"In every penal institution of this kind [Atlanta penitentiary] there are two classes of prisoners—those who are responsive to reformatory treatment and those who are unresponsive to such treatment. . . .

"After giving this matter much consideration I believe that the best results will be obtained if all of the prisoners who are responsive to reformatory influences are maintained in one institution and all of those who are unresponsive to such influences are maintained in another institution, and I therefore respectfully recommend that the necessary separation of classes be made as soon as practicable."

Such easy separation of the sheep from the goats may contain a germ of truth concerning the modern theories of classification of prisoners, but it can hardly be called an adequate statement of the complexities of that classification.

On the whole, this record indicates capacity for growth, but contains no experience with self-governing prison groups. How far Mr. Moyer's adaptability, if possessed in the measure indicated, will carry him in grappling with the delicate and technical problems of self-government, remains to be seen.

The warden of Sing Sing has a larger task than the development of kind treatment and the extension of the honor system. He must open his mind to the progress of democracy among convicts. He must regard his prison population as a body politic, and while no one contends that all prisoners are mentally equipped to benefit from self-government, the warden of Sing Sing must accept the fostering of that experiment as the prime obligation that he bears to the people of the state. He must cease to think solely of the personal relations between him and individual convicts and he must think of the relations between one convict and another, between one convict and the whole group of convicts. He must prepare men for citizenship by letting them be citizens. So far as the physical conditions of the plant allow, he must provide opportunity for the free expression of will, capacity and judgment. He must make his institution a community and he must beget a community aim and consciousness.

This is the task that Mr. Moyer has before him at Sing Sing. In entering upon it this week, he has, if he can hold them, the services of a deputy whose retention may hold sound hope for the continuance of self-government and the realization of its highest usefulness. Mr. Derrick has had four years' successful experience in developing self-government at Lone reformatory in California. He came to Sing Sing in August, on leave of absence for a year, to try out the plan on a larger scale and with adult criminals. He has been promised a free hand under the new warden to continue his work. If he receives it, none will rejoice more fully than the friends of the movement already begun there.

III

But the progress of the self-government program at Sing Sing hangs on more than deputy or warden. It hangs on the policies of the state prison department and the state administration.

Mr. Carter, the state superintendent, has shown no real grasp of the self-government method. There is practically no difference, he has said, between it and the honor system as practiced at another state prison, that at Comstock, N. Y. It requires no deep study of penology to know that the one method involves only a personal relationship between

the warden and individual men, whereas the other binds all the prisoners together into a group-conscious community and aims to promote good citizenship by practicing it.

What, too, is to be thought of the well-grounded rumor that Charles F. Rattigan, warden of Auburn prison who helped Mr. Osborne found the Mutual Welfare League, is slated to be removed, and that George W. Benham, a former warden of Auburn, is to take his place? Mr. Benham is a Republican leader in Cayuga county, and Mr. Rattigan is a Democratic appointee.

Governor Whitman, too, has not been reassuring in his public utterances regarding the new reforms. Speaking before the American Prison Association in Buffalo recently he gave as one reason for his belief that he knew something about how prisoners ought to be treated the fact that he had, directly or indirectly, caused thousands of criminals to be sent to jail, and he added that "in swinging away from the brutal it is not necessary to swing into the maudlin. An extreme of punishment is no less dangerous than an extreme of mollycoddling.

It is possible to think of the rights of the prisoner without forgetting the rights of society." And again he coupled his assurance that he believed in prison reform with the comment that "the solid rock of any sound system of prison reform is iron discipline."

Sentences like these, coming from the governor of New York at a time when less informed people are applying the same words to the Sing Sing experiment, give little cause for optimism. It is not too much to say that Governor Whitman holds the immediate future of prison self-government in his hands. What happens at Sing Sing will affect other states and other countries. The question in which the people of New York are vitally interested is whether he and his state superintendent of prisons possess the knowledge and sympathy necessary to give that experiment freedom to prove its usefulness. The present appointment is at best a missed opportunity to give the people of the state a guarantee that that will be done. Rather it is a challenge to public vigilance.

Spokesmen of Submerged Peoples

The Conference of Oppressed and Dependent Nationalities

By Bruno Lasker

A CONFERENCE was held in Washington on December 10-11 "to develop through the American representatives of the oppressed or dependent nationalities an American international policy with reference to these nationalities." Its proceedings were marked from beginning to end by an optimism which stands in considerable contrast to the assumption frequently voiced of late that the American people have become indifferent to the woes of the conquered nations of Europe.

This optimism was the more remarkable since most of the speakers—fifteen of them represented each a dependent nation, though nearly all were American citizens—had to unfold stories of persecution dating back long before the outbreak of the war of the nations, many of them over periods of generations and even centuries. There would thus at first thought seem little likelihood of active intervention on behalf of these peoples now when their struggles are so largely obscured by more dramatic events on the principal stages of the war, and by the lack of communication.

But there are two good reasons for sensing the break of a new dawn. The first is that this war has swept the United States into the very center of world relationships and made it necessary for her government to acquaint itself with European problems and to come to some decision upon their solution. The other is the enormous influence which this country will have in the council of the nations after the war, as the great money-lender whose wishes—whether considered reasonable or not—must to some extent at least be respected by the greater powers if they do not want financially to be left out in the cold.

Such political and financial reasons apart, there was also a general feeling that the narrow national selfishness which has tainted the utterances of so many influential advisors of American foreign policy under the strain of present dangers to the peace of the country, will give way to a more open, more consistent and more popular demand for the exercise of American influence on behalf of the smaller nations. The ap-

parent indifference of the American people to the wholesale deportation, imprisonment, starvation and massacre of many of the finest peoples of Europe, the impossibility of even getting adequate publicity for their wrongs and for their appeals to America through the press, as compared with the general public indignation under much lesser provocation in the past, cannot, and must not, be accepted as symptoms of moral decay but rather of a passing pre-occupation and fear.

The conference owed its origin to a resolution passed at last year's women's peace conference at The Hague, pledging each national group to organize public opinion in its own country as regards the rights of nations to control their own destinies and determine their own institutions. The American delegation to the congress after the war, to be held simultaneously with the official diplomatic peace conference, felt the need for its own instruction, not in the fundamentals of American traditional policy with regard to the dependent peoples of Europe, which are well understood, but in the peculiar circumstances of each of these peoples which must influence the best solution of its individual problem.

Such instruction the conference provided in abundance. Though chosen for their personal competence rather than as representative of recognized groups of hyphenated citizens, the speakers succeeded in conveying eloquently, and in most cases fairly, the necessary knowledge of historical, ethnological, political and economic facts pertinent to the situation. It is difficult to single out from so much material of vast and abiding human interest the most significant data. An attempt to draw conclusions from it concerning a wise American policy with regard to the several problems of statesmanship involved would be wholly premature.

The story is often told of the Irish immigrant who entered a strong protest at Ellis Island on being temporarily confined with "them foreigners." We rarely think of the Irish as a foreign people in the same way as we think of Bohemians, Jews or Poles. A long history of persecution has made them look upon America as their natural second home. Francis

Hackett gave a masterly exposition of the case for American intervention on behalf of Ireland; but he warned Americans not to overestimate their moral influence with foreign powers until they should set their own house in order. Admitting that the United States government has proved its capacity for international disinterestedness, he could not pronounce it innocent of traces of imperialism.

The helplessness of all dependent people in a capitalistic age is illustrated, he said, by the existence in our midst of twelve million Negroes, who, whatever may be said about their status and condition, are not "free" in any but a superficial estimation. Legislative change in Ireland will no more make the Irish free than the political emancipation of the Negro has secured for him the full opportunity of development which thousands of Americans have died to give him. It is difficult for any government to appraise the conditions of well-being for a minority population in a foreign empire. Complete political separation often is not the only or the best aid to its rehabilitation. As England has failed in her government of Ireland by every test that can reasonably be applied, so she will fail again if the liberation of the Irish people does not include the substitution of other economic relationships for the present sordid capitalistic basis of their exploitation.

Senator La Fontaine did not dwell upon the present political dependency of Belgium, which he looks upon as purely temporary with no conceivable element of permanency after the war. He, too, pointed to economic difficulties as those most likely to require the serious attention of American sympathizers with Belgian independence. That country could not against its will be incorporated in the German empire; but it could be obliged to enter a central or, in the case of a decisive victory by the entente powers, a western European *zollverein*, inimical to the development of its industry and commerce.

He instanced Switzerland and Belgium as examples of successful racially composite states, proving to the world that a complete separation of peoples divided by different origin, language, religion and historical experience is not essential to national cohesion under all circumstances. He even counseled a judicious system of deportation—within the same country—with exchanges of land to the advantage of all concerned, as a justifiable possible means of ensuring the fullest cultural and economic development of a composite people where, as in some parts of Hungary and Macedonia, the mixture of populations extends even to the unit of the village community.

The failure of European diplomacy with regard to Albania and the suffering of that old and brave nation during the present war formed the subject of an illuminating address by Father F. S. Noli, the editor of an Albanian daily paper in Boston. "The Albanians," he concluded, "appeal to the civilized world for independence in the name of peace, justice and international morality. These words do not mean much to war-maddened Europe now, but they will deeply be meditated by all the belligerents when they are cooled off by the disastrous results of this most expensive slaughter. And these words are prized above all else by the neutral, humane, peace-loving, justice-loving and justice-imposing United States of America."

One of the most moving contributions to the discussions was an appeal for the Syrians by Mrs. Layyah Barahat, of Philadelphia, herself rescued as a child, so she explained, from the relentless Turkish extermination of her ancient race by the pennies collected in American Sunday schools. Both

she and Miran Sevasly, of Boston, who spoke on behalf of the Armenians, were convinced that no reform of Turkish administration ever will or can stem the persecution of Christian peoples under Moslem rule. The disruption of the Ottoman empire, not only in Europe, but also in Asia Minor, was demanded by other speakers also as the only possible guarantee that wholesale slaughter and starvation will cease.

This was the only instance of an apparently unanimous desire of American representatives of European peoples for the complete defeat of one of the parties to the present struggle. Dr. Kasimir A. Zurawski, of Chicago, in spite of a fire of cross-examination after the conclusion of his address, maintained an attitude of confidence in the central powers as guarantors and maintainers of Polish independence. He took the stand that Poland already was a free nation, not by virtue of any autonomy granted her by Germany, but by that of her victorious uprising against Russia, recognized by the central powers as an established fact. To him nothing short of a complete national independence of the Polish state could ensure permanent peace in Europe.

The Letts, on the other hand, and the great majority of Esthonians, represented at the conference by John Schmidt, of Chicago—peoples that have suffered for centuries by a feudalism imposed upon them by German barons—see the means of salvation and of a great cultural development in a grant of full local autonomy and parliamentary representation within the Russian empire. Other component peoples of Russia—Lithuanians, Ukrainians, Finns, as represented by Mary Jurgelionis, of Chicago, Miroslav Sichinsky, of New York, and Aino Malmberg, of Finland—were unanimous in their desire for the creation of separate state units, variously defined in accordance with different interpretations of history, different estimates of population statistics and different experiences of common life with other races under the same despotic foreign yoke.

The case of the Croats was presented by Albert N. Weber, whose narrative of Austrian oppression and political dishonesty led up to a strong plea for American intervention. Quoting an utterance by President Wilson to the effect that it is the right of every people to choose the sovereignty under which it wants to live, he claimed this was all the Croats were asking, in the sincere expectation of support not only from their American brothers but from the American people as a whole.

The Jews were represented by two speakers. Mr. de Hass pleaded the cause of Zionism and Simon O. Pollock, in an eminently sane and convincing address, insisted upon the essential need for the exercise of American influence on behalf of the Jewish population which will and must remain in Russia. He brought much evidence to show that Russians and Jews can live peaceably together, that every persecution of the Jews has been inspired by the government alone under the influence of some definite political motive, and that the strongest guarantees for the unhampered and peaceful development of Jewish culture, institutions and industry in a free and constitutionally governed Russia are to be found in the fervent advocacy of Jewish rights in and out of the Duma by the leaders of Russian liberal democracy. "There are two grounds upon which the liberal Russian urges equality for the Jews: one ground is purely humanitarian; the other is based upon sound economics."

Charles Pergler, of Iowa, spoke for an independent Bohemian-Slovak state. The Austrian empire never can become, he urged, a federation of autonomous states. It is a survival from the feudal age which so long as it lasts must endanger

the peace of Europe. "The federalization of Austria and the safeguarding of the rights of Slovaks in Austria could be achieved only at the point of allied guns. This is no easier and perhaps decidedly more difficult than to dissolve Austria and get rid of the problem forever."

It may appear from this recital of the aims of the various national groups as though the conference had been a series of destructive accusations and passionate appeals for American participation in a general splitting of Europe into numerous small, independent states. But there was also throughout the discussions, more difficult to convey in a brief report, a pervading feeling of tolerance, a recognition of the perplexities which beset any possible plan of harmonizing these various aspirations, a sincere desire for solutions which will prove permanent and beneficial not only to this or that nation but to the world at large.

At the closing session—which, by the way, ended with an ovation to Jane Addams, who was present at most of the proceedings—Prof. William I. Thomas, of the University of Chicago, summarized the theories of nationalism which underlay many of the speeches made. It was a conference of real good fellowship. Spontaneously there arose from it a wish for a more enduring organization to work out a plan of American policy with regard to the dependent and oppressed nations. Late on Monday night a committee was formed to collect and digest further evidence and to prepare a program of principles of national autonomy which Americans might urge as an effective basis of world peace, a program which should be brought to bear upon the peace conferences after the present war and sufficiently universal in application to unite in common action all sections of progressive and democratic public opinion in this country.

Social Insurance a Live Issue

The Discussions Last Week at the Washington Conference

By Edward T. Devine

THE international conference on social insurance which was to have been held in Washington in 1915 was made impossible by the international war, but a partial substitute has been found to be possible in a Conference on Social Insurance called by the International Association of Industrial Accident Boards and Commissions. The word international in the name of this association means merely that neighboring commissions on this continent are included in the membership of the association. The federal government acted informally as host, addresses being made by President Wilson and Secretary of Labor Wilson at a meeting over which Secretary of Commerce Redfield presided; and Royal Meeker, commissioner of labor statistics, held the laboring oar in arranging and carrying out the plans for the conference.

The outstanding fact about social insurance is the enormous increase of public interest in the subject since the first conference on social insurance was held a little over three years ago, under the auspices of the American Association for Labor Legislation, in Chicago. At that time there were a few lone voices in the wilderness; now there are hundreds of advocates, scores of vocal opponents, a definite cleavage of opinion within the ranks of organized labor, and an eager awakening interest on the part of lawmakers, newspapers, relief societies, churches, and the public. For this advance, Dr. Andrews and his associates on the social insurance committee of the Association for Labor Legislation deserve the chief credit.

The program of the conference in Washington last week was made up chiefly of two main sets of discussions, sharply distinguishable from each other. The larger number of papers dealt with workmen's compensation for industrial accidents. In this field the time for agitation has passed and the problem is one of perfecting a still cumbrous and tentative administrative mechanism. The papers were therefore naturally by experts, and they dealt largely with technical subjects of immense interest to commissions and to those whose interests are affected by the compensation laws in the various states. An amazing number of such papers was presented, probably as many and perhaps as valuable as would have been likely to have been presented in a real international conference on social insurance,

although they came from less experienced and in some cases less eminent specialists than might have been furnished by European countries where compensation laws or laws providing for insurance against accidents have been longer in force.

There is some validity in the distinction pointed out by Magnus W. Alexander, of the General Electric Company, that compensation for accidents is not, strictly speaking, analogous to and therefore not a precedent for other kinds of social insurance. In the case of industrial injuries, employers have themselves the chief responsibility for prevention, or, when that fails, for compensation. Industry, in that form of insurance, is not used to enforce a general social obligation, as in the case of sickness and old-age insurance, or even more obviously in the case of maternity insurance, which has no especial relation to industry and is not a risk exclusively for those whose incomes are less than twelve hundred dollars. Unemployment insurance may be regarded as occupying middle ground in this respect between compensation for accidents and health insurance.

The second feature of the conference to which reference has been made was the educational discussion of various forms of social insurance concerning which as yet no laws have been passed in this country, except laws for the appointment of investigating commissions. These papers and discussions, dealing less with technical questions of administration and more with fundamental problems of social philosophy, were the more interesting to the general public and offered a wider range for forensic oratory. From this point of view the most interesting and impressive part was taken by the veteran leader of the American Federation of Labor, Samuel W. Gompers, who, in the presence of cabinet officers and after President Wilson had extended his greetings, solemnly warned his countrymen against the infringement of liberty involved in compulsory social insurance against sickness and unemployment. Earlier in the conference, William Green, secretary-treasurer of the United Mine Workers of America, the largest existing trade union, had told the conference that on this subject there was difference of opinion in organized labor, as among doctors, and that for his part he saw no way of dealing with the social

problem of sickness and old age in workingmen's families except by the application of the compulsory principle.

The most comprehensive argument against non-contributory old-age pensions was made by Mr. Alexander, who in 1908 was chairman of the first state commission—that of Massachusetts—to be appointed to investigate this subject. The commission, as is well known, advised against old-age pensions, and further study seems to have confirmed Mr. Alexander in the conclusions which he and his colleagues reached on the subject at that time. Mr. Gompers, however, as well as Secretary Wilson and other speakers of the conference, advocated old-age pensions, and others who would probably not favor non-contributory old-age pensions are ready to include complete insurance against invalidity, even when this results from old age, as a part of a system of health insurance.

Dr. Richard C. Cabot, of Boston, genially expressed agreement with everybody who had spoken at the conference with the single exception of Frederick L. Hoffman, of the Prudential Insurance Company, whose preference for commercial insurance and for private charity to meet exceptional cases of distress won for him this unique distinction. Dr. Cabot thinks that advocates of social insurance will probably be disappointed in the extent to which their measures will insure efficient prevention of disease. But he thinks that it will have a beneficial effect on the organization of agencies for the public health as a whole, and especially that it will stimulate members of the medical profession to keep better records through the public inspection to which health records will necessarily be subjected under a system of social insurance.

Lee K. Frankel, of the Metropolitan Life Insurance Company, presented some fundamental considerations in health insurance. He sought to bridge the difference between advocates and opponents of compulsion by proposing universal rather than compulsory insurance, with the principle of individual option and initiative in the place of legal compulsion. Dr. Frankel's method of doing this is highly ingenious and is suggested by the so-called elective compensation schemes. He begins with the idea that the right to work and to give work are privileges or franchises which the state gives to its citizens, and that the state may impose a tax for the exercise of these privileges. By the manipulation of this tax the state will create a motive for insurance sufficient to make it universal, while still not legally compulsory.

Obviously this is analogous to the withdrawal of the common-law defences from those who refuse to elect to come under a compensation system. Professor Freund would no doubt call the one as he did the other "the bartering of justice." Moreover, in the case of employers' liability there was no doubt that the defences which it was proposed to barter

were actually there. Whether as much can be said for the idea that the right to work and to give work are in the nature of franchises conferred by the state on its citizens seems at least doubtful. There are those who think that the right to work and even to "give work" are both historically and logically far beyond the province of government. It is a slender basis on which to build an alternative system of universal social insurance. The point seems not to have received at the conference the attention which its importance deserves.

Without attempting to enumerate the numerous excellent papers dealing with various aspects of compensation laws, attention may be called to Prof. Willard C. Fisher's somewhat staggering list of defects and suggested changes in workmen's compensation laws and to the extended review of existing agencies for health insurance made by Edgar Sydenstricker, of the Public Health Service.

Among the most highly appreciated contributions to the discussions of the conference were those of Mary Van Kleeck, of the Russell Sage Foundation, on insurance for wage-earning women, and Edith Abbott, of Hull House, on the operation of the funds to the mothers' act in Illinois. Miss Van Kleeck insisted on agitation of the great need of higher wages for women workers and a whole-hearted campaign for shorter hours. If a system of health insurance will enlighten us as to disastrous conditions and will stimulate the enforcement of laws establishing higher standards of sanitation and places of employment, more preventive health work in industrial communities, better dispensary service and better care of women at the time of childbirth, it will be a social gain to enact it. This, or something like it, was indeed the keynote of the whole conference. Julia C. Lathrop, chief of the federal Children's Bureau, declared that, next to the grace of God, increased income is essential. Miss Abbott closed her report with a similar plea.

Advocates of various forms of social insurance came back again and again to the idea that an insurance system is justified only in so far as it will contribute to health, education, income and higher standards of living; while the comparatively few opponents could make headway only by attempting to point out that other methods, such as the inculcation of thrift and greater emphasis on family solidarity, would be speedier and more effective routes to the same desirable goal.

Omission of specific reference to other addresses and papers from this obviously fragmentary review of the conference should not be taken as an indication of their lack of interest and scientific value. The proceedings of the conference will be published as number 212 of the Bulletin of the United States Bureau of Labor Statistics, or number 10 of the series on Workmen's Insurance and Compensation.

The Scarlet House

Sing Sing No. 65368 in the Star of Hope

I WENT into a Scarlet House—
 "A charnel place," they said.
 "Where Hope and Faith and Charity
 Were numbered with the dead."

I heard within this House of Sin,
 A lilting note so clear—
 So frail and sweet it seemed to me
 'Twas wrong to cage it there.

I saw a figure in a cell
 Who prayed beside his cot,
 With lips so filled with holy thought
 I envied him his lot.

I met within this scarlet place,
 "A man without a soul"
 Who shared with me ('twas all he had)
 The bread from out his bowl.

I passed me from the Scarlet House,
 And wrote upon its wall:
 "If this is sin that man has judged,
 Then God shall judge us all."

HOWEVER roundly Germany may deny that it began the war; however soundly spokesmen for the Entente may maintain that it never can win it, the Teutonic peoples have staked their claim to the first daring official move to end it.

Pending the publication of the exact terms which the United States, Spain and Switzerland are asked to transmit—if, indeed, exact terms are offered—immediate discussion is bound to center around such questions as the sincerity of the German Chancellor's proposal to enter forthwith into negotiations for a lasting peace; whether the proposal is for home consumption, under pressure of a rising public opinion in Germany against prolonging the war; whether it is for neutral consumption, in order to clear Germany's skirts of responsibility for another twelve months of battle and perhaps another tryout of "frightfulness"; whether Germany can afford to be magnanimous in view of the Rumanian victories and the occupation of foreign territory east and west; whether she is seeking to clinch such gains as she has before a collapse; or whether, after all, the move is to be taken at its face value, as that of a government which is not afraid to face realities and sees that further prolongation of the war will cost unutterably and get nowhere for friend or foe.

Disregarding these controversies, it may be of some service to approach the situation from another angle and show its relation to the peace movements which have been going on since the war began. For unquestionably the development of minority groups in each of the belligerent parliaments, the spread of petitions, the persistent protest, imprisonment and exile of conscientious objectors and other peace radicals in England, Germany, France, Austria and Russia; the shuttling back and forth of unofficial mediators and neutral messengers who have brought them tidings of each other and have brought to civil leaders in each country the knowledge that the outgivings of the enemy war party (spread by the press of the home war party) did not sum up the total of public opinion—unquestionably all these things have played a part in leading up to the psychological situation which made it possible for the moderate group in Germany, represented by Von Bethmann-Hollweg, to broach peace; which will in turn make for the crystallization of civil public opinion among the Allies, however rigid and denunciatory the first official reactions are to the German overtures. When the history of the war comes to be written, these obscure peace movements may be found cast in the part of the mouse in the fable, gnawing at the meshes of militarism which have bound all Europe.

However that may be, let us look at

FIRST IN WAR FIRST IN PEACE ?

The German Overtures

the German move in relation to certain working principles which have become more and more clearly defined as the peace movement has gained headway. In the first place, we find the German note criticized in newspaper parlance as so much "bunk" intended for public consumption. There is at least a kernel of truth here. The overtures *are* public. They break with the old traditions of conventional, cautious diplomacy which have kept the Washington administration from risking an open failure by calling a conference of neutrals, by publicly asking the belligerent countries to state their terms, or by itself proposing an initial basis for coming together. They break with the precedent of the negotiations leading up to the settlement of the Russian-Japanese war—a settlement, incidentally, which ended a particular war in the East, but left no security as against future wars there; rather, left a situation which, as Chinese leaders tell us, may in the end turn the Chinese from a pacifist to a military people and give a new content to the "Yellow Peril." Such secret diplomacy wholly disregarded public opinion in Russia as a force to be reckoned with by the Russian government in deciding whether it would or would not parley. The new peace movements ground their faith on the people back of the governments.

IN the second place, leaving all questions of terms aside, the German move opens way for negotiation rather than military advantage as a method of settlement. This, in the new view, is fundamental. The "lockjaw," as Stephen Phillips called it, of trench warfare has had its counterpart in men's minds. When the Allies have been losing ground, as in the Russian invasion and as now in Rumania, peace movements in America have been denounced by the English and French press as an ill-concealed attempt to give Germany the spoils of a temporary victory. When the Allies have made gains, as in breaking the German offensive at Verdun or in forcing the German lines on the Somme, the peace movement has been attacked as an attempt to save Germany from a thrashing.

There has been a natural cause for this feeling, aside from the widespread conviction among English and French people that they are fighting for liberty

and democracy and that if this war is not won by the complete defeat of the Germans the fight is lost for all civilization. Candid English visitors to this country within the past year—members of Parliament and others—have freely said that they did not believe Germany could be invaded. But they have pointed out that any government in Paris or London which took steps to bring peace, or to start negotiations, would be thrown out over night by the extreme war party. The same has at different times been true in Berlin. The question is how far the German government—more strongly entrenched than any of the others, and buttressed by recent success at arms—will break this tension all around and create a situation in which all of the war cabinets will have to put their cards on the table. Only recently did Englishmen and Frenchmen learn explicitly from a statement in the Russian *duma* that one of the goals they were fighting for was the turning over of Constantinople to Russia.

In an address this last week before the conference of oppressed nationalities in Washington, Prof. Thomas pointed out that in the old polity of international relations—which has had its culmination in the present world war—each country has had to work out efficiency and national cohesion or go down. The crudest, cheapest, easiest force to bind people together is enmity of another people. Thus we had—in each country at the outbreak of this war the visualization of some other country as aggressor; the defense of the homeland and its ideals as the watchword; the fanning of hatred; the blurring of specific ends.

A different situation will present itself when such affirmative ends are wrested from the silence of governing groups and spread before the people; set forth specifically enough so that they may be compared with the claims, however exaggerated, of the other side. Such a situation gives hope of the development, in open discussion, of great modes of civil opinion which will prove as effective as the Von Tirpitz and Northcliffe groups have been in the dark. Such a situation changes the basis of settlement from temporary military advantage to what a whole people are willing to fight for to the limit.

IN other words, such a situation may lead to a war of attrition—not of men and munitions, but of public policies. If we are to heed the constructive peace movements, the solvent of conflicting territorial and other claims rests not in weighing one against the other, the force back of one against the force back of the other, but in lifting the plane of settlement to a new and larger level. Thus the Allies are struggling, Mr. Asquith said in his Guild Hall speech

(Continued on page 317)

A WORKINGMEN'S EVENING CLASS IN AMERICANIZATION

Staying After School

By Harold O. Berg

SUPERVISOR EXTENSION DEPARTMENT, BOARD OF SCHOOL DIRECTORS, MILWAUKEE

OUT in Milwaukee they do not spend much time in discussing the question of "the ideal community center" nor do they debate whether centers should be municipally financed or supported by membership dues, whether the emphasis should be placed upon recreation, upon education, or upon civic and forum activities, whether to cater to the young people hoping that their presence will sooner or later attract the parents, or vice versa. The great question in Milwaukee has been how to get the school open at night for recreation purposes and keep it open.

The subject of recreation is really a question of leisure. Some people want to spend their leisure otherwise than at games and entertainments. Therefore, with this conception of filling in leisure time by wholesome recreation, semi-educational in nature, seven Milwaukee schools and one special building are at present being used as social centers, while nine others are open for evening schools which may conduct recreational activities.

The wider use of the school plant was achieved by a state law which authorizes boards of education to establish and maintain evening schools, social centers, library branches, etc., by means of a special 2 by 10 mill tax, provided the question passes a referendum of the people. Milwaukee adopted the policy of using its schools for social centers, believing that supervision of recreation is an educational problem and that civic economy demands a more open use of the public schools. The school house is usually the neighborhood center from a geographic standpoint. It ought also to be the focal point of the neighborhood from a civic and community standpoint.

A social center housed in the school building has at its command hundreds of the world's best advertisers—children. Each social center in Milwaukee issues a weekly newspaper which is carried into the homes by the children of the regular

day school, and thereby proves itself a marvelous connecting link between the school and the home—a link sadly missing in many educational systems.

Each of Milwaukee's three full-time centers, which are open five afternoons and six evenings a week, is under a director who devotes his whole time to the work, either in actual charge of the center or in studying the places of amusement and housing conditions. The part-time centers, those open only four evenings a week, are directed by day-school principals, paid according to attendance. This plan arouses greater effort to attract the community to the center. Indeed some of the principals have developed the work to such a degree that the school board has now authorized a full-time assistant for the social and the organization end.

The varied kinds of activities, the different ages and types of people dealt with, make the selection of all these workers a matter of extreme importance. The success of a class or a club depends not only upon the ingenuity and the brains of the one in charge, but, to a great extent, upon his heart and soul. Hence the supervisor who is allowed to select his assistants on the basis of personality plus training and experience is far more able to surround himself with a capable, desirable corps than the one who must confine his selection to a civil service list of those measuring up to rather stereotype qualifications.

Contrary to general opinion, the schoolhouses were easily adapted to social center work. The assembly halls were fitted for athletic games and gymnasium work by screening windows and lights, stripping the floors for indoor baseball, basket ball and volley ball. The working boys of Milwaukee are not found to be particularly fond of formal gymnastics after a hard day's work, so athletic games are featured. The girls have shown a distinct inclination for club, wand and dumb-

bell drills, aesthetic dancing and folk dancing. In the gymnasium classes and athletic games segregation is at all times maintained with the exception of the boys' match games on Friday night, to which girl spectators are admitted.

In this same hall dancing classes and socials are held on Saturday evenings, the banner night for the low-class dance hall with which the center is competing. These socials are not public and the halls are closely supervised. No one is admitted unless known to the director or introduced to him and vouched for by someone whom the director knows. A register is kept of everyone attending the dances. A young man leaving the building is asked to take his hat and coat and is not allowed to return that evening. This regulation discourages going out for a smoke or for refreshments. The dancing is made self-supporting by a nominal charge of five cents for the dancing class and ten cents for the social.

Hallowe'en parties, Japanese parties, St. Patrick's parties and the like are often given to increase the attendance at these Saturday evening centers. During the past year the crowds grew so large that it became necessary to limit the attendance to three hundred at each of the various centers, and to open for dancing six other schools, making thirteen in all.

Both the aged grandfather and the infant asleep in his go-cart are found in the audience at the bi-weekly five-cent entertainments of moving pictures, dramatic, literary, and musical numbers which are given by neighborhood talent. It is planned to conduct these entertainments under ideal conditions, each school being furnished with one of the best moving-picture machines on the market, large stages with curtains, and footlights. To meet the fire ordinance the moving-picture machines are housed in concrete booths. Since one of the great evils of the moving-picture show and the public theater is the promiscuous seating of the audience, segregation is carried out at the entertainments by reserving one section for parents and their children, escorted and unescorted girls, and another section for men and boys. No children under fourteen years of age are admitted unless accompanied by their parents, with whom they are required to sit.

The common practice of allowing dancing after an enter-

GAMES FOR THE YOUNGER ONES

tainment is strictly forbidden, since a dance following a public performance means a public dance. A small charge of five cents makes a more appreciative audience and places some of the expense where it partially belongs.

Every Saturday afternoon entertainments are given for the school children. One cent is charged, and the receipts are used to defray the cost of the moving pictures and musician. The large attendances have made two entertainments an afternoon necessary, one for the boys and one for the girls. Three films are shown and the remainder of the program consists of story telling and other numbers that appeal especially to children.

Over two hundred dollars has been spent for slides on geographical and historic topics. The children of the neighborhood schools are given a special invitation to attend these entertainments when the stereopticon or moving-picture numbers pertain to any particular topic which they are studying. The center then becomes an auxiliary of the regular school work.

This spring, by a unanimous vote of the school board, the assembly halls of all schools were opened for political meetings during the municipal campaign, and the results were such that the school board again opened them during the state and national campaign.

Thus the assembly halls, as a rule the most expensive but least used rooms of our schools, are virtually in use every evening of the week.

The basements of the schools are partitioned off into rooms and made pleasant by whitewashing the walls, painting the cement floors and brilliantly lighting with electricity. Where not enough basement rooms are available, class rooms are used. Desks are screwed in threes to wooden strips, or runners, making it easy to slide them into the corridor so that the room can be used for dancing, sewing or debating. One of these rooms is then used as a library or reading room, and has, in my estimation, a far greater future than the isolated library. The patrons of a library, as a rule, are readers. Rarely does an individual—a non-reader—drop in to make a survey or to satisfy his curiosity. But the participation by an individual in his favorite pastime other than reading in a building containing library features will make it easy to bring him to the reading room. The books are furnished by the public library. The librarian tries to cooperate with the regular day school in directing the reading of the children along historical, geographical and literary lines.

Certain periods are set aside for story telling. With the cooperation of the public museum, courses are given in birds, Indian life, minerals, etc. Every library is furnished with a phonograph. The school board has purchased \$500 worth of records. An effort is made to acquaint the children with the

ONE OF THE POPULAR POOL-TABLES

great musical artists, composers and compositions, the different kinds of musical instruments, the different musical combinations—duets, trios, quartets, etc.—in short, the object of the course is to create a love and understanding of good music. The prevailing foreign language of the neighborhood is catered to through books and periodicals.

One room is equipped with three pool tables. Since no boys under sixteen are admitted, the frequenters of this room are usually already expert in the game. It is generally crowded—so crowded that one principal recently asked for bleachers. The pool tables are the connecting link between the neighborhood gangs and the center.

To maintain interest in the minor games such as dominoes, checkers, various card games, parchesi, odd pins and the like, there are bi-weekly center tournaments and monthly inter-center tournaments.

The "rough-house room" has its lights and windows protected by screens, and here the boys and girls work off some of their superfluous energy in the low-organized games, requiring little skill and team work and much energy. Even the toughest boy is relieved by this play and becomes transformed into a peaceable and docile citizen.

As a club room for organizations such as science clubs, boy scouts, camp-fire girls, athletic clubs, mothers' clubs, news-boys' clubs, afternoon and evening sewing classes, millinery classes, etc., a sixth room is fitted up. Some day this may be used as a smoking room for the men, with settees and arm-chairs in the adjoining corridors.

The spacious kindergarten room is used for the adult glee clubs, dramatic clubs, orchestras, bands and civic clubs which may meet in the building. Young people of talent—literary, dramatic, musical, etc., have been taken thus from meeting-places not conducive to the best morals.

Every person entering the center is directed to a wardrobe room by the doorkeeper. Here outer hats and wraps are

checked without charge. Relieving a person of his outer garments in this manner has a tendency to make him feel more at home and to induce him to prolong his evening visit.

In the same building are conducted evening classes in English for foreigners. One center had an attendance of three hundred such students. Naturalization classes are also conducted. Milwaukee contains hundreds of men who have not taken out their second papers and who dread the ordeal of the examination required. They welcome the opportunity to be instructed in the lines of elementary history and civics. These evening classes serve as a nucleus for the organization of various clubs.

At the end of the social center season, each center holds a closing banquet for all the members of its organized activities. This year a total of over three thousand sat down at the various banquet boards on Saturday evening, April 29. Addresses were made by prominent citizens, numbers were rendered by the center dramatic, literary and musical clubs, and the evening closed with dancing.

This year the dramatic clubs and musical organizations united in two grand concerts—twenty-four organizations, composed of 491 persons, participating. The combined audiences numbered eighteen hundred.

Too often young people go to ruin because of parents' implicit faith in them and readiness to believe their accounts of where they spend their evenings and the kinds of recreation offered them. To prevent young people from using the social center as a dodge, cards are issued to those whose parents demand them, upon which the doorkeeper writes the director's name, the name of the young man or woman who is asking for it, the date, the hour of his or her arrival and the hour of leaving. Thus any parent may know the exact whereabouts of his son or daughter. This is freely advertised in the newspapers and is mentioned to the parents at all entertainments.

"Come Out of the Kitchen"

By Mary Ray

MINNEAPOLIS BUREAU OF MUNICIPAL RESEARCH

Wanted: Women with experience in politics to organize caucuses throughout States preliminary to spring primaries.

Wanted: Women with secretarial and political experience to accompany women candidates on campaign tours; experience in public speaking also desirable.

Wanted: Woman secretary for East End Woman's Club with practical understanding of municipal government and ability to present voters' problems.

ADVERTISEMENTS of this and like nature represent the future needs of our nation when the doors of political life are swung open to women. With the enfranchisement of the women of the United States will come the demand for capable and politically tutored organizers of the feminine electorate.

The wide-awake women, now on the firing line of the suffrage movement, once the battle is won, will have to work strenuously to educate politically the newly made, lukewarm voters. Equal-suffrage propagandists of today must become the leaders of the enfranchised host of tomorrow.

First among the activities of such leadership comes an educational campaign. Thousands will need instruction as to the fundamental powers and functions of government—national, state and local—as to the basic issues represented by rival

parties, as to the factors involved in communal problems, and as to the personal capabilities and political inclinations of those in the limelight of politics. The channels for such instruction will be the press and the platform. Second comes the organization of the women into effective voting units. This means holding caucuses to put forward candidates and to arouse enthusiasm for the success of issues. Are there the suffrage enthusiasts sufficient in number or fitted by training to inaugurate an educational campaign of such dimensions and to set going the wheels of complicated yet centralized organization? Great ardor for the cause or extensive reading in the field do not suffice. Mere enthusiasts or political or economic theorists will not answer. What is needed is actual contact with public officials, work with departments of government, and a first-hand knowledge of the administration of public affairs. Where is it possible to obtain such training today?

On the top floor of one of the tallest buildings of Minneapolis, commanding a view of the length and breadth of that metropolitan, prosperous Western city and immediately overlooking the City Hall, is the Bureau of Municipal Research—a part of the Minneapolis Civic and Commerce Association.

The purpose of this bureau is to promote efficient and economical government in the city of Minneapolis and in the county of Hennepin. To this end the bureau is endeavoring, through cooperation with public officials, to secure the adoption of scientific methods of accounting and administration, and to collect, classify, analyze, correlate and interpret data with reference to the conduct of public affairs.

In cooperation with the public, and in its behalf, the bureau is attempting to secure constructive publicity in matters pertaining to municipal problems and so to interpret the facts as to secure popular confidence in the activities of officials and a more intelligent support for legitimate municipal projects and administration. It acts as a clearing-house and point of contact between the citizens and their public servants.

For women, here is the oasis for political experience in a desert of political inexperience. Here young women are employed to work independently or with other members of the staff in various city departments. They are allowed a portion of their time to supplement this practical training with reading to learn from students in public service and from the experiences of other cities. They give their time gratis for the first few months in return for the training they receive. A few examples may show more concretely the work and its connection with the entrance of women into public life.

For two months this summer, one of the young women helped in the compilation of the city budget and attended hearings before the Board of Tax Levy which acts upon the budget. It was the most scientific statement of the city's financial requests ever prepared. Budgets for national, state and municipal expenditures are sorely needed today. A segregated budget means economy instead of extravagance, and financial responsibility and the proper use of funds instead of financial irresponsibility and graft. May it not be that women will put up and win the fight for budgeting public expenditures?

Another woman served as secretary of the Citizens' Milk Committee. This committee of thirty public-spirited citizens, representative of both consumer and producer, prepared an ordinance on milk which is to be submitted to the City Council shortly. It is considered the model for the country. Here is experience in legislation, both drafting and passing, that would be useful to those who aspire to sit in our lawmaking bodies. Likewise, here is experience in organization, for the secretary divided the committee into sub-committees and then unified their action for a common end.

Young women are participating in the surveys and constructive work for several city departments. In this way they learn not only the A B C's but also the X Y Z's of departmental administration. Moreover, they become acquainted with the latest business methods and know by experience the principles and administrative details that make for efficiency and economy.

They discover how to collect and make useful information

The self-release of woman: an interpretation of the age-long struggle as conceived by Tyra Kleen, the Swedish painter who is now in the United States.

relative to civic administration. For instance, different kinds of ordinances are indexed and kept up to date. Again, questionnaires are prepared and sent out. The information obtained is put together in such a way that the mistakes and merits of one city as compared with others are evident at a glance. In other words, the women are taught where and how to obtain accurate information and in what ways to present the information that it may be easily intelligible. This kind of training would be particularly useful to those on whom the burden of educating the voter-fledglings will fall.

For practice in public speaking it is planned to require each woman to give weekly a twenty-minute speech before the staff. When they are deemed proficient, they will be used to give talks before women's clubs. This will bring the city's problems directly before interested groups, and will be a part of the general constructive publicity of the bureau.

Leaving aside the question of suffrage for a moment, we may consider other lines of work in which public-service training would be useful. A most striking feature of the trend of political thought and action is the constant cooperation of the citizens with the government through various organizations. Ballot associations, educational associations, legal aid societies, civil service reform leagues, foundations for special research, housing reform associations, civic clubs, health associations, commercial organizations, recreation associations, societies for the reform of the judiciary, local improvement associations and tax associations, all welcome the services of those with expert knowledge of the structure and operations of government. There is high reward for special training and intimate dealing with administrative problems. Women with such knowledge have, therefore, a large unexplored field before them.

THE SANDWICH-MAN

By Lucy Jackson

WHAT makes this glow in the sordid street?
In coat and cap of gorgeous yellow
This is indeed a splendid fellow!
Splendid?—perhaps,—but look at his feet.

His boots are now mere shreds of leather;
And under the cap, unshaved and weary
His face peers out, eyes pale and bleary.
God knows, between him and the weather

There's little more than the boards he wears,
As he shambles along, remote from it all!
"To-night! Eight sharp! Fifty cents! At The Hall!
A supper and dance! One flight upstairs."

WOOD CARVINGS OF A PEASANT LAD

THE CHRISTENING

SELF-TAUGHT, starting life as a joiner, Axel Peterson, a Swedish boy of lowly birth, took to carving for his own amusement. Little figures, gaunt and gloomy or stout and sunny, village types as he found them ready to hand, he carved in crude, unconventional fashion. Then groups—weddings, games, christenings, funerals, trials and the like, incidents in the common life of the common folk—came from his talented hand. In the ugly irregularity of his method there is something peculiarly suggestive of the hardship and monotony of the life of plain people. These wood carvings, which were part of the Swedish art exhibition shown at the Pan-American Exposition at San Francisco, are now being shown in a traveling exhibit in various cities from coast to coast.

THE VILLAGE TRIAL

Democratizing Social Welfare Efforts

By John Melpolder

GENERAL SECRETARY, SOCIAL SERVICE BUREAU OF WAYNE COUNTY, INDIANA

THERE are some people who give freely of their time and money to further the interests of social welfare; there are those who give only of their money, but depend upon others to give their time; and there are those who give neither of time nor of money, through lack of vital interest in social welfare.

Now social welfare work benefits all in the community. So there are those who earn what social benefits they and others receive; those who purchase at list-price or at a discount what benefits they receive by free delivery; and those who are wholly beneficiaries of their fellow citizens' sense of social responsibility. In other words, we have ideal citizens, paying citizens, and dependent citizens.

It is not necessary for this purpose to put into approximate figures the relative numbers of citizens constituting these three groups in the average community, for it is well known that the first group of ideal citizens is usually very small, that the second group of paying citizens is somewhat larger, and that the third group of voluntary social dependents is composed of the great mass of the people.

When we consider the dangers of pauperizing a community, our minds jump at once at those unfortunates who through promiscuous almsgiving have been encouraged to become social dependents. But what about the pauperizing of our well-conditioned people who remain, voluntarily and without compunction, dependent upon the small group of public-spirited citizens for their social welfare relief? The time has come to point out definitely that not only the applicant for charitable relief presents an abnormal social phenomenon, but also in the same degree does the prosperous man, "concentred all in self,"

" . . . With soul so dead,
Who never to himself hath said,
This is my own, my native"—town.

When we speak of organizing the community forces for social welfare, we usually have in mind the organizing of that little group of social workers, both paid and unpaid, who are already hard at work to improve the community. We point out to these workers the waste in money, time and effort involved in individual and limited group enterprises, and we demand that these workers get together, that they cooperate, federate, centralize their activities.

Not Fans but Players

WE THINK of organization in this respect as we do of the organization of a baseball team. We want coordination, team play, *esprit de corps*. But we lose sight of the one important fact that social welfare work is not to be the task of the few players out in the field while the thousands of fans in the grandstand and in the bleachers are to be solely engaged in exercising their vocal organs; but that social welfare work is to be the work of the community, for the community and by the community; in other words, a community enterprise.

