WYATT'S far Western Grown Muskmelons

415 Cantaloupe, Hearts of Gold

CULTURE: The Melon delights in warm rich soil with perfect drainage, and can never be grown to perfection under unfavorable conditions. Very good Melons, however, can be grown on almost any land if the trouble is taken to dig holes 2 feet square, filling them with a rich compost of woodsmold and cow-pen manure. Plant three-fourths to one inch deep from April to June in rows 6 feet apart, leaving not less than 4 feet between the hills, putting about 10 seeds to the hill. As insects are often very destructive, it is best not to thin at all until the plants are well started. When they are large enough to be safe, thin to two in a hill, and keep the ground mellow and free from weeds. Those who make a specialty of Muskmelons will find it advantageous to start the seed under protection of glass, so as to have the plants ready by the time seeds could be usually planted in the open ground.

Fruits are small with rather large seed cavity, nearly round, 2½ lbs.; with very faint grey ribs, and heavily covered with hard grey netting. Flesh thick, green and of excellent texture. 92 days. Prices: Pkt. 10c; oz. 20c; ¼ lb. 60c; lb. \$2.00; 2 lbs. \$3.75; 5 lbs. \$8.75, postpaid.

The crisp, tender flesh is deliciously sweet and free from "white heart." Pruned, the melons produced are slightly smaller than Tom Watson or Florida Giant. 86 to 90 days. Pkt. 10c; oz. 25c; ¼ lb. 90c; lb. \$3.00; 2 lbs. \$5.80; 5 lbs. \$14.25, postpaid.

PEPPERS — Hot and Sweet

One Ounce of Seed Produces About 1,000 Plants

CULTURE: Sow the seed in hotbed or box at a temperature of about 70 degrees on or about February 15. Transplant to the open ground when all danger of frost is over, in rows 3 to 5 feet apart and plants set 15 to 20 inches apart in the row—about 9,000 plants are required to set an acre. Cultivate frequently and keep free from weeds. A mixture of sheep manure and chicken manure is most desirable for distributing in the rows a week or ten days before the plants are set out. When the plants are well set and started at about 7 inches high, guano or any well-rotted manure hoed into the surface soil will also increase plant growth and fruiting qualities.

CANNING

CLASSIFICATION OF CANNING MATERIAL

ACID FOODS

Acid foods such as fruits, tomatoes, ripe pimentos, rhubarb and sauerkraut are processed at the boiling temperature of water (212 degrees F.) in a hot-water canner.

NONACID FOODS

Nonacid foods include all other vegetables such as beans, corn, peas, asparagus, squash and meats. Nonacid foods require long processing or processing at a high temperature (240 degrees to 250 degrees F. obtained by applying 10 to 15 pounds pressure) to prevent spoilage. A pressure cooker should be used when canning nonacid foods.

HOT WATER CANNER

The water bath is generally considered the most satisfactory canner for processing fruits, juices, tomatoes, pickles and preserves and may be used when canning vegetables. A wash boiler, lard tin or any vessel that has a tight cover and is large enough to hold the required number of cans or jars will make a satisfactory canner, provided it is fitted with a wooden rack or a piece of wire mesh to prevent jars from breaking by touching the bottom of canner.

STEAM PRESSURE CANNER

The steam pressure cooker should be used in processing all nonacid vegetables and meats because it is possible to attain a high temperature which is necessary to destroy certain organisms which cause spoilage in canned foods. A steam pressure cooker consists of a metal kettle with tightly-fitting lid which, when clamped in place, makes it possible to hold steam under pressure and obtain a correspondingly high temperature. The cover is equipped with safety valve, petcock and pressure gauge all of which should be kept in good repair or results will be disappointing.

When processing by any method fill jar to within 1 to 1/2 inch of top. Clean threads of jar then place a new, wet rubber flat on sealing shoulder. Screw cap tight, then loosen one-quarter inch. Do not lift jar by top. Do not invert at any time.

SELECTION AND PREPARATION OF FOOD

Only clean, sound, strictly fresh material is fit for canning. All fruits, vegetables and meats should be canned when at the most perfect stage for cooking. A good rule is "two hours from vine to can."

Process small, young pods 35 minutes and large ones 55 minutes at 10 pounds pressure or 3 hours in hot-water bath; then complete seal.

BEETS

Pack firmly into hot BALL Jars; then loosen by cutting through the pack several times with a sharp knife. Add 1 teaspoon salt to each quart. Cover with boiling water. Process 65 minutes at 15 pounds pressure or 3 1/2 hours in hot-water bath; then complete seal.

OKRA

Use small pods. Wash; remove stem ends without cutting into pods. Cover with boiling water. Cook from 1 to 3 minutes. Pack into hot BALL Jars. Add 1 teaspoon salt to each quart. Process 40 minutes at 10 pounds pressure or 2 1/2 hours in hot-water bath; then complete seal. Okra which is to be used for soup should be sliced before precooking.

PEAS—GREEN

Peas should be freshly gathered and green throughout. Wash pods. Drain. Shell. Grade for size. Rinse. Cover with boiling water. Boil small peas 3 minutes; large ones 5 minutes. Pour into hot BALL Jars. Add 1 teaspoon salt to each quart. VEGETABLE PLANTING CALENDAR

Many otherwise successful gardeners lose months of valuable production because of a failure to realize the cold hardness of a number of the most popular and productive vegetables.

By successive plantings beet, broccoli, cabbage, carrot, chard, kale, mustard, onion, parsley, radish, spinach and turnip (salad or root) can be kept in production, out-of-doors and without protection winter or summer, every day in the year in this isothermal zone.

The planting information shown in the chart on this page is the result of careful preparation and years of actual gardening experience. Planting dates shown for tender varieties are

based on the average U. S. Weather Bureau records of the last killing frost in the spring and the first killing frost in the fall in this zone, for the past 50 years.

Throughout our catalog we have endeavored to give the approximate number of days to maturity for all varieties. This information should be helpful, especially in determining the latest safe dates to plant tender varieties in the summer or fall, in order to make a crop before frost.

Soil conditions permitting, we recommend planting on or immediately after the average date of the last frost in the spring, otherwise spring rains may delay planting days or weeks.

"TESTED SEEDS"

The term "tested seeds" as used in this catalogue, and in all of our advertising means that every bag or package of seeds purchased at Wyatt's is supplied from a lot that has been carefully tested by the North Carolina Seed Testing Laboratory and the seeds are known to grow. Every lot of seeds reaching our warehouse is sampled and tested before the seeds are moved into our store for packaging or for sale in bulk. This accounts for the fact that "Wyatt's Tested Seeds" are more and more in demand in North Carolina and in the South.

