INTRODUCTION.

PROBABLE evidence is effentially diftinguished from demonstrative by this, that it admits of degrees; and of all variety of them, from the highest of moral certainty, to the very lowest presumption. We cannot indeed fay a thing is probably true upon very flight prefumption for it; because, as there may be probabilities on both fides of a question, there may be some against it: and though there be not, yet a flight prefumption does not beget that degree of conviction, which is implied in faying a thing is probably true. But that the flightest possible presumption is of the nature of a probability appears from hence; that fuch low presumption often repeated, will amount even to a moral certainty. Thus a man's having observed the ebb and flow of the tide to day, affords some fort of prefumption, though the lowest ima-Α

imaginable, that it may happen again tomorrow: but the observation of this event for so many days, and months, and ages together, as it hath been observed by mankind, gives us a full assurance that it will.

THAT which chiefly constitutes probability is expressed in the word likely, i. e. like fome truth*, or true event; like it, in itself, in its evidence, in some more or fewer of its circumstances. For when we determine a thing to be probably true, suppose that an event has or will come to pass, it is from the mind's remarking in it a likeness to some other event, which we have observed has come to pass. And this observation forms, in numberless daily instances, a presumption, opinion, or full conviction, that fuch event has or will come to pass; according as the observation is, that the like event has fometimes, most commonly, or always fo far as our observation reaches, come to pass at like distances of time, or place, or upon like occasions. Hence arises the belief, that a child, if it lives twenty years,

^{*} Verisimile.

will grow up to the stature and strength of man; that food will contribute to the preservation of its life, and the want of it for fuch a number of days, be its certain destruction. So likewise the rule and measure of our hopes and fears concerning the fuccess of our pursuits; our expectations that others will act fo and fo in fuch circumstances; and our judgement that fuch actions proceed from fuch principles; all thefe rely upon our having obferved the like to what we hope, fear, expect, judge; I fay, upon our having observed the like, either with respect to others, or ourselves. And thus, whereas the Prince * who had always lived in a warm climate, naturally concluded in a way of analogy, that there was no fuch thing as water's becoming hard; because he had always observed it to be fluid and yielding: we on the contrary, from analogy conclude, that there is no prefumption at all against this: that it is supposeable, there may be frost in England, any given day in January next; probable

A 2

^{*} The flory is told by Mr. Locke, in the chapter of Probability.

that there will on fome day of that month; and that there is a moral certainty, i. e. ground for an expectation without any doubt of it, in some part or other of the winter.

Probable evidence in its very nature, affords but an imperfect kind of information; and is to be confidered as relative only to beings of limited capacities. For nothing which is the possible object of knowledge, whether past, present, or future, can be probable to an infinite intelligence; fince it cannot but be difcerned absolutely as it is in itself, certainly true, or certainly false. But to us probability is the very guide of life.

From these things it follows, that in questions of difficulty, or such as are thought fo, where more fatisfactory evidence cannot be had, or is not feen; if the refult of examination be, that there appears upon the whole, any the lowest prefumption on one fide, and none on the other, or a greater prefumption on one fide, though in the lowest degree greater; this determines the question, even in matters of speculation; and in matters of

practice, will lay us under an absolute and formal obligation, in point of prudence and of interest, to act upon that presumption or low probability, though it be fo low as to leave the mind in very great doubt which is the truth. For furely a man is as really bound in prudence, to do what upon the whole appears, according to the best of his judgement, to be for his happiness, as what he certainly knows to be fo. Nay, further, in queftions of great consequence, a reasonable man will think it concerns him to remark lower possibilities and presumptions than these; fuch as amount to no more than showing one fide of a question to be as supposeable and credible as the other: nay such as but amount to much less even than this. For numberless instances might be mentioned respecting the common pursuits of life where a man would be thought, in a literal fense, distracted, who would not act, and with great application too, not only upon an even chance, but upon much lefs, and where the probability of chance was greatly against his fucceeding.*

^{*} See Chap. VI. Part II.

It is not my defign to inquire further, into the nature, the foundation, and meafure of probability; or whence it proceeds that likeness should beget that presumprion, opinion, and full conviction, which the human mind is formed to receive from it, and which it does necessarily produce in every one; or to guard against the errors, to which reasoning from analogy is liable. This belongs to the fubject of logic; and is a part of that subject which has not yet been thoroughly confidered. Indeed I shall not take upon me to fay, how far the extent, compass and force, of analogical reasoning, can be reduced to general heads and rules; and the whole be formed into a system. But though little in this way has been attempted by those who have treated of our intellectual powers, and the exercise of them; this does not hinder but that we may be, as we unquestionably are, assured, that analogy is of weight, in various degrees, towards determining our judgement and our practice. Nor does it in any wife cease to be of weight in those cases, because persons, either given to dispute, greater exactness than our faculties appear to admit of in practical matters, may find other cases in which it is not easy to say, whether it be, or be not, of any weight; or instances of seeming analogies, which are really of none. It is enough to the present purpose to observe, that this general way of arguing is evidently natural, just, and conclusive. For there is no man can make a question but that the sun will rise to-morrow; and be seen, where it is seen at all, in the sigure of a circle, and not in that of a square.

Hence, namely from analogical reasoning, Origen ‡ hath with singular sagacity observed, that, " he who believes the " scripture to have proceeded from him " who is the author of nature, may well " expect to find the same sort of difficulties " in it, as are sound in the constitution " of nature." And in a like way of reflexion it may be added, that he who de-

[‡] Χρη μεν τοι γε τον απαζ παραδεξαμενον του κτιςαντος τον κοσμον ειναι ταυτας τας γραφας πεπεισθαι, οτι οσα πέρι της κτισεως απαντά τοις ζητουσι τον περι αυτης λογον, ταυτα και περι σων χραφωνω Philocal. p. 23. Ed. Cant.

nies the scripture to have been from God, upon account of these difficulties, may, for the very fame reason, deny the world to have been formed by him. On the other hand, if there be an analogy or likeness between that fystem of things and dispensation of Providence, which revelation informs us of, and that fystem of things and dispenfation of providence, which experience together with reason informs us of, i. e. the known course of nature; this is a prefumption, that they have both the fame author and cause; at least so far as to answer objections against the former being from God, drawn from any thing which is analogical or fimilar to what is in the latter, which is acknowledged to be from him: for an Author of Nature is here fupposed.

Forming our notions of the constitution and government of the world upon reasoning, without foundation for the principles which we assume, whether from the attributes of God or any thing else; is building a world upon hypothesis, like Des Cartes. Forming our notions upon reasoning from principles which are cer-

tain

tain, but applied to cases to which we have no ground to apply them, (like those who explain the structure of the human body, and the nature of difeases and medicines from mere mathematics, without sufficient data;) is an error much a-kin to the former: fince what is assumed in order to make the reasoning applicable, is hypothesis. But it must be allowed just, to join abstract reasonings with the obfervations of facts, and argue from fuch facts as are known, to others that are like them; from that part of the divine government over intelligent creatures which comes under our view, to that larger and more general government over them, which is beyond it; and from what is present, to collect, what is likely, credible, or not incredible, will be hereafter.

This method then of concluding and determining being practical, and what, if we will act at all, we cannot but act upon in the common pursuits of life; being evidently conclusive, in various degrees, proportionable to the degree and exactness of the whole analogy or likeness; and having so great authority for its introduction into

the

the subject of religion, even revealed religion; my defign is to apply it to that fubject in general, both natural and revealed: taking for proved, that there is an intelligent author of nature, and natural governor of the world. For as there is no prefumption against this prior to the proof of it; fo it has often been proved with accumulated evidence; from this argument of analogy and final causes; from abstract reasonings; from the most antient tradition and testimony; and from the general consent of mankind. Nor does it appear, so far as I can find, to be denied, by the generality of those who profess themselves diffatisfied with the evidence of religion.

As there are some, who, instead of thus attending to what is in fact the constitution of nature, form their notions of God's government upon hypothesis: so there are others, who indulge themselves in vain and idle speculations, how the world might possibly have been framed otherwise than it is; and upon supposition that things might, in imagining that they should, have been disposed and carried on after a better model.

model, than what appears in the prefent disposition and conduct of them. Suppose now a person of such a turn of mind, to go on with his reveries, till he had at length fixt upon some particular plan of nature, as appearing to him the best .-One shall scarce be thought guilty of detraction against human understanding, if one should fay, even before-hand, that the plan which this speculative person would fix upon, though he were the wifest of the fons of men, probably would not be the very best, even according to his own notions of best; whether he thought that to be fo, which afforded occasions and motives for the exercise of the greatest virtue, or which was productive of the greatest happiness, or that these two were necessarily connected, and run up into one and the fame plan. However it may not be amiss once for all, to see what would be the amount of these emendations and imaginary improvements upon the fystem of nature, or how far they would mislead us. And it feems there could be no ftopping, till we came to fome fuch conclusions as these: that all creatures should at first be made as perfect and as happy as they

they were capable of ever being: that nothing, to be fure, of hazard or danger should be put upon them to do; some indolent persons would perhaps think nothing at all: or certainly, that effectual care should be taken, that they should, whether necessarily or not, yet eventually and in fact, always do what was right and most conducive to happiness, which would be thought easy for infinite power to effect; either by not giving them any principles which would endanger their going wrong; or by laying the right mo-tive of action in every instance before their minds continually in fo strong a manner, as would never fail of inducing them to act conformable to it: and that the whole method of government by punishments should be rejected, as absurd; as an awkward round about method of carrying things on; nay, as contrary to a principal purpose, for which it would be supposed creatures were made, namely happiness.

Now, withour confidering what is to be faid in particular to the feveral parts of this train of folly and extravagance; what

what has been above intimated, is a full direct general answer to it, namely, that we may fee before-hand that we have not faculties for this kind of speculation. For though it be admitted, that from the first principle of our nature, we unavoidably judge or determine fome ends to be abfolutely in themselves preferable to others, and that the ends now mentioned, or if they run up into one, that this one is absolutely the best: and consequently that we must conclude the ultimate end designed, in the constitution of nature and conduct of providence, is the most virtue and happiness possible: yet we are far from being able to judge, what particular disposition of things would be most friendly and affiftant to virtue; or what means, might be absolutely necessary to produce the most happiness in a system of such extent as our own world may be, taking in all that is past and to come, though we should suppose it detached from the whole of things. Indeed we are fo far from being able to judge of this, that we are not judges what may be the necessary means of raising and conducting one perfon

fon to the highest perfection and happiness of his nature. Nay even in the little affairs of the present life, we find men of different educations and ranks are not competent judges of the conduct of each other. Our whole nature leads us to afcribe all moral perfection to God, and to deny all imperfection of him. And this will for ever be a practical proof of his moral character, to fuch as will confider what a practical proof is; because it is the voice of God speaking in us. And from hence we may conclude, that virtue must be the happiness, and vice the misery, of every creature; and that regularity and order, and right cannot but prevail finally in a universe under his government. But we are in no fort judges, what are the neceffary means of accomplishing this end.

Let us then, instead of that idle and not very innocent employment of forming imaginary models of a world, and schemes of governing it, turn our thoughts to what we experience to be the conduct of nature with respect to intelligent creatures; which may be refolved into general laws or rules of administration, in the same way as many

many of the laws of nature respecting inanimate matter may be collected from experiments. And let us compare the known constitution and course of things, with what is faid to be the moral fystem of nature; the acknowleged difpensations of providence, or that government which we find ourselves under, with what religion teaches us to believe and expect; and fee whether they are not analogous and of a piece. And upon fuch a comparison, it will I think be found, that they were very much fo: and both may be traced up to the fame general laws, and refolved into the fame principles of divine conduct.

The analogy here proposed to be considered, is of pretty large extent, and consists of several parts; in some more, in others, less exact. In some sew instances perhaps it may amount to a real practical proof; in others, not so. Yet in these it is a confirmation of what is proved other ways. It will undeniably show, what too many want to have shown them, that the system of religion both natural and revealed, considered only as a system,

and prior to the proof of it, is not a fubject of ridicule, unless that of nature be fo too. And it will afford an answer to almost all objections against the system both of natural and revealed religion; though not perhaps an answer in so great a degree, yet in a very confiderable degree an answer, to the objection against the evidence of it; for objections against a proof, and objections against what is faid to be proved, the reader will observe are different things.

Now the divine government of the world, implied in the notion of religion in general and of christianity, contains in it; that mankind is appointed to live in a future state; that there, every one shall be rewarded or punishedd; rewarded or punished respectively for all that behaviour here, which we comprehend under the words, virtuous or vicious, morally good or evile: that our prefent life is a probation, a state of trials, and of disciplines, for that future one; notwithstanding the objections, which men may fancy they have, from notions of necessity, against there being

[.] Ch. iii. f Ch. iv. ° Ch. i. d Ch. ii.

Ch. v.

any fuch moral plan as this at all h; and whatever objections may appear to lie against the wisdom and goodness of it, as it stands so imperfectly made known to us at prefent i: that this world being in a state of apostacy and wickedness, and consequently of ruin, and the sense both of their condition and duty being greatly corrupted amongst men, this gave occafion for an additional difpensation of pròvidence; of the utmost importance k; proved by miracles; but containing many things appearing to us strange and not to have been expected m; a dispensation of providence, which is a scheme or system of things "; carried on by the mediation of a divine person the Messiah, in order to the recovery of the world o; yet not revealed to all men, nor proved with the strongest possible evidence to all those to whom it is revealed; but only to fuch a part of mankind, and with fuch particular evidence as the wisdom of God

h Ch, vi. Ch, vii. Part II. Ch, i. Ch, ii.
Ch, iii. Ch, iv. Ch, v.

thought fit?. The defign then of the following treatife will be to fhew, that the feveral parts principally objected against in this moral and christian dispensation, including its fcheme, its publication, and the proof which God hath afforded us of its truth; that the particular parts principally objected against in this whole dispenfation are analogous to what is experienced in the constitution and course of nature, or providence; that the chief objections themfelves which are alledged against the former, are no other, than what may be alledged with like justness against the latter, where they are found in fact to be inconclusive; and that this argument from analogy is in general, unanswerable, and undoubtedly of weight on the fide of religion*, notwithstanding the objections which may feem to be against it, and the real ground which there may be for differences of opinion, as to the particular degree of weight which is to be laid upon it. This is a general account what may be looked for in the following treatife.

^{*} Ch. vi. vii. † Ch. viii.

And I shall begin it with that which is the foundation of all our hopes and of all our fears; all our hopes and fears, which are of any consideration; I mean a future life.

AN.

P53 J •

ANALOGY

OF

RELIGION

TO THE

CONSTITUTION AND COURSE OF NATURE,

PART I.

OF NATURAL RELIGION,

CHAP, I.

OF A FUTURE LIFE.

STRANGE difficulties have been raised by fome concerning personal identity, or the sameness of living agents, implied in the notion of our existing now and hereaster, or in any two successive moments; which whoever thinks it worth while, may see considered in the first differtation at the end of this treatise. But without regard to any

of them here, let us confider what the analogy of nature, and the feveral changes which we have undergone, and those which we know we may undergo without being destroyed, suggest, as to the effect which death may, or may not have upon us; and whether it be not from thence probable, that we may survive this change, and exist in a future state of life and perception.

I. From our being born into the prefent world in the helpless imperfect state of infancy, and having arrived from thence to mature age, we find it to be a general law of nature in our own species, that the same creatures, the fame individuals, should exift in degrees of life and perception, with capacities of action, of enjoyment, and fuffering, in one period of their being, greatly different from those appointed them in another period of it. And in other creatures the fame law holds. For the difference of their capacities and states of life at their birth, (to go no higher) and in maturity: the change of worms into flies, and the vast enlargement of their locomotive powers, by fuch change: and birds and infects burfting the shell their habitation, and by this means

enter-

entering into a new world, furnished with new accommodations for them, and finding a new sphere of action assigned them; these are instances of this general law of nature. Thus all the various and wonderful transformations of animals are to be taken into confideration here. But the states of life in which we ourselves existed formerly in the womb and in our infancy, are almost as different from our present in mature age, as it is possible to conceive any two states or degrees of life can be. Therefore, that we are to exist hereafter, in a state as different (suppose) from our present, as this is from our former, is but according to the analogy of nature; according to a natural order or appointment of the very same kind, with what we have already experienced.

II. We know we are endued with capacities of action, of happiness, and misery: for we are conscious of acting, of enjoying pleasure, and suffering pain. Now that we have these powers and capacities before death, is a presumption that we shall retain them through and after death; indeed a probability of it abundantly sufficient to act upon, unless there be some positive rea-

B 4

fon to think that death is the destruction of those living powers: because there is in every case a probability, that all things will continue as we experience they are, in all respects, except those in which we have some reason to think they will be altered. This is that kind* of prefumption or probability from analogy expressed in the very word Continuance, which feems our only natural reason for believing the course of the world will continue to-morrow, as it has done fo far as our experience or knowledge of history can carry us back. Nay, it feems our only reason for believing, that any one substance now existing, will continue to exist a moment longer; the felf-existent substance only excepted. Thus, if men were affured the unknown event death, was not the deftruction of our faculties of perception and of action, there would be no apprehension any other power or event unconnected with this of death, would destroy those faculties just at the instant of each creature's

death,

^{*} I say a KIND of presumption or probability; for I do not mean to affirm that there is the same Degree of conviction, that our living powers will continue after death, as there is, that our substances will.

death; and therefore no doubt but that they would remain after it: which shews the high probability that our living powers will continue after death, unless there be some ground to think that death is their destruction*. For, if it would be in a manner certain that we should survive death, provided it were certain that death would not be our destruction, it must be highly probable we shall survive it, if there be no ground to think death will be our destruction.

* Destruction of living powers, is a manner of expreffion unavoidably ambiguous; and may fignify either the destruction of a living being, so as that the same living being shall be uncapable of ever perceiving or acting again at all; Or, the destruction of those means and inftruments by which it is capable of its prefent life, of its present state of perception and of action. It is here used in the former sense. When it is used in the latter, the epithet PRESENT is added. The loss of a man's eye is a destruction of living powers in the latter sense. But we have no reason to think the destruction of living powers, in the former fense, to be possible. We have no more reason to think a being endued with living powers, ever loses them during its whole existence, than to believe that a stone ever acquires them.

Now

Now though I think it must be acknowledged, that prior to the natural and moral proofs of a future life commonly insisted upon, there would arise a general confused suspicion, that in the great shock and alteration which we shall undergo by death, We, i. e. our living powers, might be wholly destroyed; yet even prior to those proofs, there is really no particular distinct ground or reason for this apprehension at all, so far as I can find. If there be, it must arise either from the reason of the thing, or from the analogy of nature.

But we cannot argue from the reason of the thing, that death is the destruction of living agents, because we know not at all what death is in itself; but only some of its effects, such as the dissolution of slesh, skin, and bones. And these effects do in no wise appear to imply the destruction of a living agent. And besides, as we are greatly in the dark, upon what the exercise of our living power depends, so we are wholly ignorant what the powers themselves as distinguished, not only from their actual exercise, but also from the present capacity of exercising them; and

as opposed to their destruction: for sleep, or however a fwoon, shews us, not only that the powers exist when they are not exercised, as the passive power of motion does in inanimate matter; but shews also that they exift, when there is no present capacity of exercifing them: or that the capacities of exercifing them for the prefent, as well as the actual exercise of them, may be sufpended, and yet the powers themselves remain undestroyed. Since then we know not at all upon what the existence of our living powers depends, this shews further, there can be no probability collected from the reason of the thing, that death will be their destruction: because their existence may depend, upon somewhat in no degree affected by death; upon fomewhat quite out of the reach of this king of terrors.-So that there is nothing more certain, than that the reason of the thing, shews us no connection between death, and the destruction of living agents. Nor can we find any thing throughout the whole analogy of nature, to afford us even the flightest prefumption, that animals ever lofe their living powers; much less, if it were possible, that that they lose them by death: for we have no faculties wherewith to trace any beyond or through it, so as to see what becomes of them. This event removes them from our view. It destroys the sensible proof, which we had before their death, of their being possessed of living powers, but does not appear to afford the least reason to believe that they are, then, or by that event, deprived of them.

And our knowing, that they were posfessed of these powers, up to the very period to which we have faculties capable of tracing them, is itself a probability of their retaining them, beyond it. And this is confirmed, and a sensible credibility is given to it, by observing the very great and astonishing changes which we have experienced; so great, that our existence in another state of life, of perception and of action, will be but according to a method of providential conduct, the like to which has been already exercised even with regard to ourselves; according to a course of nature, the like to which, we have already gone through.

However, as one cannot be greatly senfible, how difficult it is to silence imagina-

tion

tion enough to make the voice of reason even distinctly heard in this case: as we are accustomed, from our youth up, to indulge that forward, delusive faculty, ever obtruding beyond its fphere; of some affistance indeed to apprehension, but the author of all error: As we plainly lofe ourselves in gross and crude conceptions of things, taking for granted that we are acquainted with, what indeed we are wholly ignorant of; it may be proper to confider the imaginary prefumptions, that death will be our destruction, arifing from these kinds of early and lasting prejudices; and to shew how little they can really amount to, even though we cannot wholly divest ourselves of them. And.

I. All prefumption of death's being the destruction of living beings, must go upon supposition that they are compounded; and so, discerptible. But since consciousness is a single and indivisible power, it should seem that the subject in which it resides, must be so too. For were the motion of any particle of matter absolutely one and indivisible, so as it should imply a contradiction to suppose part of this motion to exist, and part

part not to exist, i. e. part of this matter to move, and part to be at rest; then its power of motion would be indivisible: and fo also would be the subject in which the power inheres, namely the particle of matter: for if this could be divided into two, one part might be moved and the other at rest, which is contrary to the supposition. In like manner it has been argued*, and, for any thing appearing to the contrary, justly, that fince the perception or consciousness, which we have of our own existence, is indivisible, so as that it is a contradiction to suppose one part of it should be here and the other there; the perceptive power, or the power of consciousness, is indivisible too: and confequently the subject in which it refides; i. e. the conscious being. Now upon fupposition that living agent each man calls himself, is thus a single being, which there is at least no more difficulty in conceiving than in conceiving it to be a compound, and of which there is the proof now mentioned; it follows, that our organized bodies are no more ourselves or part of ourselves, than

^{*}See Dr. Clarke's letter to Mr. Dodwell, and the defences of it.

any other matter around us. And it is as eafy to conceive, how matter, which is no part of ourselves, may be appropriated to us in the manner which our prefent bodies are. as how we can receive impressions from, and have power over any matter. It is as easy to conceive, that we may exist out of bodies, as in them: that we might have animated bodies of any other organs and fenses wholly different from these now given us, and that we may hereafter animate these same or new bodies variously modified and organized; as to conceive how we can animate fuch bodies as our present. And lastly, the dissolution of all these several organized bodies, fupposing ourselves to have fucceffively animated them, would have no more conceivable tendency to deftroy the living beings ourselves, or deprive us of living faculties, the faculties of perception and of action, than the diffolution of any foreign matter, which we are capable of receiving impressions from, and making use of for the common occasions of life.

II. The fimplicity and absolute oneness of a living agent cannot indeed, from the nature of the thing, be properly proved, by

3

ex-

experimental observations. But as these fall in with the supposition of its unity, so they plainly lead us to conclude certainly, that our gross organized bodies, with which we perceive the objects of fense, and with which we act, are no part of ourfelves: and therefore shew us, that we have no reason to believe their destruction to be ours: even. without determining whether our living fubstances be material or immaterial. For we fee by experience, that men may lofe their limbs, their organs of fense, and even the greatest part of these bodies, and yet remain the fame living agents. And perfons can trace up the existence of themselves to a time, when the bulk of their bodies was extremely small, in comparison of what it was in mature age: and we cannot but think, that they might then have loft a confiderable part of that fmall body, and yet have remained the fame living agent?; as they may now lose great part of their prefent body and remain fo. As it is certain, that the bodies of all animals are in a constant flux, from that never-ceasing attrition, which there is in every part of them. Now things of this kind unavoidably teach us to distinguish, between these living agents ourfelves,

felves, and large quantities of matter, in which we are very nearly interested: since these may be alienated, and actually are in a daily course of succession, and changing their owners; whilst we are assured, that each living agent remains one and the same permanent being *. And this general observation leads us on to the following ones.

First, That we have no way of determining by experience, what is the certain bulk of the living being each man calls himself: and yet till it be determined that it is larger in bulk than the solid elementary particles of matter, which there is no ground to think any natural power can dissolve, there is no fort of reason to think death to be the dissolution of it, of the living being, even though it should not be absolutely indiscerptible.

Secondly, From our being so nearly related to and interested in certain systems of matter, suppose our sless and bones, and asterwards ceasing to be at all related to them, the living agents ourselves remaining all this while undestroyed, notwithstanding such alienation; and consequently these systems

^{*} See Dissertation 1.

of matter not being ourselves: it follows further, that we have no ground to conclude any other, suppose internal systems of matter: and therefore we can have no ground to conclude this, but from our relation to and interest in such other systems of matter: and therefore we can have no reason to conclude, what befalls those svstems of matter at death, to be the destruction of the living agents. We have already feveral times over lost a great part or perhaps the whole of our body, according to certain common established laws of nature; yet we remain the fame living agents: when we shall lose as great a part, or the whole, by another common established law of nature, death; why may we not also remain the same; that the alienation has been gradual in one case, and in the other will be more at once, does not prove any thing to the contrary. We have passed undestroyed through those many and great revolutions of matter, fo peculiarly appropriated to us ourfelves; why should we imagine death will be fo fatal to us? nor can it be objected, that what is thus alienated or lost, is no part of our original folid

folid body, but only adventitious matter; because we may lose entire limbs, which must have contained many folid parts and veffels of the original body; or if this be not admitted, we have no proof that any of these folid parts are diffolved or alienated by death. Though, by the way we are very nearly related to that extraneous or adventitious matter, whilst it continues united to and distending the several parts of our folid body. But after all; the relation a person bears to those parts of his body, to which he is the most nearly related; what does it appear to amount to but this, that the living agent, and those parts of the body, mutually affect each other? And the fame thing, the fame thing in kind, though not in degree, may be faid of all foreign matter, which gives us ideas, and which we have any power over. From thefe observations the whole ground of the imagination is removed, that the diffolution of any matter, is the destruction of a living agent, from the interest he once had in such matter.

Thirdly, If we confider our body fomewhat more distinctly, as made up of organs C 2 and

and instruments of perception and of motion, it will bring us to the fame conclusion. Thus the common optical experiments show, and even the observation how fight is affifted by glaffes, shows that we see with our eyes in the same sense as we see with glaffes. Nor is there any reason to believe, that we fee with them in any other fense; any other, I mean, which would lead us to think the eye itself a percipient. The like is to be faid of hearing: and our feeling distant solid matter by means of fomewhat in our hand, feems an instance of the like kind, as to the subject we are confidering. All these are instances of foreign matter, or fuch as is no part of our body, being inftrumental in preparing objects for, and conveying them to, the perceiving power, in a manner fimilar or like to the manner in which our organs of fense perpare and convey them. Both are in like way instruments of our perceiving such ideas from external objects, as the author of nature appointed those external objects to be the occasions of exciting in us. However, glasses are evidently instances of this; namely of matter, which is no part of our body

body, preparing objects for and conveying them towards the perceiving power, in like manner as our bodily organs do. And if we fee with our eyes only in the same manner as we do with glaffes, the like may justly be concluded, from analogy, of all our other fenses. It is not intended, by any thing here faid, to affirm, that the whole apparatus of vision, or of perception by any other of our fenses, can be traced, through all its steps, quite up to the living power of feeing, or perceiving: but that fo far as it can be traced by experimental obfervations, fo far it appears, that our organs of fense prepare and convey on objects, in order to their being perceived, in like manner as foreign matter does, without affording any shadow of appearance, that they themselves perceive. And that we have no reason to think our organs of fense percipients, is confirmed by instances of persons losing some of them, the living beings, themselves, their former occupiers, remaining unimpaired. It is confirmed also by the experience of dreams; by which we find we are at present possessed of a latent, and what would otherwise be, an unima-

 C_{β}

gined unknown power of perceiving fensible objects, in as strong and lively a manner without external organs of sense as with them.

So also with regard to our power of moving, or directing motion by will and choice: upon the destruction of a limb, this active power remains, as it evidently feems, unlessened; so as that the living being, who has fuffered this lofs, would be capable of moving as before, if it had another limb to move with. It can walk by the help of an artificial leg; just as it can make use of a pole or a lever, to reach towards itself and to move things, beyond the length and power of its natural arm; and this last it does in the same manner as it reaches and moves, with its natural arm, things nearer and of less weight. Nor is there as much as any appearance of our limbs being endued with a power of moving or directing themselves; though they are adapted, like the feveral parts of a machine, to be the instruments of motion to each other; and some parts of the limbs to be instrumental of motion to other parts of it.

Thus

Thus a man determines, that he will look at fuch an object through a microscope; or being lame suppose, that he will walk to fuch a place, with a staff a week hence. His eyes and his feet no more determine in these cases, than the microscope and the staff. Nor is there any ground to think they any more put the determination in practice; or that his eyes are the feers, or his feet the movers, in any other fense than as the microscope and the staff are. Upon the whole then, our organs of fense and our limbs are certainly instruments, which the living persons ourselves make use of to perceive and move with: there is not any probability, that they are any more; nor confequently, that we have any other kind of relation to them, than what we may have to any other foreign matter formed into instruments of perception and motion, suppose into a microscope or a staff; (I say any other kind of relation, for I am not speaking of the degree of it) nor confequently is there any probability, that the alienation or diffolution of these instruments is the destruction of the perceiving and moving agent.

C 4

And

And thus our finding, that the diffolution of matter, in which living beings were most nearly interested, is not their dissolution; and that the destruction of several of the organs and instruments of perception and of motion belong to them, is not their destruction; shows demonstratively, that there is no ground to think that the dissolution of any other matter, or destruction of any other organs and instruments, will be the dissolution or destruction of living agents, from the like kind of relation. And we have no reason to think we stand in any other kind of relation to any thing which we find dissolved by death.

But it is faid these observations are equally applicable to brutes: and it is thought an insuperable difficulty, that they should be immortal, and by consequence capable of everlasting happiness. Now this manner of expression is both invidious and weak; but the thing intended by it, is really no difficulty at all, either in the way of natural or moral consideration. For 1st, Suppose the invidious thing, designed in such a manner of expression, were really implied as it is not in the least, in the natural im-

more

mortality of brutes; namely, that they must arrive at great attain nents, and become rational and moral agents; even this would be no difficulty; fince we know not what latent powers and capacities they may be endowed with. There was once, prior to experience, as great prefumption against human creatures, as there is against the brute creatures, arriving at that degree of understanding, which we have in mature age. For we can trace up our own existence to the fame original with theirs. And we find it to be a general law of nature, that creatures endued with capacities of-virtue and religion, should be placed in a condition of being, in which they are altogether without the use of them, for a confiderable length of their duration; as in infancy and childhood. And great part of the human species go out of the present world, before they come to the exercise of these capacities in any degree at all. But then, 2dly, The natural immortality of brutes does not in the least imply, that they are endued with any latent capacities of a rational or moral nature. And the œconomy of the universe might require, that there

there should be living creatures, without any capacities of this kind. And all difficulties as to the manner how they are to be disposed of, are so apparently and wholly founded in our ignorance, that it is wonderful they fhould be infifted upon by any, but fuch as are weak enough to think they are acquainted with the whole fystem of things. There is then absolutely nothing at all in this objection, which is fo rhetorically urged, against the greatest part of the natural proofs or prefumptions of the immortality of human minds: I fay the greatest part; for it is less applicable to the following obfervation, which is more peculiar to mankind :

III. That as it is evident our present powers and capacities of reason, memory, and affection, do not depend upon our gross body in the manner in which perception by our organs of sense does; so they do not appear to depend upon it at all in any such manner, as to give ground to think, that the dissolution of this body will be the destruction of these our present powers of rested ion; or to give ground to conclude, even that

that it will be so much as a suspension of the former.

Human creatures exist at present in two states of life and perception, greatly different from each other; each of which has its own peculiar laws, and its own peculiar enjoyments and fufferings. When any of x our senses are affected, or appetites gratified, with the objects of them, we may be faid to exist or live in a state of sensation. When none of our fenses are affected, or appetites gratified, and yet we perceive, and reason, and act; we may be faid to exist or live in a state of reflection. Now it is by no means x certain, that any thing which is diffolved by death, is any way necessary to the living being in this its state of reflection, after ideas are gained. For, though from our present constitution and condition of being, our external organs of fense are necessary for conveying in ideas to our reflecting powers, as carriages, and levers, and fcaffolds are in architecture; yet when these ideas are brought in, we are capable of reflecting in the most intense degree, and of enjoying the greatest pleasure and feeling the greatest pain by means of that reflection, without any affift.

affiftance from our fenfes; and without any at all, which we know of, from that body, which will be diffolved by death. It does not appear then, that the relation of this gross body to the reflecting being, is in any degree necessary to thinking; to our intellectual enjoyments or fufferings: nor confequently, that the diffolution or alienation of the former by death, will be the destruction of those present powers, which render us capable of this state of reflection. -Further there are instances of mortal diseases, which do not at all affect our present intellectual powers; and this affords a prefumption, that those diseases will not deftroy these present powers. Indeed, from the observations made above, it appears, that there is no prefumption, from their mutually affecting each other, that the diffolution of the body is the destruction of the living agent. And by the same reafoning, it must appear too, that there is no prefumption, from their mutually affecting each other, that the diffolution of the body is the destruction of our present reflecting powers: but instances of their not affecting each other, afford a prefumption of the

contrary. Instances of mortal diseases not impairing our present reflecting powers, evidently turn our thoughts even from imagining fuch difeases to be the destruction of them. Several things indeed greatly affect all our living powers, and at length fuspend the exercise of them; as for instance drowfiness, increasing till it ends in found fleep; and from hence we might have imagined it would destroy them, till we found by experience the weakness of this way of judging. But in the diseases now mentioned, there is not fo much as this shadow of probability, to lead us to any fuch conclusion as to the reflecting powers which we have at prefent. For in those diseases, persons the moment before death appear to be in the highest vigour of life. They discover apprehension, memory, reason, all entire; with the utmost force of affection; sense of a character, of shame and honour; and the highest mental enjoyments and sufferings, even to the last gasp: and these surely prove even greater vigour of life than bodily strength does. Now what pretence is

there

there for thinking, that a progressive difease when arrived to such a degree, I mean that degree which is mortal, will destroy those powers which were not impaired, which were not affected by it, during its whole progress quite up to that degree? And if death by diseases of this kind, is not the destruction of our present reslecting powers, it will scarce be thought that death by any other means is.

It is obvious that this general observation may be carried on farther: and there appears fo little connexion between our bodily powers of fensation, and our prefent powers of reflection, that there is no reason to conclude, that death which destroys the former, does so much as suspend the exercise of the latter, or interrupt our continuation to exist in the like state of reflection which we do now. For fuspenfion of reason, memory, and the affections which they excite, is no part of the idea of death, nor is it implied in our notion of it. And our daily experiencing those powers to be exercifed, without any affiftance that we know of from those bodies, which,

which will be diffolved by death; and our finding often, that the exercise of them is fo lively to the last; these things afford a fensible apprehension, that death may not perhaps' be fo much as a discontinuance of the exercise of these powers, nor of the enjoyments and fufferings which it implies *. So that our posthumous life, whatever there may be in it additional to our present, yet may not entirely be beginning anew; but going on. Death may, in fome fort, and in some respects, answer our birth; which is not a suspension of the faculties which we had before it, or a total change of the state of life in which we existed when in the womb; but a continuation of both, with fuch and fuch great alterations.

* There are three distinct questions, relating to a future life, here considered: Whether death be the destruction of living agents; if not, whether it be the destruction of their present powers of reslection, as it certainly is the destruction of their present powers of sensation; and if not, whether it be the suspension, or discontinuance of the exercise, of these present reslecting powers. Now if there be no reason to believe the last, there will be, if that were possible, less for the next, and less still for the sirst.

Nay, for aught we know of ourselves, of our present life and of death; death may immediately, in the natural course of things, put us into a higher and more enlarged state of life, as our birth does *; a state in which our capacities, and sphere of, perception and of action, may be much greater than at present. For as our relation to our external organs of fenfe, renders us capable of existing in our present state of fenfation; fo it may be the only natural hinderance to our existing, immediately and of course, in a higher state of reflection,-The truth is, reason does not at all shew us, in what state death naturally leaves us .-But were we fure, that it would suspend allour perceptive and active powers; yet the suspension of a power and the destruction

^{*} This, according to Strabo, was the opinion of the Brachmans, νομιζειν μεν γαρ δε τον μεν ενδαδε Βιον, ως αν ακμην κυσμενων ειναι, τον δε δανατον, γενεσιν εις τον οντως βιον, και τον ευδαιμονα τοις φιλοσοφησασι. Lib. XV. p. 1039. Ed. Am. 1707. To which opinion perhaps Antoninus may allude in these words, ως νυν περιμενεις, ποτε εμθρυον εκ της γαστρος της γυναικος σου εξελθη, ουθως εκδεχεσδαι την ωραν εν η το ψυχαριον σου τον ελυτρου τουτου εκκτεσειται. Lib. IX. c. 3-

of it, are effects fo totally different in kind, as we experience from fleep and a fwoon, that we cannot, in any wife argue from one to the other; or conclude even to the lowest degree of probability, that the same kind of force which is sufficient to suspend our faculties, though it be increased ever so much, will be sufficient to destroy them.

These observations together may be sufficient to fhew, how little prefumption there is, that death is the destruction of human creatures. However there is the shadow of an analogy, which may lead us to imagine it is; the supposed likeness which is obfervable between the decay of vegetables, and living creatures. And this likeness is indeed fufficient to afford the poets very apt allusions to the flowers of the field, in their pictures of the frailty of our present life. But in reason, the analogy is so far from holding, that there appears no ground even for the comparison, as to the present question; because one of the two subjects compared, is wholly void of that, which is the principal and chief thing in the other, the power of perception and of action; and which is the only thing we are inquiring about

about the continuance of. So that the defiruction of a vegetable, is an event not fimilar or analogous to the destruction of a living agent.

But if, as was above intimated, leaving off the delufive cuftom of fubflituting imagination in the room of experience, we would confine ourselves to what we do know and understand; if we would argue only from that, and from that, form our expectations; it would appear at first fight, that as no probability of living beings ever ceasing to be so, can be concluded from the reason of the thing; so none can be collected from the analogy of nature; because we cannot trace any living beings beyond death. But as we are conscious, that we are endued with capacities of perception and of action, and are living persons; what we are to go upon is, that we shall continue so, till we foresee some accident or event, which will endanger those capacities, or be likely to destroy us: which death does in no wife appear to be.

And thus, when we go out of this world, we may pass into new scenes, and a new state of life and action, just as haturally

turally as we came into the prefent. And this new state may naturally be a focial one. And the advantages of it, advantages of every kind, may naturally be bestowed, according to some fixt general laws of wifdom, upon every one in proportion to the degrees of his virtue. And though the advantages of that future natural state should not be bestowed, as these of the present in fome measure are, by the will of the fociety; but entirely by his more immediate action, upon whom the whole frame of nature depends: yet this distribution may be just as natural, as their being distributed here by the instrumentality of men. indeed, though one were to allow any confused undetermined sense, which people please to put upon the word natural, it would be a shortness of thought scarce credible, to imagine, that no fystem or course of things can be fo, but only what we fee at prefent: *especially whilst the probability of a future life, or the natural immortality of the foul, is admitted upon the evidence of reason; because this is really

^{*} See Part If. Ch. ii. and Ch. iii.

both admitting and denying at once, a state of being, different from the present to be natural. But the only distinct meaning of that word is stated, fixed, and settled: fince what is natural, as much requires and prefupposes an intelligent agent to render it so, i. e. to effect it continually, or at stated times; as what is fupernatural or miraculous does to effect it for once. And from hence it must follow, that persons notions of what is natural, will be enlarged in proportion to their greater knowledge of the works of God, and the dispensations of his providence. Nor is there any abfurdity in fuppofing, that there may be beings in the universe, whose capacities, and knowledge, and views, may be fo extensive, as that the whole christian dispensation may to them appear natural, i. e. analogous or conformable to God's dealings with other parts of his creation: as natural as the vifible known course of things appears to us.-For there feems scarce any other possible fense to be put upon the word, but that only in which it is here used; similar. stated, or uniform.

This

This credibility of a future life, which has been here infifted upon, how little foever it may fatisfy our curiofity, feems to answer all the purposes of religion, in like manner as a demonstrative proof would. Indeed a proof, even a demonstrative one, of a future life, would not be a proof of religion. For, that we are to live hereafter, is ** just as reconcileable with the scheme of x Atheism, and as well to be accounted for > by it, as that we are now alive, is: and therefore nothing can be more abfurd than & to argue from that scheme, that there can * be no future state. But as religion implies > a future state, any prefumption against such a state, is a prefumption against religion: and the foregoing observations remove all prefumptions of that fort, and prove, to a very confiderable degree of probability, one fundamental doctrine of religion; which, if believed, would greatly open and disposé the mind ferioufly to attend to the general evidence of the whole.

CHAP. II.

OF THE GOVERNMENT OF GOD BY RE-WARDS AND PUNISHMENTS; AND PAR-TICULARLY OF THE LATTER.

HAT which makes the question concerning a future life to be of fo great importance to us, is our capacity of happiness and misery. And that which makes the confideration of it to be of fo great importance to us, is the supposition of our happiness and misery hereafter depending upon our actions here. Without this indeed, curiofity could not but fometimes bring a fubject, in which we may be fo highly interested, to our thoughts; especially upon the morality of others, or the near prospect of our own. But reafonable men would not take any farther thought about hereafter, than what should happen thus occasionally to rife in their minds, if it were certain, that our future interest interest no way depended upon our present behaviour: whereas on the contrary, if there be ground, either from analogy or any thing elfe, to think it does; then there is reason also for the most active thought and folicitude, to fecure that interest; to behave so as that we escape that mifery, and obtain that happiness in another life, which we not only suppose ourselves capable of, but which we apprehend also is put in our power. And whether there be ground for this last apprehension, certainly would deserve to be most seriously considered, were there no other proof of a future life and interest, than that presumptive one, which the foregoing observations amount to.

Now in the present state, all which we s enjoy, and a great part of what we fuf-> fer, is put in our own power. For pleafure and pain are the consequences of our actions; and we are endued by the author of our nature with capacities of forefeeing these consequences. We find by + experience he does not fo much as preserve our lives, exclusively of our own care and attention, to provide ourselves with,

D 4

and to make use of, that sustenance, by which he has appointed our lives shall be preferved; and without which, he has appointed, they shall not be preserved at all. And in general we forefee, that the external things, which are the objects of our various passions, can neither be obtained nor enjoyed, without exerting ourfelves, in fuch and fuch manners; but by thus exerting ourselves we obtain and enjoy these objects, in which our natural good confifts; or by this means God gives us the possession and enjoyment of them. I know not, that we have any one kind or degree of + enjoyment, but by the means of our own + actions. And by prudence and care, we may, for the most part, pass our days in tolerable ease and quiet: or on the contrary, we may by rashness, ungoverned passion, willfulness, or even by negligence, make ourselves as miserable as ever we please. And many do please to make themselves extremely miserable, i. e. to do what they know beforehand will render them fo. They follow those ways, the fruit of which they know, by instruction, example, experience, will be difgrace and poverty

and

and fickness and untimely death. This every one observes to be the general course of things; though it is to be allowed, we cannot find by experience, that all our sufferings are owing to our own follies.

Why the author of nature does not give his creatures promifcuoufly fuch and fuch perceptions, without regard to their behaviour; why he does not make them happy without the instrumentality of their own actions, and prevent their bringing any fufferings upon themselves; is another matter. Perhaps there may be fome impoffibilities in the nature of things, which we are unacquinted with *. Or less happiness, it may be, would upon the whole be produced by fuch a method of conduct, than is by the present. Or perhaps divine goodness, with which, if I mistake not, we make very free in our speculations, may not be a bare fingle disposition to produce happiness; but a disposition to make the good, the faithful, and the honest man, happy. Perhaps an infinitely perfect mind may be pleafed, with feeing his creatures behave fuitably to the nature which he has given them: to the relations

^{*} Ch. vii.

which he has placed them in to each other; and to that, which they stand in to himself: that relation to himself, which during their existence, is even necessary, and which is the most important one of all: perhaps, I fay, an infinitely perfect mind may be pleafed with this moral piety of moral agents, in and for itself; as well as upon account of its being effentially conducive to the happiness of his creation. Or the whole end, for which God made, and thus governs the world, may be utterly be-yond the reach of our faculties: there may be fomewhat in it as impossible for us to have any conception of, as for a blind man to have a conception of colours. But however this be, it is certin matter of universal experience, that the general method of divine administration, is, forewarning us, or giving us capacities to forefee, with more or less clearness, that if we act so and so, we shall have such enjoyments, if fo and fo, fuch fufferings; and giving us those enjoyments, and making us feel thofe

those sufferings, in consequence of our actions.

"But all this is to be afcribed to the " general course of nature." True. This is the very thing which I am observing. It is to be afcribed to the general course of nature: i. e. not furely to the words or ideas, " course of nature," but to him who appointed it, and put things into it: or to a course of operation, from its uniformity or constancy called natural; and which necessarily implies an operating agent. For when men find themselves necessitated to confess an author of nature, or that God is the natural governor of the world; they must not deny this again, because his government is uniform: they must not deny that he does all things at all, because he does them constantly; because the effects of his acting are permanent, whether his acting be fo or not; though there is no reason to think it is not. In short, every man, in every thing he does, naturally acts upon the forethought and apprehension of avoiding evil or obtaining good

good: and if the natural course of things be the appointment of God, and our natural faculties of knowledge and experience are given us by him; then the good and bad consequences which follow our actions, are his appointment, and our foresight of those consequences, is a warning given us by him, how we are to act.

" Is the pleasure then, naturally ac-66 companying every gratification of paf-" fion, intended, to put us upon gratify-" ing ourselves in every such particular " instance, and as a reward to us for fo " doing." No certainly. Nor is it to be faid, that our eyes were naturally intended to give us the fight of each particular object, to which they do or can extend; objects which are destructive of them, or which, for any other reason, it may become us to turn our eyes from. Yet there is no doubt but that our eyes were intended for us to fee with. neither is there any doubt, but that the foreseen pleasures and pains belonging to the passions, were intended, in general, to induce mankind to act in fuch and fuch manners.

Now from this general observation, obvious to every one, that God has given us to understand, he has appointed fatisfaction and delight to be the consequence of our acting in one manner, and pain and uneafiness of our acting in another, and of our not acting at all; and that we find the consequence, which we were beforehand informed of, uniformly to follow; we may learn, that we are at prefent actually under his government in the strictest and most proper sense; in such a sense as that he rewards and punishes us for our actions. An author of nature being fupposed, it is not so much a deduction of reason, as a matter of experience, that we are thus under his government: under his government, in the fame fense, as we are under the government of civil magiftrates. Because the annexing pleasure to fome actions, and pain to others, in our power to do or forbear, and giving notice of this appointment before-hand to those to whom it concerns; is the proper formal notion of government. Whether the pleasure or pain which thus follows upon our behaviour, be owing to the author of nature's

nature's acting upon us every moment in which we feel it; or to his having at once contrived and executed his own part in the plan of the world; makes no alteration as to the matter before us. For if civil magistrates could make the fanction of their laws take place, without interposing at all, after they had passed them; without a trial and the formalities of an execution; if they were able to make their laws execute themselves, or every offender to execute them upon himself; we should be just in the same sense under their government then, as we are now, but in a much higher degree, and more perfect manner .- Vain is the ridicule, with which, one foresees, some persons will divert themfelves, upon finding leffer pains confidered as instances of divine punishment. There is no possibility of answering or evading the general thing here intended, without denying all final causes. For final causes being admitted, the pleafures and pain now mentioned must be admitted too as instances of them. And if they are; if God annexes delight to fome actions, and uneafiness to others, with an apparent defign to induce us to act fo and fo: then he not only dispenses happiness and misery but also rewards and punishes actions. If, for example, the pain which we feel, upon doing what tends to the destruction of our bodies, suppose upon too near approaches to fire, or upon wounding ourselves, be appointed by the author of nature to prevent our doing what thus tend to our destruction; this is altogether as much an instance of his punishing our actions, and consequently of our being under his government, as declaring by a voice from heaven, that if we acted fo, he would inflict fuch pain upon us, and inflicting it, whether it be greater or lefs.

Thus we find, that the true notion or conception of the author of nature, is that of a master or governor, prior to the confideration of his moral attributes. The fact of our case, which we find by experience, is, that he actually exercises dominion or government over us at prefent, by rewarding and punishing us for our actions, in as strict and proper a fense of these words, and even in the same sense, as children, fervants,

fervants, subjects, are rewarded and punished by those who govern them.

And thus the whole analogy of nature, the whole present course of things, most fully shows, that there is nothing incredible in the general doctrine of religion; that God will reward and punish men for their actions hereafter: nothing incredible, I mean, arifing out of the notion of rewarding and punishing. For the whole course of nature is a present instance of his exercifing that government over us, which implies in it rewarding and punishing.

BUT as divine punishment is what men chiefly object against, and are most unwilling to allow; it may be proper to mention fome circumstances in the natural course of punishments at present, which are analogous to what religion teaches us concerning a future frate of punishment: indeed so analogous, that as they add a further credibiity to it, fo they cannot but raise a most ferious apprehension of it in those who will attend to them.

IT has been now observed, that fuch and fuch miferies naturally follow fuch and fuch actions of imprudence and willfulnefs,

as well as actions more commonly and more distinctly considered as vicious; and that these consequences, when they may be foreseen, are properly natural punishments annexed to fuch actions. For the general thing here infifted upon, is, not that we fee a great deal of mifery in the world, but a great deal which men bring upon themselves by their own behaviour, which they might have foreseen and avoided. Now the circumstances of these natural punishments, particularly deferving our attention, are fuch as these: that oftentimes they follow, or are inflicted in confequence of actions, which procure many present advantages, and are accompanied with much prefent pleasure: for instance, fickness and untimely death is the consequence of intemperance, though accompanied with the highest mirth and jollity: that these punishments are often much greater, than the advantages or pleasures obtained by the action, of which they are the punishments or consequences: that though we may imagine a constitution of nature, in which these natural punishments, which are in fact to follow, would follow

low, immediately upon fuch actions being done, or very foon after; we find on the contrary in our world, that they are often delayed a great while, fometimes even till long after the actions occasioning them are forgot; fo that the constitution of nature is fuch, that delay of punishment is no fort nor degree of prefumption delay; these natural punishments or miseries often come, not by degrees, but fuddenly with violence, and at once; however, the chief misery often does: that as certainty of such distant misery following such actions, is never afforded persons; so perhaps during the actions, they have feldom a distinct full expectation of its following *: and many times the case is only thus, that they see in general, or may fee, the credibility, that intemperance, fuppose, will bring after it difeases; civil crimes, civil punishments; when yet the real probability often is, that they shallescape; but things notwithstanding take their destined course, and the misery inevitably follows at its appointed time,

^{*} See Part II. Ch. vi:

in very many of these cases. Thus also though youth may be alledged as an excufe for rashness and folly, as being naturally thoughtless, and not clearly foreseeing all the consequences of being untractable and profligate; this does not hinder, but that these consequences follow, and are grievously felt throughout the whole course of mature life. Habits contracted even in that age, are often utter ruin: and men's fuccess in the world, not only in the common fense of worldly success, but their real happiness and misery depends in a great degree, and in various ways, upon the manner in which they pass their youth; which consequences they for the most part negled to consider, and perhaps feldom can probably be faid to believe, beforehand. It requires also to be mentioned, that in numberless cases, the natural course of things affords us opportunities for procuring advantages to ourtelves at certain times, which we cannot procure when we will; nor ever recall the opportunities, if we have neglected them. Indeed the general course of nature is an example of this. If, during the opportunity of youth

youth, persons are indocile and self-willed; they inevitably fuffer in their future life, for want of those acquirements, which they neglected the natural feafon of attaining. If the husbandman lets his feed time pass without fowing, the whole year is loft to him beyond recovery. In like manner, though after men have been guilty of folly and extravagance up to a certain degree, it is often in their power, for instance, to retrieve their affairs, to recover their health and character; at least in good meafure: yet real reformation is in many cases, of no avail at all towards preventing the miseries, poverty, sickness, infamy, naturally annexed to folly and extravagance exceeding that degree. There is a certain bound to imprudence and mifbehaviour, which being transgressed, there remains no place for repentance in the natural course of things. It is further very much to be remarked, that neglects from inconfiderateness, want of attention*, not I looking about us to fee what we have to + do, are often attended with confequences

^{*} Part II: Ch vi.

aitogether as dreadful, as any active mifbehaviour, from the most extravagant passfion. And lastly, civil government being +
natural, the punishments of it are so too:
and some of these punishments are capital; as the effects of a dissolute course of
pleasure are often mortal. So that many
natural punishments are final * to him, who
in-

* The general confideration of a future state of punishment most evidently belongs to the subject of natural religion But if any of these reflections should be thought to relate more peculiarly to this doctrine as taught in Scripture; the reader is defired to observe, that gentile writers, both moralifts and poets, fpeak of the future punishment of the wicked, both as to the duration and degree of it, in a like manner of expreffion and of description, as the Scripture does. So that all which can positively be afferted to be matter of mere revelation with regard to this doctrine, feems to be, that the great distinction between the righteous and the wicked, shall be made at the end of this world; that each shall then receive according to his deferts. Reason did, as it well might, conclude that it should, finally and upon the whole, be well with the righteous, and ill with the wicked: but it could not be determined, upon any principles of reason, whether human creatures might not have been appointed to pass through other states of life and being, before that distributive justice should finally and effectually E 3

incurs them, if confidered only in his temporal capacity: and feem inflicted by natural appointment, either to remove the offender out of the way of being further mifchievous; or as an example, though frequently a difregarded one, to those who are left behind.

