communication with that city is a great desideratum.

If a line to that point offers any all accommodation to the peninsula of the only railroad likely to be carried across the If a line to that point offers equal accommodation to been reduced to two dollars. the Canadian trade and travel, then must we consider the case pretty well made out. We await impatiently the announcement of some definite and systematic plan of operations which we shall hasten to lay before our readers, with such remarks and elucidations as our humble yet zealous efforts are capable of affording.

EXTRAORDINARY LOCOMOTIVE .- We intended to notice in our last an "extraordinary performance of a locomotive;" but it turned out, according to the printer's figures—they were certainly not ours-that the engine itself was much more extraordinary than its performance, as it is represented to weigh 1308 tons, instead of 13.8 as written. The "Manatawney," the engine referred to, weighs 13, tons, instead of 1308, as

AMERICAN RAILROAD IRON.-We ask the attention of those who would purchase railroad iron to the advertisement, in this number, of the "Maryland and New-York Iron and Coal Company," or, as it is better known, the Mount Savage Iron Company. This establishment is, as it will be seen, ready to receive orders and make contracts for railroad iron of all kinds, and we hope to be able to announce similar information from at least balf a dozen other manufactories before the end of the year.

CONCORD RAILROAD.—The report of the diers at their late annual meeting, shows that the one week amount of capital stock of the road is \$750,000. and the cost of the road and its appendages The length of the road is 34 3.5 \$756,444. miles, and the maximum grades 15 8-10 feet per

The income of the road the last year amounted to \$181,842, of which the passenger department afforded \$90,545, freight \$90,099, and rents and interest \$1,196. The expenses amounted to \$82,928; of which \$11,528 were for road repairs; \$9,708 for wood and oil; \$6,-393 for taxes, and other expenses. Net income \$98.913. Two dividends were declared, one of 6 and the other of 7 per cent.

RAILWAYS VS. CANALS IN GREAT BRITAIN.
-By a notice in an English paper, we perceive that railways are gaining the ascendency over canals in that country. "The Ellsmere and Chester, and the Birmingham and Liverpool canal companies," (now united.) advertise that they hold, including branches in various directions (through the coal and iron field of North Wales, etc.,) 160 miles of canal.

They call the attention of their shareholders to the fact no longer to be disguised, that the public preference for railways is fast destroying to the severest scrutiny. If the Atlantic and St. the whole canal interest of the country. And the committee recommend, as the only means of saving their property, that application be made to parliament for the privilege of destroying the whole canal with all its ramifications, and of converting it into railroads.

extensive branches are to be carried to the north, besides which the western terminus is claimed by every the activity at the railway coal wharves on the hamlet from opposite Detroit to far up on the eastern Delaware, and he will be struck with the forci-

BALTIMORE AND WASHINGTON RAILROAD, HIGH FARES.

We have felt called upon, in support of our favorite theory-viz: "low fares and high speed for passengers"—to refer more than once, and possession of the legal power to reduce the fare 24,499 way passengers between interrecently in a somewhat pointed manner, to the upon their Washington branch, only since the rates charged on the Baltimore and Washington first of June. railroad. We feel assured that our motives, in der advisement, and have not yet decided what the course pursued by the Journal, cannot be they will do, but desire, and should be allowed, misunderstood. We have neither personal inte- full time to mature their measures upon the sub- 81,490 pas'g'rs, producing a revenue of \$168,318 rest to promote, nor private griefs to assuage, by ject in question. a change of policy in this or other cases of railroad management-or rather, as we have somethe greatest number"-but placing always first this principle. Railroad companies are not exthose enterprizing and liberal citizens who have pected to do what will induce a permanent deinvested, and in the case of the Baltimore and crease in their revenue. On the ground of pub-Ohio railroad company especially, having been lic good alone, such reductions are never advopioneers in the cause, risked their capital; therefore the only question to be solved in our mind must look first of all to the returns upon the cais what rates of fare on this road will, at the pital intrusted to their management. Maximum gers carried by both the railroad and the coaches, same time produce the best returns to the shareholders, and the greatest accommodation to those it otherwise, they would be guilty of breach of 70,217 passengers carried through in both ways. who desire to travel. This, we admit, is an important question; one which requires due deliberation before a change is adopted. We therefore give place to the following well written communication on the subject, from a source commanding our highest respect, which, had it come to hand in time, would have appeared in our last number, and we ask for it an attentive perusal by all who feel an interest in the matter -and who that travels does not?

# [For the American Railroad Journal]

High Fares - Baltimore and Washington Railroad .- The company who are the proprietors of this railway have been frequently and harshly censured for their alleged extortion in charging \$2 50 for carrying passengers from Baltimore to Washington. The complaint has come in part from the travelling public, and in part from the Virginia line of railroads south of Washington. - The public forgets that before this railroad was opened they paid \$3 for making the same journey in seven hours over an inferior turnpike road, almost impassable in the winter, and that the railroad saves them at least five hours in time and fifty cents in money, and affords them a proportional increase of safety and comfort. The Virginia companies forget that but for this railroad they would probably have never come into existence, and that they were in fact constructed and put into operation some time after its completion, with a full knowledge that its charter fixed its charge at the rate above mentioned. They also forget that on their local, or way travel, one of them is charging even higher rates (8 cents per mile) than those of the Washington railroad, and that their clamor for a reduction of the latter has been dictated less by a regard for the public, than by a desire to break down a rival work, the Portsmouth and Roanoke railroad, which, in connection with the bay steamboats, has always competed with them for the southern travel.

I shall in a few words attempt to show that 7,767 do. do., going south, do.

their complaints against the Baltimore and Ohio railroad company are not so well founded as is generally believed.

They have the matter un-

Again. The reduction is urged as much on the ground that it will advance the interests of times thought, mis-management. Our only aim the company, as that it will promote those of the and object has been and is "the greatest good to public-and low fares are always pressed upon cated by reasonable men. Boards of direction dividends are their prime legitimate aim. Were trust. Happily the policy that will produce this 25,268 maximum is also the one which will ultimately be most advantageous to the public. If the rates are too high, trade and travel is checked, and the revenue falls off, while the people are partially deprived of the use of the work. If too low, they have a fuller enjoyment of the improvement, but it is only for a time; as, the income becoming insufficient to keep it in proper repair, and pay a proper interest to the proprietors, it languishes, and perhaps finally comes to a stand. So that the public is at first badly accommodated, and at last not at all. These are self-evident truths, but they require to be recalled to the attention of those who clamor for low fares without consideration. The only right rule I conceive, is that of the maximum revenue. principle may seem selfish, but it is not the less sound, and is indeed formally denied by no one.

Now the palpable inference from this is, that a rate of fare having been established and found to yield a fair interest on the capital invested, should not be changed without due consideration; for the effect of any change is always doubtful. This amounts to no more than saying that no prudent person takes a step in the dark if he can help it. The Baltimore and Ohio railroad company is now acting thus prudentially, and is looking narrowly into the probable issue of a reduction in its rates before it determines to reduce

That there is reason for caution will be seen from the following statements,

It is known that a line of post coaches, (established and supported by the Virginia railroads, to favor their rivalry of the bay route) has been running for a year or two past upon the turnpike proach. in opposition to the Washington railroad. In the 101 months preceding the 30th of April last, the Washington railroad carried

40,155 through passengers from Baltimore to Washington only, at \$2 50,

9,068 round trip passengers from Baltimore to Washington and back, \$2 50,

In the first place that company has been in 56,991 through passengers, yielding \$142,478 mediate points, short of the whole distance, and averaging a distance of about 17 miles, at \$1 06 25.840

22,672

The post coach line on the turnpike within the same period, carried

9,337 passengers through from Baltimore to Washington only.

3,889 do. do. going south.
769 do. way between intermediate points.

13,995 total carried by coaches, at \$1 50 to the through passenger, with \$1 added for those going south by the Virginia railroad companies.

Adding together the through and way passenwe have

to less distances, say do. do. about one-half the whole distance.

Now if the railroad had carried all these passengers, at \$2 for through passengers, and five cents per mile for way, the loss to the company would have been, - \$6,399

And if carried for \$1 50 for through passengers and four cents per mile for way,

the loss would have been So that if the stages had been driven off, and the whole travel secured to the railroad, to effect which the latter and greater reduction would have been doubtless necessary, the road would have lost upwards of \$40,000 of revenue, and have paid less than 6 per cent. on its cost.

But it will be said, would not the number of passengers have been so increased as to make up the same net revenue. Now, it is the doult on the minds of the directors, on this very point, which leads them to hesitate as to the policy of the reduction; for it will be seen that under the half-price, round trip, fare of \$1 25, upwards of 9000 passengers made the excursion within the time above mentioned, and the probability is that this number embraced nearly, if not quite, all of those whom the reduction of fare would have induced to make the journey. In fact the 24 hours allowed for the trip, (one-sixth of which only is spent on the road,) will be, in the opinion of most of those who are acquainted with the federal metropolis, quite sufficient for the enjoyment of all the pleasure likely to be realized from the excursion. At least, it should be admitted to be a question not altogether free from doubt, and upon which the company interested may take time to deliberate, without deserving odium and re-

The truth of the matter then is-1st, that this company has in fact already exercised its power of reduction to its full extent in favor of excursion passengers, upon whom chiefly low fares would be likely to operate in augmenting \$100,388 travel; and that this class of passengers have 19,418 been carried at the reasonable rate of \$2 50 for

80 miles, or 31 cents per mile. 2d, that the direction has good reason to fear that a reduction, at this juncture, on the general travel would be attended by a considerable decrease of the revenue of the road, which their prime and paramount duty to their stockholders would not warrant them in risking.

If then the professed confidence in the sagacity and honesty of these gentlemen be really entertained, why are they not lest to judge of the propriety of a measure the results of which they have the means of foreseeing so much more clearly than others? I address myself, of course, only to those who recognize the principles laid down in the outset of these remarks. To those who demand low fares at the sacrifice of the proprietors of the work, I have nothing to say which would influence their opinions or silence their clamor, the continuance of which must therefore be submitted to with becoming patience. Z.

NEW HAVEN AND NORTHAMPTON RAILROAD The New Haven and Northampton Canal Co. have had it in contemplation for some time, and are now concerting measures for an increase of capital, to enable them to lay down a railroad on their towing path from New Haven to Westfield and Northampton, eighty miles, connecting with the Northampton and Greenfield, and other contemplated roads, and thus bring the travel and transportation of the populous and thriving valley of the Connecticut to New York in this country, viz. by way of New Haven, using both the canal the Reading railroad. and railroad, and tapping in its course the great Western road from Boston to Albany and Westfield, (sixty miles from here.) making it decidedly the nearest route to Albany-and should the Hartford and Danbury road ever be made, that too would be tapped at Plainville, (Bristol Basin,) twenty-seven miles from here.

The whole length being already graded, with Many persons now express their surprise, that

some twelve or fourteen miles shorter to Westfield, and considerably shorter to Northampton,) cannot be supported. This may be true to a ments, with the advantage of a first rate canal alongside of it for the transportation of heavy freight, and will connect about three hundred miles of railroad with New York, with the unusual advantage of water communication for bring them to a grade of 50 feet to the mile, would of population and business. As the population heavy freight alongside of it for the whole disease require about 2000 cubic yards of earth to be of the eastern province was larger than the west-

prevented the proprietors of the canal company making application to the General Assembly at its last session, for the permission to lay down their intended road, nor did they intend to agitate the matter till they were ready to commence work—but we are happy to learn that all their arrangements will probably be commended. pleted before the meeting of the next Legislature, when it will be found that for about seven hundred and fifty thousand dollars, the company will have a first rate railroad of eighty miles in extent, and a canal of the same extent now in full and successful operation .- New Ha-

We copy the above from the New Haven Courier, for the purpose of showing that those concerned are making use of suggestions contained in the Railroad Journal five years ago. In the number for June, 1840, will be found a communication from the pen of one of the engineers of that canal, giving in detail the estimates of the cost of converting the canal into a railroad. The above notice speaks of the "advantage of having a canal for the transportation of heavy the attention of the New Haven Courier to an article in the Railroad Journal for 19th June last, which gives a good idea of the relative advantage of railways and canals for heavy freight, as exemplified by the best lines for that purpose in this country, viz.: the Schuylkill canal and

We copy below the estimates referred to, as published in this journal in June, 1840.

"It now remains to show the practicability at a note and small expense, of making a railroad on the site of the canal. First, then, drain it effectually, by running ditches along the sides just at the foot of the inner slopes. Let the outer slopes of these ditches having reached Northampton, the valley of the Conceptionations of the inner slopes of the canal— The whole length being already graded, with the exception of some slight additions about the let the ditches be, say four feet wide at top, and one locks, having one entire level of twenty six deep. The slopes of the canal are I foot perpendimiles, with the advantage of a canal to transport cular, to 1½ horizontal; preserving the same slopes all the materials for the superstructure, it has for the ditches, their bottom width would be one foot. been ascertained that the whole can be done with the heaviest T rail, for about seven thousand dollars per mile—say \$560,000 for eighty miles!

Many nersons now according to the discharge from the discha Many persons now express their surprise, that to raise this space six inches, which would leave a the canal company, or the New Haven people, dry solid roadway, one foot six inches, above the botdid not avail themselves of the already graded tom of the ditches, ready to receive the superstruc-banks of the canal to connect by railroad the upper valley of the river, and Albany and Westfield, with New Haven, as soon as the Boston
people located their great road to Albany through
Springfield, Westfield, &c.

It will be said, that there being one rome already made at great expense, another, (although
would require to be levelled down to form the roadway. When a number of locks occur together, it would probably be necessary to change the location for a short distance: there may be some five or six instances where this would require to be done; in certain extent at the present time—competition all other cases the elevation could be overcome with-will produce low fares, which will benefit the people; and then it will be tested which road fing expense; where they occur singly, which is frequently the case, the elevation would be overcome people; and then it will be tested which road can best afford to carry for low fare, the one that costs only seven hundred and fifty thousand ty feet to the mile. Wherever they are 1056 feet long, on an inclination of fifty thousand the costs only seven hundred and fifty thousand the costs only seven hundred and fifty thousand the costs of t for instance, there are six locks; the elevation over-come is, I think, 36 feet, and the distance from the lower to the upper one, is half a mile, which brought to a plane, gives an inclination of 72 feet per mile.

The high price of iron, and other causes, moved, in cutting and filling which, at 10 cents per yard, gives \$200. But I will suppose the obstacle presented by each lock to cost in its removal \$1000. The whole number of locks is about 60. We have then the sum of \$60,000 for this item. I will state in this place that there is one level on the canal 28 miles long. The ditches give for the 80 miles, 78,-160 cubic yards of earth, at six cents per yard, gives \$4,689 60. Levelling down the towing path at certain places, I will estimate at \$500 per mile. The superstructure for a single track may be safely estimated at \$5000 per mile.

"RECAPITULATION.

.\$60,000 00 Planes at 60 locks.... 

......\$504,689 60

it graded for the express purpose, would cost \$15,000 per mile. It is true there are many short curves in the canal, but it need only be borne in mind, that these curves will occur on level grade, and the difficulty vanishes. I think there are few of less radius than 400 feet curves, which are frequently to be found on railroads combined with steep grades. On a railfreight, alongside the railroad." We would call road in Pennsylvania there are curves of 240 feet the attention of the New Haven Courier to an radius. Some of you may apprehend danger to such an enterprize, from the competition of other roads, either built or contemplated; but allow me to present you with this view of the case. The Hartford and New Haven railroad was estimated to cost about \$800,000. It has probably cost fully that sum. Suppose it extended to Springfield, or even to Northampton, at the rate of \$15,000 for a single track a low estimate, and we have the sum of \$1,460,000 as the cost of a railroad from New Haven to Northampton, by the way of Hartford, or an average sum per mile of \$18,250, besides having the disadvantage of not being a continuous line. It is true the Hart-ford and New Haven railroad is graded for a double

necticut is before you to invite your enterprize.

"The estimate of cost which I have made is necessarily quite a rough one, but I am satisfied it cannot vary much from the truth. Locomotive power, have been excluded, as being in this communication unnecessary

"I will here add, that the aqueducts, which might be used as viaducts, and culverts, on the canal, are of the most permanent and substantial kind.

"If this communication shall be so fortunate as to awaken inquiry on the subject, I shall feel that it has not been made in vain; for I am satisfied that the project needs but be fairly investigated to be carried

[For the American Railroad Journal.]

AUGUSTA, GA., June 24, 1845.

I presume the editor of the Railroad Journal has, ere this, heard of the great enterprize we have on hand, in an attempt to make our city a southern Lowell.

We have commenced and are rapidly executing a canal for manufacturing purposes. It will be nine miles in length, including rather more than two miles in the city. The bottom is 20 feet wide, and the depth 5 feet at the upper end, -slopes 2 to 1. The nature of the ground in the city gives us three falls of about 13 feet each .-The Savannah, from which the water is taken, is, at the lowest water 500 feet wide, and averages 2 feet deep, so that we may safely calcu-

late on an unfailing supply.

Our river is navigable above the falls about 100 miles, and the extension of our railroad to the state road will give us the control of an immense trade with the interior. By these means we have the raw material, provisions, fuel, and building materials at the cheapest rate at our doors. The river, and the railroad to Charleston afford easy means of communication with the seaboard; and, altogether, our local advantages are such as to present the greatest attraction to men of skill and enterprize south of Lowell. I trust these will be duly appreciated by our northern friends, and that their capital and skill will contribute to develope our great re-GEORGIA.

as well as in relation to the impolicy-more the information. We have long entertained than that, the injustice—of charging canal a favorable opinion of the enterprize and tolls upon freight carried on the railroads public spirit of the citizens of Augusta, Ga., and have often spoken of it as, a narrow, ceedingly limited. We usually form our of railroad from the Hudson river to lake Sentinel," which we perceive is published We look upon it much in the same daily, tri-weekly, and weekly, though, by-thedelphia; and by the state of Maryland upon with such a water power, in one of the most and 1818, it levied a tax of one dollar upon visions, and the raw material, we anticipate fore, to be abandoned, as it surely will soon predict that it will ultimately become largely in this town, and other towns on the route be, that business and travellers may be at interested in the manufacture of cotton and liberty to seek the natural and the most con- other articles. We have only to say to those develope your power with your own means and enterprize, then invite capitalists, experienced in manufacturing, to join you in its use and advantages; but by all means, avail yourselves of the opportunity which it offers to participate in the benefits arising from working up, as well as in producing, and dealing in, the raw material. We heartily wish those It is the first thing of importance that has interested early and ample success, towards which we shall be always happy, if in our power, to contribute.

(For the American Railroad Journal.)

A Novelty .- We observed a few days since, below Manayunk tunnel, on the Philadelphia and Reading railroad, an iron bridge constructed by the company, at their shop at Pottstown, on the Howe Truss principle, of superior workmanship and finish. The span of the bridge is 34 feet; the cords are made of wrought iron, having a centre truss. The weight of the main truss is three tons, and the whole weight of the bridge, including every thing, 9 tons 1 cwt. The cost of this bridge is about \$1600, and it is the first iron bridge that has ever been put up in this

The above is from the Anthracite (Pottsville, Pa.) Gazette. The writer is mistaken in supposing that the bridge referred to is the "first iron bridge that has ever been put up in this country." The Erie canal, at Utica and Rome, is now spanned by two or three iron bridges, built some four or five years since, by Mr. S. Whip-Tonawanda railroad company. ple, civil engineer, of Utica. They are conand wrought iron combined, and of a form to We were not aware of the contemplated give, as the writer of this believes, much greater is one to connect Bristol with South Wales, by improvement above referred to, and are strength, according to the quantity of iron used, means of a tunnel under the Severn!

level route and straight lines for railroads, therefore the more obliged to the writer for than the Reading bridge. These bridges have a space of 80 feet in the clear, are designed for highway bridges, and cost from 1500 to 1600

> We shall be much obliged to "J." or to Mr. Whipple, the builder, for a particular description, accompanied by drawings, of the bridges referred to at Utica and Rome. If we receive them, we will make them and the builder also better known, at least to the railroad community.

> INTERNAL IMPROVEMENT .- Portsmouth. Exeter and Manchester Railroad .- A petition will be presented to the General Court of New Hampshire, at the June session, for an act to incorporate a company, with power to construct a "railroad from Portsmouth to either or both the above named places, and to form a junction with, or to cross the Boston and Maine railroad, at any point in the towns of Durham, Newmarket or Exeter, as shall seem to the petitioners most likely to promote the prosperity of Porstmouth, of the towns above mentioned, and of the State at laage."

> The petition is now receiving signatures will also petition. Such a road would bring Concord and Manchester twenty-two miles nearer the seaboard at Portsmouth than at Boston. As the good effects of such a road on the business and prosperity of this section, have been ably and fully set forth in a pamphlet by "A Citizen," we will not go into any detail of the matter here. The road is of more consequence to this town than any that has been constructed in our neigh-

> The above is a very noticeable project. appeared for a long time, in the shape of an actual developement of New Hampshire within herself. The map shows at once, the

borhood. - Portsmouth Journal.

topographical propriety of the undertaking. -Business relations may at present, and for a long time to come, direct the transportation of goods from the valley of the Merrimack to Boston, and so, in return. But the interior of New Hampshire will eventually seek the shortest outlet to the sea.

DIVIDENDS.

The directors of the Boston and Worcester railroad have declared a dividend of 4 per cent. on the capital stock of the corporation from the profits of the six months ending on the 31st of May last, payable on the 1st of July. The receipts of income during the 6 months, with a reserve of \$13,162 from the previous dividend, amounted to \$236,203, and expenses to \$107,982, leaving a net income of \$127,221.

The Boston and Providence railroad company have declared a dividend of three and a half dollars per share, payable 1st of July at the Phœnix bank, New York.

The directors of the South Carolina railroad have structed like the Reading railroad bridge, of cast declared a dividend of \$2 25 per share for the last six months.

PROPOSED TUNNEL THROUGH LONDON .-It is said Mr. Stephenson has suggested the metals from their ores since the year 1839, construction of a tunnel from Hyde-park. the paper describes the author's method of corner to Mile-end, for the purpose of easing the great leading thoroughfares of their present throng of passengers. From this trunk line communication would be had with the streets above by means of spiral staircases, under cover, at regular distances, and branch ted on (which, if a sulphate, should be pretunnels would lead off to the various suburbs north of the Thames, Regent's-park, High- gether with a little lime or other flux for the gate, Hampstead, Tottenham, &c.; in these tunnels railway omnibuses would run, and a journey from one end of London to the crucible furnace; a battery of zinc and copother might be accomplished in half an per is prepared with five pair of plates, excihour or forty minutes, while the streets above would be considerably cleared, and much of the present confusion prevented. the end of which is inserted in the furnace, Such a proposal may at first to many persons appear absurd, but the plan is undoubtedly practicable, and though enormously expensive, the nature of the soil (London clay) is favourable, and the great traffic which would arise would probably pay a moderate thus, the electricity passes down through the interest.

Institution of Civil Engineers, May 20th, 1845-Sir John Rennie, (President,) in the chair .- Mr. P. Barlow presented, as an appendix to his paper on the atmospheric system, the results of a series of experiments upon the force employed in drawing carriages up an inclined plane of 1 in 43 by a stationary engine and rope traction upon the Canterbury and Whitstable Railway. From threads of any diameter, of great suppleness, these experiments it appeared that the stationary engine of 25-horse power, with a rope, would produce an useful mechanical effect, equal to the engine of 100-horse power on the Dalkey Atmospheric Railwaythus proving by direct facts the deduction of Mr. Stephenson as to the amount of lost power by the latter system. These statements were ordered to be printed with Mr.

operating, for which purpose he uses a blacklead crucible, lined inside, within an inch or two of the bottom, with a coating of fire-clay. which is allowed to dry, and a second and third coat superadded; the ore to be operaviously roasted) is put into the crucible, topurpose of giving it fluidity. The crucible, with its contents, is then placed in a common ted by a very dilute sulphuric acid; to the zinc of this battery is attached an iron rod, and caused to touch the outside of the crucible; another rod, either of iron or copper, is used, having at one extremity a disc of iron or coke, which is made to rest on the surface of the fused mass in the crucible—thus, the electricity passes down through the whole fluid mass in the crucible, and in the course of an hour the metal is separated from the ore, and deposited at the bottom.—Mining Journal.

Imade from common and double refined B. O. iron; the latter a very superior article. The tires are superi ning Journal.

ZINC THREAD.—The Moniteur Industriel announces that an important discovery in the manufacture of zinc thread has been effected by M. Boucher, who, after many essays, has at length been able to produce zinc and presenting all the qualities of an excellent metal thread. In all cases where a great tension is not required, this thread can be substituted with advantage for that of iron, brass, or copper. Its applications at present are very important, and increase daily. is used for culinary purposes; there are metallic threads, threads for plants, clasps, points for soft wood, cords for bleaching yards, &c. Barlow's paper.

APPLICATION OF ELECTRICITY IN THE MANUFACTURE OF METALS.—At the Society of Arts, on 14th May, Mr. Whishaw (secretary) read a paper by Mr. Napier, "On Separating Metals from their Ores by Means of Electricity." After giving an account of the progress made in the application of shortly test its merits.

# FRENCH AND BAIRD'S PATENT SPARK ARRESTER.

TO THOSE INTERESTED IN Railroads, Railroad Directors and Managers are respectfully invited to examine an improved SPARK ARRESTER, recently patented by the undersigned.

Our improved Spark Arresters have been extensively used during the last year on both passenger and freight engines, and have been brought to such a state of perfection that no annoyance from sparks or dust from the chimney of engines on which they are

used is experienced.

These Arresters are constructed on an entirely different principle from any neretotore offered to the public. The form is such that a rotary motion is imparted to the heated air. smoke and sparks passing through the chimney, and by the centrifugal force thus acquired by the sparks and dust they are separated from the smoke and steam, and thrown into an outer chamber of the chimney through openings near its top, from whence they fall by their own gravity to the bottom of this chamber; the smoke and steam passing

off at the top of the chimney, through a capacious and unobstructed passage, thus arresting the sparks without impairing the power of the engine by diminishing the draught or activity of the fire in the furnace.

These chimneys and arresters are simple, durable and neat in appearance. They are now in use on the following roads, to the managers and other officers of which we are at liberty to refer those who

on the following roads, to the managers and other officers of which we are at liberty to refer those who may desire to purchase or obtain further information in regard to their merits:

E. A. Stevens, President Camden and Amboy Railroad Company; Richard Peters, Superintendant Georgia Railroad, Augusta, Ga.; G. A. Nicolls, Superintendant Philadelphia, Reading and Pottsville Railroad, Reading, Pa.; W. E. Morris, President Philadelphia, Germantown and Norristown Railroad Company, Philadelphia; E. B. Dudley, President W. and R. Railroad Company, Wilmington, N. C.; Col. James Gadsden, President S. C. and C. Railroad Company, Charleston, S. C.; W. C. NICOLL'S PATENT SAFETY SWITCH for Railroad Turnouts. This invention, for some time in successful operation on one of the principal railroads in the country, effectually prevents engines and their trains from running off the track at a switch, left wrong by accident or design.

It acts independently of the main track rails, being laid down, or removed, without cutting or displacing

It is never touched by passing trains, except when in use, preventing their running off the track. It is simple in its construction and operation, requiring only two Castings and two Rails; the latter, even if much worn or used, not objectionable.

Working Models of the Safety Switch may be seen at Messrs. Davenport and Bridges, Cambridgeport, Mass., and at the office of the Railroad Journal, New York.

Plans, Specifications, and all information obtained on application to the Subscriber, Inventor, and Patentee.

THE AMERICAN RAILROAD JOURNAL is the only periodical having a general circulation throughout the Union, in which all matters connected with public works can be brought to the notice of all persons in any way interested in these undertakings. Hence it offers peculiar advantages for advertising times of departure, rates of fare and freight, improvements in machinery, materials, as iron, timber, stone, cement, etc. It is also the best medium for advertising contracts, and placing the merits of new undertakings fairly before the public.

R. CASEY, CIVIL ENGINEER, NO. 23 Chambers street, New York, will make surveys estimates of cost and reports for railways, canals, roads, docks, wharves, dams and bridges of every description, with plans and specifications. He will also act as agent for the sale or purchase of machinery, and of patent rights for improvements relating to public works.

# KITE'S PATENT SAFETY BEAM.

MESSRS. EDITORS.—
As your Journal
is devoted to the benefit of the public in general I feel desirous to communicate to you for publication the following circumstance of no inconsiderable importance, which oc-curred some few days since on the Philadelphia, Wilmington and Baltimore railroad.

On the passage of the evening train of cars from Philadelphia to this city, an axle of our large 8 wheeled passenger car was broken, but from the particular plan of the construction, the accident was entirely unknown to any of the passengers, or, in fact, to the

dent would unavoidably have much injured it, perhaps thrown the whole train off the track, and seriously injured, if not killed many of the passengers.

Wilmington, Del., Sept. 28, 1840.

The undersigned takes pleasure in attesting the value of Mr. Joseph S. Kite's invention of the Safety Beam Axle and Hub for railroad cars. They have for some time been applied to passenger cars on this road, and experience has tested that they fulty accomplish the object intended. Several instances of the fracture of axles have occurred, and in such the cars have uniformly run, the whole distance such the cars have uniformly run the whole distance with entire safety. Had not this invention been used, serious accidents must have occurred.

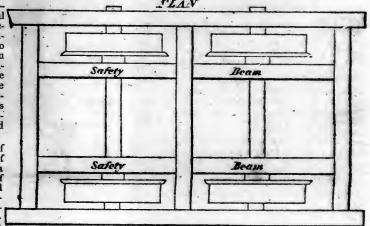

In short, we consider Mr. Kite's invention as completely successful in securing the safety of property

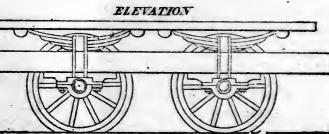

and lives in railroad travelling, and should be used on all railroads in the country.

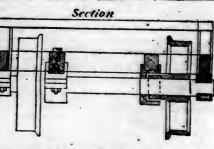

JOHN FRAZER, Agent,

GEORGE CRAIG, Superintendant,

The A model of the above improvement is to be seen at the New Jersey railroad and transportation office, No. 1 Hanover st., N. York.

TO IRON MANUFACTURERS. THE SUB-scribers, as Agents of Mr. George Crane, of Wales, having obtained a patent in the United by

From 4 inches to 1 in calibre and 2 to 12 feet long, capable of sustaining pressure from 400 to 2500 ths. per square inch, with Stop Corks, 7s. Le, and other fixtures to suit, fitting together, with screw joints, suitable for STEAM, WATER, GAS, and for LOCOMOTIVE and other STEAM BOILER FLUES.

Manufactured and for sale b MORRIS, TASKER & MORRIS.
Warehouse S. E. Corner of Third & Wainut Streets, PHILADELPHIA.

TO IRON MASTERS.—FOR SALE.-SITES in the immediate neighborhood of Bituminous Coal and Iron Orc, of the first quality, at Ralston, Lyoming Co., Pa. This is the nearest point to tide water where such coal and ore are point to tide water where such coal and ore are found together, and the communication is complete with Philadelphia and Baltimore by canals and railways. The interest on the cost of water power and lot is all that will be required for many years; the coal will not cost more than \$1 to \$1 25 at the mill sites, without any trouble on the part of the manufacturer; rich iron ore may be laid down still more deadly at the works, and taken together. more cheaply at the works; and, taken together, these sites offer remarkable advantages to practical manufacturers with small capital. For pamphlets, descriptive of the property, and further information, apply to Archibald McIntyre, Albany, to Archibald Edward of the property of the pr Robertson, Philadelphia, or to the undersigned, at No. 23 Chambers street, New York, where may be seen specimens of the coal and ore.

W. R. CASEY, Civil Engineer, VALUABLE PROPERTY ON THE MILL Dam For Sale. A lot of land on Gravelly Point, so called, on the Mill Dam, in Roxbury, fronting on and cast of Parker street, containing 68,497 square feet, with the following buildings thereon standing.

NORRIS, BROTHERS.

PENNSYLVANIA MAIN LINE.

We copy the following from the Philadelphia Enquirer-not receiving the Harview of this important line of communication through Pennsylvania. The accompanying table shows the receipts, expenditures, and net revenue for the past ten years. Total receipts, \$8,433,107 04; expenditures, \$5,935,909 20; net revenue, \$2,497,. 197 84. In 1840, the year which gave the as well as Philadelphia, to the western states, [Philad. Enquirer.] largest receipts, \$1,007,885 07, the line fell is received upon the Main Line, from the in debt \$77,798 37! This must have been Susquehanna and Tide Water canal and the the year, we imagine, when the managers made the most money. There has been a Pittsburg. From Columbia, the line passes regular and large increase of net revenue up the valley of the Susquehanna through for the last three years; and we hope to be the county of Dauphin, connecting with the able to announce. at the close of the current year, a still greater increase. The tributaries and sources of business of this line are such that it must ultimately pay a large income to the state, if it is properly managed. Then let the state come fairly up to the mark, and pay the interest when due, and thus retrieve its honor, regain its lost reputation-not only in paying its debts, but also in appointing honest men to manage its

line until 1835.

The first cost of the whole

line.....\$14,361,320 32 The expenditures over re-

ceipts, prior to 1835.... 222,496 06

Cost prior to completion.. \$14,583,816 38

Annual int. on cost, 5 pr. ct. \$729,191 00 and between the counties of Armstrong, But- pay for it. No other canal or railway can that the net revenue since 1835 has been county of Allegheny to the city of Pitts. and the state has no right to resume the \$2,249,197, and he proceeds to state:

risburgh Argus—as giving an interesting lated counties of Delaware, Chester, and nal to market. Lancaster, to the river Susquehanna, con-York and Wrightsville railway, and is carried through Pennsylvania 311 miles to Union canal at Middletown, and the Cumberland valley railway and the Harrisburg and Lancaster railway at Harrisburg. At Middletown it receives the coal of the Swatara mining district, one of the richest in the state, from the Union canal; and at Harrishurg, the rich products of the great Cumberland valley are shipped to market.

" Passing up the Susquehanna to the mouth of the Juniata river, twelve miles above Harrisburg and forty-three north-west from Columbia, it connects with the Susquehanna The Main Line of our State Works.—The in addition to the agricultural productions ments: Harrisburg Argus, in giving a history of our of northern Pennsylvania, it receives the 1. Even the Montezuma salt an executive committee, in compliance with agent of the petitioners, for his active and villages, on the Eric canal, will be as near the recommendation of the business commit-untiring exertions in procuring the charter of the New York and Hartford railroad.

Resolved, That the president and secreta. ries cause the proceedings of this convention to be inserted in the public prints.

PHILIP RIPLEY, President.

JOHN HOOKER, Secretaries.

We find the preceding account of a railroad convention held in Hartford on the 25th, in the Courant of Saturday, 28th June. From the last resolution, considering the ported by the business committee, and after Railroad Journal-the only periodical in the full and able discussion by Messrs. Hondley, Union devoted to the cause—as one of the Atkins, Perkins, Cowles, Collins and Ripley, " public prints," we thought it probable that we should receive a communication from the gentlemen instructed to lay the proceedings they may have collected, as to the amount tion to the route of the contemplated railroad of the convention before the people—those of business their towns may probably afford from Hartford to New York, via Danbury, who are expected to furnish means to construct the work; but as they appear not to consider the Journal as a "public print"or, if admitted to belong to that respectable hrotherhood, of too little consequence to be treated with common courtesy-we republish the proceedings "upon our own hook," Resolved, That the application for the that our readers may see what those living along the line of the work think of it: reserving the expression of our views and opin-

SPRINGFIELD AND ALTON RAILROAD .field to Alton is seriously talked of again. Resolved, That inasmuch as there is no It would connect Springfield, the capital of can be no greater mistake; for St. Louis communicate with facility with the great more beneficial to St. Louis if its population commercial marts, lead to the establishment and business were greater than it now is-Resolved, That this route, connecting with constant communication with St. Louis, present at the convention, was called on by a railroad in the State of New York near and would considerably increase the profits

of the St. Louis commerce. St. Louis has an interest in the growth and prosperity of all the towns and cities on the Upper Mississippi and Missouri; so far from looking with jealousy and regret on their increase, Or, deducting the line common to both, viz: perity of the upper river towns, and expect to be benefitted thereby. A good packet steamer now passes every day both ways, between St. Louis and Alton; and if a good railroad should bring passengers or produce from the interior of Illinois to Alton, they could be readily transferred to St. Louis in two or three hours, and at very small expense. We would then say to the Illinois people, go on and finish your railroad from provenient in that borough; but these fears are most happily removed, and since the completion of that road, the business and population of Schuylkill Haven have augmented with northeast, so as to connect it with the lakes. and St. Louis will always wish it well; and whilst it will be beneficial to Alton, it will at the same time swell the commerce of this city. Every improvement on the waters above this, whether in town or country, is calculated to have a salutary effect on the trade of St. Louis; for great cities must be sustained in a great measure by the trade which they carry on with other cities and with smaller towns. New York is much be- rises 64 feet to the base of the cupola in the roof; nefitted by the existence of such places as Jersey City, Brooklyn, Hudson, Troy and with heavy pilasters and Grecian consols, sup-Albany, because she carries on with them a porting a pediment head. The cupola rises 25 feet and is ventilated by 32 Venetian latticed trade advantageous to all the parties concerned. It is a very contracted view of The roof, which is 12 feet high, forms the segbusiness that leads people to believe that one town or city must languish because others in the same region of country are prosperous. St. Louis does not entertain such the best and most convenient for the purpose for opinions. - New Era.

ERIE WITH THE OHIO.

We learn from the Cincinnati Gazette of 26th ultimo, that the Miami extension canal has been completed to its connection with world; only smaller than the Pantheon at Rome. the Wabash and Erie canal, thus opening a third canal from the lake to the Ohio, viz: from Erie to Pittsburg, from Cleveland to Portsmouth, and from Toledo to Cincinnati. These important works have been constructed, and are now in use through a region of country which, fifty years ago, had not ten kill Haven; all the coal from that rich and exthousand white inhabitants! It has now over 1,800,000!! If 10,000 people have accomplished so much - and much more - in fifty years, what will 1,800,000 accomplish in the next fifty years !!! Will some one give us an answer?

"Collector's Office, Miami Canal, June 25th, 1845.

"Arrived this morning from Toledo, which place she left on the 18th inst., the canal boat Rose of Toledo, Capt. Robert Denvir, with five passengers.

D. LAPHAM, Collector." What a line of canal navigation is opened! From Cincinnati to Toledo, and from Toledo noisance made last full. By that survey, one to La Fayette,: a distance of four hundred principal route was examined, and found to be leastly three miles! Thus are the distances given a further view of the whole country between Portadelphia; Wm. E. Coffin & Co., Boston. From Cincinnati to Toledo, and from Toledo tances given:

Cincinnati to Toledo, -Toledo to La Fayette, 226

three hundred and forty-three miles continu. ous canal navigation from Cincinnati to La-Favette, Indiana.

# SCHUYLKILL HAVEN.

Perhaps no town in this county is growing into importance with greater rapidity than Schuylkill Haven. Many judicious persons were apprehensive that the construction of the Reading railroad would stop the progress of impidity unequalled in the past history of the town. The railroad company's depot presents an aspect of unusual industry and activity. 'The improvements of the company are all substantial and ornamental. The engine house particularly attracts attention, and in its plan and style of finish does credit to the company and to the gentlemen under whose supervision it was erected. It is a circular building, 126 feet in diameter; the stone work is 16 feet high, capped with a massive cornice, from which the spherical roof immediately above the cornice, are 16 windows windows, or openings, above a projecting cornice. ment of a circle, and is crowned with a hase and sub-base from which rises the spire. interior arrangement of this building is said to be which it was employed that has ever been de-ANOTHER UNION OF THE WATERS OF LAKE and the building is capable of holding 16 or 18 engines; the tracks upon this pivot radiate from the centre to the wall, and 32 feet from the wall is a range of 8 columns, extending to the cupola. This rotunda is fourth in size in the which is 145 feet, and St. Maria del Foise, at Florence, which is 139 feet also.

The railroad company have also erected at their depot, a range of shops, in the form of an L; being in depth on two sides, 116 feet, with a width of 50 feet on both ends of the L.