Plant Wyatt's Tested Seeds and be sure of success.

CULTURE

"Glads" are the most popular and easily grown of all summer-flowering corms (not true bulbs).

Soil requirements are not very exacting. Plant large corms 6" or more apart 4" to 6" deep, smaller ones accordingly, being governed by whether the soil is light or heavy. Plantings made at intervals of two to three weeks beginning in early April and continued until early July should flower from the latter part of June until frost. Good fertilizers include cow and sheep manures. Apply two to three times as a side dressing during the growing season before flowering. Fertilizers should not come in contact with corms or foliage. Watering during dry seasons will give amazing results.

Our stock is Michigan grown, disease and thrip free.

1809 Morning Glory, Heavenly Blue

MORNING GLORIES

IPOMEAS. In growing Ipomeas (Morning Glories and Moonflowers), never plant until the soil is thoroughly warm. To aid germination of particularly hard-seeded varieties, filing a small notch at the top of the seed will help considerably. Always select the driest, sandiest part of the garden and sow where the plants are to flower as the Ipomeas resent transplanting. Plants should be kept on the dry side in order to induce early and abundant flowering with a rather sparse growth of foliage. Heavy watering will stimulate foliage growth at the expense of flowers. A poor soil is preferable to a rich one and fertilizer should not be used as this will promote heavy foliage which will hide the flowers.

Ⓜ 1805 Pearly Gates It is exceptionally free flowering with large fleecy pure white flowers making a heavy cascade of flowers on fence or trellis. One of the earliest bloomers. Pearly Gates received Special Mention in the 1942 ALL-AMERICA Selections. Pkt. 10c; ¼ oz. 50c.

Ⓜ 1808 Scarlett O'Hara This introduction brings us an entirely new color in this popular garden flower, rich dark wine red or deep rosy crimson. While the flowers are not quite so large as the Heavenly Blue Morning Glories they are of good size, 3 to 4 inches in diameter freely produced on fast growing vines that bloom 65 to 70 days after seeds are sown. The dark green foliage does not make a heavy growth, leaving the plants graceful in appearance. Easiest culture. Pkt. 10c; ¼ oz. 40c.

1809 HEAVENLY BLUE. A graceful vine of extremely quick growth producing a great number of exquisitely formed deep clear blue petunia-like flowers. Ideal for covering stumps or other unsightly objects. Pkt. 10c; ¼ oz. 35c; oz. \$1.00.

WYATT'S SUPERB PETUNIAS

Sow the small seeds in a warm, sunny, open place outdoors, thinning to 15 inches apart, or in frames for transplanting. Scatter seeds thinly, barely cover and firm soil over them; water seedlings with a fine spray to prevent drying out. The weakest looking seedlings usually produce the finest flowers, so save the weak plants for transplanting. Seed of the double and fringed sorts should be pressed into a shallow pot of sifted soil and covered with only a sprinkling of sand. The pot should be watered from below by placing it in water. Never allow to become too dry nor too moist.

Their erect habit renders the Bedding Petunias best for beds, borders, etc.

1911 Martha Washington

Silver Medal winner in the 1935 All-America selections. While this excellent petunia is not so recent as some, it is deserving of prominent space in every garden. Its growth is only 8 to 10 inches high, the plants producing a ball effect. The very large flowers are ruffled or frilled. The unusual coloring includes blush pink at the frilled edge, changing through orchid to wine red toward the center and into dark violet at the throat. Pkt. 25c.

1913 Glamour A.A.S. 1942.

Truly one of the loveliest Petunias we have ever grown. The flowers range from 4 to 5 inches across; they are artistically waved and ruffled, and the color is a beautiful salmon rose with golden veining on the white throat. 1909 **Burgundy** Burgundy is one of those rugged individualists of the garden, a strong growing type, with very showy flowers in a shade of deep red which is rather difficult to combine with other colors. Since, however, its own color is so showy in itself, it is well worth growing as an accent or specimen group. Pkt. 25c; 2 pkts. 40c.

1921 **Elk's Pride** Magnificent large velvety, deep purple blooms of exceptional beauty. Pkt. 25c; 3 pkts. 60c.

Pansy

 1946 Phlox, Salmon Glory

GIANT PANSIES

1869 WYATT'S NEW SUPER GIANT MIXED. The immense flowers of this new strain often produce flowers double the size of the ordinary varieties. Wyatt's Super Giant Pansies are borne in profusion on large vigorous plants supporting long strong stems. The rich coloring and great size of the flowers in addition to its prolonged blooming season will make this new variety a garden favorite and a sure prize winner wherever exhibited. Pkt. 50c; 3 pkts. \$1.25.

1946 Salmon Glory

Enormous soft but rich salmon-pink florets, with wide creamy white eyes, composing large umbels. The 10-inch plants are bushy and erect and with the exquisite color of the flowers the effect is most pleasing. Pkt. 25c; 2 pkts. 40c.

SALVIA

Salvias give a very showy display with their sprays of brilliant flowers rising above the green foliage. They form bushy plants and bloom continuously from mid-summer until late frost. Sow seed after trees are in full leaf and the ground is warm, or may be started earlier in boxes in sunny windows, and transplanted as soon as the soil is warm.

2046 Scabiosa, Blue Moon

SCABIOSA

While the annual Scabiosas will bloom during the summer, they do so much better in the early spring than during the hot summer days, that every effort should be made to start the seed in the early fall in warm sections, or in cold frames in early spring in the more northerly sections. In warm sections, such as Southern California, plants will winter over perfectly well and produce extremely early flowers the second year. Scabiosas enjoy full sun and will thrive in any good garden soil.

2046 Blue Moon A strikingly beautiful Scabiosa, as different from the existent Scabiosa varieties as Double Nasturtiums are different from the old single type. BLUE MOON produces large, fluffy, double flowers composed entirely of broad, heavy, wavy petals. Because of this complete doubleness the flowers are extremely large. The color is deep rich lavender blue. The plants grow 3 to 4 feet. BLUE MOON received Honorable Mention in the 1939 All-America Selections. Pkt. 10c; ¼ oz. 50c.

WYATT'S ZINNIAS

We are happy to offer this year, seeds from the very finest Zinnias cultivated. Flowers from the fields where Wyatt's seeds are selected have been awarded gold medals for distinction in size and color since 1926. Wyatt's pure strain of Zinnias come direct from the originator who has exhibited all over the world. Each year Wyatt's Zinnias produce prize winning flowers for flower growers all over the South. Get your seeds from this pure strain and raise the prize winning Zinnias in your community.

CULTURE. Sow seeds indoors in March or April or out of doors after ground is warm. Thin out or transplant to 1 to 2 feet apart when plants are 3 to 4 inches high. Fertilize heavily and pinch out first bud when it first forms in the top of the plants. Wyatt's Zinnias grow 3 to 5 feet high.