These things are not, what we call accidental, or to be met with only now and then; but they are things of every day's experience: they proceed from general laws, very general ones, by which God governs the world, in the natural course of his providence. And they are so analogous, to what religion teaches us concerning the future punishment of the wicked, so much of a piece with it, that both would be naturally expressed in the very same words, and manner of description. In the book of Proverbs +, for instance, wisdom is in-

take place. Revelation teaches us, that the next state of things after the present, is appointed for execution of this justice; that it shall be no longer delayed; but the mystery of God, the great mystery of his suffering vice and confusion to prevail, shall then be sinished; and he will take to him his great power and will reign, by rendering to every man according to his works.

† Chap. 1.

troduced, as frequenting the most public places of refort, and as rejected when she offers herfelf as the natural appointed guide of human life. " How long, speaking to those who are passing through it, how long, ye fimple ones, will ye love folly, and the fcorners delight in their fcorning, and fools hate knowledge? Turn ye at my reproof. Behold, I will pour out my fpirit upon you," I will make known my words unto you. But upon being neglected, "because I have called, and ye refused, I have stretched out my hand, and no man regardeth; but ye have fet at nought all my counfel, and would none of my reproof: I also will laugh at your calamity, I will mock when your fear cometh; when your fear cometh as defolation, and your destruction cometh as a whirlwind; when diffress and anguish cometh upon you. Then shall they call upon me, but I will not answer; they shall seek me early, but they shall not find me." This passage, every one sees, is poetical, and fome parts of it are highly figurative; but their meaning obvious. And the thing intended is expressed more E4 literally

literally in the following words: "For that they hated knowledge, and did not chuse the fear of the Lord—therefore shall they eat of the fruit of their own way, and be filled with their own devices. For the security of the simple shall slay them, and the prosperity of fools shall destroy them." And the whole passage is so equally applicable, to what we experience in the present world, concerning the confequences of men's actions, and to what religion teaches us as to be expected in another, that it may be questioned which of the two was principally intended.

Indeed when one has been recollecting the proper proofs of a future state of rewards and punishments, nothing methinks can give one so sensible an apprehension of the latter, or representation of it to the mind; as observing, that after the many disregarded checks, admonitions and warnings, which people meet with in the ways of vice and folly and extravagance; warnings from their very nature; from the examples of others; from the lesser inconveniences which they bring upon themselves; from the instructions of wife and virtuous

virtuous men: after these have been long despised, scorned, ridiculed; after the chief bad confequences, temporal confequences, of their follies, have been delayed for a great while; at length they break in irrefiftibly, like an armed force: repentance is too late to relieve, and can ferve only to aggravate their distress: the case is become desperate; and poverty and sickness, remorfe and anguish, infamy and death, the effects of their own doings, overwhelm them, beyond possibility of remedy or escape. This is an account of what is in fact the general constitution of nature.

It is not in any fort meant, that according to what appears at present of the natural course of thing, men are always uniformly punished in proportion to their misbehaviour; but that there are very many instances of misbehaviour punished in the feveral ways now mentioned, and very dreadful instances too; sufficient to show what the laws of the universe may admit; and, if thoroughly considered, sufficient fully to answer all objection against the credibility of a future state of punishments, from any imaginations, that the frailty of our nature and external temptations almost annihilate the guilt of human vices: as well as objections of another fort; from necessity; from suppositions, that the will of an infinite being cannot be contradicted or that he must be incapable of offence and provocation.

Reflections of this kind are not without their terrors to ferious persons, the most free 'from enthusiasm, and of the greatest firength of mind: but it is fit things be stated and confidered as they really are. And there is, in the prefent age, a certain fearlessness, with regard to what may be hereafter under the government of God, which, nothing but an universal acknowledged demonstration on the side of atheism. can justify; and which makes it quite neceffary, that men be reminded, and if possible made to feel, that there is no fort of ground for being thus prefumptuous. even upon the most sceptical principles. For, may it not be faid of any person upon his being born into the world, he may behave fo, as to be of no fervice

⁺ See Ch. iv; and Ch. vi.

to it, but by being made an example of the woeful effects of vice and folly! That he may, as any one may, if he will, incur an infamous execution, from the hands of civil justice; or in some other course of extravagance shorten his days: or bring upon himself infamy and diseases worse than death? So that it had been better for him, even with regard to the present world, that he had never been born. And is there any pretence of reason, for people to think themselves secure, and talk as if they had certain proof, that let them act as licentioufly as they will, there can be nothing analogous to this, with regard to a future and more general interest, under the providence and government of the same God.

CAAP. III.

OF THE MORAL GOVERNMENT OF GOD.

S the manifold appearances of defign, and final causes, in the constitution of the world, prove it to be the work of an intelligent mind; so the particular final causes of pleasure and pain distributed among his creatures, prove that they are under his government; what may be called his natural government of creatures endued with fense and reason, This, however, implies somewhat more than feems usually attended to, when we speak of God's natural government of the word. It implies government of the very fame kind with that, which a a master exercises over his servants, or a civil magistrate over his subjects. These latter instances of final causes as really prove an intelligent Governor of the world, in the fense now mentioned, and before * distinctly

* Chap. ii.

treated

and

treated of: as any other inflances of final causes prove an intelligent Maker of it.

But this alone does not appear at first fight to determine any thing certainly, concerning the moral character of the author of nature, confidered in this relation of government; does not ascertain his government to be moral, or prove that he is the righteous Judge of the world. Moral government consists, not barely in rewarding and punishing men for their actions, which the most tyrannical person may do: but rewarding the righteous and punishing the wicked; in rendering to men according to their actions, confidered as good or evil.-And the perfection of moral government confifts in doing this, with regard to all intelligent creatures, in an exact proportion to their personal merits or demerits.

Some men feem ro think the only character of the Author of nature to be that of fimple absolute benevolence. This confidered as a principle of action and infinite in degree, is a disposition to produce the greatest possible happiness, without regard to persons behaviour, otherwise than as such regard would produce higher degrees of it:

and supposing this to be the only character of God, veracity and justice in him would be nothing but benevolence conducted by wisdom. Now furely this ought not to be afferted, unless it can be proved; for we should speak with cautious reverence upon fuch a fubject: and whether it can be proved or no, is not the thing here to be inquired into; but whether in the constitution and conduct of the world, a righteous government be not discernibly planned out: which necessarily implies a righteous Governor. There may possibly be in the creation, beings, to whom the Author of nature manifests himself, under this most amiable of all characters, this of infinite absolute benevolence; for it is the most amiable, supposing it not, as perhaps it is not, incompatible with justice: but he mahifests himself to us under the character of a righteous Governor. He may, confistently with this, be fimply and absolutely benevolent, in the fense now explained: but he is, for he has given us a proof in the conflitution and conduct of the world that he is, a Governor over fervants, as he rewards and punishes us for our actions. And in

the

the conflitution and conduct of it, he may also have given, besides the reason of the thing, and the natural presages of conscience, clear and distinct intimations, that his government is righteous or moral: clear to such as think the nature of it deserving their attention; and yet not to every careless person, who casts a transfent reslection upon the subject*.

But it is particularly to be observed, that the divine government, which we experience ourselves under in the present state, taken alone, is allowed not to be the perfection of moral government: and yet this by no means hinders, but that there may be somewhat, be it more more or less, truly

* The objections against religion, from the evidence of it not being universal, nor so strong as might possibly have been, may be urged against natural religion, as well as against revealed. And therefore the consideration of them belongs to the first part of this treatise, as well as the second. But as those objections are chiefly urged against revealed religion. I chose to consider them in the second part. And the answer to them there, Ch. vi. as urged against Christianity, being almost equally applicable to them as urged against the religion of nature, to avoid repetition, the reader is referred to that chapter.

moral

moral in it. A righteous government may plainly appear to be carried on to some degree: enough to give us the apprehension that it shall be compleated, or carried on to that degree of perfection which religion teaches us it shall; but which cannot appear, till much more of the Divine administration be seen, than can in the present life: and the defign of this chapter is, to inquire, how far this is the case: how far, over and above the moral nature* which God has given us, and our natural notion of him as righteous Governor of those his creatures, to whom he has given this nature +; I fay how far besides this, the principles and beginnings of a moral government over the world may be discerned, notwithstanding, and amidst allthe confusion and disorder of it.

Now one might mention here, what has been often urged with great force, that in general, lefs uneafinefs and more fatisfaction, are more the natural confequences ‡ of a virtuous than of a vicious course of life;

^{*} Dissertation 2, † Ch. vi

[‡] See Lord Shaftesbury's Inquiry concerning Virtue, Part II.

in the present state, as an instance of a moral government established in nature; an instance of it, collected from experience and prefent matter of fact. But it must be owned, a thing of difficulty to weigh and balance pleasures and uneasinesses, each amongst themselves, and also against each other, so as to make an estimate with any exactness of the overplus of happiness on the fide of virtue: and it is not impossible, that, amidst the infinite disorders of the world, there may be exceptions to the happiness of virtue; even with regard to those persons, whose course of life from their youth up, has been blamelefs; and more with regard to those, who have gone on for fome time in the ways of vice, and have afterwards reformed. For suppose an instance of the latter case; a person with his passions inflamed, his natural faculty of felf-government impaired by habits of indulgence, and with all vices about him, like fo many harpies, craving for their accustomed gratification: who can say how long it might be, before fuch a person would find more fatisfaction in the reasonableness and present good consequences of virtue,

virtue, than difficulties and felf-denial in the restraints of it? Experience also shows, that men can, to a great degree, get over their fense of shame, so as that by profesfing themselves to be without principle, and avowing even direct villany, they can fupport themselves against the infamy of it.-* But as the ill actions of any one will pro-4 bably be more talked of, and oftener thrown + in his way, upon his reformation; fo the infamy of them will be much more felt, after the natural fense of virtue and of honour is recovered. Uneafineffes of this kind ought indeed to be put to the account of former vices: yet it will be faid, they are in part the consequences of reformation. Still I am far from allowing it doubtful, whether virtue, upon the whole, be happier than vice in the present world. But if it were, yet the beginnings of a righteous administration may, beyond all question be found in nature, if we will attentively inquire after them. And,

I. In whatever manner the notion of God's moral government over the world might be treated, if it did not appear, whether he were in a proper sense our governor

at all: yet when it is certain matter of experience, that he does manifest himself to us under the character of a Governor, in the sense explained *; it must deserve to be confidered, whether there be not reason to apprehend, that he may be a righteous or moral Governor. Since it appears to be fact, that God does govern mankind by the method of rewards and punishments, according to some settled rules of distribution; it is furely a question to be asked, What prefumption is there against his finally rewarding and punishing them, according to this particular rule, namely, as they act reasonably or unreasonably, virtuously or vicioufly? Since rendering men happy of miferable by this rule, certainly falls in, much more falls in, with our natural apprehenfions and fense of things, than doing so by any other rule whatever: fince rewarding and punishing actions by any other rule, would appear much harder to be accounted. for, by minds formed as he has formed ours. Be the evidence of religion then more or less clear, the expectation which it raises in

> * Ch. ii F 2

us, that the righteous shall, upon the whole, he happy, and the wicked miserable, cannot however possibly be considered as abfurd or chimerical; because it is no more than an expectation, that a method of government already begun, shall be carried on, the method of rewarding and punishing actions; and shall be carried on by a particular rule, which unavoidably appears to us at first sight more natural than any other, the rule which we call distributive justice. Nor,

II. Ought it to be entirely passed over, that tranquillity, satisfaction, and external advantages, being the natural consequences of prudent management of ourselves, and our affairs; and rashness, profligate negligence, and wilful folly, bringing after them many inconveniences and sufferings; these afford instances of a right constitution of nature: as the correction of children, for their own sakes, and by way of example, when they run into danger or hurt themselves, is a part of right education. And thus, that God governs the world by general fixt laws, that he has endued us with capacities of reslection upon this constitution

of things, and foreseeing the good and bad consequences of our behaviour; plainly implies some fort of moral government; since from such a constitution of things it cannot but follow, that prudence and imprudence, which are of the nature of virtue and vice*, must be, as they are, respectively rewarded and punished.

III. From the natural course of things, vicious actions are, to a great degree, actually punished as mischievous to society: and besides punishment actually inflicted upon this account, there is also the fear and apprehension of it in those persons whose crimes have rendered them abnoxious to it. in case of a discovery; this state of fear being itself often a very considerable punishment. The natural fear and apprehension of it too, which restrains from such crimes, is a declaration of nature against them. is necessary to the very being of society, that vices destructive of it should be punished as being so; the vices of falsehood, injustice, cruelty: which punishment therefore is as natural as fociety; and fo is an instance

See Differtation II.

F 3

of a kind of moral government, naturally established and actually taking place. And, since the certain natural course of things is the conduct of Providence or the government of God, though carried on by the instrumentality of men; the observation here made amounts to this, that mankind find themselves placed by him in such circumstances, as that they are unavoidably accountable for their behaviour, and are often punished, and sometimes rewarded under his government, in the view of their being mischievous, or eminently beneficial to society.

If it be objected that good actions, and fuch as are beneficial to fociety, are often punished, as in the case of persecution and in other cases; and that ill and mischievous actions are often rewarded: it may be answered distinctly; first, that this is in no fort necessary, and consequently not natural, in the sense in which it is necessary, and therefore natural; that ill or mischievous actions should be punished: and in the next place, that good actions are never punished, considered as beneficial to society, nor ill actions rewarded, under the view

of their being hurtful to it. So that it stands good, without any thing on the side of vice to be over-against it, that the Author of nature has as truly directed, that vicious actions considered as mischievous to society, should be punished, and put mankind under a necessity of thus punishing them; as he has directed and necessitated us to preserve our lives by food.

IV. In the natural course of things, virtue as fuch is actually rewarded, and vice as fuch punished: which seems to afford an instance or example, not only of government, but of moral government, begun and established; moral in the strictest sense; though not in that perfection or degree which religion teaches us to expect. In order to fee this more clearly, we must distinguish between actions themselves, and that quality ascribed to them, which we call virtuous or vicious. The gratification itself of every natural passion must be attended with delight: and acquisitions of fortune, however made, are acquisitions of the means, or materials of enjoyment. An action then, by which any natural passion is gratified or fortune acquired, procures delight or advantage;

abstracted from all consideration of the morality of fuch action. Confequently the pleasure or advantage in this case, is gained by the action itself, not by the morality, the virtuousness or viciousness of it; though it be, perhaps, virtuous or vicious. Thus, to fay fuch an action or course of behaviour, procured fuch pleasure or advantage, or brought on fuch inconvenience and pain, is quite a different thing from faying, that fuch good or bad effect was owing to the virtue or vice of fuch action or behaviour. In one case, an action, abstracted from all moral confideration, produced its effect; in the other case, for it will appear that there are fuch cases, the morality of the action, the question under a moral confideration, i. e. the virtuousness or viciousness of it, produced the effect. Now I say virtue as such, naturally procures confiderable advantages to the virtuous; and vice, as fuch, naturally occasions great inconvenience, and even mifery to the vicious, in very many instances. The effects of virtue and vice upon the mind and temper, are to be mentioned as inflances of it. Vice as fuch is naturally attended with fome fort of uneafiness:

finess; and, not uncommonly, with great disturbance and apprehension. That inward feeling, which, respecting lesser matters, and in familiar speech, we call being vexed with one's felf, and, in matters of importance, and in more ferious language, remorfe; is an uneafinefs naturally arifing from an action of a man's own, reflected upon by himself as wrong, unreasonable, faulty, i. e. vicious in greater or less degrees: and this manifestly is a different feeling from that uneafinefs, which arises from a fense of mere loss or harm. What is more common, than to hear a man lamenting an accident or event, and addingbut however he has the fatisfaction that he cannot blame himself for it; or on the contrary, that he has the uneafiness of being fensible it was his own doing? Thus also the disturbance and fear, which often follow upon a man's having done an injury, arise from a sense of his being blameworthy; otherwise there would, in many cases, be no ground of disturbance, nor any reafon to fear refentment or shame. On the other hand, inward fecurity and peace, and a mind open to the several gratifications of life,

life, are the natural attendants of innocence and virtue. To which must be added, the complacency, satisfaction, and even joy of heart, which accompany the exercise, the real exercise, of gratitude, friendship, benevolence.

And here, I think, ought to be mentioned, the fears of future punishment, and peaceful hopes of a better life, in those who fully believe, or have any ferious apprehension of religion; because these hopes and fears are present uneasiness and satisfaction to the mind; and cannot be got rid of by great part of the world, even by men who have thought most thoroughly upon that subject of religion; and no one can say, how considerable this uneasiness and satisfaction may be, or what upon the whole it may amount to.

In the next place comes in the confideration, that all honeft and good men are difposed to be friend honest good men as such, and to discountenance the vicious as such, and do so in some degree, indeed in a confiderable degree from which favour and discouragement cannot but arise confiderable advantage and inconvenience. And though the generality of the world have

have little regard to the morality of their own actions, and may he supposed to have less to that of others, when they themselves are not concerned; yet let any one be known to be a man of virtue, some how or other, he will be favoured, and good offices will be done him, fome regard to his character, without remote views, occasionally and in some low degree, I think, by the generality of the world, as it happens to come in their way. Public honours too and advantages are the natural confequences, are fometimes at least the consequences in fact, of virtuous actions; of eminent juftice, fidelity, charity, love to our country, confidered in the view of being virtuous. And fometimes even death itself, often infamy, and external inconveniences, are the public confequences of vice as vice. For instance, the sense which mankind have of tyranny, injustice, oppression, additional to the mere feeling or fear of mifery, has doubtless been instrumental in bringing about revolutions which make a figure even in the history of the world. For it plain, men resent injuries as implying faultineis, and retaliate, nor merely under the notion

notion of having received harm, but of having received wrong; and they have this refentment in behalf of others, as well as of themselves. So likewise even the generality are, in fome degree, grateful and disposed to return good offices, not merely because such an one has been the occasion of good to them, but under the view, that fuch good offices implied kind intention and good defert in the doer. To all this may be added, two or three particular things, which, many persons will think frivolous; but to me nothing appears fo, which at all comes in towards determining a question of fuch importance, as, whether there be, or be not, a moral institution of government, in the ftrictest sense moral, visibly established and begun in nature. The particular things are thefe: that in domestic government, which is doubtless natural, children and others also are very generally punished, for falsehood, and injustice, and ill behaviour, as fuch, and rewarded for the contrary; which are instances where veracity, and justice, and right behaviour, as fuch, are naturally enforced by rewards and punishments, whether more or less

confiderable in degree: that, though civil government be supposed to take cognizance of actions in no other view than as prejudicial to society, without respect to the immorality of them; yet as such actions are immoral, so the sense which men have of the immorality of them, very greatly contributes, in different ways, to bring offenders to justice: and that entire absence of all crime and guilt in the moral sense, when plainly appearing, will almost of course procure, and circumstances of aggravated guilt prevent, a remission of the penalties annexed to civil crimes, in many cases, though by no means in all.

Upon the whole they, besides the good and bad effects of virtue and vice upon men's own minds, the course of the world does, in some measure, turn upon the approbation or disapprobation of them, as such, in others. The sense of well and ill doing, the presages of conscience, the love of good characters and dislike of bad ones, honour, shame, resentment, gratitude; all these, considered in themselves, and in their effects, do afford manifest real instances of virtue as such naturally savoured, and of

vice as fuch discountenanced, more or less, in the daily course of human life; in every age, in every relation, in every general circumstance of it. That God has given us a moral nature *, may most justly be urged as a proof of our being under his moral government: but that he has placed us in a condition, which gives this nature, as one may speak, scope to operate, and in which it does unavoidably operate i. e. influence man to act, fo as thus to favour and reward virtue, and discountenance and punish vice; this is not the same, but a further, additional proof of his moral government: for it is an instance of it. The first is a proof, that he will finally favour and fupport virtue effectually: the fecond is an example of his favouring and supporting it at present, in some degree.

If a more distinct inquiry be made, whence it arises that virtue as such is often rewarded, and vice as such is punished, and this rule never inverted: it will be found to proceed, in part, immediately from the moral nature itself, which God has given us; and also in part, from his having given us,

together

^{*} See Differtation II.

together with this nature, so great a power over each other's happiness and misery.-For first, it is certain, that peace and delight, in fome degree, and upon fome occafions, is the necessary and present effect of virtuous practice; an effect arifing immediately from that constitution of our nature. We are fo made, that well-doing as fuch gives us fatisfaction, at least, in some instances; ill-doing as fuch, in none. And fecondly, from our moral nature, joined with God's having put our happiness and mifery in many respects in each other's power, itcannot but be, that vice, as fuch, fome kinds and instances of it at least, will be infamous, and men will be disposed to punish it as in itself detestable; and the villain will by no means be able always to avoid feeling that infamy, any more than he will be able to escape this further punishment, which mankind will be disposed to inflict upon him, under the notion of his deferving it. But there can be nothing on the fide of vice to answer this; because there is nothing in the human mind, contradictory, as the logicians speak, to virtue. For virtue confists in a regard to what

what is right and reasonable, as being so; in a regard to veracity, justice, charity, in themselves: and there is furely no such thing, as a like natural regard to falsehood, injustice, cruelty. If it be thought, that there are instances of an approbation of vice, as fuch, in itself, and for its own fake, (though it does not appear to me, that there is any fuch thing at all; but fupposing there be,) it is evidently monstrous: as much fo as the most acknowledged perversion of any passion whatever. Such instances of perversion then being left out, as merely imaginary, or, however, unnatural; it must follow, from the frame of our nature, and from our condition, in the refpects now described, that vice cannot at all be, and virtue cannot but be, favoured as fuch by others, upon fome occasions: and happy in itself in some degree. But that they must be thus distinguished in some degree, is in a manner necessary: it is matter of fact of daily experience, even in the greatest confusion of human affairs.

It is not pretended, but that in the natural course of things, happiness and mifery appear to be distributed by other rules,

than

than only the personal merit and demerit of characters. They may fometimes be distributed by way of mere discipline.-There may be the wifest and best reasons, why the world should be governed by general laws, from whence fuch promiscuous diftribution perhaps must follow; and also why our happiness and misery should be put in each other's power, in the degree which they are. And these things, as in general they contribute to the rewarding virtue and punishing vice, as fuch: fo they often contribute also, not to the inversion of this, which is impossible; but to the rendering persons prosperous, though wicked; afflicted, though righteous; and, which is worfe, to the rewarding fome actions, though vicious; and punishing other actions, though virtuous. But all this cannot drown the voice of nature in the conduct of providence, plainly declaring itself for virtue, by way of distinction of vice, and preference to it. For, our being fo constituted, as that virtue and vice are thus naturally favoured and discountenanced, rewarded and punished respectively as such, is an intuitive proof of the intent of Nature, that it should be fo: otherwise the constitution of our mind, from which it thus immediately and directly proceeds, would be absurd. But it cannot be said, because virtuous actions are sometimes punished, and vitious actions rewarded, that nature intended it. For, though this great disorder is brought about, as all actions are done, by means of some natural passion; yet this may be, as it undoubtedly is, brought about by the perversion of such passion, implanted in us for other, and those very good purposes. And indeed these other and good purposes, even of every passion, may be clearly seen.

We have then a declaration, in some degree of present effect, from him who is supreme in nature, which side he is of, or what part he takes: a declaration for virtue, and against vice. So far therefore as a man is true to virtue, to veracity and justice, to equity and charity, and the right of the case, in whatever he is concerned; so far he is on the side of the Divine administration, and co-operates with it: and from hence, to such a man, arises naturally a secret satisfaction, and sense of security, and implicit hope of somewhat further.—And,

V. This hope is confirmed by the necesfary tendencies of virtue, which, though not of present effect, yet are at present discernable in nature; and so afford an instance of fomewhat moral in the effential conftitution of it.—There is, in the nature of things, a tendency in virtue and vice to produce the good and bad effects now mentioned, in a greater degree than they do in fact produce them. For instance; good and bad men would be much more rewarded and punished as fuch, were it not, that justice is often artificially eluded, that characters are not known, and many, who would thus favour virtue and discourage vice, are hindered from doing fo by accidental causes .-These tendencies of virtue and vice are obvious with regard to individuals. But it may require more particularly to be confidered, that power in a fociety, by being + under the direction of virtue, naturally increases, and has a necessary tendency to prevail over opposite power, not under the + direction of it; in like manner as power, + by being under the direction of reason, + increases, and has a tendency to prevail over + brute force. There are several brute crea- 4

G2

tures

tures of equal, and feveral of fuperior strength, to that of men; and possibly the sum of the whole strength of brutes, may be greater than that of mankind: but reason gives us the advantage and superiority over them; and thus man is the acknowledged governing animal upon the earth. Nor is this superiority considered by any as accidental; but as what reason has a tendency, in the nature of the thing, to obtain: and yet perhaps difficulties may be raised about the meaning, as well as the truth, of the affertion, that virtue has the like tendency.

To obviate these difficulties, let us see more distinctly, how the case stands with regard to reason; which is so readily acknowledged to have this advantageous tendency. Suppose then two or three men, of the best and most improved understanding, in a desolate open plain, attacked by ten times the number of beasts of prey: would their reason secure them the victory in this unequal combat? Power then, though joined with reason, and under its direction, cannot be supposed to prevail over opposite power, though merely brutal, unless the one bears some proportion to the other.—

Again:

Again: put the imaginary case, that rational and irrational creatures were of like external shape and manner: it is certain, before there were opportunities for the first to distinguish each other, to separate from their adversaries, and to form an union among themselves, they might be upon a level, or in several respects upon great disadvantage; though united, they might be vastly superior: since union is of such efficacy, that ten men united might be able to accomplish, what ten thousand of the same natural strength and understanding wholly ununited, could not. In this cafe, then, brute force might more than maintain its ground against reason, for want of union among the rational creatures. Or suppose a number of men to land upon an island inhabited only by wild beafts; a number of men, who, by the regulations of civil government, the inventions of arts, and the experience of fome years, could they be preserved so long, would be really sufficient, to fubdue the wild beafts, and to preferve themselves in security from them: yet a conjuncture of accidents might give fuch advantage to the irrational animals, as that they might at once overpower, and G 3 even even extirpate, the whole species of rational ones. Length of time then, proper scope and opportunities, for reason to exert itfelf, may be absolutely necessary to its prevailing over brute force. Further still: there are many instances of brutes succeeding in attempts, which they could not have undertaken, had not their irrational nature rendered them incapable of foreseeing the danger of fuch attempts, or the fury of passion hindered their attending to it: and there are instances of reason and real prudence preventing men's undertaking what, it hath appeared afterwards, they might have succeeded in by a lucky rashness.-And in certain conjunctures, ignorance and folly, weakness and discord, may have their advantages. So that rational animals have not necessarily the superiority over irrational ones: but, how improbable foever it may be, it is evidently possible, that, in fome globes, the latter may be superior .-And were the former wholly at variance and difunited, by false self-interest and envy, by treachery and injustice, and consequent rage and malice against each other, whilst the latter were firmly united amongst themfelves

felves by instinct; this might greatly contribute to the introducing such an inverted order of things. For every one would consider it as inverted: since reason has, in the nature of it, a tendency to prevail over brute force; notwithstanding the possibility it may not prevail, and the necessity which there is, of many concurring circumstances to render it prevalent.

Now I fay, virtue in a fociety has a like tendency to procure superiority and additional power: whether this power be confidered as the means of fecurity from opposite power, or of obtaining other advantages. And it has this tendency, by rendering public good, an object and end to every member of the fociety; by putting every one upon confideration and diligence, recollection and felf-government, both in order to fee what is the most effectual method, and also in order to perform their proper part, for obtaining and preferving it: by uniting a fociety within itself, and so increasing its strength; and, which is particularly to be mentioned, uniting it by means of veracity and justice. -For as these last are principal bonds of union, so benevolence or public spirit, un-

G 4 directed,

directed, unrestrained by them, is, no body knows what.

And suppose the invisible world, and the invisible dispensation of Providence, to be, in any fort, analogous to what appears: or that both together make up one uniform scheme, the two parts of which, the part which we fee, and that which is beyond our obfervation, are analogous to each other: then, there must be a like natural tendency in the derived power, throughout the universe, under the direction of virtue, to prevail in general over that, which is not under its direction; as there is in reason, derived reafon in the universe, to prevail over brute force. But then, in order to the prevalence of virtue, or that it may actually produce, what it has a tendency to produce; the like concurrences are necessary, as are, to the prevalence of reason. There must be fome proportion between the natural power or force which is, and that which is not, under the direction of virtue: there must be fufficient length of time; for the complete success of virtue, as of reason, cannot, from the nature of the thing, be otherwife than gradual: there must be, as one

may speak, a fair field of trial, a stage large and extensive enough, proper occasions and opportunities, for the virtuous to join together, to exert themselves against lawless force, and to reap the fruit of their united labours.

Now indeed it is to be hoped, that the disproportion between the good and bad, even here on earth, is not fo great, but that the former have natural power fufficient to their prevailing to a confiderable degree, if circumftances would permit this power to be united. For, much lefs, very much less, power under the direction of virtue, would prevail over much greater not under the direction of it.-However, good men over the face of the earth cannot unite; as for other reasons, so because they cannot be fufficiently afcertained of each others characters. And the known courfe of human things, the scene we are now passing through, particularly the shortness of life, denies to virtue its full scope in several other respects. The natural tendency, which we have been confidering, though real, is hindered, from being carried into effect in the present state; but thefe

these hindrances may be removed in a future one. Virtue, to borrow the Christian allusion, is militant here; and various untoward accidents contribute to its being often overborne: but it may combat with great advantage hereafter, and prevail compleatly, and enjoy its confequent rewards in some future states. Neglected as it is, perhaps unknown, perhaps despised and oppresfed, here; there may be scenes in eternity, lasting enough, and in every other way adapted, to afford it a fufficient sphere of action; and a fufficient sphere for the natural consequences of it to follow in fact. If the foul be naturally immortal, and this state be a progress towards a future one, as childhood is towards mature age; good men may naturally unite, not only amongst themselves, but also with other orders of virtuous creatures, in that future state. For virtue, from the very nature of it, is a principle and bond of union, in some degree, amongst all who are endued with it, and known to each other; fo as that by it, a good man cannot but recommend himself to the favour and protection of all virtuous beings throughout the whole universe, who can be acquainted with his cha-

character, and can any way interpose in his. behalf in any part of his duration. And one might add, that suppose all this advantageous tendency of virtue to become effect, amongst one or more orders of creatures, in any diffant scenes and periods, and to be feen by any orders of vicious creatures, throughout the universal kingdom of God; this happy effect of virtue would have a tendency, by way of example, and possibly in other ways, to amend those of them, who are capable of amendment, and being recovered to a just sense of virtue. If our notions of the plan of Providence were enlarged, in any fort proportionable to what late discoveries have enlarged our views with respect to the material world; representations of this kind would not appear abfurd or extravagant. However they are not to be taken, as intended, for a literal delineation of what is in fact the particular scheme of the universe, which cannot be known without revelation: for suppositions are not to be looked upon as true, because not incredible: but they are mentioned to fhew, that our finding virtue to be hindered from procuring to itself such superiority

riority and advantage, is no objection against its having, in the effential nature of the thing, a tendency to procure them. And the fuppositions now mentioned do plainly shew this: for they shew, that these hindrances are fo far from being necessary, that we ourselves can easily conceive; how they may be removed in future states, and full fcope be granted to virtue. And all these advantageous' tendencies of it are to be confidered as declarations of God in its favour. This, however, is taking a pretty large compass: though it is certain, that, as the material world appears to be, in a manner, boundless and immense; there must be some scheme of Providence vast in proportion to it.

But let us return to the earth our habitation: and we shall see this happy tendency of virtue, by imagining an instance not so vast and remote: by supposing a kingdom or society of men upon it, perfectly virtuous, for a succession of many ages; to which, if you please, may be given a situation advantageous for universal monarchy. In such a state, there would be no such thing as saction: but men of the greatest

capa-

capacity would of courfe, all along, have the chief direction of affairs willingly yielded to them; and they would share it among themselves without envy. Each of these would have the part assigned him, to which his genius was peculiarly adapted: and others, who had not any distinguished genius, would be fase, and think themselves very happy, by being under the protection and guidance of those who had. Public determinations would really be the refult of the united wifdom of the community: and they would faithfully be executed, by the united strength of it. Some would in a higher way contribute, but all would in fome way contribute to the public profperity: and in it, each would enjoy the fruits of his own virtue. And as injustice, whether by fraud or force, would be unknown among themselves; so they would be fufficiently focured from it in their neighbours. For cunning and false self-interest, confederacies in injustice, ever flight, and accompanied with faction and intestine treachery; these on one hand, would be found mere childish folly and weakness, when fet in opposition against wisdom, public spirit, union inviolable, and fidelity

on the other: allowing both a fufficient length of years to try their force. Add the general influence which fuch a kingdom would have over the face of the earth, by way of example particularly, and the reverence which would be paid it. It would plainly be fuperior to all others, and the world must gradually come under its empire: not by means of lawless violence; but partly by what must be allowed to be just conquest; and partly by other kingdoms fubmitting themselves voluntarily to it, throughout a course of ages, and claiming its protection, one after another, in fuccessive exigencies. The head of it would be an universal monarch, in another sense than any mortal has yet been; and the eastern stile would be literally applicable to him; that " all people, nations, and languages should serve him." And though indeed our knowledge of human nature, and the whole history of mankind, shew the impossibility, without some miraculous interpolition, that a number of men, here on earth, should unite in one fociety or government, in the fear of God and universal practice of virtue: and that fuch a government

ment should continue so united for a succession of ages: yet admitting or supposing this, the effect would be as not drawn out. And thus, for instance, the wonderful power and prosperity promised the Jewish' nation in the scripture, would be, in a great measure, the consequence of what is predicted of them; that the "people should be all righteous and inherit the land for ever; "" were we to understand the latter phrase of a long continuance only, fufficient to give things time to work. The predictions of this kind, for there are many of them, cannot come to pass, in the present known course of nature; but suppose them come to pass, and then, the dominion and preeminence promifed must naturally follow, to a very confiderably degree.

Confider now, the general fystem of religion; that the government of the world is uniform, and one, and moral; that virtue and right shall finally have the advantage, and prevail over fraud and lawless force, over the deceits as well as the violence of wickedness, under the conduct of one supreme Governor; and from the observations above made, it will appear, that

^{*} Ifa. lx. 21.

God has, by our reason, given us to see a peculiar connection in the several parts of this scheme, and a tendency towards the completion of it arising out of the very nature of virtue; which tendency is to be considered as somewhat moral in the essential constitution of things. If any one should think all this to be of little importance; I desire him to consider, what he would think, if vice had, essentially, and in its nature, those advantageous tendencies; or if virtue had essentially the direct contrary ones.

But it may be objected, that, notwithflanding all these natural effects and these
natural tendencies of virtue; yet things
may be now going on throughout the universe, and may go on hereafter, in the
same mixt way as here at present upon
earth: virtue sometimes prosperous, sometimes depressed; vice sometimes punished,
sometimes successful. The answer to
which is, that it is not the purpose of this
chapter, nor of this treatise, properly to
prove God's persect moral government over
the world, or the truth of religion; but to
observe what there is in the constitution

and

and course of nature, to confirm the proper proof of it, supposed to be known: and that the weight of the foregoing observations to this purpose, may be thus distinctly proved. Pleasure and pain are indeed to a certain degree, fay to a very high degree, distributed amongst us without any apparent regard to the merit or demerit of characters. And were there nothing elfe, concerning this matter, difcernible in the constitution and course of nature; there would be no ground from the constitution and course of nature, to hope or to fear, that men would be rewarded or punished hereafter according to their demerits: which however, it is to be remarked, implies, that even then there would be no ground from appearances to think, that vice upon the whole would have the advantage, rather than that virtue would. And thus the proof of a future state of retribution, would rest upon the usual known arguments for it; which are I think plainly unanswerable; and would be fo, though there were no additional confirmation of them from the things above infifted on. But these things are a very ftrong confirmation of them. For,

H

First,

First, They shew, that the Author of nature is not indifferent to virtue and vice.-They amount to a declaration from him, determinate and not to be evaded, in favour of one, and against the other: fuch a declaration, as there is nothing to be fet overagainst or answer on the part of vice. So that were a man, laying aside the proper proof of religion, to determine from the course of nature only, whether it were most probable, that the righteous or the wicked, would have the advantage in a future life; there can be no doubt, but that he would determine the probability to be; that the former would. The course of nature then, in the view of it now given, furnishes us with a real practical proof of the obligations of religion.

Secondly, When, conformably to what religion teaches us, God shall reward and punish virtue and vice as such, so as that every one shall, upon the whole, have his deserts; this distributive justice will not be a thing different in kind, but only in degree, from what we experience in his present government. It will be that in effect, toward which we now see a tendency. It will

will be no more than the completion of that moral government, the principles and beginning of which, have been shewn, beyond all dispute, discernible in the present constitution and course of nature. And from hence it follows,

Thirdly, That, as under the natural government of God, our experience of those kinds and degrees of happiness and misery, which we do experience at prefent, gives just ground to hope for and to fear, higher degrees, and other kinds of both in a future state, supposing a future state admitted: fo under his moral government, our experience, that virtue and vice are; in the manners above-mentioned, actually rewarded and punished at present, in a certain degree, gives just ground to hope and to fear, that they may be rewarded and punished in an higher degree hereafter. It is acknowledged indeed, that this alone is not fufficient ground to think, that they actually will be rewarded and punished in a higher degree, rather than in a lower: but then,

Lastly, There is sufficient ground to think so, from the good and bad tendencies of virtue and vice. For these tendencies are

H' 2 effen-

effential, and founded in the nature of things; whereas the hinderances to their becoming effect, are, in numberless cases, not necessary, but artificial only. Now it may be much more strongly argued, that these tendencies, as well as the actual rewards and punishments, of virtue and vice, which arise directly out of the nature of things, will remain hereafter, than that the accidental hinderances of them will. And if these hinderances do not remain; those rewards and punishments cannot but be carried on much further towards the perfection of moral government: i. e. the tendencies of virtue and vice will become effect; but when or where, or in what particular way, cannot be known at all but by revelation.

Upon the whole: There is a kind of moral government implied in God's natural government: * virtue and vice are naturally rewarded and punished as beneficial and mischievous to society; † and rewarded and punished directly as virtue and vice. † The notion then, of a moral scheme of govern-

^{*} Pag. 84. † Pag. 86, 87. ‡ Pag 87, &c. ment,

ment, is not fictitious, but natural; for it is fuggested to our thoughts, by the constitution and course of nature: and the execution of this scheme is actually begun, in the instances here mentioned. And these things are to be confidered, as a declaration of the Author of nature, for virtue, and against vice: they give a credibility to the supposition of their being rewarded and punished hereafter; and also ground to hope and to fear, that they may be rewarded and punished in higher degrees than they are here. And as all this is confirmed, fo the argument for religion, from the constitution and course of nature, is carried on farther, by observing, that there are natural tendencies, and, in innumerable cases, only artificial hinderances, to this moral fcheme's being carried on much farther towards perfection than it is at prefent*. The notion then of a moral scheme of government, much more perfect than what is feen, is not a fictitious, but a natural notion; for it is fuggested to our thoughts, by the effential tendencies of virtue and vice. And these tendencies are to be considered as

> * Pag. 99, H 3

intimations, as implicit promises and threattenings, from the Author of nature, of much greater rewards and punishments to follow virtue and vice, than do at present, And indeed, every natural tendency, which is to continue, but which is hindered from becoming effect by only accidental causes, affords a prefumption, that fuch tendency will, fome time or other, become effect; a prefumption in degree proportionably to the length of the duration, through which fuch tendency will continue. And from these things together, arises a real presumption, that the moral scheme of government established in nature, shall be carried on much farther towards perfection hereafter; and, I think a prefumption that it will be absolutely compleated. But from these things joined with the moral nature which God has given us, confidered as given us by him, arises a practical proof* that it will be compleated, a proof from fact; and therefore a distinct one from that, which is deduced from the eternal and unalterable relations, the fitness and unfitness of actions.

^{*} See this proof drawn out briefly, Ch. vi. CHAP.

CHAP. IV.

OF A STATE OF PROBATION, AS IMPLY-ING TRIAL, DIFFICULTIES AND DANGER.

THE general doctrine of religion, that our present life is a state of probation for a future one, comprehends under it several particular things, distinct from each other. But the first, and most common meaning of it, seems to be, that our suture interest is now depending, and depending upon ourselves; that we have scope and opportunities here, for that good and bad behaviour, which God will reward and punish hereafter; together with temptations to one, as well as inducements of reason to the other. And this is in great measure, the same with saying, that we are under the moral government of God, and

to give an account of our actions to him. For the notion of a future account and general righteous judgment, implies some fort of temptation to what is wrong: otherwise there would be no moral possibility of doing wrong, nor ground for judgement, or difcrimination. But there is this difference, that the word probation is more distinctly and particularly expressive of allurements to wrong, or difficulties in adhering uniformly to what is right, and of the danger of miscarrying by such temptations, than the words moral governa ment. A state of probation then, as thus particularly implying in it trial, difficulties and danger, may require to be confidered distinctly by itself.

And as the moral government of God, which religion teaches us, implies, that we are in a state of trial with regard to a sufficient for also this natural government over us, implies, that we are in a state of trial, in the like sense, with regard to the present world. Natural governments by reward and punishments, as much implies natural trial, as moral government does moral trial. The natural

govern

government of God here meant*, confifts in his annexing pleafure to fome actions, and pain to other, which are in our power to do or forbear, and in giving us notice of fuch appointment before-hand. This neceffarily implies, that he has made our happiness and misery, or our interest, to depend in part upon ourfelves, And fo far as men have temptations to any course of action, which will probably occasion them greater temporal inconvenience and uneafiness, than satisfaction; so far their temporal interest is in danger from themfelves, or they are in a state of trial with respect to it. Now people often blame others, and even themselves, for their misconduct in their temporal concerns. And we find many are greatly wanting to themselves, and miss of that natural happiness, which they might have obtained in the prefent life: perhaps every one does in fome degree. But many run themselves into great inconvenience, and into extreme diffress and misery: not through incapacity of knowing better, and

doing better for themselves, which would be nothing to the prefent purpose; but through their own fault. And these things necessarily imply temptation, and danger of miscarrying, in a greater or less degree, with respect to our worldly interest or happiness. Every one too, without having religion in his thoughts, speaks of the hazards which young people run, upon their fetting out in the world: hazards from other causes, than merely their ignorance, and unavoidable accidents. And fome courses of vice, at least being contrary to men's worldly interest or good; temptations to these must at the same time be temptations to forego dur present, and our future interest. Thus in our natural or temporal capacity, we are in a state of trial, i. e. of difficulty and danger, analogous, or like to our moral and religious trial.

This will more distinctly appear to any one, who thinks it worth while, more distinctly, to consider, what it is which constitutes our trial in both capacities, and to observe, how mankind behave under it.

And that which constitutes this our trial, in both these capacities, must be some what either in our external circumstances or in our nature For on the one hand, persons may be betrayed into wrong behaviour upon furprize and extraordinary external occasions; who would, otherwise, have preserved their character of prudence and virtue: in which cases, every one, in fpeaking of the wrong behaviour of these persons, would impute it to such particular external circumstances. And on the other hand, men who have contracted habits of vice and folly of any kind, or have fome particular passions in excess, will seek opportunities, and, as it were, go out of their way, to gratify themselves in these, respects, at the expence of their wisdom and their virtue; led to it, as every one would fay, not by external temptations, but by fuch habits and passions. And the account of this last case is, that particular pasfions are no more coincident with prudence, or that reasonable self-love, the end of which is our worldly interest, than they are with the principle of virtue and religion; but often drawn contrary ways to one,

as well as the other: and fo fuch particular passions are as much temptations, to act imprudently with regard to our worldly interest, as to act viciously*. However, as when we fay, men are misled by external circumstances of temptation; it cannot but be understood, that there is somewhat within themselves, to render those circumstances temptations, or to render them fusceptible of impressions from them: so when we fay, they are misled by passions; it is always supposed, that there are occasions, circumstances, and objects, exciting these passions, and affording means for gratifying them. And therefore, temptations from within, and from without, coincid, and mutually imply each other. the feveral external objects of the appetites; passions, and affections, being present to the fenses, or offering themselves to the mind, and fo exciting emotions fuitable to their nature: not only in cases where they can be gratified confistently with innocence and prudence, but also in cases

where

^{*} See fermons preached at the Rolls, 1726. 2 Ed. p. 205, &c. Pref. p. 25, &c. Serm. p. 21, &c.

where they cannot, and yet can be gratified imprudently and viciously; this as really puts them in danger of voluntarily foregoing their present interest or good, as their future; and as really renders felf denial necessary to secure one, as the other: i. e. we are in a state of trial with refpect to both, by the very fame pattions, excited by the very fame means. Thus mankind having a temporal interest depending upon themselves, and a prudent course of behaviour being necessary to secure it; passions inordinately excited, whether by means of example, or by any other external circumstance, towards such objects, at fuch times, or in fuch degrees, as that they cannot be gratified confiftently with worldly prudence; are temptations, dangerous, and too often successful temptations, to forego a greater temporal good for a less; i. e. to forego what is upon the whole, our temporal interest, for the sake of a present gratification. This is a description of our real state of trial in our temporal capacity. Substitute now the word future for temporal, and virtue for prudence; and it will be just as proper a description of our state of trial in our religious capacities, so analogous are they to each other.

If, from confideration of this our like state of trial in both capacities, we go on to observe farther, how mankind behave under it; we shall find there are fome, who have fo little fenfe of it, that they scarce look beyond the passing day; they are so taken up with present gratifications, as to have, in a manner, no feeling of consequences, no regard to their future ease or fortune in this life: any more than to their happiness in another. Some appear to be blinded and deceived by inordinate passions, in their worldly concerns, as much as in religion. Others, are not deceived, but, as it were, forcibly carried away by the like passions, against their better judgment, and feeble refolutions too of acting better. And there are men, and truly there are not a few, who shamelesly avow, not their interest, but their mere will and pleasure, to be their law of life: and who, in open defiance of every thing that is reasonable, will go on in a course of vicious extravagance, forefeeing, with no remorfe, and little little fear, that it will be their temporal ruin; and some of them, under the apprehension of the consequences of wickedness in another state. And to speak in the most moderate way, human creatures are not only continually liable to go wrong voluntarily, but we see likewise that they often actually do so, with respect to their temporal interests, as well as with respect to religion.

Thus our difficulties and dangers, or our trials, in our temporal and our religious capacity, as they proceed from the fame causes, and have the same effect upon men's behaviour, are evidently analogous, and of the same kind.

It may be added, that as the difficulties and dangers of miscarrying in our religious state of trial, are greatly increased, and one is ready to think, in a manner wholly made by the ill behaviour of others: by a wrong education, wrong in a moral sense, sometimes positively vicious; by general bad example; by the dishonest artifices, which are got into businesses of all kinds; and in very many parts of the world, by religion's being corrupted into super-

fuperstitions, which indulge men in their vices: fo in like manner, the difficulties of conducting ourselves prudently in refpect to our present interest, and our danger of being led afide from pursuing it, are greatly encreased, by a foolish education; and after we come to mature age, by the extravagance and carelessness of others whom we have intercourse with; and by mistaken notions, very generally prevalent, and taken up for common opinion, concerning temporal happiness, and wherein it consists. And persons by their own negligence and folly in their temporal affairs, no less than by a course of vice, bring themselves into new difficulties; and by habits of indulgence, become less qualified to go through them; and one irregularity after another embarrasses things to fuch a degree, that they know not whereabout they are; and often makes the path of conduct fo intricate and perplexed, that it is difficult to trace it out; difficult even to determine what is the prudent or the moral part. Thus, for instance, wrong behaviour in one stage of life, youth; wrong, I mean confidering ourfelves only in

in our temporal capacity, without taking in religion; this, in feveral ways, increases thé difficulties of right behaviour in mature age, i. e. puts us into a more disadvantageous state of trial in our temporal capacity.

We are an inferior part of the creation of God. There are natural appearances of our being in a state of degradation*. And we certainly are in a condition, which does not feem, by any means, the most advantageous we could imagine or defire, either in our natural or moral capacity, for fecuring either our prefent or future interest. However, this condition, low and careful and uncertain as it is, does not afford any just ground of complaint. For as men may manage their tempôral affairs with prudence, and so pass their days here on earth in tolerable ease and satisfaction, by a moderate degree of care: fo likewise with regard to religion, there is no more required than what they are well able to do, and what they must be greatly wanting to themselves, if they neglect. And for persons to have that put upon them, which they are well able to go through

^{*} Part II. chap. 5.

through, and no more, we naturally confider as an equitable thing; fupposing it done by proper authority. Nor have we any more reason to complain of it, with regard to the author of nature, than of his not having given us other advantages, belonging to other orders of creatures.

But the thing here infifted upon is, that the state of trial which religion teaches us we are in, is rendered credible by its being throughout uniform and of a piece with the general conduct of providence towards us, in all other respects within the compass of our knowledge. Indeed if mankind, confidered in their natural capacity, as inhabitants of this world only, found themselves, from their birth to their death, in a fettled state of security and happiness, without any folicitude or thought of their own: or if they were in no danger of being brought into inconvenience and diffress, by carelessness or the folly of passion, through bad example, the treachery of others, or the deceitful appearances of things were this our natural condition; then it might feem strange and be fome prefumption against the truth

of

of religion, that it reprefents our future and more general interest, as not secure of courfe, but as depending upon our behaviour, and requiring recollection and felf-government to obtain it. For it might be alledged, "What you fay is " our condition in one respect, is not in " any ways of a fort with what we find, " by experience, our condition is in an-" other. Our whole present interest is " fecured to our hands, without any fo-" licitude of ours; and why should not our future interest, if we have any such, " be fo too?" But fince, on the contrary, thought and confideration, the voluntary denying ourselves many things which we desire, and a course of behaviour, far from being always agreeable to us; are abfolutely necessary to our acting even a common decent, and common prudent part, fo as to pass with any satisfaction through the prefent world, and be received upon any tolerable good terms in it: fince this is the case, all presumption against self-denial and attention being necessary to secure our higher interest, is removed. Had we not experience, it might, perhaps speciously, 1 2 he

be urged, that it is improbable any thing of hazard and danger should be put upon us by an infinite being; when every thing which is hazard and danger in our manner of conception, and will end in error, confusion, and misery, is now already certain in his foreknowledge. And indeed, why any thing of hazard and danger should be put upon such frail creatures as we are, may well be thought a difficulty in speculation; and cannot but be fo, till we know the whole, or however, much more of the cafe. But still the constitution of nature is as it is. Our happiness and misery are trusted to our conduct, and made to depend upon it. Somewhat, and, in many circumstances, a great deal too, is put upon us, either to do, or to fuffer, as we chuse. And all the various miseries of life, which people bring upon themselves by negligence and folly, and might have avoided by proper care, are instances of this: which miseries are beforehand, just as contingent and undetermined as their conduct, and left to be determined by it.

These observations are an answer to the objection against the credibility of a state of trial, as implying temptations, and real danger of miscarrying with regard to our general interest, under the moral government of God: and they shew, that, if we are at all to be confidered in fuch a capacity, and as having fuch an interest; the general analogy of providence must lead us to apprehend ourselves in danger of miscarrying, in different degrees, as to this interest, by our neglecting to act the proper part belonging to us in that capacity. For we have a present interest, under the government of God which we experience here upon earth. And this interest, as it is not forced upon us, fo neither is it offered to our acceptance, but to our acquisition; in such sort, as that we are in danger of missing it, by means of temptations to neglect, or act contrary to it; and without attention and felf-denial, must and do miss it. It is then perfectly credible, that this may be our case, with respect to that chief and final good, which religion proposes to us.

CHAP. V.

OF A STATE OF PROBATION, AS INTENDED FOR MORAL DISCIPLINE AND IMPROVE-MENT.

FROM the confideration of our being in a probation state, of so much difficulty and hazard, naturally arises the question, how we came to be placed in it. But such a general inquiry as this, would be found involved in insuperable difficulties. For, though some of these difficulties would be lessened by observing, that all wickedness is voluntary, as is implied in its very notion; and that many of the miseries of life have apparent good effects; yet when we consider other circumstances belonging to both, and what must be the consequence of the former in a life to come;

come; it cannot but be acknowledged plain folly and prefumption, to pretend to give an account of the whole reasons of this matter: the whole reasons of our being allotted a condition; out of which so much wickedness and misery, so circumstanced, would in fact arife. Whether it be not beyond our faculties, not only to find out, but even to understand, the whole account of this; or, though we should be supposed capable of understanding it, yet whether it would be of fervice or prejudice to us to be informed of it, it is impossible to fay. But as our prefent condition can in no wife be shewn inconsistent with the perfect moral government of God: fo religion teaches us we were placed in it, that we might qualify ourselves by the practice of virtue for another state which is to follow it. And this, though but a partial answer, a very partial one indeed, to the inquiry now mentioned; yet is a more fatisfactory answer to another, which is of real, and of the utmost importance to us to have answered: the inquiry, what is our business here? The known end then, why we are placed + in a state of so much affliction, hazard, x

I 4 and

and difficulty, is, our improvement in virtue and piety, as the requisite qualification for a future state of security and happiness.