The Mine Hill and Schuylkill Haven railroad connects with the Reading road at Schuyltensive portion of the region known as the West Branch, is carried over this road; its business has already reached 10,163 tons per week. and as the company are now extending their laterals and branches in all directions, the trade over this road must greatly increase. The extension of five miles to the Swatara region, will open a vast field; the product of which alone will greatly augment the business of this road. All the coal carried over the Mine Hill road is shipped for he Philadelphia and eastern markets by the canal or railroad, from Schuylkill Haven.

of the curporators of the Atlantic and St. Lawing them July equal to the best spikes in market, rence railroad company, Mr.-Hall has recently both as to quality and appearance. All orders addressed to the subscriber at the works, will be prompted to the promised continuation of the recontrol of noisance made last full. By that survey, one

land and the Canadian frontier, and has indicated two or three other general lines, by which a railroad communication may be effected, under very favorable conditions.

The progress of these surveys tends to the rection of the whole work. They will unperfection of the whole work. its citizens will always rejoice in the pros. from the Junction to Toledo, and it leaves doubtedly be farther continued, until the proper time arrives for final selection .- Portland Adr.

Extract from the Report of Mr. Hall. My estimates of the cost of construction of the first 19 miles surveyed, commencing at Portland, is as follows :

471,650 yds. excavation and embankment at 13 3,505 perch stone masonry for road and river abutments, at \$2 . 7,010 00 6.336 do. for culverts, at \$1,50 . . 9,504 00 6,060 do. for cattle guards and passes. at \$1,25 7,575 00 4,620 00 4,620 rods grubbing, at \$1 12,100 feet of pile bridging, at \$4 . 48,400 00 150 feet bridge at Rovals River, at \$10 . . . 5 road bridges at \$42 210 00 12 road signs, and road and farm 1,500 00 crossings 10,880 rods of fence at 90 cts. . . 9,792 00

The remaining 120 miles I shall class as below, which I believe will cover the whole expense of construction. For grading the road, bridges, masonry for abutments, culverts, and

cattle yards, fencing, &c.
For 45 miles, at \$7,000 per mile, \$315,000 00 8,000 " 440,000 00 . 55 10,000 ** 90,000 00 60 66 9 12,000 " 48,000 00 66 66 66 66 14,000 " 70,000 00 5 20,000 " 66 40.000 00 2 land damages . . 50.000 00 40,000 00 depots and way stations. . railing, including superstruc-

ture and laying down the same, 139miles, at \$8,500 per mile . . . 1,181,500 00 Say for turnout tracks . . 20,000 00

\$2,294,500 00

For engines and cars, which will have to be ncreased as the business of the road demands. For 12 engines, equal to \$5,000

\$60,000 00 each . . . . . . 15 passenger cars, at \$1,800 27,000 00 ." 100 freight cars, at 530 . . . 53,000 00

> \$140,000 00 \$2,596,856 50

# Thursday, July 10, 1845.

NEW YORK AND ERIE RAILROAD.

This important work is occupying, and very just ly, at this time, the general attention of our citizens. By the papers of Wednesday, we were apprised of the resignation of the president of the company, Eleazer Lord, Esq., and of the appointment in his stead, of James Harper, late Mayor, but much better known as one of the partners in the house of HAR-PER & BROTHERS, publishers, of this city. In common with other friends of the work, we have been satisfied that a change of management was necessary, as it has been evident to us that those having the control were not likely to obtain the necessary means for its early completion. Deeply impressed with these views, we had prepared the following article for this number; and, though its object is in part accomplished, still we give it a place, that we may not appear to have been idle spectators in so important a matter; and also to congratulate the company, and the citizens of New York generally, on the selection of a man upon whom all parties can unite, and who CAN, IF HE WILL, complete the work on or before the 4th day of July, 1850-or in LESS than five years.

# NEW YORK AND ERIE RAILBOAD.

Some months since (see No. 5, Jan. 30th, 1845,) we compared the direction of the Erie with that of the Baltimore and Ohio railway, and intimated that with similar management, similar results would follow. We contended that the Erie railroad must be conducted on different principles, but we little thought that-in addition to its other troubles-the direction itself was anything but harmonious.

The treasurer of the company-Silas Brown, Esq. a merchant of high standing-did not pay the interest due on the bonds of the company a few days since. The president of the company, Eleazer Lord, Esqr., comes out in the papers pretty strongly against the treasurer, who had, he asserts, assets in his hands on which he, Mr. L., could with ease have raised the means to pay the interest, had the treasurer seen fit to give him a single day's notice. Mr. Brown in reply states, that the president must have kown his intention the day before the interest was due; that the "assets" consisted of a quantity of railroad iron, which had been shipped to the western part of the road, and had been sold by the sheriff and bid in by Mr. Brown, in his individual capacity, which was now on its way back to the city to be sold for the benefit of the company. Mr. Brown also states that he is already liable in his individual capacity for several thousand dollars, that he does not consider it proper for him to make further advances, and that

Correspondents will oblige us by sending in their fact that he has only received about \$3000 from the We feel it our duty to offer some remarks on a kinand Brown-that is, on the eve of stopping.

it. That it is practicable who can doubt?

rests of this city, and the business community, are ving the means, the next step is to see them properly country, and the engineer is as highly esteemed by, such a man as Mr. McLane, and the best professional skill in the Union will find abundant room for the display of its resources on so long and varied a route as that of the New York and Erie railroad. Again such men would be cautious of issuing statements to prove that work on the Erie railroad had been done for 50 per cent. less than on any other work. What has been done on the Erie railroad to show that they alone understand the construction and management of railways? No man of intelligence can believe that similar work has, under similar circumstances, been done for 30 or 40 per cent. less on the Erie railroad, than on the admirably managed works of Massachusetts. We would not speak disrespectfully of the gentlemen who have the manage ment of this work, nor intentionally throw a straw in the way of its progress, far otherwise, as, for most of them, we entertain personally a high regard, and the work itself, we have so long looked upon it as the great railroad of the Union-because it will become the first and most important link in a chain of railway which will ultimately have one terminus on the Atlantic, and the other on the Pacific that we feel in a measure wedded to it, and bound to give it our best efforts; hence it is that we call upon those who now have the management—but who unfortunately have not the confidence of those who are to furnish the means for completing the workto show themselves what they claim to be, the true friends of the work, by uniting cordially with others in the selection of a man of character and practical knowledge as a business man, who has never been identified with the work; and then select the ablest professional services which the country affords, pay them well, and make them responsible for their doings. By adopting this course, confidence will be inspired, the necessary capital will be easily obtained, and the work will be completed within five years; and within ten years it will be considered the most profitable railway investment in this country," if not in the world; but if the present course is pursued, it will become a by-word among our neighbors, and a reproach to ourselves.

# RAILWAY ESTIMATES.

their present unfortunate condition is owing to the new projects against overrating their advantages. trust in others, and to disappointment to themselves.

earnings of the road for the last six months! In dred fault—that of underrating the cost of construcshort, it would appear that the road is again in the tion. As far as the graduation is concerned, there predicament in which it was found by Messrs. Allen is of course room for error to some extent; but, in other respects, a little care only is required to arrive Unless gentlemen of wealth and enterprize come at an approximation to the ultimate expenditureforward boldly and in concert, there is great reason quite near enough for practical purposes. Again, to fear that the work will be abandoned for some the expenditures, other than the graduation, generalyears, though of its ultimate completion we have ly form much the greater part of the total cost; and, never entertained a doubt. If, therefore, an efficient as these can be ascertained with all desirable accuorganization be practicable, this is the time to effect racy, it is clear that the amount of capital necessary for the efficient working of a railway is no longer a The first step must be to place at the head of the matter of doubt with our present varied and extencompany a gentleman whose judgment, integrity sive experience. We should think these remarks and thorough acquaintance with the wants and inte- entirely superfluous, as relating to matters of the utmost notoriety, had we not observed that it is, at this such as to command the confidence of the mercan- day, gravely proposed to construct railways for from tile and monied classes. This is the first step to \$7 to \$10,000 per mile. In Connecticut it is asserted success, and if taken promptly it will succeed. Ha- (last Journal, p. 427,) that they can build with "the heaviest T rail for about seven thousand dollars per applied. To ensure these desirable results we must mile." Now the cost of the iron alone, allowing follow the example of Baltimore. We find at the 100 tons per mile of single track with turnouts, will head of her great work one of the ablest men in the be about this sum. At the late preposterous prices the cost in England would have reached this sum; as he is universally known to, the profession. The but assuming the cost to settle there at \$35 to \$40 difficulties to be overcome in the case of the Erie per ton, and adding \$25 duty, we have 60 to 65 dolrailroad would require all the ability and energy of lars per ton; exclusive of freight, insurance, storage and carrying to the place where required. There is, therefore, little probability of the cost of the iron alone falling below 7000 dollars per mile of single track, yet, with this fact staring them in the face, and with the vast experience of Massachusetts, within a few hours' ride, we find such statements as the above gravely put forth. As far as the individual project above alluded to is concerned, this is of comparatively little moment; but all such exaggerations injure the cause of railways generally. Any director, engineer, or even respectable assistant in Massachusetts, could inform them that \$10,000 per mile for the mere track, exclusive of preparing the road-bed, is, at this time, a low estimate with a heavy rail. .

We observe a similar statement in a Toronto paper, where a road, requiring considerable excavations, embankments and bridges, is to be put into operation for 8 or 9000 dollars per mile with the flat bar. A long road in Georgia, and a short one in Lower Canada—their only road!—have been for some years in successful operation with an expenditure per mile of 12 or 13,000 dollars. But the price of iron was little more than half what it is now, and the country in both cases offered remarkable fi cilities. Lastly, they were both superintended by engineers of standing in the profession.

We would inform our Connecticut and Canadian friends, that they may consider \$20,000 per mile as a low estimate of a single track railway, with moderate equipment of cars, engines, buildings, shops, water stations, etc. This is in accordance with the experience of Massachusetts, the people of which State are unrivalled in this country, and unsurpassed in any other, for mechanical skill, for bold yet judicious enterprize, and for that energetic perseverance which never rests short of the attainment of its ob-

'Although railways may be constructed and equipped for from one-fourth to one-half the cost of the bare channel and locks of the canals of New York, or of Canada, they still require no trifling sums; and we must believe that their friends would act more judiciously were they to take the advice and opinion of some competent engineer before putting forth such flattering views; enticing, it is true, at the We have repeatedly cautioned the advocates of first glance, but, on examination, leading only to disTHE FIRST TO THE LAST.

The to all. communication, and there are many able express trains on these lines run at the rate journals laboring in the cause, not only in of nearly 50 miles an hour, stoppages in tion of railways throughout the country will England, but also in France and Germany, any risk, the progress of travelling on the pears to me, up to this time, that they are which are well sustained, if we may judge Great Western line will arrive at a speed of merely intended as stock exchange speculaby their appearance; and why should they a mile per minute. We say nothing of the tions. And I am drawn to this conclusion not be, when they are devoted to what is yet greater speed which is promised by the from the attempt now making to inoculate rapidly becoming one of the leading interests atmospheric mode of locomotion. of the age?

We again bid our new co-laborer a hearty welcome, and shall be happy to aid his extensive circulation in this country, and to furnish him with such information in rela-chimerical; fifteen years ago, the unextion to our railroads, canals, and public peeted rate of thirty miles an hour was conworks, as may be useful or interesting to his sidered a wonder which no effort of practireaders in Europe.

thought, said, and accomplished in relation actually been exceeded. to railroads, within the last quarter of a century. Is the claim for Mr. Stephenson well founded for so early a period as 1812?-We would not deprive him of his just due, nor allow him to wear honors which should adorn the brow of less conspicuous men.

Progress of Railway Speed.—When Geo. Stephenson constructed the first locomotive engine, men who called themselves "prac. THE REPUTED PROJECTOR OF THE RAILWAY tical" contended that the smooth wheels would run round, or slip, on the equally smooth iron rails, without moving the carriage. But the wheels actually did bite, and Mr. Stephenson then said to his friends that there was no limit to the speed of such an mite, and doing justice to the real author, engine, provided the works could be made we gave a document which showed claims to stand. This was in 1812.

A few years later, a writer who declared himself friendly to the use of locomotive engines, strongly protested against "the extravagant expectations, or rather professions, of the enthusiastic speculatist," that "engines would be seen travelling at the rate of 12, 16, 18, and 20 miles an hour," and added, that "nothing could do more harm towards their general adoption and improvement than the promulgation of such nonsense." This was in 1825.

periodical devoted to the cause, extends cor- mittee of the House of Commons, and the dially the right hand of fellowship, and bids promoters of that project gravely warned God speed to the London Railway Express, at a greater rate than 10 miles an hour, he the youngest of the present numerous fa- would "put a cross on the concern." "Exeter, 23d Sept., 1844."

# THE IRON TRADE.

So important do we consider the iron formed sources in England, that we feel called upon to give copious extracts from the London Mining Journal, a work edited with great ability and fairness.

It would appear from the following extract of June 7th, that there are "Bulls," "Bears," and "Lame Ducks," in the London iron, as well as in the New York stock market; and there, as here, we imagine, litif lame ducks only were made of the bulls and bears-but unfortunately, it often happens that those animals only come in for "snacks," when the operations are favorationate caresses of the other-when they find themselves in a corner of the fence, without the ability to escape—while meritorious enterprizes and fair dealers are made to suffer.

"The advance in the price of iron," says the editor, "consequent on the improved state of the trade, and the numerous lines of projected railways, has been attended ironmasters has been dissolved, and as regards the operations for 'time,' there are fearful accounts. The rapid and unprece-

a humanites of and washing that the appearance

"Permit me most respectfully to claim a defalcation, which is not only attended by which the number of furnaces is represented after my unwearied application to this scheme regards the price, but is of incalculable in number in operation in all Scotland is sevenand sown, I may at last be permitted to be- to see maintained, and we consider that it is been thought of for making iron, although the same cause.

> subject, all more or less colored by the inte-

ability of taking to their bargain, and hence of the newspapers all over the country, in your consideration and support in my behalf, loss of money, in the difference existing as to be ninety, whereas the truth is, that the ever since 1820, and to solicit your kind pa- jury, in throwing on the market an influx of ty-five. In this way the quantity of iron tronage in obtaining for me some remunera. Iron, which was not previously contemplated. made is carried far beyond the truth. To tion for moneys expended by me during this It is generally admitted, that the present re-swell out the list, the names of every place long period, as well as for my services in duced price - for such it is, comparatively where iron has ever been made are paraded, speaking, with reference to the high figure even where there is not a vestige left of fur-"Surely where so many have reaped a which bars attained at one period—is one naces or apparatus for making iron, and rich harvest in the field which I have tilled which the ironmaster would be well pleased names are given of every spot that has ever only such as will repair the heavy losses sus- no step has been taken towards getting mitained in the past few years-therefore, are neral or erecting furnaces. After having we most anxious to see the iron trade as-falsified the facts as to the present production sume a healthy state, which can only be ef- of iron, the statement goes on to specify furfected by the ironmasters coming to the re- naces said to be in preparation, and that will solution of having no 'time bargains.' This be in blast three months hence. Not one would give to the miner, collier, and those additional furnace will be in operation even employed in the works, fair wages, and at twelve months hence. The list of new trade, and so interesting to many of our the same time, place the iron trade in a po- works in preparation, and which it is assertreaders, the latest information from well in sition, which will render it remunerative to ed will be at work in a few months, is made the capitalist, and, at the same time, encou- up of places as yet only heard of by name, raging to the adventurer. We trust that the as localities where minerals may probably ironmasters will not, by any false notions of be found, but even this has not been ascer-rivalry, injure in interest which so material-tained. The subjoined is an accurate list ly affects the operative, or will descend to of all the furnaces at present in blast, with transactions, such as 'time bargains,' which an estimate of the consumption and export we think should be excluded from all other of Scotch pig iron, without anticipating the precincts than those of the stock exchange. Luture, and so not drawing anything upon We have ever understood that the iron trade the increased demand to arise immediately was one of a legitimate nature, and less spe-culative than others, and, indeed, the real or few) that are about to be made, and for tle regret would be felt among fair dealers, business doing, and the orders on hand, one alone of which 30,000 tons of Scotch would fully justify this conclusion; it is then pig iron has already been purchased. It is with regret we find that the prices are influ- desirable that an article in such extensive enced, and the present depression to be at-use as iron now is should be at a moderate tributed to the speculation which has been price, and it may be that speculation has regoing forward, and the inability of the 'bulls' cently forced the price up too suddenly; but ble, leaving others to enjoy the pleasures of to take stock, or rather, we should say, the on the other hand, many accidental circumthe gentle embrace of the one, or the affectuation the gentle embrace of the one, or the affectuation to depress the martionate caresses of the other—when they taking the iron for which they have contracted. We trust that the present lesson which the state of the production and dewill serve as a beacon, and that henceforth, mand must establish. This particular dewe may not have occasion to record a re- scription of iron, from the necessities of action like the present, as emanating from some holders, has been sold at prices much under its relative value in proportion to other iron, and below its cost to the manufacturer, with the high prices he has now to pay for coal, and the great advance that has taken "THE SCOTCH PIG IRON TRADE. - In con. place in wages. From feuds and litigation with those natural results which might be sequence of the unprecedented fluctuation among the ironmasters in Scotland, for a expected—a re-action having taken place in that has taken place in the price of Scotch considerable time prices were kept unnatumore senses than one, while the union of the pig iron this year, more than usual attention rally low, and the very lowest rates have has been directed to it, and many statements been referred to as a fair price for the artiand reasonings have been offered on the cle; it might, with more fairness, be assumed that the average price should be £7, dented rise which took place, had the effect rests of the writers. Those who wish to which was the price in 1836, when there exof putting several furnaces in blast, and was, buy the commodity say all they can to low. isted no such demand for iron as has now moreover, attended with an advance of er its price, and those who have it to sell, sprung up for warehouses, ships, railways, wages, while the operative, not considering bring forward everything in their power to for a moment aught than the advanced price, raise its value. If this bias were honestly ders is that, with the price steady at about seeks for a further rise. In the meantime, exercised, it might be excused; but where £5, business is in the best state. The exthe prices are receding; it is now discovered that many transactions, on which were called the rapid rise, were, as would be said in the stock exchange, for the account, and those who were 'buils,' for pigs, are now to use the language of the alley, but 'lame ducks;' in fact, purchases have been made of pig and bur iron, for 'time,' which, when make of Scotch pig iron appeared lately in the sex state. The extra demand that has come on this year, from the general prosperity of the manufacturing interests, and the unprecedented extension of railways, will, probably, cause the price to rule above £5, but it cannot remain under it. The depressed prices just at present submitted to, will occasion orders to flow in from all quarters. In bar iron, also, the recent retrograde movement in Staffordshire! leaves the price such as will lead to husiness From Grangemouth and the going on freely and steadily; indeed, this is already apparent, the trade in that quarter Do. do. 1844.......... 39,190

The Mining Journal, of June 14th, has the following article, in continuation, upon the iron trade. We will give the table sposteamer.

"We have taken some pains to acquire trade; but we find much difficulty in arriving at conclusions, such as would warrant us in placing before our readers any distinct features of a general nature: so varied are the positions in which the several districts prospects. are placed. It was only last week that we adverted to the 'time' speculations in pig iron, which particularly applied to Scotland; while, from the inability of the 'bulls,' or buyers of stock, to pay at the period fixed for delivery, a reduction naturally took place. Nevertheless, the prices of iron were maintained in the Staffordshire, Derbyshire and South and North Wales districts, except so far as the reduction which it had been considered prudent to make: the rise having been too rapid to be justified even by the increased demand, while it was calculated materially to injure the ironmaster in the end. from the advanced wages he would be compelled to give, and to reduce which, with a reduction in the price of the article, would movement on the part of the ironmasters, It was our intention this week to have given a statistical table of the prices of Welsh bars Weekly consumption of Scotch Pig Iron in at Newport, 'pigs' at Newport, and tin plates Scotland, England and Ireland, according at Bristol, for the past twenty years, having been favored with a tabular statement, show. ing the changes in price which these several articles have undergone, but we must needs defer its insertion until our next; in the meantime, we may take one or two instances as evidence of the sudden transition and revulsions which the iron trade has undergone, trusting that some of our correspondents, associated with the trade, will take up the subject, and offer some remarks on the anomaly, if we may use the expression, which the table presents. In July, 1823, we find bars were selling at Newport at £7 per ton; in eighteen months afterwards—that is to say, the termini to build this road without extranein January, 1825-they are quoted at £14 ous aid. Hill's Pat. per ton, and here we might stop, had we

gards the immense difference which these prices present, with reference to the production of bar iron in South Wales alone; or, rather, we may say, the prices obtained at Newport-eighteen months having effected a rise of 100 per cent. To progress, we next arrive at the year 1831, some six years forward, when the price of bars had fallen to £5 per ton, being a reduction of nearly two-thirds in the price of the article, which thus appears to have fallen from £14 per ton to £5. From that period to April, 1836, it price quoted in August, 1837, being £6; again a re-action took place, and in March, 1838, we find; it £10 per ton; but in 1843, it decreases below even any price we have cited, and we find £4 per ton the quotation ken of when it comes to hand, by the next of the day; from that time a gradual advance has taken place, and from the statement with which we have been favored, the accurate information, as respects the iron price quoted for March, in the present year, is £10. We leave, until next number, the tabular statement to which we have referred, when we shall be induced to offer some observations on the iron trade, its position and

"We may, in closing our remarks, observe, that the decline in Scotch pigs has had an effect on Welsh and Staffordshire bars, and although the large houses are not disposed at present to make any reduction, yet the market cannot be said to maintain the firmness it has displayed during the past

few weeks."

# SELECTED RAILROAD, CANAL; AND MISCELLANEOUS ITEMS.

KENNEBEC, BATH, AND PORTLAND RAIL-ROAD.—A meeting of the company for the esta-blishment of this railroad was held at Gardiner last week. The committee appointed to form a union between the the Kennebec and Portland, and the Bath and Portland railroad companies. reduction in the price of the article, would reported that a satisfactory union had been be attended with much difficulty; hence the agreed upon, and their report was accepted. It was voted that the shares in the capital stock At 30 cwt. pigs to the ton of bars, 1000 tons all, whether they consider the interests of amount of each subscription shall be paid at the time of subscribing—no subscription to be bind-ing unless the sum of \$500,000 in the whole shall be subscribed on or before the 13th of Ocinber next.

A committee was appointed to invite subscriptions to the stock in other states, and an executive committee to prepare subscription-books, to obtain and publish information, and to take a general superintendence of the affairs of the company .- Daily Adv.

CHESHIRE RAILROAD.—The first assessment of ten dollars per share is payable on Tuesday

CONCORD TO PORTSMOUTH.—No railread project in New Hampshire has yet found greater favor than that from Concord to Portsmouth. which will bring the sea twenty-five miles nearer to the whole country north and west. It is said the road will be made the present year between Portsmouth and New Market. There

NASHUA AND WORCESTER RAILBOAD .- The space for the adduction of argument, as restockholders of the Nashua and Worcester.

railroad corporation held a meeting at Worces ter, on Wednesday, and made choice of the fol- finely in city and country. lowing gentlemen as directors, viz: Jacob Fisher, of Lancaster; John G. Park, of Groton; Fisher, of Lancaster; John G. Park, of Groton; amount much more than sufficient to warrant Joel Pratt, of Sterling; J. W. Bancroft, S. Salisbury and Edwin Conant, of Worcester; Samuel R. Brooks, and Jacob Little, of Newborks; J. C. Holland, and John A. Rockwell, of Norwich; Isaac Hunt, jr., of Nashua; Alexander De Witt, of Oxford; and William Brigham, of Boston. We learn that the amount of stock now subscribed is \$530,000. The subscription is \$500,000. The subscribed is \$500,000. The subscription is \$500,000. The subscription is . This road is sure to be built:

The laving of the rails on the Old Colony road was commenced on Wednesday last, in Kingston, a little west of the river, and is now progressing northerly. The westerly abutment of the bridge over Jones river is completed, and the road graded up to it, with the exception of a short cut through the hill. The easterly abutment is expected to be finished next week, when a temporary bridge will be placed over it for the purpose of carrying over the earth remaining to be excavated on the west side. The ship Mary Frances sailed from Cardiff, (Wales,) on the 24th ult., and the bark Vernon on the 25th ult., loaded with iron, and their arrival may be vation for the foundation of the engine house in show a large increase: this town was commenced yest erday .- Plymouth Memorial.

NORTHAMPTON RAILROAD.—Intelligence was received by the last steamer, that the agent of the Northampton railroad corporation had purchased the rails for the remainder of the road, on The price paid was quite favorable terms. about \$50 per ton, which is something like \$18 per ton more than was paid for the rails pur-chased last year. This is much better than was anticipated a few months since.-Northampton Courier.

SARATOGA AND WASHINGTON RAILROAD. We understand that this very important link in the chain of railroads between New York and Montreal will be immediately carried through. The arrangements are so made, that if New-York capitalists will not finish the road, Bostonians are coming forward to take up the stock. -Albany Argus.

Of course-wherever there is a railroad route which will pay good dividends, there you will find Boston capitalists engaged. We shall yet have to apply to them to build the New York and Erie, and New York and Albany roads!

MAD RIVER RAILROAD .- The lettings for completing the Mad River and lake Erie railroad are announced in the last Bellefontaine Gazette. One hundred and seventy-four bids were put in. Two hundred bidders were on the ground. The contracts provide that the work must all be done by the 1st of June, 1846.

The Morris and Essex railroad company has declared a semi-annual dividend of 31 per cent.

The number of passengers carried on the Troy and Greenbush railroad during the twelve days ending 26th ult., was 2369, being an average of near 200 each day.

We shall have a word to say of this road soon It is so much like Taor that we cannot pass it by in silence.

DAY LINE TO NEWPORT. - The Long Island railroad company started a line to Newport and Providence on Thursday of last week at the low fare of \$1.

give particulars. Suffice it to say, that an ternal improvement. The packet and freight amount much more than sufficient to warrant boat Mail, Capt. James Collins, arrived from

We learn from Mr. Collins that six or eight miles more of the canal will be completed with-in three or four weeks. This will carry the navigation up to the feeder dam, beyond Connersville, and leave some seven miles to be done to finish the line to Cambridge! Very soon, therefore, we shall have daily communication with the heart of one of the richest valleys in Indiana, or the west .- Cin. Gaz.

SANDY AND BEAVER CANAL.—The New Lisbon (Pa.) Palladium announces that the entire stock necessary to complete this canal, which was suspended in 1837, was taken in that town, at a meeting held there recently. W. Milnor Roberts has been appointed engineer, and it is said that the lettings are to take place this month.

Thomas Wilson has been elected president, and Thomas M. Abbott treasurer, of the Susquehanna canal company.

The outlet locks of the Alexandria canal, into the Potomac river, are completed.

More Manufactures .- We are informed that a company with a capital of \$200,000, contemplate the erection of works in this city for the manufacture of iron with anthracite coal.— The ore will be obtained from northern New-York; the coal from Penusylvania, by the Delaware and Hudson canal.—Troy Whig.

We are authorized to say, that the experiment of making iron from the ore with anthracite coal has been entirely successful, and, therefore, the works for making it on a large scale will be immediately erected and put in opera-

According to the Cincinnati Chronicle, the actual length of the Ohio river, from Pittsburg to its mouth, is 875 miles.

Heavy Verdict.—From a report in the Ontario Repository, of the causes tried at the recent term of the United States circuit court for the northern district, held at Canandaigua, we learn that the jury, in the case of Babbitt, vs. the Buffalo steam engine manufacturing company, returned a verdict of \$4,000 as damages for the infringement of the plaintiff's patent, relative to the lining of boxes in which gudgeons and axles are to run, and by which the bad effects heretofore experienced from friction and heating are obviated.

The Fall River railroad, connecting with the New Bedford and Taunton and Boston and Providence roads at Myrick's, six miles from Taunton, was opened for travel on Tues-day mornning last. The cars and all the appliances on this are said to be unsurpassed for comfort by any in the country. It is the first railroad of any extent constructed with Amer-

rit of emulation,—we will not call it enter- some part of it has already been determined prise-now dawning in this province with on, and agents have been, or shortly will regard to the construction of these impor- be, appointed to proceed to the mother countant thoroughfares, and the interest with try to procure subscriptions to the stock. which it is viewed by our neighbors. It is St. Catharine's Jour. to be hoped that in laying down routes some general geographical plan will be kept in view, and that no local interests will be suffered to thwart it. Local interests may at first appear to clash, but when closely considered may be made to harmonize and assist each other. Public opinion is happily working in the right direction.

The prominent geographical points in Canada are, Montreal, Kingston, Toronto, Bertie and Sandwich, having for governing points of communication in the States,

Portland, Buffalo and Detroit.

And first, the "Great Western Railway" the most important, because of the immense amount of foreign travel it will command, in connexion with railroads in the States. It is a link in the great chain from New York and Boston to the Western and South-western States. St. Louis, at the confluence of the Missouri and Mississippi, is the great centre of the South-west, and its commerce with the East will in a great measure pass this way. The western terminus of this railway should be at Sandwich or Windsor, and going easterly, fork off at a convenient place for Bertie and Toronto-the former connecting great lines of American railways at Detroit and Buffalo, with only the Detroit and Niagara rivers intervening-the latter opening the connexion with Lake Ontario.

the Atlantic, and giving to the province a good, safe and convenient harbor, never their property one of the best investments in closed by the winter frests. Next, from the kingdom. They have proved the supervised by the minds spikes made by the harmor. All orders directed to the Agent, Troy, N. York, will be punctually attended to. Montreal to Kingston, a continuation of the riority of steam tugs for towing boats; it last railway to Lake Ontario; and finally now only remains for them to complete their connecting Toronto with Kingston, thus work, by laying down a line of rails on the giving the whole length of the province, west of Montreal, a rapid communication with the capital and the ocean, and especially advantageous in winter.

RAILROAD IRON.—A gentleman familiar with the affairs of the Mount Savage Railroad Iron Works in Alleghany County, Md., has furnished the editors of the N. Y. Tribune with the following facts:

1. The Company has supplied by contract 1,000 tons for the Fall River Railroad, at \$60 per ton, delivered in New England.

- 2. Since the recent extraordinary rise of iron, it has entered upon new contracts at \$85 per ton, instead of \$95, as the Morning News had it.
- 3. It is now turning out 100 tons of railroad bars per day, and is putting up two new blast furnaces and an immense blowing engine, which will be completed in August; from which time it will be prepared to turn out 300 tons per day, or at the rate of 90,-000 tons per annum.

4. It is ready to make contracts to deliver any quantity of bars ten per cent. cheap- side. er than they can be obtained from .Europe ja45

under the present tariff.

5. The English price of railroad iron at the latest dates was £15 10s. or about \$75 at Liverpool, at which price it would cost manufactured by the subscriber's Patent Machinery, \$87 50 to deliver it here under a 20 per cent. duty. 5. The English price of railroad iron at cent. duty.

CANAL AND RAILWAY UNION-(From a osed by the winter frests. Next, from Intreal to Kingston, a continuation of the st railway to Lake Ontario; and finally now only remains for them to complete their work, by laying down a line of rails on the whole length of the province, est of Montreal, a rapid communication ith the capital and the ocean, and especially advantageous in winter.

This scheme will eventually be completed,

They have proved the supervisite twing boats; it now only remains for them to complete their work, by laying down a line of rails on the Spikes are kept for sale, at Factory Prices, by I. #### ARRESTER. FRENCH AND BAIRD'S PATENT SPARK

TO THOSE INTERESTED IN Railroads, Railroad Directors and Managers are respectfully invited to examine an improved SPARh ARRESTER, recently patented by the undersigned.

Our improved Spark Arresters have been extensively used during the last year on both passenger and freight engines, and have been brought to such a state of perfection that no an-noyance from sparks or dust from the chimney of engines on which they are used is experienced.

These Arresters are constructed on

These Arresters are constructed on an entirely different principle from any nerecotore onered to the public. The form is such that a rotary motion is imparted to the heated air, smcke and sparks passing through the chimney, and by the centrifugal force thus acquired by the sparks and dust they are separated from the smoke and steam, and thrown into an outer chamber of the chimney through openings near its top, from whence they fall by their owing gravity to the bottom of this chamber; the smoke and steam passing off at the top of the chimney, through a capacious and unobstructed passage, thus arresting the sparks without impairing the power of the engine by diminishing the draught or activity of the fire in the furnace.

These chimneys and arresters are simple, durable and neat in appearance. They are now in use on the following roads, to the managers and other officers of which we are at liberty to refer those who may desire to purchase or obtain further information in regard to their merits:

E. A. Stevens, President Camden and Amboy Railroad Company; Richard Peters, Superintendant Georgia Railroad, Augusta, Ga.; G. A. Nicolls, Superir tendant Philadelphia, Reading and Pottsville Railroad, Reading, Pa.; W. E. Morris, President Philadelphia, Germantown and Norristown Railroad Company, Philadelphia; E. B. Locomotive steam engines and tenders; Driving and other locomotive wheels, axles, springs & flange tires; car wheels of cast iron, from a variety of pat-terns, and chills; car wheels of cast iron with wrought tires; axles of best American refined iron;

springs; boxes and bolts for cars.
Cotton, Wool and Flax Machinery
of all descriptions and of the most improved patterns,

of all descriptions and of the most improved patterns, style and workmanship.

Mill gearing and Millwright work generally; hydraulic and other presses; press screws; callenders; lathes and tools of all kinds; iron and brass castings of all descriptions.

ROGERS, KETCHUM & GROSVENOR,

a45 Paterson, N. J., or 60 Wall street, N. York.

NICOLL'S PATENT SAFETY SWITCH for Railroad Turnouts. This invention, for some time in successful operation on one of the principal railroads in the country, effectually prevents engines and their trains from running off the track

at a switch, left wrong by accident or design.

It acts independently of the main track rails, being laid down, or removed, without cutting or displacing them.

It is never touched by passing trains, except when in use, preventing their running off the track. It is simple in its construction and operation, requiring

only two Castings and two Rails; the latter, even if much worn or used, not objectionable.

Working Models of the Safety Switch may be seen at Messrs. Davenport and Bridges, Cambridgeport, Mass., and at the office of the Railroad Journal, New York.

Plans, Specifications, and all information obtained on application to the Subscriber, Inventor, and Pa-tentee. G. A. NICOLLS,

Rading, Pa. GEORGE VAIL & CO., SPEEDWELL IRON Works, Morristown, Morris Co., N. # AMERICAN RAILROAD JOURNAL,

# AND GENERAL ADVERTISER

FOR RAILROADS, CANALS, STEAMBOATS, MACHINERY,

AND MINES.

# ESTABLISHED 1831.

PUBLISHED WEEKLY, AT No. 23 CHAMBERS STREET, NEW YORK, AT THREE DOLLARS PER ANNUM.

SECOND QUARTO SERIES, VOL. L., No. 29.1

THURSDAY, JULY 17, 1845.

[WHOLE No. 472, Vol. XVIII.

THE AMERICAN RAILROAD JOURNAL is the only periodical having a general circulation throughout the Union, in which all matters connected with public works can be brought to the notice of all ersons in any way interested in these undertakings. Hence it offers peculiar advantages for advertising times of departure, rates of fare and freight, improve-ments in machinery, materials, as iron, timber, stone, cement, etc. It is also the best medium for advertising contracts, and placing the merits of new under-takings fairly before the public.

W. R. CASEY, CIVIL ENGINEER, NO. 23 Chambers street, New York, will make surveys estimates of cost and reports for railways, canals, roads, docks, wharves, dams and bridges of every description, with plans and specifications. He will also act as agent for the sale or purchase of machinery, and of patent rights for improvements relating to public works.

# KITE'S PATENT SAFETY BEAM.

MESSES. EDITORS.— As your Journal is devoted to the benefit of the public in gen-eral I feel desirous to eral I feel desirous to communicate to you for publication the following circumstance of no inconsiderable importance, which occurred some few days since on the Philadelphia, Wilmington and Baltimore railroad.

On the passage of the evening train of cars from Philadelphia to this city, an axle of our large 8 wheeled passenger car was broken, but from the particular plan of the con-struction, the accident was entirely unknown to any of the passengers, or, in fact, to the conductor himself, until the train, (as was supposed from some supposed, from some circumstances attend-ing the case,) had pass-ed_several miles in advance of the place where the accident occurred, whereas had the car been constructed on the common plan

the same kind of accident would unavoidably have much injured it, perhaps thrown the whole train off the track, and seriously injured, if not killed many of the passengers.

Wilmington, Del., Sept. 28, 1840.

The undersigned takes pleasure in attesting of the value of Mr. Joseph S. Kite's invention of the Safety Beam Axle and Hub for railroad cars. They have for some time been applied to passenger cars on this road, and experience has tested that they fully accomplish the object intended. Several instances of the fracture of axles have occurred, and in such the cars have uniformly run the whole distance with action and the such that the cars have uniformly run the whole distance with entire safety. Had not this invention been used, serious accidents must have occurred.

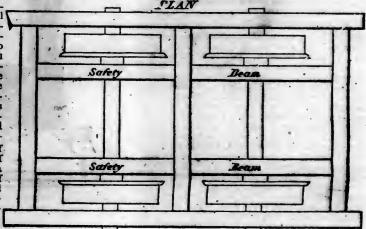

In short, we consider Mr. Kite's invention as completely successful in securing the safety of property

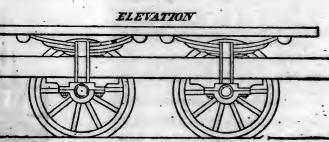

and lives in railroad travelling, and should be used on all railroads in the country.

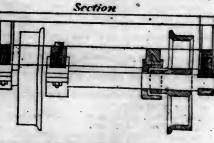

JOHN FRAZER, Agent,

GEORGE CRAIG, Superintendant,

TA model of the above improvement is to be seen at the New Jersey railroad and transportation ja45

TO IRON MANUFACTURERS. THE SUB-States for his process of smelting Iron Ore with Anthracite coal, and holding an assignment of the pa-tent obtained by the late Rev. F. W. Geissenhainer, are prepared to grant licenses for the manufacture of Iron according to Mr. Crane's principle.

A. & G. RALSTON & CO

# PASCAL IRON WORKS.

# WELDED WROUGHT IRON TUBES

From 4 inches to 1 in calibre and 2 to 12 feet long, capable of sustaining pressure from 400 to 2500 lba. per square inch, with Stop Corks, 7. L. and other fixtures to suit, fitting together, with screw joints, suitable for STEAM, WATER, GAS, and for LOCOMOTIVE and other STEAM BOILER FLUES.

Manufactured and for sale by MORRIS, TASKER & MORRIS. Warehouse S. E. Corner of Third & Walnut Streets, PHILADELPHIA.

TO IRON MASTERS.—FOR SALE.—MILL SITES in the immediate and large a A SITES in the immediate neighborhood of Bituminous Coal and Iron Ore, of the first quality, at Ralston, Lyoning Co., Pa. This is the nearest point to tide water where such coal and ore are found together, and the communication is complete with Philadelphia and Baltimore by canals and railways. The interest on the cost of water power and lot is all that will be required for many years; the coal will not cost more than \$1 to \$1 25 at the mill sites, without any trouble on the part of the manufacturer; rich iron ore may be laid down still more cheaply at the works; and, taken together, these sites offer remarkable advantages to practical manufacturers with small capital. For pamphlets, descriptive of the property, and further information; apply to Archibald McIntyre, Albany, to Archibald Robertson, Philadelphia, or to the undersigned, at SITES in the immediate neighborhood of Bi-Robertson, Philadelphia, or to the undersigned, at No. 23 Chambers street, New York, where may be seen specimens of the coal and ore.