What needs to be done, then, is to organize the community itself for community welfare, to democratize social welfare efforts, to bring together into one united force the

present workers with the shirkers, who are not now a force, but a load. What we want the public to get away from is the idea that social welfare work is the pet enterprise of an aristocracy of superior social intelligence, of an oligarchy of altruistic social uplifters. This can be done only by developing every individual and group interest into the common cause of a community enterprise for social welfare.

We boast of our democracy, but it must be admitted that there is nothing so undemocratic in our community life as our individualistic and haphazard efforts for social welfare. Exception to this statement may be taken by a director of some social welfare organization, who considers himself as serving a democratic movement in a representative capacity. But if such a director will figure out the percentage of the adult population in his community that contributes to his organization, which usually does not exceed 5 per cent, and if he will then compute the percentage of this 5 per cent that was in attendance at the annual meeting at which he was elected a director, which most likely was less than 5 per cent of the contributors—then he will begin to realize that he actually represents this so-called democratic movement by virtue of the choice of 5 per cent of the community, or of about two-tenths of 1 per cent of the population, or of about two out of every one thousand persons in his town.

The Pet Family Charity

HOWEVER, even such a group enterprise has possibilities of expansion into a democratic movement, unless it is managed by a close corporation of fossilized directors who consider that they have preempted the field. But the most undemocratic and the most hopeless situation presents itself in that of the pet charity of some particular family that wishes its benevolence to remain distinctive and exclusive, and therefore will not permit its interests to lose their individuality by being incorporated with the common cause of a community enterprise.

Such an individual project represents the aristocratic attitude of wanting to do things *for* people. It is a survival of the spirit of a benevolent feudalism, which is considered quite proper even in democratic America by those who act on the principle that rank imposes obligation upon *others*. Such a family says, in actions, if not in so many words, "This enterprise is ours, was established by us, and is being largely [or entirely] maintained by us; therefore, we reserve the right to stipulate for all time the conditions upon which this work shall be conducted." When such a family affair thwarts the community will and prevents or upsets community enterprise and control, then immediate advantages should be considered only in their bearing upon true and ultimate values.

The time has come when social work must cease to be a self-imposed task of the few, and must become the crystallization of the community conscience, the expression of community aspirations. The few must reach the conclusions, and act upon those conclusions: that the pioneer work has practically been finished; that the principles, aims and methods are pretty well understood; and that if their value is not thoroughly

appreciated by all, it is due to the fact that many have had no part in the work, have not learned to do by doing.

The time has come when the relatively small group of present workers must no longer occupy a place above or beyond the community, but behind the community, pushing the community into action, and shooting over the heads of the community with their larger-caliber guns only when serious difficulties cannot be overcome except by this method. The success of a social welfare undertaking is not to be judged solely by the results, but also by the number that helped to accomplish these results. A social task crudely performed, but performed by the community is infinitely more effective than the same task performed exclusively by a few trained social workers and their directors with the technical skill and finesse of modern scientific social welfare methods.

But is community action really possible? Can a community ever be considered in fact, as in ideal conception, as an entity possessing a conscience and a will, and capable of clear thinking, logical reasoning and sane acting, such as the development of social welfare work requires? Isn't the community, after all, composed of such various elements, each of them controlled by such special interests, that its citizenship has collectively nothing in common but its corporate name and boundaries? In relation to social welfare work, it must be admitted that a comprehensive social program cannot be drafted that will receive the unanimous approval and support of all in the community. Neither can a proper sequence of social welfare activities be hoped for even when one effort at a time be considered and undertaken.

But one community effort at a time is possible when the importance of such an effort for the moment at least appeals to the community, and that is the one fact to be considered to the exclusion of all others in the development of social welfare work as a community enterprise. When we speak therefore of organizing the community forces for social welfare, we really mean the focusing of the community's attention upon some particular community problem and the organizing of the community to solve that problem. Back of it all, of course, remains that group of social welfare promoters and engineers engaged in surveying the situation, collecting and compiling the data, agitating the question, organizing the forces, and reducing to a practical working basis the desires of the community, but at all times maintaining a democratic working relationship with the community.

Roman Candles Fizzle

BUT HOW can the community be induced to express itself? The first step invariably suggested to obtain such an expression is to call a citizens' mass meeting, with the usual spectacle of a citizens' mass formation reduced to the scattered ranks of the few social welfare veterans accompanied by their wives or husbands in honor of this special occasion. Now if this were a political affair, a drum corps, a parade, roman candles, and a silver-tongued orator would be considered indispensable. Or if this were a religious affair, a specially built tabernacle, a sawdust trail, a chorus of several hundred trained voices, and a Billy Monday would be depended upon to attract and to inspire the mass. But this is a civic affair, *i. e.*, an affair combining politics and religion in their broadest and most beneficent aspects; therefore, such methods would be inappro-

priate—with the result that the mass fails to materialize.

Now such a failure is usually interpreted as a lack of public interest in social welfare, whereas it should be accepted as a failure on the part of the promoters to comprehend the one simple fact that any show would meet with failure without a long and painstaking period of rehearsals before the opening night. No sooner is one political contest settled than the organization work for the next is at once undertaken; while a Billy Monday requires a long period of preparatory stage settings, his unique and world-wide reputation notwithstanding. The fact is that a mass meeting is usually the last thing to be thought of to obtain a popular expression or to arouse a general interest in an undertaking for social welfare.

Reaching "the Silent Vote"

FOR THREE or more decades social workers have been engaged in social welfare laboratory work, and they have been the chief sources of social betterment information and inspiration. Often they have been compelled to fight their battles single-handed, because they departed from old, established beliefs, customs and methods. As a result they are ever subject to criticism, and, being humanitarians, these social workers are sensitive to this criticism from those whom they seek to serve. So it often happens that these social workers pay more attention to their critics than to those who represent what has come to be known in politics as "the great silent vote." The silent vote is the vote of that great middle class which at all times has furnished the sane and practical thinkers and workers for any cause. Neither spectacular nor exclusive methods appeal to this sensible type of citizenship, but a cause that assumes the character and dignity of a democratic community enterprise and that presents a practical solution for a serious community problem will receive their backing and cooperation. Through them the community must be reached. But how can they be reached?

Commercial clubs have their committees on health and public welfare; central labor unions have their civic committees; ministerial associations, denominations, churches and church societies have their social service committees and classes, some of them using even specially prepared text-books and manuals; the lodge spirit is going beyond the restrictions of a limited lodge brotherhood; even the practical politician has much to say these days about social justice, and the social worker receives now a far more ready cooperation from public officials than heretofore; while the public press, of course, remains as one of the most important social welfare agencies. These are the forces that help to socialize the community and these are the forces that are ready for the social welfare promoter, to be organized and help to put over any social betterment effort as a community enterprise.

It is immaterial what the first community undertaking for social welfare may be. It may be a clean-up and health campaign, an investigation into housing or vice conditions, the establishment of social centers in the public schools, parks and playgrounds, or a tuberculosis hospital. Whatever the first undertaking, the all-important thing is that the community's attention is being focused upon some particular phase of social welfare work, that the community is being put to work, and out of this one community effort other efforts naturally develop.

The Health of Social Workers

Some Results of Medical Examinations

By Joseph J. Weber

NEW YORK STATE CHARITIES AID ASSOCIATION

IN the belief that there were possibilities of working out certain common office problems in the United Charities Building in New York city, through a cooperative committee, several of the larger organizations in the building turned their attention to the medical examination of their employes and its bearing upon their health and the efficiency which comes only with good health.

Several of the organizations already had some policy of medical examinations. Just what were these policies? How did they work? Were the results helpful alike to employes and organizations? In order to obtain comparable data, a uniform questionnaire was filled out by five social service agencies—the State Charities Aid Association, the Charity Organization Society, Association for Improving the Condition of the Poor, Russell Sage Foundation, and Survey Associates, Inc.

The questionnaire included the general character of the examination, its result and the physician's report; the frequency of the examinations; the desirability of having the employe examined by his private physician; the responsibility of the employer in seeing that the treatment prescribed is carried out; the measures taken to safeguard the health of the employe as a result of the examination; the number of days lost because of illness, and the cost of medical examinations to the organization.

In one organization the policy of medical examination had been in force four years and seven months at the time this study was made; in three, over three years; and in one, exactly one year.

Their experience shows clearly that it is best to have prospective employes take the medical examination before they are engaged. Where this is impossible, the engagement is made subject to the results of the examination. In this way, if markedly unfavorable physical conditions are found, the chief executive of the organization, in conference with its medical examiner, can determine whether the person may be given some form of work other than that originally assigned him, or whether it would be better to advise him to seek elsewhere for employment that would not be detrimental to his health.

All organizations definitely urge that the examination be made by the organization's medical examiner. They do this for three reasons: It insures an examination by an expert general diagnostician. Many physicians skilled in treatment are not first-class diagnosticians; in the absence of accurate diagnosis, subsequent treatment does little good and may even do positive injury.

The "Company" Physician

IN THE SECOND PLACE, the examination will be made by a physician who, as one of his chief duties, has acquainted himself with the nature of the work of the organization he serves and the demands which it makes upon the health and strength of its employes—acquaintance which ripens with time and with constant contact with the work of the organization and its employes; whereas the employe, in going to his own physi-

cian, often either fails to give him this information as fully and accurately as he should, or, though he may realize the necessity of giving it, finds himself unable to do so for lack of exact data.

Finally, examination by the organization doctor spells uniformity of data valuable for purposes of statistical comparison. In the absence at present of any generally used uniform medical terminology, the practice of allowing private physicians to make the examinations and render reports makes uniformity of record exceedingly difficult and at times impossible. When, however, employes express a strong preference, four of the organizations permit an examination by the employe's personal physician, if approved by the executive head. Under these circumstances, the societies ask the employe to explain to his doctor fully the nature of his work and the demands which it makes upon his health and strength; they ask the physician to make any recommendations concerning the nature of the employe's work that seem to him desirable. An effort is also made to secure as uniform data as possible by having the physician report his findings, diagnosis and recommendations for treatment upon the organization's uniform record card.

Frequency of Examination

UP TO THE TIME of the completion of this study, none of these organizations required more than the initial examination, unless conditions were revealed that called for further study, occasional examinations or careful watching, or unless the employe showed symptoms of a breakdown, loss of energy or suffered from persistent colds. They are beginning, however, to realize that it is not sufficient protection, either to the workers or to themselves, to have employes examined only at the time they enter upon employment.

Since this study was made, one organization has adopted the principle of giving all permanent employes (those who have rendered six months or more of service) of more than 50 years of age, a yearly examination; those 40 to 50 years, an examination every two years; those under 40, an examination every three years. Exceptions, of course, are those cases needing more frequent observation. Another organization requires all employes over 40 to be examined yearly, while employes under 40 years are examined at intervals of two years, unless in any twelve-month period they have been absent on account of illness for ten days, when they receive a further examination.

Experience shows that employes are generally willing to take the examinations, even if at times it involves personal inconvenience. They see the value to themselves and their obligation to do all they can to keep themselves ready for efficient service.

The organizations make it clear to their employes that none will be discharged by reason of any physical condition requiring attention, unless such condition seriously interferes with their usefulness, or unless a change of work is advisable in the interest of their own health.

The examinations, in general, include a medical history, a

general physical inspection, including weight, height, age, temperature and pulse; examination of the heart, lungs, kidneys and other organs; upper air passages and teeth; special senses, including the use of the ophthalmoscope; and, finally, routine laboratory tests. The medical examiner of one organization includes in his general physical examination tests for blood pressure. The medical examiners of the four other organizations give blood pressure tests in instances where indications show they are advisable, as, for example, where there are symptoms of heart or kidney disease.

The results of these examinations may be briefly summarized. A total of 551 employes in the five societies referred to were examined—521 by the medical examiner of the organization, 30 by the employes' private physicians. These employes may be roughly divided into three age groups: under 21 years; 21 through 35 years; and over 35 years. The group 21 through 35 years had the largest number of actual cases of sickness or defects, 188 cases being reported from this group.

Most Diseases Preventable

PROMINENT among the reports may be noted first, the cardiac diseases, 39 cases; anemia, 36; tuberculosis, in all forms, 34; defective vision, 32. Affections of nose and throat were found in 21 cases; nervous tension and overwork in 16; defective hearing in 12; syphilis in 3. Occasional cases of tuberculous glandular disease, floating kidney, foot weakness, and spinal trouble were discovered. There was one case of mild gas-poisoning and one of melancholia. But the large majority of illnesses were of the preventable type, especially if given attention in their early stages.

Just what the practice of medical examinations means, can perhaps best be made clear by brief sketches of several different types of cases:

Miss Z, a clerk, was found to be suffering from extreme anemia. A tonic was recommended and faithfully taken, with marked results in improved health. In the spring and fall of the year, moreover, Miss Z also suffered from sore throat, which often kept her from the office. Upon examination the doctor recommended the removal of her tonsils. An operation was successfully performed and she has not been obliged to remain away from her duties since on account of throat difficulties.

Mr. X "had a cold." That he was really suffering from incipient tuberculosis would not have been discovered had he not been examined under the organization's system of medical examination. He was allowed a six months' leave of absence to go to a sanatorium. He returned with the disease completely arrested.

Miss C was found upon examination to have valvular disease of the heart. She was advised by the doctor to be extremely careful in her method of living, to avoid all hurry and overstrain. In order that she might carry out this advice, an immediate change in her work was effected.

Miss D was found by the medical examiner to have tuberculous glands. These with the tonsils were removed. She then took a three months' rest and at once began to show marked improvement in health. Now, after less than a year, she has gained considerably in weight and is in fine physical condition.

The findings of the medical examinations have led some of the organizations not only to assign employes to a different

kind of work in the organization, but, occasionally, employes have been advised to seek employment elsewhere, to secure a change in the character of their work. One organization, aside from medical treatment, has been led to give more continuous and specific attention to signs of overwork and to give vacations and make temporary changes in duty when apparently needed. Another has moved into offices having more light and in which it has better control of ventilation. Still another has established a lunchroom which practically meets all of its expenses. Special menus, selected from the standpoint of food value and economy, are prepared from day to day by a trained dietitian.

With regard to the responsibility of the employe in carrying out the physician's instructions, the organizations have found that, once the employe is instructed what to do, the responsibility should rest with him.

The cards and correspondence containing the findings, diagnoses and recommendations of the physicians are held in strictest confidence and are kept under lock and key in the offices of the chief executives. Where necessary, important suggestions derived from the medical examiner's report are brought by the chief executive to the attention of the head of the department in which the employe works, and such instructions given as are deemed wise, based on the recommendations of the physician. In order to keep an accurate record of the dates on which its employes are expected to take their periodical examinations, one organization has found it convenient to maintain a card catalog of the names of its employes, alphabetically arranged in a classification by months.

Health Bookkeeping

IN OTHER WORDS, a technique has been gradually built up in these organizations, which has gained by the process of comparing the experience outlined in this report. Yet even in these organizations health bookkeeping and supervision has still a very considerable distance to go before it approaches the financial record-keeping of these same societies. For example, only one organization could give the total number of days' work done by male and female employes, both temporary and permanent, during a calendar year and the total number of days lost on account of sickness by male and female employes during that year. Even in the one exception the total number of days' work done by the male and female employes was not given separately. During 1915 the employes of this organization did 607,176 days' work. Ten days were lost by male employes, of whom there were 42, or roughly two hours a year per individual; and 632 days were lost by female employes, of whom there were 176, or roughly 3½ days per individual. The importance of such health work, from the administration no less than the social standpoint to organizations largely served by women, seems clear.

That the medical examination of the employes of these five organizations has been the means of forestalling many a serious illness as well as of giving increased efficiency, resulting not only in lessened suffering but in a saving of expense far exceeding its actual cost, cannot be doubted. Surely some such plan would be of value to every large social service organization and even to smaller agencies through cooperative action.

COMMON WELFARE

THE WOMEN'S PEACE PROGRAM FOR 1917

IT was not so much the words that were said as the women who said them which made memorable the second annual meeting of the Woman's Peace Party, held in Washington, December 8-10.

At one small gathering were the five women whose influence is perhaps the most powerful in the country—Jane Addams, presiding officer of the conference; Florence Kelley, of the National Consumers' League; Julia C. Lathrop, of the Children's Bureau; Ella Flagg Young, former superintendent of Chicago schools; and Lillian D. Wald, of the Henry Street Settlement, New York city.

Business was the real reason the Woman's Peace Party foregathered in Washington. Therefore reports of local branches were the order of the day, ranging from New York city's showing of 1,500 members and a long list of activities to an account of a struggling western branch devoting its year's energy to getting a resolution against military training in schools through the State Federation of Women's Clubs.

Officers were elected, largely reelected, with the exception of Mrs. C. E. Cumberston, who will fill the place of vice-president which Mrs. William Kent resigns. Mrs. William I. Thomas will divide her time as executive secretary and as associate chairman to assist Miss Addams, the chairman.

Two sessions of the conference were devoted to the discussion of a congressional program for the year. The result was the adoption of thirteen propositions for sponsorship by the legislative committee. Part of the thirteen pertained to laws already passed or introduced—steps to be taken toward the repeal of the "draft" clause in the army reorganization bill and favorable action under the Hensley clause of the naval appropriation bill; toward securing an expression of the will of the people of the Danish West Indies before completion of the purchase of the islands and toward endorsement of the Susan B. Anthony suffrage amendment.

Other recommendations dealt with such new legislation to be urged as the creation of joint commissions representing Japan and the United States, and China and the United States, to meet issues arising between the Orient and America; the establishment of federal jurisdiction over alien residents in various states; and the formulation of the principle that foreign investments be made at the risk of the investor.

A few of the measures which the legislative committee will support were later embodied in resolutions covering the policy for the next year. Thus the party pledged its opposition to compulsory military service of citizens and to military training for minors, while the legislative committee will work to prevent the passage of any laws making such requirements. The party resolved, and the legislative committee will urge, that action be taken by the government to convene the third Hague conference at the earliest practicable moment.

Of particular timeliness was the resolution recommending that the next inaugural ceremony, instead of being a military pageant, represent the civic, social, educational, industrial, artistic and religious interests of the country.

Throughout the sessions of the conference, in the business routine, at the public mass meetings, in group discussion, the members of the Woman's Peace Party emphasized again and again their uncompromising attitude upon two principles. They condemned the disenfranchisement of women as delaying world peace, and with only a few dissenting voices placed their approval upon a constitutional amendment submitting the suffrage question to various state legislatures. And they condemned unanimously all attempts to menace social, industrial and political liberties by forcing compulsory military service upon the United States.

Yet even if the Woman's Peace Party is not pushing preparedness, it is, as Jane Addams pointed out in opening the conference, "cherishing hopes for the nation just as patriotic. Because we have the best development of our country at heart," she said, "we work for peace."

STUDENT DIPLOMATS OF THE AMERICAS

TO have the young men and women of Mexico and the United States walking about the campuses of our universities together, discussing sociology and history, assimilating the same ideas, would do more than any one other thing, the Friends feel, toward establishing harmony between Mexico and America.

The education of Chinese students through the income of the Boxer indemnity fund returned to the Chinese by the United States government some years ago, and the great Cecil Rhodes foundation, both contemplate a broader international policy. It was some similar arrangement with Mexico that the Peace Committee of the Philadelphia Yearly Meeting of Friends had in mind when it sent a letter to the presidents of 508 institutions of higher learning in the United States. As a result, 47 colleges and universities are offering scholarships to Mexican students and all the answers are friendly and encouraging.

Stanley R. Yarnall, of the Friends School, Germantown, Pa., as chairman of the committee, has had eager replies concerning the plan from Andres Osuna, director general of public education for the Federal District of Mexico, in which Mexico City is located.

The committee is not yet entirely confident, in spite of the willingness of our universities to cooperate. Definite information with regard to Mexican preparatory schools is lacking. Consequently it has been suggested that a normal or agricultural or industrial institution to train leaders for the Mexicans might be more efficacious. On the contrary, the original letter from the Friends' Committee to college presidents in the United States read:

"The statement has been made to us on good authority that 'several of the students who finish their studies in such institutions as the Escuela Nacional Preparatorie of Mexico have both character and preparation to enter colleges. They are good men of about 18 years of age, with knowledge equivalent to the average high-school graduates of the

United States.' Further information in regard to Mexican candidates for entrance into our colleges and universities may be obtained from Señor Andres Osuna, Director General de Educacion Publica, Mexico, D. F."

The Quakers look forward to a great foundation such as the General Education Board, or the establishment by some wealthy man of a large number of really permanent Mexican scholarships. Moreover, they would begin an interchange of visits by bringing immediately a delegation of Mexican educators to the north.

THE HENSLEY CLAUSE AND DISARMAMENT

BEFORE a recent conference of peace societies in New York, Lillian D. Wald, speaking for the American Union Against Militarism, of which she is chairman, introduced a resolution urging all the organizations represented to agree that securing the widest publicity and the earliest possible action "on the so-called Hensley clause in the naval appropriations act of 1916" is of paramount importance in their work for the year ahead.

Who is Hensley and what has he to do with peace?

Walter L. Hensley, of Missouri, was one of the "anti-preparedness" minority in Congress last year, the small group of Democrats who followed Representatives Kitchin, of North Carolina, and Bailey, of Pennsylvania, in opposing the big armament plans of the majority. They were overwhelmed, Congress having voted the largest war-preparation budget ever adopted by any nation in time of peace—\$662,476,512 for army and navy in 1916 against \$461,830,459 by England and \$293,181,125 by Germany in the year before the war. And they failed of reelection or even renomination.

But they left their mark on page 71 of the naval appropriations act of 1916, which requests the President to call the nations together to discuss disarmament and to organize for peace. These paragraphs, according to leaders of the Union Against Militarism, may yet go down in history as the great achievement of the Sixty-fourth Congress.

The Hensley clause requests the President "to invite at an appropriate time, not later than the close of the war in Europe, all the great governments of the world to send representatives to a conference which shall be charged with the duty of formulating a plan for a court of arbitration or other tribunal, to which disputed questions between nations shall be referred for adjudication and peaceful settlement, and to consider the question of disarmament and submit their recommendations to their respective governments for approval."

It authorizes the appointment of nine

citizens to represent the United States at such a conference and appropriates \$200,000 to carry out the plan. And it provides that if such an international tribunal is established before the naval construction provided for in the act is contracted for, "such naval expenditure as may be inconsistent with the engagements made in the establishment of such tribunal . . . may be suspended" by order of the President.

This final provision is hedged about with "ifs," but nevertheless many who have carefully studied the bill believe it vitally important. David Lawrence, writing in the *New York Evening Post*, said that these provisions "bind the chief executive to a definite step in foreign policy," and further "it is entirely possible that much of the money authorized for naval construction may never be spent." [See the *SURVEY* for September 2.]

The American Union Against Militarism hails the Hensley clause as "congressional authority for scrapping the dreadnaughts before they are built." "Here, indeed," writes Crystal Eastman, executive secretary of the union, "is a new precedent in naval bills: 'We authorize you to build these ships, but we authorize you also to try to get the other nations to stop building theirs; if you succeed, then *don't build ours.*'"

The union has set out to "let every despairing pacifist in the country, every exhausted anti-militarist, every lover of democracy, every radical, every man who objects to having the taxes wasted, every trade-unionist, every ordinary citizen who dislikes to feed the war-trust—let them all know that there is an 'if' in the huge naval program, that a good share of the \$315,000,000 can be saved to the people if we can hold up the new building contracts until an international understanding is under way. Under the

law, certain of the contracts must be let before March 1, 1917. But that gives us time enough to tell the whole world about the Hensley paragraphs and the practical hope they hold out for world-wide organized peace."

There is a fresh wave of discussion here and abroad of the terms on which the nations might organize to keep the peace. The most powerful peace organization of the day, the League to Enforce Peace, is solely devoted to advocating one specific set of terms. "But," the Union Against Militarism says, "all your plans must be submitted to an official conference of nations such as the Hensley clause provides for before they can become operative. Therefore, why not join with us in an effort to secure the earliest possible action on this clause?" The union points out that the Hensley clause has greater significance than unofficial proposals from any quarter; that the American Congress has, in fact, enacted "so far as we know the first piece of legislation looking directly toward complete world organization for disarmament and peace."

SERMONS AND HIKES TO SET BACK DISEASE

THE second annual celebration of "tuberculosis week," alias "health and happiness week," alias "disease prevention week" and many other "weeks" under as many titles, has been a country-wide success, to judge by early reports. The three feature days have been the Sunday, or Saturday before or after the week of December 2-9; Wednesday, medical examination day; and Friday, children's health crusade day, perhaps this year the most significant feature of the week.

As last year, many churches again cooperated. More than 75,000 requests for literature on this subject came to the National Association for the Study and Prevention of Tuberculosis, including the "talking points on Tb," and the prayer written for the occasion by the Rev. Walter Rauschenbusch.

In Detroit, Richmond, several cities of Indiana and in other cities, the local medical society cooperated with the tuberculosis association in offering free examinations either at physicians' offices or at some special hall. In Oklahoma the state society helped to extend these examinations all over the state. There is reason to believe that a great impetus has been given to the practice of periodic examinations, by the observances of this day.

The Health Department of New York city observed in addition to these three days an "open window day," a "walk-to-work day" and a "sanitary workshop day." December 10 was "Sunshine Sunday"—at least in name. The "Finley hike," endorsed by John H. Finley, commissioner of education,

HEALTH DEPT. "LIFE LINES"
No. 2

**Become a fresh-air crank,
even at the risk of being
disliked. Better a live fresh-
air crank than an almost
lifeless hot-house invalid**

DEPARTMENT OF HEALTH, CITY OF NEW YORK

ONE OF THE HEALTH WEEK POSTERS

TWO BY TWO

NOAH'S ARKS, a whole fleet of them, are off on their Christmas voyage. Their havens are the stockings of many children. Their port of departure is the Old Men's Toyshop, opened a year ago by the New York Association for Improving the Condition of the Poor. Here about sixty men—some very old, some convalescent from illness but not yet able to return to their regular work—have been at work throughout the year making toys for the Christmas exhibition and sale. The carved animals variously mounted serve the twofold purpose of attractive, simple toys for children and employment for the old men who made them. Here is one thing, at least, that an old man may do rather than die.

*"What can an old man do but die
When all the dreams are fled,
When all the tasks are finished,
And all the friends are dead?"*

*For no one wants an old man
In all the busy town.
The Island is a lonely place
To watch the 'sun go down."
(Harry Lee.)*

was an eight-mile walk from City College to Yonkers. This attraction drew fully 800 men, women and children into the ranks.

Minneapolis had as a special feature an exhibit of activities of disease prevention, hospitals, child welfare. The City Hospital showed the Pasteur method of preventing cross infection in a hospital, how different patients were taken care of, and modern equipment in general. The aim was especially to show the public how to use the hospital.

An occasion which draws into its observance people of all ages, all occupations, all denominations, must, as the North Carolina State Board of Health says, be found to set back tuberculosis not a little distance.

LABOR ISSUES BEFORE CONGRESS

ORGANIZED labor appears to have won a point in its fight against the enactment of legislation proposed by President Wilson on December 5 in his address to Congress providing for compulsory delay of strikes pending official inquiry into the disputes involved. The House Committee on Interstate and Foreign Commerce, meeting on December 8, decided that all items in the President's program of legislation relating to the railroad crisis, should be first taken up in the Senate. There they will be attached to the bill already passed by the

House for the reorganization of the Interstate Commerce Commission.

Announcement was simultaneously made by Samuel Gompers that the American Federation of Labor and the railroad brotherhood heads will seek to draft a bill for investigation of industrial disputes which will be submitted to the President and Congress. The purpose of this measure will be to guarantee the freedom of the workers in any industry to strike at any time, unless safeguarded in their relative strength against the employer during a period of truce. Labor officials hold that the Canadian industrial disputes act has merely served to protect employers in gathering their forces to resist a strike, and to break the spirit of strikers through delay of action. The bill to be offered by organized labor to President Wilson will not permit this.

Senator LaFollette, who is preparing an exhaustive argument on the railroad legislation, is opposed to the compulsory scheme. Senator Cummins declares that the plan will not work, as it conflicts with fundamental American ideas of the right of the individual to refuse the conditions of employment offered him. He argues that if a man may be forced by law to work during a period of inquiry, he may also be forced by law to work thereafter under conditions dictated by the inquiring body—in direct violation of the constitutional safeguard against involuntary servitude.

Relations between President Wilson and Mr. Gompers continue friendly despite the President's endorsement of a principle to which the whole labor movement is opposed.

The creation of a women's division in the United States Department of Labor, under the direct authority of the secretary of labor and outside the Bureau of Labor Statistics, is embodied in the Jones-Casey bill (H. R. 16358) reported unanimously by the House Committee on Labor with the endorsement of Secretary of Labor Wilson. It has the backing of the National Woman's Trade Union League, the National Consumers' League, the General Federation of Women's Clubs and the Women's Division of the National Civic Federation, representing in all over three million women. Their representatives in Washington are active in advancing it toward passage in the House.

In the formal report on the bill, submitted on December 5 by Representative Keating, it is explained that "the bill is designed to create a division charged with the duty of ascertaining and presenting facts concerning the work which wage-earning women in industry are doing, what they are getting for it, the conditions under which it is being done, and its effect upon the health of such women.

"The necessity for the establishment of the division rests mainly on three propositions:

"1. The growing army of wage-earning women creates problems in the industrial world of far-reaching importance to the public as a whole.

"2. Solutions of these problems can be effected only through the continuous and instructive studies which recognize not only the similarities but the essential differences in conditions surrounding wage-earning women and wage-earning men.

"3. The record of twenty-five years shows that without statutory existence the work of a division designed to ascertain the facts concerning women in industry cannot be continuous and coherent because its resources have been uncertain, its activities intermittent and its very existence a matter of chance."

The last paragraph sums up the reasons advanced for putting the division outside the control of the Bureau of Labor Statistics. That bureau is charged with never having given adequate attention to the interests of the women in industry. During the past two years the lack of harmony between the bureau management and the women who have attempted to make its Women's Division effective has led to the wiping out of the entire division through resignations. Secretary of Labor Wilson sent to the Labor Committee of the House a letter endorsing the new measure.

Possibilities of the enactment of a

minimum wage law for women in the District of Columbia are improved by the adoption by Congress on December 5 of the Keating-Kenyon resolution providing for a study of the cost of living for wage-earners in the district. Six thousand dollars is appropriated for this study, to be made by the Department of Labor.

The cost-of-living resolution was first introduced in the upper house by Senator Kenyon nearly three years ago. Although twice favorably reported from committee and once considered in a conference committee of the two houses as an amendment to an appropriation bill, it has until now been kept back for lack of unanimous consent. The Consumers' League, which was promoting the resolution, conducted a campaign of publicity and secured the endorsement of scores of civic and industrial organizations, most of which were represented at a hearing before the House Committee on the District of Columbia, on February 10. Mrs. Florence Kelley, representing the National Consumers' League, explained that the plan was to establish the facts upon which judgment as to the need for minimum wage legislation might fairly be based.

The House committee added to the measure a provision that the wages in the district be also studied. As this could not have been done within the appropriation, the Senate struck out the House amendment, and that action was confirmed by the House on the second day of its present session.

Whether the Bureau of Labor Statistics or some other branch of the Department of Labor will conduct the inquiry has not yet been decided. In so

far as possible, the cost of living previous to the recent general advance in prices of the necessaries of life will be ascertained, together with present costs.

Meanwhile, the House Appropriations Committee, through a subcommittee, has been working on various proposals for a horizontal increase in the salaries of government clerks. The 10 per cent increase, which is favored by most members of the committee, is conceded not to equal the increase in cost of food and fuel.

Postal clerks to the number of 40,000 are asking that their salary upon entering the service be made \$900 instead of \$800 a year, and that the limit of automatic increase be raised to \$1,500 from the present \$1,200. The commissioners of the District of Columbia have asked Congress to grant an increase of 20 per cent to all district employes now paid less than \$1,000 a year, 15 per cent for all between \$1,000 and \$1,500, 10 per cent for all between \$1,500 and \$2,000, and 5 per cent for all above \$2,000. Teachers, firemen and police are not included.

As the committees contemplate a horizontal increase of wages on the percentage plan, chances for advancement of the Nolan bill, providing a minimum wage of \$3 a day in federal employ, are not favorable.

MARY GOODE, FRIEND OF HAPLESS GIRLS

WHEN Mary Goode died the other day in New York a city magistrate bore witness to "the good she accomplished in the Night Court and with women returned from Blackwell's Island." Some of these women sent

flowers, but only the undertaker followed the hearse to the cemetery. Those in charge of her affairs believe money enough will be left to pay for the burial.

That was the end of Mary Goode. Her beginning was in a little town upstate. Without a family, or even relations, she was befriended by a Catholic priest, who had her taught stenography and later helped her find a position in New York, at which she made good. Some time after she had a long sickness, underwent an operation and, her few friends vaguely understood, opened a rooming house and prospered.

That was all until the lid blew off the Police Department [see the SURVEY for March 8, 1913]. Then it came out that Mary Goode's rooming house was a brothel. She had become the keeper of a rather small, high-priced house uptown. She had a bit of an education, a good business head and a fighting Irish temper.

For years she had paid for police protection through a political intermediary, a neighborhood bottler of beer. The price of protection rose greedily month by month, until Mary Goode and her girls made scarcely a living for themselves. Then, made bold by District Attorney Whitman's effective protection of the witnesses against Lieutenant Becker, Mary Goode broke every tradition of her class and squealed on the police. Her testimony before the Curran investigating committee was an important element in the purging, then beginning, which the Bureau of Social Hygiene reported two years later had practically eliminated police protection from what is left of commercialized vice in New York city.

In her unveiling of the police, Mrs. Goode—for so she was known—went first to a leader of the woman suffragists, saying that she felt a woman would understand better than a man. When this elected confidante sent her to the district attorney she had a definite plan to propose. Every man who touched vice, she said, grafted on it. Therefore put it in the hands of women. Let a committee of madams be officially appointed to run and regulate the business, paying regular license fees instead of graft.

She considered her occupation a legitimate business, an idea likely enough confirmed by the men she met in the course of it. And it had never occurred to her that any considerable number of people in New York held it illegitimate and wanted to do away with it altogether. Had not Mayor Gaynor just issued his statement deprecating the testimony before Alderman Curran's committee and declaring "outward order and decency" the city's ideal?

Mary Goode appeared occasionally thereafter as a bitter critic of the police, who hounded and raided her, she said, even while she was running a respect-

MONEY BY WIRE

Donors to the Cleveland Federation for Charity and Philanthropy were tripled in number by a telephone canvass during "Thanksgiving's Week." One thousand volunteer operators, working in relays, secured \$18,500 from 8,160 contributors among Cleveland's 45,000 telephone subscribers. Each operator had before her a printed statement of the "story" she was to tell. A telephone canvass has never before been carried out on so large a scale.

able lodging house. Then she dropped out of sight until her death opened the lips of Magistrate Henry Groehl to tell of the woman who, under a new name, had gone every morning to meet the boat which brings derelict women back from serving their sentences on the island, and every evening to the Night Court for Women. She had helped and befriended them and given them money from her slender purse.

A month ago she gave every cent she had with her to a girl in court and walked home in a driving winter rain. This brought on a severe cold, followed by pneumonia, and Mary Goode was snuffed out. During the two years of her service of contrition she had been a member of the Church of the Holy Innocents.

OUT OF WORK AND INTO SCHOOL

ON September 1, 1917, when the federal child-labor law goes into effect, 27,000 factory children, ten to thirteen years old, and 17,000 children in mines and quarries, aged ten to fifteen, will be out of jobs. Meanwhile the legislatures of some forty states will have met. What will these legislatures have done to prepare a welcome for the children in the schoolhouses hitherto closed to them—in some sections, never built?

Most of the factory children are working in southern states, over six thousand of them in North Carolina, nearly three thousand in South Carolina, as many in Georgia, besides others in Mississippi, Virginia and the states where the fourteen-year limit is not carefully enforced or the twelve-year-old children of the poor are exempted from it. The majority of these are in textile mills—silk, woolen, knitting and cotton—but cigar factories in Virginia, furniture factories in North Carolina, and the miscellaneous factories that have been growing up all over the South with the spread of manufacture may have their share of children under fourteen. It is well known that the enforcement of state labor laws has never been adequate in the greater part of the South, chiefly because of the refusal of state legislatures to appropriate enough for thorough factory inspection, so that even where there is a fourteen-year limit the twelve-year-old child is likely to be at work.

It is hardly fair, however, to imply that state enforcement is without effect in the South. For instance, Commissioner Watson of South Carolina reports this year that there are only 2,881 children twelve to fourteen years old in the mills of his state, 1,673 fewer than in 1909, and no children under twelve, the minimum age limit. After these figures were compiled the South Carolina legislature forestalled federal

regulation by adopting the fourteen-year limit, and it is probable that before next September the South Carolina mills will be practically empty of twelve- and thirteen-year-old operatives. But the fact remains that the federal fourteen-year limit will be felt chiefly below the Mason-Dixon line.

What will become of the children out of jobs? Some of the opponents of the federal law predicted in Congress that they would be "on the streets," that they would turn speedily into delinquents and criminals if they were removed from the moral atmosphere of the factory. Champions of the law suggested, on the other hand, that the children might go to school, as other twelve- and thirteen-year-olds have been known to do. This idea was not received with enthusiasm.

The sad truth is that it will probably be out of one job and into another for most of these factory children. The states most affected by the fourteen-year age limit are also the states with the weakest school laws and the least comprehensive child-labor laws. It will be perfectly possible, therefore, for the mill child who is fired the end of next August, out of respect for the federal law, to get a job in a bakery, or a laundry, or a store, or in any one of a number of local and unregulated occupations, and continue undisturbed his career as a wage-earner.

If his state school law requires only four months' school attendance a year, or exempts him from school for poverty, he can not be expected to waste much time getting an education. And if his state child-labor law says nothing against his working in a nice little "shin-parlor" or bakery, where federal inspectors never appear, he will certainly work there if they will take him on. It is to be hoped, however, that a flood of child labor in local industries may awaken the states themselves to the need of more thorough labor regulations and better school systems.

As for the 17,000 mining children, they presumably will find other jobs, too, since only 2,000 of them are under fourteen. The value of the federal law to them is that it takes them out of a very dangerous occupation and puts them into safe ones. The state that has the largest number of these children is West Virginia, with 1,839. Virginia has 621; Indiana, 585; Iowa, 340. The rest are scattered through the nineteen other states that have not taken children under sixteen out of their mines and quarries.

Besides the children thrown out of jobs there are over 100,000 children, fourteen and fifteen years old, whose hours of labor will be regulated. There are twenty-eight states that have not enacted an eight-hour day for children, and thirteen states that allow children to work at night. So the federal hours'

regulations will affect states from New Hampshire to Louisiana and from Connecticut to Oregon. In Pennsylvania alone there are 30,000 children who will go from a nine-hour day to an eight-hour schedule. There are over 20,000 children in the South who have been working eleven hours a day, but will work only eight.

PROBATION MAKING FOR VACANT CELLS

ONE of the first after-studies of men placed on probation, if not the first, is described in the ninth annual report of the New York State Probation Commission, issued recently. The number of cases studied is not large but the results are believed by the commission to confirm the view that when probation is efficiently done a large majority of men make good.

All cases placed on probation in Erie county in a single month in 1912 were selected for this study. These numbered twenty-eight. The study undertook to discover what had become of the men three years later. One had moved away, one had entered the army and one had died. There were twenty-five, therefore, who could be reported on.

Of these twenty-five, permanent improvement was found among seventeen. Two showed fair improvement, five had been rearrested and committed and one had absconded. Sixty-eight per cent, therefore, showed permanent improvement.

In only twenty-one of the twenty-eight cases did the men complete their probation and receive regular discharge, so that of those for whom the probation officers had had full opportunity to do constructive work throughout the probation period, 81 per cent showed permanent improvement at the end of three years.

A typical case of a man who improved is that of Michael ———, 47 years old, who had been arrested on numerous occasions, several times for assault, and who used alcohol to excess. He was discharged from probation in December, 1913, when he was earning from \$50 to \$75 monthly. In August, 1915, he was found in the same employment and earning the same wages. Police, neighbors and relatives declared that his habits had greatly improved, with noticeable benefit to his family.

The growth of the probation system and decrease of imprisonment in New York was emphasized at the meeting of state probation officers in Poughkeepsie last month. Homer Folks, president of the state commission and secretary of the State Charities Aid Association, pointed out that whereas on September 30, 1915, there were 11,907 persons on probation in the state, there were 13,361 on September 30 this year—an increase of 1,454. During this same period the

population of state prisons decreased from 5,401 to 5,053, and of Elmira Reformatory from 1,279 to 818.

Complete figures of penal and reformatory institutions for September 30 are not available, said Mr. Folks, "but the total population of county penitentiaries, New York city penal institutions, state reformatories for women and state institutions for juvenile delinquents showed a decrease of 1,005."

An even more striking instance of the effect of probation work was reported from Niagara county. The census of the Niagara county jail on January 1, 1915, was 135. A probation officer was appointed in March and the census immediately began to fall. On September 30 it was 73. On January 1, 1916, it was 68, and on June 30, 57, considerably less than half its population of last January.

"Good times with plenty of employment are undoubtedly an important factor in this tendency," said Mr. Folks. "No one can say how far it will go, but there is every indication that in a very few years the number of persons receiving extra-institutional treatment will be larger than the number of offenders within institutions."

Henry Noble MacCracken, president of Vassar College, pointed out that there is a correlation between the principles underlying probation and those that a modern university employs in administering discipline to its students.

POLIO POINTS ALL OVER THE COUNTRY

IN the *Public Health* report of November 10, the geographic distribution of poliomyelitis by states is carefully tabulated by Dr. C. H. Lavinder. If we take somewhat arbitrarily, says Dr. Lavinder, all the states which show a prevalence rate of over five per hundred thousand, we find that, roughly speaking, they form three groups. These are first, the New England and North Atlantic states; second, those stretching westward along the Great Lakes; third, those skirting the South Atlantic and Gulf coast. The prevalence of disease in these states is distinctly above that in the rest of the country.

The focus in New York city and vicinity stretched north and perhaps westward. Another focus in Minnesota, which appeared about the same time as that in New York, stretches eastward as well as west. No connection has as yet been traced between these two foci. A third, originating perhaps in Mississippi or Alabama, stretches northward to Virginia and Maryland.

The relation between the foci in these groups of states, Dr. Lavinder considers at the present time conjectural. The facts are, however, that the disease, which became epidemic in New York and Minnesota almost simultaneously,

reached its greatest prevalence in Alabama and Mississippi before it did in the states farther north, Virginia and Maryland. The presence of cases in California and in Texas, above the endemic record, deepens the suspicion of human contact along routes of travel.

Yet the human contact theory is not without difficulties, although the evidence thus far accumulated is greatly in its favor. Why, if the polio germ is spread through mouth-spray, are there frequent halts in the progress of the disease along routes of travel? One map from the Massachusetts Department of Epidemiology shows forty-eight cases in Adams and North Adams; only one in the three southern bordering counties, and then sixty-five cases in adjoining Pittsfield.

Similarly, the outbreaks in Minnesota, Iowa and Nebraska in 1908-10, were believed to be traceable to the 1907 outbreak in New York. Yet no epidemic occurred in Chicago, although a large proportion of travel from the east into those states passed. This year Illinois has shared in the outbreak, although, next to New York and New Jersey, Massachusetts has been the state to suffer most severely from poliomyelitis. Figures of the Massachusetts State Department of Health show that from January to November, 1,714 cases were reported. The most rapid increase in the number of cases has occurred during September and October, the incidence rising in Massachusetts as it declined in New York and New Jersey. A sharp and steady decline is now evident, however, even in this state.

TRAINING WOMEN IN UNION LEADERSHIP

THE School for Active Workers in the Labor Movement, conducted by the National Woman's Trade Union League at Chicago, grows apace. Opened in January, 1914, with one student, it has developed through nearly three years of experience a unique course of training for leadership in women's trade union organizations. The ever-increasing number of women entering every trade and the successful social uprisings of the workers in the sweated industries emphasize the need of this training, which the league undertook to provide at the initiative of Mrs. Raymond Robins, its president.

Mrs. Robins furnished its convention with the background for this action in a report in which she effectively detailed the movements in England to afford facilities for self-culture and organized educational advantages to wage-workers, beginning with the efforts of the Rochdale Cooperative Pioneers and culminating in the cooperation between the Workers' Educational Association and the universities of England and Wales. Her recommendations resulted not only

in the establishment of this school, but in the adoption of an educational policy for the league.

Three classes of students are received into the school: those whom the league asks to leave their trades to take the training to fit them to become organizers; those sent by their own unions or central labor bodies to improve their efficiency in working for the organization; those who come at their own initiative and on their own responsibility.