Now the beginning of life, confidered as an education for mature age in the prefent world, appears plainly, at first fight, analogous to this our trial for a future one; the former being in our temporal capacity, what the latter is in our religious capacity. But some observations common to both of them, and a more distinct confideration of each, will more distinctly shew the extent and force of the analogy between them; and the credibility, which arises from hence, as well as from the nature of the thing, that the present life was intended to be a state of discipline for a future one.

I. Every species of creatures is, we see, designed for a particular way of life; to which the nature, the capacities, temper, and qualifications, of each species, are as necessary, as their external circumstances. Both come into the notion of such state, or particular way of life, and constituent parts of it. Change a man's capacities or charac-

character to the degree, in which it is conceivable they may be changed; and he would be altogether incapable of a human course of life, and human happiness: as incapable, as if, his nature continuing unchanged, he were placed in a world, where he had no sphere of action, nor any objects to answer his appetites, passions, and affections of any fort. One thing is fet over against another, as an antient writer expresses it. Our nature corresponds to our external condition. Without this correfpondence, there would be no possibility of any fuch thing as human life and human happiness; which life and happiness are, therefore, a refult from our nature and condition jointly: meaning by human life, not living in the literal fense, but the whole complex notion commonly understood by those words. So that, without determining what will be the employment and happiness, the particular life of good men hereafter, there must be some determinate capacities, some necessary character and qualifications, without which perfons cannot but be utterly incapable of it: in like manner, as there must be some, without which

which men would be incapable of their prefent state of life. Now,

II. The constitution of human creatures, and indeed of all creatures which come under our notice, is fuch, as that they are capable of naturally becoming qualified for states of life, for which they were once wholly unqualified. In imagination we may indeed conceive of creatures, as incapable of having any of their faculties naturally enlarged, or as being unable naturally to acquire any new qualifications: but the faculties of every species known to us, are made for enlargement; for acquirements of experience and habits. We find ourselves in particular indued with capacities, not only of perceiving ideas, and of knowledge or perceiving truth, but also of storing up our ideas and knowledge by memory. We are capable, not only of acting, and of having different momentary impressions made upon us; but of getting a new facility in any kind of action, and of fettled alterations in our temper or character. The power of the two last is the power of habits. But neither the perception of ideas, nor knowledge of any fort, are habits:

bits; though absolutely necessary to the forming of them. However, apprehension, reason, memory, which are the capacities of acquiring knowledge, are greatly improved by exercife. Whether the word habit is applicable to all these improvements, and in particular how far the powers of memory and of habits may be powers of the same nature, I shall not inquire. But that perceptions come into our minds readily and of course, by means of their having been there before, feems a thing of the fame fort, as readiness in any particular kind of action, proceeding from being accustomed to it. And aptness to recollect practical observations of service in our conduct, is plainly habit in many cases. There are habits of perception, and habits of action. An instance of the former, is our constant, and even involuntary readiness, in correcting the impressions of our fight concerning magnitudes and distances, so as to fubstitute judgement in the room of sensation imperceptibly to ourselves. And it feems as if all other affociations of ideas not naturally connected, might be called paffive habits; as properly as our readiness in understanding languages, upon fight or hearing of words. And our readiness in speak. ing and writing them is an instance of the latter, of active habits. For distinctness, we may confider habits, as belonging to the body, or the mind; and the latter will be explained by the former. Under the former are comprehended all bodily activities or motions whether graceful or becoming, which are owing to use: under the latter, general habits of life and conduct; fuch as those of obedience and submission to authority, or to any particular person; those of veracity, justice, and charity; those of attention, industry, felf-government, envy, revenge. And habits of this latter kind feem produced by repeated acts, as well as the former. And in like manner as habits belonging to the body are produced by external acts: fo habits of the mind are produced by the exertion of inward practical principles, i. e. by carrying them into act, or acting upon them; the principles of obedience, of veracity, justice, and charity. Nor can those habits be formed by any external course of action, otherwise than as it proceeds from these principles: because

it is only these inward principles exerted, which are strictly acts of obedience, of veracity, of justice, and of charity. So likewife habits of attention, industry, felf-government, 'are in the same manner acquired by exercise; and habits of envy and revenge by indulgence, whether in outward act, or in thought and intention, i.e. inward act: for fuch intention is an act. Refolutions also to do well, are properly acts. And endeavouring to enforce upon our own minds, a practical fense of it, which a man really has himfelf, is a virtuous act. All these, therefore, may and will contribute towards forming good habits. But going over the theory of virtue in one's thoughts > talking well, and drawing fine pictures of it; this is so far from necessarily or certainly conducing to form an habit of it, in him who thus employs himself; that it may harden the mind in a contrary course, and render it gradually more infensible, i e. from an habit of insensibility, to all moral confiderations. For, from our very faculty of habits, passive impressions, by being repeated, grow weaker. Thoughts, by often paffing through the mind, are felt less sensibly: being accustomed to danger, begets

begets intrepidity, i. e. lessens fear; to distress, lessens the passion pity; to instances of others mortality, leffens the fenfible apprehenfions of our own. And from thefe two observations together; that practical habits are formed and strengthened by repeated acts, and that passive impressions grow weaker by being repeated upon us; it must follow, that active habits may be gradually forming and strengthening, by a course of acting upon such and such motives and excitements, whilft these motives and excitements themselves are, by proportionable degrees, growing less sensible, i. e. are continually less and less fensibly felt, even as the active habits strengthen, And experience confirms this: for active principles, at the very time that they are lefs lively in perception than they were, are found to be, fome how, wrought more thoroughly into the temper and character, and become more effectual in influencing our practice. The three things just mentioned may afford instances of it. Perception of danger, is a natural excitement of passive fear, and active caution; and by being injured to danger, habits of the latter are

gradually wrought, at the same time that the former gradually leffens. Perception of distress in others, is a natural excitement, passively to pity, and actively to relieve it: but let a man fet himfelf to attend to, inquire out, and relieve diftreffed persons, and he cannot but grow less and less sensibly affected with the various miferies of life, with which he must become acquainted; when yet, at the fame time, benevolence, confidered not as a paffion, but as a practical principle of action, will ftrengthen: and whilst he passively compassionates the distressed less, he will require a greater aptitude actively to affift and befriend them. So also at the same time that the daily instance of men dying around us, gives us daily a lefs fenfible paffive feeling or apprehension of our own mortality, fuch instances greatly contribute to the strengthening a practical regard to it in ferious men; i. e. to forming an habit of acting with a constant view to it. And this feems again further to shew, that pasfive impressions made upon our minds by admonition, experience, example, though they may have a remote efficacy, and a

very great one, towards forming active habits, yet, can have this efficacy no otherwife than by inducing us to fuch a courfe of action; and that it is, not being affected fo and fo, but acting, which forms those habits: only it must be always remembered, that real endeavours to enforce good impressions upon ourselves, are a species of virtuous action. Nor do we know how far it is possible, in the nature of things, that effects should be wrought in us at once, equivalent to habits, i. e. what is wrought by use and exercise. However, the thing infifted upon is, not what may be possible, but what is in fact the appointment of nature; which is, that active habits are to be formed by exercise. Their progress may be so gradual, as to be imperceptible of its steps: it may be hard to explain the faculty, by which we are capable of habits, throughout its feveral parts; and to trace it up to its original, fo as to distinguish it from all others in our mind: and it feems as if contrary effects were to be ascribed to it. But the thing in general, that our nature is formed to yield, in some such manner as this, to use and

and exercise; is matter of certain experience.

Thus by accustoming ourselves to any course of action, we get an aptness to go on, a facility, readiness, and often pleafure in it. The inclinations which rendered us averse to it, grow weaker: the difficulties in it, not only the imaginary but the real ones lessen; the reasons for it, offer themselves of course to our thoughts upon all occasions; and the least glimpse of them is fufficient to make us go on, in a course of action, to which we have been accustomed. And practical principles appear to grow stronger, absolutely in themselves, by exercife; as well as relatively, with regard to contrary principles; which, by being accustomed to submit, do so habitually, and of course. And thus a new character, in feveral respects, may be formed; and many habitudes of life, not given by nature, but which nature directs us to acquire.

III. Indeed we may be affured, that we should never have had these capacities of improving by experience, acquired knowledge, and habits had they not been necessary, and intended to be made use of. And accordingly we find them so necessary, and

for much intended, that without them we should be utterly incapable of that, which was the end for which we were made, considered in our temporal capacity only: the employments and satisfactions of our mature state of life.

Nature does in no wife qualify us wholly, much less at once, for this mature state of life. Even maturity of understanding and bodily strength, are not only arrived to gradually, but are also very much owing to the continued exercise of our powers of body and mind, from infancy. But if we suppose a person brought into the world with both these in maturity, as far as this is conceivable; he would plainly at first be as unqualified for the human life of mature age, as an idiot. He would be in a manner distracted, with astonishment, and apprehension, and curiosity, and fuspense: nor can one guess, how long it would be, before he would be familiarized to himself and the objects about him enough, even to fet himself to any thing. It may be questioned too, whether the natural information of his fight and hearing, would be of any manner of use at all to himi

him in acting, before experience. And it feems, that men would be strangely headftrong and felf-willed, and disposed to exert themselves with an impetuosity, which would render fociety unsupportable, and the living in it impracticable; were it not for fome acquired moderation and felf-government, fome aptitude and readiness in restraining themselves, and concealing their sense of things. Want of every thing of this kind which is learnt, would render a man as uncapable of fociety, as want of language would; or as his natural ignorance of any of the particular employments of life, would render him uncapable of providing himfelf with the common conveniences, or supplying the necessary want of it. In these respects, and probably in many more, of which we have no particular notion, mankind is left, by nature, an unformed, unfinished creature; utterly deficient and unqualified, before the acquirements of knowledge, experience, habits, for that mature state of life, which was the end of his creation, confidering him as related only to this world.

But then, as nature has endued us with a power of supplying those deficiencies, by

K 2 acquired

acquired knowledge, experience, and habits; fo likewise we are placed in a condition; in infancy, childhood, and youth, fitted for it; fitted for our acquiring those qualifications of ail forts, which we stand in need of in mature age. Hence children, from their very birth, are daily growing acquainted; with the objects about them, with the scene in which they are placed, and to have a future part; and learning fomewhat or other, necessary to the performance of it. The subordinations, to which they are accustomed in domestic life, teach them felf-government in common behaviour abroad, and prepare them for fubjection and obedience to civil authority. What passes before their eyes, and daily happens to them, gives them experience, caution against treachery and deceit, together with numberless little rules of action and conduct, which we could not live without; and which are learnt fo infenfibly and so perfectly, as to be mistaken perhaps for initinct; though they are the effect of long experience and exercise; as much so as language, or knowledge, in particular business, or the qualifications and behaviour belonging to the feveral ranks and profeffions. Thus the beginning of our days is adapted to be, and is, a state of education in the theory and practice of mature life. We are much affifted in it by example, instruction, and the care of others; but a great deal is left to ourselves to do. And of this, as part is done easily and of course; to part requires diligence and care, the voluntary foregoing many things which we defire, and fetting ourselves to what we should have no inclination to, but for the necessity or expedience of it. For, that labour and industry, which the station of fo many abfolutely requires, they would be greatly unqualified for, in maturity; as those in other stations would be, for any other forts of application; if both were not accustomed to them in their youth. And according as persons behave themselves, in the general education which all go through, and in the particular ones adapted to particular employments; their character is formed, and made appear; they recommend themselves more or less; and are capable of and placed in, different stations in the fociety of mankind.

K 3

The

The former part of life then, is to be confidered as an important opportunity, which nature puts into our hands; and which, when loft, is not to be recovered. And our being placed in a state of discipline throughout this life, for another world, is a providential disposition of things, exactly of the same kind, as our being placed in a state of discipline during childhood, for mature age. Our condition in both respects is uniform and of a piece, and comprehended under one and the same general law of nature.

And if we were not able at all to difcern, how or in what way the present life could be our preparation for another; this would be no objection against the credibility of its being so. For we do not discern, how food and sleep contribute to the growth of the body: nor could have any thought that they would, before we had experience. Nor do children at all think, on the one hand, that the sports and exercises, to which they are so much addicted, contribute to their health and growth, nor on the other, of the necessity which there is for their being restrained in them: nor are they capable of understanding the use of many parts of discipline, which nevertheless they must be made to go through, in order to qualify them for the business of mature age. Were we not then able to discover, in what respects the present life could form us for a future one: yet nothing would be more supposeable than that it might, in some respects or other, from the general analogy of providence. And this, for aught I see, might reasonably be said, even though we should not take in the consideration of God's moral government over the world. But,

IV. Take in this confideration, and confequently, that the character of virtue and piety is a necessary qualification for the future state; and then we may distinctly see, how, and in what respects the present life may be a preparation for it: since we want, and are capable of improvement in that character, by moral and religious habits; and the present life is sit to be a state of discipline for such improvement: in like manner as we have already observed, how, and in what respects, infancy, childhood, and youth, are a necessary prepar-

K 4

ation

ation, and a natural state of discipline for mature age.

Nothing which we at prefent fee, would lead us to the thought of a folitary unactive state hereafter; but if we judge at all from the analogy of nature, we must suppose, according to the scripture account of it, that it will be a community. And there is no shadow of any thing unreasonable, in conceiving, though there be no analogy for it, that this community will be, as the scripture represents it, under the more immediate, or, if fuch an expreffion may be used, the more fensible government of God. Nor is our ignorance, what will be the employments of this happy community, nor our confequent ignorance, what particular scope or occasion there will be for the exercise of veracity, justice and charity, amongst the members of it with regard to each other; any proof that there will be no fphere of exercise for those virtues. Much less, if that were possible, is our ignorance any proof, that there will be no occasion for that frame of mind, or character which is formed by the daily practice of those particular virtues

here

here, and which is a refult from it. This at least must be owned in general, that, as the government established in the universe is moral, the character of virtue and piety must, in some way or other, be the condition of our happiness, or the qualifications for it.

Now from what is above observed concerning our natural power of habits, it is easy to see, that we are capable of moral improvement by discipline. And how greatly we want it, need not be proved to any one who is acquainted with the great wickedness of mankind; or even with those imperfections, which the best are conscious of. But it is not perhaps distinctly attended to by every one, that the occasion which human creatures have for discipline, to improve in them this character of virtue and piety, is to be traced up higher than to excess in the passions, by indulgence and habits of vice. Mankind, and perhaps all finite creatures, from the very constitution of their nature, before habits of virtue are formed, are deficient, in danger of deviating from what is right; and therefore stand need of virtuous habits, for a fecurity against

against this danger. For, together with the general principle of moral understanding, we have in our inward frame various affections towards particular external objects. These affections are naturally, and of right, subject to the government of the moral principle, as to the occasion on which they may be gratified; as to the time, degrees, and manner, in which the objects of them may be purfued; but then the principle of virtue can neither excite them, nor prevent their being excited. On the contrary, they are naturally felt, when the objects of them are present to the mind, not only before all confideration, whether they can be obtained by lawful means, but after it is found they cannot. For the natural objects of affection continue fo; the necesfaries, conveniencies, and pleasures of life, remain naturally defirable; though they cannot possibly be obtained at all. And when the objects of any affection whatever cannot be obtained without unlawful means; but may be obtained by them: fuch affection, though its being excited, and its continuing sometime in the mind, be as innocent, as it is natural and necessary; yet

cannot but be conceived to have a tendency to incline persons to venture upon such unlawful means; and therefore must be conceived as putting them in some danger of it. Now what is the general security against this danger, against their actually deviating from right? As the danger is, so also must the security be, from within: from the practical principle of virtue*. And the

* It may be thought, that fense of interest would as effectually restrain creatures from doing wrong. But if by a fense of interest is meant a speculative conviction or belief, that fuch and fuch indulgence would occasion them greater uneafiness, upon the whole, than fatisfaction; it is contrary to prefent experience to fay, that this fense of interest is sufficient to restrain them. from thus indulging themselves. And if by sense of interest is meant, a practical regard to what is upon the whole our happiness: this is not only coincident with the principle of virtue and moral rectitude, but is a part of the idea itself. And it is evident, this reasonable self-love wants to be improved as really as any principle in our nature. For we daily fee it overmatched, not only by the more boisterous passions, but by curiofity, shame, love of imitation, by any thing, even indolence: especially if the interest, the temporal interest, suppose, which is the end of such felf-love, be at a diftance. So greatly are profligate men mistaken, when they affirm they are wholly go-

the strengthening or improving this principle, confidered as practical, or as a principle of action, will leffen the danger, or encrease the security against it. And this moral principle is capable of improvement, by proper discipline and exercise; by recollecting the practical impressions which example and experience have made upon us: and instead of following humour and mere anclination, by continually attending to the equity and right of the case, in whatever we are engaged, be it in greater or lefs matters; and accustoming ourselves always to act upon it; as being itself the just and natural motive of action; and as this moral course of behaviour, must necessarily under divine government, be our final interest. Thus the principle of virtue, improved into an habit, of which improvement we are thus capable, will plainly be, in proportion to the strength of it, a security against the danger which finite creatures are in, from the very nature of propension

verned by difinterestedness and self-love. And so little cause is there for moralists to disclaim this principle. See p. 123, 124.

or particular affections. This way of puting the matter, supposes particular affect
tions to remain in a future state; which it
is scarce possible to avoid supposing. And
if they do; we clearly see, that acquired
habits of virtue and self-government may
be necessary for the regulation of them.
However, though we were not distinctly
to take in this supposition, but to speak
only in general; the thing really comes to
the same: For habits of virtue, thus acquired by discipline, are improvements in
virtue: and improvement in virtue, must
be advancement in happiness, if the government of the universe be moral.

From these things we may observe, and it will farther shew this our natural and original need of being improved by discipline, how it comes to pass, that creatures made upright fall; and that those who preserve their uprightness, by so doing, raise themselves to a more secure state of virtue. To say that the former is accounted for by the nature of liberty, is to say no more, than that an event's actually happening is accounted for by a mere possibility of its happening. But it seems distinctly

distinctly conceivable from the very nature of particular affections or propensions. For, suppose creatures intended for such a particular state of life, for which such propenfions were necessary: suppose them endued with fuch propentions, together with moral understanding, as well including a practical fense of virtue, as a speculative perception of it; and that all these several principles, both natural and moral, forming an inward constitution of mind, were in the most exact proportion possible, i. e. in a proportion the most exactly adapted to their intended flate of life; fuch creatures would be made upright, or finitely perfect. Now particular propensions, from their very nature, must be felt, the objects of them being present; though they cannot be gratified at all, or not with the allowance of the moral principle. But if they can be gratified without its allowance or by contradicting it; then they must be conceived to have fome tendency, in how low a degree foever, yet fome tendency, to induce persons to such forbidden gratification. This tendency, in some one particular propension, may be encreased, by the

the greater frequency of occasions naturally exciting it, than of occasions exciting others. The least voluntary indulgence in forbidden circumstances, though but in thought, will encrease this wrong tendency; and may encrease it further, till peculiar conjunctures perhaps conspiring, it becomes effect; and danger of deviating from right, ends in actual deviation from it: a danger necessarily arising from the very nature of propension; and which therefore could not have been prevented, though it might have been escaped, or got innocently through. The case would be, as if we were to suppose a strait path marked out for a berson, in which such a degree of attention would keep him steady: but if he would not attend in this degree, any one of a thousand objects, catching his eye, might lead him out of it. Now it is impossible to fay, how much, even the first full overt act of irregularity, might diforder the inward constitution; unsettle the adjustments, and alter the proportions which formed it, and in which the uprightness of its make consisted; but repetition of irregularities would produce hahits

bits. And thus the constitution would be spoiled; and creatures made upright, become corrupt, and depraved in their fettled character, proportionably to their repeated irregularities in occasional acts. But on the contrary, these creatures might have improved and raised themselves, to an higher and more fecure state of virtue, by the contrary behaviour: by fleadily following the moral principle, supposed to be one part of their nature; and thus with standing that unavoidable danger of defection, which necessarily arose from propenfion, the other part of it. For, by thus preserving their integrity for some time; their danger would leffen; fince propenfions by being inured to fubmit, would do it more easily and of course: and their security against this lessening danger would encrease; fince the moral principle would gain additional strength by exercise: both which things are implied in the notion of virtuous habits. Thus then vicious indulgence, is not only criminal in itself, but alfo depraves the inward constitution and character. And virtuous self-government; is not only right in itself, but also im-

proves

proves the inward constitution or character; and may improve it to fuch a degree, that though we should suppose it impossible, for particular affections to be abfolutely coincident with the moral principle; and confequently should allow, that such creatures as have been above supposed, would for ever remain defectible; yet their danger of actually deviating from right, may be almost infinitely lessened, and they fully fortified against the remains of it; if that may be called danger, against which, there is an adequate effectual fecurity. But still, this their higher perfection may continue to confift in habits of virtue formed in a state of discipline, and this their more compleat fecurity remain to proceed from them. And thus it is plainly conceivable, that creatures without blemish, as they came out of the hands of God, may be in danger of going wrong; and fo may stand in need of the fecurity of virtuous habits, additional to the moral principle wrought into their natures by him. That which is the ground of their danger, or their want of fecurity, may be confidered as a deficiency in them, to which virtuous habits are the natural

natural fupply. And as they are naturally capable of being raised and improved by discipline, it may be a thing fit and requisite, that they should be placed in circumstances with an eye to it: in circumstances peculiarly sitted to be, to them, a state of discipline for their improvement in virtue.

But how much more ftrongly must this hold with respect to those, who have corrupted their natures, are fallen from their original rectitude, and whose passions are become excessive, by repeated violations of their inward constitution? Upright creatures may want to be improved; depraved creatures want to be renewed. Education and discipline, which may be in all degrees and forts of gentleness and of severity, is expedient for those; but must be absolutely necessary for these. For these, discipline of the feverer fort too, and in the higher degrees of it, must be necessary, in order to wear out vicious habits; to recover their primitive strength of felf-government, which indulgence must have weakened, to repair, as well as to raife into an habit, the moral principle, in order to their arriving at a fecure state of virtuous happiness.

Now

Now whoever will confider the thing, may clearly see, that the present world is peculiarly fit to be a state of discipline for this purpose, to such as will set themselves to mend and improve. For the various temptations with which we are furrounded; our experience of the deceits of wickedness; having been in many instances led wrong ourselves; the great vitiousness of the world: the infinite diforders confequent upon it; our being made acquainted with pain and forrow, either from our own feeling of it, or from the fight of it in others: these things, though some of them may indeed produce wrong effects upon our minds, yet when duly reflected upon, have, all of them, a direct tendency to bring us to a fettled moderation and reafonableness of temper: the contrary both to thoughtless levity, and also to that unrestrained felf-will, and violent bent to follow present inclination, which may be observed in undisciplined minds. Such experience, as the prefent state affords, of the frailty of our nature: of the boundless extravagance of ungoverned passion; of the power which an infinite being has over

us by the various capacities of misery which he has given us; in short, that kind and degree of experience, which the present state affords us, that the constitution of nature is fuch as to admit the poffibility, the danger, and the actual event, of creatures lofing their innocence and happiness, and becoming vitious and wretched; hath a tendency to give us a practical fense of things, very different from a mere speculative knowledge, that we are liable to vice, and capable of mifery. And who knows whether the fecurity of creatures in the highest and most fettled state of perfection, may not in part arise, from their having had fuch a fense of things as this, formed, and habitually fixt within them, in fome state of probation. And paffing through the prefent world with that moral attention, which is necessary to the acting a right part in it, may leave everlafting impressions of this fort upon our minds. But to be a little more distinct, allurements to what is wrong; difficulties in the difcharge of our duty; our not being able to act an uniform right part without fome thought and care; and the opportunities which

which we have, or imagine we have of avoiding what we diflike, or obtaining what we defire, by unlawful means, when we either cannot do it at all, or at 'least not fo eafily, by lawful ones; thefe things, i.e. the fnares and temptations of vice, are what render the prefent world peculi. I fit to be a state of discipline, to those who will preferve their integrity: because they render being upon our guard, refolution, and the denial of our passions, necessary in order to that end. And the exercise of fuch particular recollection, intention of mind, and felf-government in the practice of virtue, has, from the make of our nature, a peculiar tendency to form habits of virtue; as implying, not only a real, but also a more continued, and a more intense exercise of the virtuous principle; or a more constant and stronger effort of virtue exerted into act. Thus suppose a person to know himself to be in a particular danger, for fome time, of doing any thing wrong, which yet he refolves fully not to do: continued recollection, and keeping upon his guard, in order to make good his resolution, is a continued exerting of that act of vir-

 L_3

tue in a high degree, which need have been, and perhaps would have been, only instantaneous and weak, had the temptation been fo. It is indeed ridiculous to affert, that felf-denial is effential to virtue and piety; but it would have been nearer the truth, though not strictly the truth itself, to have faid, that it is effential to difcipline and improvement. For though actions materially virtuous, which have no fort of difficulty, but are perfectly agreeable to our particular inclinations, may possibly be done only from these particular inclinations, and fo may not be any exercife of the principle of virtue, i. e. not be virtuous actions at all; yet on the contrary they may be an exercise of that principle: and when they are, they have a tendency to form and fix the habit of virtue. when the exercise of the virtuous principle is more continued, oftener repeated, and more intense: as it must be in circumstances of danger, temptation and difficulty of any kind and in any degree; this tendency is encreased proportionably, and a more confirmed habit is the confequence.

This

This undoubtedly holds to a certain length; but how far it may hold, I know not. Neither our intellectual powers, nor our bodily strength, can be improved bevond fuch a degree: and both may be overwrought. Possibly there may be somewhat analogous to this, with respect to the moral character; which is fcarce worth confidering. And I mention it only, left it should come into some persons thoughts, not as an exception to the foregoing observations, which perhaps it is; but as a confutation of them, which it is not. And there may be several other exceptions. Observations of this kind cannot be supposed to hold minutely, and in every cafe. It is enough that they hold in general. And these plainly hold fo far, as that from them may be feen distinctly, which is all that is intended by them, that the present world is peculiarly fit to be a state of discipline, for our improvement in virtue and piety: in the fame fense as some sciences, by requiring and engaging the attention, not to be fure of fuch persons as will not, but of such as will, fet themselves to them, are fit to form the mind to habits of attention.

L 4

Indeed

Indeed the present state is so far from proving, in event, a discipline of virtue to the generality of men, that, on the contrary, they feem to make it a discipline of vice: and the vitiousness of the world is, in different ways, the great temptation, which renders it a state of virtuous discipline in the degree it is to good men. The whole end, and the whole occasion, of mankind's being placed in fuch a flate as the prefent, is not pretended to be accounted for. That which appears amidst the general corruption, is, that there are fome perfons, who, having within them the principle of amendment and recovery, attend to and follow the notices of virtue and religion, be they more clear or more obscure, which are afforded them; and that the present world is, not only an exercise of virtue in these persons, but an exercise of it in ways and degrees, peculiarly apt to improve it; apt to improve it, in some respects, even beyond what would be, by the exercise of it required, in a perfectly virtuous fociety, or in a fociety of equally imperfect virtue with themfelves. But that the prefent world does not actually become a state of moral discipline

pline to many, even to the generality, i. e. that they do not improve or grow better in it, cannot be urged as a proof, that it was not intended for moral discipline, by any who at all observe the analogy of nature. For, of the innumerable feeds of vegetables and bodies of animals, which are adapted and put in the way, to improve to fuch a point or state of natural maturity and perfection, we do not see perhaps that one in a million actually does. Far the greatest part of them decay before they are improved in it; and appear to be absolutely destroyed. Yet no one, who does not deny all final causes, will deny, that those feeds and bodies, which do attain to that point of maturity and perfection, answer the end for which they were really defigned by nature: and therefore that nature defigned them for fuch perfection. And I cannot forbear adding, though it is not to the present purpose, that the appearance of fuch an amazing waste in nature, with respect to these seeds and bodies, by foreign causes, is to us as unaccountable, as what is much more terrible, the present and future

ture ruin of fo many moral agents by themfelves, i.e. vice.

Against this whole notion of moral discipline, it may be objected, in another way, that fo far as a course of behaviour, materially virtuous, proceeds from hope and fear, fo far it is only a discipline and strengthening of self-love. But doing what God commands, because he commands it, is obedience, though it proceeds from hope or fear. And a course of such obedience will form habits of it. And a constant regard to veracity, justice, and charity, may form distinct habits of these particular virtues; and will certainly form habits of felf-government, and of denying our inclinations, whenever veracity, justice, or charity requires it. Nor is there any foundation for this great nicety, with which fome affect to distinguish in this case, in order to depreciate all religion proceeding from hope or fear. For, veracity, justice, and charity, regard to God's authority, and to our own chief interest, are not only all three coincident: but each of them is, in itself, a just and natural motive or principle of action. And he who begins a good life

life from any one of them, and perseveres in it, as he is already in some degree, so he cannot fail of becoming more and more, of that character, which is correspondent to the constitution of nature as moral; and to the relation, which God stands in to us as moral Governor of it: nor consequently can he fail of obtaining that happiness, which this constitution and relation necessarily suppose connected with that character.

These several observations concerning the active principle of virtue and obedience to God's command, are applicable to passive fubmission or refignation to his will: which is another effential part of a right character connected with the former, and very much in our power to form ourselves to. It may be imagined, that nothing but afflictions can give occasion for, or require this virtue; that it can have no respect to, nor be any way necessary to qualify for, a state of perfect happiness, but it is not experience which can make us think thus. Prosperity itself, whilst any thing supposed desirable is not ours, begets extravagant and unbounded thought. Imagination is altogether

as much a fource of discontent, as any thing in our external condition. It is indeed true that there can be no scope for patience when forrow shall be no more; but there may be need for a temper of mind, which shall have been formed by patience. -For, though felf-love, confidered merely as an active principle leading us to purfue our chief interest, cannot but be uniformly coincident with the principle of obedience to God's commands, our interest being righly understood; because this obedience and the pursuit of our own chief interest, must be in every case one and the same thing: yet it may be questioned, whether felf-love, confidered merely as the defire of our own interest or happiness, can, from its nature, be thus absolutely and uniformly coincident with the will of God; any more than particular affections can *: coincident in fuch fort, as not to be liable to be excited upon occasions and in fuch degrees, impoffible to be gratified confistently with the conflitution of things, or the divine appointment. So that habits of refignation may, upon this account, be requisite for all creatures; habits, I fay; which fignify

what is formed by use. However, in general, it is obvious, that both felf-love and particular affections, in human creatures, confidered only as passive feelings, distort and render the mind; and therefore stand in need of discipline. Now, denial of those particular affections, in a courfe of active virtue and obedience to God's will, has a tendency to moderate them; and feems also to have a tendency to habituate the mind, to be easy and satisfied with that degree of happiness which is allotted us, i. e. to moderate, felf-love. But the proper difcipline for refignation is affliction. For a right behaviour under that trial; recollecting ourselves so as to consider it in the view, in which religion teaches us to confider it, as from the hand of God; receiving it as what he appoints, or thinks proper to permit, in his world, and under his government: this will habituate the mind to a dutiful submission. And such submission, together with the active principle of obedience, make up the temper and character in us, which answers to his sovereignty; and which absolutely belongs to the condition of our being, as dependent creatures.

Nor can it be faid, that this is only breaking the mind to a fubmission to mere power; for mere power may be accidental, and precarious, and usurped: but it is forming within ourselves the temper of resignation to his rightful authority, who is, by nature; supreme over all.

Upon the whole: fuch a character, and fuch qualifications, are necessary for a mature state of life in the present world, as nature alone does in no wife bestow; but has put it upon us, in great part, to acquire, in our progress from one stage of life to another, from childhood to mature age: put it upon us to acquire them, by giving us capacities of doing it, and by placing us in the beginning of life, in a condition fit for it. And this is a general analogy to our condition in the present world, as in a state of moral discipline for another. It is in vain then to object against the credibility of the prefent life's being intended for this very purpose, that all the trouble and danger, unavoidably accompanying fuch discipline, might have been faved us, by our being made at once the creatures and the characters, which we are to be. For we experience, that what we were to be, was to be the effect of what we would do: and that the general conduct of nature is, not to fave us trouble or danger, but to make us capable of going through them; and to put it upon us to do fo. Acquirements of our own, experience and habits, are the natural supply to our deficiencies, and fecurity against our dangers; since it is as plainly natural to fet ourselves to acquire the qualifications, as the external things, which we stand in need of. In particular, it is as plainly a general law of nature, that we should, with regard to our temporal interest, form and cultivate practical principles within us, by attention, uses and discipline, as any thing whatever is a natural law; chiefly in the beginning of life, but also thoughout the whole course of it. And the alternative is left to our choice: either to improve ourselves, and better our condition: or, in the default of fuch improvement, to remain deficient and wretched. It is therefore perfectly credible, from the analogy of nature, that the same may be our case, with respect to the happiness

of a future state, and the qualifications necessary for it.

There is a third thing, which may feem implied in the present world's being a state of probation: that it is a theatre of action, for the manifestation of persons characters, with respect to a future one: not to be sure to an all-known Being, but to his creation or part of it. This may, perhaps, be only a consequence of our being in a state of probation in the other fenses. However, it is not impossible, that men's shewing and making manifest, what is in their heart, what their real character is, may have refpect to a future life, in ways and manners which we are not acquainted with: particularly it may be a means, for the Author of nature does not appear to do any thing without means, of their being disposed of fuitably to their characters; and of its being known to the creation, by way of example, that they are thus disposed of. But not to enter upon any conjectural account of this: one may just mention, that the manifestation of persons characters, contribute very much, in various ways, to the

carrying on a great part of that general course of nature, respecting mankind, which comes under our observation at present. I shall only add, that probation, in both these senses, as well as in that treated of in the foregoing chapter, is implied in moral government: since by persons behaviour under it, their characters cannot but be manifested, and if they behave well, improved.

M

CHAP.

CHAP. VI.

OF THE OPINION OF NECESSITY, CONSIDERED AS INFLUENCING PRACTICE.

THROUGHOUT the foregoing treatife, it appears, that the condition of mankind, confidered as inhabitants of this world only; and under the government of God which we experience; is greatly analogous to our condition, as defigned for another world, or under that farther government, which religion teaches us. If therefore any affert, as a fatalist must, that the opinion of univerfal necessity is reconcileable with the former; there immediately arises a question in the way of analogy, whether he must not also own it to be reconcileable with the latter, i. e. with the fystem of religion itself, and the proof of it. The reader then will observe, that the question now before us is not absolute, Whether the opinion of fate be reconcileable with religion; but hypothetical, whether, upon · fupfupposition of its being reconcileable with the constitution of nature, it be not reconcileable with religion also: or, what pretence a fatalist, not other persons, but a fatalist, has to conclude from his opinions, that their can be no such thing as religion. And as the puzzle and obscurity, which must unavoidably arise from arguing upon so absurd a supposition as that of universal necessity, will, I fear, easily be seen; it will, I hope, as easily be excused.

But fince it has all along been taken for granted, as a thing proved, that there is an intelligent Author of nature, or natural Governor of the world; and fince an objection may be made against the proof of this, from the opinion of universal neceffity, as it may be supposed, that such necessity will itself account for the origin and preservation of all things: it is requisite, that this objection be distinctly answered; or that it be shewn, that a fatality, supposed consistent with what we certainly experience, does not destroy the proof of an intelligent Author and Governor of nature; before we proceed to consider, whether it

destroys the proof of a moral Governor of it, or of our being in a state of religion.

Now, when it is faid by a fatalist, that the whole constitution of nature, and the actions of men, that every thing, and every mode and circumstance of every thing, is necessary, and could not possibly have been otherwise; it is to be observed, that this necessity does not exclude deliberation, choice, preference, and acting from certain principles, and to certain ends: because all this is matter of undoubted experience, acknowledged by all, and what every man may, every moment be conscious of. And from hence it follows, that necessity, alone, and of itself, is in no fort an account of the constitution of nature, and how things come to be and to continue as they are; but only an account of this circumstance, relating to their origin and continuance, that they could not have been otherwise, than they are and have been. The affertion that everything is by necessity of nature, is not an answer to the question; whether the -world came into being as it is, by an intelligent Agent forming it thus, or not; but to quite another question; whether it came

into

into being as it is, in that way and manner which we call necessarily, or in that way and manner which we call freely. For suppose farther, that one who was a fatalift, and one who kept to his natural fense of things, and believed himself a free agent, were disputing together, and vindicating their respective opinions; and they should happen to instance in a house; they would agree, that it was built by an architect .-Their difference concerning necessity and . freedom, would occasion no difference of judgement concerning this; but only concerning another matter; whether the architect built it necessarily or freely. Suppose then they should proceed to inquire concerning the constitution of nature; in a lax way of speaking, one of them might fay, It was by necessity; and the other by freedom: but if they had any meaning to their words, as the latter must mean a free agent, so the former must at length be reduced to mean an agent, whether he would fay one or more, acting by necessity: for abstract-notions can do nothing. Indeed we ascribe to God a necessary existence, uncaused by an agent. For we find within ourselves the idea of infinity, i.e. immen-M 3

fity and eternity, impossible, even in imagination, to be removed out of being. We feem to difcern intuitively, that there must, and cannot but be somewhat, external to ourselves, answering this idea, or the archetype of it. And from hence, (for this abstract, as much as any other, implies a concrete) we conclude, that there is, and cannot but be, an infinite, an immense eternal Being existing, prior to all design contributing to his existence, and exclusive of it. And from the scantiness of language, a manner of speaking has been introduced; that necessity is the foundation, the reason, the account of the existence of God. But it is not alledged, nor can it be at all intended, that every thing exists as it does, by this kind of necessity; a necessity antecedent in nature to defign: it cannot, I fay, be meant that every thing exists as it does, by this kind of necessity, upon several accounts; particularly because it is admitted, that defign, in the actions of men, contributes to many alterations in nature. For if any deny this, I shall not pretend to reason with them.

From these things it follows; first, that when a fatalist afferts, that every thing is

by necessity, he must mean, by an agent acting necessarily; he must, I say, mean this, for I am very fensible, he would not chuse to mean it: and secondly, That the necessity, by which such an agent is supposed to act, does not exclude intelligence and defign. So that, were the fystem of fatality admitted; it would just as much account for the formation of the world, as for the structure of an house, and no more. Necessity as much requires and supposes a neceffary agent, as freedom requires and supposes a free agent, to be the framer of the world. And the appearance of design and of final causes in the constitution of nature, as really prove this acting agent, to be an intelligent defigner, to act from choice; upon the scheme of necessity, supposed possible, as upon that of freedom.

It appearing thus, that the notion of necessity does not destroy the proof that there is an intelligent Author and natural Governor of the world; the present question, which the analogy before mentioned suggests *, and which, I think it will answer, is this: whether the opinion of necessity,

* Page 178.

supposed confistent with possibility, with the constitution of the world, and the natural government which we experience exercifed over it; destroys all reasonable ground of belief, that we are in a flate of religion: or whether that opinion be reconcileable with religion; with the fystem, and the proof of it.

Suppose then a fatalist to educate any one, from his youth up, in his own principles; that the child should reason upon them, and conclude, that fince he cannot possibly behave otherwise than he does, he is not a subject of blame or commendation, nor can deferve to be rewarded or punished: imagine him to eradicate the very perceptions, of blame and commendation out of his mind, by means of this fystem, to form his temper, and character, and behaviour to it: and form it to judge of the treatment he was to expect, fay, from reasonable men, upon his coming abroad into the world, as the fatalist judges from this syftem, what he is to expect from the Author of nature, and with regard to a future state. I cannot forbear stopping here to ask, whether any one of common fense would think

fit, that a child should be put upon these fpeculations, and be left to apply them to practice. And a man has little pretence to reason, who is not sensible, that we are all coildren in speculations of this kind. However, the child would doubtless be highly delighted to find himfelf freed from the restraints of fear and shame, with which his play-fellows were fettered and embarrafied: and highly conceited in his fuperior knowlege, fo far beyond his years. But conceit and vanity would be the least bad part of the influence, which these principles must have, when thus reasoned and acted upon, during the course of his education. He must either be allowed to go on and be the plague of all about him, and himself too, even to his own destruction: or else correction must be continually made use of, to supply the want of those natural perceptions of blame and commendation, which we have supposed to be removed: and to give him a practical impression, of what he had reasoned himself out of the belief of, that he was in fact an accountable child, and to be punished for doing what he was forbid. It is therefore in reality

reality impossible but that the correction which he must meet with, in the course of his education, must convince him, that if the scheme he was instructed in were not false; yet that he reasoned inconclusively upon it, and fome how or other misapplied it to practice and common life: as what the fatalist experiences of the conduct of Providence at prefent, ought in all reason to convince him, that this scheme is misapplied, when applied to the subject of religion. But supposing the child's temper could remain still formed to the system, and his expectation of the treatment he was to have in the world be regulated by it; fo as to expect that no reasonable man would blame or punish him, for any thing which he should do, because he could not help doing it: upon this supposition, it is manifest he would, upon his coming abroad into the world, be insupportable to society, and the treatment which he would receive from it, would render it fo to him; and he could not fail of doing fomewhat, very foon, for which he would be delivered over into the hands of civil justice. And thus, in the end, he would be convinced of the

obligations he was under to his wife inftructor. Or suppose this scheme of fatality, in any other way, applied to practice, fuch practical application of it, will be found equally abfurd; equally fallacious, in a practical fense: for instance, that if a man be destined to live such a time, he shall live to it, though he take no care of his own prefervation, or if he be destined to die before that time, no care can prevent it: therefore all care about preserving one's life is to be neglected: which is the fallacy instanced in by the ancients. But now on the contrary, none of these practical absurdities can be drawn, from reasoning upon the supposition, that we are free; but all fuch reasoning with regard to the common affairs of life, is justified by experience. And therefore, though it were admitted that this opinion of necesfity were speculatively true; yet, with regard to practice, it is as if it were false, so far as our experience reaches; that is, to the whole of our present life. For, the constitution of the present world, and the condition in which we are actually placed, is, as if we were free. And it may perhaps justly by concluded, that fince the whole process of action, through every ftep

step of it, suspence, deliberation, inclining one way, determining, and at last doing as we determine, is as if we were free, therefore we are fo. But the thing here infifted upon is, that under the prefent natural government of the world, we find we are treated and dealt with, as if we were free, prior to all consideration whether we are or not. Were this opinion therefore of necesfity admitted to be ever fo true; yet fuch is in fact our condition and the natural course of things, that whenever we apply to life and practice, this application of it, always misleads us, and cannot but mislead us, in a most dreadful manner, with regard to our present interest. And how can people think themselves so very secure then, that the same application of the same opinion may not mislead them also, in some analogous, manner, with respect to a future, a more general and more important interest? For, religion being a practical · fubject; and the analogy of nature shewing us, that we have not faculties to apply this opinion, were it a true one, to practical fubjects; whenever we do apply it to the subject of religion, and thence conclude,

that

that we are free from its obligations, it is plain this conclusion cannot be depended upon: there will still remain just reason to think, whatever appearances are, that we deceive ourselves; in somewhat of a like manner, as when people fancy they can draw contradictory conclusions from the idea of infinity.

From these things together, the attentive reader will fee it follows, that if upon supposition of freedom the evidence of religion be conclusive, it remains so, upon supposition of necessity; because the notion of necessity is not applicable to practical fubjects: i. e. with respect to them, is as if it were not true. Nor does this contain any reflection 'upon reason; but only upon what is unreasonable. For to pretend to act upon reason, in opposition to practical principles, which the Author of our nature gave us to act upon; and to pretend to apply our reason to subjects, with regard to which, our own short views, and even our experience, will shew us, it cannot be depended upon; and fuch, at best, the subject of neceffity must be; this is vanity, conceit, and unreasonableness.

But

190 OF THE OPINION OF NECESSITY

But this is not all. For we find within ourselves a will, and are conscious of a character. Now if this, in us, be reconcileable with fate, it is reconcileable with it, in the Author of Nature. And besides, natural government and final causes, imply a character, and a will in the governor and defigner*; a will concerning the creatures whom he governs. The Author of Nature then being certainly of some character or other, notwithstanding necessity; it is evident this necessity is as reconcileable with the particular character of benevolence, veracity, and justice in him, which attributes are the foundation of religion, as with any other character: fince we find this necessity, no more hinders men from being benevolent, than cruel; true, than faithless; just, than unjust; or if the fatalist pleases what we call unjust. For it is said indeed, that what, upon supposition of

^{*} By will and character is meant that, which, in speaking of men, we should express, not only by these words, but also by the words, temper, taste, dispositions, practical principles, that whole frame of mind, from whence we act in one manner, rather than another.

freedom would be just punishment, upon fuppofition of necessity, becomes manifestly unjust: because it is punishment inflicted for doing that, which perfons, could not avoid doing. As if the necesfity, which is supposed to destroy the injustice of murder, for instance, would not also destroy the injustice of punishing it. However, as little to the purpose as this objection is in itself, it is very much to the purpose to observe from it, how the notions of justice and injustice remain, even whilst we endeavour to suppose them removed; how they force themselves upon the mind, even whilst we are making suppositions deftructive of them; for there is not, perhaps a man in the world, but would be ready to make this objection at first thought.

But though it is most evident, that universal necessity, if it be reconcileable with any thing, is reconcileable with that character in the Author of Nature, which is the foundation of religion; "yet does it" not plainly destroy the proof, that he is "of that character, and consequently the "proof of religion?" By no means. For we find, that happiness and misery are not our fate, in any such sense, as not to be the

consequences of our behaviour; but that they are the consequences of it*. We find God exercises the same kind of government over us, with that, which a father exercises over his children, and a civil magistrate over his subjects. Now, whatever becomes of abstract questions concerning liberty and necessity, it evidently appears to us, that veracity and justice must be the natural rule and measure of exercising this authority or government, to a being, who can have no competitions, or interfering of interests, with his creatures and his subjects.

But as the doctrine of liberty, though we experience its truth, may be perplexed difficulties, which run up into the most abstructe of all speculations, and as the opinion of necessity seems to be the very basis, upon which insidelity grounds itself; it may be of some use to offer a more particular proof of the obligations of religion, which may distinctly be shewn not to be destroyed by this opinion.

The proof from final causes of an intelligent Author of Nature, is not affected by

the opinion of necessity, supposing necesfity a thing possible in itself, and reconcileable with the constitution of things .-And it is a matter of fact, independent on this or any other speculation, that he governs the world by the method of rewards and punishments +: and also that he hath given us a moral faculty, by which we diftinguish between actions, and approve fome as virtuous and of good defert, and disapprove others vicious and of ill desert 1. Now this moral difcernment implies, in the notion of it, a rule of action, and a rule of a very peculiar kind; for it carries in it authority and a right of direction, authority in fuch a fense, as we cannot part from it without being felf-condemned §.

And that the dictates of this moral faculty, which are by nature a rule to us, are moreover the laws of God, laws in a fense including sanctions; may be thus proved. Consciousness of a rule or guide of action, in creatures who are capable of considering it as given them by their Maker,

[†] Ch. ii. † Dissert. II. § Serm. 2. at the Rolls.

not only raises immediately a sense of duty, but also a fense of security in following it, and of danger in deviating from it. A direction of the Author of nature given to creatures capable of looking upon it as fuch, is plainly a command from him: and a command from him necessarily includes in it, at least, an implicit promise in case of obedience, of threatening in case of disobedience.-But then the fense or perception of good and ill defert +, which is contained in the moral discernment, renders the fanction explicit, and makes it appear, as one may fay, expressed. For fince his method of government is to reward and punish actions, his having annexed to fome actions an inseparable sense of good defert, and to others of ill, this furely amounts to declaring, upon whom his punishments shall be inflicted, and his rewards be bestowed .-For he must have given us this discernment and fense of things, as a pre-sentiment of what is to be hereafter: that is, by way of information before-hand, what we are finally to expect in his world. There is then more evident ground to think, that the government of God, upon the whole, will be found to correspond to the nature which he has given us: and that in the upshot and issue of things, happiness and misery shall, in fact and event, be made to follow virtue and vice respectively; as he has already, in so peculiar a manner, associated the ideas of them in our minds. And from hence might easily be deduced, the obligations of religious worship, were it only to be considered as a means of preserving, upon our minds a sense of this moral government of God, and securing our obedience to it: which yet is an extremely impersect view of that most important duty.

Now I fay, no objection from necessity, can lie against this general proof of religion. None against the proposition reasoned upon, that we have such a moral faculty and discernment; because this is a mere matter of fact, a thing of experience, that human kind is thus constituted: none against the conclusion; because it is immediate and wholly from this fact. For the conclusion that God will finally reward the righteous and punish the wicked, is not here

here drawn, from its appearing to us fit *, that He should; but from its appearing that he has told us He will. And this he hath certainly told us, in the promise and threatening, which it hath been observed the notion of a command implies, and the sense of good and ill desert, which he has given

* However, I am far from intending to deny, that the will of God is determined, by what is fit, by the right and reason of the case; though one chuses to decline matters of fuch abstract speculation, and to speak with caution when one does speak of them. But if it be intelligible to fay, that 'it is fit and reasonable ' for every one to consult his own happiness,' then, ' fitness of action, or the right and reason of the case,' is an intelligible manner of speaking. And it seems as inconceiveable, to suppose God to approve one course of action, or one end, preserably to another, which yet his acting at all from defign, implies that he does, without supposing somewhat prior in that end, to be the ground of the preference; as to suppose him to discern an abstract proposition to be true, without supposing somewhat prior in it, to be the ground of the difcernment. It doth not therefore appear, that moral right is any more relative to perception, than abstract truth is: or that it is any more improper, to speak of the fitness and rightness of actions and ends, as founded in the nature of things, than to speak of abstract truth; as thus founded.

Š.

foning from fact is confirmed, and in some degree even verified, by other facts; by the natural tendencies of virtue and vice; and by this, that God, in the natural course of his providence, punishes vicious actions as mischievous to society; and also vicious actions as such in the strictest sense. So that the general proof of religion is unanswerably real, even upon the wild supposition which we are arguing upon.

It must likewise be observed farther, that natural religion hath, besides this, an external evidence; which the doctrine of neceffity, if it could be true, would not affect. For suppose a person, by the observations and reasonings above, or by any other, convinced of the truth of religion; that there is a God, who made the world, who is the moral Governor and Judge of mankind, and will upon the whole, deal with every one according to his works: I fay, fuppose a person convinced of this by reafon; but to know nothing at all of antiquity, or the present state of mankind. It would be natural for fuch a one to be inquifitive, what was the history of this system of doctrine; at what time, and in what manner, it came first into the world; and whether it were believed by any confiderable part of it. And were we upon inquiry to find, that a particular person, in a late age, first of all proposed it, as a deduction of reason, and that mankind were before wholly ignorant of it: then, though its evidence from reason would remain, there would be no additional probability of its truth, from the account of its discovery. But instead of this being the fact of the case, on the contrary, he would find, what could not but afford him a very firong confirmation of its truth: First, That somewhat of this fystem, with more or fewer additions and alterations, hath been professed in all ages and countries, of which we have any certain information relating to this matter. Secondly, That it is certain historical fact, so far as we can trace things up, that this whole system of belief, that there is one God, the Creator and moral Governor of the world, and that mankind is in a state of religion, was reccived in the first ages. And thirdly, That as there is no hint or intimation in history, that that this system was first reasoned out; so, there is no express historical or traditional evidence, as ancient as history, that it was taught first by revelation. Now these things must be allowed to be of great weight.-The first of them, general consent, shews this fystem to be conformable to the common fense of mankind. The fecond, namely, that religion was believed in the first ages of the world, especially as it does not appear that there were then any fuperstitious or false additions to it, cannot but be a farther confirmation of its truth. For it is a proof of this alternative: either that it came into the world by revelation; or that it is natural, obvious, and forces itself upon the mind. The former of these is the conclusion of learned men. And whoever will consider, how unapt for speculation rude and uncultivated minds are, will, perhaps, from hence alone, be strongly inclined to believe it the truth. And as it is shewn in the fecond part * of this treatife, that there is nothing of fuch peculiar prefumption against a revelation in the beginning of the wolrd,

* Chap. ii.

as there is supposed to be against subsequent ones: a fceptic could not, I think, give any account, which would appear more probable even to himfelf, of the early pretences to revelation; than by supposing fome real original one, from whence they were copied. And the third thing abovementioned, that there is express historical or traditional evidence as ancient as history, of the fystem of religion being taught mankind by revelation; this must be admitted as some degree of real proof, that it was so taught. For why should not the most ancient tradition be admitted, as fome additional proof of a fact, against which there is no presumption? And this proof is mentioned here, because it has its weight to shew, that religion came into the world by revelation, prior to all confideration of the proper authority of any book supposed to contain it; and even prior to all confideration, whether the revelation itself be uncorruptly handed down and related, or mixed and darkened with fables. Thus the historical account, which we have, of the origin of religion, taking in all circum---- flances!

stances, is a real confirmation of it, which no way affected by the opinion of necessity. And the external evidence, even of natural religion, is by no means inconsiderable.