WYATT'S GIANTS OF CALIFORNIA DOUBLE ZINNIAS

The Giants of California type of Zinnias differ from the Dahlia Flowering group only in that they are different in form. Both types produce immense, double flowers in almost every color and shade. Invaluable for showy beds or borders outside or for cut flowers. Zinnias can be kept in constant bloom by a succession of plantings.

BRIEF CULTURAL NOTES

ZINNIAS: Zinnias are warm weather loving plants and should never be sown until the soil has thoroughly warmed up and all danger of any frost has passed. For best results, especially with the smaller flowered, early blooming varieties, we recommend sowing the seed where the plants are to flower. The taller growing, large flowered sorts can safely be transplanted, although they also will make a more robust growth and will produce more flowers if they can be sown where the plants are to bloom, and then when the seedlings are 3" or 4" tall, thinned to the proper distance. To induce a thrifty, heavy root system, irrigate your plants rather than sprinkling. Dig a little trench alongside the row and let the water run slowly for several hours so it will seep down deep into the ground and make the food in the soil available for the plant throughout the mass of feeding roots. Always cultivate after each irrigation to conserve moisture. By this method you will have to water Zinnias only once every two weeks or so, whereas if the ground is merely sprinkled, you will have to repeat the sprinkling every other day or so. Irrigation not only gives a stronger, healthier plant, but also saves on your water bill.

FIELD SEEDS

F97 Alfalfa While Alfalfa is a relatively expensive crop, the first cutting usually returns about double the cost of seeds, lime, fertilizer and planting. A good method is to lime the land and plant an annual legume crop that can be thoroughly disked, not turned in preparing the alfalfa seed bed. Use 20 to 35 pounds (not more) borax per acre and drill 25 to 40 pounds of thoroughly inoculated seeds per acre. Roll or culti-pack after seeding. At seeding time use 500-700 pounds 2-12-6 and 8-10 tons barnyard manure if available and not weed infested. Apply 400 pounds 0-12-12 annually thereafter. Always leave the alfalfa stand 6 inches tall or more for winter since any closer cutting invariably results in severe damage. If your stand of alfalfa becomes thin or weak sow 3 to 5 lbs. Orchard grass per acre to help control weeds and increase production. We offer 99½ per cent pure or better seeds, germinating 90 per cent or more, free of noxious weeds as follows: Lb. 70c; 4 lbs. \$2.30, postpaid. Not prepaid, 5 to 159 lbs. at 52½c lb.; bag lots (160 lbs.) or more at 50½c lb. **BORAX.** Prices: 25 lb. bag \$2.00; 100 lb. bag \$6.00.

F86 Alsike Clover One of the best for mixing with timothy; it is perfectly hardy in every climate. Sow early in the spring or late summer. Sow 10 to 15 lbs. per acre alone, or 8 lbs. per acre with timothy. Prices: Lb. 65c; 4 lbs. \$2.05, postpaid. Not prepaid, 5 to 159 lbs. at 45½c lb.; bag lots (160 lbs.) or more at 43½c lb.

F85 Burr Clover (in the burr) An annual winter legume, coming from seed each year, and furnishes grazing during the winter. If allowed to go to seed, it will reseed the ground for another winter's grazing. Sow Burr clover at the rate of 40 to 60 pounds in the burr to the acre. Unable to supply this Spring.

F83 Crimson Clover Should be sown from August to October. When sown by itself, 25 to 30 pounds are required to the acre; sown with grain or vetches, 15 pounds would be sufficient. Write for prices.

F82 Red Clover A valuable farm crop in northern part of the Cotton Belt. Equally good for pasture, hay or soil improvement. Even the first crop makes rich feed and is most valuable for hay. Sow in fall or spring. September and March being the best months. 15 lbs. per acre. Write for prices.

F95 Sericea Lespedeza Scarified and recleaned. This is the perennial lespedeza being grown so largely over the south. Its greatest asset is that it grows on the poorest soils without fertilizer or lime and while it steadily improves the land, it produces an abundance of nutritious hay if cut when tender. Prices: Lb. 45c; 5 lbs. \$1.85, postpaid. Not prepaid, 10 lbs. \$3.20; 50 lbs. \$15.50; 100 lbs. or more at 30c lb.

F87 White Blossom Sweet Clover Adapted to a wide variety of soils; is used for pasture, for forage, for ensilage, for bees, for soil improvement. The deep roots break up, aerate and drain stiff subsoils and add humus. Spring sowings will yield a crop the following fall and two crops the following year. The first season it grows 1½ to 2½ feet high, but if cut when 6 inches high it stools out and makes a more tender growth for grazing. Sow 20 pounds per acre. Prices: Lb. 45c; 4 lbs. \$1.15, postpaid. Not prepaid, 5 to 159 lbs. at 22c lb.; bag lots (160 lbs.) or more at 20c lb.

F93 Lespedeza, Kobe

F97 Alfalfa

F80 White Dutch Clover Because of its spreading habit and persistent year 'round growth White Dutch is invaluable for lawn and pasture use. It grows in all soils and will grow both in the shade and open areas. Like other clovers White Dutch enriches the soil while furnishing nutritious grazing. Sow 6 to 8 pounds per acre alone or 2 to 3 pounds with other clovers or grasses. Prices: Lb. \$1.35; 5 lbs. \$5.85, postpaid. Not prepaid, 10 lbs. \$11.00; 25 lbs. \$26.25; 100 lbs. or more at \$1.00 lb.

F89 Ladino Clover A perennial clover of exceptional merit for pastures, especially on moist, fertile land. Its popularity rests mainly upon its ability to recover rapidly from grazing or clipping and because of its leafy and succulent rather than stemmy growth. A complete recovery after grazing often takes place in two weeks. Its growing season is as long as that of any other legume. Like all clovers, Ladino succeeds best on well limed, fertile and somewhat moist land. Sow 5 to 6 pounds per acre alone or 1 to 3 pounds in mixtures. Prices: Lb. \$3.00; 5 lbs. \$14.50, postpaid. Not prepaid, 10 lbs. \$28.50; 25 lbs. \$68.75; 100 lbs. or more at \$2.50 lb.

F93 Kobe Lespedeza A variety particularly adapted to lowlands. Common. The leaves and stems are slightly coarser making a heavier hay crop. This variety is being highly recommended by the N. C. Experiment Stations for all but the mountainous regions of North Carolina, South Carolina and Virginia. Sow 30 to 40 lbs. per acre. Prices: 100 lb. bag lots 16c lb. Write for quantity prices.