The academic work covers four months, the courses including, besides English, public speaking and other necessary preparatory work, the study and analysis of judicial decisions affecting labor injunctions, boycotts, etc., economic history and the history of organized labor, elementary economics and modern radicalism. Some of these courses are taken at the Chicago School of Civics and Philanthropy and the University of Chicago.

The eight months of field work includes the theory and practice of organization, attendance at meetings of unions and the Federation of Labor, conferences with their men and women leaders, analysis of trade agreements, writing for the press, study of police court methods, and instruction in suffrage and civic duties. Attention is given to health, exercise in the gymnasium and regular recreation. An extension department offers correspondence courses and public lectures. A group of the students is in residence at Chicago Commons.

Mrs. Robins thus states the school's motive and enters its plea: "Our day's work is in the main directed to the immediate aspects and demands of the struggle, but we cannot act wisely nor fully understand the meaning of the hour in which we live, unless we keep in mind the underlying cause for these conditions and the fundamental principles of justice. Today, as yesterday, 'where there is no vision the people perish,' and today, as yesterday, the spirit must be born to see the vision, to hold it, to live and die for it. To release and set free this spirit, so that it may achieve its purpose foretold in the hidden heart of man—to show the path of freedom, to bring hope, faith, courage to those held in bondage and crushed under the weight of wrong—and to give them the message, 'To you, too, has been given the dominion over life,'—this is our task.

"We therefore ask those who recognize in today's industrial struggle the challenge of democracy and those who believe that the great heritage of the past in thought and act, in history, science and poetry, belongs to all the people, to help us work out the most effective plan to meet the demands for further educational opportunity of the working women of America."

Book Reviews

THE IMMIGRANT IN ST. LOUIS

By Ruth Crawford, A. M. Studies in Social Economics, edited by the Faculty of the St. Louis School of Social Economy. Vol. 1, No. 2. Price \$5.00 net. St. Louis, Mo., 1916.

THE ITALIANS IN MILWAUKEE, WISCONSIN

General Survey by G. La Piana, prepared under the direction of the Associated Charities, 1915.

FOREIGNERS' GUIDE TO ENGLISH

By Azniv Beshgeturian. Price \$.75 postpaid. Immigrant Publication Society, New York, 1915.

IMMIGRANT AND LIBRARY; ITALIAN HELPS, WITH LISTS OF SELECTED BOOKS

By John Foster Carr. Price \$.35 postpaid. Immigrant Publication Society, New York, 1914.

MAKERS OF AMERICA

By Emma Lilian Dana. Price \$.50 postpaid. Immigrant Publication Society, New York, 1915.

AT SCHOOL IN THE PROMISED LAND

By Mary Antin. The Riverside Literature Series. 104 pp. Price \$.25; Houghton-Mifflin & Co., Boston; by mail of the SURVEY \$.29.

INTRODUCING THE AMERICAN SPIRIT

By Edward A. Steiner. Fleming H. Revell Company. 274 pp. Price \$1; by mail of the SURVEY \$1.10.

MODERN AUSTRIA: HER RACIAL AND SOCIAL PROBLEMS

By Virginio Gayda. Dodd, Mead and Company. 350 pp. Price \$3; by mail of the SURVEY \$3.15.

JAPANESE EXPANSION AND AMERICAN POLICIES

By James Francis Abbott, Ph. D. The Macmillan Company. Price \$1.50; by mail of the SURVEY \$1.62.

THE INEQUALITY OF HUMAN RACES

By Arthur de Gobineau, translated by Adrian Collins, M. A. Introduction by Dr. Oscar Levy. G. P. Putnam's Sons. Price \$2; by mail of the SURVEY \$2.14.

Anything relating to racial varieties is of peculiar interest at the present time, when, no matter which way we turn we find race or nationality involved in the most serious problems of social and political life. We have before us a list of books and

pamphlets, taking up one and another aspect of that question, to which it is worth while to call the reader's attention.

First on the list is one of those detailed descriptions of foreign life in an American community of which we should have more. This is a study of The Immigrant in St. Louis, made by Ruth Crawford of the St. Louis School

of Social Economy. In it is presented in brief form the available historical and statistical matter bearing upon foreign settlement in the city, and first-hand studies of the principal foreign colonies. The study shows what happens to the immigrant on first arrival, points out the need of proper methods of reception and protection, describes the homes and the economic situation of the different nationalities, gives an account of them as they are dealt with by public or private agencies as dependents or delinquents, describing among other means of dealing with them, the Mullanphy Fund—a unique institution. (See THE SURVEY, May 1, 1915.) Of especial interest is a discussion of the problem of immigrant education.

Another community survey of immigrants is at hand in Italians in Milwaukee, prepared by G. La Piana for the Associated Charities of that city. This study makes a more definite impression than the St. Louis study since it is confined to one nationality. The confusion is therefore avoided that results when we try to follow—as in the St. Louis study—Italians, Greeks, Poles, Russians, Rumanians, Jews, Spaniards, Syrians, Croatians, Hungarians, Bohemians, and others successively through various chapters each devoted to a single topic like "homes," "occupations," and so forth.

The presentation as a background for the picture of life in this country, of the conditions under which the immigrant lived at home takes us a long way toward a sympathetic understanding of why people live as they do here, and how best to help them to live better.

As a help to the education and assimilation of our non-English speaking immigrants we should note the excellent publications of the Immigrant Publication Society. The St. Louis Survey graphically set forth the ill success of "a class of big men (who) listened in dull apathy to the stumbling efforts of a Greek waiter to read from Stepping Stones, Third Reader, concerning the trip of a camel across the Sahara Desert." Nothing of this sort will happen to the class that uses the Foreigner's Guide to English. This book takes for its subject matter the incidents of daily life that come most nearly and directly within the experience and interest of the working immigrant, and presents them through a simple conversational and graphic method.

Another useful book on the Publication Society's list is the one called Im-

migrant and Library: Italian Helps, for the assistance of librarians in selecting books for Italian readers, and in contriving ways of attracting them to the library. The greater part of the little volume is taken up with lists of books in the Italian language with brief descriptive notes, classified under various headings of general interest, such as Biography, Travel, Description, History, Fiction, Italian, and so on. Lists of books in English are not given because such lists are already available. These book-lists will be found useful not only by librarians in looking after the needs of Italians, but by social workers, and others, who have some familiarity with the Italian language and want to learn more about the Italian people.

A book to interest adult immigrants and to ground them in our national traditions is Makers of America, which gives an account in clear and readable English of the lives and deeds of Franklin, Washington, Jefferson and Lincoln.

The Guide to the United States for the Jewish Immigrant is a recent translation of a Yiddish edition, published some time ago. It contains the information most useful to a newly arrived immigrant—such as the conditions of admission to the country, to whom to apply for aid, where to go for work, about traveling in the United States, about schools and other educational advantages, how to become a farmer, how to become a citizen, and—of especial utility—a simple, non-technical statement of laws and ordinances that the immigrant is least likely to know about and most likely to break.

Next comes to our attention At School in the Promised Land, a selection of those chapters from Mary Antin's remarkable book of a few years ago, which deal with her school-days. The selections are presented for use as a school reader, among other reasons because, as is pointed out in the preface, "besides explaining to Americans the experiences, the hopes and the problems of immigrants, the author reminded the native-born of their priceless heritage of liberty and opportunity"; and because "the book had a special message to teachers in its amazing revelation of the power that lies in a teacher's hands, and of the results that attend a wise use of this power."

The St. Louis Survey gives us a picture of the foreigner as seen by the native: perhaps it is equally useful to show how the "native" looks to the "foreigner." This is the purpose of Introducing the American Spirit. "We are not loved as a nation," says Dr. Steiner, "largely because we are not understood, and we are not understood because we do not understand ourselves and we do not understand ourselves because we have not studied ourselves in the light of the spirit of other nations." So Dr.

Races
and
Customs

Steiner undertakes to give us a little of that light through the impressions of a certain visiting Herr Direktor, who is taken by the author on a personally conducted tour to note and admire various manifestations of the American spirit. We find it rather difficult to visualize the "spirit" through the bewildering succession of meals and railway journeys which seem to be the main medium for impressions, but there is here and there a suggestive bit of criticism, an illuminating pictorial flash—as in the chapter describing the meeting of the Russian priest, the American Y. M. C. A. secretary, and the Herr Direktor.

In the next book we go to look at the foreigner in his native country. Modern Austria untangles for us in a clear and interesting way the racial and social complexities in which a large proportion of our present immigrants are involved in their home-land.

The author is an Italian, and the questions are presented from an anti-Austrian point of view, but the spirit is eminently fair, and we can well believe the statement of the translator's preface that the author is "a keen observer and able student of political and social movements."

Japanese Expansion and American Policies brings before us another racial problem. Our fervor for "preparedness" is largely based upon fear of attack from one or both of two quarters—the west and the east—the German and the Japanese. The latter is a terror of longer standing, and the author in this book addresses himself to the task of clearing it away. Whether there is reason for it or not, and the author insists there is not, a spirit of fear, contempt and unfriendliness toward another people is an excellent basis for hostilities.

Why should we fight the Japanese? Dr. Abbott can think of but three reasons: first, that there should be acts of hostility toward American citizens in the Orient, which we should be obliged to take notice of. The chance of this is remote, as American tourists are well liked in Japan and well treated. Or, we might fight to maintain an open door in China, or to help China against an aggressive Japan. Neither of these reasons is likely to appeal to the American government or the American public as causes of war, as is shown by our action—or failure to act—in similar circumstances.

But perhaps the Japanese would fight us? This might occur in consequence of irritating state and national legislation. But if this happens it will be our own fault, Dr. Abbott thinks, because we can attain all necessary ends without arousing Japanese antagonism.

But might not the Japanese go to war with us in the natural course of national expansion? The discussion of this pos-

sibility is perhaps the most interesting part of the book. The argument is developed in the way made familiar to us by Mr. Angell—that it would be unprofitable to Japan to wage war upon us, and that it would be difficult if not impossible to finance such a war. It is admitted that nations do go to war under such conditions, but we are reminded that the Japanese are singularly cautious in their calculations, and mindful of the profit of their undertakings.

Refraining from irritating legislation and a contemptuous attitude toward the Japanese nation, whom we have every reason to treat as a friend, and to accept as an equal in the family of nations, does not mean, in the author's view, that we should permit unrestricted immigration from Japan. This would be undesirable, but he thinks restriction according to the Gulick plan of admitting immigrants of any race in numbers proportional to their countrymen already here would answer our purpose entirely, and give no offence to the Japanese because it would apply to all countries equally.

An attempt to discover the fundamental laws governing the life-history of races in general is made in *The Inequality of Human Races*, a translation of Count Gobineau's standard work, first published in 1853. Its timeliness now, according to the translator, is that of the prophet confirmed by the stride of events. The basis of Gobineau's creed was a belief in race and aristocracy as the first condition of civilization, a disbelief in the influence of environment, and a distrust in the efficacy of religion and morality. His theories fit in with the teachings of Nietzsche, Treitschke, Chamberlain and others to form the body of doctrine upon which the Teutonic mind has been feeding for the past sixty years to make it ready for the present conflict.

To confirm his powers of prophecy, it happens that the general trend of biological discovery does sustain to some extent his general theory of race today, as it would not have been sustained, say, twenty years ago, before Weismann and the resurrected Mendel had pretty well shattered the hypothesis of the environmental influence of heredity.

But after all, what does it matter what curious anticipations of truth Gobineau may have hit upon, since he lacked the scientific basis which gives value to the results of experimental biology today? For we must remember that this book was written six years before what we may term the beginning of the "modern era"—the publication of the *Origin of Species*, when the accredited method of studying humankind was by means of the "philosophy of history," with all its glittering ambiguities. And there is danger that the partial con-

firmation of some of the author's theories by modern science may lead the unwary to accept the others, not thus confirmed.

KATE HOLLADAY CLAGHORN.

THE RELIGION OF EXPERIENCE

By Horace J. Bridges. Macmillan Company. 275 pp. Price \$1.50; by mail of the SURVEY, \$1.62.

Not experiential religion, but the experience of mankind with religions is the concern of the lecturer of the Chicago Ethical Society, in his latest volume. The social significance of the book is its emphasis upon "religion and nationality." So interdependent are these to the author that the history of both testifies to the "sociological identity" between them. He therefore argues that a nation is and always has been essentially a church, and that a church fulfills its highest function and best perpetuates itself by molding the nation to the religious ideals and spirit of its own life. In noting how many of the functions being assumed by the modern state correspond to those hitherto considered exclusively religious and ecclesiastical, the author passes by the humanitarian service thus shared to point out the correspondence between their other prerogatives which he thinks will be "clear to all who are not hypnotized by names."

The state's registration of its citizens and the church's declaration of its watch over its members through baptism; civil and ecclesiastical marriage; surveillance over theological and political beliefs; and the imposition of certain exactions as conditions of eligibility for political office and ecclesiastical ordination, are cited as correspondences.

The modern nation, he claims, is dangerously inefficient because unaware of its true religious nature. On the other hand, he attributes much of the inefficiency and divisiveness of the modern church to its failure to see and teach that "patriotism is the highest application of the universal moral law and is identical with religion."

Differing though he does from all the churches, critical though he is of their beliefs and policies, yet he scorns as without any basis in history, or in contemporary experience, any suggestion either of the disappearance of religion or the superseding of the churches. Indeed, he would have the ministers of the churches and the churches themselves remand to other agencies most of their humanitarian ministries and social activities, in order to reserve themselves for the fulfillment of their primary purpose, which

is to idealize, inspire and dynamize the nation and its individual citizens.

In so arguing, however, he seems to deprive them of the very means of applying and even initiating their social and civic ideals, especially in communities not well organized to these ends. He stoutly maintains that without these organized means, the new-born ideals and inspirations of the Christian church would soon have been lost in the "bog of oblivion."

Not since Elisha Mulford wrote *The Nation and The Republic of God* have religion and nationality been so vigorously and fundamentally identified and their interdependence so effectively reasserted.

GRAHAM TAYLOR.

POLITICS (Volumes I and II)

By Heinrich von Treitschke. The Macmillan Company. 406 and 643 pp. Price \$7 per set; by mail of the SURVEY, \$7.32.

In the two-volume English translation of von Treitschke's *Politics*, for which the Rt. Hon. A. J. Balfour has written an introduction and President A. Lawrence Lowell a two-page foreword, we have an excellent opportunity to learn at first hand what

those doctrines are which have been so much discussed in the past two years. The work is worthy of a careful and open-minded reading, especially, as President Lowell intimates, the first three chapters and the last two.

The present reviewer has done no more than this at present, but he intends before many days to read also the intervening twenty-three chapters. What better commendation from a reviewer could any book ask? Mr. Balfour's introduction, entertaining as it is, should not be read in advance, if the reader wishes to be fair to himself. Fairness to the author does not matter. He is a foreigner, anyway, and has been dead for years; but if one is to enjoy reading a book, if he is to enjoy the process of forming his own conclusions, it is better not to start fresh from a verdict by an imposing authority that the author is inaccurate, that there is nothing profound in him, that he is abusive, that some of his blemishes may be due to want of memory or care, but that others are the offspring of invincible prejudice, that his inordinate self-esteem does not have the grace to appear in its most agreeable form, and that even his humor is not of the prophylactic kind. One

should not miss this introduction, but it should come after the book itself.

The view of the state set forth in these opening chapters is not in the least mystical. It is as clear as crystal and as concrete. The state is born in a community whenever a group or an individual has achieved sovereignty by imposing its will upon the whole body. It represents power. The consent of the governed is advantageous, but not necessary. The state is the people legally united, but not necessarily nor even normally on a democratic basis. The state is everywhere older than history. It is not something artificial and is not an organism. It is not founded upon contract. It is a legal personality. As a person it has a will. One of the few wise remarks that Rousseau ever made is that the general will is not to be identified with the will of all the people. The state has an independent force, and power is its characteristic attribute.

The state has no power to limit its own power. Treaties have no absolutely binding force, but are voluntary self-restrictions. The power which made may unmake them. No outsider can interfere. It is a point of honor for a state to solve for itself whatever difficulties may arise. The appeal to arms will be valid until the end of history, and therein lies the sacredness of war.

Without war, says von Treitschke, explicitly, no state could be. This is not to be considered a necessary evil. War is a uniting as well as a dividing element among nations. It is undoubtedly the one remedy for an ailing nation. It is war which fosters the political idealism which the materialist rejects.

There is another side of this philosophy. States are subject to a moral law. Truth and frankness have much more power than is commonly supposed. An instinct for truth is born within us. A state gains a moral strength from the confidence of its neighbors. Art is to be fostered. It is not a luxury, but is as indispensable to men as their daily bread. Compulsory education, which is only a phrase, should rather be called compulsory freedom. Moreover, the state is not to absorb the whole of human life. Liberty of the individual will grow with the growth of culture.

And with this inevitable reference to culture we might end the sampling of von Treitschke's crisp and provoking phrases. In addition, however, Americans should perhaps be warned that to him they are still colonists. The German-Americans who forsook their fatherland in 1848 were only radicals who in their vanity imagined that they were faced with a struggle like that of the

French Huguenots; but this struggle had only a subjective existence in their exalted imagination. It is foolish to admire them. Germans must always maintain the principle that the state is in itself an ethical force and a high moral good.

The book will be interesting to anyone, but it is especially recommended to all pacifists who are so only because they have never really faced the argument for aggression and war.

EDWARD T. DEVINE.

SOCIETY, ITS ORIGIN AND DEVELOPMENT

By H. K. Rowe. Charles Scribner's Sons. 378 pp. Price \$1.50; by mail of the SURVEY, \$1.62.

Sociology "must not be permitted to remain the possession of an aristocracy of intellect." For this reason the author has drawn a cross-section of society, concretely, so that it may be studied by the average person. The book presents an outline

of the activities of society in a readable form. It is comprehensive yet compendious. It will prove useful to pupils and general readers.

Excellent as it is in conception and execution, the volume falls into the errors almost unavoidable when one attempts to treat of a great variety of subjects.

To say that "crime calls for prevention and punishment" hardly accords with the statement that "retaliation is no longer the accepted principle; reformation has taken its place." It is accurate to say that punishment is still practiced. But in stating the principles of modern methods punishment should find no place.

The statement under the discussion of play that "control is held in abeyance; parent, teacher and constable leniently indulge the child," is not in conformity with the universally accepted theory that play must be always directed in constructive channels. That as yet too much liberty is allowed is a fact. But it is also true that this is recognized as a defect, that it may be considered as a passing phase and that modern interpretation and plans look to its gradual elimination.

Notwithstanding such errors, the book is worth while for students. It possesses a distinct advantage because it treats of facts and wastes no time in trying to establish a terminology.

E. T. HARTMAN.

Communications

"PENITENTIAL HYMN"

To the Editor: John Haynes Holmes' poem in the SURVEY for November 18 ought to be translated in all the languages of Europe and I trust it may be. It is splendid.

L. M. POWERS.

Gloucester, Mass.

BORDER IMMIGRANTS

To the Editor: I was much interested in the article by William E. Leonard in the SURVEY of October 28 last, in which he says that the influx of Mexicans into the border states is making a double race problem of increasing seriousness. When the tendency of the Latin races to intermarry with Negroes is considered, it will be seen that the problem is even more serious than it now appears. Telegrams sent to congressmen by a railroad running through these states, to the effect that it needed cheap Mexican labor in its business constituted one of the arguments against a recent restriction bill over the presidential veto. And except for a few people whose sentiment beclouds their reason, this is the usual line-up: those who want cheap labor and do not mind cheap citizenship against those who feel that we could do better without either.

JOSEPH LEE.

Boston.

NEW NAME WANTED

To the Editor: What shall be the name of the National Conference of Charities and Correction?

In the proceedings of the Indianapolis session, 1916, page 685, there is mention of the action of the business meeting of that session on the report of a special committee on change of name. That meeting accepted the suggestion of the special committee that "a change of name of the conference is desirable," and decided that there should be a postal canvass of the conference members, with the result published three months before the 1917 session, and that there should be a final preferential ballot at that session. The postal canvass is to give the names already suggested.

So far, the suggestions are as follows: The National or the American Conference or Social Welfare or Social Progress or Public Welfare; the National or American Welfare Congress or Conference or Public Welfare Congress or Conference; the American or National Conference or Council of Social Agencies; the American or National Confer-

ence for Social Service or for Social Betterment; American Sociological Conference; Social Workers or American Social Workers' Conference; National Conference of Social Workers or for Social Work; National Conference on the Community or on the Common Good.

If readers of the SURVEY can make any further suggestion for names of the conference, will they kindly send them at once to the undersigned, who is chairman of the special committee, at 18 Somerset street, Boston, in order that they may appear also in the postal canvass.

JEFFREY R. BRACKETT.

[School for Social Workers]
Boston.

TOPICS FOR 1918

To the Editor: The Committee on Organization of the National Conference of Charities and Correction for 1918, which reports at the Pittsburgh conference in 1917, is giving consideration to the selection of topics for the 1918 conference. May I take this means of requesting SURVEY readers to submit to the committee any suggestions which they may have as to topics which ought to be discussed?

Certain of the committees of the conference have been more or less permanent from year to year as representing well-established fields of work whose problems never exhaust discussion. There is room, however, each year for the discussion of certain problems which are of an especially timely interest, and which would not be suitable perhaps for inclusion in the program every year. Such topics ought to have a genuine national appeal and be of interest to the whole group of those who attend the conference. Suggestions may be mailed to the chairman of the committee at 105 East 22 street, New York City.

PORTER R. LEE.

[Chairman Committee on Program]
New York.

SCRUBWOMEN

To the Editor: How soon and at what price could you furnish 1,000 copies of the frontispiece from the SURVEY of December 2, showing the picture of the scrubwoman?

I should like to try to make it work for Chicago scrubwomen. I have no definite plans as yet, but for several years have wished more could be done for them. A large percentage of them support from one to a dozen small children and a sick husband or other

invalid member of the family. I have known of some very heroic cases. Perhaps you could say something in your next issue that would help scrubwomen all over the country. Elevator boys and day-light servants all are more or less remembered at Christmas, but the scrubwomen working at night are never thought of, and many of them do as conscientious work as can be found anywhere.

WIRT W. HALLAM.

Chicago.

POOL-ROOMS

To the Editor: I am writing for either material or information concerning the subject of pool-rooms, billiards and bowling-alleys. Have you literature which treats of these subjects in a truly scientific manner, rather than the "general" treatise which is so markedly denunciatory and not at all constructive in the real social sense? Nothing short of a critical, laboratory treatment of the main causes or reasons which impel boys to indulge in these games and frequent these places will suffice. Many of the so-called "surveys," which are not numerous as to this particular subject, are too vague, being neither accurate in statement, scientific in treatment nor illuminating in character. A great favor will be conferred to me, personally, sir, as also to a rapidly growing city, which is seeking both to adjust itself and regulate its equally rapidly growing problems. Surely there is need for intelligent community action here, with over 250 unlicensed and unsupervised pool-rooms, which are frequented by at least 25,000 young men each week of the year.

JOHN J. PHELAN.

Toledo.

A CHILDREN'S BUREAU

To the Editor: A reader of old newspaper files will soon discover that there is nothing new under the sun. For example, the New York *World* of July 27, 1866, published an editorial entitled A Children's Bureau. It appears that the Rev. Joel Lindsley, of Medina, Ohio, had beaten his small son to death with a shingle, because of the child's refusal to say his prayers. The father's statement after his conviction for manslaughter is as tragic a story as was ever written, his own plea being his "moral conviction" that the child should have been made to yield, the punishment being continued intermittently for some two hours, when the child died.

At the same time, a woman named Abrahams was being tried in Richmond, Va., for cruelty to her former slaves. Horace Greeley, in the *Tribune*, was making the Abrahams case a text for the continued operation of the Freedmen's Bureau, for the protection of the Negroes of the South. Manton Marble, in the *World*, opposing the Children's Bureau, made the Lindsley case

an example of the need of a Children's Bureau. He argued as follows:

"If there be any virtue in the interference of a central government to right social evils, where can the action of that virtue be more imperatively needed, where can it avert such awful calamities or work such blessed good, as in throwing about the tenderest years of white children at the North, safeguards at best as efficient as those which an excited philanthropy now demands for the feelings, the property and the persons of the emancipated Negro at the South?"

The irony of the editorial is apparent, but its logic was better than the editor realized.

A. J. MCKELWAY.

New York.

GIVING

To the Editor: A letter from T. D. A. Corkerell in your issue of August 26 moves me to add a word to the subject of Appeals. Surely there should be more in the relation of worthy object on one side and the giver on the other than the mere passing of money from one to the other, whether in large or small sums.

It has become a custom with some in the raising of considerable sums of money to follow a first appeal at intervals with one or two letters, perhaps insinuating that the first has been overlooked. The whole idea is too much like a summons to stand and deliver.

Now, I contend that, though such persons or charities as practise these methods may obtain all the money they need, they have dealt a blow to real charity. The object we should always hold high before us is to convince the individual or the public that the person or the project to be helped is so valuable or so pitiful that all who hear stop to give something, whether it be but the throb of sympathy, a dollar or a check for a large sum: thus do we educate ourselves and others into true neighborliness.

H. S. CUNNINGHAM.

Brookline, Mass.

FIRST IN WAR: FIRST IN PEACE

[Continued from page 297]

in 1914, to "destroy the military domination of Prussia." Conceivably, one way lies in a crushing German defeat, but not a few Englishmen are skeptical of this outcome. Conceivably, another way may lie in German victory coupled with a social revolution; but not a few Germans are skeptical of such an outcome if the war party is triumphant. Conceivably, there is a third way by which the people of western Europe could be guaranteed against German militarism, so as to permit England,

France and their allies to demobilize their vast armies, reduce their enormous military expense, and be secure in their liberties. With the mighty scheme of the German war party twice wrecked—at the Marne and Verdun—and with the counter ambitions of English and French imperialists faring no better, a settlement is conceivable which would take the threat out of every military establishment by taking the threat out of all. The proposal of international organization and progressive disarmament might so fire the hearts of men and women of all nations as to make even the travail of the last years seem not in vain, releasing them from the burden of war in peace and freeing them from their generation-long dreads.

Similarly, if we are to heed the constructive peace movements, the cause of the Belgians and Serbians cannot permanently be served without serving also the cause of the Ukrainians, the Letts, the Poles, and other oppressed peoples. Here again the settlement must be lifted to a new and common level, for so long as injustice and oppression toward any of the weaker peoples is permitted to any great power, so long is it potentially a threat to all, and to the other great powers. Nor will friction over colony grabbing and the exploitation of backward people be resolved by a fresh parceling of their heritage, but by a common undertaking for their protection, the conservation of their natural resources, and the open door.

Until then, the capitals of western Europe will not be safe from each other, nor the neutral nations from the consequences of other peoples' wars.

Therein lies the stake of the United States in a settlement radically different from the military one which closed the Napoleonic conflict—a settlement which will lay a new fabric of international relations, as the League to Enforce Peace and World Court propaganda want; which will in advance, as President Wilson and the more militant peace organizations urge, stamp that fabric with those principles without which a liberty-loving people would not for long tolerate local government or world government. Therein lies the significance of the Hensley clause (see page 308), empowering the President to call a conference of the nations.

P. U. K.

JOTTINGS

BOSTON is to vote on no-license on December 19. With Billy Sunday to help, there is said to be a fair chance that the city will go dry.

GOVERNOR HUNT both won and lost in Arizona. The final count on a very close vote is reported to show him defeated for re-election by thirty-two votes. But the referendum measure abolishing capital punishment, on which he has staked his political fortunes again and again, carried by 152 votes.

THE photographs used on page 175 of the SURVEY for November 18 were taken by Dr. W. W. Peters, of Shanghai, and reproduced by courtesy of the International Committee, Y. M. C. A.

THROUGH an unintentional and regrettable error the SURVEY stated last week that the summary of social legislation in 1916 in Bulletin No. 76 of the National Conference of Charities and Correction omitted federal legislation. As a matter of fact, federal is included along with state legislation under all of the classified headings.

"ENCOURAGE the shops that close early," says the Consumers' League of New York city, in sending out a list of twenty-four stores that will close to customers at six o'clock even during the Christmas rush, one that will close at seven, one at 9:45 and five at ten. Copies of the list may be had of the league at 105 East 22 street, New York city.

SIXTEEN lectures on mental hygiene were included in the public series offered this autumn by the New York city Department of Education. An attendance averaging over 200 and a readiness to question the speakers after a lecture indicate wide interest in the subject. The department has, therefore, asked the Mental Hygiene Committee to provide for two other series of lectures to be given in different sections of the city.

ECUADOR has recently limited the working day to eight hours for "every laborer, workman, clerk in store, office or industrial establishment, and in general, every employe of any kind." The text of the law stipulates the amount of overtime which shall be paid, includes exemption from work on Sundays and legal holidays, and compels the employer and the employe to give thirty days' notice "before making any change."

FORTY-FIVE different tracts of land have been offered to Dallas, Tex., for a municipal farm for misdemeanants. A campaign for such a farm has been conducted vigorously, and the city is said to have been won over to the idea. Two or three other cities and as many states already have such farms. Dallas may avoid issuing bonds through the sale of the present jail property, which the farm would render useless.

THE Armenian relief fund is to benefit from the sale of a volume of 130 Armenian poems, rendered into English verse by Alice Stone Blackwell. The book is just out, in time for Christmas. (Robert Chambers, Ford building, Boston, \$1.50.) Readers of the SURVEY will doubtless find some of these poems familiar through Miss Blackwell's article and translations of a year ago, *Songs of Exile*, in the SURVEY for December 4, 1915.

A SPECIAL section on public health has been opened in the Municipal Reference Library of New York city. Several libraries in the city have valuable collections of medical books; the Municipal Library is the only one specializing in subjects of public health to which the public has access. The collection was begun several years ago by the Department of Health, but has had no direct supervision hitherto. It will now be in charge of Sara N. Halliday, formerly librarian of the Lederle Laboratories.

ANSLEY WILCOX has been a trustee of the Buffalo Charity Organization Society since 1881 and president since 1906. To mark the tenth anniversary of his presidency he was presented with an illuminated scroll in which the staff joined in wishing him many years more and in pointing out that during those ten years the society grew almost as much as in the preceding thirty. The staff signatures run back to 1877, when Adam Meister began his service, lasting continuously to this time.

AT the Harvard-Technology School for Health Officers, the Duke of Sougkla, brother of the King of Siam, is taking the full course and plans to organize a national public health system on his return to Siam. Dr. Ettore Ciampollini, of Siena, Italy, has completed a medical course and is now adding this special study of public health. Another student is a member of the United States Medical Reserve Corps and others are health officers on leave or professors of bacteriology or sanitation.

BECAUSE of the prevalence of cholera in many places in Asia, the federal Public Health Service has issued special orders that steerage passengers arriving at United States ports from China and Japan shall be detained for bacteriological examinations. No passenger from these eastern ports is admitted until it has been determined he is neither infected with cholera nor a carrier of the cholera bacillus.

A "SCHOLARSHIP FUND SEAL" is being circulated by the National Association for the Study and Education of Exceptional Children to meet the special demands that infantile paralysis has made upon its work. Timely treatment and guidance, says the association, will overcome the handicap of ill health and the resulting mental warp with which numbers of children grow up. Officers of the association include Dr. Ira S. Wile, ex-President Taft, Charles W. Eliot, Commissioner of Education Claxton, Elizabeth E. Farrell, Dr. Maxmilian P. E. Groszmann.

THE Wisconsin State Board of Industrial Education has recently, it declares, carried continuation industrial schooling to every employe in Racine who wants it. At a meeting attended by the mayor and other city officials, representatives of the Central Labor Trade Council, employers of eighteen industries, the local Board of Education and the Industrial Board of Education, it was decided to add six new trades to the existing school courses and to establish continuation classes in the shops of three concerns that employ over 7,000 people. The existing central continuation school now gives half time or evening instruction to 2,000 workers.

DURING the coming year a special experiment in safeguarding the health of workingwomen will be made by the Women's Municipal League of New York city. Health is to be emphasized as one of the most important factors in vocational guidance and an effort will be made to promote a wider knowledge of personal hygiene among working girls. A doctor stationed at a large non-commercial employment agency will give every girl applying for work an opportunity to be examined and advised.

"Recently in a large department store," said Mrs. Henry A. Stimson, president of the league, "three girls dropped dead from heart trouble within a few days of each other. Since then the management of the store has inaugurated a system of physical

examinations for its employes to detect such physical defects in time."

GREATER NEW YORK, in its budget-making, seems to be missing a lesson of the infantile paralysis epidemic. It refused almost entirely the petition of the Department of Health for extended work in the Bureau of Child Hygiene. Additional medical inspectors, nurses, and six dental hygienists were asked for, to meet the need in schools and clinics of more preventive work. Only three hygienists were given, and some means for developing the school lunch work. Last year more than 200,000 school children were found to have some physical defect, in teeth, eyes and tonsils. Inadequate appropriations mean that there is but one nurse for more than 3,000 children; one doctor for more than 7,000; that only once in three years are all children examined, instead of once a year, as is done in many progressive cities and states, including New York state outside the city.

THE *Bulletin* of the New York Charity Organization Society has discovered "Jimmy Jones," who "holds the world's record for youth in teaching. Jimmy's father is sick with arthritis. His mother, who had supported the family of three until recently, is expecting a baby and can no longer work. We are now trying to take the place of the father and mother in keeping the home together. Jimmy, however, feels that he must do his share. He has been sparing his mother every unnecessary step—carrying coal and even scrubbing the floor; and he is only ten. His greatest achievement is a contribution of a dollar a week to the family treasury. Jimmy is exceedingly bright. A neighbor's child is not, and Jimmy is tutoring him in the three R's at a charge of a dollar a week. Too much work would be a bad thing for Jimmy, so we have made other arrangements for the scrubbing of the floors and have persuaded Jimmy's parents to let him join a boys' club. But Jimmy proudly continues to coach his pupil, to the great satisfaction of school teachers, parents, and everybody else."

THE Christmas holidays will see, if all plans go through, several motion picture theaters in Cleveland trying out model programs picked by the Civic Committee of the Cleveland Federation of Women's Clubs. Neighborhood groups in churches and school community centers are now being asked to support the films and enforce their use by the managers who arrange to use them. Volunteers are checking up on "first run" films and preparing data for the use of the Civic Committee in making up its programs. Films are being picked according to what is termed the "family standard." Other standards, such as children's will be worked out as opportunity presents. Bertelle Lytle, chairman of the committee, complains that no comprehensive standards of scenario, staging or other factors in the motion picture now exist beyond those of the National Board of Censors. Tentative programs were planned for last spring, but failed to make much of an impression, through a combination of small Holy Week attendance, lack of publicity and failure of managers to live up to their promises to show the whole program and nothing but the program.

ALABAMA has apparently heard often enough that she has a poor school system. She has been told that she is niggardly with her schools, that physical conditions in many rural counties are a disgrace, and that she is close to the bottom of the list of states in illiteracy. Her state superintendent of education, William F. Feagin, has been dingling this into her ears for several years and Alabama has apparently decided

that it is time to improve. When the voters of the state polled their opinions November 7, they carried by a majority of over 21,000 an amendment to the constitution that will enable much more money to be spent on schools than has heretofore been possible. Any county can now levy a special tax for school purposes not to exceed thirty cents on \$100, in addition to the tax already authorized, provided the voters of the county agree to do so at an election held for the purpose. Any school district, also, can levy a similar tax, provided the counties where it is collected are already levying as much as a three-mill school tax. A striking feature of the vote on the amendment was that fifteen "black belt" counties, which may not care to take advantage of the new tax-levying power, voted in favor of it.

THE non-competitive comity and cooperation between the schools of philanthropy, which have always characterized their relations with each other, have led to interesting exchanges within their teaching staffs. The example of Henry W. Thurston in going from the Chicago School of Civics and Philanthropy to the New York School of Philanthropy has been followed by interchanges between the Philadelphia, Chicago and St. Louis schools. Lydia C. Lewis has entered upon her work with the Chicago school as supervisor of field work, coming from the Pennsylvania School for Social Service, where she filled a similar position, as well as that of dean. Graduated from Swarthmore College, she worked with Mary E. Richmond in the Philadelphia Society for Organizing Charity for two years and afterwards pursued special studies at Woodbrooke, England, and at the University of Birmingham under Profs. W. J. Ashley and J. H. Muirhead. Lillian Wilder, who was graduated last year at the Chicago school, where she specialized in social investigation, has become supervisor of field work in the recreation department of the St. Louis School of Social Economy, where she also lectures on immigration. After graduating from Goucher College, she had several years of experience in teaching and in practical social work. Adena Miller, formerly supervisor of field work at the Chicago school, has become the civic secretary of the Cincinnati Woman's City Club.

A COMPREHENSIVE program of social legislation, embodied chiefly in the children's code, was the chief topic of discussion at the seventeenth annual meeting of the Missouri Conference for Social Welfare at Columbia. The problem of administering laws for social betterment in the average county and small town was brought to the front. Conditions throughout the state as a whole, rather than in the larger cities, were emphasized. Feeble-mindedness, rural problems, the Negro and the old Missouri fight to get politics out of state institutions were big points in the discussion. The meetings were attended not only by over 150 delegates from all over the state, but by a large number from the State University and from the city of Columbia. At the big opening meeting Sunday evening, at which Frederic Almy, president of the National Conference of Charities and Correction, spoke, there were over 1000 present. At another large open meeting, Dr. William F. Snow, secretary of the American Social Hygiene Association, spoke on modern methods of vice suppression. With his talk came the announcement of the formation of the Missouri State Society for Social Hygiene, which will take over the local work in all parts of the state. Meeting with the conference was the Missouri Association of Infirmity Officials. Rabbi Louis Bernstein of St. Joseph, was elected president for the coming year, and J. L. Wagner, secretary of the State Board of Charities, was re-elected secretary.

Entered as second-class matter March 25, 1909, at the post office at New York, N. Y., under the act of March 3, 1879.

The GIST of IT

AMERICA, writes Mr. Devine, should give, greatly and widely, from public funds and private fortunes, in cooperation with governments and relief agencies, toward the reconstruction of Europe. Its aim should be to shorten the period of complete recovery. Only thus can we do our bit, from swollen purses, to end the war in the right way—so as to lighten its curse and restore the health of the nations. Page 321.

THE Woman Who Rose Up and Walked might be the title of Dr. Ames' Christmas story. And to cure paralysis by turning on a hose would be described as a miracle in any circles but those of the modern and modest medics to which the author belongs. Page 323.

EXPERIENCE goes to show that the peculiar needs of women in industry will never be met until someone is specially charged with the task of discovering them and making them known. Hence, argues Miss Van Kleeck, the proposed woman's division in the federal Department of Labor is a good thing—let's have it. Page 327.

AT the bottom of much poor health (thank you; of course there's no such thing, but most everybody has it on and off) is poor food and at the root of poor food are mean wages or lack of gumption to buy and cook properly. Hence the dietitian, robust from her own wares, blossoms into the home economist and strikes at the family's health through its stomach. Page 329.

A SANITARIAN'S suggestion for the next Spoon River Anthology. Page 331.

SPARE the cash and spoil the Children's Bureau, says Mrs. Kelley; or rather, demand of your congressman that this vital agency of conservation shall not be starved by heedless parsimony as the babies it serves grow thin and droop on poor milk. Page 332.

THERE'S a deal more peace talk and protest against curtailing of civil liberties in England than gets by the censor. Some facts that came over in the mind of a man, which the censor has not yet been able to reach. Page 333.

POOR Mrs. O'Rourke had no hair on her head until she was given a dollar for bread. In the casual way all committees deplore she spent it for tonic instead of flour. But behold, with her marvelous curly new mane, the family's grown self-supporting again. So the C. O. S. motto, for poor and for rich, henceforth and hereafter's—"Not alms but a switch." Page 338.

CONGRESS once more has set up the literacy test as the head-pin of its immigration policy, ready for the bowler from the White House. Political refuge is more or less preserved. Page 334. A committee to work out a national immigration policy is a promising offshoot of the National Conference on Marketing and Farm Credits. Page 334.

MINNEAPOLIS has divorced its protective work for children from the same sort of work for animals even at the cost of disbanding two old-established and popular societies. Page 336.

Ourselves and Europe

IV. Reconstruction

By Edward T. Devine

THE reconstruction of the devastated regions of Europe cannot be accomplished through indemnities. If it could be done in that way the moral sense of mankind would revolt against the injustice of it. The Socialist demand that after this war there should be no indemnities is far more just than the expectation that the conquered enemy should be made to pay the entire costs.

This war, we must continually remind ourselves, is not like other wars. There is no precedent applicable. Its burdens are too great to be imposed upon the conquered, whoever they may be; and it is by no means certain as yet who they will be. Huge expenditures will undoubtedly be required for reconstruction, but the funds from which to make them should not be raised from the meager possessions of those whom war will already have despoiled; from the product of the hard-driven toil of industrial workers whose resources the war has most completely destroyed. It is not literally impossible. Slaves were made to build the pyramids. Under the guns of conquerors who choose the avenger's part men might for a time be compelled to pay the tribute of indemnity and reparation.

Early in October, the *New Statesman* presented what may no doubt be regarded at this stage of the war as the moderate English view of the subject of "reparation." The demand that Germany must not be humiliated, the writer regards as utopian. Humiliation, bitterness and resentment are corollaries of defeat, and the allies certainly intend that Germany shall be defeated. However, the victors should reduce such bitterness to a minimum and make easy the way of its disappearance at the earliest possible moment. With this end in view, the *New Statesman* repudiates the proposal of an English writer, which has been widely circulated in Germany, that the central empires should be saddled with "the entire costs of the war." This might be just, but it would be short-sighted. The allies are, however, to be reimbursed for all the "actual damage suffered at the hands of the enemy." After Belgium, the chief claimants would be France, Poland and Serbia. Every merchant ship of either an allied or a neutral nation which has been torpedoed otherwise than when engaged in specific war service is to be replaced by a ship from the German merchant marine, the German government being left to

make its own arrangements for compensation to individual owners. These ships will be far more to be desired in the conditions existing just after the war than any amount of money which could be collected as compensation for those which were lost. "War crimes" are to be punished if the allies are ever in position to inflict punishment. There is to be no amnesty for acts "committed by the deliberate instructions of superior authorities."

Our concern with these proposals at present is their probable effect on the prospects of peace. Obviously any country which is fighting for these ends, regarding them as the irreducible minimum of the moderate wing of its expressed public opinion, is fighting for a crushing victory. It proposes not to be so grasping as to overreach itself, but it proposes to exact precisely its own terms. There is no recognition of joint responsibility for the war or for any of its consequences. The bill to be paid will not be padded, but it will include all the actual damage inflicted and it will be paid in such currency as the victors may dictate.

This is one way to look at the war. It is the patriotic, nationalistic, military view. The enemy is responsible for having begun the war. His methods are unlawful and inhuman. He is beyond the pale. He must be beaten to earth and when that is done he must make reparation. Neutrals who take a definite position in regard to the war, like belligerents, frequently express it in similar terms. Pro-German Americans think that England could have prevented the war by securing the neutrality of France. Anti-German Americans, holding the Kaiser and his advisers responsible for plunging Europe into war, insist that justice demands that Germany be not only defeated but compelled to make reparation.

This is the same bad, old, limited, and distorted view of human relations that has led to rack and inquisition, blood feuds and all manner of deviltries, since the world began. Science and religion, reason and love, are alike opposed to it; but the new idea makes way but slowly under the best conditions. When half the civilized world is fighting it is likely to disappear for the time being altogether. The new view assumes that responsibility for any such disaster as that in which we are now involved is likely to be complex, shared by

both or all sides, not easily placed on the shoulders of any one man or nation. The new view heeds Burke's admonition about not indicting a nation. It repeats the words of a higher moral authority not to judge lest we be judged. It interprets the saying about woe to them by whom offenses come as prophecy—prophecy terribly fulfilled in our ears—not as a warrant for visiting more woe on those by whom in our very finite judgment we think they have come. The cow that kicked over the lamp in a Chicago barn in October of 1871 had about as much responsibility for the great fire as any one man in Germany or in Serbia has for the present conflagration. The new idea of the war, the view suggested by reason and good will, is that it came because the nations had not taken adequate measures to prevent it; and that in this failure America is as criminally negligent as England or Germany. We share the responsibility for the disaster which our civilization did not foresee, or, foreseeing, did not prevent.

Whatever may be the verdict of history as to the causes of the war and the relative responsibility of the different nations for its beginning, there will be at its end an immediate world-wide problem of relief and rehabilitation to solve. The prosperous and intact nations should help to solve it. Americans in Europe are constantly hearing that their country is, of course, getting rich from the war. Such remarks imply that individual Americans, whether they are actually sharing in war-profits or not, are somehow to be felicitated on the resulting prosperity. Both the remarks and the inference have some basis, although the further natural inference that America wants the war to go on for this reason or any other has not.