But it is carefully to be observed, and ought to be recollected after all proofs of virtue and religion, which are only general; that as speculative reason may be neglected, prejudiced, and deceived: fo also may our moral understanding be impaired and perverted, and the dictates of it not impartially attended to: this indeed proves nothing against the reality of our speculative or practical faculties of perception; against their being intended by nature, to inform us in theory of things, and instruct us how we are to behave, and what we are to expect in consequence of our behaviour. Yet our liableness, in the degrees we are liable, to prejudice and perversion, is a more ferious admonition to us to be upon our guard, with respect to what is of fuch consequence, as our determinations concerning virtue and religion; and particularly not to take custom, and fashion, and flight notions of honour, or imaginations

tions of present ease, use and convenience to mankind for the only moral rule*.

The foregoing observations drawn from the nature of the thing, and the history of religion, amount, when taken together, to a real practical proof of it, not to be confuted; fuch a proof as, confidering the infinite importance of the thing, I apprehend would be admitted fully sufficient, in reafon, to influence the actions of men, who act upon thought and reflection; if it were admitted, that there is no proof of the contrary. But it may be faid; " there are many probabilities, which cannot indeed be confuted, i. e. shewn to be no probabilities, and yet may be overbalanced, 66 by greater probabilities on the other " fide; much more by demonstration. And " there is no reason to object against par-" ticular arguments alledged for an opinion, " when the opinion itself may be clearly " fhewn to be false, without meddling with 66 fuch arguments at all, but leaving them " just as they are. Now the method of

^{*} Differt. II.

government by rewards and punishments and especially rewarding and punishing good and ill defert as fuch respectively, must go upon supposition, that we are free and not necessary agents. And it is incredible that the Author of Nature should 66 " govern us upon a supposition as true; which he knows to be false; and there-" fore abfurd to think he will reward or " punish us for our actions hereafter; especially that he will do it under the " notion, that they are of good or ill de-" fert." Here then the matter is brought to a point. And the answer to all this is full, and not to be evaded: that the whole constitution and course of things, the whole analogy of Providence, shews beyond possibility of doubt, that the conclusion from this reasoning is false; wherever the fallacy lies. The doctrine of freedom indeed clearly shews where; in supposing ourselves necessary, when in truth we are free agents. But upon the supposition of necessity, the fallacy lies in taking for granted, that it is incredible necessary agents should be rewarded and punished. But that, some how or other, the conclusion now mentioned is falle,

false, is most certain. For it is fact, that God does govern even brute creatures by the method of rewards and punishments, in the natural course of things. And men are rewarded and punished for their actions, punished for actions mischievous to society as being so, punished for vicious actions as fuch; by the natural instrumentality of each other, under the present conduct of Providence. Nay even the affection of gratitude, and the passion of resentment, and the rewards and punishments following from them, which in general are to be confidered as natural, i. e. from the Author of nature, these rewards and punishments, being naturally * annexed to actions confidered as implying good intention and good defert, ill intention and ill defert; these natural rewards and punishments, I say, are as much a contradiction to the conclusion above, and shew its falshood, as a more exact and compleat rewarding and punishing of good and ill defert as fuch. So that if it be incredible, that necessary agents should be thus rewarded and punished; then, men

are not necessary but free; since it is matter of fact, that they are thus rewarded and punished; but if, on the contrary, which is the supposition we have been arguing upon, it be insisted that men are necessary agents; then, there is nothing incredible in the farther supposition of necessary agents being thus rewarded and punished; since we ourselves are thus dealt with.

From the whole therefore it must follow, that a necessity supposed possible, and reconcileable with the conftitution of things, does in no fort prove that the Author of nature will not, nor destroy the proof that he will, finally and upon the whole, in his eternal government, render his creatures happy or miferable, by fome means or other, as they behave well or ill. Or, to express this conclusion in words conformable to the title of the chapter, the analogy of nature shews us that the opinion of necessity, considered as practical, is false.-And if necessity, upon the supposition abovementioned, doth not destroy the truth of natural religion, it evidently makes no alteration, in the proof of revealed.

From

From these things likewise we may learn, in what fense to understand that general affertion, that the opinion of necessity is effentially destructive of all religion. First in a practical sense; that by this notion, atheistical men pretend to satisfy and encourage themselves in vice; and justify to others their difregard to all religion. And fecondly, in the strictest fense; that it is a contradiction to the whole conffitution of nature, and to what we may every moment experience in ourfelves, and fo overturns every thing. But by no means is this affertion to be understood, as if necessity, supposing it could possibly be reconciled with the constitution of things and with what we experience, were not also reconciled with religion; for upon this supposition, it demonstrably is so.

CHAP. VII.

OF THE GOVERNMENT OF GOD, CONSI-DERED AS A SCHEME OR CONSTITUTION, IMPERFECTLY COMPREHENDED.

THOUGH it be, as it cannot but be; acknowledged, that the analogy of nature gives a strong credibility to the general doctrine of religion, and to the several particular things contained in it, confidered as fo many matters of fact; and likewife, that it shews this credibility not to be destroyed by any notions of necessity: yet still, objections may be infifted upon, against the wisdom, equity, and goodness of the divine government implied in the notion of religion, and against the method by which this government is conducted; to which objections analogy can be no direct answer. -For the credibility, or the certain truth, of a matter of fact, does not immediately prove any thing concerning the wisdom and goodness of it: and analogy can do no

more, immediately or directly, than shew fuch and fuch things to be true or credible. confidered only as matters of fact. But still, if, upon supposition of a moral constitution of nature, and a moral government over it, analogy fuggests and makes it credible, that this government must be a scheme, system, or constitution of government, as distinguished from a number of fingle unconnected acts of distributive justice and goodness; and likewise, that it must be a scheme, so imperfectly comprehended, and of fuch a fort in other respects, as to afford a direct general answer to all objections against the justice and goodness of it: then analogy is, remotely, of great service in answering those objections; both by fuggesting the answer, and shewing it to be a credible one.

Now this, upon inquiry, will be found to be the case. For, first, upon supposition that God exercises a moral government over the world, the analogy of his natural government suggests and makes it credible, that his moral government must be a scheme, quite beyond our comprehension: and this affords a general answer to all objections

jections against the justice and goodness of it. And secondly, a more distinct observation of some particular things contained in God's scheme of natural government, the like things being supposed by analogy, to be contained in his moral government, will farther shew, how little weight is to be laid upon these objections.

I. Upon supposition that God exercises a moral government over the world, the analogy of his natural government fuggests and makes it credible, that his moral government must be a scheme, quite beyond our comprehension; and this affords a general answer to all objections against the justice and goodness of it. It is most obvious, analogy renders it highly credible, that upon supposition of a moral government, it must be a scheme; for the world, and the whole natural government of it, appears to be fo: to be a scheme, system, or constitution, whose parts correspond to each other, and to a whole; as really as iny work of art, or as any particular model of a civil constitution and government. In this great scheme of the natural world, ndividuals have various peculiar relations to other

other individuals of their own species .-And whole species are, we find, variously related to other species, upon this earth.-Nor do we know, how much farther these kinds of relations may extend. And, as there is not any action or natural event, which we are acquainted with, fo fingle and unconnected, as not to have a respect to fome other actions and events: fo possibly each of them, when it has not an immediate, may yet have a remote, natural respect to other actions and events, much beyond the compass of this prefent-world. This feems indeed nothing, from whence we can fo much as make a conjecture, whether all creatures, actions, and events, throughout the whole of nature, have relations to each other. But, as it obvious, that all events have future unknown confequences; fo, if we trace any, as far as we can go, into what is connected with it; we shall find, that if fuch event were not connected with fomewhat farther in nature unknown to us, fomewhat both past and present, such event could not possibly have been at all. Nor can we give the whole account of any one thing whatever: of all its causes, ends, and

necessary adjuncts; those adjuncts, I mean, without which it could not have been. By this most astonishing connection, these reciprocal correspondencies and mutual relations, every thing which we see in the course of nature, is actually brought about. And things feemingly the most infignificant imaginable, are perpetually observed to be necessary conditions to other things of the greatest importance: fo that any one thing whatever, may, for aught we know to the contrary, be a necessary condition to any other. The natural world then, and natural government of it, being fuch an incomprehensible scheme; so incomprehensible, that a man must, really in the literal sense, know nothing at all, who is not fensible of his ignorance in it: this immediately fuggefts, and strongly shews the credibility, that the moral world and government of it may be fo too.

Indeed the natural and moral constitution and government of the world are so connected, as to make up together but one scheme: and it is highly probable, that the first is formed and carried on merely in subferviency to the latter; as the vegetable

world is for the animal, and organized bodies for minds. But the thing intended here, is, without inquiring how far the administration of the natural world is subordinate to that of the moral, only to observe the credibility, that one should be analogous or fimilar to the other: that therefore every act of divine justice and goodness, may be fupposed to look much beyond itself, and its immediate object; may have some reference to other parts of God's moral administration, and to a general moral plan: and that every circumstance of this his moral government, may be adjusted before-hand, with a view to the whole of it. Thus for example: the determined length of time, and the degrees and ways, in which virtue is to remain in a state of warfare and discipline, and in which wickedness is permitted to have its progress; the times appointed for the execution of justice; the appointed in struments of it; the kinds of rewards and punishments, and the manners of their distribution; all particular instances of divine justice and goodness, and every circumstance of them, may have such respects to each other, as to make up altogether a whole,

whole, connected and related in all its parts: a scheme or system, which is as properly one as the natural world is, and of the like kind. And supposing this to be the case; it is most evident, that we are not competent judges of this scheme, from the small parts of it, which come within our view in the present life: and therefore no objections against any of these parts, can be insisted upon by reasonable men.

This our ignorance, and the confequence here drawn from it, are univerfally acknowledged, upon other occasions; and, though scarce denied, yet are universally forgot, when perfons come to argue against religion. And it is not perhaps eafy, even for the most reasonable men, always to bear in mind the degree of our ignorance, and make due allowances for it. Upon these accounts, it may not be useless to go on a little farther, in order to shew more distinctly, how just an answer our ignorance is, to objections against the scheme of Providence. -Suppose then a person boldly to affert, that the things complained of, the origin and continuance of evil, might easily have been prevented by repeated interpolitions: 214

interpolitions so guarded and circumstanced, as would preclude all mischief arising from them: or, if this were impracticable, that a scheme of government is itself an imperfection; fince more good might have been produced, without any scheme, system, or constitution at all, by continual fingle unrelated acts of distributive justice and goodness: because these would have occasioned no irregularities. And farther than this, it is prefumed, the objections will not be carried. Yet the answer is obvious; that were these affertions true, still the observations above, concerning our ignorance in the scheme of divine government, and the confequence drawn from it, would hold, in great measure; enough to vindicate religion, against all objections from the diforders of the present state. Were these affertions true, yet the government of the world might be good and just notwithstanding; for, at the most, they would infer nothing more than that it might have been better. But indeed they are mere arbitrary affertions: no man being fufficiently acquainted with the poffibilities of things, to bring any proof of them,

to the lowest degree of probability. For however possible, what is afferted may feem; yet many instances may be alledged, in things much less out of our reach, of fuppositions absolutely impossible, and reducible to the most palpable felf-contradictions, which, not every one by any means, would perceive to be fuch, nor perhaps any one at first fight suspect. From these things, it is eafy to fee distinctly, how our ignorance, as it is the common, is really a fatisfactory answer to all objections against the justice and goodness of Providence. If a man, contemplating any one providential difpensation, which had no relation to any others, should object, that he discerned in it a disregard to justice, or a deficiency of goodness; nothing would be less an answer to such objection, than our ignorance in other parts of providence, or in the possibilities of things, no way related to what he was contemplating. But when we know not, but the parts objected against may be relative to other parts unknown to us; and when we are unacquainted with what is, in the nature of the thing, practicable in the case before us; then then our ignorance is a fatisfactory answer; because, some unknown relation, or some unknown impossibility, may render what is objected against, just and good; nay good in the highest practicable degree.

II. And how little weight is to be laid upon fuch objections, will farther appear, by a more distinct observation of some particular things contained in the natural government of God, the like to which may be supposed, from analogy, to be contained in this moral government.

First, As in the scheme of the natural world, no ends appear to be accomplished without means: fo we find that means very undefirable, often conduce to bring about ends in fuch a meafure defirable, as greatly to overbalance the difagreeableness of the means. And in cases where such means are conducive to fuch ends, it is not reason, but experience, which shews us, that they are thus conducive. Experience also shews many means to be conducive and necessary to accomplish ends, which means, before experience, we should have thought, would have had even a contrary tendency. Now from these observations relating to the natural

tural scheme of the world, the moral being supposed analogous to it, arises a great credibility, that the putting our mifery in each other's power to the degree it is, and making men liable to vice to the degree we are; and in general, that those things which are objected against the moral scheme of Providence, may be, upon the whole, friendly and affiftant to virtue, and productive of an over-balance of happiness: i.e. the things objected against, may be means, by which an over-balance of good will, in the end, be found produced. And from the same observation, it appears to be no prefumption against this that we do not, if indeed we do not, see those means to have any fuch tendency; or that they feem to us to have a contrary one. Thus those things which we call irregularities, may not be fo at all: because they be means of accomplishing wife and good ends more confiderable *. And it may be added, as above, that they may also be the only means, by which these wife and good ends are capable of being accomplished.

After these wise observations it may be proper to add, in order to obviate a wicked,

an abfurd and wicked conclusion from any of them, that though the constitution of our nature, from whence we are capable of vice and mifery, may, as it undoubtedly does, contribute to the perfection and happiness of the world; and though the actual permiffion of evil may be beneficial to it: (i. e. it would have been more mischievous, not that a wicked person had himself abstained from his own wickedness, but that any one had forcibly prevented it, than that it was permitted:) yet notwithstanding, it might have been much better for the world, if this evil had never been done. Nay, it is most clearly conceivable, that the very commiffion of wickedness may be beneficial to the world, and yet, that it would be infinitely more beneficial for men to refrain from it. For thus, in the wife and good constitution of the natural world, there are diforders which bring their own cures; diseases, which are themselves remedies. Many a man would have died, had it not been for the gout or a fever; yet it would be thought madness to affert, that sickness is a better or more perfect state than health; though

the

the like, with regard to the moral world, has been afferted. But,

Secondly, The natural government of the world, is carried on by general laws. For this there may be wife and good reasons, the wifest and best, for aught we know to the contrary. And that there are fuch reafons, is fuggested to our thoughts, by the analogy of nature; by our being made to experience good ends to be accomplished, as indeed all the good which we enjoy is accomplished, by this means, that the laws, by which the world is governed, are general. For we have fcarce any kind of enjoyments, but what we are, in fome way or other, instrumental in procuring ourselves, by acting in a manner which we foresee likely to procure them: now this forefight could not be at all, were not the government of the world carried on by general laws. though, for aught we know to the contrary, every fingle cafe, may be, at length, found to have been provided for even by these; yet to prevent all irregularities, or remedy them as they arise, by the wisest and best general laws, may be impossible in the nature of things, as we fee it is absolutely

impossible in civil government. But then we are ready to think, that, the constitution of nature remaining as it is, and the course of things being permitted to go on, in other respects, as it does, there might be interpositions to prevent irregularities; though they could not have been prevented or remedied by any general laws. And there would indeed be reason to wish, which, by the way, is very different from a right to claim, that all irregularities were prevented or remedied by prefent interpolitions, if these interpolitions would have no other effect than this. But it is plain they would have some visible and immediate bad effects; for instance, they would encourage idleness and negligence; and they would render doubtful the natural rule of life, which is afcertained by this very thing, that the course of the world is carried on by general laws. farther, it is certain, they would have diftinct effects, and very great ones too; by means of the wonderful connexions before mentioned. So that we cannot fo much as guess, what would be the whole refult of the interpolitions defired. It may be faid.

faid, any bad refult might be prevented by farther interpolitions, whenever there was occasion for them: but this again is talking quite at random, and in the dark. Upon the whole then, we see wise reafons, why the course of the world should be carried on by general laws, and good ends accomplished by this means: and, for aught we know, there may be the wifeft reasons for it, and the bad ends accomplished by it. We have no ground to believe, that all irregularities could be remedied as they arife, or could have been precluded, by general laws. We find that interpolitions would produce evil, and prevent good: and, for aught we know, they would produce greater evil than they would prevent; and prevent greater good than they would produce.

And if this be the case, then the not interposing is so far from being a ground of complaint, that it is an instance of goodness. This is intelligible and sufficient: and going farther, seems beyond the utmost reach of our faculties.

But it may be faid, that "after all, these supposed impossibilities and relations are what

what we are unacquainted with; and we must judge of religion, as of other things, by what we do know, and look upon the rest as nothing; or however, that the answers here given to what is objected against religion, may equally be made use of to invalidate the proof of it; since their stress lies so very much upon our ignorance." But,

First, Though total ignorance in any matter, does indeed equally destroy, or rather preclude, all proof concerning it, and objection against it: yet partial ignorance does not. For we may in any degree, be convinced that a person is of such a character and confequently will purfue fuch ends; though we are greatly ignorant, what is the proper way of acting, in order, the most effectually, to obtain these ends: and in this case, objections against his manner of acting, as feemingly not conducive to obtain them, might be answered by our ignorance; though the proof that fuch ends were intended, might not at all be invalidated by it. Thus, the proof of religion is a proof of the moral character of God, and consequently that his government is moral, and

and that every one upon the whole shall receive according to his deferts: a proof that this is the defigned end of his government. But we are not competent judges, what is the proper way of acting, in order the most effectually to accomplish this end. Therefore our ignorance is an answer to objections against the conduct of Providence, in permitting irregularities, as feeming contradictory to this end. Now, fince it is obvious, that our ignorance may be a fatisfactory anfwer to objections against a thing, and yet not affect the proof of it; till it can be shewn, it is frivolous to affert, that our ignorance invalidates the proof of religion, as it does the objections against it.

Secondly, Suppose unknown impossibilities, and unknown relations, might justly be urged to invalidate the proof of religion, as well as to answer objections against it; and that in consequence of this, the proof of it were doubtful. Yet still, let the affertion be despised, or let it be ridiculed, it is undeniably true, that moral obligations would remain certain, though it were not certain what would, upon the whole, be the consequences of observing or violating them.

them. For, these observations arise immediately and necessarily from the judgement of our own mind, unless perverted, which we cannot violate without being self-condemned. And they would be certain too, from considerations of interest. For though it were doubtful, what will be the future consequences of virtue and vice; yet it is, however, credible, that they may have those consequences, which religion teaches us they will, and this credibility is a certain + obligation in point of prudence, to abstain from all wickedness, and to live in the conscientious practice of all that is good. But,

Thirdly, The answers above given to the objections against religion, cannot equally be made use of to invalidate the proof of it. For, upon supposition that God exercises a moral government over the world, analogy does most strongly lead us to conclude, that this moral government must be a scheme, or constitution, beyond our comprehension. And a thousand particular analogies shew us, that parts of

fuch a scheme, from their relations to other parts, may conduce to accomplish ends, which we should have thought, they had no tendency at all to accomplish: nay ends, which before experience, we should have thought fuch parts were contradictory to, and had a tendency to prevent. And therefore all these analogies shew, that the way of arguing made use of in objecting against religion, is delusive; because they shew it is not at all incredible, that, could we comprehend the whole, we should find the permission of the disorders objected against, to be confistent with justice and goodness; and even to be inflances of them. Now this is not applicable to the proof of religion, as it is to the objections against it *; and therefore cannot invalidate that proof, as it does these objections.

Lastly, From the observations now made, it is easy to see that the answers above given to the objections against Providence, though, in a general way of speaking, they may be said to be taken from our ignorance; yet are by no means taken

merely

^{*} Serm. at the Rolls, p. 312. 2d edit.

merely from that, but from fomething which analogy shews us concerning it. For analogy shews us positively, that our ignorance in the poffibilities of things, and the various relations in nature, renders us incompetent judges, and leads us to false conclusions, in cases similar to this, in which we pretend to judge and to object. So that the things above infifted upon, are not mere suppositions of unknown impossibilities and relations: but, they are suggested to our thoughts, and even forced upon the observation of ferious men, and rendered credible too, by the analogy of nature. And therefore, to take these things into the account, is to judge by experience, and what we do know: and it is not judging so, to take no notice of them.

CONCLUSION.

THE observations of the last chapter, lead us to confider this little scene of human life, in which we are fo bufily engaged, as having a reference, of some fort or other, to a much larger plan of things. -Whether we are, any way, related to the more distant parts of the boundless universe; into which we are brought, is altogether uncertain. But it is evident, that the course of things which comes within our view, is connected with fomewhat past, present, and future, beyond it. So that we are placed, as one may speak, in the middle of a scheme, not a fixt, but a progressive one, every way incomprehensible: incomprehenfible, in a manner, equally, with respect to what has been, what now is, and what shall be hereafter. And this scheme cannot but contain in it somewhat as wonderful, and as much beyond our thought P 2

and conception, as any thing in that of religion. For, will any man in his fenses fay, that it is less difficult to conceive how the world came to be and to continue as if is, without, than with, an intelligent Author and Governor of it? or, admitting an intelligent Governor of it, that there is fome other rule of government, more natural, and of easier conception, than that which we call moral? Indeed, without an intelligent Author and Governor of nature, no account at all can be given, how this universe, or the part of it particularly in which we are concerned, came to be, and the course of it to be carried on as it is: nor any, of its general end and defign, without a moral Governor of it. That there is an intelligent Author of nature, and natural Governor of the world, is a principle gone upon in the foregoing treatife, as proved, and generally known and confessed to be proved. And the very notion of an intelligent Author of nature proved by particular final causes, implies a-will and a character. Now, as our whole nature, the nature which he has given us, leads us to conclude his will and character to be moral,

moral, just, and good: so we can scarce in imagination conceive, what it can be otherwife. However, in confequence of this his will and character, whatever it be, he formed the universe as it is, and carries on the course of it as he does, rather than in any other manner; and has affigned to us, and to all living creatures, a part and a lot in it. Irrational creatures act this their part, and enjoy and undergo the pleasures and the pains allotted them, without any reflection. But one would think it imposfible, that creatures endued with reason could avoid reflecting fometimes upon all this: reflecting, if not from whence we came, yet, at least, whither we are going, and what the mysterious scheme, in the midst of which we find ourselves, will, at length, come to, and produce: a scheme in which it is certain we are highly interested, and in which we may be interested even beyond conception. For many things prove it palpably abfurd to conclude, that we fhall cease to be, at death. Particular analogies does most fensibly shew us, that there is nothing to be thought strange, in our being to exist in another state of life.-

 P_3

And that we are now living beings, affords a ftrong probability, that we shall continue fo; unless there be some positive ground, and there is none from reason or analogy, to think death will destroy us. Were a perfuafion of this kind ever fo well grounded, there would, furely, be little reason to take pleafure in it. But indeed it can have no other ground, than some such imagination, as that of our gross bodies being ourselves: which is contrary to experience. Experience too most clearly shews us the folly of concluding, from the body and the living agent affecting each other mutually, that the diffolution of the former is the destruction of the latter. And there are remarkable inflances of their not affecting each other, which lead us to a contrary conclusion. The supposition then, which in all reason we are to go upon, is, that our living nature will continue after death. -And it is infinitely unreasonable to form an institution of life, or to act upon any other supposition. Now all expectation of immortality, whether more or less certain, opens an unbounded prospect to our hopes and our fears: fince we fee the constitution

of nature is fuch, as to admit of misery as well as to be productive of happinets, and experience ourselves to partake of both in fome degree; and fince we cannot but know, what higher degrees of both we are capable of. And there is no prefumption against believing farther, that our future interest depends upon our present behaviour: for we see our present interest doth; and that the happiness and misery, which are naturally annexed to our actions, wery frequently do not follow, till long after the actions are done, to which they are respectively annexed. So that were speculation to leave us uncertain, whether it were likely that the Author of nature, in giving happiness and misery to his creatures, hath regard to their actions or not: yet, fince we find by experience that he hath fuch regard, the whole fense of things which he hath given us, plainly leads us at once, and without any elaborate inquiries, to think that it may, indeed must, be to good actions chiefly that he hath annexed happiness, and to bad actions misery; or that he will, upon the whole, regard those who do well, and punish those who do evil .--

P 4

To confirm this from the constitution of the world, it has been observed; that some fort of moral government is necessarily implied in that natural government of God, which we experience ourselves under: that good and bad actions, at prefent, are naturally rewarded and punished, not only as beneficial and mischievous to society: but also as virtuous and vicious: and that there is, in the very nature of the thing, a tendency to their being rewarded and punished in a much higher degree than they are at present. And though this higher degree of distributive justice, which nature thus points out, and leads towards, is prevented for a time from taking place: it is by obstacles which the state of this world unhappily throws in its way, and which therefore are in their nature temporary. Now, as these things in the natural conduct of Providence, are observeable on the side of virtue; fo there is nothing to fet against them on the fide of vice. A moral scheme of government then, is visibly established, and in fome degree, carried into execution: and this, together with the effential tendencies of virtue and vice duly confidered, natually

naturally raise in us an apprehension, that it will be carried on farther towards perfection in a future state, and that every one shall there receive according to his deferts. And if this be fo, then our future and general interest, under the moral government of God, is appointed to depend upon our behaviour; notwithstanding the difficulty which this may occasion, of fecuring it, and the danger of losing it: just in the fame manner as our temporal interest under his natural government, is appointed to depend upon our behaviour; notwithstanding the like difficulty and danger. For, from our original conflitution and that of the world which we inhabit, we are naturally trufted with ourselves; with our own conduct and our own interest. And from the same constitution of nature, especially joining with that course of things which is owing to men, we have temptations to be unfaithful in this trust; to forfeit this interest, to neglect it, and run ourselves into misery and ruin. From these temptations arise, the difficulties of behaving fo as to fecure our temporal interest, and the hazard of behaving so as to

miscarry in it. There is therefore nothing incredible in supposing there may be the like difficulty and hazard with regard to that chief and final good, which religion lays before us. Indeed the whole account, how it came to pass, that we were placed in fuch a condition as this; must be beyond our comprehension. But it is in part accounted for by what religion teaches us, that the character of virtue and piety must be a necessary qualification for a future state of fecurity and happiness under the moral government of God; in like manner as fome certain qualifications or other are neceffary for every particular condition-of life under his natural government: and that the present state was intended to be a school of discipline, for improving in ourselves that character. Now this intentionof nature is rendered highly credible by observing; that we are plainly made for improvement of all kinds; that it is a general appointment of Providence that we cultivate practical principles, and form within ourselves habits of action, in order to become fit for what we were wholly unfit for before: that in particular child.

hood

hood and youth is naturally appointed to be a state of discipline for mature age: and that the present world is peculiarly fitted for a state of moral discipline. And, whereas objections are urged against the whole notion of moral government and a pro ationflate, from the opinion of necessity; it has been shewn that God has given us the evidence, as it were, of experience, that all objections against religion on this head, are vain and delusive. He has also, in his natural government fuggested an answer to all our short-sighted objections against the equity and goodness of his moral government: and in general he has exemplified to us the latter by the former.

These things, which it is to be remembered, are matters of fact, ought, in all common sense, to awaken mankind to; induce them to consider in earnest their condition, and what they have to do. It is absurd, absurd to the degree of being ridiculous, if the subject were not of so serious a kind, for men to think themselves secure in a vicious life; or even in that immoral thoughtlessiness which far the greatest part of them are fallen into. And

the credibility of religion, arising from experience and facts here confidered is fully fufficient in reason, to engage them to live in the general practice of all virtue and piety; under the ferious apprehension, though it should be mixed with some doubt *, of a righteous administration established in nature, and a future judgment in consequence of it: especially when we consider how very questionable it is, whether any thing at all can be gained by vice; how unquestionably little, as well as precarious, the pleasures and profits of it are at the best; and how foon they must be parted with at the longest. For, in the deliberations of reason, concerning what we are to purfue, and what to avoid, as temp; tations to any thing from mere passion, are supposed out of the case; so inducements to vice, from cool expectations of pleafure and interest so small and uncertain and short, are really so infignificant, as, in the view of reason, to be almost nothing in themselves: and in comparison with the importance of religion, they quite

^{*} Part ii. Chap. vi.

disappear and are lost. Mere passion indeed may be alledged, though not as a reason, yet as an excuse, for a vicious course of life. And how forry an excuse it is, will be manifest, by observing, that we are placed in a condition, in which we are unavoidably inured to govern our passions, by being necessitated to govern them; and to lay ourselves under the same kind of reftraints, and as great ones too, from temporal regards, as virtue and piety, in the ordinary course of things, require. The plea of ungovernable passion then, on the fide of vice, is the poorest of all things: for it is no reason, and but a poor excuse.— But the proper motives to religion, are the proper proofs of it, from our moral nature, from the prefages of conicience, and our natural apprehension of God under the character of a righteous Governor and Judge; a nature, and conscience, and apprehension given by him: and from the confirmation of the dictates of reason, by " life and " immortality brought to light by the gof-" pel; and the wrath of God revealed from " Heaven, against all ungodliness, and un-" righteoufness of men."

O F

RELIGION

T-O THE

CONSTITUTION AND COURSE OF NATURE.

PART II.

OF REVEALED RELIGION.

CHAP. I.

OF THE IMPORTANCE OF CHRISTIANITY.

SOME persons, upon pretence of the sufficiency of the light of nature, avowedly reject all revelation, as, in its very notion, incredible, and what must be sictitious. And indeed it is certain, no revelation would have been given, had the light of nature been

been sufficient in such a sense, as to render one not wanting and useless. But no man, in feriousness and simplicity of mind, can possibly think it so, who considers the state of religion in the heathen world; before revelation, and its present state in those places which have borrowed no light from it: particularly, the doubtfulness of some of the greatest men, concerning things of the utmost importance, as well as the natural inattention and ignorance of mankind in general. It is impossible to fay, who would have been able to have reasoned out that whole fystem which we call natural religion, in its genuine simplicity, clear of fuperstition: but there is certainly no ground to affirm, that the generality could. If they could, there is no fort of probability, that they would. Admitting there were, they would highly want a standing admonition, to remind them of it, and inculcate it upon them. And farther still, were they as much disposed to attend to religion, as the better fort of men are: yet even upon this supposition, there would be various occasions for supernatural instruction and affiftance, and the greatest advantages might

might be afforded by them. So that to fay, revelation is a thing superfluous, what there was no need of, and what can be of no service; is, I think, to talk quite wildly and at random. Nor would it be more extravagant to affirm, that mankind is so entirely at ease in the present state, and life so completely happy; that it is a contradiction to suppose our condition capable of being, in any respect, better.

There are other persons not to be ranked with thefe, who feem to be getting into a way of neglecting, and, as it were, overlooking revelation, as of small importance, provided natural religion be kept to. With little regard, either to the evidence of the former, or to the objections against it, and even upon supposition of its truth; "the " only defign of it;" fay they, " must " be, to establish a belief of the moral " fystem of nature, and to enforce the prac-"tice of natural piety and virtue. The " belief and practice of these things were, " perhaps, much promoted by the first " publication of Christianity: but whether "they are believed and practifed, upon " the evidence and motives of nature or of

way of confidering revelation, though it is not the fame with the former, yet borders nearly upon it, and very much, at length, runs up into it: and requires to be particularly confidered, with regard to the perfons, who feem to be getting into this way. The confideration of it will likewife farther shew the extravagance of the former opinion, and the truth of the observations in answer to it, just mentioned. And an inquiry into the importance of Christianity, cannot be an improper introduction to a treatise concerning the credibility of it.

Now if God has given a revelation to mankind, and commanded those things, which are commanded in Christianity; it is evident, at first sight, that it cannot in

^{*} Invenis multos—propterea nolle fieri Christianos, quia quasi sufficiunt sibi de bona vita sua. Bene vivere opus est, ait. Quid mihi præcepturus est Christus?— Ut bene vivam? Jam bene vivo. Quid mihi necessarius est Christus? Nullum homicidium, nullum furtum, nullam rapinam facio, res alienas non concupisco, nullo adulterio contaminor. Nam inveniatur in vita mea aliquid quod reprehendatur, et qui reprehenderit faciat Christianum.——Aug. in Psal. xxxi.

any wife be an indifferent matter, whether we obey or difobey those commands: unless we are certainly assured, that we know all the reasons for them, and that all those reasons are now ceased, with regard to mankind in general, or to ourselves in particular. And it is absolutely impossible, we can be assured of this. For our ignorance of these reasons prove nothing in the case: since the whole analogy of nature shews, what is indeed in itself evident, that there may be infinite reasons for things, with which we are not acquainted.

But the importance of Christianity will more distinctly appear, by considering it more distinctly: First, as a republication, and external institution of natural or essential religion, adapted to the present circumstances of mankind, and intended to promote natural piety and virtue: and secondly, as containing an account of a dispensation of things, not discoverable by reason, in consequence of which, several distinct precepts are enjoined us. For though natural religion is the foundation and principal part of Christianity, it is not in any sense the whole of it.

Q 2

I. Chrif-

I. Christianity is a republication of natural religion. It instructs mankind in the moral system of the world; that it is the work of an infinitely perfect Being, and under his government; that virtue is his law; and that he will finally judge mankind in righteousness, and render to all according to their works, in a future state. And, which is very material, it teaches natural religion, in its genuine simplicity: free from those superstitions, with which it was totally corrupted, and under which it was in a manner lost.

Revelation is farther, an authoritative publication of natural religion, and so affords the evidence of testimony for the truth of it. Indeed the miracles and prophecies recorded in scripture, were intended to prove a particular dispensation of Providence, the redemption of the world by the Messiah: but this does not hinder, but that they may also prove God's general providence over the world, as our moral Governor and Judge. And they evidently do prove it; because this character of the Author of nature, is necessarily connected with and implied in that particular revealed dispensation

tion of things; it is likewise continually taught expressly, and insisted upon, by those persons, who wrought the miracles and delivered the prophecies. So that indeed natural religion, seems as much proved by the scripture revelation, as it would have been, had the design of revelation been nothing else than to prove it.

But it may possibly be disputed, how far miracles can prove natural religion; and notable objections may be urged against this proof of it, confidered as a matter of speculation: but confidered as a practical thing, there can be none. For suppose a person to teach natural religion to a nation, who had lived in total ignorance or forgetfulness of it; and to declare he was commisfioned by God fo to do: fuppose him, in proof of his commission, to foretell things future, which no human forefight could have gueffed at; to divide the fea with a word; feed great multitudes with bread from Heaven; cure all manner of diseases; and raise the dead, even himself, to life: would not this give additional credibility to his teaching, a credibility beyond what that of a common man would have; and

Q.

be an authoritative publication of the law of nature, i. e. a new proof of it? It would be a practical one, of the strongest kind, perhaps, which human creatures are capable of having given them. The law of Moses then, and the gospel of Christ, are authoritative publications of the religion of nature: they afford a proof of God's general providence, as moral Governor of the world; as well as of his particular dispensations of providence towards sinful creatures, revealed in the law and the gospel. As they are the only evidence of the latter; so they are an additional evidence of the former.

To shew this further, let us suppose a man of the greatest and most improved capacity, who had never heard of the revelation, convinced upon the whole, notwithstanding the disorders of the world, that it was under the direction and moral government of an infinitely perfect Being: but ready to question, whether he were not got beyond the reach of his faculties: suppose him brought, by this suspicion, into great danger of being carried away by the universal bad example of almost every one around

around him, who appeared to have no fense, no practical sense at least, of these things: and this, perhaps, would be as advantageous a situation with regard to religion, as nature alone ever placed any man in. What a confirmation now must it be to such a person, all at once, to find that this moral system of things was revealed to mankind, in the name of that infinite Being, whom he had from principles of reason believed in; and that the publishers of the revelation proved their commission from him, by making it appear, that he had entrusted them with a power of suspending and changing the general laws of nature.

Nor must it by any means be omitted, for it is a thing of the utmost importance, That life and immortality are eminently brought to light by the gospel. The great doctrines of a future state, the danger of a course of wickedness, and the efficacy of repentance, are not only confirmed in the gospel, but are taught, especially the last is, with a degree of light, to which that of nature is but darkness.

Farther: as Christianity served these ends and purposes, when it was first pub-Q 4 lished,

lished, by the miraculous publication itfelf; fo it was intended to ferve the same purpofes, in future ages, by means of the fettlement of a visible church; of a society; distinguished from common ones, and from the rest of the world, by peculiar religious institutions; by an instituted method of instruction, and an instituted form of external religion. Miraculous powers were given to the first preachers of Christianity, in order to their introducing it into the world: a visible church was established, in order to continue it, and carry it on fucceffively throughout all ages. Had Mofes and the prophets, Christ and his apostles, only taught, and by miracles proved, religion to their cotemporaries; the benefits of their instructions would have reached but a finall part of mankind. Christianity must have been, in a great degree, funk and forgot in a very few ages. To prevent this, appears to have been one reason, why a vifible church was inflituted: to be, like a city upon a hill, a standing memorial to the world of the duty which we owe our Maker: to call men continually, both by example and inftruction, to attend to it; and

and by the form of religion ever before their eyes, remind them of the reality: to be the repository of the oracles of God; to hold up the light of revelation in aid to that of nature, and propagate it throughout all generations to the end of the worldthe light of revelation, confidered here in no other view, than as defigned to enforce natural religion: And in proportion as Christianity is professed and taught in the world, religion, natural or effential religion, is thus distinctly and advantageously laid before mankind: and brought again and again to their thoughts, as a matter of infinite importance. A visible church has also a farther tendency to promote natural religion, as being an instituted method of education, originally intended to be of more peculiar advantage to those who would conform to it. For one end of the institution was, that by admonition and reproof, as well as inftruction; by a general regular discipline, and public exercises of religion: the body of Christ, as the scripture speaks, should be edified, i. e. trained up in piety and virtue, for a higher and better state. This lettlement then appearing thus beneficial:

cial: tending in the nature of the thing to answer, and in some degree actually and fwering those ends; it is to be remembered; that the very notion of it implies positive institutions: for the visibility of the church confifts in them. Take away every thing of this kind, and you lose the very notion itself. So that if the things now mentioned are advantages, the reason and importance of positive institutions in general, is most obvious; fince without them these advantages could not be fecured to the world.-And it is mere idle wantonness, to infift upon knowing the reasons, why such particular ones were fixed upon, rather than others.

The benefit arifing from this supernatural affistance, which Christianity affords to natural religion, is what some persons are very slow in apprehending. And yet it is a thing distinct in itself, and a very plain obvious one. For will any in good earnest really say, that the bulk of mankind in the heathen world, were in as advantageous a situation, with regard to natural religion, as they are now amongst us: that it was laid before them, and enforced upon them,

in a manner as distinct, and as much tending to influence their practice?

The objections against all this, from the perversion of Christianity, and from the supposition of its having had but little good influence, however innocently they may be proposed, yet cannot be infisted upon, as conclusive, upon any principles, but such as lead to downright Atheism; because the manifestation of the law of nature by reason, which, upon all principles of Theifm, must have been from God, has been perverted and rendered ineffectual in the fame manner. It may indeed, I think, truly be faid, that the good effects of Chriftianity has not been fmall; nor its fupposed ill effects, any effects at all of it, properly fpeaking. Perhaps too, the things themselves done, have been aggravated; and if not, Christianity hath been often only a pretence: and the same evils in the main would have been done, upon fome other pretence. However, great and shocking as the corruptions and abuses of it have really been, they cannot be infifted upon as arguments against it, upon principles of Theism. For one cannot proceed one step **

+ in reasoning upon natural religion, any + more than upon Christianity, without lay-+ ing it down as a first principle, that the + dispensations of Providence are not to be judged of by their perversions, but by their genuine tendencies; not by what they do actually feem to effect, but by what they + would effect if mankind did their part; that part which is justly put and left upon them. It is altogether as much the language of one, as of the other; "He that " is unjust, let him be unjust still: and he "that is holy, let him be holy still *."-The light of reason does not, any more than that of revelation, force men to fubmit to its authority; both admonish them of what they ought to do and avoid, together with the confequences of each; and after this, leave them at full liberty to act just as they please, till the appointed time of judgement. Every moment's experience shews, that this is God's general rule of government.

To return then: Christianity being a promulgation of the law of nature; being

^{*} Rev. xxii. 11.

moreover an authoritative promulgation of it; with new light, and other circumstances of peculiar advantage, adapted to the wants of mankind, these things fully shew its importance. And it is to be observed farther, that, as the nature of the case requires, so all Christians are commanded to contribute by their profession of Christianity, to preferve it in the world, and render it fuch a promulgation and enforcement of religion. For it is the very scheme of the gospel, that each Christian should, in his degree, contribute towards continuing and carrying it on: all by uniting in the public profession and external practice of Christianity: fome by instructing, by having the oversight and taking care of this religious community, the church of God. Now, this farther shews the importance of Christianity; and, which is what I chiefly intend, its importance in a practical fense: or the high obligations we are under, to take it into our most ferious consideration; and the danger there must necessarily be, not only in treating it despitefully, which I am not now fpeaking of, but in difregarding and neglecting it. For this is neglecting to do what

what is expressly enjoined us, for continuing those benefits to the world, and transmitting them down to future times. And all this holds, even though the only thing to be considered in Christianity, were its subserviency to natural religion. But,

II. Christianity is to be considered in a further view: as containing an account of a dispensation of things, not at all discoverable by reason, in consequence of which several distinct precepts are enjoined us .-Christianity is not only an external institution of natural religion, and a new promulgation of God's general providence, as righteous Governor and Judge of the world, but it contains also a revelation of a particular difpensation of Providence, carrying on by his Son and Spirit, for the recovery and falvation of mankind, who are reprefented in scripture, to be in a state of ruin. And in confequence of this revelation being made, we are commanded to be baptized, not only in the name of the Father, but also, of the Son, and of the Holy Ghost: and other obligations of duty, unknown before, to the Son and the Holy Ghost, are revealed. Now the importance

of these duties may be judged of, by obferving that they arise, not from positive command merely, but also from the offices, which appear, from scripture, to belong to those divine persons in the gospel dispensation: or from the relations, which, we are there informed, they stand in to us .-By reason is revealed the relation, which God the Father stands in to us. Hence arises the obligation of duty which we are under to him. In scripture are revealed the relations which the Son and Holy Spirit stand in to us. Hence arises the obligations of duty which we are under to them. The truth of the case, as one may speak, in each of these three respects being admitted; that God is the Governor of the world, upon the evidence of reason; that Christ is the Mediator between God and man, and the Holy Ghost our Guide and Sanctifier, upon the evidence of revelation; the truth of the case, I say, in each of these respects being admitted; it is no more a question, why it fhould be commanded, that we be baptized in the name of the Son and of the Holy Ghost, than that we be baptized in the name name of the Father. This matter feems to require to be more fully stated *.

Let it be remembered then, that religion comes under the twofold confideration of internal and external; for the latter is as real a part of religion, of true religion, as the former. Now when religion is confidered under the first notion, as an inward principle, to be exerted in fuch and fuch inward acts of the mind and heart, the effence of natural religion may be faid to confist in religious regards to God the Father Almighty: and the effence of revealed religion, as diftinguished from natural, to confist in religious regard to the Son, and to the Holy And the obligations we are under, of paying these religious regards to each of these divine persons respectively, arise from the respective relations, which they each stand in to us. How these relations are made known, whether by reason or revelation, makes no alteration in the case; because the duties arise out of the relations

them-

^{*} See, The Nature, Obligation, and Efficacy, of the Christian Sacrament, &c. and Colliber, Of Revealed Religion, as there quoted.

themselves, not out of the manner in which we are informed of them. The Son and Spirit have each his proper office, in that great dispensation of Providence, the redemption of the world; the one our Mediator, the other our Sanctifier. Does not then the duty of religious regards to both of these divine Persons, as immediately arise, to the view of reason, out of the very nature of these offices and relations; as the inward good-will and kind intention, which we owe to our fellow-creatures, arises out of the common relations between us and them? But it will be asked, "What are the in-" ward religious regards, appearing thus " obviously due to the Son and Holy Spirit: as arising, not merely from command in " scripture, but from the very nature of the revealed relations, which they stand in to us?" I answer, the religious regards of reverence, honour, love, truft, gratitude, fear, hope. In what external manner, this inward worship is to be expressed, is a matter of pure revealed command; as perhaps the external manner, in which God the Father is to be worshipped, may be more fo, than we are ready to R think think: but the worship, the internal worship itself, to the Son and Holy Ghost, is no farther matter of pure revealed command, than as the relations they stand in to us are matter of pure revelation; for the relations being known, the obligations to such internal worship are obligations of reason, arising out of those relations themselves. In short, the history of the gospel as immediately shews us the reason of these obligations, as it shews us the meaning of the words, Son and Holy Ghost.

If this account of the Christian religion be just, those persons who can speak lightly of it, as of little consequence, provided natural religion be kept to, plainly forget that Christianity, even what is peculiarly so called, as distinguished from natural religion, has yet somewhat very important, even of a moral nature. For the office of our Lord being made known, and the relations he stands in to us, the obligations of religious regards to him, is plainly moral; as much as charity to mankind is; since this obligation arises, before external command, immediately out of that of his office and relation itself. Those persons appear to forget,

that

that revelation is to be confidered, as informing us of fomewhat new, in the state of mankind, and in the government of the world: as acquainting us with fome relations we stand in, which could not otherwise have been known. And these relations being real, (though before revelation we could be under no obligations from them, yet upon their being revealed,) there is no reason to think, but that neglect of behaving fuitable to them will be attended with the fame kind of confequences under God's government; as neglecting to behave fuitably to any other relations made known to us by reason. And the ignorance, whether unavoidable or voluntary; fo far as we can possibly see, will, just as much, and just as little, excuse in one case as in the other: the ignorance being supposed equally unavoidable, or equally voluntary, in both cases.

If therefore Christ be indeed the Mediator between God and man, i. e. if Christianity be true; if he be indeed our Lord, our Saviour, and our God; no one can say, what may follow, not only the obstinate, but the careless disregard to him, in those R 2 high high relations. Nay, no one can fay, what may follow fuch difregard, even in the way of natural confequences. For, as the natural confequences of vice in this life are doubtlefs to be confidered, as judicial punishments inflicted by God; fo likewise, for aught we know, the judicial punishments of the future life may be, in a like way or a like sense, the natural consequence of vice; of men's violating or diftegarding the relations, which God has placed them in here, and made known to them.

Again: if mankind are corrupted and depraved in their moral character, and so are unfit for that state, which Christ is gone to prepare for his disciples; and the affistance of God's Spirit be necessary to renew their nature, in the degree requisite to their being qualified for that state: all which is implied in the express, though sigurative declaration, Except a man be born of the spirit, he cannot enter into the king-dom of God‡: Supposing this, is it possible any serious person can think it a slight

* Ch. v. ‡ John iii. v. matter

matter, whether or no he makes use of the means, expressly commanded by God, for obtaining this divine assistance? especially + since the whole analogy of nature shews, + that we are not to expect any benefits, + without making use of the appointed means + for obtaining or enjoying them. Now + reason shews us nothing, of the particular immediate means of obtaining, either temporal or spiritual benefits. This therefore we must learn, either from experience or revelation. And experience, the present case does not admit of.

The conclusion from all this evidently is; that Christianity being supposed either true or credible, it is unspeakable irreverence, and really the most presumptuous rashness, to treat it as a light matter. It can never justly be esteemed of little confequence, till it be positively supposed false. Nor do I know a higher and more important obligation which we are under, than that, of examining most seriously into the evidence of it, supposing its credibility, and of embracing it, upon supposition of its truth.

The

The two following deductions may be proper to be added, in order to illustrate the foregoing observations, and to prevent their being mistaken.

First, Hence we may clearly see, where lies the distinction between what is positive and what is moral in religion. Moral precepts are precepts, the reasons of which we see; positive precepts are precepts, the reasons of which we do not see*. Moral duties arise out of the nature of the case itself, prior to external command. Positive duties do not arise, out of the nature of the case; but from external command: nor would they be duties at all, were it not for such command, received from him whose creatures and subjects we are: But the

manner

^{*} This is the distinction between moral and positive precepts, considered respectively as such. But yet, since the latter have somewhat of a moral nature, we may see the reason of them, considered in this view. Moral and positive precepts are, in some respects alike, in other respects different. So far as they are alike, we discern the reasons of both: so far as they are different, we discern the reasons of the former, but not of the latter,

manner in which the nature of the case, or the fact of the relation, is made known, this doth not denominate any duty either positive or moral, That we be baptized in the name of the Father, is as much a pofitive duty, as that we be baptized in the name of the Son; because both arise equally from revealed command: though the relation which we stand in to God the Father, is made known to us by reason; the relation we stand in to Christ, by revelation only. On the other hand, the difpensation of the gospel admitted, gratitude as immediately becomes due to Christ, from his being the voluntary minister of this dispensation; as it is due to God the Father, from his being the foundation of all good: though the first is made known to us, by revelation only: the fecond, by reason. Hence also we may see, and, for distinctness fake, it may be worth mentioning, that positive institutions come under a twofold confideration. They are either inftitutions founded on natural religion, as baptism in the name of the Father; though this has also a particular reference to the gospel dispensation, for it is in the name of

R 4 God, God, as the Father of our Lord Jesus Christ, or they are external institutions founded on revealed religion: as baptism in the name of the Son, and of the Holy Ghost.

Secondly, From the distinction between what is moral and what is positive in religion, appears the ground of that peculiar preference, which the scripture teaches to be due to the former.

The reason of positive institutions in general, is very obvious; though we should not fee the reason, why such particular ones are pitched upon, rather than others. Whoever therefore, instead of cavilling at words, will attend to the thing itself, may clearly fee, that positive institutions in general, as distinguished from this or that particular one, have the nature of moral commands: fince the reasons of them appear. Thus, for instance, the external worship of God is a moral duty, though no particular mode of it be fo. Care then is to be taken, when a comparison is made between positive and moral duties, that they be compared, no farther than as they are different: no farther than as the former are positive, or arise out of mere external

command, the reasons of which we are not acquainted with; and as the latter are moral, or arise of out the apparent reason of the case, without such external command. Unless this caution be observed, we shall run into endless confusion.

Now this being premifed, suppose two standing precepts injoined by the same authority; that, in certain conjunctures, it is impossible to obey both; that the former is moral, i. e. a precept of which we fee the reasons, and that they hold in the particular case before us; but that the latter is positive, i. e. a precept of which we do not see the reasons; it is indisputable that our obligations are to obey the former; because there is an apparent reason for this preference, and none against it. Farther, pofitive institutions, I suppose all those which Christianity injoins, are means to a moral end; and the end must be acknowledged more excellent, than the means. Nor is observance of these institutions any religious obedience at all, or of any value, otherwise than as it proceeds from a moral principle. This teems to be the strict, logical way of stating and determining this matter: but will,

will, perhaps, be found less applicable to practice, than may be thought at first fight.

And therefore, in a more practical, though more lax way of confideration, and taking the words, moral law and positive institutions, in the popular sense; I add, that the whole moral law is as much matter of revealed command, as positive institutions are: for the scripture injoins every moral virtue. In this respect then they are both upon a level. But the moral law is, moreover written upon our hearts: interwoven in our very nature. And this is a plain intimation of the Author of it, which is to be preferred, when they interfere.

But there is not altogether so much necessity for the determinations of this question, as some persons seem to think. Nor are we left to reason alone to determine it.— For, First, Though mankind have, in all ages, been greatly prone to place their religion in peculiar positive rites, by way of equivalent for obedience to moral precepts; yet, without making any comparison at all between them, and consequently without

de-

determining which is to have the preference, the nature of the thing abundantly shews all notions of that kind to be utterly subversive of true religion: as they are, moreover, contrary to the whole general tenor of fcripture: and likewise to the most express particular declarations of it, that nothing can render us accepted of God, without moral virtue. Secondly, Upon the occasion of mentioning together positive and moral duties, the scripture always puts the stress of religion upon the latter, and never upon the former: which, though no fort of allowance to neglect the former, when they do not interfere with the latter, yet is a plain intimation, that when they do, the latter are to be preferred. And farther, as mankind are for placing the stress of their . religion any where, rather than upon vir-+ tue; lest both the reason of the thing, and the general spirit of Christianity, appearing in the intimation now mentioned, should be ineffectual against this prevalent folly: our Lord himfelf, from whose command alone the obligation of positive institutions arises, has taken occasion to make the comparison between them and moral precepts; when the

the Pharisees censured him for eating with publicans and finners, and also when they cenfured his disciples, for plucking the ears of corn on the fabbath-day. Upon this comparison, he has determined expressly, and in form, which shall have the preference when they interfere. And by delivering his authoritative determination in a proverbial manner of expression, he has made it general: " I will have mercy, and not facrifice ... The propriety of the word proverbial, is not the thing infifted upon: though I think the manner of speaking is to be called fo. But that the manner of speaking very remarkably renders the determination general, is furely indisputable. For, had it, in the latter case, been said only, that God preferred mercy to the rigid observance of the Sabbath; even then, by parity of reason, most justly might we have argued, that he preferred mercy likewise, to the observance of other ritual institutions; and in general, moral duties, to positive ones.

