Issued Weekly, \$3 00 per year.

San Francisco, January 7, 1911

Eleventh Year, No. 1

## Editorial Page.

In a country of such phenomenal growth as the United States it is a significant fact when the actual census of population exceeds the previous estimates. Such is the case in the last census returns of this country when the aggregate population footed up to 92 million in round numbers. This represents an increase during the last decade of 21 per cent, a gain of 2½ million greater than the decade from 1890 to 1900.

The districts of the greatest gains are New York and its immediate vicinity on the Atlantic slope. California has added to its population 825,000 souls during the period. This shows a remarkable development for a state that celebrated its fiftieth anniversary in 1900. It shows also that the state is only awakening to its possibilities. And with the year 1911 and all the attendant developments that are on foot the next decade promises to be the greatest in its history. Here's a health to the new year and may its prosperity fulfill its prospects.

In wishing you a Happy New Year, the "Builder" naturally wishes prosperity and much work for the builders of the Pacific coast. Along with it clean business and fair dealing among all classes of men. For as Kipling says in the poem to one of his books, "The Day's Work"—

Who can doubt the secret hid  
Underneath the pyramid  
Was, that the Contractor did  
Cheeps out of millions.

So that if recorded history shows unfair methods in business since time began let us hope that the new year will bring more of fair dealing than last and that the honest man will come to his own—that the pro rata contractor and the man who beats his creditors will gradually fade into the unreturning erstwhile.

Among the things that have been submitted to the legislative conference held in this city is a proposal for an amendment to the constitution and laws of the state relating to the franchises that are granted to public service corporations. City Attorney Long and Francis J. Heney have submitted a plan whereby a municipality would be empowered to grant an indeterminate franchise, reserving the right for the governing body or board of supervisors to take over the property at any time or payment of a price ascertained by the state public service commission. This public service commission to exercise the powers and functions of a court in condemnation proceedings.

The idea is a good one. What practical difficulties would be encountered in carrying out the plan remains to be seen. Anything that will tend to bring

public utilities under the control of the public is a move in the right direction. The plan needs discussion and publicity and the possibility of its being put into practice should be determined.

Another question that will come up for the next legislature is the re-enactment of the McEnerney law. A great many have not availed themselves of the provisions of the act to establish the record of their title so it is urged that the law be extended. It would perhaps be a good thing to have an act similar to this or in a modified form as a permanent law. If it is an extraordinary measure and the people have not taken advantage of it in four years they will in all probability not all take advantage of it in two years more.

An Ohio congressman named Tou Ville has introduced a bill to prohibit the government printing return notices on stamped envelopes. As matters now stand if one purchases stamped envelopes of the Post Office in quantities of 500 or more the government will print your return notice in the upper left hand corner free of charge.

Sundry envelope manufacturers and printers have got together to have a law passed to prohibit this act by the government so that the printers and envelop manufacturers may profit thereby.

It is another case of taxing the consumer for the benefit of a particular class. And the question naturally arises whether it is the greatest good to the greatest number. We think not. Most of us are consumers and these laws for special classes have certainly reached the limit.

Chief Inspector John P. Horgan, of the Board of Public Works, has compiled his record of the building activities for 1910 and the following table is a statement from the records of The Bureau of Building Inspection.

Class A.....	22 Bldgs.	\$3,380,000
Class B.....	17 Bldgs.	786,000
Class C.....	250 Bldgs.	7,060,350
Frames.....	2417 Bldgs.	8,007,152
Alterations.....	2917 Bldgs.	1,275,054

5690 Bldgs. \$20,508,558

While the year has been one of comparative inactivity, the footings show an average of \$1,709,046 per month, a comparatively good showing when everything is taken into consideration.

But few buildings have been started the twelvemonth, the total has been made up from permits issued for ordinary buildings and apartment houses. The town has been waiting to fill its office buildings already constructed, business has been comparatively quiet. So that the total of 20½

million spent in building activities indicate that the builder and supply man has after all got his share of the business.

And while the year has been a comparatively quiet one compared to the years immediately following the fire, yet the bank clearings show that the city has done more business than during any year of its history. The total of 1909 showed \$1,979,872,570, while 1910 foots up to about \$2,320,000,000. The United States Subtreasury checks did not go through the clearing house till the past year, but even after deducting these the gain is somewhere in the neighborhood of \$100,000,000.

San Francisco is a strong independent financial center and perhaps as much business is done here where actual coin is paid as in any other city in the United States. So that the bank clearings indicate in a pretty close degree the amount of business done and the increase during the past year does not show any substantial falling away of business. In fact it indicates a pretty healthy prosperity.

The coming aviation meet which is to be held at the opening of the new year promises to be one of interest. The recent record of Hoxsey in climbing to an elevation of 11,474 feet is without a parallel in the history of aviation. It has outdistanced any other flight in altitude by at least a thousand feet.

This flight was accomplished in the face of a wind of about 40 miles an hour at the earth's surface and against higher winds in the higher levels. It shows to what a mastery of the elements the aeroplane has been advanced and to what uses it might be put in time of war.

An aeroplane traveling at a rapid rate of speed at a distance of a mile high would be almost impossible to hit with any kind of a projectile or with any kind of a gun. A flock of them passing over a city or an army with high explosives would spell destruction to either.

With the rapid advancement that is being made in perfecting the machines we may expect the element of safety in navigation to increase with the perfection of the machines.

To have started from the sea level and soared into the air 974 feet more than two miles is certainly a wonderful feat. No bird that spreads a wing could do it in a single sustained flight.

We will watch the meet with interest here next month. There may be no records broken but it will give many of us a chance to view the march of science and the work of the inventor in the mastery of the air and the inconstant winds.

## A Retrospect And Review Of The Industrial Progress Of 1910.

The advent of the New Year and the close of the calendar for 1910 is a time for retrospect and review of the year that is gone and to notice a few of the important events that have marked the year that has just passed.

Among other things the year 1910 has been a census year and the records of the government enumeration show absolute and tangible evidence of progress.

The Pacific Coast has been particularly fortunate in that respect, the increase in population of the coast states being the greatest of any of the states of the union—Washington heading the list in gain percent with Oregon second and California third. California, however, stands second in the number of population added to its census during the decade, increasing in number more than 800,000 and being surpassed only by the State of New York.

All in all the year has been an eventful one not only for California and the entire west but throughout the country generally. The aviation meet now in progress in San Francisco marks the opening strides of progress in the science and art of aerial navigation that saw more real practical development during the past year than in all the ages that have gone before. Through a succession of record-breaking events the airmen have succeeded in climbing to the astounding height of 11,474 feet in a single sustained flight from the sea level, have flown across the English Channel and carried a passenger, and have attained the marvelous speed of over 70 miles an hour. The birds, the native denizens of the air, have been surpassed in every department of flight save that of time and even here the man bird has succeeded in remaining in the air a period of over eight hours in a single sustained and continuous flight.

Chief among the important lines of development in this state has been the completion of the Western Pacific Railroad. Another track has been laid that connects us with the more populous east, another avenue of commerce has been opened and an outlet for the products of the pacific slope. Attendant with it have been side lines to the lateral valleys of the state completed and projected which have done much to open up for settlement hitherto remote regions of a resourceful country.

Suburban lines have been established, the Northern Electric connecting the important parts of the great interler valleys and furnishing feeding lines for the commerce of San Francisco bay and the ocean traffic.

An independent line of steamers has been established to trade with the southern ports and with the Atlantic seaboard across the Isthmus of Panama so that the Southern Pacific Company and its subsidiary corporations no longer have a monopoly of the trade and traffic of the west.

Irrigation and reclamation projects have been active. Perhaps no year in the history of the state has been more fruitful of great enterprises of this nature that look to the reclamation of arid lands and the population of districts that have hitherto been unproductive has been the activity in the hydro electric field, the harnessing of the abundant water power of the state for light and power and irrigating purposes. The merging of independent power companies into greater corporations indicates the

interest that big capital is taking in this phase of the state development and shows that money will not be lacking for putting into operation the vast schemes that are now only in the embryonic stage.

Another phase of activity that will do as much or more than any other toward the increase of the population of the state is the colonization of large tracts of lands and the subdivision of them into small farms for more intensive farming. Hitherto California has been the home of large ranchers whose lands extended over the broad fields of the great valleys, the dominion of the stockmen whose holdings extended over hundreds of square miles of her mountains and plains.

The past year has seen an unprecedented number of sales of these holdings, they are being subdivided into comparatively small tracts and inducements are held out for the farmer and his family to come here and gain from the soil a better living than he could otherwise obtain.

While the past year has not been marked by any new discoveries in the oil fields, it has witnessed a remarkable development—wells of unprecedented capacity have been opened and the oil industry now means an income to the state that is little short of marvelous.

The mining industries of the state have gone along with a steady tread. The perfection of the smoke destroying apparatus has enabled the copper smelters of Shasta county to continue operations without the destruction of surrounding vegetation and the great placer fields of the valleys have continued to be exploited by the most modern methods of big mining.

In the department of building industry California and the West have certainly held their own. Los Angeles has perhaps shown the most steady and persistent gain from month to month of any city throughout the United States. Portland, Seattle, Spokane and Tacoma have also shown a healthy activity. The City of Oakland shows a total of permits issued for the year of \$6,695,786, as against \$5,652,811 for 1909. In San Francisco while the activity has not been as great as the years immediately following the fire the total record of permits from the Board of Public Works amounts to \$20,508,556. Among the public buildings the City of Oakland has commenced the construction of a new City Hall, the plans for which were obtained in a contest among the prominent architects of the country wherein an example has been set that can profitably be followed by other cities throughout the country.

On the whole the year has been substantially prosperous for California and the West and the future looks big with promise. This month will probably see some action by the federal congress on the site for the Panama Exposition, and if, as we have every reason to believe San Francisco will get the Congressional approval, it means increased activity along all lines. Besides this enterprise of the exposition which has pledged for its fulfillment the sum of seventeen and one-half million dollars the state has, by popular vote, agreed to bond itself for ten million dollars for the improvement of the harbor of San Francisco, one and one-half million dollars for the improvement of the harbor of San Diego and eighteen million dollars for the establishment of a system of state highways. This is certainly a substantial expression of confidence in the future. The attendant activity that will follow the launching of those enterprises will represent many times this expenditure of money.

Private capital will surely be expended where so much public money is invested. The bow of promise shines brightly over the incoming year.

# Corinthian Yacht Club Build New Home At Tiburon. Millions Of Dollars In Construction Depend On Fair.

## CORINTHIAN YACHT CLUB'S NEW HOME.

Through the untiring efforts of a few of its members the Corinthian Yacht Club are to have a club house on their property at Tiburon. The plans have been completed by Architect Walter H. Parker of San Francisco and a perspective of the new building is shown on Plate A of this issue of the Building and Industrial News.

The new club house will be erected on the site of the present structure on the point at Tiburon overlooking the entire bay and commanding a view of the heads as well. The new building will have a frontage of 100 feet and a depth of 160 feet, the sides diverging and thus increasing the length of the rear. The plans call for a three-story building which will embrace all the features required by the club. The architecture is of a particularly effective style for the surroundings of the building and when completed will make the grounds of the Corinthian Yacht Club one of the most beautiful spots to be found around the entire bay.

The building will be of frame construction and will be carried on a foundation of concrete piers. The first floor will be arranged for locker rooms, storage space for the smaller boats, sail room, a kitchen which will be equipped with a dumb waiter and a large room which will contain the showers. Across the front of the club house and on a level with the first floor will be a large porch protected from the weather and on which open air banquets can be served while the diners enjoy the splendid view of the bay and the sea air. The floor plan of the second story provides for a large Jinks Room with a stage and complete settings, and dressing rooms, card rooms, a large reception room and ladies parlor. The interior will be handsomely finished, the decorations being in keeping with the purposes of the organization.

At the last meeting of the club, which was held in the Merchant's Exchange Building last week, a special assessment of the members was voted and the successful financing of the project was assured. The new club house will cost about \$25,000 and this amount has now been practically pledged and the plans of Architect Parker carefully examined and approved.

Mr. Hawks, an enthusiastic member of the Corinthian Club, stated that while the arrangements for the new building were now complete that the work would not be started until the money was actually raised, and, that in his opinion, this could not be accomplished until the spring of next year.

## A BIG APARTMENT VENTURE.

Prominent among the hundreds of immense building projects which are being held in abeyance waiting the final outcome of the selection of the site for the 1915 Exposition is that of construction of what is to be the largest and most elaborate apartment house in the United States. This structure has been designed by Architects William Cnrlett & Son, and, with the fair an assured thing, will be located at the southwest corner of Powell and California streets across California street from the Fairmont Hotel. The construction of this building would require and outlay of a million dollars and when completed would be unsurpassed by any similar structure of its kind in the world. The property at the corner of Powell and California streets is owned by the Stanford Estate and the project to erect the apartment house thereon is in the hands of Messrs Madison & Burke, real estate agents.

A perspective of the handsome structure is shown on Plate B of this issue and as can be seen from the half tone the building will be one of the finest pieces of architecture in the city.

The same condition that surrounds the construction of this structure will be found delaying the erection of hundreds of other vast building projects on the boards in almost every other architect's office in San Francisco and the same is true in a greater or less extent throughout the state at large. On the final decision of Congress on the 17th of this month depends the fate of millions of dollars worth of construction work in this section and the men interested in these enterprises are leaving no stone unturned in their efforts to convince Congress that the City by the Golden Gate richly deserves the official sanction which means so much to the entire west.

Among other projects which are now dependent upon the outcome of Congressional decision may be mentioned three large apartment houses which have already reached the preliminary stage and which would be rushed to completion on Van Ness avenue, four similar structures which would be built within a radius of five blocks in the Fifty Vara District and a commercial structure that would rival the Call Building would grace upper Montgomery street. Plans for all of this work have passed the preliminary stages and the owners and architects are but waiting for the word which will give San Francisco her right to the 1915 Exposition to complete the working drawings. The work mentioned above represents over five million dollars to be spent in construction alone, and there is but little doubt that the majority of these projects would be dropped if the Exposition is given to our southern rival.

## THE BUILDER

When I was a king and Mason—a Mason proven and skilled—  
I cleared me ground for a palace such as a king should build.  
I decreed and dug down to my levels; presently, under the silt,  
I came on the wreck of a palace, such as a king had built.

There was no worth in the fashion—there was no wit in the plan.  
Hither and thither, aimless, the ruined footings ran—  
Masonry, brute mishandled, but carven on every stone;  
"After me cometh a builder. Tell him I, too, have known."

Swift to my use in my trenches, where my well-planned ground work grew,  
I tumbled his quoins and his ashlar, and cut and reset them anew.  
Lime I milled out of his marbles; burned it, slacked it and spread,  
Taking and leaving at pleasure the gifts of the humble dead.

Yet I despised not, or gloried; yet, as we wrenched them apart,  
I read in that razed foundation the heart of that builder's heart.  
As he had risen and pleaded, so did I understand  
The form of the dream he had followed in the face of the thing he had planned.

When I was king and a Mason—in the open noon of my pride,  
They sent me a Word from the Darkness—they whispered and put me aside  
They said: "The end is forbidden;" they said: "Thy use is fulfilled,  
And thy palace shall stand as that other's, the spoil of a king who shall build."

I called my men from the trenches, my quarries, my wharves and my shears,  
All I had wrought I abandoned to the faith of the faithless years.  
Only I cut on the timber, only I carved on the stone:  
"After me cometh a Builder. Tell him I, too, have known."

—Rudyard Kipling.

**BUILDING AND INDUSTRIAL NEWS**  
1325 Mission Street  
San Francisco**Among the Architects.**

Architect Milwain Bros., Phelan Building, will shortly award the contract for the erection of a two-story and basement frame residence which is to be erected on Calmas avenue in the Piedmont Heights District of Oakland for J. M. Angh of this city. The residence is a unique design, the exterior being covered with shingles. The interior will be handsomely finished and when complete will cost in the neighborhood of \$5000.

Architect Willis Polk, Merchants' Exchange Building, has completed the plans and will award the contracts for the construction of a three-story reinforced concrete structure within a few days. The building is to be erected at the corner of Market and Rose streets and is to be built for Mrs. Eleanor Martin. The main floor will be occupied by stores and the upper two floors will be subdivided into living rooms. The cost of the work is estimated at \$70,000. Work will be started as soon as the contracts can be awarded.

The plans submitted for a city hall at San Rafael have been figured and found to be too elaborate for the money available and after considerable delay caused by the efforts of the Town Trustees to raise additional funds new plans have been called for. The hall is to be a frame building with offices for the town officials and the quarters for the Marshal and Fire Department on the first floor and a meeting chamber for the Trustees on the second floor.

Architects Deuel and Wright, Macdonough Block, Oakland, have prepared plans and specifications for a seven-room dwelling which is to be erected for A. F. Elbe on his property on the east line of Franklin Street 75 feet south of Sunn Slope. The building will cost in the neighborhood of \$5000 and the work will be done by day's labor.

Architect A. W. Smith, 1004 Broadway, Oakland, will shortly award the contract for the construction of a one-story concrete building which is to be erected on the property of R. J. Havert at the corner of Twelfth and Jackson streets, Oakland. The building will cost \$11,000 and is to be used for a retail store.

Architect J. Cather Newsom, Monadnock Building, has been taking figures on the construction of a two-story frame residence which is to be erected on Dracina avenue between Blair and Park Way in Oakland. The work is being done for J. C. McLeod and will cost in the neighborhood of \$30,000.

Architect Theo. Lenzen and Son of San Jose have submitted a plan to the Santa Clara County Board of Supervisors at their last meeting for a frame cottage for the occupancy of the insane cases at the County Hospital. The plans of Architects Lenzen and Son have been approved by the Board and the Clerk has been instructed to advertise for bids for the construction of the building. The bids are to be opened on January 20th. The plans show a structure of several large rooms and complete with modern plumbing and heating plant. The work will cost about \$10,000.

Bids are being taken by the Trustees of the Los Banos School District for the construction of a one-story and basement frame school which is to be erected in the Charleston School District of Merced County. The building will be in the Spanish Mission style and is to cost \$12,000. The plans are now on file with the Los Banos Enterprise and bids will be opened on January 20th.

Active construction work has been started on the new buildings for the Sisters of the Presentation under the direction of Architect Charles J. I. Devlin, Pacific Building. In addition to the structure which is now under the course of construction there is to be a substantial school building erected on the Masonic avenue frontage of the property at the corner of Masonic avenue and Turk street. The plans for this building are now being prepared in the offices of the architects and will be completed as rapidly as possible. The building will probably cost in the neighborhood of \$25,000.

Architect David Coleman, Metropolis Bank Building, will shortly award the contract for the construction of a three-story and basement reinforced concrete structure which is to be erected on Fifteenth avenue near Clay street and which will cost about \$25,000. Work on the plans has been completed and the figures are in the hands of the architect.

Architect Thomas Smith, Lick Building, left yesterday on a trip to the northern counties which will require several days. The trip is in the nature of a business journey and is connected with some valuable property which Mr. Smith is looking over with a view to developing.

Architect Charles O. Clausen left Thursday on the steamer Yale for Los Angeles with a party of friends who will spend the New Year in the southern metropolis. He will return on Monday or Tuesday of next week.

Architect W. G. Hind, Humboldt Bank Building, has prepared revised sketches for a three-story apartment house which is to be erected on the property recently purchased by Dr. Clyde Payne in the north line of California street, between Fifth and Sixth avenues. The

owner at one time was contemplating the construction of two three-story apartments on this property but has now decided to improve his recent purchase with but one building covering the entire site in place of the two smaller structures. The cost of the work is estimated at about \$20,000.

Architect Albert C. Martin of Los Angeles has been successful in the recent competition held to secure plans for the new County Court House which is to be erected in Santa Paula by the people of Ventura County. The sketches of Architect Martin have just been approved, but it is reported that the building will be a reinforced concrete structure with the exterior faced with granite and sandstone or with pressed brick and terra cotta. The cost of the work will be in the neighborhood of \$200,000.

Architects Welsh and Carey, Metropolis Bank Building, are preparing plans for the rearrangement of the Elks' new home in San Rafael. The work will consist of a general rearrangement of the interior of the large residence which the order has just purchased and will represent considerable expense. The plans for the new building which is to be erected in the near future by the Elks of San Rafael will also be gotten out by Architects Welsh and Carey. The new building, it is stated, will cost in the neighborhood of \$20,000.

Architect J. J. Foley, Monadnock Building, is preparing plans for a large frame residence which is to be erected by the Burlingame Investment Company on their property down the peninsula. The dwelling will be a two-story structure with a basement and will be strictly modern in every particular. The exterior will be of a pleasing design and when complete the building will cost about \$12,000.

Architects Kidd and Anderson, 251 Kearny street, are preparing plans for a handsome two-story residence which is to be erected in the Richmond District at a cost of about \$8,000. At the present time the exact location of the site can not be published but in the course of the next three weeks, when the plans are complete, a more comprehensive description of the dwelling will be published.

Architect Walter H. Parker, 244 Kearny street, has completed the plans for the new Corinthian Club house which is to be erected on the site of the old structure at Tiburon. The new building will be a typical yacht club embracing storage rooms for the smaller craft and for equipment, a large and well appointed cafe complete with a modern kitchen, lounging rooms and social hall. The club house will raise three stories above the water and from its point of vantage the members will be able to command an unobstructed view of the entire bay. A large protected porch will extend nearly around the building and will be sheltered from the winds. The building will be constructed of concrete and frame and when complete will cost about \$25,000. The club has recently held a meeting at which plans were discussed for financing the work and at which arrangements were practically completed so that construction could be started within a short time.

Building—Santa Monica, Cal.—Bryant & Wells of Santa Monica, have been awarded the contract for the erection of a one-story frame office building to be built on Oregon avenue near Fourth street for Dr. Wagner and Ellis Bashore. It will be 32x40 feet, and will have plate glass front windows, electric and plumbing fixtures and pine finish.

## News In Brief.

### W. P. INSTALLING NEW YARD AT OROVILLE.

The Western Pacific Company is now busy, according to a report given out at the offices in Sacramento, at Oroville installing a new yard. The yard is for the purpose of making and breaking up passenger and freight trains going up or coming from the Feather River canyon. When the Western Pacific line was finished there was not sufficient yard and trackage room at the station, but now the company has facilities for the proper handling of its trains at the natural point.

### INVENTOR ENJOINS ELECTRICAL COMPANY.

W. C. Robinson, an inventor of Pennsylvania, brought suit in the United States Circuit Court Tuesday for an injunction to restrain the Levy Electrical Works of this city from using an electric conduit which Robinson claims he has had patented. A temporary injunction was granted by Judge van Fleet.

### CUTS IN INSURANCE RATES.

The report of Secretary Leslie E. Burks of the real estate board for the quarter ending December 31 explains in detail the reduction in insurance rates and the further cuts to be made in the future. The report says:

A circular letter was mailed from this office to the membership last month announcing a reduction of 15 per cent in insurance rates within the fire limits. This reduction is the result of the work of the joint committee of which George D. Toy, president of the Real Estate board, acted as chairman. This committee worked upon this matter over a period of several months and its efforts have been rewarded by this very substantial reduction, which is summarized as follows:

That the schedule be applied to the congested portion of San Francisco as at present improved, resulting in a reduction of the key rate on buildings as per class: A class, from 42 cents to 35 cents, C class, from 67 cents to 56 cents. That portion of the city within four blocks of the water front, in which reduction has already been made for fireboats, is excepted.

It is further recommended that when the direct high pressure system from salt water pumping stations is available the key rate on Class A buildings be reduced from 25 cents to 31 cents and on C class from 57 cents to 51 cents. When the storage and distributing reservoirs, with their auxiliary services, are completed the key rate of Class A buildings, produced by the application of the schedule, will be 28 cents.

That the above reductions be approved by the committee with the understanding that the plan for reduction of rates on frames should only become operative when the high pressure system is available in the district, and that the further reduction of frame rates shall be granted upon completion of the full system of reservoirs and the high pressure system.

### DUTCH COLONY NEAR MODESTO.

A new Netherlands will be established in the San Joaquin valley near

Modesto, if the plans of a Dutch syndicate, having head offices at The Hague, are carried out. A. Hulshoff Paul, its special representative, has obtained an option on several thousand acres in the irrigated district, formed plans for putting water on the land and prepared to return to Holland to close the deal with the syndicate officers and start the tide of Dutch immigration toward the valley.

The syndicate is said to be backed by millions of dollars, and with the successful colonization of the San Joaquin lands further purchases will be made.

Paul has closed negotiations for the purchase of six mines of the Highland group in Siskiyou county from John M. Tetherow and others of Yreka.

### SOUTH AMERICAN RAILWAY.

WASHINGTON, December 29.—The final payment by the city of Bogota to the American owners of its street railroad was made Tuesday and the road now is the property of the municipality. This terminates a source of constant trouble in Colombia between the United States owned company, the government authorities and the natives of Bogota. The city paid \$600,000 for the property.

### COTTON PRODUCTION LESS.

BOMBAY, December 29.—The cotton situation is causing some disquiet. The receipts to date are 300,000 bales behind last season. A total crop of only 2,500,000 bales is expected against 3,200,000. Local rates are relatively higher than the prices in the United States, but even at that the dealers are afraid to sell.

### CASH FOR CONTRACTORS.

A resolution passed by the Board of Public Works Wednesday recommended that the sum of \$200,000 be made available for finishing interior work in the hall of justice, cell work in the city and county jail and other contracts. The board asked that it be empowered to make progress payments as specified by contract.

### CONTRACT AWARDED.

The Board of Public Works at its meeting on Wednesday awarded a contract to the Coast Improvement Company for sewer work in Section A of the Sunnyside district. The sum stipulated was \$12,050.

Bennett Brothers will be paid \$4,000 for furnishing the hardware in five city schools.

Property owners having failed to sustain charges of inefficient work, the board accepted the Courtland avenue pavement.

### INCREASE IN PAY FOR NAVY YARD.

The navy department has concurred in the recommendation of the wage board which convened at Mare Island last October, and as a result an increase in wages has been granted to all of the higher classes of trades, so that the salaries paid at the local station will conform with those in the big establishments in the cities in this vicinity.

As a result the general helpers will receive an increase of 15 cents a day in all classes, the electroplaters a similar increase, the millmen an increase of 20 cents, the painters an increase of 15 cents, pattern makers 24 cents, riv-

eters 18 cents, riveters (pneumatic hammer) 18 cents.

Some new classes were established, as "forger's heavy," who will get \$5.04 a day; third class die sinkers, who will get \$4.40 a day; third class drop forgers to be paid \$4.40 a day, and flag cutters and finishers, first class, \$2.40, and second class, \$2.24.

The following are the trades and the future salaries given in the report:

Helpers, general—First class, \$2.64; second, \$2.32; third, \$2.16; fourth, \$2.

Electroplaters—First, \$4.16; second, \$3.76; third, \$3.28; fourth, \$2.88.

Millmen—First, \$4.40; second, \$4; third, \$3.52; fourth, \$3.04.

Painters—First, \$3.02; second, \$3.36; third, \$3.28; fourth, \$2.88.

Pattern makers—First, \$5.04; second, \$4.64; third, \$4.40; fourth, \$4.

Riveters—First, \$4.08; second, \$3.76; third, \$3.28; fourth, \$2.88.

Riveters, pneumatic hammer—First, \$4.08; second, \$3.76; third, \$3.28; fourth, \$2.88.

### OIL MAPS ISSUED BY STATE MINING BUREAU.

The State Mining Bureau has just issued, under the direction of Lewis E. Aubury, State Mineralogist, Maps of the oil fields of Santa Barbara County, collectively and also illustrating the Santa Maria and Cat Canyon oil field, with a great abundance of detail. The price of the Santa Barbara County map has been fixed at 40 cents, with five cents additional for postage. The price of the Santa Maria and Cat Canyon map is 50 cents, with five cents postage added. A great amount of work is in progress at the State Mining Bureau and through the field assistants of the State Mineralogist in the oil fields, in connection with the compilation and dissemination of facts relating to the oil fields of California. A map of the Whittier-Olinda oil field, in Los Angeles and Orange counties, has been issued recently.

In all the maps that have been completed, and in others that are to follow, railroads, highways and producing, non-producing and drilling wells, with the exact location of each correctly delineated, are included. Each map has been carefully calculated to meet the needs of oil prospectors, of the owners of properties and the seekers for the information abroad and at home. The co-operation of producers and the auxiliary aids furnished by original maps have been utilized to make the information as full and complete as possible.

Field assistants are now at work in the Kern County fields and the Kern River, Sunset Midway and McKittrick districts will be mapped carefully and with great attention to details that will be of commercial value. Every oil region of California that has been developed or that has immediate promise of development will be mapped by the State Mining Bureau as early as possible.

### BANK CLEARINGS FOR WEEK.

Bank clearings as reported to the California Development Board by the clearing house cities for the week ending December 29, with percentage comparison for the corresponding week of 1909 are:

San Francisco, \$36,241,617.43; decrease, 1 per cent.

Los Angeles, \$13,473,612; increase, 17

CORINTHIAN YACHT CLUB  
Tiburon, Cal.

per cent.

Oakland, \$2,786,828.48; increase 49.5 per cent.

Sacramento, \$1,020,012.86; increase, 7.1 per cent.

San Diego, \$1,027,736.08; increase, 15 per cent.

Fresno, \$688,270; increase, 17.5 per cent.

Stockton, \$460,349.76; decrease, 2.6 per cent.

San Jose, \$406,120; increase, 5.3 per cent.

Pasadena, \$578,722.69.

#### REPORT OF MUNICIPAL TRAMWAY.

During the first nine months of 1910 the receipts of the municipal tramways of Liverpool increased \$72,997 over those of the corresponding period of last year. During the year ended March 31, 1910, 93,506,656 passengers were carried, an increase of 3.1 per cent over last year, 2.1 per cent over 1908, and 4 per cent over the record year of 1907, reports Consul Horace Lee Washington.

The receipts amounted to \$2,107,194, an increase of \$72,511, or 3.6 per cent over 1909, and \$55,161, or 2.7 per cent over 1908.

Extension of stages were given during the year, the average of the penny (\$.020277) stage now being 2 2-3 miles.

The first class cars experimentally adopted on some of the city routes have proved so satisfactory that inhabitants of other tramway routes are now asking for similar cars.

#### ALUM ROCK PARK IMPROVEMENT.

SAN JOSE, Dec. 30.—The Alum Rock park commissioners Thursday night recommended a bond issue of \$125,000 to develop the mineral springs in the city's canyon reservation seven miles east of here. Practically every prizefighter of note that has trained in the vicinity of San Francisco for several years past has put in considerable time at Alum Rock, but the lack of accommodations has prevented them from using it as a permanent training camp. Among the improvements proposed are a new bathhouse, two new bridges, a septic tank, the development of new mineral springs and a general water supply.

#### CIVIL SERVICE EXAMINATIONS.

The United States Civil Service Commission announces the following examinations will be held at an early date:

Preparator, division of insects (male and female), National museum.

Preparator, division of mammals (male), National museum.

Preparator, division of paleobotany (male), National museum.

Preparator, division of technology (male), National museum.

Assistant classifier, geological survey.

Assistant in tobacco investigations (male), bureau of plant industry, department of agriculture.

Aid in zoology, National museum.

For application blanks and further

information apply to secretary, twelfth civil service district, postoffice building, San Francisco, indicating the kind of examination.

#### STATE ARBITRATION URGED.

LOS ANGELES, Dec. 30.—The mayor of Los Angeles in conference with a committee of labor leaders who called on him yesterday in discussing the iron workers' strike situation spoke in favor of compulsory arbitration and asked the committee to do their best to have the state legislature to create a state board of arbitration that would compel the arbitration of labor disputes.

The mayor told the committee that he could do nothing to arbitrate the existing strike, because the employers took the position that there was nothing to arbitrate.

The union representatives declined to call off the strike, but offered to cooperate in any way suggested in efforts to detect the persons responsible for the recent dynamite outrages.

#### BILL TO PREVENT STRIKES.

SPOKANE, Wash.—Dec. 30.—A bill prohibiting strikes and lockouts and providing for compulsory arbitration of all labor disputes has been prepared by State Senator George W. Shaefer and will be introduced at the coming session of the legislature.

By its terms any employe may be fined \$50 for each day he remains on strike.

Any employer causing a lockout becomes liable to a fine of \$10 a day for each employe deprived of work, this fine in no event to be less than \$100 a day in aggregate.

#### INCREASING RECOGNITION OF SCIENTIFIC FORESTRY.

More and more attention is being given to forestry, not only from the commercial side, but the educational and sentimental as well. The truth of this statement is illustrated by two recent incidents: the endowment of a Chair of Forestry at Yale University through a gift of \$100,000 from Mrs. Harriman, and the recommendation for the establishment of a School of Forestry at the University of California, by President Wheeler in his annual report.

Forestry is now a profession that ranks well with all others, and offers good opportunities for young men going into it as a life work. It is getting to be an exact science, one that requires qualifications to master no less than other sciences.

It would seem therefore, that forestry should become part of the regular work at the University at Berkeley, or, preferably, made a branch of instruction at the University Farm at Davis. The latter institution gradually should be enlarged and broadened so as to include what is now the College of Agriculture at Berkeley, with all its attendant studies. Such scientific courses as irrigation, forestry, agricultural

chemistry and the like should be given on or in connection with the State Farm, along with the practical training in husbandry.

At present all our forestry positions, State and National, are filled by graduates of Yale's or some other college of forestry when California could just as well supply herself from her own material.—Sacramento Bee.

What San Francisco and the Bay cities need is manufacturing establishments. Institutions that employ a number of men the year round, that produce the common necessities and luxuries of life and are a part and parcel of everyday existence.

Now is the time for the business men to get together and offer inducements for factories to locate here. The fuel question has been solved in the production of oil. No place in the world has a climate so conducive to the maximum production of labor.

In some degree the railroad monopoly has been broken and with the opening of the great canal the question of cheap freight will be solved. Hitherto the establishment of factories on this coast has not been encouraged by the railroads as their principal profit has been in charging big prices for hauling freight from the East and California fruit from the West. With the coming of new roads this matter will be adjusted somewhat and water transportation will solve the question of freight ultimately.

Now is the time to invite factories here. Every inducement should be offered. Free sites should be given individuals or corporations who show that they are in earnest in the matter and intend and are able to establish factories of importance. To those who get here early in the game the future promises a bright prospect.

The Oakland Board of Public Works are now calling for bids for the excavating and grading on the site of the new City Hall. The bids will be opened the first of next month and the first contract on the new municipal building will be let. The earth that is excavated will be used in grading some of the play grounds in the parks and in the rear of the city school buildings. With the letting of the contract for the grading it is understood that the balance of the work will be let as rapidly as possible and that the new building will be completed by June of next year. The excavating is to be completed within seventy-five days.

Architect Charles E. J. Roges, Marvin Building, is preparing plans for a salt water house which is to be erected in the city of Alameda in the near future. The work will cost about ten thousand dollars. The plumbing throughout the building will be special fixtures and pipe adopted to the use of salt water and this contract alone will cost several thousand dollars.

### BUILDING MATERIALS IN ARGENTINA.

The lack of timber in the central zone of Argentina is a serious handicap, and the difficulty of building is further complicated by the fact that the Province of Buenos Aires, the most populous in the Republic, is deficient also in sand and in stone. Cement is imported from Europe. Building in this section of the country is an exceedingly expensive operation, and it is said to be partly on this account that rentals are so extremely high in the city of Buenos Aires, averaging twice as much as for similar accommodations even in the city of New York.

In the country districts of the Province of Buenos Aires, and more or less throughout the Republic, it is only the comparatively well-to-do who live in adequately constructed houses. The houses of the poor are constructed of a vast variety of odds and ends, and frequently exhibit much ingenuity in the making. They are rambling one-story building, with a framework of odd bits of timber, the best made up of scraps of sheet iron, mud, straw, old kerosene tins, and whatnot. To a considerable extent the adobe house is in use—that is, one built of straw with a timber framework. For a better grade of house sheet is largely employed, and in brick and masonry houses sheet-iron roofs appear to be supplanting tiling. In the timberless regions of Argentina lumber, either native or imported, is too expensive to be used for anything except the interior finishings of a building.

#### Houses in Buenos Aires.

In the city of Buenos Aires the character of the buildings is in general exceedingly good, and correspondingly expensive. In former days wood was more or less employed for exterior as well as interior construction. The present fire regulations prevent the construction of wooden buildings in the central district, but there are still a few old ones standing and newer structures in the outlying sections. At the same time wood for exterior construction is an insignificant element in the total. On September 18, 1904, there were in Buenos Aires 4,326 houses built

of wood, 76,766 of stone and brick, and 1,448 of sundry materials, a total of 82,540. Of this number 72,092 consisted of one story only, 8,496 of two stories, 262 of three stories, and 736 of more than three stories. In spite of the high cost of timber, it is used extensively for interior finishing, more so, it would seem, than is necessary or wise, as fire losses in Buenos Aires have been unusually high for a city which is supposed to be built mainly of unflammable materials.

The matter of suitable building is made more difficult by reason of the fact that in the agricultural regions houses are frequently not intended to be permanent. There is demand for labor now in one place and now in another, according to the different uses to which the land is turned. This, of course, is an added reason for not incurring the expense involved in good construction. Tents are employed considerably for housing gangs of men laborers, but are naturally unsatisfactory for family use or tenancies of anything more than passing duration.

#### Trade Opportunity for Portable Houses.

The expense attached to building brick or masonry houses in Argentina, together with the more or less temporary occupation in view, suggests the field there for portable houses of wood or other material. Something better than the present huts now seen in many places, and yet less expensive construction, would undoubtedly be received with favor.

The Buenos Aires representatives of a foreign firm making bungalows have recently begun an effort to introduce that type of dwelling into the country, and it is probable that United States manufacturers of similar goods would find it to their advantage to investigate the field. A light, portable bungalow of wood or other material would appear to meet Argentine needs, and the amount to be realized in such construction would doubtless cover the cost of transportation by water to Buenos Aires and thence inland by rail and other means. It might be necessary to send representatives to the country to carry on the work, as existing agencies would be apt to prove deficient both in zeal and knowledge of overcoming the preliminary difficulties bound to be encountered in pushing anything involving so much of an innovation. A thorough knowledge of the Spanish language would, of course, be indispensable, both for dealing with customers and the workmen whom it would be necessary to employ in construction and transportation.

It would also be essential to bear in mind that a distinctly different type of house would be required in Argentina from that to which bungalow construction is mainly devoted in the United States. Here the demand for bungalows is chiefly from fairly well-to-do persons for summer homes. In Argentina, in order to be successful, bungalows would have to be sold mainly as houses for the working classes, especially agricultural laborers. The houses would therefore need to be plain and simple and constructed with due regard to the racial habits of the tenant, a large proportion of whom would be Italian or Spanish. In most cases sales would not be made to tenants direct, but to the estancieros, or owners of the large farms, who are expected to provide shelter for their ex-

tra hands at harvest time and more or less for their workers at all seasons. Some houses might be disposed of direct to the chacareros, or tillers of small holdings of their own.

In the exposition of railways and land transport at Buenos Aires a United States firm had a model on exhibition of a house with frame work of steel and woven wire. The walls were made by layers of cement against the woven wire. There would seem to be possibilities for construction in Argentina along this or similar lines. The use of sheet iron for walls as well as roofs has already been mentioned, but of course such houses are to be objected to as excessively warm in summer.

#### CHICAGO WANTS MORE SKY-SCRAPERS.

The latest record to which we have access shows that at the time it was made up there were fourteen buildings in New York whose height exceeded the present Chicago limit of 260 feet. These buildings are great monuments which have cost many millions of dollars. They give a striking impression of the city's wealth and power, and they are counted among its attractions. Admit that the general effect might be more artistic if there were a height limit and a nearer approach to uniformity, and we can find no more help for Chicago in that idea than we can in the idea of expansion. For Chicago is committed to irregularity already. It has been without a limit, it has had a limit of 130 feet, a limit of 260 feet, and would be started now upon a new experiment. Moreover, the new ordinance once passed might be changed and, to judge by our history, would be changed. Uniformity under the circumstances is out of the question. The result in a business way, however, would be to give a certain property owner an advantage over his neighbor. The former would enjoy a permanent special privilege because he happened to build at the right time.

The common sense and the just policy now is to do away with the limit altogether. We should encourage the great building enterprises that would give us splendid structures costing millions, and bring us into closer rivalry with New York. The public interest does not oppose, but commends such a policy. If any citizens or group of citizens is prepared to put as many millions into a new building as the public has put into the City Hall, by all means let us welcome the undertaking and accept the new movement with gladness upon these very easy terms. The only restrictions that are desirable are those relating to sanitation and safety, and we know that the costly skyscraper is a great improvement in all respects upon the old buildings it is replacing.—Chicago Record-Herald.

**Business Block**—Walla Walla, Wash. According to the announcement of H. A. Gardner, president and manager of Gardner & Company, successors to the firm of Schwabacher company, a fine building will be constructed in the early spring to be used as the future home of this enterprising concern. The structure will be built on the site of the present quarters and cost \$30,000. The plans are being prepared in the office of the architect, Henry Osterman, and as soon as they are completed the contract will be let.

**Concrete Building**—Eugene, Ore.—Architect J. Ford of this city is drawing plans for a two-story reinforced concrete building with pressed brick front which Geo. Perkins and Welby Stevem will erect on Main street, Springfield.

### ANCIENT BRICK AND POTTERY.

The words of Solomon applied to the making of many books of which, he said, there was no end, might with equal force be applied to bricks, and one has only to inspect the Patent Office records to be astonished at the ingenuity of man year by year in this respect.

#### Some Biblical Records.

A number of Biblical records of brickmaking are extant. About the year 2247 B. C. (Genesis xi. 3), we find the descendants of Noah travelling eastward and coming to a plain in the Land of Shinar, where they settled down and made bricks. These they used for stone, and slime for mortar. In connection with the building of the Tower of Babel, Josephus states that Nimrod, the grandson of Noah, incited the people to build a tower which was built of burnt brick cemented by bitumen that it would be impervious to water.

Then there is the reference to the refusal of Pharaoh to provide the Children of Israel with straw to make brick (Exodus v.), about the year 1491 B. C. There are, however, earlier records of brick construction in existence in Egypt, as for instance, the tomb of King Zer of the first dynasty, 5400 B. C., which contained brick partitions, while Egyptian pottery dates back to about 7000 B. C., and if the people of that day were capable of manufacturing pottery red in color with a black top and ornamented with imitations of wicker or basket work, it is highly probable that they were also capable, at least, of making sun-dried bricks.

This would be the first kind of brick made and their manufacture probably arose from the use originally made of clay for filling in the interstices between the reeds or wattles of which their houses were constructed.

In Egypt, glazed tiles were extensively used for wall decoration before 5000 B. C., but glazed bricks were not used as the dry Egyptian climate rendered any preservation for the wall surface unnecessary, and the bricks were not burnt, but simply sun-dried.

The sizes of the bricks in prehistoric times and through the first and second dynasties were 9 to 10 inches long, half as wide, and about 3 inches thick, or about the same size as the modern brick, showing that the Egyptians had some considerable knowledge of the proper size of bricks for bonding to the best advantage. The bricks of the Ramesseum vaults are 14 inches by 7 inches by 2½ inches thick (Circa, 1330 B. C.).

Glazing was known to the Egyptians in the prehistoric age, but its use was then confined to beads and amulets.

#### Prehistoric Glazed Pottery.

The earliest known glazed pottery dates from the time of King Mena, and has his name inlaid in violet glaze on a green glazed body. Though glazed vases were used in the first and second dynasties they became rarer and their use was not revived until much later times. This art of glazing in two colors took a new form in the eighteenth dynasty, when large objects, 5 feet square, were covered with a single fusing of glaze, and inscriptions were executed in glaze inlaid in white stone walls. True glass was first manufactured in the time of Tahutmes III., in 1500 B. C., and was wrought pasty

and not blown, the latter method belonging to the Roman age.

#### Arabian Records.

There are very few historical records in Mesopotamia before the time of Nebunansir, in 747 B. C. It is computed from the excavations which have been made in various mounds, such as the one at Susa, and at the northeastern extremity of Parthia near Askabad, that pottery was made there at least 5000 B. C.

In Semitic times, brick making for building purposes was the main industry of the country, and the temples were erected on immense piles of bricks. For example, the brick Ziggierat or fine stepped pyramid at Nippur, was 190 feet by 128 feet and about 100 feet high.

The earliest baked bricks measured 8.7 inches by 5.6 inches by 2.2 inches, but were later enlarged to 12 inches by 7.8 inches by 1.9 inches and towards the close of the Sumerian age, square bricks were used. Sargon made baked bricks 18 inches square and 3½ inches thick (B. C. 772.). From the time of Ur Engur (3200 B. C.) onwards, the baked bricks were about 12 inches square, and were used for facings and other important work, pavements and drains. The great majority of these bricks, however, were made of crude materials as in Egypt, being used for common work with baked bricks as facings, bitumen being often used as the cementing material.

There are evidences also of bitumen being used as a damp-proofing lining to store rooms and tanks, the inside of the chamber being lined with this material; pottery also abounded as in all periods. Coming to the later Semitic age, wherein the Sumerians and Semites were intermixed, we find large building operations going on.

Each town had its artificial hill of bricks built in stages to support the Temple of its god at the top, and every city had its enclosing walls of an immense thickness. Those of Babylon are said to have been 85 feet high and 340 feet thick, surrounded with a moat lined with burnt bricks laid in bitumen. The use of brick was necessary on account of the lack of stone, but the Assyrians became so used to its employment that, even where stone was plentiful, brick was used for palaces and temples. It is easily seen that the use of bricks to this enormous extent was a serious question. In building city walls, the excavations for the materials were made just outside the proposed area of the city, forming a boundary ditch, which, when filled with water, became the moat. Where houses and temples were concerned this caused a serious difficulty, the excavation becoming a stagnant pool or a perilous pit, a trap for the unwary.

Herodotus says, that in building the walls of Babylon, the clay dug out of the trenches, afterwards to form the moat, was made into bricks as soon as it was carried up, and burnt in kilns. When they had made a sufficient number, the bricks were cemented together with hot bitumen, and at every thirtieth row inserting craters of reeds.

The bitumen was obtained from the River Is, a tributary of the Euphrates, and was brought to Babylon, lumps of bitumen being found in great abundance floating in the river.

In the alluvial plains of Assyria, both clay and bitumen were found, the bituminous cement bubbling out of the

ground. It is collected by the Arabs at the present day.

The Babylonian bricks were more commonly burnt than those at Nineveh, for the latter people, like the Egyptians, mainly used sun-dried bricks.

The Babylonians used glazed brick to a very large extent, and burnt bricks were usual, because, unlike the dry Egyptian climate, the Babylonians had changeable weather and a damp atmosphere to contend with. All the facings and main parts of their structures were composed of these indissoluble bricks, the interiors only being built of crude brickwork.

The use of glazed brickwork was, however, mainly developed in the ninth century B. C., and onwards, when it came to be used on the external face of the wall.

Previously used only for external decorative effect, its property of weather resistance or utility—for which reason it is nowadays so much employed externally—was now first realized.

The finest remaining example of this is the facade of colored glazed bricks in relief from Susa and of the Persian age, now in Paris, restored from the fragments, and representing the Royal Archers. Amongst other things baked jars of large size and coffins of the same materials were used, as also cylindrical drains large enough for a man to descend therein to perform repairs.

The walls of Nebuchadnezzar's palace were built of bricks of a pale yellow color and of excellent quality, laid in fine lime cement, and stamped with his name and titles.

The Warka Temple was built of bricks of various sizes and shapes, the cement being simply mud, and reeds were largely used in the construction. This temple, like the other Babylonian temples, was built of masses of brickwork in stages one upon the other, and The Society of Architects, London.

### HUMBOLDT EVENING CLASSES.

Spring Work Starts on Tuesday, January 3, With Large Enrollment.

The Technical Department of the Humboldt Evening School will open for the spring on Tuesday, January 3rd, 1911.

Classes will continue instruction and be open for new students at that time in Architectural and Mechanical drawing and the necessary mathematics; also in Theoretical Surveying, Mechanics, Physics, Chemistry and Steel Square.

The work of this school is especially designed for young men engaged in the industrial branches of the building and iron trades.

A special class in Structural Engineering has recently been started for architectural and engineering draftsmen and apprentices, as well as those engaged in outside steel, wood and concrete construction work.

Lectures on technical subjects by the leading professional men engaged in the various specialties, will be given during the school year, to which the interested public will be invited.

School—Aberdeen, Wash.—Architect Watson Vernon of this city was awarded the contract to make the plans for the new High School for Centralla. The building will cost \$75,000.

### FOREIGN COMMERCE IN UNITED STATES IN CALENDAR YEAR 1910.

Larger imports, larger exports of manufactures, and smaller exports of foodstuffs are the principal characteristics of the foreign trade of the United States in 1910. Imports will show the largest total on record, exports of manufactures will be larger than ever before, exports of foodstuffs will show a smaller value than for many years and probably a smaller percentage of the total exports than in any year of the past quarter of a century.

The above statements are based upon returns for 11 months, the latest period for which details have been completed by the Bureau of Statistics, Department of Commerce and Labor. An analysis of the figures at hand, however, justifies the general assertions. Exports of foodstuffs will probably be between 335 and 340 million dollars; last year they were 400 million dollars. Manufacturers' raw materials seem likely to exceed by 65 million dollars such exports last year. Manufactures, including both those ready for consumption and those for further use in manufacturing, will probably be 820 million dollars, against 721 million last year, about two-thirds of the gain of 100 million occurring in finished manufactures.

This large increase in exports of manufactures occurred in numerous articles, but especially iron and steel, which will show a gain of about 40 million dollars; leather and lumber, each a gain of about 10 million; and cars and carriages, a gain of 5 million dollars, agricultural implements also showing a gain of about 5 million dollars. A slight decrease occurred in both cotton manufactures and copper. In foodstuffs, however, the decline is sharp, illustrating the disposition to retain for domestic consumption an increasing share of food products of the country. In the 11 months ending with November wheat exports aggregated but 21 million bushels, or 24 million less than in the same period of 1909; flour, 7-13 million barrels, against 8½ million in 1909; meat and dairy products, 117 million dollars against 140 million in the preceding year, beef products, bacon and hams showing especially large declines. Corn exports show a slight advance, amounting to 37 million bushels, against 30 million in the like period of 1909. A gain of 16 million dollars in exports of manufacturers' materials is due almost wholly to cotton, the 2,948 million pounds exported in 1910 up to November 30 exceeding by 20 million dollars the value of the 3,535 million pounds exported in the same period of the preceding year, thus reflecting the advance in price from 11½¢ per pound in 1909 to 14½¢ in the year just ended.

Considering by great groups the commerce of the 10 months ending with October, imports of foodstuffs, crude, dropped from 133 million dollars in 1909 to 118 million in 1910; manufactured foodstuffs increased from 145 to 169 million; raw materials for use in manufacturing, from 425 to 452½ million; manufactures for further use in manufacturing, from 206 to 237 million; and manufactures ready for consumption, from 277 to 310 million dollars. Meanwhile exports of crude foodstuffs fell from 83 to 70 million, and manufactured foodstuffs, from 230 to 203 million dol-

lars; while raw materials used in manufacturing increased from 421 to 437 million, manufactures for further use in manufacturing, from 207 to 234 million dollars, and manufactures ready for consumption from 387 to 447 million the comparisons in each case being between the 10 months ending with October, 1909 and 1910, respectively.

The foregoing discussion of the year's trade is based upon details for 10 months, already completed. It is proper to add, however, that figures for October and November, so far as compiled, indicate a decided change in the importation of manufacturers' materials. October imports of raw materials, for example, were but 38½ million dollars, against 46 1-3 million in October, 1909; those of partially manufactured materials, 23½ million, against 24 million in October of the preceding year; and imports of manufactures, 33 millions, against 29½ million in October, 1909. The market decline in November imports of leading articles, compared with last year, suggests that the total imports of manufacturers' materials in November, 1910, will be considerably less than in November of the preceding year. India rubber imports, for example, amounted to but 5¾ million dollars in November, 1910, against 8¾ million in November, 1909; hides and skins, 5½ million, against 11½ million in November of last year, while decreases also occur in wool, lumber, fibers and other articles.

Trade relations with other countries are materially affected by the changing character of the articles forming our commerce. With the falling off in exports of foodstuffs and increase in those of manufactures, a smaller share of our exports is going to Europe, the principal food-importing section of the world. In the 11 months ending with November our total exports to Europe aggregated 1,027 million dollars, against 1,048 million in 1909 and 1,091 million in 1908. To those sections of the world whose imports are chiefly manufactures our exports show an increase: to North America, 388 million dollars, against 314 million in 11 months of 1909; to South America, 91½ million against 74½ million last year; to Oceania, 53 million, against 41 million last year; and to Africa, 19¾ million against 15¾ million last year. To Asia the exports fell from 62½ million to 57½ million dollars, due largely to high prices of domestic cotton and wheat.

### NEW CANADIAN TOWN OF PORT MANN.

The contract has been awarded for clearing the town site at Port Mann, the Pacific coast terminus of the Canadian Northern Railway, on the Fraser River opposite New Westminster. The work is to be pushed forward rapidly with 600 men. For their convenience it is probable that a ferry service will be operated to New Westminster.

The water front at Port Mann will be approximately 2½ miles in length. After the clearing is finished in March, a landscape architect will direct operations, contract for this work has not yet been awarded. The railway company expects to have its wharf at Bon Accord across from New Westminster finished at an early date.

American investors who intend to purchase property in the town site of Port Mann are cautioned relative to the

numerous subdivisions now being placed on the market by real estate dealers, as the original town-site property will be sold at auction by the Canadian Northern Railway. The town-site lots now being offered are in some instances a considerable distance from the original town site, and it will be some years before they are actually annexed thereto.

### INTERNATIONAL RAILROAD COMMISSION.

WASHINGTON, Dec. 31.—An international railway commission with supervisory authority over railroads operating between the United States and Canada practically is assured.

After long negotiations, a conclusion was reached that, in the course of a few months, regulatory authority would be extended over railway operations between the two countries.

Martin A. Knapp, chairman of the interstate commerce commission, and J. P. Maybie, chief of the railway commission of Canada, reached an agreement Wednesday. They called at the department of state today and presented their joint report.

### MILLION DOLLAR REFORM SCHOOL.

An appropriation of \$1,000,000 and the selection of a proper site of not less than 600 acres for the establishment of a reformatory for first offenders were among the recommendations made by Judge Curtis D. Wilbur of Los Angeles before the State central committee in behalf of the committee considering that subject.

Embodied in the remainder of the rough draft of the bill presented were provisions for the schooling of petty criminals in various trades. In connection with this it was announced that the committee had so arranged the bill as to avoid difficulties with organized labor. Further, it was suggested that the management of the institution be placed in the hands of the state prison directors, which body it was deemed advisable to reduce to three members, with increased salary, by a constitutional amendment.

Age limits of offenders to be confined to the institution were set at 16 and 20 years.

### GAS PLANT FOR SHASTA COUNTY.

REDDING (Shasta Co.), January 2.—A plant for the manufacture of the famous producer gas is to be installed in this county at once. The plant will be located on holdings of Fred H. Dakin, thirty miles east of this city, in the Oak Run section. A syndicate, at the head of which is Dakin, will invest \$100,000 in the plant.

Dakin owns 900 acres of coal land in the Oak Run section. It is a large body of lignite coal, the kind that is used in Ohio for the manufacture of producer gas. This gas is piped hundreds of miles and is used for power purposes, taking the place of electricity.

The Oak Run body of coal is declared to be one of the best known, and tests that have been made have demonstrated that it can be worked cheaply.

It is proposed to pipe the gas to this city and eventually to Sacramento and San Francisco. The representatives of the syndicate are now on the ground with diamond drills, and work on the plant will begin very soon.

of the Pacific Coast

Issued Weekly, \$3.00 per year.

San Francisco, January 14, 1911

Eleventh Year, No. 2

## Editorial Page.

The new merger of the traction interests about the bay and the enormous capitalization of the corporation that controls it would seem to indicate that great financial interests are at the back of it. If as some suppose the Hill interests are involved it will no doubt prove of great benefit to San Francisco and California generally. For James J. Hill is the dean of the railroad builders. Others may beat him in the manipulation of stocks and in some of the strategies of high finance but he is an empire builder when it comes to projecting railroads and putting them on a paying basis.

The state of Washington has shown by far the largest per cent of gain in population of any of the states during the past decade. Oregon is next on the list of western states and both owe a major part of it to the activity of the Hill interests in extending his roadways through the great northwest and developing the country.

The coming years between now and 1915 bid fair to be fraught with great movements in road building and establishment of new lines of commerce.

In the practical application of the new Tax Amendment the people of California will have much interest in the results achieved. For its aim and purpose is to uncover the hidden property that has hitherto escaped its just burden of the taxes and to place the load where it of right belongs. How well it will accomplish this end remains to be seen.

In regard to the taxes paid by corporations there is a state public utilities commission in Wisconsin to regulate the rates and services of railroads and other public utilities. There is also a state tax commission to make the assessments of all property.

Both these commissions employ the same board of engineers and accountants to set a value upon the property of the corporations. The one valuation serves as the basis of rate making and as the basis of taxation.

So that it follows that the railroad can not establish one value for the basis of rate-making and another for taxation. They have evidently attained a considerable degree of effectiveness there in this respect so we will watch with interest the practical operation of our new law which has for its basis the income of the corporations.

Governor Johnson seems to have been true to his campaign promises in the inception of his term of office insofar as his inaugural address is indicative of future action. And as his attitude and past performances are to be taken as a means of judgment of his future conduct it is safe to say that he will

leave no stone unturned to fulfill his promises.

A reform government certainly has its hands full. For there are no end to the things that need fixing and the trouble usually is that too much is undertaken. Governor Johnson realizes this as well as any other person and as he made his campaign on a single issue it is altogether probable that he will confine the energies of the new regime to effecting this one reform for which he was elected.

Among the reforms suggested for the electorate is the short ballot. This is certainly a step in the right direction. For a lot of the state officers the voter can know nothing about and he simply votes the party ticket and thereby allows the appointment to be made by the political boss. The direct primary is intended to restore the government to the people. If they secure the officers of their choice for the important positions these officers may be looked upon to carry out the principles upon which they have been elected. While in reality therefore the number of offices which the people fill by popular election will be reduced the actual power of the people will be increased.

Senator Walker has introduced a bill to prohibit betting of any kind on races, oral or otherwise. It is to be hoped that this bill will become a law. For there is no other single thing that exercises so baleful an influence over the city of San Francisco and the bay districts as the race track at Emeryville.

A great majority of the burglaries and crimes committed in San Francisco at the present time can surely be traced to the followers of the track. There are more cases of embezzlement due to this cause than all others combined. So it is best to abolish it once and for all. Put the bill through and put the kibosh on it for all time.

The California Building Law Association, composed of representatives from the various Building Associations, Material Men, Architects, and Labor organizations of the state, have proposed a new lien law to be enacted by the legislature such as will be definite in form and in accordance with the intent of the Constitutional provision of the state upon this subject. The present Mechanics' Lien Law as it exists today is a sort of congeries of amendments that have been enacted by the legislature during the last twenty years and modified by the court decisions upon the subject until it is inconsistent with itself and does not effect the end to be accomplished.

As the law exists today, the lien really attaches to the balance of 25% which is supposed to be in the hands of

the owner until 30 days after the completion notice is recorded. The constitution provides that, "Mechanics, material men, artisans and laborers of every class, shall have a lien upon the property upon which they have bestowed labor or furnished material for the value of such labor done and material furnished; and the legislature shall provide, by law, for the speedy and efficient enforcement of such liens."

The California Building Law Association has requested Mr. Alexander G. Eells, a recognized Lien Law authority, to draft a law that will be in harmony with this constitutional provision and one that will eliminate as far as possible the confusing technicalities of the present statutes. This has been done and the proposed bill has been framed in a simple, direct, and consistent manner, such as will put the state on a line with New Mexico, Nevada, Oregon, and the rest of the Pacific Coast states, as well as a majority of the other states of the Union.

The bill will be introduced at the present session of the legislature and should become a law. Under its provisions it insures every one engaged in the building industry a square deal. The owner can make whatever contract he will and he can pay his contractor how and when he chooses, but he cannot escape paying a reasonable amount for any labor used to enhance the value of his property.

Under the present statute the owner by collusion with a dishonest contractor can leave the laborer and the material man in the lurch. The proposed bill will put a stop to this and give everyone a square deal. Your representative should vote for it.

The Building Law Association, through Mr. W. S. Scott, its secretary, have published a little pamphlet showing the provisions of the present law and in a parallel column the changes that are to be effected by the proposed measure.

Architects Charles M. and Arthur F. Rousseau, Monadnock Building, are preparing plans for the construction of a threestory and basement apartment flat building which is to be erected for Anton Rulfs on his property on the south line of Pine street east of Taylor. The new building will be one of the most complete structures of its kind erected in that district and when complete will cost in the neighborhood of \$28,000. The living rooms of all apartments will be equipped with wall beds and the interior will be handsomely finished. Work will be started as soon as the plans can be completed. The same architects have plans on the boards for several other fine apartment house structures and high class flats on which construction will soon be started.

# Building Operations For The Past Month And Year.

While the past year has been a remarkable one in many respects and a prosperous one for the states of the Pacific Coast the building operations for the year do not total up to the figures of 1909. Still there has been a better showing than the general business would indicate and a better result for the year's work than was expected by those who were in a position to know.

Official reports made to the American Contractor, Chicago, from forty-five representative cities show a decline in the aggregate of more than 8 per cent. Of these Greater New York is the greater factor in the total, showing a decline of about 56 million for the year. Of those that gained over last year's totals Los Angeles easily leads the list with a gain over last year of over 63 per cent. Portland follows with 31 per cent, Oakland 30. Seattle and San Francisco show a loss, Chicago shows a gain, Philadelphia and St. Louis shows a loss. The following table shows an interesting commentary on the year's work:

City.	1910. Cost.	1909. Cost.
Atlanta	\$ 7,405,940	\$ 5,551,951
Baltimore	9,798,312	7,953,196
Bridgeport	2,374,868	2,976,557
Buffalo	9,232,000	9,895,000
Chattanooga	1,324,464	1,120,181
Chicago	96,932,700	90,559,580
Cincinnati	8,074,770	7,806,369
Columbus	5,133,591	3,598,601
Dallas	4,199,040	3,393,683
Denver	11,319,955	11,553,983
Detroit	17,515,945	14,300,450
Grand Rapids	2,255,621	2,872,427
Hartford	4,541,979	3,440,925
Indianapolis	8,194,311	7,156,560
Kansas City	13,783,196	13,368,738
Knoxville	794,993	808,563
Little Rock	1,384,423	1,531,097
Los Angeles	21,684,100	13,260,703
Louisville	3,780,042	3,172,311
Manchester	1,321,980	1,797,518
Milwaukee	9,797,580	11,587,551
Minneapolis	14,363,830	13,092,390
Nashville	1,623,796	2,369,036
New Haven	4,386,065	4,226,322
New Orleans	4,284,989	5,165,212
Manhattan	108,543,095	144,332,212
Brooklyn	34,813,720	60,130,476
Bronx	45,432,530	41,715,265
New York	188,789,345	246,177,953
Oakland	6,818,635	5,211,115
Okla. City	5,491,603	5,903,270
Omaha	6,250,988	7,204,140
Paterson	2,205,416	2,719,170
Philadelphia	37,866,565	42,881,370
Pittsburg	12,753,664	15,548,526
Portland	20,886,202	14,908,205
Rochester	10,982,528	9,272,132
<b>San Francisco</b>	<b>22,873,912</b>	<b>30,411,196</b>
St. Paul	10,053,011	12,089,449
St. Louis	19,600,063	23,733,272
Salt Lake City	4,461,400	8,077,820
Scranton	2,085,948	3,987,943
Seattle	14,449,110	19,044,218
Tacoma	2,685,061	4,382,489
Toledo	4,058,188	3,043,181
Wilkes-Barre	2,052,180	2,121,234
Worcester	4,283,175	3,081,281
<b>Total</b>	<b>\$643,255,514</b>	<b>\$702,356,868</b>

During the past decade the City of San Francisco has passed through a great experience. The past four years have been devoted primarily to upbuilding the destruction wrought by the great conflagration of 1906. Notwithstanding this fact the city has grown in population and the building totals for the past year are considerably greater than in 1905.

The following list shows an interesting comparison for the past decade:

1901 Total Cost	\$ 7,437,562
1902	14,289,938
1903	14,984,514
1904	16,916,118
1905	20,111,861
1906	39,254,467
1907	50,496,499
1908	35,128,651
1909	30,411,196
1910	22,873,942

It will thus be seen that up to the fire San Francisco has shown a steady and consistent increase. From 1907 the scale has been gradually downward as the city became more and more nearly rebuilt and this year it shows a total somewhat less than it should had it progressed with the same step it had assumed for the first part of the decade.

The month of December, 1910, has shown a loss over the same month in 1909 somewhat greater in proportion than that of the entire year. Reports from the same representative cities showing a decline of above 20 per cent, New York alone showing a decrease of 56 per cent. All of the important cities of the Pacific Coast, however, show substantial gains of from 18 to 70 per cent, except San Francisco, and it shows a marked gain over the two previous months. Particulars are given in the following table:

City.	Dec., 1910. Cost.	Dec., 1909. Cost.
Atlanta	\$ 650,658	\$ 591,776
Baltimore	394,625	763,490
Bridgeport	77,575	81,000
Buffalo	488,000	475,000
Chattanooga	85,099	107,880
Chicago	12,287,900	6,725,900
Cincinnati	360,000	376,840
Columbus	481,819	76,375
Dallas	374,728	138,646
Denver	439,245	504,820
Detroit	1,480,155	1,083,670
Grand Rapids	111,210	327,628
Hartford	245,830	102,895
Indianapolis	559,600	470,360
Kansas City	1,005,920	318,780
Knoxville	12,999	15,705
Little Rock	59,498	85,546
Los Angeles	1,472,791	1,238,244
Louisville	153,750	79,437
Manchester	78,400	135,735
Milwaukee	496,172	525,284
Minneapolis	575,230	855,170
Nashville	35,325	147,040
New Haven	91,320	981,225
New Orleans	612,224	234,197
Manhattan	7,075,977	11,219,046
Brooklyn	1,680,945	5,863,920
Bronx	870,950	3,726,100
New York	9,627,872	20,809,066

Wilkes-Barre	165,873	76,189
Worcester	218,435	219,365
<b>Total</b>	<b>\$55,735,907</b>	<b>\$69,565,768</b>

## Two Artistic Residences and a Hotel For the Mission District. San Francisco.

### TWO ARTISTIC RESIDENCES.

Edward G. Bolles and Albert Schroepfer, the architects, have designed two unusually pretty residences for the Mission district, to be erected on the west line of Fair Oaks street, between Twenty-fourth and Twenty-fifth streets. One of these houses is for Mrs. Jacob Adams and the other for Williams Adams. The exterior of one is of the Swiss type and the other is a shingle-type residence, yet they harmonize and present an attractive front. Each building will cost at least \$8000. The retaining walls will be faced in pressed brick, and the first-story fronts will be carried up in the same style. Oak finish will give the first floors an air of richness, and the upper floors will be done in English white enamel, while hardwood floors, especially designed fireplaces and millwork will add a charm to the interiors.

### HOTEL FOR THE DIAMOND ESTATE.

Under the direction of Architect Washington J. Miller the four-story and basement hotel which is being erected for the Diamond Estate Company at the northeast corner of Ninth and Mission streets is nearing completion. The structure is of brick and steel with the exterior faced with a repressed red brick and presenting a fine appearance. The first or ground floor will be occupied by several stores besides a large and spacious lobby. The three upper floors will be given over to the exclusive use of the hotel and will be divided into single rooms mainly. All rooms will be fitted with all the latest conveniences as hot and cold running water, elevator service and steam heat. The building project has been carried through and the tenants secured for the new building through the efforts of the real estate firm of Thomas Magee.

### ARCHITECTURAL TERRA COTTA BECOMING A BUILDING MATERIAL.

By virtue of its merit architectural terra cotta has in late years commanded a place in a class with the best and most popular structural materials. This covers a field that includes both plain and decorative work, and one that in a measure is unique, from the fact that there is no limit to the possibilities in this field of labor. It has attained at this time a most stupendous increase for all kinds of building construction, from the small house to the skyscraper, and is manufactured so as to imitate with remarkable exactness the most costly and attractive materials for building purposes.

If we look over the history of terra cotta as a structural material, at least for exterior use, we will find that it does not extend over a period of more than about forty years. In that short time, however, it has attained a place that is worthy of the highest praise, and this has been due to its peculiar attributes, which might be summed up in a few words. First, the cost, as compared with many other structural materials, is reasonable; in fact, it is decidedly less costly than many kinds of building material, and in some respects surpasses them. It is durable, as time tests will amply prove, and it is fireproof. The latter is proven from the simple fact that it is manufactured of a clay that is baked to vitrification, thus insuring this feature beyond all possible doubt.

It can be made to resemble any kind of exterior material covered by stone, marble, granite, and other like substances that are classed among the best in use today. This has only been made possible in the past few years with the improved methods of manufacture. Now the whole operation is one that deserves the consideration and commendation of all classes of contracting operators. It has all the essentials that are necessary to make it popular, and this has doubtless been the real cause for this status of the matter.

There is little in the structural world today that is more attractive from an artistic point of view than the higher grades of architectural terra cotta. The colors are so delicate and the patterns are so intricate as to demand the admiration of every lover of the highest in structural work. Its lightness is only another feature that has added to its more general adoption for tall structures, and in this way it meets a demand that is sometimes not easy to fill.

The entire manufacturing process is now one of interest, and is conducted along the latest lines of intelligent operation. From the time the drawings are made, on through the various processes of preparing the clay, molding, making the patterns and spraying the colors or the enamel on

with compressed air, to the baking of the terra cotta, it is one of more than usual interest. It proves that there is reason for the demand, and to make further doubt impossible as to its place in the structural world.

The age is rapidly demanding fireproof structures. There is a cry far and wide for buildings that will reduce in great part the enormous losses that are now sustained in this country. There is a sane reason for this, and the field covered by terra cotta is one that meets these demands most fully. It is impossible to destroy by fire that which has been made, or at least perfected, by this very element itself. Vitrified clay can not be destroyed by fire, and this is in reality what terra cotta is, with the added charm that it has attractiveness to make it pleasing for structural purposes.

What is most needed today are such structural materials as will not only increase the security of our structures from a fire resisting point of view, but that will likewise be a factor to make the decorative portions of our buildings more nearly attainable. Then there is the matter of cost, which must be considered very carefully these days. It enters largely into our considerations in large undertakings in the building field, and this is where there has been a decided advantage in terra cotta.

If we come to take a composed view of the question there is reason for the increasing demand for architectural terra cotta. It has not replaced the structural material, but it has simply made a place for itself along with others and has filled a want that for years has been an insistent one. It fills the niche that was for many years vacant. We must have more attractiveness in more of our structures. We must begin to get away from the commonplace, and look for ideals that have been so long lacking in many of our structures. This is where there has been found in terra cotta an ideal that is sure to increase its wider use in years to come.

Then there is the important question in sanitation in structural work. This may not now be considered as important as it will in the future, and there will come a time when there will be demanded a larger percentage of buildings erected that will in a great measure have a more permanent form of sanitation, and that will have at least a tendency to reduce the number and fatality of our maladies. These things are not as yet being considered to their fullest, but it is time for their consideration, and there is reason why there must be more attention paid to the matter of structural work, and to the kind of materials that make sanitation possible. In this respect there is a favorable reason for burned clay, and in the form of architectural terra cotta it attains one of the higher ideals, so that it must be compared with the best that is today being offered for the consideration of both contractor and house erector.—Exchange.

## Among the Architects.

Architect Charles C. Frye, 127 Montgomery street, will leave shortly for Sacramento, where he will start the first surveys at the site of the A Auto Manufacturing Company's new plant, which is to cover eight acres and will consist of seven reinforced concrete buildings which will cover the entire ground area. The machinery "layouts" have not arrived here from the East and the want of these is the cause of the delay. Mr. Frye will be in Sacramento for several days, during which time the first surveys will have been completed and he expects that the "layouts" will arrive before the end of this week and that the work can be started at once. Besides the work for the A Auto Company, Mr. Frye has several other large buildings well along and expects to start the plans for two other large structures within the next month.

The Board of Public Works are calling for bids for the construction of a fire station for the housing of Truck No. 14 and Engine No. 6. The new station will be erected in the southwest line of Seventh street near Harrison and will cost about \$30,000. Separate bids are being called for on the general contract, the plumbing and heating, and on the electric work. Bids will be opened by the Board on January 16th.

Architects Hladk and Thayer, Monadnock Building, have the plans for a number of high class apartment houses on the boards, all of which will be ready to go ahead before the first of next month. The work mentioned above includes the plans for a seven-story brick building which is to be one of the most complete apartment house structures yet erected in this city; a six-story building of a similar nature, a four-story reinforced concrete apartment house which will be one of the first of those mentioned to go ahead, and a three-story frame apartment flat building. Mr. Thayer stated yesterday that the work would all be under way by the first of February and that within the next two weeks complete details of the work would be published.

Architects T. D. Newton and Son, 906 Broadway, Oakland, have completed

the plans for a two-story seven-room dwelling which is to be erected on the east line of Hanover avenue, 140 feet south of Brooklyn avenue, in Oakland. The residence will be erected for Taylor Bros. and Co. and will be done by day's work. The cost is estimated at \$3500.

Architect McKenzie, formerly of the firm of Wolfe and McKenzie of San Jose, has opened his new offices in the Bank of San Jose Building at the corner of First and Santa Clara streets. Mr. McKenzie has the plans for a number of frame dwellings on the boards which will shortly be figured, as well as other more extensive work which will be under way in the course of the next few weeks.

Architect Le Baron R. Olive of Redwood City will shortly let the contract for the construction of a brick store building which is to be erected in Palo Alto for one of the newly elected County Officers of San Mateo County. The building will cost in the neighborhood of \$12,000. Work will be started as soon as the plans are completed.

The Engineering Department of the Northwestern Pacific are preparing plans for the construction of a new passenger depot which is to be erected at San Anselmo. The building will be designed in the Mission style of architecture and when complete will cost in the neighborhood of \$7500. The news that San Anselmo is to have a new station was made public through the local paper but two days ago.

A number of local architects are preparing competitive plans for the new buildings which are to be erected at St. Luke's Hospital in the near future. The work is extensive and will cost considerably over \$150,000. The selection of the design will be made on the tenth of this month according to the statement of Dr. Burk of the Institution.

Architect J. J. Foley, Monadnock Building, is preparing plans for three flats which are to be erected on Natoma street between Sixth and Seventh streets, at a cost of \$8000. The building will contain two flats of five rooms each and one of six rooms. All the rooms will be well lighted and will be equipped in the most modern manner. The work will be started as soon as the plans can be completed.

Engineer Tibbitts, of the firm of Haviland and Tibbetts, Alaska Commercial Building, has returned from Oroville where the bids for the construction of a complete sanitary and storm water sewer system were opened. But two bids were received this time for the work and both were well within the engineers' estimates. The Contra Costa Construction Company of this city were the lowest bidders on the construction of the sanitary system, while D. W. Pierson of Sacramento was low on the combined system, but high on the sanitary system alone. The Trustees will probably award the sanitary system to the Contra Costa Construction Company and will withhold the storm water sewers for sometime. The bid of the Contra Costa Company on the sanitary system was \$90,372.23. Their bid on the whole system was \$113,569.78, and that of D. W. Pierson was \$111,523.

Architects Bugbee and Bugbee, 127 Montgomery street, will shortly have the plans complete for a three-story frame building which is to be erected in the Richmond District and which will contain two stores and three flats. The building will be started as soon as the working drawings can be completed and is estimated to cost in the neighborhood of \$12,000.

The Northern Electric Company have stated that they will shortly start the construction of a number of new depots along their lines in and around Sacramento. Plans are now complete for one of the company's structures which is to be erected at the town of Gridley, in Butte County, and work will be started within the next three weeks. All the new stations are to be designed in the Mission style. The Gridley station will cost about \$10,000.

Architect Glenn Allen has prepared plans for a beautiful City Hall structure which if approved would give this city the tallest building in the world. The design shown by Mr. Allen calls for a fifty-eight-story structure of a highly ornamental type costing less than seven million dollars. According to Mr. Allen's design the building would be erected on the site of the former structure and would surpass any of the municipal buildings in the west. The entire structure is so arranged that the distribution of light in the offices could not possibly be improved.

Architect Albert Pissis, Flood Building, is to leave shortly on an extended trip through Europe which will take several months and during that time Mr. Pissis will visit the principal cities of the old world. During his absence his office will remain open and business will continue as usual.

Architects Cunningham and Politeo, Chronicle Building, are preparing plans for a \$90,000 theatre building which is to be erected on Mason street near O'Farrell for D. L. Randolph. The new building will be located near the new Alcazar and will have a seating capacity of over 1500. The building will have a steel frame and will be strictly fireproof in every particular. The work will be figured sometime during the latter part of this month.

### EXPANSION.

Contractors will be interested to learn that the well known general agent, James J. Hayburn, has also added to his office the United States Casualty Company of New York, which is one of the largest casualty companies in the world, and this company will make very reasonable rates on liability policies. It also does a large accident and health business.

The Empire State Surety Company, represented by Mr. Hayburn, has decided to make a specialty of fidelity and court bonds and bonds for contractors. As the company has added to its surplus it will now be in a better position than ever before to handle large contract bonds at a moment's notice.

By long experience the Empire State Surety Company is able to issue contractors' bonds for responsible contractors without delay.

### METAL TRADES ASSOCIATION AND IRON WORKERS REACH AGREEMENT.

By votes of the members of the California metal trades association Monday night the compromise agreement proposed by the San Francisco industrial conciliation board to settle the dispute between the employers and the iron trades council regarding hours of labor was accepted. This means that the agreement has been approved and adopted by both sides for the various unions affected have already voted to accept it. The general executive committee of the association adopted the agreement December 30 and called the general meeting Monday night to pass on it.

The vital terms in the agreement are that the present wages shall run for the full term of the agreement—three years—and that at the end of one year a conference shall be called and the hours worked here shall be made equal to those worked in Washington, Oregon and other parts of California.

The provisions of the agreement are: First—The terms of this agreement shall run from November 9, 1910, until November 9, 1913.

Second—The wages provided for in the former agreement shall be in force for the full term of this agreement.

Third—Disputes of any kind arising between any of the affiliated unions of the iron trades council and a member of the California metal trades association, an accredited representative of each organization shall proceed to the shop where dispute exists and endeavor mutually to settle the same, and any dispute which can not be settled in this manner must be referred to conference, and should this conference of itself be unable to settle any question which may come before it, it shall provide some method of adjusting the same, and, pending a decision, there shall be no lockout on the part of the

employers nor strike on the part of the employees.

Fourth—Eight hours shall constitute a day's work, until November 9, 1911. On September 9, 1911, a conference shall be called to decide as provided in section three (3) of this agreement, what hours shall be in effect from November 9, 1911, until November 9, 1913. This conference shall be called for the purpose of equalizing hours in force at that time among men working within the states of Washington, Oregon and California, and their decision shall be come operative on November 9, 1911, and shall be in effect until November 9, 1913; and

Whereas, this suggested agreement is the unanimous decision of all parties in the San Francisco industrial conciliation board; therefore be it

Resolved, that this executive committee do hereby approve the form of agreement submitted by the conciliation board.

### AGREEMENT MODIFYING BUILDING CONTRACT.

Dated Oct. 5, 1910. Filed Oct. 7, '10. J. B. & Marie J. Gay, owners, with S. Eligh; S Adeline Place bet. Post and Geary 85-10 W Taylor 51-8x51-9; to eliminate plumbing and add 3rd story to building. ## SECRETARY OF TREASURY TO INVESTIGATE THE MATTER OF BUILDING MATERIAL.

Franklin MacVeagh, Secretary of the Treasury Department, has written a letter to State Mineralogist Aubury asking for details regarding discriminations against California building material by the Supervising Architect of the Department. These details will be forwarded by Aubury to Washington. Thereby the basis will be supplied for an investigation that may have important consequences. A mass of data has been collected by the State Mineralogist, derived from personal investigations, from written communications sent by producers of California material and, from other sources, illustrative of the discriminations complained of by the State Mineralogist.

Aubury, acting in conjunction with the Home Industry League of California, and with the sanction of the League, recently addressed a letter to the President of the United States, and alleged that California material had not been given a fair chance when plans and specifications were prepared in the office of the Supervising Architect for public buildings to be erected in California. This letter has been sent by President Taft to the Secretary of the Treasury Department and from this has followed the request for details.

The period of protest against discrimination has already covered several years. Letters have been written by Aubury in several instances to the Supervising Architect; and, on repeated occasions the California delegation in Congress has been asked by the State Mineralogist to ascertain what could be done, that California might be put upon an equality in all cases, and that it might be given the preference in the construction of public buildings in this State, in the matter of building materials which it is competent to supply. The Congressmen have taken the matter up at Washington as requested, but as discrimination, so Aubury alleges, has been manifested in public buildings recently proposed or constructed, it was thought best to take the matter directly to the President of the United States.

Aubury has every confidence in his ability to establish his claims and said yesterday:

"I am very much pleased at the outlook for a hearing, which is all that is necessary to show the general public and the officials at Washington that complaints have not been made without justification; also to illustrate that the interests at stake, in this State, are very large; more than that, California resources will be largely advertised, and it will be shown that we have ample building materials, of home origin, to construct all buildings that will be required, and that they are entirely first-class in durability and beauty and adaptability to building uses, and that they exist in this State in practically unlimited quantities, and that they are distributed throughout the length and breadth of the State. The preparation of details to be forwarded to the Treasury Department in support of the allegations that have been made will begin at once. The showing will be conclusive.

The text of Secretary MacVeagh's letter to Aubury is as follows: "In a communication to the President you state that you will be glad to furnish

details in relation to instances which you regard as discriminations against California building materials. I shall be glad to receive from you such details.

## Oakland Exchange Meeting.

### The Annual Meeting of the Oakland Builders' Exchange Well Attended and Proved Great Success.

The annual meeting of the Oakland Builders' Exchange was held last Saturday evening at the headquarters of the organization on Eighteenth street, Oakland. Between seventy-five and a hundred members were present, refreshments were served and entertainment was provided which all present declared the best ever.

After the refreshments President James H. Pedgrift of the Exchange called the members to order and acting as toastmaster delivered an address of welcome which put everybody in the most excellent humor and paved the way for the pleasant evening which followed.

Toastmaster Pedgrift then introduced Mr. Frank Oates, who rendered an excellent baritone solo which was highly enjoyed and the singer was encored several times.

Mr. J. B. McKeon was next introduced and told a number of amusing stories. Mr. McKeon was followed by Mr. Charles L. Trow, who rendered a pleasing tenor solo which met with round applause and necessitated several encores.

Mr. Henry C. Miller was then introduced and gave a recitation which was exceptionally well delivered and was received with great applause.

Mr. George Wood was to have appeared before the members of the Exchange in the Highland costume of his ancestry, but the cool bay breezes of Saturday evening proved too severe for Mr. Wood's exposed parts and he was forced to disappoint the members as far as the "kilties" were concerned, but certainly made good with the solo part of his performance.

At this point in the evening, George Dixon arose and presented the Secretary, Mr. V. L. Fortin, with a handsome present as a token of the esteem in which he is held by the members of the Exchange. Mr. Fortin responded in a fitting manner and was deeply affected by the presentation.

Many other members were called upon and responded, among which were H. T. Sweeney, James McVey and Dan Hallahan, who is always spoken of as "our favorite postman" by the members of the Exchange. Mr. Hallahan told a number of amusing stories and enlightened the members on the subject of Uncle Sam's deficiencies in the Postal Department.

The Reliance Quartette, composed of Messrs. Charles Learn, Frank Oates, James McVey and Harry Miller, responded to several encores and added greatly to the enjoyment of the evening.

At the conclusion of the evening's enjoyment a hearty vote of thanks was extended to the committee that supplied the entertainment which told by its volume how keenly all had enjoyed the affair.

## Minor Jobs About Alameda Co.

22nd and Peralta, Okd; erect shed addition; owner, Henshaw, Bulkeley & Co; contractor, H. Eisenmenger; cost, \$100.

**CIVIL SERVICE EXAMINATIONS.**

**Topographic Draftsman.**  
**Copyist Topographic Draftsman.**  
**February 8-9, 1911.**

The United States Civil Service Commission announces an examination on February 8-9, 1911, to secure eligibles from which to make certification to fill a vacancy in the position of topographic draftsman (male), Coast and Geodetic Survey, Washington, D. C., \$900 per annum, and vacancies requiring similar qualifications as they may occur in any branch of the service, unless it shall be decided in the interest of the service to fill the vacancy by reinstatement, transfer, or promotion.

The salary of the position of topographic draftsman ranges usually from \$1,000 to \$1,500 per annum, and for copyist topographic draftsman from \$900 to \$1,500 per annum.

Both men and women will be admitted to this examination.

The examination will consist of the subjects mentioned below, weighted as indicated:

TOPOGRAPHIC DRAFTSMAN.	
Subjects.	Weights.
1. Drawing (a specimen of topographic drawing will be given for reproduction in india ink)	35
2. Lettering (tests of short words in different styles of lettering, and numbers are given).....	35
3. Mathematics (comprising arithmetic, algebra to and including problems involving quadratics, plane and solid geometry, plane trigonometry, logarithms, mensuration, and projections).....	30
<hr/>	
Total.....	100

Time allowed, two days of seven hours each.

All topographic-draftsman positions in the Departments at Washington are filled from the register, or, if there are no eligibles thereon, from the copyist topographic-draftsman register.

**COPYIST TOPOGRAPHIC DRAFTSMAN.**

Subjects.	Weights.
1. Drawing (a specimen of topographic drawing will be given for reproduction in india ink)	50
2. Lettering (tests of short words in different styles of lettering, and numbers are given).....	50
<hr/>	
Total.....	100

The tests in drawing and lettering are identical with those given in the topographic draftsman examination. Competitors who take both examinations will take these tests but once. No submitted drawings will be accepted.

Time allowed, two days of seven and five hours, respectively.

Age limit, 18 years or over on the date of the examination.

This examination is open to all citizens of the United States who comply with the requirements.

Applicants should at once apply either to the United States Civil Service Commission, Washington, D. C., or to the secretary of the board of examiners at San Francisco, for application Form 1312.

As examination papers are shipped direct from the Commission to the places of examination, it is necessary that applications be received in ample time to arrange for the examination desired at the place indicated by the

applicant. The Commission will therefore arrange to examine any applicant whose application is received in time to permit the shipment of the necessary papers.

**POSSIBLE MARKETS FOR CALIFORNIA WINES.**

**Argentina.**

In answer to inquiries as to the probability of introducing California wines into Argentina, a United States consul has forwarded a communication from Alsadair Macintosh, of Macintosh Brothers, which gives the most direct and positive information relative to the subject under consideration:

Some four years ago I started the importation of California wines and for many months gave all my time and efforts to pushing the sale of same. At the same time a large sum of money, many thousands of dollars, was spent in advertising, and a fair sale was obtained for the wines, and most of the first-class hotels were persuaded to stock the wines, and at the present moment all the principal hotels and restaurants in Buenos Aires have the wines quoted on their lists. However, California wines have not obtained the position in this market that they should have, seeing that they have so many fine qualities, and we think it is for the following reasons:

The general Argentine wine-drinking public prefers either a wine composed of 25 per cent of wine imported from France, Spain, and Italy mixed, with Mendoza (Argentine) wine, or the Mendoza wine alone.