F92 Korean Lespedeza Korean Lespedeza will grow on any soil, wet or dry, rich or poor, sour or sweet. Unexcelled for hay crop since it will produce from 2 to 4 tons of good hay per acre on a good thick even stand. It is almost equal to alfalfa in feeding value, and compares favorably in fineness, palatability and protein content. A good stand will make one ton of hay per acre for each 4 to 5 inches above cutter bar. The hay is easier to cure and handle than soy beans, red clover, or alfalfa. When cutting for hay cut in August or early September. If hay crop is to reseed the land, hay must be either early and high enough for stubble to make sufficient growth to produce seed; or wait until seed have formed on bottom branches, which seed shatters to the ground for reseeding. Korean Lespedeza is earlier than other lespedezas, this insures harvest before fall rains and early frost and gives time for seed bed preparation for small grain that fall. If a good stand is expected the first year sow from 25 to 30 pounds of seed per acre. Prices: 100 lb. bag lots at 10½c lb. Write for quantity prices.

F91 Common Lespedeza

It grows on galled hillsides and on all soils, even on the poorest, and being a legume improves the soil for later crops. Its abundant long taproots and laterals when decayed, open up the subsoil and leave in it great quantities of nitrogenous matter. Once started it soon spreads and takes possession. Sown on old pastures, it will add very materially to the value of the pasture. Sow 25 to 30 lbs. per acre. Write for prices.

Sow at the rate of 8 to 10 lbs. to the acre for pasture; 25 to 40 lbs. for lawns and golf courses. Plant from March until June. F73 Sudan Grass

A quick growing heavy yielding summer hay crop well liked by stock. Strongly drought-resistant. Sow it after the ground becomes thoroughly warm, either broadcast or in rows two feet apart. Sudan grass may be profitably grown with cowpeas and soybeans, as being of erect growth it supports the pea vines and makes the cutting easier and allows them to cure more quickly. Almost any soil, from heavy clay to light sand, will grow Sudan grass. Sow 5 to 6 lbs. to the acre in 2-foot rows; 20 to 25 lbs. broadcast. Prices: Lb. 25c; 5 lbs. 85c, postpaid. Not prepaid, 10 lbs. \$1.30; 25 lbs. \$3.00; 100 lbs. or more at 11½c lb.

F74 Tift Sudan

Tift Sudan grows 4 to 8 feet, branches or leaf out to a greater degree, and is much more resistant to the many leaf and stem diseases than the common variety. This disease resistance and the fact that it recovers faster from cutting and grows over a longer period makes for a much more profitable crop. Prices: Lb. 35c; 5 lbs. \$1.25, postpaid. Not prepaid, 10 lbs. \$2.00; 25 lbs. \$4.75; 100 lbs. or more at 18½c lb.

In experimental plantings where all three Sudans are planted cattle keep the Sweet Sudan grazed to the ground and graze the others only when there is none of the Sweet Sudan to graze. An outstanding summer temporary grazing and hay crop. Plant and handle as other Sudans. Prices: Lb. 40c; 2 lbs. 70c; 5 lbs. \$1.35, postpaid. Starts growth very early in the spring and continues well into the winter. It is very easily handled and cured for hay. It is a long-lived grass, lasting with good treatment about thirty or forty years; yet it is easily exterminated if the land is wanted for other purposes. Sow 20 to 25 lbs. per acre alone or 12 to 15 with other grasses and clovers. Cut when in bloom. Prices: Lb. 60c; 5 lbs. \$2.35, postpaid. Not prepaid, 10 lbs. \$4.20; 25 lbs. \$10.25; 100 lbs. or more at 40c lb.

CROTALARIA

F304 GIANT STRIATA. The highest yielding Crotalaria adapted to all soils and making a tremendous tonnage of green manure on the poorest dry or wet land. Only 8 to 10 pounds of seeds are required per acre and may be sown in small grains at the time soda is applied if seeding is followed with harrow or weeder. Very deep rooting. Prices: Lb. 40c; 5 lbs. \$1.60, postpaid. Not prepaid, 10 lbs. \$2.60; 25 lbs. \$6.25; 100 lbs. or more at 24c lb.

F301 LATE SPECTABILIS. The great new cover crop for turning under. Requires no fertilization, no liming, and may be grown without cultivation. Broadcasting may be done just before the last cultivation of cotton or corn, allowing a main crop and building up your soil in all the same season. For maximum growth, however, broadcast 15 to 20 lbs. per acre on well prepared land when frost danger is past, harrowing in not over 2 inches.

F303 CAROLINA SPECTABILIS. An early maturing strain of the Spectabilis variety. This strain will mature seeds in the upper South, but does not make the growth that the late strain makes.

SOY BEANS

CULTURE: Soy beans may be planted either broadcast or in drills. They grow equally well on light and heavy soils, but on heavy soils they should not be planted more than 1 to 1½ inches deep except in dry season. On light sandy soils plant deeper, but not more than 3 inches. Plant in April, May or June. Such large seeded varieties as Mammoth Yellow require 1 bushel or more per acre, whereas Laredo small seeded kind only require 1 peck to the acre.

F146 Ogden This variety is worthy of consideration and comparison for several reasons. During recent years in the trials carried on by the North Carolina State College Experiment Stations it has ranked at or near the top in yield of beans, oil content of the beans, yield of hay and resistance to shattering. In addition Ogden is considerably earlier than most beans and is consequently better adapted to rotations with small grains. Seedings as late as June in the Wake County trials made a substantial production of hay. Average bean yield for 6 tests at scattered points in the state during 1943 was 27.8 bushels per acre. Plants are nicely branched and for that reason are more desirable for hay than the coarser growing types. Write for prices.

F150 Volstate A yellow seeded variety producing high yields of good oil beans. Plants are somewhat taller than Ogden and slightly less branched. For a hay crop or a crop that might be optional we would recommend Ogdens, but for a crop planted on light land and for combining we would recommend the Volstate owing to the height of the plant and the fact that the beans are somewhat bunched on the plant. Tennessee Certified Seeds (packed 2 bushels). Write for prices.

F151 Virginia It is about twenty days earlier than Mammoth Yellow. The vines make a fine growth, are filled with pods, stand about three feet high, are easy to cut and easy to cure. Prices: 2 bu. bag \$3.50 per bu.

F140 Wood's Yellow A strong upright growing plant producing a heavy crop of beans. This variety is suitable for sowing thick for hay, or planting alone or with corn for grazing. One of the best varieties for bean production and the beans are readily accepted at the crushing mills. Late maturing. Packed 2 Bushels. Prices: Bag lots \$3.50 per bu.

F147 Tokio A heavy producer of extra-large pods and beans. Packed 2 bushels. Prices: Bag lots \$3.75 per bu.