And thus the determination would have been general; though its being fo, were inferred and not expressed. But as the passage

^{*} Matth. ix. 13. and xii. 7.

really stands in the gospel, it is much stronger. For the sense and the very literal words of our Lord's answer, are as applicable to any other instance of a comparison; between positive and moral duties, as to this upon which they were spoken. And if, in case of competition, mercy is to be preferred to positive institutions, it will scarce be thought, that justice is to give place to them. It is remarkable too, that, as the words are a quotation from the Old Testament, they are introduced, on both the aforementioned occasions, with a declaration, that the Pharifees did not understand the meaning of them. This, I fay, is very remarkable. For, fince it is fcarce possible, for the most ignorant person, not to understand the literal sense of the passage, in the prophet *; and fince understanding the literal fense would not have prevented their condemning the guiltless +; it can hardly be doubted, that the thing which our Lord really intended in that declaration, was, that the Pharifees had not learnt from it, as they might, wherein the general spirit

^{*} Hof. vi. † See Matth. xii. 7.

of religion confifts: that it confifts in moral piety and virtue, as distinguished from forms, and ritual observances. However, it is certain, we may learn this from this divine application of the passage in the gospel.

But, as it is one of the peculiar weaknesses of human nature, when, upon a
comparison of two things, one is found to
be of greater importance than the other, to
consider this other as of scarce any importance at all: it is highly necessary that we
remind ourselves, how great presumption
it is, to make light of any institutions
of divine appointment; that our obligations to obey all God's commands whatever, are absolute and indispensable; and
that commands merely positive, admitted
to be from him, lay us under a moral obligation to obey him: an obligation moral in
the strictest and most proper sense.

To these things I cannot forbear adding, that the account now given of Christianity, most strongly shews and enforces upon us, the obligation of searching the scriptures, in order to see, what the scheme of revelation

ナナナナナナ

lation really is; instead of determining before-hand, from reason, what the scheme of it must be *. Indeed if in revelation there *** be found any passages, the seeming meaning of which is contrary to natural religion; we may most certainly conclude, such feeming meaning not to be the real one. But it is not any degree of prefumption against an interpretation of scripture, that such interpretation contains a doctrine, which the light of nature cannot discover; or a precept, which the law of nature does oblige x to.

* See Chap. iii

CHAP.

CHAP. II.

OF THE SUPPOSED PRESUMPTION AGAINST REVELATION, CONSIDERED AS MIRA-CULOUS.

HAVING shewn the importance of the Christian revelation, and the obligations which we are under seriously to attend to it, upon supposition of its truth, or its credibility: the next thing in order, is to consider the supposed presumptions against revelation in general; which shall be the subject of this chapter: and the objections against the Christian in particular, which shall be the subject of some following ones. For it seems the most natural method, to remove these prejudices against Christianity; before we proceed to the consideration of the positive evidence for it, and the objections against that evidence.

^{*} Chap. iii. iv. v. vi. † Chap vii.

It is, I think, commonly supposed, that there is some peculiar prefumption, from the analogy of nature, against the Christian scheme of things; at least against miracles: fo as that stronger evidence is neceffary to prove the truth and reality of them, than would be sufficient to convince us of other events, or matters of fact.-Indeed the confideration of this supposed prefumption, cannot but be thought very infignificant, by many perfons. Yet, as it belongs to the subject of this treatise; fo it may tend to open the mind, and remove some prejudices; however needless the confideration of it be; upon its own account.

I. I find no appearance of a prefumption, from the analogy of nature, against the general scheme of Christianity, that God created and invisibly governs the world by Jesus Christ; and by him also will hereafter judge it in righteousness, i. e. render to every man according to his works: and that good men are under the secret influence of his Spirit. Whether these things are, or are not, to be called miraculous, is, perhaps, only a question about words; or S

however, is of no moment in the case. If the anology of nature raises any presumption against this general scheme of Christianity, it must be, either because it is not discovered by reason and experience; or else, because it is unlike that course of nature, which is. But analogy raises no presumption against the truth of this scheme, upon either of these accounts.

First, There is no prefumption, from analogy, against the truth of it, upon account of its not being discoverable by reafon or experience. For suppose one who never heard of revelation, of the most improved understanding, and acquainted with our whole fystem of natural philosophy and natural religion: fuch an one could not but be fenfible, that it was but a very small part of the natural and moral fystem of the universe, which he was acquainted with.-He could not but be sensible, that there must be innumerable things in the dispositions of Providence past, in the invisible government over the world at present carrying on, and in what is to come; of which he was wholly ignorant, and which could not be discovered without revelation. Whether

ther the scheme of nature be, in the strictest fense, infinite or not; it is evidently vast, even beyond all possible imagination. -And doubtless, that part of it, which is open to our view, is but a point, in comparison of the whole plan of Providence, reaching throughout eternity past and future, in comparison of what is even now going on, in the remote parts of the boundless universe; nay, in comparison of the whole fystem of the world. And therefore, that things lie beyond the natural reach of our faculties, is no fort of prefumption against the truth and reality of them; because it is certain, there are innumerable things, in the constitution and government of the universe, which are thus beyond the natural reach of our faculties.

Secondly, Analogy raises no presumption against any of the things contained in this general doctrine of scripture now mentioned, upon account of their being unlike the known course of nature. For their is no presumption at all from analogy, that the whole course of things, or divine government, naturally unknown to us, and every thing in it, is like to any thing in that

which is known; and therefore no peculiar prefumption against any thing in the former, upon account of its being unlike to any thing in the latter. And in the constitution and natural government of the world, as well as in the moral government of it, we see things, in a great degree, unlike one another; and therefore ought not to wonder at such unlikeness between things visible and invisible. However, the scheme of Chistianity is by no means entirely unlike the scheme of nature; as will appear in the sollowing part of this treatise.

The notion of a miracle, confidered as a proof of a divine mission, has been stated with great exactness by divines, and is, I think, sufficiently understood by every one. There are also invisible miracles, the incarnation of Christ, for instance, which, being secret, cannot be alledged as a proof of such a mission; but require themselves to be proved by visible miracles. Revelation itself too is miraculous; and miracles are the proof of it; and the supposed presumption against these shall presently be considered. All which I have been observing here is, that, whether we chuse to call

every

every thing in the dispensation of Providence, not discoverable without revelation, nor like the known course of things, miraculous; and whether the general Christian dispensation now mentioned, is to be called so, or not; the foregoing observations seem certainly to shew, that there is no presumption against it, from the analogy of nature.

II. There is no presumption, from analogy, against some operations, which, we should now call miraculous; particularly none against a revelation, at the beginning of the world: nothing of fuch prefumption against it, as is supposed to be implied or expressed in the word, miraculous. For a miracle, in its very notion, is relative to a course of nature; and implies somewhat different from it, confidered as being fo .-Now, either there was no course of nature at the time which we are speaking of; or if there were, we are not acquainted, what the course of nature is, upon the first peopling of worlds. And therefore the queftion, whether mankind had a revelation made to them at that time, is to be confidered, not as a question concerning a miracle but as a common question of fact. And we have the like reason, be it more or less, to admit the report of tradition, concerning this question, and concerning common matters of fact of the same antiquity; for instance, what part of the earth was first peopled.

Or thus: when mankind was first placed in this state there was a power exerted, totally different from the present course of nature. Now, whether this power, thus wholly different from the present course of nature, for we cannot properly apply to it the word miraculous; whether this power stopped immediately after it had made man, or went on, and exerted itself farther in giving him a revelation, is a question of the same kind, as whether an oldinary power exerted itself in such particular degree and manner, or not.

Or suppose the power exerted in the formation of the world, be considered as miraculous; or rather, be called by that name, the case will not be different: since it must be acknowledged, that such a power was exerted. For supposing it acknowledged, that our Saviour spent some years in a course of working miracles: there is no more prefumption, worth mentioning, against his having exerted this miraculous power, in a certain degree greater, than in a certain degree less; in one or two more instances, than in one or two fewer; in this, than in another manner.

It is eyident then, that there can be no peculiar prefumption, from the analogy of nature, against supposing a revelation, when man was first placed upon the earth.

And, that there does not appear the least intimation in history or tradition, that religion was first reasoned out: but the whole of history and tradition makes for the other side, that it came into the world by revelation. Indeed the state of religion in the first ages, of which we have any account, seems to suppose and imply, that this was the original of it amongst mankind. And these reslections together, without taking in the peculiar authority of scripture, amount to real and a very material degree of evidence, that there was a revelation at the beginning of the world.—

Now this, as it is a confirmation of natural

religion, and therefore mentioned in the former part of this treatife: fo likewife it has a tendencý to remove any prejudices against a subsequent revelation.

III. But still it may be objected, that there is fome peculiar prefumption, from analogy against miracles; particularly against revelation, after the fettlement and during the continuance of a course of nature.

Now with regard to this supposed prefumption, it is to be observed in general; that before we can have ground for raising what can with any propriety, be called an argument from analogy, for or against revelation confidered as fomewhat miraculous, we must be acquainted with a similiar or parallel case. But the history of some other world, feemingly in like circumstances with our own, is no more than a parallel case: and therefore nothing short of this, can be fo. Yet, could we come at a prefumptive proof, for or against a revelation, from being informed, whether fuch world had one, or not; fuch a proof, being drawn from one fingle infrance only, must be infinitely precarious.

More

More particularly: First of all; there is a very strong prefumption against common speculative truths, and against the most or- + dinary facts, before the proof of them: which yet is overcome by almost any proof. There is a prefumption of millions to one, against the story of Cæsar, or of any other man. For suppose a number of common facts fo and fo circumstanced, of which one had no kind of proof, should happen to come into one's thoughts; every one would, without any possible doubt, conclude them to be false. And the like may be faid of a fingle common fact. And from hence it appears, that the question of importance, as to the matter before us, is. concerning the degree of the peculiar prefumption supposed against miracles; not whether there be any peculiar prefumption at all against them. For, if there be the presumption of millions to one, against the most common facts; what can a small prefumption, additional to this, amount to, though it be peculiar? it cannot be estimated and is as nothing. The only material queftion is, whether there be any fuch prefumption

tion against miracles, as to render them in any fort incredible.

Secondly, If we leave out the confideration of religion, we are in fuch total darknefs, upon what causes, occasions, reasons or circumstances, the present course of nature depends; that there does not appear any improbability for or against supposing, that five or fix thousand years may have given scope for causes, occasions, reasons, or circumstances, from whence miraculous interpositions may have arisen. And from this, joined with the foregoing observation, it will follow, that there must be a presumprion beyond all comparison, greater, against the particular common facts just now instanced in, than against miracles in general before any evidence of either.

But, Thirdly, Take in the confideration of religion, or the moral system of the world, and then we see distinct particular reasons for miracles; to afford mankind instruction additional to that of nature, and to attest the truth of it. And this gives a real credibility to the supposition, that it might be the part of the original plan of things,

things, that there should be miraculous interpositions.

Then, Lastly, Miracles must not be compared to common natural events; or to events which, though uncommon, or fimiliar to what we daily experience; but to the extraordinary phenomena of nature. And then the comparison will be between the prefumption against miracles, and the presumption against such uncommon appearances, suppose, as comets, and against their being any fuch powers in nature as magnetism and electricity, so contrary to the properties of other bodies not endued with fuch powers. And before any one can determine, whether there be any peculiar prefumption against miracles, more than against other extraordinary things, he must consider, what, upon first hearing, would be the prefumption against the last mentioned appearance and powers, to a person acquainted only with the daily, monthly, and annual, course of nature respecting this earth, and with those common powers of matter which we every day fee.

Upon all this I conclude; that there certainly is no fuch prefumption against miracles,

cles, as to render them in any wise in credible: that on the contrary, our being able to discern reasons for them, gives a positive credibility to the history of them, in cases where those reasons hold: and, that it is by no means certain, that there is any peculiar presumption at all, from analogy, even in the lowest degree, against miracles, as distinguished from other extraordinary phenomena: though it is not worth while to perplex the reader, with inquiries into the abstract nature of evidence, in order to determine a question, which, without such inquiries, we see, is of no importance.

CHAP. III.

OF OUR INCAPACITY OF JUDGING, WHAT WERE TO BE EXPECTED IN A REVELATION; AND THE CREDIBILITY, FROM ANALOGY, THAT IT MUST CONTAIN THINGS APPEARING LIABLE TO OBJECTIONS.

dence for Christianity, many are alledged against the scheme of it; against the whole manner in which it is put and left with the world; as well as against several particular relations in scripture: objections drawn from the deficiencies of revelation; from things in it appearing to men foolishness*, from its containing matters of offence, which have led, and it must have been fore seen, would lead, into strange enthusiasm and superstition, and be made to serve the

purposes of tyranny and wickedness; from its not being univerfal; and, which is a thing of the same kind, from its evidence not being so convincing and satisfactory as it might have been: for this last is sometimes turned into a positive argument against its truth *. It would be tedious, indeed impossible, to enumerate the several particulars comprehended under the objections here referred to: they being fo various, according to the different fancies of men. There are perfons, who think it a strong objection against the authority of scripture, that it is not composed by rules of art, agreed upon by critics, for polite and correct writing. And the fcorn is inexpressible, with which fome of the prophetic parts of fcripture are treated: partly through the rashness of interpreters; but very much also, on account of the hieroglyphical and figurative language in which they are left us. Some of the principal things of this fort, shall be particularly considered, in the following chapters. But my defign at prefent, is to observe in general, with respect

^{*} See Chap. vi.

to this whole way of arguing, that, upon supposition of a revelation, it is highly credible before-hand, we should be incompetent judges of it, to a great degree: and that it would contain many things appearing to us liable to great objections; in case we judge of it otherwise, than by the analogy of nature. And therefore, though objections against the evidence of Christanity are most feriously to be considered; yet objections against Christianity itself are, in a great measure, frivolous: almost all objections against it, excepting those which are alledged against the particular proofs of its coming from God. I express myself with caution, left I should be mistaken to vilify reason: which is indeed the only faculty we have wherewith to judge concerning any thing, even revelation itself: or be mifunderstood to affert, that a supposed revelation cannot be proved false, from internal characters. For, it may contain clear immoralities or contradictions: and either of these would prove it false. Nor will I take upon me to affirm, that nothing elfe can possibly render any supposed revelation incredible. Yet still, the observation above

is, I think, true beyond doubt; that objections against Christianity, as distinguished from objections against its evidence, are frivolous. To make out this, is the general defign of the present chapter. And with regard to the whole of it, I cannot but particularly wish, that the proofs might be attended to; rather than the affertions cavilled at, upon account of any unacceptable confequences, whether real or fupposed, which may be drawn from them. For, after all, that which is true, must be admitted, though it should shew us the shortness of our faculties; and that we are in no wife judges of many things, of which we are apt to think ourselves very competent ones. Nor will this be any objection with reafonable men, at least upon fecond thought it will not be any objection with fuch against the justness of the following observations.

As God governs the world, and inftructs his creatures, according to certain laws or rules, in the known course of nature; known by reason, together with experience: so the scripture informs us of a scheme of divine Providence, additional to

this.

this. It relates, that God has, by revelation, instructed men in things concerning his government, which they could not otherwise have known; and reminded them of things, which they might otherwise know; and attested the truth of the whole, by miracles. Now if the natural and the revealed dispensation of things are both from God, if they coincide with each other, and together make up one scheme of Providence: our being incompetent judges of one, must render it credible, that we may be incompetent judges also of the other. Since, upon experience, the acknowledged constitution and course of nature is found to be greatly different from what, before experience, would have been expected; and fuch as men fancy, there lie great objections against: this renders it before-hand highly credible, that they may find the revealed dispensation likewise, if they judge of it as they do of the constitution of nature, very different from expectations formed before-hand; and liable in appearance, to great objections: objections against the scheme itself, and againstthe degrees and manners of the miraculous

T

interpolition, by which it was attested and carried on. Thus suppose a prince to govern his dominions in the wifest manner possible, by common known laws; and that upon fome exigencies he should sufpend these laws; and govern, in several instances, in a different manner: if one of his subjects were not a competent judge before-hand, by what common rules the government should or would be carried on; it could not be expected, that the same perfon would be a competent judge, in what exigencies, or in what manner, or to what degree, those laws commonly observed would be suspended or deviated from. If he were not a judge of the wisdom of the ordinary administration; there is no reason to think, he would be a judge of the wifdom of the extraordinary. If he thought he had objections against the former; doubtlefs, it is highly supposeable, he might think also, that he had objections against the latter. And thus, as we fall into infinite follies and miftakes, whenever we pretend, otherwise than from experience and analogy, to judge of the constitution and course of nature; it is evidently supposeable before-hand, that we should fall into as great, in pretending to judge, in like manner, concerning revelation. Nor is there any more ground to expect, that this latter should appear to us clear of objections, than that the former should.

These observations, relating to the whole of Christianity, are applicable to inspiration in particular. As we are in no fort judges before-hand, by what laws or rules, in what degree, or by what means, it were to have been expected, that God would naturally instruct us: so upon supposition of his affording us light and instruction by revelation, additional to what he has afforded us by reason and experience, we are in no fort judges, by what methods, and in what proportion, it were to be expected, that this fupernatural light and instruction would be afforded us. We know not before-hand, what degree or kind of natural information, it were to be expected God would afford men, each by his own reason and experience: nor how far he would enable, and effectually dispose them to communicate it, whatever it should be, to each other: nor whether the evidence of it would

be

be, certain, highly probable, or doubtful: nor whether it would be given with equal clearness and conviction to all. Nor could we guefs, upon any good ground I mean, whether natural knowledge, or even the faculty itself, by which we are capable of attaining it, reason would be given us at once, or gradually. In like manner, we are wholly ignorant what degree of new knowledge, it were to be expected, God would give mankind by revelation, upon suppofition of his affording one: or how far, or in what way, he would interpose miraculoufly, to qualify them, to whom he should originally make the revelation, for communicating the knowledge given by it; and to fecure their doing it to the age in which they should live; and to secure its being transmitted to posterity. We are equally ignorant, whether the evidence of it would be, certain, or highly probable, or doubtful *: or whether all who should have any degree of instruction of it, and any degree of evidence of its truth, would have the fame; or whether the scheme would be

^{*} See Chap. vi.

Nay, we are not in any fort able to judge, whether it were to have been expected, that the revelation should have been committed to writing; or left to be handed down, and consequently corrupted by verbal tradition, and at length sunk under it, if mankind so pleased, and during such time as they are permitted, in the degree they evidently are, to act as they will.

But it may be faid, "that a revelation in fome of the above mentioned circum- frances; one, for inftance, which was not committed to writing, and thus fecu- red against danger of corruption, would not have answered its purpose." I ask, what purposes which it has now answered all the purposes which it has now answered and in the same degree: but it would have answered others, or the same in different degrees. And which of these were the purposes of God, and best fell in with his general government, we could not at all have determined before-hand.

Now fince it has been shewn, that we have no principles of reason, upon which to judge beforehand, how it were to be ex-

T 3 pected

pected revelation should have been left, or what was most fuitable to the divine plan of government, in any of the forementioned respects; it must be quite frivolous to object afterwards as to any of them, against its being left in one way, rather than another: for this would be to object against things, upon account of their being different from expectations, which have been fhewn to be without reason. And thus we fee, that the only question concerning the truth of Christianity, is, whether it be a real revelation, not whether it be attended with every circumstance which we should have looked for: and concerning the authority of scripture, whether it be what it claims to be; not whether it be a book of fuch fort, and fo promulged, as weak men are apt to fancy, a book containing a divine revelation should. And therefore, neither obscurity, nor feeming inaccuracy of stile, not various readings, nor early disputes about the authors of particular parts; nor any other things of the like kind, though they had been much more considerable in degree than they are, could overthrow the authority of the scripture: unless the prophets, apof-

apostles, or our Lord, had promised, that the book containing the divine revelation, should be secure from those things. Nor indeed, can any objections overthrow fuch a kind of revelation as the Christian claims to be; fince there are no objections against the morality of it, but fuch as can shew, that there is no proof of miracles wrought originally in atteftation of it; no appearance of any thing miraculous in its obtaining in the world; nor any of prophecy, that is, of events foretold, which human fagacity could not foresee. If it can be shewn, that the proof alledged for all these, is absolutely none at all, then is revela. tion overturned. But were it allowed, that the proof of any one or all of them, is lower than is allowed; yet, whilft any proof of them remains, revelation will stand upon much the same foot as it does at present, as to all purposes of life and practice, and ought to have the like influences over our behaviour.

From the foregoing observation too, it will follow, and those who will thoroughly examine into revelation, will find it worth remarking: that there are several ways of

T 4

arguing, which, though just with regard to other writings, are not applicable to fcripture: at least not to the prophetic parts of it. We cannot argue, for instance, that this cannot be the fense or intent of such a passage of scripture; for if it had, it would have been expressed more plainly, or have been represented under a more apt figure or hieroglyphic: yet we may justly argue thus, with respect to common books.-And the reason of this difference is very evident: that in scripture we are not competent judges, as we are in common books, how plainly it were to have been expected, what is the true fenfe should have been expressed, or under how apt an image figured. -The only question is, what appearance there is, that this is the fense; and scarce at all, how much more determinately, and accurately it might have been expressed or figured.

"But is it not felf-evident, that inter"nal improbabilities of all kinds, weaken
"external probable proof?" Doubtless.—
But to what practical purpose can this be alledged here, when it has been proved before, that real internal improbabilities which

tife even to a moral certainty, are overcome by the most ordinary testimony; and when it now has been made appear, that we scarce know what are improbabilities, as to the matter we are here considering; as it will farther appear from what follows.

For though from the observations above made, it is manifest, that we are not in any fort competent judges, what supernatural instruction were to have been expected; and though it is felf-evident, that the objections of an incompetent judgement must be frivolous; yet it may be proper to go one step farther, and observe; that if men will be regardless of these things, and pretend to judge of the scripture by preconceived expectations; the analogy of nature shews before-hand, not only that it is highly credible they may, but also probable, that they will imagine they have strong objections against it, however really unexceptionable: for fo, prior to experience, they would think they had, against the circumstances and degrees and the whole manner of that instruction, which is afforded by the ordinary course of nature. Were the instruction which God affords to brute creatures

tures by inflincts and mere propensions, and to mankind by these together with reason, matter of probable proof, and not of certain observation; it would be rejected as incredible, in many instances of it, only upon account of the means by which this instruction is given, the seeming disproportion, the limitations, necessary conditions, + + and circumftances of it. For instance: would it not have been thought highly improbable, that men should have been so much more capable of discovering, even to certainty, the general laws of matter, and the magnitudes, paths, and revolutions of the heavenly bodies; than the occasions and cures of distempers, and many other things, in which human life feems fo much -more nearly concerned, than in aftronomy? -How capricious and irregular a way of information, would it be faid, is that of invention, by means of which, nature instructs us in matters of science, and in many things, upon which the affairs of the world greatly depend: that a man should by this faculty, be made acquainted with a a thing in an instant, when perhaps he is thinking of somewhat else, which he has

in vain been fearching after, it may be, for years. So likewife the imperfections attending the only method, by which nature enables and directs us to communicate our thoughts to each other, are innumerable.— Language is, in its very nature, inadequate, ambiguous, liable to infinite abuse, even from negligence; and liable to it from defign, that every man can deceive and betray by it.

And, to mention but one instance more, that brutes, without reason, should act, in many respects, with a sagacity and forefight vaftly greater than what men have in those respects, would be thought impossible. Yet it is certain, they do act with fuch fuperior forefight; whether it be their own indeed, is another question. From these things it is highly credible beforehand, that upon supposition God should afford men fome additional instruction by revelation, it would be with circumstances, in manners, degrees and respects, which we should be apt to fancy we had great objections against the credibility of. Nor are the objections against the Scripture, nor against Christianity in general at all more or greater, than the analogy of nature would beforehand—not perhaps give ground to expect; for this analogy may not be fufficient, in some cases, to ground an expectation upon; but no more nor greater, than analogy would shew it, beforehand, to be supposeable and credible that there might seem to lie against revelation.

By applying these general observations to a particular objection, it will be more diftinctly feen, how they are applicable to others, of the like kind; and indeed to almost all objections against Christianity, as distinguished from objections against its evidence. It appears from scripture, that, as it was not usual in the apostolic age, for persons, upon their conversion to Christianity, to be endued with miraculous gifts; fo, some of those persons exercised these gifts in a strangely irregular and disorderly manner. And this is made an objection against their being really miraculous.— Now the foregoing observations quite remove this objection, how confiderable foever it may appear at first fight. For, confider a person endued with many of thefe

these gifts; for instance, that of tongues: it is to be supposed, that he had the same power over this miraculous gift, as he would have had over it, had it been the effect of habit, of study, and use, as it ordinarily is; or the same power over it, as he had over any other natural endowment. Confequently, he would use it in the same manner he did any other; either regularly, and upon proper occasions only, or irregularly and upon improper ones; according to his fense of decency, and his character of prudence. Where then is the objection? Why, if this miraculous power was indeed given to the world, to propagate Christianity, and attest the truth of it, we might, it feems, have expected, that other fort of perfons should have been chosen to be invested with it; or that these should, at the same time, have been endued with prudence; or that they should have been continually restrained and directed in the exercise of it: i. e. that God should have miraculously interposed, if at all, in a different manner or higher degree. -But from the observations made above, it is undeniably evident, that we are not judges judges, in what degrees and manners, it were to have been expected, he should miraculously interpose; upon supposition of his doing it in fome degree and manner. Nor in the natural course of Providence, are superior gifts of memory, eloquence, knowledge, and other talents of great influence, conferred only on persons of prudence and decency, or fuch as are disposed to make the properest use of them. Nor is the instruction and admonition naturally afforded us for the conduct of life, particularly in our education, commonly given in a manner the most fuited to recommend it; but often with circumstances apt to prejudice us against such instruction.

One might go on to add, that there is a great refemblance between the light of nature and of revelation, in several other respects. Practical Christianity, or that faith and behaviour which renders a man a christian, is a plain and obvious thing, like the common rules of conduct, with respect to our ordinary temporal affairs.— The more distinct and particular knowledge of those things, the study of which

the

the apostle calls, "going on unto perfec-"tion *," and of the prophetic parts of revelation, like many parts of natural and even civil knowledge, may require very exact thought, and careful confideration. The hinderances too, of natural and of supernatural light and knowledge, have been of the fame kind. And as, it is owned, the whole scheme of scripture is not yet understood, so if it ever comes to be understood, before the restitution of all things +, and without miraculous interpolitions; it must be in the same way as natural knowledge is come at; by the continuance and progrefs of learning and of liberty; and by particular persons attending to, comparing and purfuing intimations fcattered up and down it, which are overlooked and difregarded by the generality of the world. -For this is the way, in which all improvements are made; by thoughtful mens tracing on obscure hints; as it were, dropped us by nature accidentally, or which feem to come into our minds by chance: nor is it at all incredible, that a book, which has been fo long in the possession

^{*} Heb. vi. 1. + Acts iii. 21.

of mankind should contain many truths as yet undiscovered. For, all the same phenomena, and the same faculties of investigation, from which such great discoveries in natural knowledge have been made in the present and last age; were equally in the possession of mankind, several thousand years before. And possibly it might be intended, that events, as they come to pass, should open and ascertain the meaning of several parts of scripture.

It may be objected, that this analogy fails in a material respect; for that natural knowledge is of little or no consequence. But I have been speaking of the general instruction, which nature does or does not afford us. And besides, some parts of natural knowledge, in the more common restrained sense of the words, are of the greatest consequence to the ease and convenience of life. But fuppose the analogy did, as it does not, fail in this respect, yet it might be abundantly supplied, from the whole constitution and course of nature; which shews, that God does not dispense his gifts, according to our notions of the advantage and confequence they would be

of to us. And this in general, with his method of dispensing knowledge in particular, would together make out an analogy full to the point before us.

But it may be objected still farther and more generally; "The scripture repre-" fents the world as in a state of ruin, " and christianity as an expedient to re-" cover it, to help in these respects " where nature fails; in particular, to " fupply the deficiencies of natural light. -Is it credible then, that so many " ages should have been let pass, before " a matter of fuch fort, of fo great and fo general importance, was made known " to mankind; and then that it should 66 be made known to fo fmall a part of "them? Is it conceiveable, that this fup-" ply should be so very deficient, should have the like obscurity and doubtfulness, " be liable to the like perversions; in short, lie open to all the like objections as the " light of nature itself? "" Without determining how far this in fact is so, I anfwer; it is by no means incredible that it might be fo, if the light of nature and

of revelation be from the fame hand. Mere are naturally liable to diseases; for which God, in his good providence has provided natural remedies +. But remedies existing in nature, have been unknown to mankind for many ages; are known but to few now; probably many valuable ones are not known yet. Great has been and is the obfcurity and difficulty, in the nature and application of them. Circumstances seem often to make them very improper, where they are absolutely necessary. It is after long labour and fludy, and many unfuccessful endeavours, that they are brought to be as useful, as they are; after high contempt and absolute rejection of the most useful we have; and after disputes and doubts, which have feemed to be endlefs. The best remedies too, when unskilfully, much more if dishonestly applied, may produce new difeases; and with the rightest application, the success of them is often doubtful. In many cases, they are not at all effectual: where they are, it is often very flowly: and the application of them, and the necessary regimen accompanying it, is, not uncommonly, fo difagreeable, that fome will not fubmit to them; and fatisfy themselves with the excuse, that if they would, it is not certain, whether it would be fuccessful .-And many perfons, who labour under difeafes for which there are known natural remedies, are not fo happy as to be always, if ever, in the way of them. In a word, the remedies which nature has provided for difeases, are neither certain, perfect nor universal. And indeed, the same principles of arguing, which would lead us to conclude, that they must be so, would lead us likewife to conclude, that there could be no occasion for them; i. e. that there could be no difeases at all. And therefore, our experience that there are difeases, shews, that it is credible beforehand, upon supposition nature has provided remedies for them, that these remedies may be, as by experience we find they are, not certain, nor perfect, nor universal; because it shews, that the principles upon which we should expect the contrary, are fallacious.

U 2 And

And now, what is the just consequence from all these things? Not that reason is no judge of what is offered to us as being of divine revelation. For this would be to infer, that we are unable to judge of any thing, because we are unable to judge of all things. Reafon can, and it ought to judge, not only of the meaning, but also of the morality, and the evidence, of revelation. First, it is the province of reason to judge of the morality of the fcripture, i. e. not whether it contains things different from what we should have expected from a wife, just and good being; for objections from hence have been now obviated; but whether it contains things plainly contradictory to wisdom, justice or goodness; to what the light of nature teaches us of God. And I know nothing of this fort objected against scripture, excepting such objections as are formed upon suppositions, which would equally conclude that the conflitution of nature is contradictory to wisdom, justice, or goodness; which most certainly it is not. Indeed there are fome particular precepts in scripture, given to particular

persons, requiring actions, which would be immoral and vicious, were it not for fuch precepts. But it is easy to see that all these are of such a kind, as that the precept changes the whole nature of the case, and of the action; and both constitutes, and shews, that not to be unjust or immoral, which, prior to the precept, must have appeared and really have been fo; which may well be, fince none of these precepts are contrary to immutable morality. If it were commanded, to cultivate the principles, and act from the spirit of treachery, ingratitude, cruelty; the command would not alter the nature of the case or of the action, in any of these instances. -But it is quite otherwise in precepts, which require only the doing an external action; for instance, taking away the life or property of any. For men have no right to either life or property, but what arises folely from the grant of God: when this grant is revoked, they cease to have any right at all, in either; and when this revocation is made known, as furely it is possible it may be, it must cease to be unjust to deprive them of either. And though a courfe

 U_3

of external acts, which without command, would be immoral, must make an immoral habit, yet a few detached commands have no fuch natural tendency. I thought proper to fay thus much of the few scripture precepts, which require, not vicious actions, but actions which would have been vicious had it not been for fuch precepts; because they are fometimes weakly urged as immoral, and great weight is laid upon objections drawn from them. But to me there feems no difficulty at all in these precepts, but what arises from their being offences: i. e. from their being liable to be perverted, as indeed they are, by wicked defigning men, to serve the most horrid purposes; and perhaps, to missead the weak and enthusiastic. -And objections from this head, are not objections against revelation; but against the whole notion of religion, as a trial; and against the general constitution of nature. Secondly, Reason is able to judge, and must, of the evidence of revelation, and of the objections urged against that, evidence; which shall be the subject of a following chapter*.

* Chap. vii. °

But the consequence of the foregoing obfervations is, that the question, upon which the truth of Christianity depends, is scarce at all, what objections there are against its scheme, fince there are none against the morality of it; but what objections there are against its evidence: or, what proof there remains of it after due allowances made for the objections against that proof: because it has been shewn that the objections against Christianity, as distinguished from objections against its evidence, are frivolous. For furely very little weight, if any at all, is to be laid upon a way of arguing and objecting, which, when applied to the general constitution of nature, experience shews not to be conclusive: and fuch, I think, is the whole way of objecting treated of throughout this chapter .-It is refolvable into principles, and goes upon suppositions, which mislead us to think, that the Author of Nature would not act, as we experience he does; or would act, in fuch and fuch cases, as we experience he does not in like cases. But the unreasonableness of this way of objecting, will appear yet more evidently from hence, that U 4

that the chief things thus objected against, are justified, as shall be farther shown*, by distinct, particular, and full analogies, in the constitution and course of nature.

But it is to be remembered, that, as frivolous as objections, of the foregoing fort against revelation are, yet, when a supposed revelation is more consistent with itself, and has a more general and uniform tendency to promote virtue, than, all circumstances considered, could have been expected from enthusiasm and political views; this is a presumptive proof of its not proceeding from them, and so of its truth; because we are competent judges, what might have been expected from enthusiasm and political views.

* Ch. iv. latter part, and v. vi.

CHAP. IV.

of CHRISTIANITY, CONSIDERED AS A SCHEME OR CONSTITUTION, IMPER-FECTLY COMPREHENDED.

IT hath been now shewn *, that the analogy of nature renders it highly credible beforehand, that supposing a revelation to be made, it must contain many, things very different from what we should have expected, and fuch as appear open to great objections; and that this observation, in good meafure, takes off the force of those objections, or rather precludes them. But it may be alledged, that this is a very partial answer to such objections, or a very unfatisfactory way of obviating them: because it doth not shew at all, that the things objected against can be wife, just, and good, much less, that it is credible they are fo. It will therefore be proper to shew this distinctly, by applying to these objections, against the wisdom, justice, and goodness of christi-

^{*} In the foregoing chapter.

anity +, the answer above given to the like objections against the constitution of nature; before we confider the particular analogies in the latter, to the particular things objected against in the former. Now that which affords a fufficient answer to the objections against the wisdom, justice and goodness of the constitution of nature is its being a constitution, a system or scheme, imperfectly comprehended; a scheme, in which means are made use to accomplish ends; and which is carried on by general laws. For from these things it has been proved, not only to be poffible, but also to be credible, that those things which are objected against, may be confistent with wisdom, justice, and goodness; nay, may be instances of them, and even that the constitution and government of nature may be perfect in the highest possible degree. If christianity then be a scheme, and of the like kind; it is evident, the like objections against it, must admit of the like answer. And,

^{*} Part I. chap. vii. to which this all along refers.

I. Chrif-

I. Christianity is a scheme, quite beyond our comprehension. The moral government of God is exercifed, by gradually conducting things fo in the course of his providence, that every one, at length and upon the whole, shall receive according to his deferts, and neither fraud nor violence, but truth and right, shall finally prevail. Christianity is a particular scheme under this general plan of providence, and a part of it, conducive to its completion with regard to mankind, confisting itself also of various parts, and a mysterious œconomy, which has been carrying on from the time the world came into its prefent wretched state, and is still carrying on for its recovery, by a divine person, the Messiah; who is to gather together in one, the children of God, that are scattered abroad *, and establish an everlasting kingdom, wherein dwelleth righteousness +. And in order to it; after various manifestations of things, relating to this great and general scheme of providence, through a fuccession of many ages: (for the spirit

^{*} John xi. 52. † 2 Pet. iii. 13.

of Christ which was in the prophets, testified beforehand his fufferings, and the glory that should follow: unto whom it was revealed, that not unto themselves, but unto us they did minister the things which are now reported unto us by them that have preached the gospel; which things the angels defire to look into *;)after various dispensations, looking forward and preparatory, to this final falvation; in the fulness of time, when infinite wisdom thought fit. He, being in the form of God-made himself of no reputation, and took upon him the form of a fervant and was made in the likeness of men: and being found in fashion as a man, he humbled himself, and became obedient to death, even the death of the crofs, wherefore God also hath highly exalted him, and given him a name which is above every name; that at the name of Jesus every knee should bow, of things in heaven, and things in the earth and things under the earth, and that every tongue should confess, that Jesus Christ is Lord

^{* 1.} Pet. i. 11, 12.

to the glory of God the father +. Parts likewife of this occonomy, are the miraculous mission of the Holy Ghost, and his ordinary affiftances given to good men the invisible government, which Christ at present exercises over his church; that which he himself refers to in these words I in my father's house are many mansions -I go to prepare a place for you, and his future return to judge the world in righteousness, and completely re-establish the kingdom of God. For the father judgeth no man: but hath committed all judgement unto the fon: that all men should honour the fon, even as they honour the father §. All power is given unto him, in heaven and in earth ||. And he must reign till he hath put all enemies under his feet. Then cometh the end, when he fhall have delivered up the kingdom to God, even the father; when he shall have put down all rule, and all authority and power. And when all things shall be subdued unto him, then shall the fon also

⁺ Phil. ii. ‡ John xiv. ii. § John v. 22, 23. || Matth. xxviii. 18.

himself be subject unto him that put all things under him, that God may be all in all*. Now little furely, need be faid to fhew, that this fystem or scheme of things, is but imperfectly comprehended by us. The scripture expressly afferts it to be so. And indeed one cannot read a paffage relating to this great mystery of godliness +, but what immediately runs up into fomething which shews our ignorance in it; as every thing in nature shews us our ignorance in the constitution of nature. And whoever will feriously consider that part of the christian scheme, which is revealed in scripture, will find for much more unrevealed, as will convince him, that, to all the purposes of judging and objecting, we know as little of it, as of the constitution of nature. Our ignorance, therefore is as much an answer to our objections against the perfection of one, as against the perfection of the other.

II. It is obvious too, that in the chriftian difpensation, as much as in the natural scheme of things, means are made

^{* 1} Cor. xv. † 1 Tim. iii. 16

use of to accomplish ends. And the observation of this furnishes us with the same answer, to objections against the perfection of christianity, as to objections of the like kind, against the constitution of nature. It shews the credibility, that the things objected, how foolish * foever they appear to men, may be the very best means of accomplishing the very best 'ends. And their appearing foolishness is no presumption against this, in a scheme so greatly beyond our comprehension +.

III. The credibility, that the christian diffensation may have been, all along, carried on by general laws, no lefs than the course of nature, may require to be more distinctly made out. Consider then upon what ground it is we fay, that the whole common course of nature is carried on according to general fore-ordained laws. We know indeed feveral of the general laws of matter: and a great part of the natural behaviour of living agents, is reducible to general laws. But

* r Cor. s.

[†] This paragraph is referred to above in Part I. ch. i.

we know in a manner nothing, by what laws, storms and tempests, earthquakes, famine, pestilence, become the instruments of destruction to mankind. And the laws by which persons born into the world at fuch a time and place; are of fuch capacities, geniuses, tempers; the laws by which thoughts come into the mind, in a multitude of cases; and by which innumerable things happen, of the greatest influence upon the affairs and state of the world; these laws are so wholly unknown to us; that we call the events which come to pass by them, accidental: though all reasonable men know certainly, that there cannot, in reality, be any fuch thing as chance; and conclude, that the things which have this appearance are the refult of general laws, and may be reduced into them. It is then but an exceeding little way, and in but a few respects, that we can trace up the natural course of things before us; to general laws. And it is only from analogy, that we conclude the whole of it to be capable of being reduced into them: only from our feeing, that part is fo It is from our finding, that the course of

nature, in some respects and so far, goes on by general laws, that we conclude this of the rest. And if that be a just ground for fuch a conclusion, it is a just ground alfo, if not to conclude, yet to apprehend to render it supposeable and credible, which is fufficient for answering objections, that God's miraculous interpofitions may have been, all along in like manner, by general laws of wisdom. Thus, that miraculous powers should be exerted, at such times, upon fuch occasions, in fuch degrees and manners, and with regard to fuch persons, rather than others; that the affairs of the world being permitted to go on in their natural course so far, should just at fuch a point, have a new direction given them by miraculous interpositions; that these interpositions should be exactly in fuch degrees and respects only; all this may have been by general laws. These laws are unknown indeed to us; but no more unknown, than the laws from whence it is, that fome die as foon as they are born, and others live to extreme old age, that one man is so superior to another inunderstanding; with innumerable more-X things

things, which, as we before observed, we cannot reduce to any laws or rules at all, though it is taken for granted, they are as much reducible to general ones as gravitation. Now, if the revealed difpenfations of providence, and miraculous interpofitions, be by general laws, as well as God's ordinary government in the course of nature, made known by reason and experience, there is no more reason to expect, that every exigence, as it arises, fhould be provided for by these general laws of miraculous interpolitions, than that every exigence in nature should by the general laws of nature. Yet there might be wife and good reasons, that miraculous interpofitions should be by general laws; and that thefe laws should not be broken in upon or deviated from, by other miracles.

Upon the whole then; the appearance of deficiencies and irregularities in nature, is owing to its being a scheme, but in partmade known, and of such a certain particular kind in other respects. Now we see no more reason why the frame and course of nature should be such a scheme

than

than why christianity should. And that the former is fuch a scheme, renders it credible, that the latter, upon supposition of its truth, may be fo too. And as it is manifest, that christianity is a scheme revealed but in part, and a scheme in which means are made use of to accomplish ends, like to that of nature; so the credibility, that it may have been all along carried on by general laws, no lefs than the course of nature, has been distinctly proved. And from all this it is beforehand credible that there might, I think probable that there would, be the like appearance of deficiencies and irregularities in christianity, as in nature, i. e. that christianity would be liable to the like objections, as the frame of nature. And these objections are answered by these observations concerning christianity; as the like objections against the frame of mature, are answered by the like observations concerning the frame of nature.

HE objections against christianity, con-fidered as a matter of fact, having, in general been obviated in the preceding chapter; and the fame, confidered as made against the wisdom and goodness of it, having been obviated in this: the next thing, according to the method proposed, is to shew, that the principal objections in particular, against christianity, may be answered, by particular and full analogies in nature. And as one of them is against the whole scheme of it together, as just now described, I chuse to consider it here, rather than in a distinct chapter by itself. The thing objected against this scheme of the gospel, is, " that it seems to suppose "God was reduced to the necessity of a " long feries of intricate means, in order " to accomplish his ends, the recovery " and falvation of the world; in like fort " as men, for want of understanding or " power, not being able to come at their " ends directly, are forced to go round " about ways, and make use of many " perplext contrivances to arrive at them." Now every thing which we fee, shews the folly of this, confidered as an objecti-

means

on against the truth of christianity. For according to our manner of conception, God makes use of variety of means, what we often think tedious ones, in the natural course or providence, for the accomplishment of all his ends. Indeed it is certain, there is fomewhat in this matter quite beyond our comprehension: but the mystery is as great in nature, as in christianity. We know what we ourselves aim at, as final ends: and what courses we take, merely as means conducive to those ends. But we are greatly ignorant, how far things are confidered by the author of nature, under the fingle notion of means and ends; fo as that it may be faid, this is merely an end, and that merely means, in his regard. And whether there be not fome peculiar abfurdity in our very manner of conception, concerning this matter fomewhat contradictory arising from our extremely imperfect views of things, it is impossible to fay. However thus much is manifest, that the whole natural world and government of it is a scheme or system; not a fixt, but a progressive one; a scheme in which the operation of various X 3

means take up a great length of time, before the ends they tend to can be attained. The change of feafons, the ripening of the fruits of the earth, the very history of a flower, is an instance of this; and fo is human life. Thus vegetable bodies, and those of animals, though possibly formed at once, yet grow up by degrees to a mature state. And thus rational agents, who animate these latter bodies, are naturally directed to form each his own manners and character, by the gradual gaining of knowledge and experience and by a long course of action. Our existence is not only successive, as it must be of necessity; but one state of our life and being, is appointed by God, to be a preparation for another; and that, to be the means of attaining to another fucceeding one: infancy to childhood, childhood to youth, youth to mature age. Men are impatient, and for precipitating things; but the author of nature appears deliberate throughout his operations; accomplishing his natural ends, by flow fuccessive steps. And there is a plan of things beforehand laid out, which, from the nature of it requires

quires various fystems of means, as well as length of time, in order to the carrying on its several parts into execution. Thus in the daily course of natural providence, God operates in the very same manner, as in the dispensation of christianity: making one thing subservient to another; this, to somewhat farther; and so on, through a progressive series of means which extend both backward and sorward beyond our utmost view. Of this manner of operation, every thing we see in the course of nature, is as much an instance, as any part of the christian dispensation.

X 4 CHAP.

CHAP. V.

OF THE PARTICULAR SYSTEM OF CHRISTI-ANITY; THE APPOINTMENT OF A ME-DIATOR, AND THE REDEMPTION OF THE WORLD BY HIM.

HERE is not, I think, any thing relating to christianity, which has been more objected against, than the mediation of Christ, in some or other of its parts. Yet upon thorough consideration there seems nothing less justly liable to it. For

I. The whole analogy of nature removes all imagined prefumption against the general notion of a mediator between God and man*. For we find, all living creatures are brought into the world, and their life and infancy is preserved, by the instrumentality of others: and every satisfaction of it, some way or other, is bestow-

^{*} Tim. ii 5.

ed by the like means. So that the visible government, which God exercifed over the world, is by the instrumentality and mediation of others. And how far his invifible government be or be not fo, it is impossible to determine at all by reason. And the supposition, that part of it is so; appears, to fay the least, altogether as credible, as the contrary. There is then no fort of objection, from the light of nature, against the general notion of a mediator between God and man, confidered as a doctrine of christianity, or as an appointment in this dispensation: since we find by experience, that God does not appoint mediators, to be the instruments of good and evil to us: the instruments of his justice and his mercy. And the objection here referred to is urged, not against mediation in that high, eminent and peculiar sense, in which Christ is our mediator; but absolutely against the whole notion itfelf of a mediator at all.

II. As we must suppose, that the world is under the proper moral government of God, or in a state of religion, before we can enter into consideration of the reveal-

ed doctrine concerning the redemption of it by Christ; so that supposition is here to be distinctly taken notice of. Now the divine moral government which religion teaches us, implies, that the confequence of vice shall be misery, in some future state, by the righteous judgement of God. That fuch consequent punishment shall take effect by his appointment is necesfarily implied. But as it is not in any fort to be supposed, that we are made acquainted with all the ends or reasons, for which it is fit future punishment should be inflicted, or why God has appointed, fuch and fuch consequent misery should follow vice; and as we are altogether in the dark how or in what manner it shall follow, by what immediate occasions, or by the instrumentality of what means; there is no abfurdity in supposing, it may follow in a way analogous to that, in which many miseries may follow such and such courses of action at present, poverty, sickness, infamy, untimely death by diseases, death from the hands of civil justice. There is no abfurdity in supposing future punishments may follow wickedness of course,

as we speak, or in the way of natural consequence from God's original constitution of the world: from the nature he has given us, and from the condition in which he places us: or in like manner, as a person rashly trisling upon a precipice, in the way of natural consequence, falls down, in the way of natural consequence breaks his limb, suppose; in the way of natural consequence to this without help, perishes.

Some good men may perhaps be offended, with hearing it spoken of as a fupposeable thing, that the future punishments of wickedness may be in the way of natural consequence; as if this were taking the execution of justice out of the hand of God, and giving it to nature. But they should remember, that when things come to pass according to the course of nature this does not hinder them from being his doing, who is the God of nature: and that the scripture ascribes those punishments to divine justice, which are known to be natural, and which must be called fo, when diffinguished from such as are miraculous. But after all, this fupposiposition, or rather this way of speaking, is here made use of only by way of illustration of the fubject before us. For fince it must be admitted, that the future punishment of wickedness is not a matter of arbitrary appointment, but of reason, equity and justice; it comes, for aught I fee, to the fame thing, whether it is fupposed to be inflicted in a way analogous to that in which the temporal punishments of vice and folly are inflicted, or in any other way. And though there were a difference, it is allowable, in the prefent cafe to make this supposition, plainly not an incredible one; that future punishment may follow wickedness in the way of natural consequence, or according to some general laws of government already established in the universe.

III. Upon this supposition, or even without it, we may observe somewhat, much to the present purpose, in the constitution of nature and appointments of providence; the provision which is made, that all the bad natural consequences of mens actions should not always actually follow; or that such bad consequences, as, according to the set-

tled course of things, would inevitably have followed, if not prevented, should in certain degrees, be prevented. We are apt prefumptuoufly to imagine, that the world might have been fo constituted, as that there would not have been any fuch thing as mifery or evil. On the contrary, we find the author of nature permits it: but then he has provided reliefs, and in many cases, perfect remedies for it, after some pains and difficulties: reliefs and remedies even for that evil, which is the fruit of our own misconduct; and which, in the course of nature, would have continued, and ended in our destruction, but for such remedies. And this is an instance, both of feverity and indulgence, in the constitution of nature. Thus all the bad confequences, now mentioned, of a man's trifling upon a precipice, might be prevented. And though all were not, yet some of them might, by proper interpolition, if not rejected; by another's coming to the rash man's relief, with his own laying hold on that relief, in fuch fort as the case required. Persons may do a great deal themselves towards preventing the bad

confequences of their follies; and more may be done by themselves, together with the affistance of other their fellow-creatures; which affiftance nature requires and prompts us to. This is the general constitution of the world. Now suppose it had been fo constituted, that after such actions were done, as were foreseen naturally to draw after them mifery to the doer, it should have been no more in human power to have prevented that naturally confequent mifery, in any instance, that it is, in all; no one can fay whether fuch a more fevere conftitution of things might not have been really good. But, that on the contrary, provision is made by nature, that we may and do, to fo great a degree, prevent the bad natural effects of our follies; this may be called mercy or compassion in the original constitution of the world; compassion, as distinguished from goodness in general. And, the whole known constitution and course of things affording us instances of such compassion, it would be according to the analogy of nature, to hope, that, however ruinous the natural consequences of vice might

might be, from the general laws of God's government over the universe; yet provision might be made, possibly might have been originally made, for preventing those ruinous consequences from inevitably following at least from following universally, and in all cases.

Many, I am fenfible, will wonder at finding this made a question, or spoken of as in any degree doubtful. The generality of mankind are fo far from having that aweful fense of things, which the prefent state of vice and misery and darknefs feems to make but reasonable, that they have scarce any apprehension or thought at all about this matter, any way; and fome ferious persons may have spoken unadvisedly concerning it. But let us observe, what we experience to be, and what from the very constitution of nature, cannot but be, the confequences of irregular and disorderly behaviour; even of such rashness, willfulness, neglects, as we scarce call vicious. Now it is natural to apprehend, that the bad confequences of irregularity will be greater, in proportion as the irregularity is fo. And there is no comparifon between these irregularities, and the greater instances of vice, or a dissolute profligate difregard to all religion; if there be any thing at all in religion. For confider what it is for creatures, moral agents prefumptuously to introduce that confusion and misery into the kingdom of God, which mankind have in fact introduced; to blaspeme the sovereign Lord of all; to contemn his authority; to be injurious, to the degree they are, to their fellow-creatures the creatures of God. Add that the effects of vice in the present world, are often extreme mifery, irretrivable ruin, and even death. And upon putting all this together, it will appear, that as no one can fay in what degree fatal, the unprevented consequences of vice may be, according to the general rule of divine government; fo it is by no means intuitively certain, how far these consequences could possibly, in the nature of the thing, be prevented, confiftently with the eternal rule of right, or with what is, in fact, the moral constitution of nature. However there would be large ground to hope, that the univerfal government was not fo feverely strict, but that there

was from for pardon, or for having those penal consequences prevented. Yet,

IV. There feems no probability, that any thing we could do, would alone and of itself prevent them : prevent their following, or being inflicted. But one would think, at least, it were impossible, that the contrary should be thought certain. For we are not acquainted with the whole of the case. We are not informed of all the reasons, which render it fit, that future punishments should be inslicted; and therefore cannot know, whether any thing we could do, would make fuch an alteration as to render it fit, that they should be remitted. We do not know, what the whole natural or appointed consequences of vice are, nor in what way they would follow, if not prevented: and therefore, can in no fort fay, whether we could do any thing, which would be fufficient to prevent them. Our ignorance being thus manifest, let us recollect the analogy of nature or providence. For, though this may be but a flight ground to raise a positive opinion upon, in this matter; yet it is fufficient to answer a mere arbitrary affertion, without any kind of evidence, urged by way of objection against a doctrine, the proof of which is not reason, but revelation.-Confider then: people ruin their fortunes by extravagance; they bring difeases upon themselves by excess; they incur the penalties of civil laws, and furely civil government is natural: will forrow for these follies past, and behaving well for the future alone and of itself, prevent the natural confequences of them? On the contrary, mens natural abilities of helping themselves, are often impaired: or if not, yet they are forced to be beholden to the affistance of others, upon several accounts, and in different ways: affiftance which they would have had no occasion for had it not been for this misconduct, but which, in the difadvantageous condition they have reduced themselves to, is absolutely necesfary to their recovery, and retrieving their affairs. Now fince this is our cafe, confidering ourselves merely as inhabitants of this world, and as having a temporal interest here, under the natural government of God, which however, has a great deal moral in it: why is it not supposeable, that

that this may be our case also, in our more important capacity, as under his perfect moral government, and having a more general and future interest depending? If we have misbehaved in this higher capacity, and rendered ourselves obnoxious to the future punishment, which God has annexed to vice: it is plainly credible, that behaving well for the time to come, may be——not useless, God forbid——but wholly insufficient alone and of itself, to prevent that punishment; or to put us in the condition, which we should have been in, had we preserved our innocence.