For these reasons it is our opinion that there will never be a large sale of California wines in the Argentines, as California could not compete with the European article on account of freights, and I could hardly conceive any respectable firm mixing them with the crude wines of the country and selling them as California wines so as to be able to compete in price with the Spanish, French, and Italian wines.

Another phase of the subject is that much the largest proportion of the Argentine working classes is composed of Spaniards and Italians, who drink no wines but of their own country, and when they do not drink these they consume the Mendoza article.

**Mexico.**

The making of spurious wines, as well as the manufacture of mescal and tequila from alcohol, is quite an industry in certain parts of the Republic.

Cognac is the leading drink of the cantinas. The importations from France are principally of cognac. The table wines, both white and red come from Spain.

As to duties, nonsparkling wines shipped in wood pay 6½ cents gold per 2.2 pounds gross, and shipped in glass 12½ cents per 2.2 pounds net. Sparkling wines pay 32½ cents per 2.2 pounds net.

An active man who speaks the language fluently and knows the customs of the country thoroughly would prove the best medium for the introduction of California wines into Mexico. The personal equation is a large factor in commercial life in Mexico. It would undoubtedly be best to solicit orders direct from the leading consumers, and the solicitor should not be in a hurry. It would be an easy matter to make delivery through an agent. No business in California wines could be done

through the wholesale houses, which have a fixed business in the importation of European wines, and do not care to change. They are, furthermore, Spanish, and naturally, other things being equal, prefer to import Spanish wines to as great an extent as the market will bear.

With the importation of California wines of high quality there is no reason why, in course of time, a strong trade should not be built up therein. It will, however, be necessary for American wine growers to realize, first of all, that a systematic and determined effort will be required to bring about the displacement of wines of established reputation, regardless of whether or not these wines have real merit.—Consular Reports.

**RUBBER IN BRITISH GUIANA.**

While exports indicate that the wild rubber found in the forests of British Guiana can be utilized for commercial purposes, nothing has been proved yet in regard to the cultivated product, the industry being in its infancy.

Several companies have been formed in England for rubber culture in this colony, and concessions have been secured from the local government for the land. Some companies are said to be forming in the United States for the same purpose. It would be well for the public to remember that no returns can be expected from cultivated rubber under five to seven years. During that time the outlay is for seeds, cultivation, management, companies' expenses, etc.

Some companies formed in England have bought balata grants, from which, of course, returns are being received from the balata produced, but otherwise no dividends can be expected under the period mentioned.

**Caution to Prospective Investors.**

Prospective investors in stock of rubber plantations in British Guiana should exercise great care in learning the locations of the plantations, as Para rubber will not give good results on coast lands. To be successful, plantations should be far enough up the rivers to be beyond the influence of salt water. Care should be taken to find out the financial standing and business reputation of the promoters and officials of the companies before any money is invested.

Efforts were made in New York a short time ago to float a rubber company whose plantation was supposed to be in this colony, the promoters of which had a doubtful claim to a tract of land on which the "plantation," consisting of only a few wild rubber trees, was said to be located.

Before investing in rubber plantations here, Americans should make inquiries of the Registrar of British Guiana as to whether a company has a grant of land, and of the Commissioner of Lands and Mines as to whether actual operations are being carried on.

**Bank Building—San Diego, Cal.**—The Gallagher Construction Company of San Francisco and San Diego has contract for erection of a two-story concrete building of the Bank of Commerce and Trust Co. at Orange avenue and Park place. Excavation has been made and the building will be 65x92 feet.

## News In Brief.

### TO CONSTRUCT CARSON RIVER DAM.

WASHINGTON, Jan. 5.—The reclamation service was yesterday authorized by Secretary Ballinger to begin the preliminary work for the construction of the Carson river dam in connection with the Truckee-Carson irrigation project in Nevada, acting on the recommendations made by the board of army engineers.

Much difficulty, it is said, is likely to attend the construction work. Various types of dams were considered for the solution of the problem. The board finally agreed on a structure of earth and gravel.

It was said at the reclamation service yesterday that the completion will make available a large area of valuable land for entry and settlement.

### NEW BRANCH RAILROAD.

Articles of incorporation of the Oakland and Bay Shore Railway Company were filed in the office of the County Clerk Wednesday by R. H. Miller, Albert J. Krutmeyer and John R. Selby of this city. Walter Arnstein, secretary of the City Electric Company, has been elected treasurer by the incorporators, who are also the directors for the first year. The company is capitalized for \$500,000, divided into 5000 shares at \$100 each.

The proposed line is to be an extension of the Oakland and Antioch Railroad and will open up a large section of the country in the vicinity of Oakland that is at present practically without railroad or transportation facilities. Whether the project is being backed by the Southern Pacific or the F. M. Smith interests is a matter that has not been definitely determined.

The projected line is to begin at the east end of Shafter avenue, Oakland, and to extend in a southwesterly direction to Thirty-eighth street, and thence in a westerly direction to the west end of the contemplated projection of Seventh street, at the water front. A branch line is to be constructed from Webster and Twenty-eighth streets, running south on Webster to Thirtieth, together with various spurs and switches.

The Oakland and Antioch Railroad, which is now under construction, will extend from Bay Point to Oakland, via Concord and Walnut creek, in Contra Costa county, through the county tunnel, through the Claremont district, along the south side of Lake Temescal to Thirty-eighth street and College avenue. A branch will also be built to Martinez.

### CORRECTION.

Under date of December 29, The Builder published under the head of "News In Brief" a short account of an action that had been brought in the United States Circuit Court wherein W. C. Robinson, an inventor of Pennsylvania, sought to enjoin the Levy Electric Works of this city from using a certain flexible conduit that he had invented. The article was in error in that it stated that a temporary injunction had been granted restraining The Levy Electric Company from using the conduit. Suit has been commenced but no decision has yet been rendered.

The Levy Electric Company is still using the conduit. The Builder article was taken from the report of the court proceedings and the statement was there made.

### ECONOMY IN U. S. TREASURY.

WASHINGTON, January 8.—Economies which will approximate more than \$1,900,000 a year have been effected in the United States treasury under Secretary MacVeagh, and additional economies of \$1,600,000 a year are contemplated, according to figures given out today.

Legislation is necessary before some of the contemplated reforms can go into effect.

If Congress acts favorably on the Secretary's recommendations, it is expected that the savings will total \$3,577,500 a year. Of the \$1,900,000 saved this year only \$356,000 represents reductions of forces.

### RECLAMATION WORK FOR OREGON.

WASHINGTON, Jan. 7.—Secretary Ballinger today authorized the additional surveys and examinations preliminary to construction work upon the western extension of the Umatilla reclamation project in Oregon.

When completed from 20,000 to 25,000 acres will be reclaimed.

Montana lands approximating 204,000 acres were today designated by Secretary Ballinger, under the enlarged homestead act, as being not susceptible of successful irrigation. These are located in the northwestern part of the state. The total designation in Montana under the enlarged homestead act to date is 31,105,181 acres.

### IMPROVEMENTS FOR MODESTO.

MODESTO, Jan. 8.—The city trustees plan many city improvements. The construction of a complete new sewer system with a septic tank outlet will begin tomorrow. The new sewer system will cost \$65,000. Contracts have been let for the rehabilitation of the street lighting system, making this one of the best lighted cities in the San Joaquin valley. The installation of a fire alarm system is contemplated, and bids on an automobile chemical engine and hose wagon are being advertised. Other improvements will be the paving of additional streets and macadamizing of all streets leading into the country. Property for a library site has been purchased and a new library building will be constructed during the coming year. Bonds to cover these improvements were voted last fall.

### SEWER CONTRACT LET.

OROVILLE (Butte Co.), January 7.—The contract for building the sewer system in this city was awarded to the Contra Costa Construction Company, which agreed to do the work for \$90,019. The bid of J. W. Pierson of Sacramento was rejected. The contractors state they will commence work at once, beginning upon the higher ground. It is expected that the sewer will be completed by Summer.

### VALUE OF GOVERNMENT COAL LANDS.

WASHINGTON, Jan. 8.—Activities of the geological survey in the classification and valuation of the government's western coal lands, begun in 1908, have resulted in an increase of the price set upon the lands of more than \$400,-

000,000 according to a statement issued by that bureau today.

The survey has appraised 14,682,839 acres with values in some tracts ranging upward of \$400 an acre. The work has been done on the basis of the actual tonnage under each 40 acre tract. The total price set upon the land is \$625,944,849.

"Under the former system of selling at the minimum price fixed by the coal law," says the statement, "these lands would have been priced at \$172,020,014, or a difference of over \$400,000,000.

The survey also has recommended for restoration to entry within this period 33,908,199 acres as noncoal lands.

### \$3,000,000 FOR SCHOOLS.

State Controller A. B. Nye has notified State Superintendent of Public Instruction Hyatt of the amount of money in the State Treasury available for common and High schools of California. This money will be apportioned to the schools in each county throughout the State.

For the common schools \$3,097,813.24 will be available. For the High Schools \$251,502.91 will be subject to apportionment.

### CUT IN WAGES.

ALLEN TOWN, Pa., Jan. 10.—A 10 per cent cut in wages has been made by the Thomas Iron Company, operating blast furnaces at Hokendauqua, Island Park, Hellerton and Alburti, and the Empire Steel and Iron Company, operating furnaces at Catasauqua, Pa., and Oxford, N. J. The reduction includes ore mines in Morris county, New Jersey, and affects 3,500 men. The managers say the low selling price of pig iron made the cut necessary.

### HIGHWAY PROJECTED.

SAN RAFAEL, Jan. 10.—A highway stretching from Eureka to Sausalito, through Humboldt, Mendocino, Sonoma and Marin counties, to be built and maintained from the state road fund, is the project that will be placed before the legislature during the present session.

Assemblyman George Harlan of this district has communicated with the Marin promotion league on the subject, and Senator E. B. Martinelli is also behind the plan.

It is the aim of those supporting the highway project to secure the best opinions in the four counties as to the most advantageous road to follow. The Camino real from Sausalito to Petaluma has been suggested as part of the route, it being the present county road in Sonoma and Marin. It is understood that the proposed bill would provide for the upkeep of town streets traversed by the state highway.

### CALIFORNIA ASPHALT IN NEW YORK.

NEW YORK, Jan. 9.—One phase of municipal ownership, which has proved successful in this city, is the asphalt plant, which is operated in Brooklyn.

The annual report just issued, shows that since the city began its operation it saved on an average more than \$10,000 a year. This is on an expenditure of about \$100,000.

The asphalt is brought in large quantities from California.

Issued Weekly, \$3.00 Per Year.

Eleventh Year, No. 3.

## Editorial Page.

The settlement of the controversy between the California metal trades association and the iron trades council gives assurances of peace in the metal industries of the bay cities for three years.

This has been effected by means of a conciliation board which has negotiated an agreement that seems to be acceptable to all concerned. This is good work in the right direction. For industrial war spells disaster for all concerned and the effect on all concerned is almost as disastrous as actual war.

If these conciliation boards can be rightly chosen and can act as arbiters on all questions of this sort then will there be a stability in the industrial situation that could not otherwise be obtained.

Arbitration is the thing. Organized capital and organized labor are now the predominating elements of production. When they are at war everybody suffers. Some method should be found by which disputes can be settled in a peaceable manner. If a voluntary board chosen by both sides can do it, so much the better. If not, a law should be enacted whereby these questions which effect everybody should be compelled to be arbitrated to the end that industrial peace may prevail.

The effect of the recently enacted primary law has been salutary in this respect, it has brought the election of United States Senators nearer the people. While the law provided that the advisory vote of the primaries should be considered as expressed in the vote of the districts the members of the legislature considered themselves only bound by the popular vote of the state. Hence only two men were considered, Spalding, who received a majority of the votes of the districts and Works, who received a majority of the votes of the people. Works was elected by an overwhelming majority.

While the letter of the primary law may have been violated in this respect it nevertheless has effected a great reform. There was no "sack" in evidence and the choice was confined to the two men which the people had expressed a preference for.

Now let the legislature give California the Oregon plan of electing Senators—not merely by party nominations, but by popular vote. By this plan each party in the direct primaries names by a State-wide vote its candidate for the Senatorship, and The People choose between the party nominees in the general election following.

Mr. B. F. Yoakum, chairman of the executive board of the St. Louis & San Francisco railroad system, is at present visiting the city and state and it is

surmised by many that he is looking over the field as a probable territory for the ultimate extension of the St. Louis & San Francisco railroad system.

This road, as its name implies, must have been originally started with the idea of extending from the Mississippi River to the Pacific coast. While it has been in existence more than a quarter of a century, so far it has only reached the gulf. Its operations have been confined entirely to the states of Missouri, Kansas, Oklahoma, Texas and Arkansas.

Mr. Yoakum is known as an empire builder because of the vast colonization schemes that he has so successfully put through in the southwest. There colonization trains are run regularly as a matter of business. As a result the country is soon populated and it means freight and passenger traffic both ways by the railroad.

The Southern Pacific and Santa Fe have accomplished something in this regard, as the increase in population of the state of \$92,496 during the past ten years will testify. But the work of colonization has only just begun. The coming decade will be one of marked development in irrigation, reclamation and subdivision. With it also will be a great movement in railroad building. The handwriting is on the wall. The Southern Pacific company can no longer hold a monopoly of the state's resources. The time has come when railroad and steamship lines are coming to San Francisco.

The modern apartment house is a model of architectural ingenuity. Space is economized to the limit and patents for all kinds of disappearing furniture have been perfected until at the present time every nook and corner of an apartment house building is made use of by the architect. A six by nine living room may answer also for a bedroom. The bed is pulled out from the wall or up from the floor and after having been slept in for the night is pushed back again. All kinds of ventilators are in use to the end that air may be circulated through nooks and crannies that do not ordinarily have free ventilation. The kitchen is a model of economy of space. Wall tables, gas stoves, wall cupboards and modern appliances make the most of the room available and tend to give a snug and cosy home to the smallest space.

San Francisco is getting to be a city of apartments. Real estate is getting to be too valuable for the small home owner to own in any but the outlying districts. The apartment house is now the home of the business man and the clerk downtown for it solves the servant question and is near to the place of employment. However, in many ways the habit of living in apartments and

tenments is to be deplored. The home life and surroundings are not of the best. In the swell apartments children are not allowed and it is just about the same as living in a hotel. It is much better for any who are getting even a moderate salary to buy a little home somewhere in the suburban districts and start to making payments thereon. The payments on the house will be about the same as rent and in the end there will be something to show for the money spent.

No less than three bills have been introduced into the Senate to provide against the acquisition and holding of lands by aliens. It is generally understood that these measures are directed against the Japanese. These measures are proper in the main, as lands should be held by the citizens of the country.

In considering measures of this sort it is important to bear in mind existing treaties on this subject, as the constitution provides that the constitution and the treaties made thereunder shall be the supreme law of the land. The treaty now in existence gives the citizens of this country and of Japan the right in the other to "own or hire and occupy houses, manufactories, warehouses, shops and premises that may be actually necessary for them, and lease land for residential and commercial purposes."

It naturally follows that a Japanese may own town lots, own or lease factory sites and places for commercial purposes. He can not, however, own farming land, or at least he does not have this right conferred by treaty.

It is not a desirable thing to have the rights of citizenship here conferred upon the Mongolian races. This country should be a white man's country, its institutions can only exist under the most enlightened citizenship of the white race.

So if a law is passed to exclude alien ownership of land it must apply to all alien ownership.

A published interview with Glenn Curtiss, the aviator, reports him as saying that the field is so new and untried that he hesitates at all to say what may be the future of the aeroplane. Of one thing he seems to be sure and that is that the present and near future use of the machine will be for exhibition purposes.

The matter of automatic balance such as the use of the gyroscope seems to be entirely out of the question, as it is stated the instrument is not practicable for the use of ships at sea nor is it with the ship in the air. He points out that the principal improvement in the near future will be in the skill of the aviators themselves and not in the machines.

## The Forty-fourth Annual Convention Of American Institute Of Architects At San Francisco, January, 1911.

The Forty-fourth Annual Convention of the American Institute of Architects has convened in San Francisco during the past week. While the regulations of the body provide that its annual conventions be held in the City of Washington, D. C., its members have paid the city by the Golden Gate the high compliment of abrogating its rules and assembling here for its annual conclave. In this it has served a double purpose, for not only have those who reside in the East had the benefit and pleasure of a winter trip to California, but they have also had the opportunity of viewing a modern city that has practically been built from the ground up in the short space of four years. Here has been met the architectural problems of erecting new buildings on old sites, the re-establishment of a city where it had formerly existed, a city to meet the demand of modern times according to the demands and resources of the owners of the property.

Among the places of interest and prominent pieces of architecture of the Pacific Coast which they have had the privilege to inspect are the plans and buildings of the State University at Berkeley for which, under the Hearst endowment, a world-wide competition among architects was held some years ago. Also the unique and artistic mission architecture of Stanford University situated in the romantic Santa Clara valley, and further the old Missions themselves, built of adobe by the pioneer fathers of the church, and which have withstood the elements for many generations.

According to program the Institute convened at the Fairmont Hotel at 9:30 o'clock Tuesday morning. After an address of welcome by Hon. John A. Kelly, acting mayor of San Francisco, Mr. Irving K. Pond, of Chicago, President of the Institute, delivered his address in which he reviewed the progress of the body and discussed the problems which confront it.

On Wednesday the Institute held its session in the Greek Theatre at Berkeley, a modern reconstruction of the classic home of the ancient drama, whose original was constructed by the architects of Dionysius when art and architecture were in the flower of their development in Athens.

Aside from the regular order of business, which goes to make up the general work of such a convention, the reports of committees and chapters, and the introduction and discussions of resolutions and amendments, an elaborate program of entertainment was provided for the visitors. Among these were automobile rides around the city, a trip on the bay and a visit to Mount Tamalpais at the close of the session. While some of these entertainments were marred by the rain which fell during the latter part of the week the visitors have seen no dull moments and have enjoyed their stay.

One of the chief features of the convention was the exhibition of architectural drawings which was held in the rooms of the San Francisco Architectural Club, 126 Post street. The display was one of the largest and most interesting if its kind ever held in this city. Special effort was made on the part of the committee in charge to secure architectural drawings representative of the rebuilding of the city as many of the visitors and delegates to the convention remembered the city in the days before the fire and for this reason the exhibition was doubly interesting. Several hundred drawings were on display and

all of the important commercial structures and private residences constructed since the fire were represented. Many other structures that are contemplated were also shown, together with specimens of the work of the various classes of the San Francisco Architectural Club done in their Atelier.

Among the important discussions of the session was the one upon the resolution presented by the San Francisco Chapter Wednesday morning, recommending the establishment in San Francisco of a municipal commission for the purpose of a comprehensive plan for municipal buildings along practical and economic lines as well as for beautifying the city. The resolution was referred to a committee by the Board of Supervisors of the City and County of San Francisco at their last session and it is to be hoped that a favorable report will be made. For the time to beautify the city is when its public buildings are built and these should be constructed after some definite plan that has for its object both utility and beauty. Nothing so favorably impresses a visitor to a city for the first time as the appearance of its public buildings and the general plan of its public works and public parks. If these things are left to be constructed by the political fortune hunters of successive years only chaos and waste of public moneys will result. The Institute naturally went on record as in favor of the Municipal Art Commission, it being a part of the plan of construction of the city beautiful, the end and aim of all lovers of art.

The following is the list of officers of the American Institute of Architects for the past year:

### OFFICERS

President, Irving K. Pond, Chicago.  
First Vice-President, Walter Cook, New York.  
Second Vice-President, E. V. Seeler, Philadelphia.  
Secretary and Treasurer, Glenn Brown, Washington, D. C.

### BOARD OF DIRECTORS

One Year—Frank Miles, Philadelphia; Geo. Cary, Buffalo; R. Clipston Sturgis, Boston.

Two Years—Frank C. Baldwin, Detroit; Breck Trowbridge, New York; John M. Carrere, New York.

Three Years—Gass Gilbert, New York; Ralph Adams Cram, Boston; John Galen Howard, San Francisco.

At the annual election held Thursday morning the following officers were chosen for the ensuing year:

President, Irving K. Pond; First Vice-President, Walter Cook; Second Vice-President, E. W. Wheelwright; Secretary and Treasurer, Glenn Brown.

Three directors chosen for a term of three years as follows:—Thomas R. Kimball, Milton Medary and A. F. Rosenheim.

The officers of the San Francisco Chapter who were responsible for the session of the Institute being held here and the committees in charge of arrangements were as follows:

William Mooser, President.  
George B. McDougall, Vice-President.  
Sylvain Schnalttacher, Secretary and Treasurer.  
Albert Pissis and James W. Reid, Trustees.

### EXECUTIVE AND FINANCE COMMITTEE

James W. Reid, Chairman      Geo. B. McDougall  
William Moser                      Albert Pissis  
Sylvain Schnalttacher, Secretary

### SUB-COMMITTEES TO ASSIST GENERAL COMMITTEE INCIDENTAL ENTERTAINMENT

Clarence Ward, Chairman      J. R. Miller  
William Knowles                      Charles P. Weeks

## DECORATION FOR BANQUET

Carl Werner, Chairman	W. H. Toepke
Kenneth MacDonald	August G. Headman
E. G. Bolles	

## ENTERTAINMENT AND SIGHT-SEEING

F. H. Meyer, Chairman	H. C. Smith
T. P. Ross	B. Joseph
G. A. Lansburgh	J. Cather Newsom
Merritt Reid	

## PUBLICITY

M. O'Brien, Chairman	Lionel Deane
Wm. A. Newman	F. D. Boese
John Bakewell	T. J. Welsh

## RECEPTION COMMITTEE

John Galen Howard, Chairman	C. E. Hodges
H. Schulze, Vice-Chairman	W. C. Hays
William Curlett	L. B. Dutton
W. B. Faville	L. C. Mullgardt
Charles T. Mott	B. J. S. Cahill
O. G. Traphagen	E. Kollofrath
E. M. Lazarus	Merritt Reid
W. H. Parker	W. H. Toepke
Albert Sutton	Lionel Deane
Willis Polk	William Moser
Hermann Barth	Sylvain Schnattacher
Charles W. Dickey	James W. Reid
Clinton Day	Albert Pissis
C. I. Havens	Geo. B. McDougall
E. J. Molera	

There should also be mentioned the committee in charge of the exhibit of architectural drawings which was so notable a feature of the session. It was constituted as follows:

W. B. Faville, chairman; L. C. Mullgardt, Frederick H. Meyer, John Bakewell, Jr., Charles Peter Weeks, Walter Parker, Thomas Bendell, Harry E. Nye, John M. Bagley, Jr., and George A. Philbault.

The visitors leave for the South today where a supplementary two days' entertainment and sight-seeing has been provided by the Los Angeles Chapter. They have been entertained and instructed. A kindlier feeling will no doubt be entertained for San Francisco and the West and a better idea of its attainments and possibilities.

Here is a different climate and a distinct environment. The palm and orange tree grow in the shadow of the snow-capped mountains, and skies and distance lend a setting to architecture that is distinct from anything in the United States. Here in the West should be developed a distinct and individual literature, a new art, and a distinct architecture. How much we have differentiated thus far from our older brothers across the mountains our present visitors will be able to judge.

## Two Distinctive Structures, Both Of A High Class: Saint Mary's Hospital and The A. B. Spreckels Building.

### SAINT MARY'S HOSPITAL BUILDINGS.

In this week's supplement there is shown a perspective view of the group of modern hospital buildings which have been erected under the direction of Architect Willis Polk for the Sisters of Mercy on their property at the northeast corner of Hayes and Stanyan streets. The reproduction is a half-tone taken from a photo of the architect's water color drawing recently displayed at the Exhibition of the San Francisco Architectural Club.

The buildings occupy a site 275 by 412 feet and compose one of the finest and most complete hospitals in the west. The cost of the actual construction of the buildings has exceeded three hundred thousand dollars. The institution is under the supervision of the Sisters of Mercy and besides ranking as one of the finest equipped hospitals in the city, holds a place second to none as a charity institution. The style of architecture is particularly suited to the general plan of the buildings and organization in whose charge the splendid work is conducted.

The entire group of buildings are of the reinforced concrete type of construction and have been made absolutely fireproof. The general arrangement is such that each ward and private room obtains an abundance of fresh air and sun light. The various parts of the main structure may be easily separated each from the other and in this manner the contagious diseases may be treated apart from the other wards and at the same time the attendants are enabled to avoid the trouble always encountered when obliged to work in buildings separate from the general administration building. The dining rooms have received special attention and are nicely finished and bright and cheerful. The kitchens are the most modern possible to design and represent one of the most valuable assets of

the institution. The operating rooms are the largest in the city and their special equipment includes the most approved appliances of modern surgery. The mechanical equipment of the building is absolutely complete to the most minor detail and includes elevators and dumb waiters, electric clocks, refrigerating plant, vacuum cleaning and sweeping system, linen chutes and a private water supply system from the deep well on the property.

The work on the buildings has been under way for some months and is now rapidly nearing completion. All of the contracts on the various parts of the work have been sublet and many of the contractors have filed their notices of completion.

### THE A. B. SPRECKELS BUILDING.

Architects MacDonald and Applegarth have recently completed the design of one of the most unique commercial buildings which has yet been erected in San Francisco, and a reproduction of the same is shown in this week's supplement. The structure is a three-story and basement commercial building located at the northeast corner of Davis and California streets and is an example of the classical design. While in reality the structure is a full three stories in height, the treatment is such that viewed from a distance the building has the appearance of a beautiful classic structure such as housed many of the banking institutions of this city. The columns and other exterior stone work are of granite while the remaining portions of the exterior are completed in ornamental iron and plate glass.

The interior of this handsome structure has been worked out to harmonize with the exterior and is handsomely finished. The entire three floors will be occupied by commercial firms in the wholesale business.

## Among the Architects.

The City Architect will shortly have the plans for the two new Police Stations complete and ready for figures. The first to be erected will be known as the Richmond Station and the report of the City Architect's office shows that the plans on this building are now complete while the specifications are 75% complete. The other building will be known as the Bay View Station and is reported as being well advanced, the working drawings having been started. Each station will cost in the neighborhood of \$30,000.

Architects Welsh and Carey, Metropolitan Bank Building, have prepared plans for a five-story brick and steel apartment house to be erected on the south side of Eddy street, east of Van Ness avenue. This will be another addition to the splendid line of apartments that flank the wide avenue throughout its length and will be a credit to the district where rebuilding has been somewhat hampered by the high value of realty and the restrictions of the fire limits. The building will be fireproof and fitted up with every modern convenience. The estimated cost is \$40,000.

Plans are being figured on the work of construction of a two-story brick building to be erected at the southeast corner of Minna and Mary streets. O'Brien Bros. Clunk Building, are the architects and the structure is designed for a modern flat building to contain ten flats. It is of modern design and fireproof and the estimated cost is \$13,000.

Architect E. E. Young, 251 Kearny street, has prepared plans for a three-story frame building located on the southwest corner of Green and Hyde streets, which is to contain a store and eight apartments. Bids are being taken by the owner, Mr. H. D. Hogrefe, 1485 Clay street. The estimated cost is \$12,000. The building will be equipped with every modern convenience in the matter of lighting and heating apparatus, with every sanitary appliance and artistic detail.

Architect Wm. Knowler, Mutual Savings Bank Building, is now taking fig-

ures on a frame dwelling to be erected for Mr. Chas. Adams at Majestic Park, Alameda. The plans call for a cozy cottage of modern design, a substantial addition to the many homelike residences of the Bay city.

Architect N. W. Sexton has moved his offices from the first floor of the Chronicle Building to suite 504 and 505 of the same building and now has the new offices open to the public. At the present location Mr. Sexton has a large private office for the reception of his clients and a splendid draughting room well lighted and roomy.

Architects William Curlett and Son, Phelan Building, have awarded the contract for the steel work on the new Terminal Hotel and other contracts for the construction of this building will follow as rapidly as the working drawings can be completed. The building has been mentioned in these columns several times before and further description of the same is not necessary at this time. The cost of the new structure is estimated at \$250,000.

Architect Le Baron R. Olive of Redwood City has the plans for a number of artistic homes on the boards which will be erected during the coming spring in the various residence tracts in and about Redwood City. The same architect has the working drawings for a brick commercial building which is to be erected in Palo Alto for the Sheriff of San Mateo County well advanced and will shortly take figures on the work. The building will contain a number of stores on the first floor and rooms which may be used for either office purposes or living apartments on the second floor. The building when complete will cost about \$20,000.

The project to erect a \$300,000 commercial building in Oakland for the use of the Oakland Chamber of Commerce has been revived again and it is stated that the plans for the financing of the structure have been well laid and that before the end of this year active construction work will have been started.

It is the plan to organize a building company which will be the owner of the structure, composed of and controlled by the chief factors in the chamber.

A large block of the stock is to be held by the chamber as an organization at the beginning and a scheme is to be evolved whereby it will be possible for the Chamber of Commerce to become the full owner of the structure.

The plans of Architect W. C. Hays, Foxcroft Building, have been accepted for the new church edifice which is to be erected by the First Presbyterian Church on their property at the southeast corner of Van Ness avenue and Sacramento street. The structure will cost about \$80,000. The work is to be started as soon as the working drawings are complete. The construction will be of steel, stone and brick.

Architect Edward Foulkes, Crocker Building, is preparing plans for the alteration of a two story frame residence located in the city of Oakland into a modern flat building containing two apartments. The work will cost about \$6,000. The same architect has

the plans on the boards for an artistic frame bungalow which is to be erected in Oakland at a cost of \$4,000.

The plans of Architect F. D. Voorhees of Oakland have been accepted for a new high school building in Vallejo which has been made possible by the sale of \$80,000 worth of bonds of that city. The work has been contemplated for some time and several bond elections have failed, but now that the bonds are sold and a site for the building selected the work will be started as soon as possible.

Architect Streshly, Balboa Building, has the plans for two good sized brick buildings nearly complete, both of which are to be erected in this city. The work will be started within a short time on both of the structures, one of which will cost in the neighborhood of \$40,000 and the other over \$50,000. Besides this work, Mr. Streshly has the plans for a number of frame buildings under way which will be completed shortly and figures taken on their construction.

Architect O. E. Evans, 2454 Mission street, has a number of buildings under construction at this time besides the plans for three other jobs which are rapidly nearing completion. The three-story frame apartment house which has just been completed at the northwest corner of Twenty-third and Douglass streets for Mr. W. Wiegner was designed by Mr. Evans and is a splendid structure carried out in the Spanish Mission style and costing \$12,000. At the southeast corner of Noe and Twenty-fourth streets is located another of the same architect's buildings which is nearly completed at this time. The structure is a three-story and basement store and apartment house building. The first story will be of brick veneer and the upper two stories will be finished with the preble dash cement plaster. Architect Evans is also preparing plans for a store and flat building and a barn which will be erected at the southwest corner of Church and Duncan streets at a cost of \$4000. He is also taking figures on the construction of a two-story frame residence which will be erected in the south line of Jersey street, near Diamond street. This building is estimated to cost \$3000. Figures are also being taken by the same architect for extensive alterations which are to be made to the two-story frame residence now located on Cuvier street near Bosworth. The work will cost between \$1600 and \$2000.

Architect G. Albert Lansburgh, Gunst Building, is preparing plans for a large wine cellar which will cover an area of 20,000 square feet and when complete will be one of the most modern plants of its kind in this section. The new building will be located at the corner of Sixteenth and Kansas streets and is to be erected for the Schlessinger and Binder Company. The excavations will be carried down to an exceptional depth and extra heavy concrete foundations will be put in. The exterior walls will be of brick designed to carry heavy floor loads and the whole structure will be of a higher type than the usual Class C building. Architect Lansburgh states that the plans are now well advanced and will be ready for figures within the next ten days.

**School Building**—Los Angeles, Cal.—A. B. Cass, first vice-president of Y. M. C. A., announces that two new buildings will be built, one in Hollywood and the other in Boyle Heights; also that plans have been drawn for two or three stories to be added to present home. The educational secretary urged erection of a \$100,000 building for trade school.

## News In Brief.

### TO BUILD OIL PIPE LINE.

LOS ANGELES, January 12.—With the purpose of building an oil pipe line from Midway field to the sea, the Guaranty Pipe Line Company filed articles of incorporation here yesterday with Cromwell Simon, Thomas Ball, M. A. Fleming and Drew Pruitt as the incorporators. The concern is to be affiliated with the Guaranty Oil Company, which has considerable holdings at Midway and Coalinga.

The proposed line, the cost of which with pumping stations, is estimated at \$2,000,000, is to extend from sections 31, 32-24 and 32, 32-24, about one and one-half miles from Maricopa, along a short route to tidewater. The terminal has not been definitely selected, two points being under consideration. This line will be sixty miles long, and will probably be a six-inch pipe. Eventually it is to be tapped north of this city with a line to be built to Los Angeles, a distance of not less than 150 miles. Later, if business warrants, a second short line to the sea, parallel with the first, is to be constructed.

### BIG RANCH SOLD.

RED BLUFF, January 12.—The Los Molinas ranch, containing 12,000 acres and valuable water rights, on Mill and Antelope creek, has been sold for \$1,000,000 to Eastern capitalists. This is probably the largest sale that has ever been made in Tehama county.

The large ranch was owned by the estate of the late Joseph Cone and was incorporated under the name of the Los Molinos Ranch Company, of which the greater part of the stock is held by the heirs, Mrs. J. D. Sherwood and Mrs. E. W. Runyon. J. R. Sherwood, husband of the former, has been the manager of the company.

The sale of the ranch has been in negotiation for the last two months, and surveys have been made. A few citizens of Red Bluff through business connections knew that the sale was impending and had been made.

The ranch has a frontage on the Sacramento river of twelve miles. A portion of it has been sold to colonists and Los Molinos county is a thriving community. The ranch is a fertile body of land that will support a large number of families.

### DILLON TO HEAD FIRE BOARD.

James E. Dillon was re-elected president of the fire commission for the current year at Thursday's session. The commission received a gift of \$25 for the widows' and orphans' fund from Harry Hill of 3560 Washington street, together with a letter of thanks and praise for the firemen's efforts in putting out a fire at his residence New Year day.

### BUILDING SOCIETY DEFENDANT IN SUIT.

After several days of preliminary argument the hearing of testimony was begun Thursday by Judge Sturtevant in the suit in which Joseph A. Leonard is suing the San Francisco and Suburban home building society for \$160,000 damages for alleged breach of contract.

Leonard was employed by the society

in 1906 to improve the Jordan tract. The profits were to be divided between Leonard and the society. Most of the stock in the company is owned by J. C. Jordan.

The contract was terminated early in 1908 by resolution of the directors of the society, Jordan asserting that the profits were not sufficient under Leonard's management.

### TO INCREASE MILL CAPACITY.

EDGEWOOD (Siskiyou Co.), January 13.—The Orr Lake Lumber Company expects a new engine for its mill north of town. The old one was broken January 4th. When the new engine is installed the capacity of the mill will be raised to 40,000 per day.

The same company will soon start the Flume Creek Mill near Castella and cut 750,000 feet of logs for the Receiver.

### SITE FOR POWER PLANT.

CASSEL (Shasta Co.), January 13.—Reuben A. Wilcox has sold 62,250 square feet of land on Hot Creek to J. A. Whitehead and Clarissa Whitehead. It is understood that the parcel is to be the site for a power house. Mr. Whitehead promoted the Pacific Power Company in this county a few years ago, interesting Red Bluff capital in the enterprise, which, however, was never carried to completion.

### TO CHANGE JURY TRIALS.

Assembly Amendment No. 14, offered Thursday by H. S. Beatty of San Francisco provides that juries in criminal cases as well as civil cases may reach a verdict by a vote of 9 instead of 12, in all cases except where the death penalty is involved. In murder cases of the first degree, 12 will be required, as at present, for conviction.

### CLEMENTS HEADS COMMISSION.

WASHINGTON, Jan. 14.—Judson C. Clements of Georgia was elected chairman of the interstate commerce commission to succeed Judge Martin A. Knapp of New York at a special conference of the commission held Friday. Clements is the senior member of the commission and is a democrat.

### APPORTION STATE HIGHWAY FUNDS.

SACRAMENTO, Jan. 12.—When the state highway commission is appointed and organized, one of its difficult tasks will be the apportionment of the \$18,000,000 road fund to the satisfaction of the north and south, which sections, as it appeared today, are clearly opposed in their demands for shares of the highway bond issue.

It was learned this afternoon that four northern counties seek an allotment of from \$500,000 to \$1,000,000 for the rebuilding of the El Camino Real, from San Francisco around the bay, nearly 400 miles to Sausalito.

The plan received the official indorsement of the northern California delegation. When it became known among the southern legislators that the north sought the first fruits of the big fund there was much talk of Los Angeles county making pressing demands for immediate reimbursement for the \$3,000,000 which that county already has spent on its roads.

The northern California delegation had a meeting this afternoon at which it indorsed Assemblyman Jasper's bill

to build roads to connect Trinity, Tehama and Shasta with Humboldt.

### PIPE LINE BEGUN.

BAKERSFIELD, Jan. 17.—The construction of the pipe line of the Standard from the Kern river fields to Point Richmond began from this end of the line yesterday. A number of workmen left here for the field. Several cars of pipe arrived in this city yesterday to be used along the line. Working crews were sent to Fresno and Corcoran.

The latest freak of the great Lakeview gusher is to spout red clay, containing 3 per cent water, 45 per cent mud and 52 per cent oil.

### STATE BUILDING TRADES COUNCIL CONVENES.

The tenth annual session of the State Building Trades Council opened Monday at San Rafael. The minutes of the association and the reports read showed big gains in the membership and the finances in a satisfactory condition. Addresses of welcome were delivered by the mayor of San Rafael and the district attorney of Marin County and President F. S. Rake of the San Rafael Council.

On Monday afternoon a report was read from Mayor P. H. McCarthy, the president of the council, now in Washington. He paid tribute to Marin county and said that a part of it would soon be in Greater San Francisco. He advised laboring men to own their homes and said outside of San Francisco they could do no better than buy a home in Marin. His report was long dealing with labor conditions throughout the State.

A number of resolutions were introduced yesterday dealing with subjects relative to proposed legislation and jurisdiction disputes.

Trade jurisdiction disputes are, according to leading delegates, large to be eliminated, having already been settled in a measure by the Building Trades Department of the American Federation of Labor.

Acting President J. B. Bowen announced the appointment of the following committees:

Resolutions—H. J. Banker, chairman; T. C. Lynch, C. D. Bass, John Ekkburt, W. J. Dickerson.

Constitution and Law—E. A. Clancy, chairman; W. A. Anderson, W. G. M. thewson, J. J. Swanson, F. P. Cantro. Adjustment—F. C. MacDonald, chairman; L. D. Johns, E. K. Rhodes, G. Parker, A. L. Hawbecker.

Report of General President—M. Connors, chairman; Michael Lee, C. Gustafson, H. E. Meyers, H. B. Gowin.

Report of General Secretary Treasurer—Thomas Graham, chairman; E. Hendricks, A. Johannsen, T. C. Vickrey, J. W. Bibby.

Report of General Councils—L. Barnhard, chairman; John McPhillip, William Marshall, George Moody, F. Eggert.

Reports of Local Councils—James Gray, chairman; J. A. Lloyd, John McPhillip, John Gerow, W. F. Brown.

Report of General Executive Board—H. R. Lee, chairman; Oscar Fredericks, J. F. Hurney, Charles Coon, J. Dewar.

Press and Publicity—O. A. Tviert, A. G. Gilson.

Assistant Secretaries—Joseph H. A. W. M. Gill.

Assistant Sergeant-at-Arms — J. D. Cozad.

Messenger — B. Ormsby.

#### ANTI-INSURANCE LAW VALID.

WASHINGTON, Jan. 17.—The law of Alabama to prevent agreements and combinations against insurance companies for the purpose of fixing rates of fire insurance was held to be constitutional yesterday by the Supreme Court of the United States. The act provided that every policy holder of fire insurance should be interpreted, in event of loss, to include 25 per cent penalty if the insurance company either at the time the policy was issued or before the time of trial was a member of a tariff association for fixing the rate of insurance.

#### AN EXAMPLAR CITY.

Buenos Ayres sets an example to the entire world as to what can be accomplished in the way of civic improvements by a few years of ceaseless activity. During the past nine years, according to the report of Senor Carlus Thays, Director of the Public Park Board of the Argentine capital, much has been done to materially add to the typography and natural advantages of the Argentine capital. In addition to planting over 142,000 trees during this short space of time, over 80 well distributed parks have been opened throughout the city. The principal part is the great Plaza Del Congresso, situated in the heart of the metropolis, which was carried out simultaneously to the development of the beautiful botanical garden. The trees are planted throughout the parks and along the system of driveways, pines of Neuquen (*Araucari imbricata*) alternating with palms, (*Cocos australis*) from Misiones territory.

#### TO BUILD SHIP FOR CHINESE NAVY.

PHILADELPHIA, Jan. 14.—The New York ship building company of Camden, N. J., today confirmed reports that it has received a contract for the building of a cruiser for the Chinese government. The vessel will cost considerably more than \$1,000,000. The armor and guns will be supplied by the Bethlehem Steel Company.

#### STATE MUST AID CITY.

The State of California must aid the city of San Francisco in relaying the sewer in Beale street, over those portions of the thoroughfare upon which its property abuts, according to the interpretation of the political code of City Attorney Long. In an opinion given the board of works Friday Long held that the harbor commissioners, being in control of certain lots upon both the inner and outer sides of Beale street, should help to pay for the improvement.

#### TO SELL TRINITY TIMBER.

WEAVERVILLE (Trinity Co.), January 16.—The Forest Service of the United States Department of Agriculture is advertising for bids on a sale of timber roughly estimated at 1,000,000,000 feet board measure, mostly of Douglas fir, sugar pine, yellow pine, white fir, and incense cedar. The timber is located in the watershed of the south fork of the Trinity River, covering an area of about 219,000 acres in

the Trinity National Forest. The notice of sale places a minimum rate of \$1.50 per thousand board feet for all timber cut and removed before April 1, 1916, and a rate of \$2 per thousand board feet for all timber cut and removed between April 1, 1916, and April 1, 1921. A deposit of \$25,000 is required to accompany each bid submitted.

District Forester F. E. Olmsted, in charge of the National forests in this district, states that this is by far the largest body of timber ever offered for sale by the Secretary of Agriculture at one time.

#### LOS ANGELES ELECTRIC LINES TO MERGE.

LOS ANGELES, January 14.—Vice-President Paul Shoup, in charge of the Southern Pacific electric lines, last night announced that the management and operating departments of the Pacific Electric Railroad and the Los Angeles-Pacific Railroad would be merged on February 1st. General Manager James McMillan of the Pacific Electric will be the General Manager of the consolidated roads; General Manager Robert Sherman, of the Los Angeles-Pacific, retiring from the railroad business.

#### SEWER CONTRACT LET.

CHICO (Butte Co.), January 14.—The Trustees Thursday night awarded to the Chico Construction Company the contract for street improvement under the Local Improvement Act of 1901, and the long delayed work will commence within the next thirty days. The bid of the Chico company, which was the only one offered, totaled \$32,000. The contract calls for the grading and graveling of the unaccepted streets in a manner specified by the Board. This contract is a preliminary step to further improvement by bond money voted.

#### BANK BUILDING FOR WILLOWS.

WILLOWS (Glenn Co.), January 16.—The Bank of Willows decided to erect a bank building on the northwest corner of Tehama and Walnut streets, and building operations will commence at once. The bank has been located on the southwest corner of the same streets over thirty years. The plans are in the hands of the architect at present, and one of the best and most up-to-date bank buildings in the northern part of the State will be erected.

#### BIG FIRE AT WINNIPEG.

WINNIPEG, Man., Jan. 16. — Fire which started Saturday night at midnight and destroyed the Kelly block resulted in a loss of \$400,000. The Dominion fur company was the principal loser, their loss being \$200,000.

#### PHOSPHATE BEDS IN MONTANA.

WASHINGTON, January 15.—Phosphate beds, believed to be of great commercial value, have been discovered in Western Montana, according to a bulletin from the United States Geological survey. The deposits are on public lands near Butte, Mont., which have been withdrawn from entry, pending Congressional legislation as to their control or disposition.

Rock phosphate hitherto was not believed to be present in Montana, and it was only in the classification of cer-

tain lands by the Geological Survey to determine whether they were of a mineral or non-mineral character that the area was located.

#### NEW YORK CENTRAL TO EXTEND OFFICES TO SACRAMENTO.

Following a policy of extending its system wherever business warrants it, the New York Central lines will open a branch office in Sacramento, and O. W. Ruggles, who for many years has been general passenger agent of the Michigan Central office at Chicago, will take charge.

Ruggles arrived Friday evening from the East with W. B. Jerome, special agent of the New York Central lines at Chicago. Jerome comes out West regularly to inspect agencies. He announced that an office would be opened at Sacramento. Both railroad men are staying at the Palace.

Ruggles is one of the oldest men in the service of the New York Central. He has been an indefatigable worker for the interests of his company and has not known a let up in 30 years.

Jerome said Sunday that the establishment of an office in Sacramento was in line with the policy of advancement that prompted the New York Central to open an office in San Francisco in 1888 and some years later in Los Angeles.

"If the business we expect shows up the way it should, we will not only have a passenger office in the capital city, but a freight agent stationed there as well," Jerome said in explaining the new arrangement.

"The business of 1910 warrants a policy of stretching out into new fields. The year of 1907 was a banner year in railroad business. Nineteen hundred and nine topped it and we are this year confronted with the statement that 1910 has broken all records.

#### TO OPEN DEFUNCT BANK.

H. P. Wilson, the New York financier, who has interested himself in the reorganization of the California Safe Deposit and Trust Company, arrived from the East Monday evening. Just as soon as the depositors' association has shown that it has lived up to the conditions imposed, the bank will be opened.

Oscar Cooper will go East in a few days to present fully to the interested New York financiers just what has been accomplished by the reorganizing committee of the defunct bank. Wilson says that if the report is favorable there is no question about the reopening of the institution.

#### LUMBER MILL LOSES SUIT.

In 1901 the big lumber mill of Niehaus Bros. in West Berkeley, was burned to the ground. A damage suit was brought against the Contra Costa Water Company of Alameda County.

It was alleged by Niehaus Bros. that there was not sufficient water pressure to extinguish the flames, although their contract with the Contra Costa Company called for an adequate supply. In the Superior Court damages to the amount of \$129,000 were awarded Niehaus Bros. The Supreme Court reversed the judgment, holding that there was no such contract; that the water company was required to merely furnish sufficient water to run the machinery of the plant.

## PETROLEUM PRODUCED IN THE UNITED STATES IN 1910.

### Two-thirds of the World's Output.

The year 1910 has been sufficiently eventful in the development of new oil supplies in the United States to more than keep up the country's phenomenal production of the last three years. In fact, the production increased to over 200,000,000 barrels, which is two-thirds of the world's production and several million barrels more than the whole world produced seven years ago.

The most surprising developments of the year were in the Sunset-Midway district of California. The developments in the Caddo field of Louisiana also entirely changed the position of that field. Connected with the developments in both these fields were important changes in the conditions of marketing the oil.

The production of oil in the United States in 1910, as reported by D. T. Day, of the United States Geological Survey, was between 200,000,000 and 208,000,000 barrels, approximately, as follows:

	Barrels.
Illinois .....	32,000,000
Appalachian and Lima-Indiana fields .....	32,000,000
Gulf and Caddo fields.....	14,000,000
Mid-Continent and Rocky Mountain fields .....	53,000,000
California .....	73,000,000
	204,000,000

Stocks increased over 50 per cent on the Pacific Coast. Prices of crude oil declined except in the Mid-Continent field, where they increased to 44 cents a barrel.

### California.

The total oil product of California in 1910 was over 73,000,000 barrels.

### Sunset-Midway District.

The Santa Fe Co. began the year by bringing in a well in the North Midway field which flowed 2,000 barrels a day. Soon afterwards the St. Lawrence well, in the adjoining section, proved about as good, although sanding a great deal. On February 7 a well was finished in sec. 30, T. 32 S., R. 24 E., which began flowing 800 barrels a day. The flow increased steadily until by the middle of March the well yielded, by measurement, over 9,000 barrels a day. Early in March the Mays well was brought in on sec. 30, T. 31 S., R. 23 E., in new territory some miles northwest of the previous gusher.

On March 15 the Lakeview Oil Co.'s well, a controlling interest in which had been turned over to the Union Oil Co., was drilled to 2,230 feet and began flowing at a rate estimated at about 10,000 barrels a day. This increased rapidly to about 30,000 barrels. It was impossible at first to control the well, which soon destroyed the derrick and enlarged the size of the hole. Finally the well was surrounded by bags of sand, and the oil was led by pipes and ditches to storage reservoirs, which were soon filled. The flow was surprisingly persistent, and as months went by the oil seemed to clear itself of sand and increased its daily product to over 40,000 barrels. It began to decline in the later part of the summer, and by the end of the year had fallen to less than 10,000 barrels a day; the proportion of water had increased from less

than 1 per cent to about 56 per cent late in December. In this time the well had produced about 5,000,000 barrels of oil that was saved. The oil is of somewhat lighter gravity than the average for the district.

This phenomenal strike was followed promptly by greatly increased activity, although drilling had to be suspended in the immediate vicinity owing to the danger of fire. The region became the focus of oil interest in the United States. The financial effect of this strike was to reduce the price of oil not already contracted for, until 30 cents a barrel was offered; but with rapidly increasing capacity the tendency to keep oil in storage for better prices led to compromises and concessions to the allied producers, especially after the completion of the new independent pipe line to the coast. The Associated Oil Co. built an 8-inch pipe line from Sunset to its line at Coalinga, and the Standard Oil Co. duplicated its 6-inch line from the Sunset-Midway field to Kern Run, connecting with the main line to Point Richmond.

The Pioneer Midway, struck in April in sec. 30, T. 31 S., R. 24 E., proved another exceptional find.

The Honolulu Oil Co. struck a large gas well to the east of the oil field, in the Buena Vista Hills. The Standard Oil Co. also struck a gas well on the western edge of the Buena Vista Hills, in sec. 10, T. 32 S., R. 24 E., and the gas proved to have a pressure so great that it could not be confined, although part has been piped away for industrial use under boilers and for lighting in the neighborhood. The flow has been sufficient to justify piping the gas to Bakersfield and other near-by points. These wells have started what promises to be a great gas industry in California.—U. S. Geological Survey.

### SUPERVISORS FAVOR ARCHITECTURAL CENSORS FOR PUBLIC BUILDINGS.

At Monday's session of the Board of Supervisors they referred to the Public Buildings Committee a suggestion from the local chapter of architects that a municipal architectural commission be created to develop and supervise all great public improvements in the city and county, the special object in view in the first instance being, apparently, to provide for such supervision for the proposed new city hall.

The Board passed to print a bill authorizing the Public Works Department to contract for material needed for the construction and extension of the Geary-street municipal railway to supplement the steel rails already ordered, the additional material, and the amounts allowed for such being as follows:

Rail joints and fastenings, \$18,000; tubular steel trolley poles, \$17,000; copper wire, \$8,000; rail bonds, \$5,000; steel tie rods and nuts, \$3,000. Total, \$51,000.

### Bathhouse—Hotel—San Diego, Cal.—

Backed by ample capital, Eddie Hayes of this city has completed plans for extensive improvements to Tia Juana Hot Springs which he and his associates have acquired. The project calls for expenditure of \$100,000. It is the purpose of Eddie Hayes to erect a bathhouse of modern design, a hotel and cottages.

## Among the Architects.

Architects Geilfuss and Son, 150 Fulton street, now have bids for the construction of a large frame apartment house under advisement and will shortly award the contract for the construction of the same. The structure will be located at the northeast corner of Sacramento and Larkin streets and when complete will cost in the neighborhood of \$55,000. The plans for the structure call for 45 apartments splendidly arranged and containing the most modern equipment possible to provide.

The Urban Realty Company, under the direction of its manager, Joseph A. Leonard, will start the construction of another of the beautiful residences similar to the many others that that company has erected in the districts where they have invested. The new residence will be erected on Ninth avenue, between Anza and Balboa streets. The design by Mr. Leonard is a modern adaptation of the Queen Anne style of architecture and will harmonize with the adjacent buildings. The interior will be finished in the most attractive details, and have all the up to date appointments.

The announcement is made by the City Architect's office that the working drawings for the new \$600,000 Polytechnic High School are now practically complete and that contracts will be let for the construction of this handsome structure within the next sixty days. The building will be located on Frederick street between Willard and First avenue. The plans for the work have been gotten out in the City Architect's offices under the personal direction of Architect A. Lacy Worswick, who has been in charge of this building since the first steps were taken.

The exterior design in purely classic, modified to meet modern requirements. The ornamental cornices, belt courses and cast iron work will be simple and yet ornate, and in detail will lean toward French Renaissance.

The academic building, which is three stories, basement and attic, has a frontage on Frederick street of 350 feet and a depth of 81 feet, exclusive of auditorium, which breaks back in the center with an additional depth of 70 feet and a width of 98 feet.

The manual training building, which is one story in height, has a frontage on Carl street of 326 feet and a depth of 54 feet, with a wing at either end 51 feet by 100 feet and two stories in height, extending back toward the academic building and connecting with same from the two floors by means of arcades, giving easy access to any portion of either building without going outside. In the center between the two buildings is a large paved court, 100 feet by 200 feet.

The plumbing is to be the most modern and up-to-date sanitary plumbing. The shop building will be heated by direct steam system, while the academic building will be heated by means of steam plenum system of heating and ventilation, and provided with an automatic device which regulates the temperature of the rooms to the required degree without further attention. The building will be provided with the most modern and up-to-date vacuum cleaning system. Program

clocks will be installed throughout, with a master clock located in the principal's room. The entire building to be provided with complete lighting facilities for both gas and electricity. A modern power plant is provided, with a sufficient capacity to furnish both power and electricity for the entire group of buildings.

Architect Benj. G. McDougall, Sheldon Building, has awarded the contract for the construction of a four-story and basement apartment house which is to be erected in the city of Fresno to the Trewhitt-Shields Company of that city for about \$50,000. The building will be one of the largest apartment houses between this city and Los Angeles and is owned by Doctors Trowbridge and Maupin. The building is to be located at the corner of Tulare and N streets and construction work has just been started. Several other structures of a like nature are in contemplation in Fresno as well as two large commercial buildings which will shortly be erected.

The Chico High School was recently destroyed by fire and already the Board of Education of that city have plans under way for the erection of a new and modern building which is to cost \$50,000. No architect has as yet been selected for the work and competitive plans will probably be considered. The Board has \$35,000 from the insurance carried on the old building and will call a bond election for \$20,000 which will give them about \$50,000 for the construction of the new building.

Louis Heilmann has purchased seventeen lots on Eighteenth avenue in the Richmond District and will erect a number of high-class residences on the property recently purchased. The houses will all differ in point of exterior design, but will follow a general scheme so that all will harmonize. A feature of each building will be the large yard space which is to be left on either side as the lots on which the buildings are to be erected will all have over a twenty-five-foot frontage. The homes will cost in the neighborhood of \$3000 each and are built for sale on the installment plan.

The rain that has proven a godsend to the country generally has spoiled the greater part of the week for the aviation meet. While a couple of days may yet remain for the work that is planned it is not probable, unless the time is extended, that there will be the widespread interest in the event that marked its inception.

Anyway nearly all have seen the practical demonstration of the aeroplane, the possibilities of the heavier than air machines to navigate the air and accomplish the feats that the birds alone have been able to execute for all the ages gone before. It has been a demonstration of the reality of the dream of Darius Green and his Flying Machine.

Surely no one has expressed the dream of the aviator better than the yankee inventor of J. T. Trowbridge. For

"Darius was clearly of the opinion,  
That the air is also man's dominion,  
And that, with paddle or fin or pinion,  
We soon or late shall navigate  
The azure as now we sail the sea."

And this was the way Darius reasoned it out.

"The birds can fly, an' why cant I?  
Must we give in," says he with a grin,  
"That the bluebird an' phoebe are  
smarter'n we be?  
Jest fold our hands an' see the swaller  
An' blackbird an' catbird beat us holler?  
Does the little chatterin', sassy wren,  
No bigger'n my thumb, know more than  
men?"

Jest show me that! ur prove 't the bat  
Hez got more brains than's in my hat,  
An' I'll back down an' not till then!"  
He argued further: "Nur I can't see  
What's th' use o' wings to a bumble-bee,  
Fur to get a livin' with, more'n to me—  
Ain't my business important's his'n is."

The people of San Francisco have seen Latham in his graceful Antoinette monoplane sail over the city and the Golden Gate in much the same manner as the youthful yankee expected to astonish the Fourth of July crowds at the country town. While his machine is now wrecked almost as completely as the flying apparatus of the daring Darius we have all had opportunity to witness the sensational feats of the bird men that we have read of with interest for the past year.

The inventive genius is at work. In the near future we may expect to see the factor of safety increased in the construction of aeroplanes to such a degree that aerial navigation will be attended with comparatively small risk under favorable conditions. Then the birds will have to give in to the wisdom of the crafty yankee.

The time for the deciding of the question of the Panama Exposition is now up to Congress. This week ought to bring some action in the matter and something definite should be determined.

San Francisco certainly has the arguments for the exposition and when the matter is properly presented it seems that there ought to be but one way for sensible people to decide.

We ought to get the vote of the Atlantic States, the Northern States and the West. We ask nothing of the government in the way of aid and have shown our fitness and intention to handle the affair in a way never before exhibited.

Oregon and Utah have shown their absolute faith in the proposition and have introduced bills in their legislatures to provide for an appropriation of \$200,000 for State buildings at the exposition. Let the case be decided on its merits and we will surely get the Fair.

The firm of Bates & Chesbrough, proprietors of the new Panama Steamship line, announce that their initial shipment of a cargo of oranges and lemons to New York via the steamship route was an entire success. Delivery was made in 25 days from the date of shipment and the percentage of decay was for oranges 7 per cent, and for lemons 5 per cent. This bids fair to be a real competition in traffic. Ships well equipped for refrigeration would probably do better in the percentage of sound fruit brought to destination and the difference in the cost of freight is such that it will mean much more to the producers. If this can be done by shipment on steamer to Panama, thence unloaded, transported by rail to the Atlantic seaboard and then reshipped to New York, it will mean a great difference when the Panama canal is completed.

## Editorial Page.

It has been said that only rich and fertile lands can stand the expense of bad roads. Of all countries in the world this is true in the United States. For not only has the soil been prodigal in its productiveness but the new lands that have always been ready for the settler has led to only a parital husbandry of the splendid resources of the country. In the eastern and middle western states the roads are numerous. The government and state surveys establish a highway on every section line and every 640 acres is a square surrounded by a public road that is kept up by the township and county. There are no mountains there to impose impassable obstacles, no grades to reduce at great expense. Here it is different. The state of California is principally mountainous. Road building is an expensive proposition, too great to be undertaken by anything less than a country or state.

The state has had competent supervision of its road building. The 18 millions of dollars that have been voted by the people should give the State a superb system of highways. This is a great step in the line of progress for it means shortening of time to the agricultural country, a cheapening of traffic charges just as much as does the establishment of railway lines or water traffic. Good roads means more and better paying farms, more mining development and improvement of the general industries of the State.

The sale of the Ocean Shore railway to the bond holders seems to give assurance that it will be completed at no distant date. In all probability it will pass into the hands of the new corporation that controls the Key Route and will in the near future be extended farther north. The company has failed but it has started something. It's promoters have lost money but the country will gain. It was a move in the right direction.

While it is the general history of railroad building that the first years of their existence is a pretty hard struggle and often results in the roads going into the hands of a receiver, they are always a permanent improvement.

The Ocean Shore has met with a series of catastrophes. The great fire of 1906 put a crimp in its finances and stopped the work of development. The financial panic that followed in the latter part of 1907 served also to block the progress of construction, and while the succeeding years have not served to upbuild the enterprise San Francisco owes a great deal to the men who pioneered the project and spent their fortunes in the work.

The bond holders will no doubt make good on the project. It may take some time but it will pay in the end and

sooner or later the city will extend along the peninsula many miles to the south. It is a scenic road and one which can and will be utilized by the great transportation lines which will soon connect the various portions of the state.

In the fight for federal recognition in Congress, New Orleans seems to have elected to make it a political question and has sought to enlist on its side every senator and representative that it can by any means. It is thus removed from the question of merit of the two cities and the contest becomes one of political strength in a great measure. At this San Francisco has an even chance and added to this we have the argument of financial ability and the logical point which will be the important part for those who are fearless and independent and have no strings on them by way of instruction from their constituents at home. It is to be hoped that the question will be decided now, as it will be necessary to allow time for the preparation for the event. And also that under the rules of the house that the southerners will not be able to employ filibustering tactics to delay the vote on the measure beyond the present Congress.

Judge Ben Lindsay of the Juvenile Court of Denver delivered a lecture at the Y. M. C. A. auditorium Friday evening before a large and appreciative audience. As he has become known to the world through his magazine articles entitled "The Beast and The Jungle," it was natural to expect that his lecture would deal with social problems such as corrupt and debauch not only the adult citizenship but childhood as well. In his capacity as judge of the court which controls the destinies of youth he has had particular opportunity to appreciate the effect of dishonesty in public life, the organized band of pirates that know no political party or creed except the plunder of the general public.

Judge Lindsay well states that the reformation of society should begin at the bottom. The problem that confronts the destiny of any nation is the education of its youth. And where the child comes in contact with the ordinary and commercial methods of modern times as does the street gamin and the newsboy the result is an incipient criminal and a candidate for the juvenile court. With all that you will ever find such boys wise beyond their years in the wisdom of the world. They will know more of the motives of men than a boy that has been properly reared will of twice their years. And as they are continually brought in contact with the seamy side of life the result of a youthful criminal is not unexpected.

Three thousand years ago old

Diogenes went around with a lantern looking for an honest man. If he'd find him now in the political and business world he'd need the searchlight from a battleship. Even in the courts he is a rare bird. Judge Lindsay himself is a shining example. For the people of Denver have come to know him as an honest man. And although all the special interests of Colorado have been handed against him to get rid of him in public life, he has always been able to defeat them.

He rightly pleads for honesty and fair dealing with the child. The schools and colleges in the main build up a high ideal. Too often when the boy gets out into the world he finds he must forget his ideal if he would succeed where dishonest methods are used everywhere against him.

Fraud and deception so long as it is according to law is recognized as good business. How often will a father think it is smart for his son to do some trick that is essentially dishonest! In this the schools have a great handicap in trying to instill into the mind of the child a correct moral attitude toward right and wrong, where they receive no encouragement and support from the child's environment.

A report comes from Fresno that there is a scheme on foot, for the furtherance of which some elections will be held in the near future, whereby it is proposed to irrigate 1,800,000 acres of land, most of which lies on the west bank of the San Joaquin river. It is said that the whole of this immense tract can be irrigated from reservoirs supplied by the river, the distribution of water being effected by the gravity system, all of which will tend to simplify and cheapen the cost of the project.

The present value of the land proposed to be brought under the scheme runs up into the hundreds of millions of dollars.

The placing under irrigation of this tract will double its value, it is said. This would be a conservative estimate, it would seem, as water at the right time will realize the potentialities of the soil for any kind of crops, whereas it is now only adapted for certain products because of the lack of sufficient water.

This is truly an irrigation scheme on a stupendous scale. The immense fields of the broad valley will become a veritable garden under such conditions and its productivity will be increased many fold. Miller and Lux are the greatest holders of the land to be irrigated and it is said that the firm is favorable to the scheme. It will not only increase the population of the valley and the productivity of the land, but also take care of the flood waters as well.

## Address of President Wm. Mooser of the San Francisco Chapter of the American Institute of Architects at the Last Convention.

Mr. President:

And members of the American Institute of Architects, Ladies and Guests:

Tonight an ever youthful and ambitious West seeks opportunity to offer homage to a mature and ever-cultured East.

As down the long centuries, westward the course of Art, Science and Empire have continued to take their way, and as an awakening West, during the day-dawn, and generations of time, has ever welcomed the life-giving and illuminating thought-scheme of an ever esthetic East, so we of the Pacific Shore, the farthest extension of the world's western Empire, (semi-developed tho' it be) now ask to greet the representative culture of our Profession, the members of the American Institute of Architects, men of the East, of the great Atlantic States, north and south, whom, as superior fellow craftsmen, we would welcome tonight with all the warmth and sincerity that as Californians, we beg leave to offer the honorable art-conserving members of our profession.

While the regal East has ever been an art-conservator, the West at the same time, has been an aggressive path-finder, the herald of scientific progress, and an enthusiastic advocate of advanced ideas.

Speaking of our Profession, some critics volunteer to say, that from the designer's stand-point, Architecture is well-determined art-work, while from the Engineer's and the business man's point of view, a great building is to be regarded as a means to an end, a structural scheme providing for service use.

Hence the view-point of the practical Western mind in criticising architectural work.

It follows, therefore, that the great structure of our time is regarded, by the average business man, almost as the military man does a battleship, namely, its value is determined by its general working and service efficiency and cost of maintenance.

Therefore in replying to so-called "high-art" critics of American Architecture is it proper to say, that while we have not evolved, or invented an essentially new, or American style, yet we may point to our creations as Architectural mile-posts of the new era, the utilitarian and practical, and may claim that in our engineering and structural work we lead the world in providing all that is necessary in the matter of general sanitary and practical service, for any and all structures of any magnitude.

It may be proper to say in behalf of our architecture that, while many of

the most important buildings in the United States are externally remodelled from the classic styles, nevertheless when we stop to consider the practical needs, (or the technical talent required to install the several utilitarian requirements) of any high-class mercantile, or public building, and especially for our great modern hotels, that as Architects we claim that the varied utilities found in our buildings incomparably surpass the specially needed work, and not found in any old-time palace, or public building in any part of Europe; nor existant in the several art-boasted structures of the so-called classic period.

While Greece and Italy have their classic styles and the Orient rare design and color-scheme the Architect of 1911 has to utilize the characteristics of each style economically and artistically in our Modern Buildings, and at the same time provide internal requirements and an engineering equipment therefor that, in their entirety, constitute utilitarian and sanitary features as far superior to those of any palace or public building of ancient Europe as are the conveniences found within the home of a cliff-dweller of the Colorado Canyon, compared with those of great Buildings of our time.

Speaking in behalf of our Architecture, it can be shown that centuries of art-culture, science, and mechanic achievement are today being made practicable and caused to manifest for health and service through the many varied appliances now employed in the completion and equipment of any high-class structure.

It therefore follows that the modern Architect, as a Designer, Engineer, Architect and Artist, has not alone to create an architectural monument but at the same time has to plan and equip each structure so that each shall be a practical success, and realize, as would a working piece of machinery, the special requirements and use called for or needed in each.

Permit me, Mr. President, to say, that in our practice, and for the benefit of clients and society, that no other profession is called upon, in these strenuous times to so earnestly search out, investigate and make applicable so much of the varied engineering work, invention and requisite art-features of our time, as is the experienced Architect of today.

Also he has to act as a working expert and determine the merit of each up-to-date achievement, and especially as each may be economically and efficiently employed on our modern scheme of high-class construction, and

as any particular structure may require.

Keeping in mind the very extensive experience, esthetic skill and the varied professional requirements of the present-day Architect and the many demands upon his executive talent, I may therefore claim for our profession a recognition and a standing that any other body of professional men may claim for theirs; be the same scientific, financial, legislative or judicial.

In impartially considering the art merit and practical characteristics of American Architecture, I would call the world's attention to the masterful design and work, reaching to the jealous heavens and builded in our great Eastern and Western Cities because of the genius and talent of the members of the American Institute of Architects, so many of whom we, as Native Sons, and the Pioneers of the Great West, cordially greet tonight—and whom we, in all sincerity ask leave on this occasion to honor.

It is to that end, and having that thought in mind, that The San Francisco Chapter welcomes the several delegates and members of the American Institute of Architects, in the honoring of whom, as guests, the members of our Chapter realize they are performing a high honor to themselves.

In behalf of the San Francisco Chapter, I desire to cordially welcome each and every delegate present, representing The American Institute of Architects.

As Native Sons, and in behalf of our Pioneers, we of the Golden West extend heartiest of greetings to our professional brethren of the East.

In conclusion, Mr. President, let me say, that as our mountains and vales, as our wealth of mines, forests and streams, and as our skies and perennial spring-time, tell of a wealth of grain, fruit and flowers, and great expanse of territorial domain—and as each speak of the wealth of California, so let us trust that the welcome we aim to offer our guests, tonight, may be equal to all that each are severally entitled to, and as an earnest recognition of their respective genius and talent and their professional standing as honorable members of the American Institute of Architects.

Ladies and guests, and visiting members of the American Institute of Architects, permit me, in behalf of our Local Chapter, to thank you severally for the honor of your presence here tonight.

WILLIAM MOOSER,

President S. F. Chapter, A. I. A.,  
January 19, 1911,

# Annual Exhibition of the San Francisco Architectural Club Proves Splendid Success; Formerly Opened By President Of A. I. A.

OFFICERS OF THE S. F. A. C. FOR 1911.

ERNEST H. HILDEBRAND	- - - - -	President
TOBIAS BEARWALD	- - - - -	Vice-President
JOHN G. DRESCHLER	- - - - -	Secretary
ALBERT L. LAPACHET	- - - - -	Treasurer
AUGUST G. HEADMAN	- - - - -	Director
FREDERICK H. MEYER	- - - - -	Director

The San Francisco Architectural Club formally opened its annual architectural exhibition with a reception to the visiting architects to the American Institute of Architects. After an address of welcome by the President of the Club, Mr. Ernest H. Hildebrand, addresses were made by Mr. Irving K. Pond, President of the American Institute of Architects, Mr. Baldwin, President of the Architectural League of America, and Mr. Kimball, Fred H. Meyer, William Mooser, Sylvain Schnaittacher and August S. Headman.

The exhibition was formally opened Wednesday morning, January 18, with all the drawings in place. The display was one of the largest and most interesting exhibitions of its kind that has ever been held in this city and was open to the public between the hours of 10 a. m. and 5. p. m. Special effort was made by the committee in charge to secure architectural drawings representative of the rebuilding of the city as many of the visitors and delegates to the convention of the American Institute remember the city in the days before the fire and for this reason the exhibition was doubly interesting. Several hundred drawings were on display and all of the important commercial

structures and private residences constructed since the fire were represented. Many other structures that are contemplated were also shown, together with specimens of the work of the various classes of the San Francisco Architectural Club done in their Atelier.

This year's exhibition was the first held in the new rooms of the club and was arranged with great care and while the space is limited for the number of drawings on display, care was taken to so arrange the work as to bring out the best objects in each of the many drawings.

The committee who had charge of the exhibition is as follows: W. B. Faville, chairman; L. C. Mullgardt, Frederick H. Meyer, John Bakewell, Jr., Charles Peter Weeks, Walter Parker, Thomas Bendell, Harry E. Nye, John W. Bagley, Jr., and George A. Phibault.

The public interest manifested in the exhibition was not as much as had been hoped for by the committee in charge, but still a large number of persons outside of the profession visited the rooms and expressed great interest in the work. The annual exhibits of this nature given by the San Francisco Architectural Club will do more to promote the growth of local talent and bring the

general public to a good representative selection of architectural design and decorative art than any other one thing.

In connection with this year's exhibits the work of the Atelier was placed on exhibition and was highly complimented by the visiting delegates of the American Institute. The Society of the Beaux Arts of New York, who act as the final judges of the work done by the Atelier, have in the course of the last year mentioned the San Francisco Club more than once.

The Architectural League of the Pacific Coast, who also act as judges of the work of the Atelier before it reaches the Beaux Art Architects in New York, have reported on the two problems recently submitted by the various clubs on the Coast. The Atelier of the San Francisco Club has been awarded by far the largest number of mentions. The Class B project, a problem in design, consisting of an automobile garage, has been reported on by the jury and credited to the San Francisco Club with five honorable mentions. The report on the Order Problem, an entrance driveway, has also been made and San Francisco students to the number of fourteen are mentioned.

## A Synopsis of the Career of the American Institute of Architects Now A National Organization.

About a half century ago a handful of earnest hard-working architects in the East banded themselves together for mutual study and the advancement of architectural ideals. From that humble beginning has developed an association, the American Institute of Architects, whose influence for good is felt in every part of the United States.

The architectural profession, like all professions and lines of business, has its problems to solve. These have been met, studied and solved by the common exchange of opinions and experiences of the members of the association. Today the code of ethics, the charges

for architectural services and the manner of holding architectural competitions are regulated by the American Institute Code and are all now recognized as just and proper and so held by the Courts of the land.

The latest notable achievement of the American Institute of Architects is the securing of Federal recognition for architects when Federal buildings in excess of \$500,000 are to be erected. In such cases, the Secretary of the Treasury is empowered to invite competitive designs from ten or more architects.

The headquarters and home of the

American Institute of Architects is known as the Octagon building in Washington, D. C., which building for a time, under President Madison, was the official residence of the President. When the present White House was ready for occupancy the Octagon building became the home of the Institute.

The forty-fourth annual convention which was held this month in San Francisco, brought to this City the representative architects from every part of the United States.

The American Institute of Architects is now a national organization of national power and influence.

San Francisco

## Among the Architects.

The temporary frame buildings which have served many of the retail stores doing business on Fillmore street since the fire are to be removed and in their places new and substantial buildings will be erected. Already four handsome structures have been planned and active construction work will be started on the new buildings this spring. Two of these buildings will be erected at the intersection of California and Fillmore and two others at the corner of Geary and Fillmore. All four of these buildings are to be erected on the property of large estates and the movement for better quarters on Fillmore street is shown to have the sanction of the big holders of real estate. With such action taken by the owners of the most important sites along that thoroughfare other property owners will be forced to improve their holdings and it is evident that Fillmore street is soon to experience a building boom. The structures already planned include three Class C structures, ranging in height from four to six stories, and one Class A structure of four stories. All of the buildings will cost over a hundred thousand dollars and all will be commenced by spring.

Architect Joseph A. Leonard, Phelan Building, has completed the plans for two one-story frame residences which will be erected on the south line of Anza street, 95 and 120 feet east of Tenth avenue. The work is to be done for the Urban Realty Company and is estimated to cost \$3,000 each, and will be done by day labor.

Architect William Wilde, Albany Block, Oakland, has completed the plans for the construction of a frame garage which is to be erected for Henry Hauschildt on his property at the southwest corner of First avenue and B street. The building will have a concrete floor and the exterior will be covered with cement plaster. The plans are now being figured and the contract will be let within the next few days.

Architects Reid Brothers, Call Building, are preparing plans for two of the new structures which are to be erected on Fillmore street, replacing the temporary frame buildings in which the

merchants of that street have conducted their business since the fire. One of these buildings is to be located at the northwest corner of Fillmore and California streets and is to be a four-story Class A structure designed for use of retail stores and apartments. The Preston Estate are the owners of the property on which the new building will be erected and they expect to expend about \$90,000 on the construction. The other of the buildings which Reid Brothers are preparing plans for is to be located at the southeast corner of Fillmore and Geary, on the property of the Butler Estate, and when complete will cost \$125,000. The structure will be five stories high and will be of the Class C type of construction, containing stores on the first floor and a modern hotel on the upper floor floors. Work on both of these structures will be commenced as soon as the weather opens in the spring.

Contrary to the expectations of the local architects who submitted competitive drawing for the Chico City Hall, the first place was awarded to Architect Bryan of Chico. The report was received in this city last week to the effect that Architect Narbett's plans had been accepted. The plans of Mr. Bryan call for a one-story and unfinished basement of brick construction, which will cost \$31,000. Plans will be completed at once and bids called for within a short time.

The Chico school which was recently destroyed by fire is to be rebuilt at once on the old plans. A local man will superintend the work and make some changes in the original plans which were furnished by the old firm of Stone and Smith of this city. About \$35,000 is available for the reconstruction and a part of the old walls will be used again. The building is to be a brick structure and the School Board are waiting a decision of the City Attorney relative to the length of time necessary in advertising for bids before starting the work.

The Board of Public Works, Hewes Building, are now receiving bids for the construction of the Police Police Station, a two-story and basement brick building which is to be located on Sixth avenue between Geary and Anza streets. The bids are being called for on the general construction and for the electric wiring. All bids must be in before February 8th. The official proposal is published in another column of this issue.

The same office is receiving figures for the construction of a fence around the grounds of the Mission School located on Mission street between Fourteenth and Fifteenth streets, and also for doing certain yard work at the Clement School on Noe street, between Thirtieth and Day streets. Bids for this work will also be opened on February 8th.

The details surrounding the purchase of the site for the Armory building in this city have now been completed and the property at the northwest corner of Mission and Fourteenth streets, formerly the site of the Southern Pacific Hospital, has passed into the hands of the State. The acquisition of this property assures the speedy construction of the new \$120,000 structure, which is to be one of the most handsome and modern armory buildings in the United

States. The State has already made the appropriation for the building and work will be started as soon as the State Architect can complete the drawings.

Architects Wright, Rushforth and Cahill will shortly award the contracts for the concrete work on the new temporary city hall which is being erected on the south line of Market street, between Eighth and Ninth streets, by the Whitcomb Estate. The work which is to be let will include the foundations, concrete floors, roof and curtain walls. The contract for the cement on the building has already been let to the Mt. Diablo people, who are to furnish 20,000 barrels.

Architect Lansburgh, Gunst Building, will shortly let the contract for the construction of large brick wine cellars which are to be erected for the Schlesinger and Binder people on their property at the corner of Sixteenth and Kansas streets. The building has been described in these columns before and it will be of extra heavy construction and is to cost in the neighborhood of \$60,000. Figures on the work will be taken at once and the contracts let without delay.

Architect R. A. Herold, Sacramento, has been selected by the Masonic Hall Association of that city as the architect for their new structure which is to be erected on their new building site at the corner of Twelfth and J streets. The association has just decided to sell their former holdings in the Capitol City and to erect a new temple which will cost in the neighborhood of \$250,000. Architect Herold has just completed the preliminary design which was accepted by the Building Committee. Work will not be started before the fall months.

Architects MacDonald & Applegarth, have completed the plans for one of the most artistic bungalows yet erected in any of the suburbs of San Francisco and are now taking figures on the construction of the same. The building is designed for one of the wealthy clients of the firm and is to cost about \$16,000. The work will be started as soon as the contract can be let.

Contractor Klyce has been awarded the contract for the construction of the Mill Valley Bank, a two-story structure which will contain besides the banking offices a general office for the telephone company and which will cost \$16,000. The exterior will be of pressed brick similar to the Palace Hotel in this city. The interior will be handsomely finished in mahogany and plate glass. The equipment will include large safety deposit vaults besides the main vault of the bank. Work will be started at once and the officials hope to be installed in their new quarters before June.

Major Williamson, officer in charge of the Constructing Quarter Masters Department at Fort Mason, is calling for bids on the construction of a number of field officers' quarters and other buildings which are to be erected at Fort Winfield Scott. The buildings will be of concrete and brick and the work will include plumbing and electric wiring. The official notice to bidders is printed in another column of this same issue.

### FIRM OF H. W. MOFFATT & CO. MOVES INTO SPLENDID NEW OFFICES.

H. W. Moffatt & Co., ventilating engineers, have moved their offices in the Pacific Building to the sixth floor of the same structure and now occupy a splendid suite of three rooms, numbers 616 to 619 inclusive. Their present quarters are splendidly furnished with mahogany desks and chairs and every comfort is provided for their clients in the luxurious waiting room.

The firm is now incorporated and the present name is H. W. Moffatt & Co., incorporated. Mr. Moffatt has had a successful year and has devised the heating and ventilating systems of many of the most important buildings of the cities about the bay, among them being the new Y. M. C. A. at Oakland, The Infirmary Building, The French Hospital, The Head Building, The American Music Hall, The Techau Tavern, The Merchants' Exchange and The Wilson Building of San Francisco.

The present offices are light and airy, well ventilated and elegant in every detail.

**Oakland, Cal.**—At the annual meeting of the trustees of the Plymouth Congregational Church preliminary steps looking toward the construction of a Parish House at a cost of \$25,000, were taken. The Men's League of the church has been put in charge of the campaign to raise the necessary funds. The officers of the league are L. E. Burks, president; A. K. Vickers, vice-president, and Guy C. Calden, secretary.

## Among the Architects.

Architect Henry H. Meyers, Kohl building, has awarded contracts for a five-story brick rooming house to be erected on the north line of Mission street, west of Sixth street, for E. W. Crellin of the Hotel Richelieu. The building will cost about \$40,000. The following contracts will be placed on record in a few days: Brick work, Jas. Fennell; iron work, Western Iron Works; carpentry, Thos. Elam & Son; painting, W. W. Tucker Co.; plastering, Floodberg & McCaffery; sheet metal work, Forderer Cornice Co.; plumbing, J. G. Sutton Co.; electric work, Weidental-Gosliner Co.; elevators, Van Emon Elevator Co.

Architect H. C. Chivers of Oakland has completed the plans for a two-story and basement frame residence which is to be erected for George Friend on his property in Thousand Oaks, a suburb of Oakland. The architect is now taking figures on the work, which is estimated to cost in the neighborhood of \$6000.

Architect John H. Thomas, First National Bank Building, Berkeley, is preparing plans for a \$20,000 theatre building which is to be erected on Center street between Oxford and Shattuck streets, in Berkeley. The plans are now complete and bids will be called for on the work at once. The building will be of concrete construction and will be well ventilated and furnished with comfortable seats and wide aisles and will be equipped with the latest improvements to guard the public safety.

Architect Louis P. Hobart, Crocker Building, is preparing plans for another handsome and costly residence which will be erected at once in the town of Hillsborough, near San Mateo. The work will cost in the neighborhood of \$25,000 and will be started as soon as the architect can complete the plans and specifications.

Word has been received by one of the local architects competing for the Chico City Hall to the effect that the plans for that structure submitted to the Trustees by Architect Charles Narbett of that city have been approved by the City Council and that he has been instructed to proceed with the working drawings at once. The new building will cost about \$35,000 and is to be of brick and reinforced concrete.

Architect Henry Shermund, Mills Building, has completed the process of taking figures on the construction of the twenty-two residences and other improvements which are to be a part of the development of a large private tract in one of the most beautiful residence sections of San Francisco. The entire scheme is to be carried out as a whole. The homes will front on a private street opening from a main thoroughfare with beautiful entrance gates. Landscape gardening and fine private lawns will add to the natural beauty of the tract and when complete will make it one of the most picturesque spots to be found in any California city. Each of the dwellings will be of five rooms each with bath and will be complete with all modern improvements. A general scheme has been followed out in the designs of the

houses which is unique and pleasing, no two of the dwellings having the same elevation, and the exteriors being either of cement plaster or shingles alternating in the designs. All of the dwellings set back from the street and have large lawns in the front. The total cost of the improvements will come within \$42,000.

Work on the beautiful residence designed by Architect Shermund for Mr. D. F. Meyer and now under construction on First avenue near Sacramento street, is progressing rapidly. The home consists of nine rooms including a reception parlor, reception hall, dining room, living room, and breakfast room which will be finished in mahogany with hardwood floors throughout. These same rooms together with the kitchen and baths will be wainscoted with white glazed tile. The dwelling is a pleasing example of the Mission design with the exterior coated with cement plaster. The cost of the building when complete will be in the neighborhood of \$10,000.

The same architect is preparing plans for the construction of a \$10,000 residence which is to be erected in San Mateo. The exact location and the owners name is withheld for the present, but a more complete description of the work will be given later on. Plans are also being prepared in Architect Shermund's offices for further improvements to the grounds of the Rossi Estate in Fair Oaks. The work will follow the construction of a beautiful residence which has recently been completed for Mrs. Rossi from plans by Mr. Shermund and will consist of the construction of a conservatory and other special structures.

The Board of Public Works has awarded the contracts for the construction of Truck House No. 14 to the following firms: General Construction to Lange & Bergstrom for \$34,811; Electric work to the National Electric Company for \$910 and the Plumbing, gas fitting and heating to J. E. O'Mara for \$2420.

Bids for the completion of considerable sewer work were opened at the last meeting of the Board and bids were taken under advisement until the next meeting at which time the contracts will be awarded.

Architect Frank S. Holland, 100 Haight street, has completed the plans for a brick theatre which is to be erected on Polk street, between Washington and Clay streets, for Mary A. Demming. The contract has been awarded to H. H. Hinds for \$12,000 and the work will be started at once. The building is to be constructed of brick and the exterior will be coated with cement plaster and the main entrance nicely finished. The theatre will have a seating capacity of about 400 people and will be well ventilated and the public safety will be guarded by wide aisles and both rear and side exits. The building has already been leased for a term of years to Frank Holman and will be ready for occupancy within the next three months.

Architect C. H. Russell has recovered from his recent illness and has resumed his office practice. At the present time Mr. Russell is in Chico, called there by the City Council in regard to his drawings submitted in the recent competition held to secure plans for the new

City Hall. Mr. Russell will return to this city on Saturday.

Architects Wright, Rushforth and Cahill have received the complete engineering drawings of the temporary city hall from the local firm of engineers and will shortly be ready to let the contracts for the completion of the building which is now under way. The excavating and concrete foundations are already complete and figures will shortly be taken for the construction of the entire work. Contracts will probably be segregated.

Architect Benj. G. McDougall, Sheldon Building, is preparing plans for the erection of a two-story and basement hotel which is to be Porterville's first modern commercial hotel. The structure will be of reinforced concrete and will contain one hundred rooms besides the main dining room, a large office and lobby and grill room. The building is of the Mission style of design and the exterior will be cemented and the roof will be of red Spanish tile. The hotel when complete will cost in the neighborhood of \$45,000. The building will occupy a large ground area at the corner of Main and Olive streets, one of the most important business corners in the town of Porterville, and has already been leased for a long term of years. The working drawings have just been started and it will be some time before the plans are completed and ready for figures.

Architect Charles Peter Weeks, Mutual Bank Building, has completed the plans for the construction of a two-story and basement frame residence which is to be erected at the corner of Fairmont and Twenty-ninth streets in Alameda. The architect will shortly award the contract which is expected to go about \$5000. The work is to be done for Stewart Hawley and when complete will be one of the most handsome residences so far erected in that district of Alameda.

In connection with the construction of the proposed Chamber of Commerce building in Oakland it has been stated that an open competition will be held among the architects to secure the best possible design for their new \$300,000 structure. The financial plans are reported to be well advanced at this time and a program for the competition will probably be the next step taken by the Chamber of Commerce.

Architect Warren Skillings, Garden City Bank Building, San Jose, has just started the working drawings for two more beautiful Spanish style residences which are to be erected in San Jose. One of the dwellings will be located on First street near the Marvin residence designed by the same architect and will cost about \$10,000, while the other building will be located on the Alameda and will represent an investment of \$12,000.

Architect A. W. Cornelius, Metropolitan Bank Building, has completed the plans for the construction of a two-story and basement market building which is to be erected on North Clay street, east of Montgomery, for the American Fish and Oyster Co. The building will be of the Class C type and is estimated to cost about \$30,000. The contract will be let in a short time.

 Yertzian ..... \$57

## REDUCTION IN PULLMAN RATES.

CHICAGO, Jan. 27. — Announcement was made from the Pullman company offices that arrangements have been completed for the application next Wednesday of their new rate rules, which include a nation wide reduction of 20 per cent in practically all upper berths and a cut ranging from 25 cents to \$1 on all lower berths.

The new tariffs provide that where the lower berth rate is \$1.50, the rate for the upper berth shall be \$1.25.