F142 Ototan Its late maturity is more than overcome by the abundant growth—five feet and more in long seasons—its fine stems and abundant foliage, and the fine texture of its hay. 1 peck to acre. Prices: 2 bu. bag \$9.00 per bu.

F143 Biloxi An upright variety, growing four to five feet high. A heavy yielder of beans; a fine bean for hogging down, for planting with corn or sorghum. The pods are less liable to pop than most varieties. Late in maturing. 1 bushel per acre. Write for prices.

F152 Laredo A bean of outstanding worth, particularly for making hay. In a six-year test it averaged 1½ tons to the acre. It is medium in maturity, is a good yielder of beans. 1 peck per acre. \$6.00 per bu.

STOCK PEAS

Owing to the present situation with respect to farm labor the supplies of peas, especially pure varieties, are extremely short.

F101 Brabham The seeds are smaller and do not require to be seeded as thickly as other kinds. It is disease-resistant, vigorous in growth, holds its foliage well, valuable for hay. Write for prices.

F109 Whippoorwill More largely grown than any other cowpea, probably because of its long vine, usually six feet long, and its large yield of both hay and peas. Write for prices.

F111 Black Very prolific, early to mature, makes a fine growth. Write for prices.

F103 Large Black-Eye The pods are long and well filled with large, pure white peas with a coal-black eye. Prices: ½ lb. 20c; 1b. 35c, postpaid.

F104 Early Small Black-Eye The seeds small, and of the most select eating qualities. Write for prices.

F122 Yellow Sugar Crowder Not only one of the earliest to mature, but is also one of the most prolific and best flavored table peas. Write for prices.

F106 Taylor or Gray Crowder A large speckled pea that has a large, long pod. Mature early. Write for prices.

F110 Clay Seeds medium sized and cream or clay colored. Vines grow long and leafy. Seed matures medium late. Write for prices.

F107 Iron This variety is noted for its disease-resistant qualities. Write for prices.

F112 Gallavant, Rice or Lady The peas are the smallest, but the sweetest and best flavored of all the edible cowpeas.

Write for Prices.

F114 Brown Eyed Six Weeks One of our most popular peas for table use. Peas are medium small, round, creamy-white with brown eye; very prolific and delicious. Prices: ½ lb. 25c; 1b. 40c, postpaid.

F304 Crotalaria, Giant Striata

The above pictured crop of Wyatt's Giant Striata Crotalaria, grown on the farm of Mr. J. L. Long, Garner, Wake County, N. C., was planted to smother out wire grass. This is the first crop of Crotalaria that has been on this land and it averaged 5½ ft. tall producing approximately 35 tons green manure per acre; the equivalent of 700 pounds of soda, without taking into consideration the tremendous value of the humus. Crotalaria is one of the cheapest crops to seed and can be seeded over small grain crops when they are top dressed in the spring, followed with light cultivation or broadcast in corn when laid-by. This legume is the greatest soil building crop because of its tonnage.

VELVET BEANS

F211 EARLY RUNNING SPECKLED. An extra early Velvet Bean that is largely planted throughout the South, and extremely popular. It is one of the quickest-growing and earliest maturing of the Velvet Beans. You can plant these beans during May and June, and they will mature in time for fall planting. Write for prices.

F212 OSCEOLA. The Osceola has given excellent results as a forage crop. We have found it to make fully as much growth of vine as the Early Speckled or 90-Day, with pods larger. Write for prices.

SORGHUM - MILLET - MILO - TEOSINTE

F296 New Dwarf Milo

SYRUP AND FORAGE SORGHUMS

CULTURE: Plant when the ground becomes thoroughly warm, about two weeks after corn planting, on a rich, well drained clay loam, in rows 3½ to 4 feet apart, and cultivate as you would corn. After the flowering stage is passed, but not earlier, it may be pastured or cut for fodder. Sorghum may be grown with cowpeas and soy beans either in rows or broadcast. Sown alone, 50 lbs. per acre. In rows 6 to 8 lbs. per acre.

F192 Early Amber If planted early it will yield two cuttings a season, stooling out thicker each time it is cut. Grown with cowpeas or soy beans the quality of the hay is improved. The proportions recommended are 15 lbs. Early Amber Cane, ½ bushel of soy beans and 1 bushel cowpeas to the acre broadcast. Grows 10 to 12 feet high. Sow broadcast 1 to 1½ bushels to the acre; 5 to 6 lbs. plants an acre in 3½- to 4-foot rows. Prices: Lb. 25c; 5 lbs. 85c, postpaid. Not prepaid, 10 lbs. \$1.30; 25 lbs. \$3.00; 100 lbs. or more at 11c lb.

F193 Early Orange With taller and heavier stalks than the Amber, although not as early or as popular. Prices: Lb. 25c; 5 lbs. 85c, postpaid. Not prepaid, 10 lbs. \$1.30; 25 lbs. \$3.00; 100 lbs. or more at 11c lb.

F196 Texas Seeded Ribbon Cane Highly prized everywhere by syrup makers, for its rank and vigorous growth and heavy juicy stalk, which produces a large yield of syrup. Grows 10 to 12 feet high and produces dark, heavy, oval-shaped pendant heads. It matures late but makes a heavy growth of green foliage for fodder and ensilage. Prices: Lb. 35c; 5 lbs. \$1.15, postpaid. Not prepaid, 10 lbs. \$1.70; 25 lbs. \$4.00; 100 lbs. or more at 15c lb.

F195 Atlas Sorgo A more recent and much improved sorghum for syrup or ensilage. This is a distinct improvement over the older varieties both in yield and quality. As a fodder or ensilage crop Atlas is rapidly replacing Orange and Amber. Prices: Lb. 30c; 5 lbs. 80c, postpaid. Not prepaid, 10 lbs. \$1.00; 25 lbs. \$2.25; 100 lbs. or more at 8½c lb.

WYATT'S RECLEANED MILLETS

F185 Golden Millet German or Golden Millet makes a quickly grown, easily cured and large yielding, nutritious hay crop. Relished by horses and cattle. Seed thickly, not less than 50 lbs. to the acre, any time from the middle of April until the end of July. It's a quick crop, maturing in six to eight weeks. Cut while in bloom, before the seed hardens in the head. Growing millet with an early variety of cowpeas, like Whippoorwill, is becoming quite popular, 40 lbs. of millet being sown with a bushel of cowpeas. The crop should be cut when the millet is coming into bloom regardless of the maturity of the cowpeas, for at that stage the feeding value of the millet hay is the highest. Prices: Lb. 30c; 5 lbs. 80c, postpaid. Not prepaid, 10 lbs. \$1.25; 25 lbs. \$2.75; 100 lbs. or more at 10c lb.