And though we ought to reason with all reverence, whenever we reason concerning the divine conduct, yet it may be added, that it is clearly contrary to all our notions of government, as well as to what is, in sact, the general constitution of nature, to suppose that doing well for the future, should, in all cases, prevent all the judicial bad consequences of having done evil, or all the punishment annexed to disobedience. And we have manifestly nothing from whence to determine, in what degree, and in what cases, reformation would pre-

vent this punishment, even supposing that it would in some. And though the efficacy of repentance itself alone, to prevent what mankind had rendered themselves obnoxious to, and recover what they had forseited, is now insisted upon, in opposition to Christianity; yet, by the general prevalence of propitiatory facrifices over the heathen world, this notion, of repentance alone being sufficient alone to expiate guilt, appears to be contrary to the general sense of mankind.

Upon the whole then; had the laws, the general laws of God's government, been permitted to operate, without any interpolition in our behalf, the future punishment, for aught we know to the contrary, or have any reason to think, must inevitably have followed, notwithstanding any thing we could have done to prevent it. Now,

V. In this darkness, or this light of nature, call it which you please, revelation comes in; confirms every doubting fear, which could enter into the heart of man, concerning the future unprevented consequences of wickedness; supposes the world

world to be in a state of ruin; (a supposition which feems the very ground of the Christian dispensation, and which, if not proveable by reason, yet is in no wife contrary to it;) teaches us too, that the rules of Divine government are fuch, as not to admit of pardon immediately and directly upon repentance, or by the fole efficacy of. it; but then teaches at the same time, what nature might justly have hoped, that the moral government of the universe was not fo rigid, but that there was room for an interpolition, to avert the fatal consequences of vice; which therefore, by this means, does admit of pardon. Revelation teaches us, that the unknown laws of God's more general government, no less than the particular laws, by which we experience he governs us at prefent, are compaffionate, as well as good in the more general notion of goodness: and that he hath mercifully provided, that there should be an interpolition to prevent the destruction of human kind; whatever that destruction unprevented would have been. God fo loved the world, that he gave his only begotten Son, that whofoever believeth, not, to be fure,

¥ 3

in a speculative, but in a practical sense, that whofoever believeth in him, should not perish +: gave his fon in the same way of goodness to the world, as he affords particular persons the friendly affistance of their fellow-creatures; when, without it, their temporal ruin would be the certain confequence of their follies: in the same way of goodness, I say; though in a transcendent and infinitely higher degree. And the Son of God loved us, and gave himself for us, with a love, which he himself compares to that of human friendship: though, in -this case, all comparisons must fall infinitely short of the thing intended to be illustrated by them. He interposed in such a manner, as was necessary and effectual to prevent that execution of justice upon finners; which God had appointed should otherwise have been executed upon them; or in fuch a manner, as to prevent that punishment from actually following, which, according to the general laws of divine government, must have followed the

fins of the world, had it not been for fuch interposition*.

If any thing here faid, should appear, upon first thought, inconsistent with divine

* It cannot, I suppose, be imagined, even by the most cursory reader, that it is, in any fort, affirmed or applied in any thing faid in this chapter, that none can have the benefit of the general redemption, but fuch as have the advantage of being made acquainted with it in the present life. But, it may be needful to mention, that feveral questions, which have been brought into the fubject before us, and determined, are not in the least entered into here: questions which have been I fear, rashly determined, and perhaps with equal rashness contrary ways. For instance, whether God could fave the world by other means than the death of Christ, confistently with the general laws of his government. And had not Christ come into the world, what would have been the future condition of the better fort of men; those just persons over the face of the earth, for whom, Manasses in his prayer afferts, repentance was not appointed. The meaning of the first of these questions is greatly ambiguous. And neither of them can properly be answered, without going upon that infinitely abfurd supposition, that we know the whole of the case. And perhaps, the very inquiry, What would have followed if God had not done as he has, may have in it some very great impropriety: and ought not to be carried on any farther, than is necessary to help our partial and inadequate, conceptions of things.

Y 4

goodness, a second, I am persuaded, will intirely remove that appearance. For were we to suppose, the constitution of things to be fuch, as that the whole creation must have perished, had it not been for somewhat, which God had appointed should be, in order to prevent that ruin: even this supposition would not be inconsistent, in any degree, with the most absolutely perfect goodness. But still it may be thought, that this whole manner of treating the subject before us, supposes mankind to be naturally in a very ftrange state, And truly fo it is. But it is not Christianity, which has put us into this state. Whoever will confider the manifold miferies, and the extreme wickedness of the world: that the best have great wrongnesses within themselves, which they complain of, and endeavour to amend; but that the generality grow more profligate and corrupt with age: that heathen moralists thought the present state to be a state of punishment: and, what might be added, that the earth our habitation has the appearance of being a ruin: whoever, I fay, will consider all these, and some other obvious things, will think

think he has little reason to object against the scripture account, that mankind is in a state of degradation; against this being the fact; how difficult soever he may think it to account for, or even to form a distinct conception of the occasions and circumstances of it. But that the crime of our first parents was the occasion of our being placed in a more disadvantageous condition, is a thing throughout and particularly analogous to what we see, in the daily course of natural providence; as the recovery of the world by the interposition of Christ, has been shewn to be so in general.

VI, The particular manner in which Christ interposed in the redemption of the world, or his office as Mediator, in the largest sense, between God and man, is thus represented to us in the scripture.—
He is the light of the world *; the revealer of the will of God in the most eminent sense. He is a propitiatory facrifice †; the Lamb of God ‡: and, as he voluntarily

^{*} John i. and viii. 12. + Rom. iii. 25. and v. 11. Cor. v. 7. Eph. v. 2. 1 John ii. 2. Matth. xxvi. 28.

[‡] John i. 29, 36. and throughout the book of Revelation.

offered himself, he is stiled our High Priest*,
—And, which seems of peculiar weight,
he is described beforehand in the Old Testament, under the same characters of a
priest, and an expiatory victim †.

And whereas it is objected, that all this is merely by way of allusion to the facrifices of the Mofaic law, the apostle on the contrary affirms, that the " law was a " fhadow of good things to come, and " not the very image of the things +," and that " the priests that offer gifts accord-" ing to the law-ferve unto the example " and shadow of heavenly things, as Moses " was admonished of God, when he was 6 about to make the tabernacle. For fee, " faith he, that thou make all things ac-" cording to the pattern shewed to thee " in the mount §." The Levitical priesthood was a shadow of the priesthood of Christ; in like manner as the tabernacle made by Moses, was according to that shewed him in the mount. The priesthood

^{*} Throughout the epiftle to the Hebrews. † Ifa. liii. Dan. ix. 24. Pfalm cx. 4. ‡ Heb. x. 1. § Heb. viii. 4, 5.

of Christ, and the tabernacle in the mount, were the originals; of the former of which, the Levitical priesthood was a type; and of the latter, the tabernacle made by Moses was a copy. The doctrine of this epiftle then plainly is, that the legal facrifices were allusions to the great and final atonement, to be made by the blood of Christ; and not that this was an allusion to those. Nor can any thing be more express and determinate, than the following paffage. "It " is not possible that the blood of bulls " and goats should take away sin. Where-" fore when he cometh into the world, " he faith, facrifice and offering," i. e. of bulls and of goats, "thou wouldst not, " but a body hast thou prepared me. ___Lo, "I come to do thy will, O God.—By "which will we are fanctified, through " the offering of the body of Jesus Christ " once for all "."

And to add one passage more of the like kind: Christ was once offered to bear the sins of many: and unto them that look for him shall he appear the second time, with-

^{*} Heb. x. 4. 5. 7. 9. 10.

out fin: i. e. without bearing fin, as he did at his first coming, by being an offering for it, without having our iniquities again laid upon him, without being any more a fin-offering—unto them that look for him shall he appear the second time, without fin, unto falvation b. Nor do the inspired writers at all confine themselves to this manner of speaking concerning the satisfaction of Christ; but declare an efficacy in what he did and fuffered for us, additional to and beyond mere instruction, example and government, in great variety of expression. That Jesus should die for that nation the Jews: and not for that nation only, but that also, plainly by the efficacy of his death, he should gather together in one, the children of God that were scattered abroad: that he suffered for fins, the just for the unjust d: that he gave his life, himself, a ransome: that we are bought, bought with a price f: that he re-

Father^m. For, worthy is the Lamb that was flain, to receive power, and riches, and wisdom, and strength, and honour, and glory and bletsling. And every creature which is in heaven, and on the earth heard I, saying, blessing, and honour, and glory, and power be unto him that sitteth upon the throne, and unto the Lamb for ever and ever ⁿ.

These passages of scriprure seem to comprehend and express the chief parts of Christ's office, as Mediator between God and man, so far, I mean, as the nature of this his office is revealed; and it is usually treated of by divines under three heads.

First, He was, by way of eminence, The Prophet: That prophet that should come into the world, to declare the divine will. He published anew the Law of Nature, which men had corrupted; and the very knowledge of which to some degree, was lost among them. He taught mankind, taught us authoritatively, to live soberly, righteously, and godly, in this

^m Phil. ii. 8. 9. John iii. 35. and v. 22, 23.

^{*} Rev. v. 12. 23. ? John vi. 14.

present world, in expectation of the future judgement of God. He confirmed the truth of this moral system of nature, and gave us additional evidence of it, the evidence of testimony. He distinctly revealed, the manner in which God would be worshipped, the essicacy of repentance, and the rewards and punishments of a future life.—Thus he was a prophet in a sense, in which no other ever was. To which is to be added, that he set us a perfect example that we should follow his steps.

Secondly, He has a kingdom which is not of this world. He founded a church, to be to mankind a standing memorial of religion, and invitation to it; which he promised to be with always, even to the end. He exercises an invisible government over it, himself, and by his spirit: over that part of it, which is militant here on earth, a government of discipline, for the perfecting of saints, for the edifying of his body. till we all come, in the unity of the faith, and of the knowledge of the Son of God, into a perfect man, unto the measure of the

ftature of the fullness of Christ*. Of this church, all persons scattered over the world, who live in obedience to his laws, are members. For these he is gone to prepare a place, and will come again to receive them unto himself, that where he is, there they may be also: and reign with him for ever and ever +: and likewise to take vengeance on them that know not God, and obey not his gospel ‡.

Against these parts of Christ's office, I find no objections, but what are fully obviated in the beginning of this chapter.

Lastly, Christ offered himself a propitiatory sacrifice, and made atonement for the sins of the world: which is mentioned last, in regard to what is objected against it.— Sacrifices of expiation were commanded the Jews, and obtained amongst most other nations, from tradition, whose original probably was revelation. And they were continually repeated, both occasionally, and at the returns of stated times; and

^{*} Eph. iv. 12, 13.

[†] John xiv. 2, 3. Rev. iii. 21, and xi. 15.

^{1 2} Theff. i. 8.

made up great part of the external religion of mankind. But now once in the end of the world Christ appeared to put away sin by the facrifice of himself*. And this facrifice was, in the highest degree, and with the most extensive influence, of that efficacy for obtaining pardon of sin, which the heathen may be supposed to have thought their facrifices to have been, and which the Jewish facrifices really were in some degree, and with regard to some perfons.

How and in what particular way it had this efficacy, there are not wanting persons who have endeavoured to explain: but I do not find that the scripture has explained it.—We seem to be very much in the dark, concerning the manner in which the ancients understood atonement to be made, i. e. pardon to be obtained by facrifices. And if the scripture has, as surely it has, left this matter of the satisfaction of Christ mysterious, left somewhat in it unrevealed, all conjectures about it must be, if not evidently absurd, yet at least uncertain. Nor

* Heb. ix. 26.

has any one reason to complain for want of farther information; unless he can shew his claim to it.

Some have endeavoured to explain the efficacy of what Christ has done and fuffered for us, beyond what the scripture has authorized: others, probably because they could not explain it, have been for taking it away, and confining his office as Redeemer of the world, to his instruction, example, and government of the church. -Whereas the doctrine of the gospel appears to be, not only that he taught the efficacy of repentance, but rendered it of the efficacy which it is, by what he did and fuffered for us: that he obtained for us the benefit of having our repentance accepted unto eternal life: not only that he revealed to finners, that they were in a capacity of falvation, and how they might obtain it; but moreover, that he put them into this capacity of falvation, by what he did and fuffered for them; put us into a capacity of escaping future punishments, and obtaining future happiness. And it is our wisdom thankfully to accept the benefit, by performing the conditions, upon which it is offered.

offered, on our part, without disputing how it was procured, on his. For,

VII. Since we neither know, by what means punishment in a future state would have followed wickedness in this; nor in what manner it would have been inflicted had it not been prevented; nor all the reafons why its infliction would have been needful, nor the particular nature of that state of happiness, which Christ is gone to prepare for his disciples: and fince we are ignorant how far any thing which we could do, would, alone and of itself, have been effectual to prevent that punishment, to which we were obnoxious, and recover that happiness, which we had forfeited; it is most evident we are not judges, antecedently to revelation, whether a Mediator, was or was not necessary, to obtain those ends; to prevent that future punishment, and bring mankind to the final happiness of their nature. And for the very fame reasons, upon supposition of the necessity of a Mediator, we are no more judges, antecedently to revelation, of the whole nature of his office, or the feveral parts of which it confists; of what was fit and requisite to be assigned him, in order to accomplish the ends of divine providence in the appointment. And from hence it follows, that to object against the expediency or usefulness of particular things, revealed to have been done or suffered by him, because we do not fee how they were conducive to those ends: is highly abfurd. Yet nothing is more common to be met with, than this abfurdity. But if it be acknowledged beforehand, that we are not judges in the case, it is evident, that no objection can, with any shadow of reason, be urged against any particular part of Christ's mediatorial office revealed in scripture, till it can be shewn positively, not to be requisite or conducive to the ends proposed to be accomplished; or that it is in itself unreafonable.

And there is one objection made against the satisfaction of Christ, which looks to be of this positive kind: that the doctrine of his being appointed to suffer for the sins of the world, represents God as being indifferent whether he punished the innocent or the guilty. Now from the foregoing observations, we there see the extream slightness of

all fuch objections; and (though it is most certain all who make them do not fee the consequence) that they conclude altogether as much against God's whole original constitution of nature, and the whole daily course of divine providence in the government of the world, i. e. against the whole scheme of Theism and the whole notion of religion; as against Christianity. For the world is a constitution or system, whose parts have a mutual reference to each other: and there is a scheme of things gradually carrying on, called the course of nature to the carrying on of which, God has appointed us, in various ways, to contribute. And when, in the daily course of natural providence, it is appointed that innocent people should suffer for the faults of the guilty, this is liable to the very same objection, as the instance we are now considering. -The infinitely greater importance of that appointment of Christianity which is objected against, does not hinder but it may be, as it plainly is, an appointment of the very fame kind, with what the world affords us daily examples of. Nay, if there were any force at all in the objection, it would Z_3

would be stronger, in one respect, against natural providence, than against Christianity: because under the former, we are in many cases commanded, and even necessitated, whether we will or no; to suffer for the faults of others; whereas, the fufferings of Christ were voluntary. The world's being under the righteous government of God, does indeed imply, that finally and upon the whole every one shall receive according to his personal deserts; and the general doctrine of the whole fcripture is, that this shall be the completion of the divine government. But during the progress, and, for aught we know, even in order to the completion of this moral scheme, vicárious punishments may be fit, and absolutely necessary. Men by their follies, run themselves into extreme diftress: into difficulties which would be abfolutely fatal to them, were it not for the interpolition and affistance of others. God commands by the law of nature, that we afford them this affiftance, in many cases where we cannot do it without very great pains, and labour, and fufferings to ourfelves. And we fee in what variety of ways,

one person's sufferings contribute to the relief of another: and how, or by what particular means, this comes to pass or follows, from the constitution and laws of nature, which come under our notice: and being familiarized to it, men are not shocked with it. So that the reason of their insisting upon objections of the foregoing kind against the satisfaction of Christ, is, either that they do not confider God's fettled and uniform appointments as his appointments at all: or elfe, they forget that vicarious punishment is a providential appointment of every day's experience: and then, from their being unacquained with the more general laws of nature or divine government over the world, and not feeing how the fufferings of Christ could contribute to the redemption of it, unless by arbitrary and tyrannical will: they conclude his fufferings could not contribute to it any other way. And yet, what has been often alledged in justification of this doctrine, even from the apparent natural tendency of this method of our redemption; its tendency to vindicate the authority of God's laws, and deter his creatures from fin: this has

never yet been answered, and is, I think, plainly unanswerable; though I am far from thinking it, an account of the whole of the case. But without taking this into confideration, it abundantly appears, from the observations above made, that this objection is, not an objection against Christianity, but against the whole general constitution of nature. And if it were to be confidered as an objection against Christianity, or confidering it as it is, an objection against the constitution of nature; it amounts to no more in conclusion than this, that a divine appointment cannot be necesfary or expedient, because the objecter does not discern it to be so: though he must own that the nature of the case is such, as renders him uncapable of judging, whether it be fo or not: or of feeing it to be necessary, though it were fo.

It is indeed, a matter of great patience to reasonable men, to find people arguing in this manner: objecting against the credibility of such particular things revealed in scripture, that they do not see the necessity or expediency of them. For though it is highly right, and the most pious exercise

of

of our understanding, to inquire with due reverence into the ends and reasons of God's dispensation: yet when those reasons are concealed, to argue from our ignorance, that fuch dispensations cannot be from God, is infinitely abfurd. The prefumption of this kind of objections, feems almost lost in the folly of them. And the folly of them is yet greater, when they are urged, as usually they are, against things in Christianity analogous or like to these natural dispensations of Providence, which are matter of experience. Let reason be kept to: and if any part of the scripture account of the redemption of the world by Christ, can be shewn to be really contrary to it, let the scripture in the name of God, be given up; but let not fuch poor creatures as we, go on objecting against an infinite scheme, that we do not see the necessity or usefulness of all its parts, and call this reafoning; and, which still farther heightens the absurdity in the present case, parts which we are not actively concerned in.-For it may be worth mentioning.

Lastly, That not only the reason of the *thing, but the whole analogy of nature, *

should

should teach us, not to expect to have the Like information concerning the divine conduct, as concerning our own duty. God instructs us by experience, (for it is not reason, but experience, which instructs us) what good or bad confequences will follow from our acting in fuch and fuch manners: and by this he directs us, how we are to behave ourselves. But, though we are sufficiently instructed for the common purposes of life; yet it is but an almost infinitely fmall part of natural providence, which we are at all let into. The case is the same with regard to revelation. The dostrine of a Mediator between God and man, against which it is objected, that the expediency of fome things in it is not understood, relates only to what was done on God's part in the appointment, and on the Mediator in the execution of it. For what is required of us, in consequence of this gracious dispensation, is another fubject, in which none can complain for want of information. The constitution of the world, and God's natural government over it, is all mystery, as much as the Christian dispensation. Yet under the first, he has given men all things

pertaining to life; and under the other, all things pertaining unto godlinefs. And it may be added, that there is nothing hard to be accounted for in any of the common precepts of Christianity: though if there were, furely a divine command is abundantly fufficient to lay us under the strongest obligations to obedience. But the fact is, that the reasons of all the Christian precepts are evident. Positive institutions are manifestly necessary to keep up and propagate religion amongst mankind. And our duty to Christ, the internal and external worship of him; this part of the religion of the gospel, manifestly arises out of what he has done and fuffered, his authority and dominion, and the relation, which he is revealed to stand in to us.

CHAP. VI,

OF THE WANT OF UNIVERSALITY IN RE-VELATION; AND OF THE SUPPOSED DE-FICIENCY IN THE PROOF OF IT.

It has been thought by fame persons, that if the evidence of Revelation appears doubtful, this itself turns into a positive argument against it; because it cannot be supposed, that if it were true, it would be left to subsist upon doubtful evidence. And the objection against revelation from its not being universal, is often insisted upon as of great weight.

Now the weakness of these opinions, may be shewn, by observing the suppositions on which they are founded: which are really such as these, that it cannot be thought God would have bestowed any favour at all upon us, unless in the degree, which, we think, he might, and which,

we imagine, would be most to our particular advantage; and also that it cannot be thought he would bestow a favour upon any, unless he bestowed the same upon all! suppositions which we find contradicted not by a few instances in God's natural government of the world, but by the general analogy of nature together.

Persons who speak of the evidence of religion as doubtful, and of this supposed doubtfulness as a positive argument against it, should be put upon considering, what that evidence indeed is, which they act upon with regard to their temporal interests. For, it is not only extremely difficult but, in many cases, absolutely impossible to balance pleasure and pain, satisfaction and uneafinefs, fo as to be able to fay, on which fide the overplus is. There are the like difficulties and impossibilities in making the due allowances, for a change of temper and taste, for satiety, disgusts, illhealth: any of which render men incapable of enjoying, after they have obtained what they most eagerly have defired .-Numberless too are the accidents, besides that one of untimely death, which may

even probably disappoint the best concerted schemes: and strong objections are often feen to lie against them, not to be removed or answered, but which seem overbalanced by reasons on the other side: so as that the certain difficulties and dangers of the purfuit are, by every one, thought justly difregarded, upon the account of the appearing greater advantages in case of success, though there be but little probability of it. Lastly, every one observes our liableness, if we be not upon our guard, to be deceived by the falshood of men, and the false appearances of things; and this danger must be greatly increased, if there be a strong bias within, fuppose from indulged passion, to favour the deceit. Hence arises that great uncertainty and doubtfulness of proof, wherein our temporal interest really confifts: what are the most probable means of attaining it; and whether those means will eventually be fuccefsful. And numberless instances there are, in the daily course of life, in which all men think it reasonable to engage in purfuits; though the probability is greatly against succeeding; and to make fuch provision for themselves, as it is fup-

supposeable they may have occasion for, though the plain acknowledged probability is, that they never shall. Then those who think the objection against revelation, from its light not being universal, to be of weight, should observe, that the Author of nature, in numberless instances, bestows that upon fome, which he does not upon others, who feem equally to stand in need of it. Indeed he feems to bestow all his gifts, with the most promiscuous variety, among creatures of the fame species: health and strength, capacities of prudenceand knowledge, means of improvement, riches, and all external advantages. And as there are not any two men found, of exactly like shape and features: so it is probable there are not any two of an exactly like conflitution, temper, and fituation, with regard to the goods and evils of life. Yet, notwithstanding these uncertainties and varieties, God does exercife a natural government over the world: and there is fuch a thing as a prudent and imprudent institution of life, with regard to our health and our affairs, under that his natural government.

As neither the Jewish nor Christian revelation have been universal; and as they have been afforded to a greater or less part of the world; at different times: so likewise, at different times, both revelations have had different degrees of evidence.

The Jews who lived during the fuccession of prophets, that is, from Moses till after the captivity, had higher evidence of the truth of their religion, than those had, who lived in the interval between the last mentioned period, and the coming of Christ. -And the first Christians had higher evidence of the miracles wrought in attestation of Christianity, than what we have now. They had also a strong presumptive proof of the truth of it, perhaps of much greater force, in way of argument, than many think, of which we have very little remaining; I mean the prefumptive proof of its truth, from the influence which it had upon the lives of the generality of its profesfors. And we, or future ages, may possibly have a proof of it, which they could not have, from the conformity between the prophetic history, and the state of the world and Christianity. And further

if we were to suppose the evidence, which fome have of religion, to amount to little more, than feeing that it may be true; but that they remain in great doubts and uncertainties about both its evidence and its nature, and great perplexities concerning the rule of life: others to have a full conviction of the truth of religion, with a distinct knowledge of their duty; and others feverally to have all the intermediate degrees of religious light and evidence, which lie between these two-If we put the case, that for the present, it was intended, revelation should be no more than a small light, in the midst of a world greatly overspread, notwithstanding it, with ignorance and darkness; that certain glimmerings of this light should extend, and be directed, to remote distances, in fuch a manner as that those who really partook of it, should not discern from whence it originally came: that fome in a nearer fituation to it, should have its light obscured, and, in different ways and degrees, intercepted: and that others should be placed within its clearer influence, and be much more enlivened, cheared, and directed Aa

rected by it; but yet that even to these, it should be no more than a light shining in a dark place: all this would be perfectly uniform and of a piece with the conduct of Providence, in the distribution of its other bleffings. If the fact of the case really were, that some have received no light at all from the scripture: as many ages and countries in the heathen world: that others, though they have, by means of it, had effential or natural religion enforced upon their consciences, yet have never had the genuine scripture revelation, with its real evidence, proposed to their confideration; and the ancient Persians, and modern Mahometans, may possibly be instances of people in a situation somewhat like to this: that others, though they have had the scripture laid before them, as of divine revelation, yet have had it with the fystem and evidence of Christianity so interpolated, the fystem so corrupted, the evidence so blended with false miracles, as to leave the mind in the utmost doubtfulnefs and uncertainty about the whole; which may be the state of some thoughtful men, in most of those nations which call themthemselves Christians: and lastly, that others have had Christianity offered to them in its genuine simplicity, and with its proper evidence, as persons in countries and churches of civil and of Christian liberty; but however, that even these persons are left in great ignorance in many respects, and have by no means light afforded them enough to fatisfy their curiofity, but only to regulate their life, to teach them their duty, and encourage them in the careful discharge of it: I say, if we were to suppose this somewhat of a general true account of the degrees of moral and religious light and evidence, which were intended to be afforded mankind, and of what has actually been and is their fituation, in their moral and religious capacity; there would be nothing in all this ignorance, doubtfulness, and uncertainty, in all these varieties, and supposed disadvantages of some in comparison of others, respecting religion, but may be paralleled by manifest analogies in the natural dispensations of Providence at prefent, and confidering ourselves merely in our temporal capacity.

Aa2

Nor

Nor is there any thing shocking in all this, or which would feem to bear hard upon the moral administration in nature, if we would really keep in mind, that every one shall be dealt equitably with: instead of forgetting this, or explaining it away, after it is acknowledged in words. All shadow of injustice, and indeed all harsh appearances, in this various economy of Providence would be lost; if we would keep in mind, that every merciful allowance shall be made, and no more be required of any one, than what might have been equitably expected of him, from the circumstance in which he was placed: and not what might have been expected, had he been placed in other circumstances: i. e. in scripture language, that every man fhall be accepted according to what he had, not according to what he had not *. This however, doth not by any means imply, that all persons condition here, is equally advantageous with respect to futurity.-And Providence's defigning to place fome

^{* 2} Cor. viii. 12.

in greater darkness, with respect to religious knowledge, is no more a reason why they should not endeavour to get out of that darkness, and others to bring them out it; than why ignorant and slow people, in matters of other knowledge, should not endeavour to learn, or should not be instructed.

It is not unreasonable to suppose, that the fame wife and good principle, whatever it was, which disposed the Author of nature to make different kinds and orders of creatures, disposed him also to place creatures of like kinds, in different fituations: and that the fame principle which disposed him to make creatures of different moral capacities, disposed him also to place creatures of like moral capacities, in different religious fituations; and even the same creatures, in different periods of their being. And the account or reason of this, is also most probably the account, why the constitution of things is such, as that creatures of moral natures or capacities, for a confiderable part of that duration in which they are living agents, are not at all fubjects of morality and religion: but grow up to be so, and grow up to be so more and more, gradually from child-hood to mature

age.

What, in the particular, is the account or reason of these things, we must be greatly in the dark, were it only that we know so very little even of our own case. Our present state may possibly be the consequence of fomewhat past, which we are wholly ignorant of; as it has a reference to somewhat to come, of which we know fcarce any more than is necessary for practice. A fystem or constitution, in its notion, implies variety; and fo complicated an one as this world, very great variety. So that were revelation universal, yet from men's different capacities of understanding, from the different lengths of their lives, their different educations and other external circumstances, and from their difference of temper and bodily conflitution; their religious fituations would be widely different, and the difadvantage of fome in comparison of others, perhaps, altogether as much as at prefent. And the true account, whatever it be, why mankind or fuch a part of mankind are placed in this condition of ignorance.

norance, must be supposed also the true account of our farther ignorance, in not knowing the reasons, why, or whence it is, that they are placed in this condition. But the following practical reflections may deferve the serious consideration of those persons, who think the circumstances of mankind or their own, in the forementioned respects, a ground of complaint.

First, The evidence of religion not appearing obvious, may constitute one particular part of some mens trial in the religious fense; as it gives scope, for a virtuous exercise, or vicious neglect of their understanding, in examining, or not examining into that evidence. There feems no possible reason to be given, why we may not be in a state of moral probation, with regard to the exercise of our understanding upon the subject of religion, as we are with regard to our behaviour in common affairs .--The former is as much a thing within our power and choice, as the latter. And I. suppose it is to be laid down for certain, that the same character, the same inward principle, which, after a man is convinced of the truth of religion, renders him obe-

dient

dient to the precepts of it, would, were he not thus convinced, fet him about an examination of it, upon its system and evidence being offered to his thoughts; and that in the latter state, his examination would be with an impartiality, feriousness and folicitude, proportionable to what his obedience is in the former. And as inattention, negligence, want of all ferious concern, about a matter of fuch nature and fuch importance, when offered to mens confideration, is, before a distinct conviction of its truth, as real immoral depravity and diffoluteness; as neglect of religious practice after fuch conviction: fo active folicitude about it, and fair impartial confideration, of its evidence before fuch conviction, is as really an exercise of a morally right temper; as is religious practice after. Thus, that religion is not intuitively true, but a matter of deduction and inference: that a conviction of its truth is not forced upon every one, but left to be, by fome, collected with heedful attention to premifes; this as much constitutes religious probation, as much affords fphere, fcope, opportunity, for right and wrong behaviour,

as any thing whatever does. And their manner of treating this subject when laid before them, shews what is in their heart, and is an exertion of it.

Secondly, It appears to be a thing as evident, though it is not fo much attended to, that if upon confideration of religion, the evidence of it should seem to any person doubtful, in the highest supposeable degree, even this doubtful evidence will, however, put them into a general state of probation in the moral and religious fense. For, suppose a man to be really in doubt, whether fuch a person had not done him the greatest favour; or, whether his own temporal interest did not depend upon that person; no one, who had any fense of gratitude and prudence, could possibly consider himself in the same situation with regard to such perfon, as if he had no fuch doubt. In truth, it is as just to fay, that certainty and doubt are the same, as to say, the situations now mentioned, would leave a man as entirely at liberty in point of gratitude or prudence, as he would be, were he certain he had received no favour from fuch person, or that he no way depended upon him. And thus, though the evidence of religion which is afforded fome men, should be little more than that they are given to see the system of Christianity, or religion in general, to be fuppofeable and credible; this ought in all reason to beget a serious practical apprehension, that it may be true. And even this will afford matter of exercise, for religious suspense and deliberation, for moral resolution and self-government; because the apprehension that religion may be true, does as really lay men under obligations, as a full conviction that it is true.-It gives occasion and motives to consider farther the important fubject; to preserve attentively upon their minds, a general implicit sense that they may be under divine moral go= vernment, an awful folicitude about religion whether natural or revealed. Such apprehensions ought to turn mens eyes to every degree of new light which may be had, from whatever fide it comes: and induce them to refrain, in the mean time, from all immoralities, and live in the confcientious practice of every common vir-Especially, are they bound to keep at the greatest distance from all dissolute profaneness; for this, the very nature of the case forbids; and to treat with highest reverence a matter, upon which their own whole interest and being, and the fate of nature depends. This behaviour, and an active endeavour to maintain within themfelves this temper, is the business, the duty. and the wisdom of those persons, who complain of the doubtfulness of religion; is what they are under the most proper obligations to. And fuch behaviour is an exertion of, and has a tendency to improve in them, that character, which the practice of the feveral duties of religion, from a full conviction of its truth, is an exertion of, and has a tendency to improve in others: others, I fay, to whom God has afforded fuch conviction. Nay, confidering the infinite importance of religion, revealed as well as natural, I think it may be faid in general, that whoever will weigh the matter thoroughly, may fee, there is not near fo much difference as is commonly imagined, between what ought in reason to be the rule of life, to those who are fully convinced of its truth. and to those who have only a ferious doubting apprehension, that

that it may be true. Their hopes and fears and obligations will be in various degrees; but, as the subject matter of their hopes and fears is the same; so the subject matter of their obligations, what they are bound to do and to refrain from, is not so very unlike.

It is to be observed farther, that, from a character of understanding, or a situation of influence in the world, fome perfons have it in their power to do infinitely more harm or good, by fetting an example of profaneness and avowed difregard to all religion; or, on the contrary, of a ferious, though perhaps doubting apprehension of its truth, and of a reverend regard to it under this doubtfulness; than they can do, by acting well or ill in all the common intercourses amongst mankind.-And confequently they are most highly accountable for a behaviour, which, they may easily foresee, is of such importance, and in which there is most plainly a right and a wrong; even admitting the evidence of religion to be as doubtful, as is pretended.

The ground of these observations, and that which renders them just and true, is, that doubting necessarily implies some degree of evidence for that, of which we doubt. For no person would be in doubt, concerning the truth of a number of facts, fo and fo circumstanced, which should accidentally come into his thoughts, and of which he had no evidence at all. And though in the case of an even chance, and where confequently we were in doubt, we should in common language fay, that we had no evidence at all for either fide: yet that fituation of things, which renders it an even chance and no more, that fuch an event will happen, renders this case equivalent to all others, where there is fuch evidence on both fides of a question*, as leaves the mind in doubt concerning the truth. Indeed in all these cases, there is no more evidence on one fide, than on the other: but there is (what is equivalent to) much more for either, than for the truth of a number of facts which come into one's thoughts at random. And thus in all thefe

cases, doubt as much presupposes evidence, lower degrees of evidence; as belief presupposes higher, and certainty higher still, Any one, who will a little attend to the nature of evidence, will eafily carry this observation on, and see, that between no evidence at all, and that degree of it which affords ground of doubt, there are as many intermediate degrees, as there are, between that degree which is the ground of doubt, and demonstration. And though we have not faculties to distinguish these degrees of evidence, with any fort of exactness; yet, in proportion as they are 'difcerned, they ought to influence our practice. For it is, as real an imperfection in the moral character, not to be influenced in practice by a lower degree of evidence when difcerned, as it is, in the understanding, not to difcern it. And as, in all fubjects which men confider, they difcern the lower, as well as higher degrees of evidence, proportionably to their capacity of understanding; so, in practical subjects, they are influenced in practice, by the lower as well as higher degrees of it, proportionably to their fairness and honesty; and as, in proporportion to defects in the understanding, men who are unapt to see lower degrees of evidence, are in danger of overlooking evidence when it is not glaring, and are easily imposed upon in fuch cases: so, in proportion to the corruption of the heart, they feem capable of fatisfying themselves with having no regard in practice to evidence acknowledged real, if it be not overbearing. From these things it must follow, that doubting concerning religion implies fuch a degree of evidence for it, as joined with the confideration of its importance, unquestionably lays men under the obligations before mentioned, to have a dutiful regard to it in all their behaviour.

Thirdly the difficulties in which the evidence of religion is involved, which some complain of, is no more a just ground of complaint, than the external circumstances of temptation, which others are placed in; or than difficulties in the practice of it, after a full conviction of its truth.

Temptations render our state a more improving state of discipline*, than it would

be otherwise; as they give occasion for a more attentive exercise of the virtuous principle, which confirms and strengthens it more, than an easier or less attentive exercise of it could.

Now speculative difficulties are, in this respect, of the very same nature with these external temptations. For the evidence of religion not appearing obvious, is, to some persons, a temptation to reject it, without any confideration at all: and therefore, requires fuch an attentive exercise of the virtuous principle, feriously to consider that evidence, as there would be no occafion for, but for fuch temptation. And the supposed doubtfulness of its evidence, after it has been in some fort considered, affords opportunity to an unfair mind of explaining away, and deceitfully hiding it from itself, that evidence which it might fee; and also for mens encouraging themfelves in vice from hopes of impunity, though they do clearly fee thus much at least, that these hopes are uncertain: in like manner as the common temptation to many inftances of folly, which end in temporal infamy and ruin, is, the ground

for hope of not being detected, and of escaping with impunity; i. e. the doubtfulness of the proof before-hand, that such foolish behaviour will thus end in infamy and ruin. On the contrary, supposed doubtfulness in the evidence of religion, calls for a more careful and attentive exercise of the virtuous principle, in fairly yielding themselves up to the proper influence of any real evidence, though doubtful; and in practifing conscientiously all virtue, though under some uncertainty, whether the government in the universe may not possibly be fuch, as that vice may escape with impunity. And in general, temptation, meaning by this word, the leffer allurements, the wrong and difficulties in the discharge of our duty, as well as the greater ones: temptation, I fay, as fuch and of every kind and degree, as it calls forth fome virtuous efforts, additional to what would otherwise have been wanting, cannot but be an additional discipline and improvement of virtue, as well as probation of it in the other fenses of that word*. So that the very fame account is

* Part I. Chap. iv.

to be given, why the evidence of religion should be left in such a manner, as to require, in some, an attentive, folicitous, perhaps painful exercise of their understanding about it; as why others should be placed in fuch circumstances, as that the practice of its common duties, after a full conviction of the truth of it, should require attention, folicitude, and pains: or, why appearing doubtfulness should be permitted to afford matter of temptation to fome; as why external difficulties and allurements should be permitted to afford matter of temptation to others. The fame account also is to be given, why fome should be exercised with temptations of both these kinds; as why others should be exercised with the latter in fuch very high degrees, as fome have been, particularly as the primitive Christians were.

Nor does there appear any abfurdity in the supposing, that the speculative difficulties in which the evidence of religion is involved, may make even the principal part of some persons trial. For, as the chief temptations of the generality of the world are, the ordinary motives to injustice or unrestrained pleasure: or to live in

the neglect of religion, from that frame of mind, which renders many persons almost without feeling as to any thing distant, or which is not the object of their fenses: so there are other perfons without the shallowness of temper, persons of a deeper sense as to what is invisible and future; who not only fee, but have a general practical feeling, that what is to come will be prefent, and that things are not lefs real for their not being the objects of sense; and who, from their natural constitution of body, and of temper, and from their external condition may have fmall temptations to behave ill, fmall difficulty in behaving well, in the common course of life. Now, when these latter persons have a distinct full conviction of the truth of religion, without any poffible doubts or difficulties, the practice of it is to them unavoidable, unless they would do a constant violence to their own minds; and religion is fcarce any more a discipline to them, than it is to creatures in a state of perfection. Yet these persons may posfibly stand in need of moral discipline and exercife in a higher degree, than they would have by fuch an eafy practice of religion.

Or

Or it may be requisite, for reasons unknown to us, that they should give some farther manifestation what is their moral character, to the creation of God, than fuch a practice of it would be. Thus in the great variety of religious fituations in which men are placed, what constitutes, what chiefly and peculiarly conflitutes, the probation, in all fenses, of some persons may be the difficulties in which the evidence of religion is involved: and their principal and diftinguished trial, may be, how they will behave under and with respect to these difficulties. Circumstances in mens situation in their temporal capacity, analogous in good measure to this respecting religion, are to be observed. We find some persons are placed in such a situation in the world, as that their chief difficulty with regard to conduct, is not the doing what is prudent when it is known; for this, in numberless cases, is as easy as the contrary: but to some the principal exercise is, recollection and being upon their guard against deceits, the deceits suppose of those about them; against false appearances of reason and prudence. To perfons in fome fituations, the prinprinciple exercise with respect to conduct, is, attention in order to inform themselves what is proper, what is really the reasonable and prudent part to act.

But as I have hitherto gone upon suppofition, that mens distatisfaction with the evidence of religion is not owing to their neglects or prejudices: it must be added, on the other hand, in all common reason, and as what the truth of the case plainly requires should be added, that such distatisfaction possibly may be owing to those, possibly may be mens own fault. For,

If there are any persons, who never set themselves heartily in earnest to be informed in religion: if there are any who secretly wish it may not prove true; and are less attentive to evidence than to difficulties, and more to objections than to what is said in answer to them: these persons will scarce be thought in a likely way of seeing the evidence of religion, though it were most certainly true, and capable of being ever so fully proved. If any accustom themselves to consider this subject usually in the way of mirth and sport: if they attend to forms, and representations, and inadequate

B b 3

manners of expression, instead of the real things intended by them: (for figns often can be no more than inadequately expressive of the things fignified:) or if they substitute human errors, in the room of divine truth; why may not all, or any of thefe things, hinder fome men from feeing that evidence, which really is feen by others; as a like turn of mind, with respect to matters of common speculation and practice, does, we find by experience, hinder them from attaining that knowledge and right understanding, in matters of common speculation and practice, which more fair and attentive minds attain to? And the effect will be the same, whether their neglect, or feriously considering the evidence of religion, and their indirect behaviour with regard to it, proceed from mere careleffnefs, or from groffer vices: or whether it be owing to this, that forms and figurative manners of expression, as well as errors, administer occasion of ridicule, when the things intended, and the truth itself, would not. Men may indulge a ludicrous turn fo far as to lose all fense of conduct and prudence in worldly affairs, and even,

as it feems, to impair the faculty of reafon. And in general, levity, carelessness,
passion, and prejudice, do hinder us from
being rightly informed, with respect to
common things: and they may, in like
manner, and perhaps in some farther providential manner, with respect to moral and
religious subjects: may hinder evidence
from being laid before us, and from being
seen when it is. The scripture * does declare, that every one shall not understand.

—And it makes no difference, by what
providential conduct, this come to pass:
whether the evidence of Christianity was,
originally and with design, put and left so,

^{*} Dan. xii. 10. See also Isa. xxix. 13.14. Matth. vi. 23. and xi. 25. and xiii. 11, and 12. John iii. 19. John v. 44. 1 Cor. ii. 14. and 2 Cor. iv. 4. 2 Tim. iii. 13. and that affectionate, as well authoritative admonition, so very many times inculcated. He that hath ears to hear, let him hear. Grotius saw so strongly the thing intended in these and other passages of scripture of the like sense, as to say, that the proof given us of Christianity was less than it might have been, for this very purpose; Uti ita sermo evangelii tanquam lapis esset Lydius ad quem ingenia sanabilia explorarentur. De Ver. R. C. L. 2 towards the end.

as that those who are desirous of evading moral obligation, should not see it; and that honest-minded persons should: or, whether it comes to pass by any other means.

Farther: The general proof of Natural Religion and of Christianity, does, I think, lie level to common men; even those, the greatest part of whose time, from childhood to old age, is taken up with providing, for themselves and their families, the common conveniencies, perhaps neceffaries of life: those, I mean, of this rank, who never think at all of asking after proof or attending to it. Common men, were they as much in earnest about religion, as about their temporal affairs, are capable in being convinced upon real evidences that there is a God who governs the world; and they feel themselves to be of a moral nature, and accountable creatures. And as Christianity entirely falls in with this their natural fense of things; so they are capable, not only of being perfuaded, but of being made to fee that there is evidence of miracles wrought in attestation of it, and many appearing completions of prophecy. But though

though this proof is real and conclusive, yet it is liable to objections, and may be run up into difficulties: which however, persons who are capable, not only of talking of, but of really feeing, are capable also of feeing through; i. e. not of clearing up and answering them, so as to satisfy their curiofity, for of fuch knowledge, we are not capable with respect to any one thing in nature: but capable of feeing that the proof is not lost in these difficulties, or destroyed by these objections. But then a thorough examination into religion, with regard to these objections, which cannot be the business of every man, is a matter of pretty long compass, and, from the nature of it, requires some knowledge, as well as time and attention; to fee, how the evidence comes out, upon balancing one thing with with another, and what, upon the whole, is the amount of it. Now if the persons, who have picked up these objections from others, and take for granted they are of weight, upon the word of those from whom they have received them, or, be often retailing of them, come to see or fancy they fee them to be of weight; will not

prepare themselves for such an examination, with a competent degree of knowledge; or will not give that time and attention to the subject, which, from the nature of it, is necessary for attaining such information; in this case, they must remain in doubtfulness, ignorance or error; in the same way as they must, with regard to common sciences and matters of common life, if they neglect the necessary means of being informed in them.

But still, perhaps it will he objected, that if a prince or common master were to send directions to a fervant, he would take care, that they should always bear the certain marks, whom they came from, and that their fense should be always plain; so as that there should be no possible doubt, if he could help it, concerning the authority or meaning of them. Now the proper anfwer to all this kind of objections is, that, wherever the fallacy lies, it is even certain we cannot argue thus with respect to him, who is the governor of the world: and particularly that he does not afford us fuch information with respect to our temporal affairs and interest, as experience abundantly shews. However, there is a full answer to this objection, from the very nature of religion. For the reason why a prince would give his directions in this plan manner, is, that he absolutely desires such an external action should be done, without concerning himself with the motive or principle upon which it is done; i. e. he regards only the external event, or the things being done; and not at all, properly speaking, the doing of it, or the action. Whereas the whole of morality and religion confifting merely in action itself, there is no fort of parallel between the cases. But if the prince be supposed to regard only the action: i. e. only to defire to exercise, or in any sense prove, the understanding or loyalty of a fervant; he would not always give his orders in fuch a plain manner. It may be proper to add, that the will of God, refpecting morality and religion, may be confidered, either as absolute, or as only conditional. If it be absolute, it can only be thus, that we should act virtuously in such given circumstances; not that we should be brought to act fo, by his changing of our circumstances. And if God's will be thus

absolute, then it is in our power, in the highest and strictest sense, to do or to contradict his will; which is a most weighty consideration. Or his will may be considered only as conditional, that if we act so and so, we shall be rewarded; if otherwise punished: of which conditional will of the Author of Nature, the whole constitution of it affords most certain instances.

Upon the whole: that we are in a state of probation: and the credibility of our being at all in fuch a flate being admitted, there feems no peculiar difficulty in supposing our probation to be, just as it is, in those respects, which are above objected against. There feems no pretence, from the reason of the thing, to say, that the trial cannot equitably be any thing, but whether perfons will act fuitably to certain information, or fuch as admits no room for doubt; fo as that there can be no danger of miscarriage, but either from their not attending to what they certainly know, or from overbearing passion hurrying them to act contrary to it. For, fince ignorance and doubt afford scope for probation in all fenses, as really as intuitive conviction or

certainty; and fince the two former are to be put on the same account, as difficulties in practice; men's moral probation may also be, whether they will take due care to inform themselves by impartial consideration, and afterwards whether they will act as the case requires, upon the evidence which they have, however doubtful. And this we find by experience, is frequently our probation, in our temporal capacity. For, the information which we want with regard to our worldly interests, is by no means always given us of courfe, without any care of our own. And we are greatly liable to felf-deceit, from inward fecret prejudices, and also to the deceits of others.-So that to be able to judge what is the prudent part, often requires much and difficult confiderations. Then after we have judged the very best we can, the evidence upon which we must act, if we will live and act at all, is perpetually doubtful to a very high degree. And the constitution and course of the world in fact is such, as that want of impartial confideration what we have to do, and venturing upon extrava-

gant courses, because it is doubtful what will be the consequence, are often naturally, i. e. providentially, altogether as fatal, as misconduct occasioned by heedless inattention to what we certainly know, or difregarding it from overbearing passion.

Several of the observations here made, may well feem strange, perhaps unintelligible, to many good men; but if the persons for whose sakes they are made, think fo; perfons who object as above, and throw off all regard to religion, under pretence of want of evidence; I defire them to confider again, whether their thinking fo, be owing to any thing unintelligible in these observations, or to their own not having fuch a fense of religion and ferious folicitude about it, as even their state of fcepticism does in all reason require? It ought to be forced upon the reflections of these persons, that our nature and condition necessarily require us, in the daily course of life, to act upon evidence much lower than what is commonly called probable: to guard, not only against what we fully believe will, but also against what

we think it supposeable may, happen; and to engage in pursuits, when the probability is greatly against success, if it be credible, that possibly we may succeed in them.

СНАР.

CHAP. VII.

OF THE PARTICULAR EVIDENCE FOR CHRISTIANITY.

THE prefumptions against revelation, and objections against the general scheme of Christianity, and particular things relating to it, being removed, there remains to be considered, what positive evidence we have for the truth of it: chiefly in order to see, what the analogy of nature suggests with regard to that evidence, and the objections against it: or to see what is, and is allowed to be, the plain natural rule of judgement and of action, in our temporal concerns, in cases where we have the same kind of evidence, and the same kind of objections against it, that we have in the case before us.

Now in the evidence of Christianity, there seems to be several thing of great weight

weight, not reducible to the head, either of miracles, or the completion of prophecy, in the common acceptation of the words. But these two are its direct and fundamental proofs: and those other things, however confiderable they are, yet ought never to be urged apart from its direct proofs, but always to be joined with them. -Thus the evidence of Christianity will be a long feries of things, reaching, as it feems, from the beginning of the world to the present time, of great variety and compass; taking in both the direct, and also the collateral proof; and making up, all of them together, one argument: the conviction arifing from which kind of proof, may be compared to what they call the effect in architecture or other works of art: a refult from a great number of things fo and fo disposed, and taken into one view. I shall therefore, First, make some observations relating to miracles, and the appearing completions of prophecy; and confider what analogy fuggests, in answer to the objections brought against this evidence. And Secondly, I shall endeavour to give fome account of the general argument now C c

mentioned, confifting both of the direct and collateral evidence, confidered as making up one argument: this being the kind of proof upon which we determine most questions of difficulty, concerning common facts, alledged to have happened or seeming likely to happen; especially questions relating to conduct.

First, I shall make some observations upon the direct proof of Christianity, from miracles and prophecy, and upon the objections alledged against it.

I. Now the following observations, relating to the historical evidence of miracles, wrought in attestation of Christianity, appear to be of great weight.

n. The Old Testament affords the same historical evidence of the miracles of Moses and of the prophets, as of the common civil history of Moses and of the kings of Isreal or, as of the affairs of the Jewish nation:—and the gospels and the acts afford us the same historical evidence of the miracles of Christ and the apostles, as of the common matters related in them. This indeed, could not have been affirmed by any reasonable man, if the authors of these books, like many other his-

torians, had appeared to make an entertaining manner of writing their aim; though they had interperfed miracles in their works, at proper distances, and upon proper occasions. These might have animated a dull relation, amused the reader, and engaged his attention. And the fame account would naturally have been given of them, as, of the speeches and descriptions of such authors: the fame account, in a manner, as is to be given, why the poets make use of wonders and prodigies. But the facts, both miraculous and natural, in scripture, are related in plain unadorned narratives; and both of them appear, in all respects, to stand upon the same foot of historical evidence. Farther, some parts of scripture, containing an account of miracles fully fufficient to prove the truth of Chriftianity, are quoted as genuine, from the age in which they are faid to be written, down to the present: and no other parts of them, material in the present question, are omittted to be quoted in fuch a manner as to afford any fort of proof of their not being genuine. And, as common history, when called in question, in any instance, may of-

ten be greatly confirmed, by cotemporary or fubsequent events more known and acknowledged, and as the common scripture history, like many others, is thus confirmed: fo likewife is the miraculous hiftory of it, not only in particular instances, but in general. For, the establishment of the Jewish and Christian religions, which were events cotemporary with the miracles related to be wrought in attestation of both, or subsequent to them, these events are just what we should have expected, upon supposition fuch miracles were really wrought to attest the truth of those religions. These miracles are a fatisfactory account of those events: of which, no other fatisfactory account can be given; nor any account at all, but what is imaginary merely and invented. It is to be added, that the most obvious, the most easy, and direct account of this history, how it came to be written, and to be received in the world, as a true history; is, that it really is so; nor can any other account of it be fo easy and direct. Now, though an account, not at all obvious, but very far-fetched and indirect, may indeed be, and often is, the true account of a matter; yet it cannot be admitted on the authority of its being afferted. Mere guess, supposition, and possibility, when opposed to historical evidence, prove nothing, but that historical evidence is not demonstrative.

Now the just consequence from all this, I think, is, that the scripture history in general is to be admitted as an authentic genuine history, till somewhat positive be alledged sufficient to invalidate it. But no man will deny the confequence to be, that it cannot be rejected, or thrown by as of no authority, till it can be proved to be of none; even though the evidence now mentioned for its authority, were doubtful,-This evidence may be confronted, by his torical evidence on the other fide, if there be any; or general incredibility in the things related, or inconfiftence in the general turn of the history, would prove it to be of no authority. But fince, upon the face of the matter, upon a first and general view, the appearance is, that it is an authentic history; it cannot be determined to be fictitious without some proof that it is. fo. And the following observations, in support of these and coincident with them, will greatly confirm the historical evidence for the truth of Christianity.

1. The epiftles of St. Paul, from the nature of epistolary writing, and moreover from feveral of them being written, not to particular perfons, but to churches; carry in them evidences of their being genuine, beyond what men can be in a mere historical narrative, left to the world at large.-This evidence, joined with that which they have in common with the rest of the New Testament, seems not to leave so much as any particular pretence for denying their genuineness, considered as an ordinary matter of fact, or of criticism; I say, particular pretence, for denying it; because any fingle fact, of fuch a kind and fuch antiquity, may have general doubts raifed concerning it, from the very nature of human affairs and human testimony. There is also to be mentioned, a distinct and particular evidence of the genuineness of the epistle chiefly referred to here, the first of the Corinthians; from the manner in which it is quoted by Clemens Romanus, in an epistle of his own to that church*. Now these epistles afford a proof of Christianity, detached from all others, which is, I think, a thing, of weight; and also a proof of a nature and kind peculiar to itself. For,

In them the author declares, that he received the gospel in general, and the institution of the communion in particular, not from the rest of the apostles, or jointly together with them, but alone, from Christ himself; whom he declares likewise, conformably to the history of the Acts, that he saw after his ascension. So that the testimony of St. Paul is to be considered, as detached from that of the rest of the apostles.