A new feature of the rate scheme is the establishment of an intermediate lower berth rate. Heretofore a rate of \$1.50 has been collected, and the next higher rate amounted to 50 cents more. In the revised tariff rates \$1.75, \$2.25, etc., have been put in wherever it was necessary to bring about an equalization of the lower berth rates.

New tourist sleeping car rates also have been filed. In the matter of upper berths there is a cut of 20 per cent.

## CIVIC BODIES WILL ASK FOR STATE ROAD.

SAN MATEO, Jan. 27.—Representatives of civic bodies in San Francisco, San Mateo and Santa Clara counties will hold a meeting in the city hall at 8 o'clock today to discuss ways and means for securing for the peninsula one of the proposed state roads to be constructed from the \$18,000,000 bond issue authorized at the recent election. The meeting will be held under the auspices of the San Mateo board of trade, which has appointed a committee of which W. B. Lawrence is chairman, to take charge of the assembly. The chamber of commerce in San Francisco has appointed Henry T. Scott and George A. Newhall as two of its delegates to attend the meeting.

## PROPOSALS WANTED.

PROPOSALS to furnish machines,

motors and limit switches to operate the Stony Gate valves and cylindrical valves for controlling the culverts of the locks at Gatun, Pedro Miguel and Miraflores. Sealed proposals will be received at the office of the General Purchasing Officer, Isthmian Canal Commission, Washington, D. C., until 10:30 a. m., February 25, 1911, at which time they will be opened in public, for furnishing the above-mentioned articles. Blanks and general information relating to this circular (No. 614) may be obtained from this office or the offices of the Assistant Purchasing Agents, 24 State street, New York city; 55 National Realty building, New Orleans, La.; and 1086 North Point street, San Francisco, Cal.; also from the U. S. Engineer offices in the following cities: Seattle, Wash.; Los Angeles, Cal.; Baltimore, Md.; Philadelphia, Pa.; Pittsburg, Pa.; Boston, Mass.; Buffalo, N. Y.; Cleveland, Ohio; Cincinnati, Ohio; Chicago, Ill.; St. Louis, Md.; Detroit, Mich.; Milwaukee, Wis.; St. Paul, Minn.; Chattanooga, Tenn.; Louisville, Ky.; Mobile, Ala.; and Galveston, Texas; Commercial Club, Kansas City, Md.; Chamber of Commerce, Quincy, Ill., and Chamber of Commerce and Board of Trade, Tacoma, Wash.—F. C. Boggs, Captain, Corps of Engineers, U. S. A., General Purchasing Officer.

## ELKS PLAN THEATER BUILDING.

SANTA ROSA, January 27. — Santa Rosa Lodge, No. 646, B. P. O. E., is planning a new home and may decide to construct a theatre also. At a meeting Wednesday night the special committee named by Exalted Ruler Joseph P. Parry submitted a report favoring the site at Fourth and A streets, the former location of the St. Rose Hotel. The committee consists of C. C. Donovan, Ira D. Pyle, Charles O. Dunbar, James S. Sweet, Edison S. Merritt, W. F. Price, A. B. Lemmon.

A sub-committee, consisting of Eugene C. Farmer, F. G. Nagle and Frank Muther, will investigate other sites.

The plans submitted call for a four-story structure of red pressed brick with terra cotta timming, to cost \$120,000.

## BILL FOR GREATER CITY TO COME UP FOR REVIEW.

SACRAMENTO, January 27.—Senator Wolfe announced yesterday that a hearing on his constitutional amendment providing a method for the consolidation of two or more cities into one city and county would be held next Wednesday evening before the Senate Judiciary Committee. This measure is intended to afford means for combining the cities on San Francisco bay into one great metropolis.

## TO CONSTRUCT ALFALEA MILL.

WOODLAND (Yolo Co.), January 23. Fred Meier, who recently accepted the proposition of the Woodland Chamber of Commerce which offered a site free of charge to any responsible person who will construct an alfalfa mill, has arrived.

Mr. Meier has ordered all the machinery required for an up-to-date plant and will begin the construction of the building in about a week. His mill will have a capacity of three to five tons an hour and he expects to have it ready for operation about the first of April.

## NEW YORK BOND SALE.

NEW YORK, January 25. — After more than seven hours of canvassing, at the close of what Controller Prendergast termed the "greatest bond sale that has ever taken place in any municipality," the accountants attached to the Finance Department announced last night that the \$60,000,000 issue of corporate stock at 4¼ per cent will be awarded at an average of 100.904 per cent and will bring the city, with the premium, \$60,542,341.50. The largest individual award, \$11,000,000, goes to Kuhn, Loeb & Co. In all, 568 bids were received aggregating \$324,933,030.

## NEVADA IRRIGATION PROJECT.

ELKO (Nev.), January 25.—Permission has been granted to a big company headed by Attorney Allan Allen of Denver, by the County Commissioners of Elko County, to construct a big irrigation project in Northern Elko to be known as the Fort Halleck Irrigation District.

A large reservoir with many canals leading from it will be constructed and in all about 13,000 acres of land will be irrigated. It is believed that if this irrigation project is successful, others will be formed.

## TERMINAL COMPANY INCORPORATED.

The Pacific Terminal Company, with an authorized capital stock of \$5,000,000, has been incorporated as a subsidiary company of the United Properties Company, the directors being F. M. Smith, W. S. Tevis, R. G. Hanford, C. B. Zabriskie, W. R. Alberger, Gavin McNab and Dennis Searles.

One of the incorporators said that this company would take over the Key Route basin and other water front holdings. What use there would be for the extensive system of wharves in connection with electric lines to the Santa Clara and interior valleys the incorporators refuse to explain at the present time.

## POWER PLANT ON THE AMERICAN RIVER.

PLACERVILLE, January 25. — Engineers have begun the work of preparing a camp at Chili Bar on the south fork of the American river for the complete survey and platting of the power site ditch right and other interests at Chili Bar owned by John Pearson of this city, and now under bond to the Sacramento and Sierra Railway Company. The engineers are under Civil Engineer J. A. Graham of Berkeley.

A few weeks ago John P. Fisher, former County Clerk of El Dorado county and now an agent of the Sacramento and Sierra Railway Company, appropriated 5,000 miners' inches of the water of the south fork of the American river and it is now apparent that the appropriation of the water will be used for the purpose of the development of electricity.

That the Sacramento and Sierra Railway Company is considering the enterprise of constructing a great power plant for the generation of power to operate its cars is evident and the report of Engineer Graham will probably be followed by the work of construction.

## News In Brief.

### FILES ON BIG WATER RIGHT.

REDDING (Shasta Co.), January 20. A water right claiming 250,000 inches in the Sacramento River at a point three miles north of Redding has been located by George L. Bancroft, of Denver, Colo. Bancroft is a civil engineer. The location is the largest ever made in Shasta County.

The notice, posted on the east bank of the river a little below Middle Creek Station, says briefly that the location is made for the purpose of diverting water for electrical power, irrigation and domestic and general public utility. The diverting canal is to be ninety feet wide at the top, fifty feet wide at the bottom and twenty feet deep.

Mr. Bancroft was here last Summer to look over electrical power and irrigation projects. He is not a capitalist. He is a civil engineer who has promoted and pushed to successful completion some of the largest irrigation enterprises in Colorado. The location of the immense water right was made by George W. Bush, attorney for Mr. Bancroft, in obedience to telegraphic orders received from Denver.

The Sacramento Valley proper begins at Middle Creek, three miles above Redding. It is there that the canyon walls recede and the farming land appears. It is declared to be the natural and logical point to locate water for irrigating all lands down the valley. Middle Creek is the head of navigation in the Sacramento River, as fixed by the War Department.

### SUBSIDIARY RAILROADS ORGAN-

Articles of incorporation of the Sacramento Short Line and the San Jose Short Line, formed to carry out projects of the United Properties Company of California, the \$200,000,000 Tevis-Smith company, were filed Thursday with the county clerk. The Sacramento Short Line will build a railroad from Oakland to Sacramento, 90 miles long, and the San Jose Short Line will build a road from Oakland to San Jose, 50 miles long.

The incorporators in each case are the same and comprise attorneys and others associated with Gavin McNab. The Sacramento Short Line is incorporated for \$10,000,000, of which \$90,000 has been subscribed in conformity with the law calling for \$1,000 for each mile of road proposed to be constructed. The stock is divided into 60,000 common and 40,000 preferred, with a dividend of 6 per cent guaranteed on the latter. The directors are B. M. Alkens, R. P. Henshall, Luther Elkins, George W. Mordecai, N. Schaumlowitz, R. V. Whitting, and F. L. Stewart. Alkens has subscribed for \$84,000 worth of the stock, and the other directors for \$1,000 each.

The authorized capital of the San Jose Short Line is \$80,000. Alkens has subscribed for \$44,000 worth and each of the other directors for \$1,000 worth.

### WATER POWER FOR NEW RAILROAD.

PLACERVILLE, Cal., Jan. 20.—A short time ago Jean P. Fisher filed on 5000 inches of water in the South Fork of the American river. It now appears that the water is to be used for generating power,

Fisher is employed by the Sacramento and Sierra Railway, building to the Smith holdings of timber in the Sierras above Georgetown. J. A. Graham, of Berkeley, with two other engineers, is now here, and material and equipment for a camp at Chili Bar bridge, is being assembled. John Pearson owns some ditch rights there and the company has an option on these and it is expected that they will use these in the new project. Power will be generated here or near here for the trains of the Sacramento and Sierra Railway and the water will be taken out of the American river.

### STOCKTON BOND ELECTION.

STOCKTON, Jan. 22.—A bond election involving \$517,676.76 for proposed municipal improvements will be held Tuesday.

The propositions the people will vote upon follow:

Street work, \$290,676.76; fire department, \$100,000; sanitary sewers, \$40,000; rainwater sewers, \$77,000.

### STOCKTON TO HAVE MUNICIPAL RAILWAY.

STOCKTON, January 22.—A municipal railroad track with necessary equipment will probably be built by the city as soon as plans can be prepared.

A resolution calling for such construction was introduced in the City Council Friday night and unanimously passed.

The railroad track is designed to relieve a congested condition along the water front. Merchants have complained for several years that warehouses have had difficulty in getting transportation facilities.

A resolution to the same purpose introduced five years ago met defeat at the hands of organized opposition.

### JAPANESE TO BUILD BIG WARSHIP.

VICTORIA, B. C., Jan. 22.—The keel for a 40,000 ton battleship will be laid down soon at Yokosuka by the Japanese navy, according to advices brought by the Sado Maru. The largest Dreadnought of Japan is the Settsu, 20,800 tons, to be launched at Kure in April. The new battleship will be armed with at least 14 12-inch guns. A special yard will be provided for the work.

### BUILDING ACTIVITIES AT RICHMOND.

RICHMOND, January 22.—Five large new business structures of brick, stone or concrete are under way in McDonald avenue. The new stores have nearly all been spoken for. There are only two vacant stores in the business section of Richmond.

The most pretentious of the new buildings is the three-story concrete structure of J. L. Moreland of Lodi, which is so near completion that the storerooms are already occupied. The building has a depth of nearly 200 feet in Eighth street.

H. A. Johnson has begun the erection at Fourth street of a three-story concrete business and apartment building.

### IN THE BANKRUPTCY COURT.

The Sunset National Oil Company, into which many laboring men sank their savings, let the creditors' petition in involuntary bankruptcy win by default in falling to demur in the United States District Court.

The concern's affairs will be ended in the bankruptcy court.

G. M. Warren, a Santa Clara carpenter, filed a petition in involuntary bankruptcy Saturday with liabilities of \$2,247; assets, none.

### CIVIL SERVICE EXAMINATIONS.

The United States civil service commission announced examinations as follows for the quartermaster's department at large: Marine engineer, \$90 a month; marine fireman, \$75; mate, \$75; rodman, \$75.

The following examinations will be held soon: Deputy shipping commissioner, \$900 a year; grazing examiner (male) forest service, \$1,200; aid in anthropology (male) national museum, \$900; press feeder (female) government printing office, Washington, D. C.; preparator, bureau of entomology, department of agriculture, \$600; translator, French and German (male) war department, \$900.

For application blanks and further information address the secretary twelfth civil service district, postoffice building, San Francisco.

### TO BUILD A TEMPORARY CELTIC HALL.

Out of 16,168 shares of stock on the books of the Celtic Hall Association, 12,230 were represented in the election Thursday night of directors. Prior to adjournment the old board decided to put up a temporary hall on the lot of the association, Fourteenth street near Market, at an approximate cost of \$10,000. This will be erected in time for the celebration of St. Patrick's day. The new directors are:

R. C. O'Connor, president; T. P. O'Dowd, vice-president; Thomas Doyle, secretary; John Donohoe, treasurer; finance committee—J. D. Condon, W. J. Dunne, P. Tierney; auditing committee—Mrs. J. J. Rogerson, Mrs. J. J. Donovan, Mrs. Butters-Wren; hall committee—J. B. Hagerty, John Donohoe, T. P. O'Dowd.

### JAPANESE PLAN RAILROADS.

TOKYO, Jan. 22.—Premier Katsura, in introducing the budget for 1911-1912 in the lower house yesterday congratulated the country on the greatly increased business reported the last year. To the gain of 480,000,000 yen the manufacturing industries alone contributed 140,000,000. The premier said that an equal, or even greater, economic development might be anticipated in the coming year.

The totals are: Ordinary receipts, 492,000,000 yen; extraordinary receipts, 59,000,000 yen; ordinary expenditures, 407,000,000 yen; extraordinary expenditures, 144,000,000 yen.

This year's naval supplemental appropriation is 14,000,000 yen. During the next six years 257,000,000 yen will be used for railway improvements, including the reconstruction as a broad gauge road of the line from Tokyo to Shlmaneski. The premier also outlined the government's plan for improvements in Korea.

School—Victoria, B. C.—School Board has instructed C. E. Watkins, architect, to prepare plans for a three-story school building and submit them to the board for further consideration as early as possible.

## Editorial Page.

Among other things relative to the development of California the announcement of the forest service that the government will put on sale a billion feet of standing timber in the Trinity National forest means much to the northwestern part of the state. It is the largest sale of timber ever offered by the forest service and marks the entry of the government into self-supporting commercial lumbering.

The northwestern counties of California have perhaps as fine a body of timber as is to be found anywhere. It is a fertile country of virgin wildness and awaits only the coming of the railroad to develop it into a productive country. The opening of this vast tract of timber land to the lumber industry will assure the completion of the railroad that has been already started and will mean a rapid growth for the region around Humboldt bay.

The present policy of the government forest service is conservation. This will mean the sale and cutting of timber without destroying the forest and the institution of this policy may serve to conserve the other forests which now cover the slopes of the northern counties. There is a great field yet untouched in the northwestern part of the state which awaits only the coming of the railroad.

Tuesday's issue of the San Francisco Chronicle contained an editorial on crimes against the ballot in which it took the stand that punishment in such cases should not be less than disfranchisement for life.

Further it went on to state that the crime of bribery was almost impossible to prove as it was always the word of a confessed criminal against the person accused. The subject under discussion was the wholesale purchase of votes as revealed by the investigations of Adams County, Ohio, and the consequent punishments that had been meted out to the criminals by the judge who has the matter in charge.

Strange it is that The Chronicle could not see the difficulty in the way of proof when the board of supervisors sold the trolley franchise and took money for other similar objects. The Chronicle is generally right whenever it does not matter on which side it is, but when the question is vital it can always be relied on to be on the wrong side and against the interests of the people.

The recent order of the Supreme Court in granting a rehearing to Abe Ruef would seem to be the last act in the travesty of justice connected with the graft cases of San Francisco. No one has been punished for the flagrant crimes committed and which have dragged the name of San Francisco in

the mire, but ex-Supervisor Coffey. He was convicted on the same evidence that all the others have been acquitted on and it is an obvious injustice that he should languish in prison when the other arch criminals go scott free.

Schmitz, Ruef, Calhoun, Glass, Halsey and the whole caboodle acquitted or freed on technicalities by higher courts! One poor devil that received a paltry bribe so unlucky as to be caught, unable to hire lawyers and secure influences great enough to get a rehearing, or find some flaw in the indictment.

Is it any wonder that the people should come to look upon justice as it is administered in the courts as a screaming farce and that they should demand a reform in criminal procedure and a recall of judges.

In all probability there is not a lawyer under the sun today that could have drawn an indictment and conducted the trial of the graft cases where higher courts could not have found an error sufficient in its mind for a reversal or for the granting of a new hearing.

On Tuesday last the House of Representatives passed the Post Office appropriation bill, which amounted to about \$257,000,000. As charges are made for transportation of the mail this department is supposed to be in a measure self-sustaining. Insofar as the actual work of the department is concerned, the labor performed by the employes, it is self-sustaining. The great cost is in the transportation of the mails by the railroads. But inasmuch as all the people benefit by cheap postage it is only a matter of putting out of one pocket into another if there is a deficit in the receipts of the department.

The demand for the parcels post means a great increase of business for the department if such a measure should be passed. The additional expense for handling such parcels would be comparatively small and in rural delivery districts it would mean a great accommodation to the public and a great increase in the postal revenues.

Express companies are in the main parasitic companies that have no real reason for existence so far as the public is concerned. The railroad companies could themselves handle the express business without additional expense of a separate corporation. With a parcels post to take care of the small packages it will mean the saving to the general public the money that now goes to the enrichment of the comparatively few stockholders of the express companies.

The acquittal of Kid Sullivan, the notorious pickpocket, seems to have had an immediate effect in a change of the police force.

As the evidence in the case showed,

Sullivan was regularly employed by some "jewelers" as a diamond salesman. These "jewelers" bear names similar to the pawnbrokers that often figure in police court matters. It took only two minutes for a jury of his "peers" to acquit him of the offense that was charged and so the citizen has been vindicated. The present chief seems to have the right attitude of mind and if his purpose holds as he has started out and he gets proper support the pickpockets will find it hard picking in this city.

Unless all signs fail the anti-race track bill which has just passed the Senate will become a law in the near future. It will mean the cessation of the gambling resort at Emeryville, than which no more demoralizing institution exists in the state.

The type of race horse that is being bred and trained for gambling purposes is of no particular use for anything else. Its utility ceases with its ability to run a short distance faster than any other horse. It is neither a saddle horse nor fit for driving and though it may be of the purest breed yet its capabilities are perverted to ignorable uses.

Perhaps no other form of gambling has such a hold on the American people and on the people of the West, as the race course. Its effects are demoralizing in every way.

The specious arguments advanced by the people interested in the business are of little practical value. All that is true in them is that the race course may encourage the breeding of the modern race horse whose use, as was said before, is of little or no value to mankind. Furthermore these arguments, if they were true, count for little against the misery that is wrought and the harm that is done by this gambling enterprise that has been fittingly termed "the sport of decadent kings."

The Merchants' Association has passed a resolution requesting the Mayor to call a convention of representatives of the various boards, commissions, commercial bodies, improvement clubs, and other associations for the purpose of discussing the advisability of creating a municipal commission to develop and execute a plan for municipal improvements as suggested by the San Francisco chapter of the American Institute of Architects. It is suggested that the Secretary of War, State Board of Harbor Commissioners and the Board of Park Commissioners be requested to co-operate in determining the scope and nature of the plan and in assisting in its preparation and execution.

## What the Panama-Pacific Exposition Will Mean To San Francisco and the Entire West.

"Beyond the Alps lies Italy," the great Carthaginian general is reported to have said to his soldiers to spur their enthusiasm and inspire them to the difficult undertaking of scaling the perilous passes of the snow covered mountains. And since the days of the invasion of Rome the inspiring epigram of the great Hannibal has been the theme of the high school graduate and the embryonic orator to point out the path to opportunity whose fields lie beyond the rugged mountains of adversity.

In a similar yet different manner might it be said, Beyond the Rockies lies California. For from the time that gold was discovered at Sutter's mill the land beyond the great highlands of the west has been the land of romance and opportunity, the mecca of the argonauts and adventurers who have followed the path of the declining sun to the shores of the limitless ocean whose waters reach to the underside of the world. Here on the western horizon of the continent has been the field of many activities. The gold discoveries of '94 brought to California the fortune hunters of the first great mining excitement. It blazed the trail across the desert and made known the wonderful climate beyond the Sierras. The great valleys were found to be productive and when the old trails of the wagon roads were laid with rails and the steam train became the traffic messenger between the west and the east, California became the great wheat producer of the world. So also has it become the great fruit, orchard and garden spot of the country. For not only has it become the chief seat of culture of citrous fruits in the United States but in such products as vine and fig and olive trees does it rival sunny Italy and fair Andalusia.

And now that a shorter waterway is soon to be completed through the Isthmus of Panama it starts upon a final stage of development which bids fair to be the crowning chapter in this romance of the western world.

San Francisco will celebrate the opening of the Canal in 1915. The National Congress has passed the resolution allowing this city to invite the

world to participate in a world's fair to be held at the Golden Gate. This is as it should be for it is to celebrate the breaking of the barrier which has isolated the Pacific ocean from the trade of the Atlantic. To hold the celebration at any other place than on the Pacific ocean would be an absurdity. It commemorates the meeting of the Orient and the Occident and where these two join at the great harbor of San Francisco Bay, their natural meeting place.

Statistics show that in the last five years 1,275 conventions have brought to Chicago 1,380,000 visitors who spent in that city 45 millions of dollars. Figuring on sporadic conventions and attractions such as these, how many people and how much money had the exposition ought to bring to San Francisco?

The mere monetary receipts, whether from the fair itself or from private business, will be of small value compared to the advertising the state and the west will get. This advertising will not only be of the pamphlet and poster kind that has been inaugurated to get the exposition. All, or nearly all, of the people of the United States have some idea of what California is from the stories they have read. When they visit the fair they will have the ocular proof of its possibilities, will see with their own eyes what the west possesses and there will be immediate and tangible results. The posters and pamphlets will become absolute facts and the land beyond the mountains will retain a goodly number of the people who come to view its wonders for the first time.

The recent order of the double tracking of the entire system of the Southern Pacific railway from the Missouri river westward in itself is a great event. The last year has seen the completion of the Western Pacific railway, a new transcontinental railway. The expenditure of 75 million dollars by the Harriman lines means that the Southern Pacific is preparing to meet the competition that will of necessity come and be able to handle their share of the traffic.

Every week brings forth some new

scheme for the development of transportation facilities of our interior valleys. New lines are under way for the great timber districts of the northwest. Doubtless the great lines of the northwest will also be extended into the state, for when the first ship from the great canal sails through the Golden Gate there is bound to be great transportation interests in the port of San Francisco.

As a colonization scheme the fair ought to be an improvement on the biggest colonization scheme ever thought of. Preparation for the fair will induce hundreds to come here and the fair itself, hundreds of thousands. Outside of the railroad and the Exposition itself millions of dollars will be spent and the tide of prosperity should commence to come when the first shovel full of dirt is turned over in preparation. The next four years should be primarily a period of construction. The builder should be the busiest man on the job. For the exhibits will have to be housed, the visitors will have to be accommodated and every improvement necessarily means building of some form or other. So that the years of the immediate future promise to repeat in a measure the experience of the last four years when the release of the insurance money made the rebuilding of San Francisco the marvel of the world.

So to us of the Pacific Coast who are accustomed to deal in superlatives, the fair signals the greatest event in our history—not the incidental celebration but the thing celebrated. We have always been the front door of the nation's future but now the canal will make us face both oceans and be the halfway point between the old world and the new. Immigration which now congests itself in the great city of New York will come in a great measure to San Francisco direct. From the last outpost on the western horizon we will be shifted to the center of things.

Population, commerce, manufactures, all things that make for a state's growth, are brought ten thousand miles nearer, on the free highway of the ocean, and thereby are brought more than ten years nearer, in time. It is a great day for California and the entire west and is at the beginning of its greatest decade.

## Three Of the Famous Missions Of Southern California.

The ever increasing use of the old Spanish Mission style of architecture throughout the United States, and particularly in the State of California, has made the subject one of more than ordinary interest and the publication of unique and pleasing examples of this type, as originally executed by the Franciscan Fathers in the early days, something that we believe will be valued by the profession. With this in view we are this week illustrating in our supplement of the Building and Industrial News three of the most interesting of the old Spanish Missions of Southern California.

The photographs from which the reproductions are made were secured by Mr. J. H. Golden, representing the Thomas Schneider Company of this city, some years ago while on a tour of the southern part of this state, New Mexico and Arizona. Two of the illustrations are of the famous old Mission San Juan de Capistrano located some seventy miles south of Los Angeles and considered one of the finest examples of the work of the early Franciscan Fathers in this state. The other two reproductions are of the Mission San Luis Rey, located near the town of Santa Anna and the Mission San Buenaventura, located near San Diego. At the time that the pictures were taken of the Mission San Juan de Capistrano some seventy miles from the nearest railroad and difficult of access and no pictures of it were to be had. At that time a number of fine views had been made but have not been widely circulated.

Two views of the Mission San Juan de Capistrano here reproduced show the main entrance and part of the side elevations and have been selected because of the clearness with which they show the treatment of the arch and columns. These portions of the structure, like all the rest, are entirely intact, owing to the lapse of time and the work of vandals, but serve to show the intent of the early constructors. But little in the way of preservation has been done in the case of the Mission San Juan de

Capistrano and the building stands today as it did at the time of its completion with the possible exception of an exterior coat of plaster. This has fallen off of the walls in many places and reveals the old adobe or mud brick of the walls. The workmanship is perhaps crude but considering that the men who erected such a lasting monument to their endeavors were not skilled builders but teachers of religion the results are but little short of marvelous. In considering the results it is also necessary for one to bear in mind the fact that these early builders were priests and not practical men engaged in any kindred line of work. There were no architects among them but many talented men who had been brought from their mother country the ideas of art and architecture that were even at that time centuries old and have still endured. It was these ideas that they incorporated into their early Missions, modified, it is true, to meet the requirements of the crude labor to be had and the still more crude materials of which their structures were to be built. The classical architecture of their native land was simplified, but still maintained its proportions and distinctive features. Much of the detail and many of the ornamental features of the architectural designs which these men carried in their mind's eye were either lost in the design of their Missions or proved too complicated to be incorporated in the buildings which were to be constructed with out the aid of skilled labor and with but the raw materials as found in their natural state. The structures, when complete, were severely plain but retained the grace and beauty of the style from which they were taken and more they have proven not only lasting but worthy of being duplicated in this progressive age.

The Mission San Juan de Capistrano was at the time of its construction in the heart of a rapidly growing district and one which depended much on its connection with the sea. The Mission became the center of a growing business in hides, which were gathered from the surrounding country and stored in the Mission until the arrival

of vessels which at infrequent periods carried away the goods and brought supplies.

The illustration of the Mission San Luis Rey shows a view of the entire structure. This Mission is located near the town of Santa Anna and was one of the most important centers during the early Spanish settlement. It is in a state of high preservation and affords one of the best opportunities for study. The location of the Mission is very picturesque and adds greatly to the general effect.

The Mission San Buena Ventura, which is also shown in this week's supplement, is located some little distance from the city of San Diego and is one of the most famous of all the California Missions. In recent years it has become a show place of the railroads and is extensively advertised. The reproduction of this Mission here shown was taken in perspective and includes a large part of the entire structure. The building is one of the largest of the early Missions and has endured the ravages of time in a most extraordinary manner.

---

Architect Le Baron R. Olive of Redwood City is preparing plans for the Redwood City Women's Club which is to be erected on a lot donated to the club by the management of the Dinglee Park subdivision of that city. The plans are being revised after the original set were figured and the contract awarded to Mr. Donneley. The amount for the clubhouse, as first planned, was found to be too much for the club in its present condition and hence the revision. As soon as the new plans are complete the work will be again figured and the contract let. The building according to the new plans will probably cost \$4500.

---

Architect Joseph Calen, 45 Kearny street, is preparing plans for the construction of a three-story and basement frame apartment house which is to be erected at once on the property in the north line of Pine street west of Jones. The building will contain twelve apartments and when complete will cost in the neighborhood of \$22,000. The working drawings are well advanced and figures will be taken on the work in a short time.

San Francisco

**Among the Architects.**

The Board of Public Works are now receiving bids for the construction of considerable street work, bids for which will be opened on February 1st and on February 8th and 15th. The Board are also advertising for figures for the construction of Section B of the Sunnyside sewers and for sewer work in San Bruno avenue. Bids for this sewer work will be opened February 15th. On the same date the Board will open bids for the furnishing and erecting of the structural steel for the Lowell High School which is to be erected in the block bounded by Hayes, Grove and Clayton streets. The building is to be a three-story Class A structure and when complete will be one of the handsomest school structures yet erected in this city. The cost of the building is estimated at \$350,000. The design was furnished outside of the offices of the City Department of Architecture, Architects O'Brien and Werner having been commissioned by the city to furnish the design.

Architect Thomas Smith, Lick Building, is preparing plans for an exceptionally fine frame apartment house which is to be erected at the northwest corner of Joice Place and Pine street. The name of the owner is withheld for the present as certain details of the transaction are not as yet fully settled. The new apartment house will be three stories high and will occupy one of the finest sites now vacant in the Fifty-Vara District. The corner of Pine and Joice Place is at the crest of a hill overlooking the bay and city and while the owners of the property plan to cut the earth away for an elevator entrance, thus avoiding a tedious climb of some fifty steps, the view will be in no way spoiled. The elevation on Pine street will have the appearance of a five-story building owing to the way the lot lays and a high retaining wall which keeps the earth from falling away. The apartments will be arranged in two and three-room suites and equipped with every modern convenience, as steam heat, electric elevator service and wall beds. The architect has completed the preliminary drawings and has received instructions from the owners to proceed at once with the working drawings and let the contracts as soon as possible.

No official report of the three juries of architects which were appointed to judge the plans submitted by twenty of America's foremost architects for the eight million dollars worth of new buildings which are to be erected for the State Department, the Department of Justice and the Department of Commerce and Labor, has as yet been received. The judges started their labors on the fourth of this month but as there were over two hundred sets of plans to select from, the discussion was expected to require some time.

Plans for the Southern Pacific Company's new depot at Sixteenth street, Oakland, are now complete but figures on the work have not been called for as yet. The plans were made in the offices of Jarvis Hunt, Chicago, and whether or not the work will be handled through his office or the local department of the company in charge of Mr. Barlow is undecided at this time.

Architect William Beasley, 127 Montgomery street, has completed the plans for a Class C apartment house which is to be erected for Marcus Moses on his property on the north line of O'Farrell street, east of Hyde, at a cost of \$20,000. The exterior of the building will be faced with a pressed brick and the interior will be handsomely finished with selected Oregon pine. The arrangement of the apartments is excellent and will afford the occupants the best possible conditions and will all be equipped with the most modern conveniences. The work will shortly be started.

Architect William Mooser, Union Trust Building, has recently awarded the contract for the construction of a large warehouse for the Sunset Door and Sash Company to Ferdinand Wagner of this city for \$39,000. The warehouse is to be erected on the property of the mill company at Stockton and when complete will be one of the largest warehouses erected in Stockton. The work will be started at once.

Architect George de Colmesnil has bids under advisement for the construction of a one-story frame nickelodeon which is to be erected in the west line of Devisadero street, south of Fell street, for M. C. Hassett. The plans call for one of the most complete little show houses erected in that section of the city and one that will afford its patrons the maximum amount of comfort. The work when complete will cost in the neighborhood of \$6500.

Architect Benj. G. McDougall, Sheldon building, is preparing plans for the extensive remodeling of the Hanford theatre block, which is owned by Messrs. Robertson and Rawlins of Hanford. The remodeling will call for an addition of two stories to the present building which is a brick structure, and the rearrangement of the interior of both the theatre and the stores which now occupy the building. The work is estimated to cost \$22,000.

State Engineer Ellery has been instructed by the Advisory Board of the State Engineering Department to prepare plans and specifications at once for the San Francisco Armory which is to be erected on the old Southern Pacific Hospital site at the corner of Fourteenth and Mission streets. This was the first meeting of the Board since the

inauguration of Governor Johnson. Besides Governor Johnson there was present at the meeting Harbor Commissioner W. V. Stafford of this city, R. Hatch, superintendent of the State Hospitals, and State Engineer Ellery. The new building will cost in the neighborhood of \$380,000.

The Northwestern Pacific Company has completed their plans for the new passenger depot which is to be erected in San Anselmo and the building will be one of the most artistic of the many new stations erected along the line of that company. The design shows a Mission style building constructed entirely of stone, with a tile roof. It will contain two large waiting rooms on the ground floor. The new building will be located just north of the present structure and ground will be broken as soon as the rains cease.

An interesting news item appeared in the Riverside Press, which states that Architect Bertram G. Goodhue, of San Barbara and New York City, has been employed by the Buildings and Grounds Committee of the Panama-California Company to design all of the buildings which are to be erected for the San Diego Exposition. Architect Goodhue states that all of the exposition buildings will follow the Spanish Mission style of architecture.

Architect Arthur D. Nicholson, Pacific Building, will move his offices in that building on the first of the coming month and will then be located at 21 Montgomery street. The new office of Mr. Nicholson will be on the second floor of the Umben Building and will be opened to the public on and after the first of February.

G. Villa & Co., 1377 Grant avenue, are erecting a three-story frame building to contain six flats, on Grant avenue 81-3 east of Lombard. M. Bacigalupo, 11B Russell street, is the architect of the building which will be constructed by day's work. This is another substantial addition to the popular North Hill district. The building will be equipped with all modern appliances, including finished in hardwood, mosaic tile, marble, terrazzo steps, and have all the conveniences of modern construction.

Plans are now being figured for a five-story and basement brick apartment building to be erected on 8th street, between Jones and Leavenworth. August Nordin, Mills Building, is the architect and the plans call for a modern building finished in pressed brick and terra cotta, with all conveniences of the up-to-date high-class apartment house. This will be a splendid addition to the downtown district that has been slow in building up. Robert Jones is the owner and the estimated cost \$60,000.

Plans are now being figured for a contract will be awarded on March 1st for the construction of a six-story basement brick and stone jail to be constructed for Lassen County at Susanville, this state.

The architect for the work is J. De Lonchant, Reno, Nevada, and plans may be secured from the clerk at Susanville.

## IMPROVED GAS GRATES.

The Pure-Air Range and Grate Co. of Oakland and San Francisco are placing on the market their new invention, the Hamilton Pure-Air" gas grates, logs and heaters, which fills a long felt want. These gas appliances are designed to overcome entirely the objection to the use of gas as a fuel for heating purposes, and judging from the many letters and testimonials on file in their office from parties who are using these new appliances in their homes, they certainly have accomplished this result. The only objection heretofore to the use of gas as a fuel for heating purposes, was that it not only consumed the oxygen from the room where the heater or grate was located, but that it gave off a very offensive odor. All this is overcome by the Hamilton Pure-Air gas grates, logs and heaters.

In place of burning oxygen from the room to support combustion, as in all other gas appliances, the Hamilton Pure-Air appliances are provided with a pipe or conduit from external atmosphere that supplies pure fresh air at all times direct to the burner to support combustion, always insuring perfect combustion and without odor, this pipe or conduit not only supplies pure fresh air from out of doors to support combustion, but supplies a heating chamber, composed of a double back of metal, whereby a current of pure fresh air, induced by the heat, is drawn through this pipe or conduit from outside of the house, passing over the heated surface, and into the room, thus improving the atmosphere, and heating and ventilating the room at the same time. Attention is called to a cut of this appliance in another part of this paper.

These appliances are beyond any experimental stage, hundreds having already been installed. They received the highest award at the California State Fair last fall at Sacramento as being the highest type of mechanical perfection, and covering the most scientific principle of heating and ventilating. When this new system of heating was first introduced in San Francisco it was found that the San Francisco Building ordinance prohibited the installation of gas grates unless they were provided with a flue or chimney, but after a most rigid examination and thorough test of this new principle in gas heating appliances an amendment No. 1901 was prepared to the San Francisco Building Laws and passed by the Board of Supervisors December 5, 1910, permitting the installation of these new appliances without FLUE, CHIMNEY or other VENT.

This is only another indication of how this principle of heating is looked upon in San Francisco as well as other cities wherever introduced. Their San Francisco Office is at Room 418 Mechanics Bank Building, Mason and Market streets, and 247 Bacon Block, Oakland, Cal.

A postal to either address will bring a booklet or a representative, explaining fully this system. These appliances can be installed in old or finished buildings easily and at very little cost over new buildings. We would suggest to all those who are contemplating building who want the best, to investigate this new system of heating and have the intake installed at no additional cost while the building is in course of construction.

**Factory**—Los Angeles, Cal.—Architect Krempel & Erkes are preparing architectural plans for a building to be erected at Huntington Beach to constitute new factory of Holly Sugar Co. Machinery plans have been made by engineers of the company and Carl Leonardt has contract for building on a unit basis. Factory will cost \$400,000.

## Three Competitions Settled.

New Government Buildings in Washington are to be Designed by New York City Architects.

Three fine government buildings are to be erected in Washington, south of Pennsylvania avenue, between Fourteenth and Fifteenth streets. The competition for plans recently closed, the three successful competitors all being prominent New York architects. The award for the State Department building, which will cost \$2,200,000, was given to Arnold W. Brunner, whose attractive drawings aroused much interest. The Department of Justice Building, estimated to cost \$1,900,000, went to Don Barber, while the firm of York & Sawyer captured the largest of the three, the Commercial and Labor Building, which will be constructed at a cost of \$3,650,000.

The designs, as adopted by the committee of award, are not necessarily final. The successful architects will meet in Washington in the near future to revise their designs wherever practical, so that the group of three buildings will form a harmonious whole.

The central position will be given to the Department of Commerce and Labor Building, which will be a structure of immense size, with a length of 503 feet. The Department of Justice Building will have a frontage of 325 feet on Pennsylvania avenue and 300 feet on Fifteenth street. The State Building will have the same frontage on Pennsylvania avenue and extend back a trifle more than 300 feet. The two buildings will be three stories high, and the Commerce Building five stories. The Commerce Building will cover an area of 90,000 square feet, the State Building 72,000 square feet and the Justice Building 57,000 square feet.

White marble, admirably adapted to the designs and also to the climate of Washington, will be the material employed in constructing the three buildings, which will thus harmonize with the House and Senate office buildings, the new municipal building and the wings of the Capitol.

The accepted designs are all of the simple classic type. The Doric order was employed by Mr. Brunner, also by York & Sawyer, while Mr. Barber adopted the Ionic, using massive columns four feet in diameter and running up some forty-five or fifty feet to the full height of the building. These will constitute the striking feature of the facade.

A large aquarium, placed in the center of the immense structure, will distinguish the Department of Commerce and Labor Building from the others. The entrance floor level will be formed by the upper tier of tanks, the main floor being dropped a few feet so that it may be overlooked by the upper tank gallery, the lower tank gallery being placed half a story below. By this arrangement all the tanks, more than a hundred in number, will have an overhead light, and the entire aquarium kept within reasonable limits as to area.

The site for the Commerce and Labor Building is lower than the two others and will be elevated on a two-story architectural basement, thus making the principal floor of the structure on

the third floor above the street. It will contain a total of 450 rooms and besides accommodating the Department of Commerce and Labor will also be the headquarters of the bureaus of corporations, census, lighthouse, immigration, coast and geodetic survey, navigation, fisheries and steamboat inspection service. Moreover, there will be a large library. The total floor area is over 300,000 square feet, of which the census bureau alone will occupy 75,000 square feet.

The State Department Building will contain 325 rooms, the entrance being at the western end. The central portion has been treated in a monumental way and will contain the great state dining room, a reception room and the international conference room, which will be from the ground floor by an imposing staircase. The greater portion of the north facade will be occupied by the library.

The most important interior feature of the Department of Justice Building will be the great law library, which will occupy 7,500 square feet. The building, the nearest of the group to the Treasury and Municipal buildings, will contain 225 rooms.

A heavy task was imposed upon the three committees of awards, owing to the great number of plans submitted. Each competing architect for the two smaller buildings was required to submit six drawings, including the elevations and interior plans, while eight drawings were required of each architect competing for the Commerce and Labor Building. Twenty architects were invited to compete for each building, but one retired from the Commerce contest. This means that 392 drawings had to be considered by the committees.

Of the fifty-nine competing architects, twenty-eight were from New York, the others, including architects of Boston, Philadelphia, St. Louis, Chicago, Washington, Cleveland, Detroit, and one from San Francisco. Not only did the New York competitors carry off all the awards, but the majority of those whose designs were credited with honorable mention came from that city. Those who received the consolation honors were James Gamble Rogers, Warren & Wetmore, and Harold Magonigle, all of New York, in the State Building contest; Cass Gilbert and Percy Griffin of New York and Par, Thomas & Rice of Boston, for the Department of Justice, and for the Department of Commerce Building, Tracey, Swartout & Litchfield, Max Friedlander and George Post & Sons, all of New York.

## Among the Architects.

(From the Los Angeles Builder and Contractor.)

### Highland.

Plans for a new and costly packing house to take the place of the building destroyed recently by fire at Highlands, will at once be drawn for the West Highland Citrus association. H. H. Jackson, manager of the plant, states that a reinforced concrete building with tile roof and cement floors will be built. The company has suffered little financial loss through the fire, as the building was fully insured. The new structure will cost about \$25,000.

### Long Beach.

F. W. Hicks of Long Beach is taking bids for the construction of a two-story twenty-room apartment house to be erected on Linden avenue. It will be 40x80 feet. The cost will be about \$5000.

### Monrovia.

Tital Bros., 129 East Orange street, have completed plans and awarded the contract for the erection of a seven-room bungalow on White Oak near Primrose street for Mrs. Bessie Rogers. The cost will be \$3000.

### Porterville.

Architect Benjamin McDougall of San Francisco is drawing plans for a two-story Mission style hotel building to be erected at the corner of Main and Olive streets for Anton Konda of Porterville. The cost is estimated at \$45,000.

### Dedlands.

S. G. Randall of Redlands is having plans drawn for a one-story brick clubhouse to be erected at the corner of Vine and Sixth streets for the Redlands Motorcycle Club. The building will be 40x26 feet, with red brick walls and composition roof. The cost will be over \$3000.

### Riverside.

Carlson Bros., Magnolia avenue, Arlington, have had plans drawn for a one-story brick building to take the place of their office and shop recently destroyed by fire. It will be 57x120 feet, with concrete foundation, brick walls, composition roof and cement floors.

### Ontario.

W. A. Freemire, 114 West A street, Ontario, president of the Ontario chamber of commerce, has had plans prepared by a Los Angeles architect for a tourist hotel to be erected in Ontario. A site has been secured at the corner of Euclid avenue and G street, and a stock company will be formed to finance the project. It is expected to have the building under way before spring. The hotel will consist of a main building three stories high, surrounded by a group of cottages. All the buildings will be of frame and will be finished in a costly and up-to-date manner.

### San Bernardino.

Architect F. T. Harris, 14 Redlands National Bank building, Redlands, has prepared preliminary designs for a new Court House building which the supervisors are planning to erect on the site of the old building. The new structure will be two or three stories high, and will be of reinforced concrete with a basement and fireproof vault. The first two stories will accommodate the county offices and the third floor if erected, will contain the superior court rooms.

### San Jacinto.

The directors of the First National Bank of San Jacinto have commissioned architects to prepare plans for a two-story bank and lodge building to be erected at the corner of Main and San Jacinto streets. It will be 45x90 feet, with pressed brick exterior and composition roof.

### Phoenix, Ariz.

L. A. Amirault of Phoenix has the contract for the construction of a three-story brick store and office building on First avenue near Adams street for Peter Mohn. It will be 60x100 feet, with concrete foundation and basement, pressed brick exterior and composition

MISSION SAN BEUNA VENTURA  
Near San Diego, Cal.

MISSION SAN JUAN de CAPISTRANO  
South of Los Angeles

MISSION SAN JUAN de CAPISTRANO  
South of Los Angeles

MISSION SAN LUIS REY  
Near Santa Ana, Cal.

roof. The cost will be \$40,000. The same contractor has been awarded the contract to erect a one-story brick store building at the corner of Gregg and Van Buren streets for John Second. It will be 50x100 feet with pressed brick front, plate glass and copper windows, and two modern store rooms.

Whittier.

A. C. Davis, 321 South Bright street, has the contract for the erection of the new Presbyterian church at the corner of College and Bright streets. The total cost will be about \$6,000.

**THE LITTLE FACTORY.**

In the city of Memphis, last year, a great advertising campaign was started for "municipal publicity." A large committee of prominent citizens was formed, speakers were brought to address the Business Men's Club, and at last a big mass meeting was held, and fifty thousand dollars raised to advertise Memphis in the best possible way. Leading advertising agencies all over the United States competed for the work, and submitted plans and propositions for the most productive expenditure of this publicity fund. The agency to which the contract was finally awarded presented as its central idea the plan of getting all sorts of data about Memphis—its opportunities in the way of raw material, labor, selling markets, distribution, low cost of production, and so forth—and the comparison of these advantages with those of other towns.

At the end of a month, during which four energetic committees of business men investigated and summed up the facts in their respective lines and localities, Memphis discovered things about itself. As one man put it, "Memphis is literally supported and upheld by solid columns of facts and statistics." The advertising firm went to work on booklets, magazine "spreads" and "follow-ups" and Memphis expects great results during the next year. But one point surprised everybody. It had been thought by many that the finest and completest way to advertise, after all, would be to hold a big convention, with a thousand delegates from all over the country, and thus show Memphis to the world. It sounded well; but when the statistical workers took it up, it did not stand investigation. These experts reported that such a convention would not be of as much value of the city as the establishment of a little new factory, providing work for twenty men. The money for the expenses of a convention, and the backing it would receive, would be much better employed, they said—and they proved their point—in helping some capable man to establish a small factory.

Here were their proof figures. A convention of one thousand men in the city, for three or four days, would amount to the same as three or four thousand men in the city for one day, certainly. But they would not be Memphis men, or even profoundly interested in Memphis. They would be "here today, and gone tomorrow." On the other hand, twenty men, working and living in the city three hundred and sixty-five days in the year, would total up to a convention of seventy-three hundred for one day—about twice as many as the other proposal. In addition to that, every man would be an asset to the town, a worker, a builder,

a citizen, with a home in the community and a stake in the general prosperity. Every dollar he earned would be spent in Memphis. The little factory, even for one year, would be twice as valuable as the big convention.

Many people would never have understood this. It took the experts to show it to them. Most people need to be shown, in every place, the value of the small, ordinary individual. In a factory of twenty workers, hardly one man out of twenty, for the most part, ever realizes the value of his place in the world. He does not think of himself as an asset to the town. If a convention takes place in the biggest hall in the city he stares at the important-looking delegates, and sighs because he is only an obscure worker. Yet really he is twice as important to the city's prosperity as they. Each man in a factory doing honest, thorough work is worth more than he knows. He is a part of the foundation of the community life. He counts; he belongs.—Forward.

**THE CONSOLIDATION OF GREATER NEW YORK AND THE BENEFITS TO NEW YORK CITY AND THE ADJACENT COMMUNITIES INCLUDED IN THE CONSOLIDATION.**

The Merchants' Association of San Francisco recently wrote to the Merchants' Association of New York and asked its views on the following questions:

1. Has the Borough of Brooklyn been benefited or injured by its consolidation with New York City?
2. Has the Greater New York consolidation been a benefit or not to the various communities outside of New York City that were included in that consolidation?
3. Has New York City itself been benefited by the consolidation, and, if so, why?

The following reply was received from the Merchants' Association of New York:

New York, December 31, 1910.

L. M. King, Esq., Secretary,

The Merchants' Association of S. F., San Francisco, California.

Dear Sir:

Your favor of December 24th in relation to the result of consolidation of the various municipalities now embraced within the City of New York duly received. You ask,

(a) Whether the Borough of Brooklyn has been benefited or injured by its consolidation.

(b) Whether the consolidation has been a benefit or not to the communities outside of New York that were included.

(c) Whether the City of New York has been benefited. And if so, why.

Each of the outlying boroughs has been locally benefited, and the consolidated city has been otherwise benefited for the following reasons:

Before consolidation the then City of Brooklyn had borrowed all the money possible under its debt limit and had a very high tax rate. Despite this fact it was unable to provide for pressingly needed public improvements. Its pavements, school buildings, sewer system and water system, as well as all other public properties were in bad repair, and there was pressing need of large outlays to put them in proper condition.

Despite the fact that the large unoccupied areas and the low land valuations of Brooklyn made it the natural

and most economical site for the residential quarter of New York, the lack of adequate means of transit across the East River greatly hampered its development, and thereby prevented any considerable increase in taxable values. This, of course, taken in connection with the city's financial straits, prevented it from obtaining the revenues without which essential public improvements were impossible.

So long as Brooklyn was independent it was impracticable to provide the bridge and tunnel connections with Manhattan upon which Brooklyn's development necessarily depended, for the reason that Brooklyn could not pay its share of the very heavy cost. One of the first results of consolidation was the planning, and later the construction of three additional bridges and several tunnels, and an immediate and enormous increase in the taxable valuation of undeveloped Brooklyn real estate, together with a very large movement of population into that borough.

This great increase in values provided the fund necessary for local street improvements (which in the first instance were provided by assessment on voluntary petition) and also so increased the values of developed property as to supply the fund for needed public improvements without an increase in the tax rate. Moreover, extensive additions and improvements were made to the schools, the dock properties, the sewers and the water system upon the revenue and the general credit of the city as a whole.

Thus as the result of consolidation Brooklyn has gained enormously in population, in taxable valuations and in the aggregate of revenue applicable to public purposes. In addition to this the outlays made for public purposes in the borough and paid out of the general revenue have considerably exceeded the amount derived from taxation within the borough, so that Brooklyn has benefited, not only by the increase in the revenues proper to its own territory, but also by a portion of the revenues derived from the general credit of the city as a whole.

Generally speaking, the same statement of fact applies, although in a lesser degree, to the boroughs of the Bronx, Queens and Richmond, each of which has benefited greatly by the provision, on the general credit of the city, of better and rapidly improving means of transit, and the provision of public improvements not practicable for the unaided resources of the local territories.

The city as a whole has reciprocally benefited by the distribution of its population over a much more extensive area than formerly possible, and the large expansion of its resources, due to increased borrowing power, by reason of the great increase in aggregate values, from which sources have been derived the funds required for the comprehensive public improvements alluded to.

To sum up, the dispersion of population over a much greater area, by reason of the provision of transit facilities, has greatly increased the aggregate resources of the entire area without materially increasing the tax rate.

Trusting this will afford you the information desired, we remain,

Very truly yours,

THE MERCHANTS' ASSOCIATION OF NEW YORK,

By F. B. DeBerard.

## THE DEAD PUSSY CAT.

(A little girl has found a dead kitten in the street.)

You's as stiff an' cold as a stone,  
Little cat!

Dey's done frowed out an' left you  
alone

Little cat!  
I's a-strokin' you's fur  
But yon don't never purr,  
Nor hump up anywhere,

Little cat!  
W'y is dat?  
Is you's purrin' an' humpin' up done?

An' w'y fer is you's little foot tied  
Little cat?

Did dey pisen you's tumnick inside,  
Little cat?

Did dey pound you wif bricks,  
Or wif big nasty stucks,  
Or abuse you wif kicks,

Little cat?  
Tell me dat.  
Did dey holler w'enever you cwied.

Did it hurt werry bad w'en you died,  
Little cat?

Oh! w'y didn't you wun off an' hide,  
Little cat?

I is wet in my eyes —  
'Cause I most always cwies  
W'en a pussy-cat dies,

Little cat,  
Tink of dat—  
An I's awfully solly besides!

Dest lay still dere, down in de sof'  
groun'

Little cat!  
W'ile I tucks de gwien gwass all aroun'

Little cat,  
Dey can't hurt you no more  
W'en you's tired an' so sore;

Dest sleep twjet, you pore  
Little cat,  
Wif a pat,

An' fordet all de kicks of de town.

## THE OLDEST PRINTING PRESS.

Typography, or the art of printing from movable type, was invented in Europe about the middle of the fifteenth century. Beyond this fact, the history of this far-reaching industry is very uncertain. It is generally considered that cut wooden type was first used, then cut leaden type, and that afterward cast type was employed. William Caxton, in 1476, was the first to practice printing from movable type in England. The oldest type of printing press which, by the way, is now in the South Kensington Museum, is the actual machine with which Benjamin Franklin worked in the year 1730. It is constructed of hard wood, mortised together; it carries two horizontal rails, upon which slides a carriage supporting the frame of composed type, called the form. The type was inked by two large pads, or balls, with ink on their surfaces, the distribution of the ink being performed by working the pads together and then applying them to the form.—The Strand.

While a minister was preaching in a Western village a stranger with a big ear trumpet entered the church, sat down on the pulpit steps and turned the big end of his trumpet upward. The minister's 4-year-old daughter who was present kept her eye on the stranger until the congregation was dismissed. On the way home she said: "Papa, do you think that was Gabriel?"

## ON BEING OUT OF WORK.

Am the fall guy  
You see,  
Some Wall Street gentlemen desired to  
break some other  
Wall Street gentlemen,  
And incidentally  
They broke  
My boss—with one stroke—  
And me  
At the same time.

Consequently I'm out of a job,  
In debt—and though perfectly respect-  
able,

Just about desperate enough  
To throw a bomb.  
Yes, I know I should be calm  
And placid and patient, like a psalm.  
But you see,  
You can't blame me,  
Very much, because, after all,  
It's us kind of people that are the fall  
Guys for everything.

We pay the higher cost of living,  
We're forever giving  
Somebody something for nothing.  
And when they feel,  
Ill at ease or mean  
They turn on us and clean  
Break us. Yes, I'm keen,  
For this present state of things.

I tell  
You, it's hell,  
To be out  
Of a job; in doubt  
Where the next meal is coming;  
To go bumming  
Around begging for work,  
With the kids at home and the wife  
Making you hate your life  
Because you cant do better for them  
Than you do.  
I'm no shlrk,  
I'm no charity case—I want work.  
I'm willing, honest, true  
To my employer—when I have one.

Yet I get  
Out of a job and in debt,  
And desperate because  
Somebody goes after  
Another big grafter  
And gets  
Me.  
—Berton Braley, in December Pacific  
Monthly.

Emil Seldel, the mayor of Milwaukee, said in a recent speech: "Some people hold that alcohol is to blame for the poverty and wretchedness we see around us. That is as illogical a view as one I heard put forth by a newsboy the other day. As I waited on a corner for a car a bootblack said to a newsboy: 'Bill, how is it the sea don't run over when all the rivers runs into it?' 'Why, ye chump,' Bill answered, 'don't ye know the sea is full of sponges?'"

George Washington Primrose, thinking of matrimony and trembling on the edge, wrote to his married brother, Rufus, for advice. "Dear Jawje," wrote Rufus in reply, "every man shud marry. A wif is a man's gratest gift. She suthes his troubles, dubbles his joys and helps him every wch way. The married life is the only lif specchully when you is forchunat enuff for to git a fool of a wif like mine. P. S.—Mandy has jess stept out. You blame fule you, Stay Single!"

## OPPORTUNITY.

Master of human destinies am I!  
Fame, love and fortune on my foot-  
steps wait.  
Cities and fields I walk; I penetrate  
Deserts and seas remote, and passing  
by  
Hovel and mart and palace, soon or  
late  
I knock unbidden once at every gate!  
If sleeping, wake; if feasting, rise  
before  
I turn away. It is the hour of fate,  
And they who follow me reach every  
state  
Mortals desire, and conquer every foe  
Save death; but those who doubt or  
hesitate,  
Condemned to failure, penury and woe,  
Seek me in vain and uselessly implore.  
I answer not, and I return no more.  
—JOHN J. INGALLS.

Investigation into the rotten-egg industry in New York has developed that the use of such eggs by bakers is universal, because it is well recognized that they make cake light and airy.

But such airiness at risk of health should be suppressed by the officers of the law.

W. O. Hart of New Orleans tells this story: An old negro was brought up before the judge charged with chicken stealing, and when the usual question was propounded, "Guilty or not guilty?" he said: "I don't know, boss; I jest throw myself on the ignorance of the court."

An Italian had drifted down to Texas and was working with a gang at railroad construction. He had been told to beware of rattlesnakes, was assured that they would always give the warning rattle before striking. One hot day he was eating his noon lunch on a pine log when he saw a big rattler coiled a few feet from him. He eyed the serpent and began to lift his legs over the log. He had barely got them out of the way when the snake's fangs hit the bark beneath him. "Son of a gunal!" yelled Pietro. "Why in hell you no ringa da bell?"

## BUILDINGS FOR WILLOWS.

WILLOWS, January 25.—P. H. Green, cashier of the Bank of Willows, has entered into an agreement with A. D. Pieper to erect a building for him on the corner of Walnut and Butte streets.

The building will be a two-story brick and will have a concrete basement. The dimensions of the building will be 30 by 100 feet. The lower floor will be used by Pieper for a general merchandise store, while the upper floor will be made into offices.

This is the first move made by the property owners of Walnut street to keep the business from centering on Sycamore street and it is believed that this is only the first of a number of good structures that will be erected on that street during the coming spring.

School Buildings—Los Angeles, Cal.—Working plans for the first four of academic buildings which are to comprise the new campus group of Occidental College in Eagle Rock Valley are nearing completion in offices of Myron Hunt, architect.

## LOUISIANA'S SULPHUR MINES.

It seems rather odd that so familiar a substance as sulphur should be found in paying quantities in very few localities. According to the Logical Point it is now principally supplied to the world from one mine, located in Calcasieu Parish, Louisiana.

Until five or six years ago Sicily was the chief source of supply, but since the discovery and perfection of the patented process employed in the Louisiana deposit, the Sicilian mines have forfeited their monopoly of the sulphur production of the world.

Sulphur was discovered in the southwestern part of Louisiana in 1858, while drilling a well for oil, but no notice was taken of its value until after the Civil War, when several unsuccessful attempts were made to sink a shaft to the sulphur deposits. It is the largest sulphur mine in the world, the sulphur production of Sicily coming from some 700 mines.

In 1870 a French company began work on an enormous scale to sink an eleven-foot shaft to the deposit—500 feet beneath the surface. It was necessary to have cast in France the rings to be used for the caisson, as no foundries in the United States were capable of making satisfactory castings of the dimensions required.

These were eleven feet in diameter and five feet long. Each casting weighed seven and a half tons. A conservative estimate places the cost of transportation alone on the material and machinery brought to the mine location at \$300,000. This company never reached a sufficient depth to insert any of the cast-iron rings.

Several attempts were made by other companies and altogether three or four million dollars were sunk in the mine. But while all of these attempts to secure the sulphur by shaft mining failed the subject was discussed in the scientific papers and came to the notice of Herman Frasch, a scientist who had some years previously invented a process for desulphurizing Lima oil, a task on which the governments of several European nations had chemists at work for years.

This process was eventually sold to the Standard Oil Company, as it had anticipated the successful attempt to desulphurize the oil commercially and had in storage 25,000,000 barrels of Lima oil, for which it had paid 14 cents a barrel, as it was good only for fuel previous to the invention of Frasch, which not only desulphurized the oil in commercial quantities but the process added practically no extra expense in refining.

It is a significant fact that the Standard Oil Company today uses the same process in almost every detail. Frasch was induced to try his inventive genius on the sulphur problem. The success with which his effort was rewarded is best told in stating that the assessment of the mine in 1910 was \$4,660,000.

The sulphur obtained from this mine, while not only almost chemically pure (the average test being 99.8 per cent), contains not a trace of either selenium or arsenic, both of which are very objectionable. The principal manufacturers of sulphuric acid use this sulphur to the exclusion of the cheaper pyrites, on account of there being absolutely no danger of arsenic poisoning, as might be the case if pyrites was used.

## FIREPROOFING A MODERN BUILDING.

There is only one way to make a building fireproof and that is to do as was done in the Singer office building: Use no material in its construction which can burn.

My advice to the owners was to omit wood entirely. I wanted to be able to say that there was not enough wood used in its construction to make a lead pencil of and this ideal was very nearly realized.

When a fire occurs in such a building it is only necessary to confine it and let it burn out. Most of the slight damage from this fire could have been avoided if the doors of the room where it occurred had not been opened.

People generally do not realize what a tremendous amount of wood is used in the make-up of the ordinary so-called fireproof building. The walls, partitions and floor systems of such buildings may be fireproof, but there is so much other inflammable material in them that they may be likened to huge stoves well stocked with fuel. The stove may not burn, but the fuel will and the heat developed may be so great as to wreck the stove.

It is hard to start a fire in one of these buildings because most of the fuel lies directly on the masonry floors, but under exceptional conditions, such as a general conflagration, when great heat is applied from the outside, or when a fire gets well under way inside before it is discovered, the floors will ignite and once having caught will burn fiercely.

In likening these buildings to huge stoves I do it advisedly. They are in fact compound stoves, one above the other, all properly connected to the flues formed by the elevator shafts and stairways and supplied with outside dampers in the form of windows.

The fire in the Parker Building showed how rapidly fuel thus disposed can burn, and how difficult it is to fight such a fire when it once gets well under way. It is only a question of time when other buildings of this kind will be destroyed by fire as the Parker Building was.

I calculate that about three-fifths of the wood which enters into the construction of the ordinary fireproof building is in the floors. These are in two layers fastened to wooden sleepers. No building thus equipped should be rated as fireproof: it is at best but semi-fireproof. I think that wooden floors should not be allowed under any circumstances in buildings which are over six stories high. With the wooden floors omitted, almost all danger from fire disappears, for the other woodwork is so scattered and of so little bulk that no serious damage could be done by it.

The great defect of our present building law is that it discriminates in favor of combustible construction.

Fireproof buildings are made unnecessarily expensive by requirements for the protection of the metal, and non-fireproof building is encouraged by permitting the use of walls too thin to act as an effective fire check.

The necessity for the protection of the metal work of a building is in proportion to the amount of wood used in its construction; if the building law was framed accordingly, the cost of fireproof building might be greatly lessened and that kind of construction

correspondingly encouraged. Where wooden beams are used, it is evident that brick walls should be much thicker than in buildings where the floors are of non-combustible material. If this fact also was recognized by law, a handicap would be placed on the use of combustible material which would tend to equalize the cost of the two methods of construction and to encourage the use of non-combustible material.

At present we allow walls only one foot thick which are fifty feet high, when wooden beams are used; these beams are usually let into the wall eight inches and the walls are also often weakened by chases and flues; it needs no argument to show that walls so thin and so cut up have not the necessary stability to withstand a conflagration.

With such foolish regulations in force, is it any wonder that our annual fire losses equals one-half of the cost of new construction?—"Insurance Engineering."

## WAGES IN SOUTH AFRICA.

General labor conditions in Natal are not such as to attract white labor. For managers and clerical positions there is a small demand; for white labor of the menial class there is an exceedingly limited demand, as they must come in direct competition with the native and free Indians, all of whom have but few wants and live on cheap food, which places white labor upon a most undesirable footing. Practically all the work is done by natives and Indians.

In agricultural pursuits last year only 550 white laborers were employed, who received \$15 to \$25 per month. White overseers of sugar estates received 140 to \$150 per month. On farms native men are paid an average monthly wage of \$3.65; females, \$1.78; free Indians, \$4.87 to \$9.73 and their food, while indentured Indians, males, under five years' contract, receive a graduated wage from \$2.43 to \$3.65; females, \$1.21 to \$1.82. The indentured Indian receives food, consisting chiefly of rice and dholl, housing, and medical attendance in addition to their wage. On farms during 1908 there were employed 16,086 native men and 3,675 women, 1,335 free Indian males and 263 females, and 14,115 indentured Indian males and 5,712 females.

## NEW CEMENT PLANT IN MEXICO.

According to a Mexican newspaper, an American company having a parent plant in the United States is constructing a cement factory at Toluca, 40 miles from the City of Mexico, which purposes to turn out a cement equal to the imported product. The factory has been under construction since September, 1909, and will cost, when completed, including a laboratory for testing the output, \$500,000 gold.

**Church**—Pendleton, Ore.—Catholics are to erect a \$30,000 church building of stone construction to be erected near the location of the present church.

**Fresno**.—The contract for a \$50,000 apartment house, to be completed within five months, has been let by Drs. D. H. Trowbridge and J. L. Maupin. The building will be erected on the southwest corner of Tulare and N streets. W. G. Trewitt of Hanford is the contractor and B. G. McDougall of San Francisco, the architect.

## A SKYSCRAPER FIGHT.

One of the most interesting battles which has lately taken place in behalf of a restricted skyscraper is that which has been waged in the last few weeks in Los Angeles. These battles are not unique in the United States—not as frequent as perhaps they should be; but since one does not readily associate California with limitation and restriction, it is surprising to find the battle fought here. Yet Los Angeles is one of the few cities in which there is an ordinance restricting the height of buildings. The limit is placed at 180 feet. The present contest arose through the petition of Hulett C. Merritt for permission to erect a building which, including its cupola, should have a height of 233 feet. Mr. Merritt, who is a prominent resident of Pasadena, proceeded to erect his structure at the corner of Eighth street and Broadway. It is to be made of marble; an office building housing the Sierra Madre Club, containing "the finest mining reference library in the world." The petition went in regular course to the legislative committee of the city council. The committee unanimously recommended that it be denied, and it was reported that a majority in the council would support the recommendation of the committee. Then the interesting fight began. The business streets of Los Angeles are already congested by traffic which goes through them. Those who opposed removing the building restriction pointed out that an increase in building height meant increase in congestion. To this Mr. Merritt replied that only the cupola of his proposed structure exceeded the present limit, and that he intended to fit out the cupola in part as an observation tower, to which the people should have access for the view, and in part as quarters for his personal use when he desired to spend the night in the city. For other use, he claimed, would add to the crowding of the streets. It is to be observed, also, that the moment at which he presented his petition was a biological one. The census report had shown that Los Angeles had grown larger than any other community, and the city, puffed up with the sense of its greatness of its present and future, was exactly in the mood to consider the removal of building limitations. The council wavered, and the matter went on for a week for consideration. During that week the conflict was lively. Mr. Merritt threatened that if the council refused his petition, he would go to the people with an initiative petition asking the amendment to the building ordinance which he desired. To this it was pointed out that he would not have much chance in getting sufficient signatures, and that he ought before the council a petition for favorable action signed by scores of bankers, brokers, real estate firms and prominent business men. Further, it was intimated very plainly that if he did not build the structure in Los Angeles in the way he wanted to build it, he would erect it in Portland. That would be almost a finishing blow. While the other side was not entirely quiet. The Southern California Institute of the American Institute of Architects filed with the council a proposal against any increase in the building height limit. It described such an amendment as calculated only "to sat-

isfy the greed of private individuals at the expense of the welfare of the community." Other protests were also recorded. Then came action by the directors of the Los Angeles Investment Co., an immense real estate corporation. They held a meeting and voted that if the building height limit were removed, they would increase to twenty-five stories the height of the office building which they are about to erect. And at once a lot of people began to figure out how much this would mean to labor, etc., in Los Angeles. But there was another side to this action by the directors of the Los Angeles Investment Co. That was the striking proof which it gave of the increased street congestion likely to result from granting the suggested amendment. The council apparently took this view of the matter, and when the question finally came to vote, the petition was denied by a vote of eight to one. The very next morning, the presidents of the Chamber of Commerce and of the Commercial Club of Portland telegraphed to Mr. Merritt to know whether he would erect the office building in Portland if permitted to do so without legal interference. His reply was to the effect that, as he believed the people of Los Angeles were by a very large majority in favor of granting him the right to erect it there, he had not yet given up hope. The next day a note printed somewhat obscurely in the newspapers, announced that the commission which is at work revising the charter, had decided to present alternative propositions concerning the height of buildings for the people to vote upon. The one amendment is to provide that the present limit be maintained; the other that it shall be removed entirely, or else that for purposes of ornamentation it may be exceeded. Thus it is not unlikely that Mr. Merritt may yet have his own way. But the fight has been well fought, and with more than usual strategy.—The Architectural Record.

## RUSTING OF REINFORCING BARS.

That concrete strengthens with age is now generally conceded, says a writer in a Northern daily; but there are still in many quarters grave doubts entertained as to the durability and immunity from rust of the embedded steel bars. And it is right that this should not be taken lightly on trust. In a building of reinforced concrete the steel upon which the stability of the structure is dependent is buried deep out of sight, and cannot be easily examined, and if there were the least possibility of the bars slowly rusting to breaking point, and of the brittle concrete consequently snapping without warning, the use of the material would have to be condemned whatever its other advantages might be. But evidence is accumulating to prove the reverse. In the construction of St. Paul's Cathedral iron chains were used, and were bedded in hydraulic lime. There was occasion a year or two ago to uncover portions of these, when it was found that the iron was as bright as on the day when it was covered over. To go still further back through the centuries, the Romans used hydraulic lime concrete very extensively in building the Pantheon and the domed baths of Caracalla and Diocletian. In places iron ties were used, cast into the concrete, and, although the projecting parts

of such ties have long ago rusted away, concrete blocks are to be found with the ends still embedded, and an examination of these shows that, even after the lapse of some two thousand years, the iron is perfectly preserved from rust. In all the cases above referred to, the concrete employed was made not of cement, but of hydraulic lime, and no one will question the overwhelming superiority as a protective agent of concrete made from modern high class cement. It would almost appear, then, that even in face of the importance of unerring certainty in this matter, the case for the immunity of reinforcements from rust is sufficiently established.—Building World.

## MACHINE TO PAINT UNDER SIDE OF FLOORING.

Numerous architects have long appreciated the advantage of protecting flooring on the back, and some have specified that it be painted before being laid, the object being that after the flooring is laid at the building and the top surface filling, the porous wood is protected both top and bottom from the effect of moisture. The principal difficulty up to the present has been the expense of labor in handling so many short pieces incidental to end-matched flooring, and the time required to paint each piece separately without daubing the face side. An ingenious machine has recently been perfected, according to the "Woodworker," which consists of mechanism for feeding flooring through the machine and spreading paint evenly on the under surface of the stock. This is done at the rate of 100 feet in length per minute. In connection with the machine are a conveyor and dryer. The flooring, in coming from the machine, is received by the conveyor and is moved automatically to the dryer, which receives it and delivers it after an interval thoroughly dry and ready to bundle. The flooring is not touched by hand from the time it is put into the machine until it is received from the dryer, thoroughly dry. In this way the danger of daubing the face side by handling is avoided.—American Carpenter & Builder.

## TO TAKE STAINS OUT OF POLISHED WOOD.

Take three or four thicknesses of blotting paper and lay on the spot and place a hot smoothing iron on the paper. Have ready at hand some pieces of flannel, also folded and made quite warm. As soon as the iron has made the surface of the wood quite warm, remove the paper and go over the surface with a piece of paraffine, rubbing it hard enough to leave a coating of the substance. Then with one of the pieces of flannel rub the injured surface. Continue the rubbing, using freshly warmed cloths until the whiteness leaves the varnish or polish. The operation may have to be repeated once or twice, but it always succeeds at last.

**School Buildings**—Los Angeles, Cal.—Long Beach City High School District, owner; A. Burnside Sturges, architect; Lynn S. Atkinson, contractor, will erect a group of two-story school buildings on east side of Atlantic avenue between Pennsylvania and Seventeenth streets. Cost, \$118,966.

## RECLAMATION IN NEVADA.

RENO (Nev.)—With nearly a million acres of desert land taken up in this State under the Carey Act and with applications in for much more, it appears that in a few years Nevada, instead of being known as a land of deserts and sagebrush covered hills, will be known as a land of farms, orchards and gardens. Large corporations have taken up thousands of acres in many parts of the State and irrigation projects are now being constructed for the irrigation of this fertile desert land. When the water is placed on this soil there will be homes for thousands. Nevada has discovered that by the proper storage of water and the proper distribution of the same the deserts can be made to bloom, and that the real growth of the State depends upon the farms this State will produce, more than upon the rich, producing mines which the State can boast of at the present time.

## Million Acres Available.

By the Carey Act 1,000,000 acres of land were set aside in this State to be taken up and cultivated and at the present time only 130.18 acres remain not segregated, making over 999,869.82 having been taken up by corporations under the Carey Act.

All of this land has been taken up in the past two years, since C. L. Deady has been Surveyor General of the State, and he has, as a result, become known as "The Father of Carey Act in Nevada." In speaking of the good work being done in an agricultural way in this State under the Carey Act, Surveyor General C. L. Deady says:

## Irrigation Important Question.

"There is no industrial question of greater importance, or which demands the attention of the people of the State of Nevada more, than the subject of irrigation and the reclamation and settlement of her arid lands. Upon the control and economic application of the waters to the soil depend the growth and future prosperity of the State.

"This is a question that has commanded the attention of our citizens since Nevada became a State.

"There are millions of acres of lands in Nevada, which can only be made available for agricultural purposes by conserving the waters of the rivers and streams which rise in the mountains and are fed during the Summer season by the melting snows which accumulate during the Winter months.

## Streams for Irrigation.

"These streams are swollen during the Spring and early Summer, and the waters find their way to the sinks or lakes in the lowest valleys, where they evaporate during the dry season. To store these waters before they are lost so that they can be utilized in irrigation, public and private capital is at present directed.

"In many instances landowners individually and co-operatively have diverted the streams from their natural channels, and by conveying the waters upon the lands by means of canals and ditches from storage reservoirs and artesian wells have transformed sagebrush deserts into fields of waving grain and alfalfa.

## Using Artesian Wells.

"As nearly all the available waters of the State have been appropriated, there are many places where reservoirs may be constructed and artesian wells driven that will afford water enough to irrigate hundreds of thousands of acres of these desert wastes, and the time is rapidly approaching for their irrigation under the many reclamation projects now being formed for that purpose. Ordinarily our population increases slowly. Give us a steady, industrious people, who will be content to labor and improve farms, and Nevada may claim honors as an agricultural State that all New England could never hope to attain.

"Our mining camps may become depopulated, our mines depleted of their wealth, but when you implant a family upon eighty or 160 acres of improved land, they are there to stay and to become the bone and sinew of this great commonwealth.

## Synopsis of Carey Act.

"The Act of Congress, approved August 18, 1894, and the Acts supplemental thereto, known as the Carey Act, authorizes the Secretary of the Interior, with the approval of the President, to contract and agree to patent to certain States in which may be found desert lands, free of cost as to survey and price, not to exceed 1,000,000 acres of such desert lands to each State, including Nevada, under certain conditions set forth in the Act. The said Acts of Congress and the State Act authorizes the State Land Register, on the part of the State, to enter into contract with any person, persons, company, or corporation for the reclamation of desert lands and the disposal of the same to settlers; and when an ample supply of water has been actually furnished in a substantial ditch or canal, or by artesian wells or reservoirs to reclaim any particular tract or tracts of such lands, and when said lands have been patented to the State by the United States, the State will issue patents free occupants on such lands. The title direct to the actual settlers and bonapasses from the United States to the State, and from the State to the settler

"Under the foregoing Act, very little was attempted and nothing accomplished in the courts to put this Act in operation in this State until I assumed charge of this office two years ago, when we secured the passage of an Act by the State Legislature making it possible for companies and corporations to invest their capital in this State by reclaiming these desert lands in large tracts and disposing of to settlers on the land, water sufficient to irrigate the same.

"Since October, 1909, all of the grant of 1,000,000 acres donated to the State by Congress for reclamation purposes, with the exception of 130 acres, has been covered by applications.

"Following shows segregation of lands: Complete segregations approved, 27,951.16 acres; pending action, 32,303.39 acres; temporary withdrawals approved, 91,603.38 acres; pending action, 20,522.29 acres; temporary reservations in State Land Office, 827,489.60 acres; total, 999,869.82 acres. Number of acres available in the grant of 1,000,000 acres, 130.18."

## CULTIVATING THE TIMBER WASTES

Steam stump pulling machines are rapidly becoming the "painless dentists" of the northern woods. Following in the wake of lumber crews they are turning stumpy fields into fertile farms and reclaiming a vast empire of formerly wooded prosperity. Although in operation but a short time one machine, working in Rusk county, Northern Wisconsin, has cleared a high as four and five acres a day. As a steady diet, however, the machine does not devour the stumpage of more than one or two acres a day. It does it at a cost of not more than \$15 or \$20 an acre, while the average cost heretofore by horse-operated pulling machine has been \$35 an acre.

The situation in the "cleared" portions of the heavily wooded states of the country has not been without its pathetic side. The noble monarchs of the forest were first marked for slaughter; then the logging crews passed on. In their wake, as the trees disappeared before the commercial rapacity of man, followed crews not above cutting the smaller trees, leaving behind them a stump-studded field barren of all save the striplings and the windfalls. Many a farmer lured from home by tales of cheap lands in the timber states has found his land "cleared," but so dotted with stumps, which fire, acid, pick and dynamite failed to work or budge, that he has given up in despair, and joined forces, from very necessity, with the logging crews to "clear" another section and go on their way, leaving a trail of fallen monarchs and blasted agricultural hopes behind.

Hope, however, is returning, for former stump-ridden fields, now converted into prosperously yielding farms, stand as object lessons to inspire other farmers to turn to the new "painless dentists" of the earth. Already the days when the stump pullers shall move from farm to farm, blazing a trail for the threshing machine, has dawned. Several hundred acres were ridden of stumps in Northern Wisconsin alone last summer, and already plans are being laid for a dentistry campaign in 1911 which shall pull the earth's molars in a wholesale fashion.—Technical World Magazine.

**No. 6136. Explosives for use in mines and railway construction.**—A business man in the Near East advises an American consulate that he is anxious to enter into correspondence with manufacturers of explosives, with a view to securing the agency of some American patent explosive, such as Rackarock for use in mines and railway construction.

of the Gold Hill lumber company.  
**Cotton Gin**—Ramona, Cal.—Robt. E. Goepel of Port Gibson, Miss., is now in El Centro making preparations to build a \$100,000 cotton seed oil mill.

**School**—Eureka, Cal.—The repairs of the high school here is impossible and it was decided by Board of Education to go ahead with acquiring new site and building. The site is the property of two to four blocks north of Harris street and the building, the opinion of the board, should be semi-fireproof and cost about \$98,000 which with the estimated cost of the site, would make necessary a bond issue of about \$150,000.

## Editorial Page.

Assembly bill No. 278 is now up for consideration in the legislature and it is time to get in and work for it. This is the new Lien Law proposed by the California Building Law Association and is a piece of legislation which all interested in the building industry should work for. The measure was unanimously reported out of the Senate judiciary committee last week and in all probability will be up for final reading and passage on tomorrow, February 3rd.

Now is the time to lend your assistance. Get hold of your representative or senator and see that he understands this bill. If he understands it he can not choose but vote for it if he wishes to do the right thing for all concerned.

What a splendid enthusiasm exists in the West! There was no one it seems that did not feel jubilant and like having a holiday as a result of the vote and the announcement that the fair would be held here. It was the old spirit, ever young, that refused to be downcast when the city was in ashes and which has constructed it again from its desolation. It was the same spirit that rejoiced in the victory of the old town that wept when it was razed and which felt the love for the city the same in success as in disaster.

1915 should be a splendid time for an international exposition. Twenty-two years will have elapsed since the Chicago World's Fair. Practically a new generation will visit this one. It will afford opportunities for all to see the West and will bring to San Francisco the greatest pilgrimage of tourists that has ever visited any exposition held in the world.

As the time is set for the preliminary vote in the U. S. Senate on the question of the Kahn resolution and conservative people entertain no doubt that the resolution will be passed, it is up to us to make good. There is a lot to be done between now and 1915. It is a time for hopeful work and optimism for the door of opportunity swings open.

In this regard it should be remembered that San Francisco invites the world to take part in the exhibition to be held in celebration of the completion of the great canal. And this will mean the competition in trade which is the life of commerce and the opening of the doors to those who will come to make this city and the West a great and populous empire.

A report of last week stated that a downtown lumber merchant on hearing the news that the house had voted in favor of San Francisco remarked that it would mean an advance of \$2 a thousand on lumber and closed up his desk for the day. Organized Labor, the

official organ of the allied unions, published an extra, congratulating union men upon the prospect of prosperous years. All of which is in proper spirit if the idea is not carried too far. There should be plenty of work with a reasonable profit for all concerned in the years to come.

It is to be hoped that there will be no oppressive or unjust monopolies of material men, laborers, or employers in the preparation for the great event, or in the prosperity that should of right come to us. Let all have a chance and in the language of the prayer of the chaplain at the opening session of the present legislature, "O Lord, give us a square deal for Christ's sake. Amen."

Senator Cartwright of Fresno has introduced a resolution into the State Senate to investigate the newspaper and public criticisms of the higher courts. According to his statement the resolution is not intended to reflect upon the supreme court but to protect it.

The fact is that criminal procedure in American courts has become such a tortuous process that it is almost impossible to convict anyone who has money enough to employ astute lawyers to throw technical obstacles in the way of justice. It has come to such a pass that the public has but very little faith in the administration of even-handed justice in our courts and as a consequence but small respect for the judges. Whether this condition is warranted by the facts of particular cases is an open question, but the condition prevails on account of the multitude of rich scoundrels who go unwhipped of justice while the poor offender suffers. No better argument for reform in criminal procedure could be produced than this same resolution.

The assembly of the legislature has passed the equal suffrage amendment to the constitution. As a natural consequence it will be up to the people to vote on at next election.

The people in this instance will mean the male voters of the State and the question will be whether or not to extend the privilege to the other sex.

As a matter of absolute right there can be no question as to a woman's equal right to enjoy all the privileges of citizenship. As to the natural differences of the sexes and their proper place in the industrial and political world there is a good deal of room for question.

There is a great deal of oratory and bombast about such questions, the appeal to the mother's knee sentiment and the prospect of purifying the ballot, which in the main is simply sound and fury, signifying nothing. One of the main questions is what will be the

effect on the women themselves. If it is going to breed a race like Priscilla Jawbones, mere man will soon have to take to the tall timbers and chop bee trees for a livelihood. Or it may be that many of the good women, like many of the good men of today, will take but small interest in politics and thus only those who seek some profit will be active.

At the recent meeting of the Teachers association in San Francisco, Chester Rowell, the able editor of the Fresno Republican, deplored the fact that there were not more red-blooded men in the school business. To any one who has investigated the subject impartially Mr. Rowell's statement certainly appeals with striking force. There is a great need of wholesome, broadminded men in the schools of the country which are now almost wholly taught by women.

As in the animal world the male goes forth to kill for the family or defend the flock so in human society we naturally look for the man to go to war and look after the affairs of government. It may be that woman has reached this stage of development in her long struggle for emancipation from what was practically slavery. Anyway there seems to be a psychological movement on foot which has borne fruit throughout the world.

In any event we are not liable to have women soldiers and lady policemen on the beat for some time to come. It may materially increase the number of good fellow girls and Priscilla Jawbones. But after all the real women will look after the home, not as a slave or drudge, but as a companion; walking a path not of roses but of love, faith, and duty and will there be supreme in that kingdom. There she is a real ruler for even the most sated and cynical of men will turn reverently to the higher ideal of the

"Perfect woman, nobly planned,

To warn, to comfort, and command;

But yet a spirit still and bright,

With something of an angel light."

The new lien law is now in the senate and the outlook is good for it being passed in the near future. It is direct and as simple as such laws can be made and it is to be hoped that it will go through without change. Builders generally are working for the measure and have been able to make themselves felt.

Mr. P. J. Walker, the contractor, received the following letter from Senator John A. Stetson last week:

"I have yours of the first instant and in reply will say that I am favorably impressed with Assembly Bill No. 275. It will have a special hearing in my committee next week and I think it will be passed out favorably. It is of distinct advantage to me in making up my mind that you approve the bill."

# The Record of the Past Month In Building Operations.

In the general report from the principal building centers throughout the country building operations have held about an even break with the record for the same month last year. Reports from half a hundred cities representing the principal building centers throughout the country show gain in about half and losses in the other half so that in the final record the total foots up about even. The greatest gain is recorded at New Haven, Connecticut, as important buildings there show an increase of 73 per cent over last year. New York shows a gain, Chicago a loss, Philadelphia a slight gain, St. Louis a slight loss. The greatest loss is reported from Salt Lake City, but this is accounted for by the fact that last year in January a single permit was issued which amounted to \$800,000. The greatest per cent of gain is noted in New Haven, Connecticut, where important building permits issued last year raised the total of that city from \$104,015 last year to \$1,012,325 for the past month. Of Pacific Coast cities no reports have been received from Los Angeles and Spokane. Portland shows a gain of 58 per cent, San Francisco and Seattle show a loss of from 50 to 60 per cent. Tacoma also shows a loss of about 16 per cent and Oakland has not as yet reported. Of the other cities throughout the country that have shown gains of over 50 per cent over the same month last year the following may be mentioned: Wooster, Mass, 218 per cent; Manchester, 185; Syracuse, 151; Cleveland, 100; Newark, 94; Hartford, 91; Manhattan Borough, 87; Columbus, 83; Cincinnati, 75; Detroit, 74; Knoxville, 66.

Chicago shows a loss of 48 per cent while greater New York comes along with a gain of 29 per cent. Altogether the grand total shows a net loss of something less than one per cent. Particulars are to be found in the following table:

City	Jan., 1911	Jan., 1910
Baltimore	\$ 460,166	\$ 976,300
Birmingham	270,000	189,848
Bridgeport	87,420	79,385
Buffalo	274,000	418,000
Chattanooga	56,452	57,045
Chicago	3,133,200	6,054,000
Cincinnati	545,350	309,975
Cleveland	564,122	281,659
Columbus	123,189	67,265
Dallas	173,289	380,565
Denver	267,225	449,300
Des Moines	16,875	61,334
Detroit	1,249,800	717,555
Duluth	63,982	97,225
Grand Rapids	73,375	68,876
Hartford	192,255	100,155
Indianapolis	186,265	273,585
Kansas City	373,010	543,876
Knoxville	40,975	24,566
Little Rock	76,717	86,880
Louisville	138,817	271,956
Manchester	22,727	7,965
Milwaukee	255,775	180,195
Memphis	846,725	1,294,182
Minneapolis	286,280	602,395
Nashville	64,082	92,591
Newark	938,691	482,877
New Haven	1,012,325	104,015

New Orleans	114,035	317,508
Manhattan	13,670,777	7,291,470
Brooklyn	1,136,765	1,913,400
Bronx	609,600	2,686,450
New York	15,417,152	11,891,320
Okla. City	303,280	538,178
Omaha	322,700	287,630
Paterson	72,893	147,037
Philadelphia	2,597,460	2,131,775
Pittsburg	594,065	576,925
Portland, Ore.	990,616	624,110
St. Louis	1,355,655	1,461,000
Salt Lake City	66,400	897,400
San Antonio	152,390	199,151
San Francisco	1,242,806	2,273,044
Scranton	71,713	97,805
Seattle	506,000	1,274,975
Syracuse	406,450	161,933
Tacoma	94,141	113,344
Toledo	105,306	84,760
Washington	1,278,952	1,041,774
Wilkes Barre	95,003	70,324
Worcester	298,810	93,760

Total ..... \$37,881,006 \$38,557,323  
The total from practically the same cities for the same month in 1909 showed figures amounting to \$40,107,161, which is slightly greater than the two succeeding years. January 1909, however, showed remarkable increase over the same month 1908 the grand total showing a gain for the latter year of over 52 per cent.

The record of San Francisco for the past six years is interesting. Beginning with January 1906 the figures are:  
January 1906.....\$2,267,694  
January 1907..... 5,225,265  
January 1908..... 1,994,242  
January 1909..... 3,116,208  
January 1910..... 2,273,044  
January 1911..... 1,242,806

As this is the beginning of the new decade it will be interesting to watch the development, as the past month shows the smallest record for January for any year since the fire. Since last June no month has reached the two million mark. Here is the record:

June, 1910	\$1,458,464
July	1,596,613
August	1,743,587
September	1,433,797
October	1,772,952
November	805,938
December	1,169,131

Unless all signs fail California and the west enters this year upon its greatest decade. It will be interesting to watch the progress of building operations. They will tell how we grow.