Yet how difficult to convince those who have the northern manufacturing districts the benefit believed it to be a highly satisfactory one, and power to demonstrate the—to many—self-evident of a competing line, influenced, in no slight one which would answer all the expectations of

There seems to have been, and still is, a contest between the friends of the broad and those of the narrow gauge for rail tracks, and according to the party, are concentrating all their energies and several new rails. The piston carriage altoge-following remarks of the Mining Journal, the broad have it—at least for a time—yet the narrows give it it is said, intend to move for a recommittal in 15 hours in the day, the trains running every between the friends of the broad and those of the

examination, has completely astounded the advocates of the narrow gauge, and the success of the other party has, we believe, been advantages possessed by either gauge, in ter 176—so that the respective powers of the two almost equally unexpected. Much of the evolution of the voluminous evidence adduced, tubes was as 176 is to 254. He had laid down idence from practical men, and which was entitled to consideration, went far to prove that the broad gauge was decidedly the best for heavy goods, and, consequently, to a line from South Staffordshire, where the merchanponderous articles. It would place King's their general build, than those on the narrow hear the first blow of the pumping-engine at the Winford, from which district 4,100,000 tons of ironstone are annually raised, within 85 miles of Oxford, by which communication coal and iron could be transported at a cost of only 3d. per ton per mile. The popular feeling appeared to be nearly equal, each party carrying on the contest with that dogged perseverance, and cunning and ingenious canvassing, which would do honor to a contested election for a member of parliament. The various facts elicited, though not conclusive, are yet far from unimportant. It appear s that, in extent and connection with population, the narrow gauge has a great advantage over its rival, having lines of 1530 miles already formed and of 1264 miles proposed, passing through districts containing 12,000, 000 persons; while the broad gauge has only 333 miles of lines already formed and 600 miles proposed, and a population of only 3,000,000. How long this may be the case it is not easy to determine. It was stated by Mr. Stephenson, that no excess of speed was attainable on the broad over the narrow gauge-which was not denied, so that we may assume it to be correct.

safe process, but far less expensive than the engines were able to carry trains of 40 tons, at a A letter from Leipsic, says the Mining Journal, alteration in unfavorable gradients Notwith- a rate of 45 miles an hour, without any extra divers to Gemund by Lintz, and Saxo-Bavaria— that the impression on the minds of the comno petty annoyances either from noise or smoke.
their shares being quoted at from 98 to 931 per cent.

The trains could be sent with as much frequenmittee was decidedly adverse to the broad All the rest are above par."

All the rest are above par."

If this be true of the Continental railroads, how bilities for the transit of heavy goods, evident-ly turned the scale in its favor; the fact, too ways which must eventually radiate from this city?

Yet how difficult to convince these who have the sider the battle ended. The London and Bir-mingham company, as the so far defeated the Dalkey line during the last year, there was not up, as will be seen. How easy it is for a few of the bill, pleading that the decision of the quarter of an hour, two sets of men being emmen to raise a controversy by which the money of committee is not in accordance with the evithousands may be squandered. Committee is not in accordance with the evithousands may be squandered. The trains were carried from one end to none of the voluminous evidence adduced, tubes was as 176 is to 254. He had laid down its details proved ample for the transit of eral, and commercial, as it is more economieral, and commercial, as it is more economical perceived. He thought that the safety of the call in construction—was the original width atmospheric principle was much greater than sense consideration of the subject, we cannot for innovation, and that it should have been limits.

> ATMOSPHERIC RAILWAYS .- We find the folenced engineer, and railway manager, in Herepath's Railway Magazine for June 14th.

on behalf of the promoters, called Mr. Gibbons, saw no difficulty whatever in the gradients, for engineer of the Dublin and Kingstown Railway, much steeper gradients might be very easily and also of the Dublin and Dalkey Atmospheric worked. With a moderate traffic, the expenses The evidence of Mr. Brunel went to es-Railway, which line he had laid out. On this would be in favor of the atmospheric line, and tablish the fact, that the transhipment of one gauge to the other was not only an easy and worst gradient was 1 in 57, but over this the increased.

degree, the decision. We must not yet con-the promoters. A great saving was effected in thousands may be squandered.

THE BROAD AND NARROW GAUGE QUESTION.

The decision of the committee in favor of the Oxford, Worcester and Wolverhampton project, which is to be on the broad gauge, and was arrived at after a very lengthened examination, has completely astounded the and very expensive contest may, therefore, be expected. With respect to any of the mer being 245 cubic inches, and that of the latdoes it appear that its supporters uphold the the tube on the Croydon line, and he was satisfied that the wear and tear on that line would be much less than the contract the property of the med one of being better calculated for heavy goods, this we presume to arise from the necessary greater strength of the vehicles in might be done. On the Dalkey line they could weight involves a corresponding expense in cuum was evidently beginning to be formed. the outlay-as the narrow gauge has in all On that line there was a barn heter connected with the tube, and as simultaneously as the every description of traffic, agricultural, minadopted, and is spread over so large an extent that of the locomotive, for most of the accidents of surface throughout the kingdom, we think on the latter occurred at the stations, at which the decision of the question is shown not to places the atmospheric trains were quite out of depend on the superiority of either in a sci-the way of each other, and he believed that a entific point of view; but, under a common train might start with perfect safety every hour from each end on the Portsmouth line. Indeed, in his opinion, there was no need for a double help thinking the broad guage an uncalled line, unless the traffic were as numerous as that of the omnibuses between the Bank and Piccaprevented from extending beyond its present dilly. Mr. Brunel had looked at the sections, and thought them good. He had seen the esti-mates for the line, and thought the prices quite sufficient. A single line would carry a very lowing statement, by Mr. Gibbons, an experi- large traffic, and he thought that it would certainly serve all the purposes of the traffic on the line. Fifteen trains a day each way, might pass with perfect safety. An 18-inch tube would Portsmouth Atmospheric Line.—The Committee resumed this morning, when Mr. Alexander, 40 or 50 miles an hour with perfect ease, and he

AMERICAN RAILROAD JOURNAL.

PUBLISHED BY D. K. MINOR, 23 Chambers street, N.Y

Thursday, July 17, 1845.

We are again favored with an interesting letter from MAJOR POUSSIN of Paris, in relation to French railways, and to improvements of the locomotive en gine. We have received the work referred to in his letter, of which we shall endeavor to give a good account in our next, and subsequent numbers especially of that part relating to the Belgium Railway system, and other matters of interest to our readers. We shall also look with much interest for his next letter in relation to Railways in France.

Will our friends, connected with the different rail roads, furnish us with copies of their reports, or with written statements, which will enable us to furnish the information desired in the closing part of the following letter? They will be sure to be amply compensated for their trouble, by the information furnished by Major Poussin in return. An opportunity now presents, of an interchange of facts, the result of experience, useful to all parties; and we desire to make this journal the medium of communica tion.

FRENCH RAILWAY JOURNAL.

We have at last the pleasure of announcing the receipt of a number of the "Journal des Chemins de fer." It is a large and very handsomely got up quarto. We find several pages occupied with government notices and debates in the Chambers where the advocates of rail lines urge the claims of their favorite routes not less energetically than here or in England. Indeed, the public men of Europe generally are far in advance of our own in foresee ing the important part which the railway is to play in the next half century. Witness the fact, that the governor of our own state—the very head of the dominant party-has devoted paragraphs to the mechanical minutiæ of the political engine, as the color of a ballot, etc.,; yet had not a line for that engine which is working a revolution as great and permanent as the objects he dwells on at such length are trivial and ephemerial.

We find, also, notices of English, American, and Spanish railways; among the American ones, the railroad "de la Albany a Schenectady," and an interesting notice of the railways about to be undertaken in India, to which country it appears that they are sending M. Vignoles to take a general view of the resources and capabilities of the country, with refer-

ence to a grand system of railways.

The "Journal des Chemins de fer" contains a large quantity of interesting matter, and suggests some comparisons not very flattering to our own city. The railway cause in France is not likely to falter from want of an efficient organ, and we hope frequently to find in it matters of interest to our rea-

Pages, 10th of June, 1845.

No. 25, Boulevard Bonne Nouville.

D. K. Minon, Esq. New York.

My DEAR SIR-I have to acknowledge the receipt of your valuable journal up to the 15th May.

Since my last of the 10th May, the French Legislative Chambers have passed two bills in favor of railroads, to be worked or constructed by companies: the Northern or Lille railroad, already constructed, and the Lyons railroad, part only constructed. The letting out of these works will not take place before two monthsbills are still to be reported on the road to Strasbourg, on that from Lyons to Avignon, on Tours to Nantz, on Paris to Reims, and is most likely, on Bordeaux to Cette.

Númerous companies are already formed, have their shares subscribed, and cash paid for the proportion required by law as security. At no times has the public opinion ever been so favorable to railroad undertakings as the present : it is almost up to a mania, and it suffices that a subscription be opened with the aid of some known name for the stock to be subscribed immediately. How all these subscribers will keep their engagement is another thing for which I am not disposed to pledge myself. Time will prove all this.

I have not learned anything yet on the practical operation of some new application of locomotion projected this winter. In a few months, however, we shall probably know more on that all-engrossing subject, and I shall endeavor to let you know the result.

Meanwhile, some practical experiments having been made lately on the improvements which locomotive engines are susceptible of receiving, I will state to you on what particular subject they bear.

The experiments referred to have been conducted with much talent and courageous liberality, by two engineers, Messrs. Gouin and Lechatelier, on the Paris and Versailles railway.

These gentlemen have succeeded in measuring with great accuracy, by means of an indicator, the actual pressure of steam in the boiler and in the cylinder during the time of its introduction, when it is acting, and immediately at

They have likewise measured the quantity of water carried along with the steam, and the influence the water may exercise on the pressure in the cylinders.

The results of the relative pressure in the boiler, and in the cylinder, have been shown by a series of curves traced through the agency of the indicator; and they have demonstrated, 1st, that the pressure which is exercised in the cylinder during the period of the admission, and during the greater part of that of the letting out of steam, is hardly sensibly different; 2nd, that the pressure during the reaction follows as nearly as possible the law of Mariotte; 3rd, that the proportion of the pressure in the cylinder and boiler depends on the opening of the regulator, and the rate of speed; but that during the ordi-

Correspondents will oblige us by sending in their (Foreign Correspondence of the American Railroad Journal.) nary speed the difference of pressure in the cylinder may not differ much from 8 to 10 per cent., of that in the boiler; 4th, that the quantity of water carried along with the steam increases considerably this difference of pressure.

Experience has shown also that, according to the particular disposition of the dome, and the level to which the water is kept by the engineer, the quantity of water carried along with the steam can vary from 18 to 20 per cent. of-the quantity carried out of the boiler.

In fine, one of the most important facts ascertained by these late experiments is, that in the retrograde motion of the piston, the steam not escaping out instantaneously, it continues to exercise on the piston a certain resisting force, which is evolved at 50 per cent. of its direct agency to produce motion. It is obvious thereby, how deficient is the means (although considered as a favorable scheme,) of letting through the chimney a jet of steam to increase the combustion, as it actually contributes largely to increase the cause of resistance.

These results, supported by practical experience, will suffice to prove how deficient is yet the mighty power of the locomotive engine, since we do not actually turn to profit half of its useful or available force.

This is, you will readily admit, a very fair field for further improvement: the engine is invented, but it remains to simplify it, and to discover the means of applying the created force to its full power or extent.

I send you by a friend, Mr. Ledoun, of New Orleans, and passenger in the steamer of the 1st, my late publication on Belgium. You will find in it a whole chapter on railroads, containing the latest information on that subject. I think it may be reproduced in part in your journal to advantage.

I am very anxious that my friends in the United States should know that I never lose an opportunity of upholding the institutions of America, my adopted country, whenever I can-You will perceive in the perusal of this new work, that I have made allusion to America on several occasions.

I am proud to say that this new work has been very favorably received in France and Belgium. I should wish therefore that a few copies could find their way to the United States. I understand that they may be had at the importers of French books in New York or Philadelphia.

I hope to write you per next steamer a more interesting letter on the subject of railroads.

Can you gather some more correct data on railway traffic; and on all the elements of the cost of locomotion, low rate, &c.? Such as price of fuel-quantity consumed per mile or per ton. transported-number of wagons-of locomotives in fine, as well-cost of repairs-number of persons in the employ of railroads—exact length of said railroads-quantity of traffic-travellers -goods, &c. - rate of fare per traveller - per ton of goods-speed per honr in miles, &c.

Most faithfully yours,
GULLAUME TELL POUSSIN, Major du Genie. The following article from the Albany of the cost has been raised on loans at low 1837, deterioration, waste, etc., \$100,000 may Argus should be read by every voter in the interest. Is there any objection to this?— be considered as available. The route of the state. It coincides entirely with our views and we shall cheerfully and earnestly give first lien; the stockholder consents to take our efforts to effect the repeal of a law calculated to delay, if not entirely prevent, the construction of many important railroads in is a matter of mutual arrangement, and of tance; and the remainder of the route to this state.

THE CONSTRUCTION OF RAILROADS.

The great value of the railway is in its right

If this law had been in force, many railness, value, and profit. It is 112½ miles ways now in successful operation, could not long. It has cost over \$30,000,000. The have been made. For instance, the Syracapital is about \$20,000,000, leaving its debt cuse and Utica, upon a capital contributed stage proprietor observed, that the route from for cost over \$10,000,000, which also is bor. by the stockholders of \$800,000, cost over rowed at low interest. This road pays 10 per cent. dividend on its capital. The Gt. Western pays 7 per cent. It is the policy the cost. And yet, its directors and manin England to advertise for tenders for loans agers, in the construction of a work, upon for such sums of money as the companies which capitalists were then and are now

Under the hazard of such a conviction, there, owing for its railway an amount about honest and faithful men will not go on with equal to the debt of our state. Where a a railroad; they will rather regard this law large part of the cost is at a low rate of in. as an effectual bar. It is not possible that earth, would never rest on peat mosses or terest, (the loans often do not exceed 3 or 4 it can remain; for the railroad system ought per cent.,) the profit of the stockholder upon not to be checked. It is too important an that part of the cost which is represented by improvement; too safe an investment, and We too pervading in its operations to be sushave a similar instance upon a small scale pended by ill-advised legislation. Instead in our state. The Auburn and Syracuse of throwing difficulties in the way of these railroad has cost over \$700,000, of which works, we should rather encourage a gener.

LEXINGTON AND OHIO RAILROAD.

W.

Some weeks since we called the attention experienced engineer and a practical business It is to call the attention of your readers man, to present an estimate of the cost of fin-

general one. The present value of the ton and Ohio railroad between Frankfort and Western railway, in Massachusetts, arises Louisville, about \$250,000, of which, after

The creditor is content with a lower inte- road as located, is not only favorable, but rest than the stockholder, because he has the highly so. The general plateau of the counmutual advantage. The capitalist will fur. Louisville, as favorable as could be desired. nish the money to loan, where he may not be willing to take stock. His capital is set was laid under the system of 1830—and as In an excellent article in the Argus of against the skill of the managing stockhold. a matter of course is encumbered with nu-Friday last, entitled "Railroads, our invest. er. It is not, then, wholly the low cost of merous sharp curves and an inclined plane. ment of the surplus capital of the country, management and repairs, &c., that gives Nevertheless, an inspection of the table of &c.," there is an error as to the length of the profit on well constructed railways; but curves, shows a very decided superiority over the Great Western railway, in England, the fact that a large part of the cost is fur. the curvatures of the Baltimore and Ohio, which you state as 220 miles. The accu. nished at low interest, gives to the stock. Baltimore and Susquehanna, Philadelphia is omitted. I refer to the amount of capital, very great doubt whether any more can be vorable, as it will seldom fall below a radius and the manner in which funds are raised made at all. A law was passed at the last of 3000, and nowhere below 2000 feet. session of our legislature which forbids the This, with a graded width of 26 feet will al-The capital of the Great Western railway is making of a debt by a railroad company be. ways give a clear vision of 500 feet to the about ten millions of dollars. The residue youd the amount of subscriptions for capi. engine driver in advance of his engine—a the most unfavorable circumstances, at least sufficiently so to prevent any violent collision.

> Before proceeding to an approximate estimate of the cost of a superior road from Lexington to Louisville, it may be remarked, that in 1837, an intelligent and enterprising Lexington to Louisville was the best then unoccupied by a railroad; that by the charter of the company there could be no rival road, and that the business was ample and sufficient to maintain one profitably. This man had been driven from eastern turnpikes by the competition of eastern railways, and his

observation is worthy of notice.

Also, that, with the exception of the iron rail, materials for a strong and durable road abound in Kentucky. The excavations would nowhere encounter quicksands; the embankments, formed of a rich, tenacious other yielding foundation; and the blackberry brief soon coats them over, and protects them from wash. Black locust and red cedar for cross-ties, and white oak for mud-sills, exist in abundance, and conveniently to the line. The furnaces and rolling mills of Kentucky make the best pig metal spike and axle iron we have ever seen, and the foundries and machine shops of Louisville turn out as good castings and machinery as any in the world. It would probably be necessary to import the rails-though this iron is now rolled both in Pennsylvania and Maryland in small quantities.

We will place the cost of rails delivered in Louisville, at \$65 per gross ton, in the following estimates:

Estimate of cost of Railroad from Frankfort to Louisville, and of re-laying road with heavy rail from Lexington to Frankfort after expiration of the lease of McKee and Swigert.

bridging, culverts, masonry,

Deduct from this as follows: Value of machinery now on hand \$30,000 Value of work between Frankfort and Louisville......100,000—130,000

Total cost from Lexington to Louisville, \$1,820,320 Or, on an average, \$19,573 33 per miletaking the line at 93 miles, which is the located distance, with all necessary fixtures and equipages. It can certainly be made for a sum not exceeding these figures. Such a road as would be creditable to the southering and western country ; not one of the numerous rattle-traps which abound south of the vie in speed, safety, elegance, durability and profit, with the ronds of Massachusetts.

In the above estimate, it must be observed that the \$560,000 expended by the old corporation is thrown out of the calculation of total and final cost, while the work done by that money is reckoned as available;—we mean the old road from Lexington to Frankfort. Including this, the cost per mile will be \$25,600—or a total cost of \$2,380,320.

The business of the road was estimated by Mr. Purcell, late engineer of the company, at 10,000 tons of freight, and 50,000

passengers. More recent experience will enable us to give a closer approximate estimate. The tonnage on the present rond-28 miles long-is 11,000 yearly, and the passengers 18,500 yearly. Now we wish this fact to be remembered: The road does not now transact the business of one-half of the country north of Kentucky river, which would look to it' for accommodation exclusively, in case a first rate railroad was erected from Lexington to Louisville. The incontestible evidence of this, is the fact, that more than one-half of the tonnage, and quite one-half of the passengers, passing up and down the river, and by wagons and stages, are not delivered at, or discharged from Frankfort, by the railrond.

The population which transacts business nearly three-fold by its completion to Louis-

be an immense enlargement of the diameter mile will give for all expenses. of patronage around Lexington, as a centre. and expedition, cannot fail in a trading community, to win new friends every day.

road. On the proposed one, they could be the year when freights are scarce.

tain or end their voyage at Cincinnati.

all proper abatements on this score, the figures constituted a good road in 1834 with those of 1845—may be safely set at 29,500 tons, and 50,000 pas- a period of eleven years! sengers through the line.

Potomac and Ohio, but a road which could business of the present road on which stock and pleted, of immense importance to the people, and coals are not handled at all, or at most, in such especially to Louisville and Lexington-even should minute quantities no not to deser ve notice.

Then, in addition to the above, it will be quite safe to add the following as accessions to the bu-

30,000 head hogs and sheep for slaughter in Louisville, at 40 cts., 5,000 head borses, mules and bullocks, at \$250. 5,000 tons coals, (30 bushels per ton =

150,000 bushels,) at 1,50. 1,000 passengers, additional, through from Louisville to Mayer ille, 3,00,

We will then have for the business of the rond, mitting the rates tather below eastern prices iverage) as follows:

29,500 tons freight at \$4,00 per 2000

\$118,000 50,000 possengers through at \$3,00, 150,000 Transportation U. S. mails, 10,000 Parcels and Express packages, 3,000 Stock, coals, and accession of passengers as above, 35,000

Total estimated business, \$316,000

The road could certainly maintain a five train business in the following manner—one passer-ger train carrying through mails—down at 30 miles per hour, or four hours through, including stoppages, &c.; one passenger do. up; one freight and passenge carrying way mails down at 15 miles per hour; one freight and passenger do up; one freight train down and up on aberpute dassey In addition to this extra trains would by the road, as it now is in use, is, according soon be required between Louisville and Frankto catimate, 41,125, which would be increased fort, and if we allow that wood trains and other extras will equal a sixth daily train (very liberal) we will have 6 trains running 93 miles each in a day-558 miles per day-203,670 miles run The effect of the road to Louisville would by engines per annum; which at 65 cents per \$142,614,50 Bal. of profit on one year's work, \$173,385,50

This gives a clear dividend of 9 per cent. on a Also an extension of collateral patronage capital of \$1,820,320, or a dividend of 8 per cent. throughout the line. Chenpness, certainty, on a capital of \$2,380,320, if we include the \$560,000 of lost and forfeited stock.

We find the preceding statement in a number of and coals, are not handled on the present moved on terms highly advantageous to the of the road, we know not, though we suppose the public, and furnish a business at a period of latter, as we have not in several years been favored with a Louisville paper—owing, probably, either to Also, a large accession of passengers the fact that this Journal, while published in octavo from the Ohio river, travelling east and south form, was charged with pamphlet postage, as well might be expected. WORCESTER AND NASHUA RAILROAD.

Choice of Officers .- The directors of the Worcester and Nashua railroad company met at Worcester, (says the Norwich Courier of the 5th inst.,) pursuant to adjournment, on Wednesday last, and completed the organization of the com-pany by electing the following executive offi-

JOHN C. HOLLAND, of Norwich, president. C. B. Long, of Worcester, treasurer and clerk, pro tem.

JOHN C. HOLLAND, Norwich, ALEXANDER DE WITT, Oxford, T. W. BANCBOFT, Worcester, Building comm. WM. D. DEARBORN, of Massachusetts, chief

An assessment of 5 per cent. on the stock sub-

scribed was made, payable on the 11th of August next.

The election of the president of the Norwich and Worcester railroad company, as president of the Worcester and Nashua company, was entirely unanimous we understand; and we may be permitted to congratulate the new company on having at its head a gentleman so admirably qualified for the duties thus devolved upon him. It will be observed, also, that President Holland has been made chairman of the committee for building the road. The inference which we draw from this circumstance is, that in the judg-ment of the Worcester and Nashua company, the true interest of the company will be best promoted by such a connection with the Norwich and Worcester road as shall place both roads under the supervision and control of a general head, and of the two companies jointly.

By such an arrangement, the road from Norwich to Worcester, and from Worcester to Nashua, will, for all practical purposes, constitute but one road. The Norwich and Worcester company would be able, at small additional expense, to operate the road the entire distance from this city to Nashua. Under such an organization as is here indicated, an immense outlay of money for locomotives, cars, and machine shop, a superintendent, conductor, and other officers, would be avoided, and the money thus saved would, of course, go to swell the dividends to the stockholders. Besides all this, the new company would at once come into possession of all the advantages derivable from having their road operated by men whose experience has enabled them to reduce the business of this road to the most perfect system and order; for we believe it to be nothing more than simple justice to say of the Norwich and Worcester road, that the country does not furnish an instance of a railroad operated with such a systematic exactness,

no curves of any consequence—has not yet ning to attract the attention of capitalists there, reached the speed of the Norwich and Worcester road. So, at least, we are informed by a gentleman perfectly conversant with both roads. Such are some of the reasons which forcibly leave it entirely. The time has gone by when ment of operations; and the road will be untwo companies. .

The arrangement above referred to will probably be advantageous to both companies. It is more economically than short ones, in proporroad will also have the benefit of the experience of those who have learned their lesson thoroughly, by practice, which will be exceedingly roughly, by practice, which will be exceedingly a railroad by some route. It is impossible to valuable to them. We hope to hear soon that prevent it—it is folly to oppose it—and it is ground has been broken.

NORWICH AND WORCESTER RAILROAD .- The receipts of the Notwich and Worcester railroad company for the month of June, just ended, have \$19,728 59

The receipts for June, 1844, were 16,492 06 Increase of last June over correspon-

ding month of last year, \$3,236 53 Such an increase as this furnishes no equivocal evidence of the rapidly increasing business and rising prosperity of the road. We are happy to add, that these increased receipts are mainly from a corresponding increase in the local business of the road—a kind of business which indicates a permanent prosperity which could not so safely be inferred from a like increase from the long travel, and through freight.

It will be seen by this comparative statement that the regular increase of business along the line of a well constructed and well managed railroad, is much greater than is generally supfactory to its friends.

VERMONT AND MASSACHUSETTS, or Fitchburg and Brattleborugh Railroad .- A meeting of this corporation was held yesterday, (says the Bosion Courier of the —inst.,) to see if the stock-bolders would rescind a vote passed some months. holders would rescind a vote passed some months ago, prohibiting the making of contracts for the grading of the road, until a certain number of this road, with the inventory of each as returned shares should have been subscribed. "The prohibitory vote was rescinded by a unanimous vote of the meeting, and the directors were instructed to proceed immediately to construct the road from Fitchburg to Athol. It is presumed termine on the point where the road shall strike Connecticut river, and we trust it will be at no public may look forward to the opening of the great distance from Greenfield."

RAILROAD TO PITTSBURG.

Public opinion (says the Harrisburg Intelligencer) seems to be setting very strong in favor The Long Island tailroad, notwithstanding its more favorable location—it having no grades and no curves of any consequence—has not yet ming to attract the attention of carried the speed of the Normal and processor of of the Normal an structed, or the western travel, which has already in a great measure deserted our state, will point to a union, so far, at least, as conducting it can injure our main line of public works. The doubtedly put under contract and progress made the business of the two roads is concerned, of the New York railroads by the side of her canals on the present season. The books of the company the north, and a series of railroads from Phila- are to be immediately opened in Boston." On Monday next, as we learn from a reliable delphia to Cumberland on the south, already source, the building committee and chief engi-neer commence the survey and final location of the road, and under their energetic management, we anticipate that, before many weeks, it will than \$208,000. This will be seen by a refer-at Oswego, Syracuse, Salina, Baldwinville and

will be a balance to credit of income of \$72,- be under contract, and in progress of construc- ence to Mr. Gay's last report. The profits on the other portions of our main line, from passengers, are nothing at all-or too small to make an item in the canal commissioners' report. Heavy freight will always take the route of our main well understood that long lines can be worked line to the west, but the passenger travel will not, and does not. It can be brought back again tion to their length. The directors of the new to the Philadelphia railroad only by a continuous road will also have the benefit of the experious railroad from Harrisburg to Pittsburg, either by the southern, middle, or northern route. Pittsburg will be connected with the seaboard by wrong to deny to that great manufacturing city of the west all the advantages which her position demands. Let it, then, be connected by a continuous route, through Pennsylvanin, with Philadelphia, and New York may make her Erie railroad, and the Baltimore and Ohio company may extend their work over mountains to Parkersburg or elsewhere, and the travel of the west will still be ours.

Let a company be incorporated at the next session of the legislature. Let the project be agitated, and we have no doubt that capitalists who are now seeking railroad investments for their money, will speedily take the stock and make the road, which will forever secure to us the and in the mean time call upon all the editors in Pennsylvania friendly to this great project to lend a helping hand.

We fully concur with the editor, that only by a continuous railroad can they secure even a fair posed. This road has numerous rivals, yet its portion of the western travel; and the sooner it business is increasing in a manner very satis- is built the better for Philadelphia, as her merchants will find, to their cost, if the work is long delayed.

> RAILROADS IN NEW HAMPSHIRE .- The Con-Meredith, Plymouth, &c., to Haverhill. The towns in New Hampshire upon or tributary to to the office of the secretary of state for the year 1844, with the population of each from the census of 1840, number 68—their inventory is \$17,-348,912, and their population 74,483.'

And Hill's New Hampshire Patriot says, that The officers of the Northern railroad, in New that the work will be put under contract with-out further delay. The next step will be to de-termine on the point where the road shall strike Connecticut river, and we trust it will be at no road from Concord; through Lebanon, to the mouth of White river, and thence in connection with the Vermont Central road to Burlington, Montreal, and the northern lakes, just as soon as relied on with the utmost confidence. The stockholders are to meet at Concord, on the 8th inst., to adopt measures for an immediate commence-

The hereafter. [Sunbury paper.] Boston. The democrat submits the follow-completion of the Canadian works on the St. ing estimate, which it says approximates the Lawrence will throw New York upon her truth sufficiently near for all practical purpo-last resort to save the western trade, and put

How much there is in the pretended dan ger of Boston's taking the western trade by way of Ogdensburg, the public can judge from the facts in the case. Ogdensburg is 160 miles below Oswego, and further from Boston than Oswego is from New York. The Hudson is navigable later in the fall, and earlier in the spring, than the St. Lawrence at Ogdensburg. Flour is now shipped from Albany to Boston for 15 cents, and are higher than is actually charged on the Oswego route, and it costs 63 cents to transport a barrel of flour from Cleveland to New the same place to Boston, 72 cents by way of Ogdensburg, allowing only 2 cents for 160 miles of lake navigation.

We cut the comparative statement in the precedtion in the Journal, but on receiving the Oswego Whig, we find that it has not lost by the journey beprevent the diversion of trade which must tions in full. Perhaps we ought to have waited ensue, if the Ogdensburg road is built, and another week that we might give it with still further is found capable of conveying freight at the comments from those sensitive and ever ready but courteous directors of "public opinion" at Ogdens-There are several ways, says the Demo-burg, from whom we have not heard in an age, though we are bound to soon, or they will from us.

proving its cheapest route, an advantage con-other for making iron. But we may offer a ceded to the Oswego route. This result is more enlarged view of this subject, tn rela-

RAILWAY ACCIDENTS.

We like the manner in which they regulate their an end to all attempts at discriminating the dark spots that all may see what is the operation railway affairs in England. Light is thrown upon of the whole system; the utmost vigilance is required by the companies from those who have the management of the details. The following statement in relation to accidents on the English railways during the quarter ending April 1st, is from the first number of the Railway Express.

Cheap Rail Way Travelling .- No less than 60,000 children were conveyed last week by the Manchester and Leeds company, a distance of 100 miles, at 6d. each, as a holifrom Albany to New York for 8 cents.—day trip. This is cheap indeed, but we dare say it paid the company well, obtaining by it a gross return of £1,500. We cannot vouch for the accuracy of the above figures, but we believe, from the source from which we de-York by way of Oswego, while it costs from rive our information, that they are nearly correct. There are, we know, upwards of that number of children in the public schools in Manchester, and we have no doubt that the clever managers of that line would readily adopt a means to decoy the little rogues into a holiday trip through one of the most delightful parts of the country at a next to nothing fare, such as the whole world of schoolboys could well afford, at the same time securing to themselvet a good profit.

Railway Accidents .- The railway department of the board of trade have issued their report of railway accidents for the quarter ending April 1, 1845. The public are generally aware, we presume, that, whenever an accident occurs on any line of railway, the de-The Connecting Railroad between Sunbu-tails and result must be reported to the board ry and Pottsville.—The prospect of comple-of trade. It appears from this return that make the income from it support all the lat-ry and Pottsville.—The prospect of comple- of trade. It appears from this return that eral works in the State. The former would ting the connection between the Sunbury thirty-nine occurred on railways in Great Brithrow off 10 or 12 cents of the difference be- and Shamokin railroad, otherwise misnamed tain in the months of January, February, and tween the routes, and the latter would render (Danville and Pottsville,) and the great rail- March; that twenty-two lives were lost, and road extending from Philadelphia to Read-seventeen persons injured by such accidents. The first remedy here proposed, the ening and Pottsville, is recently becoming bright. The Sun says:—" It is a remarkable fact largement of the Eric canal would increase er, and the day of its commencement cannot that all the fatal accidents (which amount to above estimate, constitute more than one-half adiligent exploration of the ground over which eleven years of age, were killed. The other the charges for transportation, and which in the connecting railway is to pass, and the reaccidents, not fatal, bear about the same profact form two thirds of the charges at the result of two weeks' careful examination is portion. Indeed, the accidents by railways present rates. Of course all the reduction known to be quite satisfactory. We have a place by occupant of what formerly took that could be made on an enlarged canal, much reason to believe that the road will place by occupant the result of two weeks' careful examination is portion. Indeed, the accidents by railways are not one-quarter of what formerly took that could be made on an enlarged canal, must come from the one-third now charged be shorter, the expense of construction less, who laid across the rails in front of an apfor transportation, the whole of which would and the tonnage transported upon it much proaching train and was run over; and the scarcely cover the difference which the Dem-ocrat makes in favor of the Ogdensburg route. Besides other materials of transportation, we This, then, leaves a total of two passengers, The 2d remedy means nothing more or less, are well satisfied that the immense iron out of the thousands who travelled on railwe suppose, than discriminating tolls, a raworks, at Danville and its vicinity, will rether impracticable proposition.

The Democrat's premises give to the Osetc., passing over the new and the present road,

One of these jumped out of a train in motion, wego route an advantage of 12 cents on a twenty miles or more. The amount of iron and the other fell from the front of a secondbarrel of flour, over the Buffalo and Erie sent back, from these works, in every form canal route, showing conclusively, what the and variety,—and sent the whole extent of the true policy of the State is, if there is anything in the pretended danger of diversion of the western trade by the Ogdensburg route. The amount of hour and the control of a second-class carriage in motion. Thus each catastrue policy of the State is, if there is anything in the pretended danger of diversion year,—will be an important acquisition. As the safest, as well as the swiftest, mode of of the western trade by the Ogdensburg route. regards the coal, there is no mistake; for the

The Copper Trade-England and Amer-|circumstances have rendered them unproducica .- In 1842, in company with some friends tive. The ground on which the principal I visited the rich mineral district of Bayatavo. Then there were a few old excavations, some 15 or 20 feet deep, found in various parts of that metallic region, supposed to have been made some centuries ago, by persons in search of silver, of which the copper ores in my mines produce, in some instances, a small quantity. These excavations were generally made on indications of small veins of copper ore traversing the surface rocks, and may be found from one extreme of Cuba to the other. After being satisfied with the rich external appearance of things, I procu-than at present; for on all my ores shipped red a mining captain from Cornwall, review-to Europe thus far, the expenses, from the ed again the grounds, and finally located myself in the spot designated on the large maps of Cuba as "Las Minas," a little more than 20 miles from the port of Nuevitas, and within 300 yards of the line of railroad from that place to Principe. I commenced working on a most perfect run of gossan as was ever seen, encountered green carbonates, red ox- [Lond. Mining Journal, June 7th, 1845.] ides, and lighter surface ores, and at the depth of about 25 feet came to a rich lode of black of about 25 feet came to a rich lode of black. It has been noticed in the Times, that the to the purchaser the expense of turning them out in-ore, changing a little its character, till at 90 Pacha of Egypt has engaged the services of side. FRENCH AND BAIRD'S PATENT SPARK ARRESTER.

TO THOSE INTERESTED IN Railroads, Railroad Directors and Managers are respectfully invi-ted to examine an improved SPARK ARRESTER, recently patented by the undersigned.

Our improved Spark Arresters have been extensively used during the last year on both passenger and freight engines, and have been brought to such a state of perfection that no anarray are form that no anarray are form that the such as noyance from sparks or dust from the chimney of engines on which they are used is experienced.

These Arresters are constructed on an entirely different principle from any heretolore offered to the public. The form is such that a rotary motion is imparted to the heated air, smoke and sparks passing through the chimney, and by the centrifugal force thus acquired by the sparks and dust they are separated from the smoke and steam, and thrown into an outer chamber of the chimney through openings near its top, from whence they fall by their own gravity to the bottom of this chamber; the smoke and steam passing off at the top of the chimney, through a capacious and unobstructed passage, thus arresting the sparks without impairing the power of the engine by diminishing the draught or activity of the fire in the furnace.

These chimneys and arresters are simple, durable and neat in appearance. They are now in use on the following roads, to the managers and other officers of which we are at liberty to refer those who may desire to purchase or obtain further information in regard to their merits:

E. A. Stevens, President Camden and Amboy Railroad Company; Richard Peters, Superintendant Georgia Railroad, Augusta, Ga.; G. A. Nicolls, Superintendant Philadelphia, Reading and Pottsville Railroad, Reading, Pa.; W. E. Morris, President Philadelphia, Germantown and Norristown Railroad Company, Philadelphia; E. B. Dudley, President W. and R. Railroad Company, Wilmington, N. C.; Col. James Gadsden, President S. C. and C. Railroad Company, Charleston, S. C.; W. C. Walker, Agent Vicksburgh and Jackson Railroad, Vicksburgh, Miss.; R. S. Van Rensselaer, Engineer and Sup't Hartford and New Haven Railroad; W. R. M'Kee, Sup't Lexington and Ohio Railroad, Lexington, Ky.; T. L. Smith, Sup't New Jersey Railroad Trans. Co.; J. Elliott, Sup't Motive Power Philadelphia and Wilmington Railroad, Wilmington, Del.; J. O. Sterns, Sup't Elizabethtown and Somerville Railroad; R. R. Cuyler, President Central Railroad, Company, Savannah, Ga.; J. D. Gray, Sup't Macon Railroad, Macon, Ga.; J. H. Cleveland, Sup't Southern Railroad, Brooklyn.

Orde

Orders for these Chimneys and Arresters, addressed to the subscribers, or to Messrs. Baldwin & Whit orders for these commeys and Arresters, addressed to the subscribers, or to Messrs. Baldwin & Whitney, of this city, will be promptly executed.

N. B.—The subscribers will dispose of single rights, or rights for one or more States, on reasonable terms.

Philadelphia, Pa., April 6, 1844.

ROGERS, KETCHUM & GROSVENOR,

a45 Paterson, N. J., or 60 Wall street, N. York. NICOLL'S PATENT SAFETY SWITCH for Railroad Turnouts. This invention, for some time in successful operation on one of the priucipal railroads in the country, effectually prevents engines and their trains from running off the track

at a switch, left wrong by accident or design.

It acts independently of the main track rails, being laid down, or removed, without cutting or displacing

It is never touched by passing trains, except when in use, preventing their running off the track. It is simple in its construction and operation, requiring only two Castings and two Rails; the latter, even if

much worn or used, not objectionable.

Working Models of the Safety Switch may be seen at Messrs. Davenport and Bridges, Cambridgeport, Mass., and at the office of the Railroad Journal, New York.

Plans, Specifications, and all information obtained on application to the Subscriber, Inventor, and Patentee.

THE AMERICAN RAILROAD JOURNAL is the only periodical having a general circulation throughout the Union, in which all matters connected with public works can be brought to the notice of all persons in any way interested in these undertakings. Hence it offers peculiar advantages for advertising times of departure, rates of fare and freight, improvements in machinery, materials, as iron, timber, stone, cement, etc. It is also the best medium for advertising contracts, and placing the merits of new undertakings fairly before the public.

RATES OF ADVERTISING. One page per annum. \$125 00 im portance, which occurred some few days One square \$15 00 phia, Wilmington and One column \$8 00 phia, Wilmington and One column \$8 00 baltimore railroad. One square \$250 On the passage of One square ". " Professional notices per annum.....

He will also act as agent for the sale or purchase of machinery, and of patent rights for improvements relating to public works.

KITE'S PATENT SAFETY BEAM.

MESSES. EDITORS.—
As your Journal is devoted to the benefit of the public in gen-eral I feel desirous to communicate to you for publication the fol-lowing circumstance of no inconsiderable

On the passage of the evening train of cars from Philadelphia to this city, an axle of our large 8 wheeled passenger car was broken, but from the particular plan of the construction, the accident was entirely unknown to any of the passengers, or, in fact, to the conductor himself, until the train, (as was supposed from some circumstances attending the case,) had pass-ed several miles in advance of the place where the accident occurred, whereas had the car been constructed on the common plan the same kind of acci-

dent would unavoidably have much injured it, perhaps thrown the whole train off the track, and seriously injured, if not killed many of the passengers.

Wilmington, Del., Sept. 28, 1840.

The undersigned takes pleasure in attesting of the value of Mr. Joseph S. Kite's invention of the Safety Beam Axle and Hub for railroad cars. They Safety Beam Axle and Hub for railroad cars. They have for some time been applied to passenger cars on this road, and experience has tested that they fully accomplish the object intended. Several instances of the fracture of axles have occurred, and in such the cars have uniformly run the whole distance with entire safety. Had not this invention been used, serious accidents must have occurred.

In short, we consider Mr. Kite's invention as completely successful in securing the safety of property and lives in railroad travelling, and should be used on all railroads in the country.

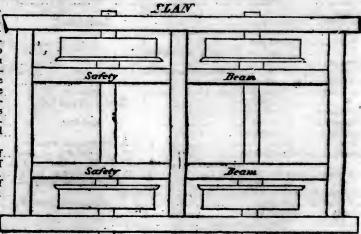

In short, we consider Mr. Kite's invention as completely successful the country.

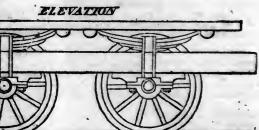

and lives in railroad travelling, and should be used on all railroads in the country.