PROSPERITY and peace in this country are stubborn facts, just as the stupendous misery into which war has plunged the nations of Europe is a stubborn fact. Suffering which money can relieve and great wealth cannot exist side by side without creating obligations. The nations which have prospered from the war, rather than the conquered and the depleted nations, must take the big share in the relief of suffering and the restoration to normal conditions.

Nor should it all be left to the Rockefeller Foundation. The government itself, if such help would be acceptable, might appropriate some hundreds of millions of dollars to help rebuild Belgium and the stricken villages of France and Poland. A similar investment in Mexico, proportionate to the need, might equally be justified, though that is another story and one which even more closely concerns us.

As to Europe, the big fund for the orphans of France is an excellent beginning. German and Austrian orphans have, of course, fully as good a claim on American philanthropy as those of France and Belgium. Galicia and the Balkan states, Armenia and Syria, will have to be restored. Some careful experiments in rebuilding are already under way in France and they will show how such work is to be done. The Belgian Relief Commission will have a real experience on which to build and will certainly have many constructive plans and ideas which will command the respect of hard-headed business men. Our millionaires, whether they have made their money from the sale of armament and munitions or not, will find here a field in which there is no danger of doing harm with their gifts, none, at least, against which it is not perfectly practicable to take ample safeguards.

We Americans have a two-fold responsibility: (1) to set our faces resolutely against the ruthless exploitation of any conquered peoples, whether they be Teuton, Gaul, Slav, or Anglo-Saxon; whether Christian, Mohammedan, or Jew; (2) to take the lead in laying securely the foundations of future peace.

Of these the first is immediate, concrete, comparatively simple. It is like that part of the scripture parable in which the paralytic is told to take up his bed and walk. The bystander can see for himself whether it works. If it does, the power to forgive sins may exist also. If the waste places are not to be restored by indemnity, that is to say by robbing the industrial workers of the beaten countries of what remains to them of the fruits of their labor, then it must be done by generosity; if not by military compulsion exerted on conquered peoples, then by the compulsion of the instinct of humanity working in the prosperous and privileged—which does not mean merely the millionaires.

Thus far, in proportion to our resources, American gifts have been paltry. While the war continues this is likely to be the case. Our information as to what is required and what is possible is meager. Reports are censored for military reasons. What philanthropy with feeble and uncertain hand seeks to save, war the next moment with a mailed fist destroys. Much is done, of course, in the aggregate, simply because human hearts are human and do respond when men are dying and women are starving and children are left fatherless in communities which have no way of caring even for the widow and the fatherless. Capable and devoted men and women everywhere are doing what they can, but they are closely restricted by the circumstances of war and their resources are relatively small.

After the war the golden opportunity for constructive philanthropy will come. War will no longer be undoing in a moment what the whole day creates. War policy will no longer stay the strong right arm of charity. The border police will allow those who are on errands of mercy to pass freely to and fro and it will be the time for large expenditures, such gigantic enterprises as the philanthropic mind has never conceived.

This is not meant, of course, to discourage present action in such matters as will not wait and as are now possible. The American Red Cross can spend all the money put at its disposal in legitimate neutral relief of the sick and wounded and of non-combatants. The Rockefeller Foundation and the Belgium Relief Commission are accomplishing great things. The Jewish relief agencies, working through the joint distribution committee and the many national agencies, should have liberal support while the war lasts. The Y. M. C. A. and the other agencies that are working for prisoners should have increased support, for the need of such work as they are doing cannot be overestimated.

THESE things, however, all put together, do not measure American philanthropic interest in the war. They do not sound the depths of American generosity. They do not fully represent American vision and constructive statesmanship. They leave unoccupied the greatest field of all, that of ending the war in such a way as to lighten its curse; in such a way as to restore the health of the nations and to promote the new and better organization of the world.

Certain things which might bring temporary and superficial relief to European communities are for good reasons to be avoided. We do not want to see a relaxation of our immigration laws. We have taken measures betimes to prevent the dumping of cheaply manufactured products into our ports. We do not contemplate an American alliance with any one European nation or any one group in hostility to others or to their exclusion. We do not desire to see our commerce seriously checked by economic alliances from which we are excluded. We have no intention that our government shall go into partnership with foreign investors. We do not mean

that philanthropy shall become a cloak for commercial enterprise.

None of these things is involved in the discharge of our unique humanitarian obligation. We should give generously and in a generous spirit. We should give from public funds and from private fortunes. We should give on carefully devised plans, in cooperation with the governments concerned and with local relief agencies. Our giving should have definite aims—to shorten the period of complete recovery and to lessen suffering. We should give because we have and others need, with no fear that any nation at war will have suffered less than it deserves. We should give in various ways: food, clothing and shelter outright where those are needed; loans without interest, such as Dr. Magnes has suggested for Jews who can be expected to repay; loans with interest where that would be more appropriate; funds for credit associations to lend to their own members when that is practicable; loans through local banks and municipal agencies for the rebuilding of homes and small business enterprises; funds for schools and hospitals and colonies of various kinds according to the need.

We should give until we feel it, until we have to do without things we would like to have. We should give in proportion to the catastrophe—a thousand dollars for every penny which we have ever been called upon to give because of any fire or famine or earthquake, for the scourge from which mankind is suffering now is a hundred thousand times worse than any disaster in the history of modern times. We should give because the burdens left by the war will be heavier in a thousand communities than they can bear alone; and we should give to save our souls alive.

If we do not realize this calamity we shall hardly be able to realize the distress from hard times when they come next in our own cities. If we do not recognize and respond to this call upon our sympathies we shall see our sympathies shrivel and die. If we do not hear the Pole, the Armenian, the Serb and the Belgian in their present agony, we show ourselves to be without the international sympathies out of which alone the international mind may develop. If the wholesale death and the infinite sorrow even in the great nations—in Russia and Germany and France and England—do not awaken a sincere desire to do what we can for them also, as we would be done by, then we should close our churches and synagogues, for there is no spark of love left in our hearts. Then we should eat and drink and laugh aloud at the thin veneer of our civilization, recognizing and acknowledging that we are one with the savage and the beast, fighting animals and little else, as we were for all the thousands of years before what we call civilization began.

But it is not so. Opposing indemnities, not from partisanship but from a realization of what they would mean in degradation and hardships for millions who did not will the war, in perpetuation of hot resentments and bitter anger against the oppressor, we will share of our abundance to reconstruct the waste places. So we will help to take the curse off the war. Thus we will make the greatest investment ever made for an enduring peace. In this way we will give evidence that our response to the President's Thanksgiving proclamation is not merely in lip service. This will be our pledge that the new League to Enforce Peace which we hope to establish after the war will be in very truth a safeguard for the interests of humanity.

How Cold Water Brought Christmas

By Thaddeus Hoyt Ames, M.D.

SHE raised her head slightly from her pillow and said, "We have just finished our tea, doctor. If you had been on time your tea would have been hot for you.

I will have some more brought in if you like. I ordered it for four-thirty, thinking you would be right here."

Her head dropped back wearily on the pillows, and the nurse standing at her side smoothed the coverings and adjusted the lacy boudoir cap so that none of its effectiveness should be lost.

As she evidently awaited a reply to her remark about my having arrived later than she expected, I said, "I want to tell you about something that has just happened this afternoon at the hospital clinic." And I gave her this incident:

AS I walked through the clinic to my office, I noticed among those waiting for examination, a patient seated with her feet braced up on a second chair to prevent her from slipping to the floor. She was a frail woman, pale and limp. A man with her gently pushed her head to the back of the chair so that it should not topple forward, and then, as if accustomed to attend her, sat down beside her. Neither paid any special attention to the other; it was as if they were tired and waiting in the station for a train.

It was their turn, and their lot fell by chance to me, in a room which was at the farther end of the waiting-room,

perhaps a hundred feet away from them. The man glanced down the aisle, which was lined by chairs filled with waiting patients, then bent over without a word and lifted her up by the hips. By his motion her head and arms were brought over upon his back, and when he straightened up she lay face downward over his shoulder, much as a bag of flour. Straight down the aisle he came toward me, while her feet dangled loosely in front and her arms and head, hair flowing and besnarled, flopped behind. In the clinic, amazed attention reigned.

In my room he bent forward and her body slid off his shoulder upon the examining couch. Her limp figure remained just as it dropped; there was no movement of her limbs, but her open eyes showed that she was alert to the situation.

"She's my wife. She's paralyzed," the man said, in broken English.

"How long has she been paralyzed?"

"A little over two months."

"Did this begin quickly or slowly?"

"She was out one Sunday afternoon wheeling the baby-carriage and she dropped to the ground. Since then she cannot stand up. The doctor says she cannot get well for a year."

He was trying to give me intelligent information, but he

had some language difficulty. The name on the little yellow card of admission to the clinic was an ordinary Jewish one, but he explained that they were Rumanians and did not understand my questions easily. So without further questioning I proceeded with a routine physical examination.

The reflexes and tests which are abnormal in any case of real paralysis, were in this case all normal. There was no organic difficulty: the movements of the arms and shoulders, in fact, everything above the waistline, was normal. After a little persuasion she was able to lift both her legs off from the examining table. This surprised me, for I had not seen her move her legs until I told her to do so. She explained that when she was lying in bed she was able to move her legs about in any direction, but it was only when she stood up that they were paralyzed. I induced her to shove her feet off the edge of the table and assisted her to sit upright. I asked the husband to take one arm while I steadied her on the other side, but the minute her feet touched the floor her knees bent, her hips became unfirm and she sank to the floor. I tried two or three times to get her legs in a straight position, holding on to her knees, but it was impossible to get her to stand up. I placed a chair under her and asked the husband to hold her in a sitting position until I returned to the room. Calling a nurse from the hydrotherapy department, the entrance of which was next to my room, I whispered that I wanted her to give my patient, ahead of the waiting patients, an immediate treatment. So despite considerable curiosity and jealousy on the part of the ten or fifteen women who were waiting for their turns for baths, and who were unwilling to be delayed, my patient was wheeled into the hydrotherapy department. Being unable to stand, she was seated on a low stool beside the posts of the cabinet, to which she held. She, of course, knew nothing of what was coming.

THE arrangements were all made; the temperature of the water was regulated to sixty degrees, the method of application was the same "fire-hose," as we sometimes call it, that is always used in routine tonic baths. The pressure was to be as strong as the nurse thought the patient could stand. Quicker than I can tell all this a stream of cold water from the hose struck the patient's back.

Her hands released their hold on the posts and she slid off the low stool to the floor. I was rushed in from the ante-room. I noticed that her hands were moving as they lay stretched above the head, so I knew we could proceed. She lay on her side with her back toward us, well placed for a continuance of the treatment. Turning to the nurse, I said, "Quickly now, turn on the water again, just as cold as before, and play it up and down her back between her shoulders and her hips."

After two trips of the stream up and down her spine, the woman cried out from the floor, "Stop! Stop it, stop!" Then there was silence while the stream made another couple of trips back and forth, and she yelled a little louder, "Stop, it hurts!"

I motioned to the nurse to continue the cold water, when suddenly the woman, putting her hands under her with a quick motion, jumped up and ran out of reach of the hose. A nurse standing by with a dry sheet enveloped her instantly and gave her a good brisk rubbing. The patient was shivering so that she did not realize that she was standing up. I returned to my room where sat the husband, entirely unaware that anything unusual had taken place.

Nor did I tell him. Instead, questioning him a little, I found that his wife was twenty-eight years old, weighed ninety-eight pounds and that they had five children. He said

his occupation was that of a tailor and that he was making eighteen dollars a week. On this the entire family was living.

Just at this moment there was a knock on the door and opening it I stepped outside, finding the wife standing, fully dressed, with the nurse. As she had walked out of the bathroom with the nurse, the waiting patients, a little peeved at being so long delayed, suddenly recognized in the walking woman the prostrate form of the patient who had been carried into the room a few minutes before, and they started whispering among themselves.

Standing back of the woman I pushed the office door open. All that the husband saw was the figure of his wife standing alone. He jumped up from his chair, and then stood motionless, speechless, unable to believe that it was she walking in.

I asked her if she would please speak to the nurse, who was going back to her own room, to thank her for giving the treatment. It had occurred to me as she stood in the doorway, just before she saw her husband, that she seemed to be angry because of what had happened, and I did not want her to feel that what had been done to her was any sort of a punishment, but was a treatment, which brought her to her normal state. The woman glanced briefly at the nurse and said that she did not want to thank her.

"But you must thank her; she did all this for you."

"I won't. I didn't like it. It was cold!"

"Well," I said to her, "if you don't thank her instantly I will take you straight back there and see that you get some more of that cold water." I looked at her sharply as I said it.

"You wouldn't do that, would you?"

"Yes, I would; and I will, too, if you don't thank her instantly."

"All right, then—thank you, nurse!" And she turned toward the nurse with a sullen look on her face. Sullen, perhaps, is not the word to use; the look was one of mingled anger at being compelled to do something she did not want to do, and surprise at what had happened to her and at the unexpected turn of events.

The nurse smiled pleasantly and said that she was very glad that the patient had reacted so well to the cold water, and that she felt sure that it had done her a lot of good. Wishing the patient "good luck," she retired.

"Your wife must stay here in the hospital with us until she has fully recovered from the strain of the past few weeks," I told the man. "Have you any means for keeping her here? The ward beds are fifteen dollars a week."

"Well, doctor, I make only eighteen dollars a week, but if I must, I must," he said determinedly.

"But," she interposed, "doctor, I have five children at home. I have already been sick two months. I can't come to the hospital. I have got to take care of my little baby."

"How old is the oldest child?"

"Five years," she said.

"And the youngest?"

"She is now just five months."

I thought to myself, twenty-eight years old, ninety-eight pounds, five children, the youngest only five months old—all on eighteen dollars a week! Aloud I commented, "How many more are there going to be?"

She looked at me seriously and directly, shrugged her shoulders and with that typical Jewish mannerism of raising the hands with the palms upward, said naïvely, "I don't know; ask my husband."

The husband stood right there, but he had no reply to make, except that he wanted to get his wife back home to take care of the children, as it was very hard for him to care for them alone while she was gone.

I said to him, "You don't mean that you take care of them yourself, do you?"

He replied, "Oh, no, not the baby; she has been taken to her grandmother's; but the others are at home."

"But you aren't there during the day, are you?"

"I get their breakfast in the morning and they stay there in the house until I come home at night. One of my wife's friends brings them some soup at noon."

"Well, you must manage as best you can while your wife remains in the hospital." As they went out they prevented the clinic patients from enjoying his carrying her on his shoulder again. This time both walked, and a nurse escorted her to the elevator to go to a ward.

THE airy creation on the head of the lady in front of me did not stir during the relating of the episode, but she had listened.

"Now," I continued, "you will please pardon me for having been late, and for delaying my inquiries about your health by this long recital, won't you? Have you had that same pain today?" and with that I entered upon my usual visit.

Early next morning a note was brought by messenger to my office:

My dear Doctor:

Since you left this afternoon I have been thinking about that woman at the hospital. It is two days before Christmas and I have not yet made my usual offering to the poor. I wonder if you would be kind enough to give my contribution this year to this woman? I am glad she could get well, and I wish she might go to the country before she has to work again.

Sincerely yours,

Enclosed were banknotes.

On my visit at the hospital that day the little woman showed me that she was fully able to stand all the time and informed me that she had had another of the tonic baths and had stood up while the stream was played up and down her spine and had held onto the posts with grim determination not to fall over. She had even smiled and said that the second bath had done her more good than the first.

On my inquiry about her life at home, she said that in their married life she and her husband were both very happy, but that when each year brought another baby, she found much trouble in managing them and was discouraged because she could not arrange her household affairs properly. She complained that by the time her husband came home, about nine in the evening, she never had the beds made, and the dishes washed and his supper ready for him. During the day there was so much to do for the children and so much mending and sewing that she never had a moment to rest. One child had to be cleaned up, one was crying to be fed, or another needed quieting after a hurt, so that she had to take care of the many exigencies and leave the ordinary household duties untouched. When her husband came home late at night he would help her wash the dishes.

"Did he object to helping you wash dishes?"

"Oh, no, he was very nice; he always finished things for me; helped sew the children's dresses, made the beds and swept the floors, and did lots of the hard work."

"I judge your husband loves you."

"Loves me? Do you think he does?"

"You don't know whether your husband loves you?"

"How should I know?"

"Doesn't he ever tell you?"

"When he comes home we are too busy. It is work, work,

work, all the time, and we never get through. We have no time to talk about such things."

Then came more of the story, brokenly:

"Doctor, ever since the second baby came, I have been doing things all night for the children just as I would during the daytime. We all sleep in one room. First one child wakes up to be 'tended to and then another. And if they do not all wake up together there are at least three or four times in the night that I must get up. For the last five years I do not suppose that I have ever had more than three hours' sleep at a time. After I have worked hard all day I do not feel good enough to work at night, and after I have worked most of the night I do not feel like working all day.

"I am always tired; but it seemed last fall after the little baby came that I just couldn't go any farther. I got so I hated the children and everything about the house, and I wanted to get away because there wasn't any chance to rest. Maybe you think I could rest all this two months I've been sick, but how could I rest when they told me that I couldn't get well for a year? I knew my children didn't have a mother. I didn't sleep any better those two months than I did before. I could hear the children crying all night just the same. Since I have been here in the hospital I have had the first rest in five years. I love my little baby and I want to go home to her. Can't I go home today, doctor? I can walk now; please, let me go!"

THAT evening I called up her husband on the telephone, asking him to come to my office on the next day. I noticed in his voice a little hesitation and reluctance, but this was overcome and he consented to come in the evening after he had finished his work. It was not until later that I found his reluctance was due to a sudden flash across his mind that I wanted him to come in order to present him with a bill for the services rendered his wife in the clinic.

In my conversation with him the next day, I was anxious to find out just what was his financial condition and to see if he was one of the people who are apt to come to the clinics about Christmas time with the idea of getting some of the holiday help. So I said, "Why don't you get someone to stay with the children?"

He shrugged his shoulders and said, "I have got no money for that."

"Can't you get help somewhere?"

He held his head up, stung by my question. "I am not the kind of a man to take help. What do you think I am, a beggar?"

"I did not think you were a beggar," I apologized. "Do you know that there are certain societies which lend or give help to people who need it for a little while? Have you been to any of them?"

"Oh, no, I do not do that," he said. "I do not take charity. It is not for my kind. I pay for what I have; nobody gives me anything—I won't take anything from anybody."

"But have you been able to get along in the past without any debts?"

"It is awful! I borrowed from my wife's brother-in-law, but I pay him back some day."

"Have you borrowed much from him?"

"Oh, yes, a good deal."

"Well, do you mind telling me how much you have borrowed?"

"I borrow forty dollars, but I pay it back some day. When I say I pay, I pay."

"Perhaps I should explain why I asked you these questions," I said. "I took the liberty of telling a patient of mine about

your wife. She is sick with a disease from which she knows she can never recover. She can't live very much longer, and she is not able to get out of bed at all, but sometimes she can sit up for a little while in bed. When I told her about your wife she said she would like to make a Christmas present to her. Now, you may be able to refuse help, but it certainly would not be polite to this lady who is sick to refuse a Christmas present to your wife. Would you want to hurt the lady's feelings by my telling her that you refused her present?"

"I am sorry the lady is sick. It would not be nice to refuse her present."

I took from my pocket, where I had several envelopes, the one which I knew contained only a five-dollar bill and handed it to him. Taking it, he turned it over casually to look at the back, as if he expected to find a picture there, and seemed a little disappointed not to find something pretty for his wife. Slowly and rather politely he put it in his pocket. He said nothing, but fumbled his hat as if it was time for him to go.

"Don't you want to see what the lady is sending your wife?"

He took the envelope out of his pocket and opening it slowly, pulled out the bill. His breath came short and jerkily, tears poured down his cheeks. He clutched his throat and started of a sudden toward the door, but turned as I said, "Won't you wait just a minute?"

"This bill, the lady says, is to buy presents for the children for Christmas. She has also arranged for your wife to stay in the hospital and then go to the country to get nice and fat before she goes home. That is your wife's Christmas present. The lady did not say anything about a present for you; I guess you are left out."

But he did not hear the last, the tears were coming too fast. All he could say was, "I have read about nice people in this world, but I never before met any."

The next morning he telephoned me that he had mailed a letter to me to give to "the kind lady," and that his wife was also sending one for her. He apologized that neither he nor she could write in English. When my patient opened the letters I gave her she found that one was written in Rumanian and the other in the Hebrew script. She said she was not any better educated than they; she could not read anything but English; but she knew what was in the letters.

I told her of the woman's delight at the prospect of getting fat enough and slept up enough to go back to her family.

"Do you mean, doctor, that that woman has already made up her mind that she wants to go back to that same situation and is determined to make things go better?"

"Absolutely, yes, she has."

"Well, this is a lesson to me—and I feel happier than I have for years. What a Christmas this is!"

Just Pretend

By Harry Lee

NEW YORK ASSOCIATION FOR IMPROVING THE CONDITION OF THE POOR

"PRETEND, just pretend,"

As the little folks say,
That the rent is past due,
That you've nothing to pay—
The food is so high,
The coal is so dear,
The wood is so scarce—
And Christmas so near!

"Pretend, just pretend"

That Your girls and Your boys
Had to gaze into windows
At other folks' toys;
To hear about Santa
And tremble with fear
That they be forgotten
And Christmas so near!

For Women in Industry

The Proposed New Division in the Department of Labor

By Mary Van Kleeck

SECRETARY COMMITTEE ON WOMEN'S WORK, RUSSELL SAGE FOUNDATION

WHEN the federal Children's Bureau was created it required no gift of prophecy to foresee that its success would lead to the demand for a similar form of organization for women in industry. Indeed, it was as early as 1909, three years before the establishment of the Children's Bureau, that the National Women's Trade Union League at its convention in Chicago passed resolutions requesting the organization of a separate division for women in industry in the Department of Commerce and Labor. Other organizations, notably the National Consumers' League, the General Federation of Women's Clubs, and the Woman's Department of the National Civic Federation, have joined the trade union women in their request, and on December 5 the Committee on Labor of the House of Representatives made a favorable report on the bill "to establish in the Department of Labor a division to be known as a woman's division" (H. R. 16358). This is the bill introduced last spring by Congressman J. J. Casey of Pennsylvania and by Senator Jones of Washington. It has the approval of the secretary of labor.

If the bill is passed, as its friends believe it may be during the present session of Congress, it will not only be an epoch-making recognition of the problems of wage-earning women, but may ultimately affect the whole scheme of collection of industrial investigations by the federal government. It is well to consider it in its larger relations and not merely as a measure "which the women want"—a slogan which is rapidly becoming powerful in the councils of the land, for obvious reasons.

The bill provides that the division "shall investigate and report to the said department upon all matters pertaining to the welfare of wage-earning women, and shall especially investigate the questions of the competitive influence of women in the several industries, the adjustment of modern industrial mechanism and management to the nervous organization of women, and the influence of industrial employments upon the subsequent home life of wage-earning women." The division will be part of the Department of Labor, and directly responsible to the secretary of labor, who will appoint its chief, a woman, at a salary of \$3,500. It will be co-ordinate with the Bureau of Labor Statistics and the Children's Bureau in the same department. Statutory provision is made for the staff and their compensation—an assistant chief and editor, three field experts, nine special agents and five stenographers and clerks. The bill carries its own appropriation of \$29,480 for salaries, \$2,000 for rent and \$15,440 for all other expenses, a total of \$46,920, or a little more than 20 per cent of the total appropriation usually granted the Bureau of Labor Statistics. Cooperation is legalized by a section requiring consultation with the chief of the Children's Bureau concerning subjects involving children and with the chief of the Bureau of Labor Statistics "when cooperation is necessary to eliminate needless duplication of expense in the conduct of investigations."

The proposal seems to have no active enemies but it has some unconverted critics who base their opposition upon the

undesirability of duplicating machinery for investigation already provided in the Bureau of Labor Statistics. They maintain that men and women work in the same industries and in the same establishments; that they are affected alike by the high cost of living; and that fundamental industrial problems, such as accidents and occupational disease, or unemployment, are not to be solved differently for women and for men in industry. Therefore, they believe that field work in investigation as well as long-range planning of subjects for continuous study may be facilitated by centering in one bureau the whole responsibility for industrial investigations.

If the work expected of the proposed new division were merely the collection of statistics, this would be a powerful argument against it. What the women want, however, is special counsel in the government, continuous attention to their needs, a scheme of organization which will automatically direct the attention of Congress to its recommendations, and the opportunity to blaze new trails in practical research and in methods of making facts known to the public. They base their case upon the special problems of wage-earning women, as distinct from those of wage-earning men, and they believe that the situation is analogous to that which led to the organization of the Children's Bureau, in spite of the fact that logically the Bureau of Labor Statistics or the census office might have been expected to carry on all necessary investigations of conditions affecting children.

Past history is significant. Following the extensive study of the Condition of Woman and Child Wage-Earners, carried on in 1907-9 by special act of Congress, Charles P. Neill, commissioner of labor, under whose direction this large investigation had been made, organized a woman's division in the Bureau of Labor, now the Bureau of Labor Statistics. It is not to be denied that the Bureau of Labor Statistics has to its credit a large output of facts concerning women's work and that these facts should have received far more public attention than has been accorded them.

First-Hand Information

FOLLOWING THE REPORT, in nineteen volumes, of the special investigation of 1907-9, nine bulletins in the special series on women in industry have been published and numerous other volumes have dealt with important subjects affecting women, such as the studies of the dress and waist industry and the cloak and suit industry in New York. It is true also that the publications on retail prices and cost of living, or wages and hours of labor in certain selected industries studied at regular intervals, or unemployment, or industrial accidents and hygiene, or administration of labor laws, and, indeed, the greater part of the output of the bureau have a bearing on conditions affecting women as well as men. To base the argument for the new plan wholly upon the failure of the bureau in the past to collect facts about wage-earning women would be to ignore a mass of valuable material in its publications. In several recent instances effective use has been made of the first-hand studies in the series on women in industry when they were issued promptly enough to be of serv-

ice to state legislatures or to Congress, but we have much to do before we can be said to have made adequate provision for the facts needed as a basis for wise action.

The secretary of labor, in endorsing the bill last July, wrote:

"My first impulse was to suggest that, in view of the fact that the Bureau of Labor Statistics has a jurisdiction covering all of this field the division should be created within that bureau rather than directly attached to the department. Upon more mature deliberation I am convinced that while there are no sharp lines of demarcation between women in industry and men in industry so far as certain phases are concerned and the same machinery which is established to collect and compile wage schedules of men, could, with superior efficiency, be utilized for collecting and compiling the wages of women in the same industry, there is a vast field for investigation and study which specially and peculiarly affects women in industry which could be more effectively handled under the immediate direction of women than under the direction of men. I have particular reference to the physical and mental effects of certain lines of modern industry upon those who are to be the mothers of future generations and the effect of that effect upon those generations themselves."

Weakness of the Women's Division

THE WEAKNESS in the present situation is that there is no statutory recognition of a division within the bureau for investigations of women in industry and no continuous, dependable appropriations for them, even in the bureau's own budget, and that the chief of the division necessarily lacks the power of independent initiative. At the present moment, indeed, the division for women in industry is practically non-existent. Other lines of inquiry to which the bureau is already committed absorb much of its funds. Special pieces of work often fall to its lot for which Congress forgets to make special appropriations. The funds actually used for the woman's division have been less than 4 per cent of the total appropriation, and salaries for women have been too low.

Under such conditions of uncertainty and limited resources, far-reaching plans for investigation for women, the building up of a coherent and continuous plan, and vigorous attacks upon one urgent problem after another become impossible. An efficient staff cannot be maintained with so little assurance of permanent tenure, and the momentum of accumulating experience is thus lost. Even since the organization of a woman's division in the present bureau, there has not been sufficient continuity in investigations and no effective drive at a single goal. In the other publications of the bureau, the statistics about women, although separately classified, have not been presented in such a way as to reveal their real significance for women. We have no analysis, for instance, of the reasons for differences in earnings of men and women in the series of bulletins on wages.

The proposed remedy avoids the weakness of the present plan. It gives statutory sanction to continuous studies for women, and insures more interest from congressmen, who cannot escape consideration of the needs of the woman's division when the appropriation bill is submitted each year. A woman at the head of her own division and responsible directly to the secretary of labor will command attention and, therefore, be more likely to secure results in practical action than if she be a subordinate worker in another bureau. She can carry out more effectively the specialized task of making vital to the public the urgent needs of the most handicapped group in the labor market. She can be for them a special friend in the government, unceasingly watching their interests.

Quite as important as its relation to women workers, however, is the effect of the measure upon the whole method of industrial investigations in the federal government. If it means wasteful duplication and an illogical separation of functions so that the sum total of our industrial research will be less effective, it would be singularly unstatesmanlike to advocate it. It should not be forgotten, however, that the proposal involves merely a change of organization within the Department of Labor, not the establishment of a new agency unrelated to the Bureau of Labor Statistics or to the Children's Bureau. Duplication could easily be avoided by a staff organization within the Department of Labor to formulate plans for all industrial research. There may be internal difficulties in the way of such a plan, but to the outsider it would seem to be most desirable if the three chiefs should constitute themselves a commission on industrial investigation, thus reenforcing each other's programs. Moreover, the removal of special work for women from the Bureau of Labor Statistics will leave the bureau's funds entirely free for urgent industrial investigations affecting both men and women or men alone. Studies in collective bargaining, for instance, need to be extended and made more illuminating that we may have concrete evidence on its methods and results.

The program of the new woman's division cannot, of course, be predicted in detail. Congressman Keating, reporting for the Committee on Labor, would have the division collect information of a practical kind to be used by industry itself, by the schools in planning industrial training, and by the public in determining the need for remedial legislation, and (promising addition) its effects. "We must know in a given industry," he writes in the formal report on the bill,

"whether women suffer more or less from unemployment than men in that industry; we must know how much of this lost time is due to personal causes which are common factors in the lives of wage-earning women as distinguished from wage-earning men, and how much is due to personal factors affecting men and women equally. We must know to what extent the equipment of machinery and the general management of the various industries take into consideration the physical and nervous organization of women wage-earners. We must know the effects of speed, complexity and monotony—all factors in modern industry—on the physical and nervous organization of women. The division's greatest opportunity for service lies in its privilege of materially assisting the efforts to settle questions of fact by furnishing statistically accurate and intelligible descriptions of the demands of various occupations upon women; in its cooperation with federal and state agencies in the effort to determine the extent to which these demands endanger the health of women wage-earners and in devising and suggesting practicable means to lessen these dangers."

Reaching Wider Audiences

THE SAME REPORT of the Committee on Labor stresses also the need for such a presentation of facts as shall appeal to a wide audience. It points out concerning the woman's division that "as part of the Bureau of Labor Statistics, its bulletins were naturally forced into the form of reference books for experts only, whereas the woman's division should tell the very human story of women wage-earners in a way that every intelligent person can easily understand."

It is true that there remains in the bureau today something of a traditional conception of the proper form for reports issued by a governmental bureau. In the first annual report of the federal Bureau of Labor in 1886, it is stated that "the matter presented herewith is largely statistical, whether presented in the text of the work or in tabu-

lar form. Theoretical discussion has been avoided so far as possible." An examination of the reports of the bureau shows how great has been the emphasis upon statistical presentation rather than upon an unstatistical, but none the less scientific description of conditions. Under the present commissioner, Royal Meeker, distinct gains have been made in the recognition of the task of public education. The useful *Monthly Review* is one evidence of this. But the traditional attitude still exists. If a woman's division, beginning without the hampering effect of certain recognized forms for reports can use new methods, it may afford a useful demon-

stration of the fact that government reports may be both scientific and illuminating.

Certainly we need facts. We must know more about minimum wage laws, the extent of night work and its results, the employment of married women in industry, and the health effects of dangerous processes. The difficulties of varying legislation in different states may be made to serve a useful purpose if the federal government will draw conclusions as to their relative merits. The creation of a woman's division seems to be a promising first step in a more coherent, nationwide program for protecting women in industry.

Home Economics and Public Health

By *Winifred Stuart Gibbs*

LECTURER IN HOUSEHOLD ARTS, TEACHERS' COLLEGE, COLUMBIA UNIVERSITY

OUR grandmothers did not suspect it, but they were the true founders of the home economics movement. They baked and brewed and made and mended, that their families might be fed, clothed and kept in good health. They had no thought of making a "science" of their housekeeping, nor did anyone stagger under a sense of responsibility to the body social. Nevertheless these homemakers and housekeepers were blazing trails for their daughters and granddaughters.

The founders and leaders of a cause have a place all their own, but before the time is ripe for their efforts many forces must have been at work. There could have been no home economics movement if there had not first been homes.

At the very time when mid-Victorian home life was pursuing its placid way, Ruskin was laying hold of certain principles and their inter-relationships. He realized that the "lady" or "loaf-giver"—the domina or "house lady" gave to her household much beside the literal loaf. Of the loaf-giver's education he wrote: "All such knowledge shall be given her as may enable her to understand, and even to aid [what would he say today?] the work of men." Another time he says: "It is of the highest importance . . . that she should follow at least some one path of scientific attainment." Again, "She has a happy smile because there is a little wall around her place of peace; and yet she knows in her heart that outside of that little rose-covered wall the wild grass to the horizon is torn up by the agony of men and beat level by the drift of their life-blood."

Today we should sum up all this by saying that home economics, as its name implies, began in the home, developed in the classroom and reached its *summum bonum* in the present-day field of social and sanitary science.

In order to review this initial stage, we have only to go back, each one to his own home. Was not its busy Presiding Genius a teacher? a demonstrator of sanitary housing and attractive furnishing? a supervisor of division of income and household accounting, of dietary-making, cookery and nutrition, of clothing and of sewing, of first aid and of home nursing, not to mention Christian ethics and a few other trifles akin? Busy places, these human laboratories! Small wonder that the compounds resulting from their activities, compounds of intellectual processes, of character-dust and soul-filaments, should today, by their very existence, create larger and larger fields of service.

Gradually, keen-minded housekeepers began to realize that

they were living science just as certainly as their husbands and sons were making history. They began to desire for their profession a more formal recognition. It was no longer enough to keep their homes clean; they began to ask questions about household bacteriology. Feeding the family was just as sacred a duty as ever, but the housekeeper began to ask, Why is milk good for children? A recipe ceased to be merely "Mrs. Brown's corn bread," and came to stand for energy that should help Susy learn her lessons.

While continuing to care for her children's health as a matter of course, the mother came to ponder, What law of health have I broken that members of my family have frequent colds and indigestion? What connection is there between impure milk and that epidemic in Jack's grade at school? What is my own responsibility to other mothers and to other homes? And a new home economics ideal rose, companion to the new public health.

About this same period wide-awake educators felt a growing consciousness of something lacking in their courses of study. They were no longer satisfied to stop at proficiency in arithmetic and accuracy in spelling. Physiology, "cooking" and "sewing" were more emphasized.

This transition time of home economics was one of much misdirected energy, but the underlying principles were sound and simple. There was much discussion of the pedagogical and psychological possibilities of "domestic science"; and "domestic art" teachers realized that the subjects involved presented many opportunities for the cultivation of manual dexterity. In some cases, perhaps, technique was pursued to the undoing of the larger result. Wise leaders were needed to organize the good material and discard the poor.

The Early Meetings

IN 1899, such leaders, eleven of them, held the first formal conference on "home science and household economics." The Lake Placid Club, where the conference was held, saw an organization of forces—home, school and social—destined to put home economics definitely in line for its highest development.

Of the fifteen topics planned for discussion at Lake Placid, three may be quoted as best illustrating the triple theme of this paper: First, How can domestic science help the woman who does her own work? Then, The training of teachers of domestic science, and standards of living as affected by sanitary science. Thus home economics touches public health at a second point in the line of their progress.

In 1908, the Lake Placid conference was merged into the new American Home Economics Association. The first issue of the *Journal of Home Economics*, official organ of the new association, sounds the note of contact with social activities, particularly public health.

In a comprehensive review of *Charities and The Commons*, that later became the SURVEY, Benjamin Andrews wrote: "There is no other magazine published which comes so closely into touch with the whole field of home economics as *Charities*." Dr. Andrews then quotes a paper by Ira S. Wile that had appeared in *Charities*, and entitled Economic Dietetics, in which Dr. Wile said that "Instruction in dietetics would cause (1) a reduction in the weekly cost of food; (2) a reduction in the waste of food; (3) a reduction in the indigestibility of food." As a result there would be, he continued, "(1) fewer improperly nourished anemic children; (2) fewer dyspeptic, neurotic adults; (3) healthier homes; (4) more efficient workers; and (5) a higher standard of living."

During the first year of its life the *Journal of Home Economics* published also a paper on The Economic Value of the Visiting Dietitian (of which mention will be made later); one on Domestic Science Teachers in the Campaign Against Tuberculosis, by Ira S. Wile; a discussion of Typhoid Fever, Its Infection and Prevention, by Mary Hinman Abel; a study of Malnutrition in School Children in New York City, by E. Mather Sill; a review of the Progress of Sanitation, by George M. Kober, and also, forerunner of other such investigations, an inquiry into Abuse in the Distribution of Food-stuffs, by Miriam Birdseye.

Allies for the Common Welfare

SINCE THAT YEAR of grace 1908, home economics and public health have clasped hands many times. Today they are strong allies. But the importance of this alliance was perceived first by home economics workers.

Mention has already been made of a paper in the first number of the *Journal* describing the visiting dietitian. This brief article was one of the first reports of a work that has since assumed the proportion of a "movement," and that is established at present in fully thirty cities. It began in 1906 in the office of the New York Association for Improving the Condition of the Poor. There, "visiting housekeeping" as it has been generally called, demonstrated its sphere of usefulness as a relief agency and yet more as a preventive agency. The work of the visiting housekeeper furnishes a most concrete example of the possibilities open to the home economist in public health work.

As this work developed in the New York association, the object of the visiting housekeeper was at first to give simple lessons in diet and cooking to mothers of underfed school children. The group in which this work was begun was one in which the families were in danger of becoming dependent. Their income was not elastic enough to cover all necessities, and the visitor soon found that mothers who were urged to spend more freely on food scrimped their expenditure for clothing, light and other essential items in the family budget. The food item could not be separated from other parts of the whole outlay. The home's expenditure as a whole had to be considered; and therefore the budget became the basis of instruction in these semi-dependent families, and the instruction itself followed such lines as were indicated in each case. For instance, teaching of food values was adapted to the needs of each individual mother, who was taught how to buy her necessities from her present income, as far as possible, and according to the health needs of her children. Sewing was not a thing of diagrams and theory, but also followed the line of need.

Aprons were taught when Susy needed an apron; trousers when Tommy's turn in the equipment came.

What sum did the mother need in order that her family should have an income sufficient to safeguard its health, insure working efficiency and provide a fair margin?

Inevitably there arose a third question, the most difficult of all—how to help the mother plan to bridge the gap too often existing between resources and the lowest estimate of needs? Technically speaking, this meant that the visiting housekeeper's aim became threefold: to aid in preventing dependency by instruction in right living and the conservation of health and resources; to aid in stamping out dependency and a wise use of relief; to aid in preventing illness and to relieve illness wherever possible by dietary measures.

The experience of the work especially under discussion—that developed in the New York association—proved that careful instruction in the use of even a barely adequate income could be made to count much toward putting the family on a sound health basis.

Left to herself, the mother in such groups will buy a supply of meat out of all due proportion, or else she will adopt a diet of starch and tea, considering vegetables and fruit as luxuries and milk quite beyond the possibility of purchase. She knows nothing of the relationship between orange juice and hard little bones in her growing children. But the dietitian's business is to show her that the things she thinks she can't afford to buy are the things she can't afford not to buy.

An important detail of this work is that, with assistance, the mother herself makes the estimates, does the figuring and writes her own memoranda on which to base her budget, and that from week to week she keeps her own expense account. The responsibility is not removed from her shoulders; she is helped to bear it more intelligently. Indeed, it is her own weekly expense account that furnishes material for future lessons. This expense account includes expenditures from the small cash allowance made by the association when circumstances demand it, and paid to the family at regularly stated intervals. The relief, often temporary, checks serious results of under-nourished children and so clears the way for the happier task of building up sound bodies for future activities.

In such family health work nurse and home economist work in closest cooperation and interdependence. The nurse attends to the necessary medical examinations and advice and aids in all matters that require her skill. The home economist faces the responsibility of preventive, upbuilding measures that shall make the individual family a sound social unit.

Such work has developed from many other centers than those just described. A home economist is on the staff of several New York hospitals for work among out-patients. A tuberculosis society in Jersey City has grown to county proportions and includes home economics teaching as one of the most important departments of its work. The first settlement to undertake this work was Willoughby House, in Brooklyn. Municipal departments of health are interested in these possibilities in their field, and state health officers, as well. Several of the more progressive states have under consideration, it is said, the addition of a home economist to the staff of their divisions of child hygiene. Significant in this connection was a vote taken at the recent convention of the American Public Health Association, to add to its organization another section—that on foods.

The Vital Point—Cost of Food

MARY HINMAN ABEL of the Home Economics Association is preparing a special study of figures obtained in constructive work among semi-dependent families to use as a basis for simi-

lar work among families independent, so far as income goes, but greatly in need of instruction concerning the wise use, as well as husbanding, of their income, especially in the purchase of foodstuffs.

The future holds many responsibilities. To summarize briefly: The home economist's work is with the family as a whole, as a unit. The families should enter into the scheme of cooperation so that each member will feel that he has a definite place in building a model neighborhood, a neighborhood in which each family is made up of individuals sound physically and prepared to bring good health to the duties of citizenship, present and future. From such neighborhood work, the step

to municipal activity is easy; for in every part of the city the neighborhoods will be ready to contribute each its peculiar share according to its own development, and to face and explain its own needs. The task of planning and working for betterment, social and physical, will be intelligently shared by every section, not left to a remote and often uninformed "committee."

Thus, through the upbuilding of homes and the strengthening of children; through instruction—in school and out of it—in wise living and spending; through active participation in social effort, the home economist is making a definite contribution to national betterment.

A Country Funeral

By *William C. Rucker, M. D.*

ASSISTANT SURGEON-GENERAL, U. S. PUBLIC HEALTH SERVICE

IN spite of the fact that there was a long row of horses and spring wagons along the front fence, the big white house that stood a little way back from the road seemed tensely still. All the blinds were down, and in the parlor there were so many flowers which kind neighbors had brought from their gardens that it was difficult for the town undertaker to move about. The minister was almost a stranger, having come from the city to substitute for the regular pastor—and to get a breath of country air at the same time. After he had read a passage from the Scripture he turned and, with his finger still between the leaves of his Bible, said:

“**W**E have met today for the sad purpose of performing the last solemn rites over the body of one who has passed into the Great Beyond. Our hearts are overflowing with grief at the untimely ending of this life so full of promise. He had just begun his career. Still in the time of sowing, he had not reached the point where he could see the grain begin to grow, much less had he reached the time of harvest. In thinking about this matter, many may be led to wonder why it has pleased the Divine Creator to remove this promising young person from our midst, to cut short a life so well begun. They bow their heads and say ‘Thy will be done’, but without understanding the logic of it all.

“If they will but consider for a moment they will realize that the reason they do not understand it is because they have not themselves been logical. They assume that the responsibility for the death of this young man, and the grief, sorrow and loss which it entails, lies with the Creator, whereas the immediate responsibility in every case of typhoid fever rests upon man himself. God, in his wisdom, has placed mankind in possession of the knowledge of the causative agent and the means of its spread. He has opened up our minds that we may understand how this disease may be prevented and avoided, and He has given us an almost infallible weapon with which to protect ourselves from the attacks of the germ which causes the disease. Therefore, this bereavement means that someone has failed to make use of these God-given means of protecting human life. Many a time, as in the present instance, it is the innocent bystander who suffers from the

neglect of another; from somebody's failure to realize that he is his brother's keeper.

“It is impossible in the present instance to exactly fix the responsibility for the sickness and death of the departed, but some man or woman is responsible, because only human beings have typhoid fever, and the disease cannot be acquired excepting from some person who has the disease or who is harboring the germs which cause it. Like every other person who contracts this disease, this young man unwittingly took into his body something which came from the body of another person. Possibly he may have received it directly or indirectly from some person who suffered from a very light attack of typhoid fever, and who, by the carelessness of his habits subsequent to his recovery, was the means—possibly the ignorant means—of the spread of the disease to other people. It may be that someone who was wantonly careless in the manner in which he disposed of the waste products of his body brought this grief upon the family of the deceased and this economic loss to our community. Perhaps the responsibility in the present instance does not lie with any one individual, but with some town or city which has been careless in the method of ridding itself of its offscourings, or has been indifferent to the laws of sanitation in securing its drinking water.