And he declares farther, that he was endued with a power of working miracles, as what was publicly known to those very people, speaks of frequent and great variety of miraculous gifts as then subsisting in those very churches, to which he was wri-

^{*} Clem. Rom. Ep. I. c. 47. † Gal. i. 1 Cor. xi. 23, &c. 1 Cor. xv. 8.

ting; which he was reproving for feveral irregularities: and where he had personal opposers: he mentions these gifts incidentally, in the most easy manner and without effort; by way of reproof to those who had them, for their indecent use of them; and by way of depreciating them, in comparison of moral virtes; in short, he speaks to these churches, of these miraculous powers, in the manner, any one would speak to another of a thing, which was as familiar and as much known in common to them both, as any thing in the world ‡. And this, as hath been observed by several persons, is surely a very considerable thing.

2. It is an acknowledged historical fact, that Christianity offered itself to the world, and demanded to be received, upon the allegation, i. e. as unbelievers would speak, upon the pretence, of miracles, publickly wrought to attest the truth of it, in such an age: and that it was actually received by great numbers in that very age, and

[‡] Rom. xv. 19. 1 Cor. xii. 8. 9. 10—28, &c. and ch. xiii. 1. 2. 8. and the whole xvith ch. 2. Cor. xii. 12. 13. Gal. iii. 2. 5:

upon the professed belief of the reality of these miracles. And Christianity, including the dispensation of the Old Testament, feems distinguished by this from all other religions. I mean, that this does not appear to be the case with regard to any other: for furely it will not be supposed to lie upon any person, to prove by positive historical evidence, that it was not. It does in no fort appear, that Mahometanism was first received in the world upon the foot of supposed miracles*, i. e. public ones; for, as revelation is itself miraculous, all pretence to it must necessarily imply some pretence of miracles. And it is a known fact, that it was immediately, at the very first, propagated by other means. And, as particular institutions, whether in paganism or popery, faid to be confirmed by miracles after those institutions had obtained, are not to the purpose: so, were there what might be called historical proof, that any of them were introduced by a supposed divine command, believed to be attested by miracles; these would not be in any ways parallel.

^{*} See the Koran, ch. xiii. and ch. xvii.

For fingle things of this fort, are easy to be accounted for, after parties are formed, and have power in their hands; and the leaders of them are in veneration with the multitude; and political interests are blended with religious claims, and religious diftinctions. But before any thing of this kind, for a few persons, and those of the lowest rank, all at once, to bring over such great numbers to a new religion, and get it to be received upon the particular evidence of miracles; this is quite another thing .-And I think, it will be allowed by any fair adversary, that the fact now mentioned, taking in all the circumstances of it, is peculiar to the Christian religion. However, the fact itself is allowed, that Christianity obtained, i.e. was professed to be received in the world, upon the belief of miracles, immediately in the age in which it is faid those miracles were wrought; or that this is what its first converts would have alledged, as the reason for their embracing it. Now certainly it is not to be fupposed, that such numbers of men, in the most distant parts of the world, should forfake the religion of their country, in which

which they had been educated; separate themselves from their friends, particularly in their festival shows and solemnities, to which the common people are fo greatly addicted, and which were of a nature to engage them much more, than any thing of that among us; and embrace a religion, which could not but expose them to many inconveniences, and indeed must have been a giving up the world in a great degree, even from the very first, and before the empire engaged in form against them; it cannot be supposed, that such numbers should make so great, and, to say the least, fo inconvenient a change in their whole institution of life, unless they were really convinced of the truth of those miracles, upon the knowledge or belief of which they professed to make it. And it will, I fuppose, readily be acknowleged, that the generality of the first converts to Christianity, must have believed them: that as becoming Christians, they declared to the world, they were fatisfied of the truth of those miracles; so this declaration was to be credited. And this their testimony is the same kind of evidence for those miracles.

cles, as if they had put it in writing, and these writings had come down to us. And it is real evidence, because it is of facts, which they had capacity and full opportunity to inform themselves of. It is also distinct from the direct or express historical evidence, though it is of the fame kind: and it would be allowed to be diffinct in all cases. For were a fact expressly related by one or more ancient historians, and difputed in after ages: that this fact is acknowledged to have been believed, by great numbers of the age in which the historian fays it was done, would be allowed an additional proof of fuch fact, quite distinct from the express testimony of the historian. The credulity of mankind is acknowledged; and the fuspicions of mankind ought to be acknowledged too; and their backwardness even to believe, and greater still to practife, what makes against their interest. And it must particularly be remembered, that education, and prejudice, and authority, were against Christianity in the age I am speaking of. So that the immediate conversion of such numbers, is a real prefumption of somewhat

what more than human in this matter: I fay prefumption, for it is not alledged, as a proof alone and by itself. Nor need any one of the things mentioned in this chapter, be considered as a proof by itself: and yet all of them together may be one of the strongest.

Upon the whole: as there is large historical evidence, both direct and circumstantial, of miracles wrought in attestation of Christianity, collected by those who have written upon the fubject; it lies upon unbelievers to shew, why this evidence is not to be credited. This way of speaking is, I think, just; and what perfons who write in defence of religion, naturally fall into. Yet, in a matter of fuch unspeakable importance, the proper question is, not whom it lies upon, according to the rules of argument, to maintain or confute objections: but, whether they really are any, against this evidence, fufficient, in reason, to destroy the credit of it. However, unbelievers feek to take upon them the part of shewing that there are.

[†] See the last paragraph except two of this chapter.

They alledge that numberless and enthusiaftic people, in different ages and countries, expose themselves to the same difficulties which the primitive Christians did; and are ready to give up their lives, for the most idle follies imaginable. But it is not very clear, to what purpose this objection is brought. For every one; furely, in every case, must distinguish between opinions and facts; and though testimony is no proof of enthusiastic opinions, or of any opinions at all; yet it is allowed, in all other cases, to be a proof of facts. And a person's laying down his life in attestation of facts or of opinions, is the strongest proof of his believing them. And if the apostles and their cotemporaries did believe the facts, in attestation of which they exposed themfelves to fufferings and death: this their belief, or rather knowledge, must be a proof of those facts: for they were fuch as came under the observation of their senses. And though it is not of equal weight, yet it is of weight that the martyrs of the next age, notwithstanding they were not eye-witnesses of those facts, as were the apostles and their cotemporaries, had, however, full

opportunity to inform themselves, whether they were true or not, and gave equal proof of their believing them to be true.

But enthusiasm, it is said, greatly weakens the evidence of testimony even for facts, in matters relating to religion; fome feem to think, it totally and absolutely destroys the evidence of testimony upon this subject. And indeed the powers of enthusiasm, and of diseases too which operate in a like manner, are very wonderful, in particular instances. But if great numbers of men, not appearing in any peculiar degree weak, nor under any peculiar fuspicion of negligence, affirm that they faw and heard fuch things plainly with their eyes and their ears, and are admitted to be in earnest; such testimony is evidence of the strongest kind we can have, for any matter of fact. Yet posfibly it may be overcome, ftrong as it is, by incredibility in the things thus attested, or by contrary testimony. And in an instance where one thought it was so overcome, it might be just to consider, how far fuch evidence could be accounted for, by enthusiasm: for it seems as if no other imaginable account were to be given of it.

But till fuch incredibility be shewn, or contrary testimony produced, it cannot furely be expected, that fo far-fetched, fo indirect and wonderful account of fuch testimony, as that of enthusiasm must be: an account so strange, that the generality of mankind can scarce be made to understand what is meant by it: it cannot, I fay, be expected, that fuch an account will be admitted of fuch evidence; when there is this direct, easy, and obvious account of it, that people really faw and heard a thing not incredible, which they affirm fincerely and with full affurance, they did fee and hear. Granting then that enthusiasm is not (strictly speaking) an absurd, but a possible account of such testimony: it is manifest, that the very mention of it, goes upon the previous supposition, that the things so attested are incredible; and therefore need not be confidered, till they are fhewn to be fo. Much less need it be considered, after the contrary has been proved. And I think it has been proved, to full fatisfaction, that there is no incredibility in a revelation, in general; or in fuch an one as the Christian in particular. However, as religion is supposed ; posed peculiarly liable to enthusiasm, it may justly be observed, that prejudices almost without number, and without name, romance, affectation, humour, a desire to engage attention or to surprize, the partyspirit, custom, little competitions, unaccountable likings and dislikings, these influence men strongly in common matters.—And as these prejudices are often scarce known or respected upon by the persons themselves who are influenced by them, they are to be considered as influences of a like kind to enthusiasm, yet human testimony in common matters is naturally and justly believed notwithstanding.

It is intimated farther, in a more refined way of observation, that though it should be proved, that the apostles and first Christians could not, in some respects, be deceived themselves, and, in other respects, cannot be thought to have intended to impose upon the world; yet it will not follow, that their general testimony is to be believed though truly handed down to us; because they might still in part, i. e. in other respects, be deceived themselves, and in part also designedly impose upon others; which,

it is added, is a thing very credible, from that mixture of real enthusiasm, and real knavery, to be met with in the fame characters. And, I must confess, I think the matter of fact contained in this observation upon mankind, is not to be denied; and that fomewhat very much a kin to it, is often supposed in scripture as a very common cafe, and most feverely reproved. But it were to have been expected, that perfons capable of applying this observation as applied in the objection, might also frequently have met with the like mixt character, in instances where religion was quite out of the case. The thing plainly is, that mankind are naturally endued with reason, or a capacity of distinguishing between truth and falshood; and as naturally they are endued with veracity, or a regard to truth in what they fay: but from many occasions, they are liable to be prejudiced and biaffed and deceived themselves, and capable of intending to deceive others, in every different degree: infomuch that, as we are liable to be deceived by prejudice, so likewise it feems to be not an uncommon thing, for perfons, who, from their regard to truth, would would not invent a lie entirely without any foundation at all, to propagate it with heightening circumstances, after it is once invented and set a going. And others, though they would not propagate a lie, yet, which is a lower degree of falshood, will let it pass without contradiction. But notwithstanding all this, human testimony remains still a natural ground of assent; and this assent, a natural principle of action.

It is objected farther, that however it has happened, the fact is, that mankind have, in different ages, been strangely deluded with pretences to miracles and wonders.—But it is by no means to be admitted, that they have been oftener, or are at all more liable to be deceived by these pretences, than by others.

It is added, that there is a very confiderable degree of historical evidence for miracles, which are, on all hands acknowledged to be fabulous. But suppose there were even the like historical evidence for these, to what there is for those alledged in proof of Christianity, which yet is in no wise allowed; but suppose this; the consequence would not be, that the evidence of the

latter is not to be admitted. Nor is there a man in the world who, in common cases, would conclude thus. For, what would fuch a conclusion really amount to but this, that evidence confuted by contrary evidence, or any way over-balanced, deftroys the credibility of other evidence, neither confuted nor over-balanced? To argue, that because there is, if there were, like evidence for testimony, for miracles acknowledged falfe, as for those in attestation of Christianity, therefore the evidence in the latter case, is not to be credited; this is the same as to argue, that if two men of equally good reputation, had given evidence in different cases no way connected, and one of them had been convicted of perjury, this confuted the testimony of the other.

Upon the whole then, the general obfervation that human creatures are so liable to be deceived, from enthusiasm in religion, and the principles equivalent to enthusiasm in common matters, and in both from negligence; and that they are so capable of dishonestly endeavouring to deceive others; this does indeed weaken the evidence of testimony in all cases, but does not destroy

it in any. And thefe things will appear, to different men, to weaken the evidence of testimony in different degrees: in degrees proportionable to the observations they have made, or the notions they have any way taken up, concerning the weakness, and negligence, and dishonesty of mankind; or concerning the powers of enthusiasm, and prejudices equivalent to it. But it feems to me, that people do not know what they fay, who affirm these things, to destroy the evidence from testimony, which we have of the truth of Christianity. Nothing can destroy the evidence of testimony in any case, but a proof or probability, that persons are not competent judges of the facts to which they give testimony, or that they are actually under some indirect influence in giving it, in fuch particular cafe.-Till this be made out, the natural laws of human actions require, that testimony be admitted. It can never be fufficient to overthrow direct historical evidence, indolently to fay, that there are fo many principles, from whence men are liable to be deceived themselves and disposed to deceive others, especially in matters of religion, Dd3 that

that one knows not what to believe. And it is furprizing persons can help reflecting, that this very manner of speaking, supposes they are not satisfied that there is nothing in the evidence, of which they speak thus; or that they can avoid observing, if they do make this reslection, that it is, on such a subject, a very material one *.

And over against all these objections, is to be set, the importance of Christianity, as what must have engaged the attention of its first converts, so as to have rendered them less liable to be deceived from carelessness, than they would in common matters; and likewise the strong obligations to veracity, which their religion laid them under: so that the first and most obvious presumption is, that they could not be deceived themselves, nor would deceive other.—And this presumption in this degree, is peculiar to the testimony we have been considering.

In argument, affertions, are nothing in themselves, and have an air of positiveness, which sometimes is not very easy:

^{*} See the foregoing chapter.

yet they are necessary, and necessary to be repeated; in order to connect a discourse, and distinctly to lay before the view of the reader, what is proposed to be proved, and what is left as proved. Now the conclusion from the foregoing observation is, I think, beyond all doubt, this: that unbelievers must be forced to admit the external evidence for Christianity, i. e. the proof of miracles wrought to attest it, to be of real weight, and very confiderable; though they cannot allow it to be fufficient, to convince them of the reality of those miracles. As they must, in all reason, admit this; fo it feems to me, that upon confideration they would, in fact, admit it: those of them, I mean, who know any thing at all of the matter: in like manner, as persons, in many cases, own, they see strong evidence from testimony, for the truth of things, which yet they cannot be convinced are true: cases suppose, where there is contrary testimony, or things which they think, whether with or without reafon, to be incredible. But there is no testimony contrary to that which we have been confidering: and it has been fully proved, Dd4 that

that there is no incredibility, in Christianity

in general, or in any part of it.

II. As to the evidence for Christianity from prophecy, I shall only make some few general observations, which are fuggested by the analogy of nature; i. e. by the acknowledged natural rules of judging in common matters, concerning evidence of a

like kind to this from prophecy.

1. The obscurity or unintelligibleness of one part of a prophecy, does not, in any degree, invalidate the proof of forefight, arifing from the appearing completion of those other parts which are understood.-For the case is evidently the same, as if those parts, which are not understood, were loft, or not written at all, or written in an unknown tongue. Whether this observation be commonly attended to or not, it is so evident, that one can scarce bring onesfelf to fet down an instance in common matters to exemplify it. However, fuppose a writing, partly in cypher, and partly in plain words at length; and that in the part one understood, there appeared mention of several known facts; it would never

come

that if he understood the whole, perhaps he might sind, that those facts were not in reality known by the writer. Indeed both in this example and the thing intended to be exemplified by it, our not understanding the whole, (the whole suppose of a sentence or a paragraph) might sometimes occasion a doubt, whether one understood the literal meaning of such a part: but this comes under another consideration.

For the fame reason, though a man should be incapable, for want of learning, or opportunities of inquiry, or from not having turned his studies this way, even fo much as to judge, whether particular prophecies have been throughout compleatly fulfilled; yet he may fee, in general, that they have been fulfilled to fuch a degree, as, upon very good ground, to be convinced of forefight more than human in fuch prophecies, and of fuc events being intended by them. For the same reason only, though, by means of the deficiencies in civil history, and the different accounts of historians, the most learned should not be able to make out to fatisfaction, that fuch fuch parts of the prophetic history have been minutely and throughout fulfilled; yet a very strong proof of foresight may arise, from that general completion of them, which is made out: as much proof of foresight, perhaps, as the giver of prophecy intended should ever be afforded by

fuch parts of prophecy.

2. A long feries of prophecy being applicable to fuch and fuch events, is itself a proof, that it was intended of them: as the rules, by which we naturally judge and determine, in common places parallel to this, will shew. This observation I make in answer to the common objection against the application of the prophecies, that confidering each of them diffinctly by itfelf, it does not at all appear, that they were intended of those particular events to which they were applied by Christians; and therefore it is to be supposed, that, if they meant any thing, they were intended of other events unknown to us, and not of these at all:

Now there are two kinds of writing, which bear a great resemblance to prophecy, with respect to the matter before us;

the.

the mythological, and the fatirical where the fatire is, to a certain degree, concealed. And a man might be affured, that he understood what an author intended by a fable or parable, related without any application or moral, merely from feeing it to be easily capable of such application, and that fuch a moral might naturally be deduced from it. And he might be fully affured, that fuch perfons and events were intended in a fatirical writing, merely from its being applicable to them. And, agreeably to the last observation, he might be in a good measure satisfied of it, though he were not enough informed in affairs, or in the story of fuch persons, to understand half the fatire. For his fatisfaction, that he underflood the meaning, the intended meaning, of these writings, would be greater or less, in proportion as he faw the general turn of them to be capable of fuch application: and in proportion to the number of particular things capable of it. And thus, if a long feries of prophecy is applicable to the prefent state of the church, and to the political fituations of the kingdoms of the world, some thousand years after these prophephecies were delivered and a long feries of prophecies delivered before the coming of Christ is applicable to him; these things are in themselves a proof, that the prophetic history was intended of him, and of those events; in proportion as the general turn of it is capable of fuch application, and to the number and variety of particular prophecies capable of it. And, though in all just way of confideration, the appearing completion of prophecies is to be allowed to be thus explanatory of, and to determine their meaning; yet it is to be remembred farther, that the antient Jews applied the prophecies to a Messiah before his coming, in much the fame manner as Christians now: and that the primitive Christians interpreted the prophecies respecting the state of the church and of the world in the last ages, in the fense which the event, seems to confirm and verify. And from these things, it may be made appear:

3. That the shewing even to a high probability, if that could be, that the prophets thought of some other events, in such and such predictions, and not those at all, which Christians allege to be completions of

those

those predictions; or that such and such prophecies are capable of being applied to other events than those to which Christians apply them—that this would not confute or destroy the force of the argument from prophecy, even with regard to those very instances. For, observe how this matter really is. If one knew fuch a person to be the fole author of fuch a book, and was certainly affured, or fatisfied to any degree, that one knew the whole of what he intended in it: one should be affured or fatisfied to fuch degree, that one knew the whole meaning of that book; for the meaning of a book, is nothing but the meaning of the author. But if one knew a person to have compiled a book out of memoirs, which he received from another, of vaftly fuperior knowledge in the fubject of it, especially if it were a book full of great intricacies and difficulties; it would in no wife follow, that one knew the whole meaning of the book, from knowing the whole meaning of the compiler: for the original memoirs, i. e. the author of them, might have, and there would be no degree of prefumption, in many cases, against supposing him him to have, fome farther meaning, than the compiler faw. To fay then, that the scriptures and the things contained in them can have no farther meaning, than those perfons thought or had, who first recited or wrote them; is evidently faying, that those perfons were the original, proper, and fole authors of those books, i. e. that they are not inspired: which is absurd, whilst the authority of these books is under examination, i. e. till you have determined they are of no divine authority at all. Till this be determined, it must in all reason be supposed, not indeed that they have, for this is taking for granted that they are inspired, but that they may have fome farther meaning than what the compilers faw or underflood. And upon this supposition, it is supposeable also, that this farther meaning may be fulfilled. Now events corresponding to prophecies, interpreted in a different meaning from that, in which the prophets are supposed to have understood them; this affords, in a manner, the same proof, that this different fense was originally intended, as it would have afforded, if the prophets had not understood their predic-

tions in the fense it is supposed they did: because there is no presumption of their fense of them, being the whole sense of them. And it has been already shewn, that the apparent completions of prophecy, must be allowed to be explanatory of its meaning, fo that the question is, whether a feries of prophecies has been fulfilled, in a natural or proper, i. e. in any real fense of the words of it. For fuch completion is equally a proof of forefight more than human, whether the prophets are, or are not, supposed to have understood it in a different fense. I say, supposed; for, though I think it clear, that the prophets did not understand the full meaning of their predictions; it is another question, how far they thought they did, and in what fense they understood them.

Hence may be feen, to how little purpose those persons busy them selves, who endeavour to prove, that the prophetic history is applicable to events, of the age in which it was written, or of ages before it. Indeed to have proved this before there was any appearance of a farther completion of it, might have answered some purpose; for it might have prevented the expectation of

any fuch farther completion. Thus: could Porphyry have shewn, that some principal parts of the book of Daniel, for instance, the seventh verse of the seventh chapter, which the Christians interpreted of the latter ages, was applicable to events, which happened before or about the age of Antiochus Epiphanes: this might have prevented them from expecting any farther completion of it. And, unless there was then, as I think there must have been, external evidence concerning that book, more than is come down to us, fuch a discovery might have been a flumbling-block in the way of Christianity itself; considering the authority our Saviour has given to the book of Daniel, and how much the general scheme of Christianity presupposses the truth of it.

But even this discovery, had there been any such*, would be of very little weight with

^{*} It appears, that Porphry did nothing worth mentioning in this way. For Jerom on the place fays: Duas posteriores bestias—in uno Macedonum regno ponit. And as to the ten kings. Decem reges enumerat, qui fuerunt saevissimi: ipsosque reges non unius

with reasonable men now; if this passage, thus applicable to events before the age of Porphyry, appears to be applicable also to events, which fucceeded the diffolution of the Roman Empire. I mention this, not at all as intending to infinuate, that the division of this empire into ten parts, for it plainly was divided into about that number, were, alone and by itself, of any moment in verifying the prophetic history: but only as an example of the thing I am fpeaking of. And thus upon the whole, the matter of enquiry evidently must be, as above put, whether the prophecies are applicable, to Christ, and to the present state of the world and of the church; applicable in fuch a degree, as to imply forefight: not whether they are capable of any other application; though I know no pretence for faying, the general turn of them is capable of any other.

These observations are, I think, just; and the evidence referred to in them, real;

unius ponit regni, verbi gratia Macedoniae, Syriae, Afiae, et Ægypti; sed de diversis regnis unum efficit regum ordinem. And in this way of interpretation, any thing may be made of any thing.

though there may be people who will not accept of fuch imperfect information from scripture. Some too have not integrity and regard enough to truth, to attend to evidence, which keeps the mind in doubt, perhaps perplexity, and which is much of a different fort from what they expected .-And it plainly requires a degree of modesty and fairness, beyond what every one has, for a man to fay, not to the world, but to himself, that there is a real appearance of fomewhat of great weight in this matter, though he is not able thoroughly to fatisfy himself about it; but it shall have its influence upon him, in proportion to its appearing reality and weight. It is much more eafy, and more falls in with the negligence, prefumption and wilfulness of the generality, to determine at once, with a decifive air, there is nothing in it. The prejudices arifing from that absolute contempt and fcorn, with which this evidence is treated in the world, I do not mention. For what indeed can be faid to perfons, who are weak enough in their understandings, to think this any prefumption against it; or, if they do not, are yet weak enough in their temper to be influenced, by fuch prejudices, upon fuch a fubject.

I shall now, Secondly, endeavour to give fome account of the general argument for the truth of Christianity, consisting both of the direct and circumstantial evidence, considered as making up one argument. Indeed to flate and examine this argument fully, would be a work much beyond the compass or this whole treatife; nor is fo much as a proper abridgement of it to be expected here. Yet the present subject requires to have some brief account of it given. For it is the kind of evidence, upon which most questions of difficulty, in common practice, are determined, evidence arising from various coincidences, which support and confirm each other, and in this manner prove, with more or less certainty, the point under consideration. And I chuse to do it also: first, because it seems to be of the greatest importance, and not duly attended to by every one, that the proof of revelation is, not fome direct and express things only, but a great variety of circumstantial things also; and that though each of these direct and circumstantial things is indeed

to be confidered feparately, yet they are afterwards to be joined together; for that the proper force of the evidence confifts in the refult of those several things, considered in their respects to each other, and united into one view: and in the next place, because it feems to me, that the matters of fact here fet down, which are acknowledged by unbelievers, must be acknowledged by them also to contain together a degrée of evidence of great weight, if they could be brought to lay these several things before themselves distinctly, and then with attention consider them together; instead of that cursory thought of them, to which we are familiarized. For being familiarized to the curfory thought of things, as really hinders the weight of them from being feen, as from having its due influence upon practice.

The thing afferted, and the truth of which is to be inquired into, is this: that over and above our reason and affections, which God has given us for the information of our judgement and the conduct of our lives, he has also, by external revelation, given us an account of himself, and

his

his moral government over the world, implying a future state of rewards and punishments; i. e. hath revealed the system of natural religion; for natural religion may be externally revealed by God, as the ignorant may be taught it by mankind, their fellow-creatures—that God, I fay, has given us the evidence of revelation, as well as the evidence of reason, to ascertain this moral fystem; together with an account of a particular dispensation of Providence, which reason could no way have discovered, and a particular institution of religion, founded on it, for the recovery of mankind out of their present wretched condition, and raising them to the perfection and final happiness of their nature.

This revelation, whether real or supposed, may be considered as wholly historical. For prophecy is nothing but the history of events before they come to pass: doctrines also are matters of fact; and precepts come under the same notion. And the general design of scripture, which contains in it this revelation, thus considered as historical, may be said to be, to give us an account of the world, in this one single

E e 3

view, as God's world: by which it appears effentially diffinguished from all other books, fo far as I have found, except fuch as are copied from it. It begins with an account of God's creation of the world, in order to ascertain, and distinguish from all others, who is the object of our worship, by what he has done: in order to afcertain, who he is, concerning whose providence, commands, promifes, and threatenings, this facred book, all along, treats; the Maker and Proprietor of the world, he whose creatures we are, the God of nature: in order likewise to distinguish him from the idols of the nations, which are either imaginary beings, i. e. no beings at all; or elfe part of that creation, the historical relation of which is here given.

And St. John, not improbably, with an eye to this Mosaic account of the creation, begins his gospel with an account of our Saviour's pre-existence, and that "All "things were made by him; and without him was not any thing made that was "made*:" agreeably to the doctrine of St. Paul, that "God created all things by "Iesus

^{*} John i.3.

" Jesus Christ+." This being premised, the Scripture taken together, feems to profess to contain a kind of an abridgement of the history of the world, in the view just now mentioned; that is, a general account of the condition of religion and its profeffors, during the continuance of that apostacy from God, and state of wickedness, which it every where supposes the world to lie in. And this account of the state of religion, carries with it some brief account of the political state of things, as religion is affected by it. Revelation indeed confiders the common affairs of this world, and what is going on in it, as a mere scene of distraction; and cannot be supposed to concern itself with foretelling, at what time, Rome, or Babylon, or Greece, or any particular place, should be the most conspicuous feat of that tyranny and diffoluteness, which all places equally aspire to be; cannot, I fay, be supposed to give any account of this wild scene for its own fake. But it feems to contain fome very general account of the chief governments of the world, as

> † Eph. iii 9. E e 4

the general state of religion, has been, is, or shall be, affected by them, from the first transgresson, and during the whole interval of the world's continuing in its present state, to a certain future period, spoken of both in the Old and New Testament, very distinctly, and in great variety of expressions: " The times of the restitution of all "things *: When the mystery of God " shall be finished, as he hath declared to his " fervants the prophets +:" When " the "God of Heaven shall set up a kingdom, " which shall never be destroyed: and the "kingdom shall not be left to other peo-" ple t," as it is represented to be during this apostacy, " that judgement shall be " given to the faints §, and they shall reign |: " And the kingdom and dominion, and " the greatness of the kingdom under the " whole Heaven, shall be given to the peo-" ple of the faints of the most High **.

Upon this general view of the scripture, I would remark, how great a length of time

the whole relation takes up, near fix thoufand years of which are past; and how great a variety of things it treats of; the natural and moral system or history of the world, including the time when it was formed, all contained in the very first book, and evidently written in a rude and unlearned age; and in fubsequent books, the various common and prophetic history, and the particular dispensation of Christianity. Now all this together gives the largest scope for criticism; and for confutation of what is capable of being confuted, either from reason or from common history, or from any inconfistence in its feveral parts. And it is a thing which deferves, I think, to be mentioned, that whereas fome imagine, the supposed doubtfulness: of the evidence for revelation implies a pofitive argument that it is not true; it appears, on the contrary, to imply a positive argument that it is true. For, could any common relation, of fuch antiquity, extent, and variety, (for in these things the stress of what I am now observing lies) be proposed to the examination of the world; that it could not, in an age of knowledge and

and liberty, be confuted, or shewn to have nothing in it, to the satisfaction of reasonable men; this would be thought a strong presumptive proof of its truth. And indeed it must be a proof of it, just in proportion to the probability, that if it were sale, it might be shewn to be so: and this, I think, is scarce pretended to be shewn, but upon principles and in ways of arguing, which have been clearly obviated †. Nor does it at all appear, that any set of men, who believe natural religion, are of the opinion, that Christianity has been thus consuted. But to proceed:

Together with the moral fystem of the world, the Old Testament contains a chronological account of the beginning of it, and from thence, an unbroken genealogy of mankind for many ages before common history begins; and carried on as much farther, as to make up a continued thread of history of the length of between three and four thousand years. It contains an account of God's making a covenant with a particular nation, that they should be his people, and he would be their God, in a

peculiar fense; of his often interposing miraculously in their affairs; giving them the promife, and long after, the possession of a particular country; affuring them, of the greatest national prosperity in it, if they would worship him, in opposition to the idols which the rest of the world worshipped, and obey his commands; and threatening them with unexampled punishments, if they disobeyed him, and fell into the general idolatry: infomuch, that this one nation should continue to be the observation and wonder of all the world. It declares particularly, that "God " would fcatter them among all people from "one end of the earth unto the other:" " but that " when they should return unto " the Lord their God, he would have com-" passion upon them, and gather them from " all the nations, whether he had scattered " them:" that " Ifrael should be faved in " the Lord, with an everlasting falvation; " and not be ashamed or confounded world without end." And, as fome of thefe promises are conditional, others are as absolute, as any thing can be expressed: that the time should come, when "the people should 66 be all righteous, and inherit the land for

"ever:" that, "though God would make
"a full end of all nations whither he had
"feattered them, yet would he not make
"a full end of them:" that "he would
bring again the captivity of his people
"Ifrael, and plant them upon their land,
and they should be no more pulled up out
"of their land:" that "the feed of Ifrael
"should not cease from being a nation for
"ever *."

It foretels, that God would raise them up a particular person, in whom all his promises should finally be fulfiled; the Messiah who should be, in an high and eminent sense, their anointed prince and Saviour.—
This was foretold in such a manner, as raised a general expectation of such a person in the nation, as appears from the New Testament, and is an acknowledged sact; an expectation of his coming at such a particular time, before any one appeared claiming to be that person, and when there was no ground for such an expectation but from

^{*} Deut. xxviii. 64. Ch. xxx. 2, 4. Ifa. xlv 17. Ch. lx. 21. Jer. xxx, 11. Ch. xlvi. 28. Amos ix. 15. Jer. xxxi. 36.

the prophecies: which expectation, therefore, must in all reason be presumed to be explanatory of those prophecies, if there were any doubt about their meaning. It feems moreover to foretel, that this person should be rejected by that nation, to whom he had been fo long promifed, and though he was much defired by them*, And it expresly foretels, that he should be the Saviour of the Gentiles; and even that the completion of the scheme, contained in this book, and then begun, and in its progrefs should be somewhat so great, that, in comparison with it, the restoration of the Jews alone would be but of fmall account. "It is a light thing that thou " fhouldest be my fervant to raise up the " tribes of Jacob, and to restore the pre-" ferved of Ifrael; I will also give thee for " a light to the Gentiles, that thou mayest " be for falvation unto the end of the " earth. And in the last days, the mountain " of the Lord's house shall be established in " the top of the mountains, and shall be

[†] Isa. viii. 14. 15. Ch. xlix. 5. Ch. liii. Mal. i. 10, 11. and Ch. iii.

66 exalted above the hills: and all nations " shall flee into it—for out of Zion " shall go forth the law, and the word of " the Lord from Jerusalem. And he shall "judge among the nations and the "Lord alone shall be exalted in that day, " and the idols he shall utterly abolish+." The Scripture farther contains an account, that at the time the Messiah was expected, a person rose up in this nation, claiming to be that Meffiah, to be the person, whom all the prophecies referred to, and in whom they should centre: that he spent some years in a continued course of miraculous works; and endued his immediate disciples and followers, with a power of doing the fame, as a proof of the truth of that religion, which he commissioned them to publish: that, invested with this authority and power, they made numerous converts in the remotest countries, and settled and estab-

[†] Ifa. xlix. 6. Ch. 2. Ch. xi. Ch. lvi. 7. Mal, i. 11. To which must be added, the other prophecies of the like kind, several in the New Testament, and very many in the Old, which describe what shall be the completion of the revealed plan of Providence.

lished his religion in the world; to the end of which the scripture professes to give a prophetic account of the state of this religion amongst mankind.

Let us now suppose a person utterly ignorant of history, to have all this related to him, out of the Scripture. Or suppose such an one, having the Scripture put into his hands, to remark these things in it, not knowing but that the whole, even its civil history, as well as the other parts of it, might be, from beginning to end, an entire invention: and to ask, what truth was in it, and whether the revelation here related, was real or a siction? And instead of a direct answer, suppose him all at once, to be told the following confest sacts; and then to unite them into one view.

Let him first be told, in how great a degree the profession and establishment of natural religion, the belief that there is one God to be worshipped, that virtue is his law, and that mankind shall be rewarded and punished hereafter, as they obey and disobey it here; in how very great a degree, I say, the profession and establishment of this moral system in the world, is owing

to the revelation, whether real or supposed, contained in this book: the establishment of this moral fystem even in those countries which do not acknowledge the proper authority of the scripture. Let him be told alfo, what number of nations do acknowledge its proper authority. Let him then take in the confideration, of what importance religion is to mankind. And upon thefe things, he might, I think truly observe, that this supposed revelation's obtaining and being received in the world, with all the circumstances and effects of it, considered together as one event, is the most conspicuous and important event in the history of mankind: that a book of this nature, thus promulged and recommended to our confideration, demands, as if by a voice from Heaven, to have its claims most feriously examined into: and that, before fuch examination, to treat it with any kind of scoffing and ridicule, is an offence against natural piety. But it is to be remembered, that how much foever the establishment of natural religion in the world, is owing to the fcripture revelation, this does not destroy the proof of religion from reason; any 3 more

more than the proof of Euclid's Elements is destroyed, by a man's knowing or thinking, that he should never have seen the truth of the several propositions contained in it, nor had those propositions come into his thoughts, but for that mathematician.

Let fuch a person as we are speaking of, be, in the next place, informed, of the acknowledged antiquity of the first parts of this book: and that its chronology, its account of the time when the earth, and the feveral parts of it, were first peopled with human creatures, is no way contradicted, but is really confirmed, by the natural and civil hiftory of the world, collected from common historians, from the state of the earth, and from the late invention of arts and sciences. And as the scripture contains an unbroken thread of common and civil history, from the creation to the captivity, for between three and four thousand years; let the person we are speaking of be told in the next place, that this general history, as it is not contradicted, but is confirmed by prophane hiftory as much as there would be reason to expect, upon supposition of its truth; fo Ff there

there is nothing in the historyitself, to give any reasonable ground of suspicion, of its not being, in the general, a faithful and literally true genealogy of men, and feries of things. I speak here only of the common scripture history, or of the course of ordinary events related in it; as distinguished from miracles, and from the prophetic history. In all the scripture narrations of this kind, following events arise out of foregoing ones, as in all other hiftories. There appears nothing related as done in any age, not conformable to the manners of that age: nothing in the account of a fucceeding age, which, one would fay, could not be true, or was improbable, from the account of things in the preceding one. There is nothing in the characters, which would raise a thought of their being feigned; but all the internal marks imaginable of their being real. It is to be added also, that mere genealogies, bare narratives of the number of years, which persons called by such and fuch names lived, do not carry the face of fiction; perhaps do carry fome prefumption of veracity: and all unadorned narratives, which

which have nothing to furprize, may be thought to carry fomewhat of the like prefumption too. And the domestic and the political history is plainly credible. There may be incidents in scripture, which taken alone in the naked way they are told, may appear strange; especially to persons of other manners, temper, education: but there are also incidents of undoubted truth. in many or most persons lives, which, in the same circumstances, would appear to be full as strange. There may be mistakes of transcribers, there may be other real or feeming mistakes, not easy to be particularly accounted for: but there are certainly no more things of this kind in the fcripture, than what were to have been expected in books of fuch antiquity; and nothing, in any wife, fufficient to difcredit the general narrative. Now, that a history, claiming to commence from the creation, and extending in one continued feries, through fo great a length of time, and variety of events, should have such appearances of reality and truth in its whole contexture, is furely a very remarkable circumstance in its favour. And as all this is Ff2

applicable to the common history of the New Testament; so there is a farther credibility, and a very high one, given to it, by prophane authors: many of these writing of the same times, and confirming the truth of customs and events, which are incidentally as well as more purposely mentioned in it. And this credibility of the common scripture history, gives some credibility to its miraculous history: especially as this is interwoven with the common, so as that they imply each other, and both together make up one relation.

Let it then be more particularly observed, to this person, that it is an acknowledged matter of fact, which is indeed implied in the foregoing observations, that there was such a nation as the Jews, of the greatest antiquity, whose government and general policy was founded on the law, here related to be given them by Moses as from Heaven: that natural religion, though with rites additional yet no way contrary to it, was their established religion, which cannot be said of the Gentile world: and that their very being as a nation, depended upon their acknowledgement of one God, the

God

God of the universe. For, suppose in their captivity in Babylon, they had gone over to the religion of their conquerors, there would have remained no bond of union, to keep them a distinct people. And whilst they were under their own kings, in their own country, a total apostacy from God would have been the dissolution of their whole government. They, in such a sense, nationally acknowledged and worshipped the Maker of Heaven and earth, when the rest of the world were sunk in idolatry, as rendered them, in sact, the peculiar people of God.

And this fo remarkable establishment and preservation of natural religion amongst them, seems to add some peculiar credibility to the historical evidence from the miracles of Moses and the prophets: because these miracles are a full satisfactory account of this event, which plainly wants to be accounted for, and cannot otherwise.

Let this person, supposed wholly ignorant of history, be acquainted farther, that one claiming to be the Messiah, of Jewish extraction, rose up at the time when this nation, from the prophecies above-mention-

ed, expected the Messiah: that he was rejected, as it feemed to have been foretold he should, by the body of the people, under the direction of their rulers: that in the course of a very few years; he was believed on and acknowledged as the promised Mesfiah, by great numbers among the Gentiles, agreeably to the prophecies of Scripture, yet not upon the evidence of prophecy, but of miracles, of which miracles we also have strong historical evidence; (by which I mean here no more than must be acknowledged by unbelievers, for let pious frauds, and follies be admitted to weaken, it is abfurd to fay they destroy, our evidence of miracles wrought in proof of Christianity:) that this religion approving itself to the reason of mankind, and carrying its own evidence with it, fo far as reason is a judge of its fystem, and being no way contrary, to reafon, in those parts of it which require to be believed upon the mere authority of its author; that this religion, I fay, gradually spread and supported itself, for some hundred years, not only without any affiftance from temporal power, but under constant dif-

discouragements, and often the bitterest perfecutions from it: and then became the religion of the world: that in the mean time, the Tewish nation and government were destroyed, in a very remarkable manner, and the people carried away captive and dispersed through the most distant countries; in which state of dispersion, they have remained fifteen hundred years: and that they remain a numerous people, united amongst themselves, and distinguished from the rest of the world, as they were in the days of Moses, by the profession of his law; and every where looked upon in a manner, which one scarce knows how diftinctly to express, but in the words of the prophetic account of it, given fo many ages before it came to pass; "Thou shalt be-" come an aftonishment, a proverb, and a " by-word, among all nations whither the " Lord shall lead thee "."

The appearance of a standing miracle, in the Jews remaining a distinct people in their dispersion, and the conformation which this event appears to give to the truth of

* Deut, xxviii. 37

the revelation; may be thought to be anfwered, by their religion's forbidding them intermarriages with those of any other, and prefcribing them a great many peculiarities in their food, by which they are debarred from the means of incorporating with the people, in whose countries they live. This is not, I think, a fatisfactory account of that which it pretends to account for. But what does it pretend to account for? The correspondence between this event and the prophecies; or the coincidence of both, with a long dispensation of Providence of a peculiar nature, towards that people formerly? No. It is only the event itself, which is offered to be thus accounted for: which fingle event taken alone, abstracted from all such correspondence and coincidence perhaps would not have appeared miraculous: but that correspondence and coincidence may be fo, though the event itself be supposed not. Thus the concurrence of our Saviour's being born at Bethlehem, with a long foregoing feries of prophecy and other coincidences, is doubtless miraculous, the feries of prophecy and other coincidences, and the event, being admitted: though the event itself, his birth

at that place, appears to have been brought about in a natural way; of which, however, no one can be certain.

And as feveral of these events feem, in fome degree expressly, to have verified the prophetic history already; fo likewise they may be confidered farther, as having a peculiar aspect towards the full completion of it; as affording some presumption that the whole of it shall, one time or other, be fulfilled. Thus, that the Jews have been fo wonderfully preferved in their long and wide dispersion; which is indeed the direct fulfilling of some prophecies, but is nowmentioned only as looking forward to fomewhat yet to come; that natural religion came forth from Judea, and spread, in the degree it has done, over the world, before lost in idolatry; which, together with some other things, have distinguished that very place, in like manner, as the people of it are distinguished: that this great change of religion over the earth, was brought about under the profession and acknowledgement, that Jesus was the promised Mesfiah; things of this kind naturally turn the thoughts of ferious men, towards the full completion of the prophetic history, concerning

cerning the final reftoration of that people; concerning the establishment of the everlasting kingdom among them, the kingdom of the Messiah; and the future state of the world, under this facred government. Such circumstances and events, compared with these prophecies, though no completions of them, yet would not, I think, be spoken of as nothing in the argument, by a person upon his first being informed of them.—They fall in with the prophetic history of things still suture, give it some additional credibility, have the appearance of being somewhat in order to the full completion of it.

Indeed it requires a good degree of know-ledge, and great calmness and consideration, to be able to judge thoroughly, of the evidence for the truth of Christianity, from that part of the prophetic history, which relates to the situation of the kingdoms of the world, and to the state of the church, from the establishment of Christianity to the present time. But it appears from a general view of it, to be very material. And those persons who have thoroughly examined it, and some of them

were

were men of the coldest tempers, greatest capacities, and least liable to imputations of prejudice, insist upon it as determinately conclusive.

Suppose now a person quite ignorant of history, first to recollect the passages abovementioned out of scripture, without knowing but that the whole was a late fiction, then to be informed of the correspondent facts now mentioned, and to unite them all into one view: that the profession and establishment of natural religion in the world, is greatly owing, in different ways, to this book, and the supposed revelation which it contains; that it is acknowledged to be of the earliest antiquity; that its chronology and common hiftory are entirely credible; that this ancient nation, the Jews, of whom it chiefly treats, appear to have been, in fact, the people of God, in a diftinguished sense; that, as there was a national expectation amongst them, raised from the prophecies, of a Messiah to appear at fuch a time, fo one at this time appeared claiming to be that Messiah; that he was rejected by this nation; but received by the Gentiles, not upon the evidence of prophecy,

phecy, but of miracles; that the religion he taught supported itself under the greatest difficulties, gained ground, and at length became the religion of the world; that in the mean time the Jewish polity was utterly destroyed, and the nation dispersed over the face of the earth; that notwithstanding this, they have remained a distinct numerous people for fo many centuries, even to this day; which not only appears to be the express completion of several prophecies concerning them, but also renders it, as one may speak, a visible and easy possibility, that the promises made to them as a nation, may yet be fulfilled. And to these acknowledged truths, let the person we have been supposing, add, as I think he ought, whether every one will allow it or no, the obvious appearances which there are, of the state of the world, in other respects besides what relates to the Jews, and of the Christian church, having so long answered, and still answering to the prophetic history. Suppose, I say, these facts fet over against the things before-mentioned out of the scripture, and seriously compared with them; the joint view of both

both together, must, I think, appear of very great weight to a considerate reasonable person; of much greater indeed, upon having them first laid before him, than is easy for us, who are so familiarized to them, to conceive, without some particular attention for that purpose.

All these things, and the several particulars contained under them, require to be distinctly and most thoroughly examined into; that the weight of each may be judged of, upon such examination, and such conclusion drawn as results from their united force. But this has not been attempted here. I have gone no farther than to show, that the general impersect view of them now given, the confest historical evidence for miracles, and the many obvious appearing completions of prophecy, together with the collateral things*here mentioned, and there are several others of the like sort; that all this together, which, being fact,

^{*} All the particular things mentioned in this chapter, not reducible to the head, of certain miracles, or determinate completions of prophecy.

must be acknowledged by unbelievers, amounts to real evidence of fomewhat more than human in this matter; evidence much more important than careless men, who have been accustomed only to transient and partial views of it, can imagine; and indeed abundantly fufficient to act upon. And these things, I apprehend, must be acknowledged by unbelievers. For though they may fay, that the historical evidence of miracles wrought in attestation of Christianity, is not fufficient to convince them that fuch miracles were really wrought; they cannot deny, that there is fuch historical evidence, it being a known matter of fact, that there is. They may fay, the conformity between the prophecies and events, is by accident: but there are many instances, in which such conformity itself cannot be denied. They may fay, with regard to fuch kind of collateral things as those above-mentioned, that any odd accidental events, without meaning, will have a meaning found in them by fanciful people; and that fuch as are fanciful in any one certain way, will make out a thousand coincidences, which seem to fayour their peculiar follies. Men, I fay, may talk thus: but no one who is ferious, can poffibly

possibly think these things to be nothing, if he considers the importance of collateral things and even of lesser circumstances in the evidence of probability, as distinguished, in nature, from the evidence of demonstration. In many cases indeed, it seems to require the truest judgement, to determine with exactness the weight of circumstantial evidence: but it is very often altogether as convincing, as that, which is the most express and direct.

This general view of the evidence for Christianity, considered as making one argument, may also serve to recommend to serious perfons, to fet down every thing, which they think may be of any real weight at all in proof of it, and particularly the many feeming completions of prophecy: and they will find, that judging by the natural rules, by which we judge of probable evidence in common matters, they amount to much a higher degree of proof, upon fuch a joint review, than could be supposed upon considering them separately at different times; how strong foever the truth might before appear to them, upon fuch separate views of it. For probable proofs, by being added,

والتعدادية

not only increase the evidence, but multiply Nor should I dissuade any one from setting down, what he thought made for the contrary side. But then it is to be remembered, not in order to influence his judgement, but his practice, that a mistake on one fide, may be, in its consequences, much more dangerous, than a mistake on the other. And what course is most safe, and what most dangerous, is a consideration thought very material, when we deliberate, not concerning events, but concerning conduct in our temporal affairs. To be influenced by this consideration in our judgement, to believe or disbelieve upon it, is indeed as much prejudics, as any thing whatever.-And, like other prejudices, it operates contrary ways, in different men. For some are inclined to believe, what they hope; and others, what they fear. And it is manifest, unreasonableness, to apply to men's passions in order to gain their affent. But in deliberations concerning conduct, there is nothing which reason more requires to be taken into the account, than the importance of it. For, suppose it doubtful, what would be the consequence of acting in this, or in a

trary manner: still, that taking one side could be attended with little or no bad consequence, and taking the other might be attended with the greatest, must appear, to unprejudiced reason, of the highest moment towards determining, how we are to act. - But the truth of our religion, like the truth of common matters, is to be judged of by all the evidence taken together. And unless the whole series of things which may be alledged in this argument, and every particular thing in it, can reasonably be suppose to have been by accident; (for here the stress of the argument for Christianity lies;) then is the truth of it proved: in like manner, as if in any common case, numerous events acknowledged, were to be alledged in proof of any other event disputed; the truth of the disputed event would be proved, not only if any one of the acknowleged ones did of itself clearly imply it, but though no one of them fingly did fo, if the whole of the acknowledged events taken together, could not in reason be supposed to have happend, unless the disputed one were true.

G g

Tr.

It is obvious, how much advantage, the nature of this evidence gives to those perfons, who attack Christianity, especially in conversation. For it is easy to shew, in a short and lively manner, that this and another thing, is of little weight in itself; but impossible to shew, in like manner, the united force of the whole argument in one view.

However, lastly, as it has been made appear, that there is no presumption against a revelation as miraculous; that the general scheme of Christianity, and the principal parts of it, are conformable to the experienced constitution of things, and the whole perfectly credible: so the account now given of the positive evidence for it, shews, that this evidence is such, as, from the nature of it, cannot be destroyed: though it should be lessened.

CHAP. VIII.

OF THE OBJECTIONS WHICH MAY BE MADE AGAINST ARGUING FROM THE ANALOGY OF NATURE TO RELIGION.

IF every one would confider with fuch attention as they are bound, even in point of morality, to confider, what they judge and give characters of; the occasion of this chapter would be, in some good measure at least, superseded. But since this is not to be expected; for some we find do not concern themselves to understand even what they write against: since this treatise, in common with most others, lies open to objections, which may appear very material to thoughtful men at first sight; and, besides that, seems peculiarly liable to the objections of fuch as can judge without thinking, and of fuch as can cenfure without judging; it may not be amiss to set down

G g 2

the

the chief of these objections which occur to me, and consider them to their hands. And they are such as these:

" That it is a poor thing to folve diffi-" culties in revelation, by faying, that "there are the fame in natural religion: when what is wanting is to clear both of them, of these their common, as well as other their respective difficulties: but that it is a strange way indeed of convincing men of the obligation of religion, to shew them, that they have as little reason for their worldly pursuits: and a strange way of vindicating the justice and goodness of the Author of nature, and of removing the objections against both, to which the system of religion lies open, to fhew, that the like objections lie against natural providence; a way of answering objections against religion, without fo much as pretending to make out, that the fystem of it, or the particular things in it objected against, " are reasonable—especially, perhaps " fome may be inattentive enough to add, " must this be thought strange, when it " is confessed that analogy is no answer to " fuch "fuch objections: that when this fort of reasoning is carried to the utmost length

"it can be imagined capable of, it will yet

" leave the mind in a very unfatisfied state:

" and that it must be unaccountable igno-

" rance of mankind, to imagine they will

" be prevailed with to forego their present

" interests and pleasures, from regard to

" religion, upon doubtful evidence."

Now, as plaufible as this way of talking may appear, that appearance will be found in a great meafure owing to half views, which shew but part of an object, yet shew that indiffinctly; and to undeterminate language. By these means, weak men are often deceived by others, and ludicrous men by themselves. And even those, who are ferious and confiderate, cannot always readily difintangle, and at once clearly fee through the perplexities, in which fubjects themselves are involved; and which are heightened by the deficiencies and the abuse of words. To this latter fort of persons, the following reply to each part of this objection feverally, may be of some affiftance: as it may also tend a little to stop and filence others.

G g 3 First,

First, The thing wanted, i. e. what men require, is to have all difficulties cleared .-And this is, or at least, for any thing we know to the contrary, it may be, the fame, as requiring to comprehend the Divine nature, and the whole plan of Providence from everlasting to everlasting. But it hath always been allowed to argue, from what is acknowledged, to what is difputed. And it is in no other fense a poor thing, to argue from natural religion to revealed, in the manner found fault with, than it is to argue in numberless other ways of probable deduction and inference, in matters of conduct, which we are continually reduced to the necessity of doing. Indeed the epithet POOR, may be applied, I fear as properly, to great part or the whole of human life, as it is to the things mentioned in the objection. Is it not a poor thing for a physician to have fo little knowledge in the cure of difeafes, as even the most eminent have? to act upon conjecture and guess, where the life of man is concerned? undoubtedly it is: but not in comparison of having no skill at all

in that useful art, and being obliged to act wholly in the dark.

Further: Since it is as unreasonable, as it is common, to urge objections against revelation, which are of equal weight against natural religion; and those who do this, if they are not confuted themselves, deal unfairly with others, in making it feem, that they are arguing only against revelation, or particular doctrines of it, when in reality they are arguing against moral providence; it is a thing of confequence to show, that such objections are as much levelled against natural religion, as against revealed. And objections, which are equally applicable to both, are properly fpeaking, answered, by its being shewn that they are fo, provided the former be admitted to be true. And without taking in the confideration how diffinctly this is admitted, it is plainly very material to observe, that as the things objected against in natural religion, are of the same kind with what is certain matter of experience in the course of providence, and in the information which God affords us concerning our temporal interest under his government; so

the objections against the system of Christianity and the evidence of it, are of the very same kind with those which are made against the system and evidence of natural religion. However, the reader upon review may see, that most of the analogies insisted upon, even in the latter part of this treatise, do not necessarily require to have more taken for granted than is in the former; that there is an Author of nature, or natural Governor of the world: and Christianity is vindicated, not from its analogy to natural religion, but chiefly, from its analogy to the experienced constitution of nature.