## NEW HOUSES BUILT OF OLD MATERIAL.

It is perhaps not generally recognized by the average reader that new buildings constructed of old or second-hand material are considered in many respects just as good. If not better, than those constructed wholly of new materials. In all cases the prices for second-hand building materials are considerably below the level of the new, thus permitting of a great saving in the building of a house, while, coupled with this, the owner has the satisfaction of knowing that his house

is even more substantial than it would have been had he purchased new materials throughout. In discussing this particular feature of construction, a large dealer in second-hand building materials in Greater New York expressed himself as failing to understand why anyone intending to build a house ever purchased new material. "After a house is built," he said, "there is nothing to show that second-hand material has been used, except the bank account of the owner. The house itself will outlast the ordinary house of new material."

"The principal trouble in using new materials is caused by the lumber. In these days of airships and two-mile-a-minute autos we won't wait for lumber to become thoroughly seasoned. Take the ordinary beam that is used in a new house. It is still oozing sap. In the course of a few years it will shrink half an inch in length or it will become warped. As a result great cracks open in ceilings and in floors. Ceilings fall from this cause, doors stick and windows rattle, all because the wood was too fresh.

"Comparing prices, you will see how money may be saved. Second-hand brick is sold at, approximately, 25 per cent lower than new brick. This in spite of the handling, for every second-hand brick must be cleaned of the mortar. A brownstone stoop which would cost you \$200 to buy new I can sell for \$100. It will be just as good as new, too, and none would be able to say from its appearance that it was not.

"On beams, the builder can save a third despite the fact that the second-hand are far better than the new."

The speaker went on to say that the demand for the big beams particularly far exceed the supply. When the old Stock Exchange was torn down in Broad Stret some years ago the beams were used in the erection of a Fifth Avenue mansion.

"They say the only part of a pig the packer can't use is the squeal," he continued. "The same is true of an old building. The only part there is no demand for is the plaster. We leave that on the ground for the diggers to cart away. The sashes, doors, casings, stairs, banisters, fireplaces, mantels, even the laths, are all fish for our net, as are the piping, bath-room fixtures, basins, tubs, chandeliers, etc.

"Second-hand sashes, that are as good as new, you can buy for less than it would cost to put glass in new ones. I'll sell you a bath room outfit for one-half what you'd pay for new material, while a door that would cost \$10 new can be bought for \$3.

"Of course it makes some difference how far the material has to be shipped. If you are building in Maine you can build so cheaply as you can on Long

(Continued on Page 15)

## The Mary Pauline Payne Residence, One of the Most Handsome Reinforced Concrete Dwellings On the Coast; A Tudor Gothic Church and a Classic Theater.

### REINFORCED CONCRETE RESIDENCE.

One of the most beautiful dwellings of this type which has as yet been erected in this country is the large concrete residence of Mrs. Mary Pauline Payne, which was designed by Architects William Curlett & Son and is now in the course of construction under the direction of A. H. Beetham, the general contractor. Mr. Beetham has been actively engaged on this work for the last nineteen months and while the work has progressed with marked rapidity there still remains uncompleted work which will require from twelve to fifteen months more of labor.

The dwelling is being erected in one of the most favored spots in Menlo Park and occupies a site in the midst of spacious grounds which are considered among the finest of the many private estates of aristocratic Menlo Park.

Some twelve months ago a reproduction of the architects' drawings of this residence was published in the Building and Industrial News and since that time Mr. Beetham has brought the work to the state of completion shown in the two illustrations published on pages B and C of this issue. The exterior of the dwelling is now practically complete as is also some parts of the interior. The accompanying half-views show a large part of the main excavation which is three stories high and also a view of the building including the porte cochere. The photos are here reproduced by the courtesy of A. H. Beetham.

A very severe classic or modern Italian style of architecture has been selected for the building by the architects and the extensive improvements which are to be made in the grounds will be carried out so as to harmonize with the imposing country home. The plan has been carefully worked out and strictly adhered to, with the result that the new structure will be the most artistic which has yet been erected in or about San Francisco.

The main entrance will be reached by passing through a porte-cochere at the extreme end of the building and ascending a few steps of marble to the main terrace floor, which will be laid in ornamental marble slabs. The main entrance sets somewhat back and is guarded by massive columns of concrete, plastered with white cement as is the whole exterior of the building.

The first floor will contain a large living room 30x54 feet, a library 20x30 feet, and a dining hall 21x25 feet. The doors of the entrance hall vestibule lead the steps of the main stairs will be of marble and Caen stone. In the rear and partly detached are found the servants' quarters.

The entrance on the ground floor has been provided so that automobile tires may drive their machines into the main building and there take an elevator to the upper floors. The living room will have an especially constructed spring floor laid in hardwood and will be used for dancing par-

On the second floor are eight large bed-rooms with private baths, besides a number of servants' rooms. The third floor will be given over chiefly to the use of guests and extra bed chambers.

A large billiard hall is located in the basement directly under the front terrace and will be lighted by means of heavy glass placed in the floor above.

The basement will also contain the furnace rooms, laundry and other household departments, such as a cold storage plant, etc.

Special attention has been given by the architects to the heating and ventilating. With the plant which is to be installed, fresh air can be obtained at any time, not by opening windows and doors, but by the mechanical system entirely.

The building is strictly fire proof, no wood entering into its construction with the exception of the interior finish. Before the residence is completed it will represent an investment of over \$30,000.

In the construction of the work Mr. Beetham has been most successful. Nothing but the very best of material or workmanship have been allowed to enter into the construction and the result will be one of the most perfect examples of concrete constructions that this section has ever witnessed. Mr. Beetham has been ably assisted in the work by a number of well-known sub-contractors who have installed special apparatus or performed special parts of the work. The firm of Mangrum & Otter installed the heating system and much of the tile work; the Otis Elevator Co., the elevator; J. P. Ahlert of Menlo Park did the plumbing; the Pacific Manufacturing Company furnished the mill work, Chas. Campbell was awarded the plastering contract and O. F. Larsen has charge of all the ornamental plaster work which is being done.

A special feature of the work and one recently completed by Mr. Beetham is the construction of a large septic tank which is to care for all the sewerage from the residence and grounds. A large million gallon reservoir has also been erected which will take care of the water from the three roof gardens and will serve as a reserve supply for irrigation or in case of fire.

### INGLESIDE AND LAKEVIEW CATHOLIC CHURCH.

Plans for a new church for the Roman Catholic residents of Ingleside and Lakeview have been completed by Arthur G. Scholz, the architect, and construction will soon begin on the edifice. The design is an adaptation of the Tudor Gothic, the main lines of which are brought out in the pretty structure.

The lower part of the exterior walls will be of clinker brick with white-racked joints, and the remainder of the building will be wrought in rough-cast plaster on metal lathing. The roof will be covered with red tile and

all the windows are to be of art glass. A brick vestibule with heavy arched ceiling will be of imposing character, while the interior and roof construction will be exposed, except at the sanctuary, where the walls will be decorated in colors. In the rear of the side altars a sacristy and another room are provided, which will be paneled to a height of seven feet. There will be an organ loft of ample proportions and a high basement will provide accommodations for sodalities and the Sunday-School classroom.

The Roman Catholics of Ingleside and Lakeview have purchased a lot at the southwest corner of Montford and Capitol avenues, near the Ingleside road, as a site for the church. The lot has an area of 50x125 feet, and is in the center of the district which the church is to serve. Funds for the purchase of the land were provided at mass meetings and entertainments, and it was at the first of these meetings that Architect Scholz offered to furnish the plans for the building as his contribution to the church. The offer was accepted by the committee and the plans are now in the hands of Rev. James A. Cooper, pastor of Ocean View parish, who will have charge of the new parish.

### BIG THEATRE TRANSACTION.

A report which has gained considerable confirmation in real estate and building circles in San Francisco during the week just passed is to the effect that the Pantages Vaudeville Circuit has succeeded in purchasing the site and building owned by the William Morse Company on Ellis street east of Powell street. This lot together with the building, now under construction, was to be the home of the American Music Hall but is reported to have passed into the hands of the Pantages people.

A reproduction of the building, as planned by the Morse Company, and which is reported will be completed by the Pantages Circuit, is shown on Plate D.

The plans show a structure designed after the classic style of architecture which will cost \$225,000. The building will have a steel frame and reinforced concrete walls and floors. The interior partitions, roof and all interior finish will be of fireproof materials, while the arrangement of the exits and other safety appliances make the theatre second to none in point of safety. The main auditorium, balcony, gallery and boxes will have a seating capacity of nearly three thousand. Public comfort has been one of the most important considerations and valuable space has been given up to wide aisles and roomy seats. Special attention has also been given to the arrangement of the seats and an unobstructed view of the stage from any seat in the house has been attained.

The excavation and steel frame work have been completed by the general contractors, Messrs. Hoyt & Lang, under the direction of Supervising Architect H. H. Hedger,

## Among the Architects.

Architect C. S. McNally has dissolved partnership and is again practicing his profession alone. His offices have been moved from the ninth floor of the Mechanics' Institute Building to the suite on the sixth floor known as 612. At this time Architect McNally has the plans nearly completed for a fine apartment flat building which will shortly be erected in a fine location in this city. The details of the work are not at this time ready for publication, but as soon as possible the work will be made public.

Architect D. J. Patterson, formerly the head of the Southern Pacific Bureau of Architecture, has opened offices on the ninth floor of the Mechanics' Institute Building, and will in the future engage in private practice in this locality. Mr. Patterson was for many years in charge of the Southern Pacific's work and until that department of the system was abolished proved an efficient official.

The contract for the construction of the Chico storm water sewer system was awarded at the last meeting of the City Trustees at a figure several thousand dollars below the estimate of the City Engineer. The successful bidder was John Heafey of Oakland, who has agreed to do the work for \$18,500. The City Engineer's estimate was \$32,000.

Architect William Binder, of San Jose, has been selected to prepare plans for a Public Library which is to be erected in the town of Hollister at a cost of \$10,000. The plans are now nearly complete and the work will shortly be advertised for bids. The building is a Carnegie endowment and when complete will be one of the handsomest buildings in the city of Hollister.

The general contractors on the Hearst Building are now receiving figures for the electric work on the big structure. The concrete floors are now complete and work has been started on the exterior terra cotta. The leasing of offices has been placed in the hands of Thomas Magee and they are receiving many applications for space.

Architect Kelham, Crocker Building, will shortly award the contract for the construction of a two-story and basement brick building which is to cover an area of 300 by 200 feet on Fourth street, between Bryant and Perry streets. The big structure is to be erected on the property of the Sharron Estate and when completed will be occupied by the Sunset Publishing Company. The figures for the construction are now in the hands of the architect and the contract will be awarded in the next few days.

Architect C. S. McNalley has moved his offices from the ninth floor of the Mechanics' Institute Building to the sixth floor and is now located in suite 612.

The City Department of Architecture has completed the plans for the new Richmond Police station and the Class C stables which are to be erected on the same site. The work will cost in the neighborhood of \$25,000 and when complete will be one of the finest stations in the city. The exterior will be faced with a pressed brick and both the roof of the main station and the stables will be covered with slate. Work will be started on both of these structures in a very short time.

In appreciation of the services which he has rendered to the Stone Cutters' Union, Architect Willis Polk, who is a member of the union, was presented with a solid gold watch fob, made in the image of the button of the union. Mr. Polk was a guest of honor at a smoker given recently by the Union and it was at this time that the presentation was made.

A large warehouse building is to be erected for the Thomson-Diggs Hardware Company of Sacramento on their property at the corner of Front and R streets from plans by Architects Suff and Diggs of Sacramento. The building is reported to be of the Class A type and will be four stories in height and is to cost about \$110,000. The site upon which the new structure is to be erected affords access to both the Southern Pacific and Western Pacific tracks. The building is by far the largest structure of its kind that has as yet been erected on Front street and its construction will probably be followed by the erection of at least two more similar structures in the near future.

Architect John J. Foley, 844 Monadnock Building, has the plans for a number of attractive residences and flat buildings on the boards, the work on which will be started at once. Plans are now well advanced for a two-story and basement frame residence which is to be erected for the Tevis Estate on their property in Hillsboro, near San Mateo. The dwelling will contain eight rooms, all nicely finished with hardwood floors throughout and will be equipped with a warm air heating system. The exterior of the dwelling will be covered with shingles, while cement plaster will be used in the gables. The cost of the work is estimated at \$5000. Work will be started as soon as the working drawings can be finished. The same architect will shortly award the contract for the construction of a three-story and basement frame flat building for Mr. Grammer, which is to be erected on Natoma street between Sixth and

Seventh streets at a cost of \$6500. Some changes have been made in the plans of Architect Foley for the construction of store building at Burlingame which lessens the height of that structure by one story. The building is to be erected for the Burlingame Investment Co. and is to be of the reinforced concrete type, containing the offices of the Wells Fargo Express Company. The building will be one story high and when complete will cost \$6000. Architect Foley is also preparing plans for a two-story, attic and basement frame flat building which is to be erected in this city for Mrs. O'Connell. The ground floor will contain five rooms and the upper will have six rooms on the second floor and three finished rooms in the attic. The work is estimated to cost \$7500. Work has just been started on the Callaghan residence in Burlingame from plans by Mr. Foley and is being done by day's labor. The residence is a handsome two-story and basement structure of seven rooms and when complete will cost about \$4500.

Architect O. E. Evans, 2454 Mission street, is preparing plans for the construction of six two-story frame dwellings which are to be erected on Twenty-third street near Castro and which will cost about \$2800 each. The work is the direct outcome of selection of this city as the site for the Panama-Pacific Exposition and it is positively stated that had not this city been favored the owner of this property would not have improved his holdings. Such is the condition of hundreds of other pieces of property upon which substantial buildings will be started in the near future.

The same architect is also preparing plans for the construction of a story and a half bungalow which is to be erected on Sixteenth avenue near I street at a cost of \$2500.

Architect Willis C. Lowe, 244 Kearns street, has started the working drawings for a four-story and basement apartment house which is to be erected at the corner of O'Farrell and Leavenworth streets. The building is to be reinforced concrete structure and since the coming of the Exposition to this city the owner has instructed his architect to make provision for the addition of an additional four stories, making the building an eight-story structure.

Bids were received by the Oakland Board of Public Works for the excavations for the new City Hall building and were taken under advisement by the City Engineer and the City Attorney. The contractors submit bids for the work were as follows: Hutchinson Company, \$10,350; Cjiax Barker, \$9,660; P. J. Cochran & J. Mu doon, \$14,670; Piedmont Construction Co., \$10,260; Just Anderson, \$6,370; L. Page, \$7,310; P. J. Walker, \$8,000; Cotton Bros. & Co., \$12,450.

The following bids were also received by the Board for the furnishing a installation of equipment for the new Police and Fire Alarm building, which has been erected at Thirteenth and Oak streets. The Henshaw Building Company, \$1500; C. W. Marwedel, \$22; J. L. Hicks, \$1184.50; The Pacific Telephone Co., \$1425; and Smith-Booth Usher Co. \$1500.

**THE NEW LIEN LAW.**

Indications point to the early passage of the proposed new Lien Law as promulgated by the California Lien Law Association,

Messrs. Scott, Phillips, McLaren and Ellsfi who have been representing the Lien Law Association before the Legislature, returned yesterday and report that the bill with slight modifications has passed the Judiciary Committee and will probably pass the Assembly next week, after which it will come before the Senate.

**ASSIGNMENT OF LIEN.**

Architect...C. C. Adams.

Day's work.

Cost, \$1350

### COST OF BUILDING TODAY.

When George Washington was a boy, so the old jokers tell us, he was able to throw a silver dollar across the Delaware River, because a dollar went further than it will today. When the high prices of the necessaries of life are taken into consideration George would only be able to throw a dollar a quarter of the way across the Delaware, if he were here today. In other words, it costs us four times as much for our food and for our buildings today as it did in George Washington's day. We have no complaint to make of high prices; it only goes to show that money is more plentiful in the country today than it ever was before. The high cost of building materials is being brought home to the government on constructive work being put on the market. Estimates based on prices a few months ago have to be revised today. To illustrate, the sum of \$900,000 was appropriated for a new building in Boston, one half of this sum to be used in the purchase of a site. There appears to be no increase in the demand for the ground upon which the building was to stand, but the building itself will cost \$100,000 more than the amount available. The bids received have all been rejected because they exceed the amount provided for in the estimates by the sum named. This state of things has no relation to geography. High prices are confined to no section and are peculiar to no quarter.

Frame Flats—Portland, Ore.—H. P. Pfister will erect a two-story frame building at the southwest corner of Thirteenth and Main streets to contain four flats with five rooms each, to cost \$12,000. D. C. Lewis is the architect.

**School Bond Election Proposed**—Sacra-  
mento, Cal.—The school trustees have  
adopted a report filed with that body by  
a committee that has investigated the  
school conditions in the city. The re-  
port recommends many improvements  
to the school system and a bond issue  
of \$750,000 to carry out the proposed  
betterments. Among other things it is  
planned to purchase large playgrounds.  
to extend the grammar school course to  
include the first year of high school, to  
erect several large and modern school  
buildings, to install a complete poly-  
technic course in the schools and to  
have manual training in the high  
school.

**Sugar Factory**—Perris, Cal.—A sugar  
factory with a capacity of 500  
tons is to be erected near Perris in  
Riverside County by Southwestern Sug-  
ar Co. of Los Angeles, with capital of  
\$1,000,000. Incorporators are: W. E.  
Evans, R. S. Bulla, D. Howarth, M. B.  
Jones, etc. Plant will cost \$500,000.

## Among the Architects.

### LOS ANGELES.

(From the Los Angeles Builder and Contractor.)

Architect A. C. Martin, 430 Higgins building, is preparing plans for a two-story and basement ten-room residence to be erected in the Wilshire district for James Kays.

Matthews & Matthews, 328 Douglas building, are preparing plans for two two-story brick apartment house buildings to be erected at the northeast and southeast corners of South Park avenue and 52nd Place. Tifal Bros., 129 East Orange street, Monrovia, will be the contractors. The buildings will be 50x100 feet and each will contain 80 rooms, divided into two and three-room apartments.

Architect C. C. Rittenhouse, 388 Wilcox building, is preparing plans for a three-story and basement frame and plaster apartment house to be erected on West Tenth street facing Overton street. The owner will move his present residence off the lot in a few days. The new building will be 40x125 feet, and will contain sixty rooms divided into twenty-four apartments.

Fred Biren, 609 Broadway Central building, invites contractors to submit bids for the construction of a 1½-story seven-room residence on Chenoye street near Franklin avenue, Hollywood, for A. H. Knoke.

Architect Thomas Preston, 416 Currier building, is preparing plans for a two-story ten-room frame residence to be built by the Frank W. Rounthwaite Co., 1106 Story building.

Architect W. J. Saunders, 512 Wright & Callender building, has prepared plans for the addition of a fourth story to the Braun Chemical Company's building on Stephenson avenue near Avery street. J. B. Binford is the owner. The construction will be reinforced concrete with hollow tile and concrete roof with composition covering. The cost will be \$5500. Day work under the supervision of the architect.

F. R. Greenleaf, 213 North Carondolet street, is preparing plans for a two-story frame apartment house, 40x96 feet, to be erected on Vine street near Hollywood boulevard, Hollywood, for K. M. Keeler, of Madison, Wisconsin.

F. R. Greenleaf, 213 North Carondolet street, is also preparing plans for a two-story nine-room Colonial residence to be erected at Hollywood for K. M. Keeler.

Architects Hunt & Burns, 701 Laughlin building, are preparing plans for a two-story and basement 15-room residence to be erected at Wilshire boulevard and Westerly drive for W. H. Holliday, president of the Merchants National Bank.

Matthews & Matthews, 328 Douglas building, have completed plans for a two-story Mission style brick building to be erected on Vermont avenue near 54th street by the Edison-Cook Co., 54th and Vermont avenue. It will be

50x65 feet. The cost will be about \$9000.

Architect Arthur S. Heineman, 1402 Union Trust building, has prepared plans for eight single and double bungalows to be erected in a private court on Santa Barbara avenue near Vermont avenue for Mrs. W. S. Crane.

Architects Train and Williams, 226 Exchange building, have been commissioned to prepare plans for the brick building to be built at Mission street and Fair Oaks avenue, South Pasadena, by A. C. Ong. The building will be two stories and basement, 95x102 feet, with six stores and a banking room on the first floor and 17 offices and a lodge hall above.

Matthews & Matthews, 328 Douglas building, are preparing plans for 22 modern five-room bungalows to be erected in Arroyo Glen Park by the Artistic Bungalow Building Co., 6160 Pasadena avenue. Two of the houses will cost \$1750 and the others will average \$1500 each.

H. Whitaker, 3802 North Griffin avenue, is preparing plans and will build by day work a three-story brick factory building at Avenue 20 and Salt Lake railway for the Los Angeles Can Co. It will be 70x200 feet, of mill construction and is estimated to cost \$15,000.

Architect A. B. Benton, 114 North Spring street, has completed plans for a one-story school building, 60x50 feet, to be erected at Nordhoff for the Thatcher school. It will contain five classrooms and three offices. The construction will be of reinforced concrete throughout with waterproofed cement roof, forced draught heating system, etc. Plans are also being prepared for a dormitory building, 60x50 feet, of similar construction. The Richards-Neustadt Construction Co., Wright & Callender building, will probably erect the buildings on a percentage basis, work to start on the school building at once.

Architect Fred R. Dorn, 232 Douglas building, has prepared sketches for a ten-story Class A, steel and brick hotel building to be erected by John D. Hooker on Ninth street near Broadway if a lease is made. The building will be 50x120 feet, containing 165 rooms and 80 baths and will cost \$20,000. Robert Marsh & Co. are representing the owner in negotiating the lease.

### MONTHLY BULLETIN OF THE CALIFORNIA DEVELOPMENT BOARD.

January 31, 1911.

This bulletin is based on special reports by reliable authorities in various counties, covering almost every section of the State.

The census returns show that California has thirty-one towns of over 5,000 population, and three of over 100,000. The aggregate gain for the State was 892,496, or 60.1 per cent, placing California twelfth in the line of States, instead of twenty-first, which place she held since 1900.

#### Snowfall in the Mountains.

January, 1911, was a month of unusually heavy precipitation in all parts

of California. The snowfall in the mountains was far above the normal, and at the close of the month the snow cover exceeded in extent and in depth that of any month for many years past. This condition followed a period of light precipitation. At the close of December, 1910, there was less snow in the mountains than had been known for many years. The ground was bare at elevations which hitherto had been covered. The runoff was probably the lightest for any December and there was much anxiety lest the water shortage should continue. The long dry period was broken with a moderate snowfall on January 9th. This was followed by storms lasting practically to the end of the month. At the lower levels the rainfall was the heaviest since 1862. At the higher levels the accumulated snow on the ground varied from 10 to 20 feet. Warm rains during the last few days materially reduced the depth of the snow. At elevations of 7,000 feet the snow was lowered about 6 feet. The runoff was abnormally heavy, and the rivers were all bank full.

The month closed with an abundant supply of water in sight and much water which ought to be stored running to waste.

California has been well represented and advertised during the month at the Land Show in Omaha. The California Development Board and five counties had exhibits; four illustrated lectures on the State's resources were given each day. February 25th was observed as California Day; the Nebraska Legislature attended in a body.

Though January is the dull month of the year, every line of industry shows activity.

The Government engineers announce the completion of the Orland irrigation project, covering 14,000 acres, and that three new ones are planned.

A project is on foot to put under irrigation 1,800,000 acres of the Miller & Lux Rancho, on the west side of the San Joaquin river.

Other irrigation and reclamation projects are under way in Tehama, Glenn, Colusa, Butte and other counties.

The United States Farm Lands Co., capitalized at \$30,000,000, has established headquarters at Sacramento, and through its subsidiary companies expect to do much colonization work in the near future.

The influx of homeseekers continues unabated.

The acreage of wheat and barley will be largely increased.

There is extensive new planting of orchards, both deciduous and citrus. The vineyard acreage is also being enlarged. Mining and oil development is active.

Railroad building and extension is active.

The Colfax cut-off on the Southern Pacific is to be completed by July 1st.

A large sale of timber land, 103,000 acres, in Tehama to a Chicago syndicate is reported.

Congress has appropriated \$747,000 for improvement of Humboldt Bay, and \$20,000 for an Indian Industrial School at Guinda in Yolo County. A Trust Co. has been organized to construct a harbor at Crescent City, Del Norte Co.

One thousand two hundred and twenty-four new registrations of motor vehicles were made with the Secretary of State during the month of December.

The following shows the bank clear-

ings from December 29th to January 28th inclusive:

San Francisco .....	\$206,651,914.21
Los Angeles .....	78,802,256.00
Oakland .....	17,456,965.65
Sacramento .....	6,327,751.41
San Diego .....	6,379,367.96
Fresno .....	3,034,597.00
Stockton .....	2,947,706.22
San Jose .....	2,043,784.00
Pasadena .....	3,610,077.00

### THE CITY AS A COMPOSITION.

The first contribution in the new English "Town Planning Review" is an article by Professor Adshead, entitled "An Introduction to Civic Design." It contains more that is poetic, suggestive and interesting than the title implies. "In the contemplation of a city," he begins, "we have before us the most comprehensive of the works of man; its solid walls tell us of his stubborn will, its fine facades of his success, its twisted streets of his uncertainty of aim, the squalor of its slums of his defeat." He says, again: "The city is, in the first place, the envelope of its inhabitants; its buildings are their constant horizon, and its streets have their daily regard." He points out that therefore it should exist "primarily for their edification, their pleasure, and their well-being." "To talk of a city as existing solely for purposes of trade is to talk of mankind as existing for meat alone." In the conclusion of his article, he takes up an interesting subject in commenting on the significance of the tone and color of a town—a matter, by the way, that was touched upon in this department last month. Says Professor Adshead: "The city which is white has the greatest refinement and charm. Paris, of modern cities the most beautiful in the world, is a city of ivory studded with pearly gray in a setting of green. Regent Street, London, is painted in white and cream, and to this is entirely due its attractiveness to the fashionable throng. The city which is white, and which scintillates and reflects the light of the sun, is the only fit background for the brilliant crowd with which every progressive city from Athens to New York has stood possessed. Cities which are gray, like Edinburgh, suggest rather endurance, grandeur and romance. Gray cities are very fitting these humid and northern climes. All great cities are either white or gray. That which is a golden red, harmonizing with the rich green verdure of the surrounding land, will ever suggest ease of existence, simplicity, and primitive life. . . . The character of a city is most evident when seen through the medium of its color, but it is also seen through its texture and its form. The buildings and the outline of the streets, to be a fit complement to modern city life, should be regarded in the first place as a background and a foil. In their form and outline they should be simple and strongly composed. Their surface should be hard and their enrichments delicate to a degree. . . . The characteristics of a city expressed in its color, its texture, and its form, reflect on the citizen himself. Its design, the grouping of its buildings, and its outward expression are matters of vital importance to his well-being."—*Architectural Record*, D.C.

### CALIFORNIA APPROPRIATIONS IN RIVERS AND HARBORS BILL.

WASHINGTON, February 2.—The rivers and harbors bill, which passed the Senate and will be sent to the conference, carries for Humboldt Bay, besides \$15,000 for the channel in front of Eureka, \$170,000 for general improvements.

The bill also gives authority to the Secretary of War to contract for \$717,400, in addition to that authorized by the appropriation, for Los Angeles harbor, which was fixed at \$270,000, and the Secretary of War was given discretion, should the bills for dredging become unreasonable, to purchase or construct a dredge and do the work under government auspices.

Oakland harbor gets \$150,000 for improvements. For improving the channel over Pinole shoal, San Pablo bay, as recommended by the Secretary of the Navy, \$400,000 is made available, and authority is given the Secretary of War to contract for \$360,000 in addition.

Other California waterways improvements authorized are:

Mokelumne river, \$5,000; Petaluma creek and Napa river, \$11,000; Sacramento and Feather rivers, \$25,000; San Joaquin river, including Stockton and Mormon channels, \$25,000; surveys for improvements ordered at Crescent City harbor, Newport harbor, Richmond harbor, Santa Barbara harbor, San Joaquin river for locks and dams up to Herndon, Fremont channel and McLeod lake arms of Stockton channel, San Joaquin river, Mokelumne river from Galt, New Hope bridge to Woodbridge and San Rafael creek.

### PERMIT TO CONSTRUCT SCENIC ROAD CAN NOT BE GRANTED.

The City Attorney has given an opinion in the matter of the permit sought by Architect Willis Polk and the Great Highway Development company for the privilege to construct a scenic railway along the ocean frontage of Golden Gate Park stating that the power to grant such a permit was beyond either the power of the park commissioners or the board of supervisors.

Long reviewed the history of the great highway, its dedication, and the acts of the state legislature affecting it, as well as those applicable to the park itself, in an opinion to the board of supervisors. Bringing out the fact that the permit applied for was a franchise, he held:

First—That the great highway has been dedicated by the board of supervisors and the legislature of this state as a boulevard, and that because of this dedication and the general law governing such a dedication the permit herein applied for can not be granted either by the supervisors or the park commissioners.

Second—That the charter specifically prohibits the park commissioners and the supervisors from granting the permit here applied for.

### AMERICAN LOGGING SYSTEM IN MALAYSIA.

In the great hardwood lumber tracts of Malaysia many concessions are being granted, and in most instances the American system of logging is being adopted and American machinery used. One company has a concession 34 miles

long and 10 miles wide on a heavily wooded island, upon which a large amount of American machinery is being installed, and the entire concession will be operated on the American system. Some of the finest hard woods known to the market are plentiful on this grant and the finished lumber will be shipped to the European and American markets. Some hustling young Americans have charge of the operations, but the company is controlled by Dutch capitalists.

### Opening for American Machinery.

Heretofore the logging operations in Malaysia have been carried on in the most primitive manner. The jungles of this great area, including Borneo, Java, Sumatra, Celebes, New Guinea, and Malay, with hundreds of small islands, are replete with valuable hard and soft woods and the world is now beginning to come to these regions with increasing orders, so much so that the primitive systems of logging are gradually giving way to up-to-date methods, and of these methods the American system is far in advance. and the larger companies are beginning to adopt our machinery in their operations. Several large Dutch mills are using it and hundreds of thousands of dollars will be invested in it before long. One firm is now putting up over \$100,000 worth of American logging machinery to be operated in a very large concession on an island 70 miles long, off the coast of Sumatra.

North of the Malay Peninsula in Burma a large logging business is done. On one large concession 6,000 elephants are employed and each elephant represents an invested capital of \$2,000. An American steam logging outfit would cost not much more than 1 elephant and would do 10 times the work. Timber is dragged sometimes over 100 miles by elephants in the primitive Burma operations. Here is a field for our machinery, but it can only be placed there by energetic representatives who understand the machinery and know something of conditions prevailing where it is to be used.—*Consular Reports*.

### THE TEN BEST BUILDINGS.

Which are the ten most beautiful buildings in the United States? A great voting contest in the East, of architects and architectural students gave this list: The Capitol and the Congressional Library in Washington; the Public Library and Trinity Church in Boston; Columbia Library, Trinity Church, St. Patrick's Cathedral, the City Hall and Madison Square Garden in New York, and the Vanderbilt residence, Biltmore, in North Carolina.

All of these buildings are in the East. Three of them are libraries and three are churches. One capitol, one city hall, one place of amusement and one residence complete the list. Not a single State capitol, or theater or gallery of art, or monumental museum has a place.

It is hardly likely that the vote taken in the contest was fully representative of the country. It is an Eastern judgment expressed by architects and the favor appears to have run to grandiose rather than to beautiful buildings. A Western vote, or a vote of artists or of amateurs, would doubtless have given a different verdict in several cases.—*American Carpenter and Builder*.

## GREAT ENGINEERING ACHIEVEMENTS.

Second only in importance to the Panama canal work is the construction of the New York State barge canal, whose total length as completed will be 442 miles. It extends from the Hudson river at an elevation of 125 feet above sea level to Tonowanda, near Buffalo, on Lake Erie, where the final stretch of the canal is at an elevation of 565.6. The masonry structures alone will require 4,250,000 cubic yards of concrete and 113,000,000 cubic yards of earth and silt, and 11,000,000 cubic yards of rock will have been excavated by the time the canal is completed. At the present time nearly the whole of the work is under contract, and from now on progress will be greatly accelerated. Another vast enterprise designed to improve the waterways of the United States is the scheme known as the Atlantic Coast canal, which, as contemplated by act of Congress, is designed to provide an inland waterway, parallel and adjacent to the Atlantic coast, over the whole distance from Boston, Mass., to Key West, Fla., and thence by way of the Gulf of Mexico to New Orleans. Colonel Black of the corps of engineers has recently presented a report upon that section of the canal extending from New York to Philadelphia, which pronounces the plan to be feasible.

The estimate of the time of transit between New York and Philadelphia through a sea-level canal costing under \$40,000,000 would be about seven hours. Steady progress has been made on the Cape Cod canal, which is designed to provide a deep waterway about four miles in length through the neck of Cape Cod, and thus afford an unbroken inland waterway from New York to Boston, by which ships can avoid the stormy ocean trip around Cape Cod and save several hours in the time of transit. The most notable canal project in Europe that has received public attention in the Firth of Forth canal, which will open a waterway for the largest ships across Scotland from the Firth of Forth to the Firth of Clyde. It is estimated that the work can be completed in nine years at a cost of \$100,000,000. The great project for bringing a daily supply of 500,000,000 gallons of water from the Catskills to New York city is being pushed through by the contractors with such activity that the great Ashokan dam is nearing completion, and the prospects of delivering the first installment of water to the present Croton dam within four or five years are very encouraging.

The New York city government has recently authorized the construction of a remarkable deep tunnel aqueduct, 11 to 16½ feet in diameter, for distributing the Catskill supply, which will extend at a depth of 100 feet or more from Yonkers beneath the full length of Manhattan island, a distance of nearly twenty miles. At intervals shafts will communicate with the surface mains of the city. This work will be altogether without precedent in the history of municipal water supply. A notable event of the year was the completion of the four-mile tunnel through the Andes on the Transandine Railway between Chile and Argentina.—Scientific American.

## ARCHITECTURAL COMPETITIONS.

By F. W. Fitzpatrick.

Much is being said and still more written about competitions. They continue the mootest of moot questions that assail the peace of the profession. Worse than that, they are a veritable ill, and one that, like a cankerous growth, threatens to poison and destroy the entire body. Strange, too, how just like so many other ills, we seek constantly to retouch it, gloss it over, perhaps minimize it, and sometimes even make frantic efforts to better it, but never seem to even dream of boldly eradicating it.

Let me suggest something. No, nothing startling new or original; simply something quite old but forgotten—merely a resurrecting of a cobweb antique, but one that in its time worked to a charm, and is today as fit as ever if we only have gumption enough to make it do duty instead of the frapped idea of "Competition."

Architectural competition never was, is not, and never will be an ideal way of selecting an architect. Not one owner in a hundred thousand has the qualifications necessary to a discriminating judgeship as to architectural merit; his selection is either a prejudiced personal one, or he is blandished by some trick of rendering, of glibness of tongue or vain promise of extraordinary or impossible achievement. If he selects a professional advisor it is rarely a great master, or a man of noted ability and keen sense of differentiation. The judge is seldom the peer—save in name—to many of the competitors and with all the prejudices, the whims, the narrowness of the individual to which is often added an impaired digestion. The successful competitor is usually not the one who even attempts to do his best for the owner, or who honestly endeavors to solve the problem, but rather the one who best knows the judge's whims, and is shrewd enough to cater or pander to them. If there is a board of award, the case is changed in detail—not in principle; you get a compromise between half a dozen or more personal prejudices, and that's all. At best a competition is a delusion and a snare, and too often it winds up in a mess or a scandal.

Once in a while, in a free-for-all competition, a great light, a new genius, is discovered, but it happens so seldom that we hardly need to sit up nights watching for the new star. I have known something of that kind to happen but twice in the past thirty years, during which period I have been more or less actively intimate with competitions. Indeed there is scant opportunity for that sort of thing these days, as in most cases the big competitions, particularly the Federal and State ones, are "restricted." The eligible competitors are naturally the most successful practitioners, and the big jobs seem to be, quite by accident, of course, portioned out with arithmetical precision and rotation.

Now then, instead of all this, that rarely conduces to the best results architecturally, why not call for "collaboration" instead of the farcial so-called "competition"? If the number of competitors can be limited, then certainly an owner may with equal justice select the local or other architect—in whose integrity and ability he may

have confidence—to construct his building, to let contracts and all that sort of thing, and even invite and pay one, two, four or more other architects to come in and collaborate with that one, pick his design to pieces, doctor it up, lambast it generally and then hammer it into shape. They'll evolve something worth while, too; and it's so much more sensible than the competition notion. Especially for government work. In that the government is adequately, if not admirably, equipped with supervising architect and all the necessary machinery for superintendence, contract-giving and all details that are infinitely better administered generally than is the case with private work. And surely is the government architect more intimate with departmental needs than any outsider can be and in better position therefore to plan the structure to fit its purposes. So instead of going through the motions of competition, why not try and get Congress to repeal the Tarsney act and pass another authorizing the executive departments to invite and pay five or six architects to collaborate upon each new building, to discuss the design with the supervising architect, to work together to get up something useful and beautiful and that will be the result of their united energies, skill and experience.

We have at least one or had one glorious example of what could be accomplished by collaboration, an example that yielded such vastly superior results to any "competition" that had ever gone on before it that it is a marvel, indeed, that it did not take deeper root in our ways of doing things architectural. I mean the Chicago World's Fair. There a splendid corps of architects was kept together, harmonized, led, scolded by that prince of organizers and executives, Burnham, and their united work gave us a group of buildings that for beauty, unity and adaptability has never been surpassed or even equaled for modern times, nor in classic antiquity. Those buildings were a lovely dream, they lifted one above the sordid things of earth, idealized that Exposition, were its chiefest charm and fascinated the bucolic plainsman as well as the most cultured traveler.

Collaboration, that's the word. Why not try it again?

## BILL TO EXPLOIT ADVANTAGES OF STATE.

The bill fostered by the California Club of San Francisco providing for an appropriation of \$300,000 to be devoted to giving publicity to California's resources was introduced in the senate by Senator Burnett today. The money is to be used under the direction and management of the board of examiners, and to be paid out during the next two fiscal years, beginning July 1, 1911, and July 1, 1912.

In addition to the California Club, the San Francisco chamber of commerce, the Oakland chamber of commerce, the Richmond commerce chamber and the Sacramento chamber are earnestly advocating the measure.

The agricultural, horticultural and industrial advantages of the State are to be exploited, and the bill is proposed with especial vigor as a desirable measure to draw attention and appreciation toward California prior to the Panama-Pacific exposition in 1915.

**NEW HOUSES BUILT OF OLD MATERIAL.**

(Continued from Page 2)

Island, using the same material. A very well-known and very wealthy New Yorker has just built a bungalow in Maine from material shipped from here. Every stick used in it is old, but none would ever guess it. For \$250 I'll sell you a complete bungalow. You can have it built for less than \$100, and you'll have a palace that would have cost you up to \$1,000 to build of new material."

The removal of skyscrapers has already begun, and this has resulted in the appearance of second-hand steel. The prices on this class of material are 15 to 20 per cent lower than the new, following the fluctuations of the new in the open market. Old steel and iron always have a price as junk, and the difference between the value as junk and as building materials represents little more than the cost of manufacture.

Fireplaces from old farm houses also are in demand, and when a century-old house is torn down the open fireplace invariably is preserved to decorate some wealthy man's home. The supply of these is far less than the demand. Old oak for panels and old-fashioned Dutch doors in two pieces also are sure of a ready market at all times.

**NEW BANK BUILDING FOR MARYSVILLE.**

MARYSVILLE (Yuba Co.), February 9.—It is reported on the streets of this city today that the Hampton residence property on D street, between Fourth and Fifth, is about to change hands, and that the purchaser will be the Northern California Bank of Savings. It is claimed that the deal may be completed today, and that the sale will be followed by the removal of the fine residence now on the site, in order that a handsome and imposing bank building can be erected there.

The site is on the west side of D street, where there are some of the finest residences in the city.

**MASONIC TEMPLE FOR WILLOWS.**

WILLOWS (Glenn Co.), February 9. The Willows Masonic Temple Association was incorporated here yesterday for \$35,000 for the purpose of erecting a fine three-story building in Willows, the ground floor to be devoted to stores, the second floor to banquet and club purposes and the third to lodge rooms. The building will cost \$30,000 and is to be erected in the immediate future.

The officers of the Association are: President, H. G. Squire; Secretary, J. D. Danner; Treasurer, J. M. Silvey; Directors, G. W. Orr and R. O. Black.

**AMERICAN APARTMENT BUILDING WANTED AT ODESSA, RUSSIA.**

A problem in this city is the proper housing of the people at reasonable rates. Of late values of land within the city and rentals of living apartments have been yearly increasing. The city's population has been increasing and residential sections have become congested. Because of this, an association composed of lawyers, mili-

tary officials, engineers, clergymen, etc., has purchased 26,138 square feet for \$216,300 in one of the best residential sections with the intention of erecting a thoroughly up-to-date apartment building.

The association desires to erect a five-story building, the street floor to be devoted to business and the upper floors to flats, with elevators, electric lights and appliances, up-to-date plumbing, and not only everything known in the way of modern improvements, but something entirely unknown at present in this city. The association desires the assistance of American capital and the services of an American architect in order to secure the erection of a typical American apartment building. It estimates that approximately \$772,500 will be required for constructing the building required, while the annual revenue will be about \$128,750.

The association desires this office to place it in touch with such parties in the United States as may be interested. Many if not the greater proportion of furnishings will doubtless come from the United States.

The association expresses itself as abundantly able to provide all that may be required in the way of security for outside capital that may be invested. Parties in the United States interested in the above and desiring further information should apply to the Bureau of Manufactures, Washington, D. C., for the address of the chairman of the financial committee of the association. All correspondence should, if possible, be in the Russian language, but if this is not convenient, German or French should be used, preferably the former.

**FOREIGN TRADE OPPORTUNITIES.**

(From the Consular Reports.)

(Inquiries in which addresses are omitted are on file at Bureau of Manufactures, Washington, D. C. In applying for addresses refer to file numbers.)

**No. 6181. Railway cars and extras.**—Consul Alfred A. Winslow, of Valparaiso, reports that the Chilean Government has asked for bids for 20 box cars, 20 coal cars, 20 flat cars, 3 powder cars, 25 metal cars, 3 first-class coaches, 3 second-class coaches, 3 baggage cars, together with 60 pairs of wheels and quite a quantity of other car extras. Bids will be opened March 25, 1911, in the office of the Direccion General de Obras Publicas, Santiago, Chile.

**No. 6185. Apples, butter, etc.**—A report from one of the Commercial Agents of the Department of Commerce and Labor states that an American business man who has resided in Manchester, England, for several years, where he is now engaged in the import and export trade, desires to receive tenders from American exporters of apples, butter, or other products adapted to the English markets. Highest references will be furnished to inquirers in the United States and England.

**No. 6186. Pumping plant and pipes.**—An American consul in Mexico reports that a mining company in his district has asked for a concession to establish a plant for generating electric power and a plant for the distillation of sea water, the distilled water thus produced to be pumped to mines of the company

to be used for producing steam power and also for drinking water for the mining camp. Authority from the Federal Government is also asked to dig wells along the line of transmission and use the water for irrigation in case any is discovered. The permanent American address of the manager of the company in question is given in the report.

**No. 6189. Barge of light draft.**—An American consul in a Latin American country reports that metal boats might find a market in his district if constructed for boating and yachting purposes and freight barges. A local firm engaged in the banana trade will soon need a barge or two of very light draft which can be utilized on shallow rivers and creeks to transport bananas from steamers. It is suggested that American manufacturers address the concern in question to ascertain the kind of barks or lighters it may need for this service.

**No. 6190. American goods for Australia.**—A business man in Australia writes to the Bureau of Manufactures that he has had correspondence with American firms relative to the sale of their goods in that country, and that he is at present in the United States to make arrangements regarding these matters. He will be in this country until the middle of March and would like to meet the representatives of firms interested in this proposition.

**No. 6193. Leather goods of every description.**—A report from an American consular officer in a European country states that a local business house desires to hear from American manufacturers of leather goods of every description, such as trunks, hand bags, leather cases, collar boxes, hand bags for ladies, and the usual supplies for retail and wholesale stores. The firm desires price lists and discount sheets forwarded without delay, as it requires the goods shortly, when an American shoe store will be opened. Correspondence may be in English.

**No. 6194. Telephone system.**—A city in the Near East of 250,000 inhabitants desires a telephone system, preferably of the automatic type and with about 200 telephones to start with. A citizen from there now in the United States will furnish detailed information. The suggestion is made that an American concern install the equipment and organize the enterprise as a local company, selling the shares to native capitalists who are ready to purchase the stock.

**No. 6195. Representation in Latin America.**—An American business man well versed in Spanish and English writes to the Bureau of Manufactures that he is thoroughly familiar with trade conditions and business methods in Latin America, is in position to take up the business of American firms in these countries, and will undertake the organization of an expedition to Spanish countries in the joint interest of several firms producing similar lines of goods. He is especially interested in machinery, tools, and supplies in general. Correspondence may be in English or Spanish.

**No. 6197. Bone-crushing machinery.**—A correspondent of the Indian Trade Journal desires to secure the names of firms in a position to export bone-crushing machinery. Particulars may be obtained by addressing the Director-General of Commercial Intelligence, 5 Clive street, Calcutta, India.

## Among the Architects.

### ALXJOO OJSJONVRE NVS

Architect C. O. Clausen, Phelan Building, will shortly award the contract for the construction of a three-story and basement brick hotel building which is to be erected on a prominent business corner in Point Richmond. The building is a splendid piece of colonial architecture and when complete will be the most handsome building in Richmond. The building will occupy the corner of Washington and Cottage streets, the property of Miss Riordan, who is financing the enterprise. The two street elevations will be faced with a red pressed brick. The interior arrangement provides for a large dining room on the ground floor besides a lobby, grill room, kitchen and its accessories. The upper two floors will be divided into 42 rooms and baths, each room being supplied with hot and cold running water and heat. The lot on which the hotel is to be erected has two street frontages, one of 40 feet and the other of 100 feet and its splendid location assures the success of the venture. When complete the hotel, which is to be known as the Colonial, will represent an investment of over \$35,000.

Architect Herman Barth, 12 Geary street, will shortly award the contract for the construction of a one-story brick store building which is to be erected in the west line of Third street, south of Tehama, for Mr. Rosenthal. The new structure will be used for retail store purposes and will cost about \$8000.

Bids will be received by Major Williamson, in charge of the Constructing Quarter Master's Department at Fort Mason, up to and including March 1st for the construction of an addition to the present pumping station at the Presidio and for the installation of certain machinery. The official notice of bidders appears in another column of this issue.

Jas. T. Narbett and Chester Cole, architects of Chico, who unsuccessfully presented plans in competition for contract for that city's municipal building, have, in a signed statement, charged three members of the local Board of Trustees, Robbie, Scott and Eames, with gross favoritism in the awarding of the contract for the plans to Architect A. J. Bryan.

In their statement they declare that it was the Board's intention to award the contract to Bryan without the formality of advertising for bids, but that upon the advice of City Attorney Guy R. Kennedy, it was decided to advertise for bids, but that Bryan should receive the contract anyway. It is claimed in the statement that the Board met upon several occasions in Bryan's office, and that he was favored in every possible way.

Mayor Robbie, in replying to the statement, pointed out various essentials in which the plans of Bryan were better than the others submitted, and absolutely denied that the plans were awarded any other way but upon sheer merit.

Competitive plans for the construction of the new El Dorado County court house which is to be erected at

Placerville are to be received by the Board of Supervisors at Placerville on Tuesday next. A number of local architects are submitting designs for the work, which is to cost \$125,000. The Board will meet on Monday and transact the routine business and then adjourn until Tuesday, when the architects' drawings will be opened. The Board will remain in session until a selection has been made.

Architects Bakewell and Brown will shortly award the contracts for the construction of the Burlingame Country Club's new building which is to be erected on the site of the former structure which was destroyed by fire last March. The new building will be larger and more pretentious than the old club house, occupying a site 164 feet by 125 feet. The building will be two stories high and of frame construction with the exterior plastered with cement. The ground floor will be given over to the social rooms of the club, while the upper floor will be subdivided into smaller rooms for the private use of the members. The supervision of the building will be under the direction of W. B. Bourn, Willis Polk and George Newhall. Work will be started at once and it is the desire of the organization that the new building will be completed before the end of this year.

Architect William Hayes, Foxcroft Building, has awarded the contracts for the construction of the First Presbyterian Church which is to be erected at the corner of Sacramento street and Van Ness avenue. The general contract was awarded to Frank M. Garden, Union Trust Building, the plumbing was given to William F. Wilson, the terra cotta work to Gladding, McBean & Co., and the heating and ventilating and electric work to the Pacific Fire Extinguisher Co. The total amount of these contracts is reported to have been in the neighborhood of \$80,000.

Architect Walter D. Reed, Oakland, has submitted preliminary plans to the Oakland Council for the erection of a \$500,000 auditorium which is to be erected by the city. The committee have reported on a site for the new building on the shore of Lake Merritt and it is now the plan to include the \$500,000 necessary for the construction of the new building in the general bond election which is to be called for new schools. The site on the lake is now owned by the city of Oakland, having been purchased recently from E. F. Adams. The preliminary plans as submitted by Architect Reed for the building call for a square structure with four facades. The architect has selected the classic Greek style of architecture.

### FAIR SITES NOW BEING DISCUSSED.

Now that the Fair has practically been assured to San Francisco discussion has come up as to the most suitable place to hold the exposition. Seven sites have been mentioned, including four in San Francisco, two in San Mateo County, and one across the bay in Oakland. Briefly, they are:

Water front site, to build the fair on an arc following East Street from Rincon Hill to Telegraph Hill, constructing permanent docks and wharves to be used temporarily as exposition buildings.  
Harbor View site, the reclaimed and

other land of the James G. Fair Estate, and include portions of the Presidio, providing for a harbor frontage for the fair.

Golden Gate Park site, the 600 acres in the western portion of Golden Gate Park, with an ocean frontage, and contributing permanent buildings and improvements to the city pleasure ground.

Lake Merced, the Spring Valley property adjacent to Lake Merced and facing half a mile on the Pacific Ocean, a tract of some 1,200 acres of rolling land, for which it is claimed adequate transportation facilities can be developed.

Tanforan district, the tracts in South City, San Mateo County, where the aviation meet was held.

Visitacion Valley, the tract lying on the Southern Pacific Bay shore cut off and facing the bay, in San Mateo County.

Oakland water front, the reclaimed land between the Southern Pacific and Western Pacific moles, Oakland.

Citizens of Sacramento and the valley of the river which flows through the Capitol City have raised the sum of \$50,000 for advertising purposes.

This amount is to be expended in advertising the resources of the valley and in the general colonization schemes which are being promulgated in that part of the State. This is a substantial fund for such a purpose to be raised by popular subscription and it ought to bring some tangible results in the near future.

Certainly Superior California needs advertising. The citizens in the southland are better advertisers, in fact they have so well advertised the city of Los Angeles that in a great part of the East it is taken as a synonym of California. So much is this the case that in the recent issue of Collier's weekly the picture of the feat of Aviator Ely in flying from the deck of the warship is described as having taken place in the harbor of Los Angeles.

If such colossal ignorance as this exists in the editorial office of an international weekly as Collier's, how dense must be the general knowledge of the people throughout the country on the general subject of the resources of Northern California.

Statistics show that there has been an emigration to Canada during the past three years of about 100,000 annually. In a similar way a great number of Americans have crossed the southern boundary into Mexico. One real estate firm alone reports having sold 100,000 acres of land at Hermosillo on the West Coast of Mexico during last year to American farmers. This means colonization of foreign lands by people of the United States. The abundant opportunities offered by this State in soil and climate should offer inducements that would keep the great majority of the citizens of United States within the territorial boundaries.

### NEW LUMBER COMPANY AT OROVILLE.

OROVILLE (Butte Co), February 4.—Articles of incorporation of the Butte County Mill and Lumber Company have been filed with the County Clerk. The company is capitalized for \$75,000 and Oroville is the principal place of business.

With the exception of Clarke Standford, all the directors are from Riverdale.

## Editorial Page.

Speaking of the new lien law now up for consideration in the Senate, a member of the Kansas legislature has introduced a bill giving tombstone men a lien on monuments so that they can be taken back if not paid for. It now remains for a law to be enacted that will give preachers a lien on the bride, and the doctor a lien on the baby. Thus will the road for the fellow who beats his bills be made rugged from the cradle to the grave.

The Senate Committee has voted unanimously in favor of San Francisco as the fair site and the final vote of the body is scheduled for today. There seems to be no question that the measure will pass. While there is no reason to doubt that it will pass without any opposition, still we will all feel like we had it absolutely cinched after the President has signed the bill.

Following the announcement that \$75,000,000 would be spent in double-tracking the Harriman lines in the West comes the announcement that \$1,250,000 will be expended by the same corporation in advertising the Pacific coast and intermountain states. Thus it would seem that this great corporation is at last going to enter upon an aggressive and effective campaign to get settlers, a positive and efficient effort to increase the population. So outside of the fair to be held there is likely to be an advertisement of the State and its resources such as it never has had before. The time is ripe for development and when such a corporation as the Southern Pacific and its allied lines takes up such a campaign it means that the time has come when it must fight for business instead of playing the shut-out policy where they can hog it all.

The Merchants' Association of San Francisco has planned four trade excursions to various parts of the State for the purpose of establishing closer trade relations with the people who deal with the wholesale merchants and jobbers of San Francisco. The first excursion covering the northern part of the San Joaquin valley will leave San Francisco on Tuesday, February 28, and return March 3rd. This is the first of the merchants' expeditions to San Francisco's commercial field and is in line of the active campaign that has been instituted to extend the scope of the field.

A reader suggests that part of the State's contribution of \$5,000,000 in aid of the Panama-Pacific Exposition be used to construct a permanent building, of reinforced concrete, to be available in future for all large conventions that may be held in California.

It is further suggested that the struc-

ture be in the Mission style of architecture, typical of California.

The idea is a good one and worthy of consideration. Such a building would be a great help to securing National conventions for this State, and would remain a lasting monument to the opening of the Canal and the fitting celebration of the occasion.

The announcement by Colonel George Goethals, the head of the Canal Commission and the man in charge of the construction of the waterway, that the canal would be open to shipping by September, 1913, is gratifying to the people of the United States and to us of the Pacific coast. For it not only shortens the estimated time of completion but also lessens the estimated expense. Instead of 400 million dollars the figures are now placed at 375 millions.

It has been a marvelous undertaking. Only the perfection of modern machinery could have made the thing possible. When completed it will be the most enduring monument of any time.

In reality the canal will be an inland lake, reaching almost from ocean to ocean, enclosed at either end by the dams and locks at Gatun and Miraflores. Only at the Culebra Cut does the big waterway narrow down and have the excavated boundaries of our conventional ideas of a canal. Here is where the great work of excavation has been done and is yet to do. Here also the Principal difficulties have been encountered in the way of slides.

It is gratifying to learn that the work is to be completed ahead of time for in such a stupendous undertaking there are usually numerous difficulties and unforeseen circumstances occur that delay in time and increase the expense.

The perfection of modern concrete construction has had much to do with the ability to complete the canal in record time. The advancement of science in sanitation and medicine has made the canal zone habitable for the white man. Modern methods of transportation, the use of electricity for power, and the perfection of machinery for all kinds of construction work have together brought to reality an undertaking that would have been a dream a generation ago.

There are certain critics who declare that the canal will always be operated at a loss. They figure on initial expense, probable disasters, and upkeep, and figure that unless the canal earns about a hundred millions a year that it will be run at a loss. All of which seems to be the kind of criticism that has gone and still goes with every great and important undertaking. It

stands to reason that when the canal is completed it will do more to encourage and foster commerce than all the ship subsidies in the world. It will shorten distances and place the ports of the Pacific in communication with the modern nations. Whatever may be the difficulties encountered in the construction or maintenance of the canal, it is certain that the project is destined to be the great factor in the future destiny of all the countries that border on the great Pacific ocean.

Of the several sites mentioned for the fair none as yet seem to have any great preponderance of public opinion nor has any definite form been assumed by the contest. Insofar as the matter of federal approval has not been finally settled it would be folly to arrange the details before the initiative action would be secure.

A great number of citizens favor the western half of Golden Gate Park for the site as they point out that many permanent buildings ought to be erected and this would naturally add to the improvement of the park. Six hundred acres of land would no doubt be enough for the exposition. The surroundings are attractive and there is enough diversity of elevations to allow for the creation of lakes enough for all purposes.

The question of the water carnival brings up the desirability of the waterfront sites. Here the bay front at Telegraph Hill and around the city front a drawing for which has been made by Architect E. A. Coxhead. This design has the recommendation of being at the point of vantage for all the naval features and demonstrations necessary for the occasion and to present a brilliant and wonderful spectacle to the traveler who approaches the city from the bay or ocean way.

Visitation valley in south San Francisco on the bay front is also a prospective site. Lake Merced south of Twin Peaks is another site which has many recommendations among which are its natural surroundings and its transportation facilities.

All these sites have something to recommend them and perhaps most of them at least are suitable. The question is to select the best one in an impartial manner. The people are vitally interested in this affair. They will pay the price. There should be publicity given to the proceedings. An efficient committee has been in charge of affairs. The governor's commission will no doubt be able and competent men. In the meantime every citizen should take an interest in the fair and if possible have his say in seeing that the thing goes through as intended.

## What Are the Necessary Qualifications Of A Successful Painter Or Contractor?

The following paper was read by P. N. Kuss at the fifth annual convention of the California State Association of Master Painters and Decorators:

Honesty and knowledge of his trade. Honesty is the cornerstone of all legitimate business, and this applies to the painting trade as well as to any other business.

The success attained by a man in his line of business depends upon his knowledge thereof.

The qualifications necessary to success as a master painter may be divided into two classes—those of the mechanic and those of the business man. When I speak of a successful master painter, I do not mean a man that can show only a substantial bank account or assessment roll as evidence of his success, but one that has gained the confidence of the community in which he lives and has built up a business that will bring him in a living in later years, without his having to enter keen competition; a business that will come to him without overmuch effort on his part, let this business be small or large, as fits the needs and capacity of the master painter himself.

The apprentice is the embryo mechanic and in the mechanic we have the material for the successful master painter.

The first characteristic in a young man tending to the making of a good mechanic and later a successful master painter is love of occupation, an inclination to learn, an eye for color and proportion as well as ambition. And incidentally, has it ever occurred to you what is to be done with the multitude of young men that are annually turned out of our high schools, with educations too good for the paint shop (in their own estimation), and not good enough to make a living out of any profession. Some of them, no doubt, would make good master painters, if they could be subjected to a good mechanical training. Then again, has it ever occurred to you what would happen to us should our supply of European mechanics be withdrawn from us?

Now, let us take one of those boys or young men from school and make a successful master painter of him. First, we put him with some good firm as an apprentice, and with the characteristic mentioned above he will, in due time, learn to be a good mechanic. In the course of time his ambition will prompt him to strike out for himself in business, or he may choose to further perfect himself in the many branches of our craft and have no inclination to assume the responsibility of a business of his own. In the latter case he will be a good mechanic, never out of work when there is anything to do and always sure of a living.

On the other hand, we will assume that the young man is not satisfied with working for wages and starts

out for himself. If he is a good mechanic and treats his customers with fairness and honesty he will soon create a demand for his services. More men, more money and more executive ability is needed. He has now arrived at a critical point when his capacity for business will show itself. We have the cautious master painter, who will undertake no more than he can handle well and who has just enough ambition to further develop his mental capacity. Our minds like our muscles increase with exercise and, barring unforeseen accidents and misfortunes, the cautious, steady, ambitious master painter has every chance of success. His business may not be very extensive, but nevertheless must be classed as successful.

Then we have the plunger who will take everything offered him. He has not the slightest idea of his own capacity, but seems to think himself capable, because others heap responsibilities upon him. He goes up like a skyrocket and down like a stick. We hear of him for a season or two only.

We now come to the master painter who aspires to do an extensive business and, although instances may be cited where large businesses are carried on by men who are not skilled mechanics, still I hold that an early mechanical training is one of the essential qualifications for a successful master painter. It is true that when a master painter lays down his brush to devote his time entirely to the business part of it, he has yet a good deal to learn to be skilled in all the branches of our trade, nor is it necessary that he should be. He has now a foundation to work upon and if he has the inclination to learn his opportunities are now better than ever.

He comes in contact with new mechanics and new methods of doing work. He can continually learn from the men that he employs. There are but few men that are not willing to give to their employer the best they have, if it is appreciated by the employer. And why should he not be? It is his ware and he has it for sale.

Ability to estimate on work is, next to being a mechanic, an essential qualification to carrying on business. A master painter may carry on a nice little business, relying on the knowledge of how to do the work and his judgment of the amount of time and material required to do it, in order to make a price, still that method is not practical on a large scale. Schedules and price lists are nice things to have where you have no knowledge available, and for the purpose of establishing a relation of one class of work to another. However, you should never forget that it was somebody else that made the prices and not you. All values are based on costs and I should advise all beginners to make their own costs.

And do not wait until you are ready to retire, but begin at once. No matter how small a business you have, systematize it so that you can tell the number of hours or days it takes to do a job, as well as the material it requires. Figure your job from plans or otherwise, reducing everything to measurements. When you get the job, do it and keep strict account of cost, separating the different classes of work. When you have finished the work go back and measure all surfaces over again and compare the results with your original figures. The comparison may be a revelation to you. You may find something that you omitted or you may find something that is an extra that you can charge for.

Don't think when you have done this once that you know it all, but keep on doing it until you have price lists of your own. Eventually you will become expert at figuring and with persistence will actually get so far that at last you will know what you are doing.

But there are many jobs that cannot be reduced to measurements. Judgment and skill as a mechanic must serve you to produce certain results and a thorough knowledge of how to do work will help you materially.

In the execution of work on a larger scale, qualifications necessary do not differ from those needed by any other large employer. It is simply a matter of getting the right man in the right place, and here again your early mechanical training comes to your assistance. You need not wait to hear what others say, but soon learn to know your own men. Being skilled yourself you will readily recognize the skill in others.

The disposition and character of a man are important factors to be considered in placing him properly. That is, where he will be most profitable to you and where he himself will best suit fellow workmen as well as customer. Some men work well together and produce good results; others, with perhaps less skill, will please certain customers better. In fact, this qualification of putting the right man in the right place is so rare a gift that a man with that alone may succeed in any business, and it is really the executive ability which, combined with the opportunities of this country, have laid the foundation for many a fortune.

The material used in the painting business represents about one-third of its volume, and there is where the master painter, to be successful, is called upon to show his qualifications as a merchant.

As a mechanic, he has learned, or should have learned, the nature and uses of the many different materials used in the painting trade, and in this

(Continued on Page 15)

# The Hotel Shattuck, The Splendid Hostelry Of The University Town.

## Situation.

The Hotel Shattuck is situated at the southwest corner of Shattuck Avenue and Allston Way. To one familiar with Berkeley, nothing more would need be said. However, there are those whose knowledge of the College City is not sufficient to conceive a picture instantly at the mention of this remarkable site. The locality is among the most beautiful around San Francisco Bay. One block away is the University of California. To the east and north are the celebrated Berkeley Hills, from which many a poet and descriptive writer has received inspiration. The Berkeley oaks are considered one of the attractions of the State. In their quiet way, they rival, for beauty, the sky-scraping sequoias. Westward is the Bay. On the south are the Shattuck Gardens, the hostelry being in the northern part of the estate.

Local trains to the bay towns are close at hand. The trip to San Francisco is a matter of thirty-five minutes. In a shorter time can be reached the famous places of interest which surround, or are enclosed within the cities of Berkeley and Oakland.

## Construction.

In architecture, the Shattuck is reminiscent of the Spanish style, yet shows the elaboration that has been worked upon the old models by California architects. The result is a style that has become typical of this State, and nowhere is a more beautiful example to be found than in the Hotel Shattuck. The plans and designs were made by Benjamin G. McDougall.

The building is six stories in height; the roof-line, however, is not a uniform distance from the ground, there being a succession of tower-like effects, extremely pleasing to the eye. The exterior is white, capped with red tiling. There are two entrances.

Reinforced concrete is the material that has been used for this hostellar edifice. The result is absolutely fire-proof. The term is one that has frequently been used with more or less truth. But it may be said of this hotel that it is as solid and proof against fire as the ingenuity of building science is capable.

## Interior.

As was said above, modern progress in hotel craft is exceedingly severe in its demands upon the hotelman. When he enters the competition that is classified under the term "first-class," he has a costly task before him—a task not only costly but one that requires a large amount of experience, knowledge of the world, and talent of a high order. The lobby is a section where much of this ability culminates. The best of architects and interior decorators are employed to make an attractive and commodious lobby. It is as if here the guest pauses and makes his first estimate of the hotel. It is here that congregate many persons who are not guests, visitors, perhaps, or the many citizens, lawyers, jurists, friends, newspaper reporters, professional men of all kinds, and they, with homes near by, view the place as a matter of pride to their city. They may never have occasion to become a guest of the hotel in their own city; yet they comment freely thereon. It is the lobby that forms their opinion.

This part of the Shattuck is a most luxurious place. The general color scheme is white and gold. The walls are pannelled and hung with meritorious paintings of California scenes. The leather furniture, and the mahogany, rich examples of craft. They are comfortable and inviting—two particulars which are not always consequent upon mere expense in outfitting. The whole effect is one of splendor.

The offices are brilliant pieces of hotel architecture. The music-room and lounging-room are complements of that pains-taking which is evident in every part of the hotel. Tapestries, draperies, rugs, carpets, and fixtures constitute an artistic blend of color, proportions and beautiful perspectives.

## The Dining Room.

It was a gracious feeling for the University of California that the college colors, blue and gold, were used in the decorations of the dining room. At that, there are many varieties of blue and gold that have been used for decorative purposes. The tones that wall this part of the Shattuck are of the richest materials, and present a com-

bination that is at once satisfying and elating. The crest of the house, a blue shield with a gold S, gives a regal dignity from the tops of the pillars.

This eating hall has a capacity of three hundred guests. A number of banquets have already taken place here, the general effect of fashion and gayety being noticeably harmonious with the architectural value of the scene.

As for the tableware, napery and table accessories, these will vie with the best in the land.

## Ladies' Parlor.

The ladies' parlor is on the second floor, looking upon Allston Way. This department has come to be a most popular one in our big hostelries. Recent advancement in the feminine world, and the so-called emancipation of woman, has occasioned a demand for an apartment where the fair sex may meet on the same principles enjoyed by men in the lobby. This is a place of freedom, recreation, conversation and general convenience. It is a sort of woman's club. And in fact, at the present day, hotel life has to a great extent supplied the comforts and excellencies of clubdom.

Circassian walnut has come to be a fashionable wood; and deservedly so. Its deep tones and fine, smooth surfaces, devoid of harsh glosses, are an aristocratic tone in any room. The use of Circassian walnut in the ladies' parlor, especially with the handsome designs, were the objects of many compliments at the opening of the hostelry. And everybody who has been so fortunate as to view the place, has expressed instant admiration. The walls are done in brown tapestry paper; the draperies are white and brown.

## INTERNATIONAL CONGRESS OF ARCHITECTS.

Organization is now being perfected for the Ninth International Congress of Architects to be held at Rome next year in connection with the Jubilee Exhibition. Among questions to come up for discussion will be: (1) Armored cement, as used in various countries, and the possibilities of its being utilized for large buildings of a monumental character, having due regard to the technical and decorative aspects of the question. (2) Rules governing international competitions in architecture.

San Francisco

## Among the Architects.

Architect A. D. Nicholson has moved his offices from the Pacific Building to 20 Montgomery Street and now has his new offices open to the public.

Architect E. A. Bozio, 1125 Laguna street, has completed the plans and specifications for the construction of a three-story brick rooming house which is to be erected in the east line of Stockton street south of Pacific street. The owner of the property on which the building is to be erected is Pierre Duprey and he expects to expend about \$13,000 on the improvement. The bids for the work are now in the hands of the architect and the award of contract will be made within the next few days.

The Oakland city council has adopted a resolution declaring the public necessity of a municipal auditorium, to be erected on the shore of Lake Merritt and to cost \$500,000. The resolution is a legal preliminary to the inclusion of the item in the proposed school bond issue.

As preliminary plans for the building must be in hand before such a proposition can be submitted the city has retained Architect Walter D. Reed to make the drawings. He has filed a plan for a building, which may include a city boathouse and casino. The convention hall as designed will seat 10,000 persons and may be converted into an arena for horse shows and similar displays or turned into a theater which would seat 7,750 persons. In the structure will be a banquet hall with places for 2,000 guests.

The council has also adopted a resolution declaring the public necessity of issuing bonds for schools. The committee of the whole of the council and the board of education have agreed upon \$2,493,900 as the sum necessary to provide adequate high and grammar schools and sites.

Architects Wright, Rushforth and Cahill, 571 California street, have a number of sets of plans of the temporary city hall which is now under the course of construction on Market street between Eighth and Ninth streets, out for figures. The most im-

portant parts of the work are now being estimated and a number of the largest firms in the city are figuring the work. The time for the completion of the building is now growing short and it is the intention of the owners to rush the work to an early completion.

The County Surveyor of Santa Clara County has completed the plans and specifications for a reinforced concrete road bridge which is to be erected on the Meridian Road in Santa Clara County, and the Board of Supervisors will receive bids on the work which will be opened on the 20th of this month. The bridge has a 54-foot span and a 31-foot roadway. The entire structure will be of reinforced concrete.

Architect Charles S. McKenzie, Bank of San Jose Building, is preparing plans for a two-story frame store and lodging house building which is to be erected in the town of Los Altos in the near future. The building is designed in the Mission style and the exterior will be plastered with cement plaster on metal lath. There will be three stores on the ground floor and eighteen apartments on the second floor. The apartments will be equipped with all modern conveniences and are large and light. Bids on the work will be opened on Saturday next and the work is expected to cost about \$7500. The same architect has the plans on the boards for a number of artistic residences which will shortly be started in the various parts of the Garden City.

Architect A. C. Lutgens, 251 Kearny street, has prepared plans and specifications for the construction of a store and flat building which is to be erected for Mrs. G. A. Randolph of Alameda. The building will be of frame construction and will occupy a site in the south line of Hayes street between Gough and Octavia streets. There will be two stores on the ground floor and four flats on the upper floors. The flats will be nicely arranged and equipped in the most modern manner. The bids on the work are now all in and have been taken under advisement by the architect, who will award the contracts shortly. The same architect is preparing sketches, which have been approved by the owner, for a five-story and basement Class C building which is to be erected in the near future in the "burned district." The building will probably be designed for a hotel or high class apartment house. Plans are now nearing completion in Mr. Lutgens' offices for a public library building which is to be erected in a nearby town. Full details of this work will be published as soon as the working drawings are complete.

The Daily Pacific Builder has received a request from H. G. Squires, P. O. Box 126, Willows, Cal., asking that we make the announcement that the Masonic Hall Association of that city are considering the construction of a Hall in Willows and that they would be pleased to receive sketches and estimates from various architects. The letter states that the building is to be erected on a lot 50 by 100 feet and that the association will spend in the neighborhood of \$35,000 on the new structure.

In the morning dailies it was stated that the Pantages Theatrical Circuit

are about to erect a Class A theatre in this city. This has been reported several times but now the statement comes from the head of the organization and in the form that plans are under way for the purchase of the Morris theatre building on Ellis street, in the rear of the Orpheum, and that they will complete the structure at an early date.

The Southern Pacific Company are receiving bids for the construction of a power station which is to be erected in Berkeley in connection with the electrifying of their ferry lines on that side of the bay. The work will be executed in reinforced concrete and will be similar to the station built in Oakland by the same company. Bids for the work will be opened on the 17th in the offices of Mr. Barlow, in the Flood Building.

Bids have been taken under advisement in the Engineers offices of the United Railroads for the construction of a complete shop building and barns for the company which will be erected on Geneva street opposite the present brick structure which is now being used as a division headquarters. The contract will be awarded in the course of the next few days. Engineer Farlow furnished the plans and specifications.

John W. Procter, a well known real estate operator and one who has erected several substantial buildings, is about to start the construction of another high class apartment house in the north line of O'Farrell street east of Leavenworth. At this time Mr. Procter is not prepared to give the name of his architect but states that he will do so in the course of the next few days. The new building will cost in the neighborhood of \$100,000.

Sullivan W. Jones, member of the firm of Palmer & Hornbostel, the New York architects who designed the proposed \$1,000,000 city hall, will arrive Thursday, bringing the detail plans for the steel structural work of the building, and the contract plans for the superstructure and finishing. The board of public works will at once proceed with advertising for bids for work. Jones will be supervising architect. The firm was paid a \$5,000 prize for the design in the architectural contest held by the city. Henry W. Hornbostel of the firm visited Oakland and completed preliminary work on which the plans were completed. He detailed Jones to supervise the construction.

Bids are now being taken by the Oakland Board of Public Works for considerable of the work involved in the construction of their harbor improvements. The work referred to is that of dredging the Oakland Channel, the construction of levees in the Key Route Basin and the extension of Fourteenth street. Bids are called for on all of the above and will be opened on February 24th. Plans have been prepared by the City Engineer.

Architect A. W. Smith, of Oakland, will shortly award the contracts for the construction of a frame store and apartment house structure which is to be erected at the corner of Shattuck and Haste streets in Berkeley. The owner of the property about to be improved is M. P. W. Abbee. The work will be started at once.

All work for two three-story and basement frame bldgs. (flats).

Owner.....Domenico Figoni and Antonio Quaranta, 8th and Clementina, S. F.

Architect...None.

Contractor...Devencenzi Bros. & Co., 432 Broadway, S. F.

Filed Feb. 10, '11. Dated Jan. 9, '11.

Rough frame up .....\$1750

Brown coated ..... 1750

Completed and accepted ..... 1750

Usual 35 days ..... 1750

**Total cost, \$7000**

Bond, forfeit, none. Limit, 120 days. Plans and specifications filed.

**(382) Fortleth Ave. — 200 S Anza** ("A"). All work for a 1½-story frame dwelling.

Owner.....Mr. H. W. Schuck, 630 40th Ave., S. F.

Architect...None.

Contractor...M. Meyn, 3575 Sacramento, S. F.

Filed Feb. 11, '11. Dated Nov. 17, '10.

Completion of foundation.....\$100

Rough frame enclosed ..... 300

Rough plaster completed ..... 400

Accepted ..... 400

Usual 35 days ..... 400

**Total cost, \$1000**

Bond, forfeit, none. Limit, 75 days from Nov. 21, 1911. Plans and specifications filed.

**(383) Fourteenth Ave. W 50 N Geary.** Two-room frame dwelling.

Owner.....Thos. Scoble, 1405 Clement, S. F.

Architect...E. G. Spence, 515 12th Ave, S. F.

Day's work.

**Cost, \$3000**

**(384) West Clay Park Lot No. 11.** Two-story frame dwelling.

Owner.....S. A. Born Bldg. Co., 636 Market, S. F.

Architect...Schropfer & Bolles, Foxcroft Bldg., S. F.

Day's work.

**Cost, \$7000**

**(385) Oakdale No. 1735.** Repair and underpin dwelling.

Owner.....Mrs. E. McNeil, 2740 Howard, S. F.

Architect...None.

Contractor...Fk. Neidick, 2669A Howard, S. F.

**Cost, \$500**

**(386) Alabama W 350 S Ripley.** Raise and underpin dwelling.

Owner.....Tim Howerhan, Alabama near Peralta, S. F.

Architect...None.

Contractor...Ray S. Hulbert, 32 Prospect Ave., S. F.

**Cost, \$350**

**(387) Williams N 25 E Ceres.** One-story frame cottage.

Owner.....Chas. Broock, 1000 Tennessee, S. F.

Architect...None.

Contractor...J. M. Hoeye, 1000 Tennessee, S. F.

**Cost, \$800**

**(388) Griffith and Hudson SW.** Add to frame bldg.

Owner.....Wm. Taaffe Tanning Co., 509 Monadnock Bldg., S. F.

Architect...None.

Day's work.

**Cost, \$750**

**(389) Ceres and Williams NE.** Two-story frame store and dwelling.

Owner.....J. M. Hoeye, 1000 Tennessee, S. F.

Architect...None.

Day's work.

**Cost, \$1000**

**(390) Seventh Ave. E 25 N Judah N** 25xNE 95. All work for two-story frame bldg.

Owner.....Henry W. Swanitz, 1283 3d Ave., S. F.

Architect...None.

Contractor...Sunset Home Realty Co. Filed Feb. 11, '11. Dated Feb. 9, 1911

Contractor conveys lot subject to deed of trust for \$3500.

Balance \$3200 as follows: \$1500 on execution of contract; \$1700 to be paid in monthly installments of \$20, interest on deferred payments of 6%.

**Total cost, \$6700**

Bond, etc., none. Plans and specifications filed.

**(391) Mission & New Montgomery SW** SW 106 SE 80 NE 11-2 SE 80 NE 95-8 NW 106 to beg. Ornamental iron work for reconstruction of Rialto Building.

Owner.....Hartland Law, M. D., 636 Pine, S. F.

the bids were all taken under advisement. The low men in each case, however, are reliable firms and will in all probability be awarded the work. The following lists show the bids as filed by the competing firms.

### General Construction of Richmond Station.

Robert Trost, \$32,397.  
 O'Connor and Collins, \$42,150.  
 Robert M. Levan, \$37,500.  
 E. W. Elliott, \$54,238.  
 Lange and Bergstrom, \$37,000.  
 Charles H. Hock, \$35,725.  
 McSheehy Bros., \$29,213.

### Plumbing, Heating and Gas Fitting on Same.

M. Levy, \$2695.  
 William S. Snook and Son, \$2675.  
 Kiernan and O'Brien, \$2830.  
 J. E. O'Mara, \$2735.  
 John G. Sutton and Company, \$2731.

### Electric Work for Same.

Decker Electric Co., \$898.  
 American Electric and Engineering Co., \$775.  
 Hetty Bros., \$795.  
 Central Electric Co., \$825.  
 National Electric Co., \$644.  
 John G. Sutton, \$740.

### Yard Work, Clement School.

Lange and Bergstrom, \$—, bid void.  
 McSheehy Bros., \$35,000.

### Yard Fence at Mission Grammar School.

Robert Trost, \$1658.  
 Elmer Carlson, \$1860.  
 Pacific Rolling Mills, \$1850.  
 Lange and Bergstrom, \$1957.  
 Flinn and Tracy, \$625.  
 McSheehy Bros., \$2150.

### MUNICIPALLY FURNISHED HOUSES IN ENGLAND.

The town of Newcastle-on-Tyne, England, has furnished a very satisfactory solution for the slum problem. Two blocks of tenement dwellings have been erected upon corporation land, with their back to a twenty-foot street, and their face to the children's playground. Ten feet of this space form a pleasant avenue; thirty feet are utilized as front gardens to the houses. Here are seventy-two one-room dwellings in two stories. The blocks are divided from each other by a ten-foot passage, and access to the upper rooms is by way of a covered-in stone staircase at one end of each block, leading on to a balcony four feet wide. Each room is 15x11 feet and has a bay window 8-feet wide and projecting 2 feet 6 inches. A bed fitted with a wire mattress, occupies a recess 6x4 feet, and is screened by a curtain hung from a rod. There is a scullery portion 7x3½ feet, fitted with a sink, and a plate and pan closet. In the entrance lobby is a food locker and a coal bunker. The bay window is surrounded with fixed seats, which have lockers underneath. These single rooms are supplied with a wardrobe, containing a drawer and hat shelf; a combined dressing table and book rack; a plate rack with drawers and cupboards below; and even a rail for pictures.

These houses are rented for the sum of 12½ cents per day or 90 cents per week.

**Hotel**—Whittier, Cal.—Mr. H. A. Woodworth, capitalist from Denver, has taken option on property in northern part of this city on which he will erect a \$150,000 hotel.

## City Bids Opened.

### Board of Public Works Opens Bids for the Construction of the Richmond Police Station and Other Work.

A number of bids were opened by the Board of Public Works at their last meeting and among others were figures for the general construction of the Richmond Police Station, the heating and plumbing for the same, and for electric work. Bids were also opened for the yard work at the Clement School and for the construction of a fence and other work at the Mission Grammar School. None of the above mentioned contracts were awarded and

 H. Higgins, contractors; architect,  
 T. D. Newson & Son; 1½-story  
 frame dwelling; contract filed Feb.  
 9, 1911; cancellation filed Feb. 15,  
 1911.

**Theatre**—Medford, Ore.—Medford is  
 to have before the opening of the the-  
 atrical season, a \$40,000 theatre, to be  
 erected at Sixth and Riverside, near the  
 Natatorium. Dr. F. C. Page, who some  
 time ago announced his intention of  
 erecting a theater, is said to have ex-  
 pressed a willingness to go into this  
 new venture and assist in it, instead of  
 erecting the one he planned.

## NEW METHOD OF DRYING WALLS.

A new method of drying humid walls,  
 says the Slate Trade Gazette, has been  
 devised by a Belgian architect. It con-  
 sists in embedding inclined porous  
 tubes in the walls, the direction of the  
 tubes in plan being perpendicular to  
 the wall surfaces. By capillary action  
 these tubes continually absorb moisture  
 from the wall, for the air which they  
 contain, being in the same hygrometric  
 condition as that of the interior of the  
 building, is relatively dry, and readily  
 takes up the moisture. The act of  
 vaporizing ensuing therefore reduces  
 the temperature of the air passing from  
 the tube and being constantly replaced  
 by dryer and warmer air. The tubes  
 are placed sufficiently close together to  
 leave no intervals between their zones  
 of influence. In new buildings the  
 places for the tubes are left, but the  
 tubes themselves are not inserted until  
 the mortar has set. It is stated that  
 the method has been tried at Versailles.

**Apartment House**—San Diego, Cal.—  
 Henry Fehlmann, Jr., will erect a \$12,000  
 apartment house on Tenth and E, ex-  
 clusive of furnishings.

## Berkeley Advertisements.

## Many Bids Opened.

### Major Williamson Opens Bids For the Construction of Sixteen Buildings For Government in This City.

The result of the bids which were opened this week for the construction of a number of brick and concrete buildings at the Presidio show that in every case but one the figures submitted by Neil A. McLean were the lowest. The work is among the most important undertaken at the Presidio this year and will total considerably over \$225,000. There will be sixteen buildings erected and as stated above, Mr. McLean was the lowest bidder on fifteen of these structures. The figures for the construction of a guard house show that John J. Leonard was nearly a thousand dollars lower than McLean. Thirteen bidders figured most of the work and the bids as submitted by them will be of general interest and are reproduced below. The bids will all be sent to Washington for approval before any contracts are awarded, but in all probability both McLean's and Leonard's bids will be accepted. The work for the entire number of buildings was figured under the direction of the Constructing Quartermaster's office at Fort Mason and in charge of Major Williamson.

The following is a complete list of the firms submitting bids on the work and the official figures taken from the records of the Constructing Quartermaster's office.

#### Complete Construction of One Dispensary Building.

Neil A. McLean.....\$12,607  
 Willits & Barr..... 15,786  
 Jesse Wells Car..... 14,863  
 Duncanson-Harrelson Co 14,245  
 John J. Leonard..... 16,150  
 Pringle-Dunn Co..... 14,945  
 M. Fisher ..... 15,473.13

#### Complete Construction of Two Sets of Field Officers' Quarters (Plan 235D)

(All prices are for one set of quarters only.)

Neil A. McLean.....\$12,280

**Contract Awarded**—Long Beach, Cal.—C. C. Moore & Co., contractors and engineers of Los Angeles, have been awarded contract for installing of all piping machinery and mechanical apparatus in the new \$1,000,000 Southern California Edison plant now in course of construction here. The Moore Company bid \$39,000.

(Continued from Page 2)

age of ready-made goods and scarcity of skilled mechanics it stands him in good stead to know which pays him best, to use the ready prepared or to mix the article himself.

The successful merchant feels the pulse of the public and gives them what they demand, but sometimes the public demand is perverted. The successful master painter knows better. He buys the best and the best only, because to him it is the cheapest and because he knows a good article when he sees it, and if there is any adulterating or cheapening to be done, he prefers to do it himself. He has learned that from boyhood up.

Last, but not least, the successful master painter must be a financier. He must pay his bills promptly, and if he has got to go home without a cent in his pocket on pay day he must not let his men leave his shop without their full pay. He may get an extension of time from his supply men, but should never ask it of his employes.

I have tried to show that the qualifications necessary to the successful master painter are manifold—he must be a good mechanic, a man of executive ability, a business man—but I have also tried to show that a good mechanical training is the most essential qualification of all, in so far that if you have none of the other qualifications, this one alone will make a good living for you, and if you are so fortunate as to possess the combination of qualifications mentioned, your knowledge as a mechanic will make you the master of your line of business and worthy in the truest sense of the title of master painter.

#### SPEECH OF HON. WILLIAM SULZER, OF NEW YORK, IN THE HOUSE OF REPRESENTATIVES, JANUARY 31, 1911.

The House having under consideration House joint resolution 213 and House bill 29362—

Mr. Sulzer said:

Mr. Speaker: I shall vote for San Francisco as the most desirable place in which to commemorate the opening of the Panama Canal. The completion of the great canal will be the consummation of the hopes of the great world builders and the realization of the constructive dreamers of four centuries. It will mark the engineering triumph of all the ages. It will divide the continents, connect the oceans, extend our coast line, and make us invulnerable on land and sea. We should fittingly celebrate the completion of this gigantic undertaking. The Panama Canal is ours. We have built it, we will own it, and we will protect it forever. We want a Panama year, and 1915 is written as the time and San Francisco should be the place in our glorious coming annals.

Sir, in the interest of the people I have carefully considered the best place in which to hold this celebration and have come to the irresistible conclusion that the only suitable place to do justice to the Panama exposition is the beautiful city of San Francisco. There are many reasons for this judgment. In the short time allowed to me for discussion I can not go into all of them, but one reason is enough, and that is the opening in 1915 of the Panama Canal will extend the coast line of the United States from the Atlantic to the

Pacific. The stupendous work is essentially a Pacific project, and the commercial metropolis of the Pacific Ocean is beyond question San Francisco—the city of boundless hospitality, the city of warm hearts and glad hands, the greatest cosmopolitan city on all the broad Pacific. She needs no eulogy. Her story is the pride of America.

All credit to the intrepid citizens of San Francisco. They know no such word as fail. All glory to the new San Francisco. She has risen phoenixlike from her ashes—greater and grander than ever—the wonder of the world. The people of San Francisco are determined to demonstrate to all the world the progress they are achieving in everything that makes for the advancement of humanity. They ask the Government for no help. They want no gift. They appeal for no loan. All they ask is that the Government recognize the importance of their celebration of the opening of the Panama Canal, lend its official indorsement, take part in it, build its own buildings, makes its own exhibits, do so at its own expense, officially invite the other nations to do likewise—and San Francisco will do the rest.

The Government has aided financially every exposition of a national character ever held in this country. No Government aid is asked by San Francisco for this Panama exposition—not a dollar is sought, directly or indirectly—only suitable recognition and the extension of any official invitation to all the world to come, to see, and to participate.