“At any rate, the death of this young man could have been prevented. It was entirely unnecessary. It is the price which we are made to pay for somebody's ignorance and carelessness. The day is fast approaching when such sacrifices shall cease to be. It will arrive only when we have learned that the presence of typhoid in a community means that someone has been criminally negligent of his duty. Today, with hearts bowed down by the grief of our loss, let us resolve that we will henceforth so order our lives that we may conduct them without menace to others. Let us take unto ourselves the lesson of this hour, and in our own sorrow fix our determination to prevent the coming of sorrow to others. If we do this, this dead shall not have died in vain.”

ON the cottage organ somebody played *Lead, Kindly Light*, six young men came in from the lawn where they had been talking in hushed whispers, and the procession moved out toward the hillside.

Starving the Children's Bureau

By Florence Kelley

SECRETARY NATIONAL CONSUMERS' LEAGUE

THE fourth annual report of the federal Children's Bureau confirms the conviction with which the writer of these lines reviewed the second annual report, that no social worker, in whatever field of activity, is well read who is not familiar with the publications of this bureau. Modest as their form and simple as their language, they are scientific in the finest sense of that much abused word. The facts in them are collected by competent people, sifted with skill and scrupulous care, and made public in forms available for all who can read English.

And what long-neglected facts, on what fundamentals of the life of the nation! The birth, life and death of legions of native citizens condemned to extinction in infancy by the neglect of the community and the common lack of standards of income for working class families; the cruel because needless death in childbirth of tens of thousands of mothers; the infinite variety of means discovered for "putting baby on the map," for keeping child-saving in the foreground of community life at least during Baby Week in every year. Only our stupendous immigration can explain our surviving our callous disregard of our century-long waste of mothers and children and of the means at hand for saving them.

Since the foundation of the bureau every state of the forty-eight has improved its registration of births. And this is no mere coincidence. For the bureau makes the very process of gathering its needed facts a means of enlisting people to act on them. While enquiring into infant mortality in a city, it stirs by the very manner of its questioning the people of that city to reduce that mortality.

Nowhere in the world, therefore, can students find govern-

ment reports like the four modest pamphlets in which, once a year, this bureau has given an account of its activities. For its task is unique: "To investigate and report upon all matters pertaining to the welfare of children."

The bureau reports in multiform ways. Its printed official documents, free from all padding, all jargon, and all jumbling of figures, are sadly limited in the size of the editions. But exhibits, screens, slides, films and charts eke out the printed word. And the mail keeps voluntary agencies forever handing on the torch of the searchers after children's well-being.

This annual report comes at the moment when it should give rise to novel New Year's resolutions by the American people about their congressional appropriations. Beginning with the grotesquely petty sum of \$25,000, Congress has always dealt meagerly with this most useful bureau. In the present month, moreover, the House Appropriations Committee cut all the proposed modest increase from the estimates for its future work.

The bureau asked an increase of \$187,520, making the total requested appropriation \$352,160. While an amendment on the floor of the House granted an increase of \$109,000 the work of the bureau will be crippled for lack of the full sum requested.

Will the American people passively accept this insult as their Christmas gift from Congress? Or will nation-wide protests rebuke the committee and the insufficient amendment cynically adopted on the floor—before Congress adjourns this week to commemorate the coming of the Holy Child?

AMERICA TO THE NATIONS OF EUROPE

By Louis S. Friedland

ASSOCIATE EDITOR THE RUSSIAN REVIEW

YE stand embattled in your weaponed might,
Playing the game of death to test your strength.
What will ye reap in bitterness at length?
Think ye there will emerge from out the fight

Dripping with blood of men, a master-race,—
Nation of Nations? No! Swift time will bring
Another champion, sternly challenging,—
Then war, and pestilence, and all things base.

Hearken a message from a newer land
That welds your sons in ever-strengthening ties;—
Behold! the greatest nation will arise
Where all the nations' sons together stand!

Nation of Nations! Yes, we have the way!
There is no other! *One* Nation build ye then,
Binding your sons by all the hopes of men,—
And mark the dawning of a better day.

COMMON WELFARE

“REPARATION, RESTITUTION, GUARANTEES AGAINST REPETITION”

INTERNATIONALISTS anticipated that the patriotic braggadocio with which the German chancellor embellished the German peace overtures would be answered with resounding blows in similar vein in Lloyd George's speech to the British Parliament. Both addresses, in their phrasings, have appealed to the fighting spirit of their people. Both reviewed the events of the war in a way to spur to new exertions, but both great civil leaders reckoned not only with the war groups but with the nascent sentiment which in each country is for trying out negotiation as an alternative to military exhaustion as a way for settlement. The British premier drove back of all the military events to the objects of the war.

“This is a struggle,” he said, “for international right, international honor, international good faith—the channel along which peace on earth and good will among men must follow.

“The trained sense of fair play among the nations, the growth of an international consciousness for the protection of the weak against the strong, of a stronger consciousness that justice has a more powerful backing in the world than greed, the knowledge that any outrage upon fair dealing between nations, great or small, will meet with prompt and inevitable chastisement—these constitute the causeway along which humanity was progressing slowly to higher fields.”

Unlike the word coming from the Russian council, and less explicitly from the other capitals, the British Premier did not close the door to negotiation nor repeat the demand of the English extremists that surrender should be the only basis for broaching peace. He said: “The mere word that led Belgium to her own destruction will not satisfy Europe any more. We all believed it; we all trusted in it. It gave way at the first pressure of temptation, and Europe has been plunged into this vortex of blood. We will, therefore, wait until we hear what terms and guarantees the German government offers other than

those, better than those, surer than those, which she so lightly broke. Meanwhile we ought to put our trust in an unbroken army rather than in a broken faith.”

In the view of some of the closest observers of the peace negotiations, the German proposal, met by the Allies' demand for terms, may be stalled by a counter-proposition of a conference, unless the central powers couple with it at least certain fundamental proposals which the Allies would find it difficult to turn down and hold public opinion at home and abroad.

Repeated dispatches from Washington during the past week, quoting Ambassador Bernstorff directly or indirectly, indicate that while the German government does not believe particular terms should be discussed other than around the boards of a conference, where national spokesmen would not be under pressure to abuse each other for home consumption, Germany may come out with the statement that she stands ready to discuss disarmament and a league of nations which in essence would be a guarantee against militarism.

In such case, Germany will have done three things which since the outbreak of the war—and at times equally propitious as this—have been held up by the pacifists as the great opportunity open to the United States—to propose peace through negotiations, to propose disarmament and to propose a League of Nations. The way was open to the Wilson administration for such proposals prior to the German note; it has to a degree been closed while the note was under consideration as something likely to imply the United States was taking sides. It is open again, either to initiate action or to publicly throw the weight of the United States into the scales of European decision.

THE ENGLISH CIVIL LIBERTIES GROUP

STEPHEN A. CHANDLER, who describes himself as a business man and active member of the Exeter branch of the Union for Democratic Control, reached New York on the St. Paul last

week. He sailed just prior to the change in ministry and the receipt of the German overtures, and tells of two recent developments in the crystallization of public sentiment in England. These have had their origin among members of the Union for Democratic Control.

What is known as the Civil Liberties Group has followed with sympathetic interest the case of the conscientious objectors, but is concerned directly with steps to defend the rights of free meeting and free speech. For example, a recent pamphlet was written by R. J. Lupton, former member of Parliament, entitled *What We Are Fighting For*. Thousands of copies of this pamphlet were circulated before it was suppressed by the police under the defense of the realm act. The author was fined £200 and £50 cost. Mr. Chandler's office and home in Exeter were raided by the police in November because of his activities in distributing this pamphlet. This was not his first experience, however, of the police raid, as he had gone through one in August when some pamphlets entitled *How the War Came*, published by the *Labor Leader*, were known to be in his possession.

This civil liberties movement is, he says, practically in the making. The parliamentary group committed to it was forty strong in November, and as result of the overthrow of the Asquith government and the sharper alignment between militarists and pacifists in Parliament Mr. Chandler believes it is four times as strong at the present writing, and will become the opposition in Parliament. It is composed of such energetic members as Charles Trevelyan, who left the Cabinet at the outbreak of the war and whose recent letter to the American people was published in the *SURVEY* for December 9; Arthur Ponsonby, Philip Snowden, Ramsay MacDonald, Holt, a figure in the shipping world; Pringle, Outhwaite, Jowett, Hardy, the leader of the railway-men's union; Prof. G. Langdon Davis, and others in liberal and labor parties.

A parallel development has been the organization of a Committee for Peace by Negotiation, in which practically the

same men are leaders and of which the Rev. Herbert Dunico of London is secretary. This committee, says Mr. Chandler, has been gaining strength rapidly throughout the fall, is holding meetings all over the country, and on Christmas eve has planned a chain of mass meetings calling on the British government to enter into a conference for a settlement of the war.

In mid-November Mr. Chandler was in conference with Ramsay Macdonald, leader of the pacifist group in Parliament. Mr. Chandler had come up to London from Exeter following the raid on his office to find out whether similar repressive tactics were going on in other parts of England. Mr. Macdonald told him that such was the case and that apparently the most rigorous methods were being used in the provinces. The government was aware that there had been a shift in sentiment since the summer "push," with its great waste of life and blood.

A hundred meetings were being held every week. Of these the press tells little or nothing. For example, Mr. Macdonald had spoken (in Glasgow) at a meeting in St. Andrew's Hall, whose seating capacity is 4,750. Every seat was filled an hour before the meeting commenced, and at least 3,000 people were turned away.

Coming south, Mr. Macdonald spoke at Leicester on a Sunday morning to an audience of 4,000 people. At the time Mr. Chandler saw him he was planning to go to Cardiff in about ten days. The newspapers have since made much of the break-up of that meeting as though the riot expressed public opinion.

It is generally believed among the peace people that the riot was deliberately planned. At the same time Charles Roden Buxton, another pacifist leader, was speaking within twenty miles of Cardiff to an audience of 2,500 and the next day to 1,500. The newspapers did not report these meetings.

THE IMMIGRATION BILL PASSED AGAIN

AS adopted by the Senate on December 14 and sent to conference of the two houses of Congress, the immigration bill preserves the right of refuge in the United States for political offenders from abroad. Senate committee amendments and House bill provisions impairing the right of political asylum were eliminated when the measure was before the upper house. At the same time the exemption of victims of religious persecution from the literacy test was restricted to those who were prevented by such persecution from securing education sufficient to meet the literacy requirement.

Efforts by the Friends of Russian Freedom and other bodies to safeguard the right of asylum for revolutionists

from overseas were centered upon provisions in the bill which would exclude and deport any alien "who advocates or teaches the unlawful destruction of property," and against the Senate committee amendment which would restrict the right of political asylum to "persons convicted or who admit the commission, or who teach or advocate the commission of an offense purely political, *unless such offense be a felony.*" This last restricting phrase was held virtually to destroy the right of the political refugee to come into the country.

When President Wilson vetoed the last immigration bill he said: "It seeks to all but close entirely the gates of asylum which have always been open to those who could find nowhere else the right and opportunity of constitutional agitation for what they conceived to be the inalienable rights of men; and it excludes those to whom the opportunities of elementary education have been denied, without regard to their character, their purposes, or their natural capacity."

At the instance of Senator Reed, who championed especially the rights of the Russian Jews, the words "unless such offense be a felony" were stricken out. On motion of Senator LaFollette the exclusion of aliens who advocate or teach "the unlawful destruction of property" was first stricken out, and later restored when a special exemption was made in these words: "Any person who knowingly aids or assists any alien who advocates or teaches the unlawful destruction of property, *except in war, insurrection or revolution*, to enter the United States shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be punished," etc.

The most stubborn opposition to the literacy test has always come from the Russian Jews, who in Russia are denied the right of education either in their own or Russian schools. When the bill passed the House last spring it contained this special exemption from the literacy test: "All aliens who shall prove to the satisfaction of the proper immigration officer or to the secretary of labor that they are seeking admission to the United States to avoid religious persecution in the country of their last permanent residence, whether such persecution be evidenced by overt acts or by laws or governmental regulations that discriminate against the alien or the race to which he belongs because of his religious faith."

This was amended, on motion of Senator Sterling of South Dakota, to read, after the words "last permanent residence," as follows: "and which persecution involves a restriction or denial to any class or sect of such aliens of the means or opportunities of obtaining an education sufficient to comply with the literacy test hereinbefore provided."

Under this limitation the literacy test would still be applied to Armenians and

other persecuted sects who are not denied admission to the schools of the countries from which they come. New laws under consideration in the Ottoman parliament, abolishing the privilege of Armenian and other subject peoples in the empire to have their own schools, will still permit the children of these peoples to learn to read in the Turkish language. Hence the exemption is confined to the Russian Jews.

Despite the modification of the bill this year in the Senate, it is generally anticipated in Washington that the President will veto the measure because of his opposition to the literacy test. The bill was adopted in the House by a vote of 308 to 87 and in the Senate by 64 to 7.

When an attempt was made by Senator Reed so to change the definition of the word "alien" in the bill as to safeguard the American citizenship of an American-born woman who may marry an alien, his amendment was defeated by a vote of 6 to 5.

In view of the precautions now being taken against the coming of undesirable immigrants to the United States after the close of the European war, it is interesting to discover that men in the government service at Washington predict that none but the politically oppressed will come. They argue that if Serbia remains under foreign rule, we shall have the Serbs; if Bulgaria is divided and largely brought under alien control, the Bulgars will come in tens and hundreds of thousands; but the Armenians have been so decimated by Turkish massacre that few of them will be left to travel to America. Those now alive and safe in Armenia will take refuge under the Russian flag if Russia gives up the territory south of the Black Sea.

NEW CROPS GROWN BY THE MARKET CONFERENCE

"ORGANIZE and take your salvation into your own hands. Organize cooperatively as a producer. Cooperate with the consumer. Make your own demands on the agencies of government—the Farm Credits Board, the Federal Trade Commission, the Department of Agriculture, the state departments of marketing. Your economic life is yours to organize. Your social life is yours to organize."

It was in response to this call that the agriculturalists themselves—the livestock men, the grain-growers, the dairy men, the vegetable and fruit producers—came from every state and Canada to the fourth National Conference on Marketing and Farm Credits at Chicago, December 4-9. Hitherto agricultural experts, editors, professors and state and national officials have preponderated. But while they were prominent in this one, they took pride in the fact that 2,000 farmer-producers themselves, including a few women, had rallied at

At the Community Christmas Tree

By Helen Hoyt

We have pulled a star out of heaven
And hung it on a tree-top,
Twinkling.
We have drawn down fire out of the clouds
And bound it upon the branches,
Glimmering.
Red light and blue light,
Caught in crystals;
Strange berries,
More still, more magical
Than any mistletoe
Found by the druids
In charmed forests.
What sorcery is ours
That makes trees glisten and shine,
Twinkling, glimmering,
Live in the midst of the dark?
What spell do we own
That with wires and glass
We fasten-in the wandering light
And deck our festival with flames of the air!

Photo by New York Edison Co.

their call to speak and act for themselves. This significant result was perhaps due to the National Agricultural Organization Society, which was launched by the conference a year ago to help the farmers organize themselves for cooperation in producing, storing and marketing their products and in improving the conditions and enhancing the attractions of rural life, as is being done in Denmark and also in Ireland, under the leadership of Sir Horace Plunkett.

While the technique of soil and seed improvement, stock breeding and extermination of pests was not lacking, this conference was keyed from start to finish to such significant social-economic keynotes as the bases for farm credits in the standardization of products as well as in legislation, and still more emphatically such community and national organization of the rural population as will increase the number of landowners, diminish the number of tenants, distribute labor and immigrant agriculturalists where they are needed on the land and will unite farming families and classes. Charles McCarthy's summarizing of this purposefulness as "the Henry Ford-izing of rural industry" describes its intended effectiveness but fails to indicate how wholly democratic this new rural movement is both in spirit and procedure.

Much of the discussion and most of the recommendations of the conference

pertained to federal legislation already enacted or urged upon Congress. The federal farm loan act was "heartily recommended to the farmers for the fullest possible use," and farm loan associations were suggested as the best means of taking advantage of this law. Congress was urged to provide a system of short-time credits and to create some authorized way of certifying marketable notes secured by live stock and other farm products; and also to appoint a federal commission to employ and supervise a body of experts to carry on agricultural inquiries and to advise farmers how to increase their efficiency. The conference put up to the Federal Trade Commission an investigation of the entire live stock and packing industries, including the investigation of municipal abattoirs and cooperatively owned packing plants, with a view to the assurance of "a free and uncontrolled market."

Fully a third of the five days' discussion was devoted to the relation of land tenure to the distribution of immigration. The failure to bring together the demand for and supply of farm labor was attributed to the alarming increase of tenant farming and the transiency of their tenure of the land, the lack of credit by small producers, unorganized distribution and the gloom and sterility of country life. While farmers of American family stock confessed to have shared

somewhat with the immigrants these same burdens, yet they gave abundant evidence of awaking to the necessity of solving the problem for both. "We want your information, not your pity," was the challenge which rang out over and over again.

Land settlement could not be left wholly to unregulated private enterprises, it was contended. The general purpose of the Crosser bill in Congress was endorsed, but it was agreed that a scientific land settlement policy should include economic and soil surveys of unsettled lands, "ready-made farms" made available for habitation and immediate productiveness by the cooperation of federal and state governments, and such supervision of private sales and private colonization as shall prevent fraud and injustice and aid the settler in selecting and gaining his foothold on the farm.

Important as have been such offshoots from this national conference as the National Association of State Marketing Officials, the National Association of Teachers of Rural Economics, and the National Agricultural Organization Society, none of its initiatives may prove to be more necessary and far-reaching than an independently organized committee on a constructive national immigration policy, which was launched at the end of the session. A small group of men and women bent on promoting closer

team work between those enlisted in the various phases of the immigration problem, urban and rural, and in the economic, legislative and philanthropic measures for its solution, constituted themselves a permanent committee to this end.

These initiators, who hope for many additions to their numbers, include Fred-eric C. Howe, commissioner of immigration at Ellis Island, Sidney L. Gulick of Japan, Grace Abbott of the Immigrants' Protective League, Chicago, Charles McCarthy of the Wisconsin Legislative Research Bureau, John R. Richards, director of the South Park recreation center, Chicago, Mrs. Van Rensalaer and Mrs. Mumford of Boston, and Miss Robinson of New York, representing the National Civic Federation, Edward A. Fitzpatrick of Madison, Wis., Edward F. Sanderson of the People's Institute, New York, H. A. Lipsky, member of the Chicago Board of Education and editor of the *Jewish Courier*, Graham Taylor of the *SURVEY*, and John Collier of New York as chairman.

The committee will prepare and circulate a digest of existing and proposed laws and will strive to promote and unite significant efforts tributary to the development of a really national and constructive immigration policy, dealing not only with the admission and exclusion of immigrants, but also with the training and assimilation of immigrants already admitted, who are in the struggle of gaining their foothold and becoming American citizens.

DIVISION OF LABOR AND HUMANE SOCIETIES

TO say that children are tyrants is a truism which implies curled and ruffled darlings and limits the scope of their tyrannies to private life. But here are the little delinquents and dependents of Minneapolis assuming the role of despots and robbing two long-established philanthropies of their names and separate existences. The Minneapolis Humane Society and the Juvenile Protective League of Hennepin County are the victims and, like many a husband and wife, are meekly giving up cherished traditions for the better service of "the children."

The directors of both societies have resigned, the old names and constitutions have been surrendered, and legal steps are being taken to launch two new organizations, the Animal Rescue League and the Children's Protective Society of Hennepin County on January 1. The league will embody the animal rescue work of the old Humane Society. The children's society will be an amalgamation of the children's branches of the Humane Society and the Juvenile Protective League.

The change is one which raises questions as to the opportuneness of new and more scientific adjustments in social

work in other cities of the size of Minneapolis and in other fields of social work. It is the result of two years' careful study and planning on the part of a committee, composed from both societies with a chairman chosen from the Committee on Benevolence of the Civic and Commerce Association. To perform the work of both societies more economically and more effectively is the purpose of the readjustment.

The general feeling in Minneapolis is that the new children's society will be in every way better equipped to handle the problems of unfortunate children, yet there is not a little local sentiment expressed over the passing of two fine old names. The Humane Society, formed in 1877 by George R. Brackett, Paris Gibson and George Bradbury, is one of Minneapolis' pioneer institutions. For the first fifteen years or so one agent took entire charge of the work at an annual salary of two hundred and fifty dollars. You picture him upbraiding a teamster for beating his horse one moment and soothing the wails of an abandoned infant the next.

Besides its case work, the society has always been active in securing better legislation concerning cruelty and abuse in Minnesota. In 1905, its officers took the lead in obtaining the state's juvenile court law. In 1907, they cooperated with the Municipal Court in establishing the present system of adult probation. During 1915, investigations carried on by the society brought to light such deplorable conditions in Minneapolis baby farms that two new ordinances regulating these places were passed by the City Council. The Humane Society now cooperates with the Board of Health in the licensing and inspection of baby boarding-homes and the disgraceful traffic in unfortunate infants has been done away with. A newly opened department of child-placing and home-finding has furnished many babies for adoption into thoroughly approved homes this year.

The Juvenile Protective League was organized in 1906 to aid the Juvenile Court in solving the problems brought before it and in making its work as effective as possible. It has supplied needed assistants for the court, until the thorough demonstration of their usefulness has induced the city to place them on its payroll. The first juvenile probation officers, woman policeman and court nurse were employed by the league. The County Detention Home for Boys at Glen Lake is the outgrowth of a similar home established by the league. The new Boys' Club, one of the liveliest in Minneapolis, was inaugurated under its auspices. Extensive research work in connection with the Juvenile Court, giving remedial relief to the boys and collecting data for the court, have been carried on. The league has made various surveys of pool rooms, dance halls,

movies and street conditions in Minneapolis.

WORKING IN THE NAME OF THE CHRIST CHILD

SOME thirty years ago there lived in the city of Washington a young girl, the daughter of Richard T. Merrick, a distinguished lawyer. A serious injury, due to an accident, had left her an invalid, confined to her couch. The Christmas season was fast approaching and amid the preparations for the holidays, which the happy family were busily making, this young invalid, reared in luxury, conceived the desire of clothing in the name of the Christ Child some poor babe who was to come into the world in poverty. She made a simple but complete layette, sent for a friend whom she knew could find the very mother who needed such assistance, and—one small child was clothed in the name of the Christ Child.

The Christ Child Society, founded just twenty-six years ago, distributed one hundred and thirty-nine layettes this year. Not one request has ever been refused to an applicant endorsed by its visitors. And from this has developed the material relief department, which clothes and shoes children, furnishes a fortnight's outing, a brace for a crippled leg or a book from the library. There are no religious qualifications, except in the classes for religious instruction for Catholic children. The active members contribute a definite number of hours' work each week and anyone may become a member by promising to answer the Christmas letter of a poor child. Washington numbers a thousand members and there are more than 4,500 in all, including the branches in twenty-two cities.

From her couch where she has lain for more than twenty-five years Miss Merrick directs and leads it all.

THE LARGEST OF CHARITY FEDERATIONS

AT a testimonial dinner to the chairman, Felix M. Warburg, on Monday, announcement was made that an eight-week campaign in behalf of the New York Federation for the Support of Jewish Philanthropic Societies had concluded with pledges of \$10,000 over the goal of \$2,000,000 set at the beginning. The total is the largest ever raised in any city for the current expenses of any group of philanthropies. And the eighty organizations now belonging to the federation make it the largest federation of Jewish charities and the largest purely financial charity federation of any sort in the country.

That the number of organizations grew from thirty-eight at the start was held a clear indication of its internal success. Practically all the Jewish charitable societies of Manhattan now are

in the federation. There is talk of including religious education societies and even a possibility of a future merger of the well-established Brooklyn Federation of Jewish Charities.

Pledges were secured from between 9,000 and 10,000 persons, most of whom already were giving to Jewish charities. Approximately 25,000 people have been listed in the last two years as donors to Jewish charities, and Chairman Warburg hopes in the course of time to raise the total of federated Jewish givers in Manhattan to 100,000.

The total of over \$2,000,000 pledged to current expenses represents at least a 33 per cent increase over the income of last year of the federated charities and a 100 per cent increase over their former guaranteed income from members. The federation guarantees to come up to the contribution totals of last year for every organization.

Mr. Warburg feels that as a result of federating "we are to draw together in the common cause of social service all shades of Jewry. Selfish individualism is to be banished. We can secure for boards of trustees people entitled to these positions because of their energy and devotion, rather than because of their financial value. These positions now will be more sought after, because more responsible and respectable and less exclusive. The new federation will democratize Jewish endeavor in communal problems."

In social and other matters the federated organizations will be autonomous. Mr. Warburg hopes that the comparing of methods and experience will result in such improvements in methods of service, in reports and in accounting, that the more direct influence exercised by some charitable federations might be unnecessary.

SCIENTIFIC REFUGEES FROM THE ZEPPELINS

THE latest confirmation of earlier reports concerning the disappointing results from radium in the treatment of cancer [see the SURVEY, November 20, 1915], is that from the Crocker Fund for Cancer Research. The report will be published by Columbia University early in 1917. Advance proofs, however, tell in part the story.

Dr. Francis Carter Wood records the experiments on rats, mice and guinea-pigs of the British Imperial Cancer Research Fund last year. These animals had been inoculated in London, but at the invitation of Columbia University were sent to this country after the war broke out, lest a Zeppelin bomb should destroy the imperial laboratory. The loss of the animals would prove a serious hindrance to the work of cancer research, for many of them showed unusual conditions of cancer growth. In spite of difficulties,

A RUSSIAN LIBRARY IN A PRISONERS' CAMP
Eight months passed before the first book reached this camp, from the Swiss relief societies. Half a year later this picture was received.

these experiments have been continued successfully, and at present the Crocker Fund has a complete duplicate set of the growths in the London laboratory.

Several heralded "cures" have been tested in the Crocker laboratory, including radium, but in no case has cure been effected. It has been proved that in small amounts, radium may even stimulate the growth of cells of the cancer type. In large amount it may cause a decrease in size of the tumor, but if the neoplasm is not killed the growth returns after a quiescent period, and is immune to radium. Says Dr. Wood:

"These experiments are thus of practical importance because they show that in treating a tumor of any size unless very large quantities of radium are used the portions of the tumor at a considerable distance from the radium may be stimulated and grow more rapidly, even though locally the tumor may diminish in size; and they point to the necessity of careful study of the nature, extent and distribution of a human tumor before a decision is made as to whether radium can justifiably be applied therapeutically."

In spite of the fact that radium has disappointed the first high hopes concerning its curative powers, "there is no question," continues Dr. Wood, "but that it is the best palliative treatment we have in cases of inoperable recurrence after previous surgical removal of the main mass of the growth. It is unquestionably possible to prolong life in a few instances and to make the patients more comfortable by the judicious and intelligent employment of large quantities of radium. On the other hand, it is equally certain that the use of small quantities, say, twenty to fifty milligrams, of radium element in such cases

often results in a rapid extension of the tumor, so that the patient's condition is worse than if he had been left alone."

THE HUNGRY RUSSIANS IN GERMANY

WHEN the French and German prisoner soldiers suffering from tuberculosis passed through the towns of Switzerland and so on up to the mountains for the fresh air, they told a Russian, C. Oberucheff, how his countrymen, prisoners in the camps of Germany and Austria, were being treated. Since that time their stories have been confirmed by representatives of the Red Cross, and by letters from the prisoners themselves, he says. So he has come to the United States in the hope of finding help in easing their lot.

Russian soldiers in German camps are pitifully under-nourished. Consequently they are being wiped out by disease, which they have not the vitality to combat. And they are hunting through the garbage cans for crumbs from the other prisoners' "parcels," Mr. Oberucheff says. The French government allows its soldiers in the German camps 500 grams of food daily; the British receive three parcels a week from England; and relief societies do something for the Belgians. Families and friends are sending candies and cigarettes. But the Russian receives nothing. Even his fellow prisoners are forbidden to share with him.

The parcels—one for each man during a period of two and one-half months—with which the Russian government supplies its soldiers in foreign camps, are now stacked in Sweden, held up because of the general disorganization.

In the meantime the Russian soldier eats nothing but his allowance from the German war office: coffee without sugar

in the morning, soup for lunch, no vegetables, little meat and a poor kind of bread.

Mr. Oberucheff, representing ten relief organizations who have been buying food in France for the prisoners, has come to the United States for money for provisions. He wants especially to ship over cans of condensed milk, since the exportation from Switzerland has been checked. Last February the Central Committee of Relief in Switzerland obtained permission for the Russian government to send her tuberculous prisoners in exchange to Switzerland as other countries are doing. But as yet the government has taken no steps.

BELGIAN EXILES IN A HOSTILE COUNTRY

DURING the last two months, according to dispatches, Belgian workmen have been deported into northern France and Germany at the rate of about 3,000 a week.

When the United States protested against the transfer as contrary to all precedents and those "humane principles of international practice which have long been accepted and followed by civilized nations in their treatment of non-combatants," the German government excused its action on the ground that article 43 of the Hague convention requires an invading government to maintain order. This, it insisted, was impossible since nothing could be done in Belgium to relieve the increasing unemployment which was causing demoralization and acute suffering.

The German reply stated that the deportations have been carried out without severity and with all possible consideration. It claimed that Belgians now working in Germany are engaged without exception in occupations permissible under international law, such as legitimate agricultural and industrial pursuits. It even invited American diplomatic representatives to visit the workmen's camps and assure themselves that the Belgians are well off. The note concluded with an expression of regret that the United States has never sought to protest against what it describes as the dragging off of Germans from East Prussia, Alsace and other places to Siberia and elsewhere.

Although the American protest intimated that the policy of deportation, if pursued, would in all probability be fatal to the Belgian relief work, at the New York office of the Commission for Relief in Belgium it was said that so far the change had not hampered the commission's activities. If the whole order for deporting 300,000 men were carried out, only 3 per cent of the civilians receiving relief from the commission would be affected.

Without doubt, however, it was said that the deportations have been carried

on with flagrant disregard for the rights of non-combatants.

Cardinal Mercier, Archbishop of Malines, in a letter urging the civilized world to denounce Germany's act, describes how every able-bodied man (not merely the unemployed) was "hurried off, pell-mell, assembled in freight cars and carried to unknown parts, like a herd of slaves." The cardinal points out that the "prolonged unemployment" with its drain upon finances could have been relieved had the country been "spared the war levies, which have now reached the sum of one billion francs," and had Belgian industry been left "its machinery and accessories, its raw materials and its manufactured goods, which have passed from Belgium into Germany."

"The naked truth is," he adds, "that every deported workman is another soldier for the German army. He will take the place of a German workman who will be made into a soldier."

In response to Cardinal Mercier's appeal, on December 15, 3,000 persons assembled at a mass meeting in New York city and adopted resolutions calling upon the United States to protest "with all its force and earnestness" against Germany's forced enslavement of Belgian citizens.

MRS. O'ROURKE'S NEW HEAD O' HAIR

IN my opinion," said Mrs. Leffingwell, "we are approaching the one hundred per cent efficiency standard." At this the majority of the committee softly applauded while Miss Galusha rose and bowed.

Christmas was to bring a profound surprise to the district committee of a certain big relief organization, particularly to Mrs. Leffingwell, the stanch opponent of dole-giving to needy families; to little old Mr. Hamlon, who likes doles and persistently questions Mrs. Leffingwell's "scientific charity;" to Miss Galusha, the secretary, who shares Mrs. Leffingwell's views and Mr. Hamlon's impulses. She had, as it were, been the scene of contest between these two ever since she had agreed to try out her hand on the committee's work. Mrs. Leffingwell claimed that Miss Galusha was entirely committed to the non-dole-giving program, while Mr. Hamlon cherished hopes that she would swing around to the "good old-fashioned way."

The surprise came just after Mrs. Leffingwell laid down Miss Galusha's report and, leveling a glance at Mr. Hamlon, observed that Miss Galusha's success in rehabilitating needy families of the district was due to the fact that she had undeviatingly followed the non-dole-giving plan.

Miss Galusha was just starting to acknowledge the compliment by the usual reversal of credit from herself to

the work of the committee members who had so generously backed her in her attempts at true constructive work, when suddenly her face blanched. The door of the committee room had been pushed open by a large, impressive woman wearing a plaid coat of raglan cut and a new, forbidding bonnet surmounted by a sweeping green plume. She bore down upon the committee with a pleased and eager smile, followed by an organized column of children, all of whom exhibited conspicuous marks of recent grooming. With a military gesture the woman arranged the children in a row behind the chairman and stood looking hopefully at Miss Galusha.

Where had Miss Galusha seen this family before?

"How do you do?" said the woman, reaching for Miss Galusha's slim hand with both of her own big red ones. "Sure, don't you know who I am?"

Since Miss Galusha continued to stare at her in bewilderment, she turned upon the helpless committee. "This young lady," she said, with a sidewise nod of her head in Miss Galusha's direction, "this young lady is the only person in the wide world who did the square thing by the O'Rourke family. What with bad luck from first to last, and worst of all on top of that, I have tried out every charity society in this here town."

By this time the committee had obviously given up proceeding with its usual business. Mrs. Leffingwell settled back in her chair and encouraged Mrs. O'Rourke to proceed. Mr. Hamlon looked almost envious.

"Yes, ma'am," said Mrs. O'Rourke, "this here Miss Galusha, she didn't try none of the new-fangled notions on me. After Mrs. Ricardo told her that I was after the work, she come to see me one day when me nor the children had nothing to eat but what the neighbors give us, nor one of us a good shoe to our name, and me just up from the typhoid with never a spear of hair left to me head, and bringing a laugh from everybody I went to see about something to do, with me bonnet slipping around on me like your foot on a banana peel. You remember me now, Miss Galusha?"

Miss Galusha was sitting on the edge of her chair, white to the lips. "Mrs. O'Rourke," she broke in hastily, "we were just having a meeting. Suppose you wait outside, you and the children, for a little while, and then I will come out and see you."

Mrs. O'Rourke bent sideways from the waist and gave Miss Galusha a good-natured poke with her elbow. "Go along with you, Miss Galusha," she said, heaving with a laugh. "It's the committee I am after coming to see. Committees have been coming to see me since I first married my poor deserting Michael, and me and the children have

come to pay back one of them there calls.

"Ladies and gents," she proceeded. "This here young lady is too timid to say it for herself, but she has made the O'Rourke family what it is." And she waved her off hand with a flourish toward the row of young O'Rourkes. "Self-respecting, self-supporting, well set up and proud, with prosperity coming down the pike. This here Miss Galusha, she come to see me about getting work I could do in the privacy of me own apartment. I will never forget the night. The childern was all trying to get on one roller skate they had fished out the ash barrel, and me up to me shoulders at the wash-tub. She walked right in and got the hang of us like that." Here Mrs. O'Rourke snapped her fingers. "And she didn't laugh at me looks. She got me some washing to do.

"The collar on that lady over there, Nora," she suddenly burst out, pointing at Mrs. Leffingwell for the benefit of the oldest O'Rourke girl, who recognized the article with an appreciative grin, "I have washed that collar many a time, and I think we recognize the clothes of some of the rest of yous as old friends of ours. The washing, it helped us out, but it was just a dollar here and a dollar there, and the childern going through their clothes like a house afire, and rent always falling due and all the rest. All the washing in the world would not have put the O'Rourke family where it stands today."

The committee smiled and waited. "There was just one thing that fetched us out of the woods," continued Mrs. O'Rourke. "Do you mind, Miss Galusha, the dollar you give me?"

There was no doubt that Miss Galusha remembered. She colored to the roots of her hair and scribbled meaningless designs on the pad in front of her, while the committee suddenly stiffened.

"I suppose you meant me to spend it for the kids," said Mrs. O'Rourke, "But," says Nora to me, 'it seems like you have to earn your living with your hair more than with your hands, ma, and why not buy a bottle of the hair tonic that is being sold in the corner drug store?' says she." Here Nora snickered.

"That hair tonic, ladies and gents, was bought with the dollar, and Nora she followed directions about rubbing it on. Before many weeks was over I had a soft little down on me head. And in another month quite a crop. I used to go out walking round the block o' nights for to get the air, seeing as the childern was so sensitive about me being seen and getting laughed at. One evening I happened into the drug store for another bottle of tonic and the druggist, a friend o' mine, he called someone from the back of the store and he says, 'Mr. Ballu,' he says, 'this is the

SHAKESPEARE.

NO scutage or aid shall be imposed in our realm save by the common council of the realm. MAGNA CHARTA, JUNE 15, 1215 A.D.

IN the name of God, Amen. We whose names are underwriten, the loyall subjects of our dread sovereigne Lord, King James, by the grace of God, of Great Britaine, Franc, and Ireland king, defender of the faith, etc., haveing undertaken, for the glorie of God, and advancemente of the Christian faith, and honour of our king and countrie, a voyage to plant the first colonie in the Northerne parts of Virginia, doe by these presents solemnly and mutuallly in the presence of God, and one of another, covenant and combine our selves together into a civill body politick, for our better ordering and preservation and furtherance of the ends aforesaid; and by vertue hearof to enacte, constitute, and frame such just and equall lawes, ordinances, acts, constitutions, and offices, from time to time, as shall be thought most meete and convenient for the generall good of the Colonie, unto which we promise all due submission and obedience. In witness whereof we have hereunder subscribed our names at Cap-Codd the 11. of November, in the year of the raigne of our sovereigne lord, King James, of England, France, and Ireland, the eighteenth, and of Scotland the fiftie fourth. An^o; Dom. 1620.

TO the end that this may be a government of laws and not of men. CONSTITUTION OF MASSACHUSETTS.

CHARLES I to the Speaker of the House of Commons (naming the members of the House whom he desired to arrest):

"Mr. Speaker, do you espy these persons in the House?"

The Speaker, falling on his knee before the King:

"Your Majesty, I am the Speaker of this House, and, being such, I have neither eyes to see nor tongue to speak save as this House shall command; and I humbly beg your Majesty's pardon if this is the only answer that I can give to your Majesty." FROM THE JOURNAL OF THE HOUSE OF COMMONS, JANUARY, 1642.

lady I was telling you about who had such grand success with your tonic.'

"Then Mr. Ballu he looked my head over and says he, 'Mrs. O'Rourke,' says he, 'suppose you come onto my payroll,' says he, 'for \$9 a week and all the tonic you can use thrown in. All you need to do is to set in the window with a sign up against you holding a bottle of the tonic fond-like in your hands,' says he.

"Well, ladies and gents, I made some hit in that window. My friends all crowded around and that made everybody a-passing want to see. A young

fellow got to writing me up in the papers and had my picter printed with my name onto it. Mr. Ballu raised me pay and business got so brisk, he's been hiring the two oldest childern to paste labels on the bottles after school."

Here Mrs. O'Rourke removed her bonnet and submitted her head for the inspection of the members of the committee. Mrs. Leffingwell received this attention with scant courtesy, but Mr. Hamlon rose on tiptoe to get a commanding view of the amazing hair crop of Mrs. O'Rourke. At just this point

Miss Galusha was seized with a fit of coughing and hastily left the room.

Mrs. O'Rourke soon discovered Miss Galusha's absence. "Now, ladies and gents," she confided to them in a stage whisper, "don't you be afraid of giving a coin or two to the poor along with your programs and advice. The children and me have considerable talk about that dollar given me by Miss Galusha. Nora will have it that it came from the committee, but I always tell her I am sure it was straight from the big, wide heart of Miss Galusha herself, seeing as she told me never to tell."

"Merry Christmas to the whole of yez!"

CHILDREN STRAYING IN AND OUT OF SCHOOL

"**B**ECAUSE the parents fail to see the value of an education; because of real or imagined economic pressure; because of the child's dissatisfaction with school and his desire to earn money; because the break between grammar and high school induces many to believe that they have finished"—

These reasons, or some of them, quoted from the report of Anne S. Davis, for the past eight months chief vocational advisor to the Chicago Board of Education, tell in the main why children leave school. They might be regarded as an indictment of municipal education in this country. Casually the city has thrown its opportunities in the path of its children, and aimlessly the children have been allowed to find their way about and adopt or leave the opportunities before them. They leave school upon completing the eighth grade because they "believe that they have finished," or because their study has not kindled any fire of interest in their minds, or because the little that was good enough for their parents is thought to be good enough for them. Or they may slip over for a while into the nearest high school—classical, technical, commercial, they scarcely stop to find out which—without analyzing their ambitions or their aptitudes and, finding that they are in the wrong place, slip out again on a haphazard hunt for a job.

This, at any rate, is the picture presented by Miss Davis' report. In several ways she is attacking the situation. Guided by the ideal of keeping the child in school as long as possible and of helping to socialize the school into a better servant of the child's needs, she has worked steadily with principals and teachers to adjust the great mechanism to the individual pupil. She explains to parents the varied courses offered in high schools, and the better industrial openings for children who have been to high school, or who have continued their study until they are sixteen.

That her emphasis is on the value of

prolonging school experience and adapting it to the individual need is shown by the fact that in three years (during eight months of which she has worked for the city) 30 per cent of the children who consulted her about work were persuaded to continue their education.

Her "follow-up" work serves a double purpose. After helping to find positions for those whose economic situation requires it, she has kept in touch with these children's experiences by letters, by visits to employers and parents and by seeing the child himself. In this way she has tried to help children toward greater efficiency in their work and to induce them to take every opportunity for further training. The full records of this "follow-up" system, which already cover several thousand children, will be valuable for a thorough study of the conditions confronting the child as he begins his industrial life and for a survey of the industrial opportunities open to children over fourteen years of age. It ought, too, to make vocational guidance more effective and to bring a contribution to future school planning, where it has long been realized that a closer adjustment with community problems is needed.

Miss Davis recommends a law, similar to the Wisconsin statute, establishing day continuation schools. This she believes will reduce the loss of energy incurred at present. She adds: "There should be a provision in our child labor law prohibiting children from leaving school until they have a position in view. The certificate should be sent directly to the employer. When the child is discharged or leaves his position for any reason, the certificate should be mailed back to the school authorities, who will know immediately that the child is not at work, and so return him to school until he secures another position. Under this plan the child will have the proper educational oversight."

BILLS THAT THE BABIES HAVE TO PAY

THERE are in the state of Illinois between two and three thousand persons—babies, children, adults—who might see today had their eyes been properly attended to when sight was first endangered, says Carolyn C. Van Blarcom, in her first report of the Illinois Society for the Prevention of Blindness.

Organized effort in Illinois to prevent blindness dates only from March, although prior to that, work had been carried on informally by a volunteer group of physicians and laymen. This volunteer organization supported the state bill for preventing blindness in babies, which became effective July 1, 1915. In the past six months it has reorganized as the present society, made plans for sustained work, secured a secretary and enrolled over 800 members.

The main effort of the new organization has been to secure more general observance of the law requiring that babies' sore eyes be reported and prophylactic measures used. Thirty-two violations of the reporting law have been discovered; one doctor and two midwives have been convicted and fined; the attorney-general has authorized the prosecutions of three other doctors and midwives, and evidence is being gathered concerning the other cases. Cooperation from state and local health departments, nursing associations and various other philanthropies makes possible a rapid extension of the work.

The greatest difficulty which the society encounters is said to be ignorance of the seriousness of infection in babies' eyes. Tragedies occur within a stone's throw of hospitals and dispensaries where blindness might have been averted.

Miss Van Blarcom tells of one young mother who, holding her blind baby in her arms, said that the baby's eyes might have been treated just as well as not, but that this was her first baby and midwives and grandmothers assured her out of the fullness of their knowledge of such things that it was only a "cold in the eyes"; that "it was natural for babies to have sore eyes and they will get well by themselves." But the baby will pay the penalty in lifelong blindness.

Amusing incidents occur in the midst of all the tragedy. In one case, under the authority of the state the society attempted to take a baby back to the hospital, from which the parents had removed it against the earnest advice of doctors and nurses. The mother was visited in her home, shown photographs of blind children and told the seriousness of her own baby's condition—but all to no avail. Finally, after several hours had been spent in persuasive argument, the still resisting parents were won over by the prospect of a taxi ride. So at nine o'clock at night a much delighted family accompanied the society's agent and the suffering baby to the hospital.

Sometimes the price paid by a baby for the ignorance and neglect of those accountable for its care is not alone its sight, with all that that means, but also its home, parents and relatives. Blind babies are not regarded as valuable assets and are not infrequently abandoned by the parents who are responsible for their blindness. Nor do one-eyed babies always find favor in the sight of their parents, for each year a number of them are left at Cook County Hospital and never claimed.

The average cost to the state to maintain and educate a blind person is estimated at something over \$10,000. This does not take into account the negative loss of productive citizens—the state's most valuable asset.

Book Reviews

INDUSTRIAL CONDITIONS IN SPRINGFIELD, ILL.
A survey by the Committee on Women's Work and the Department of Surveys and Exhibits of the Russell Sage Foundation. By Louise C. Odencrantz and Zenas L. Potter. Price \$25.