JAMES ELLIOTT, Sup. Motive Power,

JOHN FRAZER, Agent,
GEORGE CRAIG, Superintendant,
JAMES ELLIOTT, Sup. Motive Power,
W. L. ASHMEAD, Agent.

TA model of the above improvement is to be seen at the New Jersey railroad and transportation
files, No. 1 Hanover st., N. York.

PATENT CAR AND TRUCK. DAVENPORT & BRIDGES'

DAVENPORT & BRIDGES' IMPROVED PATENT IRON TRUCK FOR RAILROAD CARS, is presented above, and the attention of Railroad Companies is respectfully invited to the following description of their justlycelebrated invention:

Companies is respectfully invited to the following description of their justly-celebrated invention:

Fig. 1 of the drawing above represents a top view or plan of our Improved Railroad Truck. Fig. 2 is a central, longitudinal, and vertical section. C, Fig. 1 and 2, represents the arched bars of the side trusses: they consist of two long bars of plate iron (about three inches wide by seven-eighths of an inch thick,) bent into the shape as seen in drawing 2. Each of them is placed directly over a flat and straight tie bar, A, which extends from one end to the other, as seen in Fig. 2. These parts, so arranged, receive between their ends what may be considered as side trusses and diagonal cross braces, rest at their ends upon four pedestals, F, F, which receive the bearings or boxes for the axles to run on. Another flat tie bar, P, extends from the under side of one of the pedestals, and on each side of the journals of the axles, O, O, in the positions represented in the drawings. From the above it will be seen that there are two bolts to each pedestal, and that this number is all that is requisite for the full security of the bars and pedestals together. The body rests and moves upon two sectional supports, D D, arranged on the sides of the truss frames, as seen in Fig. 2; they extend somewhat, or a sufficient distance above the truss frames, and are jointed at their lower ends by means of a bolt, L, which rests upon the top of the bars and pedestals together. The body rests in the truss frame, and rests upon the top of the bar, A, and rests upon the top of the bar, A, and the inverted strap, E, which strap passes over and rests upon the top of the bar, A, to the arched bar, C.

Two bands, N, N, are passed entirely around the central part of each truss frame, the object of the same being to transfer the strain, or a portion thereof, of the spring, from the tie bar, A, to the arched bar, C.

These Trucks are adapted as well for eight-wheeled passenger cars as for baggage and freight cars, giving to each a more agr

MISSISSIPPI AND THE LAKES

We find the following article in the National Intelligencer, copied from the Cincinnati Atlas, descriptive of a new route to the Mississippi. There was an effort made in '37 or '38 to open a communication by canal between these waters. A charter was obtained and the work, we believe, commenced, but the disasters of that period prevented its completion, at that time. It will, however, be again resumed and completed, when it will become a thorough-

We mentioned a few days since, on the authority of the Buffalo Commercial, that Captain Hotaling had succeeded in establishing a line of steamboats between Green Bay, on lake Michigan, and the Mississippi. This route is said to be one of the most picturesque in the United States; and will, in the course of a few years, become a favorite with the pleasure-hunting portion of the community, if for no other purpose than for the beauty

From a notice in the Galena Gazette of an experimental trip of the Maid of Iowa, we learn that she ascended the Wisconsin as high as Point Boss. That point is at the lower end of the rapids of the Wisconsin, and is the southern extremity of the great Northern Wisconsin Pinery. It is 130 miles above fort Winnebago, and 100 miles above where any steamboat has ever before been. She passed the dreadful Dells, which are mentioned so often by Indian traders, and which map-makers note so particularly. No one can form any idea of the grandeur of these rocks, which the river passes through. They are 8 miles in length, from the head to the foot, and present the most wild and picturesque view imaginable. For the distance of one mile the Wisconsin is crowded into a space of less than 50 feet in width, and the rocks on either side project in awful gran-deur and sublimity. The gulf of Niagra is nothing to it. The Maid crowded herself through it by steam, going up, and returning dropped through with an oar on each end to keep her straight, such as are used by raftmen in running lumber.

The Maid of Iowa will be run as a regucommercial states. The travel of these two of the most perfect works of the kind on the lar packet between Galena and fort Winnebago, where she will connect with the Man-With such advantages, present and per-chester, running on lake Winnebago. On cheap, and pleasant route of 502 miles spective, this cheap, short road, of 35 miles, this end of the route, the Enterprize, thus circuitous one through the large lakes of 803 for the immense commerce which awaits it na to Green Bay. The Maid of Iowa and at no distant period, cannot disappoint its Manchester come within sight of each other This northern travel, therefore, of Iowa projectors and patrons, but must, with ordi- at fort Winnebago, and have their trips so arand Wisconsin, and the shores of lake Su-nary skill and prudence in its management, ranged as to meet there each time, where a portage of one mile only divides them. The Manchester and Enterprize are also seperated by a portage of 61 miles at the outlet of the lake. Thence to Green Bay there is no obstruction-making the whole distance from the Wisconsin to the great lakes with but 74 miles of land carriage.

It is the intention to keep up the line thoughout the season of navigation, and by it, the Gazette says, goods can be delivered from the lakes, at any point on the Mississippi above Galena, for \$1.25 a hundred pounds.

We are obliged to the friend who sent us the following notice of an article published in We can well imagine a difference between a bridge for a common country, or village road, and one for such a business as that of give us a more definite description of the bridge referred to?

Mr. EDITOR:—A correspondent of the American Railroad Journal, who signs him-self "J" makes some supposed corrections on the article which appeared in you paper a would give important facilities to the business comfew weeks ago relative to the iron bridge on munity. And such a line will yet be established, bridge put up in this country, as there are We might cite the Western road from Worcester miles an hour; no lives, however, were lost, and

Erie canal—and as to the superior strength quite ready to speak. of the Erie canal bridges I cannot speak, as "J" has not informed us of the kind of structure, but if he asserts that the Erie canal bridges are capable of passing engines weighing 19 tons, and drawing a load of 110 cars, weighing in the aggregate 800 tons, it will be time to talk of the relative strength of the bridges. Yours,

#### WASHINGTON RAILROAD.

The question of a reduction of the fare on this road was again brought before the board of directors of the Baltimore and Ohio railroad company, at the meeting of yesterday. At three several meetings heretofore, the board was equally divided on the question, but yesterday there was a majority in favor of reducing the fare to two dollars, and it was accordingly determined that the fare should be at that price on and after the 14th instant. This is a good step, but it does not, we think, go far enough.

The Baltimore American of 10th inst. has the ken freely on the subject, as our readers are fully aware, and shall have more to say hereafter in relation to it, when the present movement shall have would result from a bold, liberal reduction; such as is manifestly called for by the spirit of the age, to confidence to believe that the managers of the road -109.590 act from what they deem the best interests of those 34,614 who have invested their capital in the work; altho' 29,256 we must still entertain and inculcate the doctrine roads between New York and Washington, would especially be benefitted by such a policy, low fares railroads to facilitate the business of that country. and high speed, as thousands of our citizens would From reading the railway papers only, one is led travel were lower and less time were consumed.

Why should a person on going to Washington

now on the Erie canal two or three iron to Albany as an evidence of high fares-that is com bridges of greater dimensions and of a supe-paratively high-driving passengers by the way of rior kind of structure. I would inform "J" New York, simply because they can travel 350 miles that a railroad bridge was alluded to, and by the way of New York, cheaper than 200 miles not a highway bridge, such as are over the over the railroad; but upon this subject we are not

The Britannia, from Liverpool, arrived at Boston on Saturday morning last, by which we received the Railway Express of the 20th, and the Railway Record of the 14th and 28th of June-but our regular files of Herapath's Journal, the Railway Times, and the Mining Journal have neither of them come to hand. We are fortunately, however, supplied with a file of Herapath's Journal to the latest date - by the Great Western, which arrived at this port on Monday morning - from a liberal friend, an eminent merchant of London, to whom we have been often before indebted for similar favors, as well as for occasional ably written communications, in relation to important subjects, in which our readers are deeply interested. For the one which we lay before them in this number from the same source, we ask the attentive perusal of all in this country who take an interest in railroads. We know well that few Americans have been more deeply interested in the success of railroads than the writer of the letter referred toand none would derive more pleasure from their extension, and ample success, than he, and the above paragraph in relation to the reduction of fare house in a neighboring city, of which he is a memon the Washington road. We have heretofore spo- ber. We are fully aware of the inconvenience, and labor we have given him by our former request and desire to tender our thanks for the past; yet we cannot well avoid soliciting from him a conhad a fair trial. We do not, however, anticipate tinuance, as opportunity may allow, of his favors from so modest a movement, the full benefit which for the Journal, as we are sure that good will result to the cause from them.

We find, on referring to our papers, that the sub-1-50 through, or \$2 for the round trip, the same day; ject of railways continues to occupy, as heretofore, yet we will give it a fair trial, as we certainly have the attention, not only of speculators, but also of capitalists, both in and out of parliament-not only in England, but also in all Europe. So great, indeed, is the confidence in their value in aid of we must still entertain and inculcate the doctrine, business that they are to be introduced into India on that "low fares and high speed for passengers" will, a large scale. An engineer has been recently apon most railroads in this country, tend to increase pointed to proceed to India, with a salary of £4,000 the profits of the shareholders. And we think the per ann., for five years, and £500 for expenses out and the same in, to lay out a general system of

like to, and would visit Washington if the rates of to the conclusion that scarcely any other business than railway legislation occupies the attention of parliament. Rival lines and rival gauges give be compelled to sleep on the way? He may do so rise to a vast deal of manœuvering and eloquence, the Journal of the 3d July, in relation to twice if he chooses, yet there should be one train a and an abundant harvest for solicitors. "The war iron bridges, as we do not receive the An-day, leaving New York at 5 P.M., by which passen- of the gauges," as it is termed, is calling out great thracite Gazette in which it was published gers may be in Washington, certainly by 8 o'clock efforts from the friends of the original-or narrow next morning and at a cost not exceeding \$5. Then gauge—to prevent the adoption of Mr. Brunel's people might go to Washington, transact business broad-or 7 feet-gauge, as on the Great Western, and be at home again in 36 to 38 hours, and at a while the friends of the latter are equally active cost of 12 or \$13. A through ticket for \$5, to be and have even been successful in the commons—to the Reading railroad. Will "M" please divided, \$2 to Philadelphia, \$2 to Baltimore and \$1 establish the broad gauge on certain important to Washington; with an average speed of 20 miles lines and their branches. It has been held by the an hour, would add vastly to the travel over these friends of the broad gauge that there was less liaroads, and we have no doubt that it would within a bility to accident upon them at high speed, than year, materially increase the income. Such a upon the narrow track; but the recent accidents line to carry the great south mail, merely leaving upon the Great Western railroad were altogether. and receiving mails at Philadelphia and Baltimore, inopportune to give force to that argument. It was exceedingly fortunate, and indeed almost a miracle, that more damage, both to life and property, was not

(Foreign Correspondence of the American Railroad Journal.) 21 TOKEN HOUSE YARD, London, July 4th, 1845.

DEAR SIR: - Excessive occupation has prevented me from replying to your esteemed favor of the 21st March, before. I have from time to time, sent you out the Railway Journal, and yesterday by the Great Western I put up six numbers by a friend, which I hope will reach you safely. I have had conversation with the editors of the railway papers here, who feel no interest whatever in American railways, neither has the public at large. There are some English interested in the Reading railroad, and in the Lehigh Navigation co, but such is their distrust of these and everything else American, owing to the delinquency of Pennsylvania and Maryland and the other defaulting states, that they will sell out as soon as they can, and have nothing more to do with our unfortunate country, whose reputation has been so wonderfully lowered in the last five years, that, although this is the anniversary of her political birth, not an American is willing to acknowledge it, by celebrating a day that ought always to be held sacred by our countrymen. This was not the case a few years ago, before our country became the bye-word of contempt and dishonor; for Americans were then proud of the land of their nativity and always celebrated the 4th of July with the utmost zeal and enthusiasm. I do not think the English will for the next twenty years feel any interest in our railways, for Holland, Belgium, France, Germany and even Italy, Spain and Portugal are much nearer and appear to engross all the spare capital that cannot find employment in the magnificent railway enterprizes of this country. We had previously to 1840 a command of the purse of England, but we have lost the confidence of this people and I fear that in neither your life time nor in mine will it be regained. Money is cheap here, 21 per cent. for discounts, but none will go into American enterprizes. I am very sorry I cannot give you any information respecting the nature of the agreement made by the post office and the railways here. All I can say is, the system pursued by this government is liberal in the extreme, and highly remunerative compared with the niggardly system pursued by our government to the railways of the United States; whereas it ought to be precisely the reverse, for in Great Britain the railways could well do without the assistance of government, while in our country, railways are generally supported very poorly by the public, and are not remunerative to the proprietors, and therefore a paternal government ought to make great exertions to aid in all legitimate ways this incalculably valuable system for the promotion of civilization, prosperity and happiness of an immensely extended empire like ours. I am assured that our government has adopted a lower rate of postage, but it is a pitty they did not resort to an uniform low rate, say 5 cents per half ounce. In Great Britain the letters in 1844 had got up to the Great number of 242,000,-000 from 75,000,000 before the penny postage was adopted.

I am glad to say that iron is decling here. I think if I had cash in hand I could execute orders for rails, such as are sent out to the United States, at £9 per ton, free on board at Cardiff; but as long as the unwise duty of \$25 per ton exists in our country it is not to be expected that many railways will be made unless wood be resorted to; for our Pennsylvania iron masters have not the ability to make railway

demand for ship building and house building, indeextraordinary. You have already published in gratification. your Railway Journal the fact that one house in

vor to give an account of the accident when we to contract with them. In Pennsylvania the iron ships (for sails) for colliers, and I have to inform furnaces are blown out in the month of November you that one ship building house here employs noor December, and are not relighted until February thing but iron, and that they have on their stocks or March, whilst in this country a blast furnace is constantly seven iron steamers, and as fast as one is constantly at work, the fire never ceasing day or launched another is commenced on the ways she has night for 12, 15, and 20 years, and I can mention just left. This house had on their books orders for furnaces in South Wales that have been in blast for 83 steamers a few months ago, how many they have twenty-five years. With the want of science, skill, now I know not, but probably many more, as the capital, and experience, how is it to be expected popularity of iron as a material for building vessels that the iron masters of Pennsylvania and Mary- is constantly increasing. The number of iron vesland can make railway iron as fast as our rail-sels building by other houses in London, besides ways want it. I am told the Mt. Savage iron works Hull, New Castle-on-Tyne, Leith, Dundee, Aberin Maryland is making one hundred tons per deen, Glasgow, Liverpool, Bristol, &c., &c., would week of railroad iron, and that at the Great West-really surprise you if I had the time to collect the ern, near Pittsburg, in Pennsylvania, some railway facts on this subject. The consumption of iron for iron is being made; but when thousands and tens of house building, particularly for roofs, floors, joists, thousands of tons are required weekly, how ridicu-colums, window sills and shutters, and other parts lous it is to depend on our own resources; particu- of houses, is very rapidly increasing. The conlarly when so many thousand tons of pig and bar sumption for other purposes is also rapidly increasiron are wanted, which cannot be made in this coun- ing, and I will mention only one more fact to illustry, but are obliged to be made and imported from trate this. I took some American friends, a short Russia, Sweeden, Norway, and Great Britain. The time ago, to the engineering establishment of Sir manufacture of pigs and merchant bars require less John Rennie to see nine pairs of hugh gates intended capital, skill, and experience, and are much more for the locks of the dock of the great government naremunerative than railway iron. Let the American val station of Sebastipole, in South Russia. These iron master confine himself to these articles, and gates of course consisted of cast iron ribs and ties, also boiler iron, axles, and cast iron of all kinds, and the filling up was of wrought (boiler) iron, and and he will have full employment; and if they will were 64 feet broad by 32 feet high, and each gate allow railways to get their supplies of rails at \$25 weighing nearly 100 tons, making 1800 tons of iron per ton cheaper, from Europe, than they now do, for these 18 gates. I should weary you if I were to they will promote the construction of railways, continue to relate facts to show the greatly increaswhich, in turn, will consume, for locomotives, ten-ed consumption of iron because it is cheap. It will ders, axles, wagons, turntables, chairs, &c., &c., a be so in our country also if we reduce the price, and ton of iron for every ton of rails laid down upon the the iron masters in the United States will be more road. All the iron required for railway purposes, profited by selling 1000 tons at \$50 per ton than by except the rails, must be made in our country, and selling 500 tons at \$75 per ton. Nothing stimulates if you encourage the making of roads by the reduc-consumption so much as low prices, and nothing tion in the price of rails, by the amount of the duty, checks it so much as high prices. I am rejoiced (\$25 per ton.) by so much do you encourage the that there is a prospect of a railway from New Enconsumption of American iron for railway purpo-gland to Montreal-whether it be to connect New ses as pointed out above. But keep the railway bar York, or Boston, or Portland, with the Canadian at \$25 per ton higher than it ought to be and you di-capital is not of much moment to the public, but minish the consumption of American iron by every that it should be formed with one of the American ton that would be required to make the accessories cities is of vast importance, and will, I hope, be carnecessary for transportation on the railway. If this ried out. I was sorry to see the counteracting efis doubted, ask the Reading railway company if a forts of the Canadian government to render our pound of English iron has been used for the loco-drawback law inland inoperative. But our conmotives, tenders, wagons, turntables, axles, &c., gress did not act liberally, for the retention of 21 &c. All have been made of American iron, which per cent. of the duty on goods exported inland ought never would have been used, or required, if the En- not to be. When I was in France, a few months glish rails laid down on the road had not called for ago, I saw bags of American cotton going from the use of those article, which are exclusively made Havre across the whole breadth of France, destined of American iron. If this be a correct view, and I for Switzerland and Germany, with nothing but a have some right to think I am correct, for I speak piece of lead, stamped with the custom house mark, from thirteen years experience, is not the Pennsyl- to show they were destined for foreign countries. vania or the Maryland iron master the very one The duty was nil, and the whole expense of going who should make the greatest exertion to have the through the Havre custom house was 5 centimes, or repeal of the duty on railway iron effected with as I American cent! whilst our custom house requires little delay as may be. Just in proportion as you oaths, certificates, bonds, and formalities of every reduce the price of iron do you increase its con-kind. When will governments learn wisdom and sumption, for it is an article of the first necessity of leave commerce free and unshackled from all recivilized life after food and raiment. In this coun-strictions? Oaths and quarantines are the opprobria try the consumption is for a most astonishing of a civilized and commercial nation, and custom amount, and it is applied to purposes unknown in houses are not much better. The most prosperous our country-indeed it is becoming the substitute nation of the world, considering circumstances, the for wood for almost all purposes. The increased Swiss, have no custom house whatever. I shall always be happy to serve you and be useful to you, pendently of the increased demand for a most active and I will continue to send Herapath's Journal, and prosperous state of general trade, to say nothing which I exchange with him for yours, which I asof the requirements for railway purposes, is most sure you I always read with infinite pleasure and I am, dear sir, Yours, most truly, GERARD RALSRON.

TORONTO AND LAKE HURON RAILROAD.

A single number of the British Colonist, a paper published at Toronto, Canada West, has come to don, Chatham and Windsor. hand, in which we find several articles in relation to the above named railroad. The editor of the Colo nist has some very sensible remarks in relation to the routes and termini proposed by interested parties which ought to be generally read. . There is nothing more true than his remark that the "termini of the railroad cannot be everywhere," nor can the road pas every man's door, nor indeed every village, therefore we adhere to our favorite theory, of deciding the question of route and termini, all else being equal bb the instruments, rather than by the personal interest of any individual. The interest and convenience of those who pay for the use of the work, as well as of those who receive the profits, are to be consulted always.

formation respecting this great undertaking travelling from east to west, and from west to We refer particularly to the proceedings of held lately at Detroit, in Michigan. #### NEW HAMPSHIRE LEGISLATURE.

We observe in the last Patriot, a letter tion. The legislature, in its superior wisdom, pas- in Boston. signed "Locomotive," in reference to a new sed a law requiring railroad companies to obtain difficulty in securing the necessary capital, upon a solid and fair basis, in every way favorable to the present and future credit of the vorable to the present and future credit of the province. We have said that the plan of Locomotive" is feasible. It will be considered a man to vote upon the have advertised a meeting of the stockhold-

legislature. To those of our citizens who of operations."—Ib.

The plan of "Locomotive" is to run the are interested in railroad and manufacturing corporations in that state, the removal of this vexatious and unnecessary incumbrance upon their property must be a source of gratulation; but not more so to them than to the people of New Hampshire, that a policy, more congenial to the true interests of the state, and with more regard to the just rights of corporations, has been adopted. The leader of the radical force in the legislature, having acquired glory enough for one session, was induced to forego open opposition to this bill, which was so drawn up as to recieve the official sanction of Gov. Steele, and it may be that this modified compromise may be so guarded as to be conducive to the interests of both the state and the corporators. Hill's Patriot has the following synopsis of the bill:-

It authorizes corporations to make by-laws, providing for the representation of stock, no the meeting at Guelph, and the report made miles, between the proposed line and one from one person being allowed to represent more than a fiftieth part of the capital. Stockolders in corporations are authorized to appoint which are admitted to be embodied under the proxies for the representation of their property, but no such proxy is allowed to vote on the shares of more than one individual. A, with the hope that the right path will be discovered at last, and that the disputants about undertaken and speedily completed, it would it amounts to only one, or any number of ly be acknowledged the best; that they will agree to travel the road when the rails are for its fortility and its most of the shares not exceeding a fiftieth part of the whole number—whether B's stock amounts agree to travel the road when the rails are for its fertility; and it would, moreover, com- in value only to \$100, or, as in some cases, laid without quarelling! We even think mand the favorable interest of the govern- \$50,000, or perhaps \$75,000. But A canment; the acknowledged weighty influence of not act as proxy for B and C, at one and the

THE RAILROADS OF BELGIUM, With a notice of the other modes of internal communication-translated and abridged from "La Belgique et' les Belges," by Maj. G. T. Poussin, formerly of the U. S. E.

BY G. C. SCHAEFFER, C. E.

The Belgians, famous for their agriculture, remarkably industrious, and almost as enterprizing and commercial as the Americans, have always justly estimated the importance of an easy transport "heel path" is generally as wide. of the products of the soil or of their manufactures. At a very early period, great attention was paid to the improvement of the means of transport, but feet 9 inches go to Brussels, occasionally lightening in relation to receipts and expenditures. It will be within a few years the extension of their system of their draught. The interior slope varies from 45 to communication has been immense—the whole coun- 65 degrees. The whole descent is 48 feet, overtry is intersected with railroads, canals, and rivers, besides numerous and excellent common roadsand Belgium in this respect is superior to France, or even England, although inferior to the United

COMMON ROADS.—These are divided into four classes-state roads, provincial roads, chartered ral vessels at the same time. It is fed by the Sonne roads, (routes concedes,) and country roads.

There are at present,

2,156 miles of state roads. 1,053 provincial roads, 301 chartered roads,

3,510 miles of paved roads.

The country roads are very numerous.

The Belgian roads are generally very well constructed, are almost all of them planted. The charge of all work pertaining to them is given to the corps of bridges and roads.

The expense of maintaining the roads absorbs the whole income of the tolls, which is entirely devoted to this purpose. The capital invested by the state has never, in the most fovorable times, paid more than three-fourths of one per cent., and since the establishment of railroads, has barely paid, or even sometimes fallen short of, the expenses. The influence of the railroads in diminishing the travel on the ordinary roads has, therefore, not amounted to much, for while it has lessened the travel of the parallel, it has increased that of the transverse, lines.

Suitable provision is made for the opening of new roads, and every pains taken to maintain even the county roads in good order at all seasons.

NATURAL AND ARTIFICIAL NAVIGATION.—The situation of Belgium is remarkably favorable to communication by water, both by rivers and canals. Three great basins are comprehended within its territories-portions of the basin of the Scheldt and of the Meuse, and nearly the whole of the valley of this purpose, as well as for the purchas the Yser. The tide flows throughout nearly the whole extent of them.

of the kingdom, while, of the numerous tributaries, the highest levels are not more than 100 feet above mean tide at Antwerp-a remarkably favorable condition of country for the construction of canals. The other basins, though less extensive, present the portation on the canals reduced to 2, to 4, or, same advantages.

These remarkable natural advantages caused the Belgians, as early as the 12th and 13th centuries, to at most, 1 cent and and this per ton per mile. devote their attention to commerce, and the first fruits of the spirit of improvement were the ship ca- of Belgium is 439 miles. nals of Bruges and Ghent.

Towards the end of the 15th century, the im-provements pays nearly one per cent. provements of the upper Scheldt were commenced;

dinary effort, made itself a sea port by its famous length, of great depth, and traversable by ship canal.

The canal of Brussels runs nearly north and south, commencing in a large basin within the city and terminating in the Rupel, a branch of the Scheldt. Its length is 13 2-3 miles-its width at the surface varies from 100 to 166 feet. There are five levels. The tow path is generally from 27 to 33 feet in width, but is never less than 20 feet. The

The mean depth, with the water at the ordinary level, is 10 feet 2 inches, but vessels drawing 10 years shows an exceedingly favorable result, both come by 5 locks.

This canal was commenced on the 16th of June, 1550, and was finished in 1561, long previous to any other work of the kind in Europe.

The locks of the canal of Brussels are at present 24 feet 7 inches in width, and intended to pass seveand the waste water of the canal of Charleroy.

During the wars of Louis XIV the canals executed by Vauban were rather for military than com-

mercial purposes.

The opening of the quarries and mines in Belgium gave a new impetus to improvement, and in the early part of the present century the Grand Meuse, and the Scheldt, was commenced. works of this period were immediately useful to Belgium, and which were completed-were the ca-Ostend.

After the re-union of Belgium and Holfrom the ocean. Fifty millions of francs were expended upon the canals of the kingdom.

At the time of the formation of the independent kingdom of Belgium, in 1830, the Belgians felt the need of a more complete system of communication, not connected with that of Holland, upon which they had before depended, but with which they must now compete. This was the origin of the railroad system-but canals were not neglected. Many new and important works were commenced, and a fund created for this purpose, as well as for the purchase by

The Belgians have adopted the principle The basin of the Scheldt covers the greater part that the means of communication should not road, during the year ending June 30th, be considered as sources of revenue, but that the whole income should be devoted to the maintenance and further extension of the system. Hence we find the cost of transat most 5 centimes per ton per kilometre,

vessels from the ocean, and without locks.

Other works of great magnitude are now projected, or in progress, the estimated cost of which will be 50 millions of francs.

#### EASTERN RAILROAD.

The Salem Register of the 17th inst., contains the following statement in relation to the Eastern railroad for the past year. The comparative statement of the receipts and expenditures during the past five seen that, with a very greatly increased business, the expenses have been reduced from \$179,958 93, in 1841, to \$134,318 86, in 1844! and that the receipts for the year ending June 30th last were \$351,328 61, and the expenses were only \$113,014 48. The cost per mile run in 1840 was .856, while in 1844 it was only .533!! Thus demonstrating, in the clearest manner, the true principle of progression of profits on well located and well managed railways, by a regular increase of receipts and decrease of expenses. The net receipts being 9.34 per cent! and that, too, at reduced fares!

The annual meeting of the Eastern Railroad Company was held at the Station House, in Boston, on Monday. The following gentlemen were unanimously elected as Northern Canal, which was to unite the Rhine, the directors for the ensuing year: - Messrs. David A. Neal, John Hooper, Amos Bin-ney, Daniel Adams, Jr., John Bryant, Jr., Isaiah Breed, John E. Thayer. Benj. T. nal of Mons and the improvements at Antwerp and Reed, Esq., resigned the office of treasurer, which he has held from the commencement of the enterprize; whereupon resolutions, land, the commerce of Antwerp revived, and offered by Mr. Degrand, were unanimously Bruges and Ghent were reached by vessels adopted, thanking him for his ability, zeal, industry, firmness, &c., and requesting the directors to present to him a piece of plate, with a suitable inscription.

Among the facts laid before the meeting, the Gazette says, were the following comparative statements:

Re	ceipts.	Exp	enses.
In 1840,	\$193,367 57	In 1840,	\$115,433 10

It appears by the following that the Baltimore and Ohio railroad company have decided not to accept the Virginia law of last session, requiring them to terminate their road at Wheeling. We like this determination, not because we have anything against in two days without the loss of an hours orbetter judge where to lay a railroad than the memnever fix the line of a railroad until the instruments have first designated its route. There can be no whole distance from Oswego to Detroit is greater injustice done to those who furnish the capital to construct such works, than to compel them to cated themselves away from the natural channel, or by post coaches upon plank roads. line which the God of nature has designated for the considered, for the business and let other things conform to it? This is our view right or wrong.

A meeting of the Stockholders of the Balconstruction of the railroad through the state books are opened.—[Oswego Whig.] to the city of Wheeling, on the Ohio river. There was a very large number of stockholders present, and a decided majority of the stock was represented.

The meeting was organized by calling John Nelson, Esq., to the chair, and appointing J. J. Atkinson, secretary.

Mr T. S. Alexander appeared as the representative of the stock subscribed by the city of Wheeling but on examination it was ascer tained that the subscription of that city was made conditional, and that the conditions not an 'hour, and oftentimes in 45 minutes. having been fulfilled, the subscription was vacated some time since, as provided by law. Wheeling, it was therefore decided, is not a stockholder in the company.

A communication was recieved from Mr. McLane, the president, which was read. It reviewed at length the law of the legislature of Virginia, and earnestly recommended that

it should not be accepted.

A motion was made to postpone action on the subject at this time, but the motion was

lost by a large majority.

Mr. J. P. Kennedy then offered a pream adopted. The meeting then adjourned.

six hundred thousand passengers, without Ontario to lake Huron, to which we referred served, and good order every where main- Passengers can now leave Toronto at six tained; and the accounts show that there is o'clock in the morning, reach lake Huron the same evening, and embark in the steamer Goderich, (late Gore) from Sturgeon Bay to Detroit. Passengers can now go from Toronto to lake Huron in about 12 hours without the aid of a railroad. This is certainly a powerful fact in favor of the project of turning the great stream of western travel across the Canadian peninsula via. Toronto. Passengers leaving Oswego by the morning boats up the lake may reach the steamer on lake Huron by way of Toronto and lake Simco, Wheeling, but because we are fully of the opin-dinary rest. Passengers can now go quicker ion that the engineer, with his instruments, is a much to Detroit and Chicago by this route than any other, and the completion of the Oswego bers of any legislature; and that legislation should and Syracuse railroad, would turn a great portion of the western travel this way. performed by steamboats, except 28 miles from Toronto to lake Simco, and 19 mtles spend it for the benefit of people who may have lo- from the head of that lake to Sturgeon Bay,

The construction of the Canadian railroad work. Why tax the business community for all from Toronto to lake Huron or the Detroit time to come, to oblige a few people in a few places? river, now rendered certain, by the fact that Why not select the natural, the best route, all things the stock of the road has been taken in London, must inevitably bring the whole travel of Michigan, Illinois and Wisconsin, upon lake Ontario. Under this aspect of the case, we eration the question of accepting the law of predict the stock of the Oswego and Syracuse the legislature of Virginia, authorizing the road, will not go a begging long, after the

# TROY AND SCHENECTADY RAILROAD.

We consider this one of the best constructed railroads in the country. It has deep cuttings in places, and heavy grades to surmount in ascending from the level of the Hudson, at Troy, to the flats of the Mohawk above the Cohoes falls; yet, such is the solidity and evenness of the road, the distance, 204 miles, is run regularly in less than This road, together with the Troy and Greenbush, connects the line from Boston to the Hudson river with the Utica and Schenectady road, and thus forms an unbroken chain, with uniform width of track, from Portland in Maine, to Buffalo New York, a distance of 640 miles. This road is laid with the heavy H rail, and cost a little over ble, setting forth at length why the law should and repairs for the same period were \$26, nation to keep down expenses—and it will, not be accepted, and concluding by a resolution "respectfully declining to accept the law of Virginia," which was unamimously tabular statement of the secretary of state at law of Virginia," which was unamimously \$33,560 81—an error of \$7,280—the cost the shareholders.

New route to the West .- The route from lake of a new engine and cars, which were properly included in the cost of construction and out-fit, and should not have been also, as they have been by the secretary, included in current expenses of running and repairs.

> The engines are of the best kind for passenger traffic, and the cars, made by Gilbert & Eaton, of Troy, such as a weary man delights to find.

#### ACKNOWLEDGEMENTS

We acknowledge the receipt of, and desire to return our thanks for, the following favors, viz:

Oswego and Syracuse Railroad.—The Circular of the commissioners of the Oswego and Syracuse railroad, setting forth the feasibility of the route; the kind and amount of business which it will command; its comparative advantages, with other routes, for the great northwestern travel, etc., etc. We were, however, in advance of the friend who sent it, as we cut it from a newspaper and had it in type, with our comments upon it, before the circular came to hand, and had given directions that a copy of the Journal containing it be sent to each of the commissioners, who, we are sure, will better understand the value of railroads after having perused it carefully for one year-or, even for one week-and we are equally well convinced that each will, or should, direct it to be sent to his address, and the amount of subscription to ours, by return mail.

Wear of Railroad Iron.-The communication of J. on the wear of railroad iron, is also received, but at too late a period for this number. It will appear in our next.

#### EASTERN RAILROAD REPORT.

We have received duplicate copies of the annual report of the directors to the stockholders of the Eastern Railroad Company, and we desire to return thanks in duplicate for the favor. We were upon the lookout for a report of the doings of this exceedingly well managed company, and found a synopsis of their proceedings in the Salem Register of the 17th inst., which we had in type when the report came to hand. We shall, however, refer again to the subject in a subsequent number.

### UNION OF RAILROADS.

We understand that a union has been \$31,000 per mile. They carried last year formed between the Springfield and North-66,086 passengers. Their receipts were hampton and the Northampton and Green-632,862 59, and their expenses for running field railroads. This looks like a determiPORT CARBON.

The town of port Carbon is situated on the Schuylkill river, about two miles from Pottsville, and is the seat of a considerable coal trade. The completion of the Port Carbon and Mount Carbon railroad, has opened a more rapid communication between Port Carbon and the Atlantic cities, than was furnished by the Schuylkill Navigation, and is proving of immense importance to the former town. This road was constructed under the energetic direction of F. Hewson, Esq., in a style of superior solidity and permanency it is about 21 miles in length, and taps the Scuylkill Valley and the Mill Creek roads at Port Carbon and connects with the Reading railroad at Mount Carbon. The first train of loaded cars, passed over it on the 30th of last November. Its tonnage is already heavy, and is rapidly increasing, and will continue to increase, as the different col lieries around and beyond Port Carbon, and on the line of the Schuylkill Valley and the Mill Creek roads, are brought into connection

The new track on the Mill Creek road from its termination, to its junction with the Port Carbon road, at Port Carbon, has been completed about one month; the transportation of coal over it from the collieries along the Mill creek, has been from its opening heavy, and the large weekly increase, is proving the great capacity of that portion of the

coal district.

The bridge of the Mill Creek road across the Schuylkill, is a beautiful and substantial structure. It is a Burr bridge, with a single

span of 120 feet.

# FRENCH AND BAIRD'S PATENT SPARK ARRESTER.

O THOSE INTERESTED IN Railroads, Railroad Director and Managers are respectfully invi ted to examine an improved SPARI ARRESTER, recently patented by the undersigned.

Our improved Spark Arrester: have been extensively used during the last year on both passenger and freigh engines, and have been brought to such a state of perfection that no an-noyance from sparks or dust from the chimney of engines on which they are used is experienced.

These Arresters are constructed on an entirely different principle from any nerconcre oncica w The form is such that a rotary motion is imparted to the heated air smoke and sparks passing through the chimney, and by the centrifugal force thus acquired by the sparks and dust they are separated from the smoke and steam, and thrown into an outer chamber of the chimne through openings near its top, from whence they fall by their owi gravity to the bottom of this chamber; the smoke and steam passing off at the top of the chimney, through a capacious and unobstructe passage, thus arresting the sparks without impairing the power of the engine by diminishing the draught or activity of the fire in the furnace.

These chimneys and arresters are simple, durable and neat in appearance. They are now in use on the following roads, to the managers and other officers of which we are at liberty to refer those who They are now in use

on the following roads, to the managers and other officers of which we are at liberty to refer those who at a switch, left wrong by accident or design.

It acts independently of the main track rails, being laid down, or removed, without cutting or displacing them.

It is never touched by passing trains, except when in use, preventing their running off the track. It is simple in its construction and operation, requiring only two Castings and two Rails; the latter, even if much worn of used, not objectionable.

Working Models of the Safety Switch may be seen at Messrs. Davenport and Bridges, Cambridge-port, Mass., and at the office of the Railroad Journal, New York.

Plans, Specifications, and all information obtained on application to the Subscriber, Inventor, and Parentee.

Orders for these Chimneys and Arresters, addressed to the subscribers, or to Messrs. Baldwin & Whitney, of this city, will be promptly executed.

R. CASEY, CIVIL ENGINEER, NO. 23 Chambers street, New York, will make surveys estimates of cost and reports for railways, canals, roads, docks, wharves, dams and bridges of every description, with plans and specifications. He will also act as agent for the sale or purchase of machinery, and of patent rights for improvements relating to public works.

# KITE'S PATENT SAFETY BEAM.

MESSRS. EDITORS.-As your Journal is devoted to the benefit of the public in gen-eral I feel desirous to communicate to you for publication the following circumstance of no inconsiderable importance, which oc-curred some few days since on the Philadel-phia, Wilmington and Baltimore railroad.

On the passage of the evening train of cars from Philadelphia to this city, an axle of our large 8 wheeled passenger car was broken, but from the particular plan of the construction, the accident was entirely unknown to any of the passengers, or, in fact, to the conductor himself, until the train, (as was supposed from some circumstances attending the case,) had passed several miles in advance of the place where the accident occurred, whereas had the car been constructed on the common plan the same kind of acci-

dent would unavoidably have much injured it, perhaps thrown the whole train off the track, and seriously injured, if not killed many of the passengers.

Wilmington, Del., Scpt. 28, 1840.

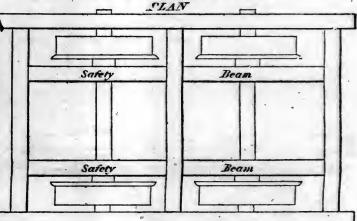

The undersigned takes pleasure in attesting to the value of Mr. Joseph S. Kite's invention of the Safety Beam Axle and Hub for railroad cars. They have for some time been applied to passenger cars on this road, and experience has tested that they fully accomplish the object intended. Several instances of the fracture of axles have occurred, and in such the cars have uniformly run the whole distance with entire safety. Had not this invention been used, serious accidents must have occurred.

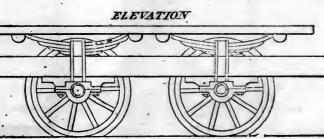

In short, we consider Mr. Kite's invention as completely successful in securing the safety of property and lives in railroad travelling, and should be used on all railroads in the country.

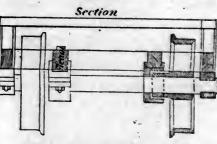

JOHN FRAZER, Agent,

GEORGE CRAIG, Superintendant,

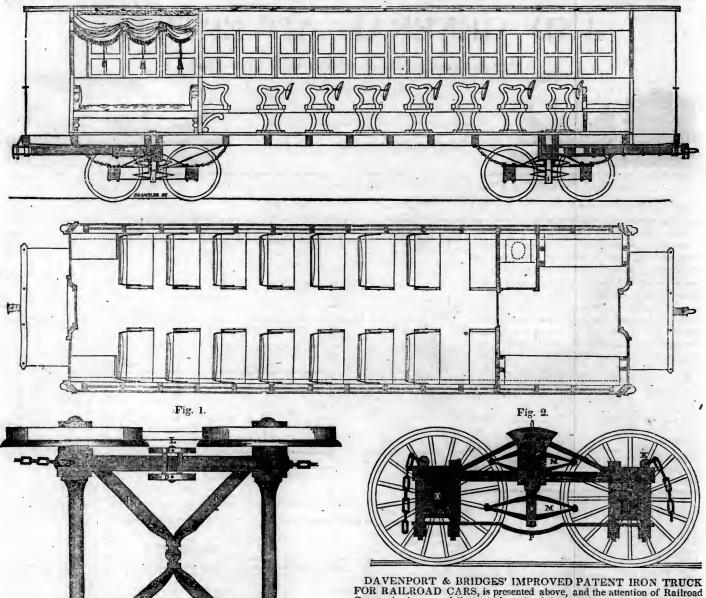

A model of the above improvement is to be seen at the New Jersey railroad and transportation office, No. 1 Hanover st., N. York.