The San Francisco exposition will be in the interest of all the people. It will materially benefit all sections of our country. In an educational way it will be a blessing to all the world. Then why should the Government refuse the request of San Francisco? I can not believe that we shall be so blind to our own best interests as to permit this legislation to fail. Congress should lend a friendly recognition to the enterprising and progressive people on our Pacific borders. They are entitled to it. They are doing a great work, that benefits all the people of our country. This exposition will bring to the attention of the world the wonderful natural resources and the great commercial possibilities of the countries bordering on the Pacific, and do much to strengthen the friendly trade relation of the nations on the ocean of the Orient.

Mr. Speaker, I am a friend of San Francisco. All things considered, she deserves the honor of the Panama exposition. Select as the celebration city the beautiful metropolis of the Pacific coast and it will be for the good of all. The Panama exposition will be a memorable milestone, marking a great epoch in our onward and upward progress. It will diffuse knowledge, educate the people, and exhibit the wonderful resources of our country and the constructive genius of our people. It will mean ocular demonstration, a great object lesson along historical, and educational, and mechanical, and commercial lines. It will mean triumph and advancement and enlightenment—and all for humanity. It will emphasize our greatness and our grandeur and our glory. It will illustrate our marvelous growth in every line of human effort, and demonstrate the giant strides our citizens are making along every avenue of industrial progress. [Applause.]

#### THE PARAFFINE PAINT COMPANY'S LATEST.

"Amiwud" is the name of the latest product of the Paraffine Paint Co., and is designed to fill the various uses and requirements in the interior finishing of buildings.

Amiwud is made in double rolls (same quantity per roll as wallpaper) and used for veneering any smooth surface, either plain, concave or irregular shapes, such as moulding, etc.

Amiwud boards are used to line the walls and ceilings of interiors by nailing same directly to the studding, then covering the joints with Amiwud battens. The result is an artistic finish in hardwood panel effect, replacing the use of plaster and wood, for covering the walls and ceilings of building interiors.

Blank boards are the same as Amiwud boards in weight and quality, and are used in the same manner, but the surface has no Amiwud finish. After being erected, if natural color is not satisfactory, they can be finished and decorated the same as plaster walls, at a considerable less expense.

There are many practical reasons why Amiwud products should be used.

Being of pulp fibre products, they are recognized as superior for building material, are non-conductive for heat or cold, can not crack, no time is wasted in waiting for walls to dry, etc., and in the saving of dollars and cents there is a very decided saving.

Amiwud products are made in such a variety that any condition of interior finish can be instantly supplied.

Amiwud is principally reproduced from the following hardwoods: Quartered Sawed Golden Oak, Light Oak and Weathered Oak, in Mahogany, Jenisero, etc.

The fact that the Paraffine Paint Co. is sponsor for the Amiwud is in itself sufficient guarantee that Amiwud is all that is claimed for it.

#### CARNEGIE LIBRARY ACCEPTED.

LOS ANGELES, Feb. 15.—The city council yesterday voted, 7 to 1, to accept the offer of Andrew Carnegie to give \$210,000 for the erection of six branch libraries in this city and to provide the \$21,000 annual appropriation for the maintenance of the libraries, upon which condition Mr. Carnegie's offer was made.

#### IN THE BANKRUPTCY COURT.

Petitions in bankruptcy were filed Tuesday by Ambrose and Leon Savage of A. B. Savage & Co. of San Mateo. The liabilities are \$1,329 and assets \$1,023.

Frank Halbert, a merchant of Oakland, also filed a petition, with liabilities of \$1,629 and assets of \$1,000.

Annie M. Todd, owner and manager of the St. Luke's Hospital of San Jose, also filed a petition. Her liabilities are \$5,149 and her assets, \$500.

#### CORNERSTONE TO BE LAID ON WASHINGTON'S BIRTHDAY.

Native Sons of the Golden West will celebrate Washington's birthday by laying the cornerstone of the new class A, eight-story building in Mason street, which will be the future home of the order in San Francisco. This date has been selected partly because it was February 22, 1895, that the cornerstone of the hall which was destroyed by fire April 18, 1906, was laid.

# Among the Architects.

## LOS ANGELES.

(From the Los Angeles Builder and Contractor.)

The Milwaukee Building Co. is preparing plans for a handsome residence to be erected in the Palisades tract at Santa Monica for Issac Milbank, 2607 Wilshire boulevard. It is reported that it will cost \$25,000.

Scott Quintin, 1127 Story building, has completed plans for the building to be erected at Avenue 20 and Humboldt street for the Los Angeles Can Co. It will be a three-story brick structure, irregular in shape, approximate dimensions 70x200 feet. H. Whitaker, 3802 North Griffin avenue, will erect the building.

Architects Edelman & Barnett, Blanchard building, have completed plans and are taking bids for the erection of a two-story brick bank, store and office building at the corner of First and Main streets, Alhambra, for the National Bank of Alhambra. The first story will contain two storerooms, and the banking room which will be 80x32 feet.

The Richards-Neustadt Construction Co., 704 Wright & Callender building, is preparing plans for a three-story store and apartment house building to be erected on Third street just west of the tunnel for R. W. Poindexter, Wilcox building. It will be Class C brick construction, 50x110 feet, with concrete foundation, pressed brick front, composition roof and fire escapes.

Architects Morgan, Walls & Morgan, 1114 Story building, are preparing plans for a two-story brick building to be erected at the southwest corner of Main and Seventh streets for the Ducommon estate.

Nat Dryden, 1553 Manhattan Place, has prepared plans for a large concrete residence to be erected at Beverly Hills for Harry W. Robinson, 2068 Hobart boulevard, proprietor of the Boston Store. It will be a one-story structure, 133x96 feet, designed in the Italian style of architecture. The construction will be entirely of reinforced concrete. The estimated cost is \$25,000. The construction will be done under the supervision of Mr. Dryden, who will also let all sub contracts.

Architects Morgan, Walls & Morgan, Story building, are preparing plans of a one-story and basement mercantile building, 51x130 feet, to be built at the corner of Pico and Normandie streets for George A. Ralphs, the Spring street grocer. It will have pressed brick facing, composition roofing, plate glass and iron fronts and all modern features.

Architects Elsen & Son, 383 Wilcox building, have prepared plans for a two-story and basement 12-room frame residence to be erected on Norton avenue near Pico street for Mr. Carley.

Architect A. L. Haley, inc., Higgins building, has prepared plans and is taking bids for the erection of a one-story brick garage, 50x364 feet, to be built on the west side of South Broadway near Eleventh street, for M. J. Nolan.

Fred Biren, 609 Broadway Central building, is preparing plans for a two-story brick store and apartment house, 50x60 feet, to be erected at Forty-second Place and Moneta avenue for

Charles Fegelman, of the New York Dye Works, 306 West Seventh street. Cost, \$5000.

H. B. Titcomb, district manager of the Southern Pacific Railway Co., 470 Pacific Electric building, reports that \$100,000 of a sum of \$500,000 appropriated by the railway company for construction work in Los Angeles, will be used at once for the erection of a large shop building on Alhambra avenue. The new building will be 160x200 feet and will have steel frame, brick walls, composition roof, galvanized iron and floor.

## Pasadena.

Thomas S. Norton, 109 North Orange Grove avenue, has completed plans and will superintend the construction of a two-story ten-room residence at 349 South Grand avenue for Mrs. S. E. Newbury. A garage with modern plumbing will also be built. The cost will be \$10,000.

J. R. Palmer has the contract for the erection of a two-story eight-room residence on North Los Robles avenue. The cost will be \$5000.

Plans have been prepared for a one-story brick addition to the passenger station of the Santa Fe railroad at Pasadena. It will be 60x60 feet in size, and will have brick foundation and walls, and composition roof.

The Sierra Madre Citrus association has let the contract to John Castle of Pasadena for the construction of the proposed addition to their packing house in Lamanda Park. The new structure will be one-story high, 80x112 feet. The cost will be \$7000.

## San Diego.

Architect Del W. Harris, Timken building, has awarded the contracts for the construction of the proposed three-story apartment house at the northeast corner of Tenth and E streets for Henry Fehlman, Jr. The general contract, including the carpenter work, has been let to Edward Rambo for \$12,000. The plumbing has been let to Schultheiss Bros.; the plastering to Brelin & Walker, and the electric work to the Heartwell Electric Co. The painting will be done by the day. The total cost will be \$18,000.

Architect G. A. Hanssen, Lawyers' building, has completed plans and is now taking bids for the construction of the proposed three-story brick store and apartment building on Fifth street between D and E streets for C. W. Ernsting, 3614 Fourth street. The structure will be three stories and basement high, and will cover an area 50x100 feet.

Architect Del W. Harris, Timken building, is taking bids this week for the construction of a one-story bank building in National City for the People's National Bank. It will occupy the corner of National avenue and Eighth street, and will be of reinforced concrete construction throughout, with a concrete tile roof. The main building will be 23x50 feet, with an L shaped extension 18x25 feet.

T. W. Coates, 1223 F street, San Diego, has the contract for the construction of a large addition to the packing house of the Stewart Fruit Co. at Chula Vista. The new building will be on the spur of the San Diego Southern Railway, and will be 75x100 feet in size. It will cost about \$7500.

General Manager A. E. Hornbeck of the San Diego & Cuyamaca R. R. Co., states that plans have been drawn for

a new passenger station to be erected in the near future at La Mesa Springs.

## Oxnard.

David Gastl, 629 B street, Oxnard, has the contract for the two-story addition to the brick and frame store building of Edward Tisnerat on A near Fifth street. The present building will be remodeled with new store fronts and interior finish. The addition will be 50x70 feet.

## Pomona.

Architect Ferdinand Davis has prepared plans of a one-story reinforced concrete building, 65x90 feet, to be built at the corner of First and Gordon streets for Clark Bros., the livery men. H. G. Baker of Glendora has the contract at \$5165.

The three-story reinforced concrete store and apartment building, 40x112 feet, now under construction for B. F. Caldwell, from plans prepared by Architect Ferdinand Davis, is ready for plastering.

## Inglewood.

R. J. Johnson of Inglewood has been awarded the contract for the erection of the new Methodist Episcopal church at the corner of Lenox and Fir avenues. It will be in the Gothic style of architecture, with artificial stone bases and columns, and frame walls. The cost will be \$7500.

## TO SIGN FOR POWER SERVICE.

PRINCETON (Colusa Co.), February 9.—C. R. Wickes, a banker of Willows; A. S. Linstrom, also of Willows, and D. A. Schellou, a farmer of this vicinity, were in this city recently to confer with business men and farmers with regard to subscribing for power from the Superior California Power Company, a subsidiary organization to the Northern California Power Company. The citizens are enthusiastic in welcoming the new line and a meeting will be held Saturday afternoon here to further confer with company's representatives. The company expects to run a line here and one to Butte City, the latter to furnish power for that place and several large land companies on the east side for pumping water for irrigation purposes.

## CORNER STONE OF SCHOOL LAID.

PETALUMA, February 14.—The cornerstone of the new Lincoln Grammar School was laid yesterday in the presence of the educational commissioners and city officials.

## LUMBER LOST FROM SCHOONER.

While attempting to cross the bar on its way into port Sunday night in a heavy sea and wind, the steam schooner Ravall, Captain Nelson, from Eureka, lost 25,000 feet of lumber. The cargo was lost near the lightship about 10 miles outside of port.

## FAVORS SHIP SUBSIDY BILL.

WASHINGTON, Feb. 14.—The house committee on postoffices and post roads will vote Wednesday upon the Gallinger ocean mail subsidy bill. The committee considered the bill at length today, but it did not put to a vote the question of reporting it back to the house. Postmaster Hitchcock advocated the matter before the committee. Members of the committee say the measure will be favorably reported to the house Thursday for passage.

## Editorial Page.

In his report to the President on the lumber industry of the United States, Herbert Knox Smith, Commissioner of Corporations, goes into detail on the subject of concentration of control of standing timber of the country into a few hands in vast speculative holdings. The report states that the Southern Pacific Company heads the list as the largest holder, the Weyerhaeuser timber company next, and the Northern Pacific Railroad Company third.

Commenting at length upon this propensity to concentrate the report goes on to state:

"The past history and present status of our standing timber drive home upon us the imperative necessity of revising our public policy for the future management of all our remaining natural resources.

"Only 40 years ago at least three-fourths of the timber now standing was, it is estimated, public owned. Now about four-fifths of it is privately owned.

"The great bulk of it has passed from government to private hands through (a) enormous railroad, canal and wagon roads grants by the federal government; (b) direct government sales in unlimited quantities at \$1.25 an acre; (c) certain public land laws, great tracts being assembled in spite of the legal requirements for small holdings.

"Such laws were wholly inappropriate to forest regions; but though vigorously condemned in several public reports they are still largely in force. They were intended to distribute the public lands in small tracts as homes for freeholders. In fact, they actually furthered timber concentration in vast holdings.

"The 1,082 largest holders of timber own 88,579,000 acres of land, as compared with a vastly wider distribution of public lands in non-forested agricultural sections.

The value of standing timber has increased tenfold, twentyfold and even fiftyfold, according to local conditions. The present annual growth is only about a third of the present annual cut. Replacement by new growth is very slow."

It is about two years since Gifford Pinchot, then Chief Forester of the United States, having made, under the instructions of the Federal Government, an inquiry into the timber resources of the states, reported that at the present rate of consumption the timber limits of the United States would be all gone in twenty-three years. This estimate was based on the assumption that the present rate of timber consumption will remain at today's figures.

Statistics show that, notwithstanding the great increase in the use of concrete, iron, and steel throughout the

United States, the use of timber per head of the population was almost doubled in the past twenty years. The stumpage, or standing timber, of the United States is currently estimated at 1,400,000,000,000 feet. This was the figure accepted by Mr. Pinchot when he made his famous estimate of the complete exhaustion of the forest reserves of the United States in twenty-three years from 1908. But some authorities have put the standing timber as high as 2,000,000,000,000 feet, and, accepting that figure, the evil day might be postponed for thirty-three years. In a portion of the Southern States of the American Union a relatively small belt of valuable timber is left, chiefly cypress, cedar, and long-leaf yellow pine, but it is estimated by the best authorities that within seven years this belt will have been cut clean. In Eastern Canada, deforestation has proceeded at the same rapid rate as in the Eastern States of America. The virgin forests have been cut away, with the exception of isolated belts which are held by strong hands.

Placing the figures at the highest above given and Commissioner Smith's estimate agrees with that of Pinchot. These facts and figures show what a vital question conservation has come to be. What is true of the lumber industry is also true of land and the other public resources. It is evidently high time that the government and the states took some thought of tomorrow.

Now since the Fair Resolution has been signed by President Taft and the Committee of citizens who saw the fight through are returning home, it is time to think of who is to direct the destinies of the exposition and after the site is selected what form the Fair city will assume.

The site for the exposition now seems to be the paramount thing. The boosters for the various places are all active in extolling the advantages of their respective sites and it will be a pretty hard thing to decide in the end as each has many things to recommend it.

In this connection the question of supervising the architectural features will be as important a matter as any that will come before the executive body of the exposition. Two plans have been suggested. One that an advisory board be appointed, consisting of five members, chosen by the American Institute of Architects that will have supervision of the buildings. Another is that the authority be vested in one man. Both have something to recommend them. On the theory of the City Beautiful here certainly will be a chance for the fairy creation of the artist. A city for a show such as the world has never seen perhaps will have

to be erected in the short space of three years. Its perspective and distances, its landscapes and terraces, its elevations and skylines will have to be comprehended and held in the mind's eye of the artist who designs it. Along with this will be the selection of sites and allotments to different states and foreign countries, harmonizing the buildings they will construct with the general scheme of things.

Under the conditions that will exist it would seem to us that the responsibility should not be divided but rest with one man. He should be an artist and should have the advantage of the counsel and suggestions of his associates in the work. But beyond that, the fair city should not be a patchwork creation, a composite picture made up of perhaps heterogeneous ideas. Here of all places will the artist be able to give free reign to his imagination and erect, though it may be of perishable plaster, a fairy city as ornate and beautiful as any dreamed of by the ancient Greeks.

Along with the announcement of the war on the ocean freight rates comes the statement that the Standard Oil group of capitalists have secured control of the Gould lines. This of course includes the Western Pacific system. So that after all back of all the transcontinental lines that enter the state of California is the same group of capitalists. They are different corporations and different bodies, but back of all are companies and corporations which hold a controlling interest or influence that dictates the general policy of the road.

Roughly speaking the capital of the country is represented by two great syndicates, the Rockefeller and the Morgan interests. These represent upward of 20 billions of dollars of wealth and there is no great interest of any kind that is not associated with one or the other. These are the great overlords of this financial feudalism and the other lords maintain their positions through their alliances with them. When they start out to get a plain independent American's scalp in this age of corrupt commercialism it is the steam roller process to a refinement. He is lucky to get off alive.

The bill introduced into the present legislature to prohibit the sale of liquor within one mile of the State farm school at Davis and at the university, recalls the heading published in a San Francisco paper when a similar law was enacted some years ago.

The reporter in good faith and in perfect innocence wrote a head for the article entitling it, "An Act To Promote Pedestrianism Among Students."

## The Architect, What He Should Be and What To Expect Of Him.

Although an architect's commission for the planning of a home or building is a very small part of the total investment, yet upon his ability depends, to a large extent, the best and proper expenditure of the entire building funds. To be successful, an architect must be versatile. He must at once be a structural engineer and a mathematician; an artist and a business man. His profession is both an art and a science. The mathematical part is mentioned here first since mathematical accuracy, both as to scale and dimensions, is absolutely necessary throughout all his work.

Drawings containing a lack of the proper amount of dimensions, or inaccurate dimensions, are useless, for workmen accustomed to following the plans without question will, if the dimensions are inaccurate, sometimes make serious mistakes, costing the owner of the home or building several times what he paid his architect, to rectify them. The contractor has a right to expect compensation for all extra work required through any inaccuracies on the drawings.

Wherever the strength of materials has to be figured, it is very necessary that the architect should know their relative strength so that they will sustain the weight which they have to carry in a safe and economical manner. Even a home sometimes presents difficult structural problems, although, of course, they are not as prominent or as vital as in the construction of buildings. The strength of materials should never be guessed at, since there are accurate ways of figuring all materials based upon previous tests and experiments. A strong tendency on the part of many architects lies in the direction of making homes or buildings far stronger than required, thus compelling the owner to pay for beams or girders which are several times as strong as necessary.

An architect must be an artist—an artist who paints with materials. All good designing is done in the head. The home is first built in imagination, the architect's drawings and specifications being only the systematic means of conveying to workmen the instructions which will enable them to build this mental picture with material. The artistic element in the designing of a home is very essential, both in making it a lasting joy to its owner and for the pleasure it affords him to receive the credit given his good taste by admiring friends and neighbors. The architect must be a man of sentiment, since sentiment enters into the planning of a home to a large extent, it being in sentiment that the home has its conception.

As an artist, the architect takes into consideration not only the harmonious arrangement and decorative features

of the room within, but their outward effect upon the exterior of a home; as, for example, the windows, front entrance, the fireplace, when built on an outside wall; and not only the artistic grouping of doors and windows is considered, but their practical arrangement also, so as to preserve wall spaces in appropriate places for such wall furniture as pianos, bookcases, beds and bureaus.

He must be a thorough business man; a man of unquestionable integrity, especially when he is called upon to superintend the construction of a home or building. In this capacity, he is sole arbitrator between the contractor and the owner. He must not only be tactful, but very frank and fair, with all concerned. Sometimes he is put in the very embarrassing position of having to decide against his client in favor of the contractor; but more often the decision is in favor of the client and against the contractor. When disputes arise between contractor and owner, as they frequently do, his decision must be entirely impartial.

Some people have the wrong impression that an architect's decision should invariably be in his client's favor; but such is not the case. An architect should always go on the principle of an owner paying the proper price for everything obtained, and the contractor's giving him everything that he pays for. Neither should be allowed to take undue advantage of the other. The architect who will for a price, allow a contractor to put inferior materials into a building, or who will specify certain inferior materials for a commission, is not worthy of his profession. Such a man, in the first place, has not sentiment enough to properly plan a home. His very pride, alone, if he is a man of quality, would rebel against the idea of inferior materials or workmanship going into monuments of his ability. The homes and buildings which he plans and designs are the foundation-stones on which rest his reputation. The stronger that foundation, the more secure the reputation. If the foundation becomes weak and rotten with corruption, his reputation soon crumbles and falls.

Now that the reader knows in a general way what an architect is, or should be, it is an easy matter to deduct from this what to expect of him.

After consulting with an architect, either by correspondence or in person, and having frankly informed him of the amount you wish to spend, the location of the house and your general idea as to its plan and design, your architect should give you his price for the preparation of the complete plans, specifications and details. Prices are sometimes quoted on the percentage basis; a certain per cent on the final cost of the house being the architect's

commission. The most satisfactory way, however, for both architect and client, is to have a definite price agreed upon. This will remove entirely any question of the architect's trying to increase the cost of the house in order to increase his commission; and it should be thoroughly understood between architect and client that the architect is to provide all necessary drawings for the complete, convenient, and proper construction of the house or building.

Cases have been known where the architect has claimed that his price included the furnishing of only one set of plans, and where he has charged exorbitant prices for additional sets. Such a man, of course, is not dealing with his client honestly. He is taking advantage of his client's ignorance. In the first place, it is his duty, as an advisor, to inform his client of all the pitfalls into which he is apt to run, and not to deliberately make them for him.

No building, no matter how small, can be built conveniently with less than three sets of plans. The owner should have one at his home, as a matter of convenience in keeping in track of and following up the work, taking estimates on various items, etc. There should always be one set of plans at the building during its construction, so as not to inconvenience the foreman at any time. Since the mill requires a set of plans for a considerable length of time during the construction of the home, in order to get out the various items of mill work and deliver them as they are needed, an extra set should be provided for this purpose. When the home costs over seven or eight thousand dollars, there should be provided additional sets, as the size or manner in which the building is being constructed may require.

Never consider an architect's estimate of cost as accurate. It cannot be, except by coincidence, since he has not the gift of prophecy and can only state approximately what the lowest bid will be from several contractors who may vary in their estimates over twenty per cent.

One of the principle advantages of employing an architect is that both the planning and building of a home are reduced to a system. In this profession, as in all other professions or trades involving a multitude of details, system means economy. Few people have the slightest idea as to how much thought and time is put into the preparation of the plans and specifications for the construction of a modern home. Give your architect time. Plans cannot be made with a rubber stamp. Every home is a problem in itself, and it takes time to work out the best solution of it.

(Continued on Page 15)

## A Monumental Office Building And A Splendid Hotel For An Interior Town.

### HANDSOME FRESNO HOTEL.

Active construction work has been started on the handsome seven-story hotel building designed by Architect Edward T. Foulks of San Francisco and which is to occupy the prominent business corner of Merced and I streets in the growing city of Fresno. The hotel is to be of the reinforced concrete type of construction and, when completed, will rank as one of the finest hosteleries to be found in any of the interior cities of the state. The contract for the construction of the building has been let to H. C. Farley, of Oakland, and calls for the expenditure of \$200,000. The work has progressed rapidly and at this time the foundations are in and the contractor has the walls well up to the first story.

The hotel has been designed in the Spanish Renaissance style of architecture, and as the reproduction from the architect's drawing published on Plate "B" of this issue shows, is an exceptionally pleasing treatment of this style of design. The exterior will be covered with cement plaster and blocked off in tiers. Color effects will be worked into the cement treatment of the upper portion of the building. The proportions of the whole structure have been carefully maintained throughout and while the general appearance of the building is plain the completed structure will draw well deserved comment from all who visit Fresno.

On the first floor will be located the large public dining room, a banquet room, ball room, main lobby and general offices, a bar and florist and several retail stores which will face on the main street. A unique feature of the hotel will be a large open court in the center of the structure which will extend up for two stories and be covered

with a large art glass dome. The rooms on the mezzanine floor consisting of the ladies' parlor, writing rooms and sample rooms will open onto this court. In the center of the court will be a large fountain surrounded by gardens for summer use while at one end an open fire place has been provided for the winter months. The kitchen accessories are complete to the last detail as is all of the mechanical equipment of the hotel and will be located partly in the basement and on the first floor adjoining the dining and banquet rooms.

Four of the upper floors have been given over to the use of guests chambers and baths, numbering 175 rooms in all. These rooms are all large and bright and will be heated with steam. Many of the rooms are so arranged that by the use of connecting doors they can be thrown together into connecting suites or used as single rooms as the case requires. The interior finish throughout will be of the very best and the furnishings of the rooms will be in keeping with the high-class of service which is to be maintained.

The seventh floor of the hotel is to be fitted up as a private club and will consist of a large social room, banquet hall, library and writing room. The finish of this portion of the building will differ from the rest owing to the special purpose to which the floor is to be put, and will include large open fire places and hardwood floors.

Construction work has been going on at the Fresno Hotel for the passed two months and the building will probably require at least ten months more before it can be completed.

### MONUMENTAL OFFICE BUILDING.

In anticipation of the demands that undoubtedly will be made within the

next two or three years for more and finer office accommodations within what is known as the conservative financial district of the city, Architect Curtis Tobey, Russ Bldg., has designed a monumental office building to cover the southwest corner of Montgomery and Bush Sts., S. F., diagonally opposite to the Mills Building. The same Architect, some time before the fire, remodeled the old improvements for the Crocker Estate Company, and, in the plans for the new building, every advantage of the site has been carefully considered with a view of not only producing an attractive and prominent structure but one that will net the owners the greatest profits.

The plans call for Class "A" construction with reinforced floors, curtain walls and partitions. The exterior is stone and marble, and the vestibules and corridors will be executed in marble and mosaics.

Each of the fourteen floors of offices contain twenty outside rooms. The twelfth floor under the main cornice, is devoted entirely to the two sets of lavatories, barber shop and baths, and ladies' parlors. The fourteenth floor is a blind story with dead lights in the roof back of the balustrade. This floor provides each office in the building with individual armored steel safe storage rooms.

The building is entirely self-contained and the energy plant in the basement will supply electrical heat, light and ventilation to each office.

The cost of the building is estimated at \$300,000.

The site is now occupied by a one-story building under lease and, although no definite time has been set, the owners will take up the matter of improving the property as soon as conditions are, in their judgment, sufficiently stable to warrant the investment.

### NORWAY'S TIMBER SUPPLY.

The Norwegian authorities are somewhat apprehensive on account of the increasing importation of fir and pine timber by owners of wood-pulp mills. It is looked upon as an indication that the forests of the country are being drawn upon beyond their capacity, and this in spite of very liberal public and private outlay for tree planting and the enactment of forestry laws in most of the wooded districts.

The forestry laws of Norway regulating the usage of the forests and the size of trees that may be lawfully felled for any purpose other than the owner's private use, and not for sale, are different in the several communities and are formed to meet the requirements and wishes of the people themselves. For this reason trees not much larger than saplings may lawfully be felled in some tracts, while only fair-sized trees may be felled in others.

### Forestry Work—Imports of Pulp Wood.

Tree planting is carried on systematically by the State, by counties, and by private persons, but it is stated on good authority that from the time of planting it takes twenty-five years for a tree to reach 12 inches in diameter at the butt in the most favorable localities in the south, while it takes fifty years or more in tracts in the north where planting is at all possible. Even in the southern part of the country it takes seventy-five to one hundred years for a pine tree to yield timbers 25 feet in length and 9 to 10 inches in diameter at the top. Planted trees are claimed to be self-seeding when thirty years old. Owing to the broken and hilly condition of most timber lands in Norway it is often found impossible to start new growth by planting, as heavy rains wash away the seedlings.

Importation of material for the pulp mills was first tried in 1907. The import had reached 12,800 cubic meters

the next year, and in 1909 it had increased to 65,400 cubic meters, valued at \$362,000. The timber is imported from ports in Finland and Russia.

### Exports of Lumber Decreasing.

Another reason for doubting the endurance of the forests is the fact that the export of lumber is fast decreasing. Exports of all kinds of lumber have been as follows during the last four years: 1906, 2,028,000 cubic meters; 1907, 1,897,000 cubic meters; 1908, 1,496,000 cubic meters; 1909, 1,322,000 cubic meters.

As lumber prices have advanced from year to year, the decrease in bulk has not caused a corresponding decrease in values; nevertheless the figures, it is believed, point to the inevitable result—that unless the forests are better protected the supply will fall short of the demand, although iron and stone have largely taken the place of lumber for building of ships, houses, and bridges and for other purposes.

## Among the Architects.

L. H. Sly, 125 Sutter street, is to erect a costly apartment house on the east side of Leavenworth street south of O'Farrell and the work will be done by day labor, under the direction of the owner. The building will be similar in the general designs to the two other apartment houses already erected by Mr. Sly and when complete will cost about \$100,000.

The Regents of the University of California are now receiving figures for extensive work which is to be done in connection with the construction of the Agriculture Hall. The bids called for include plumbing, lath and plaster and furring, roofing and sheet metal work, marble and terrazzo work and the mill work. The bids will be opened on March 1st and at the same time figures will be received for the furnishing and installation of lighting fixtures in Boat Hall. The official advertisement for bids appears in another column of this issue.

The Government Engineers' reports on the various harbor improvements which are now under consideration have been filed at Washington. The reports show that \$1,100,000 has been regarded as necessary for the Oakland harbor and the same report favors a large amount of work done in the Los Angeles harbor.

The official authorization of the award or contract for the construction of the general foundry building for the naval station at Bremerton has been made and as reported in these columns sometime ago the work was awarded to W. N. Concannon of this city for \$143,825.

The news has also reached this city from the Navy Department in Washington to the effect that the plans for the barracks which are to be erected at the Bremerton station will shortly be ready for figures. This work was figured by many local contractors but all figures were rejected by the government and the plans have been revised. Bids will be called for in the course of the next few weeks.

Architect J. Cather Newsom, Monadnock Building, is preparing plans for the construction of a handsome two-story frame residence which is to be

erected for Mr. Haywood on the Boulevard in Hayward. The dwelling will follow the Mission style and the exterior will be plastered and the roof will be covered with tile. The interior has been arranged for nine rooms besides the baths, and will be beautifully finished throughout. A garage will be built in connection with the dwelling and when complete the work will cost in the neighborhood of \$10,000.

The same architect has the plans for several high class commercial structures under way including an eight-story building in the city of Oakland and several apartments on this side of the bay.

The revised plans for the construction of the Marine Barracks which are to be erected at the Government Navy Yards at Bremerton, Washington, will be received in this city within the next three weeks and submitted to the local contractors for figures. The revised plans are expected to run about \$115,000. The group of buildings will be of the reinforced concrete type and will be the most substantial improvement to the yard in the north made for some years.

The Navy Department have also forwarded plans from Washington to the Benicia Navy Yard for the construction of a reinforced concrete projectile storage building which is to be erected at the yard at Benicia and bids are now being called for on its construction. The figures will be opened on March 15th at Benicia.

Architects Parker and Kenyon, 244 Kearny street, are preparing plans for the alteration of a large brick building in Marysville. The work will consist of the rearrangement of the two upper floors so that they may be used for lodge purposes. The work is extensive and will necessitate the tearing out of the entire fitting of the present building and the refitting, including finish wood work, plumbing, hardware, etc. Work will be started as soon as the plans can be completed.

Architect Voorhees of Oakland has completed the preliminary plans for the construction of the new Vallejo high school building and the School Trustees state that the work will be started about April 1st, or as soon as the plans can be completed. The design shown by Mr. Voorhees is very attractive and will assure the city of Vallejo one of the finest high school buildings in the state. The cost of the work is estimated at nearly \$50,000.

Architects Cunningham and Politeo, Chronicle Building, will shortly award the contracts for the construction of a large part of the work in connection with the erection of the new Alcazar Theatre building. The steel contract has already been let and the work on which bids have been called for includes the following: Painting, plumbing, heating and ventilating, automatic fire sprinklers, vacuum cleaning system, electrical work, sheet metal work, lathing and plastering, stucco work and the marble and tile work. The new play house will cost in the neighborhood of \$150,000 before it is complete.

Architect Thomas Edwards has moved his offices in the Koenig Building and is now located at 45 Kearny street, where he is associated with Architect

Schumacher in so far as the use of the offices is concerned. The work of the two architects will be conducted separately as in the past.

In connection with the extensive improvements which are now under way at the Presidio, Major Williamson, officer in charge of the Constructing Quartermaster's Department, announced yesterday that the plans for the construction of a building for the female nurses which is to be erected near the General Hospital on the Presidio grounds are now nearing completion in his office. The plans for the work call for a two-story and basement building complete in every detail, including a heating plant and modern plumbing. The building will be of brick and frame construction with the brick used up to the second story and frame construction above that point. The plans will be complete within a few days and the advertisement for bids will be published shortly.

In a communication received from Washington it is stated that the Secretary of the Treasury has decided that a competition will be held to secure the plans for the subtreasury building which is to be erected in this city. It is stated that sixteen architects have been invited to submit plans for the work, which will be opened in three months' time. A jury of awards has been appointed consisting of D. H. Burnham of Chicago, H. Van Buren Magonigle of New York, Douglas H. Thomas of Baltimore, C. E. Richards of Columbus, Ohio, and W. H. Noland of Richmond. The cost of the building for which the architects are to compete is estimated at \$500,000.

Architect O. E. Evans, 2425 Mission street, has commenced the preparation of plans for sixty-three dwellings which are to be erected in various parts of the Mission District and for several different owners. The work will be started at once and a number of the plans are now complete. Each of the buildings will cost over \$2,000 and will average about \$2500. This work is another of the direct results of the selection of this city as the fair site. At this time Mr. Evans is unable to state just what method will be pursued in the construction of the dwellings, but it is probable that contracts will be awarded for the construction of several buildings at once.

A competition, in which a number of local architects were interested, was recently settled in Visalia. The competition was held to secure plans for the construction of a \$40,000 school building which is to be erected in the Lamooore School District of Tulare County. The work was awarded to Architect Thayer of Visalia and the building will be a brick structure costing in the neighborhood of \$40,000. Work will be started on the construction of the building as soon as the working drawings can be completed.

Contractor Armbruster of Mill Valley has been awarded the contract for the construction of a large country residence which is to be erected by a Civil Engineer of Berkeley on property which he has recently purchased in Mill Valley. The contract price for the work is reported to have been close to \$17,000. Work will be started at once.

**ENDORSED BY NATIONAL BOARD OF FIRE UNDERWRITERS.**

The Falls Manufacturing Company, conducting their factory located at 317 First street, San Francisco, has recently been successful in having their Standard Fire Door Hardware endorsed by the National Board of Underwriters' Laboratories and have been granted the use of the endorsed label on this hardware.

In the manufacture of Labeled Fire Door Hardware every fixture is thoroughly inspected by the local Board of Underwriters representing the National Board, before it is permitted to leave the factory.

The label is a guarantee of quality and accuracy in production and insure the purchaser against substituting as well as the minimum rate of insurance by the local Board of Underwriters.

We are pleased to announce that it is gratifying to know that we are able to procure a product of this character manufactured in one of our own factories, so conveniently situated in our own State and commend the enterprising firm for their effort in behalf of the users of this class of standard goods.

They deserve the earnest support of the architects and building professions generally and no doubt will be of much convenience to the many architects, contractors and builders and owners seeking this class of building hardware in the future.

### SECURING THE BEST BIDS FOR CONTRACTS UNDER COMPETITIVE PLAN.

There is considerable discussion as to the best method of securing the most acceptable bid under the competitive plan of taking bids, and many suggestions have been made. All take it for granted that the plan of awarding to the lowest bidder is not of itself the best way, since the lowest bidder may have figured too closely to enable him to get out whole, with the alternative of either losing money on the job or of making even through methods which are sometimes successful but are never satisfactory, says a writer in a recent issue of "Improvement Bulletin." One suggestion is to announce that the contract will be let to the lowest bid, but one would be accepted, as a means of avoiding the possibility of the work going at a figure which implies a loss to the builder. Another plan is offered to have the architect or engineer make a close and accurate estimate of the cost of the work and throw out all bids exceeding this by 25 per cent and average the remaining bids, this average to be regarded as a fair price and the work offered to the man closest to the average, but under it. All lower bidders are to be permitted to refigure the work and ascertain if they are still willing to undertake the work at the figure named in their bid, but are not to be permitted to change the figure. If they find on refiguring that they have not erred materially, their bids will be considered, otherwise the work is to be

let to the man figuring closest to the average of the bids taken.

This latter method would afford an opportunity for the low bidders to scrutinize their bids and ascertain if they had made any serious errors, and they would also be able to retire from the contest without having any threats of being penalized to the extent of the customary check which is required. It would do away with a portion of the present effort to bid low, whether it was carefully figured or not. And the ability to retire from the competition would serve to place the bidder upon a level with the owner, whereas in the present method the owner is not held to anything, while the contract is forced to make a contract, signed by him, and accompanied by a forfeit, which the owner is at liberty to accept or reject, while the contractor has no such option. The mutuality of the contract is not present in such an arrangement.

But the real situation lies in the lack of enforcing the specifications. Bidders come to know how much architects or engineers may be expected to enforce the acquisitions of the specifications, and to take chances accordingly. While there is a great deal of complaint over the manner of enforcing the specifications on Government work, there is an example set which architects and engineers should copy. The specifications should mean what they say and they should be worded in such a manner that they are sufficiently plain to be intelligible to all who are to be guided by them. The complaint of too much technical requirement on the part of Government officials is not to be endorsed, but regarding the specifications as the basis of operation is something not to be objected to—if the specifications are specific enough to be plain. But hastily prepared specifications make a very poor ground from which to complain of careless and reckless bidding.

### WARNING.

#### TO THE PUBLIC:

It has recently come to our attention that the Pitcher Patented Sliding Door Frames for 5½ inch partitions, or 3¼ inch studded wall, which many architects are specifying and which have been installed in all classes of buildings in San Francisco and surrounding cities, Portland and Los Angeles, are being copied and our patents infringed upon, and that there is a very frail and poorly constructed substitute for our frames now being placed on the market and offered to contractors and builders.

We wish to notify all architects, contractors and owners of buildings to beware of any such infringements and that we will not allow such frames to be erected without protest, and contractors and owners will put them in at their own risk.

We wish to state to the public that we own and control Letters Patent covering frames which are known as the Pitcher Patented Sliding Door Frames, and that any contractors, owners or other persons who are manufacturing, or putting up, or using a substitute for this frame and infringing on our patents, will be liable to suit.

We will be pleased to furnish any further information in this connection if desired.

 Filed Feb. 20, '11. Dated Feb. 9, '11.  
 Cost, \$2000

(Continued from Page 2)

Employing a competent architect should mean to the home-builder: 1. Saving of time and worry. 2. Saving of cost through the application of system. 3. Substantial construction. 4. Home-like arrangement of rooms. 5. An attractive home. 6. The advantage of taking competitive bids, thereby reducing the cost of letting the contract on a business-like basis. 7. Having three or more sets of accurately prepared plans and specifications to work from. 8. Knowing just what will be included in the finished structure, thereby saving a long list of extras for things that could not be possibly covered in a rough pencil sketch.

Planning a home is like selecting a wife. What suits one man seldom suits another. Each must choose according to his own taste. To the uninitiated, the planning and building of a home or building is a very difficult and complicated matter. A right mental attitude, however, toward success in such an undertaking, as in all other things, will reduce the problem to a minimum.—Arthur C. Clausen in Construction.

**School Bonds Sold**—Vallejo, Cal.—After six years of effort and seven bond elections, the city of Vallejo will secure its new \$60,000 high school building. The land has been purchased and Rollins and Sons, the San Francisco bond buyers, have paid \$62,239.05 into the coffers of County Treasurer.

## FOREIGN TRADE OPPORTUNITIES.

### (From the Consular Reports.)

(Inquiries in which addresses are omitted are on file at Bureau of Manufactures, Washington, D. C. In applying for addresses refer to file number.)

**No. 6223. House furnishings.**—An American consul in China reports that a wealthy local resident is building a palatial mansion which is to be furnished in foreign style. The structure, when completed, will cost about \$75,000. Dealers in high-class mantels, house furnishings, bathroom equipments, patent lighting equipments and fixtures, etc., would do well to send catalogues with price lists, discount sheets, and shipping instructions to this person. Duplicate copies of catalogues and letters should be addressed to the consulate submitting the report. The inquirer is particularly desirous of fitting one room with bird's eye maple furniture and finishings.

**No. 6224. Demand for refrigerators.**—An American consulate in the Far East reports that it is in receipt of several inquiries for catalogues of American refrigerators, for household, club, and small hotel uses. Dealers should specify plainly prices with discounts, shipping weights and measures, packing and shipping charges, and manner of making payments.

**No. 6225. Establishment of wire-nail factory.**—A report from an American consular officer states that a wealthy Chinese contemplates the establishment of a wire-nail factory, to have a capacity of 13,000 pounds per day and to be operated by steam power. He has requested the consular officer to secure for him prices on the necessary machinery and equipment, including boiler and engine. He has also intimated that the services of an American operator to take charge and at the same time instruct Chinese in its operation would be required until the local mechanics could acquire the necessary training to run the plant themselves. As the inquirer does not speak or write English, communications should be sent through the office forwarding the report.

**No. 6226. American goods for Argentina.**—The Bureau of Manufactures is in receipt of a communication from a business man, who states that he is about to establish himself in Argentina, and would like to hear from American manufacturers of the following articles: Shooks, heavy drugs and chemicals, dry colors, brushes, groceries, specialties, etc.

**No. 6227. Staves.**—An American consular officer in western Europe reports that a prominent cooper in his district desires correspondence with firms in the United States that can furnish prime light pipe staves, northern, of dimensions 54 by 1 or 1 1/4 inches. He states that he requires at least 30,000 staves annually.

**No. 6231. Agricultural machinery.**—An American consular officer in an Asiatic country reports that an engineer in his district who has recently become the local representative of American firms producing marine engines, steel boats, pumps, etc., desires to get in touch with American manufacturers of agricultural machinery of all kinds, for which he states there is an excellent opening. He is anxious to secure catalogues, price lists, discounts, shipping particu-

lars, etc. Correspondence may be in English.

**No. 6232. Barbed-wire fencing.**—A report from an American consular officer states that an importing firm in the Levant is interested in the possibilities for barbed-wire fencing, and would be willing to consider the representation of American concerns manufacturing the same. This house does an extensive business. Correspondence in French is preferred, but English will be acceptable.

**No. 6235. Catalogues of American goods.**—An American consulate in the Far East reports that calls are being continually received with a view to obtaining information as to the possibility of securing American goods, but unfortunately none can be supplied because of the absence of catalogues, price lists, etc. The consulate would appreciate the sending by American manufacturers of catalogues, which will be properly indexed and filed for the convenience of local business men. The following list will convey an idea of the range likely to suit: Automobiles of every description, arms, salted beef, barometers, boots and shoes, bedsteads, coffee, cotton drills, caps and hats, cotton piece goods, cutlery, clocks and watches, flour, groceries, glassware, hose, lamps and stoves, musical instruments, margarin, condensed milk, fertilizers, paper (both printing and writing), paint and varnishes, photographic supplies, laundry soap, sewing machines, seeds, timber, tobacco, etc. A special request is made for agricultural machinery of every description, including that for use in sugar mills and on sugar plantations, petroleum, gasoline, and alcohol motors, furniture, general hardware, lamps and stoves using alcohol as fuel.

### A NEW KIND OF DISAPPEARING BED.

We have heard the elocutionists recite the tribulations of the inventor's wife whose husband invented a patent bed that fired him out and then closed so that he couldn't sleep any more after it was time to get up. We have all read also of the wonderful feats of the Arabian Nights where the Magician stamped upon the floor and things vanished into thin air as if they had never existed.

Of these two stories we are sometimes reminded when we witness some of the appliances of the modern apartment house. Chief among these that we have noticed is the New Automatic Disappearing Bed for which Nugent and Stone, 916 Phelan Building, are the agents. This novel contrivance is concealed in the floor and has no outward appearance of anything to lead anyone to suspect its presence. Room is made for it by cutting away the joists at the proper place and the carpet is arranged to permit the opening of the trap door. All that is necessary is to press a button and, Presto! the bed stands in view all ready for use.

It is something different from the ordinary disappearing bed and can be put in new buildings in course of construction or in old ones at a less cost than any other. It needs no construction to hide it and absolutely takes up no room whatever. A child can operate it. It is an interesting device and worth going to see. Builders and property owners would do well to investigate.

## Among the Architects.

### LOS ANGELES.

(From the Los Angeles Builder and Contractor.)

Architect Elmer Grey, 812 Wright & Callender building, has prepared plans for a large two-story and basement residence to be erected at Garfield avenue and El Monte road, Alhambra, for Mr. Addison Lysle. It will cover a ground area 80x50 feet and will contain fourteen rooms.

Architect Elmer Grey, 812 Wright & Callender building, has prepared plans for a large three-story and basement Colonial style residence to be erected on Western avenue near Tenth street for Dr. O. C. Welbourn. The approximate dimensions will be 60x18 feet and there will be sixteen rooms.

Architects Hudson & Munsell, 415 Stimson building, have completed plans for the detention home to be built on Mission road near Eastlake avenue in the county. The extreme dimensions of the building will be 300x165 feet with concrete.

Architects Dennis & Farwell, 618 Fay building, have completed plans for the police substation to be erected on East First street between St. Louis and Cummings streets, for the city. It will be a two-story brick and concrete building with a concrete basement, 20x85 feet. The cost is estimated at \$20,000. The plans have been approved by the police commission and forwarded to the board of public works for bids.

Architect Ferdinand Parmentier, Byrne building, is completing plans for a one-story brick store building 60x102 feet, to be erected on the east side of Hill street near Eighth street for Dr. John R. Haynes, N. Bonfilio and L. J. Christopher. The cost will be about \$10,000.

Needham & Fetherstonbaugh, 617 Wright and Callender building, have completed plans and are taking bids for the erection of a three-story and basement brick store and hotel building to be built at the corner of 18th and I streets, Bakersfield, for H. R. Morrow and Barnett, 624 Chamber of Commerce building, Los Angeles. It will be 55x107 feet with a wing 32x60 feet.

Robert H. Walker, 512 Delta building, has prepared plans for six frame apartment buildings to be erected on West Seventh street near Bixel street by T. Wiesendanger, 311 Merchants Hrust building. They will be one story structures, 96x36 feet, and each will contain four apartments, consisting of living room, dining room, kitchen and bath.

Architects Train & Williams, 226 Exchange building, have completed plans for the brick building to be built at Mission street and Fair Oaks avenue, South Pasadena, by A. C. Ong. The building will be two stories and basement, 95x102 feet, with six stores and a banking room on the first floor and 17 offices and a lodge hall above.

Architects Train & Williams, 226 Exchange building, have completed plans for a new church to be erected on Pasadena avenue between North Avenues 65 and 66 for the Garvanza Methodist Episcopal congregation. It will contain an auditorium to seat 450 and will have a basement for social purposes.

Architects Garrett & Bixby, 405 Currier building, are preparing plans for a three-story and basement brick store and hotel building, 50x100 feet, to be erected on Grand avenue between Ninth and Tenth streets for Dr. A. M. Pelton. The first story will be divided into two storerooms with plate glass windows and prism glass transoms.

Harry Gray has had plans prepared for a three-story and basement brick store and rooming house building to be erected at Ruth avenue and Fifth street. Joseph F. Rhodes, 314 Central building, will erect the structure. It will be 55x100 feet. The first story will contain two storerooms and a moving picture theater to seat 250.

Architect C. C. Rittenhouse, 383 Wilcox building, is preparing plans for a two-story and basement ten-room frame residence to be erected in Chapman Park.

Architect C. C. Rittenhouse, 388 Wilcox building, is preparing plans for a three-story and basement frame and plaster apartment house to be erected on West Tenth street facing Overton street, for George R. Tedford. It will be 40x125 feet, and will contain sixty rooms divided into 24 apartments.

## NEWS NOTES OF THE S. F. C. A.

### President Hildebrand Appoints The Committees For the Year. Many Special Features In Store.

At the last meeting of the San Francisco Architectural Club the following committees were appointed by President Ernest H. Hildebrand to serve for the ensuing year:

House Committee—Russell Monson, chairman; S. C. Flawn, Howard Schroeder.

Class Committee—Tobias Bearwald, Carl Warnecke, Jos. Gould.

Entertainment Committee—Geo. E. Greenwood, chairman; T. Bearwald, Herbert Brooke.

Press Committee—August Headman, J. P. Duan.

Life Class Committee—Arthur Lafranchi, Alfred Lowenthal.

Architectural History Committee—Thos. C. Bendell.

The matter of the Architectural play, "Accord and Discord in a Draughting Room," written for the club by Mr. Arthur O. Johnson, was taken up and it was decided to give this play in the club rooms to members and their friends in the near future.

Mr. Greenwood of the Entertainment Committee is also preparing to put on another minstrel show in the Fall of the year. Mr. Greenwood has secured several talented singers and from the present outlook this affair will eclipse any ever given by the San Francisco Architectural Club in the past.

The Life Class, under the direction of Mr. A. O. Johnson, was organized and will meet every Friday evening. Any member desiring to join this class should communicate with Mr. Lafranchi or Mr. Lowenthal.

Mr. J. P. Duan of the firm of Duan & Company, the patent sidewalk light people, donated \$10.00 to the Life Class. The Duan Company was the recipient of the thanks of the club members for their substantial interest in the welfare of the class work of the club.

The class in Architectural History

under the direction of August G. Headman, will hold its first meeting next Tuesday evening. These lectures will be illustrated by stereoptical views from a large collection of slides in the possession of Mr. Headman. The lectures will begin with the Stone Age and then follow the development of architecture to Persian, Egyptian, Grecian, Roman, Romanesque, Gothic, French and Italian Renaissance; Elizabethan Tudor, Colonial and Modern Architecture.

Any person interested in architecture who wants to join the club and the above classes or the Steel, or class in Design, should hand their application for membership to the Secretary, Mr. John Drescher, who can be seen at the club rooms, 126 Post street, every day between 12 and 1 o'clock, and he will be pleased to answer any questions or talk over any details, so get in your application and start in with the new class.

### PETROLEUM IN THE STRAITS OF MAGELLAN.

During the past year this office has made several reports relating to the discovery of petroleum within a few hours' ride of Punta Arenas. Among the discoveries were those of the Chilean engineer, Senor Miguel Machada, and reports now confirm his investigations.

Two Dutch engineers are here in the interests of a company in Holland to explore the natural resources of this territory. These engineers have just returned from the field of Machado's prospecting and confirm all his statements. They say that all indications show the existence of beds of petroleum in the region of Agua Fresca.—Consular Reports.

### NEW CAPITAL CITY.

Recent reports state that the Australian Government has selected Canberra, New South Wales, as a site for a new capital city, and that architects and landscape artists from practically all parts of the world will be invited to submit competitive designs for the proposed buildings and the laying out of an elaborate ground scheme. The site is described as lying among a series of hills of slight altitude, with exceptional advantages for the location of the principal buildings. It will probably be some little time before an actual start will be made on the projected structures, although the Government has already appropriated a substantial sum for the preliminary work.

**Sacramento Business Blocks**—Sacramento, Cal.—Superior Judge Shields made an order directing the Evangelical Lutheran Church to sell its property—all of lot 10, J and K, 12th and 14th Sts., for \$55,000. According to the petition the church had a bona fide offer of \$55,000 for the lot and improvements, which consist of the Lutheran Church and the parish house, and that it was desired to sell and build in another place. This will mean the absorption of the property between 12th and 14th streets, on K, into the business section of the city, as it is understood that a big building will be erected on the site, and that another will be erected just east of it.

## Editorial Comment.

The party of capitalists now visiting the city in company with Judge Lovett of the Southern Pacific will no doubt be interested in the immediate future of this coast.

Its oil production is one source of wealth to them as they are the head of the great syndicate represented by the Standard Oil Company. The coming of water competition is a fact which they will have to meet and no doubt they will take measures to do so.

The reports state that President Lovett says that the road will be double tracked as announced. This means the raising of 75 million dollars, but this can be done in course of five years with all the means at their command.

The State Mineralogist, Mr. Lewis E. Aubury, acting in conjunction with a large number of petroleum producers of the State is to memorialize the Secretary of the Navy to equip the Naval vessels of the Pacific Ocean to burn petroleum as fuel. There can be no question as to the advisability of such a step. A vessel equipped to burn oil will have many advantages over one equipped to burn coal. This has been so thoroughly demonstrated that there is not a nation in the world that is not cognizant of the fact.

The State has enormous values in fuel oil. The industry is yet in its infancy comparatively speaking, but during the last 23 years the records show a production of 307,466,564 barrels valued at \$136,693,228.

The great gushers that have been tapped in the last two years have placed a great deal of oil on the market. There have been fluctuations in price because of the inconstant demand in relation to the supply and also perhaps from the control over the market exercised by the Standard Oil Company. The equipment of the vessels of the Navy to burn oil would not only be a good thing for the navy but would also make a market for California oil.

A proposition has recently been before the Navy Department of the U. S. Government to take such action as will lead to the standardizing of certain commercial articles, including engineering material. This is a movement in the direction of the standards recently accomplished in England by the British Engineering Standards Committee. It is proposed to revise the specifications so as to bring about an acceptable standard to be observed by all branches of the government and in the commercial world as well.

This is a move in the right direction. Government work should be done with materials that have a known and tested value.

The result of the movement thus far has been that the Navy Department has authorized a conference of the representatives of the various bureaus with a view to adopting uniform specifications so far as possible for materials used by the Navy.

This method of standardizing of materials used might well be adapted by the other departments.

To be effective it perhaps could only be done by a commission appointed by the President. This commission should include representatives of the various departments of the government and representatives of the various engineering bodies.

The executive committee of the Panama Pacific corporation have asked for detailed facts and figures concerning the various sites for the exposition. This is a move in the right direction as the ultimate outcome should be that the site that is most advantageous should be selected. It is a big undertaking and the men who have it in charge have a big task before them. The question of cost and transportation will enter largely into the selection and the availability of the different localities for the purpose intended. The contest will now narrow down to facts and figures and we may expect some determinate action within the present month.

There are a numberless quantity of magazines on the market now that hardly seem to have a legitimate excuse for existence. But if the proposed law gives arbitrary powers to the postmaster general such that he is virtually the arbiter of the fate of all these publications it should be made more definite. And again its ultimate effect on the reading public should be taken into consideration before it is passed at all.

There is some discussion as to city control of the harbor of San Francisco. For those who are advocating this measure the cities of Oakland and Los Angeles are cited as getting better advantages than San Francisco under state control.

Insofar as Oakland is concerned the Southern Pacific Company has maintained a monopoly of its water front for years.

The port of San Francisco has been a free port and reasonably well administered. It is not probable that it would be better managed under municipal control.

It seems strange that this subject was not mentioned before Johnson was elected and the Southern Pacific ousted from control of the Harbor Commission.

# Indirect Daylight In Public and Private School Buildings.

By CURTIS TOBEY, Architect.

Much has been said and written, many experiments tried and great progress has been made especially in very recent years relative to the proper lighting, heating and ventilating of both private and public buildings. Perhaps the greatest attention to this subject has been directed to the public and private school where the need of proper light, heat and ventilation is most apparent. In this respect alone, the classroom of today is as far superior to the classroom of fifty years ago as asphaltum pavements are to dusty roads, but even with this wide comparison, there is yet much to be learned along these lines and any board of School Trustees, within whose power it is to determine the building and conduct of the school, will waste no time in a careful and comprehensive study of these most important elements. They are, indeed, the most potent environs of a classroom and, when properly installed, adjusted and operated, should be evidenced only by an entire absence of strain upon or dullness of the eye or action of either scholar or teacher.

The purpose for which the child attends school is to learn, and the teacher to teach. One step at a time; one subject at a time must receive and be given complete and alert attention. In no other way are best results obtainable. In order to secure this alert attention from children, and more particularly a class of children, it is far more necessary than in the case of adults to eliminate from the classroom every element or environment that tends to distract that attention. For illustration, suppose that the classroom were to be darkened. Then, by means of a stereopticon, project upon the wall above the teacher's desk, we will say, the map of Asia. The intense attention of each scholar upon the one spot of light results in a lasting mental picture and, in the one instant of complete forgetfulness of all else, both scholar and teacher will have accomplished in learning that which, with ordinary daylight distractions, may have taken a week.

It might be argued from this that the darkened room should be used instead of daylight if best results were to be obtained. This is true only in a very limited degree. It must be remembered that darkness is depressing and, also, that the fixity of attention upon the light spot is but momentarily secured. The induced exhilaration of the senses caused by the comparison of light and dark is relatively abnormal, and if continued for any time, reaction would result in drowsiness. In the case of plant life, which for all purposes of comparison is identical with animal or human life, the plant thrives best and develops to its fullest and hardest perfection under the influences

of the natural, open sunlight. Under poor conditions the plant is stunted and development is slow; under forced cultivation, the growth is intense and results are sometimes marvelous, but the vitality of the plant is weak and its blooms and fruits are sallow and perishable. A well developed and hardy stalk; rich, full foliage and firm, brilliant blooms and fruits are proof of ideal environment, and this can be found only in sunlight. It is during the hours and under the influence of sunlight, or perhaps more correctly, daylight, that the student must work. It is under ideal daylight conditions that he builds up a hardy and healthy constitution and mental balance and, if, like the plant, it is expected of him to produce the best fruits of his cultivation, he must be schooled and coached under such physical and moral environments as will permit and encourage a keen but normal attention to the detail of his studies.

Dealing with the one subject—light. If it were possible to separate the essential elements from their combination, one from the other, and classify each in its relative importance, light may be placed first; but, as light, heat and ventilation are together responsible, its place of first importance is assumed only from the fact that the proper lighting of the classroom is least understood and so often miscalculated. To enable one to more nearly understand the value to the student of a correctly lighted classroom, a careful study of the effects of light upon the student as exhibited by his facial features and his attitude toward his work. The strength, quality and direction of the light under which he must read, recite, figure and think have a marked influence upon the nerves of the body and, unless this light possesses such qualities as to become neutral to the senses, its distractive power is very proportionately great. For instance, total absence of ocular exertion is indicated by the full, open eye and the size of the pupil. If the eye is squinted and the pupil small, it is reasonable to assume that the light is too strong. A weak or impoverished light causes the excessive enlargement of the pupil. The pupil of the eye acts upon the retina exactly as the diaphragm or "stop" acts upon the lense and sensitized plate of the camera. If the light is strong, the hole or opening in the diaphragm is contracted. If the light is weak, it is opened wide according to the strength and quality of light that is required to produce the best results in the picture. The photograph of an object under direct sunlight produces a picture or impression of strong light and shadow but lacking in detail. The same object taken without the direct rays of the sunlight produces a softer impression

but the detail is clear and easily comprehended. The human or mental camera with its lense, the eye, receives similar impressions under like conditions only, it must be understood, that the impressions of the eye are far more sensitive to light conditions and produce impressions of color, form and atmosphere that call upon all of the physical senses to properly understand and reason. If strength, quality and direction of light so easily affect results in the mechanical picture, how much more easily are results affected in the mental or ocular impression. In the open, the photographer finds his greatest difficulty in securing the proper lighting of his subject. In the studio, he controls the lighting mechanically and his subject is placed as desired. The classroom is the studio of the scholar, and the lighting of the classroom should be even more carefully arranged. It must not only be clear and soft but must emanate from a source that will be least distracting to the eye of each and every scholar and render its very existence as nearly neutral to the senses as is possible under the circumstances.

This, of course, is the ideal condition and it may be seldom if ever obtained, but it is, nevertheless, the object sought and the nearest ideal conditions can be reached the closer and more active will be the natural attention of the scholar to his studies.

The scheme now commonly employed to secure best lighting is to place windows at the rear and left side of the classroom and well up from the floor, and equipped with roller shades with which to temper the light at the will of the teacher. So far as it goes, this method is good, but there is much room for improvement. The ordinary classroom is twenty-four to twenty-six feet wide and from thirty to thirty-six feet long. The desks are arranged to cover practically all of this floor area. With the light coming from the rear and one side, no matter how carefully adjusted, it is impossible to equally light all parts of the room nor is it possible to project the light to each desk at the same or proper angle nor to avoid distracting cross-lights and the glare from the windows themselves.

If the classroom were to be selected, or rather, if the scholars were to congregate as a class of instruction out of doors and in the open with no building of any nature to house or to protect them, you would find the class instinctively gathered in the shadow of trees or other natural protection from the direct sunlight and other uncomfortable or irritating elements. If you note carefully, you would discover that the pupil of the eye of each scholar is fairly large and that the eye itself is wide open and clear. He reads, recites and calculates with ease and all

the while unconscious of either ocular or physical strain or disturbance. If the weather is well tempered, he feels only a sense of both mental and physical balance and his interest in and attention to his work is keen and enjoyable. Note carefully the strength and quality of the light. It is clear and soft and perfectly diffused, and it casts no perceptible shadow. It is not a white light but seems to partake of the overhanging foliage through which it filters and is difused. In liquid phraseology, it is not unlike a diluted essence of a lifesustaining element. This is the strength and quality of light with which each school or classroom should be provided.

This brings us to the consideration of the ways and means to produce this light, not only in the arrangement of future buildings, but in buildings already constructed and in use. In the case of the open and out-of-door classroom, the light beneath the foliage is a filtered or indirect light. This, then, is what is required in the schoolroom. To get this with all of its clear, soft and shadowless qualities with equal distribution to every part and corner of the room needs only intelligent thought and the application of such mechanical contrivances as are known and have been tested. In our modern school buildings, we already have the windows placed well up from the floor and located at the rear and left side of the classroom. In our old school buildings, the windows extend from the line of the chalk rail and are located at random. These old buildings should be altered, so far as possible, to conform with the window openings of the modern school building which usually emit the light to the room very correctly. Then, in place of the ordinary

sheet glass, insert sheets of specially designed prism glass in small or large panes as are convenient to fill the sash but, in order to avoid prismatic reflections at the edges, one pane or light of prism glass is preferred. This prism glass should be so designed that the light from the outside will be reflected inward and upward onto the ceiling of the room. The ceiling should be finished in ordinary plaster and rounded with deep plaster coves where the ceiling joins the walls. No break in the smooth line of plaster should occur on ceiling or walls above the picture mould which should be placed on a line with the door head casings. Finish this unbroken stretch of plaster walls and ceiling with a flat or dull tint of a very light shade of greenish-blue known as turquoise blue. The lower portion of the walls below the picture mould should be finished with a flat, washable covering preferably of light buff or cream color. The floors of the room should be entirely covered with heavy linoleum, such as is used to cover the floors of modern office buildings, and this linoleum finished with two or three coats of shellac.

The results obtained under the combined action of the prism lights and interior treatment of ceiling, walls and floor should be almost identical with the results sought. The rays of light accurately reflected through the prism glass to and upon the ceiling are so broken and refracted by the action that no reflection is perceptible from the view point of the scholar. The light tint of dull, greenish-blue of the ceiling and walls above the picture mould take up or absorb all glint or sparkle and only the soft, clear and shadowless daylight is diffused in practically equal strength and quality to all parts of the

room. The dark linoleum not only absorbs the noise and shuffle of feet, and the dropping of books and pencils but offers no light distractions. From the viewpoint of the scholar or teacher, the prism glass shows no light but appears dark and shadowy.

Under this system of indirect lighting of the schoolroom, only slight heed is necessary to be given to the adjustment of window shades. The quality of the light varies but slightly during the hours of study and only in case of excessive sunlight is it necessary to cover the prisms. The greatest item of cost is the floor covering. The linoleum may be eliminated and the floors painted in imitation, but as a sound absorber, it is invaluable. The purpose of the shellac is to harden and preserve the surface and to render it if anything more sanitary. Shellac is impervious to water and ink or other spots are easily removed.

Particular attention should be given to securing and setting the prism glass. This glass is made in many angles so as to meet every condition and requirement. In ordering the glass, the manufacturer should be given an accurate plan and vertical section of each room showing the size and location of each window and its height from the floor, together with the points of compass, and distance and height of nearby buildings.

As previously stated, there are no more important features to be carefully studied and considered by the management of the school than light, heat and ventilation, and money thus properly expended is well expended.

In a future issue, the Building and Industrial News will publish a similar article by the same author upon "Heat and Ventilation."

## Methodist Church Edifice and Modern Flat Building Illustrated This Week.

The First Methodist Church of Willows, Glenn County, are about to commence the construction of an edifice which will be by far the most imposing church building in Willows. The plans for the new building have been ordered from the competitive drawings of Architect H. C. Russell of San Francisco. The church is to be erected on a prominent corner and work will be started as soon as the working drawings can be completed.

In the design of the church Architect Russell has selected the early English style of architecture. The exterior walls of the building will be of veneered brick. The roof line is broken in several places adding to the general appearance of the structure. The interior will be nicely finished and while it will be necessary for the church to omit the art glass windows for the

present these will eventually be placed in the building completing the edifice.

The Sunday School rooms and social hall will be located in the basement of the building while the main auditorium will occupy the entire ground floor. A balcony will be placed at a convenient height from the main auditorium around both sides and the rear greatly increasing the seating capacity of the building.

Rev. Z. N. Needham is the pastor of the Willows First Methodist Church and it has been through his untiring efforts that the growing community has been able to finance the construction of the new church.

### MODERN FLAT BUILDING.

Architect William Beasley, 127 Mont-

gomery street, has just awarded the contract for the construction of a two-story and finished basement flat building to O. V. Gerzabek for approximately \$35,000. The building will contain twelve modern flats handsomely finished and is located on the south side of Bush street between Hyde and Larkin streets. The owner of the property upon which the building is to be erected is S. M. West and when completed the flats will take rank as among the finest apartments in the city. The bed rooms will be occupied with wall beds and the finish throughout will be of Flemish Oak. The vestibule will be wainscoted with marble and mosaic. Lewis Gilbertsen has been awarded the contract for the brick work on the building, the exterior of which will be executed in klinker brick and rough plaster.

Firms desiring news on special classes of buildings such as Banks, Churches, Schools, Hotels, etc., will find such items all classified and grouped under proper headings, commencing on this page. These same items are again repeated under "LOCALITIES" in the last part of our news department.

## Plans Wanted.

**Willows, Cal.**—The Willows Masonic Hall Association has been formed and will erect a suitable building on their lot 150x150 feet. Building to contain stores on ground floor, large banquet room and offices on second floor and lodge room with accessories on third floor. Between \$25,000 and \$30,000 are available for construction purposes. Building to be of brick and steel. H. G. Squires, Box 126 Willows, Cal., chairman of Building Committee.

**Redwood City, Cal.**—Redwood City Masons have purchased a site and will build a lodge hall in the immediate future. Cost of building not to exceed \$14,000. Probably will be reinforced concrete. Roy Cloud, County Superintendent of Schools, is the Master of the Lodge.

**Redwood City, Cal.**—The project to erect a Town Hall has been revived again and the financial side of the question put in such shape that plans will be called for shortly. The building will cost in the neighborhood of \$15,000 and will be of reinforced concrete. The City Clerk can furnish architects with additional information.

**Centralia, Wash.**—A Carnegie donation of \$15,000 has been accepted for the construction of a Public Library and competitive plans will be called for at once.

**Ventura, Cal.**—Local business men have started a movement to raise funds for a new Young Men's Christian Association building which is to be erected if the movement is successful.

**San Bernardino, Cal.**—A bond election is to be called to vote bonds to the amount of \$300,000 for the construction of a Hall of Records and a County Hospital. Competitive plans will be asked for if the bonds carry.

**Spokane, Wash.**—The Spokane Lodge of Elks will erect a \$200,000 lodge building within the coming year. A corporation has been formed and the selection of a building site is now under discussion.

**Fresno, Cal.**—The Knights of Pythias of Fresno will erect a steel and brick building at the corner of K and Merced streets at a cost of \$75,000. There will be a large drill room and assembly hall. Building will be three stories and basement. Building Committee is composed of Leon Hart, J. J. Miley and N. P. Justy.

## —APARTMENT HOUSES—

**San Francisco**—Apartment House, 4 story and basement. Class C. Architect, August Nordin, 717 Mills bldg., San Francisco. Owner's name withheld for the present. Working drawings under way.

**San Francisco**—Apartment House, 6 story & basement. Class C. \$100,000. Architect, Lewis M. Gardner, 1123 Leavenworth st., San Francisco. Owner, Builders' Realty Co., 180 Jessie st. Building to contain 174 rooms, modern

plumbing, pressed brick and cement plaster facing, automatic elevators, etc. Location, N Eddy st. W Jones. Architect receiving bids.

**San Francisco**—Apartment House. 3 story & basement frame. \$16,000. Architect, Edward E. Young, 251 Kearny st., San Francisco. Owner, H. D. Hogrefe, 1485 Clay st. Building will be erected at the southeast corner of Hyde and Union streets and will contain stores on the first floor and several apartments on the 2 upper floors. The owners are now taking sub-figures.

**San Francisco**—Apartment House. 6 story and basement. Class B. \$100,000. Location, North line of O'Farrell st. 68 E of Leavenworth. Architect, Charles Peter Weeks, Mutual Bank bldg., San Francisco. Owner, John W. Proctor. Faced with pressed brick and terra cotta. Some structural steel. Modern plumbing throughout, elevators, etc. Architect preparing plans.

**San Francisco**—Apartment House. 3 story and basement. Frame. \$30,000. Location, SE Cor Green and Van Ness, San Francisco. Architect, Sylvain Schnaittacher, First National Bank bldg., San Francisco. Owner, Herman Rogers. Exterior covered with cement plaster on metal lath. Contract will be awarded shortly.

**Portland, Ore.**—Apartment House. 4 story and basement. Brick. \$80,000. Location, Cor. St. Clair and Washington sts., Portland. Architect, Edward J. Root, Commercial Club bldg., Portland. Owner, Mrs. E. J. Frohman, Portland Hotel. Plans are complete and the architect is calling for bids on the work.

**San Francisco**—Apartment House. 3 story and basement. Frame. \$15,000. Architect, Arthur J. Laib, Russ bldg., San Francisco. Owners, Franklin, Estate. The plans for this building are now well advanced and will shortly be completed. The exterior will be of pressed brick and cement plaster on metal lath.

**Oakland, Cal.**—Apartment House. 3 story and basement. Brick. \$30,000. Architect, C. W. McCall, 513 Central Bank bldg., Oakland. Owner's name withheld for the present. Building will contain 27 apartments. Front faced with pressed brick.

**Seattle, Wash.**—Apartment House. 4 story and basement. Brick and stone. \$40,000. Location, Eastlake and Almy sts., Seattle. Architect, M. W. Palmer. Owners, Spellmire Brewing Co. Plans are now ready for figures.

**Seattle, Wash.**—Apartment House. 3 story. Brick veneer. \$20,000. Location, 13th and Marion sts., Seattle. Architect, George Hamilton, Seattle. Owner, A. E. Peterson. Plans are complete and bids will be called for in March.

**Seattle, Wash.**—Apartment House. 8 story and basement 108x120. \$200,000. Location 4th Ave. and Virginia st., Seattle. Architects, Quandt & Creutzer, Seattle. Owner, J. T. Kelly. Plans are complete and figures are being taken.

**Los Angeles, Cal.**—Apartment House. 3 story and basement. Location, SE

First and Flower sts., Los Angeles. Architects, Garrett & Bixby, 405 Currier bldg., Los Angeles. Owner, U. W. Murphy, 506 Hill st. Architects are preparing the working drawings.

**Los Angeles, Cal.**—Apartment House. 4 story and basement. Brick. 60x125. Location, SE Pico and Wright sts, Architect, J. T. Zeller, 203 Currier bldg., Los Angeles. Owner, Mrs. E. Johnson. Building will contain 120 rooms with 50 baths. The exterior will be faced with pressed brick. Working drawings have been completed and the bids will be called for at once.

**Los Angeles, Cal.**—Apartment House. 3 story and basement. Store and apartments. Class C. 50x110. Location, Third st. Architects, Richards-Neustadt Co., 704 Wright and Callender bldg., Los Angeles. Owner, R. W. Poin-dexter, Wilcox bldg. There will be several stores on the first floor, with cement floors, and 44 rooms on the floors above. Bids are now being taken.

**Everett, Wash.**—Apartment House. 2 story and basement. Frame. \$10,000. Location, Broadway and Everett aves. Architect, W. W. Hastings, Commercial bldg., Everett. Bids will be called March 1st.

**San Francisco**—Apartment House. 5 story and basement. Class C. \$50,000. Location, NE Cor. Golden Gate and Hyde sts. Architects, Bugbee & Bugbee, 127-Montgomery st. Owner, James H. Garrett. Exterior will be of pressed brick and terra cotta. All apartments will have private bath, hot and cold water and elevator service. Plans are complete and figures will be taken shortly.

**San Francisco**—Apartment House. 3 story and basement. Frame. \$35,000. Location, SE Cor. California and Leavenworth sts. Architect, C. O. Clausen, 970 Phelan bldg. Owner, I. Mensor, 1686 Geary st. Will contain 18 apartments with private baths, hot and cold water and elevator service. Exterior of the building will be finished in metal lath and plaster. Plans complete and work is to be done by day's labor.

**San Francisco**—Apartment House. 3 story and basement. Brick. \$20,000. Location, Geary and Larkin sts. Architect, E. P. Antonovich, 333 Kearny st., San Francisco. Owner's name withheld for the present. Will contain 13 apartments with private baths. Exterior will be plastered. Plans are being prepared.

**Los Angeles, Cal.**—Apartment House. 3 story and basement. Frame. \$27,000. Location, NW 3rd and Boylston sts. Architects, Jeffery & Van Trees, 124 Coulter bldg., Los Angeles. Owner, Allison Barlow. Exterior cement plaster on metal lath. Interior white cedar. Plans nearly complete.

## —BANKS—

**Oakland, Cal.**—Bank and office building. 7 story and basement. \$200,000. Location, 11th and Broadway sts. Architects, Reed & Meyer, Oakland Bank of Savings bldg., Oakland. Owners, Security Bank & Trust Co., Oakland. Working drawings nearing completion. Steel frame, pressed brick and terra cotta exterior facing.

**Sacramento, Cal.**—Bank and office bldg. 5 story and basement. Class A. \$200,000. Location, 4th and J sts. Architect, Chas. S. Kaiser, Mechanics Insti-

tute Bldg., San Francisco. Owners, Farmers' and Merchants' Bank. Plans will not be complete for several months.

**Colusa, Cal.**—(Remodeling). The Colusa Bank has purchased a two-story brick building and will install new fixtures, fireproof vaults and safe deposit boxes.

**Sacramento, Cal.**—Bank Building. 1 story and basement. Class A. \$150,000. Location, 11th and J sts., Sacramento. Architects, Willis Polk & Co., Merchants' Exchange bldg., San Francisco. Owners, D. O. Mills Bank of Sacramento. Plans now complete.

**Astoria, Ore.**—Bank Building. Gust. Holmes, president of the Scandinavian American Bank, has reported that the concern will erect a new home on the corner of 12th and Duane, Astoria.

**Winters, Yolo Co., Cal.**—Bank Building. 2 story and basement. Stone and terra cotta. \$30,000. Location, Winters, Cal. Architects, Parker & Kenyon, 244 Kearny st., San Francisco. Owners, Citizens' Bank of Winters. Plans are complete and figures are being taken. The second floor of the building will be fitted for apartments.

**Marysville, Yuba Co., Cal.**—Bank Building. 2 story and basement. Reinforced concrete. \$40,000. Architects, Parker & Kenyon, 244 Kearny st., San Francisco. Owners, Northern California Bank, Marysville. Plans have been started and will be completed as soon as possible. The upper floor of the building will be fitted for offices.

## —BARRACKS & GOV. WORK—

**Bremerton, Wash.**—Group of reinforced concrete barracks for the use of the Marine Corps. Plans prepared by the Engineering Department of the Navy, Washington, D. C. Plans have been revised and will be forwarded to various Pacific Coast cities for figures within four weeks.

**Benicia, Cal.**—Reinforced concrete projectile storage building. Plans by Navy Department, Washington, D. C. Location, Navy Yards, Benicia, Cal. Plans now being figured. Bids opened March 15th.

**Presidio, Cal.**—Quarters for female nurses. 2 story. Brick and frame. Plans by Constructing Q. M. Dept., U. S. A., in charge of Major McK. Williamson, Fort Mason, Cal. Plans are complete and bids will be opened March 15.

## —BRIDGES—

**Modesto (Stanislaus Co.), Cal.**—The Board of Supervisors have awarded the contract for the repair of a concrete bridge across the Snake Ravine to W. L. Gillham of Modesto for \$639. The same Board authorized additions to Mr. Gillham's contract on the concrete bridge which is being erected over Dry Creek in Stanislaus County, amounting to \$2534.

**Corona, Cal.**—The Newton Construction Co. of Corona have the contract for the construction of piers of two concrete bridges which are to be erected from Ontario to Magnolia Aves.

**Burley, Idaho**—The legislature has appropriated \$10,000 for the construction of a bridge across the Snake River at Burley. The State Engineer has been instructed to prepare the plans which will call for a steel and concrete bridge.

**Spalding, Idaho**—The Northern Pa-

cific R. R. Co. have announced that the old steel and wooden bridge across the Clearwater River at Spaulding is to be replaced this spring with a new steel and concrete structure 1,000 feet in length.

**Harrington, Wash.**—Beall & Co. of Portland have been awarded the contract for furnishing the county with all metal culverts which are to be used in constructing several county bridges.

## —CHURCHES—

**San Francisco**—Church. 1½ story. Brick and frame. \$20,000. Location, De Montford and Capitol aves., San Francisco. Architect, Arthur G. Scholz, 16th and Mission sts., San Francisco. Owners, Ingleside Catholic Church. Plans in the hands of the church and work to start at once.

**San Francisco**—Church. 1 story. Frame. \$15,000. Location, Mission District. Architect, August Nordin, 717 Mills bldg., San Francisco. Owner's name withheld for the present.

**Vancouver, Wash.**—Church. 2 story. Brick and stone 52x92. \$20,000. Architect, B. A. Carpenter. Owners, First Presbyterian Church of Vancouver. Plans approved and working drawings started.

**Spokane, Wash.**—Church. Members of the Emmanuel Baptist Congregation have purchased a site at Eleventh ave. and Adams street, where they will erect a new church. Rev. Dr. Donald D. MacLaurin is pastor.

**Tacoma, Wash.**—Church. Brick 75x120. \$80,000. Architects, Fay, Russell & Babcock, Seattle. Owners, Sixth Ave. Baptist, Tacoma. Bids being taken.

**Seattle, Wash.**—Church. Brick 80x92. \$18,000. Architects, Huntington and Gould, Seattle. Owners, Calvary Presbyterian Church. Bids being taken.

## —COURT HOUSES & JAILS—

**Placerville, Cal.**—Court House. 2 story and basement. Brick and stone. \$125,000. Architects, Cuff & Diggs, Sacramento, Cal. Owners, El Dorado County. Working drawings just started.

**Susanville, Lassen Co., Cal.**—Jail. 1 story and basement. Brick or stone. \$15,000. Location, Court House grounds, Susanville. Architect, F. J. De Lonchant, Reno, Nev. Owners, Lassen Co. Bids being called. Opened March 6th.

**Los Angeles, Cal.**—Detention Home. 2 story and basement. Brick. Board of Supervisors receiving bids up to March 13th. Work to be segregated as follows: (1) general building contract; (2) plumbing and gas fitting; (3) steam heating, cooking and laundry equipment; (4) electrical burglar alarm system.

**Lewiston, Idaho**—Add. to present County Jail. Brick and stone. \$20,000. Architect, J. H. Nave, Lewiston. Working drawings started.

## —ELEVATORS—

**Elevators**—Board of Supervisors of Los Angeles will receive sealed bids up to 2 p. m. March 6, 1911, for furnishing and installing passenger elevator in Surgical Ward building, to be constructed at the County Hospital. Certified check must be 10 per cent of amount bid. H. J. Leland, County Clerk.

**Elevators**—New electric elevator is to be placed in the State Capitol at Salem, Ore.

## —FACTORIES & WAREHOUSES

**San Francisco**—Warehouse. 2 story and basement. Reinforced concrete. \$30,000. Location, 5th and Tehama sts. Architect, Willis Polk, Merchants' Exchange bldg., San Francisco. Owners, San Francisco Gas and Electric Co. Plans complete and ready for figures shortly.

**San Francisco**—Warehouse. 4 story and basement. Mill construction. \$160,000. Location, 2nd and Tehama sts. Architects, Frye & Osborne, French Bank bldg., San Francisco. Owner, Lalley Plumbing Co. Plans have just been started. Exterior walls will be of reinforced concrete, floors and interior partitions of wood.

**Sacramento, Cal.**—Warehouse. 5 story and basement. Steel and brick. \$100,000. Location, Front and R sts. Architects, Cuff & Diggs, Sacramento. Owners, Thompson-Diggs Hardware Co. Building will be fireproof throughout, with steel frame and brick walls and concrete floors. Plans are now under way.

**Sacramento, Cal.**—Factory. Group of reinforced concrete buildings. \$250,000. Architects, Frye & Osborne, French Bank bldg., San Francisco. Owners, A Auto Manufacturing Co., Sacramento. There will be seven buildings in all. The working drawings have been started but work is delayed until spring.

## —CONTRACTS AWARDED—FACTORIES AND WAREHOUSES.

**Fresno, Cal.**—Factory. 1 story. Brick creamery. Architect, C. K. Kirby, Jr., Fresno. Owners, Danish Creamery Co. Contractor, Frank Rehm, Fresno.

## —HALLS & SOCIETY BLDGS.—

**San Francisco**—Society Building. 4 story and basement. Class B. \$27,000. Location, Waverly Place. Architects, O'Brien Bros., Clunie bldg., San Francisco. Owners, Bing Kong Tong. Ground floor will be occupied by stores, the upper two floors by the club rooms, with sleeping apartments for the members. The exterior will be faced with pressed brick. Plans are nearing completion.

**Chico, Cal.**—City Hall. 2 story and basement. Brick, \$31,000. Architect, A. J. Bryan, Chico. Owners, City of Chico. Building will be used as a City Hall and contains offices for the various departments and the police department. Plans nearly complete.

**Marysville, Cal.**—Society Building (alterations and additions). 2 story. Brick. \$11,000. Architects, Parker & Kenyon, 244 Kearny st., San Francisco. Owner, Mr. Willis, Marysville, Cal. Plans started.

**Sacramento, Cal.**—Masonic Hall. 7 story and basement. Class A. \$250,000 to \$300,000. Location, 12th and J sts. Architect, R. A. Herold, Bryte bldg., Sacramento. Owners, Sacramento Masonic Hall Association. Plans have just been started in the architect's offices.

**San Francisco**—Masonic Temple. 5 story and basement. Class A. \$750,000. Location, Van Ness ave. and Oak st. Architects, Bliss & Faville, Balboa bldg.,

San Francisco. Owners, Masonic Temple Association. Plans complete and bids under advisement.

**NEW ALASKA GOLD CAMP MAKES GREAT SHOWING.**

SEATTLE (Wash.), February 25.—Iditarod, the new mining district in Alaska, from which was expected an initial yield of only \$250,000 as late as August last, has passed all records of virgin Alaska camps at the United States Assay Office by shipping into Seattle \$1,060,535 in gold since the first arrival last summer. During February the assay office has received two consignments, of \$20,000 and \$17,000 respectively, the last shipment arriving yesterday by registered mail.

Assayer in Chief Villas regards shipments of more than a million within six months as a remarkable showing for a new district, and prophesies that the record for the coming season will be still more noteworthy. Reports from the assayers show that the Iditarod gold is slightly higher in percentage of purity than the other camps, carrying only a trace of base metal. Winter shipments of gold from the new camp are made by trail to Fairbanks and Seward.

**LONDON TAKES RAILWAY BONDS.**

LONDON, February 27.—London's share of \$5,000,000 of the \$10,000,000 issue of first mortgage 4½ per cent gold bonds of the St. Paul and Kansas City Short Line Railroad Company has been oversubscribed and the subscription list has been closed.

Firms desiring news from certain localities like San Francisco, Los Angeles, Portland, Seattle, etc., will find all such items, commencing on this page, all carefully classified as to location. These same items are reported in the fore part of the news department, under distinct headings such as Banks, Churches, Hotels, etc.

cisco. Architects, O'Brien Bros., Clunie bldg., San Francisco. Owner, name withheld. Figures have been taken on the concrete work. Contract to be let at once.

## Building Contracts.

### San Francisco.

## Los Angeles and Southern California.

**Apartment House**—3 story and basement. Location, SE First and Flower sts., Los Angeles. Architects, Garrett & Bixby, 504 Currier bldg. Owner, U. W. Murphy, 506 S. Hill st. Architects are preparing the working drawings.

**Apartment House**—4 story and basement. Brick. 60x125. Location, SE Pico and Wright sts., Los Angeles. Architect, J. T. Zeller, 203 Currier bldg. Owner, Mrs. E. Johnson. Building will contain 120 rooms with 50 baths. Exterior will be faced with pressed brick. Working drawings have been completed and the bids will be called for at once.

**Apartment and Stores**—3 story and basement. Class C. 50x110. Location, Third st., Los Angeles. Architects, Richards-Neustadt Co., 704 Wright & Callender bldg. Owner, R. W. Poin-dexter, Wilcox bldg. There will be several stores on the first floor with cement floors, and 44 rooms on the floors above. Bids are now being taken.

**Bridges**—Corona, Cal.—The Newton Construction Co. of Conora have the contract for the construction of piers of two concrete bridges which are to be erected from Ontario to Magnolia aves.

**Detention Home**—2 story and basement. Brick. Los Angeles, Cal. Board of Supervisors receiving bids up to March 13th. Work to be segregated as follows: (1) general building contract; (2) plumbing and gas fitting; (3) steam heating, cooking and laundry equipment; (4) electrical burglar alarm system.

**Apartment House**—3 story and basement. Frame. \$27,000. Location, NW 3rd and Boylston sts., Los Angeles. Architects, Jeffery & Van Trees, 124 Coulter bldg., Los Angeles. Owner, Allison Barlow. Exterior cement plaster on metal lath. Interior white cedar. Plans nearly complete.

**Car Shops**—(Additions to car shops.) \$500,000. Location, Los Angeles. Architect, H. B. Titcomb, Los Angeles. Owners, Southern Pacific Co. The general plan embraces the building of one large new building and extensive additions to the present general repair shops.

**Detention Home**—2 story. Concrete. \$—. Architects, Hudson & Munsell, Stimson bldg., Los Angeles. Owners, Los Angeles County. Bids are being taken and will be opened on March 13th. Plumbing, electric work, and steam heating separate from the general contract.

## Seattle and Washington.

**Apartment House**—1 story and basement. Brick and stone. \$10,000. Location, Eastlake and Almy sts., Seattle. Architect, M. W. Palmer. Owners,

Spellmire Brewing Co. Plans are now ready for figures.

**Apartment House**—3 story. Brick veneer. \$20,000. Location, 13th and Marion sts., Seattle. Architect, George Hamilton, Seattle. Owner, A. E. Peterson. Plans are complete and bids will be called for this month.

**Apartment House**—8 story and basement 108x120. \$200,000. Location, 4th ave. and Virginia st., Seattle. Architects, Quandt & Creutzer, Seattle. Owner, J. T. Kelly. Plans are complete and figures are being taken.

**Apartment House**—2 story and basement. Frame. \$10,000. Location, Broadway and Everett aves., Everett, Wash. Architect, W. W. Hastings, Commercial bldg. Bids will be called for March 1st.

**Bridges**—Harrington, Wash.—Beall & Co. of Portland have been awarded the contract for furnishing the county with all metal culverts which are to be used in constructing several county bridges.

**Government Barracks**—Bremerton, Wash.—Group of reinforced concrete barracks for the use of the Marine Corps. Plans prepared by the Engineering Department of the Navy, Washington, D. C. Plans have been revised and will be forwarded to various Pacific Coast cities for figures within four weeks.