F186 Pearl, or Cat-Tail Millet One of the best and most nutritious of the continuous cutting green forage plants. Grows 10 to 12 feet high, but cutting can commence when it has attained the height of 3 to 4 feet, when it will stool out enormously and make rapid growth; can be cut in this way three to four times during the season. It does well even on poor land, and surprisingly well in dry seasons. All kinds of stock eat it greedily. Should not be planted until the ground is thoroughly warmed. Sow 6 to 8 lbs. to the acre in rows 3 feet apart. Prices: Lb. 30c; 2 lbs. 50c; 5 lbs. \$1.00, postpaid. Not prepaid, 10 lbs. \$1.50; 25 lbs. \$3.50; 100 lbs. or more at 13c lb.

F187 Japanese Millet (Billion Dollar Grass.) Also known as Barnyard Millet. Distinct from other millets; grown 4 to 6 feet high, yielding an enormous crop. Sow in May, June or July, 20 lbs. to the acre broadcast; or sow in 15-inch drills and cultivate until it is 18 inches high. When green, feed a moderate quantity at first, gradually increasing the quantity as the animals become accustomed to it. Write for prices.

BROOM CORN

F294 Broom Corn (Evergreen.) A fine crop for dry land farming where there is a market for the straw for brooms. It has practically no food value. Plant in 3½-foot rows, thinning out to stand 8 to 10 inches in the row and cultivate like corn, 6 lbs. per acre. Prices: Lb. 35c; 5 lbs. \$1.25, postpaid. Not prepaid, 10 lbs. \$2.00; 25 lbs. \$4.75; 100 lbs. or more at 18c lb.

TEOSINTE

F289 Teosinte Cut when 4 or 5 feet high, it makes an excellent fodder, starts immediately into growth again, and will give several more cuttings. If sufficient quantity is planted a continuous supply of nutritious green feed can be had daily right up to frost. Plant in May or June in drills 3½ to 4 feet apart; 3 to 4 lbs. plants an acre. Prices: Lb. \$1.10; 5 lbs. \$5.00, postpaid.

COMBINE MILO FOR GRAIN

F296 New Dwarf Milo A superior plant for growing with peas for hay because of its low habit of growth. For grain it out yields corn and brings a higher price. Dry grain is ready in 110 to 120 days. Ready to cut for hay in 60 days. Plant 10 lbs. per acre in rows; broadcast 25 lbs. with peas or 50 lbs. alone. Prices: Lb. 25c; 5 lbs. 65c, postpaid. Not prepaid, 10 lbs. 90c; 25 lbs. \$2.00; 100 lbs. or more at 7c lb.

HEGARI

F197 Hegari Recognized as the most valuable and widely adapted member of the sorghum family, and well suited to conditions in the Southern states. Hegari has great forage value for two reasons. First, because its high sugar content makes stalks and leaves highly palatable to livestock, and second, it yields heavily with its many broad leaves and substantial stalks. As an ensilage crop many acres are planted to Hegari every year in the South. As a pasture crop, in thickly seeded plantings it pastures well and also makes good hay. Its largest use is in bundle feeding and it can be left shocked in the field until fed, or as is coming into more general practice, it is ground head, stalks and leaves through a hammer mill. Hegari makes a good substitute crop for corn, which it outyields on light soils, since it can be planted much later. Prices: Lb. 25c; 5 lbs. 75c, postpaid. Not prepaid, 10 lbs. \$1.00; 25 lbs. \$2.25; 100 lbs. or more at 8c lb.

POTATOES - PEANUTS - RAPE

SEED POTATOES

Potatoes are forwarded by express or freight, as directed, purchaser paying charges. One peck will plant about 100 feet of row, or 100 hills; 10 to 12 bushels required for an acre.

SEQUOIA, N. C. Certified A high yielding vigorous variety developed by the North Carolina Agricultural Experiment Station in cooperation with the U. S. Department of Agriculture. This variety is highly resistant to leaf hoppers and flea beetles. Due to its vigorous growth habits set pieces should be spaced 10 inches in the row and the usual fertilizer application reduced on good soils. Write for prices.

IRISH COBBLER, Maine Certified or Select A most excellent extra-early variety producing plump, handsome tubers of good size and excellent quality. The vines make short, upright growth, so that the hills may be only a short distance apart. The flesh is pure white with a clean, smooth, white skin with strong, well developed eyes slightly indented. In quality they are excellent, always cooking dry and mealy. Write for prices.

RED WARBA, Maine Grown This good red variety replaces the popular Red Bliss with us. Admirers of the Bliss qualities will not be disappointed with Red Warba which is distinctly superior in quality and yield. The potatoes are slightly less round and otherwise have the bright pink skin and attractive appearance so well known to the users of the Red Bliss variety. Write for prices.

PEANUTS

CULTURE: Soils: Well drained sandy loam, properly limed, is best. Varieties: Virginia Bunch and Jumbo Runners in the old belt of North Carolina and Virginia. Spanish, North Carolina Runner or Virginia Bunch in the Southern Coastal plains and counties bordering the Piedmont using Spanish, Tennessee Red, or North Carolina Runner if in doubt as to the ability of the soil to make the larger varieties. In the Piedmont the Spanish variety is recommended. Smaller varieties produce more oil per ton of nuts, however, on adapted soils the larger nuts produce more oil per acre. Use 35 lbs. small varieties; 45 lbs. large varieties (shelled) per acre. Buy 1-3 more nuts by weight in the shell for the desired amount of shelled nuts. Average of 22 tests conducted in North Carolina in 1941 showed \$16.43 per acre increase return where peanuts were dusted 4 times with sulphur-copper dust, after deducting the cost of dusting.

F221 Valencia Yields 600 to 700 pounds in shells. Adapted to a variety of soils and makes few "pops." Straight smooth pods contain 3 or 4 large kernels of finest quality. An early bunch variety. Prices: Lb. 40c; 5 lbs. \$1.70, postpaid. Not prepaid, 10 lbs. \$2.60; 25 lbs. \$6.25; 100 lbs. or more at 24c lb.

F223 Tennessee Red Yield about the same as North Carolina Runner. Nuts larger, pods well filled with 3 or 4 kernels of excellent quality. Prices: Lb. 40c; 5 lbs. \$1.70, postpaid. Not prepaid, 10 lbs. \$2.60; 25 lbs. \$6.25; 100 lbs. or more at 24c lb.

F224 Improved Spanish Yields 1,000 to 1,200 lbs. per acre in shells. This is the earliest of all peanuts, a bunch type, producing pods tightly filled with 2 kernels each. Prices: Lb. 40c; 5 lbs. \$1.70, postpaid. Not prepaid, 10 lbs. \$2.60; 25 lbs. \$6.25; 100 lbs. or more at 24c lb.