Secondly, Religion is a practical thing, and confifts in such a determinate course of life; as being, what there is reason to think it is commanded by the Author of nature, and will, upon the whole, be our happiness under his government. Now if men can be convinced, that they have the like reason to believe this, as to believe, that taking care of their temporal affairs will be to their advantage; such conviction cannot but be an argument to them for the practice of religion, And if there be really any reason for believing one of these, and

endeavouring to preferve life, and fecure ourselves the necessaries and conveniencies of it: then there is reason also for believing the other, and endeavouring to fecure the interest it proposes to us. And if the interest, which religion proposes to us, be infinitely greater than our whole temporal interest; then there must be proportionably greater reason, for endeayouring to secure one, than the other: fince, by the supposition, the probability of our fecuring one, is equal to the probability of our fecuring the other. This feems plainly unanswerable; and has a tendency to influence fair minds, who confider what our condition really is, or upon what evidence we are naturally appointed to act; and who are difposed to acquiesce in the terms upon which we live, and attend to and follow that practical instruction, whatever it be, which is afforded us.

But the chief and proper force of the argument referred to in the objection, lies in another place. For, it is faid, that the proof of religion is involved in such inextricable difficulties, as to render it doubtful; and that it cannot be supposed, that if it

were true, it would be left upon doubtful evidence. Here then, over and above the force of each particular difficulty or objection, these difficulties and objections taken together, are turned into a positive argument against the truth of religion: which argument would ftand thus:-If religion were true, it would not be left doubtful, and open to objections to the degree in which it is: therefore that it is thus left, not only renders the evidence of it weak, and lessens its force, in proportion to the weight of fuch objections; but also shews it to be false, or is a general prefumption of its being fo. Now the observation, that from the natural constitution and course of things, we must in our temporal concerns, almost continually, and in matters of great consequence, act upon evidence of a like kind and degree to the evidence of religion: is an answer to this argument': because it shews, that it is according to the conduct and character of the Author of nature, to appoint that we should act upon evidence like to that, which this argument prefumes he cannot be fupposed to appoint that we should act upon.

It is an instance, a general one made up of numerous particular ones, of somewhat in his dealing with us, similar to what is said to be incredible. And as the force of this answer lies merely in the parallel, which there is between the evidence for religion and for our temporal conduct; the answer is equally just and conclusive, whether the parallel be made out, by shewing the evidence of the former to be higher, or the evidence of the latter to be lower.

Thirdly, The defign of this treatife is not to vindicate the character of God, but to shew the obligations of men: it is not to justify his providence, but to shew what belongs to us to do. These are two subjects, and ought not to be confounded. And though they may at length run up into each other, yet observations may immediately tend to make out the latter, which do not appear, by any immediate connexion, to the purpose of the former; which is less our concern than many seem to think.

For, 1st, It is not necessary we should justify the dispensations of Providence against objections, any farther than to shew, that the things objected against may, for aught

3

we know, be confiftent with justice and goodness. Suppose then, that there are things in the fystem of this world, and plan of Providence relating to it, which taken alone would be unjust: yet it has been shewn unanswerably, that if we could take in the reference, which these things may have, to other things present, past, and to come; to the whole scheme, which the things objected against are parts of; these very things might, for aught we know, be found to be not only confistent with justice, but instances of it. Indeed it has been shewn, by the analogy of what we fee, not only possible that this may be the case, but credible that it is. And thus objections, drawn from fuch things, are answered, and Providence is vindicated, as far as religion makes its vindication necessary. Hence it -appears, 2dly, That objections against the divine justice and goodness, are not endeavoured to be removed, by flewing that the like objections, allowed to be really conclusive, lie against natural Providence; but those objections being supposed and shewn not to be conclusive, the things objected against, considered as matters of fact, are

farther shewn to be credible, from their conformity to the constitution of nature; for instance, that God will reward and punish men for their actions hereafter, from the observation, that he does reward and punish them for their actions here. And this, I apprehend, is of weight.

And I add, 3dly, It would be of weight, even though those objections were not answered. For, there being the proof of religion above fet down; and religion implying feveral facts, for instance again, the fact last mentioned, that God will reward and punish men for their actions hereafter; the observation that his present method of government is by rewards and punishments, shews that future fact not to be incredible; whatever objections men may think they have against it, as unjust or unmerciful, according to their notions of justice and mercy; or as improbable from their belief of necessity. I fay, as improbable, for it is evident no objection against it, as unjust can be urged from necessity; fince this notion as much destroys injustice, as it does justice.

Then

Then 4thly, Though objections against the reasonableness of the system of religion, cannot indeed be answered without entering into confideration of its reasonableness; yet objections against the credibility or truth of it, may. Because the system of it is reducible into what is properly matter of fact. And the truth, the probable truth, of facts, may be shewn without confideration of their reasonableness. Nor is it necessary, though, in some cases and refpects, it is highly useful and proper, yet it is not necessary, to give a proof of the reasonableness of every precept injoined us, and of every particular difpensation of Providence, which comes into the fystem of religion. Indeed the more thoroughly a person of a right disposition is convinced of the perfection of the divine nature and conduct, the farther he will advance towards that perfection of religion, which St. John* fpeaks of. But the general obligations of religion are fully made out, by proving the

reasonableness of the practice of it. And that the practice of religion is reasonable, may be shewn, though no more could be proved, than that the fystem of it may be fo, for aught we know to the contrary: and even without entering into the distinct confideration of this. And from hence, 5thly, It is eafy to fee, that though the analogy of nature is not an immediate answer to objections against the wisdom, the justice, or goodness, of any doctrine or precept of religion, yet it may be, as it is an immediate and direct answer to what is really intended by fuch objections: which is, to shew that the things objected against are incredible.

Fourthly, It is most readily acknowledged that the foregoing treatise is by no means satisfactory: very far indeed from it: but so would any natural institution of life appear, if reduced into a system, together with its evidence. Leaving religion out of the case, men are divided in their opinions, whether our pleasures overbalance our pains; And whether it be, or be not, eligible to live in this world. And were all such controversies settled, which perhaps, in specu-

lation, would be found involved in great difficulties; and were it determined upon the evidence of reason, as nature has determined it to our hands, that life is to be preserved: yet still, the rules which God has been pleafed to afford us, for efcaping the miferies of it and obtaining its fatisfactions, the rules, for instance, of preserving health and recovering it when loft, are not only fallible and precarious, but very far from being exact. Nor are we informed by nature, in future contingencies and accidents, fo as to render it at all certain, what is the best method of managing our affairs. What will be the fuccefs of our temporal pursuits, in the common fense of the word success, is highly doubtful. And that will be the fuccess of them, in the proper sense of the word; i. e. what happiness or enjoymen we shall obtain by them, is doubtful in a much higher degree.

Indeed the unfatisfactory nature of the evidence, with which we are obliged to take up, in the daily course of life, is scarce to be expressed. Yet men do not throw away life, or disregard the interests of it, upon account of this doubtfulness. The evi-

dence

dence of religion then being admitted real, those who object against it as not satisfactory; i. e. as not being what they wish it, plainly forget the very condition of our being: for fatisfaction, in this fense, does not belong to such a creature as man. And, which is more material, they forget also the very nature of religion: For, religion presupposes, in all those who will embrace it, a certain degree of integrity and honefty; which it was intended to try whether men have or not, and to exercise in such as have it, in order to its improvement. Religion presupposes this as much, and in the fame fense as fpeaking to a man, presupposes he understands the language in which you speak: or as warning a man of any danger, presupposes that he hath such a regard to himfelf, as that he will endeavour to avoid it. And therefore the question is not all, whether the evidence of religion be fatisfactory: but whether it be, in reason, sufficient to prove and discipline that virtue, which it presupposes. Now the evidence of it is fully fufficient for all those purposes of probation; how far foever it is from being fa-Hh tis-

tisfactory, as to the purposes of curiosity, or any other; and indeed it answers the purposes of the former in several respects, which it would not do, if it were as overbearing as is required. One might add farther: that whether the motives or the evidence for any course of action be satisfactory, meaning here by that word, what fatisfies a man, that fuch a course of action will in the event be for his good; this need never be, and I think, flrictly speaking, never is, the practical question in common matters. But the practical question in all cases is, whether the evidence for a course of action be fuch, as taking in all circumstances, makes the faculty within us, which is the guide and judge of conduct *, determine that course of action to be prudent. Indeed, fatisfaction that it will be for our interest or happiness, abundantly determines an action to be prudent. But evidence almost infinitely lower than this, determines actions to be fo too; even in the conduct of every day.

+ See Differt. II.

Fifthly, As to the objection concerning the influence which this argument, or any part of it, may or may not, be expected to have upon men; I observe, as above, that religion being intended for a trial and exercife of the morality of every person's character, who is a subject of it: and there being, as I have shewn, such evidence for it, as is sufficient, in reason, to influence men to embrace it: to object, that it is not to be imagined mankind will be influenced by fuch evidence, is nothing to the purpose of the foregoing treatise. For the purpose of it is, not to inquire what fort of creatures mankind are, but what the light and knowledge which is afforded them, requires they should be; to shew how, in reason, they ought to behave; not how, in fact, they will behave. This depends upon themselves, and is their own concern; the perfonal concern of each man in particular. And how little regard the generality have to it, experience indeed does too fully shew. -But religion, confidered as a probation, has had its end upon all perfons, to whom it has been proposed with evidence sufficient in reason to influence their practice. For by Hh 2 this

this means they have been put into a state of probation: let them behave as they will in it. And thus, not only revelation, but reason also, teaches us, that by the evidence of religion being laid before men, the defigns of providence are carrying on, not only with regard to those who will, but likewise with regard to those who will not, be influenced by it. However lastly, the objection here referred to allows the things infifted upon in this treatife to be of some weight: And if so, it may be hoped it will have fome influence. And if there be a probability that it will have any at all, there is the same reason in kind though not in degree to lay it before men, as there would be, if it were likely to have a greater influence.

And farther, I defire it may be confidered, with respect to the whole of the foregoing objections, that in this treatise I have argued upon the principles of others*, not my own,

^{*} By arguing upon the principles of others, the reader will observe is meant; not proving any thing from those principles, but notwithstanding them. Thus religion is proved, not from the opinion of necessity; which is absurd; but, notwithstanding or even though that opinion were admitted to be true.

and have omitted what I think true, and of the utmost importance, because by others thought unintelligible, or not true.-Thus I have argued upon the principles of the Fatalists, which I do not believe and have omitted a thing of the utmost importance which I do believe, the moral fitness and unfitness of actions, prior to all will whatever; which I apprehend as certainly to determine the divine conduct as speculative truth and falsehood necessarily determine the divine judgement. Indeed the principle of liberty and that of moral fitness so force themselves upon the mind, that moralists the ancients as well as moderns, have formed their language upon it. And probably it may appear in mine: though I have endeavoured to avoid it and in order to avoid it I have fome times been obliged to express myfelf in a manner, which will appear strange to such as do not observe the reason for it; but the general argument here purfued, does not all suppose, or proceed upon these principles. Now, these two abstract principles of liberty and moral fitness being omitted, religion can be confidered in no other view, than merely as a question of fact, and Hh 3

in this view, it is here confidered. It is obvious, that Christianity, and the proof of it are both historical. And even natural religion is, properly, a matter of fact. For, that there is a righteous governor of the world, is fo: and this proposition contains the general fystem of natural religion. But then, several abstract truths, and in particular these two principles, are usually taken into consideration in the proof of it: whereas it is here treated of only as a matter of fact. To explain this: that the three angles of a triangle are equal to two right ones, is an abstract truth: but that they appear fo to our mind, is only a matter of fact. And this last must have been admitted, if any thing was, by those ancient Sceptics, who would not have admitted the former; but pretended to doubt. whether there were any fuch thing as truth, or whether we could certainly depend upon our faculties of understanding for the knowledge of it, in any cafe.

So likewise, that there is, in the nature of things, an original standard of right and wrong in actions, independent upon all will, but which unalterably determines the will

of God, to exercise that moral government over the world, which religion teaches, i.e. finally and upon the whole, to reward and punish men respectively as they act right or wrong; this affertion contains an abstract truth, as well as matter of fact.-But suppose in the present state, every man, without exception, was rewarded and punished in exact proportion, as he followed or transgressed that sense of right or wrong, which God has implanted in the nature of every man: this would not be at all an abstract truth, but only a matter of fact.-And though this fact were acknowledged by every one; yet the very fame difficulties might be raifed, as are now, concerning the abstract questions of liberty and moral fitness: And we should have a proof, even the certain one of experience, that the government of the world was perfectly moral, without taking in the confideration of those questions: and this proof would remain whatfoever way they were determined. And thus, God having given mankind a moral faculty, the object of which is actions, and which naturally approves fome actions as right and of good defert, and

Hh4

condemns others as wrong, and of ill der fert: that he will, finally, and upon the whole, reward the former, and punish the latter, is not an affertion of an abstract truth, but of what is as meer a fact, as his doing fo at present would be. This future fact I have, not indeed proved with the force with which it might be proved, from the principles of liberty and moral fitness; but without them have given a realy conclusive practical proof of it, which is greatly Arengthened by the general analogy of nature: a proof, eafily cavilled at, eafily shewn not to be demonstrative, for it is not offered as fuch; but impossible, I think, to be evaded or answered. And thus the obligations of religion are made out, exclusively of the questions concerning liberty and moral fitness; which have been perplexed with difficulties and abstruse reasonings, as every thing may.

Hence therefore may be observed distinctly what is the force of this treatise. It will be, to such as are convinced of religion upon the proof arising out of the two last mentioned principles, an additional proof and a confirmation of it: to such as do not

admit those principles, an original proof of it, and a confirmation of that proof.—
Those who believe, will here find the scheme of Christianity cleared of objections, and the evidence of it in a peculiar manner strengthened; those who do not believe, will at least be shewn the absurdity of all attempts to prove Christianity salse, the plain undoubted credibility of it; and, I hope, a good deal more.

And thus, though some perhaps may ferioufly think, that analogy, as here urged, has too great stress laid upon it; and ridicule unanswerable ridicule, may be applied, to shew the argument from it in a disadvantageous light; yet there can be no question, but that it is a real one. For religion, both natural and revealed, implying in it numerous facts; analogy, being a confirmation of all facts to which it can be applied, as it is the only proof of most, cannot but be admitted by every one to be a material thing, and truly of weight on the fide of religion, both natural and revealed: and it ought to be particularly regarded by fuch as profess to follow nature, and to be less fatisfied with abstract reasonings.

CON-

CONCLUSION.

TATHATEVER account may be given, of the strange inattention and difregard in some ages and countries, to a matter of fuch importance as religion; it would, before experience, be incredible that there should be the like difregard in those, who have had the moral fystem of the world laid before them as it is by Christianity, and often inculcated upon them: because this moral fystem carries with it a good degree of evidence for its truth, upon its being barely proposed to our thoughts. There is no need of abstruse reasonings and distinctions, to convince an unprejudiced understanding, that there is a God who made and governs the world, and will judge it in righteousness: though they may be necessary to answer abstruse difficulties, when once such are raifed; when the very meaning of those words, which

which express most intelligibly the general doctrine of religion, is pretended to be uncertain; and the clear truth of the thing itfelf is obscured, by the intricacies of speculation. But to an unprejudiced mind, ten thousand instances of design, cannot but prove a defigner. And it is intuitively manifest, that creatures ought to live under a dutiful fense of their maker; and that justice and charity must be his laws, to creatures whom he has made focial, and placed in fociety. Indeed the truth of revealed religion, peculiarly fo called, is not felf-evident; but requires external proof, in order to its being received. Yet inattention, among us, to revealed religion, will be found to imply the fame diffolute immoral temper of mind, as inattention to natural religion: because, when both are laid before us, in the manner they are in Christian countries of liberty; our obligations to enquire into both, and to embrace both upon supposition of their truth, are obligations of the same nature. For, revelation claims to be the voice of God; and our obligation to attend to his voice, is furely, moral in all cases. And

And as it is infifted, that its evidence is conclusive, upon thorough consideration of it; fo, it offers itself to us with manifest obvious appearances of having fomething more than human in it, and therefore in all reafon requires, to have its claims most feriously examined into. It it to be added, that though light and knowledge, in what manner foever afforded us, is equally from God; yet a miraculous revelation has a peculiar tendency, from the first principles of our nature, to awaken mankind, and inspire them with reverence and awe: and this is a peculiar obligation, to attend to what claims to be fo with fuch appearances of truth. It is therefore most certain, that our obligations to enquire feriously into the evidence of Christianity, and, upon supposition of its truth to embrace it are of the utmost importance, and moral in the highest and most proper fense. Let us then suppose, that the evidence of religion in general, and of Chriftianity, has been feriously enquired into, by all reasonable men among us. Yet we find many professedly to reject both, upon speculative principles of infidelity. And all of them do not content themselves with a bare

bare neglect of religion, and enjoying their imaginary freedom from its restraints. Some go much beyond this. They deride God's moral government over the world.— They renounce his protection, and defy his justice. They ridicule and vilify Christianity and blaspheme the author of it; and take all occasions to manifest a scorn and contempt of revelation. This amounts to an active fetting themselves against religion; to what may be confidered as a positive principle of irreligion, which they cultivate within themselves, and, whether they intend this effect or not, render habitual, as a good man does the contrary principle. others, who are not chargeable with all this profligateness, yet, are in avowed opposition to religion, as if discovered to be groundlefs. Now admitting, which is the fuppofition we go upon, that these persons act upon what they think principles of reason, and otherwise they are not to be argued with: it is really inconceivable, that they should imagine they clearly fee the whole evidence of it, confidered in itself, to be nothing at all; nor do they pretend this. They are far indeed from having a just notion of its evidence:

dence; but they would not fay its evidence was nothing, if they thought the fystem of it, with all its circumstances, were credible, like other matter of science or history. So that their manner of treating it must proceed either from fuch kind of objections against all religion, as have been answered or obviated in the former part of this treatife; or else from objections and difficulties, supposed more peculiar to Christianity. Thus, they entertain prejudices against the whole notion of a revelation, and miraculous interpolitions. They find things in scripture, whether in incidental passages, or in the general scheme of it, which appear They take for to them unreasonable. granted, that if Christianity were true, the light of it must have been more general, and the evidence of it more fatisfactory, or rather over-bearing: but it must and would have been, in fome way, otherwise put and left, than it is. Now this is not imagining they fee the evidence itself to be nothing, or inconfiderable; but quite another thing.-It is being fortified against the evidence, in fome degree acknowledged, by thinking they fee the fystem of Christianity, or somewhat which

which appears to them necessarily connected with it, to be incredible or false: fortified against that evidence, which might, otherwise, make great impression upon them.—Or, lastly, if any of these persons are, upon the whole, in doubt concerning the truth of Christianity: their behaviour seems owing to their taking for granted, through strange inattention, that such doubting is, in a manner, the same thing, as being certain against it.

To these persons, and to this state of opinion, concerning religion, the foregoing treatife is adapted. For all the general objections against the moral system of nature having been obviated, it is shewn, that there is not any peculiar prefumption at all against Christianity, either considered as not discoverable by reason, or as unlike to what is fo discovered; nor any worth mentioning against it as miraculous if any at all; none certainly, which can render it in the least incredible. It is shewn, that upon supposition of a divine revelation, the analogy of nature renders it beforehand highly credible, I think probable, that many things in it must appear liable to great objections:

and

and that we must be incompetent judges of it, to a great degree. This observation is, I think, unquestionably true, and of the very utmost importance: but it is urged, as I hope it will be understood, with great caution of not vilifying the faculty of reafon, which is the candle of the Lord within us*; though it can afford no light where it does not shine; nor judge, where it has no principles to judge upon. The objections here spoken of being first answered in the view of objections against Christianity as a matter of fact, are in the next place confidered as urged, more immediately, against the wifdom, justice and goodness of the Christian dispensation. And it is fully made out that they admit of exactly the like answer, in every respect, to what the like objections against the constitution of nature admit of: that, as partial views give the appearance of wrong to things, which upon farther confideration and knowledge of their relations to other things, are found just and good; fo it is perfectly credible, that the things objected, against the wisdom

and goodness of the Christian dispensation, may be rendered instances of wisdom and goodness, by their reference to other things beyond our view: because Christianity is a scheme as much above our comprehension, as that of nature; and like that, a scheme in which means are made use of to accomplish ends, and which, as is most credible, may be carried on by general laws. And it ought to be attended to, that this is not an answer taken, merely or chiefly, from our ignorance; but from fomewhat positive, which our observation shews us. For, to like objections, the like answer is experienced to be just, in numberless parallel cases, the objections against the Christian dispenfation, and the method by which it is carried on; having been thus obviated in general and together; the chief of them are confidered distinctly, and the particular things objected to are shewn credible, by their perfect analogy, each apart, to the constitution of nature. Thus: if man be fallen from his primitive state, and to be restored, and infinite wisdom and power engages in accomplishing our recovery: it were to have been expected it is faid, that this should have

have been effected at once; and not by fuch a long feries of means, and fuch a various oeconomy of perfons and things; one difpenfation preparatory to another, this to a farther one, and so on through an indefinite number of ages, before the end of the scheme proposed can be compleatly accomplished: a scheme conducted by infinite wisdom, and executed by almighty power. But now on the contrary, our finding that every thing in the constitution and course of nature is thus carried on, shews such expectations concerning revelation to be highly unreafonable; and is a fatisfactory answer to them, when urged as objections against the credibility, that the great scheme of providence in the redemption of the world may be of this kind and to be accomplished in this manner. As to the particular method of our redemption, the appointment of a mediator between God and man, this has been shewn to be most obviously analogous to the general conduct of nature, i. e. the God of nature, in appointing others to be the instruments of his mercy, as we experience in the daily course or providence. The condition of this world, which the doc-

trine of our redemption by Christ presuppofes, so much falls in with natural appearances, that heathen moralists inferred it from those appearances: inferred, that human nature was fallen from its original rectitude, and, in consequence of this, degraded from its primitive happiness. Or, however this opinion came into the world, thefe appearances must have kept up the tradition and confirmed the belief of it. And as it was the general opinion under the light of hature that repentance and reformation, alone and by itself, was not sufficient to do away fin; and procure a full remission of the penalties annexed to it; and as the reason of the thing does not at all lean to any fuch conclusion: so every day's experience shews us, that reformation is not, in any fort, fufficient to prevent the present disadvantages and miferies, which, in the natural course of things, God has annexed to folly and extravagance. Yet there may be ground to think, that the punishments, which, by the general laws of divine government, are annexed to vice, may be prevented; that provision may have been, even originally, made, that they should be prevented by Ti2

fome means or other, though they could not by reformation alone. For we have daily instances of such mercy, in the general conduct of nature: compassion provided for mifery*, medicines for diseases, friends against enemies. There is provision made, in the original constitution of the world, that much of the natural bad consequences of our follies, which perfons themselves alone cannot prevent, may be prevented by the affiftance of others; affiftance, which nature enables, and disposes and appoints them to afford. By a method of goodness analogous to this, when the world lay in wickedness and consequently ruin, God so loved the world, that he gave his only begotten Son to fave it; and he being made perfect by fuffering, became the author of eternal falvation to all them that obey him.+ Indeed neither reason nor analogy would lead us to think, in particular that the interposition of Christ, in the manner which he did interpose, would be of that efficacy for recovery of the world, which the scripture

teaches

^{*} Serm. at the Rolls, p. 106. † Heb. v. 9: John iii. 16

teaches us it was; but neither would reason nor analogy lead us to think, that other particular means' would be of the efficacy which experience shews they are in numberlefs instances. And therefore as the case before us does not admit of experience; fo, that neither reason nor analogy can shew how or in what particular way, the interposition of Christ, as revealed in scripture, is of that efficacy, which it is there represented to be; this is no kind nor degree of prefumption against its being really of that efficacy. Farther: the objections against Christianity, from the light of it not being universal, nor its evidence so strong as might possibly be given us, have been anfwered by the general analogy of nature; that God has made fuch variety of creatures is indeed an answer to the former; but that he dispenses his gifts in such variety, both of degrees and kinds, amongst creatures, of the same species, and even to the same individuals at different times; is a more obvious and full answer to it. And it is so far from being the method of providence in other cases, to afford us such overbearing evidence, as some require in proof of Chris-I i 3 tianity;

tianity; that on the contrary, the evidence upon which we are naturally appointed to act in common matters, throughout a very great part of life, is doubtful in a high degree. And admitting the fact, that God has afforded to fome, no more than doubtful evidence of religion: the fame account may be given of it, as of difficulties and temptations with regard to practice. But as it is not impossible, surely, that this allegded doubtfulness may be men's own fault, it deferves their most serious consideration, whether it be not fo. However, it is certain, that doubting implies a degree of evidence for that, of which we doubt; and that this degree of evidence, as really lays us under obligations, as demonstrative evidence.

The whole then of religion is throughout credible: nor is there, I think, any thing relating to the revealed dispensation of things, more different from the experienced constitution and course of nature, than some parts of the constitution of nature are from other parts of it. And if so, the only question which remains, is, what positive evidence can be alledged, for the truth of Chris-

Christianity. This too in general has been confidered, and the objections against it estimated. Deduct therefore what is to be deducted from that evidence upon account of any weight which may be thought to remain in these objections, after what the analogy of nature has fuggested in answer to them: and then confider, what are the practical confequences from all this, upon the most sceptical principles one can argue upon, (for I am writing to persons who entertain these principles): and upon fuch consideration, it will be obvious, that immorality, as little excuse as it admits of in itself, is greatly aggravated, in perfons who have been made acquainted with Christianity, whether they believe it, or not: because the moral fystem, of nature or natural religion, which Christianity lays before us, approves itself, almost intuitively, to a reasonable mind upon. feeing it proposed. In the next place, with regr d to Christianity, it will be observed; that there is a middle, between a full fatisfaction of the truth of it, and a fatisfaction of the contrary. The middle state of mind between these two, consists in a serious apprehension, that it may be true: joined with doubt, Ii4

doubt, whether it be fo. And this, upon the best judgement I am able to make, is as far towards speculative infidelity, as any fceptic can at all be supposed to go, who has had true Christianity, with the proper evidence of it, laid before him and has in any tolerable measure considered them.-For I would not be mistaken to comprehend all, who have ever heard of it; because it feems evident in many countries, called Christian, neither Christianity, nor its evidence are fairly laid before men. And in places where both are, there appear to be fome, who have very little attended to either and who reject Christianity with a fcorn proportionate to their inattention; and yet are by no means without understanding in other matters. Now it has been shewn, that a ferious apprehension that Christianity may be true, lays perfons under the strictest obligations of a serious regard to it, throughout the whole of their life; a regard not the same exactly, but in many refpects nearly the fame, with what a full conviction of its truth would lay them under. Lastly, it will appear, that blasphemy and prophaneness, I mean with regard to ChrifChristianity, are absolutely without excuse, For there is no temptation to it, but from the wantonness of vanity or mirth: and these, considering the infinite importance of the subject, are no such temptations as to afford any excuse for it. If this be a just account of things, and yet men can go on to vilify or disregard Christianity, which is to talk and act, as if they had a demonstration of its falsehood; there is no reason to think they would alter their behaviour to any purpose though there were a demonstration of its truth,

ADVERTISEMENT.

IN the first copy of these papers, I had inserted the two following dissertations into the chapters, of a future life, and, of the moral government of God, with which they are closely connected. But as they do not directly fall under the title of the foregoing treatise, and would have kept the subject of it too long out of sight; it seemed more proper to place them by themselves.

DISSERTATION I.

OF PERSONAL IDENTITY.

THETHER we are to live in a future state, as it is the most important question which can possibly be asked, so is it the most intelligible one which can be expressed in language. Yet strange perplexities have been raifed about the meaning of that identity or sameness of person, which is implied in the notion of our living now and hereafter, or in any two fuccessive moments. And the folution of these difficulties hath been stranger than the difficulties themselves. For, personal identity has been explained so by some, as to render the inquiry concerning a future life, of no confequence at all to us the perfons who are making it. And though few men can be misled by such subtilties, yet it may be proper a little to confider them.

Now

Now when it is asked, wherein personal identity confifts, the answer should be the same, as if it were asked, wherein consists fimilitude or equality; that all attempts to define, would but perplex it. Yet there is no difficulty at all in afcertaining the idea, For, as, upon two triangles being compared or viewed together, there arises to the mindthe idea of fimilitude; or upon twice two and four, the idea of equality: fo likewife, upon comparing the consciousness of one's self or one's own existence in any two moments, there as immediately arises to the mind the idea of perfonal identity. And as the two former comparisons not only give us the ideas of fimilitude and equality, but also shew us, that two triangles are alike, and twice two and four are equal; fo the latter comparison not only gives us the idea of perfonal identity, but also shews us the identity of ourselves, in those two moments: the prefent, suppose, and that immediately past; or the prefent, and that, a month, a year, or twenty years past. Or in other words, by reflecting upon that, which is myself now, and that, which was myielf twenty years

years ago, I difcern they are not two, but one and the same self.

But though consciousness of what is past does thus ascertain our personal identity to ourselves, yet to say, that it makes personal identity, or is necessary to our being the same persons, is to say, that a person has not existed a single moment, nor done one action, but what he can remember; indeed none but what he reslects upon. And one should really think it self-evident, that consciousness of personal identity presupposes, and therefore cannot constitute, personal identity; any more than knowledge in any other case, can constitute truth, which it presupposes.

This wonderful mistake may possibly have arisen from hence, that to be endued with consciousness, is inseparable from the idea of a person, or intelligent being. For, this might be expressed inaccurately thus, that consciousness makes personality; and from hence it might be concluded to make personal identity. But though present consciousness of what we at present do and feel, is necessary to our being the persons we now are; yet present consciousness of past actions or feelings, is not necessary to

our being the fame persons who performed those actions or had those feelings:

The inquiry, what makes vegetables the fame in the common acceptation of the word, does not appear to have any relation to this of personal identity: because the word, same, when applied to them and to person, is not only applied to different subjects, but it is also used in different senses. For when a man fwears to the fame tree, as having flood fifty years in the same place, he means only the same as to all the purposes of property and uses of common life, and not that the tree has been all that time the same in the ftrict philosophical sense of the word. For he does not know, whether any one particle of the present tree, be the same with any one particle of the tree which stood in the same place fifty years ago. And if they have not one common particle of matter, they cannot be the same tree in the proper philosophic sense of the word fame: if being evidently a contradiction in terms, to fay they are, when no part of their fubstance, and no one of their properties is the same: no part of their substance, by the supposition; no one of their properties, because it is allowed, that the fame property cannot be transferred from

fwer

one substance to another. And therefore, when we fay, the identity or fameness of a plant confifts in a continuation of the fame life, communicated under the fame organization, to a number of particles of matter, whether the same or not; the word same, when applied to life and to organization, cannot possibly be understood to fignify; what it fignifies in this very fentence, when applied to matter. In a loofe and popular fense then, the life and the organization and the plant are justly faid to be the same, notwithstanding the perpetual change of the parts. But in a strict and philosophical manner of speech, no man, no being, no mode of being, no any thing can be the fame with that, with which it hath indeed nothing the same. Now sameness is used in this latter fense when applied to persons. The identity of these, therefore, cannot fubfift with diverfity of fubstance.

The thing here considered, and, demonfiratively, as I think, determined, is proposed by Mr. Locke in these words, "whe-"ther it," i. e, the same self or person, be the same identical substance?" And he has suggested what is a much better an-

fiver to the question, than that which he gives it in form. For he defines person, " a thinking intelligent being, &c." and personal identity, " the sameness of a rati-"onal being;" the question then is, whether the fame rational being is the fame fubstance: which needs no answer, because being and fubstance; in this place, stand for the same idea. The ground of the doubt, whether the fame person be the fame fubstance, is faid to be this, that the consciousness of our own existence, in youth and in old age, or in any two joint fuccessive moments, is not the same individual action +, i. e. not the same conscioufness, but different successive consciousnesses. Now it is strange that this should have occasioned such perplexities. For it is furely conceiveable, that a person may have a capacity of knowing fome object or other to be the same now, which it was when he contemplated it formerly; yet in this case, where, by the supposition, the object is perceived to be the fame, the perception of it in any two moments can-

^{*} Locke's works, Vol. I, p. 146.

⁺ Locke, p. 246, 147.

hot be any of the same perception. And thus, though the successive consciousness which we have of our own existence are not the same, yet they are consciousnesses of one and the same thing or object; of the same person, self, or living agent. The person, of whose existence the consciousness is felt now, and was felt an hour or a year ago, is discerned to be; not two persons, but one and the same person; and therefore is one and the same.

Mr. Locke's observations upon this subject appear hasty: and he seems to profess himself distaissed with suppositions, which he has made relating to it*. But some of those hasty observations have been carried to a strange length by others, whose notion, when traced and examined to the bottom, amounts, I think, to this †; "That person-" ality is not a permanent, but a transient thing; that it lives and dies, begins and ends continually, that no one can any

^{*} Locke, p. 152.

[†] See an answer to Dr. Clarke's third defence of his letter to Mr. Dodwell, 2d. Edit. p. 44. 56. &c.

more remain one and the same person two moments together, than two fuccessive moments can be one and the fame moment; that our substance is indeed continually changing: but whether this be of fo or not, is, it feems, nothing to the purof pose; fince it is not substance, but conscioufness alone which constitutes personality; which consciousness, being succesfive, cannot be the fame in any two mo-" ments, nor confequently the personality " constituted by it." And from hence it must follow, that it is a fallacy upon ourfelves, to charge our present selves with any thing we did, or to imagine our prefent selves interested in any thing which befell us, yesterday: or that our present self will be interested in what will befall us tomorrow: fince our prefent felf is not, in reality, the same with the self of yesterday, but another like felf or person coming in its room, and mistaken for it; to which another felf will fucceed to-morrow. This, I fay, must follow: for if the self or perfon of to-day, and that of to-morrow, are not the fame, but only like perfons; the person of to-day, is really no more interested in what will befall the person of to-morrow, than in what will befall any other person. It may be thought perhaps, that this is not a just representation of the opinion we are speaking of; because those who maintain it allow, that a person is the same as far back as his remembrance reaches.—And indeed they do use the words, identity and same person. Nor will language permit these words to be laid aside: since if they were, there must be, I know not what ridiculous periphrasis, substituted in the room of them. But they cannot, consistently with themselves, mean, that the person is really the same.

For it is felf-evident, that the personality cannot be really the same, if, as they expressly affert, that in which it consists, is not the same. And as, consistently with themselves, they cannot, so, I think it appears, they do not, mean, that the person is really the same, but only that he is so in a sictitious sense: in such a sense only as they affert, for this they do affert, that any number of persons whatever may be the same person. The bare unfolding this notion, and laying it thus naked and open, seems the best consultation of it. However,

K 2 Ence

fince great stress is said to be put upon it, I add the following things.

First, This notion is absolutely contradictory to that certain conviction, which necessarily and every moment rifes within us, when we turn our thoughts upon ourfelves, when we reflect upon what is past, and look forward upon what is to come.-All imagination of a daily change or that living agent which each man calls himfelf, for another, or of any fuch change throughout our whole prefent life, is entirely born down by out natural fense of things. Nor is it possible for a person in his wits, to alter his conduct, with regard to his health or affairs, from a suspicion, that though he should live to-morrow, he should not, however, be the fame person he is to-day. And yet, if it be reasonable to act with refpect to a future life, upon this notion the personality is transient; it is reasonable to act upon it, with respect to the present.—Here then is a notion equally applicable to religion and to our temporal concerns; and every one fees and feels the inexpressible absurdity of it in the latter case. If therefore any can take up with it in the former, this cannot proceed from the reason of the thing, but

but must be owing to an inward unfairness, and secret corruption of heart.

Secondly, It is not an idea; or abstract notion, or quality, but a being only, which is capable of life and action, of happiness and mifery. Now all beings confessedly continue the same, during the whole time of their existence. Consider then a living being now existing, and which has existed for any time alive: this living being must have done and fuffered and enjoyed, what it has done and fuffered and enjoyed formerly, (this living being, I fay, and not another) as really as it does and fuffers and enjoys, what it does and fuffers and enjoys this instant. All these successive actions, enjoyments, and fufferings, are actions, enjoyments, and fufferings, of the same living being. And they are fo, prior to all confideration of its remembering or forgetting: fince remembering or forgetting can make no alteration in the truth of past matter or fact. And suppose this being endued with limited powers of knowledge and memory, there is no more difficulty in conceiving it to have a power, of knowing itfelf to be the same living being which it

TITLE

was fome time ago, of remembering fome of its actions, fufferings, and enjoyments, and forgetting others, than in conceiving it to know or remember or forget any thing else.

Thirdly, Every perfon is confcious, that he is now the same person or self he was, as far back as his remembrance reaches: fince when any one reflects upon a past action of his own, he is just as certain of the person who did that action, namely, himfelf, the person who now reflects upon it, as he is certain that the action was at all done. Nay very often a person's affurance of an action having been done, of which he is absolutely assured, arises wholly from the consciousness that he himself did it.-And this he, person, or self, must either be a fubstance, or the property of some substance. If he, if person, be a substance; then consciousness that he is the same perfon, is confciousness that he is the same fubstance. If the person, or he, be the property of a substance; still consciousness that he is the fame property, is as certain a proof that his substance remains the same, as confcioufness that he remains the same fubfubstance would be: fince the same property cannot be transferred from one sub-stance to another.

But though we are thus certain, that we are the fame agents, living beings, or fubstances, now, which we were as far back as our remembrance reaches; yet is is asked, whether we may not possibly be deceived in it? and this question may be asked at the end of any demonstration whatever; because it is a question concerning the truth of perception by memory. And he who can doubt whether perception by memory can in this be depended upon, may doubt also, whether perception by deduction and reasoning, which also include memory, or indeed whether intuitive perception can. then we can go no farther. For it is ridiculous to attempt to prove the truth of those perceptions, whose truth we can no otherwife prove, than by other perceptions of exactly the same kind with them, and which there is just the same ground to sufpect; or to attempt to prove the truth of our faculties, which can no otherwise be. proved, than by the use or means of those very fuspected faculties themselves.

Kk4 DIS-

DISSERTATION II.

OF THE NATURE OF VIRTUE.

THAT which renders beings capable of moral government, is their having a moral nature, and moral faculties of perception and of action. Brute creatures are impressed and actuated by various instincts and propenfions: fo also are we. But additional to this, we have a capacity of reflecting upon actions and characters, and making them an object to our thought: and on doing this, we naturally and unavoidably approve fome actions, under the peculiar view of their being virtuous and of good defert; and disapprove others, as vicious and of ill defert. That we have this moral approving and disapproving * faculty, is certain, from

* This way of speaking is taken from Epictetus+, and is made use of as seeming the most full, and least

7 Arr. Epict. I. 1, c. 1,

liable

from our experiencing it in ourselves, and recognizing it in each other.

It appears from our exercifing it unavoidably, in the approbation and disapprobation even of seigned characters; from the words, right and wrong, odious and amiable, base and worthy, with many others of like signification, in all languages, applied to actions, and characters: from the many written systems of morals which suppose it; since it cannot be imagined, that all these authors, throughout all these treatises, had absolutely no meaning at all to their words; or a meaning merely chimerical: from our natural sense of gratitude, which implies a

liable to cavil. And the moral faculty may be underflood to have these two epithets, δοκιμασείκη and αποδοκιμασείκη upon a double account: because, upon a survey of actions, whether before or after they are done, it determines them to be good or evil; and also because it determines itself to be the guide of action and of life, in contradistinction from all other faculties, or natural principles of action: in the very same manner, as speculative reason directly and naturally judges of specutive truth and falshood; and, at the same time, is attended with a consciousness upon reslection, that the natural right to judge of them belongs to it.

1 ..

distinction between merely being the instrument of good, and intending it: from the like distinction, every one makes between injury and mere harm, which Hobbs fays, is peculiar to mankind; and between injury and just punishment, a distinction plainly natural, prior to the confideration of human laws. It is manifest, great part of common language, and of common behaviour over the world, is formed upon fupposition of such a moral faculty; whether called conscience, moral reason, moral sense, or divine reason; whether considered as a fentiment of the understanding, or as a perception of the heart, or which feems the truth, as including both. Nor is it at all doubtful in the general, what course of action this faculty, or practical difcerning power within us, approves, and what it disapproves. For, as much as it has been disputed wherein virtue consists, or whatever ground for doubt there may be about particulars; yet, in general, there is in reality an univerfally acknowledged standard of it. It is that, which all ages and all countries have made profession of in public; it is that, which every man you meet, puts

puts on the shew of: it is that, which the primary and fundamental laws of all civil constitutions, over the face of the earth, make it their business and endeavour to enforce the practice of upon mankind: namely, justice, veracity, and regard to common good. It being manifest then, in general, that we have such a faculty, or discernment as this; it may be of use to remark some things, more distinctly, concerning it.

First, It ought to be observed, that the object of this faculty is actions*, comprehending under that name active or practical principles: those principles from which men would act, if occasions and circumstances gave them power; and which, when fixed and habitual in any person, we call his character. It does not appear, that brutes have the least reslex sense of actions, as distinguished from events: or that will and design, which constitute the very nature of actions as such, are at all an object to their perception. But to ours they are: and they

^{*} ουδε η αρετη και κακια—εν πεισει αλλα ενεργεια. Μ. Anton. L. 9. 16. Virtutis laus omnis in actione confistit. Cic. Off. 1. 1. c. 6

are the object, and the only one, of the approving and disapproving faculty. Acting, conduct, behaviour, abstracted from all regard to what is, in fact and event, the consequence of it, is itself the natural object of the moral difcernment; as speculative truth and falsehood is, of speculative reason. Intention of such and such consequences, indeed, is always included; for it is part of the action itself: but though the intended good or bad confequences do not follow, we have exactly the same sense of the actions as if they did. In like manner, we think well or ill of characters, abstracted from all consideration of the good or the evil, which persons of such characters have it actually in their power to do. We never, in the moral way, applaud or blame either ourselves or others, for what we enjoy or what we fuffer, or for having impressions made upon us, which we confider as altogether out of our power; but only for what we do, or would have done, had it been in our power; or for what we leave undone which we might have done, or would have left undone, though we could have done it.

Secondly,

Secondly, Our sense or discernment of actions as morally good or evil implies in it a fense or discernment of them as of good or ill desert. It may be difficult to explain this perception, fo as to answer all the questions which may be asked concerning it: but every one speaks of such and such actions as deferving punishment; and it is not, I suppose, pretended that they have absolutely no meaning at all to the expresfion. Now the meaning plainly is not, that we conceive it for the good of fociety, that the doer of fuch actions should be made to fuffer. For if unhappily it were refolved that a man who, by fome innocent action, was infected with the plague, should be left to perish, lest, by other peoples coming near him, the infection should fpread; no one would fay, he deferved this treatment. Innocence and ill-defert are inconfistent ideas. Ill desert always supposes guilt; and if one be not part of the other, yet they are evidently and naturally connected in our mind. The fight of a man in misery raises our compassion towards him, and, if this mifery be inflicted on him by another, our indignation against the author

y Burney.

of it. But when we are informed, that the fufferer is a villain, and is punished only for a treachery or cruelty; our compassion exceedingly lessens, and, in many instances, our indignation wholly fubfides: Now what produces this effect; is the conception of that in the fufferer, which we call illdefert. Upon confidering then, or viewing together, our notion of vice and that of mifery, there refults a third, that of illdefert. And thus there is in human creatures an affociation of the two ideas, natural and moral evil, wickedness and punishment. If this affociation were merely artificial or accidental, it were nothing: but being most unquestionably natural, it greatly concerns us to attend to it instead of endeavouring to explain it away:

It may be observed farther, concerning our perception of good and of ill-desert, that the former is very weak with respect to common instances of virtue. One reason of which may be, that it does not appear to a spectator, how far such instances of virtue proceed from a virtuous principle, or in what degree this principle is prevalent: since a very weak regard to virtue may be suffi-

fufficient to make men act well in many common instances. And on the other hand, our perception of ill-defert in vicious actions lesiens, in proportion to the temptations men are thought to have had to fuch vices. For, vice in human creatures confisting chiefly in the absence or want of the virtuous principle; though a man be overcome, suppose, by tortures, it does not from thence appear, to what degree the virtuous principle was wanting. All that appears is, that he had it not in fuch a degree, as to prevail over the temptation; but possibly he had it in a degree, which would have rendered him proof against common temptations.

Thirdly, our perception of vice and ill defert arises from, and is the result of, a comparison of actions with the nature and capacities of the agent.—For, the mere neglect of doing what we ought to do, would, in many cases, be determined by all men to be in the highest degree vicious. And this determination must arise from such comparison, and be the result of it; because such neglect would not be vicious in creatures of other

natures, and capacities, as brutes. And it is the fame also, with respect to positive vices. or fuch as confift in doing what we ought not. For, every one has a different fense of harm done by an idiot, madman or child, and by one of mature and common understanding; though the action of both, including the intention which is part of the action, be the fame; as it may be, fince idiots and madmen, as well as children, are capable not only of doing mischief, but also of intending it. Now this difference must arise from fomewhat difcerned in the nature or capacities of one, which renders the action vicious; and the want of which in the other, renders the same action innocent or less vicious: and this plainly supposes a comparison, whether reflected upon or not, between the action and capacities of the agent, previous to our determining an action to be vicious. And hence arifes a proper application of the epithets, incongruous, unfuitable, disproportionate, unfit, to actions which our moral faculty determines to be vicious.

Fourthly, It deserves to be considered, whether men are more at liberty, in point

of morals, to make themselves miserable without reason, than to make other people fo: or diffolutely to neglect their own greater good, for the fake of a prefent leffer gratification, than they are to neglect the good of others, whom nature has committed to their care. It should seem, that a due concern about our own interest, or happiness, and a reasonable endeavour to secure and promote it, which is, I think, very much the meaning of the word, prudence, in our language; it should seem, that this is virtue, and the contrary behaviour faulty and blameable: fince, in the calmest way of reflection, we approve of the first, and condemn the other conduct, both in ourfelves and others, This approbation and disapprobation are altogether different from mere desire of our own, or of their happiness, and from forrow upon missing it. For the object or occasion of this last kind of perception, is satisfaction, or uneasiness; whereas the object of the first is active behaviour. In one case, what our thoughts fix upon, is our condition: in the other, our conduct. It is true indeed, that nature has not given us so sensible a disappro-LI bation

10

bation of imprudence and folly, either in ourselves or others, as of falsehood, injustice, and cruelty: I suppose, because that constant habitual sense of private interest and good, which we always carry about with us, render fuch fensible disapprobation less necessary, less wanting, to keep us from imprudently neglecting our own happinefs, and foolifhly injuring ourfelves, than it is necessary and wanting to keep us from injuring others, to whose good we cannot have so strong and constant a regard: and also because imprudence and folly, appearing to bring its own punishment more immediately and constantly than injurious behaviour, it less needs the additional punishment, which would be inflicted upon it by others, had they the same sensible indignation against it, as against injustice, and fraud, and cruelty. --- Befides, unhappiness being in itself the natural object of compassion; the unhappiness which people bring upon themselves, though it be wilfully, excites in us fome pity for them; and this in course lessens our displeasure against them. But still it is matter of experience, that we are formed fo, as

to reflect very severely upon the greater instances of imprudent neglects and foolish rashness, both in ourselves and others. instances of this kind, men often say of themselves with remorse, and of others with fome indignation, that they deferved to fuffer fuch calamities, because they brought them upon themselves, and would not take warning. Particularly when perfons come to poverty and diffress by a long course of extravagance, and after frequent admonitions, though without falsehood or injustice; we plainly do not regard fuch people as alike objects of compassion with those, who are brought into the fame condition by unavoidable accidents. From these things it appears, that prudence is a species of virtue, and folly of vice; meaning by folly, fomewhat quite different from mere incapacity: a thoughtless want of that regard and attention to our own happiness, which we had capacity for. And this the word properly includes; and, as it feems, in its usual acceptation; for we scarce apply it to brute creatures.

However, if any person be disposed to dispute the matter, I shall very willingly

give up the words virtue and vice, as not applicable to prudence and folly; but must beg leave to insist, that the faculty within us, which is the judge of actions, approves of prudent actions, and disapproves imprudent ones: I say, prudent and imprudent actions as such, and considered distinctly from the happiness or misery which they occasion. And by the way, this observation may help to determine, what just-ness there is in that objection against religion, that it teaches us to be interested and selfish.

Fifthly, Without inquiring how far, and in what fense, virtue is resolvable into benevolence, and vice into the want of it; it may be proper to observe, that benevolence and the want of it, fingly confidered, are in no fort the whole of virtue and vice. For if this were the case, in the review of one's own character or that of others, our moral understanding and moral sense would be indifferent to every thing, but the degrees in which benevolence prevailed, and the degrees in which it was wanting. That is, we should neither approve of benevolence to fome perfons rather than to others, nor difapprove injuffice and falsehood upon any other

other account, than merely as an overbalance of happiness was foreseen likely to be produced by the first, and of misery by the fecond. But now on the contrary, fuppose two men competitors for any thing whatever, which would be of equal advantage to each of them: though nothing indeed would be more impertinent, than for a stranger to busy himself to get one of them preferred to the other; yet fuch endeavour would be virtue, in behalf of a friend or benefactor, abstracted from all consideration of distant consequences: as that examples of gratitude, and the cultivation of friendship, would be of general good to the world. Again, suppose one man should, by fraud or violence, take from another the fruit of his labour, with intent to give it to a third, who, he thought, would have as much pleafure from it, as would balance the pleasure which the first possessor would have had in the enjoyment, and his vexation in the lofs of it: suppose also that no bad consequences would follow: yet fuch an action would furely be vicious. Nay farther, were treachery, violence, and injustice, no otherwise vicious, than as foreseen likely to produce an overbalance of misery to society; then,

if in any case a man could procure to himself as great advantage by an act of injustice, as the whole foreseen inconvenience, likely to be brought upon others by it would amount to; such a piece of injustice would not be faulty or vicious at all: because it would be no more than in any other case, for a man to prefer his own satisfaction to another's in equal degrees: The fact then appears to be, that we are constituted so as to condemn salfehood, unprovoked violence, injustice, and to approve of benevolence to some preferably to others, abstracted from all consideration, which conduct is likeliest to produce an overbalance of happiness or misery.

And therefore, were the Author of nature to propose nothing to himself as an end but the production of happiness, were his moral character merely that of benevolence; yet ours is not so. Upon that supposition indeed, the only reason of his giving us the above-mentioned approbation of benevolence to some persons rather than others, and disapprobation of salsehood, unprovoked violence and injustice, must be, that he foresaw, this constitution of our nature would produce more happiness, than form-

ing us with a temper of mere general benevolence. But still, since this is our constitution; falsehood, violence, injustice, must be vice in us, and benevolence to some preferably to others, virtue; abstracted from all consideration of the overbalance of evil or good, which they may appear likely to produce.

Now if human creatures are endued with fuch a moral nature as we have been explaining, or with a moral faculty, the natural object of which is actions: moral government must consist, in rendering them happy and unhappy, in rewarding and punishing them, as they follow, neglect, or depart from, the moral rule of action interwoven in their nature, or suggested and enforced by this moral faculty; in rewarding and punishing them upon account of their so doing.

I am not fensible, that I have in this fifth observation contradicted what any author designed to affert. But some of freat and distinguished merit, have I think expressed themselves in a manner, which may occasion some danger to careless readers, of imagining the whole of virtue to

confift in fingly aiming, according to the best of their judgement, at promoting the happiness of mankind in the present state; and the whole of vice, in doing what they foresee, or might foresee, is likely to produce an over balance of unhappiness in it; than which mistakes none can be conceived more terrible. For it is certain, that fome of the most shocking instances of injustice, adultery, murder, perjury, and even of perfecution, may, in many supposeable cases, not have the appearance of being likely to produce an overbalance of misery in the present state: perhaps fometimes may have the contrary appearance. For this reflection might eafily be carried on, but I forbear-The happiness of the world is the concern of him, who is the Lord and the Proprietor of it; nor do we know what we are about, when we endeavour to promote the good of mankind in any ways, but those which he has directed: that is indeed in all ways not contrary to veracity and justice. I speak thus upon supposition of persons really endeayouring, in some fort, to do good without regard to these. But the truth seems to be, that fuch supposed endeavours proceed, almost

most always, from ambition, the spirit of party or some indirect principle, concealed perhaps in great measure from the persons themselves. And though it is our business and our duty to endeavour, within the bounds of veracity and justice, to contribute to the ease, convenience, and even chearfulness and diverfion of our fellow-creatures: yet from our fhort views, it is greatly uncertain, whether this endeavour will, in particular instances, produce an overbalance of happiness upon the whole; fince fo many and distant things must come into the account. And that which makes it our duty, is, that there is fome appearance that it will, and no positive appearance fufficient to balance this, on the contrary fide; and also, that such benevolent endeavour is a cultivation of that most excellent of all virtuous principles, the active principle of benevolence.

However, though veracity, as well as justice, is to be our rule of life; it must be added, otherwise a snare will be laid in the way of some plain men, that the use of common forms of speech generally understood, cannot be falsehood; and, in general that there can be no designed falsehood,

with-

without defigning to deceive. It must likewise be observed, that in numberless cases, a man may be under the strictest obligations to what he foresees will deceive, without his intending it. For it is impossible not to foresee, that the words and actions of men in different ranks and employments, and of different educations, will perpetually be mistaken by each other: and it cannot but be so, whilst they will judge with the utmost carelessiness, as they daily do, of what they are not, perhaps, enough informed to be competent judges of, even though they considered it with great attention.