Springfield, Ill., might be called a typical American community. Its population of something over 50,000 puts it in the class of cities occupied by the greater part of the urban population of the country. Eighty-seven per cent of its people are American

born. It is not a great manufacturing center like Pittsburgh; it does not have an unwieldy population of unassimilated aliens; it has both industry and immigrants, but not in overwhelming proportions.

These are facts which give especial significance to the industrial report of the Springfield Survey. If the Pittsburgh Survey revealed a cross-section of American industry, the Springfield Survey does something that is possibly more significant: it reveals a cross-section of American life. It shows how the wage-earner fares, not where capital has had its unbridled will, nor where native standards have been undermined, but where as near an approach to simon-pure Americanism exists as can be found in any community big enough to make "surveying" it worth while.

The report analyzes conditions of employment among the 2,500 coal miners who constitute the largest group following a single occupation, the 6,000 workers engaged in manufacturing and mechanical pursuits, the 3,000 in trade and the 2,000 in transformation.

No flagrant or dramatic lapses in safety devices or fire protection were found, yet the report concludes that "a tragedy as horrible as that in Binghamton, a city no larger than Springfield, might occur in one of Springfield's factories at any time." Though Illinois was one among the thirty-one states to enact workmen's compensation laws between 1900 and 1916, yet because the law is optional and because many employers, especially in the most hazardous industries, have elected to be exempt, "the great majority of the Springfield workers . . . are employed in places where the basic principle of compensation laws has not yet been established." Illinois also has a child labor statute, but the survey

revealed an unsatisfactory law and decided laxity of enforcement.

Low wage rates prevailed, the minimum for the unskilled male per day being \$1.75 to \$2; for women workers in the laundries, \$6 a week; and for sales girls, particularly in the three five- and ten-cent stores studied, an average wage of from \$4 to \$5 per week. In one store new recruits sometimes started at \$3.50, while, at the other end of the scale, after seven years' experience, a sales girl in another store was earning only \$5. All three of these stores employed only girls who were living at home.

Most significant was the study of the earnings of coal-miners, whose wages ranged from \$2.62 a day for laborers to a tonnage rate of 57 cents to \$1.27 for miners and loaders. At this rate the latter were sometimes able to make \$5 or more a day, but in the year of the investigation (1914) the miners worked only 181 days, and it was discovered that the men seldom can count on a full working year. As a result, the report states, idle time reduces the yearly income until "it is impossible, in the case of many of the men, to supply an average family of five or six persons with the reasonable necessities of life."

Eighty-five per cent of 3,981 workers investigated worked nine hours and more a day; only 13 per cent, the majority of whom were members of unions, worked eight hours or less. A good deal of seven-day labor was found.

If these conditions are typical of America, and there is every reason to believe that they are, one is at least privileged to believe that the spirit of the report is typical of another kind of America and one that is destined to gain the ascendancy. For the investigators frankly condemned the low standards prevailing, proposed other and higher standards, and suggested means by which the higher standards could be attained.

They endorsed unionism as "an effective means" for the improvement of industrial conditions; urged a reorganization of the state bureaus having to do with labor conditions, and the appointment of a commission, as in Wisconsin, New York and Ohio; pointed out the necessity of better enforcement of law; favored health insurance, the establishment of an improved system of public employment offices, reduction in hours of labor and the abolition of seven-day work. In addition the report lays down ten "minimum requirements" which are essential to social welfare.

JOHN A. FITCH.

HISTORY OF THE WORKING CLASSES IN FRANCE
By Agnes M. Wergeland, Ph.D. University of Chicago Press. 136 pp. Price \$1; by mail of the SURVEY \$1.05.

SLAVERY IN GERMANIC SOCIETY DURING THE MIDDLE AGES

By Agnes M. Wergeland, Ph.D. University of Chicago Press. 158 pp. Price \$1; by mail of the SURVEY \$1.06.

For a proper understanding of present-day social conditions and institutions, a knowledge of their origins and historical development is important. These two little volumes by the late Dr. Wergeland present in a brief and readable form the results

of scholarly research into the medieval forbears of some of the factors in our modern social and industrial life.

Of the two books, the History of the Working Classes in France deals with matters more directly connected with the problems of today. It is a review, or, as the preface names it, a running commentary on Levasseur's *Histoire des Classes Ouvrières et de l'Industrie en France Avant 1789*; and in placing this important and elaborate work within the reach of many to whom it might otherwise remain inaccessible, a valuable service has been performed.

From the early beginnings of the medieval period down through the Renaissance to the France of Louis XV and XVI, the varying forms of industrial organization, the development of trade and foreign commerce, and the social and economic status of the working classes are traced. Especially interesting is the analysis of the relation of employe to employer, first as seen in serf, freedman and lord under the feudal system; then, with the growth of cities, in the master, valet and apprentice under the guild, or corporation, as it is more properly called. The aristocratic fraternities or associations of masters on the one hand and the democratic *compagnonages*, or unions of workmen and valets, on the other, furnish us with a medieval counterpart of our employers' associations and labor unions.

We find also the government curbing the power of the "corporations" when their influence seems likely to become too great. We hear the cry repeated at different periods that wages have not kept pace with the rise in the price of food-stuffs. These are all apparent indications that many of the problems which agitate us today have had their precursors in earlier times.

The subject of slavery as a legal status does not press us now as it did formerly, but it is always an interesting chapter in the history of human relationships. The main sections of Dr. Wergeland's monograph on slavery in medieval Ger-

manic society cover the periods of reduction—that is, the process by which a slave “becomes more and more a thing”; of ‘restitution or amelioration; and, finally, of liberation. This seems to her the inevitable course which slavery must run. “It, after all, bears the stamp of transition and in the end must reach freedom.” The economic aspects of the institution are especially analyzed and its legal status made clear at successive stages by extensive reference to Germanic law.

HENRIETTE R. WALTER.

MORAL SANITATION

By Ernest R. Groves. Association Press. 128 pp. Price \$.50; by mail of the SURVEY, \$.56.

Accepting moral illness as a definite entity, the author of “Moral Sanitation” seeks to show how it may be prevented and moral progress stimulated. Recognizing morality to be a social matter, he accepts Freud’s theory as an important measure toward

ascertaining why men fail morally. In the opinion of the author, the method of Freud is the most serviceable for the social worker as a method of discovering the inner cravings and conflicts involved in the problems of human conduct. In the acceptance of sex instinct as the one single fundamental force in determining human conduct, such motives as fear, hunger, restriction of opportunity are entirely overlooked.

Education is relied upon as the chief method of advancing preventive morality, and the importance of early training therefore is paramount. Most people will agree that high moral principles must be inculcated, though there will naturally be differences of opinion as to whether Christianity is essential for this purpose. The statement that “religion is the most powerful agent of moral education” may be questioned by those who believe that ethics and morals may be developed among agnostics and atheists.

It is pessimistic to believe that “morality is lost in the midst of a fine glow of feeling that counterfeits the appearance of morality.” One cannot accept as final the statement that “religion must never give comfort to one who is failing to meet a moral need, while dreaming over or talking finely about the thing that requires action.”

It is true that a moral leader must be on the lookout for evidences of repressions in the lives of those he wishes to help, but the mere revealing of these latent cravings does not in itself constitute the essential factor in reformation.

The author finds elements of danger in repentance, because in itself it de-

velops a great amount of emotional interest. The neglect of all positive moral service by a person who over-emphasizes repentance is designated as a pathological state that “has the same unhappy moral results that follow day-dreaming.”

The pleas for better homes and more intelligent parenthood naturally arise from the opinion that the family has failed as a moral agent. The incompetence of parents is constantly emphasized. Yet the statement is made, “The moral responsibilities of the home cannot safely be farmed out.” But if the author is correct in regarding morality as a social matter, society itself has responsibilities for morals which cannot be satisfied in the home because of its natural limitations.

The need of recreational facilities and of labor, the disadvantages of maladjustments, and the importance of vocational guidance are properly stressed, although there is no new contribution.

In the final chapter occurs the statement that “social progress at present is largely hampered by our inadequate knowledge of the laws and influences that govern men and women.” The author discovers the basis of moral sanitation in human motives, but if the solution of moral conduct is to be found only through studying the repressions of childhood, progress is likely to be slower than the author desires.

IRA S. WILE, M. D.

A LABORATORY MANUAL OF FOODS AND COOKERY

By Emma B. Matteson and Ethel M. Newlands. The Macmillan Co. 325 pp. Price \$1.50; by mail of the SURVEY \$1.64.

Among housekeepers we find an increasing number who are interested in acquiring a scientific background for the administration of their homes. While the authors of this book present a good textbook, they have also written a volume that may be of service to any housekeeper, providing she combines her scientific interest with the desire to give her family real food and not compounds resulting from the manipulation of chemical formulæ.

Furthermore, such a housekeeper will find any number of suggestions in the various chapters that will help her to answer her own questions. For example, in the chapter on milk the experiments give practical directions for comparing food value, consistency, etc., of milk and cream; also for computing the percentage of butter to be obtained, for comparing fresh and salt butter, for testing milk, and for the use of soda with sour milk.

The various chapters divide the com-

mon foods as follows: Beverages; fruits; vegetables; milk, cream, and butter; cheese; eggs; meat; poultry; fish and flour mixtures. In each case the food is treated in relation to its composition and nutritive value as well as to its preparation. Each chapter closes with a comprehensive bibliography. The recipes are real recipes and not chemical equations. The final office of the food—that is, the nourishing of various members of the family—is emphasized. Suggestions are given for score-cards by which the quality of certain foods may be summarized. There are also helpful tables analyzing standard portions of various recipes, so that with little practice the housekeeper can balance her family meals without undue trouble.

WINIFRED STUART GIBBS.

THE GERMAN REPUBLIC

By Walter Wellman. E. P. Dutton & Co. 202 pp. Price \$1; by mail of the SURVEY, \$1.08.

Walter Wellman, explorer and journalist, has had a dream—a fantastic, amusing dream. He calls it the German Republic. It is a dream of the end of the war by the delightfully simple process of making the Germans discover that they have

been led throughout by madmen. An irresistible movement takes place in Germany. The nation opens its eyes. It discovers that the war came because there was an “epidemic of mental obsession” in Germany.

The people are brought to the point at which they express regret to the world that a war was precipitated by their leaders; regret that Belgium was invaded; regret that works of art and monuments were destroyed in France by German troops; regret that the Lusitania was sunk; regret that there were zeppelin raids on English towns and villages; regret that poisonous gases and liquid fire were employed; regret that German ingenuity, inventiveness and skill were applied to the development of new and hideous ways of slaughter; regret that a spy was admitted to prison camps to bribe his fellow countrymen to turn traitors.

To America this repentant nation has a special word to say, a word of apology and contrition for having resented the sale of munitions of war to its enemies and a word of gratitude for the sublime patience and forbearance of the American people. On their knees the Germans humbly give thanks that all neutral mankind did not declare them outlaws, wild beasts running amuck, and treat them accordingly.

The outcome is the unanimous estab-

lishment of the German Republic, a plan which satisfies everyone; disarmament; an international court with a constabulary force to uphold its decisions;— and thus a peaceful German conquest of the world. It is, as the author says, dramatic, spectacular, convulsive.

Perhaps the end will come about that way—perhaps. If Maximilian Harden had said it rather than an American journalist, the prophecy would have been even more interesting.

Regarded simply as one more hostile indictment of the German cause it must be said that hardly any except that of Mr. Beck has been more successful. As a practical contribution towards the desired ends of peace, international good will, disarmament and the conquest of the world by high ideals, the method proposed is open to the objection that it leaves nothing for the allies and neutrals to do.

E. T. D.

NATIONALIZING AMERICA

By Edward A. Steiner. Fleming H. Revell Company. 240 pp. Price \$1; by mail of the SURVEY \$1.09.

This little volume, mainly composed of recent Chautauqua addresses, explains Dr. Steiner's great popularity as a lecturer. It is of religious seriousness, but it is also entertaining.

Though covering a greater variety of subjects than it is possible to recall on laying down the book—among them English as an international language, American scenery, the Daughters of the American Revolution, mince pies, investments in Mexico, the teaching of geography, Jewish ritual, slang, the influence of Buffalo Bill on European thought, the intricacies of baseball, and the Christian virtues of non-Christians—these lectures develop a systematic program in logical sequence.

The infectious optimism of the author is too well known to require further comment. He clearly analyzes the deficiencies and dangers of American social and political life; but every criticism broadens out into a constructive suggestion for reform which is both practical and inspiring. It is indeed in its call for active patriotism and applied human sympathy that Dr. Steiner's message becomes more than a mere addition to our not inconsiderable literature on the meaning and future of Americanism.

Not the statutory body of law concerning immigration, he tells us, will avert the decay of American institutions and traditions, but a better comprehension by Americans of the difference of their nationalism from that of racially

homogeneous countries and of the special duties which emanate from that difference. To keep alive in home politics as well as in their foreign relations the ideals of which the history of the world has made them the principal custodians today is the one task above all of which Americans, whether of the fifth or of the first generation, must become conscious. For Dr. Steiner, who sees everything through his enthusiasm for America, Americanism and Internationalism seem in this connection to be interchangeable terms.

In our lack of educational system, the author finds the gravest obstacle to the growth of that American spirit which he visualizes as the essence of a new form of nationalism. And this although, in his experience, there are among the immigrants many "who were foreordained to come to America and were always Americans in spirit."

Even if we cannot grasp the involved problems of some of the smaller European peoples and races, we can sympathize with them in their struggles. The love of liberty which for many of them has made this country their second home is the link of their mutual understanding and of the understanding of native Americans for them.

The tense appeal of this book is lightened by many human stories and by the same warm humor which recently won for the author so many new friends when he narrated the adventures in this country of the stolid "Herr Director."

B. LASKER.

YOUR BOY AND HIS TRAINING

By Edwin Butler. D. Appleton and Company. 282 pp. Price \$1.50; by mail of the SURVEY \$1.64.

and study to what is known about boys and especially to the personality of his own boy. "The education of the parent in the subject of boy-training is the pretentious purpose of this volume."

It makes no attempt at scientific accuracy, but has tried to keep some essentials of science "distantly in sight." It is, however, simple, sensible, sympathetic and suggestive and ought to be read by father, with mother occasionally looking over his shoulder, and often talking over with father the meaning of what they read in terms of sonny.

HENRY W. THURSTON.

MATERNITY; LETTERS FROM WORKING-WOMEN Collected by the Women's Cooperative Guild, with a preface by Herbert Samuel, M. P. G. Bell & Sons. 212 pp. Price \$1; by mail of the SURVEY, \$1.07.

One of the most serviceable books published in England since the war began is a small volume of letters from working-women collected by the Women's Cooperative Guild. The guild is a self-governing organization within

the British Cooperative Movement, which deals especially with the position of married women in the home and the state. For a number of years it has given special attention to the subject of maternity protection and has helped materially towards the adoption of the two maternity acts with which the factory acts have at last been supplemented.

The maternity insurance law and the compulsory notification of births act have been used by the guild as a basis for a still greater scheme for the national care of maternity. The circular of the Local Government Board in 1914 on this subject largely embodied the suggestions made by the Women's Cooperative Guild.

The present volume is not the least of the guild's contributions to the movement for maternity protection. Here, for the first time, the problems of maternity are discussed by actual mothers. The writers of the 160 letters are working-class wives, who relate simply and literally just what it means to bear and rear children in working-class homes. Yet their confessions do not represent the worst conditions; for the letter writers, being guild members, are, therefore, the wives of the better paid, rather than the lowest paid, manual workers. Also these women are literate; they are able to recount their experiences in writing. Those who know the average working women face to face will appreciate the fact that a group of organized and literate working women must represent the economic élite of their class.

We can imagine what the lives of those even less fortunate must be when we know how intolerable were the conditions under which the writers of the letters bore their children. Over-work and poverty, ignorance of the physical functions of motherhood and excessive child-bearing were chiefly responsible for the recorded waste in women's health and infants' lives. As one woman says, "The best of times are bad;" but when neglect and privation are added, unnecessary and useless suffering is the result.

As the Christmas season, when there is, unhappily, so much lip-worship of motherhood, those who care for the real

lesson of the nativity and the message of the poor woman who bore her baby in a manger should read these modern letters on child-bearing by working-class mothers. They suggest a way to translate compassion into protection. For if we really care as much about motherhood as we say we do, we ought to be working for maternity insurance and a better national care of maternity.

KATHARINE ANTHONY.

STATE SOCIALISM AFTER THE WAR

By Thomas J. Hughes. George W. Jacobs & Co. 351 pp. Price \$1.50; by mail of the SURVEY, \$1.62.

State Socialism After the War, by Thomas J. Hughes, is frankly one more utopia, appearing at a moment when utopias are at a discount. Equaland, the imaginary kingdom of heaven whose polity it describes, is placed in

Africa; and with respect to comfort, equity, efficiency and demonstrated practicability, the ideal commonwealth, like those of Bellamy, Wells, or Sir Thomas More, leaves little to be desired. Moreover Equaland is shown to be governed in accordance with scripture. The parables of the laborer engaged at the eleventh hour and the talents are cited as justification, respectively, for Equaland's system of

wages and of land tenure; while the communism established after Pentecost is presented as the prototype of the state socialism of the ideal community.

All the details are worked out admirably and with due regard to the manner in which modern business is actually conducted. It would be hard to say why Christians, social workers, socialists, workingmen, employers of all kinds should not be interested in this book as its publishers think they will be.

4. That there be divisions to learn road-making, house-building, surveying, Red Cross work, etc., comparable to the infantry in an army; that there be divisions to learn seamanship, boat construction, etc., comparable to the navy.

5. That this army be employed every year at maneuvers in some public improvements, such as road-making, bridge-building, ditch-digging, etc.; that such volunteers be put to work immediately in becoming acquainted with and Christianizing our immigrant population.

6. That all church members, men and women, from the age of 16 upwards, be eligible, as well as all others who would desire to join in the movement with the same spirit.

ARCHIBALD McCLURE.

Lake Forest, Ill.

THE COUNTRY FOR ORPHANS

To the Editor: Referring to the revelations in New York papers as to conditions in orphanages in New York city, would be glad if you would publish this letter. These little people start life under a terrible handicap and surely they are entitled to some extra compensation so far as this is possible in order to make good that burden.

My suggestion is, why not place the orphanages of New York in smaller towns and villages nearby, or if that be not legal or feasible, perhaps a better idea would be to take up the abandoned farms of your state and thereon place these young people so that fresh air and the best of food will give them some special advantages to offset conditions over which they have no control.

I do not mean to scatter these all over the state where inspection would be difficult, but group them all within a few square miles. They would learn farming, a valuable trade in itself, and produce a large sum of good citizenship for the future, even if they did not produce enough revenue to pay expenses.

J. W. HAMILTON.

Communications

AN ARMY FOR PEACE

To the Editor: Such suggestions as courts of arbitration, sending teachers to Mexico and paying for the education of Japanese students in the United States are splendid. Yet it seems to me that there is also a need of something definite that everyone who believes in peaceful "preparation" can immediately do, just as the Plattsburg camps, the civilian naval cruise, etc., are tangible, immediate opportunities of services for those who believe in military and naval "preparation." I enclose a general outline of a plan to provide something definite and immediate for those people to do who feel that those who call themselves Christians and Americans ought not to fight and kill:

1. That the denominational church bodies of America issue immediately a call to the members of their churches for at least a million volunteers, who will agree to offer their services to the Presi-

dent of the United States for any emergency in our domestic or foreign relations; these volunteers to agree never under any circumstances to use military and naval weapons.

2. That in order to meet an emergency with any of the great nations of the world, each volunteer agree immediately to learn to speak at least one foreign language, 200,000 each to learn Japanese, Chinese, German, Russian and a Latin tongue, so that in time of emergency this volunteer army be ready to march or sail out to meet any opposing force just as our army and navy would, except that the weapons be not arms but hospitality, kindness and an understanding of the language and ideals of the opposing force.

3. That each volunteer agree to give two weeks a year to mobilization, drill in marching and kindred exercises such as are found in a military camp—except for guns.

THE STRONG REPORT

To the Editor: I have read with regret your remarks on page 207 of the issue of November 25. The Committee on Resolutions of the State Conference on Charities and Correction has always reported at the final session of the conference and it was not unusual that the attendance was not large when the report was presented. Although I had no knowledge of the contents of the committee's report until it was read, perhaps the resolution approving of the present constitution of the State Board of Charities was suggested by the president's remarks at the opening of the conference (a copy of which I send you herewith). There is no slap at Mr. Strong or con-

demnation of his report in my remarks or in the resolution, but only an expression of opinion as to the policy of a paid Board of Charities. No objection was made to the resolution from the floor and it was adopted unanimously.

GEORGE B. ROBINSON.

[President of the Seventeenth State Conference of Charities and Correction.]

Bedford Hills, N. Y.

ARIZONA WELFARE EXHIBIT

To the Editor: The Department of Social Science of the University of Arizona undertook the task of interesting the various organizations of the state in preparing material for a welfare exhibit at Tucson. The response both from local organizations and national committees was exceptionally good, and as a result a very creditable exhibit was prepared. Charts and photographs were secured from the various state institutions, such as the prison, Pioneers' Home, insane asylum, etc., describing the nature of their activities. Civic organizations, women's clubs, Y. M. and Y. W. C. A. and charity organizations from various cities of the state prepared exhibits showing some phase of their work.

One booth was devoted to an exhibit from the National Committee on Provision for the Feebleminded; another to the prevention of tuberculosis and blindness. Still another booth contained pictures and charts from various employers of the state showing the nature of their welfare work, hospital service, and efforts to provide for the safety of their employes.

Considering the pioneer condition of social work in the state, the exhibit proved a decided success. It formed a clearing house for people of the state interested in social welfare. Dr. Mary L. Neff of the Extension Department of the University was in charge.

E. J. BROWN.

[Professor of Social Science, University of Arizona.]

"HANDS ACROSS THE SEA"

To the Editor: No doubt the open letter by Charles P. Trevelyan, M. P., published in the SURVEY for December 9, has been welcome to those American social workers who are actively engaged in the propaganda in favor of immediate peace, based upon what many of them like to call reciprocal concessions between the two groups of belligerent nations.

Without taking up with you now the main issue raised in this debate, viz., to find out whether it agrees with the humanitarian ideals in the name of which those social workers pretend to speak, that justice make concessions to injustice, liberty to despotism, right to might,

I shall restrict myself in the present communication in pointing out to you the inconsistency of the following sentences to be found in Mr. Trevelyan's letter:

"Those who, like myself and Messrs. Snowden, Ponsonby and Ramsay MacDonald, have for months been pressing in the House of Commons and out of it, for an early effort at negotiations have no more desire than the wildest warmonger that the war should end before Germany is ready to evacuate France and Belgium and by acts acknowledge the abandonment of all designs at aggression or aggrandizement. . . . Suppose that to the British people, for instance, an American president were to be able to say in quite simple and direct language that Germany was ready to give up Belgium and France if the British government would negotiate. . . . What is it that we seek, what does saner opinion seek, in France, Germany and elsewhere? It is security—security for which the nations are crying. They fear to sheathe their swords if they do not see security looming in the near distance. But what offers security except this very league of the nations? . . ."

Do you not see with me how large a gap there is between these three statements? When the English pacifists, in the name of whom Mr. Trevelyan pretends to speak, require that Germany should evacuate France and Belgium, acknowledge by acts the abandonment of all designs of aggression or aggrandizement, the idea thus expressed seems to be precise enough provided you include among those acts the release of Alsace-Lorraine by Germany, that country having been annexed in 1871 against the solemn protest of its population and having been governed for the last half-century against the manifest will of the same population; and provided, also, that Belgium, Poland and Serbia are restored to full independence and not just transformed into buffer states which Germany would use as outposts guarding the German empire.

But how is it that when you turn to the second sentence, you hear now only of the restoration of Belgium and France and nothing more about that explicit abandonment of plans of conquest which was declared indispensable in the first sentence? And why, a few lines below this, a second change in the program according to which nothing more is necessary than the formation of a league of nations! I must confess I do not understand how Mr. Trevelyan can reconcile these different viewpoints, or rather I understand it only too well, for after all the whole view of the war is contained in the last few words of his message, "We are also weary here."

Mr. Trevelyan is "weary" and his friends are "weary," and for that reason, before the end of their journey, they are ready to throw off the burden of jus-

tice and liberty, a valuable but very heavy load. How far will they not be led by their thirst for peace? And of what will they not free themselves to try and plod along that path towards the oasis of peace which is constantly growing narrower and narrower? What a touching picture of the camel attempting to pass through the needle's eye—but how fantastic!

A FRENCHMAN.

New York.

MR. COHEN'S RESIGNATION

To the Editor: Under Jottings on page 288 of the SURVEY for December 9 appears a statement that the Dress and Waist Manufacturers' Association had voted to demand my resignation, as well as that of Mrs. Moskowitz. I do not know where you got your information as to my own resignation, but it is wholly inaccurate. The fact is, I resigned of my own volition. I enclose a copy of my letter of resignation:

"J. J. Goldman, Esq.,

"President, Dress and Waist Mfrs. Ass'n.,

"2 West 33 street, New York city.

"My dear Mr. Goldman: Will you please be good enough to relieve me of my duties as counsel to the association at the earliest practicable moment? You are aware of the pressure upon me of other professional work and the difficulties and sacrifices involved in my endeavor to be of service as an adviser to the association. So long as I thought it was worth while, I felt that I must make these sacrifices. I am now satisfied, however, that too many of the members of your association fail to understand the value of counsel or advice and prefer to learn their lessons by bitter personal experience. I confess that I am getting very tired of trying to save business men in the women's wear industries from the consequences of their own stupidity. They seem wholly bent upon passing through bitter and costly experience through which to learn lessons which they might easily learn either by reading or taking counsel. At all events, I see no reason why I should be called upon to add to the sacrifices I have already made."

JULIUS HENRY COHEN.

New York.

BIRTH CONTROL

To the Editor: The article on Birth Control by S. Adolphus Knopf, M. D., in the SURVEY for November 18, interests me very deeply. What does the word "contraception" mean as used by Dr. Knopf? If it means self-control, then I am with him heartily in much that he says.

But there are some statements that lead me to believe he means some other method of prevention which allows con-

tinued indulgence but evades the legitimate result. If so, I ask in all sincerity why the same time and effort cannot be put upon the higher plane of self-control? And I also ask, as a means to this end, why some of the stumbling blocks cannot be removed, such as vaudeville shows, where the exposed bodies of women appeal to the passions of men, many of the modern dances, the indecent dress of many women upon our streets and in our homes, and the pictures of nude women which so often fill the windows of so-called art stores.

Would not help along these lines, combined with plain teaching from such men as Dr. Knopf and more stringent marriage laws with a foundation already laid in the home, build up such characters that birth-control means self-control? If time can be given to teach and people are intelligent enough to understand how to use successfully preventives, they can understand and use self-control instead.

The following paragraph is the one to which I object very strongly:

"There are hundreds of young men and women, physically and morally strong, who gladly would enter wedlock if they knew that they could restrict their families to such an extent as to raise a few children well. But their fear of a large family retards, if it does not prevent, their happiness and, *ipso facto*, the procreation of a better and stronger man and womanhood. The woman withers away in sorrowful maidenhood and the man, whose sexual instincts are often so strong that he cannot refrain, seeks relief in association with unfortunate and often diseased prostitutes. The result is a propagation of venereal diseases with all its dire consequences."

Is it for such moral cowards as these that Christ suffered on Calvary; that mothers go down into the "valley of the shadow of death" to bring forth a man child made in God's image? God's way surely is for young men and women to marry, bear children and rear them.

If for no better reason than the above, they are cowards and shirkers, missing the best in life. They know they have a God-given power—self-control. It can hold in check the fiery temper, stay the hand from murder, control all pass-out understanding the facts before marriage, that there is a power within themselves which can make an intelligent use of a certain privilege. And this power only, trained and developed as it can and ought to be, is the one that will solve the problem of birth control, or so it seems to me. I wish to acknowledge Dr. Knopf's greatness and goodness as shown in the able article he has written in behalf of humanity; but a mother has her side of the question.

MRS. W. H. HOPKINS.

Atlanta, Ga.

To the Editor: You have asked me to reply to the very courteous criticism by Mrs. Hopkins of my paper on birth control in the SURVEY of November 18. If Mrs. Hopkins were a medically trained woman I could answer her in technical terms and give physiological and ethnological reasons why such high ideals as she entertains are very difficult to carry out in the present status of men's development and our social fabric. Sociologically speaking, it is even more difficult when you deal with the masses and the poor, who cannot have separate bedrooms and for whom self-control is thus a difficult matter. Self-control can be much more easily exercised prior to marriage than afterwards.

As to that paragraph of my article to which Mrs. Hopkins takes particular exception, that is to say, where I speak of "the hundreds of young men and women, physically and morally strong, who would gladly enter wedlock if they knew they could restrict their families to such an extent as to be able to raise a few children well," etc., let me say in all candor that I do not by any means agree with Mrs. Hopkins when she says that a young man who hesitates now, for economic reasons, to marry and to assume the responsibility of supporting a more or less large family, is a moral coward. If he can control his sexual impulses and hesitates to marry because of too small an income to support wife and children decently, he should be considered a moral hero, perhaps even a martyr, and not a moral coward.

I referred in my paper to the work of Dr. Alice Hamilton in collecting statistics of deaths of children in large families, that is to say, where men and women married young, carried out Mrs. Hopkins' injunction, and bore children. But did they rear them? The Chicago *Herald-Record* makes the following interesting comment on the case cited by Dr. Hamilton of an Italian woman on the West Side of their city—the Italian mother who had given birth to twenty-two children and had raised only two: "Society would have been better off if this prolific mother had borne only two healthy children. The net increase in the population would have been the same. Further, the terrific waste of twenty babies born only to die, the impoverishment due to twenty fatal illnesses, to twenty little funerals, is appalling."

I ask Mrs. Hopkins in all sincerity if the teaching of self-control could have accomplished anything in this case? I venture to say that even doing away with vaudeville shows, modern dances, indecent dress of women in streets and homes, and nude pictures in art stores, would have had little influence on this type of husband who, I am sure, if he attended church and saw his priest, had been told more than once to exer-

cise self-control. Evidently neither this priestly injunction nor the doubtless frequent appeals on the part of the suffering wife for moderation was of any avail.

On the other hand, if this woman could have had access to a clinic conducted by medical men of high repute who would have foreseen the inevitable consequences of too many childbirths and had taught her prophylactic measures, would these physicians not, too, have obeyed the divine injunction to save useless suffering of body, mind and soul? Would they not have been true physicians and servants of the state by having aided the mother to have a smaller number of children, but physically strong and destined to become useful citizens of the republic?

S. ADOLPHUS KNOPF, M. D.
New York.

To the Editor: To one reading of the thoughtful paper of Dr. Knopf, in the SURVEY for November 18, a number of thoughts suggested themselves. The law recognizes the interruption of pregnancy as legal and justifiable in order to save the lives of women suffering from tuberculosis, nephritis, cardiac diseases, or for conditions whose fatal progress would be hastened through continued pregnancy, but the law holds it to be illegal to teach these same women how to avoid conception. It is manifestly contrary to every principle of modern preventive medicine that there should be such interference with the judgment and action of physicians where it seems most rational and medically sound to give advice as to the methods of preventing a condition containing a hazard to life.

From the standpoint of public health, it is important that a very sharp line of demarcation should be established between abortions and the prevention of conception. The interruption of pregnancy to destroy a developing ovum entails physical hazards to the woman which often adds to the mortality rate. At the same time, this is equally the destruction of life as foeticide and, literally speaking, infanticide. According to DeLee, while abortion occurs oftener among the lower classes, criminal abortion is more frequent among the more educated classes.

The report of the special committee on criminal abortions (quoted in Textbook of Legal Medicine and Toxicology, Peterson and Haines, vol. ii, page 92) estimated "that one-third of all pregnancies throughout the country end in abortions. This is estimated at not less than 100,000 yearly. A large number of these are criminal abortions, from which the committee estimated that 6,000 women die yearly." A fact of this character merits careful consideration.

Dr. Howard Kelley, in discussing

syphilis (Medical Gynecology, page 423), states that "it is the recognized duty of all physicians in the presence of any contagious disease to protect others from the risks of infection. . . . In the case of syphilis, where there is a question of its introduction into marriage, the physicians' protective duty embraces not only the prospective wife, but the children she may bring into the world and through them the interests of society."

I do not favor the abolition of federal or state laws which deal with abortions, though owing to the weight of public opinion convictions for violations of these laws are remarkably limited in view of the large number of violations occurring annually. I believe and would urge that the federal and state laws be amended so that in effect the procuring of an abortion and the preventing of conception will be dissociated as acts not synonymous in character and meriting entirely different treatment. The procuring of an abortion should still be penalized. The prevention of conception should be permitted.

IRA S. WILE, M.D.

New York.

THE *Catholic Charities Review*, a monthly with the Rev. John A. Ryan as editor, will begin publication in January from the Catholic University of America at Washington, D. C.

COPIES of a Report on an Investigation of the Wages and Conditions of Telephone Operating, made to the United States Commission on Industrial Relations by Nelle B. Curry, field investigator, have now been printed in quantity and may be had of Miss Curry at 613 Brooklyn avenue, Kansas City, Mo.

GUY T. JUSTIS, secretary of the Erie Social Service Federation, has resigned to become, on January 1, secretary of the Denver Federation for Charity and Philanthropy. Before helping to organize the Erie Federation about two years ago, Mr. Justis was superintendent of the Erie Associated Charities.

BOSTON stayed wet, the election on Tuesday going for license by 23,000 as against only 14,000 a year ago. Liquor interests organized a tremendous campaign to offset the temperance forces and Billy Sunday. The outcome of the school election is looked upon as a great victory for idealism. Henry Abrahams, a liberal and well-educated labor man, defeated Michael H. Corcoran, rated as a reactionary.

THE thrifty cockles of Benjamin Franklin's heart would have been warmed by an item in *Commerce Reports* for December 5. At the very front, ahead of consular reports and business openings the world round, Secretary of Commerce Redfield writes of the \$2,000 earned by schoolchildren

of Washington, D. C., by collecting 150 tons of old newspapers since the opening of the fall term.

THE passage of the amendment to the Illinois state constitution enabling the legislature to revise the antiquated and unjust taxing system has been in doubt ever since the election, November 7, when it was submitted on referendum. Whether a majority of all male votes polled at the election or only a majority of those cast for members of the legislature was needed to pass the measure, is the question at issue. It fell short of having a majority of all votes, but is officially declared to have been passed by a majority of the legislative votes.

MORE than 700 pages are required for the proceedings, just issued, of the forty-third annual meeting of the National Conference of Charities and Correction, in spite of careful editorial work throughout. The needs of study classes and others for a handy edition have been met by reprinting separately fifteen of the leading papers and three whole divisions—Inebriety, Family and Community, Feeble-mindedness and Insanity. (Proceedings free with membership, \$3 yearly; division reprints 25 cents each. 315 Plymouth Court, Chicago.)

MODELED on the faithful little paper phrase-books that have opened many a locked door and filled empty stomachs abroad, the English-Italian Phrase-Book for Social Workers gives the commonly needed questions and answers for the friendly visitor, the settlement, the truant officer, the night-school teacher and the nurse or doctor. There are sixteen special vocabularies and some terse points on Italian grammar. The book is both written and published by Edith Waller, of Morristown, N. J., at 75 cents, with a Physicians' Supplement at 25 cents.

"NO sickly, happy-go-lucky, weak, 'tol'able' race can hope to cope with a strong, vigorous, healthy, proud, self-respecting race of people," said Robert R. Moton, principal of Tuskegee Institute, before a great mass-meeting of white and colored people at Roanoke. "Colored people must lay more stress on health." And he brought his health preaching down to local dollars and cents by showing that Roanoke, with a Negro population of 8,000, has about 470 sick folk all the time at an annual cost of \$60,000 in wages, \$96,000 in doctors' fees and \$12,000 in undertakers' bills.

REPRESENTATIVE women of Pittsburgh are reported to be organizing a movement for birth-control as a result of a recent meeting held at the First Unitarian Church. A police threat to prevent a mass-meeting at the Labor Temple stimulated public interest. Frederick A. Blossom, of New York, editor of the *Birth Control Review*, spoke at the monthly dinner of the Social Workers' Club and at a later meeting of social workers, physicians, college professors, clergymen and representatives of women's clubs, held in the office of the Associated Charities. Organizers of the movement plan to hold a series of public meetings and possibly a convention of birth-control leagues in Pittsburgh next May at the time of the meeting of the National Conference of Charities and Correction.

THE New York Community Chorus is planning to give a free performance, by one thousand voices, of Handel's Messiah in Madison Square Garden on December 26 at 8 P. M. This will follow the singing of Christmas carols around the Tree of Light in Madison Square Park. The membership of the Community Chorus includes a countess and a scrubwoman, while the advisory board is made up of capitalists, socialists and a wide variety of religious denomina-

tions. Efforts are being made to enlist a wider cooperation, and possibly some civic recognition, to make the New York Community Chorus a permanent organization. It is supported entirely by voluntary contributions.

EVER since the SURVEY in its issue of December 6, 1913, first gained a national hearing for the educational experiment conducted by Marietta L. Johnson at Fairhope, Ala., educators have shown increasing interest in her ideas. John Dewey, who visited Fairhope in the winter of 1914-15, pronounced Mrs. Johnson's school one of the most hopeful educational experiments in this country. To promote the methods underlying this experiment the Fairhope League, formed several years ago, is now incorporating. One of its objects will be to conduct a correspondence school in the principles of organic education for mothers throughout the country. Mrs. Johnson, who is now lecturing weekly in New York city on her methods, will write the lessons for this school. Another plan is to establish a demonstration school in New York and to secure as pupils a limited number of orphans from the countries at war.

AGITATION for the commission form of government with city manager, has been initiated by the Cleveland Real Estate Board, with the approval of other civic and semi-civic organizations. Cleveland's present city charter has been in operation only since January, 1915. While it provides for non-partisan election of officers and nomination by petition, many people declare that party lines are as closely drawn as ever. The preferential ballot, which gave Harry L. Davis the mayoralty a year ago on second choice votes, is said to be due for a hard legal and political fight before it ever serves the city at another election. Its next use would come next fall.

JOHN IHLDER has been chosen secretary of the Philadelphia Housing Association and will begin his duties January 1. Following his graduation from Cornell and early newspaper training, Mr. Ihlder served for five years as field secretary of the National Housing Association, gaining thereby a country-wide knowledge of housing conditions. During the past year, as a special adviser in housing, he has made surveys of Bridgeport, Conn. (see the SURVEY for November 11), and Mt. Vernon, N. Y., has been the organizer of the Ellen Wilson Homes, Inc., in Washington, D. C., and has been adviser to the million-dollar housing company organized in Bridgeport. Mr. Ihlder has been the SURVEY's advisory editor in the field of housing for a number of years and is the author of many SURVEY articles, most recently on the boom towns of Fline [September 2] and Hopewell [December 2].

THE Federal Council of the Churches of Christ in America, representing thirty denominations with a membership of 18,000,000, is sending to 100,000 individual churches and Sunday Schools, a Christmas message addressed to "the Christian Fathers and Mothers and to the Children of America, in behalf of the Fathers and Mothers and little Children of the lands across the sea." Because the Christmas sun this year shines only upon our half of the world, the appeal suggests that Christmas day be made a sacrament of self-denial for the little children who lead blinded fathers by the hand in Italy, Russia, Great Britain, France, Austria, and Germany; for the starving and unsheltered infants in stricken Serbia; the million children in Belgium, dying of the white plague because they cannot get the "extra meal a day" which the Commission for Relief in Belgium is trying to secure for them; long-suffering Poland, almost child-

less; and the "numberless other children of other races whose faces wear no smile of happiness."

SHERMAN C. KINGSLEY of Chicago is to be the secretary of the new Cleveland Welfare Federation (see the SURVEY for December 9), beginning his duties early in January. Mr. Kingsley enlisted in social work with the Brooklyn Bureau of Charities and was later executive of the Children's Aid Society and of the Children's Friend Society in Boston. In 1904 he was chosen superintendent of the Chicago Relief and Aid Society and successfully promoted its combination in 1909 with the Chicago Bureau of Charities into the United Charities of Chicago. In 1912 he became director of the Elizabeth McCormick Memorial Fund for the promotion of child welfare. He has been identified with every social and civic movement in Chicago for a decade, through the City Club, the Social Service Club, the Central Council of Social Agencies, through widespread public speaking and writing for the press; and with many national movements, particularly through the National Conference of Charities and Correction.

CALENDAR OF CONFERENCES

Items for the next calendar should reach THE SURVEY before January 10.

DECEMBER AND JANUARY

- CHARITIES**, Texas State Conference of. Austin, Texas. January 18. Sec'y, M. A. Turner, Room 215, City Hall, Houston, Tex.
- ECONOMIC ASSOCIATION**, American. Columbus, O., December 27-30, 1916. Sec'y, W. G. Leland, 1140 Woodward bldg., Washington, D. C.
- INTERCOLLEGIATE SOCIALIST SOCIETY**. New York, December 28-30. Sec'y, Harry W. Laidler, 70 Fifth avenue, New York.
- LABOR LEGISLATION**, American Association for. Columbus, O., December 27-29, and Cincinnati, December 30. Sec'y, John B. Andrews, 131 East 23 street, New York city.
- NEGRO CONFERENCE**, Tuskegee. Tuskegee, Ala., January 17-18.
- POLITICAL SCIENCE ASSOCIATION**, American. Cincinnati, O., December 28-31. Sec'y, Mr. Chester L. Jones, University of Wisconsin, Madison, Wis.
- SCIENCE**, American Association for the Advancement of. New York city, December 26-30. Sec'y, L. O. Howard, Smithsonian Institution, Washington, D. C.
- SOCIOLOGICAL SOCIETY**, American. Columbus, O., December 27-30. Sec'y, Scott E. W. Bedford, University of Chicago, Chicago.
- STATISTICAL ASSOCIATION**, American. Columbus, O., December 27-30. Sec'y, Carroll W. Doten, 491 Boylston street, Boston.
- VOCATIONAL EDUCATION ASSOCIATION OF THE MIDDLE WEST**. Chicago, Ill., January 18-20. Sec'y, A. G. Bauersfeld, Sedgwick and Division streets, Chicago.
- NATIONAL CHARITIES AND CORRECTION**, National Conference of. Pittsburgh, Pa., June 6-13, 1917. Sec'y, W. T. Cross, 315 Plymouth Court, Chicago.
- RECREATION CONGRESS OF THE PLAYGROUND AND RECREATION ASSOCIATION OF AMERICA**. Milwaukee, Wis., November 20-23, 1917. Sec'y, H. S. Braucher, 1 Madison avenue, New York.
- RELIGIOUS EDUCATION ASSOCIATION**. Boston, February 27-March 1, 1917. Sec'y, H. F. Cope, 332 So. Michigan avenue, Chicago.

INFORMATION DESK

The following national bodies will gladly and freely supply information and advise reading on the subjects named by each and on related subjects. Members are kept closely in touch with the work which each organization is doing, but membership is not required of those seeking information. Correspondence is invited. Nominal charges are sometimes made for publications and pamphlets. *Always enclose postage for reply.*

Health

SEX EDUCATION—New York Social Hygiene Society, Formerly Society of Sanitary and Moral Prophylaxis, 105 West 40th Street, New York City. Maurice A. Bigelow, Secretary. Seven educational pamphlets, 10c. each. Four reprints, 5c each. Dues—Active \$2.00; Contributing \$5.00; Sustaining \$10.00. Membership includes current and subsequent literature; selected bibliographies. Maintains lecture bureau and health exhibit.

CANCER—American Society for the Control of Cancer, 25 West 45th St., New York City. Curtis E. Lakeman, Exec. Sec'y. To disseminate knowledge concerning symptoms, diagnosis, treatment and prevention. Publications free on request. Annual membership dues \$5.

COMMITTEE ON PROVISION FOR THE FEEBLE-MINDED—Objects: To disseminate knowledge concerning the extent and menace of feeble-mindedness and to suggest and initiate methods for its control and ultimate eradication from the American people. General Offices, Empire Bldg., Phila., Pa. For information, literature, etc., address Joseph P. Byers, Exec. Sec'y.

MENTAL HYGIENE—National Committee for Mental Hygiene, 50 Union Square, New York City. Clifford W. Beers, Sec'y. Write for pamphlets on mental hygiene, prevention of insanity and mental deficiency, care of insane and feeble-minded, surveys, social service in mental hygiene, State Societies for Mental Hygiene.

NATIONAL HEALTH—Committee of One Hundred on National Health. E. F. Robbins, Exec. Sec'y., 203 E. 27th St., New York. To unite all government health agencies into a National Department of Health to inform the people how to prevent disease.