F225 Virginia Bunch Yields 1,500 to 2,500 pounds in shells. Produces largest nuts of bunch type and highest yielding of all varieties since it can be planted closer in rows. Prices: Lb. 40c; 5 lbs. \$1.70, postpaid. Not prepaid, 10 lbs. \$2.60; 25 lbs. \$6.25; 100 lbs. or more at 24c lb.

OATS AND BARLEY

F176 Wyatt's Fulghum Oats

We consider this variety most satisfactory for spring planting. It is a heavy yielder and rust-proof, has plump full heads that mature early. Its productiveness, probably more than any of its other good qualities, has contributed to its wide popularity. They stool out splendidly, have large, full heads, fine, plump grains and strong straw that stands about three feet high. Write for prices.

F174 Columbia Oats Favorite for growing on the light sandy soils of the coast sections of the South Atlantic States. It makes a good growth of straw, is an abundant yielder of bright, clean heavy grain, is free from rust, and what is of equal importance, when plantings are late it is of early maturity. Early plantings can be cut in time to put the same land in corn, peanuts, cowpeas, millet or other summer crops. Prices: 8 lbs. (peck) 50c; 32 lbs. (bu.) \$1.50; 3 bu. bag \$4.20; 5 bag lots or more at \$1.35 bu.

WYATT'S TOBACCO SEEDS

F254 Tobacco, Oxford 26, Granville Wilt Resistant

Our Oxford 26 tobacco seeds are produced on soils known to contain the wilt spores and the crop is interplanted every tenth row with a standard variety. Note the effect of the wilt on the non-resistant variety in the center row in the picture above, and the uniform stand of Oxford 26 in the next rows.

F254 Oxford 26 Certified This is the new variety, resistant to Granville wilt, offered for the first time for planting in 1945. Granville Wilt is widespread in Granville, Wake, Durham, Pitt, Carteret, and Craven counties but is present on at least a few farms in nearly every North Carolina county where flue-cured tobacco is grown. In general appearance Granville wilt is similar to other diseases that attack the crop, but in mid-summer can be easily distinguished by the presence of dark streaks which extend for 18 or more inches above the soil in the woody part of the stem. Oxford 26 is recommended only for fields known to be contaminated with Granville wilt. This strain is highly resistant, but for best results should be grown on soil rotated to other crops for 1 to 2 years.

By comparison this variety will not produce the weight of leaf per acre that can be expected from 400 or 401, but the yield would compare favorably with such standard varieties as Gold Dollar, White Stemmed Orinoco or Cash. Because the leaves are spaced somewhat farther apart than on some varieties, it can be planted closer together in the row for increased yield. The quality compares favorably with other varieties. Our Oxford 26 is produced directly from seeds supplied by the Oxford Experiment Station where this variety was developed. Our seeds are chemically treated. Prices: Oz. \$2.00; 3 ozs. \$5.25; lb. \$26.00, postpaid.

F279 Oxford No. 1 Resistant to Black Shank, a disease that attacks the larger roots and stalks, causing death rapidly. Oxford 1 is the least resistant but the best quality of the resistant varieties. For best results plant on soils that have been planted to crops other than tobacco for at least 2 years. Recommended only for fields where black shank is known to be present. Prices: Oz. \$1.00; 3 ozs. \$2.65; lb. \$13.00, postpaid.

PRATT'S DDT 25%

DILUTES WITH WATER

Pratt's 25% DDT has a wide range of use, from 1 to 4 dilution for fly control in farm buildings, to 1 to 400 for orchard and garden spraying.

ORCHARD SPRAYING. For the control of codling moth Pratt's 25% DDT has been found most effective. Add 2 pints Pratt's 25% DDT per 100 gallons of the cover sprays of arsenate of lead and fungicide.

For leaf roller, leaf hopper, gypsy moth, Japanese beetle, and even oriental peach moth, add 2 pints per 100 gallons to the regular spray at that time and repeat as necessary. Figure the residual effect of DDT at concentrations safe on foliage to last about 10 to 14 days.

As with any contact spray, do not apply DDT when bees are working, and do not apply to ripening fruits and vegetables. DDT is about one-half as toxic on foodstuffs as arsenate of lead, and while it is used at much weaker dilutions, precautions should be observed.

FLIES, MOSQUITOES, GNATS and FLEAS. For the treatment of barns, dairies, kennels, outside porches and screens, use 1 part Pratt's 25% DDT to 4 parts of water (5% solution). Spray walls, ceiling, and objects upon which the insects may alight with a thorough mist. This spray is not intended for treatment of finished interiors in homes. While it may last for 2 or 3 months in farm buildings, it should be repeated more often on objects subject to weathering, although Pratt's 25% DDT is dispersed in a comparatively insoluble form. Avoid spraying feeding troughs or contaminating foodstuffs. It is non-inflammable and does not create a fire hazard in the buildings sprayed. 1½ oz. bottle 45c; 8 ozs. \$1.15, postpaid. Not prepaid, oz. 35c; 8 ozs. \$1.00; qt. \$2.35.

HOW TO USE DILUTION TABLE

This Dilution Table indicates the quantities of any given spray material to add to a given quantity of water to give the desired dosage (strength) of spray.

All liquid or semi-liquid materials are proportioned directly on a liquid basis, i. e., 1 to 100 dilution indicates that one gallon of spray material should be diluted with water to make 100 gallons of diluted spray (or three tablespoonfuls to make one gallon of diluted spray).

Dry materials such as Lead Arsenate or "BORDO" are proportioned by mixing a given number of pounds of spray material with water to make each 100 gallons of diluted spray. To aid in mixing, the table shows the smaller quantities of dry materials in convenient household measuring units.

NOTE: When two or more spray materials are combined in one spray mixture the same water is used to dilute all the materials.

HOW TO ORDER. To avoid any delay, use the order blank. Orders are filled in turn, so book yours in advance, if possible. State second and third choice if you can use other breeds.

Straight orders of one kind are best. Do not order too many different kinds at one time. We do not always have chicks of every breed hatching and this may delay your order. Do not wait until a week before you are ready for the chicks and expect to receive them by return mail, for the wise poultryman has placed his order weeks in advance and is likely to be getting them the same day you want them.

FERTILIZERS

ADCO

ALUMINUM SULPHATE

Use 1 lb. to 25 sq. ft. to make soils acid for acid loving plants. Mountain Laurel, Rhododendrons, Azaleas, etc. Prices: Lb. 25c; 5 lbs. \$1.00, postpaid. Not prepaid, lb. 15c; 2 lbs. 25c; 5 lbs. 60c; 10 lbs. \$1.00.