**Church**—2 story. Brick and stone 52x92. \$20,000. Vancouver, Wash. Architect, B. A. Carpenter. Owners, First Presbyterian Church of Vancouver. Plans approved and working drawings started.

**Church**—Spokane, Wash.—Members of the Emmanuel Baptist Congregation have purchased a site at Eleventh ave. and Adams st. where they will erect a new church. Rev. Dr. Donald D. MacLaurin is pastor.

**Church**—Brick 75x120. \$80,000. Tacoma, Wash. Architects, Fay, Russell & Babcock, Seattle. Owners, Sixth Ave. Baptist Church, Tacoma. Bids being taken.

**Church**—Brick 80x92. \$18,000. Architects, Huntington & Gould, Seattle. Owners, Calvary Presbyterian Church. Bids being taken.

**Post Office**—2 story and basement. Steel and stone. \$90,000. Location, Bellingham. Architect, James Knox Taylor, Washington, D. C. Owners, U. S. Government. Plans are now in the West and bids are being taken and will be opened on March 23.

**Freight Depot**—Concrete and frame. \$80,000. Location, Bellingham, Wash. Architects, Company Engineering Department. Owners, Northern Pacific Co. Work is to be started at once. 200 feet of stone or concrete bulkheading will be required.

**Passenger Depot**—2 story and basement. Steel and Stone. \$60,000. Location, Everett, Wash. Architects, Stone & Webster, Everett, Wash. Owners, Everett Railroad, Light and Water Co. and the Seattle and Everett R. R. Co. Bids have been called and contracts will be awarded at once.

**Bridge**—Burley, Idaho—The legislature has appropriated \$10,000 for the construction of a bridge across the Snake River at Burley. The State Engineer has been instructed to prepare the plans, which will call for a steel and concrete bridge.

**Bridge**—Spalding, Idaho—The Northern Pacific R. R. Co. have announced that the old steel and wooden bridge

across the Clearwater River at Spaulding is to be replaced this spring with a new steel and concrete structure 1,000 feet in length.

**Addition to County Jail**—Brick and stone. \$20,000. Lewiston, Idaho. Architect, J. H. Nave, Lewiston. Working drawings started.

## Portland and Oregon.

**Apartment House**—4 story & basement. Brick. \$80,000. Location, Cor. St. Clair and Washington sts., Portland. Architect, Edward J. Root, Commercial Club bldg. Owner, Mrs. E. J. Frohman, Portland Hotel. Plans are complete and the architect is calling for bids on the work.

**Bank Building**—Gust. Holmes, president of the Scandinavian American Bank, has reported that the concern will erect a new home on the corner of 12th and Duane, Astoria.

## Up and Down the Coast.

**Packing Plant**—Pasadena, Cal.—John Castel was awarded contract for building \$7,000 addition to Sierra Madre Citrus Association's packing plant at Lamanda Park. It will be 80x112 feet. V. W. Bailey has contract for mason work.

**Business Block**—Los Angeles, Cal.—Although plans have not yet been completed it is announced that within next few weeks the wholesale grocery firm of Haas, Baruch & Co. will begin construction of a \$250,000 building on property recently acquired on Second and Alameda streets.

**School Building**—Los Angeles, Cal.—Architect N. F. Marsh has completed plans for the Polytechnic high school building to be erected at Ventura and bids will be received by Board of Education up to February 11th. School buildings will cost about \$65,000.

**Creamery**—Los Angeles, Cal.—Los Angeles Creamery Co. will erect 100x160 ft. reinforced concrete concrete building, four stories high, just north of their new office building at Twelfth and Towne avenue. Will be used for housing of butter and ice cream. Plans are being prepared by Train & Williams.

**Theatre**—Medford, Ore.—Work will be started April 1st on the new theatre to be erected by J. Cort on North Riverside avenue. Cost, \$50,000. E. W. Houghton, architect of Seattle, will supervise the construction.

**Federal Building**—Phoenix, Ariz.—Reports from Washington, D. C. indicate that plans for new Federal building and postoffice at Phoenix will be completed shortly and bids will be taken about February 15 and will be closed March 1st. About \$170,000 has been appropriated.

**School Bonds**—Milton, Ore.—At meeting of school board of district No. 31, which comprises Milton and Freewater, it was decided to call an election on March 9 of the voters for the purpose of bonding the district for \$15,000, to be used for the purchase of site and erection of school house.

# A Plan To Start the Construction Of A Civic Center In Conntction With A Splendid Fair Site.

By Architect N. W. Mohr.

To us, the people of San Francisco, an opportunity for improving and beautifying our city once more presents itself.

With the millions of dollars available for the erection of Exposition buildings, a wise selection of a site on which to hold this great event will tend considerably towards the realization of a beautiful plan by Architect Burnham, which was ordered at the hands of the Merchants' Association several years ago.

The people of San Francisco deserve great credit for the great individual improvements made to our city since the great disaster of April, 1906. But the opportunity which then presented itself for a general and systematic improvement of the entire city was only partly embraced. Selfish interests then controlled the destiny of the city and prevented to a great degree any realization of a great scheme for the common good. Before that time these same interests had prevented us from taking those necessary precautions which might have averted the stupendous loss of five hundred millions in property.

If these interests still remain and are able to interpose obstacles to our development it is the plain duty of the people to band together for the common good, and, by concerted action, overthrow any obstacles that are raised to the end that the great future that now presents itself for our city may be realized.

With this principle in mind I have made a study of all the sites so far suggested on which to celebrate the Fair. While they all have great individual beauties and advantages, I have come to the conclusion that the one at Harbor View is the most appropriate and practical for the above purpose. This site is bounded by the Bay Shore on the north, Lombard St. on the south, the Presidio including a great portion thereof on the west, and Fort Mason, Aquatic Park and Telegraph Hill on the east. My principal reason for selecting this site is that it is closest to and most practical and accessible to our main down-town and business section; and furthermore of great importance, this site works in harmoniously with the general improvement plan of the entire city. From the civic center to this suggested main portion of the Exposition at Harbor View stretches one of our most beautiful boulevards—Van Ness Avenue.

At the civic center, bounded by the extension of Mission Street to Market Street on the west, and taking in the two or three vacant lots from that point to Market and Eleventh Streets, and back again south to Mission Street, we should erect the Administration Building route of the Exposition, also a municipal auditorium and other suitable buildings that may be permanently constructed and planned to be economically converted and used after the Fair into our permanent City Hall and other city buildings.

The stimulus for general street im-

provements, if held in this combination of sites, will be inestimable. The Stockton Street Tunnel, the extension of Montgomery Avenue to the outer boulevard at North Beach, and of great importance the extension of Mission Street to Market and Gough Streets, adjoining the civic center, would improve the efficiency of our street system one hundred fold. The Mission Street extension would bring our great city home district on the south, the suburbs in San Mateo County, directly in access to the heart of the town, and the suggested World's Fair site at Harbor View on the Golden Gate.

Included in the main section are other important features of Architect Burnham's plans—the lasting embellishment of the adjoining beautiful hills; Telegraph Hill surrounded by a terraced park and observatory; Lone Mountain, crowned by an impressive monument, commemorative of our heroes who won national recognition to San Francisco for the Exposition; and Presidio Hills, crested with a museum of arts, the latter to be converted into a permanent academy of fine arts and literature, would form the links in a chain of vantage points of interest connected by a scenic railway and beautiful boulevards from the main Fair grounds, thereby enabling the visitors to gain a good general view of our entire city.

Now is the time to bring to action the converting of the cemeteries into parks and terraces, which in a great measure would improve the Richmond and neighboring districts.

Another valuable feature of the plan is the embodying of an outer boulevard beginning at the Ferry Building and running around to the northern boundary of the city through the proposed Fair grounds to the Presidio, and from thence to the ocean. This boulevard, if constructed with an idea of permanency, would form an excellent automobile drive from the Ferry Building to the Ocean Shore.

Another feature of the general improvement plan is the great Parade and Aviation grounds in the Presidio immediately adjoining the Bay, thereby enabling the impressive events of combined navy, army and airship maneuvers which will be a feature of the Exposition, the surrounding hills forming a natural amphitheatre to accommodate the multitude of spectators.

The Aquatic Park adjoining Fort Mason will be the field of the International Championship Swimming and Boating Contests, another attraction of the Fair. Along the banks of this permanent improvement will be located our local boating and swimming club house, also a municipal bathing pavilion.

The main site being partly on the water will enable the literal reproduction of the beauties of Venice, the streets of water reflecting and magnifying the architectural beauties of the magnificent facades on their banks in a way only equalled by our imagination of what Fairyland must be,

Transportation, a great factor in the selection of a site for an Exposition, is ideally provided for. On the north a complete system of ferries may be organized, on all other sides our main street and transportation lines coming in direct contact with its boundaries at every point.

The Government's present intention of great dockage improvements along the Bay Shore would naturally be made in harmony with these plans.

As to appropriateness of location, what greater argument than that which Nature herself puts forth can be offered. In sight of the far-famed Golden Gate, a great natural waterway, the Fair itself being held in honor of the completion of one of the greatest artificial waterways—the Panama Canal; nestling in a beautiful cove of hills on the south, San Francisco Bay itself with the noble Marin County Hills and Mount Tamalpais forming a background on the north, and an uninterrupted vista of the distant Alameda Hills marking the eastern boundaries of our magnificent bay, one of the beautiful scenes for which our San Francisco is so well known.

First impressions are usually lasting ones. The initial view of the city to the travelers from the decks of the mighty fleets of ocean vessels arriving on their first trip through the new Panama Canal, and immediately on entering the Golden Gate, will be this beautiful Exposition City of 1915, a dream of beauty designed for permanency, of permanent value to San Francisco that will tend to progress and the improvement of the entire community for all time.

The above suggestions and plans may be readily accomplished by the union and co-operation of all the people, the city authorities and the Panama-Pacific International Company organically and financially. The great economies of these ideas may not please the aforesaid powerful but selfish interests that possibly may still exist, particularly as with the same expenditure of the people's money practically twice the results are accomplished. This in itself should arouse us to the truth of the great advantages and opportunities which now present themselves and lead us for the time to lay aside our petty individual interests for those of the general good of San Francisco by selecting wisely a location that will produce the most permanent good and making as great a success as possible this wonderful International Exposition of 1915, to be held in honor of a great modern accomplishment of science—the Panama Canal.

In conclusion, I sincerely hope that the accompanying drawing and suggestions may be of value towards elucidating my plans and ideas and that my efforts may be the means of inducing others to action towards what in my opinion is a grand opportunity for the improvement and beautification of San Francisco.

Respectfully submitted,

N. W. MOHR.

## Proposed Sites For The Panama-Pacific International Exposition At San Francisco.

When Congress passed the resolution authorizing San Francisco to invite the nations of the world to present exhibits at an international exhibition to be held in this city in 1915 the question of where the exposition was to be held was settled. One of the conditions precedent to holding the exposition was that a suitable site should be procured. Where the fair would be located has been a question that has been uppermost in the minds of the people of San Francisco ever since. The time is at hand when the question should be decided and upon the decision of the Board of Directors of the Panama-Pacific International Exposition Corporation now rests the question of location.

San Francisco has many sites to offer. The difficulty is to choose the best one. All have many advantages to recommend them and each one possesses some special qualification to entitle it to consideration. Three of these sites with tentative drawings by architects illustrating the prospective fair city are presented in this issue of the Building and Industrial News.

Inasmuch as the conditions under which some of the bonds for the fair funds were voted provided for an exposition to be held in the city and county of San Francisco it follows that any site outside of these limits can not be considered. So as matters now stand there are five possible sites to be considered, namely: The Golden Gate Park; Lake Merced; The City Water Front; Bay View, and Harbor View.

The plan to use the city water front is illustrated by a drawing by architect Ernest Coxhead and shows an exposition city built upon the land and wharves that extend from Telegraph Hill to Rincon Hill on the city front. One chief objection to this site is its cost which probably eliminates it as an available site.

Of the other proposed sites Lake Merced and Golden Gate Park are what might be termed the inland sites. That is they are not located on the bay and water demonstrations are not a part of the scheme of the entertainment on the grounds. Lake Merced situated in the southern part of the county near the ocean presents an admirable site for the fair, a natural amphitheatre bordering on a beautiful lake with plenty of room available. Its proponents claim for it that transportation facilities are adequate and that the tunnel for twin peaks that has been so much talked of will bring that section of the city into immediate communication to the business section.

"Put It In The Park" has been the slogan of a goodly portion of our citizens ever since the day it was announced that San Francisco would get the fair. The illustration on plate D of this issue gives an idea of what the exposition would look like placed in the public park.

Future extending the right of eminent domain for acquiring property for ex-

position purposes and this will in a measure extend the ability to choose

There is no question of the availability of the place for the purpose. Its proponents state that on the unused portion of the park west of 20th avenue there are six hundred acres that can be used for exposition purposes. In addition to this a portion of the great highway could be utilized and some blocks of land on either side could be obtained by lease or purchase.

There is ample opportunity for landscape gardening, the topography of the site presents plenty of places for artificial lakes and the frontage on the ocean presents a splendid view in itself. On the ground that the site is free, that the park will be improved, and that it is the proper place to construct permanent buildings its proponents have urged that it is the only proper place to hold the exposition.

Of the bay sites that of Harbor View is treated of in a separate article in this issue by architect N. W. Mohr. It fronts the bay on a commanding site just inside the Golden Gate and is in closer proximity to the business section than any of the proposed sites save that of the Water front.

The other bay site that has been suggested and seems to lead in the straw ballot that is now being taken is that of Bay View in South San Francisco. Here is offered a section of ample room, fronting on the bay and protected from the trade winds by the hills that surround Tanforan.

It has transportation facilities by both land and water and climate conditions as good as any in San Francisco.

Among the objections that have been urged against the several sites may be mentioned, first, against Bay View that it is situated a considerable distance from the business section of the city and that one must travel through an unsightly portion of the city to get there.

Against Harbor View, the availability of the site and the cost of obtaining sufficient land for the purpose.

Against the park, the climatic condition in the summertime during the months of June, July, and August when the trade winds blow and when we may expect the largest crowd of visitors.

Against Lake Merced the same objection as to climate is urged and also its distance from the business section. It is further urged by some that the water supply of the lake should be kept intact as an emergency reservoir for the city and that under the law we could use it for nothing else.

The proponents of the bay sites claim that a water demonstration should be a good part of the entertainment and that this should be combined with the exposition proper to keep up the total of paid admissions. Both sites on the bay claim the advantage of protection from the ocean winds while the park has an ocean frontage and is the peoples property.

position purposes and this will in a measure extend the ability to choose

that rests in the hands of the committee.

We have every reason to believe that the board of directors will be guided by the highest principles of public policy and will place the fair in the place that is best available. For this exposition is bigger than any man or any set of men, paramount to any selfish interest however great it may be or how many people it may affect.

### REBUILDING MESSINA.

In a speech at the laying of the cornerstone of the new public buildings at Messina on January 16, Italian Minister of Public Works Saachi recalled what the Government has already done and announced its intentions in the future for the benefit of the stricken city. He explained the difficulties that had prevented an earlier start from being made with permanent rebuilding. In the first place the immediate needs of the survivors had to be met, and for this purpose 40,000 cantonment shelters had been constructed; \$3,474,000 had been spent in the purchase of timber, \$3,860,000 for other materials, and \$4,246,000 for the building of the cantonments. Another \$2,123,000 had been expended on demolitions, repairs, water mains, sewers, and roads. Altogether of the \$20,458,000 originally placed at the disposal of the Ministry of Public Works \$14,668,000 had been spent, and contracts were gradually being entered into for the outlay of the rest. While two years ago only some 3,000 persons remained among the ruins, the city now counts 40,000 inhabitants living in the cantonments and 20,000 in houses that have been repaired, and the growing development of the public services and the recovery of trade afford great encouragement for the city's future.

Laws specially passed for the purpose have brought the total funds at the Government's disposal, including the advance of loans to private persons, up to \$96,500,000, and it has been possible to do all this without intrenching upon the Treasury's prosperity or the country's credit. The Government's program now is the speedy building of new houses in accordance with rules calculated to minimize future danger. Over a million cubic yards of debris have been cleared away and now work has to be begun on private property. If private owners do not take the necessary measures within 3 months, the Government will immediately step in with powerful modern appliances. This would mean that the lower part of the town could be cleared in 18 months and the upper part within 3 years.

The Government is taking active steps for the building of public offices and will ask Parliament for further funds for that purpose, but thought must be given especially to the sea front and harbor. Work on the dry-dock is already actively proceeding, and in a few months further harbor works costing \$965,000 will be begun.

Firms desiring news on special classes of buildings such as Banks, Churches, Schools, Hotels, etc., will find such items all classified and grouped under proper headings, commencing on this page. These same items are again repeated under "LOCALITIES" in the last part of our news department.

## Plans Wanted.

City Architect Alfred I. Coffey of San Francisco is now engaged in preparing the necessary data from which a schedule of competition may be drawn up for the new City Hall building which are erected as soon as possible. Architect Coffey has informed Chairman Nelson of The Public Buildings Committee that his work will be complete by the time of the next meeting of the Committee which will be held on March 14th. The committee has \$20,000 which is available and this amount will be used in securing competitive designs.

The Belmont School District of San Mateo County will vote on \$20,000 worth of bonds which are to be used in securing a site and erecting a new school building. The site under consideration will cost \$6,000. It is the desire of the Trustees to erect a two rooms Mission style school costing about \$10,000.

The New Tobin School District in San Mateo County have decided on the erection of a new building and will call for competitive designs shortly for a one-story frame building costing about \$7,000.

The Board of Education of Santa Monica, Cal. will invite twelve architects to meet them during the middle of this month to consider the plans for the construction of a Polytechnic High School in that city. The cost of the building probably be in the neighborhood of \$200,000.

The Long Beach Lodge of Elks are considering the construction of a new building 76x70 and will consider competitive designs. The building is to be three stories high and of brick construction costing about \$25,000.

The Redlands Lodge of Elks have raised their building fund to \$40,000 and will commence the construction of their new building as soon as an architect can be selected.

## —APARTMENT HOUSES—

**Apartment House**—4 story and base, brick and steel \$60,000. San Francisco. Architects Ried Bros., Call Bldg. S. F. Owner Preston Estate. Building will be located at the NW corner of Fillmore and California streets and will have several retail stores on the ground floor and 2 and 3 room apartments on the upper floors. The exterior will be of pressed brick and cement plaster. Steam heat and hot and cold water and electric elevators. Plans are now being figured.

**Apartment House**—3 story and base, frame \$15,000. San Francisco. Architect W. G. Hinds, Humboldt Bank Bldg. S. F. Owner Dr. Clyde S. Payne. Building will have stores on the ground floor and eight apartments on the upper two floors. Plans have been completed and work is being done by Day Labor. Foundation is complete.

**Apartment House**—5 story and base, Class C, \$50,000. San Francisco. Ar-

chitects Bugbee and Bugbee, 127 Montgomery St. S. F. Owner James H. Garratt. The exterior will be of pressed brick and terra cotta. Modern plumbing, elevator service and steam heat. Plans complete and figures being taken.

**Apartment House**—7 story and base, Malsbary Superintendent of Construction, 125 Sutter St. S. F. Owner Apartment Investment Co. Building will have reinforced concrete floors and will be fireproof throughout. Work is to be done by Day Labor and will start at once.

## Fresno, Modesto, Stanislaus and Central California.

Bakersfield, Kern Co., Cal.—Cott. house. 3 story and basement. Cla A. \$350,000. Architect, Frederick Meyer, Humboldt Bank Bldg., S. Francisco. Owners, Kern County. Bids are being called for the furnishing hardware for the entire building and will be opened by the Board of Supervisors at Bakersfield on April 6th

**Fresno, Cal.**—Railroad stations. 2 story and basement. Brick. \$50,000. Architects, Mathewson and Clark, Fresno. Owners, Fresno, Hanford and Summit Lake R. R. Co., Fresno. Besides the plans for the Fresno building the same architects are getting out the plans for two other similar buildings, one of which will be erected at Sanger and one at Kingsburg. Plans have just been started.

**Fowler, Fresno Co. Cal.**—Church frame and concrete 60x100 \$35,000. Architect A. B. Sturgis. Story Bldg. L. Owners United Presbyterian Church of Fowler. The exterior will be of artificial stone and rustic. There will be a plenum heating system. The plans are now being prepared.

**Reedley, Fresno Co. Cal.**—Stores and room. 2 story and base, brick 50x107 22,000. Architects Mathewson & Clark, Fresno, Cal. Owner Jess Jansen, Reedley, Cal. The architects have started the plans for the building and will shortly take figures. The exterior will be of pressed brick.

**Bakersfield, Cal.**—Stores and offices. story and base, brick \$30,000. Architects Bennes and Long Hayden Bldg. Bakersfield. Owner L. C. Ross. The exterior will be plastered with cement. A team heating system will be installed the figures are now in the hands of the architects.

**Selma, Fresno Co., Cal.**—High School. story and base, reinforced concrete \$45,000. Architect, F. S. Allen, 426 Spring St. Los Angeles. Owners Selma High School District. M. B. Carrington, Selma Clerk of the Board of School trustees. Bids for the work are being taken and will be opened on March 1st.

**Fresno, Cal.**—Convention Hall. 2 story and basement. Brick. 175x150. 15,000. Architect, C. K. Kirby, Jr., 147 Forsyth Bldg., Fresno, Cal. Owner, City of Fresno. Plans are still to be passed upon by the City Council.

**Building Contracts Awarded.**  
**FRESNO COUNTY.**

**rear part of Lots 7, S. Blk 50, Fresno.** Addition to brick business building. Owner.....Tong Duck, Tong Sing & Co., Fresno. Architect...None. Contractor..Trewwhitt-Ssields Co., Hanford. Filed Mar. 6, '11. Dated Mar. 6, '11. 1st of each month actual work done ..... 75%  
**Total cost, \$6200**  
Bond, \$1550. Sureties, J. O. Hickman and A. E. Horlock. Limit, 75 days. Forfeit, \$10. Plans and specifications filed.

**Los Angeles and Southern California.**

**Monrovia, Los Angeles Co. Cal.**—Church. Brick 80x160. \$30,000. Architects, Allison & Allison, 605 Exchange Bldg., Los Angeles. Owners, Methodist Episcopal Church of Monrovia. The exterior brick walls will be plastered and a clay tile roof will be used. The plans are now complete and the architects are taking figures.

**Los Angeles—Hotel.** 3 story and base, brick \$30,000. Architect Franklin Tyler, 600 Union Trust Bldg. L. A. Owner A. M. Pelton 768 Hartford Ave. L. A. Exterior will be of pressed brick. Steam heat will be installed and the rooms equipped in the most modern manner. The architect is now preparing plans.

**Los Angeles—Apartment House.** 3 story and base, brick 50x28 \$45,000. Architect E. J. Borgmeyer, 317 Stimson Bldg. L. A. Owner Dr. James T. Miller. The building will contain 60 rooms with hot and cold water and steam heat. The exterior will be of pressed brick. The plans are now ready for figures.

**Santa Monica, Cal.—Apartment house** 3 story and base, brick and frame 60x120 \$50,000. Architects Eager & Eager, Story Bldg. L. A. Owner Carl F. Schrauder, Santa Monica. The first story of this building will be of pressed brick and the upper two stories of cement plaster on metal lath. The architects are getting out the working drawings.

**Los Angeles, Cal.—Hall of Records.** Special electric work. Plans in the hands of the Board of Supervisors, Los Angeles. Bids wanted for the installation of an electric generating plant. Estimated cost \$18,000. Also for electric lamps, vacuum cleaning system and electric fixtures. Bids open, March 27th.

**South Pasadena, Cal.—School.** Dormitory. 3 story and basement. 50x56. \$10,000. Private plans. Owner, Boys and Girls Aid Society. 620 American Savings Bank Bldg., Los Angeles. Plans are complete and are now on file at the offices of the Society. Bids will be received up to March 13th.

**Montalvo, Ventura Co., Cal.—School.** 1 story and basement. Frame. \$5,000. Architect, Norman F. Marsh, 212 Broadway Central Bldg., Los Angeles, Cal. Owners, Montalvo School Dists. Plans are nearly complete.

**Glendale, Los Angeles Co., Cal.—School—**2 story and basement. Brick. \$25,000. Glendale, Los Angeles Co., Cal. Architect, Paul V. Tuttle, 1417 W. Fourth St., Glendale. Owners, Glendale School District. This School will contain 8 class rooms. The plans have just been started.

**Hollywood, Los Angeles Co., Cal.—School.** 1 and 2 story. Brick. Cost not given. Architect Norman F. Marsh, 212 Broadway Central Bldg., Los Angeles. Owner, Hollywood School District. Bids were opened on March 9th.

**Long Beach, Cal.—Railroad Construction.** Double track line on the municipal wharf. Owner, City of Long Beach. Work consists of laying 65-lb. rails 8,000 feet. Bids are now being taken.

**Nordhoff, Ventura Co., Cal.—School.** 1½ story slow burning const. \$30,000. Architect A. B. Benton, L. A. Owner Thacher School, Nordhoff. Contractor Richards-Neustadt Co. L. A. Contract price \$30,000. An electric generating plant will be included in the work.

**Ventura, Ventura Co., Cal.—Steel span bridges.** Cost not given. Engineer County Engineer of Ventura Co. Ventura, Cal. Owners Ventura Co.

There will be two bridges one the Saticoy Bridge and one the Piru Bridge. Some approximate quantities, included in the two bridges are:

Structural steel.....726,800 pounds  
Reinforcing bars.....38,912 pounds  
Concrete .....898 cubic yards  
Pine lumber .....280,400 feet B. M.  
Asphalt pavement...31,307 square feet  
Plans and specifications for this work are on file in the office of the Clerk of the Board of Supervisors.

**Los Angeles—Church.** frame \$25,000. Architect Frank M. Tyler, 600 Union Trust Bldg. L. A. Owners German Presbyterian Church. Rev. Otto Sazinger Pastor. Concrete foundation and rustic exterior. Art glass windows. Plans are being prepared.

**Los Angeles —Apartment House.** 3 story and base, brick and frame 36x125 \$35,000. Architects Sirey and Gentry, 504 O. T. Johnson Bldg. L. A. Owner M. E. Mathers. Building will contain 26 apartments of 2 and 3 rooms each with private baths. The exterior will be of blue brick veneer and cement plaster on metal lath. The architects have the working drawings well advanced.

**Los Angeles, Cal.—Factory.** 2 story and basement. \$20,000. Architects, Walker and Vawter, Wright and Callender Bldg., Los Angeles. Owners, James Schultz Lumber Co. Plans are being prepared.

**Los Angeles, Cal.—Addition to warehouse.** 2 story mill construction, brick walls 50x200. Cost not given. Architects Morgan, Walls and Morgan, 114 Story Bldg., Los Angeles. Owners, Baker and Hamilton. Plans are being prepared.

**Alhambra, Los Angeles Co., Cal.—Library,** 1 story and basement. Brick and concrete. \$30,000. Architect, Frederick L. Roehrig, Los Angeles. Owners, Town of Alhambra. Preliminary plans have only been started and the bonds for the building have not been voted, but it is stated that there is absolutely no opposition to the project.

**Los Angeles, Cal.—Eagles' Hall.** 3 story and basement. Brick. Cost not given. Architects, R. B. Young & Son, 700 Lankershim Bldg., Los Angeles. Owners, Eagles' Hall Association. Bids are now being taken for extensive alterations.

**Pasadena, Cal.—Elks' Club.** 2 story and basement. Brick. 44x68. \$25,000. Architect, Myron Hunt, 1017 Union Trust Bldg., Los Angeles. Owners, Pasadena Elks' Club Association. The exterior of the building will be of pressed brick. The plans are now being prepared. Figures will be called shortly.

#### CONTRACT AWARDED

**Los Angeles—Apartment house.** 3 story and base, brick 50x114 cost not given. Architect E. J. Borgmeyer, Stimson Bldg. L. A. Owner Phillip Duffey. Contractor W. C. Jacobs, 2123 C. street L. A. Plans for a similar building for the same owner are also being made by Architect Borgmeyer and Mr. Jacobs will probably build this structure also.

**Los Angeles, Cal.—Church.** Concrete and plaster. \$10,000. Architect, A. B. Benton, 114 N-Spring St., Los Angeles. Owners, St. Mark's Episcopal Church. Contractor, E. M. Bacon of Unland. Contract price about \$10,000.

## Seattle and Washington.

**Bremerton, Wash.—Rem. church.** 2-story and basement. Stone 42x75. \$40,000. Architect Alpheus Dudley, Cray Bldg., Seattle. Owners, First Methodist Church of Bremerton. Rev. R. Livingston Wolfe, Pastor. Several rooms will be added and new heating system installed. The construction is to start at once. The pastor is in charge of the plans and will receive all bids.

**Spokane, Wash. — Roundhouse,** 1 story. Reinforced concrete and 40 acres of trackage. \$25,000. Plans by engineering department of the Oregon and Washington Railway and Navigation Co., Spokane, Wash. Owners, O. & W. R. & N. Co. The roundhouse will have 30 stalls and besides the 40 acres of trackage to be constructed there will be a general shop building erected in the near future.

**Yakima District, Wash.—Lack Kachess Dam.** Cost \$625,000. Engineers, U. S. Government Reclamation Service. Owners U. S. Government. The dam involves the excavation of approximately 345,000 cubic yards of material placing of about 240,000 cubic yards of embankment 15,000 cubic yards of riprap and the use of 8,000 cubic yards of concrete and 300,000 pounds of reinforced steel and other items.

**Seattle, Wash.—Apartment house.** 5 story and base, concrete and frame \$55,000. Architects Breseman and Duffee, Central Bldg. Seattle. Owner's name withheld. Exterior will be cemented. Modern plumbing and elevator service. Plans are being prepared.

#### CONTRACTS AWARDED.

**Spokane, Wash.—Railroad construction.** Contracts awarded for grading and building the North Coast Railroad line between Spokane and Ayer are as follows: A. G. Carlson & Co., 22½ miles of road, \$1,400,000; W. W. Tribble, 3½ miles, \$275,000; George Chew, 7½ miles, \$1,000,000, and Snake River Bridge, \$625,000, all of Spokane, and Eschbach-Bruce Co., of North Yakima, 7 miles, \$1,500,000. Total contracts about \$4,800,000. The Snake River bridge will be 457 feet long, to be supported on five steel towers on concrete piers. Bids are now being received at the offices of Mr. Strahorn, general manager of the road, for the construction of the grade between Spokane and Cheney, a distance of 18 miles. These bids will be opened within the course of about two weeks.

**Spokane, Wash.—Reinforced concrete bridge.** Cost \$42,900. Engineer, City Engineer of Spokane. Owner City of Spokane. Contractor C. F. Graff, Cray Bldg. Seattle. Contract price \$42,900. Graff's bid was \$2100 below the Engineers estimate.

# Heating, Cooling, and Ventilating of Public and Private Schools.

By CURTIS TOBEY, Architect.

Under the title of "Indirect Daylight" in the March 4th number of the Building and Industrial News, the subject of proper lighting of buildings, and particularly the lighting of school buildings, was discussed from an analytical standpoint of what might be correctly termed "Reuben's Logic," and suggestions made and directions given for the construction of new and the reconstruction of old school buildings so as to secure what was determined the best and most natural lighting of the classroom. Now let us consider and discuss the other two elements, heat and ventilation, or rather the subject of heating, cooling and ventilating the classroom.

As stated in the prior article on indirect daylight, "Light, Heat (temperature) and Ventilation" is a subject or term commonly understood as representing in combination the three positive elements to which existence is most susceptible. Eliminating food requirements from consideration, these elements of life, and most particularly the young life of the classroom, play so great a part in development and furtherance or restraint and repression that the physical and mental ability of the scholar is vastly affected. Death is the result of their total absence, whereas, in their existence in neutral adjustment to natural needs, life flourishes in marvelous luxuriance.

For the healthy and natural development of the mind of the child and scholar, it is absolutely necessary that its body is healthy and natural. Under this condition, he forgets that sickness and nerve fatigue exist. He is not acquainted with his stomach for it never bothers him. He is entirely unconscious of his environments and source and element of provision. All is neutral to the senses but the one desire of the moment and that is intense and its satisfaction keen and enjoyable. It is this neutrality of the senses to these physical environments and provisions, this absolute forgetfulness or insensibility, that permits the undivided and eager attention of the scholar in his studies, and it is therefore absolutely necessary that this neutrality be secured and maintained in the classroom if best and lasting results are expected from his training. Let us see what our modern classroom offers or provides to meet the needs and requirements in the matter of atmospheric temperature and purification.

In a room 26 feet by 36 feet, a large classroom, there are usually two entrance doors with pivoted transom sash over one or both. At the rear and at the left of the scholars as they are seated are placed the window openings. The lower two-thirds of each opening is fitted with double-hung sash balanced with weights to enable each sash to be raised or lowered at will. The upper one-third of each opening is provided with a bottom-hinged transom sash controlled by adjustable transom lift. Each sash is glazed with ordinary 21 or 26 ounce glass represent-

ing a thickness of about one-eighth of an inch of separation between the temperature of the outside atmosphere and that of the classroom. The front and right-hand walls are blank partitions forming part of the interior construction of the building. This gives us, then, two outside walls with about half their area of only one-eighth of an inch in thickness, and two inside walls plastered on both sides and usually containing sound deadening material between the studs. The ceiling is plastered which, together with the lath, should give a thickness of about three-quarters of an inch, but, as it is customary with plasterers to "skin" the ceilings, this thickness is very often not over one-half an inch. The floors are doubled with deadening felt between the rough and finished floor.

To maintain a uniform temperature and a uniform ventilation within a space so unevenly inclosed and so poorly insulated from the effects of the elements, is a practical impossibility. To correct this condition, steam, hot water or hot air radiators are placed on or near the floor and below and in the center of each set of windows. Fresh air inlets are placed below or in back of these radiators and, like the radiators, are controlled by hand at the will of the teacher, or, as is very customary, by one of the scholars assigned to that duty. Ventilators are placed in the ceiling or in the walls near the ceiling for the purpose of venting or carrying off the impure air through galvanized iron vent pipes that connect with a large exhaust stack extending above the roof of the building. This stack is in most cases equipped mechanically to cause a forced draft calculated to exhaust the air of each classroom within a given time. The draft or suction in this stack is sometimes left to the natural tendency of the air to ascend due either to its gravity or both to gravity and induced suction at the top through louver terminal. This latter method is never uniform and is not to be recommended except where made necessary by the lack of sufficient funds. To facilitate the intake of fresh air and the outlet of impure air as occasion demands, windows and transoms are opened and adjusted to best secure results.

This description is necessarily composite, but it applies very accurately to the newest and best of our public school buildings. The older buildings contain many recognized faults and practically few merits. They are, unfortunately, so fundamentally crude, as compared with modern design and equipment, that many of them must be relegated to and considered in the class of temporary housings.

Before we start to criticize or to make suggestions for the improvement or alteration of the present classroom and its modern methods for securing and maintaining uniform and evenly distributed temperature and ventilation or rejuvenation of its air, we must first understand and determine the nature of

air itself both in the relation of fresh or pure air to the noxious or impure air that is the result of contact with the body or that which has been exhaled from the lungs, and in its action as a fluid body within definite confines. Primarily, air is composed of oxygen and nitrogen; oxygen representing, in ordinary terms, Life and Animation, while nitrogen, which comprises in volume nearly four-fifths, representing Substance. The cleansing action of air upon the blood and tissues of the body at each respiration is similar to the cleansing action of water upon soiled linen at each washing. The dirty or foul air expelled from the lungs is laden with used up or oxidized energy in the form of carbonic acid gas. This exhaled air with its load of carbonic acid gas is much heavier than pure or fresh air, just as dirty water, with its load of earthy matters held in suspension, is heavier than clean water. Thus, assuming that the air contained in a room is still and of even temperature throughout, the foul or heavy air would drop or gravitate to the floor while the fresh and lighter air would remain toward the ceiling. The air body in the average classroom, however, is not still nor is it of even temperature and, although the tendency of the foul laden air is always downward, the air currents keep it in constant motion and in constant assimilation or mixture with the fresh air. Instead, then, of the scholar breathing and working in fresh air, the same that is injected into the classroom through the fresh air inlets, he is breathing, again and again, air that contains more or less of the impurities not only of his own body but of every other body in the room. It is obviously impractical to provide each scholar individually with an independent and separate supply of fresh air direct from the outside. Such a contrivance is possible, of course, but its application and use would involve so many other problems that its consideration is necessary only in classes under medical treatment. For the normally healthy child and scholar, a high percentage of purity is all that is required, but he is entitled to as high a percentage of pure air at each respiration during his study hours as is possible to secure for him, and this, too, with no more distraction or exertion than he would experience in the open.

In point of fact, no body of air is ever absolutely quiet, not even within its own particular mass. In the classroom, the currents of the air are accelerated by the great differences of temperature at various points. In winter time, it is warmest at the heating radiators and coldest at the windows and exposed walls; while in summer time, the reverse is the case, the windows radiating outside heat. In summertime, also, the circulation of air in the classroom is greatly increased by the opening of the windows and transoms. This latter, although perhaps productive of excellent ventila-

tion, is nevertheless severe upon a weak constitution and particularly so if the scholar is within line of the draft. If the windows and transoms are not thrown open both for better ventilation and for purposes of cooling the room, then the ventilating system must perform its function. It is unfortunate but true that there is scarcely a modern school house in which its heating and ventilating system performs its functions in entire satisfaction of demands, nor what is even more rare, a school house or a classroom whose atmospheric temperature remains the same in summer as in winter, not only as the thermometer registers at the heaters or ventilators, but as it registers at every corner and section of the classroom.

Summer heat, with its dry, sultry and dust-laden air, is no more conducive to active brain development than is the shivering cold of winter. The climate or temperature of the classroom must be equal and uniform, and maintained at a degree of physical comfort to each scholar so nearly perfect that the existence of temperature environment is forgotten. The same is as true of the ventilation. The supply and exhaust of air should be so equalized and so carefully adjusted to meet the requirements, not only of the room, but of each scholar in the room that it calls for no consideration or attention.

With a classroom made first practically noiseless with its thick, shelled linoleum floor covering; the window sash fitted with the thick prism glass accurately adjusted to disperse soft, clear and shadowless light; the climate or temperature evenly distributed and perpetually maintained; and the air continuously but unobtrusively admitted and exhausted without draft or noticeable circulation the attention of the scholar to his work must be the best, his attack upon difficult and intricate problems must be with keen interest and pleasure, and he must, under such favorable physical environments, produce the best results possible.

It is a simple matter to review any situation, see and understand its good and its bad points and to criticize results. Neither is it altogether difficult to offer valid suggestions for the betterment of conditions as they exist, but it is decidedly difficult, and sometimes hazardous, to attempt to prescribe a "cure-all" remedy, more particularly, if in the application of the remedy, all precedent is to be upset. Progress, however, is the fruit of rational experiment and the results sought are sufficiently important and necessary, as in the case of the surrounding elements of the classroom, that it may not be deemed a breach of conservatism to offer suggestions and to propose a system of heating, cooling and ventilating which, in its installation and operation, would be directly opposed to the systems now in vogue.

In the case of indirect light, the direct rays are so diverted and refracted that the room has the effect of light without a source. This is exactly what is required. The strength, quality and direction of the light thus obtained for the classroom was secured by a careful study of natural out-of-door conditions. Nature supplies correct examples and "modus operandi" of all principles. The source of light and heat is above and not below, as in the case of ordinary floor radiation within a building,

Now, if the natural source of heat and cold is above, the ceiling and not the floor should be the source of heat and cold for the classroom. It should, also, be the source of pure air, and the floor, and not the ceiling, the point at which the heavy and foul air is exhausted.

In the basement of office and other buildings where, for mechanical reasons, radiators have necessarily been placed on the ceilings, it has been discovered that the temperature of the rooms is much more even and the heat more uniformly distributed throughout the entire space than is the case where the radiator is located on the floor. Another instance of the application of "top" heat is found in the mechanical incubator and brooder for the hatching and care of chicks. This instance is, of course, not exactly parallel to the needs of a classroom, but it serves to illustrate the theory of "top" heat and air inasmuch as this method has been tried out and adopted as the best and most natural, as well as the most successful in point of results.

The matter of equipping a classroom for "top" or, as in the case of light, "indirect" heating and cooling, and for the supply of fresh air, once its theory is understood by the mechanic, there is no difficulty in its application. At each of the four corners of the ceiling and about four feet each way from the walls, hang a radiator of sufficient capacity equal to one-fourth of the total radiation required. Directly above each radiator provide the fresh air inlet. An inch or two below the radiator, hang a permanent metallic distributing pan so that as the fresh air strikes into the radiator it will be deflected horizontally and distributed over the ceiling. At each corner of the room, and if possible at other points in the base board, provide exhaust openings for the heavy and foul air. Both the supply of fresh air and exhaust should be operated and regulated mechanically by means of pressure and suction appliances. The radiators should be controlled by a thermostat placed in a screened recess of the wall about three feet from the floor and set to operate the control at normal temperature.

Under such an arrangement, with the system designed to meet full requirements, and with all windows and doors closed, the heated fresh air that is distributed evenly over the entire upper portion of the room would gradually descend upon the scholars uniformly and in its original purity, take up its burden of body impurities as thrown off at each respiration and finally fall to the floor to be sucked into the exhaust vents and out through the stack to the roof. The inequalities of building insulation against the external or outside elements would have but slight effect upon the uniformity of internal temperature or at least a far less effect than it has upon the internal temperature of the classroom under present methods of heating and ventilating.

During the summer months, when the heating of the building is not required, the fresh air supply should first pass through a cooling process before it is supplied to the classrooms and is distributed horizontally over the ceiling. Uniform temperature is maintained in warm weather by this means as regulated by the thermostat the same as it is regulated in cold weather, and also without the necessity of opening doors and windows or causing injurious drafts.

The additional expense of installation and maintenance of this system of "top" or indirect heating, cooling and ventilating is but slightly in excess of the ordinary systems, the additional expense centering upon the power plant and cost of operation. The advantages gained, however, are so great from the student's standpoint that this extra expense is but trifling and should not be considered as in the least obstructive.

## Illustrations For The Week.

Architect E. E. Young, 251 Kearny street, has completed plans for a handsome two story and basement residence which is to be erected at the southwest corner of Buchanan street and Pacific Avenue. The exterior of the dwelling, which has been designed in the modern French style, will be of Colusa and Manti stone. The interior is to be handsomely finished in hardwoods. A feature of the residence will be the large ball room which is to be equipped with a spring floor. The contract is in the hands of F. P. Lansing and will exceed \$60,000 in cost. An illustration of the main elevation appears in this issue.

Architects Dunn and Kearns, Monadnock Bldg., present the first general plan for a concession building to be erected at the Panama Fair in 1915.

The contemplated building is to be "Hades" cafe. Rough sketches and a design for the front elevation have been prepared by Architects Dunn and Kearns. D. D. Kearns said yesterday:

"This is the first actual exposition building planned. It will cost about \$50,000 and will have a frontage of about 150 feet and a depth of 100 feet.

"The idea is to construct a mountain, in the caverns of which will be dining rooms, buffets and a large cafe or banquet hall. The waiters will be garbed as devils, and the scenic effects will involve the use of the most modern stage mechanisms.

"The front of the structure will be handsome and elaborate design, rich in decoration and surrounded by fountains. The entrance will represent the 'Primrose path' leading to the depths of 'Hades.'"

The same architects have also plans for a seven story reinforced concrete apartment house, an elevation of which appears in this issue. The building will be of the reinforced concrete structure and one of the most complete buildings of its kind in the city. The work of construction will be started at once, the work costing in the neighborhood of \$90,000.

To the American soldiers encamped along the border of Mexico the revolution across the border must appear as a huge joke. The Mexicans do things about like a Chinaman. The soldiers are a motley crowd of nondescripts who are always loaded down with a lot of junk when they travel and are always followed by a motley crowd of women and children. When a train starts out they generally have a few cars reserved for the families. It must be a great field for military maneuvers. The battles one would imagine are pretty correctly depicted in Fische's cartoons of Mutt and Jeff.

Firms dealing news on special classes of buildings such as Banks, Churches, Schools, Hotels, etc., will find such items all classified and grouped under proper headings, commencing on this page. These same items are again repeated under "LOCALITIES" in the last part of our news department.

## Plans Wanted.

At the last meeting of the Redwood City Council Trustee Hynding reported that the work of preparing data for the competitive plans for the new City Hall was complete and that all matters were now in shape so that the advertisement for plans might be published. On a motion this was ordered done and the date was set for receiving the plans. Three hundred dollars will be the architect's commission for the plans and specifications. Plans will be received on April 17th.

The people of the Belmont School District, San Mateo County have signified their intention of erecting a new school building by voting \$20,000 worth of bonds. A site is to be purchased costing \$10,000, and \$4,000 is reserved for architect's fees and furnishing the new building. The balance of \$10,000 will be put into the construction of the new building. Thomas W. Pennington, Belmont, is the Clerk of the Board. Competitive plans will be considered.

The people of Napa have voted \$20,000 worth of bonds which will be used in the construction of a new school building. The bonds have not yet been sold but will be very shortly. Competitive plans for the new building will be received by the Clerk of the Board of Education, Napa, Cal.

Willow, Glenn County, Cal., have voted a bond issue of \$40,000 which will be used for the construction of a new High School in that city. The work is to start as soon as possible and competitive plans will be asked for as soon as the details of the work can be completed.

Willows, Glenn County, Cal., is to have a new City Hall, costing in the neighborhood of \$25,000. Architects have been asked to submit competitive plans for this work will be opened by the Board of City Trustees at their next meeting which will be held the latter part of next week.

The people of Filmore, Ventura County, Cal., have asked the County Supervisors to provide a new County Jail in their city. The matter was taken up at the last meeting of the Board and particulars will be decided upon at their next meeting.

The M. E. Church, South, in Selma have decided to erect a new edifice and at the last quarterly meeting a committee, was appointed to look after the details of securing plans and directing the work. The committee consists of the following, S. L. Heisinger, E. Poulson and J. B. Cook.

Owing to the activity of the Board of Education and the Promotion Clubs of the nearby cities, the addition and alterations to the Mt. Tamalpais Union High School now seem assured. The work will be extensive as some \$25,000 or more is asked for by the Board to carry out their scheme of enlargement.

## —APARTMENT HOUSES—

**Sacramento, Cal.**—Apartment house, 2 story and base, frame \$20,000. Architect C. N. Burrell, 312 Central Bank Bldg., Oakland. Owner's name withheld. The exterior of this building will be of cement plaster on metal lath. There will be modern plumbing throughout. Plans are now being figured.

**San Francisco**—Apartment house, 5 story and base, brick 27x120 \$40,000. Architect C. O. Clausen, Phelan Bldg. S. F. Owner Joseph Henry. The building will contain only two and three room apartments each with private bath. There will be steam heat and elevator service. The exterior will be of pressed brick and terra cotta. Plans are now complete and figures will be taken at once.

**San Francisco**—Apartment house, 5 story and base, brick \$40,000. Architects Righetti and Headman, Phelan Bldg. S. F. Owners Podester and Chelsea. The building will be heated with steam. An electric elevator will be installed and each apartment will be supplied with a private bath. The exterior of the building will be of pressed brick and terra cotta. The plans are now being figured.

**San Francisco**—Apartment house, 3 story and base, frame \$16,000. Architect Fred. P. Rabin 185 Stevenson St. S. F. Owner's name withheld. Plans are being prepared.

**Oakland, Cal.**—Apartment house, 2 story and base, frame \$12,000. Architect Sidney B. Newsom, 309 Commercial Bldg. Owner Mrs. Mary Newsom. The exterior will be covered with shingles. There will be a private bath for each apartment. The plans are now being figured.

**San Francisco**—Apartment house, 3 story and base, frame \$18,000. Architect Fred. P. Rabin 185 Stevenson St. S. F. Owner's name withheld. The specifications are as yet undecided but the apartment house will be steam heated and will contain all other modern improvements. The plans have just been started.

**Seattle, Wash.**—Apartment house, 5 story and base, concrete and frame \$55,000. Architects Breseman and Durfee, Central Bldg. Seattle. Owner's name withheld. Plans have just been started.

**San Francisco**—Apartment house, 3 story and base, frame \$15,000. Architect N. W. Sexton, Chronicle Bldg. S. F. Owner C. W. Welsh. Building will contain 18 apartments with all modern improvements. Plans are now being figured.

**Portland, Ore.**—Apartment house, 2 story and base, frame \$15,000. Architects Francher and Duke, Portland. Owner J. Margulis. Plans are now complete.

**Los Angeles, Cal.**—Apartment house, 3 story and base, brick 74x126 \$35,000. Architect George W. May, 903 Security Bldg., L. A. Owner Frank S. Hess.

The building will contain about 100 rooms divided into 2 and 3 room apartments and modern in every particular. The plans are being prepared.

**Santa Monica, Cal.**—Apartment house, 3 story and base, brick 60x120 \$50,000. Architects Edgar and Edgar, Story Bldg., L. A. Owner Carl F. Schrader. There will be stores on the first floor and 3 and 4 room apartments above. There will also be 24 bath rooms. The exterior will be of pressed brick and cement. The plans are nearly ready for figures.

## —BANKS—

**Medford, Ore.**—Bank, 1 story and base, brick cost not given. Architects Beezer Bros., Seattle. Owners Medford National Bank. Plans are nearly complete.

**Willows, Glenn Co., Cal.**—Bank, 1 story and base, 40x100 \$30,000. Architect C. H. Russell, Humboldt Bank Bldg. S. F. Owners A new corporation has been formed headed by H. J. Barceloux of Willows. Exterior will be of pressed or enameled brick. There will be large commercial vaults besides a safety deposit vault. Plans have just been started.

**Willows, Glenn Co., Cal.**—Bank, 2 story and base, b. \$25,000. Architect Sella, Sacramento. Owners Bank of Willows. Plans for this building have been complete and will be figured shortly.

**Fullerton, Orange Co., Cal.**—Rem. bank bldg. \$16,000. Architect none. Owners First National Bank of Fullerton. Work consists of an extension to present building and the installation of complete new fixtures.

**Pasadena, Los Angeles Co., Cal.**—Bank, brick and stone, cost not given. Architect none. Owners Alambra National Bank, Alambra, Cal. Figures for this work have been rejected and new figures will be called for at once. While no reason is given for the rejection of the bids it is believed that all figures were to high.

## —BRIDGES—

**Santa Rosa, Sonoma Co., Cal.**—Repairs to County bridges. Cost not determined. Engineer, County Surveyor, Santa Rosa. Under the Emergency measure the bridge at Melitta in the Bellevue District was ordered rebuilt. Extensive repairs will also have to be made to several other of the County's bridges.

**Sausalito, Marin Co., Cal.**—Reinforced concrete bridge. Contemplated work. The City Trustees are contemplating the construction of several small concrete bridges in that town and the type of construction is meeting with considerable opposition among the citizens.

**Hollister, San Benito Co., Cal.**—Repairs to County bridges \$100,000. County Surveyor, Hollister, Cal. Bonds to be above named amount are to be voted upon at once for the repair of bridges destroyed by the recent high water. The San Juan bridge has been completely destroyed and will be replaced by a reinforced concrete structure. Plans have been ordered prepared.

**Redwood City, San Mateo Co., Cal.**—Reinforced concrete bridge. Cost not determined. Engineer Neuman, County Surveyor, Redwood City. The San Mateo and Santa Clara County Surveyors are working in conjunction on the plans for a reinforced concrete bridge over the San Francisco Creek to take the place of the one washed away.

### —CHURCHES—

**Seattle, Wash.**—Church. 1 story and base, frame 70x70 \$8,000. Architect U. Grant Fay, Central Bldg., Seattle. Owners West Seattle Baptist Church. The architect has just started the plans.

**Auburn, Placer Co., Cal.**—Church. 1 story and base, frame \$9500. Architect none. Owners Roman Catholic Church of Auburn. Contractors Costa and Gross, Livermore, Cal.

### Contracts Awarded.

**Orengo, Wash.**—Church. 1 story and base, frame 58x80 \$8,000. Architect W. F. Tobey, Seattle. Owners Presbyterian Church of Orengo. Contractors W. A. Simmons and J. A. Cummings of Seattle. Contract price \$8,000.

### —COURT HOUSES & JAILS—

**Portland, Multnomah County, Ore.**—Court house. 3 story and base, class A. \$500,000. Architects Whidden and Lewis, 701 Corbett Bldg., Portland. Owners Multnomah County. Bids are being taken for the carpentry and cabinet work for the east wing of this structure. Bids will be opened March 24. Bids for the west wing were rejected lowest being \$605,000.

**The Dalles, Ore.**—Court house. 2 story and base. \$80,000. Architect C. J. Crandell, Portland and The Dalles. Owners Wasco County. The site for this building has just been selected and the working drawings started.

### FACTORIES & WAREHOUSES

**San Francisco**—Warehouse. 4 story and base, mushroom const. \$150,000. Architect Frye and Osborn French Bank Bldg., S. F. Owners Lally Plumb, Co. Details of the construction of this building have been settled. The job has been mentioned in these columns before and since that time the owners have ordered changes in the plans which will increase the cost of the work about \$50,000 making a total cost of \$150,000. Working drawings have been started.

### Contracts Awarded.

**Lodi, San Joaquin Co., Cal.**—Factory 2 story frame \$7500. Architect. Owners Pacific Casket and Barrel Co., S. F. Contractor J. M. Appleton, Lodi.

**Lodi, San Joaquin Co., Cal.**—Warehouses. 2 reinforced concrete 50x150 and 50x84. Architect none. Owners Beckham, Welch and Thompson & Lodi Storage and Milling Co. Contractor Perrin Bros., Lodi.

### FIRE HOUSES.

**Spokane, Wash.**—Fire station. 2 story and base. Class C. \$24,000. City Architect, Spokane. Owner City of Spo-

kane. This is one of three new stations that will be erected at once. Fire Chief A. H. Myers has furnished estimates to the city for a like station at Wabash St., costing \$12,000. Chief Myers will also purchase a new chemical hose and auto truck.

**Portland, Ore.**—Alterations Fire station \$15,000. Architects MacNaughton and Raymond, Portland. Owners City of Portland. Bids have been opened for this work.

**Emeryville, Alameda Co., Cal.**—Rem. Fire station. Architect none. Owners Town of Emeryville City Clerk F. H. Farr is taking bids and will open same on March 20th. Concrete walls and floors will be put in.

**Spokane, Wash.**—Fire stations. 2 story and base. Class C. \$24,000. City Architect, Spokane. Owner City of Spokane. This is one of three new stations that will be erected at once. Fire Chief A. H. Myers has furnished estimates to the city for a like station at Wabash St. costing \$12,000. Chief Myers will also purchase a new chemical hose and auto truck.

### FLATS.

**San Francisco**—Flats. 2 story and base, frame \$10,000. Architect Charles E. J. Rogers Marvin Bldg. S. F. Owners name withheld. The interior of these flats will be exceptionally finely finished hardwood being specified. The plans are now being figured.

**Oakland, Cal.**—Flats. 3-2 story and base, frame \$13,500. Architect none. Owner Mr. Young, 10th and Chestnut streets, Oakland. The owner is now taking figures on this work.

**Sacramento, Cal.**—Flats. 2 story frame \$6500. Architect C. N. Burrell, 312 Central Bank Bldg., Oakland. Owner's name withheld. Architect is taking bids.

**San Francisco**—Flats. 3 story and base, frame \$5,000. Architect J. Devenenzi, 432 Broadway St. S. F. Owner Antonio Prato. The work will be done by Day's Labor.

**San Francisco**—Flats. 3 story and base, frame \$5,000. Architect none. Owner John Byrne 3218 21st St. S. F.

**San Francisco**—Flats. 2 story and base, frame \$7500. Architect George L. Streshley, Balboa Bldg., S. F. Owner Bradley and Riley. Plans have just been started. Wall beds will be installed.

**San Francisco**—Flats. 2 story and base, frame \$7500. Architect George L. Streshley, Balboa Bldg., S. F. Owner T. J. Feeney. Building will contain 2 flats of 4 and 5 rooms each. Exterior of cement plaster wall beds will be installed. Plans ready for figures.

### GOVERNMENT WORK AND SUPPLIES.

**Denver, Colo.**—Furnishing Cement. Approximately 130,000 barrels of Portland cement are wanted by the Reclamation service and bids are being taken by the officer in charge, address Reclamation Service, Commonwealth Bldg. Denver, Colo. Bids opened April 3.

**Mare Island Navy Yard, Cal.**—Circulating loop, \$23,000. Engineers Dept. Yards and Docks, Washington, D. C. Owners U. S. Gov. Bids are being taken. Opened March 25.

**Furnishing Cement**—Denver, Col. Approximately 130,000 barrels of Portland cement are wanted by the Reclamation service and bids are being taken by the officer in charge, address Reclamation Service, Commonwealth Bld., Denver, Colo. Bids opened April 3.

### —HALLS & SOCIETY BLDGS.—

**Pasadena, Los Angeles Co., Cal.**—Elks' Hall. 2 story and base, brick \$20,000. Architect Myron Hunt, L. A. Owners Pasadena Elks' Hall Ass'n. Details have not been completed and bids will not be called for some time.

**San Jose, Santa Clara Co., Cal.**—Elks' Hall. 5 story and base, brick \$55,000. Associated Architects, Binder, McKenzie, Wolfe, Lenzen and Skillings, San Jose. Owners Elks' Hall Ass'n. Only preliminary plans have as yet been gotten out and for that reason the details of the building can not be given at this time.

**Black Diamond, Contra Costa Co., Cal.**—Auditorium. 2 story and base, brick \$20,000. Architect A. W. Cornelius, Metropolitan Bank Bldg., S. F. Owner D. A. Gatto. The ground floor of the building will be fitted for store purposes and the upper floor for a large hall. Bids are now being taken.

### Contracts Awarded.

**Chico, Butte Co., Cal.**—City hall. 2 story and base brick \$30,000 Architect A. J. Bryan, Chico. Owners City of Chico. Contractor E. D. Sharp, Chico. Contract price \$30,726.

### —HOSPITALS—

**Riverside, Riverside, Co., Cal.**—Post office. 2 story and base, Class A. \$125,000. Architect James Knox Taylor, Washington, D. C. Owner U. S. Government. Information from Washington states that the Riverside building will be out for figures within the next six weeks.

**Hollywood, Los Angeles Co., Cal.**—Hospital. 2 story and base, brick and frame, 40x80 \$30,000. Architects Kremenpel and Erkes, Los Angeles. Owners German Methodist Old People's Home Society. Besides the main portion of the building there will be two wings 25x96. Bids have been taken.

**Santa Clara Co., Cal.**—Hospital bldgs. 9 frame buildings, 1 and 2 story \$90,000. Architect Ralph Warner Hart, Humboldt Bank Bldg., S. F. Owners Independent Order of Odd Fellows. This work will include a large hospital building, general administration building and employees' quarters. All buildings will be cement plastered. Bids are now being taken.

**San Louis Obispo, San Louis Obispo Co., Cal.**—Hospital. 2 story and base, frame and concrete \$22,000. Architect W. H. Weeks, 251 Kearny St. S. F. Owner W. M. Stover. The building is to be used as a private sanitarium. Plans have been started.

## Contracts Awarded.

**Fort Missoula, Mont.**—Hospital reinforced concrete \$52,000. Architect Const. Q. M. Dept. U. S. A. Lieut. Roy W. Winton, Fort Missoula, Mont. Officer in charge. Owner U. S. Gov. Contractor Melniss and Harrington, Fort Ward, Wash. Contract price \$51,955.

## HOTELS

**Portland, Ore.**—Hotel. 4 story and base, brick \$60,000. Architect R. J. Roath, Mohawk Bldg., Portland. Owner J. S. Johnson. Plans will be ready for figures March 18th, and contract will be let at once.

**Los Angeles, Cal.**—Hotel. Large Class A. \$100,000. Architects Parkinson and Bergstrom, Security Bldg., L. A. Owners Orena Estate Co. Details of the work can not be given at this time as the plans have not been started.

**Seattle, Wash.**—Hotel. 3 story and base, reinforced concrete 93x120 \$50,000. Architects Stephen and Stephen, New York Bldg., Seattle. Owner Geo. A. Smith. Plans are complete and bids will be taken at once. The building will contain 170 rooms. Steam heat will be installed.

**San Francisco**—Hotel. 2 story and base, brick \$25,000. Architect Fred P. Rabin, 185 Stevenson St. S. F. Owner's name withheld. The exterior will be of pressed brick. Plans have only just been started and bids will not be called for within a month.

**San Francisco**—Hotel. 3 story and base, brick \$25,000. Architect Charles E. J. Rogers, Marvin Bldg., S. F. Owner E. Hirschler. Foundation work is complete. Bids for the balance of the work will be called for at once.

**Modesto, Stanislaus Co., Cal.**—Hotel. 3 story and base, brick \$30,000. Architect William A. Newman, Hewes Bldg., S. F. Owners Rockdale Co., Modesto. Plans have just been accepted by the owners. There will be retail stores on the first floor and a modern hotel on the 2 upper floors.

## POST OFFICES

**Spokane, Wash.**—Post Office (completion of attic) cost not given. Architect James Knox Taylor, Washington, D. C. Owners U. S. Government. Work consists of fitting attic of building for offices and court rooms. Bids will be opened March 28th, 1911.

**Rock Springs Wyo.**—Post Office. 2 story and base, steel and stone cost \$85,000. Architect James Knox Taylor, Washington, D. C. Owners U. S. Government. Bids for the excavation of the basement and filling of tunnels are now being taken. Bids opened March 21.

**Santa Fe, New Mexico**—Post office. 2 story and base, Class A. Architect James Knox Taylor, Washington, D. C. Owner U. S. Government. Bids for this work have been opened, 20 firms entering the competition. No contract has yet been awarded but the lowest bidder, the Philadelphia Const. Co. was \$112,400. The bids ranged up to as high as \$153,000.

## RAILROAD CONST. STATIONS AND EQUIPMENT

**Los Angeles, Cal.**—Station. 2 and 3 story and base, Class A. \$3,000,000 to \$5,000,000. Architect Jarvis Hunt, Chicago, Ill. Owners Southern Pacific Co. President Lovett of the S. P. is the authority for the statement that this work will be undertaken shortly and has named the architect.

**Oakland, Cal.**—Station. 2 story and base, Class A. \$250,000. Architect Jarvis Hunt, Chicago, Ill. Owners Southern Pacific Co. Plans for this work have been forwarded to San Francisco and construction work will be started this spring. The contracts will probably be let through the architect's office in Chicago.

## RESIDENCES.

**Oakland, Cal.**—Residence. 1 story and base, frame \$3500. Architect T. D. Newsom, 906 Broadway St., Oakland. Owner Leonard Leirman. Exterior rustic, no heating. Plans being figured.

**Pasadena, Los Angeles Co., Cal.**—Residence. 2 story and base, frame 50x37 \$15,000. Architect C. F. Driscoll, 501 Chamber of Commerce Bldg., L. A. Owner's name withheld. Residence will contain 16 rooms. Exterior will be of cement plaster on metal lath. Interior trim of white cedar and hardwoods. Plans for figures in one week.

**Alameda, Alameda Co., Cal.**—Residence. 1½ story and base, frame \$3,000. Architect Fred P. Rabin 185 Stevenson St. S. F. Owner's name withheld. Plans ready for figures in one week.

**Oakland, Cal.**—Residence. 2 story and base, frame \$4500. Architect Bernard J. Joseph, First National Bank Bldg. S. F. Owner A. Bernstein. Architect will award the contract at once. Bids are in.

**Berkeley, Alameda Co., Cal.**—Residence. 2 story and base, frame \$4,000. Architect T. D. Newsom, 906 Broadway St. Oakland. Owner T. H. Folwell. Exterior of cement and metal lath. Furnace heat will be installed. Plans are being figured.

**Los Angeles, Cal.**—Residence. 2 story and base, brick \$20,000. Architect J. Haenke, 315 Central Bldg. L. A. Owner William Bayly. Dwelling will contain 15 rooms, with complete heating system. Interior trim of mahogany and brick. Exterior of tapestry brick. Plans are being prepared.

**Concord, Contra Costa Co., Cal.**—Residence. 2 story and base, frame \$20,000. Architect W. H. Weeks, 251 Kearny St. S. F. Owner name withheld. The exterior will be of cement plaster and metal lath. There will be a complete heating system. Plans are being prepared.

**Oakland, Cal.**—Residence. 2 story and base, frame \$2,000. Architect none. Owner Carl Edwin Anderson, 1948 Union St. Oakland. Work is to be done by Day's Labor.

**Oakland, Cal.**—Residence. 2-2 story and base, frame \$4,000 each. Architect C. N. Burrell, 312 Central Bank Bldg. Oakland. Owner California Building

Co., Central Bank Bldg. Plans are being figured.

**San Francisco**—Residence. 3-story and base. Reinforced concrete 37x70 \$37,000. Architect Herman Barth, 12 Geary St. S. F. Owner Dr. M. Krotoszyner. Bids have been taken and contract is to be awarded at once.

**San Francisco**—Residences. 63 1 and 2 story and base, frame \$2500 to \$3,000 each. Architect O. E. Evans 2454 Mission, St. S. F. Owners various property holders in the Mission District. Work will probably be done by Day's Labor.

**San Francisco**—Cottages. 6 1story frame cottages \$2,000 each. Architect C. S. McNally, Mechanics' Institute Bldg., S. F. Owner St. George Holden, Holden-Duprey Co. Work is to be done by Day's Labor.

**Oakland, Cal.**—Residence. 2 story and base, frame \$3500. Architect Deuel and Wright, Macdonough Bldg., Oakland. Owner F. Pearce. Plans are now ready for figures.

**Oakland, Cal.**—Residence. 2 story and base, frame \$4500. Architect F. M. May, 2154 Center St. Owner H. C. Macauley. Bids are to be taken at once.

**Berkeley, Alameda Co., Cal.**—Residence. 2 story and base, frame \$4500. Architect John Hudson Thomas, First National Bank Bldg., Berkeley. Owner Mrs W. B. Seabury. Plans are nearly complete and figures will be called at once.

### SEALED PROPOSAL.

Hundreds of dollars may be saved by securing numerous and able competitors to bid on your work. All large construction enterprises and the supply of materials should be advertised in these columns to secure "rock bottom prices." All the leading contractors, manufacturers and material men on the Pacific Coast States read the Building and Industrial News. Send us your advertisements, note the results and save money.

Announcements in these columns will be published at a uniform rate of 10 cents per line for first insertion and 5 cents per line for each subsequent insertion.

Advertisers may send plans and specifications to this office for the convenience of local bidders without extra charge;

District was ordered rebuilt. Extensive repairs will also have to be made to several other of the County's bridges.

**Reinforced Concrete Bridge**—Contemplated work. Sausalito, Marin Co., Cal. The City Trustees are contemplating the construction of several small concrete bridges in that town and the type of construction is meeting with considerable opposition among the citizens.

**Auditorium**—2 story and base. brick \$20,000. Black Diamond, Contra Costa Co., Cal. Architect, A. W. Cornelius, Metropolis Bank Bldg., San Francisco. Owner, D. A. Gatto. The ground floor of the building will be fitted for store purposes and the upper floor for a large hall. Bids are now being taken.

**High School**—2 story and base. frame \$35,000. Vallejo, Solano Co., Cal. Architect, F. D. Voorhees, 517 Central Bank Bldg., Oakland. Owners, City of Vallejo. This building has been described in these columns before when plans were accepted. Bids are now being taken and will be opened the latter part of this month.

**Residence**—2 story and base. frame \$20,000. Concord, Contra Costa Co., Cal. Architect, W. H. Weeks, 251 Kearny St., San Francisco. Owner, name withheld. The exterior will be of cement plaster and metal lath. There will be a complete heating system. Plans are being prepared.

Contracts Awarded.

**School**—1 story and base. frame \$10,090. Cotati, Sonoma Co., Cal.—Architect, Brainerd Jones, Petaluma. Owners, Cotati School District. The following bids were received: J. C. Lindsay, Santa Rosa, \$9499; J. O. Kuykendall, Santa Rosa, \$8377; Hoyt Bros., Santa Rosa, \$8167; Fred Cullens, Petaluma, \$7745; C. Downie, Hessel Station, \$7198 and A. Herman, Penngrove, \$7100. All bids were taken under advisement.

Sacramento, Stockton & Northern California.

**Flats**—2 story frame \$6500. Sacramento, Cal. Architect C. N. Burrell, 312 Central Bank Bldg., Oakland. Owner's name withheld. Architect is taking bids.

**Apartment House**—2 story and base. frame \$20,000. Sacramento, Cal. Architect C. N. Burrell, 312 Central Bank Bldg., Oakland. Owner's name withheld. The exterior of this building will be of cement plaster on metal lath. There will be modern plumbing throughout. Plans are now being figured.

**Bank**—2 story and base. 40x100 \$30,000. Willows, Glenn Co., Cal. Architect C. H. Russell, Humboldt Bank Bldg. S. F. Owners A new corporation has been formed headed by H. J. Barceloux of Willows. Exterior will be of pressed or enameled brick. There will be large commercial vaults besides a safety deposit vault. Plans have just been started.

**Bank**—2 story and base. \$25,000. Willows, Glenn Co., Cal. Architect Selton, Sacramento. Owners Bank of Willows. Plans for this building have been complete and will be figured shortly.

**School**—1 story frame \$10,000. New Hope School District, Stanislaus Co., Cal. Architect, none. Bids are now in the hands of the Trustees. Ed. Hutchings, Clerk of the Board.

## Editorial Comment.

Customs inspectors and people in charge of the wharves of San Francisco report that there is a great supply of goods coming from the East, the shippers taking advantage of the cut in rates by the Pacific Mail and American-Hawaiian Steamship Companies. How far this will continue to the detriment of the California Atlantic Steamship Company remains to be seen. For the shipper who takes advantage of this cut in rates is but cutting his own throat and helping the return of the old order of things. It is a penny wise and pound foolish proposition wherein the merchant for a temporary advantage of a few dollars over his competitor invites the monopoly that has oppressed him for a generation.

The corporation has been erected into a gigantic creature of industry. The combined capital of its stockholders makes such a giant of commerce that the individual competitor is a microscopic pigmy in comparison. So of necessity the laws of trade have been forced to be modified. Combinations of corporations controlling great transportation lines have practically rendered competition impossible. So that it has become necessary to impose State and federal regulation of trade where under natural conditions the best results would be obtained under the natural law of competition.

Rate cutting is never instituted in the interests of the public. Somebody must pay the losses in the end. But the hard part of such a war is that the patriotic merchant who steadfastly supports the line that has given him free competition has to pay the price for the competition wherein his unscrupulous competitor reaps the benefit. The more one studies the situation it looks like things are drifting toward a sort of socialism which will ultimately mean government control or ownership of a great many things now owned and operated by private capital.

The time will ultimately come when railroads will have a physical valuation assigned to them. The water will have to be squeezed out of the stock and they will not pay interest on a lot of paper that represents no actual investment. The abuses of over capitalization and the steam roller tactics in competition are such that they call for more and more government intervention and regulation.

The question of a Japanese war with the United States seems to be a favorite one with the newspapers throughout the country. Just now the mobilization of the troops on the Mexican border seems to have given rise to a lot of

rumors and suggestions of secret treaties between Mexico and Japan.

Japan is a progressive and confident nation and her demonstration in the war with Russia proved her to be a power to be reckoned with. Still it is to her advantage to be friendly with the United States for all she could hope to gain by a war would be the Island possessions in the far East. For that matter it would seem the part of wisdom to sell them the Philippines or get rid of them some way as all they are ever likely to be is a source of expense.

In a war of any duration Japan could not expect to prevail against the United States with its superior territory and resources. Much of the newspaper noise about the danger from Japan is simply jingoism. Mexico would be of little use to Japan if it had it, and further it has no excuse to interfere in affairs down there anyway. There are no Japanese citizens there nor is there Japanese capital invested there. The secret about the movement of troops to the southern border, if there is one, will probably be found somewhere else than in the fear of Japanese intervention.

No one seems to know any thing about where the Exposition is likely to be placed nor is there any intimation made as to who will be selected as the director general of the affair.

To all intents and purposes the matter is as well guarded, if any one knows, as the reason for the movement of the military forces to the Mexican border. None of the daily papers have committed themselves for any of the sites mentioned nor, so far as can be learned, has any one in authority given any intimation as to where it is likely to go.

The Lake Merced boosters have been active lately but the result of the straw ballot seems to have resulted in a majority for Bay View insofar as such a ballot meant anything. The climatic conditions at Lake Merced are not at all favorable. During the time of the trade winds and a goodly portion of the year the fog blows in there in much the same manner that it does through the Golden Gate.

The legislature at Sacramento has certainly been an active one. While the appropriations have run up higher than ever before still there has been a great deal accomplished.

The lieutenant governor has worn out his gavel in the strenuous duties of keeping order and when the session ends there will be a great many new statutes added to the chapter laws of California, a good percentage of which will be found to be salutary.

## Irrigation and Its Relation to the Development of the Great West.

Of the important elements of existence, water, light and air are the divine gifts of nature; without them there is no life. Their total absence means death to organized forms and any curtailment of any one of the three important elements modifies existence to such an extent that life takes on a dwarfed and misshapen existence. Matter itself appears in three primary forms, solid, liquid and gaseous. It exists as the solid earth, the liquid ocean, and the circumambient air. By the aid of light and heat nature manifests itself in organized forms in all three elements and gives to the dull world an animated manifestation.

The active and permeating principles of organized life are, however, the elements first above mentioned, water, light, and air, which everywhere occur in such divine profusion and are the ministering agents to man's life and progress in the world. The sunless depths of the ocean own but low organized forms and those provided with artificial means of producing light. The frozen zones support but a moiety of plant or animal life, and the desert boasts only such species of fauna or flora that are able to extract a meager supply of moisture from the impoverished air, or animals that can migrate to distant water supplies.

Under these conditions human life has ever been confined to the rain belts of the tropic and temperate zones. To the polar icecaps and the arid wastes the migrations of man have been that of the pilgrim and explorer for there he does not find the conditions necessary for his existence. The earth must yield its supply of food, it must furnish him with the means of providing shelter from the elements.

Our earliest records of organized society come from the alluvial valleys of the Nile and Euphrates. There in the midst of deserts, under cloudless skies, flowed the rivers that each year flooded the level plain and left a rich deposit of fertile soil. There in the moist earth were planted the first crops in recorded history. There lived the primitive peoples that have left such enduring monuments of architecture that they have been the marvel of all succeeding ages. And there also did nature teach primitive man the principle of irrigation, for with the tropical rains and the melting of the snows in the high mountains came the annual overflow of the river that revived the life of the plain. There also were practiced those primitive forms of artificial irrigation which still obtain where the water is drawn up from the shrunken river in buckets and poured into the ditches of the surrounding gardens. And in the historic valleys of Asia Minor still exist the monumental lines of the great canals that furnished subsistence to the countless thousands of inhabitants that built the great cities of Babylon and Nineveh and extended their empire over the known world.

Along with religion, philosophy, letters and architecture the art and science of irrigation was transmitted to Phoenicia and to Greece and Rome. As a natural heritage it descended to modern Europe and where opportunity afforded this means of assisting nature to supply the solid earth with the softening and life-giving water has been employed since civilization began.

Under modern conditions irrigation has taken on a new aspect. The development of the modern corporation has enabled capital to be collected in such quantities that projects can now be undertaken by private enterprise that before could have only been attempted by an empire or a nation. The inventions of modern mechanics have enabled the modern engineer to construct dams and aqueducts that would have before been impossible. The application of concrete and artificial stone to modern construction by modern mechanical methods has made possible the construction of artificial waterways in places hitherto thought to be inaccessible. Nothing is now too great, it seems, to be in the range of probability. Some years ago an engineer came forward with a scheme to deflect the Missouri river above the Platte and irrigate the great arid plains of western Nebraska and Kansas. In a recent issue of the Sunday papers there was a long discussion by a French engineer to turn the water of the Atlantic ocean upon the great lowlands of the Sahara desert and thus change the geography and climate of the continent of Africa.

The question of irrigation and reclamation has now become one of the most important confronting the United States government. A great portion of the lands that lie west of the Mississippi river are arid or semi-arid in their nature. On the great slopes that flank the backbone of the continent the rainfall is inconstant and indeterminate. Only the lands in the immediate vicinity of the water courses are capable of successful and intensive cultivation. As a natural consequence therefore ways and means have been sought to husband the resources of the prodigal seasons, to store up the water from the winter rains and the melting snows and distribute them in the season for growing crops. To this end the national government has undertaken to construct reservoirs and canals at different places. Notable among these is the Shoshone river project in Wyoming and the Salt river project of Arizona that was opened by ex-President Roosevelt on the 18th of the present month. In both cases great concrete dams were built at advantageous places where the water could be confined and distributed over fertile lands situated miles away. They were engineering feats that required years to consummate.

As an illustration the storage dam on the Salt River project has required about five years to build. The founda-

tion was surveyed May 13, 1904. The first stone was laid September 6, 1911. The structure is declared to be the largest storage dam of its kind in the United States, and, with one exception, the largest in the world. It is exceeded in size only by the Assouan dam on the River Nile.

There are 336,000 cubic yards of masonry in the dam, according to the records of the Reclamation Service, and 340,000 barrels of cement, manufactured from material found in the vicinity, were used in its building. The structure is of sandstone and cement and rises 284 feet above the river. It is 1,080 feet long on top and 170 feet thick at its base. An acre of ground is covered by the foundation alone. Running along the top, which is the length of about two city blocks, is a roadway twenty feet wide.

The dam forms a reservoir twenty-five miles long and more than 200 feet deep. Its capacity is approximately 56,628,000,000 cubic feet, or, according to the officers of the Reclamation Service, enough water to submerge the State of Delaware one foot deep.

The waters from the dam will be used to irrigate about 250,000 acres of land in the Salt River Valley. After the water leaves the dam, and before it reaches the point where it is to be used, it flows a distance of about sixty miles. It is then distributed throughout the land to be irrigated by means of a diversion dam.

The valley, it is said, will become one of the richest agricultural valleys in the world. Crops can be raised twelve months in the year. It is estimated by C. J. Blanchard, statistician for the Reclamation Service, that one full crop from this valley will equal more than the entire cost of the irrigation works. He declared that land that was not worth one cent per acre before the project was built, since its completion had risen in value from \$100 to 1,000 an acre.

This is one of several instances where irrigation has been fostered by the federal government and a great work has been consummated. Other projects are now under way and will be completed within the coming decade.

California has always used the waters of its streams for irrigation. While no great project such as the Salt River District of Arizona has been attempted by the government private capital and the property owners of different districts have constructed and maintained irrigation districts and canals that have maintained for intensive cultivation vast tracts of otherwise arid land. At present there are numerous private projects on the way to completion. Notable among these is the Kuhn project in Glenn County. Lately a plan has been promulgated to store the floodwaters of the San Joaquin river and irrigate a tract of land of the great valley amounting to 1,800,000 acres.

Irrigation and reclamation are the

**Firms desiring news on special classes of buildings such as Banks, Churches, Schools, Hotels, etc., will find such items all classified and grouped under proper headings, commencing on this page. These same items are again repeated under "LOCALITIES" in the last part of our news department.**

engineering problems of the present and of the immediate future. It is the handmaid and companion of Conservation. No longer can we afford the prodigal waste of former years. Unused lands must be called into cultivation and the desert made to yield its proportion of products for man's use.

Irrigation by wells has become an important factor in the land cultivation of the West. Subterranean water is constant in all the valleys west of the Sierra Madre mountains. The hydroelectric power of the high mountains is being conveyed to the lower lands and there made to pump the water to the surface of the soil. Here is transformation of energy at a profit.

Some day, perhaps in the not far distant future, some inventive genius will devise some means of harnessing the potential energy of the sun's rays and using it for purposes of securing water for irrigation. Then the cloudless skies of California and the great arid plains will be capital for the investor and the desert will in truth blossom as the rose; and the lands of the great Southwest will be as productive as the hanging gardens of Babylon, as rich as the world-famed Valley of the Nile.

## Plans Wanted.

A movement to erect a new Elks' Hall in the city of Santa Rosa is meeting with hearty approval, and a Hall Association has already been organized. C. C. Donovan is chairman of the Building Committee. Ten thousand dollars worth of stock has already been sold.

The proposition to erect a \$150,000 Elks' Hall in Berkeley has been formally ratified at the last meeting of the Berkeley Lodge. The site for the proposed building has already been purchased and covers a lot 100x100. A three or five story building is to be erected.

The Episcopalians of Holtville have purchased a site for a new church edifice, and hope to be able to erect a new building within a short time. No plans have as yet been considered.

El Centro, Cal. The recent bond election, at which the citizens voted \$75,000 worth of bonds for a new high school, carried by a large majority. Professor Nichols and M. W. Conkling are in charge of the work pertaining to the new building.

Berkeley, Cal. A new \$20,000 fire house and three smaller fire stations are included in a bond election which will be submitted to the voters very shortly. The \$20,000 station is to replace the present building located on Shattuck Avenue near Durant.

Elgin, Ore., has voted in favor of a bond issue of \$30,000 which will be used in the construction of a new city hall.

The Knights of Pythias are reported to have selected a site for their Home for Aged and Indigent Pythians near Aberdeen, Washington. The plan of the order is to erect buildings costing in the neighborhood of \$75,000. No plans have as yet been selected.

On April 7th the voters of the Corn-ing Union High School District in Tehama County, Cal., will be asked to vote on a bond issue of \$43,000 for the construction of a new high school and

the improving of the grounds. The School Trustees are as follows: M. de Motte, L. J. Erwin and F. G. Beresford.

Twelve acres of the Meek tract in Haywards, Alameda County, Cal., has been selected for the site of the new \$75,000 high school building by the Trustees of the Haywards Union High School District. The building is to be constructed out of the proceeds of a bond election called for \$80,000, and which will be submitted to the voters shortly.

The Woodmen of the World in Fresno, Cal., have just acquired a site on which to erect a building. Members of the order are considering ways and means of financing the enterprise. In the same city the Knights of Pythias are considering improving a lot held by them, by the erection of a hall for their use.

P. G. Classman, 524 38th street, Oakland, Cal., intends to build a five room bungalow on 4th Avenue in the Terrace District. No architect has been selected.

Dr. Joseph Ardenzie, 604 Pacific Bldg., San Francisco, is about to erect a handsome two story residence on Ashbury street. He favors something in the English style. No architect has been selected.

Dayton, Lyon County, Nevada. The County Commissioners are considering the erection of a new court house at Dayton, and are receiving plans from various architects throughout the west. The plans will be opened by the Commissioners on April 12th. For further particulars address County Clerk Charles A. McLeod, Dayton, Lyon Co., Nevada.

## —APARTMENT HOUSES—

**San Francisco.**—Apartment house. 3 story and base, frame \$18,000. Architect W. S. Hinds, 1301 Humboldt Bank Bldg., S. F. Owner Mr. Gibbs. The building will be similar to several other structures that have been erected for the same owner from plans by Mr. Hinds. There will be 18 apartments of 2 and 3 rooms each. Wall beds will be used. The exterior will be of enameled brick and cement plaster. There will be a steam heating plant installed but no elevator. Plans are being prepared.

**San Francisco.**—Apartment house. 3 story and base, brick \$18,000. Architects Chas. M. and A. F. Rousseau, 597 Monadnock Bldg., S. F. Owner J. Brunn. The exterior of this building will be of pressed brick and cement. Wall beds will be installed and steam heat. Bids will be called for at once.

**San Francisco.**—Apartment house. 5 story and base, reinforced concrete, \$40,000. Architects Chas. M. and A. F. Rousseau, 597 Monadnock Bldg., S. F. Owners Keenan O'Brien Realty Co. Building will have a cement plastered exterior. There will be wall beds used. The mechanical equipment includes 2 electric passenger elevators, 1 electric freight elevator and steam heat. Bids will be called March 31st.

**San Francisco.**—Apartment house. 3 story and base, frame \$25,000. Architects Dunn and Kearns, Monadnock Bldg., S. F. Owner's name withheld. The exterior will be of metal lath and plaster. There will be a steam heating plant. The building is to contain 15 apartments. Bids are now being taken by the architects.

**San Francisco.**—Apartment house. 5 story and base, brick \$175,000. Architect E. J. Vogel, Shreve Bldg., S. F. Owner's name withheld. The building will contain 196 apartments with baths. The exterior will be of pressed brick and terra cotta. The mechanical equipment throughout will be the most modern. Plans have been figured.

**San Francisco.**—Apartment house. 3 story and base, \$12,000. Architect none. Owner Thomas Vodden, 1015 Cole St. The building will contain 7 apartments. The exterior will be of pressed veneer and shiplap. The work is to be done by day labor.

**San Francisco.**—Apartment house. 5 story and base, reinforced concrete, \$50,000. Architects Salfield and Kohlberg, Clunie Bldg., S. F. Owner J. F. Hetty. The building is arranged for stores on the first floor and apartments on the upper floors. There will be steam heat and elevator service. The exterior will be of cement plaster. The plans are being re-figured.

**San Francisco.**—Apartment house. 5 story and base, reinforced concrete \$45,000. Architects Salfield and Kohlberg, Clunie Bldg., S. F. Owner's name withheld. Preliminary drawings only have been made and the architects are now working on the details of construction. Plans will be complete in about two weeks.

**Oakland, Cal.**—Apartment house. 4 story and base, frame \$44,000. Architects Hamilton and Murdock, Hansford Bldg., S. F. Owner A. D. Wilson. The exterior of the building will be only metal lath and plaster. The mechanical equipment will be strictly modern. The plans are being figured.

**Oakland, Cal.**—Apartment house. 4 story and base, frame \$30,000. Architect A. W. Smith, 1004 Broadway, Oakland. Owner John G. Frederickson. The exterior will be of cement plaster on metal lath. There will be a steam heating plant installed. The architect is receiving figures.

**Fresno, Fresno Co., Cal.**—Apartment house. 3 story and base, frame \$25,000. Architect C. K. Kirby, Fresno. Owner N. Kochman. Building is designed in the Mission style. Wall beds will be installed. The plans are being prepared.

**Richmond, Contra Costa Co., Cal.**—Apartment house. 3 story and base, frame, 50x90, \$15,000. Architects Dunn and Kearns, Monadnock Bldg., S. F. Owner Herbert F. Brown. The building is arranged for stores on the first floor and apartments above. There will be a steam heating system. Plans are being prepared.

**Venice, Los Angeles Co., Cal.**—Apartment house, 3 story and base, frame \$12,000. Architects Bryant and Wells, Venice, Cal. Owner G. D. Bates. Work will be done by day labor.

**Seattle, Wash.**—Apartment house, 3 story and base, brick, 70x90, \$30,000. Architects White and Warren, Northern Bank Bldg., Seattle. Owner's name withheld. Plans will be completed March 30th. There will be 42 apartments. Exterior will be of pressed brick.

### Contracts Awarded.

**San Francisco.**—Apartment house, 3 story and base, frame \$10,000. Architects Righetti and Headman, Phelan Bldg., S. F. Owner Emilio Lastreto. Contractor H. S. Williams. Bldg's Exchange, S. F. Contract price \$10,000.

### —BRIDGES—

**Easton, Wash.**—Kachess Dam. Cost not given. Engineers U. S. Reclamation Service, North Yakima, Wash. Owner U. S. Government. Bids are now being taken for the construction of this work and will be opened on April 15th. The work involves approximately the following: Excavation of 345,000 yards of earth, filling of 240,000 yards of embankment, 15,000 yards of riprap, 8,000 yards of concrete and 300,000 pounds of reinforcing steel.