TUBERCULOSIS—National Association for the Study and Prevention of Tuberculosis, 105 East 22nd St., New York. Charles J. Hatfield, M. D., Exec. Sec'y. Reports, pamphlets, etc., sent upon request. Annual transactions and other publications free to members.

SOCIAL HYGIENE—The American Social Hygiene Assoc. Inc., 105 West 40th St., N. Y.; Branch Offices: 122 South Michigan Ave., Chicago; Phelan Bldg., San Francisco. To promote sound sex education, the reduction of venereal diseases, and the suppression of commercialized vice. Quarterly magazine "Social Hygiene." Monthly *Bulletin*. Membership, \$5; sustaining, \$10. Information upon request. Pres., Abram W. Harris; Gen. Sec'y, William F. Snow, M. D.

NATIONAL ORGANIZATION FOR PUBLIC HEALTH NURSING. Object: to stimulate the extension of public health nursing; to develop standards of technique; to maintain a central bureau of information. Publications: Public Health Nurse Quarterly, \$1.00 per year; bulletins sent to members. Address Ella Phillips Crandall, R. N., Executive Secretary, 600 Lexington Ave., New York City.

THE AMERICAN RED CROSS—Through its Town and Country Nursing Service, maintains a staff of specially prepared visiting nurses for appointment to small towns and rural districts. Pamphlets supplied on organization and administration of visiting nurse associations; personal assistance and exhibits available for local use. Apply to Superintendent, Red Cross Town and Country Nursing Service, Washington, D. C.

PUBLIC HEALTH—American Public Health Assn. Pres., William A. Evans, M. D., Chicago; Sec'y, Prof. S. M. Gunn, Boston. Object "To protect and promote public and personal health." Seven Sections: Laboratory, Sanitary Engineering, Vital Statistics, Sociological, Public Health Administration, Industrial Hygiene, Food and Drugs. Official monthly organ, *American Journal of Public Health*; \$3.00 per year. 3 mos. trial subscription (to Survey readers 4 mos.) 50c. Address 755 Boylston St., Boston, Mass.

EUGENICS REGISTRY—Board of Directors, Chancellor David Starr Jordan, President; Prof. Irving Fisher, Dr. C. B. Davenport, Luther Burbank, Dr. J. H. Kellogg, Secretary. A bureau for the encouragement of interest in eugenics as a means of Race Betterment, established and maintained for the Race Betterment Foundation in co-operation with the Eugenics Record Office. Address, Eugenics Registry Board, Battle Creek, Mich.

PREVENTION OF BLINDNESS—National Committee for. Objects: To furnish information for Associations, Commissions and persons working to conserve vision; to publish literature of movement; to furnish exhibits, lantern slides, lectures. Printed matter: samples free; quantities at cost. Invites membership. Field, United States. Includes N. Y. State Com. Edward M. Van Cleave, Managing Director; Gordon L. Berry, Field Secretary; Mrs. Winifred Hathaway, Secretary. Address, 130 E. 22d St., N. Y. C.

Racial Problems

NEGRO YEAR BOOK—Meets the demand for concise information concerning the condition and progress of the Negro Race. Extended bibliographies. Full index. Price, 25c. By mail, 35c. Negro Year Book Company, Tuskegee Institute, Alabama.

In addition to information in Negro Year Book, Tuskegee Institute will furnish other data on the conditions and progress of the Negro race.

HAMPTON INSTITUTE, HAMPTON, VA.—Trains Negro and Indian youth. "Great educational experiment station." Neither a State nor a Government school. Supported by voluntary contributions. H. B. Frissell, Principal; F. K. Rogers, Treasurer; W. H. Scoville, Secretary. Free literature on race adjustment, Hampton aims and methods. *Southern Workman*, illustrated monthly, \$1 a year; free to donors.

NATIONAL ASSOCIATION FOR THE ADVANCEMENT OF COLORED PEOPLE, 70 Fifth Avenue, New York. Publishes *The Crisis*, a monthly magazine, 63 branches and locals. Legal aid, literature, speakers, lantern slides, press material, etc. President, Moorfield Storey; Chairman of the Board of Directors, J. E. Spingarn; Vice-President and Treasurer, Oswald Garrison Villard; Director of Publications and Research, W. E. B. DuBois; Acting Secretary, Roy Nash.

Libraries

AMERICAN LIBRARY ASSOCIATION—Furnishes information about organizing libraries, planning library buildings, training librarians, cataloging libraries, etc. *A. L. A. Booklist*, a monthly annotated magazine on book selection, is a valuable guide to the best new books. List of publications on request. George B. Utey, Executive Secretary, 78 E. Washington St., Chicago.

Recreation

RECREATION—Hundreds of able men and women gave their experience in neighborhood playground and recreation centers at the Recreation Congress held at Grand Rapids, Michigan. Many of the addresses will be published only in *The Playground*, published monthly, \$2.00 a year. Subscribe now. Playground and Recreation Association of America, 1 Madison Avenue, New York City.

Settlements

SETTLEMENTS—National Federation of Settlements. Develops broad forms of comparative study and concerted action in city, state, and nation, for meeting the fundamental problems disclosed by settlement work; seeks the higher and more democratic organization of neighborhood life. Robert A. Woods, Sec'y, 20 Union Park, Boston, Mass.

Winning the Other Half

National Prohibition a Leading Social Issue

By Robert A. Woods

SOUTH END HOUSE, BOSTON

TWO short years ago there were but nine prohibition states. Today the majority of the states in the Union are committed against the sale of liquor within their bounds. Adding no-license communities in local option states, and including Michigan, Montana, Nebraska and South Dakota, not far from 60,000,000 Americans now live in dry territory. Of the non-prohibition states all but four or five have at least one-half their territory dry.

Along with the impressive increase in the number of prohibition states, whose example has spread into Canada and brought about prohibition in five provinces, eleven American cities of over one hundred thousand population—two of them, Denver and Seattle, over two hundred thousand—have no licensed saloons. In these cities prohibition is actually being enforced. The large majority vote in Seattle against any recession from prohibition showed all responsible sentiment in that city decisively in favor of a system which completely excludes the liquor traffic. When Detroit goes under a dry régime, the question will become an open one for cities of the first magnitude.

This situation brings the question of prohibition flatly to the attention of every thinking citizen with the demand that its issues be freshly and thoroughly considered and a definite working decision reached.

Although it has been the conviction of the majority of citizens in the northeastern states that state prohibition is for them almost impossible to secure, and not desirable if secured, this point of view is changing somewhat. Even as to Maine, where state prohibition seems to be as little successful as anywhere, it is contended that a system which means a greatly reduced totality of drunkenness justifies itself even though it have many defects. At times it has seemed as if emphasis placed upon the failure of law enforcement represents on the one hand, a rather doctrinaire point of view and, on the other, the self-interest of the liquor trade. In other words, the question arises whether liquor legislation is not to be considered beneficial as long as it is being enforced to the degree which is characteristic, for instance, of the laws against burglary or murder.

To be sure there still remains a considerable liquor supply

within so-called dry territory, but without question there is at the same time a vast decrease in the liquor business within these bounds and a decrease of at least one-half in drunkenness. What is even more important, the new generation is growing up apart from contact with the sale or use of intoxicating drink. The organized manufacture of alcoholic beverages is completely eliminated and, what has seemed to many the most promising of all that prohibition might accomplish, liquor and politics are effectually divorced.

Yet, whatever may be the pros and cons, new and old, of state prohibition, one would still hesitate before urging it upon the representative northeastern states. Today the question is one of national prohibition. The evidence is becoming conclusive that it is distinctly possible and practicable to secure the suppression of the liquor trade throughout the length and breadth of the country. What is even more important, national prohibition would have many claims in the matter of enforcement which cannot be made for state prohibition.

National prohibition can be secured by a two-thirds vote of Congress submitting the matter to state legislatures, followed by the approval of the legislatures of three-fourths of the states. With twenty-five states already committed to prohibition, it requires only ten more states to secure the passage of an amendment to the constitution. That this consummation is not distant is suggested by the fact that at least a dozen states seem today as ready for a prohibition movement as was the state of Michigan a year or two ago.

Since the election the opinion has been tentatively expressed by some of the best-informed Washington correspondents that the enabling act would certainly be passed at the present session of Congress. It should be remembered that two years ago, when the question of submitting a prohibition amendment to the states was voted on in Congress, the result was a majority of 207 to 194. Should the present Congress not give the two-thirds vote, a single straw indicating the almost certain prospect of a two-thirds majority in the incoming Congress a year hence is found in the Indiana situation. In 1914, the entire congressional delegation from Indiana voted against the prohibition measure. For the newly elected

Congress ten members out of thirteen, including both senators, are in favor of the act.

The woman vote is looked upon as a powerful reinforcement to the prohibition cause, and this expectation will undoubtedly be justified, notwithstanding the fact that it has been, whether wisely or not, a part of woman suffrage policy to stand aside from the liquor question.

Increasing tolerance, if not actual leaning toward the idea of national prohibition has been substantially promoted by the attitude of Europe during the war. The ban against vodka in the Russian empire, followed by the elimination of trade in beer and even in wine in great numbers of Russian cities, has given the issue a reality and dignity which could not have been achieved through discussion and action among our own people. The prohibition of absinthe in France, where the liquor interests are probably more dominant financially than in any other country, has also had its effect. The restrictive measures of England have been instructive, but we have been moved even more distinctly toward regulation of the liquor trade by the thus far stolid refusal of the English to go to the limit of suppression which the national well-being so clearly demands.

Enforcement of Federal Law

A FURTHER POWERFUL impetus toward national prohibition comes from consideration of the effectualness with which it can be enforced. The leaks in the state prohibition system, whether permitted by law or in violation of it, come from the overflow of the liquor business in adjoining states. The Webb-Kenyon law, placing serious restrictions on interstate traffic, for the first time has given state prohibition a fair chance. The "bone-dry" legislation, a follow-up to the ordinary prohibition laws, represents the tendency of prohibition states to make ready for such national action as will eliminate entirely the risk of a supply from beyond their boundaries.

National prohibition would, of course, eliminate all manufacture and importation of intoxicating liquor, and thus cut the root of the organized liquor trade. If evidence be needed that the national government can enforce its will down toward the vanishing point, take the fact that even under so well-managed a local option system as that of Massachusetts a considerable number of illicit liquor dealers flout the town government and the state government, but post the United States tax receipt. When any broad-scale organization of the liquor business, whether for manufacture or distribution, is made obviously impossible, attempts at small-scale trade will be recognized as so exceedingly dangerous that in all probability the enforcement of national prohibition for, say, 95 per cent efficiency, would soon become almost automatic.

The gradual shift in American attitude toward the extreme position of total abolition of liquor has come as the result of remarkable educational developments.

Medical science has demolished the old theory that alcohol is a stimulant. It is known now that the degree of freedom which liquor gives the lower brain centers is the result of a stupefying effect upon the higher governing powers of the mind. It is the last word of science as well as of ancient wisdom that "wine is a mocker."

The close relation between the use of alcohol and many serious diseases has been brought out with ever-increasing effect. The accumulated evidence which has been secured by many insurance companies, showing the considerably greater mortality among moderate drinkers than among abstainers, goes to enforce strongly the ever-broadening opposition on the part of physicians to its use. Its causative relation to insanity is the subject of dispute only as to degree. The alcohol case has

not been helped by the fact that poverty and drink are admitted to work in a circle. The increased and widespread study of prostitution has placed directly before all honest minds the great share of alcohol in building up and maintaining this intolerable burden and disgrace. The amount of attention directed recently toward the question of feeble-mindedness, on the one hand, and the production of a better race, on the other, has indicted alcohol as a race poison which has the power to penetrate and damage the germ cell through which the gift of life passes from generation to generation.

The new scientific methods for the treatment of drunkenness tend to show more clearly than ever that the appetite for alcohol is very largely, if not wholly, abnormal. It is not a thing that goes with human nature. In other words, since alcohol is as distinctly an outside, malignant enemy as are any of the disease germs that afflict the human race, there is precisely the same reason for isolating and despatching it. Indeed, Demon Rum, while he may be somewhat of a joke as a figure in anti-alcohol emotionalism, does not fall far short of representing the scientific fact. Here perhaps we may admit for the sake of argument that alcohol as a beverage carries 1 per cent of benefit to 25 or 50 per cent of injury to the community.

In this connection one of the most suggestive sides of the whole anti-alcohol movement is the attitude of the New York city Board of Health, which is definitely organizing a campaign to dissuade people on health grounds from the use of alcoholic drinks. The board is committed to the elimination of the alcohol line of attack on the human organism precisely as it is committed to relentless warfare upon the tuberculosis germ.

The romantic atmosphere with which the use of alcoholic liquor has always been surrounded has been a sort of haze through which the new light has with difficulty penetrated. It is true that alcohol seems to provide an outlet to the spirit of sociability and to the sense of the exaltation of life, but on second thought the conclusion is gripping every reasonable mind that the result is a crude form of sociability and a deluded consciousness of exaltation.

Along with the subtle and penetrating revelations which science is bringing, the theory of the substitution of wholesome emotional interests for the sensations aroused by alcohol is having an effect. We learn, for instance, that the moving-picture show is furnishing a foil to the saloon. Again, in various parts of the country the turning of community sentiment against the saloon is ascribed to the influence of a man who is, for the first time in the history of religion, setting forth a thoroughgoing mixture of religion and humor. The universal testimony of men in the liquor business that the younger generation is not drinking as much as their fathers or even their older brothers, already reflects not only a high level of intelligence, but a rising wave of the new, widely available normal way of finding the exaltation of life.

Influence of Alcohol on Business

THESE VARIOUS tendencies considerably reinforce the business man in his growing insistence that, if possible, the undermining influence of alcohol upon industrial responsibility and efficiency must be determinedly confronted. The increasing number of great sources of employment which are closed even to the moderate drinker is in its measure fully as significant as the spread of prohibition itself. The decline of the use of liquor among those fulfilling any sort of administrative function in business or manufacturing is a universally patent fact. The change in the habits of commercial travelers during the past ten years has been phenomenal. The way in which the

logic of abstinence passes up and down and across is suggested by the disappearance of liquor from the bills of fare of the dining cars. A large number of monthly and weekly periodicals are excluding liquor advertisements from their pages since these publications have come to be real compendiums of life; the fact that the use of liquor is considered by them to be not a part of life is impressing the popular mind.

The most disturbing threat which alcohol furnishes to industrial production is shown by records kept for the hours during the working day at which industrial accidents take place. It appears that the number of such accidents goes to a high peak in the middle of the morning and again in the middle of the afternoon. No explanation has ever been given for this curious phenomenon other than alcohol. In all probability it is the result of the beer that employes drink on their way to work in the morning and during the noon hour.

It is a melancholy, but not a finally established, fact that organized labor is today one of the chief bulwarks of the liquor business. In England practically all the labor leaders are teetotalers and make it part of their duty to promote the organization of a powerful temperance propaganda among working men. With us only a few men such as Charles Stelzle and John B. Lennon have kept up a continuous total abstinence appeal to trade unionists, on grounds not only of moral welfare, but of economic interest.¹

In some cities the building trades show a strong tendency against the use of liquor. It seems clear that in Michigan working men had a substantial part in carrying the state for prohibition; and in the states where prohibition is now well established we see organized labor beginning to come forward in its favor. In general, however, the employes in the liquor trades and its various subsidiaries are able to focus the entire labor movement of their communities against the attack on the liquor traffic.

It is wholly reasonable to believe that the use of alcoholic liquor constitutes one of the most serious handicaps upon organized labor in the way of learning and practising associated action. It is a fair venture that it will be only a de-alcoholized industrial army that will develop the discipline, the loyalty, the program and the leadership which can bring us into the era of cooperative production.

Thus far, prohibition is with us distinctly an American movement. Its tide has not reached any of the larger immigrant centers of population. Yet the attitude of the Irish element toward the sale of liquor and its use has become increasingly stringent. The great order of the Knights of Columbus allows no liquor dealer in its membership. The Catholic total abstinence societies are becoming increasingly powerful in the direction of moral suasion, and a real influence of the same sort is the Society of the Holy Name, whose membership is enormous.

Immigrants and Prohibition

AS TO THE GERMANS, a German pastor, writing recently in the *Atlantic Monthly*, has set it down as one of the great mistakes of the German-Americans that they have not modified their attitude on the prohibition question. In the case of the Jewish and Italian groups, though there is danger here and there that they may get the habit of selling and using whiskey, there is undoubtedly an equally strong tendency toward the extreme of moderation. In general, for all these elements in the population, national prohibition, if it comes, must be forced. Yet it is certain that a substantial proportion in each group will not be irreconcilable.

Of the arguments used by liquor interests against prohibition, the principal one has always been that prohibition is a sham, that a large amount of illicit business goes on under it and that respect for law is proportionately undermined. It does not appear that this argument is founded on truth so far as many of the prohibition states are concerned. The fact that liquor has to be brought in wholly from without the state, encountering legal obstacles at every turn, is one of which no argument can dispose. The favorite recent argument has been that state prohibition tends to eliminate the use of beer, which is bulky and perishable, at the same time being unable to prevent the sale of whiskey. No doubt there is a certain weight in this contention, but it is not irrefutable, since the national sales of whiskey and beer have remained continuously in the same ratio.

Decrease in Drinking

IT IS CONTENDED by the liquor interests that, even with the advance of prohibition, the use of alcoholic drinks is increasing. It is true there has continued to be a gross increase in liquor consumed, but the rate of that gross increase fell from 44 per cent in the seven years 1900-1907 to 11 per cent in the seven years 1907-1914. The more significant fact, however, is shown by the per capita consumption, which from an increase of 5.03 gallons in the first seven-year period fell in the second seven years to a decrease of .29 of a gallon. These figures are taken from the United States statistical abstract for 1914, pages 170 and 512. It should be remembered that this decrease is referable only to the nine states which were actually under prohibition up to 1914. It is safe to say that we shall soon begin to see the figures for a substantial national reduction not only in per capita but in total consumption of liquor.

It seems to be clearly recognized that these arguments and nearly all others that can be brought forward fall prostrate in the face of national prohibition, and only with great logical difficulty resume any fighting force. There is still the authority of Mr. Taft that national prohibition would require a large army of inspectors to enforce the law; but it would certainly not require many inspectors to see that there was no brewery or distillery business on an appreciable scale, and to see that there was no wholesale liquor business except of the most casual and clandestine sort.

A curious, ironic twist has been given the strongly urged contention that prohibition would mean a vast increase in the use of drugs based on opium. The interstate prohibition method itself has intervened with substantial success to minimize the sale of such drugs and incidentally to dispatch the argument. Neither would the use of certain medicines as substitutes for alcoholic beverages, which is a considerable evil in some prohibition states, present great difficulties in the face of the advancing sentiment against the sale of such medicine for any purpose whatsoever.

The anxiety which has frequently been felt not merely by advocates of alcohol, but by many impartial persons, that the sudden elimination of the liquor business might create a serious economic disturbance leaving much real suffering in its train, is also effectually disposed of by the experience of Seattle, where within a year the effect of prohibition has been almost wholly beneficial from an economic point of view. Even former opponents admit that there are only a few cases where a satisfactory adjustment has not now taken place.

Almost the only residuary argument against national prohibition, except the belated appeal to personal liberty, is that of the private stills, which have been figured as a certain source of widespread degradation. It is true that under the proposed

¹ Very striking testimony in favor of prohibition is coming in from trade-union leaders who have tested its results in the western cities.

form of national prohibition, it would be possible for the individual householder, for the use of himself and family, to make whiskey. In so far as this possibility should be developed, however, to a wide extent, the "bone-dry" tendency would doubtless lead to effective state action.

With the whole conception of the federal power rapidly changing, and the very strongholds of the states' rights doctrine yielding their traditions, one may not be disturbed over the forcing of conclusions by the South and West upon the great population centers of the Northeast. In fact, there was not lacking a certain poetic justice in the remark of a southerner who said that the North had put abolition over on the South and the South was now going to put prohibition over on the North.

An honest doubt in the minds of not a few who are careful about the processes of democratic action is that a constitutional amendment in favor of prohibition would not represent a majority sentiment of the electorate. This objection, which had basis a few years ago, is fast crumbling away. While there may be reactions in the progress of woman suffrage, the fact that both parties are committed to equal franchise indicates that the political influence of women must rapidly increase. Within the period which would be required in order to carry through a constitutional amendment the number of women voters will undoubtedly become sufficient to make such action, when consummated, represent a definite majority of the voters of the country. Another factor becoming apparent is the overwhelming majorities which will support national prohibition in all the states in which state prohibition has already become established.

The promoters of prohibition do not want to push their cause hastily and relentlessly. Should they wish to do so, they could very likely carry a measure through Congress placing a prohibitive tax upon the liquor business. Their immediate proposal, as far as congressional action is concerned, is to bring about prohibition in the District of Columbia—meanwhile securing as soon as possible a two-thirds vote which will submit the prohibition amendment to the state legislatures. They are stressing the point that unless Congress soon passes

the vote to submit, national prohibition will be an issue forced upon both Democrats and Republicans and taking precedence over all other questions with which the parties must deal.

With twenty-five states already in line, the ever-growing momentum will soon bring over the necessary ten. A sad lack of self-respect and preparedness for the needs and opportunities which will follow national prohibition will be found among those communities which simply rest back and are willing to be passively swept over into the new era. It looks as if the question of the next few years in a group of our most powerful states would be—shall our state share in this great moral revolution or shall we be written down in history among the baser sort who had to be coerced into submission?

A most remarkable fact about the movement for national prohibition, looked at now from the point of view of its strong probability of success and the amazing economic and moral transformation which it will produce, is that, for its specific promotion, it owes nothing to any of the accredited social-reform forces. With substantial accuracy it may be said social workers as a body have had toward it nothing more than the attitude of curious spectators. Yet it will, without doubt, accomplish within their own field more than the total result of all they can hope to achieve with their present programs. On the fingers of one hand can be counted the leaders of organized labor who have shown any kindly interest in what may even double and triple trade-union resources and influence. Hardly even a ripple has been stirred upon the face of socialist discussion by this vast tendency which promises to accomplish the biggest result of deliberate collective action in the whole history of democracy.

Making all allowances for the secondary influence of economic considerations, it is the plain church-going people of the towns and the countryside who by their inherent moral force are bringing about this stupendous achievement. After having won their victory they may represent the main action toward further goals. It will be understood that they have not been without leaders—men with the savor and the tincture in them of the historic exponents of such folk—of Cromwell, Wesley, Lincoln.

Federal Aid for Consumptives

Would the Kent Bill Help?

By Gertrude Vaile

EXECUTIVE SECRETARY DENVER DEPARTMENT OF SOCIAL WELFARE

EVERYONE who has had to face the problem of tuberculosis from a community standpoint, whether doctor or social worker, must feel, I believe, that it is far beyond the possibility of adequate local handling. It is so immense and far-reaching that the federal government itself must take cognizance of it and do something effective to help and control it.

So widely has this feeling taken possession of people that many believe any sort of government action, no matter what, is desirable so long as it brings the federal government into the problem. But if government action, when secured, does not tend in the right direction and reinforce efforts already being made, it may further complicate a very difficult situation and cause even more suffering than before. This I am convinced would be the result of the Kent bill now pending in Congress.

The bill provides for government subsidy not to exceed

seventy-five cents per day per patient for the care of indigent tuberculous persons who are *not legally residents* in the states where they are temporarily located, on condition that the authorities in that place, or someone else, pay an equal amount. The benefit may not be granted if the person comes *in order* to receive it. The government may provide transportation to return a non-resident to his place of legal residence if proper arrangements are made for sanatorium care there, but expressly states that no aid shall be given toward his care in his own place. Where the subsidy is granted in any sanatorium the government may stipulate the standard of care given.

I believe that government aid in the care of non-residents would prove an exceedingly unfortunate public policy, increasing the suffering of tuberculous people and working injustice upon communities, and this for three main reasons: it would inevitably, as it seems to me, increase the migra-

tion of destitute tuberculous people to climatic resorts; it would have the effect of making them remain there long enough to lose their claim on their own home states and their right to return; and it reduces, so far as government action is concerned, a tremendous national problem to the limits of a local health-resort problem, and in so doing turns aside from some of the main points in the anti-tuberculosis struggle.

Now we ought not to object to an increase of migration if it is really necessary for people suffering from tuberculosis to go to certain western and southwestern regions to recover their health. But as Dr. Philip King Brown, of San Francisco, pointed out in his article in the SURVEY for July 29, favoring the Kent bill, "it is a delusion that climate cures tuberculosis. As a factor in cure it is not comparable with rest, good food and fresh air, however or wherever obtained." And another important factor in cure is peace of mind. Undoubtedly our western climate has helped many people who were economically and temperamentally able to take good advantage of it. All other things being equal, the addition of the best climate is an additional good. But many patients, and almost all indigent patients, in seeking climate sacrifice far more important things.

Suffering from Homesickness

IT IS A grievous thing to be sick, alone and away from home and friends. Many tuberculous people suffer ruinously from homesickness. Some experience the tragedy of loss of sympathy of the home folks because they do not understand conditions so far away, and, imbued with the idea that climate alone is sufficient, feel that if the patient does not get well promptly when he has "had his chance," it must somehow be his own fault or imagination.

There is suffering for the spirit also in the belief that a person whose health has improved out West must never again go East to live. That idea may be exaggerated, but it is impossible to uproot it from the popular mind, and tuberculosis specialists have told me it is true that after a stay in this milder climate there is genuine risk of breakdown in becoming re-adjusted to a more rigorous climate. Add to this intolerable sense of bondage and imprisonment the fact that, if the patient appears to be tuberculous, he is an object of fear and dislike in the health resort. It is hard for him to find a boarding place, even when he is able to pay for it.

Industrial difficulties are also great for the health-seeker. Opportunities for work, fitted to his limitations or for which he is at all prepared, are few and overcrowded in the sparsely settled, non-industrial regions where the main occupations are mining or ranching, and the ranching—or herding—is under conditions of peculiar physical hardship. Moreover, if people are known to be tuberculous they are not acceptable in positions that they really could fill. One of the largest employers of labor in Colorado, offering a great variety of employment, excludes all who have "tuberculosis in any form."

When in addition to all these difficulties, which must be met in a measure even by people of comfortable means, the poor man buys climate at the cost of improper housing, meager food, work when he should be resting, and driving anxiety about existence, then, indeed, in seeking life he enters into conditions of death from which he might have been saved had he remained at home.

The splendid results achieved by eastern sanatoria prove how successfully tuberculosis can be treated in any climate under the right conditions.

It must be remembered also that sanatorium care without good opportunity for after-care is little better than wasted, so likely is breakdown if the patient plunges at once from

the sanatorium into unrestricted work. Dr. Gelien of our tuberculosis dispensary tells me that the results of the dispensary care, looking after patients in their homes and at work, are not nearly so satisfactory in Denver as she found them in working in a Baltimore dispensary.

The doctor attributes the difference to the social and industrial advantages which the patient had in his familiar surroundings. There it was often possible that the man's employer, who had known him before he fell sick, would make readjustments of work in sympathetic desire to help him, transferring him perhaps to some other part of the work better suited to his condition, or allowing him to work part-time when he was not strong enough to resume full-time work. Among his own family and friends, too, the patient was shielded and safeguarded and helped in a hundred ways that told tremendously in his progress through the long fight, but all of which are denied to the sufferer who must make his own way alone in a strange place.

And so any public policy which could increase the migration of indigent tuberculous persons I can only believe would greatly increase the sum of human suffering.

After all, the crux of the question is, would the proposed legislation increase such migration? Dr. Brown thinks it would not, for several reasons. For one, the law provides that if people come *in order* to receive the benefit they may not have it. But who shall judge the inner mind of man? Climate alone has long been reason enough for coming. It would remain quite reason enough to allege. That the limiting clause is in there at all is interesting as showing that the framers of the bill themselves saw that it was likely to increase migration unless safeguarded.

Even if very few persons should actually come *in order* to receive the benefit of the law, yet such a law would stimulate migration, because it would take away all need for hesitation about coming. Consumptives would come in ever-increasing numbers in the spirit of that Russian steel-worker who presented to us a few weeks ago a letter from a doctor in his home town saying:

"The bearer recently came under my care and I diagnosed his case as tuberculosis and advised him to leave for Denver, Colo. The man is in meager circumstances and has only sufficient means for his trip and very little left for his maintenance while he is there. On his arrival in Denver he trusts that the kindness and generosity of so many institutions there will extend a helping hand to him."

The envelope was addressed, "Government or any charitable institution for consumption. Please instruct the man where to find it."

I think that no judge talking to that man would hold that he came for the purpose of securing sanatorium care, even though it was mentioned in the letter and almost immediately asked for. He clearly believed that air alone would cure him, and if he could have a few days' rest he would be able to go to work. Nevertheless, he trusted in the kindness and generosity of the community.

No Need for Prudence

Now, there are a host of people more prudent than the Russian laborer who do not come because they will not trust themselves to unknown conditions when they would be unable to make any vigorous efforts to meet them. Under the Kent bill all need for such prudence is taken away. Why should anyone hesitate to go wherever the climate is most attractive and run his chances? The government itself will help him if he should need any help.

My reasoning on this matter has the support of prominent charity organization workers the country over. Frank J.

Bruno, of the Minneapolis Associated Charities, formerly of Colorado Springs, says he cannot see how anyone living in a western state could doubt that it would increase migration. W. Frank Persons, of New York, considers it so obvious as hardly to be open to discussion. J. W. Magruder, of Baltimore, says, "How could it be otherwise? All our Charity Organization Society experience goes to prove it."

The American Association of Societies for Organizing Charity, in its annual meeting, passed resolutions in which conviction was expressed that "such legislation will increase inevitably ill-advised migration of such persons, often in the late and hopeless stage of their disease, and encourage migration of their children and other dependent relatives."

Sanatoria for Jewish Patients

IN Denver this which seems to me so clear as a matter of logic has worked out in actual experience. We have faced conditions more like those that this bill would create than can be found anywhere else. We have in Denver two national Jewish tuberculosis sanatoria, supported by Jewish contributors from the entire country, open to destitute Jews of the entire country. What is the result of this situation? The Jewish Social Service Federation, dealing with needy people in their homes, found that about 90 per cent of all their home relief work was in cases of tuberculosis. In the public relief office, which is to say the general community, the proportion of cases involving tuberculosis was 16 per cent of the total relief.

Why so much more migration of destitute tuberculous Jews than of other tuberculous people? I can find but one possible answer—the two national hospitals. The Jewish people themselves have been facing this situation with great earnestness and are having careful studies of it made. The two hospitals are now to make very heavy contributions for the support of patients and their families outside of the hospitals. Whatever solution may be tried out, the Jews are a united, socially minded people. Through their National Conference of Charities they make their own rules and can apportion responsibility equitably among their communities without dependence on legislation.

A federal enactment, such as that contemplated in the Kent bill, would reproduce in the climatic resorts, it appears to me, the Denver Jewish problem on the universal scale of the whole American public, when no machinery yet exists to meet it, and when it has baffled the finest machinery that a united, socially conscious people have yet devised.

Dr. Brown says that if the law should have the effect of increasing migration, "a few prompt deportations under existing or supplementary legislation and the matter can be easily settled." Has he forgotten that one of the main arguments presented at the Senate committee hearing in favor of the bill was just the fact that people cannot be deported? The argument ran thus: They are there, in the climatic resorts. You cannot compel their own states to care for them while they are out of their states. You cannot compel them to return to their own states against their will. Therefore, let the government bear part of the burden. I should have concluded, therefore let us avoid any policy which will make them even more likely to come and more unwilling yet to return.

Dr. Brown, in further answer to my contention that this bill would increase migration, believes that under such a law the government would take active steps through publicity and quarantine measures to prevent migration. He says, "If the federal government, through the secretary of the treasury, who is (already) given absolute police power in quarantine matters, cannot stop migration of indigent consumptives, no one can."

If such authority already exists and is so easily applied, why is it not used now to prevent the present migration? That would abolish offhand all need for government subsidy in the care of non-residents. But quarantine methods are not being used just because they are admittedly impractical in dealing with tuberculosis. The best and probably the only power to check the migration of indigent consumptives is to provide incentives for them to remain at home instead of incentives to go away.

And as for government advice and publicity, it would be far more effective without such subsidy than with it. With such a subsidy as the one proposed, what the government *does* would speak so loud that we could not hear what it *says*. It would say, "Stay at home. It will be better for you unless you have abundant independent means." And then it would hold out fine government-supervised sanatoria available to the destitute who go away from home. We need to have the government present a clear-cut message and not confuse it like that.

Doctor Brown thinks migration would be actually checked by the Kent bill because, he says, it "has been so worded as to meet the passing-on method." I have studied that bill over and over and I cannot find it. Perhaps he means that if the government pays part of the cost the community will be more willing to pay the other part instead of bidding the patient to move on. Miss Tate, of the Tuberculosis Bureau of the California State Board of Health, tells us how poor is the care for tuberculosis in some of the county institutions in the West, often not worth more than sixty-five cents a day, because of the unwillingness to make provision which would be largely used by non-residents.

But why should we expect that officials who now hesitate to take up long-continued care at sixty-five cents a day for a patient who does not belong to them, would be any more willing to take it up at seventy-five cents a day, even if the government would add another seventy-five cents? From the point of view of community finances, it is still preferable for the patient to be elsewhere, and if more of them come, the more incentive to shift them along. The chief essentials in removing the temptation to irresponsible passing-on of dependents are, first, that there should be some place where the person belongs, and, second, that he will not lose his right to return there if he lingers dependent somewhere else. In neither of these essentials does the Kent bill offer any help.

And that brings me to my next main point, that people who receive benefit under the Kent bill are likely by that fact to remain long enough in the climatic resort to lose their legal residence and their right to go home again.

Laws of settlement determine the conditions under which a community will assume responsibility for the care of dependent persons. Such laws as exist are very different in different states, and mostly they do not exist at all in the West. Unfortunately such laws as there are seem to have been devised not to protect the poor, but to protect communities against the poor. However widely the laws vary they are alike, so far as I have been able to learn, in the one point that settlement is assumed or expressly stated to be lost by length of absence alone, regardless of conditions under which that absence was spent.

A misunderstanding of the fact that settlement is lost in the old home, whether or not it is gained anywhere else, is responsible for much very plausible but misleading argument about the Kent bill. The attorney-general of California is quoted to the effect that a person who considers himself only temporarily located in the place where he is, might, even after a number of years, be regarded as a non-resident for purposes of the bill and might be returned to the place from which he

came, "provided that it is the place of his legal residence." But, as a matter of fact, he never could be returned to the place from which he came, because it would long since have ceased to be his legal residence.

Loss of Legal Residence

I HAVE BEEN REFUSED the right to return a man to the place where he had lived from childhood if he had been gone one week over a year, even though he himself regarded it as his home. All of his friends and most of his relatives lived there, every normal working day of his life had been spent there. He longed to go back and had no possible claim on any other spot under the sun.

Once I tried out the possibilities of securing a sworn statement of intention of residence, while there could yet be no question about it, to see if that could retain for a man his right to return home for care after a year's absence. I put to the attorney-general of the state from which the man had just come this question: "If a citizen of the state of X is cared for as a charity patient in a tuberculosis sanatorium outside of the state of X, will that necessarily affect his legal residence and consequently his claim for care in his own home state?" I cited the case and asked whether, if he should file with the public charities of his own state and Colorado an affidavit to the effect that he was only a sojourner in Denver and considered his home to be X, he might after a year return there and receive care. My letter went to the attorney-general of that state enclosed in a letter from our own attorney-general. The answer which came back was: "It is the opinion of the administrative department concerned that the patient referred to should not be deported to this state." Even though we offered to care for their citizen for a year without expense to them.

I cite these two instances, although I have cited them several times before because they seem to me to test the issue to its extreme, and also because they show the construction placed upon the matter in the two states from which our heaviest tuberculosis migration comes. I have tried out both states repeatedly with no better success. Until there can be radical changes of settlement laws, or of the construction of law, we cannot expect to return to his former home a patient who has received sanatorium care under the Kent bill. It is true that we may continue to regard him as non-resident in the new place and so claim government aid for his continued sanatorium care, but the care of the patient outside of the sanatorium and the care of the family dependent upon him become permanently fixed upon the new community where the government interpretation holds that the patient is "temporarily located."

Dr. Brown says that the family is wholly apart from the problem. But whom the Lord hath joined together we may not so easily put asunder. If I am right that the Kent bill would increase the migration of tuberculous patients, it would increase also the migration of their families. If it would cause the patient to lose his claim upon his home state, it would fix his family upon the new state. We are told that in California the non-resident tuberculosis problem is almost wholly of single men. That may be because California is so far away. In Denver, last year 41 per cent of the tuberculosis cases dealt with by the city relief office involved the family.

It simply is not possible for the new sparsely settled climatic regions to be national sanatoria for tuberculosis patients and pension their families besides. In our inability to do it their children die before our eyes. I shall never forget a certain widow who applied for a mother's pension. Her husband had died of tuberculosis. There were three children.

We had them all examined and none of the children showed any trace of tuberculosis. We knew the mother was working too hard and that the income was insufficient, but there was no money available from the mother's pension fund, the general relief fund was hard pressed, and she was making ends meet after a fashion and not complaining. So we just let the matter wait. Months later we took up the application again and had all the family re-examined. Every one of those children showed positive tuberculosis, and the oldest girl, just approaching working age, had active pulmonary tuberculosis. I shall never quite get over that. But the same thing is happening this minute in family after family we know.

Home Conditions Affected

PERHAPS it is true that relief of the family is not the government's duty. But if, as physicians tell us, tuberculosis is primarily a question of living conditions, then to enter upon a governmental policy of sanatorium care without measuring its effect on the home would seem to me hardly a helpful way to get at the problem as a whole.

It is objected that I am arguing the matter from a health-resort standpoint, whereas it is a national problem and concerns primarily the great industrial states. *Tuberculosis* is indeed a national problem, but *non-resident* tuberculosis, to which alone the bill refers, is almost exclusively a problem of the climatic resorts.

The Municipal Tuberculosis Sanitarium of Chicago reports for last year six non-residents out of 1,800. The Cook County Tuberculosis Sanitarium at Oak Forest reports "practically no non-residents cared for out of 1,500"! I sent back to Chicago the query, "Does this mean that the desire of public hospitals not to care for non-residents leaves the burden on private hospitals?" I got back the answer, "Private hospitals will not take free tuberculosis patients. No burden there." Dr. Kremer, of the Tuberculosis Admission Bureau of the city of New York, reports that on June 1, in the nine tuberculosis hospitals, Seton, Metropolitan, St. Joseph's, St. Anthony's, Brooklyn Home, Sea View, Montefiore Home, St. Vincent's and Riverside, there were just sixteen non-resident patients.

Migration of Consumptives

IN CONTRAST to that, in Denver, on October 10, out of forty-seven tuberculous patients in the County Hospital, twenty had been in the state less than one year and fifteen more less than three years. Of the twenty-four in the tuberculosis ward of the county farm, about the same date, four had been here under six months and 15 under three years. Almost all of the seventy-one admit that they came to Colorado for their health. Of 342 patients cared for since January, 1913, by the Brotherly Relief Colony, a tent colony for indigent tuberculous men maintained by private charity, 175, or 51 per cent, had been in Denver less than six months, 203, or 60 per cent, had been in the state less than a year, and only forty-eight had been in the state over five years.

We are told, "Los Angeles in six months dealt with 668 consumptives in her hospital for such cases, of whom 145 had been in the county less than six months, while 290 more were adults who had been in the state less than five years." One-fifth in Los Angeles under six months, two-thirds in the state under five years.

Non-resident tuberculosis appears, then, to be negligible in the great industrial states. The bill applies practically only to the climatic resorts. If Congress, gathered from all the nation, is really humanely concerned to help tuberculosis in all the nation, it is not the Kent bill as it now stands that should interest the members.

Many people endorsed the bill at first for the reason already suggested, that they felt that any government action was better than none. But it was interesting at the Southwestern Tuberculosis Conference at Albuquerque, N. M., in October, to see how many people rose in discussion from the floor to say that when they first saw the bill it looked good to them, but the more they thought about it the more they believed it would make the situation worse than before.

What, then, can the government do? Either or both of two things. First, investigation, education and active experimentation. The wonderful gift of \$100,000 from the Metropolitan Life Insurance Company to the National Association for the Study and Prevention of Tuberculosis, to try out an experiment to eliminate tuberculosis absolutely from some selected community, is a thrilling suggestion of what the United States government could do. Such efforts on the part of the government would point the way for all communities to take care of their own people and inspire them to do it. Through such help and leadership, we could hope to eliminate tuberculosis even as the medieval plague was stamped out. To establish a special bureau of tuberculosis in the Public Health Service and give it a liberal appropriation would make such work possible.

Second, if in addition to such fundamentally important work the government can undertake so great a matter, why not simply reverse the Kent bill and give aid, not in the care of non-residents, but of *residents*, and then define residence for purposes of this law as the last place where a person had legal settlement, however long he may have wandered since?

This idea that a good American can be a man without a country in time of distress is barbarous.

I know that objections to government subsidies have been voiced, and I am myself of those who hold that public subsidies to private charities are unwise. But I do not see that government subsidies to local governmental units would be open to all the same objections, and when the aid is to a medical charity and the disease is infectious and concerns the public health, I cannot see that the objections would hold.

Such government aid would make a strong incentive for tuberculous persons to stay at home, for there would be the best probability of good care. That would be the happiest and most effective check to migration. It would help to establish justice between states instead of further entrenching injustice. It would do much to stop that cruel passing on, for there would be a definite place to go and no object in urging a man to keep moving just because he did not belong in the place where he was. Best of all, it would help states to build up their sanatorium care for their own people and give the government opportunity to get some hold of the tuberculosis problem in the great centers where it originates, instead of touching only that part of it that has scattered to the outskirts. And so it would be nation-wide, a real public-health measure.

The attorney-general of Colorado thinks that such a measure as I have suggested would be more likely to meet the test of validity than the Kent bill as it now stands, as being more universal in its application and more fully justified under the principle of government power for general welfare and the control of infectious disease.

A State Children's Code and Its Enforcement

By Roger N. Baldwin

SECRETARY, THE CIVIC LEAGUE OF ST. LOUIS

“**A** COMPLETE new code of laws for the welfare of all the children of Missouri” is the way the Missouri Children's Code Commission styles its report, just published, to the legislature which meets in January. It is the first complete code prepared in response to the national movement for a children's code in every state.

Never before in Missouri has there been any effort made to bring together all the present laws relating to children. The new code is more than that. It is an effort to adapt to Missouri the very best experience and ideas of other states and countries. It is, furthermore, an effort to create machinery which will make the laws work.

The commission of twenty-four members appointed by the governor has been at work since June, 1915. It was appointed on request of the State Committee for Social Legislation and a number of other agencies throughout the state interested in a program of child-welfare bills in the 1915 legislature. All of the program, with a few exceptions, failed of passage, as did most progressive legislation, because of the wet and dry issue. The Missouri senate, recognizing that fact, appointed a senatorial commission of three, whose appropriation was later found to be invalid. It could not, therefore, go to work. The governor's commission was then

appointed in its place, to work as volunteers, raising its own funds.

The new code deals not only with all the subject matter of the only other children's code in the country—that of Ohio enacted in 1913—but goes beyond into the problems of the legal status of children in civil suits, the administration of county agencies, health and recreation, and the social problems of the public schools.

Not all the recommendations of the commission are embodied in the legal draft of the code which will be presented to the legislature. Many recommendations approved by the commission, but believed to be impracticable until certain preliminary steps have been taken, are reserved for action by subsequent legislatures. These recommendations are separated in the code from the immediate proposals.

The report carries not only the legal draft and a statement of the reasons for every new recommendation, but outlines the need of the code in Missouri, based upon the actual conditions surrounding children throughout the state.

The commission's work has been done almost entirely by the voluntary efforts of the twenty-four members, divided into sub-committees on statistics and social conditions, public administration, delinquents, defectives, destitute and neglected children, child labor, health and recreation, and education.

The legal work has been done largely by the Law School of the University of Missouri.

The federal Children's Bureau at Washington furnished great help in getting the work started, with an outline of subjects to be considered and a complete index of Missouri statutes relating to children. This work the bureau is gradually accomplishing for all the states, as an aid to codifying the laws. The commission's expenses, which, with the printing of the report and the educational campaign through the state, will total \$1,500, are being raised by voluntary subscription.

The Commission's Chief Aim

THE EXECUTIVE WORK of the commission is in charge of Mrs. Maurice Lowenstein, a graduate of the New York School of Philanthropy. The chairman is Judge Rhodes E. Cave of the St. Louis Circuit Court.

One purpose the commission has made conspicuous above all others—to create an administrative system which will make the laws work after they are passed. Early in its work the commission decided that if it did not do anything else it would see that adequate machinery was provided for every county and for the whole state. This strikes at the heart of the present problem in every state of the Union. The standards developed in the last decade have been written into statutes without provision for their successful administration.