PEAT MOSS

For new lawns 1 bale should be thoroughly pulverized and mixed in each 100 to 200 sq. ft. of lawn area. Nothing is so beneficial to establish lawns as a bale of peat mixed with 100 pounds of Sheep Manure applied to each 2,000 sq. ft. 3 or 4 times each summer. Peat should also be used liberally in gardens, flower beds and borders, and as a mulch for shrubbery, because of its capacity to hold moisture. \$2.75 per bale f.o.b. Raleigh.

VIGORO

Complete plant food

100-lb. bag \$4.00	10-lb. pkg. \$.85
50-lb. bag \$2.50	5-lb. pkg. \$.45

SHEEP MANURE

Best of all natural manures, highly concentrated, free from straw and rubbish, with all weed seeds killed. It puts new life into worn out soils.

For lawns use 6 to 10 lbs. to every 100 square feet. For vegetable or flower gardens use 10 to 15 lbs. to every 100 square feet. Prices: 100 lbs. \$3.30. Not prepaid.

TOBACCO DUST

Supplies organic potash and nitrogen. It will increase the value of any chemical fertilizer when used in equal parts. Price: 100 lb. bag \$2.50.

How to make
a BEAUTIFUL
LAWN

The first requisite for a lawn of any kind, be it permanent or merely temporary, is good soil. Good soil from a point of plant growth must have these three vital parts: Plant food, moisture, humus. Most of us are familiar with the first two of these but some of us are not so familiar with the third—humus. Humus is that part of an ideal soil that renders it porous and loamy. It prevents heavy soils from packing or baking and adds "body" to light or sandy soils, thereby increasing their moisture-holding capacity. Therefore, since plant foods must be in a liquid form before they are available to plants, humus is the most important of the three vital parts of an ideal soil. Heavy soils without humus are so tightly packed that they have no room for moisture. Loose sandy or light soils, while having great capacity for moisture, drain so rapidly that they

become very dry too often for healthy plant growth. And so we see then that humus added to heavy soil increases its capacity for moisture while preventing its packing or baking and when added to sandy or light soil increases its ability to retain moisture.

Wyatt's Peat Moss, listed on this page, is the finest type of humus available since it is perfectly pure, containing no weed seeds nor harmful bacteria and has a moisture capacity of 15 times its own weight. Where the area is too great to permit the use of commercial peat for humus we recommend successive plantings of cover crops for turning under, legumes preferred. Humus derived in this manner has the advantage of being much higher in plant food content than commercial peat. A third source for humus is through the use of animal manures. We do not recommend manures unless they are known to be thoroughly rotted and free of weed seeds and harmful bacteria. As the humus diminishes it must be replaced from a compost heap made of leaves

from trees or grass clippings or from some equally generous source, and scratched into the lawn from time to time. However, once the soil is well built up with humus and a constant supply for the future is provided the problem of growing a permanent lawn is solved.

After the soil has been thoroughly broken apply 4 lbs. of Vigoro per 100 sq. ft. Prepare a fine seed bed and allow to settle. The seeds may be sown, on the scarified surface, using 1 pound to each 200 square feet. After seeding the lawn should be rolled. Germination will be hastened if the surface is moistened with a very fine mist from the hose every day until the grass is up. When the lawn is established it should never be sprinkled, but instead soaked once a week.

Established lawns should be fed regularly. 100 lbs. Sheep Manure thoroughly mixed in 1 bale of peat should be applied as a top dressing to each 2,000 sq. ft. 3 to 4 times each summer followed by an application of 6 lbs. of bone meal per 100 sq. ft. each fall.

Wyatt's Lawn Grass Seed

A smooth green lawn is your home's greatest beauty asset. Deep, thorough preparation, proper fertilization and good seeds are the most important steps toward a successful lawn. Read what we have to say on page 64 (opposite), "How to Make a Beautiful Lawn," then select the mixture below, most suited to your needs. The results will please you.

Wyatt's Carolina LAWN GRASS MIXTURE

F-60. WYATT'S CAROLINA MIXTURE of lawn grass seeds is an improvement on all of the better mixtures offered heretofore at comparative prices. Our constant experiments have taught us just what grasses are best suited to the eastern and southern states. The finest seeds of these varieties are carefully re-cleaned and blended into our Carolina Mixture so as to give the very best results obtainable. Saw 5 lbs. per 1000 sq. ft. Prices: 1 to 4 lbs. 50c per lb.; 5 to 24 lbs. 40c per lb.; 25 to 99 lbs. 35c per lb.; 100 lbs. or more at 32c per lb., prepaid.

Wyatt's Colonial LAWN GRASS MIXTURE

F-58. WYATT'S COLONIAL MIXTURE. The continued demand for a mixture of the finer leaved grasses has led us to prepare this Colonial Mixture consisting largely of the best varieties of bents and fescues. While the price per pound is higher, only a fraction of the quantity required of other grasses is required of the **Colonial Mixture**, leaving very little, if any, difference in the total cost for seeding. Once the lawn is seeded to these grasses of vastly superior beauty, all other varieties will be discarded. Use 2 lbs. per 1000 sq. ft. Prices: 1 to 4 lbs. \$1.25 per lb.; 5 to 24 lbs. \$1.15 per lb.; 25 to 99 lbs. \$1.10 per lb.; 100 lbs. or more at \$1.05 per lb., prepaid.

Wyatt's Sunny South LAWN GRASS MIXTURE

F-59. WYATT'S SUNNY SOUTH MIXTURE. For lighter soils and soils that became extremely dry, and in locations subjected to extreme heat during the summer months **Wyatt's Sunny South Mixture** of lawn grasses is recommended. The grass varieties used on golf greens over the entire South predominate in this mixture. Only the purest stocks are used. Saw 5 lbs. per 1000 sq. ft. Prices: 1 to 4 lbs. 60c per lb.; 5 to 24 lbs. 55c per lb.; 25 to 99 lbs. 52c per lb.; 100 lbs. or more at 50c per lb., prepaid.

Wyatt's Shady Nook LAWN GRASS MIXTURE

F-61. WYATT'S SHADY NOOK LAWN GRASS. A carefully blended mixture of grasses best adapted to shaded situations. Use 5 lbs. per 1000 sq. ft. Where the soil is acid from poor drainage or drippings from trees, occasional application of agricultural lime should be made at the rate of 5 to 6 pounds per 100 sq. ft. Prices: 1 to 4 lbs. 60c per lb.; 5 to 24 lbs. 50c per lb.; 25 to 99 lbs. 45c per lb.; 100 lbs. or more at 40c per lb., prepaid.