# DAVENPORT & BRIDGES' PATENT CAR AND TRUCK.

FOR RAILROAD CARS, is presented above, and the attention of Railroad Companies is respectfully invited to the following description of their justlycelebrated invention:

Companies is respectfully invited to the following description of their justly-celebrated invention:

Fig. 1 of the drawing above represents a top view or plan of our Improved Railroad Truck. Fig. 2 is a central, longitudinal, and vertical section. C, Fig. 1 and 2, represents the arched bars of the side trusces: they consist of two long bars of plate iron (about three inches wide by seven-cighths of an inch thick,) bent into the shape as seen in drawing 2. Each of them is placed directly over a flat and straight fite bar, A, which extends from one end to the other on the same side of the frame, and the whole is secured as side trusces and diagonal cross bars or braces, B, which are united at their centres upon four pedestals, F, F, which receive the bearings or boxes for the axles to run on. Another flat tie bar, P, extends from one end to the other on the same side of the frame, and the whole is secured as side trusces and diagonal cross barses, rest at their ends the ends of that of the other, on the same side of the frame, and the whole is secured the positions represented in the drawings. From the above it will be seen that there are two bolts to each pedestal, and that this number is all that is requisite for the full security of the bars and pedestals together. The body rests and moves upon two sectional supports, D D, arranged on the sides of the truss frames, and are jointed at their lower ends by means of a bolt, L, which rests upon the top of the lower part of the inverted strap, E, which strap passes over and rests upon the top of the upper spring, M, which is placed to both passing through the lower part of the inverted strap, E, which strap passes over and rests upon the top of the upper spring, M, which spring rests upon a within the truss frame, and rests upon the top of the bar, A.

Two bands, N, N, are passed entirely around the central part of each truss frame, the object of the same being to transfer the strain, or a portion thereof, of the spring, from the tie bar, A, to the arched bar, C.

DAVENPORT & BRIDGES.

RAILROAD IRON AND LOCOMOTIVE CUSHMAN'S COMPOUND IRON RAILS. TO RAILROAD COMPANIES AND BUILDTyres imported to order and constantly on hand
A. & G. RALSTON improvements in the construction of rails, mode of ENGINES AND BOILERS. 4 South Front St., Philadelphia.

THE NEWCASTLE MANUFACTURING Company continue to furnish at the Works, L Company continue to furnish at the Works, situated in the town of Newcastle, Del., Locomotive and other steam engines, Jack screws, Wrought iron work and Brass and Iron castings, of all kinds connected with Steamboats, Railroads, etc.; Mill Gearing of every description; Cast wheels (chilled) of any pattern and size, with Axles fitted, also with wrought tires, Springs, Boxes and bolts for Cars; Driving and other wheels for Locomotives.

The works being on an extensive scale all orders.

The works being on an extensive scale, all orders will be executed with promptness and despatch.
Communications addressed to Mr. William H.
Dobbs, Superintendent, will meet with immediate attention.

ANDREW C. GRAY, ja45

President of the Newcastle Manuf. Co.

guarding against accidents from insecure joints, etc. respectfully offers to dispose of Company, State Rights, etc., under the privileges of letters palent to Railroad Componies, Iron Founders, and others interested in the works to which the same relate. Companies reconstructing their tracks now have an op-portunity of improving their roads on terms ver, arvantageous to the varied interests connected w their construction and operation; roads having in use flat bar rails are particularly interested, as such are permanently available by the plan.

W. Mc. C. CUSHMAN, Civil Engineer,

Albany, N. Y.

Mr. C. also announces that Railroads, and other works pertaining to the profession, may be constructed under his advice or personal supervision. Applicaitons must be post paid.

#### PASCAL IRON WORKS.

# WELDED WROUGHT IRON TUBES

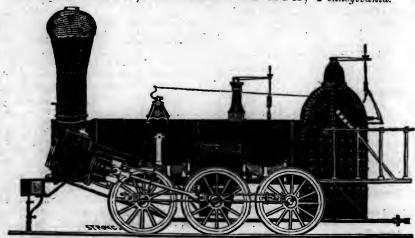

From 4 inches to 1 in calibre and 2 to 12 feet long, capable of sustaining pressure from 400 to 2500 lbs. per square inch, with Stop Cocks, T., L., and other fixtures to suit, fitting together, with screw joints, suitable for STEAM, WATER, GAS, and for joints, suitable for STEAM, VILLER FLUES, LOCOMOTIVE and other STEAM BOILER FLUES,

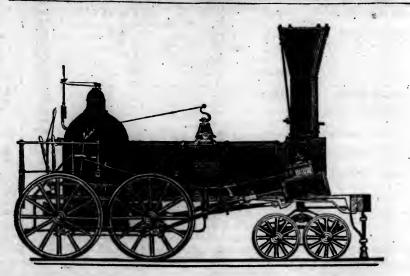

Manufactured and for sale by MORRIS, TASKER & MORRIS.
Warehouse S. E. Corner of Third & Walnut Streets, PHILADELPHIA.

#### NORRIS, LOCOMOTIVE WORKS

BUSH HILL, PHILADELPHIA, Pennsylvania.

Uniformity of Gauge

This subject is now causing much excitement in England. It is one of great importance, and one which early received attention in this journal, as may be seen in the number of 21st January 1832! in an article from an esteemed correspondent of that to hear again. Uniformity in the width of track was frequently referred to and urged upon engineers -yet, as in many other matters, experience only enabled them to decide on what is, upon the whole, the proper width; and in arriving at a decision, a diversity of widths has come into use; and even now, it would seem that the question of what is the best gauge is far from being settled.

We copy from the latest number of Herapath's Journal, the editor's remarks upon this subject.

now late as it is.

Great difference of opinion existed at first among engineers as to what should be the proper gauge. Most of them were of opinion that the present is too narrow, and perhaps if the whole was to be done over again we should have it something wider.

The reasons for a wider gauge were chiefly two-one, that the present gauge would be dangerous at high speeds, and the other, that it did not afford scope for that powerful machinery in locomotives necessary for attaining very high velocities. Greater research and experience have exploded the first and along with it, one of the arguments of Mr. Brunel for his broad gauge. He asserted, that by increasing the gauge he should riages.

enough. There are or were about his com- force. All the tunnels, all the cuttings, bridwhich cost some £30,000 or £40,000, and gauge will equally do for the narrow. But have never been used, for one very good— as it was well observed in the house, and is and to all other men's minds, except Mr. stated by one of our correspondents, if the reason, namely, that they did not possess the into the broad—the whole work must be power to work. They are of course laid changed. More land must be bought; the lieve to 6 or 61 to 7 feet wheels.

has got over the difficutly.

never taxed to the full or a fourth, as on the see was well received by the house. power of the boiler to generate steam rapidcombined with an expansive apparatus, does cious one. effectually, and appears, by an improvement lately introduced of double valves one above but for high speeds a rapid supply of steam. This, at first, Brunel maintained could only be accomplished by more room for the boiler, that is, by a wider gauge. Mr. Robert Stephenson, however, has cut this reason away by increasing the length of the boiler, and generating more steam with the same fuel. The simplification which he at the same time gave to the working gear, and the improvements which have lately been made in the valves, have at length furnished us with the means of economising this steam so much as in fact to give us much more than we want. Both Brunel's reasons, therefore, for the broad gauge, whatever plausibility they had in the first instance, now no longer exist.

If then there be any change of gauge, reabe able to use higher wheels on the carriages son tells us that it should be from the broad and engines, and that these higher wheels on to the narrow gauge. Not only is it the the carriages would work with less friction, gauge containing some four or five times the and therefore, more economy. The less friction number of miles in operation, but the change tion with high wheels, we at first opposed as could be made at incomparably less cost, and being contrary to the results of experiment, without any danger to the public or delay in which showed that slipping friction is indehas taught Mr. Brunel that we were right, and only wants the rails to be laid down.—for he has abandoned his high wheels for carmonth or less after the materials are procur-In respect of the engines, this fact is ed, the whole may be done with a proper pany's premises engines with 10 feet wheels, ges and embankments, which do for the broad Brunel's until he tried them-very obvious converse is to be done-the narrow turned The second reason, that is, that the nar- a fourth to a third of the entire cost of the ery competent to compass high velocities, as to the time required, no one could calcufalling in of the tunnel while it was widen-comotive." East Indian railways .- The court of dithe other, with an advance of excentric to rectors have appointed an experienced person close the parts earlier, to be capable of still as surveyor of railways in India, at a salary greater improvement. In these engines, it is of £4,000 a year for five years, and £500 for not great statical power, but an abundant sup- his passage, etc, out, and the same sum home. one uniform gauge, if at any reasonable cost it could be attained. Mr. Cobden has therefore done wisely in bringing it forward, even but for bich and it is the principal element, but for bich and it is the principal element, but for bich and it is the principal element, but for bich and it is the principal element, but for bich and it is the principal element, but for bich and it is the principal element, but for bich and it is the principal element, but for bich and it is the principal element, but for bich and it is the principal element, but for bich and it is the principal element, but for bich and it is the principal element, but for bich and it is the principal element. may be long before, as a means of passenger transit, these railways may be much used by the native population (always averse to innovation,) but for the conveyance of produce they must be of immense advantage, and tend to lessen the inequalities which exist between Indian articles of export and those of more favored lands. The merchant and the government are, therefore, in this sense, equally interested in the success of the scheme, while for the conveyance of troops it is impossible to conjecture the full extent of benefit which may result from railway facilities. The journey by way of the Ganges from Calcutta to Cawnpore, for example, occupies a greater period of time than the passage from England to India. How desirable, then, it must be to lessen the tediousness of this and similar routes .- [Times.]

Atmoipheric Railway.-At the sitting of the Academy of Sciences on Saturday last. says the Paris correspondent of the National Intelligencer of 1st July, M. Arago reported pendent of velocity, and the rolling friction outer rails would do it as far as the road is a new apparatus for the Atmospheric railway, on railways is insignificant; and experience concerned; for which the road is prepared which he described as an important improvement in respect to speed and safety. In England, at the late meeting of the directors of the London and Croyden Atmospheric rail-

way:
"Mr Joseph Samuda, one of the patentees of the atmospheric railway, said he would undertake to work fifteen trains per day each way, at an average travelling speed of forty miles an hour, from one end of the line to the other, the average weight of each train

being from 30 to 40 tons.

" Mr. Gibbon, the acting engineer of the power to work. They are of course laid changed. More land must be bought; the aside and the company have gradually come bridges, tunnels, embankments and cuttings, down to more reasonable dimensions, we believe to 6 or 61 to 7 feet wheels.

Dalkey railway, said that the atmospheric system worked with a precision and regular-live to 6 or 61 to 7 feet wheels. mate, the cost of the change would be from During the greater part of Sunday last ten row gauge does not afford room for machin- line. Twenty millions would not do it; and trains were running per hour, each train weighing about 40 tons. The cost of workwas no doubt good at the time, but by a better late it. Of the danger, too, attending widen ing is in the proportion of ten to twelve in arrangement and larger boilers, Stephenson ing tunnels, we have had a specimen by the

New Engine. - A new locomotive of great be informed, that the power of an engine to To talk of changing the narrow to the broad power, made by Hinckley and Drury, and draw great loads at moderate velocities, and gauge, would be very little short of insanity. called the Alvah Crocker, has just been placed small loads at high velocities, and gauge, would be very little short of insanity. called the Alvah Crocker, has just been placed small loads at high velocities, and gauge, would be very little short of insanity. small loads at high velocities, depends on that a change would be desirable to one upon the Fitchburg road, for the freight two very different qualities. #### New York and Eric and New York and Albany Railroads.

Next to the Croton water-if second even to that in importance to the people of this city-is the early completion of these two great railroads. We have not a doubt but that, if completed and put into successful operation, within five years their cost would be twice reimbursed to the people of New Yorkeven if they merely paid the current expenses of management-in the expense of living, in improved health, arrising from a greater supply of the necessaries of life-such as pure milk, fresh vegetables, poultry, etc.; and last, though not least, in the increased value of real estate, which would not be less certainly, and probably more than ten per cent.-or its present assessed value of \$171,000,000--over and above what it would be if the roads are not built. It would therefore be true economy for the city to build these roads by a tax upon the property, divided into ten annual assessments, and then put the fare and freight at the lowest possible rates-merely paying current expenses, and accumulating a fund for re-building the road when required-as, by such a course, the artificial channels for business would be superior to the natural, and New York might then retain her relative position without

of measures do not, and will not, at present, see have been extended, the numerous branches comthe correctness of this position; therefore we must pleted and the business have found its way to them, construct them; and it is to the men of means-not in operation? With New York at one end, and of large, but also of small means-to those who feel the fertile region of country with its numerous railat home in New York-not to those who feel, if they roads and canals, bordering upon the great lakes at do not say, "What is Broadway or New York to me? the other, and its hundrede of miles of lateral roads that we desire to say-and especially in relation to in this important work under the law of the last lethe New York and Erie Railroad-let not the gislature? present liberal offer of the legislature pass unimproved. Such another may not again occur in an tion to your means, in the completion of a work money, even if it never pays a penny of dividend, Yet that it will be a good investment when complethis country and Europe, which are now in use and their length, cost, cost per mile, and last year's divi-

a few of the English roads, which have generally cost more pounds sterling than ours have dollars per mile; yet they pay larger dividends, simply because they have business at both ends, and along their line, as the New York and Erie will soon havepecially at its extremes; and as for its way business the main line! It is the construction of branches immensely to the business of railroads, and ensures their prosperity. Such is found to be the case in England-where railroads are most profitable-as will be seen in the annexed list:

Correspondents will oblige us by sending in their fear of competition. We say this might be done the working of the system, when the machinery is and true economy would be consulted thereby; yet comparatively new, and its business has to be diwe have no expectation that it will be done, as verted from its ordinary channels, what may we those who have the means to carry out such a course not anticipate from it when the main lines shall rely upon individuals, upon the men of means, to as a large proportion of it will wherever they are I live in Paris;" but to those who live and have a diverging from it along its line, as there surely will pride in, and a regard for the people of, New York, be, where can be a better investment of capital than

Liverpool and London.

Two hundred and twenty miles in five hours, or age, if this is neglected! To the owners of real es- 44 miles an hour, including stops! and at about 5 tate, to the merchants, to the manufacturers, to the cents a mile in first class cars; and proportionably mechanics, carmen and business men of New York less, or about 3 and 2 cents in the second or third we say then, now do your duty, and aid in propor- class cars. This is truly going ahead, and, as Mr. Willis says in his letter, speaking of his journey which, when done, will enable you to live better from Liverpool to London, "this travelling at forty and cheaper, to enjoy better health and make more odd miles the hour gives, one's eyes hardly time to know a tree from a cow, but here and there I got a distant view in crossing a valley, and recognized the ted there cannot be a doubt; and as a proof that it lovely rural beauty of England, the first impression will be so, compare its estimated cost and its resour- of which lasts one, like an enchanted memory, thro ces for business with the following roads, both in life. Notwithstanding the great speed, the cars ran so evenly on their admirable rails, that there was no paying large and increasing dividends. We give jar to prevent one's sleeping or being comfortable, and I awoke from a very pleasant dream to find myself in London." In speaking of the pavements of London, he says "the paving of London is really most admirable. Vast city as it is, the streets are as smooth as a floor-all over it, and to ride is indeed a luxury. The break-neck, hat-jamming and dislocating jolts of Broadway must seem to English judgment an inexcusable stain on our public spirit. And apropos of paving-the wooden pavement seems to be entirely out of favor. Regent street is laid in wooden blocks, and in wet weather (and it rains here some part of every day) it is so slippery that an omnibus which has been stopped in going up the street is with difficulty started again. The horses almost always come to their knees, though the ascent is very slight, and the falls of cart and carriage horses are occurring continually. Nothing seems to 'do' like the McAdam pavement, and wherever you find it in London, you find it in as perfect order as the floor of a bowling alley. I see that all heavy vehicles, by the way, are compelled to have very it will exceed any other in the country, in propor- broad wheels, and they rather improve the road than tion to its greater length and the number and extent spoil it. A law to the same effect should be passed of its branches, which will certainly exceed that of in New York, if it ever has a pavement worth preserving." The cost of keeping the pavements of and the connection with other roads which adds Broadway, even in the condition we usually find them for fifteen years would make them equal to those of London and keep them so; and so of other streets. But any person with one eye only, who witnesses the manner in which the pavements are put down, or repairs are made, will see that they cannot be permanent, and must therefore be a constant source of annoyance and expense.

#### Branch of the Eric railroad.

The Attica and Hornellsville railroad company, says the Ithaca Chronicle, incorporated at the last session of the legislature, has organized, by appointing Geo. Palmer of Buffalo, president, and J. G. Hoyt of Attica, secretary. The books for subscription to the stock are to be opened at Buffalo, Attica and Hornellsville, on the 10th of September

tion to the wear of the 56 lbs. iron of the second per yard; some portion of it was 60 pounds, lance with 3 by 21 inch plate iron, and contrack of the Lowell road.

ing the iron of this road is about equal to one cent \$121,559, after deducting the proceeds of the years no dividend was paid, the profits haper ton of freight per mile-estimating the passengers old iron, or about \$4700 per mile. and baggage as so much freight.

perience, greatly exceeds the usual estimate of the the change; but, on the other hand, the new value of that item, it would be well to call the attention of engineers to this important subject, with a admitted free of duty, which reduced the cost. view to providing some adequate remedy. J.

#### Wear of Railroad Iron.

to the probable duration of railroad iron weight, is very nearly \$5000 per mile. when exposed to a heavy traffic; and there If we then divide this sum by 500,000 tons, are few subjects on which the opinions of the amount of trade which shall have destroypractical men have differed more.

the Lowell road was first brought into use in their iron and still make reasonable profits. 1838, after the "fish-belly rail" had been found inadequate. `The new rail was of the H pattern-the form now most generally approved.

The following table shows the number of tons which passed over the road, in each year, from 1838, when this rail was first used, until July, 1845, when the company commenced making extensive repairs:

CLAC			CA	COLLE	2.00	· cp		
In	1838	abou	ıt				60,000	ton
	1839			-			70,000	66
	1840		-				73,000	66

#### Petersburg Railroad.

We give place to the following communication, and make the corrections desired, as a matter of justice, and also as a matter of business. We aim, and have made considerable effort, to obtain from each company, or from authentic sources, correct statements of the costs, etc., of their road, but have in many instances, as our table shows, been unable to obtain anything approximating to a full statement, and have, therefore, left them blank-while in some others we have adopted statements which prove to be erroneous. The best remedy is for each company to furnish full and accurate reports, and thus enable us to place them in their proper position:-

### Petersburg, July 21, 1845. Editor Railroad Journal-

Sin :- A friend has just called my attention to an article in your paper of the 26th ult., a part of which I extract, as it is short:

"While I think of it I will correct the statement in relation to the road over which I preside, and two additional ones in your list.

"The gross income (Richmond, Fredericksburg, and Potomac railroad) for the fiscal year, ending 1st of April last, was \$185,243 "Its net income was 85,688

"Its cost .... 1,454,171 "Its dividends 6 per cent.

"The Petersburg and Roanoke railroad cost about

I do not suppose that the writer of the

The following article, from the Boston Courier, took up 26 miles of the "fish-belly" rail, In 1842 and 1813 the company rebuilt the ving been absorbed by the new work and the

> The receipts of transportation for the 12 months ending Feb. 1st, 1845, were . . . .

Expenses of all kinds, \$49,970 33 except interest, was..... Interest account..... 4,745 98-58,718 31

\$123,670 81

Net income..... \$64,952 50 Out of this income was paid-Of the debts due by the company.... And a dividend of 3 per cent..... 23,070 00

Out of the profits of the last six months we have paid about \$32,000 of our debt and a dividend of 2 per cent.

This will give your readers a better idea of the value of our road than the short statement that "it pays 3 per cent."

Your informant, in sending you the statement about our road, omitted, no doubt accidentally, to give all that is necessary to fill up the blanks in your list, some of which are of importance in ascertaining the value of the investment. This I will give you.

The road is 63 miles, (instead of 60, as in our list.)

The number of shares 7,690, of \$100 each, all paid.

The amount of loans and debts Feb. 1st, 1845, was \$94,592. This was reduced to less than \$63,000 July 1st.

Last prices of stock \$75 to \$77. I have charge also of the Greenville and Roanoke railroad, the cost of which is greatly overrated in your report.

This road is 18 miles long. \$284,433. Number of shares 2000, of \$100 each, all paid. Debt, 1st of May last, \$37,-544. This road was finished in 1837. Up to May last the company had paid \$46,858 of their debt out of the profits of transportation. No dividend has yet been made.-Last sales of stocks 25 to 28.

The receipts tor the fiscal year, ending May 1st last, were ..... Expenses of all kinds... \$16,620 62 \$25,368 94 Interest account ..... 2,673 46-\$19,294 08

A TRAVELLER BY RAILWAYS.

Possibly "Proser's Railway Guide Wheels" are Rennie's old lathe engines. This clumsy death of Mr. Darne, among the good ones; therefore we lay the follow- affair is more than doubly as ponderous as it ing article, from Herapath, before our readers, and should be, weighing about 11 tons, (13 with ask their views in return:

Prosser's Railway Guide Wheels.

On Wednesday last the merits of this plan have exceeded six tons. were publicly tried at Wimbleton-common, springs. The rails just laid down, soused by where a length of about two miles of rail- a heavy rain, were in a most wretched state way was laid down for the purpose. The line was not composed entirely of wooden train, we mean constructed in the common rails but partly of iron to the line was not composed entirely of wooden rails, but partly of iron, to show the power mode, could have traversed at scarcel a of easy transition from one to the other of which the plan is capable; and this we may observe was proved beyond doubt. The shape of the line is not much unlike that of a ladle, being for some distance a straight length, at one end of which it branches off with short curves into two lines of railway, taking opposite directions to form a circle, so that the train ran down the straight line, round the circle, and returned to the place whence it set out up the straight portion. The radius of the curves (contained in the circle) is 10 chains, and the heaviest gradients of different inclination, varying gradients of different inclination, varying from the content of the content of the curve with the undiminished speed of 20 to 25 miles an hour. That was a pretty good test of the capabilities of the system. There was no more jolting in performing this than in running over less objectionable portions. We may remark that this "jolting," caused in a great measure by the want of springs, was apparently by no means pleasant to some of the parties invited to have an accordance of the House on the broad and nargon the content of the content of the House on the broad and nargon the content of the content of the content of the House on the broad and nargon the content of the content of the House on the broad and nargon the content of the content of the content of the House on the broad and nargon the content of the content of the House on the broad and nargon the content of the House on the broad and nargon the content of the con gradients of different inclination, varying of Mr. Prosser's invention, since we have had occasion to call their attention to it on as their digestions, in estimating, or rather had occasion to call their attention to it on former occasions; it is simply a contrivance Sight seers are too apt to form opinions wholten dispense with the ordinary flange, by emto dispense with the ordinary flange, by em-ploying small wheels, working against the rails obliquely at angle of 45 degrees, to do its office, by which it is professed friction is reduced, and greater safety obtained—the rubbing of the flange being obviated by the rolling of these wheels, which at the same time obtain a greater purchase on the rails, and in case of accident to the wheels or ses. On the whole, we think the experiment axles (unfortunately the principal cause of our and our neighbor's worst accidents, particu-larly that frightful one on the Versailles railway) they supply the place of the wheels themselves. The plan is equally adaptable to iron or wood, and in using the latter a sato be effected, the best guarantee for which is the contract entered into by one of the first quired by the late law of Maryland, guaranters of contractors to make it on the Guillying the transportation of 195,000 tons of side. firms of contractors to make it on the Guilford Junction line, which unfortunately perhaps for the inventor, though the large sum of £20,000 was given as compensation, was will be submitted without delay, for the aphaps for the inventor, though the large sum nished for the whole amount. These bonds of £20,000 was given as compensation, was not completed, owing to the purchase of it by the South West company, to form part of an extensive scheme in connection with their railway. Had that line been made, we should have had by this time one of the best made, we have the state of the sentence of proofs we could desire of the merits of the index of the company, namely, the practical working of it. It is, however, to be adopted by the Waterpany, is encouraging; and we trust that ford and Kilkenney railway; being but of so having succeeded, thus far, after many diffi-

### FRENCH AND BAIRD'S PATENT SPARK ARRESTER.

THOSE INTERESTED IN Railroads, Railroad Directors and Managers are respectfully invited to examine an improved SPARK ARRESTER, recently patented by the undersigned.

Our improved Spark Arresters have been extensively used during the last year on both passenger and freight engines, and have been brought to such a state of perfection that no annovance from sparks or dust from the chimney of engines on which they are used is experienced.

These Arresters are constructed on an entirely different principle from any heretowie onered to the public. The form is such that a rotary motion is imparted to the heated air, smoke and sparks passing through the chimney, and by the centrifugal force thus acquired by the sparks and dust they are separated from the snoke and steam, and thrown into an outer chamber of the chimney

scribers, as Agents of Mr. George Crane, of Wales, having obtained a jatent in the United States for his process of smealing Iron Ore with Anthracite coal, and holding an assignment of the patent obtained by the late Rev. F. W. Geissenhainer, are prepared to grant licenses for the manufacture of Iron according to Mr. Crane's principle.

NICOLL'S PATENT SAFETY SWITCH for Railroad Turnouts. This invention, for some time in successful operation on one of the principal railroads in the country, effectually prevents engines and their trains from running off the track at a switch, left wrong by accident or design.

It acts independently of the main track rails, being laid down, or removed, without cutting or displacing

It is never touched by passing trains, except when in use, preventing their running off the track. It is simple in its construction and operation, requiring only two Castings and two Rails; the latter, even if much worn or used, not objectionable.

Working Models of the Safety Switch may be seen at Messrs. Davenport and Bridges, Cambridgeport, Mass., and at the office of the Railroad Journal. New York.

THE AMERICAN RAILROAD JOURNAL is the only periodical having a general circulation throughout the Union, in which all matters connected with public works can be brought to the notice of all persons in any way interested in these uudertakings. Hence it offers peculiar advantages for advertising times of departure, rates of fare and freight, improvements in machinery, materials, as iron, timber, stone, cement, etc. It is also the best medium for advertising contracts, and placing the merits of new undertakings fairly before the public.

### KITE'S PATENT SAFETY BEAM.

MESSRS. EDITORS.—
As your Journal is devoted to the benefit of the public in gen-eral I feel desirous to communicate to you for publication the following circumstance of no inconsiderable importance, which occurred some few days since on the Philadel-phia, Wilmington and Baltimore railroad.

On the passage of the evening train of cars from Philadelphia to this city, an axle of our large 8 wheeled passenger car was brostruction, the accident was entirely unknown to any of the passengers, or, in fact, to the conductor himself, until the train, (as was supposed from some circumstances attending the case,) had pass ed several miles in advance of the place where the accident oced several curred, whereas had the car been constructed on the common plan

the same kind of acci-dent would unavoidably have much injured it, perhaps thrown the whole train off the track, and seriously injured, if not killed many of the pas Wilmington, Del., Sept. 28, 1840.

The undersigned takes pleasure in attesting of the value of Mr. Joseph S. Kite's invention of the Safety Beam Axle and Hub for railroad cars. They have for some time been applied to passenger cars on this road, and experience has tested that they fulby accomplish the object intended. Several instances of the fracture of axles have occurred, and in such the cars have uniformly run the whole distance with entire safety. Had not this invention been used, serious accidents must have occurred.

In short, we consider Mr. Kite's invention as completely successful in securing the safety of property and lives in railroad travelling, and should be used on all railroads in the country.

### PATENT CAR AND TRUCK DAVENPORT & BRIDGES'

DAVENPORT & BRIDGES' IMPROVED PATENT IRON TRUCK FOR RAILROAD CARS, is presented above, and the attention of Railroad Companies is respectfully invited to the following description of their justlycelebrated invention:

Companies is respectfully invited to the following description of their justly-celebrated invention:

Fig. 1 of the drawing above represents a top view or plan of our Improved Railroad Truck.—Fig. 2 is a central, Jongitudinal, and vertical section. C, Fig. 1 and 2, represents the arched bars of the side trusses: they consist of two long bars of plate from (about three inches wide by seven-eighths of an inch thick,) bent into the shape as seen in frawing 2. Each of them is placed directly over a flat and straight tie bar, A, which extends from one end to the other, which are united at their centres upon four pedestals, F, F, which receive the bearings or boxes for the axles to run on. Another flat tie bar, P, extends from the under side of one of the pedestal, and that this number is all that is requisite for the full security of the bars and pedestals to that of the other, on the same side of the journals of the axles, O, O, in the positions represented in the drawings. From the above it will be seen that there are two bolts to each pedestal, and that this number is all that is requisite for the full security of the bars and pedestals together. The body rests and moves upon two sectional supports, D D, arranged on the sides of the truss frames, and are jointed at their lower ends by means of a bolt, L, which rests upon the top of the lower part of the inverted strap, E, which strap passes over and rests upon the top part of the bar, A.

Two bands, N, N, are passed entirely around the central part of each truss frame, and rests upon the top of the bar, A.

Two bands, N, N, are passed entirely around the central part of each truss frame, and pedestals together. The body at the spring, from the tie bar, A, to the arched bar, C.

These Trucks are adapted as well for eight-wheeled passenger cars as for baggage and freight cars, giving to each a more agreeable and easy motion than any other Truck heretofore constructed or in use. They are simple in their construction, combining strength and great durability, although

O RAILROAD COMPANIES AND BUILD-ERS OF MARINE AND LOCOMOTIVE ENGINES AND BOILERS.

### PASCAL IRON WORKS.

### WELDED WROUGHT IRON TUBES

From 4 inches to 1 in calibre and 2 to 12 feet long, capable of sustaining pressure from 400 to 2500 lbs. per square inch, with Stop Cocks, Tr. L., and other fixtures to suit, fitting together, with screw joints, suitable for STEAM, WATER, GAS, and for LOCOMOTIVE and other STEAM BOILER FLUES.

ctured and for sale by MORRIS, TASKER & MORRIS. archouse S. E. Corner of Third & Walnut Streets, PHILADELPHIA.

RAILROAD IRON.—THE MARY-LAND AND NEW YORK IRON AND Coal Company are now prepared to make contracts for Rails of all kinds. Address the Subscriber, at Jennon's Run, Alleghany County, Maryland.
WILLIAM YOUNG,

TO IRON MASTERS.—FOR SALE.—MILL SITES in the immediate neighborhood of Bituminous Coal and Iron Ore, of the first quality, at Ralston, Lyoming Co., Pa. This is the nearest point to tide water where such coal and ore are found together, and the communication is complete with Philadelphia and Baltimore by canals and railways. The interest on the cost of water power and lot is all that will be required for many years; the coal will not cost more than \$1 to \$1 25 at the mill sites, without any trouble on the part of the manufacturer; rich iron ore may be laid down still more cheaply at the works; and, taken together, these sites offer remarkable advantages to practical manufacturers with small capital. For pamphlets, manufacturers with small capital. For pamphlets, descriptive of the property, and further information, apply to Archibald McIntyre, Albany, to Archibald Robertson, Philadelphia, or to the undersigned, at No. 23 Chambers street, New York, where may be seen specimens of the coal and ore.

W. R. CASEY, Civil Engineer,

VALUABLE PROPERTY ON THE MILL Value Property on the Mill Dam For Sale. A lot of land on Gravelly Point, so called, on the Mill Dam, in Roxbury, fronting on and east of Parker street, containing 68,497 square feet, with the following buildings thereon standing.

Main brick building, 120 feet long, by 46 ft wide, two stories high. A machine shop, 47x43 feet, with large engine, face, screw, and other lathes, suitable to do any kind of work.

Pattern shop, 35x32 feet with lathes work banch.

Pattern shop, 35x32 feet, with lathes, work bench-

Work shop, 86x35 feet, on the same floor with the pattern shop.

Forge shop, 118 feet long by 44 feet wide on the Forge snop, 118 feet long by 44 feet wide on the ground floor, with two large water wheels, each 16 feet long, 9 ft diameter, with all the gearing, shafts, drums, pulleys, &c., large and small trip hammers, furnaces, forges, rolling mill, with large balance wheel and a large bibwing apparatus for the foundry. Foundry, at end of main brick building, 60x45½ feet two stories high, with a shed part 45½x20 feet, containing a large air furnace, cupola, crane and corn oven.

corn oven.

corn oven.

Store house—a range of buildings for storage, etc.,
200 feet long by 20 wide.

Locomotive shop, adjoining main building, fronting on Parker street, 54x25 feet.

Also—A lot of land on the canal, west side of Parker st., containing 6000 feet, with the following buildings thereon standing:

Boiler house 50 feet long by 30 feet wide, two stories

ries.

Blacksmith shop, 49 feet long by 20 feet wide.

With Wheels of any dimensions, with their Patent Arrangement for Variable Expansion. Castings of all kinds made to order: and they call attention to their Chilled Wheels for the Trucks of Locomotives, Tenders and Cars.

NORRIS, BROTHERS.

PATENT HAMMERED RAILROAD, SHIP and Boat Spikes. The Albany Iron and Nail Works have always on hand, of their own manufac-ture, a large assortment of Railroad, Ship and Boat Spikes, from 2 to 12 inches in length, and of any form of head. From the excellence of the material always used in their manufacture, and their very general use for railroads and other purposes in this country, the manufacturers have no hesitation in warranting them fully equal to the best spikes in market, both as to quality and appearance. All orders addressed to the subscriber at the works, will be promptly executed. JOHN F. WINSLOW, Agent.

Albany Iron and Nail Works, Troy, N. Y.

The above spikes may be had at factory prices, of Erastus Corning & Co., Albany; Hart & Merritt, New York; J. H. Whitney, do.; E. J. Etting, Philadelphia; Wm. E. Coffin & Co., Boston.

TO IRON MANUFACTURERS. THE SUBscribers, as Agents of Mr. George Crane, of Wales, having obtained a ratent in the United States for his process of smelling Iron Ore with Anthracite coal, and holding an assignment of the pa-tent obtained by the late Rev. F. W. Geissenhainer, are prepared to grant licenses for the manufacture

of Iron according to Mr. Crane's principle.

A. & G. RALSTON & CO. No. 4 Sout Fronth st., Philadelphia, Pa.

DATENT RAILROAD, SHIP AND BOAT The Troy Iron and Nail Factory keeps Spikes. constantly for sale a very extensive assortment of Wrought Spikes and Nails, from 3 to 10 inches, manufactured by the subscriber's Patent Machinery, which after five years' successful operation, and now almost universal use in the United States (as well as England, where the subscriber obtained a patent) are found superior to any ever offered in market.

Railroad companies may be supplied with Spikes having countersink heads suitable to holes in iron rails, to any amount and on short notice. Almost all the railroads now in progress in the United States are fastened with Spikes made at the above named factory-for which purpose they are found invaluable, as their adhesion is more than double any common spikes made by the hammer.

All orders directed to the Agent, Troy, N. York,

will be punctually attended to.

HENRY BURDEN, Agent.

Spikes are kept for sale, at Factory Prices, by I. & J. Townsend, Albany, and the principal Iron mer-chants in Albany and Troy; J. I. Brower, 222 Water St., New York; A. M. Jones, Philadelphia; T. Jan-viers, Baltimore; Degrand & Smith, Boston. ** Railroad Companies would do well to forward

their orders as early as practicable, as the subscriber is desirous of extending the manufcturing so as to keep pace with the daily increasing demand. FRENCH AND BAIRD'S PATENT SPARK ARRESTER.

O THOSE INTERESTED IN A Railroads, Railroad Director: and Managers are respectfully invited to examine an improved SPARK ARRESTER, recently patented by the undersigned.

Our improved Spark Arresters have been extensively used during the last year on both passenger and freight engines, and have been brought to such a state of perfection that no annoyance from sparks or dust from the chimney of engines on which they are

used is experienced.

These Arresters are constructed on an entirely different principle from any neretotore offered to the public. an entirely different principle from any heretolore offered to the public. The form is such that a rotary motion is imparted to the heated air, smoke and sparks passing through the chimney, and by the centrifugal force thus acquired by the sparks and dust they are separated from the smoke and steam, and thrown into an outer chamber of the chimney through openings near its top, from whence they fall by their own gravity to the bottom of this chamber; the smoke and steam passing off at the top of the chimney, through a capacious and unobstructed passage, thus arresting the sparks without impairing the power of the engine by diminishing the draught or activity of the fire in the furnace.

These chimneys and arresters are simple, durable and neat in appearance. They are now in use on the following roads, to the managers and other officers of which we are at liberty to refer those who may desire to purchase or obtain further information in regard to their merits:

E. A. Stevens, President Camden and Amboy Railroad Company; Riehard Peters, Superintendant Georgia Railroad, Augusta, Ga.; G. A. Nicolls, Superintendant Philadelphia, Reading and Pottsville Railroad, Reading, Pa.; W. E. Morris, President Philadelphia, Germantown and Norristown Railroad Company, Philadelphia; E. B. Dudley, President W. and R. Railroad Company, Wilmington, N. C.; Col. James Gadsden, President S. C. and C. Railroad Company, Charleston, S. C.; W. C. Walker, Agent Vicksburgh and Jackson Railroad, Vicksburgh, Miss.; R. S. Van Rensselaer, Engineer and Sup't Hartford and New Haven Railroad, W.R. M'Kee, Sup't Lexington and Ohio Railroad, Lexington, Ky.; T. L. Smith, Sup't New Jersey Railroad Trans. Co.; J. Elliott, Sup't Motive Power Philadelphia and Wilmington Railroad, Wilmington, Del.; J. O. Sterns, Sup't Elizabethtown and Somerville Railroad; R. R. Cuyler, President Central Railroad Company, Savannah, Ga.; J. D. Gray, Sup't Macon Railroad, Macon, Ga.; J. H. DAVENPORT & BRIDGES CONTINUE TO MANUFACTURE TO ORDER, AT THEIR WORKS, IN CAMBRIDGEPORT, MASS Passenger and Freight Cars of every description, and of the most improved pattern. They iso furnish Snow Ploughs and Chilled Wheels of any pattern and size. Forged Axles, Springs, Boxes and Bolts for Cars at the lowest prices. All order punctually execued and forwarded to any part of the country. Our Works are within fifteen minutes ride from State street, Boston-coaches pass every fifteen minutes.

### Mansfield and Sandusky City Railroad.

will unquestionably be extended to Columbus, and probably connect with the Little Miami road at Xenia, or some other point; thus opening an easy communication from the lake to the Ohio river.

We have been looking to Cleveland, for action, upon the line of road between there and Sandusky City. It strikes us that this is their true policy.-Let them give their efforts to the completion of the road parallel with the lake, and which must be pushed through unless they are willing to have the great travel to the west in winter, and much in summer, from east of Buffalo, pass through Canada to Detroit—as they may rest assured that a road will be speedily constructed across the province from some point on the Niagara river or lake Ontario.

Will Mr. Higgins, or Mr. Williams, the engineer, please furnish us with a full description of the road-and trimmings-and let us know how and when they design to reach the Ohio river?

The Sandusky Clarion of 25th of July says:

"A few years ago a company was chartered to make a railroad from this place to Monroeville. The road was made, but not in a very substantial manner. There was a good deal of business done upon it, but at a heavy expense, as the transportation was done altogether by horse-power. The stock decreased in value, and the road was finally sold by the state for its lien, although it took stock to the amount of its claim, under the new charter. It was bought by a company, of which Mr. Burr Higgins, of this city, is the principal agent and manager. The charter was re-modeled, and was, with one or two other charters, merged in one, under the style then, perfect confidence has been felt, not only in sho in the speedy completion of the road, and in the liberal profits to be realized by the enterprizing stockholders, but in the great advantages to be derived by extending so valuable a work more than fifty miles into one of the most fertile portions of the state, hithhas shown that this confidence has not been ever near. misplaced. The great benefits anticipated are yet to be tested.

on Thursday we availed ourselves of an in-lder the care of such a man.

vitation extended to our citizens by the super-Thus we find one railroad after another, some intendent, to take a pleasure trip Monroeville, is a difficulty in particularizing; but Stearns shorter and some of greater length, coming into and it was indeed a pleasure trip. The new the baggage master at Lynn depot, must not use in different sections of the country. This road car has 28 double seats, with a passage run- be forgotten; well versed in the political conning the whole length between, which were dition of the country, as well as the arduous sit as comfortably as they could rest on their ready night or day, to render information to there were several open cars, which carried appreciate his services, while we know he the road will be completed."