**Spokane, Wash.**—Bridge, concrete and steel \$415,000. Engineers, City Engineer, Spokane. Owners City of Spokane. Plans for this structure have been completed and are in the hands of the Trustees. A bond issue has been provided to finance its construction. The bridge will be seven spans.

**Modesto, Stanislaus Co., Cal.**—Repairs to bridges. The Supervisors are considering the construction of a new 100 foot span bridge over Dry Creek, which is to replace the bridge washed away in the recent high water. A petition from the two towns of Hughson and Empire is also before the Board asking for a new bridge over the Tuolumne River. This structure would have to consist of 2 spans of 100 feet each, and is estimated to cost \$60,000.

**Salinas, Monterey Co., Cal.**—Repairs to bridges \$80,000. Engineer Lou G. Hare, County Engineer Salinas. The above amount includes the repairs to the bridges spanning the Salinas River, the Pancho Rico bridge, the San Lorenzo bridge, the Toro bridge and the King's City bridge.

### —CHURCHES—

**San Francisco.**—Church, frame \$35,000. Architect George W. Kramer, No. 1 Madison Ave., New York. Owners First Methodist Church. The plans for this building are now being figured by the San Francisco contractors. The contract will be awarded this week.

**Pomona, Los Angeles Co., Cal.**—Guild Hall, frame \$12,000. Architect C. E. Wolfe, Pomona, Cal. Owners St. Paul's Episcopal Church. There will be a large audience room, rooms for the ladies' guilds and men's club rooms, and it is the intention of the owners to have a gymnasium and rooms for a boys club. The building will be heated by a furnace in the basement. The architect has just started the plans.

**Portland, Ore.**—Church, brick and stone \$75,000. Architect Ellis F. Lawrence, Portland. Owners Westminster Presbyterian Church. The plans for this building have just been approved by the Building Committee. Rev. Marcotte is the pastor.

**Seattle, Wash.**—Church, frame, 52x92, \$4,000. Architect Alpheus Dudley Crary Bldg., Seattle. Owners Methodist Protestant Church. Plans for this work will be ready March 27th.

**Ashland, Ore.**—Church, frame \$13,000. Architect Alpheus Dudley, Crary Bldg., Seattle, Wash. Owners First Baptist Church of Ashland. Plans have been turned over to the owners.

**Seattle, Wash.**—Church, brick \$20,000. Architect Alpheus Dudley, Crary Bldg., Seattle. Owners 32nd Ave. and East Marion St. Church. Plans for this building were prepared over a year ago and it is now announced that the work will go ahead at once. The building will be erected by day labor.

### Contracts Awarded.

**San Francisco.**—Church, frame \$20,000. Architect Wilson J. Wythe, 513 Central Bank Bldg., Oakland. Owners Howard Street M. E. Church. Contractor Thos. W. Caine, 402 Kearny St., S. F. Contract price \$20,000.

### —COURT HOUSES & JAILS—

**Stevenson, Skamania Co., Wash.**—Repairs to Court House, \$32,000. Architect's name not given. Owners Skamania County. Bids are being taken by the Clerk of the Board of Supervisors, Stevenson, Wash., and will be opened on April 3rd.

**San Luis Obispo, Cal.**—Remodeling Court House. Cost not stated. Architects Righetti and Headman, Phelan Bldg., S. F. Owners San Luis Obispo County. The architects have just completed the gathering of the necessary data, and have started the working drawings for this work.

### FACTORIES & WAREHOUSES

**San Francisco.**—3 warehouses, 1 story and base, brick, \$2,000 each. Architect C. B. Rushmier, 166 Kearny St., S. F. Owners Whittell Realty Co. Plans are now complete for one of these buildings and bids are being taken. The plans for the other two buildings will be completed in about two weeks.

**Spokane, Wash.**—Cream Factory, 2 story and base, brick and concrete \$10,000. Architects Russell and Vincent, Mohawk Bldg., Spokane. Owners Broadview Dairy Co. The architects have just commenced the plans for this building. Aside from the cost of construction, an additional \$18,000 will be put into machinery.

### FIRE HOUSES.

**San Francisco.**—Police Station, 2 story and base, brick, \$30,000. Architect Alfred I. Coffey, City Architect 1204 David Hewes Bldg., S. F. Owner City and County of San Francisco. Plans for this work are now complete and bids are being taken by the Board of Public Works and will be opened on April 5th. All contracts are to be let separately.

**San Francisco.**—Fire House, 2 story and base, brick, \$35,000. Architect Alfred I. Coffey, City Architect 1204 David Hewes Bldg., S. F. Owner City and County of San Francisco. Plans are complete and bids are being taken and will be opened April 5th. All contracts are to be separated. Station will be known as Engine House No. 42.

**Oak Grove, Monterey Co., Cal.**—Fire Station, 2 story and base, frame \$6,000. Architect Edgar F. Lang, Monterey. Owners Town of Oak Grove. Plans were approved at the last meeting of the Trustees, and bids were ordered which will be opened April 14th.

### Contracts Awarded.

**Modesto, Stanislaus Co., Cal.**—Electric Fire Alarm System. Engineer, City Engineer of Modesto. Owners City of Modesto. Contractor Gamewell Fire Alarm System. Contract calls for the installation of a 21 box system.

### FLATS.

**San Francisco.**—Flats, 3 story and base, frame \$10,000. Architect E. E. Young, 251 Kearny St., S. F. Owner's name withheld. Plans are being prepared and bids will be taken in two weeks.

**San Francisco.**—Flats, 2 story and base, frame \$8,000. Architect E. E. Young, 251 Kearny St., S. F. Owner's name withheld. Bids have been taken under advisement in the architect's offices.

**San Francisco.**—Flats, 3 story and base, frame \$9,000. Architects Salfield and Kohlberg, Clunie Bldg., S. F. Owner Theo. P. Beilenberg. The plans are completed and bids are being taken.

**San Francisco.**—Flats, 3 story and base, frame \$9,000. Architect none. Owner Carston Hanson, 3948 18th St., S. F. Building will contain six flats and is to be constructed by day's labor.

**San Francisco.**—Flats, 3 story and base, brick \$12,000. Architects O'Brien and Werner, Foxcroft Bldg., S. F. Owner Abbot A. Hanks. The plans have been figured and the contract is about to be awarded.

**San Francisco.**—Flats, 3 story and base, frame \$9,750. Architect none. Owners McKillop Bros., 534 Cole St. The building will contain six flats and is to be erected by day's labor.

**San Francisco.**—Flats, 3 story and base, frame \$6,000. Architect D. C. Coleman, Metropolitan Bank Bldg., S. F. Owner Bay View Realty Co. Building will contain six flats. Work is to be done by day labor.

**San Francisco.**—Flats, 3 story and base, frame \$16,000. Architect none. Owner Casper Zwiernick, 1624 Grove St. Building will contain 12 flats. Work is to be done by day labor.

**San Francisco.**—Flats, 3 story and base, frame \$15,000. Architects H. Gellfuss and Son, 150 Fulton St., S. F. Owner H. W. Gantner. There will be stores on the first floor of this building and flats above. The bids are now under advisement in the architects' offices.

**San Francisco.**—Flats, 3 story and base, frame \$6,000. Architect none.

Owners C. J. and W. J. Keenan, 300 Webster St., S. F. Building is to contain 12 flats. Work will be done by day labor.

**Seattle, Wash.**—Flats, 2 story and base, frame \$8,000. Architect J. O. Taft, Arcade Bldg., Seattle. Owner F. William Brown. The plans are being prepared.

**GOVERNMENT WORK AND SUPPLIES.**

**Bremerton, Wash.**—Marine Barracks. 3 reinforced concrete buildings, \$150,000. Architect Constructing Q. M. Dept. of U. S. Marine Corps, Washington, D. C. Owner U. S. Government. This work has been mentioned before. The plans have now been forwarded to the coast and are being refigured in Seattle, Portland and San Francisco. Plans may be obtained from the offices of the Marine Corps in any of the above mentioned cities.

**Gray's Harbor, Wash.**—Stone, piling and poles. Cost not stated. Engineer C. W. Kutz, U. S. Engineer's Office, Seattle, Wash. Bids are being received for furnishing approximately 375,000 tons of stone, brush fascines, piling and poles which are to be delivered at Gray's Harbor. Bids will be opened on April 7th.

**Los Angeles and South-  
ern California.**

**Hotel**—2 story and base. frame \$20,-  
000. Whittier, Los Angeles Co., Cal.  
Architects Eisen and Son, 383 Wilcox  
Bldg., Los Angeles. Owner's name  
withheld. Plans are being prepared.

**Guild Hall**—Frame \$12,000. Pomona.  
Los Angeles Co., Cal. Owners St.  
Paul's Episcopal Church. There will be  
a large audience room, rooms for the  
ladies' guilds and men's clubs, and it  
is the intention of the owners to have  
a gymnasium and rooms for a boy's  
club. The building will be heated by  
a furnace in the basement. The archi-  
tect has just started the plans.

**Apartment House**—3 story and base.  
frame \$12,000. Venice, Los Angeles Co.,  
Cal. Architects Bryant and Wells,  
Venice, Cal. Owner G. D. Bates. Work  
will be done by day labor.

**Residence**—2 story and base. frame  
\$11,000. Los Angeles, Cal. Architect  
Arthur Heinrich, Stibolt Bldg., L. A.  
Owner J. M. Marston. The building will  
be in the Spanish style, and will con-  
tain 16 rooms. The plans are being pre-  
pared.

**Store and Rooms**—2 story and base.  
brick 50x80 \$30,000. Pomona, Los An-  
geles Co., Cal. Architect C. E. Wolf,  
Pomona, Cal. Owner's name withheld.  
There will be a finely fitted store on the  
first floor and also space which is to be  
occupied by the post office. The upper  
floor will be divided into 25 rooms with  
baths, arranged in 2 and 3 room suites.  
There will be a sidewalk elevator and  
other modern improvements. Plans are  
being prepared.

**Three Schools**—1 and 2 story frame.  
Cost not stated. Riverside, Cal. Archi-  
tect G. Stanley Wilson, Riverside. Own-  
ers City of Riverside. The plans for  
three small school buildings in this city  
have just been ordered from the archi-  
tect and working drawings are being  
made.

**Residence**—2 story and base. frame  
\$12,000. Los Angeles, Cal. Architect  
Parker O. Wright, Security Bldg., L.  
A. Owner T. H. Swain. There will be  
hardwood floors and white enameled  
finished wood work. Plans have been  
prepared.

**Residence**—2 story, attic and base.  
brick and terra cotta \$30,000. Los An-  
geles, Cal. Architect J. Martyn Haenke,  
314 Centra Bldg., L. A. Owner's name  
withheld. The dwelling will contain  
23 rooms. Plans have just been started.

**Residence**—2 story and base. brick  
\$25,000. Los Angeles, Cal. Architect R.  
B. Young, 700 Lankershim Bldg., L. A.  
Owner Dan B. Jerrue. There will be a  
concrete milk house and pumping plant  
in connection with the residence, which  
will be erected before the dwelling  
proper. The architect is preparing the  
plans.

**Residence**—3 story and base. frame.  
Cost not given. Los Angeles, Cal.  
Architects Dennis and Farwell, 618 Fay  
Bldg., L. A. Owner A. Atkinson. The  
building is designed in the Spanish  
style with red tile roofs. The interior  
will be finished in Circassian walnut  
and oak. Plans are being prepared.

**Portland and Oregon.**

**Bank**—1 story and base. brick cost  
not given. Medford, Ore. Architects  
Beezer Bros., Seattle. Owners Medford  
National Bank. Plans are nearly com-  
plete.

**Court House**—3 story and base. Class  
A. \$500,000. Portland, Multnomah Co.,  
Ore. Architects Whidden and Lewis,  
701 Corbett Bldg., Portland. Owners  
Multnomah County. Bids are being  
taken for the carpentry and cabinet  
work for the east wing of this structure.  
Bids will be opened March 24. Bids for  
the west wing were rejected, lowest  
being \$605,000.

**Apartment House**—2 story and base.  
frame \$15,000. Portland, Ore. Archi-  
tects Francher and Luke, Portland.  
Owner J. Marguelis. Plans are now  
complete.

**Court House**—2 story and base. stone  
\$80,000. The Dalles, Ore. Architect C.  
J. Crandell, Portland and The Dalles.  
Owners Wasco County. The site for  
this building has just been selected  
and the working drawings started.

**Residence**—2 story and base. frame  
\$15,000. Portland, Ore. Architect, El-  
lis F. Lawrence, Portland. Owner, H.  
Miller. Plans are complete and work  
will be started at once.

**Theatre**—2 story and base. reinforced  
concrete 35x90. \$40,000. St. Johns, Ore.  
Architects, Williams and Rasmussen,  
Seattle. Owners. Bucker Bros. The  
plans are now ready for figures.

**Pump House and Machinery**—Cost not  
given. Fort Ruger, Honolulu, H. T.  
Architect Constructing Q. M. Dept., U.  
S. Army, Capt. M. N. Falls, officer in  
charge, Honolulu, H. T. Bids are being  
taken for the construction of a rein-  
forced concrete building and the in-  
stallation of machinery and the laying  
of water mains. Bids will be opened  
April 1st.

**Marine Barracks**—5 reinforced con-  
crete buildings \$150,000. Bremerton,  
Wash. Architect Constructing Q. M.  
Dept., U. S. Marine Corps, Washington.  
D. C. Owner U. S. Government. This  
work has been mentioned before. The  
plans have now been forwarded to the  
coast and are being refigured in Seat-  
tle, Portland and San Francisco. Plans  
may be obtained from the offices of the  
Marine Corps in any of the above men-  
tioned cities.

**Theatre Remodeling**—2 story and  
base. brick \$20,000. Portland, Ore.  
Architect E. V. Houghton, Seattle.  
Owner Edwin F. James. Plans are be-  
ing prepared.

**Theatre**—2 story and base. reinforced  
concrete \$50,000. Portland, Ore. Archi-  
tects Williams and Rasmussen, Port-  
land. Owners Buckner Bros. Plans  
have just been ordered from the archi-  
tects and will be completed in three  
weeks.

**School**—2 story and base, brick and  
concrete \$62,529. Ashland, Ore. Archi-  
tect George A. Ferris, Portland. Own-  
ers City of Ashland. Contractors Snook  
and Traver, Salem. Contract price as  
above.

**Residence**—2 story and base. frame  
and brick \$15,000. Portland, Ore. Archi-  
tect R. N. Hockenberry, Portland.  
Owner, Robert Brooke. Plans for the  
building are now being prepared.

**School**—1 story and base. brick \$20,-  
000. Talent, Ore. Architect Chas. A.

Burggraaf, Ashland, Ore. Owners School District No. 22, Talent, Ore. Bids will be received until April 25th. C. W. Sherman, Clerk, Talent, Ore.

**School**—Additions, brick and frame \$35,000. Salem, Ore. Architect Fred Legg, Salem, Ore. Owners Salem High School District. Plans are complete and bids are being taken, which will be opened by the Board on March 25th. Work includes new plumbing, heating and ventilating system etc.

### Contracts Awarded.

**Quarantine Station, Ore. Hospital**—2 story and base, brick and concrete \$35,000. Columbia River. Architects Marine Hospital Service. Owners U. S. Government. Contractor Jacob Edison, Astoria, Ore. Officer in charge Dr. J. M. Holt.

## Seattle and Washington.

**Post Office**—(Completion of attic) cost not given. Spokane, Wash. Architect James Knox Taylor, Washington, D. C. Owners U. S. Government. Work consists of fitting attic of building for offices and court rooms. Bids will be opened March 28th, 1911.

**Apartment House**—5 story and base, concrete and frame \$55,000. Seattle, Wash. Architects Freseman and Durfee, Central Bldg., Seattle. Owner's name withheld. Plans have just been started.

**Church**—1 story and base, frame 70x70 \$5,000. Seattle, Wash. Architect U. Grant Fay, Central Bldg., Seattle. Owners West Seattle Baptist Church. The architect has just started the plans.

**Theatre**—2 story and base, reinforced concrete \$70,000. North Yakima, Wash. Architect, Houghton, Seattle. Owner, John Cort. The plans are in but the preliminary stage and the construction will not be started until next year.

**Store and Offices**—6 story and base, Class A, 100x120, \$100,000. Seattle, Wash. Architect, Louis Baeder, White Bldg., Seattle. Owners, Frye-Bruhn Co. This is the second building designed for the same owners by Mr. Baeder. Plans are complete and bids are being taken. This contract will be let as a whole.

**School**—2 story and base, brick \$30,000. Endicott, Wash. Architects, Keith and Whitehouse, Spokane. Owners, City of Endicott. Plans are now being prepared and building will be erected this spring.

**Hotel**—3 story and base, reinforced concrete 93x120, \$50,000. Seattle, Wash. Architects, Stephen and Stephen, New York Bldg., Seattle. Owner, George A. Smith. Plans are complete and bids will be taken at once. The building will contain 170 rooms. Steam heat will be installed.

### Contracts Awarded.

**Church**—1 story and base, frame 58x80 \$8,000. Orenco, Wash. Architect W. F. Tobey, Seattle. Owners Presbyterian Church of Orenco. Contractors W. A. Simmons and J. A. Cummings of Seattle. Contract price \$8,000.

**Hospital**—Reinforced concrete \$52,000 Fort Missoula, Mont. Architect Const. Q. M. Dept. U. S. A. Lieut. Roy W. Winton, Fort Missoula, Mont. Officer in charge. Owner U. S. Gov. Contractor McInnis and Harrington, Fort

**Pump House and Machinery**—Cost not given. Fort Ruger, Honolulu, H. T. Architect Constructing Q. M. Dept., U. S. Army, Capt. M. N. Falls, officer in

charge, Honolulu, H. T. Bids are being taken for the construction of a reinforced concrete building and the installation of machinery and the laying of water mains. Bids will be opened April 1st.

**Hotel**—8 story and base, Class A, \$80,000 to \$100,000. Portland, Ore. Architects Preusse and Zittle, Portland. Owner V. Dessert. Plans for the remodeling of this building are being completed and the work will be started as soon as the figures can be taken.

**Church**—Frame \$13,000. Ashland, Ore. Architect Alpheus Dudley, Crary Bldg., Seattle, Wash. Owners First Baptist Church of Ashland. Plans have been turned over to the owners.

**Church**—Brick and stone, \$75,000. Portland, Ore. Architect Ellis F. Lawrence, Portland. Owners Westminster Presbyterian Church. The plans for this building have just been approved by the Building Committee. Rev. Marcotte is the pastor.

**Church**—Brick, \$20,000. Seattle, Wash. Architect Alpheus Dudley, Crary Bldg., Seattle. Owners 32nd Ave and East Marion St. Church. Plans for this building were prepared over a year ago, and it was announced that the work will go ahead at once. The building will be erected by day labor.

**Church**—Frame 52x92 \$4,000. Seattle, Wash. Architect Alpheus Dudley, Crary Bldg., Seattle. Owners Methodist Protestant Church. Plans for this work will be ready March 27th.

**Bridge**—Concrete and steel \$415,000. Spokane, Wash. Engineers, City Engineer, Spokane. Owners City of Spokane. Plans for this structure have been completed and are in the hands of the Trustees. A bond issue has been provided for to finance its construction. The bridge will be seven spans.

**Y. M. C. A. Building**—2 story and base, brick \$22,000. Hillyard, Wash. Architect T. R. Jacobs, Spokane. Owners Young Men's Christian Association, Hillyard. The plans are complete and the bids will be taken on April 1st.

**Pythian Temple**—2 story and base, concrete \$20,000. Olympia, Wash. Architect Samuel Ward, Seattle. Owners Knights of Pythias, Olympia. Plans are now complete and bids will be taken at once.

**Cream Factory**—2 story and base, brick and concrete \$40,000. Spokane, Wash. Architects Russell and Vincent, Mohawk Bldg., Spokane. Owners Broadview Dairy Co. The architects have just commenced the plans for this building. Aside from the cost of construction an additional \$18,000 will be put into machinery.

**Flats**—2 story and base, frame \$8,000. Seattle, Wash. Architect J. O. Taft, Arcade Bldg., Seattle. Owner F. William Brown. The plans are being prepared.

**Apartment House**—3 story and base, brick 70x90 \$30,000. Seattle, Wash. Architects White and Warren, Northern Bank Bldg., Seattle. Owner's name withheld. Plans will be completed March 30th. There will be 42 apartments. Exterior will be of pressed brick.

**Repairs to Court House**—\$32,000. Stevenson, Skamania Co., Wash. Architect's name not given. Owners Skamania County. Bids are being taken by the Clerk of the Board of Supervisors, Stevenson, Wash., and will be opened on April 3rd.

**Stone, Piling and Poles**—Cost not stated. Gray's Harbor, Wash. En-

gineer C. W. Kuntz, U. S. Engineer's Office, Seattle, Wash. Bids are being received for furnishing approximately 375,000 tons of stone, brush fascines, piling and poles, which are to be delivered at Gray's Harbor. Bids will be opened on April 7th.

**Supplies**—Puget Sound, Wash. The Bureau of Supplies and Accounts will receive bids on April 11th for furnishing the following supplies to the Puget Sound Depot: Asbestos millboard, Fire clay, Brushes (paint), Window glass, Pipe fittings, Steel (medium), Steel (structural.)

**Marine Barracks**—3 reinforced concrete buildings \$150,000. Bremerton, Wash. Architect Constructing Q. M. Dept., U. S. Marine Corps, Washington, D. C. Owner U. S. Government. This work has been mentioned before. The plans have now been forwarded to the coast and are being refigured in Seattle, Portland and San Francisco. Plans may be obtained from the offices of the Marine Corps in any of the above mentioned cities.

**Kachess Dam**—Cost not given. Easton, Wash. Engineers U. S. Reclamation Service, North Yakima, Wash. Owner U. S. Government. Bids are now being taken for the construction of this work, and will be opened on April 15th. The work involves approximately the following: Excavation of 345,000 yards of earth, filling of 240,000 yards of embankment, 15,000 yards of riprap, 8,000 yards of concrete and 300,000 pounds of reinforcing steel.

**Reformatory**—2 story and base, 60x3000 reinforced concrete \$200,000. Monroe, Wash. Architects Saunders and Lawton, Seattle. Owners State of Washington, Corwin S. Shank, Pres. Board, 1005 Alaska Bldg., Seattle. The above work is but one wing of the institution and the architects have just started the plans.

**Passenger Depot**—2 story and base, brick and stone \$35,000. Centralia, Wash. Architects O. R. and N. Co., Portland. Owners O. R. and N. Co. The plans have been ordered and the work is on the boards in the company's offices. Bids will be called as soon as the plans can be completed.

## FOREIGN TRADE OPPORTUNITIES.

### (From the Consular Reports.)

(Inquiries in which addresses are omitted are on file at Bureau of Manufactures, Washington, D. C. In applying for addresses refer to file number.)

**No. 6364. Mining engineer.**—Consul Julean H. Arnold, of Amoy, reports that local American interests holding mining concessions located in his district may soon be in need of the service of a mining engineer of reputation to examine the properties in question and report on their value. The properties are supposed to be rich in deposits of high-grade iron ore. It is possible that the services of an American engineer already in the Far East may be secured, but in case it is necessary to look to the United States for some one competent to do the work further advice will be given to that effect.

**No. 6365. Arms for policemen.**—An American consular officer in Mexico reports that there should be a good field for American manufacturers of up-to-date arms to endeavor to interest the chief of police in any of the larger Mexican capitals along the line of introducing new equipment. This matter

has been taken up with one official and a request has been received to have manufacturers send catalogues and prices, as it is intended to purchase 300 police revolvers and 100 carbines for the rural police. Communications will receive more attention if written in the Spanish language. Manufacturers should at once address the official making the request, on a prospective order for the foregoing equipment. His name and address, together with further particulars of the report, can be obtained from the Bureau of Manufacturers.

**No. 6366. Peanut machinery and turpentine oil.**—A business man in India writes to the Bureau of Manufacturers that he would like to secure catalogues, discount sheets, and price lists from American manufacturers of peanut machinery, such as peanut diggers, hullers, thrashers, and separators. He would also like to secure the name of a first-class manufacturer of turpentine oil, together with quotations c. i. f. Bombay.

**No. 6367.—Agency for American goods**—A report from an American consular officer in Italy states that a business man in his district desires to act as agent for American manufacturers of the following classes of goods: Nickelware, kitchen utensils, household water filters, electric heating and cooking stoves.

**No. 6368. Hardware specialties and Clocks.**—The Bureau of Manufacturers is in receipt of a communication from a manufacturer's representative in Canada stating that he would like to obtain agencies from American manufacturers of hardware specialties and alarm clocks and fancy clocks. He writes that a good trade exists in these lines and he feels sure that satisfactory returns can be secured if the necessary arrangements can be made.

**No. 6369. Agricultural machinery.**—A foreign Government has requested an American consul to procure catalogues and full information as to tools, machinery, and complete equipment to dry farming. The Government will make purchases of the machinery for experimentation and for recommendation to farmers, who are being encouraged to improve and extend crop culture. Complete equipments are also desired for ensilage making. The consul, who is now on a trip to the United States, adds that in the country in question there is also a good market for plows with steel shares, which are preferred.

#### CEMENT CONCRETE VATS AND TANKS.

Impervious, odorless, tasteless, and sanitary vats and tanks for buttermilk, wine, oil, pickles, sauerkraut, etc., can be constructed of reinforced concrete, the reinforcing to be designed by a competent engineer, provided the interior surfaces are treated as follows:

After the forms are removed, grind off with a carborundum stone any projections due to the concrete seeping through the joints between the boards. Keep the surface damp for two weeks from the placing of the concrete. Wash the surface thoroughly and allow to dry. Mix up a solution of 1 part water-glass (sodium silicate) to 100 parts of water, with 4 to 6 parts water, total 5 to 7 parts, according to the density of the concrete surface treated. The denser

the surface, the weaker should be the solution.

Apply the water-glass solution with a brush. After four hours and within twenty-four hours, wash off the surface with clear water. Again allow the surface to dry. When dry apply another coat of the water-glass solution. After four hours and within twenty-four hours, again wash off the surface with clear water and allow to dry. Repeat this process for three or four coats, which should be sufficient to close up all the pores.

The water-glass (sodium silicate) which has penetrated the pores has come in contact with the alkalis in the cement and concrete and formed into an insoluble hard material, causing the surface to become very hard to a depth of  $\frac{1}{8}$  to  $\frac{1}{2}$  inch, according to the density of the concrete. The excess sodium silicate which has remained on the surface, not having come in contact with the alkalis, is soluble, therefore easily washed off with water. The reason for washing off the surface between each coat, and allowing the surface to dry, is to obtain a more thorough penetration of the sodium silicate.

It is obvious that concrete surfaces soluble, have been made impervious, so treated, if hard, impervious, and tasteless, odorless, and sanitary.

#### CHINESE RAILWAYS AND CHINESE COMMERCE.

In the latest annual report of the Chinese Imperial, Maritime Customs Covering the trade of the southern ports of the Empire, railway construction and railway effect upon existing trade are discussed by the commissioner of nearly every seaport.

In Amoy the condition of the Amoy-Changehow Railway is discussed and the cost of prospective work of constructing bridges and similar works is discussed with reference to the Hankow-Canton Railway, which had been completed for 51 miles at the beginning of 1909, with an additional 40 miles of embankment and cutting completed and several tunnels under way. The report of the Kowloon commissioner discusses the Canton-Kowloon line and its effect upon the shipping and passenger trade in all the distance of the delta of the Pearl River.

##### A Truly Chinese Railway.

The Lappa commission discusses the Sunning Railway and its relation to the Hankow-Canton lines and branch lines. The Sunning Railway is the railway constructed by capital raised very largely from Chinese in the United States, the road passing through the districts from which most of them come. The northern terminus of this line has been at Kungyifow on the Sanwui River, and the southern terminus at To slau, near Kwonghol. The line is being extended on the west side in the direction of Yeungkong and on the east side to Kongmoon and, as soon as certain arrangements can be made with connections to Canton.

I am informed by the president of the company, Mr. Chin Kee Hee, who was for 43 years engaged in railway construction work in the Pacific North-west to do with successful construction work of some of the North-west of the United States and had much to do with successful construction of some of the Northern Pacific Railway, that practically all the capital for

the extensions has been secured, largely from Chinese in the United States, and that the construction of the extensions will be pushed as heretofore. Incidentally it may be stated that orders for railway cars and materials have recently been placed by him in the United States.

In some respects the Sunning Railway is the most promising line in all China. It was capitalized, planned, engineered, and constructed by Chinese, without any foreign help whatever. If it has technical faults and is not run altogether in accordance with foreign ideas, it is nevertheless an effective line, prosperous and well managed, so far as results can show, and is a standing example of what Chinese effort and talent will accomplish in China in the near future.

That the latest commercial reports have to deal with railway realities in Southern China, which has been least in public international discussions of railway matters, indicates the change that is now going on in China. There will be no change in that Empire in the next hundred years more than that which is being effected at the present time by the extension of railway, steamship, and steam launch transportation.

#### THE EFFECT OF THE WEATHER ON OREGON PINE AND HARDWOOD PANELS.

The stability of built up veneered panels under the trying conditions of an extra rainy winter such as we have just had, has been a mooted question for a long time. A great many panels twist, warp and crack when there is an excessive amount of moisture in the atmosphere. This is due to various causes, among which are unseasoned cores, and imperfect veneer, but in the majority of cases it is due to the fact that poor glue is used. This is the most important item in making a good panel. The heavy rainy season through which we have just passed has put all veneered panels to a severe test.

White Brothers, the pioneer hardwood lumber dealers of this city, make the claim that they have the best panels in the country and that the glue used in the manufacture of their panels is the best which can be procured. Their panels have proven their quality during this winter and through all this trying period they have not had one complaint or had one panel show up defective on account of weather conditions.

The summer months in the interior valleys are also very hard on panels of imperfect manufacture in which poor glue is used. White Brothers' panels have also made a record for withstanding the excessive summer heat of the warmer sections of California. It is a well known fact that a number of different brands of panels have failed to stand up under the trying conditions of the summer months. White Bros. are proud to say that they have, on this score, never had a single complaint.

**Bustness Block**—Everett, Wash.—Chas. O. Golden has purchased from Mitchell Bros. of London, England, through their local representative, Attorney Percy Gardiner, lots on the corner of Hewitt avenue and State street and will erect a two-story \$10,000 building.

## Editorial Comment.

Figures and statistics are chiefly in-  
teresting as a matter of comparison.  
They are striking reminders of physical  
growth and relative size and convey  
an idea of magnitude more strikingly  
and briefly than words.

The issue of The Scientific American of  
March 18 is devoted to cement and  
its uses. On the first page of the issue  
is a full page illustration of a barrel  
of cement representing the output of  
1910. The imaginary barrel is 980 feet  
high, just a little short of the Eiffel  
Tower, and contains 74,000,000 ordinary  
barrels of the structural material.  
During the past four decades the pro-  
duction of Portland cement has in-  
creased from 42,000 barrels in 1880 to  
74,000,000 in 1910. And the price per  
barrel at the mill has proportionately  
decreased from \$3 per barrel to 75  
cents. For the years representing the  
census the following figures are given:

	No. of Bbls. produced	Value	Price Per Bbl. at mill
1880	42,000	246,000	\$3.00
1890	335,000	704,000	2.09
1900	8,483,020	9,280,525	1.09
1910	74,000,000	55,550,000	.75

which represents in a striking manner  
the uses to which cement is being put  
in modern construction.

Of this last year's output 2,100,000  
barrels went to the Panama canal;  
800,000 to Florida-Key West Railroad;  
1,000,000 barrels to Askodan dam and  
vast quantities for road construction  
and irrigation projects. The price has  
been the lowest that was ever known.  
This was a result of conditions that  
had arisen from an accumulation of  
product and the war of competition  
that had been carried on. The pro-  
duction and prices for the past decade  
are given below:

	No. Bbls	Value	Price at Mill
1901	12,711,225	\$12,532,360	\$ .99
1902	17,230,644	20,864,078	1.21
1903	22,342,973	27,713,319	1.24
1904	26,505,881	23,355,119	.98
1905	35,246,812	33,245,867	.96
1906	46,463,424	52,466,186	1.13
1907	48,875,310	53,992,551	1.11
1908	51,072,912	43,547,679	.85
1909	62,508,461	50,510,385	.81
1910	74,000,000	55,500,000	.75

The published speeches of Ex-Presi-  
dent Roosevelt made at Los Angeles  
and at the great universities of the  
state show that he is still the same  
progressive champion that he was  
while he was chief executive of the  
nation and also indicate that he has  
lost none of his popularity. He is  
still the aggressive optimist and  
champion of the square deal that has  
endearred him to the popular mind.

In his Los Angeles address he spoke  
in praise of the present legislature  
and of Governor Johnson and it goes  
to show that nothing so helps the  
reputation of the state abroad as sub-  
stantial reform of bad political con-  
ditions and the restoration of real  
popular government.

Among other things he spoke in  
favor of the recall of judiciary. This  
immediately following his counsel  
against adopting it in the constitution  
of Arizona would seem at first to be  
a flat contraction. But he explains  
that under normal conditions, in most  
communities, he does not believe in  
the recall of Judges. But he goes on  
to say that there are states where  
"Judges have so acted in the past as  
to make it justifiable and necessary for  
the people to adopt measures for re-  
tiring them from office." He repeated  
in Los Angeles what he said in Ari-  
zona, that the recall for the Judiciary  
should not be adopted "until by actual  
experiment" the people were driven to  
it as a necessary but regrettable method  
of doing away with some even worse  
evils. And he went further to say  
that he thought conditions in Cali-  
fornia were such as to make it im-  
perative to provide means for retiring  
any Judge when there was convincing  
reason to believe his retention on the  
bench was no longer in the interest of  
justice.

This recommendation of the Ex-  
president ought to go a long way to-  
ward helping the adoption of the Re-  
call amendment. The condition is such  
as he says—the people no longer have  
faith in the integrity of the courts.  
The recall amendment looks entirely  
to the future.

While the objection is urged against  
it that it will rob the judiciary of its  
independence the same thing might be  
said of it now. As conditions have  
heretofore existed if a judge was fear-  
less and happened to decide some im-  
portant case against the powers that  
be, the length of his term of office was  
usually limited to one term and he  
was beaten at the next election. As a  
result the occupant of the judicial  
office had to do politics or at the end  
of his term he had to start in to build  
up a law practice which he had lost  
by reason of his public service.

As a result able lawyers and fear-  
less, honest men have not generally  
sought the position of judge. Where  
a man had any considerable law prac-  
tice it was not worth the while, the  
position was too precarious and the  
gratitude of a fickle public a very un-  
certain thing to bank on.

The recall will perhaps cause the  
judges to keep their ear to the ground.  
Not necessarily more so though than  
has been done in the past, only in this  
instance they will listen to the voice  
of the people and not the political boss  
or the powerful corporation.

A certain superior judge of the City and County of San Francisco is noted for his peevish particularity in demanding clerical exactness in the preparation of papers. Seated up there on the bench, hedged about with the immunity that belongs to the judicial head, he makes life miserable for a long row of attorneys who have ex parte matters to attend to or have been careless of any detail in the preparation of papers.

It would be a good thing if there were some censor of this sort in the Recorder's office, for many of the papers that are filed are inaccurate and incomplete. No care is exercised in the spelling of names of the parties, often times the spelling of the name in body of the contract being entirely different from the signature. Again the location is often inaccurate, descriptions of property sometimes being given that does not inclose any shape at all.

Then again the contract itself does not state the exact agreement, as the contract will call for certain work in the erection of a building and then there will be important exceptions contained in the specifications.

Builders who file these contracts should see that they are properly drawn up. Slovenly work may mean a great loss of money some day. Not only that but inaccuracies of statement makes everybody guess at the record and sometimes somebody will guess wrong and misunderstanding result. If the lawyers, architects, contractors and owners who file these contracts would look them over carefully and see that they convey the idea intended, that they are clear and plain, that the proper names are entered and the proper description are given they would avoid a lot of trouble all around.

In the case of the construction of the City Hall at Chico, California, the award for the construction of which was won in competition by A. J. Bryan, a local architect of Chico, there is a local discussion as to who shall superintend the building. Mr. Bryan has come out with a statement of his side of the argument in a letter to Lionel Deane, Secretary of the State Board of Architects.

Mr. Bryan's letter is as follows:

"Chico, Cal., March 21, 1911.

"Mr. Lionel Deane, Secretary State Board of Architecture.

"Dear Sir: Our good people here have on hand at the present time two freak cases relating to the erection of public buildings, and in each case the resolutions of local Boards have made it necessary for their attorneys to prepare 'special' contracts for the building contractors to sign in order to permit the boards to employ carpenters to interpret the plans and specifications of the architects, and to decide all matters pertaining to the business of an architect during the construction of these public buildings: I am interested only in one of these buildings, and the attorney for the Board having that work on hand told me that he had written in the contract 'the terms architect and superintendent shall be considered synonymous,' and I have since been told by Mr. E. D. Sharp, the contractor for the erection of this particular building, that the contract which has been finally made up for him to sign, now reads 'that anything in the plans or

specifications which are in conflict with this contract shall be considered null and void" Being only a layman, I may be wrong in thinking that this is making law to fit the case. The specifications were carefully read and approved by the same attorney, before notice was published inviting building contractors to make estimates and proposals for the construction of the building.

"The Board set out the full allowance of 6 per cent for the making of plans and specifications and the supervision of the construction, and in their publications of notice to architects asking for competing plans they divided the 6 per cent (against protest) into two parts, 3½ per cent for plans, etc., and 2½ per cent for supervision, and now they have decided that it is good business—or politics—to pay 2½ per cent to a carpenter to take the architect's place and take charge of all architectural supervision and the issuance of architect's certificates of completion and acceptance, etc. And, finally, the attorney dug up the antiquated law of 1871, requiring me to go out and buy a surety bond amounting to 20 per cent of the entire cost of the building, and to obligate myself to furnish other bonds amounting to 100 per cent of the whole cost in case some one or more building contractors failed to bid lower than the amount the Board decided should be invested in the structure. As to these bonds, I know it is considered wrong to submit to such impositions—and that it is also wrong to allow a carpenter to assume the duties of an architect and stand around a building and 'look wise' when he can have no authority to either accept or reject any materials or work.

"But as against local Boards and their attorney we can have little to say, as they assume the right to settle matters in regard to architecture without any regard to your California Board of Architecture, or your attorneys; therefore, we will simply refer the matter to your Board to take such action as seems to be your duty.

Sincerely yours,

"A. J. BRYAN."

Without going into the merits of this particular controversy it seems that Mr. Bryan states a case well worthy of the attention of the State Board of Architecture.

Perhaps the principal cause of the revolution in Mexico is the holding of land in large tracts by individuals and corporations, many of them non resident. It is the old story of land hunger and striving for liberty of the masses. In France during the period just before the revolution about a fifth of the land was held by the crown, a fifth by the nobility, and a fifth by the church. The leaders of the revolution promised every man a farm and the division of the great estates was the basis of the reorganized government.

The same motive animated the revolutionary movement in Russia at the close of the Japanese War. It was estimated that 700 million of the 1,100 million acres of available land was owned by the crown or by large estates.

In Mexico there are million and ten million acre tracts in single ownership. It is said that Maderos himself, the revolutionary leader, owns or controls 4,000,000 acres of rubber land.

Under this state of affairs there is little hope for the natives. A system of peonage little short of slavery exists. While the population is generally a mixed race, low in the scale of intelligence, this state of things does not tend to improve the people or make the succeeding generations any better than their ancestors. Under such conditions the time is ever ripe for revolution and the peasants are ever ready to throw up their hats and follow an aggressive leader who promises every man a farm. It is to be hoped that the present insurrection will result in a more stable form of government that will hold some hope for the future for its citizens. There is land enough for all in Mexico and its citizens should have a chance.

Canada's construction work goes steadily on. There was not a month of last year that did not show a gain per cent over the month of the preceding year from all the cities reported and at the end of the season the year's total showed a gain of over 50 per cent. So far this year has kept up the record with about equal pace. From 23 cities representing building centers a total gain for February, 1911, over the same month last year amounts to 34 per cent.

Canada is a comparatively new country and its rigorous climate has in a great measure kept back its growth. Now, however, since the lands of the United States have become settled immigrants are pushing farther north where opportunities are greater. As a result the country and cities show a steady and prosperous growth.

It is also a notable fact that the western cities of the Dominion are among the most active, Vancouver, B. C., showing a total of permits for the month amounting to \$1,047,790. Winnipeg, Victoria, Lethbridge, Edmonton and Calgary also show large gains. For a climate so unfavorable to building construction during the winter season the total of over four million dollars from the 23 cities reported shows a healthy activity.

# Studies In Roman Architecture. Some Notes Taken At First Hand From Original Investigation and Research.

By F. T. Baggalay, F. R. I. B. A.

Roman buildings, after remaining for three centuries the sole inspiration of the architects of all Europe, have for a long time now received far less attention from English students than is their due, whether they are judged on their merits or by the fact that they are the direct ancestors of all such modern architecture as can claim ancient descent.

Our attention has lately been directed once more to Roman work—first, by the fact that when last English architects examined it they were content to look at a part only, and hardly went below the surface even there; secondly, I think, by our growing acquaintance with M. Choisy's illuminating work on Roman building methods; and, lastly, by a half hope that, as the Imperial Roman system of construction was largely a monolithic concrete system, it may contain some suggestions for dealing with ferro, or reinforced, concrete: all the more since Roman concrete was almost always itself in a sense reinforced with brickwork. It is true that to call the brickwork used with concrete by the Romans "reinforcement" is somewhat misleading; at best it has but little resemblance to what we call reinforcement now; and much is merely centering or facing. On the whole, however, the cause for paying special attention at the present time to Roman architecture is strong enough, I hope, to excuse me for bringing the subject before you, although I have no fresh information and little new to say about it. I should like to treat it historically; for, although the dry facts connected with an architectural style or system of building can be learned without reference to the historical point of view, they can only be really interesting or fruitful when seen in chronological sequence and in connection with the circumstances that molded them. Without the help of history we see only the effect and not the cause, and without perceiving both we get at nothing that is of much real use to us.

A good history of Roman architecture has yet, however, to be written; and there are some difficulties in the way of writing it which are surprising if we consider only how many remains still exist and how much we know about Roman history and civilization in other directions. The difficulties are the paucity and architectural unimportance of existing remains that can even probably be assigned to periods before the establishment of the Empire, the frequent difficulty in dating with certainty the existing remains in Rome of later structures, and the entire absence, in most cases, of definite clues to the dates of provincial buildings. The first two difficulties are largely due to the building activity of the first two centuries of our era, which, led, with considerable aid from fires, to the repeated partial or complete reconstruction of almost all important buildings in Rome.

The uncertainty of the chronology of

Roman architecture was somewhat violently illustrated only a few years ago. In 1894 M. Chedanne, a young Frenchman, seizing a favorable opportunity, was able to show that the rotunda of the Pantheon is not the building erected by Agrippa in B. C. 27, as had generally been supposed, but almost certainly a structure of the time of the Emperor Hadrian; quite certainly not earlier, for all the bricks which he extracted at random from various parts bore stamps known to be of that reign.

This discovery removed the principal witness to the extraordinary fact hitherto always assumed, and often asserted in so many words, that the Imperial Roman system of brick and concrete construction sprang suddenly into existence fully developed in the reign of Augustus, and endured, virtually unchanged, for nearly three and a half centuries. M. Choisy himself, in a short chapter labeled—perhaps in irony—"historical," spent much language in enlarging on the unprecedented and surprising nature of the thing; but he insisted nevertheless on the sudden rise of the system, its almost as sudden abandonment, and the absence of growth or development between.

M. Choisy, like others, evidently compared the Pantheon with the writings of Vitruvius, who must have published them at just about the time it was being built, yet was obviously entirely ignorant of any methods of building nearly so advanced; and instead of finding what now appears to be the obvious solution of the puzzle—namely that the date assigned to the Pantheon was a mistake—M. Choisy accepted the date as others had done and arrived at the only conclusion then possible—namely that the incredible had really happened, that the system on which the Pantheon is built had just sprung suddenly into existence, and that Vitruvius was a poor old fellow far behind his times and grossly ignorant of what was going on around him. Unless we believe this of Vitruvius it is impossible to suppose that walls faced with burnt brick were common, if they existed at all, in the earlier part of the reign of Augustus. It is true that in a passage in which he is supposed to be quoting a law then just promulgated he mentions burnt brick as one of the materials allowed to be used for ground-floor walls in Rome. (It is a passage that reads rather like a later insertion, but that need not be insisted upon.) But he nowhere mentions the triangular bricks used in all known remains of Roman brick facing, and in the long chapter in which he describes minutely the various kinds of walls he not only does not mention brick facing at all, but says that opus reticulatum—a facing of small blocks of stone—was what everyone was then using—"quo nunc omnes utuntur."

There is one piece of Roman brickwork, the basilica at Pompeii, which Overbeck in his great work on the town put down to 93 B. C. and which others, on the strength of a date said

to be scratched on the building, have attributed to the consulship of Lepidus and Catulus—that is, 76 B. C. But such dates are most improbable. The work is beautifully executed with molded bricks in a style which one can not suppose to have been possible at such dates, but would be quite natural if the basilica had been rebuilt after the earthquake of A. D. 63, which, according to the contemporary evidence of Seneca, threw down a great part of the town.

Without admitting that because one doubts whether the Romans used brick-faced concrete quite so early as has been supposed, one is therefore obliged to point out when they did begin to use it, it may be suggested that the upper part of the ruins of Caligula's palace, and the original part of the wall of the praetorian camp in Rome, which Doctor Middleton succeeded in distinguishing from later additions, are the earliest works of the kind of which considerable remains exist. From Middleton's description the latter wall must have been a very fine piece of work—better even than that executed under the Flavian emperors, and he attributed it to the time of Tiberius, when the camp was first established by Sejanus in A. D. 23. Dean Merivale says the wall was not built until two centuries later, but he was probably thinking of the work of Aurelian, who, as Doctor Middleton shows, merely raised it. The latter's supposition that the wall was built at once upon the establishment of the camp is not, however, necessarily correct. The mere establishment of the camp was sufficient for the purposes of the moment, and to fortify it permanently at once would have been to further alarm the people of Rome without adequate reason. The coin, too, of Claudius on which the camp is pictured appears to show a timber fence rather than a brick wall. On the whole, it seems quite likely that the wall was not built before the time of Claudius, or even Nero. With regard to the other example also, the works are immense, and if completed by Caligula must have been built in three and a half years at most. There is nothing improbable in supposing that part of the palace to have been completed by Claudius; and there is a distinct difference of system between the lower and upper parts of the work, the lower being of opus reticulatum with brick quoins and arches only. One part of the ruins of Nero's "Golden House" Doctor Middleton also describes as being faced with brick, and another with a mixture of opus reticulatum and brick—that is no doubt with brick quoins. It would be rash to entertain a positive conviction opposed to the generally accepted opinion, but it seems possible we may eventually discover that though fired building bricks were gradually coming to the front from the middle of the first century B. C., and may have been given a certain impetus by the metropolitan building act of Augustus, their use in the place of stone for entire wall

facings did not become general before the time of Nero. If that should be so, we may perhaps also find that the system of building concrete vaults with a lacing or framework of brick did not reach its final development before the middle of the second century of our era.

With respect to Roman concrete, I should like to enter a protest against the indiscriminate use of the term by Doctor Middleton and other writers, who apply it even to the walls called by Vitruvius *incertum* and *reticulatum*, in opposition, as it seems to me, to what Vitruvius himself tells us. It may be merely a question of a definition, but if a writer has one definition for a thing and his readers another, he becomes misleading. Doctor Middleton argues for the word concrete because "the result was a perfectly coherent mass, like a block of stone, particularly unlike what is now usually known as rubble work." But to the professional reader the difference between concrete and rubble work is not one of result, but of the way in which the result is obtained—the results by either method may differ as chalk from cheese. The doctor himself acknowledges that in the examples he examined the larger stones were placed with so much regularity that they must have been thrown in separately. He arrived at the conclusion that thick layers of mortar, mixed with small stones, and layers of larger stones, were thrown in alternately. When this was done in trenches in the ground, within wooden molds, of which he found distinct marks on certain walls, or between two built faces, as described by Vitruvius in speaking of wrought stonework, one may very well admit the term concrete, even though the regularity of the larger stones suggests that they were laid in by hand rather than thrown in. But Vitruvius never by so much as a hint suggests the use of "false work" in his time. He tells us, and the appearance of the walls at Pompeii, for instance, bears out the description, that *opus incertum* consisted of rough quarry stones, "one over the other bonded together"—in fact, a rubble wall, built, no doubt, with a larger quantity of mortar than we use, but built, not cast. *Opus reticulatum* he does not describe in detail, but evidently regards as a fashionable variety (which he does not altogether approve) of *incertum*. As a matter of fact, it would not be possible to cast a wall faced with *opus reticulatum*, and would be very difficult even to build it behind boarding, especially the weather boarding, of which Middleton found traces. The facing was of small conical stones with square heads, which were required to fit neatly together on the face; to set them inside boarding a man must have worked overhand and without seeing what he was doing. Without the boarding, however, there would be no more difficulty in building such a wall than in building a flint wall with split facing; and there can be little doubt that that is how it was done. It must, however, have been slow work. One knows how necessary it is to go slow when building with flint or small rubble in lime mortar. After getting a foot or two one must wait for the mortar to set before putting more weight on, otherwise the work will bulge and twist. Now, mortar made with pozzolana, does not in the first few days set appreciably faster than good lime mortar; and the Romans used it in large quantity. If

one may venture to guess, it was this slowness that led after a time to the introduction of false work to support walls while in course of erection. It seems nearly certain it was unknown in the early days of the reign of Augustus, but it may have been introduced soon afterwards. The building activity of that reign was unprecedented, and would probably have demanded methods quicker than the old. On the other hand, most of the remains of the time are of squared stone or very neatly executed *opus reticulatum*, which can not have been built behind false work. Middleton's earliest dated example of the evidence of false work is part of the foundations of Caligula's palace, and he mentions also a facing of *opus reticulatum* and brick, which may very well be of the same period, as being very roughly executed, which would be natural if an attempt had been made to apply the new discovery to a purpose to which it was not suited.

In the matter of arches and vaults, the later Romans believed that they had learned the art of building them from their old neighbors and enemies, the Etruscans; and probably they did, though it is easy to see that the character of the materials they had at hand was such as to favor an arched system, while the nature of the site of Rome and the surrounding country suggested the construction of drains and aqueducts, in which arching, to say the least, came in very usefully. The history of Roman architecture in early and Republican times may, perhaps, never be recovered. The difficulties in the way of excavations are great, while, owing to the continuous occupation of sites, the results rarely throw much light on early work. There are some remains of early walls of that squared and bonded masonry which Vitruvius seems to have thought was one of the things Roman architects had borrowed from the Greeks, and we may assume as certain that, like the Etruscans, the Romans early used the arch to span gateways. But we do not know how soon they began to put the arch to other uses, and the extent to which vaulting was developed, before it was taken up by the architects of the imperial period, is not altogether clear. The little dome over the ancient subterranean chamber, called the Tullianum in Rome, is built of cut stone in horizontal courses, and M. Chedanne declared that the dome of the Pantheon is built entirely of brick in the same way—that is, in horizontal courses. If he was right, it would seem to indicate that even in the reign of Hadrian the Romans had not arrived at our conception of domes as developments of the arch and dependent for their stability on such the same forces, but they regarded them as systems of corbelling. The chamber above the Tullianum, called the Marmertine prison, is, however, roofed with a small barrel vault neatly built with stone voussoirs. Its date is uncertain except that it is very early Republican. If Vitruvius knew how to build a vault at all, it is surprising that he did not give instructions in the art in a work which he evidently intended should cover the whole field of building and in which he deals with so many smaller matters. In the chapter on baths he twice mentions *Camarae*, that is, arched ceilings, over the hot rooms and twice the hemisphere over

the semicircular recess in which the *Jabrum* was placed. But he implies that the arched ceilings would not usually be structural ones. He says "they will be more serviceable if built," but not how that is to be done, and proceeds to describe as an alternative a ceiling of "roofing tiles without margins" laid on iron rods or arches hung to a timber framing.

The still existing barrel and hemispherical vaults over some of the rooms in the public baths at Pompeii are often quoted as of the Republican period, but their date is very uncertain. From illustrations it would appear that they are entirely of concrete or rubble without brick, but the walls of the rooms are shown as having brick piers and lacing courses, which, according even to Doctor Middleton, would make them not earlier than the last years of the reign of Augustus. The oldest important Roman vaults to which a date can be assigned with tolerable certainty are those in the building called the *Tabularium*, erected against the face of the Capitoline Hill, on the Forum side, probably in B. C. 78. These are narrow barrel vaults of tufa concrete strengthened in one part at intervals with arches constructed with stone voussoirs, and partly, perhaps, resting on them. The next are those of the substructures of Caligula's palace, which, if not quite so old as Caligula's reign, must be older than those of the Colosseum. Middleton says they are cast concrete. Then come the vaults behind the two lower ranges of arches of the Colosseum, which must have been erected between A. D. 70 and 80. These are barrel vaults constructed with brick arches at intervals, between which they are of concrete, on the lower surface of which the marks of boarding are still visible. All the more elaborately constructed vaults illustrated by M. Choisy are of the second century or later.

This article will be concluded in next week's issue.

If abundant rainfall and snow in the mountains are the sure premonitors of abundant crops California should have a prosperous season. From the great valleys the snow cap of the great Sierras can be seen on a clear day showing in an unbroken line of white against the sky. The flood water of the rivers indicate that the supply is far above the average.

The cool weather of the early spring has kept back bud development and there ought to be a substantial crop of most fruits. Some of the early blooming varieties of almonds have been reported as caught in the late storm and accordingly bear but lightly.

What is needed yet is a general rain or two to fill out the season and there should be a bumper crop of everything all down the line.

#### NEW LIGHTING SYSTEM FOR GRASS VALLEY.

GRASS VALLEY (Nevada County), March 31.—The Trustees have accepted the new incandescent lighting system for this city. Work will be started on the system within a few weeks, Manager John Werry, of the lighting corporation, having ordered the supplies Thursday. The new system calls for sixty-watt tungsten globes. The cost monthly to the city for the new system will be \$324 65.

## JOHN M. CARRERE, ARCHITECT.

In the death of John M. Carrere The American Institute of Architects has lost a prominent member of its organization. A man highly esteemed by his associates, respected by the public and recognized as one of the foremost, if not the foremost designer on this continent, he held a high position in the architectural profession and one that is enjoyed by few in his particular calling. His death, which occurred recently in New York, removes from the field of activity a man at middle life who has left his mark on modern architecture in the United States.

Mr. Carrere was the son of John Mervin Carrere and Anna Louisa Maxwell. He was born in Rio de Janeiro on November 9, 1858. He received his education in Europe, graduating from the Ecole des Beaux Arts in 1882. He was one of the pioneers who undertook to establish an American style of architecture. Together with his partner, Mr. Thomas Hastings, and the members of the firm of McKim, Mead and White, he was responsible for the introduction of the *beaux art* influence with its spirit of Italian and French Renaissance. He was a leader in the movement for a distinct individuality

in American buildings, and along with his associates, has been the chief factor in bringing about the present revival in American architecture.

He achieved great success in his calling. Among others the firm of Carrere & Hastings designed and were architects for the New York Public Library, the New National Academy of Design, the Cathedral of St. John the Divine, the New Theatre, and the Alcazar and Ponce de Leon Hotels at St. Augustine, Florida. He was a member of the New York Chapter of the American Institute of Architects and was twice elected its president. He was the founder of the Beaux Arts Society of New York City and was also twice its president.

In 1886 he married Marion Dell of Jacksonville, Florida. She and two daughters survive him.

Mr. Carrere left his mark upon the profession which he honored. He was an artist in the true sense of the word and his individuality was imprinted upon his work. His taking off has caused more deep and widespread regret in architectural circles than any event that has happened in recent years.

erected in San Francisco has been designed for the Lally Plumbing Company by Architects Frye & Osborn, of San Francisco. The building will be four stories high and of what is known as the mushroom type of construction with reinforced concrete walls. The building is to be located at the corner of Second and Tehama streets and will cover a large area. The site was recently purchased by the Lally Company and is one of several large real estate transactions which has been made in that district recently. Other property purchased in the same neighborhood will shortly be improved by the construction of similar buildings. The cost of the Lally warehouse has been estimated at \$150,000. Mr. Frye has recently returned from Chicago where the details of construction were settled upon and since his return to San Francisco the working drawings of the building have been rushed. A half-tone of the building is shown in this week's supplement and illustrates the manner in which it is possible, with but slight ornamentation and simple details, to change the old style unsightly warehouse to a building of grace and beauty.

### CONSERVATORY AT ST. JOSEPH'S.

The illustration shown on plate "D" of this week's supplement is that of a new conservatory which has been designed by Architect John J. Foley for the St. Joseph's Convent of San Francisco. The building will be erected on the property of the Convent on tenth street, between Howard and Folsom streets, and will be used jointly as the home for the Sisters and for an art and music conservatory.

The building will be practically four stories high with the exterior of cement plaster and concrete. The design is taken from the Classical style and will be in keeping with the other buildings now on the property. Besides the residence quarters for the Sisters there will be a large assembly

hall, chapel and on the fourth floor a music and art conservatory. The mechanical equipment of the building is complete to the last detail and will include a modern laundry plant as well as steam heat and a hot water system.

The work of construction is to be done under the architect's direction, but by day's labor and will be started at once.

### FOREIGN TRADE OPPORTUNITIES.

(From the Consular Reports.)

(Inquiries in which addresses are omitted are on file at Bureau of Manufactures, Washington, D. C. In applying for addresses refer to file number.)

**No. 6340. Rice and flour.**—One of the largest business houses in Porto Rico writes to the Bureau of Manufactures that it would like to secure a list of the principal producers of rice and flour in the United States with a view of establishing commercial relations. The letter states that the information required will perhaps result in developing considerable business with the island.

**No. 6341. Agency for American manufacturers.**—An American consular officer in Canada reports that a long-established company of excellent standing in the Dominion has decided to develop its business along modern methods, and with this end in view seeks exclusive agencies for American manufacturers. The company is especially desirous of making connections with firms manufacturing agricultural implements and gasoline engines, and invites correspondence immediately with those manufacturers of the United States who are interested in extending their retail business. The report states that this is an excellent opportunity for American connections, and that in view of the importance of the matter immediate attention should be given by manufacturers to this opening, which promises such immediate results.

**No. 6342. Switchbacks and roller coasters.**—A report from an American consul in South Africa states that a reliable firm in his district wishes to be liable firm in his district wishes to be placed in communication with manufacturers of switchbacks, roller coasters, and any miniature railway or other attractive at beach resorts of exhibitions. To save time it would be advisable to forward full particulars, descriptive and otherwise, including prices, discounts, and all essential information to the inquirers.

**No. 6373. Mariue steam motor.**—A business man in a South American city is about to enter upon the business of equipping and repairing steam motor boats, and informs an American consul that he wishes to purchase at once a 15-horsepower steam motor, generator with the burner vaporizer and pilot light, clutch, universal joint, and 5 meters (meter 30.37 inches) of driving shaft. Prices are desired by cablegram, including packing and placing on board vessel direct for South America, freight and insurance to Buenos Aires, also the name to whom draft should be made payable. Correspondence with the Inquirer may be in English.

## Illustrations For The Week.

Architect C. H. Russell, of San Francisco, has had his plans approved for the construction of a beautiful brick church which is to be erected by the Congregational Church of Oroville. The design of Mr. Russell's was one of several submitted to the members of the Building Committee and is in the English Gothic style of architecture.

The building will be 60 by 100 feet and is to occupy the site of the former structure which is on a prominent corner in the city of Oroville. The construction will be of brick and frame with the exterior walls faced with a buff pressed brick. On the first floor will be located the main auditorium which will have a seating capacity of 420. Around the auditorium will be a large balcony with a seating capacity of 150. The building is arranged on the Akron plan with the Sunday School rooms so arranged that they may be thrown into the main auditorium, thus increasing the total seating capacity to 750 people. A balcony will also be placed in the Sunday School room. There will be a large finished basement under the Sunday School in which will be located social parlors, banquet rooms, with kitchen, a large club room and the mechanical equipment for the building.

The building has been secured through the efforts of the Pastor and building operations will be started as soon as the architect can complete the plans and specifications.

### LALLY COMPANY'S WAREHOUSE.

One of the most complete and modern warehouses which has yet been

Firms desiring news on special classes of buildings such as Banks, Churches, Schools, Hotels, etc., will find such items all classified and grouped under proper headings, commencing on this page. These same items are again repeated under "LOCALITIES" in the last part of our news department.

## Plans Wanted.

J. Fugazzi, Italian Popular Bank Bldg., San Francisco, is now ready to receive plans for a two story and basement reinforced concrete building, which is to be erected on Green street near Stockton. The building will be used as a hall for social meetings of certain of the Italian Societies. There is to be an open competition held to secure plans for the building, which is to cost in the neighborhood of \$50,000. There will be five prizes offered to the competing architects. The first prize will be paid the regular fee for plans and superintendance.

A two story and basement brick school building is to be erected shortly in West Seattle, Wash. The School Board has purchased the site and will consider plans for the new building. There is to be seven rooms in the new school. The cost of construction must not exceed \$60,000.

The Long Beach Lodge of Elks will commission architects to prepare plans for a three story lodge building which they have decided to erect immediately. It will be 65x76 feet, and will be located on Ocean avenue near Cedar avenue. It will contain storerooms on the ground floor and lodge rooms and sleeping apartments on the upper stories. The estimated cost is \$25,000, and bonds will be sold to meet the expenditure. Dr. A. F. Hamman, 201 First National Bank Building, is a member of the building committee.

The Knights of Columbus of Berkeley, Cal., have decided to erect a fine lodge building in their city, and have appointed the Chairman of the Building Committee, C. D. Maloney. The site on which the new building is to be erected has not as yet been selected, and other details surrounding the enterprise have not been determined.

At a recent bond election the McKinley School District of Santa Clara County, Cal., bonds to the amount of \$10,000 were voted for the purpose of constructing a new school building. The new building will be two stories and of frame construction, with the exterior of cement plaster and metal lath. The Trustees of the District are as follows: John Fair, Clerk of the Board, D. Schults and A. Fioralta.

Woodland, Yolo County, Cal. The school officials of the Woodland District have authorized an election to vote upon the question of issuing \$60,000 bonds for the construction of a new school building. The election will be held at an early date.

Extensive additions are to be made to the High School building at San Jose, Santa Clara Co., Cal. Another district, the Hester School District, just outside the city of San Jose, is to erect a \$75,000 school building in the near future. There will be a competition held to secure plans for this work.

The recent election held at Willows, Glenn County, Cal., at which the voters were asked to bond the district for \$40,000 for the purpose of erecting a

new school building, resulted in a defeat of the bonding project. The bonds lost by 65 votes. A new election will probably be called.

A committee of forty men of the Oakland Plymouth Congregational Church are raising a fund of \$25,000 for the erection of a new church building in that city. There is to be a six days' campaign and at the close of the fourth day \$20,402 had been secured. Several architects have already submitted sketches, but none of these have been officially approved.

There is a movement on foot in Santa Rosa, Cal., to erect a new high school building, which will relieve the congestion of the present building. While no official action has been taken as yet, it is understood that the measure will meet with the proper support and that a bond election will be called within a short time. The school authorities strongly favor the movement.

The Supervisors of Alameda County at their last meeting decided to call a special election in the near future to vote on bonding the county for \$500,000, with which to erect the long-talked of County Hospital. Supervisor John F. Mullins is working hard for the new building, and it was on his estimate of its cost that the amount of bonds was determined. The election will take place early in April.

Saint Leo's Catholic Church of Oakland has secured a site for a new building, and will shortly ask for plans for a handsome new church edifice. The cost of the building will be in the neighborhood of \$30,000. No architect has as yet been selected.

The members of the Building Committee of the Elks' Temple Association of Redlands, Cal., have been authorized to secure plans for their new \$50,000 building. All arrangements for the construction of this building have now been completed.

## —APARTMENT HOUSES—

**San Francisco.**—Apartment house 3 story and base, frame \$20,000. Architect A. D. Nicholson, 20 Montgomery St., S. F. Owner George B. Elkins. The building will contain 22 apartments of 2 and 3 rooms each. There will be a modern heating plant, dumb waiters and wall beds. The exterior will be of pressed brick veneer and cement plaster on metal lath. The plans are complete and the architect is taking figures.

**San Francisco.**—Apartment house 5 story and base, brick and steel \$80,000. Architect August Nordin, Mills Bldg., S. F. Owner Dr. George P. Allen. Building will be of the class C type of construction and will contain about 130 apartments of 2 and 3 and 4 rooms. There will be steam heat, elevator service and all the latest modern improvements. The exterior is to be of pressed brick and terra cotta. The plans are being prepared.

**San Francisco.**—Apartment house 5 story and base, reinforced concrete \$10,000. Architects Chas. M. and A. F. Rousseau, 597 Monadnock Bldg., S. F. Owners O'Brien, Kierman Realty Co.

The plans for this building are being revised and will be ready for figures in about one week. The mechanical equipment will be complete in all details. The interior will be handsomely finished. Wall beds will be installed. The exterior will be of Medusa cement plaster.

**San Francisco.**—Apartment house 6 story and base, brick and steel \$75,000. Architect C. J. Colley, Pacific Bldg., S. F. Owner's name withheld. The most modern improvements have been introduced into this building, the plans for which are now nearly complete and figures are to be taken at once. There will be electric elevators, steam heat and modern plumbing. The exterior will be of pressed brick.

**San Francisco.**—Apartment house 4 story and base, brick and steel \$70,000. Architect Charles Peter Weeks, Mutual Bank Bldg., S. F. Owners McKinnin Co. The apartments will be arranged in suites of 2 and 3 rooms with private baths. There will be steam heat, elevator service and wall beds. The exterior will be of cement plaster on metal lath. The plans are complete and the figures are being taken.

**San Francisco.**—Apartment house 3 story and base, frame \$9,000. Architects Hladik and Thayer, Monadnock Bldg., S. F. Owner M. Wolff. The building will contain 12 apartments. There will be no heating system, but each apartment will have a coal grate. The exterior will be of brick veneer and shiplap. The plans are now nearly complete and bids will be called for at once.

**San Francisco.**—Apartment house 7 story and base, brick and steel \$70,000. Architects Rowell and Le Romer, Montgomery Block, S. F. Owners' name withheld. The building will contain 120 apartments with wall beds, elevator service and an oil burning plant for steam heat. The exterior will be of cement plaster. The working drawings have just been started.

**San Francisco.**—Apartment house 3 story and base, brick \$15,000; Architects Chas. M. and A. F. Rousseau, 597 Monadnock Bldg., S. F. Owner S. J. Brun. This building has been described in these columns before when the plans were being prepared. The plans are now complete and bids are being taken. The exterior will be of Medusa cement plaster and Monterey sand. There will be wall beds and a complete heating system.

**Berkeley, Alameda Co., Cal.**—Apartment house 2 story and base, frame \$10,000. Architect John Hudson Thomas, First National Bank Bldg., Berkeley. Owners Witter Estate. The exterior will be of cement plaster on metal lath. There will be a complete steam heating system installed. The architect is preparing the plans.

**Berkeley, Alameda Co., Cal.**—Apartment house 2 story and base, frame \$6,000. Architect John Hudson Thomas, First National Bank Bldg., Berkeley. Owner Mrs. E. A. Klengel. The exterior will be of cement plaster on metal lath. There will be no heating system. The architect is preparing the plans.

**Seattle, Wash.**—Apartment house 3 story and base, frame \$20,000. Archi

## BUILDING AND INDUSTRIAL NEWS

tect William Lucas Co., White Bldg., Seattle. Owner William Lucas Co. The building will be 45x80 feet and of concrete construction up to the water table. There will be 21 apartments. The building will be erected by the owners.

**Vancouver, B. C.**—Apartment house 6 story and base. 171x132 brick and stone, \$200,000. Architects Quandt and Creutzer, Haight Bldg., Seattle. Owner Peter Agren. The exterior will be of pressed brick and sandstone. There will be 84 apartments. Three electric elevators will be installed. The plans will be completed about April 15th.

**Los Angeles, Cal.**—Apartment house 2 story and base, brick \$25,000. Architects Withey and Davis, 1126 Story Bldg., L. A. Owner W. S. Sutton. There will be stores on the first floor and apartments on the upper floor. The exterior will be of pressed brick. Plans are being prepared.

**Los Angeles, Cal.**—Apartment house 3 story and base, brick 46x138 \$25,000. Architects Sholes and Lochridge, L. A. Owners Chestnut Ave. Building Co. There will be 72 rooms in the building, divided into 2 and 3 room apartments. The exterior will be of cream colored pressed brick. The plans will be ready for figures April 1st.

### BRIDGES

**Calaveras County, Cal.**—Reinforced concrete dam. Cost not stated. Engineers, Spring Valley Water Co., S. F. Owners Spring Valley Water Co. The plans for this work are now complete, and materials are being collected for its construction. The dam will be 200 feet in height and is to be one of the largest dams on the Pacific Coast.

**San Francisco**—Viaduct, reinforced concrete viaduct and earth filled approaches \$80,000. Engineer Marsden Manson, City Engineer San Francisco. Owners City and County of San Francisco. The viaduct will be constructed over Mission street between Bosworth and Springdale streets. Bids are being taken and will be opened April 26th.

**Yolo County, Cal.**—Earth Levee, \$125,000. Engineers Haviland and Tibbits, Alaska Commercial Bldg., S. F. Owners Yolo County. Plans are now complete and bids will be opened March 30.

**Stockton, San Joaquin Co., Cal.**—Dam and repairs to levee \$50,000. Engineer L. Frank Kuhn, City Engineer of Stockton, Stockton. Owner City of Stockton. The bids for this work will be opened on April 10th. The work has been provided for by a bond issue.

**Yuba County, Cal.**—2 concrete and steel bridges. Cost not given. Engineer County Surveyor of Yuba Co., Marysville. Owners Yuba Co. The new bridges are to be built in the districts under the care of Supervisors Mellen and Casey. The plans are being prepared. The new bridges will replace the old wooden structures recently washed away.

**Tacoma, Wash.**—Dock steel and concrete \$120,000. Engineer W. C. Raleigh, City Engineer of Tacoma. The new dock will be erected south of 11th street. The plans are now being prepared.

**Gold Beach, Ore.**—Bridge steel and concrete. Cost not given. Engineer County Engineer Curry County, Gold Beach, Ore. Owner Curry County. Bids are being taken for this work, which will consist of two spans each of 150 feet. Also for 3 reinforced concrete piers. Bids will be opened April 5th.

**Portland, Ore.**—Bridge steel and reinforced concrete \$500,000. Engineer City Engineer, Portland. Owners City of Portland. Bonds for this work have been voted and are now being sold. The plans are nearing completion in the City Engineer's offices.

**San Bernardino, Cal.**—Bridge concrete and frame \$1,500. Engineer not given. Owners San Bernardino County. Supervisor J. B. Glover has charge of this matter and will award the contract at once.

**Santa Barbara, Cal.**—3 bridges, concrete \$50,000. Engineer City Engineer Santa Barbara. Mayor Lloyd states that the matter of replacing the three wooden bridges within the city limits will be taken up at once, and that before the summer is over three new concrete structures will take their places.

### CHURCHES

**Oroville, Butte Co., Cal.**—Church 2 story and base, brick \$30,000. Architect C. H. Russell, Humboldt Bank Bldg., S. F. Owners Congregational Church of Oroville. The building will be in the Early English style, with red brick walls and a slate roof. The interior will be finished in pine. There will be a heating system, art glass and a large pipe organ installed. Plans have just been started.

**West Seattle, Wash.**—Church frame 70x70 \$10,000. Architect U. Grant Fay, Central Bldg., Seattle. Owners West Seattle Baptist Church. The plans for this building are now complete and figures are being taken.

**Seattle, Wash.**—Church brick and terra cotta, 60x110, \$30,000. Architect Theobald Buchinger, Arcade Bldg., Seattle. Owners Saint Mary's Catholic Church. The exterior of the edifice will be of brick and terra cotta. The seating capacity will be 700. Plans will be complete April 15th, when bids will be taken.

**Los Angeles, Cal.**—Church frame \$3,500. Architect Henry C. Holwedel, Los Angeles. Owners St. Augustine Church. The architect has just started the working drawings for this building.

### COURT HOUSES & JAILS

**Placerville, El Dorado Co., Cal.**—Court house, 2 story and base, steel and concrete 60x100, \$120,000. Architects Cuff and Diggs, Elks' Bldg., Sacramento. Owners El Dorado County. The building will include a Hall of Records, Court House and County Jail. The plans are now complete and the bids are being taken and will be opened on May 2nd. Plans can be had from either the County Clerk or from the architects.

### FACTORIES & WAREHOUSES

**Porterville, Tulare Co., Cal.**—Warehouse, 2 story and base, frame, \$5,000. Architects Engineering Dept. of P. N.

E. R. Co., Porterville. Owners P. N. E. R. Co. The building will be erected as soon as the plans can be completed. It is designed for use as a packing house.

**Los Angeles, Cal.**—Warehouse, 3 story and base, brick, \$25,000. Architects Kremper and Erkes, Henne Bldg., L. A. Owners Bailey and Schmitz, 634 So. Spring St., L. A. The architects have just started the plans for this building. The work will be done by Day Labor under the direction of the owners.

### FIRE HOUSES

**Oakland, Cal.**—Fire house, 2 story and base, frame, \$13,000. Architect F. D. Voorhees, Central Bank Bldg., Oakland. Owners City of Oakland. The building is designed for the accommodation of an engine and hose wagon. The plans are being prepared and bids will be called for shortly.

**Portland, Ore.**—Fire apparatus, auto trucks and runabouts, \$6,800. Bids received by the Fire Committee. Owner City of Portland. The proposal calls for the following: Two auto runabouts not to exceed \$2,000 each, two auto trucks not to exceed \$1,400 each, three "3-way" and four "2-way" deluge sets. Bids will be opened on April 13th.

### FLATS.

**San Francisco**—Flats 2 story and base, frame \$3,500. Architect none. Owners Fletcher and Hamill, S. F. There will be four flats in the building, all equipped in the most modern manner. The exterior of the building will be finished in rustic. The work will be done by Day Labor.

**San Francisco**—Flats 2 story and base, frame \$4,000. Architect H. Geilfuss and Son, 150 Fulton St., S. F. Owner Otto Koenig. The exterior will be of brick veneer and rustic. The interior will be finished in pine. There will be four flats with a fire place in each, and special plumbing. The bids are in and under advisement.

**San Francisco**—Flats 3 story and base, frame \$4,500. Architect J. Devenenzi, 432 Broadway St., S. F. Owner A. Figoni, 739 Filbert St. The work is to be done under the direction of the owner and by Day Labor. There will be six flats in the building.

**San Francisco**—Flats 3 story and base, frame \$10,000. Architect Will D. Shea, Golden Gate and Polk Sts., S. F. Owner's name withheld. The building is arranged for a laundry on the first floor and living rooms above. The plans are now being figured.

**San Francisco**—Flats 3 story and base, frame \$16,000. Architect none. Owner Casper Zwierlein, 1624 Grove St., S. F. There will be twelve flats in this building, arranged in 4 and 5 rooms. The exterior will be of brick veneer. There will be no heating system. The work is to be done by Day Labor.

**San Francisco**—Flats 3 story and base, frame \$6,000. Architect D. C. Coleman, Metropolis Bank Bldg., S. F. Owner Bay View Realty Co. The building will contain six flats. With the exception of the plumbing and electrical work, which will be let in a contract, the work will be done by Day Labor.

**San Francisco**—Flats 2 2 story and base, frame flats \$10,000. Architect J. J. Foley, Monadnock Bldg., S. F. Owner's name withheld. The plans for this work are now complete and bids are being taken. The construction of both buildings will be let in one contract.

**San Francisco**—Flats 2 2 story and base, frame \$6,000. Architect J. J. Foley, Monadnock Bldg., S. F. Owners O'Connell and Lunny. The buildings will each contain two flats of 4 and 5 rooms each. The exterior will be of cement plaster on metal lath. The construction will be let in one contract. The plans are now complete.

**San Francisco**—Flats 2 story and base, frame \$4,200. Architect none. Owner Chas. F. Beha, 682 4th Ave. The work is to be done by Day Labor. The plans are in the hands of the owner and work will start at once.

**San Francisco**—Flats 2 story and base, frame \$7,500. Architect J. J. Foley, Monadnock Bldg., S. F. Owner's name withheld. The exterior will be of metal lath and plaster. The building will contain two flats of 5 and 6 rooms each. The plans are complete and the work is being figured.

**Seattle, Wash**—Flats 2 story and base, frame \$8,000. Architect J. O. Taft, Arcade Bldg., Seattle. Owner F. William Brown. The flats will be strictly modern in every particular. Plans will be complete and figures taken April 1st.

**Los Angeles, Cal**—Flats 2 story and base, frame \$10,000. Architect Fred Biren, 609 Broadway Central Bldg., L. A. Owner A. Miller. The chambers will be fitted with disappearing beds. The plans are now ready for figures.

—HALLS & SOCIETY BLDGS.—

**Claremont, Alameda Co., Cal**—Club house, 1 story and base, frame, \$5,000. Architect C. S. Kaiser, Mechanics' Institute Bldg., S. F. Owners Claremont Improvement Club. The building is of rustic design and will contain offices for the club and a large meeting room. The plans are ready for figures.

**Oakland, Cal**—Additions to club, \$6,000. Architect C. W. Dickey, Oakland Bank of Savngs, Oakland. Owners Nile Club. The plans are complete and bids are being taken.

**Centerville, Alameda Co., Cal**—Masonic Temple, 3 story and base, brick, \$25,000. Architects Starbuck and Wilde, Albany Bldg., Oakland. Owners Centerville Masonic Temple Association. The exterior of the building will be of cement plaster. There will be a heating system installed besides mantels. The plans are being figured.

**Menlo Park, San Mateo Co., Cal**—Country Club, 2 story and base, reinforced concrete, \$25,000. Architect W. Garden Mitchell, Monadnock Bldg., S. F. Owners Menlo Country Club. The building will have a number of private baths, and special plumbing throughout. There will be steam heat installed. The exterior will be of white cement plaster. The plans will be ready for figures early in April.

**Portland, Ore**—Temple building, 3 story and base, stone and concrete, \$35,000. Architect Otto Kleeman, 155 E. 14th St., Portland. Owners represented by M. M. Ostrow, 64 N. 3rd St., Portland. The bids are now being taken by Mr. Ostrow.

—HOSPITALS—

**Woodland, Yolo Co., Cal**—Sanitarium, 2 story and base, frame \$25,000. Architect L. M. Turton, Napa, Cal. Owners Woodland Sanitarium Co. The building is to be built in the Spanish style, and will afford the most complete accommodations for treatment in all departments. The exterior is to be of cement plaster on metal lath. There will be either a hot water or steam heating system installed. The architect is now preparing the plans.

**San Francisco**—Hospital group of reinforced concrete buildings, \$1,000,000. Architect Louis P. Hobart, Crocker Bldg., S. F. Owners St. Luke's Hospital. While no authoritative announcement has been made to this effect, it is now generally accepted that Mr. Hobart has been selected for this work. When complete these buildings will comprise the finest and most complete hospital west of the Mississippi River.

**San Francisco**—Hospital flooring. Cost not given. Architect A. I. Coffey, David Hewes Bldg., S. F. Owners City and County of San Francisco. Bids are now being taken for tile flooring for the Administration building and Ward building No. 4 of the S. F. Hospital.

**Los Angeles, Cal**—Hospital, 3 story and base, reinforced concrete, 98x100. Cost not stated. Architect (plans are being made under the direction of Mrs. A. D. Grove, Matron of the Women's Hospital Association, L. A.) Owners California Women's Hospital Association, L. A. The new building will contain 150 rooms, equipped in the most modern manner. The plans have just been started.

**Portland, Ore**—Insane Asylum, 3 story and base, Class A, \$100,000. Architects Lazarus and Logan, Portland. Owners State of Oregon. The work now ready for figures is but one of a group of buildings which is to be erected. Official bids will be called within 20 days.

—HOTELS—

**San Francisco**—Hotel 7 story and base, brick and steel \$120,000. Architect R. S. Brown, 125 Sutter St., S. F. Owner L. H. Sly, 125 Sutter St. The building will contain approximately 125 rooms, equipped with all the latest improvements. The plans are nearly complete, and the work is to be done under the direction of Mr. Sly, who is now purchasing all materials.

**San Francisco**—Hotel 6 story and base, reinforced concrete \$50,000. Architect George L. Streshley, Balboa Bldg., S. F. Owner's name withheld. The building will be faced with pressed brick and terra cotta. There will be eighteen rooms to the floor. The first floor is to be arranged for stores. There will be steam heat and elevator service. The plans will be ready in about ten days.

**Vacaville, Solano Co., Cal**—Hotel 2 story and base, frame \$25,000. Architect L. M. Turton, Napa, Cal. Owner's name withheld. This will be one of the most complete hotel buildings erected in any of the smaller of the California cities. The exterior will be of cement plaster on metal lath. There will be a complete heating system, probably steam, installed. The architect is preparing the plans.

**Porterville, Tulare Co., Cal**—Hotel addition 2 story and base, frame \$12,000. Architect F. W. Griffin, Porterville. Owner's name not given. The addition will consist of 20 rooms, in which there will be modern plumbing installed. The architect is preparing the plans.

**Long Beach, Los Angeles Co., Cal**—Hotel and garage 3 story and base, brick \$40,000. Architect W. H. Austin, Long Beach National Bank Bldg., Long Beach, Cal. Owner C. D. Hendrickson. There will be a public garage on the first floor and hotel rooms above. The exterior will be faced with pressed brick. The plans are being prepared.

**Monrovia, Los Angeles Co., Cal**—Hotel 2 story and base, frame 124x90 \$25,000. Architects Eager and Eager, Story Bldg., L. A. Owner L. B. Vollmer. There will be 34 guests rooms and 18 baths in the building. The exterior will be of cement plaster on metal lath. A heating system will be installed. The architects are now completing the working drawings.

—RAILROAD CONST., STATIONS AND EQUIPMENT—

**Porterville, Tulare Co., Cal**—Railroad Shops, reinforced concrete, \$70,000. Architects Engineering Dept. P. N. E. R., Porterville. Owners P. N. E. R. Co. The plans for this work have just been started and bids will not be called for some time.

**Hollister, San Benito Co., Cal**—Depot, brick and frame, \$18,000. Architects Engineering Dept. S. P., Flood Bldg., S. F. Owners Southern Pacific Co. The work will be started about July 1st. The plans are now complete.

—RESIDENCES.

**San Francisco**—Residence 2 story and base, frame \$4,000. Architect Herman Barth, 12 Geary St., S. F. Owner C. Jentzen. The exterior will be of rustic, the interior trim of Oregon pine. There will be open fire places. The architect is now taking bids.

**San Francisco**—Cottage 1 story and base, frame \$2,000. Architect none. Owner G. A. Johnson, 565 San Mateo Ave., S. F. The work is to be done by Day Labor. Dwelling will contain 6 rooms and bath.

**San Francisco**—Cottages 2 1 story and base, frame \$1,400 each. Architect none. Owner J. C. Stromswold, 38 Colingwood, S. F. Work will be done by Day Labor.

**San Francisco**—Residence 2 story and base, frame \$5,000. Architect Joseph A. Leonard, Phelan Bldg., S. F. Owner Urban Realty Co. The exterior will be of klinker brick veneer and shingles. The interior trim of redwood and pine. The work is to be done by Day Labor.

**San Francisco.**—Residence 2 story and base, frame \$6,000. Architect Joseph A. Leonard, Phelan Bldg., S. F. Owners Urban Realty Co. The exterior will be of klinker brick veneer and shingles. The interior trim of redwood and pine with hardwood floors. There will be furnace heat. The work will be done by Day Labor.

**San Francisco.**—Alterations to Residence, \$8,000. Architect Henry Shermund, Mills Bldg, S. F. Owner Homer J. Bickel. The work includes new plumbing and interior arrangement and a large addition to the exterior of the building. The architect is taking figures.

**Haywards, Alameda Co., Cal.**—Residence 1 story and base, brick and frame \$7,000. Architect S. S. Schwartz, Vandyke Bldg., Haywards. Owner Dr. Henry Powell. Dwelling is designed in the bungalow style with a brick and cement exterior finish. The interior finish will be largely of hardwood. The plans are being figured.

**Oakland, Cal.**—Residence 2 story and base, frame \$4,000. Architect A. W. Smith, 1004 Broadway, Oakland. Owner Blunck Bros. The exterior will be of cement plaster on metal lath. There will be open fire places. The architect is taking figures.

**Oakland, Cal.**—Residence, 2 story and base, frame \$5,000. Architect none. Owner Peter Ohland, 303½ 52d Ave., Oakland. The plans for the work are in the hands of the owner and he is taking figures.

**Oakland, Cal.**—Residences 2 2 story and base, frame \$3,300 each. Architect W. H. Ratcliff, First National Bank Bldg., Berkeley. Owner C. L. McFarland. The dwellings are designed in the Spanish style with cement plaster on metal lath for the exterior finish. The bids are under advisement in the architect's office.

**Berkeley, Alameda Co., Cal.**—Residence 2 story and base, frame \$7,500. Architect John Carson, Bacon Block, Oakland. Owner's name withheld. (C. H. Williamson will supervise the construction). Plans are complete and figures are being taken.

**Berkeley, Alameda Co., Cal.**—Residence 1 story and base, frame \$3,000. Architect none. Owner Conrad J. A. Mattson, 1609 Grant St., Berkeley. The exterior will be of resawed redwood and shingles. The work is to be done by Day Labor.

**Oakland, Cal.**—Residence 2 story and base, frame \$4,000. Architect C. W. McCall, Central Bank Bldg., Oakland. Owner Lewellyn. The exterior will be of metal lath and plaster. There will be furnace heat. Plans are being figured.

**Berkeley, Alameda Co., Cal.**—Residence 1½ story and base, frame \$2,500. Architect none. Owner E. B. Spitzer, 2136 Essex St., Berkeley. Work is to be done by Day Labor.

**Burlingame, San Mateo Co., Cal.**—Bungalow 1 story and base, frame \$4,000. Architect J. J. Foley, Monadnock Bldg., S. F. Owner M. Mitchell. The exterior will be of shingles. There will be four large open fire places. The plans are being prepared.

**Burlingame, San Mateo Co., Cal.**—Bungalow 1½ story and base, frame \$5,500. Architect J. J. Foley, Monadnock Bldg., S. F. Owner Mr. Sherwood. The exterior will be covered with shakes. No heating system, but four fire places will be installed. Plans are being prepared.

**Piedmont, Alameda Co., Cal.**—Residence 2 story and base, frame \$20,000. Architect Willis Polk, Merchants' Exchange Bldg., S. F. Owner J. K. Moffitt. The dwelling will contain 14 rooms. The exterior is to be of brick veneer. There will be a heating plant and all other modern conveniences installed. The interior finish will be largely of hardwood. The plans are being figured.

**Los Gatos, Santa Clara Co., Cal.**—Residence, 1½ story and base, frame \$5,000. Architect Chas. F. Hodges, Monadnock Bldg., S. F. Owner Mrs. Ellen H. Fairall. The exterior will be of cement plaster and metal lath. There will be seven rooms and baths. The plans are now ready for figures.

**Los Gatos, Santa Clara Co., Cal.**—Residence, 2 story and base, frame \$6,500. Architect Chas. F. Hodges, Monadnock Bldg., S. F. Owner Hart Keating. The dwelling will be designed in the English style with a cement and half timber effect. The plans are now being prepared.