### Railroad Management.

We find in the Salem Register, the following remarks in relation to the management of the Eastern to before; but now that the arrangements are railroad. It must be evident to those who will reflect one moment on the subject, that this is the true policy for every railroad company to adopt. Induce people to travel, to live along the line, to ride often by low fare, frequent trips and courteous treatment, then they are sure to make good dividends. This company has the proof in its own management for the past year. They have even with reduced fares earned over nine per cent on their capital. So with the Dublin and Kingston railway, of only 6 miles in length, costing £58,000 a mile, by a system inducing travel, by accommodating the people, they divided in 1844, 9 per cent. Let others profit by these facts.

"The Lynn travel, as well as those who wish to visit Nahant, the Ocean or Rocka-thirds of the distance from Boston to Salem; way house, and the Mineral spring, are not and when the whole distance shall be comonly accommodated, but Salem, Beverly, pleted, which we doubt not will be as soon Marblehead and Danvers, also, as well as as practicable, and cars run every hour, then that numerous class of passengers who come we shall see old Essex crowded with the indicated at the head of this article. Since into Boston in the best trains on other roads; merchants of Boston, not only paying tribute in short, everybody is pleased and accommo- to the stockholders but realizing the sanguine

> The present arrangement has been in operation long enough to realize its utility, it having already induced individuals to reside in Essex who would not otherwise have done so.

The mechanic, the trader and the gentleerto denied all advantages from public im- man of leisure, can reside in Essex and transtruction of the road is concerned, experience as in any part of Norfolk or Middlesex, how-

The cars leave Boston eight times daily and arrive as often from Lynn and Salem. There has been a very heavy expenditure with a promptness unequalled on any other at this place for a depot, being all built on road; and what is of as much importance as made land in the bay, extending from the shore into deep water. The walls of the tlemanly manner of the conductors, who seem buildings are up, and are, like the road, built to in the most substantial manner.

Some time ago a new locomotive, called the Comfort of the travelling public; and while Mr. Vanhorn is entitled to the confict the Mansfield, arrived, and has, for a few weeks past, been runing for purposes chiefly thanks of the patrons of the road for the connected with the construction of the road partons of the road for the connected with the construction of the road partons of the road for the detay on railroad iron; the other to a gentleman in Philadelphia, last January, upon connected with the construction of the road; promptness and cheerfulness with which he but not until now has the business of carrying attends to his duties as boatman. The boat passengers re-commenced, which was sus-under his management, is nothing more or pended during the re-construction of the less than a splendid saloon, as neat as a pin, on Wednesday a splendid new car, calculated for fifty-six passengers, manufactured by Hart, Higman & Co., of Utica, N.Y., arrived, and was placed upon the road, and on Thursday we availed curselyes of an in the less than a splendid saloon, as neat as a pin advantage we hope, to many.

New Cars.—The Harlem railroad company are entitled to the thanks of their tall passengers for habitative, arrived, and was placed upon the road, and on Thursday we availed curselyes of an in the less than a splendid saloon, as neat as a pin advantage we hope, to many.

New Cars.—The Harlem railroad company are entitled to the thanks of their tall passengers for habitative, and was placed upon the road, and on Thursday we availed curselyes of an in the less than a splendid saloon, as neat as a pin advantage we hope, to many.

New Cars.—The Harlem railroad company are entitled to the thanks of their tall passengers for habitative, and was placed upon the road, and on the splendid boat unfactory of Eaton & Gilbert, Troy, so high that one

In fact, there is so much to approbate, there nearly filled with ladies, where they could duties incumbent upon him, he is always own sofas in their own parlors. Besides this strangers. It is evident that the corporation as many more. Everything worked admira- has the confidence of the patrons of the road. bly; all, we believe, were highly gratified On the whole, from the president down throwith the trip, and all, we doubt not, unite in all the offices, there is a devotedness to the wishing prosperity to the enterprizing pro- wishes of the travelling public which has alprietors of this great improvement. By the ready met with a hearty approbation. The first of September, next, it is expected that reduction of fares has increased the revenue, and the facility rendered by the frequent trains meets not only the approbation of all, but an increase of patronage is the result.

These matters should have been attended right, we think the managers of the road are entitled to credit. It may be said they have done their duty and only that, and deserve no thanks from the public; but that is just the reason why they do deserve it.

Let the managers of this road hereafter keep up with public opinion, and the Eastern railroad will ever be the 'banner road,' without exception. The running of the trains should be changed quarterly, in order to give satisfaction; in that case there is little time to grumble, even should the arrangement be un popular.

Already we have a double track about two anticipations of the proprietors of the road."

Foreign Correspondence.

We are again under obligation to our liberal friend in London, for an interesting letter and for English Railway Journals of the latest dates by the Cambria, and probably in provements of any kind. So far as the con-sact business in Boston as conveniently, now charge of a passenger, to whom, as well as to the gentleman who sent them, we desire to express our thanks. They came late to hand or we should have given our readers the reading of them in this number. They are, however, none the less acceptable, as their contents will be found interesting and useful

> tleman in Philadelphia, last January, upon the subject of high fares on railroads, which we shall republish, in subsequent numbers, and both will be read with interest to all and

can stand erect, when he cannot find a seat.

### Railroads at the North.

[Miners' Journal.

The railroad movements in the northern states appear to gain strength and impetus from each other. When the people on one of the proposed lines begin Saratoga sprigsn, Whitehall and Rutland to thus to agitate the subject, those on another line are sure to "fire up" and dash ahead with renewed energy; and this is sure to bring into the field those interested in a third. This appears to be especially the case on those lines in New England, contemplated from rio, and the whole west much nearer to them. The the Atlantic to Canada, and is becoming also true in exhibited statistics of this road show great in-York, designed to draw the trade of the west from who have other objects in view besides the dividends of operations. lake Ontario.

In New England there is, to begin east, the Portland and Montreal road; next in order, a continua- Syracuse, which enjoys the great advantage of dis-

Bellows Falls Vt., and then up the valley of the Connecticut, to White river and there connect with the road to Burlington. Here we have four lines a part of the way, all pointing towards Canada, and all looking for at least a part of their support from the great west, via lake Ontario and the St. Lawrence.

To many persons, it will doubtless appear absurd to predict that all these lines will be built; but to us it appears as plain as that two and two make four, and simply for the reason that the people along their lines cannot afford to do without them-they will be obliged to build them in self difence; therefore they would be built even if they would not pay 3 per cent on their cost. If built by the people along their lines and at their terminations, and never pay over one per cent it will be a good investment; or in other words, the property along the lines and at the terminations, would be enhanced in value, by the roads to an amount greater than the cost of the roads; therefore the people would be gainers by the operation, even if the shareholders never received a penny dividend: vet there would, in such an event, be a loss to the shareholders, as there are always some, and indeed many, who are willing to be benefitted by public works, but never to aid in their construction. Fortunately, however, in these cases, or at least in the three last, there is business enough now along the line of each to insure a dividend of over 7 per cent from their completion, without taking into the account the natural increase of business created by the road, or what may be drawn over them by extensions and latterals; and as for the other, from Portland to Montreal its through business will pay a fair dividend, without its way, which will certainly be considerable and increasing.

But these are not all, there is another, a continuation of the Fitchburg road to Brattleboro, and from there to Bellows Falls, or to Rutland or both, and to Burlington. Of the construction of this road to Bellows Falls there can be no doubt; but there appears of late to be less certainty of its reaching Rutland, though we consider it as certain as either of the others, and for the reason that the Bostonians are determined to compete with New York for the business of northern Vermont, Canada and the west, by means of railroads; and the distance from the Connecticut river to Rutland, or even to Whitehall is not so great, nor the route so difficult as to deter them from stretching out an arm in that direction, especially when so much may be gained by the operation. The Boston people will not nor will the western Vermonters, rest easy until this road is constructed. When this is done-yes, and before that period-there will be another road completed from opening an easy communication to Albany. much for New England; then comes the road from Champlain to Ogdensburg, to be built mainly by Boston capital; this road brings lake Ontaon their stock. The Rome and Cape Vincent railroad is the next in order; and then the Oswego and corner of New Hampshire by the way of Keene, to some one favor us with an answer. number.

### Railways in Belgium.

The second article on the railroads and other modes of communication in Belgium, by Geo. C. Schaeffer, from Poussin's recent interesting work on Belgium, will be found in this number of the Journal. The Belgian government appears to have undertaken their works methodically and to have prosecuted them with equal energy and success. Reference is made by the author, to a "break" in use on the inclined plane at Liege, invented by M. Leignel, which has been very successful in preventing accidents in working that plain; and the plan of forming embankments on wet soils, by which slides are prevented, is also spoken of as successful and meritorious, but no details, or definite description, is given in relation to either, which we much regret, as real improvements in such important parts of the railway system will be valuable in this country as well as in Belgium. We therefore hope that Major Poussin will favor us with such details for the Journal as will enable our readers to avail themselves of their peculiar advantages.

THANKS TO THE OSWEGO DAILY AD-VERTISER for its prompt response to our request to receive that spirited paper in exchange, as well as for its very favorable notice of the Journal. It has been our aim for thirteen years past, and we hope it may for as many years to come, to make the Journal useful to the cause in aid of which it was established; and our greatest source of regret has been, and now is, that when there was so much to be done, our limited ability and means have enabled us to do so little .-The period however, has now arrived when, with the liberal aid of the press throughout the country, and of the profession which has charge of the construction and management of, as well as the much more numerous class interested as shareholders in, the railroads constructed and projected, it may accomplish more than it has heretofore been able, and thus promote the interest of all, the public as well as those more directly interested; but to accomplish this it must be circulated more extensively and read more generally, which is most sure to follow when thus favorably noticed by the press. We therefore thank the editor for past favors and trust he may find cause to repeat to his readers his recommendation for them to become ours. We assure him and others that the Railroad Journal shall be made useful to the cause just in proportion as its increasing patronage furrelation to those lines projected in the state of New ducements to capitalists and especially to those nishes us with the means to enlarge its field

### The Railroads of Belgium.

merly of the U.S.E.

BY G. C. SCHAEFFER, C. B.

For the American Railroad Journal.

communication previously existing in Belgium, ren. adopted for about 21 miles. The shortest curves are ders the history of the introduction of the railroad 400 metres (about 1,330 feet) radius, and there are system a matter of much interest. We shall there- but few of them. fore at some length develope the views of our author, at the same time introducing such observations as may serve to render them more practically useful to ward, towards the Rhine, however, required numerthe American reader.

The creation of the railroad system of Belgium not only dates from the revolution of 1830 but was in fact the first national act after that event. It must be remembered that the existing modes of communication were in a measure but part of those of Holland and that the independence of Belgium deprived her of many of the advantages resulting from that connection. Moreover she must not only retrieve this loss, but place herself in a condition to rival those very works upon which she had formerly depended. The great principle at once laid down by her most distinguished statesmen, was the preservation of her national individuality. Another and very important subject, was the occupation of the heads and hands of a people just emerged from a revolution. These and other considerations lead to the examination of a route from Antwerp to the the greatest obstacles arose from the wet soil, but Rhine near Cologne, with the object of affording a new mouth to the Rhine and a means of competing with Holland in the traffic from Germany. These examinations led to the draught of a law which was discussed by the chambers and senate, and passed by large majorities on the 1st of May, 1834. The terms of the law are as follows: the state shall establish a gives us no further particulars of the process. railroad, having for its central point Malines (Mechlin) running eastward toward the frontiers of Prussia, by way of Louvain, Liege and Verviers; Northwardly to Antwerp; eastwardly to Ostend, by way a foundation of sand and gravel; the rails, 52 lbs. Brussels and the frontiers of France, passing through long, 1 foot wide at bottom, and 6 inches thick. The Hainault.

No sooner had the bill passed than the work was commenced, and by May 1835, the line from Brussels to Malines 121 miles long, was opened. A travel of 60 to 80,000 had been counted on, but the first year 400,000 persons passed over the road. The next year the line from Malines to Antwerp 151 miles long, was opened; and before 1837, 872,000 persons had travelled on the two sections between Antwerp tion in all cases equal to the importance of the works and Brussels.

In May, 1837, a new bill passed by the chambers provided for the extension of the national railroad from Ghent to the frontiers of France, by way of Tournay and Courtray, and a branch from Brussels, by Braine-le-Comte and Charleroy to Namur. During this year the amount of road completed was 89 miles; in 1838 the length of line in operation was 148 miles; in 1839, 192 miles; in 1840, 206 miles; in 1811, 234 miles; in 1842, 271 miles; and in 1843, the entire line of national road was completed, being in all 347 miles.

Thus, in less than nine years, was a work executed by the state, which would not at the present time terested in the subject, we give it a place in the Jour-miles per hour, for fuel and wear and tear have been finished by private enterprize, as none but nal, with the single remark, that we should like to both of road and machinery, increases in a the more profitable portions would have been select- receive a well written article on the same subject greater ratio than the speed. The surface of the country generally presents but few difficulties; the continuation of the line eastous and costly works, of which the most important is the inclined plane at Liege, which descends to the valley of the Meuse, 366 feet, by a grade of 3 to 100. The author speaks with approbation of the break in use on this plane, invented by M. Leignel, which has prevented all accident. On the same section of this plane is the bridge of Val Benoit, 604 feet long, and 50 feet wide, with a carriage and foot

The most remarkable portions of this division of the line are, however, those along the Vesder, where, sometimes by tunnel and sometimes by open work, by short curves and a succession of grades not exceeding 6 to 1000, a speedy transit is insured to the to Namuralso presented difficulties, but less than those just referred to. Upon other parts of the line more ingenious than the mode of embankment for common in wet soils. Unfortunately our author

Durability and economy, rather than ornament, are the characteristics of the works,

Mode of Construction.—The road is laid upon

The oak cross-pieces have been used since 1841; their price in 1844 was 5 francs 28c., or about one dollar each.

Our author gives to the Belgian engineers credit for professional knowledge and practical applicaentrusted to their care.

(To be continued.)

### New York and Albany ailroad.

We have received a copy of the Poughkeepsie Telegraph. We should like to know who sent it. Was it the editor? We have not seen a Poughkeepsie paper before in an age. Will he send another? It contains the following letter from John Childe, Esq., in relation to the rival routes between New York and Albany. From the date it appears to have been written for a specific purpose and may have accomplished the object for which it was designed; as it the train to leave the track. The expenses, has however been sent us by some one probably in- also, of running loaded trains faster than 25

CHARACTER OF THE LINES AND THE MORE REMARK- we would ask the gentlemen interested, what are immense loads at high velocities, and at a moderate led and in the field, or you will allow one of the best charters in the country to die an unnatural death. Look to it.

Springfield, April 19, 1845.

Dear Sir:-The people of this country have been so much entertained by the introduction of railways and the use of steam power thereon, and have been so constantly engrossed with the enjoyment of this novel and improved mode of communication both for business and pleasure, that they have scarcely noticed, until very recently, the wide difference between one railway and another, and, now, but little regard is paid, by those most experienced in railway affairs, to the means of making others more durable and efficient than the best of those already constructed. Indeed, there are enlightened men who are still advocates of undulating surface roads, because they can be cheaply built; and a railroad is too great a matter with such speculative and superficial reasoners to allow them to look beyond present success to its heaviest loads. The branch from Brain-le-Comte permanent character as a labor saving machine. The true principle is, to build a railway as you would a steam engine, a printing press, a power loom or a spinning jenny; these the inhabitants of Flanders have long been ac- the main object being, not to construct a cheap customed to meet and to conquer with equal skill machine, but one that will accomplish the and economy. Nothing can be more simple and greatest amount of labor in the least time, and with the smallest expenditure of power. preventing the slipping of soft banks, which are so In entering upon the great enterprize of constructing a railway from New York to Albany, this principle is of paramount importance and cannot be better illustrated than by showing the practical operation of a railway with locomotive steam power. In the works of nature there are lines of beauty; so in of Termond, Ghent and Bruges; Southwardly to to the yard, are laid upon oak cross-pleces, 81 feet railways there are lines of excellence, to wit: straight lines of location, horizontal gradients width of the track is one metre and a half, or near- and a strong unyielding iron rail. All these ly five feet—the distance between the tracks about 6 qualities, I know, cannot be found combined in any one route; yet every railway should be made to approximate as nearly to perfection in these particulars as the character of the country will permit, or the commercial importance of the route justify.

> Assuming an average speed of 33 miles per hour, including stoppages, which shall be maintained with economy and safety, the road should be laid free from the action of frost, and contain no curve whose radius is less than 1800 feet. Over a road thus laid, expresses may be run 40 miles per hour or even faster, but regular trains, heavily loaded with passengers, at this high speed, are greatly exposed to the risk of breaking wheels and axles, the consequences of which are as fatal as would result from running off the track; for any such breakage must inevitably cause ing speeds higher than 30 to 33 miles per While we are upon the subject of this road, hour must always be regarded as inexpedient.

ries with the gradients of the road approximately as follows:

I	oad on a level	.420	tons.
	" on an ascent of 10 feet per mile	.280	
	"·····································	208	66
	<b>""30"</b>	154	66
	"	135	
	"	. 114	
	" " 60	- 98	
	""	86	66
	<b>""80"</b>	76	**

The load of any engine, heavy or light, will vary in like proportion; that is, the load for any given engine, on a level, will require two engines of equal power on gradients of 20 feet per mile,

3 1-10 do on gradients of 40 feet per mile. 

Of the two routes from New York to Albany on the east side of the river, that in the interior connecting with the Albany and West Stockbridge toad at Chatham, presents maximum gradients of 40 feet per mile; the other, on the bank of the river, reported 17 feet per mile, but I doubt not may be constructed, with some tunnelling, not to exceed 5 or 10 feet per mile at any place, and generally a dead level. A 15 ton engine will haul 93; tons greater load over the latter than over the former. With more powerful engines this difference will be increased,-With one that will haul 853 tons on a level, it is equal to 178 tons; with one of the heaviest class, that will haul 1000 tons on a level, it is equal to 214 tons. Now the cost of traction on a road of large traffic, is nearly in proportion to the power expended; and is, over 17 and 40 feet gradients as 100 to 164; or 2ths cheaper on the river route than by the interior route.

But in case a line can be located on the river bank with gradients not to exceed 5 ft. per mile; the comparison of cost of traction over the two routes will be as 100 to 249 in favor of the river route; or, in other words, two engines on the river route will haul as many tons of merchandize and passengers between New York and Albany, as five en-for an average speed of of 33 miles per hour. gines of equal power could by the interior; The risk to life and machinery from this and the time of transit on the former will be cause (at such times beyond control) cannot

Very respectfully and truly, I am yours, JOHN CHILDE.

Low Fares and High Speed for Passengers. It is stated in Herapath's Journal that Mr. Hudson, the great railway manager, who has been obtaining leases of several important railways for the purpose of establishing uniformity of management and affording the greatest possible accommodation to the public, and consequently the most profit to the shareholders, has been exceedingly fortunate in his operations. It is said that "if Mr. Hudson had lived about two centuries ago, in all probability he would have been burnt for a wizzard, or have passed for one who had discovered the philosopher's stone.-Scarcely a thing he touches but turns up a trump, and no one, two or three centuries since, could have done that without being considered as having dealings with the governor of the lower regions."

When he took the "Hull and Selby, with an offer to pay 10 per cent, those who had known the line from its origin thought him insane, or wildly bent on wresting, at any cost, an ordinary thing from the hands of his rivals;" yet according to his figures at the meeting on Saturday, it appears that the lessees will not lose by the bargain, such has been the increase of traffic:

The same result appears to have followed his obtaining the control of the Bristol and Birmingham, composed of the Birmingham and Gloucester and the Bristol and Gloucester roads, wich were deemed by their friends "children of hopeless fortunes," yet when Mr. Ellis, Mr. Hudson's coadjutor, undertook to pay 6 per cent. rent for this pair of promise-nothings, most of the railway world thought that success had turned their brains. Here, however, as in other cases, fortune seems to smile upon them and the bargain

And so with the Great North of England, another proof of his great foresight, or great good fortune. "Three per cent, for the last half year was considered a very good dividend, says Herapath, and to our knowledge many of the shareholders were delighted with The shares then stood at about £135, which the public thought their full value.mile; and as the top of the rails will be 10 there; and chiefly to secure easy curves, low line should be in the hands of Mr. Hudson bed, the trouble and expense of clearing changeable road support. Yet with more for public convenience, who had the lines them of snow will be very light. On the difficulties to contend with, we talk of run north and south of it, up sprung the shares

and now they are actually about £250. then thought 7 per cent, would be a fair price for it, looking prospectively forward to an increase. But to our astonishment, Mr. Hudson comes forward and gives 10 per cent. by which we and others thought he would lose some £20,000 a year. We are, however, in a fair way of being deceived. As if the success of the line had been kept back until in Mr. Hudson's power, the traffic which has been crawling along at some £1,500 per, week, is now risen to £2,200."

The foregoing, as a preliminary to show what, if not who Mr. Hudson is, brings us to the subject indicated by the caption of this article, viz. that low fares and high speed for passengers, tend to increase the profits of well managed railroads, especially on long lines. Such at least appears to be the opinion of Mr. Hudson, who has had, probably, in the management of railroads, more experience than any other man living, if we may judge from the statements of Herapath, who says, "to get out of the line all it is capable of affording, and at the same time to increase the accommodation to the public, Mr. Hudson has adopted the wise policy, from the 1st inst., of sending a third class train of 1d. per mile fare all the way from London to Newcastle in one day, a distance of 303 miles.-We have little doubt but, like the London and Birmingham reduction of fares, this will result in an increase of their profits."

Who can doubt the wisdom of the policy, as well for railroad companies as for others, dependent upon the good will or necessities of the public, which shows a disposition not only to render service for a stipulated consideration, but also to render it in an acceptable manner and as much service for the consideration as can be safely done. If the service is rendered, yet in a gruff, uncourteous manner, the companies will be employed when the service cannot be dispensed with, but never from good feeling; whereas if it had been rendered in a manner which evinced a desire to oblige and at the same time to do as much as possible for the consideration, it would be the means of making friends daily, and of course, of increasing business and profits .-If this theory be correct, there are those within our knowledge, in this country, who would profit by its adoption.

We find in the money article of the Phil. Ledger of 1st inst. the following refference to the late rivalry between the Wilmington and Baltimore railroad and the Chesapeake and Delaware canal co. It is time that these ruinous rivalries between railways and canals were put an end to. Let them avoid rivalries ruinous to themselves, as well as combinations which are unjust to the public, and charge fair, living and profit giving rates that all those who invest and those who use, may be benefited by their construction,-

we hope to see it adopted by the Reading the friends of this road. The above is from railroad, and Schuylkill canal companies.—the Toronto Globe. The railroad can now afford to be magnanimous, even though it has been traduced and reviled especially by Philadelphians, who, like all others that use the Anthracite coal of Pennsylvania, owe it a debt of gratitude for reducing the price of coal at least \$1 per ton since July 1843. "The Initiatory steps to a reconcilement of the suicidal rivalry existing between this road and the canal Company have been taken, and showed themselves in an announcement by the railroad Company yesterday, of a rise in the charge of freights from 5 to 40 cents per ton. The tendency of this rise will give all the freighting to the line of Ericson propellers through the canal; and it is presumed that the canal, in return, will so regulate the speed of the steamboats through the canal as to drive all the passengers over the railroad. Thus a division of the business between this city and Baltimore will be effected, and on such terms as will result to the advantage of both railroad and canal."

Oswego and Syracuse Railroad.—We understand that about \$80,000 of the stock of this road, has been taken in Oswego-\$40, 000 at Syracuse, and some \$12 or \$15,000 An amount, it is believed suffielsewhere. cient to insure the construction of the work.

It is said that Messrs. Belknap and Co. have offered to build the road, and take their pay one half in the stock of the Company; year from the time of commencing operations. Their high character as builders of the Fitchburgh railroad, is an assurance that they will perform any contract they may enter into.

Toronto and Lake Huron Railroad Company.-We announced two weeks ago the election of the directors of this company .-A special meeting of the board was held on Canada. Saturday last, when the following resolutions were passed, settling the long vexed question of the terminus, in favor of Port Sarnia.

1st. That the line of road shall commence at Toronto and terminate at or near Port Sarnia.

2nd. That Frederick Widder, Esq., be appointed the accredited agent of the company, to proceed to England to advocate the line of road adopted, to procure stock to be taken up, and in general to further the interests of the company-and, lastly that an instalment be called in of ten per cent. on the capital stock subscribed.

The prospectus will be issued immediately. Action, Action, Action-One of the first towards promoting the undertaking.

We This is and has always been our advice, and requisites, for success appears to characterize

Fitchburgh Railroad.—This company have divided 4 per cent, from the business of the last six months. Contracts have been made for the extension of the road to Athol. to be completed in little over a year. The competition was active, and the contracts have consequently been made on favorable

An efficient corps of engineers says the Northampton Gazette of 29th July, will be put to this route between Northampton and Greenfield this week, under the direction of Capt. Childe, to make a final examination and location of the road. Of course, as soon as this is done, the road will be advertised for contract.

Eastern Railroad .- Mr. William S Tuckerman, has been chosen treasurer of the Eastern railroad corporation, vice B. T. Read; resigned.

Rome and Cape Vincent Railroad. We find in the Watertown (Jesserson county) Journal the proceedings of a large meeting in relation to a railroad from Rome, Oneida county, to Cape Vincent, on lake Ontario. This will, when constructed, open a new route to, and a competitor with, the Ogdensburgh and Champlain road for the Canada and western trade. We give the proceedings, in part, of the meeting—omitting the letter from Wm. S. Brown, Esq., C. E., for the present—that our readers may be aware of the movements in every direction for immediate action in relation to important lines of railroad. We look upon the numerous movements on this subject, when made in and agree to have it ready for the iron in one relation to necessary, or important, lines, with much pleasure, always, and admire the enterprize and energy of the people-except when we have the city of New York in our mind's eye! But, thank heaven, New York must soon act in self-defenceas well might the attempt be made to resist the tide of emigration westward as for the city of New York to attempt to retain her relative position without a railroad to Albany and to LAKE ERIE. This movement, it will be seen, is in unison with the people of

NICOLL'S PATENT SAFETY SWITCH for Railroad Turnouts. This invention, for some time in successful operation on one of the principal railroads in the country, effectually prevents engines and their trains from running off the track at a switch, left wrong by accident or design.

It acts independently of the main track rails, being

laid down, or removed, without cutting or displacing

It is never touched by passing trains, except when in use, preventing their running off the track. It is simple in its construction and operation, requiring only two Castings and two Rails; the latter, even if much worn or used, not objectionable.

Working Models of the Safety Switch may be seen at Messrs, Davenport and Bridges, Cambridge-

port, Mass., and at the office of the Railroad Journal, New York.

Plans, Specifications, and all information obtained on application to the Subscriber, Inventor, and Pa-tentee. G. A. NICOLLS, Reading, Pa. ja45

R. CASEY, CIVIL ENGINEER, NO. 23 Chambers street, New York, will make surveys estimates of cost and reports for railways, canals, roads, docks, wharves, dams and bridges of every description, with plans and specifications. He will also act as agent for the sale or purchase of machinery, and of patent rights for improvements relating to public works.

### KITE'S PATENT SAFETY BEAM.

MESSRS. EDITORS.— As your Journal is devoted to the benefit of the public in gen-eral I feel desirous to communicate to you for publication the following circumstance of no inconsiderable importance, which oc-curred some few days since on the Philadel-phia, Wilmington and Baltimore railroad.

On the passage of the evening train of cars from Philadelphia to this city, an axle of our large 8 wheeled passenger car was broken, but from the particular plan of the construction, the accident was entirely unknown to any of the passengers, or, in fact, to the conductor himself, until the train, (as was supposed from some circumstances attending the case,) had pass-cd several miles in advance of the place where the accident occurred, whereas had the car been constructed on the common plan the same kind of acci-

dent would unavoidably have much injured it, perhaps thrown the whole train off the track, and seriously injured, if not killed many of the passengers.

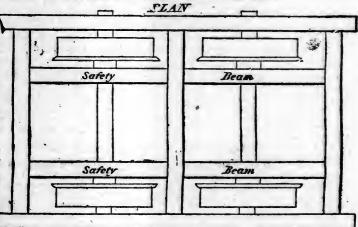

Wilmington, Del., Sept. 28, 1840.

The undersigned takes pleasure in attesting of the value of Mr. Joseph S. Kite's invention of the Safety Beam Axle and Hub for railroad cars. They have for some time been applied to passenger cars on this road, and experience has tested that they fulon this road, and experience has tested that they fuly accomplish the object intended. Several instances of the fracture of axles have occurred, and in
such the cars have uniformly run the whole distance
with entire safety. Had not this invention been
used, serious accidents must have occurred.

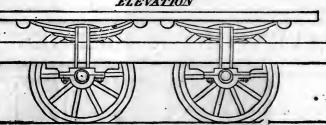

In short, we consider Mr. Kite's invention as completely successful in securing the safety of property
and lives in railroad travelling, and should be used on all railroads in the country.

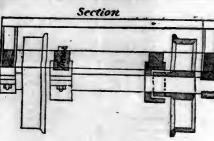

JOHN FRAZER, Agent,
GEORGE CRAIG, Superintendant,
W. L. ASHMEAD, Agent.

The A model of the above improvement is to be seen at the New Jersey railroad and transportation
office, No. 1 Hanover st., N. York.

### ELEVATION

PATENT HAMMERED RAILROAD, SHIP and Boat Spikes. The Albany Iron and Nail Works have always on hand, of their own manufac-ture, a large assortment of Railroad, Ship and Boat Spikes, from 2 to 12 inches in length, and of any form of head. From the excellence of the material always used in their manufacture, and their very general use for railroads and other purposes in this country, the manufacturers have no hesitation in warranttry, the manufacturers have no nestitation in warriant ing them fully equal to the best spikes in market, both as to quality and appearance. All orders addressed to the subscriber at the works, will be promptly executed.

JOHN F. WINSLOW, Agent.

Albany Iron and Nail Works, Troy, N. Y.

The above spikes may be had at factory prices, of Erastus Corning & Co., Albany; Hart & Merritt, New York; J. H. Whitney, do.; E. J. Etting, Philadelphia; Wm. E. Coffin & Co., Boston.

ja45

TO IRON MANUFACTURERS. THE SUBscribers, as Agents of Mr. George Crane, of Wales, having obtained a jatent in the United States for his process of smelling Iron Ore with Anthracite coal, and holding an assignment of the pa-tent obtained by the late Rev. F. W. Geissenhainer, are prepared to grant licenses for the manufacture of Iron according to Mr. Crane's principle.

A. & G. RALSTON & CO.,

No. 4 Sout Fronth st., Philadelphia, Pa.

PATENT RAILROAD, SHIP AND BOAT Spikes. The Troubles 122 Spikes. The Troy Iron and Nail Factory keeps constantly for sale a very extensive assortment of Wrought Spikes and Nails, from 3 to 10 inches, manufactured by the subscriber's Patent Machinery, which after five years' successful operation, and now almost universal use in the United States (as well as England, where the subscriber obtained a patent) are found superior to any ever offered in market.

Railroad companies may be supplied with Spikes having countersink heads suitable to holes in iron rails, to any amount and on short notice. Almost all the railroads now in progress in the United States are fastened with Spikes made at the above named -for which purpose they are found invaluable, as their adhesion is more than double any com-mon spikes made by the hammer.

All orders directed to the Agent, Troy, N. York,

will be punctually attended to.

HENRY BURDEN, Agent. Spikes are kept for sale, at Factory Prices, by I. & J. Townsend, Albany, and the principal Iron mer-chans in Albany and Troy; J. I. Brower, 222 Water St., New York; A. M. Jones, Philadelphia; T. Jan-viers, Baltimore; Degrand & Smith, Boston. ** Railroad Companies would do well to forward

their orders as early as practicable, as the subscriber is desirous of extending the manufcturing so as to keep pace with the daily increasing demand.

### FRENCH AND BAIRD'S PATENT SPARK ARRESTER.

TO THOSE INTERESTED IN Railroads, Railroad Directors and Managers are respectfully invi-ted to examine an improved SPARK ARRESTER, recently patented by the undersigned.

Our improved Spark Arresters have been extensively used during the last year on both passenger and freight engines, and have been brought to such a state of perfection that no annovance from sparks or dust from the chimney of engines on which they are

used is experienced.

These Arresters are constructed on an entirely different principle from any heretotore offered to the public. The form is such that a rotary motion is imparted to the heated air, smoke and sparks passing through the chimney, and by the centrifugal force thus acquired by the sparks and dust they are separated from gal force thus acquired by the sparks and dust they are separated from the smoke and steam, and thrown into an outer chamber of the chimney through openings near its top, from whence they fall by their own gravity to the bottom of this chamber; the smoke and steam passing off at the top of the chimney, through a capacious and unobstructed passage, thus arresting the sparks without impairing the power of the engine by diminishing the diaught or activity of the fire in the furnace.

the engine by diminishing the drought or activity of the fire in the furnace.

These chimneys and arresters are simple, durable and neat in appearance. They are now in use on the following roads, to the managers and other officers of which we are at liberty to refer those who may desire to purchase or obtain further information in regard to their merits:

E. A. Stevens, President Camden and Amboy Railroad Company; Richard Peters, Superintendant Georgia Railroad, Augusta, Ga.; G. A. Nicolls, Superintendant Philadelphia, Reading and Pottsville Railroad, Reading, Pa.; W. E. Morris, President Philadelphia, Germantown and Norristown Railroad Company, Philadelphia; E. B. Dudley, President W. and R. Railroad Company, Wilmington, N. C.; Col. James Gadsden, President S. C. and C. Railroad Company, Charleston, S. C.; W. C. Walker, Agent Vicksburgh and Jackson Railroad, Vicksburgh, Miss.; R. S. Van Rensselaer, Engineer and Sup't Hartford and New Haven Railroad, W. R. M'Kee, Sup't Lexington and Ohio Railroad, Lexington, Ky.; T. L. Smith, Sup't New Jersey Railroad Trans. Co.; J. Elliott, Sup't Motive Power Philadelphia and Wilmington Railroad, Wilmington, Del.; J. O. Sterns, Sup't Elizabethtown and Somerville Railroad; R. R. Cuyler, President Central Railroad Company, Savannah, Ga.; J. D. Gray, Sup't Macon Railroad, Macon, Ga.; J. H. Cleveland, Sup't Southern Railroad, Monroe, Mich.; M. F. Chittenden, Sup't M. P. Central Railroad, Detroit, Mich.; G. B. Fisk, President Cong Island Railroad, Brooklyn. sident Long Island Railroad, Brooklyn.

Orders for these Chimneys and Arresters, addressed to the subscribers, or to Messrs. Baldwin & Whitev. of this city, will be promptly executed. FRENCH & BAIRD. ney, of this city, will be promptly executed.

N. B.—The subscribers will dispose of single rights, or rights for one or more States, on reasona-

e terms. Philadelphia, Pa., April 6, 1844.

plain Railroad.

We have had upon our table, for several days past, ful information in relation to the business operations of the northern part of the state of New York, lake Ontario and Canada-in connection with the railroad from Ogdensburgh to lake Champlain. The painphlet appears to have been prepared expressly for the Boston market, towards which city all favorable projects and meritorious enterprizes seem now to be attracted. The pamplet appears to have been prepared by Mr. J. G. Hopkins. It has been got up with great care, and will be likely to effect the object in view, viz. to draw the attention of Boston capitalists, and business men to the advantages which this road will be likely, in connection with ple who justly appreciate the amount of business which is sure, in a few years, to float upon lake Ontario. The boundless and fertile west will furnish an amount of produce, almost beyond ordinary com- has been twice carefully surveyed, at an ex- extended, of the incorporation of any injurious prehension; a large part of which must reach the Atlantic states, through the medium of the lakes, railroads and canals, and when once loaded into appointments from the governor of Newlake vessels it will be likely to seek that point near- York; once by Edwin F. Johnson, and again are presented as some convenience to those est to the place of its destination, and from whence by Edward H. Brodhead. The appropriait can be most cheaply and speedily transported before tion for the first survey did not admit of as course, it is hoped, will not form an opinion it will be unloaded. That designed for New York full an examination of other lines as was of their merits till they have fully examined will find an outlet at Oswego, either by the canal, deemed desirable, and a further survey was the grounds upon which they are based. or the railroad that is soon to be, while all that is destined for the interior of New England, much even limiting the expense. The line was again for Boston itself will be landed at Ogdensburgh, and surveyed, with all other routes deemed at all pass over the Northern railroad to lake Champlain, practicable for reaching lake Champlain. thence to Boston and throughout New England by

The length of the road is by one line surveyed 120 miles; and the highest grade 40 feet to the mile, and by the other line 1211 miles—the estimated cost of the first line is \$1,778,459—and of the other \$1,-923,108—but we advise them to fix their minds upon a road which shall not cost less than \$2,500,000 when in complete running order. Begin rightpersevere and then it will be sure to come out right.

We make a few extracts to show the business, and its annual increase on the N. Y. canals.

"The tonnage of products, sent to tide water on the N. Y. canals in 1844, was 1,019, 025 tons, valued at more than \$34,000,000, and that 176,737 tons of merchandize was sent from tide water on those canals in the same year. We have been moderate enough to claim for Boston only a small share of the increase of that trade, as has been seen, which render our road a very productive one.

at tide water from the west, by the Erie canal, is 161,031 tons per year, for the last ten lieved, in obtaining the land for the roadway. are agricultural products.

"The number of tons merchandize which ascended the New-York canals from tide drifts, and little interruption will ever arise water in 1844, was 135,616, and including from this source. The estimates do not incoal, &c., was 176,737, and the year previ-clude the cost of engines, cars, &c.; and if, ous, 143,595. If Boston should send over in addition to this expense, and for the purthe Ogdensburgh road 20,000 tons of mer-pose of furnishing the most ample accommochandize to the west, it would be but little dations for transporting so great an amount more more than half the mere increase of of freights as is expected to pass on the road,

a pamphlet containing much interesting and use- the goods of emigrants to the west and to sufficient to admit of much abatement on acbe extravagant to set down all this trade at cessary or desirable. 20,000 tons."

We give the following in relation to the character of the route, surveys and estimates of business upon the road, that our readers may have a better idea of the project. the Vermont railroad to Burlington, to afford them. some grains of allowance—not however as alteration except by the votes of two-thirds of We are well convinced that there are very few peo- over but rather as under estimated if we take all the members elected to each branch of the an average of 7 years from its completion.

> "THE COST OF CONSTRUCTION.—The route pense of more than thirty thousand dollars, by able and accomplished engineers, under ordered by the legislature in 1840, without The result confirmed the selection made by Mr. Johnson, with slight variations. The first survey made the line 119 miles from Ogdensburgh to Plattsburgh, and the highest grade 45 feet, with an estimated cost \$1,451, 805. Mr. Brodhead, having more time for examination, was enabled, by extending the line, to reduce the highest grade to 40 feet in the mile. He surveyed two routes for part of the distance, making the line 120 miles on one, with an estimated cost of construction \$1,778,459, and the other 1211 miles, to cost \$1,923,108.

An examination of the very able and full reports of the engineers, and the maps and profiles, must show satisfactorily that the surveys have been made with great care. And when the favorable character of the soil, (ascertained by frequent shafts,) and the uniformity of the surface, and the cheapness of materials, are considered, it will not excite surprise, when the opinion is expressed that the road may be finished with a substantial "The average increase of tonnage arriving freight track within the estimates. Very little expense will have to be incurred, it is beyears. Of this annual increase, 150,084 tons The route is also through a country of great uniformity of surface, and known there to be peculiarly free from deep snows and snowthe whole number of tons going on the cathe outlay of capital should be larger than passengers.—Average number of through nals from tide water, the last year, and less has been anticipated, it is believed that the passengers on 12 railroads in Zew

The ple, and that that was the reason why they measures to ascertain the practicability of a large tract of the country. Below the junc he had stated) so soon as was expected; but and the greater expedition with which distion are two rapids, and a very considerable he had every hope that they would be enaturated as the kind of the river, furnishing bled to open before the end of July. Nothmost valuable hydraulic powers, that are alling had happened whatever to shake their freight and passengers, likely to find favor in ready used to a considerable extent, there be confidence in the success of the system, and this country, or, indeed, anywhere. We have, ing two large flour, two grist, and two saw he was surprised—perhaps he had no right seen the last canal, of any magnitude that mills, three foundries, extensive distilling and to say surprised—he was astonished that du-will ever be constructed in the United States.

which we derive from our journals is the astonishing advance in the value of railway shares since first December last. We have compared the prices of 19th July, with those in our Journal of 2nd table the average amount paid on the shares of which is only £59 6s .- and the average value of which was, in December last, £77 15s., we find the average value, as given in the last quotations, to be £109 5s.! or an average advance in value, from December 1st, 1844, to July 19th 1845, of £31 10., and on the average cost of £49 19s., or over 80 per cent. The advance has not been as great in all, yet almost every railroad in use in England, or indeed in Europe shows a regular increase of business, and advance in the value of the shares-facts cheering to us in this country; and of a character which ought to stimulate us to renewed efforts from our large cities to the interior and especially in New York, Philadelphia, Baltimore, Charleston and Savannah. These cities must see to the completion of the lines terminating in each, and reachof New England and especially with Boston.

We shall give in our next the list of roads referred to, that our readers may have all the facts before

Active operations have commenced on this resolve to succeed and then use the necessary effort. committee have engaged the services of Edward H. steam power. The first half century has not yet out considerable effort. A rival route and the sound the inhabitants on the line of the road and passed since the first successful application of steam steamboat interest, were arrayed against it, and if receives no opposition except from corporapower to useful purpose, and who can estimate the we recollect, it was reported against by a majority tions already chartered, who would thus seek extent and value of its present use? If, then, so of the joint select committee of the legislature; yet to render their own privileges exclusive, and much has been accomplished, within that period, it was passed by large majorities, 14 to 7 in the sen-

The minority report of the committee, gives the plished with the present experience with its use in a following good reasons why the charter should be granted. We coincide entirely with the reasons of We have received our regular files of English this report, especially with that part which says that railway periodicals by the Great Britain, but find "the legislature shall not withhold the privilege of little new of interest. The numerous applications creating at their own expense the facilities for their before Parliament for railroads are still pushed with industry, which have not been withheld from other vigor, and "the battle of the gauges," seems to be as sections of the state," as well as in that part which far as ever from a termination. The prices of iron says that "as the amount of travel and transportahave receded a little. It was decided at a meeting tion are in all cases greatly increased by railroads, of the iron masters of Dudley district on the 15th of there will be sufficient business for all." We will July, that the reduction of £2 per ton, recommended add, 'all' which the people may build with their own at a previous meeting, should be confirmed; and the means. There is now little fear that the people will prices adopted at the works, were £8 for bar, and pay out their own money to build useless railroads; £3 10 to £4 for pig. There is however great act there is much more danger that they will not build tivity in all the iron districts-and such is the de- all that are necessary, and that would be profitable.

"That the towns upon the proposed route The most interesting, and important information in the interior being destitute of steamboat facilities, and without navigable rivers, have great need of the proposed railroad, and strong claims that the legislature shall not withhold from them the privilege of creating, at their January last-taking thirty of the roads, in that own expense, the facilities for their industry, which have in no instance been refused to other sections of the state.

> "That independent of the long travel, the resources of the towns upon and in the vicinity of the route, and their ability to sustain a railroad with their local business and travel, are fully equal to those of any other section of the state, for the same distance.

"That the route is a feasible one; it does not, like the Western road, cross the hills at right angles, but diagonally, and cannot be more difficult than the road surveyed from for the early completion of the important lines Fitchburg to Brattleboro', which competent engineers have estimated to cost not exceeding \$23,000 per mile.

"That in time of war this interior route will not be exposed to invasion or attacks by ing the fertile regions from which they derive their sea, and will therefore for the transport of prosperity, if they desire to keep pace with the cities troops and supplies, as well as of the public mails, be of great national as well as local

"That inasmuch as the amount of travel them, upon which we base this almost incredible and transportation are in all cases greatly increased by railroads, there will be sufficient business for all; and while this state supports three railroads running from north to south, it can at least sustain one running from east to west, and thus accommodate those towns which have not the good fortune to be located in the direction of the river vallies or upon the sea coast

> "That since the legislature do not undertake to reduce the tolls and charges of any chartered companies, whether exorbitant or not, the only way to protect the public adequately, is to create the fair competition of new routes, and thus prevent any one company from assuming the character of a mo-

### Wear of Iron on Railroads.

For the American Railroad Journal.

Mr. Editor:-Is not your correspondent J, giving himself unnecessary anxiety on the subject of the wear of iron on railways.-May it not be, that owing to an interested partiality for water carriage, the thought is in his case father to the wish.

Without, however, discussing the truth of the premises by which he comes to the deduction that the said wear is equal to one cent per ton per mile, which is in fact destructive to the future prosecution of the railway system, we may, in ample refutation of any such assumption, refer to the immense spread of that system in all parts of the world, feeling assured that were there any such destructive flaw in it, we should have devoted to the discussion of railway progress. On the contrary, what has appeared in these journals goes to establish the fact that, a railway bar of good quality and form will not wear at a rate beyond the means of provision, by a moderate annual appropriation from the earnings of the road, as for its other component items, and therefore can be maintained forever doing any amount of business.

In the case of the Lowell railroad 26 say \$66 per ton-to what does such an assumption of wear tend;-Take its business for 1845 at 180,000 tons, and that for 1846 of two years, near its dissolution, and the ture noted: tonnage have then reached the point at which the rail will require renewal every year with the following weights: three cases,thereafter. Thus if the business of this road 657, 774, 801 lbs.: av. 744 lbs. only continues to increase in the same rapid ratio, its existence will soon be brought into one half its bulk of sand, broke with the fola very narrow span. Its directors have now, however, been awakened to their danger, by your correspondent, and we may soon hear 783, 954, 522, 558: av. 721 lbs. from them directly whether they sanction such a doctrine.

If, indeed, this position of your corresponthat great work the Reading railroad, so particularly the friend of the poor; and we strongly suspect it to have been mainly innow materially interfering with a certain capast years, we are willing to await the result of that which will pass on its new track in the present year of 1845, which cannot be less, of coal alone, than 800,000 tons, in the full confidence that one position above will be maintained, and that its then condition will afford ample guarantee of its long after continuing to be "fit for safe usage." And who can question the fact of the line of this road soon presenting an almost continuous succession of furnaces, forges and rolling mills, and affording it unrivalled advantages for the cheapest renewal of its rails, small as the demand in this respect promises to be. F.

Hydraulic Cement.

The following extract from a letter in relation to Lawrence's Rosendale Hydraulic Cement," may be useful to some of our readers, we therefore give it a place in the Journal, with the remark, that every barrel is warranted.

For the American Railroad Journal.

FORT ADAMS, R.I. ) July 11th, 1845.

D. J. Ogden, Jr., Sir :- Several years ago had it sounded in the various English, Ame- a great variety of mortars were mixed at the Lawrence cement was the cement used. The mortars were made into prisms 6 in. long and 2 in. square. They were broken just one year after they were made, and the weights producing the fractures carefully ascertained. The prisms 6 in. long were supported for an inch at each end, leaving 4 in. pan into which sand was poured until the

A mortar of Lawrence cement alone broke

A mortar of cement, measured dry, with lowing weights: fourteen cases-918, 738, 936, 666, 495, 738, 486, 612, 684, 1,008,

A mortar of cement mixed with an equal

weights: ten cases-315, 225, 130, 220, 360,

A mortar of cement mixed with double its bulk of sand, broke with the following weights: eight cases-117, 270, 117, 162, 126, 211, 135, 209.

Here is something from which to judge of the strength of mortar made of Lawrence

I have used it under water, in cases in which it had to be lowered into the water in buckets, the buckets upset when the concrete had been lowered to the point of deposite, and upset too, directly in the water. This is the severest trial of cement. I filled a large hole in a wall, under water last year, with concrete made of this cement, and the filling perfectly answered its purpose.

It has been the only cement used at this work for many years, and it has proved to be an excellent material, in all its applications.

### American Railway Management.

It affords us much pleasure to learn that we are fully sustained in our views on the subject of "low fares, frequent trains and high speed for passengers," on railroads, by that able, independent, and we believe, the oldest English railway periodical, "Herapath's Journal and Railway Magazine." It is well known, perhaps too well for some of our readers, that we let no opportunity pass, of inculcating this doctrine. Yet we did not hesitate to oppose the attempt made last winter, in our legislature to appoint a commissioner and to compel the railway companies, from the Hudson west to Buffalo, to reduce their fares. We should cheerfully advocate the pasrican, German, French and Russian journals this place, for the purpose of ascertaining the sage of a law relieving those companies from the relative strengths of different proportions of present restrictions upon their carrying freight-becement, lime and sand. In all these mortars cause it may save money to the people and reduce the canal tolls-and would not object to couple with it a clause prohibiting them from charging to exceed 3 cents—we believe 21, or even 2 cents, would be better for the companies-per mile for passengers and a like amount per ton for freight. They will yet adopt rates as low as these from choice, because they will find it for their interest to do so. It was not just however to restrict them further on passengers unless they were relieved from the prohibition to carry between the points of support: a stirrup of freight, therefore we published and sustained their miles long with a rail 56 lbs. per yard, at iron with a knife edge, just so dull as to pre-remonstrance to the legislature-and it is that revent any cutting action, was hung over the monstrance published in this journal, which called middle of the prism, to this was attached a forth the following exceedingly just and appropriate remarks, by the independent and able editor of Herapath's Journal, on "American Railway Manageat 200,000 tons: it should thus be at the end prism broke, and the weight producing rup ment." The views of the writer are clearly and forcibly expressed, and well sustained by numerous undeniable facts, and we desire to thank him for coming to our aid in this contest with a few powerful companies, and for expressing and sustaining our views in a manner so much better than we could do it ourselves. We will also assure him that the people here—the millions who travel—and at no distant day the shareholders also, will fully appreciate his motives in, and feel grateful to him for, thus calling attention to the subject, and furnishing them with important facts, which must ere long produce the desired result. For ourselves we cannot bulk of sand, broke with the following more forcibly express our approval of the motives

which dictated the remarks, than by republishing theirs—namely, about  $1\frac{1}{1}$  d. per mile. What why, as clear as daylight, that the interests them in the Journal, and also by requesting their will they say to that? We could quote ingeneral re-publication in those papers with which numerable other instances in which our fare cal. that the better the one is served, the we exchange. Great good will surely follow their is much less than theirs at 2d. a mile. Such higher will be the dividend of the other. re-publication in this country.

instances, the Americans, notwithstanding Leeds charge about 1.65., or a fraction high-people are widely different, and therefore a their long and cheaply-constructed railways, er than  $1\frac{1}{2}d$ , three cents. The former of comparison does not hold. If there be any impose a fare about equal to that charged in these lines cost about £300,000 per mile, and cheap travelling in America; for undoubted the latter £60,000 per mile. appears to us quite opposed to the "Go-a-have fares to suit every class; any one that ly of the two, the Americans, both from cirhead" principle of that people, unless it be pleases so to do is allowed to avail himself cumstances and inclination, are more prone in the wrong way. Considering the relative of either uninterruptedly. Every line in the to low prices, and being proverbially of merpositions of the two, the Americans should kingdom is compelled to carry passengers by charge a fare much cheaper than we do. The the third-class at 1d. a mile, and it is a matter average cost of their railways is perhaps, at of notoriety that some of the first merchants the greatest, not more than a sixth of the cost in this country have been, and are frequently, ly" and inexpensively from place to place. We trust that these remarks will be recost per mile to be £5,000 which we believe result? Why it has been found, without is a full estimate, six times that amount exception, that the company is not in the same spirit in which they are intended to be would make our average £30,000 per mile- least prejudiced by it, and that cheap fares made. a sum which we heartily wish we could say produce the largest and most profitable in- Editor of the "American Railroad Journal" was a fair average of what our railways come; that invariably where a reduction in will, we are confident, do us that justice.have cost. The great difficulty, in arousing the peo-We are aware that the people of America enjoy in general the character of being stirring fellows, and are as prone to agitate general opinion entertained by those who are "to the manor born," that New York has natural advantages so far superior to those of other cities, as to render all their efforts to compete with us of no avail; therefore it is quite unnecessary for them to build railroads, or other artificial means of communication, Portsmouth and Portland shall each have opened an easy and rapid means of communication with the canals, and the great and fertile west! When the means of avoiding New York shall be much more complete, and cheaper than those for reaching her, they will then find their relative position, as it stood ten years ago wonderfully changed. It will be somewhat similar, we imagine, to

These enormous dividends induced parties, roads. The "News" says: not interest in the canal, to undertake to construct a railroad to compete for the coal carrying trade. At which those interested in the canal, turned up—not the whites of their eyes but—their dignified noses in utter contempt: but—their dignified noses in utter contempt; railroads, run a race of rivalry with this city. Our as many of the people of New York have at with the most perfect display of Dutch phlegm, and the idea of anything like successful rivalry from Boston; and instead of paying off their loans, or enlarging their canal, and strengthening their connection with the mines by laying down the necessary tracks, and furnishing cars to the colliers, and reducing their charges for toll, they go on ridiculing the railroad-continue their high charges and making large dividends until, in the face of making large dividends until, in the face of almost insurmountable difficulties, a single track of the railroad is completed to the coal region, and put into use, in competition, until the region in the prosperity of the two cities? If we compare the year 1841 with the der great disadvantages, with the canal. year 1844, the result is as follows: Short of motive power, short of cars, and short of money, and without any connection with the mines, they commence the transportation of coal in 1842, and got down that year by Decrease. the railroad has laid a second track, increased its motive power and cars, formed important and permanent connection with the mines, until they were able to bring down in the month of July past, notwithstanding two holidays, 104,565 tons of coal: and the canal during the same period brought down 25 or 26,000 tons, thus completely reversing the position of the two companies in three years. The success of the railroad has put the canal company earnestly at work, now they have lost the business, to regain it. They long since ceased making dividends, have reduced their tollsand are enlarging the canal; and are resolved to regain what they have lost-which they will find more difficult a task than to loose it. So it will be with the citizens of New York, when Boston, Portsmouth and Portland have each their railroads penetrating the interior, with their business connections formed Receipts ...... \$1.078.057 througout the Canadas, and the western states -they will then be obliged to construct railroads and will find it no easier task to regain the business she has lost—but might have retained—than will the Schuylkill canal company to regain the coal trade. We ask the serious attention of our city readers especially to the following, and shall consider ourselves fortunate and well compensated for any amount of effort, within our power if we can be instrumental in arousing our citizens to the importance of immediate action which shall those of New York."

the same proportion to the assessed valuation, as do proposed, must take place there is no doubt

York city has lost, and Boston has gained, is \$35-000,000, and between what New York should have gained, \$50.000,000—enough to build ten railroads between here and Albany. Yet with many noble enterprizes halffinished in our vicinity, no more life is apparently among moneyed men than if New York had a charterered right to all the business in the country. The wealth which Boston has acquired by her past enterprize has given her the means and the impulse to prosecute new ones. Already she is strengthening her communication with the lakes through the Ogdensburgh road, by which route she will have the cheapest and shortest channel for goods banker knows and feels daily in the character of the drafts discounted, how rapidly business connections are forming in Boston and breaking off from New York. The capital of Boston is ample to afford the greatest acilities to to business, and when once the channel is open she will have the whole of it. When western connections are once formed in Boston how will they be got back? They never can be recovered. If once, through the inertness of our citizens, the trade is lost, it is lost forever.

"The receipts and expenses of the city of Boston, as compared with New York, for the year ending May, 1845, are as follows:

New York.

**\$1 536 781** 

Boston.

Expenses	869,575	1,536,781
Bal'nce on hand	130,872

Canada West Railroads. - It appears by the Huron and Ontario railroad has found substantial aid in England.

Huron and Ontario Railway,-This great Canadian undertaking continues to excite attention in the city, which will, we have reason to think, be shortly increased when circumstances have transpired, to which at present we can only allude. Of course we mean the progress towards a closer union with the Canada company, who naturally ought to be the parties to project and carry out the line. The most perfect understanding at this moment exists between the companies, so that we doubt not to be able in another week to announce a board of direction strengthened by some of the first names in this city. Of this we are certain, that the shareholders of the railway company will be indebted to the promoters of this union for their ultimate success-acting in opposition to the views of the Canada company failure was inevitable.— Nothing now need retard the company from immediately following out its original scheme of a direct line from Toronto to Goderich, which is, in fact, in a national point of view, the only one deserving of English support. The Canadian papers, just recieved, are full of reports of public meetings at Goderich, great efforts 49,000 tons, while the canal brought down that year, if we recollect correctly, nearly 500,000 tons. Since that period in her shell." The difference between what New in the spot, the agent of the Canada company in her shell." The difference between what New in these figures the palpable effects of Hamilton, and Toronto, in support of the rail-to-make the completion of the Western railroad, upon the fortunes of Boston while New York has "remained in her shell." The difference between what New in these figures the palpable effects of Hamilton, and Toronto, in support of the rail-to-make the completion of the Western railroad, upon the fortunes of Boston while New York has "remained in her shell." The difference between what New in the spot, the agent of the Canada company in her shell." The difference between what New in the spot, the agent of the Canada company in her shell." The difference between what New in the spot, the agent of the Canada company in her shell." The difference between what New in the spot, the agent of the Canada company in her shell." The difference between what New in the spot, the agent of the Canada company in her shell." The difference between what New in the spot, the agent of the Canada company in her shell." The difference between what New in the spot, the agent of the Canada company in her shell." The difference between what New in the spot in the shell was a spot way, to which 25,000l. were subscribed on putting down 3,000l. towards the expense of the survey.

There will be little difficulty in obtaining English capital to aid in constructing railroads in Canada. There are various reasons why it should be so; one of which is that it will be a good investment, another it will be as good as fortifications, or armies in case of

The Scotch Pig-Iron Trade.—The manufacture of pig-iron in Scotland says the London Mining Journal of 28th June, is steadily on the increase. In the Mining Journal, of the 7th inst., we gave a tabular statement of the number of furnaces in existence and in operation, from which it will be seen that, up to the end of May, the total number of furnaces in Scotland was 91, of which 75 were in and 16 out of blast. We now find, from the follwing table, that up to the end of June there are 99 built, 12 building, and 90 in blast, being an enormous increase in so short a time, and fully proves that there exist capabilities for increasing the make of iron in proportion to the demand, to an extent which some of our contemporaries have deemed impossible. We have seen it asserted, that "not another furnace could be blown in within 12 months;' yet here we have an additional number at work, capable of producing several hundred tons of pig-iron per week. That an enormous and continually increasing demand proposed, must take place there is no doubt,

but we think that it will be found that there is capital and enterprize among the iron masters equal to the emergency; it is the system of speculating on the demand, buying for the account, and not the demand itself, which has caused so much of the unpleasant consequences which have, of late years, at intervals marked the iron trade; were all transactions bona fide sales, and would the smaller makers abandon the often ruinous practice of taking large orders, which it is not in their power to execute, the iron trade would be as steady as any branch of commercial business—pay
Norwich and Worcester railroad.—Accommodation trains, daily, except Sunday. Leave Norwich and 4‡ p.m., leave Worcester at 10 a.m. and 4‡ p.m., leave Worcester, connect with the Boston, Western and Worcester, connect with the Boston, Western and Springfield railroads. New York train, via. steamboat, leaves Norwich for Worcester and Boston, except Monday, upon the arrival of the boat from New York, about 20 clock; leave Worcester for Norwich and New York at 5½ p.m. daily, except Sunday; leaves Worcester, connect with the Boston, we York at 5½ p.m. daily, except Sunday; leaves Worcester for Norwich and New York at 5½ p.m. daily, except Sunday; leaves Worcester for Norwich and New York at 7½ a.m. daily, except Sunday, and arrives at Norwich at 9½. but we think that it will be found that there any branch of commercial business—paying a good per centage for the capital invested and supporting a very large amount of ed, and supporting a very large amount of the working population in comfort and content. The following statement shows the number of blast furnaces, and weekly pro-lows: Leave Boston at 7 and 11 a.m., 2 1-2 and

produce 9960 tons.

The stocks of pig-iron in Glasgow have, trains will run as follows: Leave Boston at 7 a.m., in fact, increased to an enormous amount, 11 a.m. and 5 p.m.; leave Nashua at 6 1-2 a.m., 12 p.m. and 42 p.m. causing many to believe that the supply has outstripped the demand, but which, we bespeculating for a rise, and when such a situation of things becomes general, however, the price might for a time be bolstered up, the "crash" must come at last. To attain permanent prosperity in so extensive a branch of industry as the iron trade, the supply should go to a certain extent hand in hand with the demand; and now that German, French, and American capitalists, are successfully improtes the supply should grant and now that German, French, and American capitalists, are successfully improtes the successfully improtes the supply should grant and now that German, French, and American capitalists, are successfully improtes the successful to the successfully improtes the successful to the succes ving their make, and competing with us, it and Montreal. is time that English and Scotch iron manuless speculation, may be lost to them for ever.

AWRENCE'S ROSENDALE HYDRAULIC L Cement. This Cement is warranted equal to 32 any manufactured in this country, and has been pronounced superior to Francis' "Roman." Its value for Aqueducts, Locks, Bridges, Flooms and all Masonry exposed to dampness, is well known, as it sets immediately under water, and increases in as it sees must solidity for years. For sale in lots to suit purchasers, in tight paper-ed harrels, by JOHN W. LAWRENCE,

NICOLL'S PATENT SAFETY SWITCH for Railroad Turnouts. This invention, for some time in successful operation on one of the principal railroads in the country, effectually prevents engines and their trains from running off the track

at a switch, left wrong by accident or design.

It acts independently of the main track rails, being laid down, or removed, without cutting or displacing

It is never touched by passing trains, except when in use, preventing their running off the track. It is simple in its construction and operation, requiring only two Castings and two Rails; the latter, even if much worn or used, not objectionable.

Working Models of the Safety Switch may be seen at Messrs. Davenport and Bridges, Cambridgeport, Mass., and at the office of the Railroad Journal, New York.

THE AMERICAN RAILROAD JOURNAL is the only periodical having a general circulation throughout the Union, in which all matters connected with public works can be brought to the notice of all persons in any way interested in these undertakings. Hence it offers peculiar advantages for advertising times of departure, rates of fare and freight, improvements in machinery, materials, as iron, timber, stone cement, etc. It is also the best medium for advertising contracts, and placing the merits of new undertakings fairly before the public.

## KITE'S PATENT SAFETY BEAM.

MESSRS. EDITORS.— As your Journal is devoted to the benefit of the public in gen-eral I feel desirous to communicate to you for publication the following circumstance of no inconsiderable importance, which occurred some few days since on the Philadel-phia, Wilmington and Baltimore railroad.

On the passage of the evening train of cars from Philadelphia to this city, an axle of our large 8 wheeled passenger car was broken, but from the particular plan of the construction, the accident was entirely unknown to any of the pass gers, or, in fact, to the conductor himself, until the train, (as was supposed from some circumstances attending the case,) had pass ed several miles in ed several miles in advance of the place where the accident occurred, whereas had the car been constructed on the common plan the same kind of acci-

the same kind of acci-dent would unavoidably have much injured it, per-haps thrown the whole train off the track, and serious-ly injured, if not killed many of the passengers. Wilmington, Del., Sept. 28, 1840.

The undersigned takes pleasure in attesting of the value of Mr. Joseph S. Kite's invention of the Safety Beam Axle and Hub for railroad cars. They Safety Beam Axle and Hub for railroad cars. They have for some time been applied to passenger cars on this road, and experience has tested that they fully accomplish the object intended. Several instances of the fracture of axles have occurred, and in such the cars have uniformly run the whole distance with entire safety. Had not this invention been used, serious accidents must have occurred.

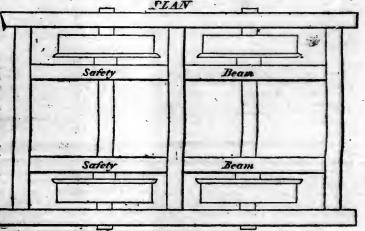

In short, we consider Mr. Kite's invention as completely successful in securing the safety and lives in railroad travelling, and should be used on all railroads in the country.

and lives in railroad travelling, and should be used on all railroads in the country.

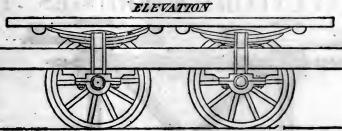

JOHN FRAZER, Agent,

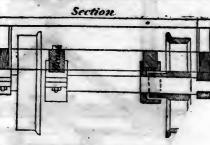

GEORGE CRAIG, Superintendant,

A model of the above improvement is to be seen at the New Jersey railroad and office, No. 1 Hanover st., N. York.

DATENT HAMMERED RAILROAD, SHIP and Boat Spikes. The Albany Iron and Nail Works have always on hand, of their own manufacture, a large assortment of Railroad, Ship and Boat Spikes, from 2 to 12 inches in length, and of any form of head. From the excellence of the material always used in their manufacture, and their very general use for railroads and other purposes in this coun-try, the manufacturers have no hesitation in warrant ing them fully equal to the best spikes in market, both as to quality and appearance. All orders addressed to the subscriber at the works, will be promptly executed. JOHN F. WINSLOW, Agent.

Albany Iron and Nail Works, Troy, N. Y.

The above spikes may be had at factory prices, of chimney of engines on which they are Erastus Corning & Co., Albany; Hart & Merritt, New York; J. H. Whitney, do.; E. J. Etting, Philadelphia; Wm. E. Coffin & Co. Boston. ja45

These Arresters are constructed on an entirely different principle from an entirely different principle from a

PATENT RAILROAD, SHIP AND BOAT Spikes. The Troy Iron and Nail Factory keeps constantly for sale a very extensive assortment of Wrought Spikes and Nails, from 3 to 10 inches, manufactured by the subscriber's Patent Machinery which after five years' successful operation, and now almost universal use in the United States (as well as England, where the subscriber obtained a patent) are found superior to any ever offered in market.

Railroad companies may be supplied with Spikes having countersink heads suitable to holes in iron rails, to any amount and on short notice. Almost all the railroads now in progress in the United States are fastened with Spikes made at the above named factory—for which purpose they are found invalua-ble, as their adhesion is more than double any common spikes made by the hammer.

All orders directed to the Agent, Troy, N. York,

will be punctually attended to.

HENRY BURDEN, Agent.

Spikes are kept for sale, at Factory Prices, by I. & J. Townsend, Albany, and the principal Iron merchants in Albany and Troy; J. I. Brower, 222 Water St., New York; A. M. Jones, Philadelphia; T. Janviers, Baltimore; Degrand & Smith, Boston.

*** Railroad Companies would do well to forward their orders are early as practicable, as the subscriber.

their orders as early as practicable, as the subscriber is desirous of extending the manufeturing so as to keep pace with the daily increasing demand.

## FRENCH AND BAIRD'S PATENT SPARK ARRESTER.

O THOSE INTERESTED IN A Railroads, Railroad Directors and Managers are respectfully invi-ted to examine an improved SPARK ARRESTER, recently patented by the undersigned.

Our improved Spark Arresters have been extensively used during the last year on both passenger and freight engines, and have been brought to such a state of perfection that no annoyance from sparks or dust from the

used is experienced.

These Arresters are constructed on an entirely different principle from any necessary onered to the public. The form is such that a rotary motion is imparted to the heated air, smoke and sparks passing through the chimney, and by the centrifugal force thus acquired by the sparks and dust they are separated from the smoke and steam, and thrown into an outer chamber of the chimney through openings near its top, from whence they fall by their owr gravity to the bottom of this chamber; the smoke and steam passing off at the top of the chimney, through a capacious and unobstructed passage, thus arresting the sparks without impairing the power of the engine by diminishing the draught or activity of the fire in the furnace.

These chimneys and arresters are simple, durable and neat in appearance. They are now in use on the following roads, to the managers and other officers of which we are at liberty to refer those who

on the following roads, to the managers and other officers of which we are at liberty to refer those who may desire to purchase or obtain further information in regard to their merits:

E. A. Stevens, President Camden and Amboy Railroad Company; Richard Peters, Superintendant Georgia Railroad, Augusta, Ga.; G. A. ** The letters in the figures refer to the article given in the Journal of June, 1844.

DENTLEY'S PATENT TUBULAR STEAM BOILER. The above named Boiler is similar in principle to the Locomotive boilers in use on our Railroads. This particular method was invented by Charles W. Bentley, of Baltimore, Md., who has obtained a patent for the same from the Patent Office of the United States, under date of September 1st, 1843—and they are now already in successful operation in several of our larger Hotels and Public Institutions, Colleges, Alms Houses, Hospitals and Prisons, for cooking, washing, etc.; for Bath houses, Hatters, Silk, Cotton and Woollen Dyers, Morocco dressers, Soap boilers, Tallow chandlers, Pork butchers, Glue makers, Sugar refiners, Farmers, Distillers, Cotton and Woollen mills, Warming Buildings, and for Propelling Power, etc., etc.; and thus far have given the most entire satisfaction, may be had of D. K. MINOR, 23 Chambers st. New York.

#### BRIDGES' PATENT CAR AND TRUCK. DAVENPORT &

DAVENPORT & BRIDGES' IMPROVED PATENT IRON TRUCK FOR RAILROAD CARS, is presented above, and the attention of Railroad Companies is respectfully invited to the following description of their justly-celebrated invention.

These Trucks are adapted as well for eight-wheeled passenger cars as for These Trucks are adapted as well for eight-wheeled passenger cars as for baggage and freight cars, giving to each a more agreeable and easy motion than any other Truck heretofore constructed or in use. They are simple in their construction, combining strength and great durability, although weighing at least twelve hundred pounds less than the common Trucks. Besides these excellences, by reason of the elasticity of the braces, B, B, B, B, as seen in the drawing, and the other peculiarities of construction, made for inside or outside bearing, the weight is equalized upon all the wheels, and yet any one car off. Being bound, and having as it were but four joinings, they are protected from injury by lateral strains, and in case of damage are easily repaired. These excellences have been fully tested by use, for a long time, on the Eastern, the Fitchburg and Long Island railroads; and for proof of the above stated superiority of these Trucks over all others, we refer to the experience of those who have used and run them.

DAVENPORT & BRIDGES.

CUSHMAN'S COMPOUND IRON RAILS. TO RAILROAD COMPANIES AND BUILDter. The Subscriber having made important improvements in the construction of rails, mode of guarding against arcidents from insecure times of ENGINES AND BOILERS. Mar. 20tf

4 South Front St., Philadelphia.

THE NEWCASTLE MANUFACTURING
Company continue to furnish at the Works, situated in the town of Newcastle, Del., Locomotive and other steam engines, Jack screws, Wrought iron work and Brass and Iron castings, of all kinds connected with Steamboats, Railroads, etc.; Mill Gearing of every description; Cast wheels (chilled) of any pattern and size, with Arles fitted, also with wrought tires, Springs, Boxes and bolts for Cars; Driving and other wheels for Locomotives.

The works being on an extensive scale, all orders will be executed with promptness and despatch.

Communications addressed to Mr. William H. Dobbs, Superintendent, will meet with immediate attention.

ANDREW C. GRAY, ja45

President of the Newcastle Manuf. Co. guarding against accidents from insecure joints, etc.

## PASCAL IRON WORKS.

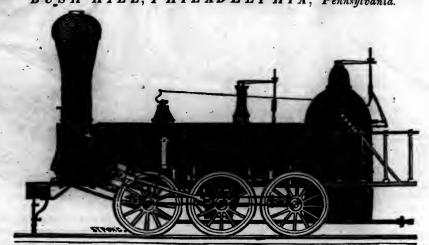

## WELDED WROUGHT IRON TUBES

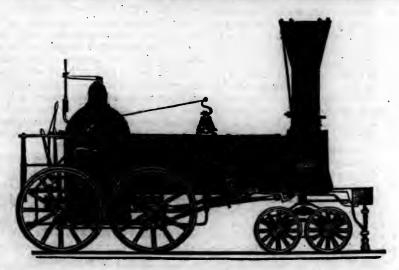

From 4 inches to 1 in calibre and 2 to 12 feet long, capable of sustaining pressure from 400 to 2500 lba. per square inch, with Stop Cocks, 7-1, 1-2, and other fixtures to suit, fitting together, with screw joints, suitable for STEAM, WATER, GAS, and for LACOMOTIVE and other STEAM BOILER FLUES.

Manufactured and for sale by MORRIS, TASKER & MORRIS. archouse S. E. Corner of Third & Walnut Stre PHILADELPHIA.

## NORRIS' LOCOMOTIVE BUSH HILL, PHILADELPHIA, Pennsylvania.

ANUFACTURE their Patent 6 Wheel Combined and 8 Wheel Locomotives of the following descrip

Class 1 15 inches Diameter of Cylinder, × 20 inches Stroke. 14 " × 24 " 66 3, × 20 " . 6 141 4 6 121 33 46 66 . . " 66 B ×-20 × 20 114 66 46 46 6: 3 × 18 - " 101 66 66

With Wheels of any dimensions, with their Patent Arrangement for Variable Expansion. Castings of all kinds made to order: and they call attention to their Chilled Wheels for the Trucks of Locomotives, Tenders and Cars.

NORRIS, BROTHERS.

RAILROAD IRON.—THE MARY-LAND AND NEW YORK IRON AND Coal Company are now prepared to make contracts for Rails of all kinds. Address the Subscriber, at for Rails of all kinds. Address the Jennon's Run, Alleghany County, Maryland.
WILLIAM YOUNG.

TO IRON MASTERS.—FOR SALE.—MILL SITES in the immediate neighborhood of Bituminous Coal and Iron Ore, of the first quality, at Ralston, Lyoming Co., Pa. This is the nearest point to tide water where such coal and ore are found together, and the communication is complete with Philadelphia and Baltimore by canals and railways. The interest on the cost of water power and lot is all that will be required for many years; the coal will not cost more than \$1 to \$1.25 at the the coal will not cost more than \$1 to \$1 25 at the mill sites, without any trouble on the part of the manufacturer; rich iron ore may be laid down still more cheaply at the works; and, taken together, these sites offer remarkable advantages to practical these sites ofter remarkable advantages to practical manufacturers with small capital. For pamphlets, descriptive of the property, and further information, apply to Archibald McIntyre, Albany, to Archibald Robertson, Philadelphia, or to the undersigned, at No. 23 Chambers street, New York, where may be seen specimens of the coal and ore.

W. R. CASEY, Civil Engineer,

VALUABLE PROPERTY ON THE MILL Dam For Sale. A lot of land on Gravelly Point, so called, on the Mill Dam, in Roxbury, fronting on and east of Parker street, containing

Main brick building, 120 feet long, by 46 ft wide, two stories high. A machine shop, 47x43 feet, with large engine, face, screw, and other lathes, suitable to do any kind of work. to do any kind of work.

Pattern shop, 35x32 feet, with lathes, work bench-

es, &c. Work shop, 86x35 feet, on the same floor with the pattern shop.

Forge shop, 118 feet long by 44 feet wide on the ground floor, with two large water wheels, each 16 feet long, 9 ft diameter, with all the gearing, shafts, drums, pulleys, &c., large and small trip hammers, turnaces, forges, rolling mill, with large balance

wheel and a large blowing apparatus for the foundry.
Foundry, at end of main brick building, 60x45½
feet two stories high, with a shed part 45½x20 feet,
containing a large air furnace, cupola, crane and corn oven.

corn oven.

Store house—a range of buildings for storage, etc., 200 feet long by 20 wide.

Locomotive shop, adjoining main building, fronting on Parker street, 54x25 feet.

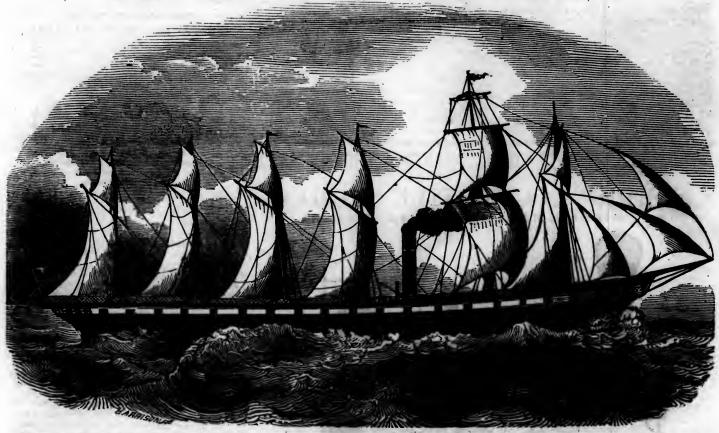

Also—A lot of land on the canal, west side of Parker st., containing 6000 feet, with the following buildings thereon standing:

Boiler house 50 feet long by 30 feet wide, two stories.

Blacksmith shop, 49 feet long by 20 feet wide.
For terms, apply to HENRY ANDREWS, 48
State st., or to CURTIS, LEAVENS & CO., 106
State st., Boston, or to A. & G. RALSTON & Co.,
Fanadetphia.

CYRUS ALGER & CO., South Boston from Company.

## SHIP GREAT BRITAIN. STEAM

We referred in our last, to the arrival of this monster ship. We have since, by the politeness of the agent, Richard Irvin, Esq., and her gentlemanly commander Captain Hosken, had an opportunity of examining her at our leisure. A single visit gives one only an opportunity to examine and admire the beauty, and strength of this remarkable structure and a half dozzen visits would not enable us to give as good a description as the following.

The ship is entirely built of iron, with the exception of the boarding of her decks and some of her cabin fittings and carved work. Her model is somewhat peculiar, yet accordant with the taste (when she was built) of many nautical men; and the speed she has since attained, together with her good sea qualities, prove that their opinions were well founded. Her sides tumble or fall in, a good deal towards the top deck, from about the middle of her length to the stern, giving her a man-of-war like appearance, and a wholesome rotundity in the after body.-Abreast of the boilers, which are forward of the longitudinal centre, her sides are rather flattish, but she has, after all, abundance of bearing for a steamer, and more aloft might have produced heavy rolling in a sea-way. Her bottom bearings are simple and she is finely moulded with a sharp entrance, approaching the plough form, and an equally for the fore saloon, and one large light over fine run. Her upper works, like most of the engine room. The under decks and the Bristol ships, are plain, but substantial in finish. The hull is formed of iron plates, and also circular lights in the sides of the decreasing in thickness from the keel up-

portion to her size as those of some iron ves- side, so as always to have a weather and a sels since constructed, particularly those built lee door, the former of which may be closed at North Birkenhead, (for war purposes) but during gales. The windlass is on a patent she is nevertheless a very strong ship, being principle. The best bower anchor weighs ciple. The plates of her keel are from 3 of 21 inches diameter in the metal of the inch thick in the middle, to 1 inch at the link. The bowsprit is proportionably short, ends, and all the plates under water are from owing to the great length of the vessel.— 5ths to 1/2 inch at the top, except the upper plate which is 5ths. She is chiefly clencher built, and double riveted at many points.—
The ribs are 6 inches by  $3\frac{1}{2}$ , by  $\frac{1}{2}$  inch at the bottom of the vessel, and 7-16ths at the a six-masted schooner, with fore and aft sails, and lugger topsails, with the exception of the mainmast, (the second from the bow,) which will carry a square mainsail and a topsail over it. She has four decks, and the upper spar deck is three hundred and eight feet in length. The engines are somewhat on the patent of Sir Mark Brunel, with the cylinders, in place of being upright, standing on an angle of about 60 degrees. The main shaft for the turning of the screw, and which is of great length and large diameter, was made at the Mersey Iron Works, in Liverpool; and is itself a great curiosity.

On the spar deck there are eight sky-lights ship-the latter of plate glass an inch in wards, and angle iron ribs of great strength. thickness. The companions, or entrances

bound securely by rods on the tension prin- about three tons, and its iron chain cable is owing to the great length of the vessel.— The bow is enriched with carved work; in the center are the royal arms, surrounded by emblems of the arts and sciences of the empire, and (in illustration of the power and speed of the ship,) representations of the thun-Her rig is that of what may be called derbolt of Jove and the caduceus of Mercury.

THE SCREW

Perhaps the most interesting portion of the whole structure is the machinery, and the Screw by which she is propelled. The latter is on the same principle, but slightly modified, as that invented by Mr. F. P. Smith, of the Patent Ship Propeller Company (who supplied it,) and who some years ago exhibited it at Liverpool in the Archimedes.