**Woodside, San Mateo Co., Cal.**—Residence, 2 story and base, concrete and frame, \$50,000. Architects Green and Green, Pasadena, Cal. Owner H. Fleishacker, S. F. The plans for this handsome residence are now being figured in San Francisco.

**Portland, Ore.**—Residence, 2 story and base, frame \$5,000. Architect Charles W. Ertz, Portland. Owner George W. Caldwell. The work is to be done by Day Labor, and work on the excavation has been started.

**Portland, Ore.**—Residence, 2 story and base, frame \$5,000. Architect C. A. Duke (care of the H. M. Fancher Co., Portland). Owner George Balliet. The work will be done by Day Labor.

**Seattle, Wash.**—Residence, 2 story and base, frame \$5,000. Architects Willatzen and Byrne, Henry Bldg., Seattle. Owner T. J. McVay. The plans are complete and figures will be taken at once.

**Los Angeles, Cal.**—Residence, 2 story frame \$7,500. Architects Walker and Vawter, Wright and Callender Bldg., L. A. Owner Dr. Walter E. Deering. The building will contain 8 rooms and baths. Plans are being prepared.

**Los Angeles, Cal.**—Residence, 2 story and base, frame \$7,000. Architect A. R. Kelly, Story Bldg., L. A. Owner E. S. Williams. The plans are complete and the architect is taking bids.

### —SCHOOLS—

**Terra Bella School District, Tulare Co., Cal.**—School 1 story and base, frame \$16,000. Architect F. W. Griffin, Porterville, Cal. Owners Terra Bella School District. The architect has started the plans for a building in the Mission style. Bids will be called shortly.

**San Francisco.**—Art Conservatory, 4 story and base, frame \$30,000. Architect J. J. Foley, Monadnock Bldg., S. F.

Owner St. Joseph's Convent. The plans for this building are complete, and the work will be done by Day Labor. Work is to start in June.

**Pasco, Wash.**—School 2 story and base, brick \$25,000. Architect C. Lewis Wilson, Chehalis, Wash. Owner Pasco School District. The plans are now being figured for this work, and bids will be opened April 18th.

**Wenatchee, Wash.**—Addition to school \$15,000. Architects Stephen and Stephen, New York Bldg., Seattle. Owners City of Wenatchee. The addition will be of brick and concrete, and will include a mechanical heating and ventilating system. The plans are being prepared.

**Seattle, Wash.**—Addition to school, \$50,000. Architect Edgar Blair, 7th Ave. and Marion St., Seattle. Owners City of Seattle. The addition will consist of a 2 story addition, containing 12 rooms. The plans are being prepared.

**Pendleton, Ore.**—School 2 story and base, reinforced concrete \$100,000. Architect C. A. Troutman, Aberdeen, Wash. Owners City of Pendleton. The architect has just started the plans.

**Prineville, Ore.**—School 2 story and base, brick and frame \$25,000. Architect Chas A. Burggraf, Albany, Ore. Owners City of Prineville. The architect's plans have just been selected in competition.

**Princeton, Colusa Co., Cal.**—School 2 story and base, frame \$25,000. Architects Parker and Kenyon, 244 Kearny St., S. F. Owners Princeton School District. The plans for this building have just been selected. Bids will be called as soon as the drawings can be completed.

### Contracts Awarded.

**Vallejo, Solano Co., Cal.**—School 2 story and base, brick \$29,992. Architect F. D. Voorhees, Central Bank Bldg., Oakland. Owner City of Vallejo. Contractors General Contractors Smith and Price, Oakland. Contract price \$29,292. Heating and Ventilating, Chas. E. Thomas, S. F., \$5,350. Electric Work, Vallejo Electric Light and Power Co., \$750. Painting, T. Barnewitz, Vallejo, \$1,900. Plumbing, H. E. Wilder, Oakland, \$4,685.

### —STORE BUILDINGS—

**San Francisco.**—Stores and Offices, 4 story and base, brick and reinforced concrete, \$250,000. Architect Frederick H. Meyer, Humboldt Bank Bldg., S. F.

**San Francisco.**—Add. to stores, \$9,000. Owners Bankers Investment Co. The plans for this building are being prepared and bids will be called for shortly. The street elevations will be faced with stone. A modern mechanical equipment will be installed.

Architect H. H. Meyers, Kohl Bldg., S. F. Owner Keil Estate. There will be new fronts put in and a pressed brick veneer will be put on the street elevation. The plans are being figured.

**San Francisco.**—Stores and Offices, 10 story and base, Class A, \$200,000. Architects Reid Bros., Call Bldg., S. F. Owner J. F. Leicesster et al. Plans have just been started. The building will be one of the finest yet erected in San Francisco.

**Oakland, Cal.**—Store, 1 story and base, brick, \$8,000. Architect none. Owner Chas. Norman, 4401 West St., Oakland. The owner is now taking bids on the work.

**Los Angeles, Cal.**—Store, 2 story and base, brick, \$13,000. Architect Chas. E. Shattuck, Mason Bldg., L. A. Owner H. G. Fenimore. There will be two stores on the first floor and rooms above. The plans are being prepared.

All bids must be accompanied by a certified check for five per cent of amount of bid, made payable to the Board of Education, Riverside, Cal.

The Board of Education of Riverside City High School District reserves the right to reject any or all bids.

By order of the Board of Education,

LYMAN EVANS, President.

A. N. WHEELLOCK, Clerk.

Dated March 18, 1911.

## CONSTRUCTING BUILDING.

(Bids open April 6.)

NOTICE IS HEREBY GIVEN that the Board of Education of the Los Angeles School District will receive bids for furnishing all labor and material necessary for the construction and completion of a school toilet building 18x20, and a coal house 10x14, at the Laurel School site, between Hollywood and Sherman, and a school toilet building, but no coal house, at the Ivanhoe School site, north of Edendale, according to plans and specifications on file in the office of the Secretary of the Board, Room 726, Security Building.

Put in a separate bid for the toilet building and coal house at the Laurel School site, and another bid for the toilet building at the Ivanhoe School site.

Put in a separate bid for the plumbing.

Bids must be accompanied by a certified check for five per cent of the amount of the bid, made payable to the order of the Board of Education, and must be sealed and filed with the Secretary, on or before Thursday, April 6th, 1911, at 3 o'clock p. m., at which time the bids will be opened.

The Board reserves the right to reject any or all bids.

Los Angeles, Cal., March 22, 1911.

E. A. NEWLIN,  
Acting Secretary.

## CONSTRUCTING SEWERS.

(Bids open April 19.)

CONSTRUCTING QUARTERMASTER'S OFFICE, VANCOUVER, WASH.—Sealed proposals, in triplicate, will be received at this office until 11 o'clock a. m., April 19, 1911, and then publicly opened, for the construction of an extension to the storm sewer at Vancouver Barracks, Washington. Plans, profiles and specifications can be seen at this office, or will be loaned on deposit of \$5 to insure safe return. The United States reserves the right to reject or accept any or all bids, or any part thereof. Envelopes containing proposals should be indorsed "Proposals for Sewer," and addressed to the Constructing Quartermaster.

## CONSTRUCTING BRIDGE.

(Bids open April 24.)

Sealed bids will be received at the office of the COUNTY CLERK OF MULTNOMAH COUNTY, PORTLAND, until Friday, April 21, 1911, at 2 o'clock p. m., for the construction of the West Portland bridge.

Each bid to conform to the plans and specifications on file in the office of the County Clerk of Multnomah County, Portland, and bids must be accompanied by a certified check payable to the County Judge of Multnomah County, for 5 per cent of the amount of the bid, to be forfeited as fixed and liquidated damages in case the bidder neglects or refuses to enter into a contract for the faithful performance of said work in the event the contract is awarded to him.

The right to reject any and all bids is hereby reserved.

F. S. FIELDS,  
County Clerk.

Firms desiring news from certain localities like San Francisco, Los Angeles, Portland, Seattle, etc., will find all such items, commencing on this page, all carefully classified as to location. These same items are repeated in the fore part of the news department, under distinct headings such as Banks, Churches, Hotels, etc.

## San Francisco.

**Apartment House**—3 story and base, frame \$20,000. San Francisco. Architect A. D. Nicholson, 20 Montgomery St., S. F. Owner George B. Elkins. The building will contain 22 apartments of 2 and 3 rooms each. There will be a modern heating plant, dumb waiters and wall beds. The exterior will be of pressed brick veneer and cement plaster on metal lath. The plans are complete and the architect is taking figures.

**Apartment House**—5 story and base, brick and steel \$80,000. San Francisco. Architect August Nordin, Mills Bldg., S. F. Owner Dr. George P. Allen. Building will be of the class C type of construction and will contain about 130 apartments of 2 and 3 and 4 rooms. There will be steam heat, elevator service and all of the latest modern improvements. The exterior is to be of pressed brick and terra cotta. The plans are being prepared.

**Apartment House**—6 story and base, reinforced concrete \$40,000. San Francisco. Architects Chas. M. and A. F. Rousseau, 597 Monadnock Bldg., S. F. Owners O'Brien, Kierman Realty Co. The plans for this building are being revised and will be ready for figures in about one week. The mechanical equipment will be complete in all details. The interior will be handsomely finished. Wall beds will be installed. The exterior will be of Medusa cement plaster.

**Apartment House**—6 story and base, brick and steel \$75,000. San Francisco. Architect C. J. Colley, Pacific Bldg., S. F. Owner's name withheld. The most modern improvements have been introduced into this building, the plans for which are now nearly complete and figures are to be taken at once. There will be electric elevators, steam heat and modern plumbing. The exterior will be of pressed brick.

**Apartment House**—4 story and base, brick and steel \$70,000. San Francisco. Architect Charles Peter Weeks, Mutual Bank Bldg., S. F. Owners McKinlin Co. The apartments will be arranged in suites of 2 and 3 rooms with private baths. There will be steam heat, elevator service and wall beds. The exterior will be of cement plaster on metal lath. The plans are complete and the figures are being taken.

**Apartment House**—3 story and base, frame \$9,000. San Francisco. Architects Hladik and Thayer, Monadnock building will contain 12 apartments. There will be no heating system, but each apartment will have a coal grate. The exterior will be of brick veneer and shiplap. The plans are now nearly complete and the bids will be called for at once.

**Apartment House**—7 story and base, brick and steel \$70,000. Architects Rowell and Le Romer, Montgomery Block, S. F. Owners' name withheld. The building will contain 120 apartments with wall beds, elevator service and an oil burning plant for steam

heat. The exterior will be of cement plaster. The working drawings have just been started.

**Apartment House**—3 story and base, brick \$15,000. San Francisco. Architects Chas. M. and A. F. Rousseau, 597 Monadnock Bldg., S. F. Owner S. J. Brun. This building has been described in these columns before, when the plans were being prepared. The plans are now complete and bids are being taken. The exterior will be of Medusa cement plaster and Monterey sand. There will be wall beds and a complete heating system.

**Residence**—2 story and base, frame \$4,000. San Francisco. Architect Herman Barth, 12 Geary St., S. F. Owner C. Jentzen. The exterior will be of rustic, the interior trim of Oregon pine. There will be open fire places. The architect is now taking bids.

**Cottage**—1 story and base, frame \$2,000. San Francisco. Architect none. Owner G. A. Johnson, 565 San Mateo Ave., S. F. The work is to be done by Day Labor. Dwelling will contain 6 rooms and bath.

**Cottages**—2 1 story and base, frame \$1,400 each. San Francisco. Architect none. Owner J. C. Stromswold, 38 Collingwood, S. F. Work will be done by Day Labor.

**Residence**—2 story and base frame \$5,000. San Francisco. Architect Joseph A. Leonard, Phelan Bldg., S. F. Owner Urban Realty Co. The exterior will be of klinker brick veneer and shingles. The interior trim of redwood and pine. The work is to be done by Day Labor.

**Residence**—2 story and base, frame \$6,000. San Francisco. Architect Joseph A. Leonard, Phelan Bldg., S. F. Owners Urban Realty Co. The exterior will be of klinker brick veneer and shingles. The interior trim of redwood and pine with hardwood floors. There will be furnace heat. The work will be done by Day Labor.

**Alterations to Residence**—\$8,000. San Francisco. Architect Henry Shermund, Mills Bldg., S. F. Owner Homer J. Bickel. The work includes new plumbing and interior arrangement and a large addition to the exterior of the building. The architect is taking figures.

**Flats**—2 story and base, frame \$3,500. San Francisco. Architect none. Owners Fletcher and Hamill. There will be four flats in the building all equipped in the most modern manner. The exterior of the building will be finished in rustic. The work will be done by Day Labor.

**Flats**—2 story and base, frame \$4,000. San Francisco. Architect Geiffuss and Son, 150 Fulton St., S. F. Owner Otto Koenig. The exterior will be of brick veneer and rustic. The interior will be finished in pine. There will be four flats with a fire place in each, and special plumbing. The bids are in and under advisement.

**Flats**—3 story and base, frame \$4,500. San Francisco. Architect J. Devencenzi, 432 Broadway St., S. F. Owner A. Figoni, 739 Filbert St. The work is to

be done under the direction of the owner and by Day Labor. There will be six flats in the building.

**Viaduct**—Reinforced concrete viaduct and earth filled approaches \$80,000. Engineer Marsden Manson, City Engineer San Francisco. Owner City and County of San Francisco. The viaduct will be constructed over Mission street, between Bosworth and Springdale streets. Bids are being taken and will be opened April 26th.

**Flats**—3 story and base, frame \$10,000. San Francisco. Architect Will D. Shea, Golden Gate and Polk streets, S. F. Owner's name withheld. The building is arranged for a laundry on the first floor and living rooms above. The plans are now being figured.

**Flats**—3 story and base, frame \$16,000. San Francisco. Architect none. Owner Casper Zwierlein, 1624 Grove St., S. F. There will be twelve flats in this building arranged in 4 and 5 rooms. The exterior will be of brick veneer. There will be no heating system. The work is to be done by Day Labor.

**Flats**—3 story and base, frame \$6,000. San Francisco. Architect D. C. Coleman, Metropolitan Bank Bldg., S. F. Owner Bay View Realty Co. The building will contain six flats. With the exception of the plumbing and the electrical work, which will be let in a contract, the work will be done by Day Labor.

**Flats**—2 2 story and base, frame flats \$10,000. San Francisco. Architect J. J. Foley, Monadnock Bldg., S. F. Owner's name withheld. The plans for this work are now complete and bids are being taken. The construction of both buildings will be let in one contract.

**Flats**—2 2 story and base, frame \$6,000. San Francisco. Architect J. J. Foley, Monadnock Bldg., S. F. Owners O'Connell and Lunny. The buildings will each contain two flats of 4 and 5 rooms each. The exterior will be of cement plaster on metal lath. The construction will be let in one contract. The plans are now complete.

**Flats**—2 story and base, frame \$4,200. San Francisco. Architect none. Owner Chas. F. Beha, 682 4th Ave. The work is to be done by Day Labor. The plans are in the hands of the owner and work will start at once.

**Flats**—2 story and base, frame \$7,500. San Francisco. Architect J. J. Foley, Monadnock Bldg., S. F. Owner's name withheld. The exterior will be of metal lath and plaster. The building will contain two flats of 5 and 6 rooms each. The plans are complete and the work is being figured.

**Hotel**—7 story and base, brick and steel, \$120,000. San Francisco. Architect R. S. Brown, 125 Sutter St., S. F. Owner L. H. Sly, 125 Sutter St. The building will contain approximately 125 rooms, equipped with all the latest improvements. The plans are nearly complete, and the work is to be done under the direction of Mr. Sly, who is now purchasing all materials.

**Hotel**—6 story and base, reinforced concrete \$50,000. San Francisco. Architect George L. Streshley, Balboa Bldg., S. F. Owner's name withheld. The building will be faced with pressed brick and terra cotta. There will be 18 rooms to the floor. The first floor is to be arranged for stores. There will be steam heat and elevator service. The plans will be ready in about ten days.

**Hospital**—Group of reinforced concrete buildings, \$1,000,000. San Francisco. Architect Louis P. Hobart, Crocker Bldg., S. F. Owners St. Luke's Hos-

BUILDING AND INDUSTRIAL NEWS

pital. While no authoritative announcement has been made to this effect, it is now generally accepted that Mr. Hobart has been selected for this work. When complete these buildings will comprise the finest and most complete hospital west of the Mississippi River.

**Art Conservatory**—4 story and base, frame \$30,000. San Francisco. Architect J. J. Foley, Monadnock Bldg., S. F. Owner St. Joseph's Convent. The plans for this building are complete, and the work will be done by Day Labor. Work is to start in June.

**Hospital Flooring**—Cost not given. San Francisco. Architect A. I. Coffey, David Hewes Bldg., S. F. Owners City and County of San Francisco. Bids are now being taken for tile flooring for the Administration building and Ward building No. 4 of the San Francisco Hospital.

**Stores and Offices**—4 story and base, brick and reinforced concrete, \$250,000. San Francisco. Architect Frederick H. Meyer, Humboldt Bank Bldg., S. F. Owners Bankers' Investment Co. The plans for this building are being prepared and bids will be called for shortly. The street elevations will be faced with stone. A modern mechanical equipment will be installed.

**Add. to Stores**—\$9,000. San Francisco. Architect H. H. Meyers, Kohl Bldg., S. F. Owner Keil Estate. There will be new fronts put in and a pressed brick veneer will be put on the street elevation. The plans are being figured.

**Stores and Offices**—10 story and base. Class A \$200,000. San Francisco. Architects Reid Bros, Call Bldg., S. F. Owner J. F. Leicesster et al. Plans have just been started. The building will be one of the finest yet erected in San Francisco.

## Editorial Comment.

Climatic conditions do not affect building activities much in San Francisco except that the rainy season makes it inconvenient for outdoor work. Still if we are to judge by the permits granted the last month has marked the opening of spring. The total of \$2,819,727 of contracts filed and permits granted for the month of March is the greatest since April 1910 and is the greatest total for March since 1909.

For the years succeeding the fire the totals for the month of March, as shown by the files of The Daily Pacific Builder, are as follows:

March 1907.....	\$5,173,905
March 1908.....	2,954,287
March 1909.....	2,956,308
March 1910.....	2,381,909
March 1911.....	2,819,727

So that it will be seen that the old town is getting back into its regular stride and things are looking up for the builders. Compare these figures for the past year:

April, 1910 .....	\$3,383,269
May, 1910 .....	2,789,204
June, 1910 .....	1,458,464
July, 1910 .....	1,596,613
August, 1910 .....	1,743,587
September, 1910 .....	1,433,797
October, 1910 .....	1,772,952
November, 1910 .....	805,938
December, 1910 .....	1,169,131
January, 1911 .....	1,242,806
February, 1911 .....	1,568,680
March, 1911 .....	2,819,727

The total for March shows an increase of one and one-quarter million over the figures for February and more than double the amount for January of the present year.

Generally speaking the whole of California north of the Tehachapi is experiencing a revival in the building line. Sacramento and Stockton are going ahead at a substantial clip. Fresno shows an advance over last year of over three to one. Willows, in Glenn County, is fast becoming a prosperous country city. Banks, churches, hotels and apartment houses are in process of construction there. Chico is building a City Hall. Placerville is erecting a new court house. Railroads and irrigation schemes are being put through all over Superior California and it looks like a steady and consistent boom in the building line for the near future.

Sacramento is considering the proposition of issuing bonds in the sum of \$750,000 for the erection of new school buildings. It also is preparing to execute plans for the purchase of a site for the \$100,000 armory to be erected by the state at the capitol city. Biggs, in Butte County, has voted \$25,000 for

the erection of a new school building. Nevada City is to vote \$30,000 for a High school. Work has already begun on a \$25,000 school building for Williams, Colusa County.

In general building activities throughout the state are taking on new life with the opening season and unless all prospects fail the year will be a prosperous one.

The trial of the Camorristi in Italy seems at this distance to take on a good deal the nature of the opera. Not only from the fact that the accused are kept in a steel cage and the principal witness in another for fear of assassination in the court room but also that the lawyers shout at one another and the judge browbeats the witnesses and there is a general tumult most of the time. The accused seem to call everybody liars that they do not like and there is all kinds of hysterical denunciations filling the air.

If this murderous band of Camorristi had to do only with Italy it might be well for the rest of us to look on and laugh. But this secret organization has sent its assassins to every country of the earth. When some one of their number or some countryman is marked for death he is followed to the end of the earth and dwells in constant fear of the treacherous Italian knife.

Organized originally for the purpose of protecting the virtue of their wives and daughters against the powerful nobles the society has degenerated into a blackmailing and murderous band. The task of suppressing it is no small matter. From this distance the reports of the trial do not seem to indicate that the present case will effect this result. It may be a start that will eventually break its power.

In view of the success of the militant movement for women's suffrage in England it is not altogether surprising to read that that eminent general, Lord Kitchener, had expressed himself in favor of women architects. The distinguished army officer is said to know much about building construction and it is presumed he speaks with knowledge of the facts.

The true architect as his title would imply is a master builder who superintends the construction of the building he designs. He should be able to direct the actual work of construction as well as write the specifications. Under these conditions it is hardly to be expected that many women would come up to the demands. They may be clever designers and valuable in the draughting office. But one could hardly expect them to live in the atmosphere of building construction and be a master builder in any sense of the word. After all the Iron General is perhaps more chivalrous than sincere.

## Studies In Roman Architecture. Some Notes Taken At First Hand From Original Investigation and Research.

By F. T. Baggalay, F. R. I. B. A.

(Continued from April 1.)

To turn from the history of construction to other matters: There is other evidence, besides that of Vitruvius, for the fact that the Romans acknowledged their indebtedness to the Etruscans for the form of their early temples, which appear to have had tree trunks for columns, widely spaced, and carrying wooden architraves. The cella walls were of rubble or unburnt brick, stuccoed over, and no doubt terminating opposite the columns of the prostyle portico in timber antae. The roof was of timber, covered with terra-cotta tiles; a terra-cotta cornice and ornaments were fixed round the eaves and sometimes, at least, terra-cotta or bronze statues ornamented the tympanus and the apex of the pediment. All was crudely painted in bright colors. Judging by a custom of later times, which must be mainly due to tradition, the whole structure was probably raised on a high base or podium, perhaps to lift it above the marshy ground common in Roman and Etruscan territory, perhaps because the first Roman temple had for some reason to be built overhanging the edge of the Capitoline mount on a substructure built upon the hillside. Vitruvius mentions three temples still standing in Rome in his day as specimens of what he calls the old Tuscan order, describing them as "clumsy, heavy roofed, low and wide," and in another place he gives his usual set of pedantic rules for reproducing such temples. These run to some length, and are chiefly interesting because they appear in the main to describe the most important temple in Rome, that of Jupiter Capitolinus, as it existed in his day—that is, as it was rebuilt by Sulla after the fire of 83 B. C., and remained until again destroyed by fire in the faction fight that ushered in the reign of Vespasian in A. D. 70. We learn that the temple was not far from square on plan, the width being to the depth as 5 to 6; that it had only one pediment, the back of the roof being hipped; that the eaves were very wide; that half the depth of the temple was taken up by the portico; that the cella, which occupied the back half, was divided into three in width; that the columns were of pseudo-Doric character with bases; and other interesting particulars. Vitruvius specifies wooden architraves, but does not say anything about the material of the columns. We know, however, from Pliny and the researches of Penrose, that the shafts of the columns of this particular temple were colored marble monoliths, stolen by Sulla from the temple of Olympian Zeus at Athens. We know, too, that the pediment was crowned with a huge terra-cotta quadriga, reputed to have been brought in ancient days from Veii.

But the temple of Jupiter Capitolinus, of which we thus get a fairly complete and detailed view, was not typical of the buildings, nor even of the temples, of the later Republican

period, but was obviously peculiar. Although it had been rebuilt only about half a century before Vitruvius wrote, a great conservatism had presided at the reconstruction of a fane reputed the oldest and most sacred in Rome, and the light thrown upon it is chiefly of use to illuminate what may be called the first period of Roman architecture, before it came under the direct influence of Greece, or was stimulated by the broader outlook, the new requirements, and the wealth arising from foreign conquests and ever-increasing commercial activity. Some of these influences began to be felt soon after 200 B. C., between the end of the second Punic war and the final destruction of Carthage. In that period at least three basilicas were erected in Rome to accommodate the increasing legal business arising from her position as mistress of all Italy and suzerain of most of the known world. They were probably the first of the long line of public civic buildings which distinguish Roman architecture. Before their erection the Forum and the temples seem to have sufficed for all public business except ordinary meetings of the Senate, which took place in the Curia, itself, however, merely an old temple enlarged for the purpose. Nothing remains of two of these basilicas, and even their sites are matters of controversy. One, the Basilica Aemilia, is pictured on a coin, where it is represented as a small two-storied porticus of columns, roofed, but with open sides. Professor Lanciani believes he has discovered its remains. The earliest triumphal arches—three or four at least—were also built in this period; but again all we know for certain of their appearance or construction is that they were adorned with statues of gilt bronze. Two more bridges over the Tiber (there was already one) were also built, one of which was reputed to be the first stone bridge. But for some time the piers only were of stone, the arches not being added until 142 B. C., whether from lack of skill, or because there were superstitious objections to the use of anything but wood for bridges, is not clear. Meanwhile many Greek works of art and educated slaves were finding their way to Rome, and after 146 B. C., when Greece became a Roman province, we are told that Roman art and literature fell entirely under Greek influence. One could wish there were more evidence of the extent and effect of that influence on architecture, for the last century of the Republic was one of considerable building activity, and it would help greatly toward a comprehension of the laws, if such there be, that govern architectural development if we had but a few well-authenticated remains of the many old temples rebuilt, and of the others and the public buildings erected in Rome and elsewhere in that century. But for temples we have to rely on a single example, the so-called Temple of Fortuna

Virilis at Rome, which, on the evidence of the building itself, is attributed to this time, probably correctly; and, for public buildings, on the so-called Tabularium, the main evidence for the date of which is a little shaky, but is borne out by that of the structure; and finally, the lower part of the theater of Marcellus, which was begun by Julius Caesar. Of the Temple of Fortuna Virilis (or Fortuna simply) Doctor Middleton says: "What the real date of this very interesting building may be it is impossible to guess, except that it is probably earlier than the middle of the first century B. C. Its early date is indicated by its pure Hellenic style, free from any Roman modifications (except perhaps the form of its elevated podium), by the absence of any marble, and by its being mainly built of tufa, travertine being used in a very sparing way, though much care and labor have evidently been spent on the construction and decoration of the building." The temple is a very small one, pseudo-peripteral with a prostyle portico, and of the Ionic order. It was stuccoed all over with a marble-dust cement, in which all the moldings and ornaments were finished. The moldings were cut in the stone, but in the cornice, at any rate, the finished cement moldings differ in several respects from the stone ones. The proportions of the plan are Greek, the length being just twice the width. But the ornaments of the frieze, garlands hung from candelabra and ox skulls, are essentially Roman. The attached columns are only half columns. The strongest items of evidence for early date are the Greek simplicity of the moldings, the absence of marble, and the proportions of the building, with regard to which the Romans, a little later on, were not in the least particular. The sparing use of travertine proves nothing; as a matter of fact it was more sparingly used in many later buildings.

The principal evidence for the exact date when the Tabularium was erected is an inscription discovered in the building in 1450, now only known from a quotation and which Doctor Middleton describes as very vague and puzzling. But its purport is that substructures and a tabularium were erected by Quintus Lutatius Catulus, who was Consul in 78 B. C., and Doctor Middleton's hesitation about it seems to rest mainly on the fact that, while many tabularia, or record offices, existed in Rome, this is not known to be one of them. It is not, however, known to have been anything else; it appears to be suited by position and arrangement to such a purpose; it has extensive and conspicuous substructures; the character of the masonry shows it to be of early date; and, finally, Doctor Middleton himself points out a very interesting fact which appears to prove conclusively that the substructures, at any rate, were built between 121 B. C. and about 6 A. D.—that is, during the

existence of the second Temple of Concord. He says that the only part of the facing of the tabularium wall not neatly dressed is that which was concealed by that temple, which can hardly mean anything but that the wall was built up against it. Altogether the evidence of date is nearly conclusive, and far better than in the case of the Temple of Fortuna or any other conspicuous building except the tombs supposed to be of the Republican period. I have already described the vaulting. The walls and arches are all of very neatly wrought masonry, with fine joints, mostly of the native tufa (probably the rock that was cut away to make room for it), faced with the harder peperino, in which the arches are of travertine. The blocks of peperino are all cut to the same size—4 feet by 2 feet. The upper part of the structure consisted on the front of an open arcade, said to have been once two stories high, though now only part of the lower story exists, mostly built up and surrounded by other buildings. The architectural interest of this arcade is that it is probably the earliest, or the earliest extant, example of the famous Roman facade, namely, a series of constructional arches and piers, like those of an aqueduct, ornamented with a framework of columns and entablatures planted against them. It may be the first attempt to endow a native arched structure with what was considered Greek architectural grace. The engaged columns in this case are Doric—the Roman variety—and parts of the architrave still exist, but all above that is gone. If there were really two stories and the second had Ionic columns the design must have been very like what we have left of the outside of the Theater of Marcellus, only built straight instead of circular, and raised on a lofty basement. Pompey's Theater, the first stone theater in Rome, built 55 to 52 B. C., seems to have been similar. The Theater of Marcellus was begun by Julius Caesar, but, as it was not finished until 13 B. C., the works had probably not got very far at his death. It is too well known to need description. The whole of the outer wall is built of solid travertine masonry, as we are told was that of Pompey's Theater. It was all stuccoed over, but, as in the case of the Temple of Fortuna, the moldings are carefully cut in the stone beneath and, except the impost molds of the arches, are good. The voussours of the arches are of great size and no archivolt molding is worked on them. One may, of course, have been formed in the stucco covering, but probably was not, for had it been in scale with the heavy impost moldings it would have needed a core and would also have been very ugly. The substructures of the cavea or auditorium, much of which still remain, can hardly be coeval with the outside wall; they may be part of the restoration undertaken by Vespasian or of a later one.

A good deal might perhaps yet be learned concerning the history of architectural details and construction from a critical comparison of tombs, and even of sarcophagi. They are more often dated by inscriptions than buildings, and very little liable to extensive restoration. There are several large tombs near Rome known to be of the later Republican period; for instance, that of Caecilia Metella, and the curious baker's tomb, close to the Porta Magiore. Both of these are built of

wrought masonry with a backing of concrete or rubble, and were once covered with the usual hard stucco. Neither brick nor marble entered into their construction. The drum of Caecilia Metella's tomb has false V joints cut in the masonry, and a frieze of ox skulls and garlands which seems characteristic of the time.

The most interesting architectural development in the last century of the Republic was the birth of a domestic architecture properly so called, a domestic architecture nourished by the immense private fortunes which became common. The rapidity with which it grew up may be gathered from the difference between the state of affairs in 125 B. C. and sixty or seventy years later. In the former year Sulla, afterwards Dictator, was paying 3,000 sesterces—say £25—a year in rent, which is said to mean that he was living in two rooms; and Lepidus, the augur, was called to order by the censor, for luxury, because he paid twice as much. At the later time Cicero, besides his town house, for which he had paid a sum equivalent to about £30,000, owned no fewer than seven country ones—that is, for his own use—and though we do not know the exact numbers of the houses kept up by other rich men, it is quite clear Cicero was not singular in that respect. These houses were of immense size. Sallust speaks of them as like cities, and they were adorned with marble columns, paintings, statues, and works of art of all kinds. They covered large areas, the greater part being but one story high; moreover, even in Rome they were often surrounded by extensive gardens. One such house changed hands for fifteen millions of sesterces—say £132,000—which probably did not include the movable works of art. It is recorded that as early as 92 B. C., Crassus erected in his atrium columns of the marble of Mount Hymettus 12 feet high, for which piece of luxury Brutus nicknamed him "the Palatine Venus." By 78 B. C. Lepidus was using Numidian marbles not merely for columns, but for thresholds. Marble slabs for lining walls seem to have been introduced rather later, in Caesar's time. Before that, all walls, internally as well as externally, were covered with hard plaster and painted. No remains are known of the large country houses or villas of the time; and the impossibility of finding out much about them, from the allusions in ancient literature may be judged by the various interpretations that have been put upon the fuller descriptions of his own villas by Pliny in the next century.

Passages in the sixth book of Vitruvius indicate, however, that country houses of the better class in his day did not differ materially as regards their domestic arrangements from town houses except that the peristyle was the first court entered, with the atrium beyond it, and that they had baths and various farm buildings attached to them. After several chapters devoted to describing private dwellings generally, the several apartments, and the modifications of size and arrangement required for different classes of owners, he says: "But the same things are true, not only of buildings in the town, but also in the country, except that in town the atriums are usually next the gates, but in the country and suburbs uniformly the peristyles, then at once paved atriums having porticos

around and looking on the palaestra and walks." The object of the country arrangement was obviously to get this view of the grounds from the common dwelling room of the house. It would seem not to have held at a later date in the larger villas of the Imperial period, when atrium had become less a dwelling room than an entrance hall, for Pliny says that in his Laurentine villa the atrium was the first apartment entered. In the suburban villa at Pompeii, called the villa of Diomed, the description of Vitruvius holds good; for the long apartment, called the gallery, which looked onto the terrace round the palaestra and to the country beyond, no doubt served most of the purposes of the atrium in a town house, though its form differs entirely both from those described by Vitruvius elsewhere and from others in Pompeii. Unfortunately there are no means of dating the building. For a wealthy man's house it is not large, and the decoration, though it is described as tasteful, was inferior to that of many other Pompeian dwellings. One can hardly accept it as a specimen of the spacious and sumptuous habitations we hear of even under the late Republic.

In his chapter especially devoted to country houses Vitruvius is evidently describing only what we should call farmhouses. He speaks of the several aspects and the arrangement of farm buildings, stables, kitchens, wine presses and baths—which he says should be placed so that they can be used also by the farm hands. And then he adds: "If something of luxury is to be introduced into country houses they are to be built according to the proportions that are laid down above for those in towns, on the fixed condition they are to be so arranged as to be without impediment to country uses." In Diomed's villa this part of the problem seems to have been solved by putting the farm buildings at the side of the house, separated from it by a narrow court, probably as a safeguard against fire or noise; and one may take it that in a gentleman's villa some such arrangement is so obvious that it would be the usual one. Of the better class of Roman house at the end of the Republic, that is, the separate house of the wealthy called a domus, as distinguished from the insula or block of flats inhabited by poorer folk, we can obtain a very clear idea from the descriptions of Vitruvius, which necessarily refer to this time, because they are illustrated by considerable remains of such houses at Pompeii. These agree very closely with the descriptions, and many date no doubt, at any rate as regards plan and the lower parts of the walls, from soon after 64 B. C., when the town was Romanized and became a fashionable resort of the wealthy. One of Cicero's seven villas was at or near Pompeii; he calls it his Pompeian villa. It would be wearisome to repeat the oft told names and uses of the various apartments of the Roman or Pompeian house, though a comparison of description with example is exceedingly interesting, both in itself and in the light it throws on the life of the period. But it may be worth while to repeat once more that the Pompeian houses are essentially Roman, and not Greek in their arrangements. They do not agree with the contemporary description of a Greek house by Vitruvius, and they do agree both with his description of a

Roman house and with what has been discovered of the plans of houses in Rome; it is not very much, unfortunately, but adequate for the purpose of comparison. The decorations of the Pompeian houses certainly appear to owe something to Greek influence, but similar decoration has been found in Rome. The Greek names which Vitruvius gives to many of the principal apartments he applies to Roman houses generally and not to those in Pompeii alone. If the architecture of Pompeii owes anything to Greek influence it is the influence which for a long time dominated all Roman art, and can not be due to the Greek origin of the city, as has been assumed. Pompeii had ceased to be a Greek colony for many centuries before it became a Roman one, and had passed successively, it is said, through the hands of Oscans, Etruscans, and Samnites. The Greek tongue had long been extinguished, and any Greek blood left in the inhabitants can have been neither sufficient nor sufficiently important to inspire its architecture.

those of the immense structures in

If you compare Pompeian ruins with Rome, the walls seem to be but slightly built, but they are quite as thick or thicker than we should erect now under similar circumstances. They are mainly of the so-called Roman concrete, really rubble. Many quoins, most isolated piers, and some walls are of wrought masonry. A certain amount of burnt brick is used, especially for patching and in the upper parts of the ruins. It probably indicates work of the Imperial period, and generally, no doubt, the repairs and restorations after the earthquake of A. D. 63, before referred to. That upper stories over parts of the houses were common is shown by the considerable number of staircases and traces of staircases found, although most appear to have been of wood and many would leave no trace. The small remains of the upper stories recovered indicate that they were constructed with wooden framing and, sometimes at least, overhanging the footways. The existence of upper stories at Pompeii is interesting because a remark of Vitruvius might have led one to suppose that in his day upper stories were peculiar to Rome. He says: "The immense population (of Rome) makes it necessary to have a vast number of dwellings, and as the area is not enough to contain them all (on the ground story), the nature of the case obliges us to raise them in the air." It hardly seems likely that all the upper stories in Pompeii were additions subsequent to the time of Vitruvius, and one must suppose he was referring only to an exceptional number of stories in Rome. It is difficult to guess how many these were. On the one hand no Latin author ever mentions more than four, and Juvenal, a century after the time of Vitruvius, speaks of the dwellings of the poor "in the fourth story under the roofs." Besides, Vitruvius tells us that walls next a public way might not be more than a foot and a half thick. On the other hand Augustus thought it necessary to limit the height of buildings to 70 feet.

The only existing remains of a house of Republican date in Rome are those of the so-called house of Livia, under Domitian's palace on the Palatine. It contained a small atrium with the *alae* formed by a long, narrow recess on

each side of the *tablinum*, and not in the position of those in the Pompeian houses. The walls are of wrought masonry and the arches of stone *vousoirs*. From the plans of the three houses found on a fragment of the celebrated "Marble Plan" of Rome, it would seem that *alae* were not essential in the atriums of the Imperial period. In two cases they are altogether absent, and in the third they have been separated from the atrium and turned into a sort of gallery by a wall built across it. There are, too, several cases in Pompeii where there are no *alae* or only one.

A number of ancient writers distinguish between the *insula*, or group of small dwellings, and the *domus* or separate house, as we distinguish between a house and a block of flats. But in Pompeii, at any rate, the *domus* as often as not formed part of a group which included habitations of various sizes. The typical example is the *insula* called the house of Pansa, where around the *domus* are grouped, besides shops that must have been separately occupied, at least five small houses, three containing some five or six rooms, and two of one room each and a staircase leading to an upper one, now gone. There is, besides, a separate staircase from the street, which probably led to other dwellings on the upper floor. It is said that such an arrangement would have been impossible in Rome, where the *insulae* were built four or more stories high, because the light would have been shut off from the main *domus*. But with internal courts as large as the *atria* and *peristyles* of Roman houses, and the little value evidently attached to light in the bedchambers and other small apartments, there can have been no such objection. It can only be raised to give the distinction between *insula* and *domus* too strict a meaning. No doubt many a *domus* in Rome and the suburbs, as elsewhere, was (in the language of the auctioneer) a "desirable detached residence," but probably many others formed parts of *insulae*, as in Pompeii. Shops on the principal street front, both communicating with the house and separated for letting off, are characteristic of the Pompeian houses. Those belonging to the house were nominally for selling the produce of country estates, and illustrate a passage of Vitruvius in which he says: "For those, again, who have to deal with country produce; at their entrances shop inclosures, and among the buildings cellars, granaries, storerooms, and so on.....are to be made."

The construction of the houses in Rome must have made it a somewhat unpleasant place to live in. The streets must have been as narrow and dark as those in the worst of mediaeval cities. The stories overhung one another, and, in addition, balconies projected so far that in some cases at least it was possible to shake hands across the street. Even after Nero had enacted that all external walls were to be of fireproof materials the upper stories continued to be of wood, and were so badly built that they frequently fell. One writer declares that people were driven out of Rome by the fear of falling houses. Many speak of the danger of tiles slipping from the roofs or thrown by persons in the upper stories. Of course bad fires were frequent. A very old law directed that

two and a half feet should be left clear between the buildings, but it fell into abeyance and does not seem to have been reenacted by Nero. Probably "vested interests" were too strong by that time to be overcome.

I will only add an apology for referring so often to Vitruvius, a writer who seems to me to receive less attention and respect than he deserves; from scholars, because he wrote indifferent, or at any rate, rather obscure, Latin, and from architects, because, unfortunately, few show any profound curiosity to know what he says; and consequently do not find out how interesting he really is.

## Illustrations For The Week.

Foundations have been laid for the new St. Ignatius Church at the north-east corner of Fulton street and Parker avenue, upon a site commanding a view of nearly the whole city. As soon as practicable work will be commenced on the superstructure, for it is the desire of the Jesuit fathers to complete the building at the earliest possible date.

The building will extend from Fulton to McAllister street, its full length being 271 feet and its width 158 feet. A stately pile of the Italian renaissance, the church resembles the old one at Hayes street and Van Ness avenue, though cast in grander and nobler lines. Its whole exterior is distinguished by purely classic design in which a fine effect is reached in the facade with superimposed colonnades of Ionic and Corinthian columns alternating. There are five great doors set between columns, and above them five windows likewise placed, and at each corner is a tower 224 feet high to the top of the cross.

The building will have a steel frame and brick walls with cement stucco on the exterior. It was first intended to have the church exterior in terra cotta of pressed brick, but the cost was prohibitive and so to effect a saving of about \$75,000 the plaster finish was adopted. A campanile of the Northern Italian type will stand at the northeast corner, away from the building, for the large bell, to obviate the vibration due to ringing.

The beautiful interior of old St. Ignatius Church will be reproduced in the new edifice, though with some material changes in the design, which will add to the grandeur and adaptability of the church. There will be seating capacity for 1700 persons within an area of 13 by 160 feet from the altar railing to the inner doors. An imposing portico lead to the vestibule of the church, off which will open the grand interior.

Elaboration of detail in the classical ornament is strikingly carried out in ceiling entablature, columns and wall. Two rows of columns support the clearstory and mark the line of the nave, without obstructing a view of the altar from the side pews. Eight alcoves will be placed along each side for confessionals and side altars. There will be seven altars, three in front and two on each side. In the rear of the sanctuary there will be three sacristies. The sanctuary will be large, in keeping with the proportions of the church, and

chief feature will be the semi-circular back wall, in front of which will stand a row of columns rising to the entablature.

The cost of the building when completed will be \$300,000. The steel frame alone costs \$72,500. The old site at Van Ness avenue and Hayes street is for sale at \$850,000, and when the sale is made construction will be started on the new St. Ignatius College upon the land lying east of the new church on the north line of Parker avenue, where the frontage is 513 feet.

Architect Charles J. I. Devlin of San Francisco has prepared the drawings for this beautiful edifice, and John E. Pope is acting as the Engineer for the building.

The Church has been represented in the matter by Father Colligan, who has worked with untiring energy for the rebuilding of Saint Ignatius Church since the time that it was destroyed in 1906.

Three views of the church are shown in this week's illustrations. The half-tones are taken from photographs of the architect's drawings, and are here reproduced by the courtesy of Father Colligan and Architect Devlin. The views shown are those of the front and rear elevations and a splendid view of the interior.

#### HANDSOME WARREN RESIDENCE.

Architects Frye and Osborn, French Bank Bldg., San Francisco, have just awarded the construction of one of the of the most handsome dwellings which has been erected in the district about Devisadero and Vallejo streets since the fire. The residence is to be erected for Mr. Charles A. Warren, of the Warren Improvement Company, the contract having been awarded to J. C. McLean for approximately \$13,000, which does not include the plumbing.

The location of the dwelling, the northeast corner of Vallejo and Devisadero streets, is one of the finest in the Marine View district, which is so rapidly becoming the most select of the San Francisco residence property. The dwelling will be a two-story, attic and basement structure of frame and brick construction and designed in the English style of architecture. The exterior from the sidewalk line to the water-table will be of brick veneer, the second floor of shingles, and from this point to the roof line the half timber effect has been used. The roofs are gabled and will be covered with red asbestos shingles.

The interior of the building has been especially well arranged, and will be divided into fourteen rooms besides four large baths. The interior finish will be largely of oak and mahogany, while all the baths will be finished in white tile, with Kompolite floors. There will be a complete heating system installed in the dwelling and other special mechanical features.

The Warren residence is one of three beautiful dwellings which Architects Frye and Osborn are getting out, all of which will be erected in the same block, either on Vallejo or on Devisadero street. An illustration of the Warren residence is shown on plate D of this week's illustrations.

Firms desiring news on special classes of buildings such as Banks, Churches, Schools, Hotels, etc., will find such items all classified and grouped under proper headings, commencing on this page. These same items are again repeated under "LOCALITIES" in the last part of our news department.

## Plans Wanted.

A site has been selected for a Carnegie Library, which is to be constructed in the town of Burlingame, San Mateo County, Cal. The building is to cost between \$10,000 and \$20,000. No architect has been selected.

An open competition is to be held by the State of Washington to secure plans and specifications from which the new Temple of Justice at Olympia is to be constructed. The building is to cost \$350,000, and the details of the competition can be had by addressing Governor Hay. Plans are to be in not later than July 1st of this year.

Bonds to the amount of \$6,000 are to be sold by the Jones School District in Stanislaus County, Cal., the proceeds of which will be used in the construction of a new building.

Bonds to the amount of \$25,000 were voted by the town of Biggs, Cal., for the construction of a new school building in that city. The bonds are to be sold at once, and the construction of the new building started as soon as plans can be secured.

The efforts of the committees now in the field to secure a new high school for the Paradise District in Butte County, Cal, have been meeting with success, and it is expected to arrange definite plans for a bond election within a short time.

A movement is on foot in Butte County, Cal., to secure a new Hall of Records. The present structure affords but little protection to the county records, and a new building is badly needed. Judge J. H. Anderson will take the matter before the Board of Supervisors at their next meeting. An effort will be made to erect a new building costing \$30,000.

A competition has been opened in San Mateo to secure plans for a gymnasium building to be erected in connection with the High school. C. N. Kirkbride is clerk of the School Board, and plans will be opened on April 24th. The building is to be 76x120 feet, of frame construction, and is not to exceed \$20,000 in cost.

The County Commissioners will submit to the voters of Kings County, Wash., a proposition to bond the county for \$200,000 for the purpose of erecting a new court house. The election will take place in May.

A bond election will be held in the Union High School District of Fresno County, Cal, on April 29th for the purpose of voting \$25,000 worth of bonds for the construction of a new building. R. S. Elliott and H. Snyder are the Trustees of the District. Address, Kerman, Cal.

A bond election will be held in the Petroleum School District of Kern County, Cal., on April 18th for the purpose of voting on \$10,000 bonds for the erection of a new building. O. F. Cleave, Bakersfield, is one of the Trustees.

Another attempt is to be made in Ventura County, Cal, to carry the bond

election for the construction of a new court house. Nathan W. Blanchard, of Ventura, is gathering data for the purpose of calling an election. The recent attempt to bond the county for \$250,000 failed, but an election for a smaller amount would probably be successful.

The Nevada City School Board, Nevada County, Cal., have decided to call an election on April 25th to bond the city for \$30,000, with which to build a new school building. If the bonds carry a competition will be held to secure plans for the building.

A new church edifice will be erected by the Seventh Day Adventists at Brawley, Imperial County, Cal., on the lot recently donated by Peter Jensen of Brawley.

Rev. McCullagh, pastor of the Presbyterian Church of Lebaron, Ore., has raised the money to purchase a site and erect a new building for his church. The work of securing the plans will be started at once.

## —APARTMENT HOUSES—

**San Francisco**—Apartment house 3 story and base, brick and frame \$60,000. Architect C. O. Clausen, Phelan Bldg., S. F. Owner L. M. Bernheim. The building will contain about 36 apartments of 2, 3 and 4 rooms each. There will be elevator service, hot and cold running water, steam heat and wall beds. The architect has completed the plans and bids will be taken at once.

**San Francisco**—Apartment House 5 story and base, reinforced concrete \$50,000. Architects Fabre and Mohr, Pacific Bldg., S. F. Owner's name withheld. The exterior will be of cement plaster. There will be an electric elevator and steam heat. Some marble will be used. The interior trim will be of pine and hardwood. The plans are being prepared.

**San Francisco**—Apartment house 6 story and base, reinforced concrete \$40,000. Architects Hladik and Thayer, Monadnock Bldg., S. F. Owner J. H. Bieckmann. The exterior will be of cement plaster. The interior will be finished in pine. There will be elevator service, steam heat and wall beds. The architects are now taking figures on the work.

**San Francisco**—Apartment house 3 story and base, frame \$10,000. Architect W. G. Hind, Humboldt Bank Bldg., S. F. Owner J. Gibbs. There will be 13 apartments of 2 and 3 rooms each. The exterior will be faced with brick veneer and shiplap. A complete heating system will be installed. Bids on the work are now being taken.

**San Francisco**—Apartment house 6 story and base, brick and steel \$75,000. Architect C. J. Colley, Pacific Bldg., S. F. Owner's name withheld. The building will contain about 80 apartments, equipped in the most modern manner with steam heat, elevator service and disappearing beds. The exterior will be faced with pressed brick and terra cotta. The plans are now complete and the architect is taking figures.

## BUILDING AND INDUSTRIAL NEWS

**Berkeley, Alameda Co., Cal.**—Apartment house 4 story and base, steel and brick \$45,000. Architect George F. King, Shattuck Hotel Bldg., Berkeley. Owner Enoch Morrell. The first floor of this building will be arranged for retail stores and the upper three floors for living apartments. The exterior will be faced with pressed brick. There improvements. The plans are complete will be steam heat and other modern and figures are being taken.

**Modesto, Stanislaus Co., Cal.**—Apartment house 2 story and base, brick \$25,000. Architect B. J. Joseph, First National Bank Bldg., S. F. Owners Weeks, Daunt, Ward and Berthold. There will be several stores on the ground floor and living apartments on the second floor. The plans are complete and figures are being taken.

**San Francisco**—Apartment house 3 story and base, frame \$16,000. Architects Crim and Scott, 425 Kearny St., S. F. Owner P. Noble. The building will contain 16 apartments equipped in the most modern manner. There will be elevator service. The exterior will be of brick veneer and rustic. The plans are now being figured.

**San Francisco**—Apartment house 3 story and base, frame \$3,000. Architect John David Hatch, Humboldt Bank Bldg., S. F. Owner's name withheld. The building will contain 6 apartments. The plans are being figured.

**San Francisco**—Apartment house 3 story and base, brick and steel, 160x50, \$50,000. Architect Harry Skidmore, Foxcroft Bldg., S. F. Owner's name withheld. The apartments will be arranged in 2, 3, 4 and 5 room suites. The exterior will be of pressed brick. The plans are nearly complete.

**San Francisco**—Apartment house 5 story and base, brick and steel, 200x200 \$85,000. Architect Bernard J. Joseph, First National Bank Bldg., S. F. Owner's name withheld. The building will contain apartments arranged in suites of 3, 4 and 5 rooms, each with private baths. The exterior will be pressed brick and terra cotta. There will be steam heat, elevators and all other modern conveniences. The working drawings are being prepared.

**Oakland, Cal.**—Apartment house 5 story and base, brick, \$60,000. Architects Woollett and Woollett, Realty Syndicate Bldg., Oakland. Owner J. H. Durst. The building will contain 100 rooms all equipped with the most modern conveniences. The plans are being figured.

**San Jose, Santa Clara Co., Cal.**—Apartment house 3 story and base, brick and frame, \$14,000. Architect Charles S. McKenzie, 509 Bank of San Jose Bldg., San Jose. Owner A. C. Kuhn. The building is arranged for stores on the first floor and nine apartments above. The exterior will be of brick and cement plaster. The plans are being figured.

**Los Angeles, Cal.**—Apartment house 4 story and base, 60x125, brick, \$45,000. Architect J. T. Zeller, 203 Currier Bldg., L. A. Owner Mrs. E. Johnson. The building will contain 120 rooms and 50 baths. The exterior will be of pressed brick. The plans are being figured.

**Portland, Ore.**—Apartment house 3 story and base, frame, 50x60, \$15,000.

Architects Claussen and Claussen, Portland. Owner Jacob Cratzer. The building will contain 30 rooms equipped with wall beds. Bids will be opened April 20th.

### Contracts Awarded.

**Los Angeles, Cal.**—Apartment house 4 story and base, brick, 116x152, \$90,000. Architects R. B. Young and Son, 701 Lankershim Bldg., L. A. Owners Orena Estate. Contractors F. O. Engstrom Co., Fifth and Seaton Sts., L. A. Contract price \$90,000.

### —BANKS—

**Crocket, Contra Costa Co., Cal.**—Bank, 2 story and base, brick and steel, \$20,000. Architect Benj. G. McDougall, Sheldon Bldg., S. F. Owners Bank of Crocket. The exterior of the building will be of cement plaster. The plans for this work are complete.

**Colusa, Colusa Co., Cal.**—Bank, 2 story and base, brick and sandstone, \$40,000. Architect W. H. Weeks, 251 Kearny St., S. F. Owners Farmers' and Merchants' Bank of Colusa. The bank will occupy only the first floor, the second floor being fitted for offices. The plans are being figured.

**Concord, Contra Costa Co., Cal.**—Bank, 2 story and base, brick, \$30,000. Architect W. H. Weeks, 251 Kearny St., S. F. Owners First National Bank of Concord. The exterior will be of cement plaster. There will be five stores besides the banking offices. Plans are ready for figures.

**San Fernando Valley, Cal.**—Bank, 2 story and base, brick, 60x80, \$25,000. Architects Train and Williams, 226 Exchange Bldg., L. A. Owner's name withheld. The exterior of the building will be faced with glazed brick. The architects are preparing the plans.

### Contracts Awarded.

**Maricopa, Kern Co., Cal.**—Bank, 1 story and base, brick, \$6,000. Architect W. H. Weeks, 251 Kearny St., S. F. Owners Bank of Maricopa. Contractors Lindgren Co., Monadnock Bldg., S. F. Contract price \$6,000.

### —BARRACKS.

**San Francisco**—Barracks, 2 story and base, reinforced concrete, \$22,000. Architect Construction Q. M. Dept., U. S. A., Lt. Col. McK. Williamson, Fort Mason, Cal. Owners U. S. Government. The work consists of the erection of a double troop barracks for the cavalry. Bids will be opened May 3rd.

### —BRIDGES—

**Boise, Idaho.**—Enlarging canal. Cost not stated. Engineers U. S. Reclamation Service, Shaw Bldg., Boise, Idaho. Owners U. S. Government. Bids will be opened on June 1 for enlarging Main South Side Canal, between stations 789 and 799, near Boise.

**Turlock Irrigation District, Stanislaus Co., Cal.**—Bridges and fill. Cost not stated. Engineer Smith, Turlock, Cal. Owners Turlock Irrigation District. Besides the work planned for the coming months, several new bridges over lateral No. 2 are to be constructed by the S. P. Co. Engineer

Smith is preparing plans for two new bridges.

**San Mateo Co., Cal.**—Bridge, concrete and wood, \$6,000. Engineer County Surveyor Neuman, Redwood City. Owners San Mateo County. The bridge will be located near Colma, and will have three concrete piers and wooden approaches. Bids will be called for at once.

**Marysville, Yuba Co., Cal.**—City Wharf, concrete and wood. Cost not stated. Engineer County Surveyor Crooks, Marysville. Owners City of Marysville. The proposition includes the dredging of the Feather River to a depth of 25 feet in front of the wharf, and the construction of suitable approaches. Plans are being prepared.

### Contracts Awarded.

**Ventura Co., Cal.**—Bridges, 2, steel and concrete. Engineer County Surveyor, Ventura. One of these bridges is located at Saticoy and the other at Piru. Owners Ventura County. Contractors: Piru Bridge, Missouri Valley Bridge and Iron Co., Denver, Col. Contract price \$19,210. Saticoy Bridge, Mervy-Elwell and Co., Oakland, Cal. Contract price \$53,800.

### —CHURCHES—

**San Francisco**—Church, fireproof structure, \$100,000. Architects Shea and Lofquist, Bank of Italy Bldg., S. F. Owners St. James Church. The details of the construction have not been settled as yet. The new building is to replace the structure recently destroyed by fire. The plans are to be rushed, and will be ready for figures in the course of two months.

**Tracy, San Joaquin Co., Cal.**—Church, frame, \$4,000. Architect W. King, Elks' Bldg., Stockton. Owners St. Michaels Church of Tracy. The architect is preparing the plans.

**Santa Barbara, Santa Barbara Co., Cal.**—Church, reinforced concrete, \$40,000. Architects Frohman and Martin, 302 Slavin Bldg., L. A. Owners Trinity Episcopal Church. The edifice will be designed in the Gothic style, and have a seating capacity of 600. Rev. B. J. Davis is the pastor. The plans are being prepared.

**Georgetown, Wash.**—Church, frame, \$6,000. Architect O. Dickinson, Empire Bldg., Seattle. Owners Georgetown Presbyterian Church. The architect has just started the working drawings, and plans will be ready for figures in about one month.

**Ashland, Ore.**—Church, concrete and frame, \$30,000. Architect Alpheus Dudley, Cray Bldg., Seattle, Wash. Owners First Methodist Church of Ashland. The exterior of the building will be of cement plaster on metal lath. The plans will be complete and ready for figures about the last of this month.

### Contracts Awarded.

**Santa Monica, Los Angeles Co., Cal.**—Church, frame, \$5,000. Architects Bryant and Wells, Ocean Park, Cal. Owners First Church of Christ, Scientist. Contractor J. B. Nichols, 1133 4th St., Santa Monica. Contract price \$3,478.

## BUILDING AND INDUSTRIAL NEWS

### FACTORIES & WAREHOUSES

**Perris, Riverside Co., Cal.**—Factory, 2 story and base, concrete and frame, \$30,000. Engineers R. S. Bulla Co., L. A. Owners Southwestern Sugar Co. The new building will be erected at once, and the cost named above does not include the machinery which is to be installed. The engineers are now receiving figures.

**Oakland, Cal.**—Warehouse, 2 story and base, frame, \$5,000. Architect L. S. Stone, Macdonough Bldg., Oakland. Owner's name withheld. The plans are complete and bids are being taken.

**Bellingham, Wash.**—Factory, group of concrete buildings, \$1,000,000. Engineers S. L. Smith and Co., 50 Church St., New York. Owners Balfour, Guthrie and Co., (represented by Atty. Alexander Baillie, Seattle). A local representative of the Engineers will be located in Seattle, and all contracts will be handled from his offices. The actual construction work will be started as soon as contracts can be let. Figures will be called for in a few days.

### Contracts Awarded.

**San Francisco**—Warehouse, 4 story and base, reinforced concrete, \$35,000. Architect's name not given. Owner Neal J. McKeon. Contractors E. D. Crowley Co., 127 Montgomery St., S. F. The plans for this work have been turned over to the contractors, and they are now letting all sub-contracts.

### FLATS.

**San Francisco**—Flats 3 story and base, frame \$4,000. Architect none. Owner P. Salina, 1810 Powell St., S. F. The building is arranged for a plumbing shop and 2 flats of 5 and 6 rooms each. The exterior will be of shiplap. The work is to be done by Day Labor.

**San Francisco**—Flats 3 story and base, frame \$15,000. Architect O. E. Evans, 2454 Mission St., S. F. Owner R. M. Brooks. There will be stores on the first floor and eight flats on the upper two floors. The exterior will be of rustic. There will be dumb waiters installed and wall beds. The interior finish will be of pine. The plans are being figured. All contracts let separate.

**San Francisco**—Flats 3 story and base, frame \$9,000. Architects Hladik and Thayer, Monadnock Bldg., S. F. Owner William Buchanan. The building will contain 6 flats, equipped in the most modern manner. The exterior will be of rustic and shiplap. The plans are complete and figures will be called for at once.

**San Francisco**—Flats 3 story and base, frame \$5,000. Architect none. Owner J. I. Moriatti, 640 Waller St., S. F. The building will contain 3 flats. The exterior will be of kilnbrick veneer and rustic. The work is to be done by Day Labor.

**San Francisco**—Flats 2 story and base, frame \$5,000. Architect C. Hansen, S. F. Owner J. H. Hjul, Merchants' Exchange Bldg., S. F. There will be four flats in the building, which is to be erected by Day Labor.

**San Francisco**—Flats 3 story and base, frame \$7,000 each, Architect

none. Owners C. J. and W. J. Keenan, 300 Webster St., S. F. The exteriors will be of pressed brick veneer and rustic. The equipment throughout will be modern. The work is to be done by Day Labor.

**San Francisco**—Flats 3 story and base, frame \$4,000. Architect none. Owner Peter Nihill, 60 Clara St., S. F. There will be four flats in this building. The plans are now in the hands of the owner, and the work is to be done by Day Labor.

**Oakland, Cal.**—Flats 2 story and base, frame \$4,000. Architect none. Owner George H. Smith, 536 27th St., Oakland. The plans are in the hands of the owner, and he is receiving figures on the various parts of the work.

**Stockton, San Joaquin Co., Cal.**—Flats 2 story and base, frame \$5,000. Architect William King, Elks' Bldg., Stockton. Owners Pessi and Casinelli. There will be a store on the first floor and living apartments above. The plans have been started.

**San Francisco**—Flats, 2 story and base, frame, \$4,000. Architects Kidd and Anderson, 251 Kearny St., S. F. Owner Margaret J. McCormick. The building will contain 2 flats of 5 and 6 rooms each. There will be no heating. Figures are being taken.

**Los Angeles, Cal.**—Flats, 2 story and base, frame, \$5,000. Architects Garrett and Bixby, Currier Bldg., L. A. Owner J. Weisbart. The architects are preparing plans. Figures will be taken shortly.

**Seattle, Wash.**—Flats, 2 story and base, frame, 47x110, \$12,000. Architect F. H. Paul, 310 Burke Bldg., Seattle. Owner Architect. The work will be started at once. Mr. Paul will award all contracts.

**Portland, Ore.**—Flats, 2 story and base, frame, \$4,000. Architect H. C. Dittich, Portland. Owner G. T. Slingerland. The plans are complete, and work will be done by Day Labor.

### GOVERNMENT WORK AND SUPPLIES.

**Benicia, Solano Co., Cal.**—Furnishing supplies. Cost not stated. Bids taken by Lt. Col. J. W. Benet, Benicia Cal. Owners U. S. Gov. Bids are being taken for furnishing the government with the following supplies: Bar iron, hardware, leather, lumber, paints, oils, cements and electrical supplies. Bids will be opened May 1st.

**Los Angeles, Cal.**—Electrical apparatus. Cost not stated. Bids taken by U. S. Reclamation Service, 605 Federal Bldg., L. A. Owners U. S. Government. Bids are being taken for furnishing electrical supplies for the Truckee-Carson project in Nevada. Bids will be opened April 13th.

**Los Angeles, Cal.**—Hydraulic Turbines. Cost not stated. Bids being taken by U. S. Reclamation Service, 605 Federal Bldg., L. A. Owners U. S. Government. Bids will be opened April 12th for furnishing the above equipment.

**Los Angeles, Cal.**—Penstock. Cost not stated. Bids are being taken by the Reclamation Service 605 Federal Bldg., L. A. Owners U. S. Government,

Bids will be opened April 17th for furnishing one 72-inch penstock for the Truckee-Carson project in Nevada.

**Pearl Harbor, Hawaii.**—Furnishing Bollers. Cost not stated. Bids are being taken by R. C. Hollyday, Pearl Harbor, for 6 450 H. P. water tube boilers equipped with oil burning apparatus. Bids will be opened April 29th.

**Pearl Harbor, Hawaii.**—Furnishing Air Compressor. Cost not stated. Bids are being taken by R. C. Hollyday, Pearl Harbor for one 3,000 cubic foot compressor complete. Bids will be opened on April 29th.

**Pearl Harbor, Hawaii.**—Dry Kiln. Cost not stated. Bids are being taken by R. C. Hollyday, Pearl Harbor, for the construction of a dry kiln. Bids will be opened May 6th.

**Furnishing Supplies**—Cost not stated. Benicia, Solano Co., Cal. Bids taken by Lt. Col. J. W. Benet, Benicia, Cal. Owners U. S. Government. Bids are being taken for furnishing the government with the following supplies: Bar iron, hardware, leather, lumber, paints, oils, cements and electrical supplies. Bids will be opened May 1st.

### HALLS & SOCIETY BLDGS.

**Oakland, Cal.**—City Hall 12 story and base, Class A, \$1,000,000. Architects Palmer and Hornbostel, New York and Oakland. Owners City of Oakland. The representatives of the architects have the specifications and working drawings complete for a large part of the work, and official bids for the work on 26 departments of the building will be called for this week. The contracts are being let through the offices of the Oakland Board of Public Works.

**Stockton, San Joaquin Co., Cal.**—Lodge Hall, addition of 5 stories to present building, \$105,000. Architect R. P. Morrell, Stockton. Owners Odd Fellows Lodge Hall Association. The present building will be completely remodeled and five additional stories added. The construction is to be of brick and steel. The exterior will be faced with pressed brick. The plans are being prepared.

**Fresno, Fresno Co., Cal.**—Convention Hall 2 story and base, brick \$15,000. Architect C. K. Kirby, Jr., Fresno. Owners City of Fresno. The plans for this work are complete and are to be approved by the City Trustees at the next meeting. The exterior will be faced with pressed brick.

**San Luis Obispo, San Luis Obispo Co., Cal.**—Hall Bldg., 2 story and base, 60x100, brick and steel, \$20,000. Architects Righetti and Headman, Phelan Bldg., S. F. Owner W. H. Bruner. The building will be arranged for stores on the first floor and a hall on the second. The exterior will be of pressed brick and terra cotta. The plans are now being figured.

**Watts, Los Angeles Co., Cal.**—Hall and stores, 2 story and base, brick, \$20,000. Architect Paul V. Tuttle, 1417 West 4th St., L. A. Owners Odd Fellows Hall Association of Watts. The first floor will be occupied by retail stores and the second by the lodge rooms. The plans are complete, and the work will be done by Day Labor.

**Needles, San Bernardino Co., Cal.**—Hall, 2 story and base, frame, \$13,000. Architect T. R. Griffith. L. A. Owners Needles Hall Association. Odd Fellows. The plans have just been started.

**Eugene, Ore.**—Hall, 2 story and base, brick, \$40,000. Architects Kroner and Horn, Portland. Owners Elks' Hall Association of Eugene. The plans call for a pressed brick exterior and a steam heating system. The architects are now ready for figures.

—HOSPITALS—

**San Francisco**—Hospital Add, 2 story and base, brick and concrete, \$35,000. Architects Engineering Dept. S. P. Co., 1142 Flood Bldg., S. F. Owners Southern Pacific Co. The building will be in the form of an addition to the main hospital now complete. The plans are out for figures.

**Fairfax Park, Marin Co., Cal.**—Sanitarium, 2 story and base, frame, \$25,000. Architects Bakewell and Brown. Owner Henry Bothin. The building will be in the Mission style, and is to have a cement plaster facing on metal lath. The plans are now being prepared.

—HOTELS—

**San Francisco**—Hotel 7 story and base, brick and steel, \$85,000. Architect G. Albert Lansburgh, Gunst Bldg., S. F. Owner Homer Brown. The building will contain 100 rooms and will be fitted in the most modern manner. There will be steam heat, elevator service etc. The exterior will be of pressed brick and terra cotta. The plans are complete and the specifications are being written.

**San Francisco**—Hotel 3 story and base, frame, \$15,000. Architect A. Fraschina, 6 Imperial Ave., S. F. Owner John G. Morrison. The exterior will be of pressed brick veneer. The plans are complete and figures are being taken.

**Concord, Contra Costa Co., Cal.**—Hotel 2 story and base, reinforced concrete or brick, \$60,000. Architect W. H. Weeks, 251 Kearny St., S. F. Owners Concord Inn Co. The hotel will contain 65 rooms, about a third of which will be equipped with private baths. The working drawings are being completed and bids will be taken for both a reinforced concrete building and a brick structure.

**Klamath Falls, Ore.**—Hotel 4 story and base, brick and steel, \$125,000. Architect Benj. G. McDougall, Sheldon Bldg., S. F. Owners Klamath Falls Development Co. The building will contain over 100 rooms, the most of which will be equipped with private baths. The exterior will be of pressed brick. There will be a steam heating plant and elevators installed.

**White Sulphur, Wash.**—Hotel, 3 story and base, reinforced concrete, 52x88, \$15,000. Architect Charles W. Ertz, Portland, Ore. Owner C. W. Dewey. The lower floor will be given over to the lobby and dining room. The two upper floors will contain 18 rooms and baths. There will be a complete steam heating system. Plans are now ready for figures.

**Sierra Madre, Los Angeles Co., Cal.**—Hotel, 4 story and base, reinforced concrete, \$75,000. Architect A. B. Benton, L. A. Owners Sierra Madre Hotel Co. The site for the building is now being cleared. The working drawings have been started, and it is expected to have the hotel open for guests before the winter holidays.

—RAILROAD CONST., STATIONS AND EQUIPMENT—

**Western Pacific Property**—Railroad construction, \$2,000,000. Engineering Dept. W. P. Mills Bldg., S. F. Owners Western Pacific. The report that this company is to make many improvements to their roadbed, and especially in the North Fork district of the Feather River country, comes direct from the offices of the company. The largest part of the work will be undertaken this summer.

**Oakland to Stockton**—Electric Line. Cost not stated. Owners Antioch and Eastern R. R. Co., Oakland. The line between Oakland and Antioch has already been partly completed, and for the purpose of extending the line to Stockton the company has been reorganized on a \$10,000,000 basis.

**Marin Co., Cal.**—Extension of railroad, \$150,000 to \$200,000. Engineering Dept. Mt. Tamalpais Scenic R. R. Co., S. F. Owners Mill Valley and Mt. Tamalpais R. R. Co. Work will shortly be undertaken on the extension of this road from West Point to Willow Camp, a distance of about seven miles. The road will follow an old stage route and be over about a 4 per cent grade. A large hotel will be erected at Willow Camp.

—RESIDENCES.

**San Francisco**—Residence 3 2 story and base, frame \$5,000 each. Architect E. E. Young, 251 Kearny St., S. F. Owner Matthew A. Little. The buildings will have a brick veneer to the water table, and rustic from that point to the roof line. There will be warm air heating systems installed. The plans are complete and the buildings will be erected by Day Labor.

**San Francisco**—Residence 2 story frame \$2,500. Architect none. Owner Marie Bergfeld, 4096 25th St., S. F. The plans are in the hands of the owner, who is now purchasing all materials.

**San Francisco**—Residence 2 story and base, frame \$3,500. Architect none. Owner Robert M. Johnson, 327 Connecticut St., S. F. The owner will supervise the construction, and the plans are now in his hands. The work will be done by Day Labor.

**San Francisco**—Residence 2 story, attic and base, brick and frame residence, 14,000. Architects Frye and Osborn, French Bank Bldg., S. F. Owner Spillabo. The dwelling is designed in the English style, and will be partly of red brick and partly of shingles and cement plaster. There will be fourteen rooms besides the baths. The building will be heated by a furnace. The plans are now being figured.

**San Francisco**—Residence 2 story and base, frame \$5,000. Architect S. Helman, 339 Montgomery St., S. F.

Owner H. A. Campbell. The building will contain seven rooms, a feature of which will be the large open fire places. The plans are now being figured.

**San Francisco**—Residence 2 story and base, frame \$2,500. Architect none. Owner G. A. Johnson, 745 San Mateo Ave., S. F. The exterior will be of rustic. The work is to be done by Day Labor.

**San Francisco**—Residence 2 story and base, frame \$5,500. Architect none. Owner F. F. Ralston, 32 Commonwealth Ave., S. F. The exterior will be of rustic. There will be furnace heat. The plans are in the hands of the owner, and the work will be done by Day Labor.

**Oakland, Cal.**—Residence 2½ story and base, reinforced concrete \$100,000. Architect Willis Polk, Merchants' Exchange Bldg., S. F. Owner W. G. Henshaw. This is to be one of the hand-somest dwellings erected in Oakland in many years. The details of the construction have not as yet been worked out. The exterior will be of cement plaster and the interior of hardwoods. All the most modern improvements will be placed in the building. The plans are about one-half complete.

**Oakland, Cal.**—Residence 2 story and base, frame \$4,000. Architect C. N. Burrell, Central Bank Bldg., Oakland. Owners California Building Co. The plans are complete and figures are being taken.

**Oakland, Cal.**—Residence 1½ story and base, frame \$2,500. Architect none. Owner Mrs. Thomas Cowell, 175 Hanover St., Oakland. The work will be done by Day Labor.

**Oakland, Cal.**—Residence 2 story and base, frame \$5,000. Architects Deuel and Wright, McDonough Bldg., Oakland. Owner Chas. Vercelli. The plans are complete and the architects are taking figures.

**Barracks**—2 story and base, reinforced concrete, \$22,000. San Francisco. Architect Constructing Q. M. Department, U. S. A., Lt. Col. McK. Williamson, Fort Mason, Cal. Owners U. S. Government. The work consists of the erection of a double troop barracks for the cavalry. Bids will be opened May 3rd.

**Church**—Fireproof structure, \$100,000. San Francisco. Architects Shea and Lofquist, Bank of Italy Bldg., S. F. Owners St. James Church. The details of construction have not been

settled as yet. The new building is to replace the structure recently destroyed by fire. The plans are to be rushed and will be ready for figures in the course of two months.

**Stores and Offices**—3 to 6 stories and base. Class A. Cost not stated. San Francisco. Architects William Curlett and Son, Phelan Bldg., S. F. Owner Mrs. R. Huddleston. There will be seven stores on the first floor and modern offices on the floors above. The street elevation will be of cement plaster on brick. A complete steel frame will be used. The mechanical equipment will include electric elevators, steam heat and pumping plant. The plans are being prepared.

**Store Alterations**—\$2,300. San Francisco. Architect Geo. L. Streshley and Co., Balboa Bldg., S. F. Owner Mark Sheldon Co. The work includes the installation of a new front, etc. Bids are being taken.

**Moving Picture Theatre**—1 story and base, frame, \$4,500. San Francisco. Architects C. M. and A. F. Rousseau, Monadnock Bldg., S. F. Owner's name withheld. The plans for this building are being figured.

**Railroad Construction** — \$2,000,000. Western Pacific property. Engineering Dept. W. P., Mills Bldg., S. F. Owners Western Pacific. The report that this company is to make many improvements to their roadbed, and especially in the North Fork district of the Feather River country, comes direct from the offices of the company. The largest part of the work will be undertaken this summer.

**Electric Line**—Cost not stated. Oakland to Stockton. Owners Oakland Antioch and Eastern R. R. Co., Oakland. The line between Oakland and Antioch has already been partly completed, and for the purpose of extending the line to Stockton the company has been reorganized on a \$10,000,000 basis.

**Flats**—2 story and base, frame, \$4,000. San Francisco. Architects Kidd and Anderson, 251 Kearny St., S. F. Owner Margaret J. McCormick. The building will contain 2 flats of 5 and 6 rooms each. There will be no heating. Figures are being taken.

**Hospital Add**—2 story and base, brick and concrete, \$35,000. San Francisco. Architects Engineering Dept. S. P. Co., 1142 Flood Bldg., S. F. Owners Southern Pacific Co. The building will be in the form of an addition to the main hospital now complete. The plans are out for figures.

**Contracts Awarded.**

**Warehouse**—4 story and base, reinforced concrete, \$35,000. San Francisco. Architect's name not given. Owner Neal J. McKeon. Contractors E. D. Crowley Co., 127 Montgomery St., S. F. The plans for this work have been turned over to the contractors, and they are now letting all sub-contracts.

**Building Contracts Awarded.**

**San Francisco.**

Oakland and Alameda  
County.

**Bungalows**—3 1 story and base.  
frame \$2,000 each. Oakland, Cal. Archi-  
tect none. Owners Donovan Bros., Al-  
catraz and Telegraph Aves., Oakland.  
The plans are in the hands of the own-  
ers, and the work will be done by Day  
Labor.

**Residence**—2 story and base. frame  
\$4,000. Berkeley, Alameda Co., Cal.  
Architect A. J. Yerrick, 860 36th St.,  
Oakland. Owner E. A. Jansen. The  
dwelling will contain 9 rooms and will  
be heated by a furnace. The exterior  
will be of shingles and cement plaster.  
The work is to be done by Day Labor.

**Residence**—2 story and base. frame  
\$4,500. Oakland, Cal. Architect Sidney  
B. Newson, 309 Commercial Bldg., Oak-  
land. Owner Dr. Friedman. The exte-  
rior of the building will be of cement  
plaster and metal lath. There will be  
a hot air heating system installed. The  
plans are being figured.

**Residence**—2 story and base. frame  
\$4,000. Oakland, Cal. Architect C. N.  
Burrell, Central Bank Bldg., Oakland.  
Owner I. H. Burrell. The plans are  
complete, and the work will be done by  
Day Labor.

**Residence**—2 story and base. frame  
\$5,000. Oakland, Cal. Architects Deuel  
and Wright, McDonough Bldg., Oak-  
land. Owner Chas. Vercelli. The plans

are complete and the architects are  
taking figures.

**Residence**—2 story and base. frame  
\$3,500. Berkeley, Alameda Co., Cal.  
Architect Noble Newson, 2610 Durant  
Way, Berkeley. Owner R. F. Reake  
Co. The plans for this dwelling are  
complete and the figures are being  
taken.

**Bungalow**—1½ story and base. frame  
\$3,000. Oakland, Cal. Architects, T. D.  
Newson and Son, 906 Broadway St.,  
Oakland. Owner S. C. Scott. The ex-  
terior will be finished in shingles. The  
plans are being figured.

**Residence**—2½ story and base. rein-  
forced concrete \$100,000. Oakland, Cal.  
Architect Willis Polk, Merchants' Ex-  
change Bldg., S. F. Owner W. G. Hen-  
shaw. This is to be one of the hand-  
somest dwellings erected in Oakland in  
many years. The details of the con-  
struction have not as yet been worked  
out. The exterior will be of cement  
plaster and the interior of hardwoods.  
All the most modern improvements will  
be placed in the building. The plans  
are about one-half complete.

**Residence**—2 story and base. frame  
\$4,000. Oakland, Cal. Architect O. N.  
Burrell, Central Bank Bldg., Oakland.  
Owners California Building Co. The  
plans are complete and figures are being  
taken.

**Residence**—1½ story and base. frame  
\$2,500. Oakland, Cal. Architect none.  
Owner Mrs. Thomas Cowell, 175 Hano-  
ver St., Oakland. The work will be  
done by Day Labor.

**Residence**—2 story and base. frame  
\$4,000. Berkeley, Alameda Co., Cal.  
Architect Noble Newson, 2610 Durant  
Way, Berkeley. Owners Reake and Co.  
The plans for this building are now  
complete and figures are being taken.

**Apartment House**—1 story and base.  
steel and brick \$45,000. Berkeley, Ala-  
meda Co., Cal. Architect George F.  
King, Shattuck Hotel Bldg., Berkeley.  
Owner Enoch Morrell. The first floor of  
this building will be arranged for re-  
tail stores and the upper three floors  
for living apartments. The exterior  
will be faced with pressed brick. There  
will be steam heat and other modern  
improvements. The plans are complete  
and figures are being taken.

**Flats**—2 story and base. frame \$4,000.  
Oakland, Cal. Architect none. Owner  
George H. Smith, 536 27th St., Oakland.  
The plans are in the hands of the owner,  
and he is receiving figures on the vari-  
ous parts of the work.

**Residence**—2 story, attic and base.  
frame \$45,000. Piedmont, Alameda Co.,  
Cal. Architect C. W. Dickey, Russ  
Bldg., S. F. Owner Mrs. S. T. Alexan-  
der. The exterior will be of cement  
plaster and metal lath. The interior  
trim will be mostly of hardwoods, with  
hardwood floors throughout. The plans  
are now nearly complete and figures  
will be taken shortly.

**Residence**—1 story and base. frame  
and brick \$6,500. Haywards, Alameda  
Co., Cal. Architect P. S. Schwartz, Van  
Dyke Bldg., Haywards. Owner Dr.  
Henry Powell. The exterior will be  
partly of brick veneer and partly of  
cement plaster. The plans are now out  
for figures.

**Apartment House**—5 story and base.  
brick \$60,000. Oakland, Cal. Architects  
Woollett and Woollett, Realty Syndi-  
cate Bldg., Oakland. Owner J. H.  
Durst. The building will contain 100  
rooms, all equipped with the most  
modern conveniences. The plans are

Being figured.

**Residence**—2 story and base. frame \$5,000. Berkeley, Alameda Co., Cal. Architect F. M. May, 2145 Center St., Berkeley. Owner W. B. Pressly. The dwelling will contain 8 rooms and baths. The exterior will be of cement plaster on metal lath. The plans are being prepared.

**Cottage**—1 story and base. frame \$3,000. Melrose, Alameda Co., Cal. Architect M. C. Kales, 1207 Jorses Ave., Elmhurst. Owner Mrs. Laura Holts. The plans are being figured. Building will contain 6 rooms.

**City Hall**—12 story and base. Class A \$1,000,000. Oakland, Cal. Architects Palmer and Hornbostel. New York and Oakland. Owners City of Oakland. The representatives of the architects have the specifications and working drawings complete for a large part of the work, and official bids for work on 26 departments of the building will be called for this week. The contracts are being let through the offices of the Oakland Board of Public Works.

**Warehouse**—2 story and base, frame, \$5,000. Oakland, Cal. Architect L. S. Stone, Macdonough Bldg., Oakland. Owner's name withheld. The plans are complete and bids are being taken.

**Stores and Offices**—5 story and base, reinforced concrete, 55,000. Oakland, Cal. Architects Woollett and Woollett, Realty Syndicate Bldg, Oakland. Owners Herst Bros. The plans for this building have been on the market for figures for the past few days, and the contract will be awarded shortly.

**Building Contracts Awarded.**

## Editorial Comment.

### CORRECT; IT'S SPRING.

See the rugs upon the line?  
Spring.  
Hear the barrel organ's whine?  
Spring.  
See the jonquils in the park?  
Hear the carol of the lark  
And the dogwood's distant bark?  
Spring.  
Notice shortcake on the bill?  
Spring.  
Feel in need of some good pill?  
Spring.  
Smell fresh paint along your way?  
See the baseball teams at play?  
Want to go a-fishing, hey?  
Spring.

—Philadelphia Bulletin.

Whatever may be the truth or falsity of the rumor that a syndicate has purchased the Associated and Union Oil companies certain it is that the future of this industry in California is to be of great importance. For with the opening of the Panama canal all ships that touch our shores will be able to procure oil, the transportation charges for eastern ports will be reduced and it will come into ever wider use on all classes of steamships.

The advantages are manifold. Not only is there economy of space in the bunker room but also many parts of the ship will be available for this purpose that cannot now be so utilized.

As to reduction in force necessary to handle the fuel on a big steamer the number would be less than one-tenth. As the steam generation is more uniform by means of oil than with coal it is only a question of time until it is used.

It is estimated and figures are given which conclusively prove that on a large steamer like one of the great Atlantic liners the saving on one round trip by the use of oil for fuel would amount to \$60,000. When these facts are demonstrated it is only a matter of time till fuel oil becomes the standard of heat producing materials. The ship that uses it will prove a profit where the ship that uses coal will fail and economic law is sure to bring about its adoption.

Pennsylvania oil is a light refining oil while the California product is a heavy fluid with an asphaltum base. The California article is adapted for fuel use. When the Atlantic steamships begin to use the liquid fuel there will be a demand for all that can be produced.

In the death of Tom Johnson, ex-mayor of Cleveland, the country has lost a public spirited citizen. His life and work goes to show that a man may

amass wealth and still be unspoiled, may profit by special privileges and still battle for the right. He was a selfmade man. From poverty he rose to a position of opulence. His sympathies were ever with the poor and he ever fought for the under dog and sought to give every man a chance.

He was a national figure. Long identified with the public service corporations of his city he yet worked for the public welfare and gave to Cleveland a better government. Whatever criticism was heaped upon him he stuck to his task as he saw it mapped out before him and left a name to be remembered. He was Tom Johnson of Cleveland, and that meant what he stood for, his character and individuality in life.

A tendency to ward socialism in domestic life is evidenced in the development of the apartment house in building construction. The centralization, under one roof, of the domestic duties, house cleaning, sweeping, cooking, laundry, and all the other duties that go to make up the workaday world of the housewife or servant, is a step in the line of industrial economy and tends to bring people together into the close proximity of living apartments.

At every turn in a modern apartment some convenience is found which is directly or indirectly a help in solving the problems of domestic help and comfort. All kinds of patent devices and disappearing furniture make it possible for rooms to be utilized for any purpose.

Heat is distributed from a central station in many places, as is likewise hot water. Electric contrivances, such as plate warmers and the like, have been brought into use to add to the comfort and do away with labor. So that it has become a fact that in the big apartments the principal part of housekeeping is done by the central station and the tenants have each their own little inglenook and compartment.

The modern apartment may not be conducive to the rearing of families such as delight ex-president Roosevelt, but it meets a demand in city life and is fast developing into a socialistic solution of the problems of domestic life such as was described years ago by Edward Bellamy in his novel "Looking Backward."

It will soon be up to the men to vote on the question of the suffragette amendment.

A story is told in the papers that after a Los Angeles man deeded his home to his wife in "consideration of love and affection" she drove him from the house. When he took refuge in the barn and slept in it, she notified him in writing that he must either vacate the premises or pay ten dollars a month rent.

This is certainly hard. It is equaled only by the case of the citizen of San Francisco who in a suit for divorce the other day, testified that his wife cracked him over the head with a motto, "God Bless Our Home." Will these two citizens support the amendment?

Under the provisions of the Tarnsey Act the Secretary of the Treasury has invited twenty of the best known architects of the country to compete in the design for one of the smaller post office buildings of the country to the end that it may redound to the benefit of American architecture.

It is intended to create a type that may be used as a model in public and private buildings of the country in simplicity, dignity and sound design. Expressed in his own words his idea is embodied in the following paragraph:

It is in this spirit, relying upon your assistance, that I trust you will accept this invitation, and that in designing and supervising the construction of one of these buildings you will assist in creating a type which shall stand in its absolute simplicity, dignity and justice of proportion an example that will lead and foster the development of American architecture.

In the office of the supervising architect of the Treasury Department the drawings for as many as 125 buildings have been turned out in a year. These plans, except in the cases of the large buildings where competitions have been invited, have all been made in the government architect's office. They have all been well planned and examples of good taste and dignity. But there is no reason to doubt that under the stimulus of competition new creations may be designed that will have a distinct individuality and add to the dignity and beauty of public buildings.

And such a model is wanted in this country for private architecture. The fact wherein the countries of Europe rival America is the architectural adornment of its natural scenes. There the centuries have taught them the value of proportion and the value of perspective. Hence the countries of the Alps rival the scenes of California only in this, that man has added to the beauty and symmetry of nature there while here it has principally been detracted from.

The government taking the lead in this direction will tend to set a standard of taste. It may take some generations to effect it, but the time will come when it will be seen that utility can be combined with beauty and grace. The Secretary's action is a move in the right direction.

The Los Angeles Times, true to its history and instincts, opposes the Boynton constitutional amendment, which provides that criminal cases shall not be reversed on appeal unless the higher courts decide that the errors cited involves a miscarriage of justice.

As it now stands, error is conclusively presumed to have prejudiced the defendant, no matter how technical it may have been or how little it went to the merits of the case. Thus in the case of E. E. Schmitz, the supreme court held that the fact that it was not alleged that he was mayor of San Francisco was fatal to the indictment. The Times in its usual pompous way