## Arrival of the Hibernia.

The regularity of the Cunard Steamers is truly astonishing. The Hibernia arrived at Boston yesterday in twelve days-and the letters and papers were sent on by the postmaster who chartered the steamboat Traveller expressly for the purpose.

We have received by this arrival our regular files sive-in which we find many matters of interest, ber,-we shall however draw largely upon them for seen at our office.

traffic for the last week was £150,136, or £80,134 with the dimensions and weight of iron work. for passengers, and £22,587 for freight, being an increase of £23,314 over the corresponding week of last year. The half yearly reports of several companies have been recently made, which show a large increase of business. The receipts on the Grand Junction for the past half year are stated at £30,000 greater than the corresponding half yearly report last year, and this notwithstanding the reduction of 90,000, and freight 22,000 tons. The directors divided ten per cent., and have on hand a reserve fund of £64,000. Having learned by experience the results of reducing fares they are about making another reduction and at the same time increase their speed. The fare is to be from Liverpool to Birmingham, 98 miles, 17 shillings for first class passengers-it is now 20s., and the rates on goods are also to be reduced in a similar ratio.

> "The good old mother of railways," as the "Liverpool and Manchester" is justly termed, held its annual meeting, in the usual manner-declared a dividend of 10 per cent. per annum, passed the usual resolutions, and adjourned without any speech making. "Such," says the Chronicle, " is the management of a half yearly meeting, by Mr. Saunders and Mr. Booth."

> The Chester and Birkenhead company have declared a dividend of 4 per cent. per annum.

The great topic now under consideration appears to be the turning of canals into railways. The canals from Liverpool to London, through Chester, Birmingham and Wolverhampton, are it is said, to be turned into a railway. The proprietors of these canals having become satisfied that they cannot compete successfully with railways, have come to the wise conclusion to be their allies. They have therefore formed a confederation with each other to unite all these canals "into one continous group of canal railways." The water is to be let out and the canals to be filled up in part by levelling the banks. New capital to be raised and then they are to be allied with the present railways, which are to aid in furnishing five millions sterling, and thus avoid rivalry. Thus it is with canals having railroads along will be an exception—they must yield; in the same manner that stage coaches have yielded to railway cars. "This," says the Chronicle, " is truly a gigantic scheme, but we have reason to know that it is not the only one of the kind, a similar intention being entertained by the canal proprietors in the southern and wetsern part of England, in the district of the great western railway."

Sale of the Munroe (Ga.) Railroad .- We are in-\$155,100 one half, it is said, on account of parties con. We hope the road will now be put in good gers by stage coaches." condition.

Iron Bridge on the Reading Railroad.

For the American Railroad Journal.

The Acadia arrived out on the 29th, in 12t days. In compliance with your request, I send you a intendence of Mr. Gregory, the acting engineer.

By official returns, says the Railway Chronicle, tracing of one of the main trusses and the bottom of 2nd Aug., it appears that the amount of railway bracing of the iron bridge on this road-together

## The Railroads of Belgium.

With a notice of the other modes of Internal Commugique et les Belges," by Major G. T. Poussin, formerly of the U.S.E.

BY G. C. SCHAEFFER, C. E.

For the American Railroad Journal.

line completed is 347 miles—148 miles only, having vidend. This he considers, very justly, as one of ges in everything bearing any relation to it. Thus a double track. To defray the expense of construct the most powerful arguments for the entire control ordinary carriages have increased in number in all tion, the chambers ordered a loan of 150 millions of of the roads by the state, for it alone, is able to place cities traversed by the lines, and in some they have francs with 5 per cent, interest and 1 per cent, to the the prices so low as to afford the entire benefit of a been introduced for the first time since the opening extinction of the debt. The whole cost of the railroads including interest on capital during the time of construction was 150,822,702 73 fr., or 284,119 fr. sury, of all moneys expended. We may remark the places not on the line. per kilometre-about \$90,000 per mile.

The actual expenditure up to

divided as follows:

Cost of road.....122,742,168 73

" stations... 9,471,624 20

Means of transp., 18,134,947 78

General expense. 4,398,033 35

Total......144,746,774 06 fr. The actual expenditure, is therefore, but 258,948fr. per kilometre.*

The following table shows the average cost of railroads in various countries.

In England .... 500,000 fr. per kilometre. France.....380,000 44 Belgium ..... 284,119 Germany . . . . 232,000 66 22 66 46 United States.150,000

COST OF WORKING .- Return for 1845, 347 miles of road.

Receipts: Passengers...........6,166,548 94 fr. Merchandize . . . . . . . . . 4,222,551 95 Carriages, horses, cattle. 331,174 00 Other sources ......... 115,487 30 

Expenses: Maintenance of road and

stations ..... 1,400,071 34 Transportation ..... 1,160,121 39 Genaral administration. 363,503 56 Cost of locomotion . . . . 2,841,734 51 Total..... 5,765,430 80

Excess of receipts over expenses. 5,465,062 51 fr. Thus the net receipts are 48.66 per cent. of the total receipts; the expenses, 51.34 per cent.

Proportion of expense of working, to total receipts.

In Germany ..... 59-1 per cent. Belgium . . . . . . . . 51.34 England......50-9 France..... 49-15 United States ..... 44.

The whole amount received on account of the railroads, amounts to a little more than the sum named, being 10,259 50 fr. per kilometre, and paying on the whole capital employed almost exactly 4 per cent. But the state pays annually 6 per cent. on the same capital-the annual loss to government being 2 per cent.—1 per cent. being for a sinking fund.

This apparently unfavorable result is to be considered in connection with the fact that the whole line has been in operation not ten years, and that while the receipts are increasing the expenses are diminishing, as will presently be shown.

* As in many cases the kilometre is mentioned (for we have not thought it requisite in all instances to reduce it to miles,) the reader will please remember that it is equal 6214, or nearly 5-8 of a mile.

SULTS OF THE RAILROADS.—Although pecuniarily the nication-translated and abridged from "La Bel-Belgian railroads are not profitable, M. Poussin formerly 28 cents per mile; it is now but 1.6 cents. considers the result as conformable to general expe- These are direct advantages easily translated into rience, that while the roads between great centres of figures and which cannot be estimated at less than trade and population are profitable, the numerous forty-five millions of francs. lines needful to the supply of the wants of the whole Cost of Construction.—The whole length of population are not so, that is, do not pay a large di- tion has not taken place without corresponding chanways an ample, although indirect return to the treathat this reasoning, although admirable for a monarchical government, is not at all adapted to our free country, where the doctrine of "rotation in office," "spoils," etc., would in all cases convert public "improvements" to public "curses;" and where a holy dread of monopolies has left all public interests in the hands of hungry speculators.

It will be seen from the table, that the cost of working the Belgian railroads is greater than it should be, but several things are to be taken into consideration. In the first place the material of the roads is as yet insufficient, and many points have required immediately on the opening of lines, a greater portion of attention to supply their wants than could be economically afforded with inadequate means. Particularly in the transportation department is this felt, as empty cars have to travel the road to supply the demand at various points.

Another very serious difficulty is the concentration of all the lines at Mechlin and not at Brussels the capital; this is undoubtedly a great mistake and must each year be productive of more disadvantage. The only reason for this arrangement would appear to be the more suitable position for the shops and depots at Mechlin, but the course of trade to the capital should not and cannot be diverted by any such consideration.

The minister of public works has declared that the expenses have reached their maximum while the receipts are continually increasing. Moreover the full benefit of these roads cannot be felt until ner be accomplished. the complete connection with the great routes of France and Germany is established and until such inter-national arrangements shall have been made as shall place the intercourse upon the most favorable footing.

The great effect of the railroad system upon socihad many rivals in the provincial cities, is now rapidly outstripping them all.

The effects produced are not to be measured by the return of four per cent. upon the capital invested, but by the influence upon the country in all directions. Before the establishment of railroads 600,000 passengers travelled annually upon the ordinary roads, now three millions four hundred thou sand, (3,400,000) pass over the railroads, nearly ten times the original number-and equivalent to the whole population, while formerly only one individual out of five travelled. What amount of money has been by this means put into circulation-certainly not less than 20 millions of francs. But these three millions and a half of passengers have realized vast benefits in the reduction of expense and the saving of time by at least one half, in many business. Thus twice the amount of business may iron.

REMARKS UPON THE DIRECT AND INDIRECT Re- be transacted in less than half the time at one half of the expense; for the average cost of travel was

But this extraordinary movement of the populasystem of railroads, finding in an infinite variety of of the railroads-and from all the stations the increased number is necessary to supply the wants of

> The working of quarries, mines, etc., has been very greatly favored by the railroads, while the fisheries have found a more certain distribution of their products, among a people famous for their religious observances and economy-in short, great fish eaters-in time too, a large supply will be required in Germany. In fact no branch of industry is without some benefit.

> Finally, a new business has arisen from the introduction of railroads, likely to be very beneficial to Antwerp. Emigrants for texas and the United States are carried over the Belgian railroads-baggage gratis and this saving has drawn large num-

> We must not forget to mention that the Belgian roads transport couriers and their dispatches gratuitously; and at a reduced price, music etc., for the national festivals, students of colleges, objects of art or industry intended for exhibition, soldiers and prisoners.

> Can we wonder that our author uses the expressive term "vivified," when speaking of the effects of railroads in Belgium. That country has indeed been brought to life by the system and has given a valuable lesson to every nation.

> M. Poussin, however, maintains that only under the control of the state, can all these benefits be obtained. Although many may not agree with him in this, it is very certain that such 'remarkable improvements to a whole nation could in no other man-

(To be continued.)

## Duty on Railway Iron.

The republication of the following letter to the ecretary of the treasury in May 1842, upon a subject of vast importance to the railway cause, may ety, is not yet fully developed. Already it would be useful, it is thought by many interested; we appear that railroads are beneficial to large cities and therefore give it a place in the Journal, and ask ruinious to small ones; thus Brussels which before for it a candid perusal by all parties. The columns of the Journal are open to the discussion of the subject by those entertaining different views.

PHILADELPHIA, May 20, 1842.

To the Hon. W. Forward, Sec. of the Treasury. Dear Sir: The subject to which I beg to call your attention is railway iron, which I observed in your tariff bill lately presented to the house of representatives, it is proposed to charge with * \$30 per ton duty, being almost equivalent to its first cost in England, and if to this be added the expenses of inspection, export duty from England, the freight, insurance, merchants'

the saving of time by at least one half, in many . The rate of duty afterwards imposed by congress cases by two thirds, which can now be devoted to is \$25 per ton, the same as on rolled or merchant

that it requires more manipulation, more ex- been done in several parts of the country alaltogether a more expensive article than mer-inconvenience arising from a change. chant iron; and cannot be made even in South might give many other reasons for keeping Wales under 40 shillings per ton advance the duty off edge rails for a few years longer, tempt it they could not succeed in making it himself. The principal expense of making of bar iron. The manufacture of flat bar materials to the place of manufacture and afrailway iron, with countersunk holes and mi-terwards the manufactured article to market; tred or square ends, has been attempted in for example, the ironstone and fuel (wood) this country, but only at three establishments are generally in the same neighborhood, but and all in this state* who have however made the limestone may be 10, 15, or 20 miles off, not exceeding 400 to 500 tons total. As the the furnace for smelting the ore into pigs is flat bar railway iron has been made in this generally many miles distant from the forge country, I suppose the manufacture may be or rolling mill, for converting into merchant extended and therefore I would encourage its iron, so also the rolling and slitting mills for domestic production; but it being impossible the manufacture of nails, &c., are usually to make edge rails for some years to come, I still more distant from the smelting furnace,

commission, cartage, storage, and all other wards per yard in weight to be imported free shire and other parts of England and also in from the fact that the importation of mercht of the railways in Rhode Island, Massachu-&c. iron and even pig iron, notwithstanding the settts and the eastern states have iron weighhigh duties on them, has continued; I con- ing from 55 to 65 lbs. per yard, and the use be manufactured for some years to come, is them with heavy or edge rails. This has pensive and very much heavier machinery, ready and will become universal wherever more skill and experience in rolling, and is railway concerns can bear the expense and over the price of bar iron, and if our people but fearing to intrude too much on your time tn Pennsylvania (where iron can be made I will only mention one other reason, and that cheapest in the United States,) were to at-fects the interest of the American iron master at less than \$20 to \$25 per ton over the price iron in this country arises from transporting

charges, independently of the expenses of get- of duty, for 6 years, say up to the 4th July Scotland, the iron masters, (and also the conting it to the line of railway, will amount to 1848, by which time I hope our establish-sumer) are interested to have the importation at least 33 per cent. more, which will make ments will have acquired sufficient extension of railway iron from England continued free the cost of this material so high as to inter- as well as capital and skill to undertake the of duty. Besides, the construction and use of rupt very seriously the importation, and thus manufacture of edge rails. To show railways calls for a very enlarged consumpinterfere most essentially with the further what I mean by edge rails, I send you en-tion of iron (every pound of which must be construction of railrways in this country, closed a sheet containing tracings of sections made by the American iron master) in making which for the rapid conveyance (at all sea- of the different patterns of rails in use in the locomotives and iron tenders, iron wagons, sons of the year) of intelligence, travellers, and United States and in Europe, but under this wheels, axles, spikes, screws, and a great merchandize, as well as for the defence of the denomination I class all rails which are roll- many other articles of iron which are all to country, may be considered indispensable, and ed that are not flat bars, whether they be of be furnished exclusively by the home produought by all means to be encouraged by the the T pattern, the H pattern, or the bridge cer. I will not trespass more on your time, federal government. If however the manu- pattern or any other pattern that ever has but conclude by reiterating the hope expressed facture of railway iron in this country could been rolled. My reason for restricting the above, viz. that all edge rails of 40 lbs. per be expected within a reasonable time, there minimum weight to 40 lbs. per yard is that yard and above that weight may continue to might be some inducement for endeavoring to the heavier (within reasonable bounds) the rail be imported free of duty 6 years, up to the encourage the home production of it, but the more perfect the railway will be. Most 4th July 1848. I have the honor to remain (Signed,)

G. RALSTON of A. & G., R. & Co."

P. S. The Liverpool and Manchester clude there is not capital and skill enough in of the flat bar is going out wherever the par-railroad company, began with rails 34 lbs. this country, engaged in making them, to sup-ties are rich enough to replace it with the per yard, but through successive changes goply the demand. This supposition is based edge rail. The use of the flat bar is most in- ing higher and higher, it now has rails of 70 upon the fact that in the last five years the an-expedient, and, though less in the first cost of ibs per yard. The heaviest iron used on any nual average importation of these two articles, the railway, ends in being more costly as the railway in England, is on the London and pig and bar iron, has been about 100,000 expense of repairs, cost of transportation, and Brighton railway, which weighs 76 lbs. per tons. But there has been no edge railway danger of throwing the trains of the tracks, yard. On the Philadelphia and Columbia iron rolled in this country, and it is not rea- render it in every point of view excessively railroad, the rail imported 10 years ago was sonable to expect that any will be until the inferior to the edge rail. In new and poor disconly 41½ lbs. per yard. What has been immanufacture of these (comparatively) raw tricts of country where every penny of ex- ported recently (within 2 years) weighs 56 materials shall be made in sufficient quantity pense in the first cost must be looked after, the lbs. per yard. So also on the Philadelphia to shut out their further importation. The flat bar may be used until by establishing and Reading railroad, their first rails did not cause of no edge railway iron being made channels of trade, sufficient capital may be exceed 42 lbs. per yard, but the recent imporhere, and why none ought to be expected to accumulated to justify the cost of replacing tations weigh 55 lbs. and this must give place in a few years for rails of 70 to 75 lbs. per yard, to accommodate the heavy trade of coal and iron on that road. If a duty on edge rails be imposed, the importation will cease altogether, or the rails will be rolled lighter and lighter instead of as experience has taught us they should be, heavier and heavier than they have been."

Northern, N. H. and Central Vt. Railroads.-These two roads, which are to unite at the mouth of White river, will complete a line of railroad from Boston to Burlington. The distance is about 250 miles, and the route generally exceedingly favorable. The line is now controlled by five distinct companies-with as many sets of officers to payand distinct establishments to keep up, which of course greatly increase the expenses of the line and must inevitably sometimes cause disarrangements. There will be accasionally misunderstandings arising from diversity of interest, and causes beyond the control of human foresight. With the very best intenpropose to allow edge rails of 40 lbs. and up-therefore until all these establishments or these tions in all parties it will be found impossible

Is it not important then that there should be a union of interest, a concentration of action, and a singleness of purpose? To us it appears that here is an opportunity for adopting the Hudsonian plan in England, of uniting several short roads under one head-one management which has proved so eminently successful not only to the shareholders by increasing their profits, but also to the public, by increasing, to an astonishing extent, its For the American Railroad Journal. facilities for business. Railroads are constructed to facililate business, to accommodate the public, and not to furnish offices for a few individuals who must live-and, if judiciously located and well managed, they will yield liberal returns to those who furnish the capital necessary for their construction. The interests of the shareholders and those who pay for the use of the roads are identical. When the people are well and cheaply accommodated then the shareholders receive liberal returns; therefore it appears to us the true policy to have only as many officers as are necessary to manage efficiently, only as many machine shops as are absolutely assential along the line, and as few hangers on as possible; then with low charges, frequent trains, and as high speed as the nature of the case will admit of, the people will be accommoda. ted, and the shareholders liberally compensated for the use of their capital.

We learn from the newspapers that the two companies have recently organized by choosing the following named gentlemen, directors and officers:

" Northern Railroad .- At the meeting of the subscribers to the stock in the Northern railroad, at Concord, says the Boston Courier, the following gentlemen were chosen directors—George W. Nesmith of Franklin, Natransported over the Lowell road, and yet it doubted right to entertain and express such than Carruth of Boston, Solomon Wildes of has not been found necessary to renew or views as his position leads him to entertain; yet Boston, Timothy Kenrick of Lebanon, Iaac tear up this track. This track is laid with others who look upon the various projected, and Spaulding of Nashau, Charles T. Russell of Boston, and Francis N. Fisk of Concord.

"At a meeting of the board of directors, the following officers were unanimously elected: George W. Nesmith president, Nathan Carruth treasurer, and N. G. Upham the experience already had there is no doubt be very likely to entertain a different opinion

September.

"The Central, Vermont, Railroad.-We announced in our postscript edition of last week," says the Burlington Free Press, "the ed altogether on all modern roads both in is in reality an important road, and especially organization of this company. Board of di- England and in this country. rectors: Charles Paine of Northfield; Rob. G. Shaw, Samuel S. Lewis, Jacob Foster, of Boston; Daniel Baldwin, James R. Lang. treal, is marked out by our Concord, (N. H.) don, of Montpelier; John Peck, of Burling-friends. The last N. H. Patriot says:

Charles Paine was chosen president, Sam- of the proposed railroad, is a little over eight The people of Portsmouth and along its line,

points to see alike, think alike, and act alike. It is theresand dollars, and it will be observed that a fore safe to presume that the distance between call of five dollars is made, payable on the Concord and Portsmouth cannot exceed forty first of Sept., with a view to an immediate miles. commencement of the work."

## Wear of Railroad Iron.

The facts stated in the following communication require no comment from us. They speak the right sort of language for those in-slight, and the course nearly straight. terested in railroads; and will we doubt not be amply sustained by experience.

ed to an article in the Journal of the 31st ult. quiring in no case, it is believed, a grade of entitled "wear of railroad iron," which seems to prove that the present iron in use will not bear a heavy traffic for any length of time. from 35 to 40 miles nearer to the sea-board The writer of this article takes the iron than by any other, and at a point, too, more used on the Lowell railroad, and says that favorable than any other upon the coast. this iron is of the most approved pattern, viz. the H weighing 56 lbs. per yard; and goes on to state that the company have found it sufficient depth of water to float the largest necessary to take up and renew the rails, after ships. having born but 420,000 tons, and therefore structive storms often so disastrous in other sets down 500,000 tons as the maximum ports. Unobstructed in the least by ice, in which iron of that weight will bear.

I will just give the comparison between the Lowell and the Philadelphia and Reading cution of commercial operations." road: and take that portion of the road extending from Pottstown to Reading a distance of 17 miles. This track was first used in 1837 and there has been transported over one track from that time to the present the following amount of freight, including passengers merchandize and coal:

Total tonnage up to Dec.: 1841 70,740 tons. '42 98,668 " '43 338,000 " . . . . .. .. .. " " jy 31 '45 421,386 in coal

## Total tonnage 1,434,202

Trail, and weighs 51 lbs. per lineal yard. The important lines of railroad in New England second track of this road is laid with the best from a more distant and less interested posi-T rail weighing 61 lbs. per yard; with the tion, with a full understanding of the onward exception of the aforesaid 17 miles—and with progress, and advantages of the system, will An assessment of five dollars per but that ten times the above can be rolled -at least within a twelvemonth, if not now. share was ordered, payable on the first of over the road without destroying the rail. A word of advice to those who are engaged Instead of the H pattern being the most ap- in this new enterprize. Adopt different proved, it is just the contrary, as it abandon-grounds to encourage its friends, and others, it

A New Route from the Atlantic to Mon-

"The distance from Portsmouth to Newuel H. Walley, jr. of Boston, treasurer, and miles. From Lamprey river to Concord, by will need the road for their own convenience

always for five heads, stationed at distant E. P. Walton, ir. secretary. The subscrip-the most direct of the routes proposed, it is

"For more than half the distance-for more than twenty miles from Portsmouth, the face of the country admits of a perfectly level grade, and the variation, for the purposes of economy will render the undulations very

"The remaining part of the distance the course lies through vallies admirably adapted to the purposes of this enterprize, admitting Mr. Editor: - My attention has been call- of a very straight and a very level course, remore than forty feet, and probably less than thirty to any one mile. •

"By this road the whole interior is brought

"Portsmouth, it is admitted, has the best harbor in the United States. Accessible at all times and under all circumstances, with a Completely sheltered from the dethe most severe seasons. And, on the whole, embracing all the facilities and conveniences for a safe, expeditious and economical prose-

Refering to the Portland and Montreal

road, the writer says:

"This work can hardly be set down for this generation, as the same object is attained by way of Concord, with, probably little or no increase in the distance.

"It is justifiable then to presume, that the Concord and Portsmouth road is to be the most eastly line of railroad communication from the Atlantic coast to the Canadas-and it may be added, the easiest and most direct."

We do not give the writer credit for being either a prophet or the son of a prophet—in Showing more than three times the amount relation to this matter; yet he has the unso to Portsmouth, and therefore should be taken early in hand; and it appears to us that it will be quite as likely to be constructed, at an early period, if it is believed that the Portland and Montreal road will be constructed "At a subsequent meeting of the board, market at Lamprey river village, on the line as if the people were sure it would not be.

and prosperity; which will not be in any manner increased by depriving Portland of equal advantages. It is a mistaken idea that the prosperity of one city is arrested because a dividend of 2 per cent. another is increased, if the natural advantages and artificial facilities are equal; yet of the value of our road than the short statewith the bost natural advantages, a city will ment that "it pays 3 per cent." not retain its relative position unless it also keeps pace in its artificial, with less favored rivals. Say therefore to those interested that up the blanks in your list, some of which "this road must be built if Portsmouth would are of importance in ascertaining the value our own eyes. keep pace with Portland as the road to Mon. of the investment. This I will give you. treal will most assuredly be built!"

## Petersburg Railroad.

We republish the following letter, which appeared in the number for the 31st July, that we may correct the errors of the pressand at the same time make an apology for their occurrence. They were marked in the proof, but accidentally omitted in the correction, we shall endeavor to avoid similar ly overrated in your report. omissions hereafter.

Petersburg, July 21, 1845.

Editor Railroad Journal-

Sir :- A friend has just called my attention to an article in your paper of the 26th of their debt out of the profits of transportault, a part of which I extract, as it is short :

" While I think of it I will correct the statement in relation to the road over which I preside, and two additional ones in your list.

"Its net income was..... 85,688

I do not suppose that the writer of the above intended to make a comparison between the two roads unfavorable to the latter, but the impression which the statement of my Lord Brougham. There are many must have made on the minds of your read-others, we imagine beside "Lady * * *" who ers was, that the first was twice as valuable an investment as the last, and that the last only "pays 3 per cent"

Let us see how far this impression is sustained by a more detailed statement in regard to the Petersburg road-"the road over

which I preside."

The Petersburg (not Petersburg and Ro anoke) railroad was finished in 1833. Up to 1842 it had paid in dividends 54 per cent. In 1842 and 1843 the company rebuilt the road with 15 miles of edge rails, and the balance with 1 by 21 inch plate iron, and constructed 3 miles of new road and an expensive bridge across Roanoke river. In these years no dividend was paid, the profits having been absorbed by the new work and the payment

The receipts of transportation for the 12 months ending Feb. 1st, 1845, Expenses of all kinds, \$123,670 81 except interest, was..... \$49,972 33 Interest account ..... 8,745 98 58,718 31

Net income .... Out of this income was paid— \$64,952 50 Of the debts due by the company... And a dividend of 3 per cent ..... 23,070 00 freight.

Out of the profits of the last six months we have paid about \$32,000 of our debt and

This will give your readers a better idea

Your informant, in sending you the statement about our road, omitted, no doubt accidentally, to give all that is necessary to fill

The road is 63 miles, (instead of 60, as in

your list.)

The number of shares 7,690, of \$100 each all paid.

The amount of loans and debts Feb. 1st, 1845, was \$94,592. This was reduced to less than \$63,000 July 1st.

Last prices of stock \$75 to \$77.

I have charge also of the Greenville and Roanoke railroad, the cost of which is great-

This road is 18 miles long. It cost \$284,433. Number of shares 2000 of \$100 each, all paid. Debt, 1st of May last, \$37, 544. This road was finished in 1837. Up to May last the company had paid \$46,858 tion. No dividend has yet been made. Last sales of stocks 25 to 28.

The receipts for the fiscal year, end-Interest account ...... 2,673 46—\$19,294 08

Net income-applied to the reduc- ?

I remain respectfully yours, H. D. BIRD.

The King of Railways.—Mr. George Hudson.—There is much more pith in the reply of Mr. Hudson in the following paragraph than kindness or candor in the remark think that his Lordship's "chatterings in the house" oftentimes do more "mischief" than good, and who would give him the same advice, if an opportunity should present, as Mr. Hudson, which we find in Herapath of 12th July, as follows, viz. "lately Lord Brougham seeing Mr. Hudson in conversation with some peers, stepped up to the place and said, " make way, my lords, that I may be introduced to the king of railways," then addressing Mr. Hudson, he observed "Lady • • has written to me to say, that I have done her a great deal of mischief by my chattering in the house, what would you advise me to do in that case, Mr. Hudson?" "Cease your 'chattering." was the pithy reply. Knowing how impossible that is, the noble lord silent for once.

Railroad Warehouse.—The Auburn and one of stone, 60 feet front by 125 deep. It tons, 78 miles in 1h. and 57m., or 40 miles

\$41,882 50 will be used exclusively for storing railroad

Astonishing Increase of Railway Traffic.-We find in the Mining Journal of 12th July the following statement in relation to the increase of railway traffic during the last six months. Such is the impulse given to business and to travel by railroads that we really cannot realize the increase untill we see the figures footed up, and even then so astonishing is the result that we can hardly believe

"Returns of Railway Traffic for the Past Six Months.—It will be seen, by the follow-ing return, that the average business of our railways is still progressively on the increase. On thirty-nine lines, embracing nearly 1800 miles, the traffic for the six months ending June, amounts in round numbers to 2,850,-0001.—being an increase of 550,0001 more than the corresponding six months of 1844. Of this increase, the London and Birmingham line has 52,000l., or 2000l. per week; Great Western, 41,0001.; Grand Junction, 30,000l.; Midlands, 57,000l.; Brighton, 14,-000l.; and South-Western, 8000l. Taking the value of money at 4 per cent, it gives an increase in the value of the above railway property of upwards of 26,000,000l. sterling, the result of increasing prosperity, although, on some lines, considerable extensions have been made."

In speaking of Nasmyth's steam pile driver the Mining Journal says, "At the great marine works, at Morice Town, near Portsmouth, the sea wall will be 1600ft. in length, the coffer dam for the construction of which is formed by a bouble row of piles from 45ft. to 66ft. in length, and from 14in. to 16 in. square. The size of this coffer dam is quite unprecedented, and by the use of the steam pile driver a saving of time will be affected of two years, and in money of 50,000l. The pile under the operation is seen to sink into the ground from 1st. to 6st. at a stroke, and the whole time occupied in driving a pile of 66 ft. long, is under four minutes—an operation which, by the old system, took from fifteen to twenty hours; the iron rim on the head of the pile is also dispensed with, and yet the timber remains without the slightest injury. It is almost impossible to imagine the great and important results which must ensue from this powerful agent, as by it numer. ous marine and railway works can be occomplished under circumstances which, with the old machine, would be impossible, such as harbors of refuge, piers, recovering land from the sea, and other extensive undertakings." We should like to know how this machine differs from "Crams steam pile driver" which has been used on several of our American railroads.

Speed on Railways.—A return has just looked very blank, and, mirabile dictu, was been published of the weight and speed of the express trains on several lines, from which we select the following:-Brighton averages 30 tons, performs 50 miles in 1h. and 27 Rochester railroad company have nearly m., or 34 miles per hour, including stoppacompleted the warehouse on the north of the ges; the Northern and Eastern, 27 tons, 321 depot. The building is a very substantial miles, 45 miles per hour; South-Western, 33

per hour; the Birmingham, 271 tons, 1121

TO IRON MANUFACTURERS. THE SUBscribers, as Agents of Mr. George Crane, of Wales, having obtained a fatent in the United States for his process of smearing Iron Ore with Anthracite coal, and holding an assignment of the pa-tent obtained by the late Rev. F. W. Geissenhainer, are prepared to grant licenses for the manufacture

of Iron according to Mr. Crane's principle.

Direct to New Orleans, and at the following reduced rates of fare, viz: Through tickets from Baltimore to Charleston, \$21: whereby the traveller saves \$425. Bear in mind that this is the great Southern Mail Line, and the only one that issues a through ticket South. Those who patronize it will save their money and time. Through Tickets from Baltimore to Charleston \$21; Baltimore to Weldon \$10: Baltimore to Petershurg \$750: Baltimore to \$10; Baltimore to Petersburg \$7 50; Baltimore to Richmond \$7.

Fast Mail Line.—Leave New York at 9 a.m. and arrive in Philadelphia at 3½ p.m.; arrive in Baltimore at 11 p.m.; arrive in Washington at 3 a.m.; arrive in Fredericksburg at 9 a.m.; arrive in Richmond, Va., at 12½ to 1 p.m.; arrive in Petersburgh, Va., at 3 p.m.; arrive in Weldon, N. C., at 10 p.m.; arrive in Wilmington, N. C., at 12 m.; arrive in Charleston, S. C.. at 6 a.m. Fast Mail Line .- Leave New York at 9 a.m. and

Passengers by the above line will arrive at Richmond by 111 o'clock p.m. and Petersburg, Va. by 21 o'clock p.m., through to the former city in twelve hours, and to the latter in fourteen and a half hours (and in eight hours less time than by the Bay route,) and to Charleston, S. C., in fifty-one to fifty-two hours after leaving Baltimore, and do not incur the risk of any detention at intermediate points as those do who take the Bay route.

Way Mail Schedule.—Leave New York at 5 o'clock p.m. and arrive in Philadelphia at 10 p. m.;
arrive in Baltimore at 21 p.m.; arrive in Washington at 7 p.m. From Philadelphia by steamboot.—
Leave Philadelphia at 6 a.m. and arrive in Baltileave Philadelphia at 6 a.m. and arrive in Baltimore at 1 p.m.; leave Baltimore at 5 p.m. and arrive in Washington at 7 p.m.

For further information and through tickets apply at the Southern office, adjoining the Washington railroad ticket office, Pratt street, Baltimore. STOCKTON & FALLS.

For Norfolk and the South, by steamboat through the Chesapeake bay to Norfolk, and then by railroad to Weldon, Wilmington or Raleigh, etc. Leaves Baltimore daily [except Sundays] from Spears' whatf, at 4 p.m., and arrives at Nor-folk next morning at 7 o'clock; fare \$6. Leaves Norfolk at 8 a.m. and arrive at Wilmington next day at 12 m. and Charleston next morning at 7. Fare through \$21.

For Philadelphia (Union Line,) via Chesapeake and Delaware Bay, and Newcastle and Frenchtown Raitroad.—The well known steamboat Constitution, Capt. Chaytor, has commenced her regular trips for the season, leaving Bowly's wharf, foot of South street, at 8 o'clock, p.m. dafly [except Sundays] for Philadelphia. Through in 8 hours. Fare \$3.

Morning Train for Phila-

The morning train leaves the depot, Pratt street daily [except Sundays] at 9 o'clock, a.in. Passengers arrive at Philadelphia in full time to continue

Lancaster, by the Baltimore and Susquehanna rail-road. Cars leave from their office, 63 North street, daily [Sundays excepted] at 9 o'clock, a.m. Fare \$3 50.

EORGE VAIL & CO., SPEEDWELL IRON Works, Morristown, Morris Co., N. J.—Manufacturers of Railroad Machinery; Wrought Iron Tires, made from the best iron, either hammered or rolled, from 1\(\frac{1}{2}\) in. to 2\(\frac{1}{2}\) in thick.—bored and turned outside if required. Railroad Companies wishing to order, will please give the exact inside diameter, or circumference, to which they wish the Tires made, and they may rely upon being served accordor circumterence, to which they wish the Tires made, and they may rely upon being served according to order, and also punctually, as a large quantity of the straight bar is kept constantly on hand.—Crank Axles, made from the best refined iron; Straight Axles, for Outside Connection Engines; Wro't. Iron Engine and Truck Frames; Railroad Jack Screws; Railroad Pumping and Sawing Machines, to be delicable by the Locaractive. Stationary chines, to be driven by the Locomotive; Stationary Steam Engines; Wro't. Iron work for Steamboats, and Shafting of any size; Grist Mill, Saw Mill and Paper Mill Machinery; Mill Gearing and Mill Wright work of all kinds; Steam Saw Mills of simple and economical construction, and very effective fron and Brass Castings of all descripions.t ja451y

TICOLL'S PATENT SAFETY SWITCH for Railroad Turnouts. This invention, for some time in successful operation on one of the principal railroads in the country, effectually prevents engines and their trains from running off the track

at a switch, left wrong by accident or design.

It acts independently of the main track rails, being laid down, or removed, without cutting or displacing them.

It is never touched by passing trains, except when in use, preventing their running off the track. It is simple in its construction and operation, requiring only two Castings and two Rails; the latter, even if

much worn or used, not objectionable.

Working Models of the Safety Switch may be seen at Messrs. Davenport and Bridges, Cambridgeport, Mass., and at the office of the Railroad Journal, New York.

New York.

Plans, Specifications, and all information obtained on application to the Subscriber, Inventor, and Patentee.

THE AMERICAN RAILROAD JOURNAL is the only periodical having a general circulation throughout the Union, in which all matters connected with public works can be brought to the notice of all persons in any way interested in these undertakings. Hence it offers peculiar advantages for advertising times of departure, rates of fare and freight, improvements in machinery, materials, as iron, timber, stone, cement, etc. It is also the best medium for advertising contracts, and placing the merits of new undertakings fairly before the public.

He will also act as agent for the sale or purchase of machinery, and of patent rights for improvements relating to public works.

## KITE'S PATENT SAFETY BEAM.

MESSRS. EDITORS.—
As your Journal is devoted to the benefit of the public in gen-eral I feel desirous to communicate to you for publication the following circumstance of no inconsiderable importance, which occurred some few days since on the Philadel-phia, Wilmington and Baltimore railroad.

On the passage of the evening train of cars from Philadelphia to this city, an axle of our large 8 wheeled assenger car was broken, but from the particular plan of the construction, the accident was entirely unknown to any of the passengers, or, in fact, to the conductor himself, until the train, (as was supposed from some circumstances attending the case,) had pass ed several miles in advance of the place where the accident occurred, whereas had the car been constructed on the common plan the same kind of acci-

dent would unavoidably have much injured it, perhaps thrown the whole train off the track, and seriously injured, if not killed many of the passenger Wilmington, Del., Sept. 28, 1840.

The undersigned takes pleasure in attesting of the value of Mr. Joseph S. Kite's invention of the Safety Beam Axle and Hub for raffroad cars. They have for some time been applied to passenger cars on this road, and experience has tested that they fully accomplish the object intended. Several instances of the fracture of axles have occurred, and in such the cars have uniformly run the whole distance with entire safety. Had not this invention been used, serious accidents must have occurred.

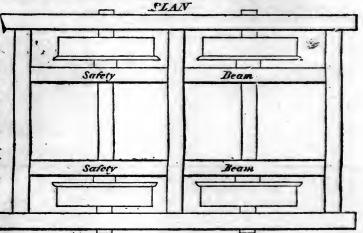

In short, we consider Mr. Kite's invention as completely successful in securing the safety of property

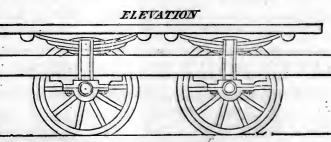

and lives in railroad travelling, and should be used on all railroads in the country.

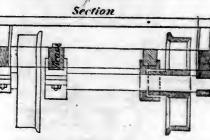

JOHN FRAZER, Agent,

GEORGE CRAIG, Superintendant,

The A model of the above improvement is to be seen at the New Jersey railroad and transportation office, No. 1 Hanover st., N. York.

PATENT HAMMERED RAILROAD, SHIP and Boat Spikes. The Albany Iron and Nail Works have always on hand, of their own manufacture, a large assortment of Railroad, Ship and Boat Spikes, from 2 to 12 inches in length, and of any form of head. From the excellence of the material always used in their manufacture, and their very general use for railroads and other purposes in this country, the manufacturers have no hesitation in warranting them fully equal to the best spikes is market.

try, the manufacturers have no hesitation in warranting them fully equal to the best spikes in market, both as to quality and appearance. All orders addressed to the subscriber at the works, will be promptly executed. JOHN F. WINSLOW, Agent.

Albany Iron and Nail Works, Troy, N. Y. The above spikes may be had at factory prices, of Erastus Corning & Co., Albany; Hart & Merritt, New York; J. H. Whitney, do.; E. J. Etting, Philadelphia; Wm. E. Coffin & Co., Boston. Ja45

PATENT RAILROAD, SHIP AND BOAT Spikes. The Troy Iron and Nail Factory keeps constantly for sale a very extensive assortment of Wrought Spikes and Nails, from 3 to 10 inches, manufactured by the subscriber's Patent Machinery, which after five years' successful operation, and now which after five years' successful operation, and now almost universal use in the United States (as well as England, where the subscriber obtained a patent)

as England, where the substitute obtained a patient are found superior to any ever officed in market.

Railroad companies may be supplied with Spikes having countersink heads suitable to holes in iron rails, to any amount and on short notice. Almost all the railroads now in progress in the United States are fastened with Spikes made at the above named factory—for which purpose they are found invalua-ble, as their adhesion is more than double any common spikes made by the hammer.

mon spikes made by the hammer.

All orders directed to the Agent, Troy, N. York, will be punctually attended to.

HENRY BURDEN, Agent.

Spikes are kept for sale, at Factory Prices, by I. & J. Townsend, Albany, and the principal Iron merchants in Albany and Troy; J. I. Brower, 222 Water St., New York; A. M. Jones, Philadelphia; T. Janviers, Baltimore; Degrand & Smith, Boston.

*4* Railroad Companies would do well to forward their orders as early as practicable, as the subscriber is desirous of extending the manufacturing so as to keep pace with the daily increasing demand.

ja45

FRENCH AND BAIRD'S PATENT SPARK ARRESTER.

O THOSE INTERESTED IN Railroads, Railroad Directors and Managers are respectfully invited to examine an improved SPARK ARRESTER, recently patented by the undersigned.

Our improved Spark Arresters have been extensively used during the last year on both passenger and freight engines, and have been brought to such a state of perfection that no annoyance from sparks or dust from the chimney of engines on which they are

used is experienced.

These Arresters are constructed on an entirely different principle from any neretorore onered to the public. The form is such that a rotary motion is imparted to the heated air smoke and sparks passing through the chimney, and by the centrifugal force thus acquired by the sparks and dust they are separated from the smoke and steam, and thrown into an outer chamber of the chimney through openings near its top, from whence they fall by their own gravity to the bottom of this chamber; the smoke and steam passing loff at the top of the chimney through a capacious and unobstructed