The chief recommendation for administering the laws in the 114 counties of Missouri is the creation of county boards of public welfare. These are to be ex-officio boards, composed of the three judges of the County Court, who are the county's administrative officers, the county superintendent of schools, and the judge of the court hearing children's cases. Such a board ties together the only three agencies in each county dealing with children—all located at the county seat.

The chief obstacle to the successful administration of children's laws in every county has been the separation of these three agencies. For instance, the probation officer appointed by the Juvenile Court could not be used by the schools as an attendance officer, nor could agents appointed by the County Court for poor relief engage in any work for the schools or for the children's court.

To unify this service for all the children of the county, the proposed county board of public welfare will have the right to appoint a county superintendent of public welfare and assistants. To prevent unwise appointments, provision is made that only persons may be appointed who hold certificates as "qualified social workers." These certificates must be secured from the State Board of Charities after competitive examination. Several grades of certificates will be provided for, as in the case of public school teachers. Thus the same protection as is thrown around the public schools by a system of certificates from a state department is also to be thrown around public social service in the counties.

While the creation of these boards in every county will be mandatory, the appointment of a superintendent and assistants is not. To stimulate the employment of a paid superintendent in each county and to arouse the county to the need of meeting social problems the State Board of Charities will be given the power to supervise the work. The state board will also have the right to step in, on complaint, and take charge of neglected children when the county fails to discharge its functions.

To meet the problem of the public welfare work of the average small town and city in the county, provision is made that these cities may be represented on the county board of public welfare, and may contribute funds to its work. Such

a city-county board, composed of members appointed by the County Court and by the mayor of a city has been for several years in successful operation in St. Joseph—the only board of its kind in the United States. All cities in Missouri will also be given the right to establish public welfare departments with broad powers to conduct the wide range of activities characterizing the Kansas City Board of Public Welfare.

To tie up the work of the County Board of Health with the welfare board, the county health officer is to be under the county board of welfare, which is to be, ex-officio, the Board of Health.

Only a few recommendations are being made for changes in the state agencies dealing with children, because of the movements outside of the commission looking to that end. There is a strong movement for the creation of a state industrial commission to handle all the departments dealing with industry, including the enforcement of child-labor laws, the women's nine-hour law and public employment bureaus.

Constitutional changes for improved schools, the state administration of health laws, civil service in state institutions—all these movements in the hands of other bodies are discussed as they relate to the code, but are not a part of it.

The chief measures recommended by the commission are:

1. The establishment of a board of public welfare in every county, as outlined above.
2. The creation of a children's court in every county as part of the Circuit Court, with provision for a referee in each county so as to hear speedily the cases of children in the absence of the judge on other parts of his circuit. The probation service will probably in most cases be under the county board of welfare, of which the judge or his referee will be a member. This court will also hear the cases of adults involving children.
3. State-wide provisions for mothers' pensions, to be administered by the county board of public welfare.
4. A complete revolution in the status of illegitimate children, giving them practically all the rights of legitimate children.
5. State supervision of all private agencies caring for children.
6. Placing all institutions for defectives and delinquents under the State Department of Education.
7. Providing for special classes for all types of defective children wherever needed throughout the State.
8. Requiring children to complete the sixth grade in school, unless the child has attained the age of sixteen years, and to include agricultural and domestic service in the provisions of the child-labor law.

There are, of course, a host of minor recommendations, but these cover the chief changes.

The commission has undertaken a state-wide campaign of publicity on the code. It is reaching the newspapers in every county. Hundreds of circulars are being sent out with a brief description of the work. Speeches are being made before women's clubs. Candidates for the legislature have been circularized and have pledged their support. An illustrated folder showing conditions surrounding children in Missouri, together with the chief new measures proposed, is being circulated throughout the state.

An Example for Other States

THE COMMISSION expects to go to the legislature in January with the unanimous endorsement of social workers and all the interests active for the welfare of children.

While the commission's work is not yet completed, enough has been done to blaze the way for other states working out their codes, with the help of the National Committee on Standardizing Children's Laws, and the federal Children's Bureau at Washington. Missouri is demonstrating what can be done by a group of volunteers with slender financial support, utilizing every available agency in the state and nation to help it along.

New Year Goals in Social Work

Sign-posts and mile-stones marking the way

1917

INFANT WELFARE

Gertrude B. Knipp

AMERICAN ASSOCIATION FOR STUDY AND PREVENTION OF INFANT MORTALITY

WHEN one realizes that over 2,083 Baby Week celebrations were definitely reported to the Children's Bureau this year it becomes evident that every section in the country has begun to face its responsibility toward the mothers and babies.

At the threshold of the New Year, like all sound business concerns, the country will want to know what has become of its greatest asset. It will therefore take stock of the babies who were born during the last year or so. Upon checking up accounts, it will find that records are conspicuously lacking so far as many of the babies are concerned; it will accordingly insist upon the prompt and accurate registration of all births in 1917.

Further checking up will show an appalling loss of baby life during the first day and week and month after birth. Realizing that the only way to prevent this waste is by reaching the mother before the baby comes, the next step will be to furnish prenatal care. But as that will be incomplete unless it is followed up by adequate care during confinement, and after-care so that the mother can regain her strength, provision will be made for skilled obstetrical care for the mother in her own home or at a well-equipped hospital.

Feeding conferences, at which the mother will be advised as to the care that will keep the baby well, will follow as the logical sequence.

These conferences will be under the charge of doctors and nurses who have been especially trained in baby care, and will be followed up by visits of the nurses in the homes for further instruction of the mothers and for the care of sick babies.

Maternal invalidism and many maternal deaths are also matters for community concern, because they reflect the failure to provide proper safeguards for the women who are going through the perils of childbirth. We are beginning to have the subconscious glimmerings that precede waking up on this subject, and the Federal Children's Bureau in its publications during the coming year will open our eyes more completely to the facts. Through other investigations

CHILDREN will always have the privilege of making New Year's resolutions and always gain the luxury of forgiveness if they relax; but the hope and faith and determination of social workers and reformers can stop only for refreshment at the beginning of each year. Resolution with them must be constant. But New Year's they may pause a moment, look up into the sky, look forward over the hills before once more they forge ahead in their organized activities. The list is by no means complete—space forbids that—and no attempt is made to bring consistency out of a cross-current of proposal.

and studies the bureau will show conditions as they are. The American Association for Study and Prevention of Infant Mortality will continue its study of the causes of infant and maternal mortality and will point out ways by which they can be checked.

The United States Public Health Service, the Department of Agriculture, the Bureau of Education, the Bureau of the Census and other bureaus of the Federal Government which touch upon community problems will further the campaign by their field work and their constructive advice to individuals and communities.

State departments of health will organize divisions of child hygiene (unless they have already done so), and for some time will be kept busy educating and advising their people. As the demand arises they will establish centres for infant and maternal welfare; and cottage hospitals in the districts that are a long way off from the big cities.

City and town departments of health will enforce the laws requiring the prompt registration of births. They will keep an accurate record of births and infant deaths and will get together with the Bureau of the Census and the state departments of health on what shall be included in such records, that the reports may speak the same language.

If the city department of health has its own division of child hygiene and its staff of doctors and nurses (especially trained for such work), it will offer its services to the mother of every baby whose birth is recorded. If it has not, it will couple up its work with that of some local society, so that babies will have medical and nursing supervision until they have passed the perilous period of infancy.

The infant welfare organizations, not only the big, strong ones in the cities, but the smaller ones in the very remotest country districts, will be more and more insistent upon the complete cycle that begins with the mother long before the baby is born, and provides parental care, obstetrical care, medical and nursing care and supervision of both mother and baby until the baby is well on its way to healthy childhood.

These are not impracticable dreams. They are already being widely realized.

HOURS AND WAGES

Florence Kelley

NATIONAL CONSUMERS' LEAGUE

THE National Consumers' League hopes that, by the end of the year 1917, the purchasing public may be able to spend its money with a clearer conscience than has ever before been possible. This comprehensive hope sums up the following specific hopes:

A. That the Supreme Court of the United States may uphold as constitutional the Oregon minimum wage law for women, so that the twelve states which have adopted similar laws may administer them vigorously and other states may copy them—that wage-earning women may all be able to live "in health and frugal decency;"

B. That the same court may sustain the Oregon ten-hours law for men, and other states may follow Oregon's example, to the end that the present wholesale using up and wearing out of fathers of families in the manufacturing industries may be checked;

C. That the same court may uphold the New York law which forbids the employment of women in manufacture between ten o'clock at night and six in the morning; and that the good work of Massachusetts, New York, Pennsylvania, Indiana and Nebraska in passing such laws may be copied everywhere;

D. That the states may all join Arizona, California, Colorado, Washington and the District of Columbia in making eight hours a working day for women in industry;

E. That Congress may pass an eight-hours bill for women, based on the federal child labor law, thus extending to women the protection which it has during the past six months bestowed upon men in the service of railroads, and on children employed in manufacture;

F. That the public utilities commis-

sions may consider the wages and working hours of the employes of the public service corporations, when determining rates to be paid by telephone subscribers, railway passengers and the spending public in general.

G. That the officers who take oath to enforce the laws passed to save the life, health, and intelligence of working people may be enabled to do their work better than ever before.

For the fulfillment of these hopes the National Consumers' League intends to make even greater efforts to publish the facts of industry, to organize and direct the good will that already exists in our nation, and to increase and strengthen the centers for its work in all the states.

Finally the crowning hope for 1917 is that the ties which bind the Swiss Consumers' League with Consumers' Leagues of the warring nations, and the American correspondence maintained, despite every difficulty, with members of those leagues, may be strengthened by the coming of peace before New Year, 1918.

CIVIC PREPAREDNESS

Clinton Rogers Woodruff

NATIONAL MUNICIPAL LEAGUE

A MUNICIPAL program for 1917 must involve a consideration of governmental organization, the proper functioning of the city, finance, economy and administration.

The tendency during the past ten years for cities to improve their machinery by introducing greater simplicity, understandability and responsibility must be accelerated during the coming year. There must be also a thoughtful consideration of the functioning of the city, so that it may adjust itself to the new demands made upon it.

This leads inevitably to the necessity for wiser financial preparedness. In the past the financial programs have more nearly resembled crazy-quilts than anything else. Movements in New York, Philadelphia, Boston, and Chicago, not to mention a multitude of smaller cities, have for their object the formulation of a carefully devised plan of financing the city, which shall recognize the distinction between current expenses and permanent improvement, which shall provide adequate funds for necessary work, and which shall redistribute the cost so as not to make it a burden upon those least fitted to carry it.

A flexible tax rate is another step in this direction of sound municipal preparedness, but a flexible tax rate should invariably be accompanied by inflexible economy. Our cities have been wasteful because neglected and overlooked. The people are awakening not only to the tremendous power of the city as a factor in human development, but to the necessity of utilizing that force to the uttermost. Useless and overlapping po-

sitions must be eliminated. Favoritism in salaries must be abolished, that adequate salaries for all may be provided. Favoritism in contracts must be eliminated, and rigid inspection must secure a dollar's return for every dollar expended.

The program must be completed by providing for expert administration such as is found embodied in the city manager idea, and by demanding that the movement for specialists in higher offices be continued unabated.

THE CONSUMPTIVE

Philip P. Jacobs

NATIONAL ASSOCIATION FOR THE STUDY AND PREVENTION OF TUBERCULOSIS

FOUR phases of the campaign against tuberculosis will receive particular emphasis this next year: standardization of methods and programs of work, intensive education, more adequate care for consumptives, and experiments in community control of tuberculosis.

In emphasizing standardization, the anti-tuberculosis campaign is following the lines of good business in seeking for efficiency and economy. Narrow programs are being expanded and weak or obsolete methods are being discarded for new ones developed out of the joint experience of the country. By field secretaries, bulletins, special investigations, correspondence and a great variety of other ways, this movement for standardization is being forwarded, and with the result that the tuberculosis campaign is being put on a business basis.

Up to the present time most of the educational work on tuberculosis has been in the nature of a more or less broadcast dissemination of information through exhibits, lectures, the press and in other ways, letting the facts take root and germinate in action how and when they might. While anti-tuberculosis workers at the present time are not neglecting this method of education, they are coming to feel that it pays better to devote their time and attention to particular groups in the community and to work for specific action on the part of those groups. Thus, for example, the school children are being taught intensively by text-book, lecture, exhibit and Red Cross seals and other ways, and this education is resulting in organization and group action by the boys and girls. Intensive education in tuberculosis aims not only to give general information about the nature, curability and preventability of tuberculosis, but also to adopt this education to the needs of particular community groups for the purpose of securing community action.

Out of these efforts for standardization and intensified educational campaigns must logically develop increased provision for the care of the consumptive. In the last analysis "the man who coughs" is the object of the anti-tubercu-

losis movement. During the coming year, and the years to follow, further emphasis will be laid on this most necessary phase of the movement, not so much to relieve individual suffering of itself, but to protect society by the control of the disease.

For example, more provision is needed for the care of children, not only those who have open tuberculosis, of which the number is comparatively small, but for the vast army of boys and girls who are under-nourished or anemic, especially those who have been exposed to infection from careless parents or others, and in whom the latent disease is a constant source of danger. Open-air schools, fresh-air classes, preventorium and similar institutions must be established everywhere.

Hospital provision for advanced cases must be increased from the 40,000 beds now available to at least 200,000. This would allow only one bed for every advanced case.

Still a third phase of the effort to secure more adequate care for consumptives is the emphasis being laid on the care of families as a whole. There is great necessity for more experiments showing how to protect families in homes where one or more members are tuberculous. Whether home treatment can ever be made a final substitute for sanatorium or hospital care is still a question upon which there is no general consensus of opinion, but the experiments that have already been undertaken would seem to indicate that some form of home treatment will lead toward a solution of that most vexing problem, the employment of the discharged or apparently cured consumptive.

The community demonstration movements in Framingham, Mass., and Cincinnati, Ohio, represent the fourth special phase of emphasis in next year's tuberculosis campaign. These movements have for their object the control of tuberculosis and other diseases on an adequate community basis.

CATHOLIC CHARITIES

John O'Grady

CATHOLIC UNIVERSITY OF AMERICA

AT the recent national conference of Catholic charities, attended by five hundred delegates representing eighty-eight cities, considerable interest was manifested in a number of social reform measures. The measures which seemed to make a particular appeal to the delegates were minimum-wage legislation and social insurance. Some of the more conservative delegates who came to the conference rather skeptical about these measures went away convinced of their necessity and feasibility and declared their intention of working for their adoption in their own states.

Other measures in the development of

which the conference is interested for the coming year are the utilization of parish halls as social centers, the prevention of juvenile delinquency, mothers' pensions, cooperation with other charities, and the protection of young girls. In many cities Catholic societies are already engaged in juvenile-court work, an activity expected in the future to become more general.

The striking tendency nowadays to make the Catholic parish a social as well as a religious center is being encouraged by the conference, because of its infinite possibilities for good. The establishment of the *Catholic Charities Monthly* at the Catholic University, under the editorship of the Rev. John A. Ryan, will supply a much needed incentive to the development of literary talent. It will bring about a uniformity of methods and a national outlook among Catholic charity workers.

PROHIBITION

Cora Frances Stoddard

SCIENTIFIC TEMPERANCE FEDERATION

WHATEVER interpretation may be placed upon the results of the November elections in other respects, its message to the forces working against alcohol in the United States was "forward." And this is the spirit in which the prohibition campaign starts upon 1917.

From the legislative point of view, the movement for national prohibition is, of course, paramount. The strength of this movement and the momentum it is gaining will appear in 1917 when certain plans now under way are carried out. In the meantime, legislation looks toward prohibition in the national capitol. A bill is also pending in Congress to shut out of the mails the liquor advertising that is deluging the would-be dry states with invitations to buy drinks by mail. When "the boy of the house," as the mail is sometimes addressed, has urged upon him a bargain collection of "whisky, cigarettes and a revolver," all for one stated sum, it is not strange that there is rebellion against this interference by federal mails in the states that are trying to give their boys a chance.

The immediate future must see an increase in educational methods in dealing with alcohol. It is evident that the dry states have cut out for them at least a generation's work of this kind if their laws are to be observed and enforced and their state life permanently freed from the deleterious influence of alcohol.

The necessity for propaganda is even greater in the states not yet dry. The section east of the Mississippi and north of the Ohio and the Potomac contains the larger part of that population of new Americans who have come to us by

the millions in recent years. Drink is to many of them as much a part of life as food. With stupendous stupidity we have allowed them far too often to have their first contact with American life through the saloon and its friendly offices of helpfulness to a stranger in a strange land. So long as these newcomers are unacquainted with the spirit of the anti-alcohol movement here, they help keep up a demand for alcoholic beverages which encourages manufacture and sale and makes enforcement of legislation difficult. Hence, for the immediate future, to reach and teach our immigrant people facts about alcohol is of almost supreme importance.

More attention must undoubtedly be given by employers and all social agencies to supplying in other ways conveniences which the saloon offers "on the side," such as toilet facilities, the opportunity for fellowship, and the cashing of checks. Wherever these needs are not adequately provided for in a community they ought to be met. The problem of civic centers for recreation, entertainment and fellowship is large enough and important enough to challenge the best efforts of the ablest social organizers.

In the immediate future, therefore, we may expect to see increasingly influential agencies supporting the abolition of the liquor traffic, a tightening up of present legislation, more systematic educational measures in reaching public opinion, a keener civic conscience acting to remove the excuses for the existence of the saloon.

UNPRIVILEGED BOYS

C. J. Atkinson

BOYS' CLUB FEDERATION

THE compelling task set for those directing boys' clubs during 1917 is a propaganda of education through publicity. An intelligent interpretation of their field and mission placed before thinking people should lead to enthusiastic support which will go far to check the great national disease, *boytormentus*.

The under-privileged boy in most communities of 10,000 population and over, is safely estimated at 66 per cent. In this class are the boys of every creed, race and color who for some reason are not getting a fair chance in life. Poverty and the size of the family necessitate the boy leaving school to go to work as soon as the law will allow.

Other agencies working for boys deal chiefly with the privileged one-third, while it is the special mission of the Boys' Club Federation to seek out the under-privileged and plan for the profitable occupation of their spare time.

Preventive work, rather than reformative, is the vital thing because it saves effort, financial outlay and human values, and preventive work is most effective with youth. As between the

boy and the girl, the boy is the most endangered by a ratio of seven to one.

The boys who are most endangered are the under-privileged two-thirds. Over 90 per cent of those who become a charge upon the community are from this group. Before one short decade the under-privileged boys of 1917 will control the political destinies of city and nation.

The organization to cope with this problem must be accessible to all, regardless of creed, nationality or social standing. It must provide sufficiently varied activities to suit the tastes of all. It must respect the code of morals and sense of justice inherent in the boy world. And it must suit its plans to meet the needs and conditions of the local community.

COMMUNITY HEALTH

W. A. Evans, M. D.

HEALTH DEPARTMENT, CHICAGO TRIBUNE

IN giving an opinion on the advances in preventive medicine in 1917 to be reasonably expected, my mind naturally turns first to the disease which gripped public attention in 1916, infantile paralysis. It seems probable that between the discoveries of Rosenow and of Nuzum we are in a fair way toward having the bacteriology of the disease placed on a workable diagnostic basis. Before the onset of the warm season someone, perhaps, will have worked out methods by which every-day physicians may have bacteriologic diagnoses made in every-day laboratories in the doubtful cases and carriers of this disease.

For twelve months an experiment in the control of malaria has been conducted in Bolivar county, Mississippi. The official reports from this experiment indicate that with the solution of a few questions of minor importance feasible working methods for the eradication of malaria will be made known. The unofficial report of this experiment will be published during this year, and we can reasonably expect that the long-delayed attack upon this disabling disease will be begun.

A striking proposal entirely to eradicate consumption from a community is an experiment which will be started at Framingham, Mass., within a few weeks, though the results must remain unknown for several years. For about twelve years the death rate from consumption in the registration area has been decreasing at the rate of a little more than 2 per cent a year. While some cities have reached the period of diminishing returns the country as a whole has not, and we can fairly expect the rate of decline to remain at least at 2 per cent during 1917.

There is still controversy as to the etiology of pellagra. Pallagrins who are put on a diet in which there is enough

protein, and especially if there be enough milk, butter and lean meat, recover from the disease, at least where the change is made early. Furthermore, the symptoms do not return if the patient is kept on a good diet and in good hygienic surroundings. With the spread of this information during 1917 we can reasonably hope for a material reduction in the pellagra death rate.

The cancer situation is in much the same position as was the consumption situation ten years or more ago. Cancer, to be sure, is being made a matter of public interest, and we should be able to notice some slight decrease in the death rate from superficial cancers, but material improvement cannot be expected this year.

As a result of the Safety First movement, which is an offshoot of workmen's compensation, the greatest advance in 1916 has been in reduced accident rates, and I expect to see these gains continue.

The effect of health insurance on both preventable disease and so-called diseases of degeneration will be as great as has been the effect of workmen's compensation on the accident rate. We cannot reasonably hope for the enactment of health insurance laws in 1917, but we can hope that the foundation for these laws will be laid.

Such are our ideals in what has been termed negative health. We see some reasons also for hoping for material improvement in matters of positive health during 1917. The New York Legislature enacted a law in 1916 requiring compulsory military training. It seems probable that in 1917 various governmental bodies will pass similar laws, ordinances or rules. When these laws are analyzed, it is found that they are similar in many of their requirements to the Scandinavian laws, which demand some attention to physical development and training in personal hygiene as a part of the school work. One effect of all such laws is to promote positive health.

TRADE TRAINING

Alvin E. Dodd

NATIONAL SOCIETY FOR THE PROMOTION OF INDUSTRIAL EDUCATION

WITH the passage of the vocational education bill by Congress providing federal grants to the states for stimulating vocational education, there will rapidly be opened up opportunities for definite training in the trades which our young people are entering at the rate of one million a year.

Vocational training can play a tremendous part in the preparedness program. On good authority it is stated that two million eight hundred thousand men are needed at home for every million men in the field. There are shells to be made, powder to be manufactured

and transportation to be provided. Mechanics for army aeroplanes and automobiles and a thousand and one other activities are needed. Every dollar laid out for vocational training in the public school is a dollar laid out in preparedness for peace.

It will be the special effort of the National Society for the Promotion of Industrial Education during 1917 to assist states in taking advantage of the provisions of the vocational education act; to advise in the writing of legislation which will meet the requirements laid down by this measure; to aid in the direction and the extension of surveys which will show the vocational needs of the community, and how to prepare programs of vocational training which will effectively meet those needs; and to give special attention to the training of teachers and to standardizing courses of study.

This will involve a more resolute and definite study of each single wage-earning occupation as a basis for each program of training. Too often our programs are based upon a schoolmaster's notion of what an occupation ought to be rather than upon what it is.

NEW SYSTEM OF VOTING

C. G. Hoag

PROPORTIONAL REPRESENTATION LEAGUE

PROPORTIONAL representation, it may be explained for those not acquainted with the movement, is the representation of voters in legislative bodies by unanimous constituencies instead of by mere geographical districts that are not at all unanimous. Under the present system the constituency of a member of the legislature, or a member of Congress is so many people, who may disagree on everything under the sun, who happen to live inside of a certain line on the map. Under the proportional system it is so many people, scattered over a larger territory, who want the same representative.

In 1917 chief attention will be devoted to the extension of proportional representation in city government, especially in connection with the commission-manager plan. Ashtabula, Ohio, adopted the system in 1915. Springfield, Mass., wanted it, but was refused it by the Massachusetts legislature.

At Washington we expect to introduce two bills this winter, one to amend the Apportionment Act of 1911 so as to permit—not require—any state that elects three or more members of the House to elect them by proportional representation, and the other to amend the Constitution so that in a presidential election the electoral votes of each state shall be assigned to each presidential candidate proportionately to the number of popular votes cast for him in the state.

We shall also introduce proportional

representation into chambers of commerce and other private organizations for the election of their boards of directors or other representative bodies.

In undertaking this program for 1917 we are greatly encouraged by progress abroad. Even during the war proportional representation has been either adopted or extended in Denmark, New Zealand, New South Wales, Holland, Canada and Great Britain. It is already practically certain that the official Electoral Conference now in session in London will decide upon proportional representation for the election of all members of the House of Commons from London and the other large cities of Great Britain.

THE FEEBLEMINDED

Alexander Johnson

COMMITTEE ON PROVISION FOR THE FEEBLEMINDED

PROGRESS in 1917, in this department, will probably mean beginnings of new institutions in Arkansas, California, Delaware and South Carolina; considerable extensions in Ohio, Massachusetts, Illinois, Missouri, Minnesota, Colorado and possibly several other states. Some striking developments of the colony plan are likely, with general adoption of the inexpensive one-story buildings, first devised for the Templeton Colony in Massachusetts and later copied at Menantico and Burlington, N. J., and (with some costly modifications) at Letchworth Village, N. Y.

An important practical movement is that for the after-care of those feeble-minded who, having been successfully trained in the schools, cannot be cared for in a colony, but might possibly do well at work in the outer world. Every school has sent out some of its trained graduates, but the proportion of real success in doing this has not been gratifying. Some feasible and safe plan must be devised and very carefully operated.

A system of after-care now being experimented with in Wisconsin includes the sterilization of adults who have been trained to usefulness, and who then may be released from the training school on probation, sent out into the care of trustworthy employers or friends and allowed at large so long as they do well. They are promptly returned if it proves they need the control of the school, but in any case rendered safe against the danger of procreation. This method may possibly be copied in other states that have sterilization laws, and if it be generally successful, may induce legislators in other states to enact similar measures.

The Committee on Provision for the Feeble-minded is publishing a series of bulletins of great value. The latest, on The Colony Plan, illustrated with pictures of colony buildings and activities, and including a careful statement of the

exact building cost of the Menantico colony for 120 boys, is, in the opinion of the writer, the most valuable document ever published on the feebleminded.

In Florida, Arkansas, Utah and some other states reports will be made by state commissions to their respective legislatures, who may take action or may continue the commissions.

Since the beginning of the work of the extension department of the Vineland Training School in February, 1913, general public interest in the welfare of the feebleminded has grown very rapidly in every part of the Union and is still growing. It is not too much to hope that the care of these defectives will be as efficient in ten or fifteen years as the care of the insane is now.

NORTH AND SOUTH

Roy Nash

NATIONAL ASSOCIATION FOR ADVANCEMENT OF
COLORED PEOPLE

THE new year presents the opportunity of a generation for advancing the status of colored people. Heretofore the only place where the Negro was sure of a living was in the South, which not only pays twelve or fifteen dollars for a month in the cotton patch, but throws in lynchings, insults and disfranchisement for good measure. Now, however, as a result of the stoppage of immigration, over half a million laborers have already come North, finding employment chiefly in the steel mills and on the railroad gangs. In the spring of 1917 will come a greatly accelerated exodus.

To see that this migration is not too much hampered by the police and town councils of southern cities; to drive home the growing conviction in the South that the time has come when they must make it a place where Negro labor wants to stay and work; and to be vigilant lest the prejudices, which will inevitably follow the Negro in his migration, rob him of the fundamental civil rights which he now enjoys in the North—this is the great task before the National Association for the Advancement of Colored People in 1917.

This is the new opportunity; the old perils persist. With the South in the saddle at Washington, the present Congress must be watched and fought if the Negroes in the District of Columbia are not to be segregated and jim-crowed, and the constitutional rights of the colored man still further diminished. Senator Vardaman's joint resolution calling on the attorney-general to submit to the Supreme Court all information bearing on the validity of the fourteenth and fifteenth amendments is but one of a dozen moves aimed at the Negro's civil status which this association will undoubtedly have to fight. And upon the outcome of the Louisville seg-

regation case, which will be reargued before the full bench of the Supreme Court by our national president, Moorfield Storey, depends the status of the entire colored populations in a dozen great cities. If we lose, the Negroes in Baltimore, St. Louis, Louisville, all through the South, and within a few years probably in New York, must accept the status of the Jews in the darkest ghettos of Russia.

The last son of William Lloyd Garrison died last week; the present generation knows not the name of his father; race prejudice is scarcely less bitter in the North than in the South. But the growing enmity toward the Negro is solidifying his forces in self-defense, and the appointment of James Weldon Johnson, contributing editor of the *New York Age*, as field secretary for this association, is a practical guarantee that the unanimity of opinion expressed last summer at the Amenia Conference by the leaders of all schools of thought will work out during 1917. A more united front than colored Americans have presented to their enemies heretofore will result. Nineteen hundred and seventeen may see, also, the beginning of an organized Negro party, which, if the exodus continues until two million colored voters are in the North, will be a considerable political force.

The ancient and peculiarly American institution of lynching will probably receive a setback during 1917, not so much because the N. A. A. C. P. has just raised a small fund which will enable us to put the facts of the more spectacular burnings before the American people, but rather because the combination of the boll weevil and northern opportunity have made the mob an expensive luxury, and the South is becoming convinced that the day is here when they may be lynching their own precious pocketbooks.

CRIME AND PRISONS

Joseph P. Byers

AMERICAN PRISON ASSOCIATION

RECOGNIZING our faults and failures, let us, nevertheless, begin this year with a few good resolutions. For one thing, let us cease to perpetuate an indefensible and atrocious county-jail system. We must forbid their use as a place for the serving of any sentence. The jail, a present place of idleness, hurtful association and immorality, must be superseded by state or district penal farm colonies for all sentenced misdemeanants. The present curse of idleness in our jails must be cured by enforced labor at the farm, and hurtful association in the jail prevented by removing the sentenced prisoners.

Into the handling of the crime and prison question we shall introduce some sort of system. The state, as the cen-

tral authority, must organize, direct and control. It must correlate the work of the criminal courts, peace officers, jails, workhouses, penal farms, prisons and reformatories, so that there shall be unity of purpose and effort in the readjustment of the offender to society.

The evil of clogging with habitual offenders our penal machinery must be cured by the indefinite sentence in the stimulating atmosphere of a rightly conducted penal farm or colony, until the purpose and ability to refrain from further offense are acquired.

But we shall not return incompetent and dangerous persons to society. Boys and girls shall not be turned loose from our juvenile reformatories at the age of twenty-one, or sometimes eighteen, solely because they have attained their legal majority. The twenty-first birthday does not necessarily indicate a change of heart or the acquirement of wisdom and self-control expected of the average citizen.

Nor will we subject the mentally defective to processes designed for the control and reformation of the criminal and delinquent. The mentally deficient we shall segregate in properly equipped institutions or colonies for the feebleminded.

And lastly we shall eliminate party politics from the management of our penal institutions, select our officials on the one standard of fitness, give them at once responsibility and authority, establish by law those fundamental principles necessary for their guidance, and leave to them the working out of details.

CONTROL OF CANCER

Curtis E. Lakeman

AMERICAN SOCIETY FOR THE CONTROL OF
CANCER

A WELL-KNOWN statistician recently prophesied that cancer, which caused 80,000 deaths last year in the United States, will take an annual toll of 120,000 lives by 1922 unless the American people bring to bear all possible forces to combat this disease. Whether or not this estimate of cancer increase be accepted, there will be general agreement that the present excessive mortality from malignant disease calls for systematic efforts to effect a reduction. That perhaps half of the 80,000 yearly deaths are unnecessary and preventable, and that, contrary to the too common belief, cancer is really curable if treated in time, is the platform on which the American Society for the Control of Cancer is organizing the nation-wide crusade against this insidious enemy of adult life.

The principles of the war on cancer, which are possible while scientific investigators continue their indefatigable efforts to determine its innermost nature and cause, are few and simple. They

have been admirably stated by Dr. Charles P. Childe, an English surgeon. The program of practical measures set forth in Dr. Childe's book, *Control of a Scourge*, is essentially that of the American Society for the Control of Cancer, and consists of the special instruction of physicians, nurses, social workers, members of women's clubs, health associations and all others who should take the lead in disseminating the elementary facts about cancer. Finally, this program includes the direct teaching of the public through lectures, newspaper articles, exhibits and the distribution of circulars.

With the cooperation of the Council on Health and Public Instruction of the American Medical Association there will soon be issued a standard pamphlet on cancer which is intended to be the most serviceable and authoritative publication so far given to lay readers in the American campaign.

In further development of plans for public instruction, the society is preparing an exhibit of eighteen or more charts which will illumine rather than illustrate the subject of cancer while conveying in simple language the message of hope in early treatment. Likewise, a collection of lantern slides suitable for public lectures will be still further developed, and selected sets therefrom, accompanied by approved lecture notes, will be recommended to speakers representing state and local cancer committees and other organizations.

In order that all practicing physicians may be made familiar with the latest knowledge of cancer and its early diagnosis, special bulletins for practitioners will be prepared, articles will be regularly published in professional journals, and state public-health authorities will be urged to provide laboratory facilities to assist physicians in the early diagnosis of cancer.

Soon after the first of the year the United States Bureau of the Census will issue its long-awaited report on the statistics of cancer mortality. As planned and developed with the advice of the Society, this is expected to be the most detailed and thorough study of its kind ever published by any government. Meanwhile the collection of statistical data and efforts to improve the registration of cancer deaths will be continued through the work of several special committees.

In the field of public-health nursing, special literature is being sent to several thousand of the leading local associations and workers. State nurses' associations and all the principal schools of nursing will again be urged to provide adequate instruction regarding the early symptoms in order that graduate nurses may be qualified to give sound advice leading to immediate professional consultation upon the recognition of the danger signals of cancer.

IMMIGRANT GIRLS

Helen Winkler

DEPARTMENT OF IMMIGRANT AID, COUNCIL OF
JEWISH WOMEN

A LARGE influx of unattached women and girls of all faiths and nationalities from all the warring countries—this is what our experience of the last year leads us to anticipate will be one of the striking features of the new immigration that is to follow the coming of peace.

Since last winter, when immigration reached its lowest ebb, the tide has steadily risen, until in November of this year there arrived at the port of New York alone no less than 356 girls and young women, of whom 138 were absolutely alone and without near relatives in this country. Bear in mind that the vast majority of these girls came from the provinces of western Russia and southern Europe; that the difficulties in getting to a neutral port are all but unsurmountable, and the expense, for the cheapest possible combination of land travel and steerage, at least 500 marks; and you will be helped to some realization of the situation that drives these girls to the desperate step of emigration—the broken homes from which fathers, brothers and husbands have been torn away, the dearth of industry, the ruinously high cost of living. Is it not a safe prediction that, with the coming of peace, multitudes of bereaved daughters and young widows in all lands will seize upon the first opportunity for escape from the intolerable conditions which surround them?

Through the Council's 75 local sections, a membership of over 20,000 women stands ready to aid the newcomers in their difficult adjustments. In the seven port sections the port agent meets the girls detained by the federal authorities pending the arrival of responsible relatives or friends, talks with them in their native tongue, aids them in finding relatives—often a difficult task, for addresses at the best are several months old, and many times the immigrant has not even these and has only her memory on which to rely.

Four benefits, in particular, this care of the Council aims to assure to the immigrant girl:

(1) Suitable housing. This usually means, when no near relative is prepared to offer her satisfactory living quarters, a boarding home among people interested in the girl's welfare and her rapid Americanization.

(2) Suitable work. By this is meant not merely the immediate job which shall make the girl economically independent, but work where any experience or aptitudes she may have will find full scope. To aid in this work of vocational guidance, a digest has been completed at the headquarters of the department in

New York of all the investigations made, whether under federal, state, municipal or private auspices, during the last six years, of the trades in which Jewish immigrant girls are chiefly engaged.

(3) Training in English and civics. Here the aim is to cooperate with municipal departments of education. Sometimes the only available opportunity is the public night school, but more and more special classes are being formed in industrial establishments and in settlements and immigrant girls' homes, where smaller groups, better classification, and a friendly and social atmosphere help to make instruction more attractive as well as more efficient.

(4) Contact with every opportunity for wholesome recreation and for self-culture that the municipality offers. This means individual introduction of girls to synagogues, social centers, libraries, museums, lectures, concerts and the like.

WAR AND PEACE

Crystal Eastman

AMERICAN UNION AGAINST MILITARISM

THE radical peace movement, barely two years old, which is America's best answer to the war in Europe, has three main emphases: to stop the war in Europe; to organize the world for peace at the close of the war; and to guard democracy (or such beginnings of democracy as we have in America) against the subtle dangers of militarism.

With regard to the first aim, the moment of achievement seems to be at hand. Surely the President's note makes the possibility of neutral action for peace almost immediate. If now we can gather together and express an overwhelming public opinion in support of that note our task will be done. The liberal and pacifist groups in the belligerent countries will do the rest.

As for international federation at the end of the war, this is the supreme moment for action. We have the hope of the world in those Hensley clauses of the navy law which request the President to summon the nations into conference at the close of the war to "consider disarmament" and organize for peace. The establishment of an international tribunal to settle disputes between nations has become a political possibility. We, the United States of America, through the action of our Congress, have taken the first step.

To make the Hensley clauses live in the mind of every American, to make them dominate the thoughts of the President, to make them ring through Europe as a promise of relief, to make them known throughout South America as a guarantee of our good faith, to accomplish this *now* before the war is over—and then at its close to create such a demand for action on them that President Wilson will not sleep until he has writ-

ten and dispatched to the heads of all the governments a classic summons to the World Congress which shall end war! There is a New Year's resolution for every pacifist in America.

But what shall we do, meanwhile, about the growing demand for compulsory military training and service in this country?—a demand stimulated by the self-interest of capitalists, imperialists and war traders, but supported by the sincere emotions of thousands who call themselves democrats? To defeat this combination we need the constant, uncompromising opposition of all those lovers of liberty who can *think*. We must make this great American democracy know, as we know, that military training is bad for the bodies and minds and souls of boys; that free minds, and souls undrilled to obedience are vital to the life of democracy. We must make them see the difference between equality and freedom; if forced military service is "democratic," in the same sense prison life is democratic.

To repeal conscription where it has crept into our laws, to keep Congress from passing the Chamberlain Bill for universal training, to keep the other states from following New York—to hold the fort for liberty over here, until the nations are actually gathering to establish organized lasting peace—until, in short, every fool can see the folly of war preparations—that is the pacifists' third task for 1917. It is a task worthy of the grimmest and the gayest fighters among us.

THE SHORT BALLOT

H. S. Gilbertson

NATIONAL SHORT BALLOT ASSOCIATION

EVERYBODY believes in the short ballot. Why don't we get it?

The chief obstacle is the state constitutions. In them are imbedded the conditions which we are undertaking to combat and the offices which we seek to tie up to a responsible executive. Where constitutions do not impose an obstacle, and particularly in city government, short-ballot progress has been amazingly swift. The more than four hundred cities under commission government and the forty-odd cities under the commission-manager government testify to this fact.

And so in the coming year or two we shall not be looking for sweeping short-ballot reforms in any of our state governments. Here and there an inconspicuous officer may be removed from the ballot and properly tied up to his official superior. In Massachusetts we may look for accomplishments, since Governor McCall and many of the leaders of the Republican party have long since seen the light and have expressed themselves as anxious to do something by way of shortening the state ballot. But action is more likely to come from the constitu-

tional convention, the members of which will be chosen in May, than from the legislature. In Illinois the legislature will be confronted with the need of a constitutional convention so as to give the state government, the counties and the cities the going over which they so richly need.

Counties are the key to so much that is wicked in our governmental scheme generally and to so much of the sort of political reconstruction which proceeds from the ground up, that constructive effort in this particular field is likely to loom big upon the horizon in coming years.

Much the most promising prospect for immediate action at the hands of the 1917 legislators lies in enactments permitting cities to go one step further toward simplification in government. Nearly all the states now have statutes permitting their cities to adopt the older form of commission government. The demand for this type has, however, practically ceased. Commission government has its conspicuous weak points. It overlooks the importance of a responsible chief executive and undertakes to secure expert or semi-expert heads of departments by the election route. The commission-manager plan, on the other hand, which has gained enormously in popular favor in the past few months, keeps the elective board with its complete responsibility for the government of the city, making it, however, only a legislative body, and provides an expert chief executive in the person of the city manager.

The year 1917 is likely also to see some important legislative attacks on the heretofore neglected problem of county government. It was California, in search of ways and means of putting the short ballot into effect in 1911, which made that state the pioneer in this field. For California permits counties to frame their own charters after the manner in which cities have exercised this right in that state for upwards of thirty-five years. This method of handling the county problem is probably not practicable in other states, since few of them are accustomed to home-rule methods. Something in the way of an optional county law will be submitted to the consideration of the New York legislature. In Kansas and Washington, according to present prospects, there will be efforts made toward constitutional revision to effect the desired ends.

CHILD LABOR

Edward N. Clopper

NATIONAL CHILD LABOR COMMITTEE

THE forces fighting for child labor reform are striving to increase children's opportunities for education. The same measure of protection and education designed for children in factories and stores must be extended to children

exploited in agriculture, domestic service and other unregulated forms of industry. Nearly three-quarters of all the children ten to fifteen years of age, reported by the census of 1910 as engaged in gainful occupations, were in agricultural pursuits. No child labor laws apply to them, and observance of compulsory education laws in rural districts is notoriously poor. The studies of the National Child Labor Committee reveal serious interference with school attendance where children are employed in the cultivation and harvesting of cotton, sugar-beets, tobacco and garden truck. In many sections school facilities are so inadequate that federal aid will have to be granted to the states for elementary education so as to wipe out illiteracy, just as the promotion of vocational education will probably receive financial support from the nation.

The work done by a child in any form of industry is an essential part of his education, and therefore both the selection of the job and his work in the job should be to some extent under the control of the public school authorities until he is eighteen years of age. Full advantage should be taken by every school superintendent authorized to issue work permits, of the opportunity afforded to study the problems of children in industry, for in no other way can so much valuable information bearing on vocational education be obtained.

The passage of the Federal Child Labor Act has brought the whole country face to face with the necessity of establishing vocational schools for children under sixteen years. As the federal act limits the work-day of children between fourteen and sixteen years in factories, mills, workshops and canneries to eight hours, many manufacturers will probably discharge all children under sixteen years of age in their employ rather than change their schedule of work hours so as to permit them to quit at one time while the other employes quit at another. And even if the manufacturers subsequently returned to the policy of employing such children the number taken back would hardly equal the number formerly employed. Hence the children will return to the schools; many of them will not be satisfied with the ordinary general education courses and will demand special courses to meet their peculiar needs. The schools will have to respond to this demand.

It is not enough, however, to assure the education of the child through the establishment of schools, the requirement of attendance and the removal of the child from industry. Mothers' pensions must be provided to preserve the integrity of the home in cases of poverty and enable poor families to comply with both the child labor and compulsory education laws. There is an intimate relation among these three great fields of labor.

education and dependency, and one cannot be dealt with independently of the others. Hence one of the most urgent needs is the codification, standardization and coordination of child welfare laws by official commissions appointed by the several states.

But after all this desirable legislation is secured there still remains the tremendous task of administration. Before the full benefit of the laws can be obtained there must be worked out through study and experience plans of organization and administrative methods for adequate and effective enforcement.

UNITARIAN PLANS

Elmer S. Forbes

AMERICAN UNITARIAN ASSOCIATION

THERE is the personal service which every Christian is bound to render if he is remotely true to his profession. There is community service which requires that Christians and churches of all names should work together for the common good, perhaps under the Christian name, perhaps simply under the inspiration of the Christian spirit, if really great things are to be achieved. Then, finally, there is the immensely important work of shaping and moulding public opinion in respect to important moral questions which ultimately must call for action by state legislatures or the federal congress.

In the year to come we hope to bring home to more individuals than ever before the obligation to serve their fellows. Service is the acid test of religious sincerity.

Community welfare demands the cooperation of churches of every name. Living conditions, public health, local industrial problems, recreation, honest and economical administration of government call for the united efforts of all.

Within that sphere of service which deals with great moral issues there is no question at the present moment of more importance than the reorganization of the world after the war. Civilization has broken down; it must be built up again slowly and carefully, and if possible, permanently. Certain it is that lasting peace can be based only on mutual confidence and good will. The cultivation of a friendly spirit towards other nations and races is essentially a task for the churches. They have in their membership a large proportion of the intelligence and wealth and power of this country, and any policy to which this body of influential men and women give their support will probably become the policy of the nation.

So far as the United States is concerned, the establishment of friendly relations between ourselves and other nations is closely connected with our immigration policy. At present it is neither reasonable nor just. Our government has torn up solemn treaties with all the

cynical indifference of European belligerents, and is guilty of grossly unfair racial discriminations that would shame any backward nation. To set our own house in order is our first step towards permanently friendly relations with the rest of the world. For this the adoption of a just and sound immigration policy is essential. To educate the conscience of their members in this matter is the important social service task of the churches.

THE RED CROSS

Ernest P. Bicknell

DIRECTOR-GENERAL AMERICAN RED CROSS

THE past year has been one of expansion in all directions, and in the matter of organization and equipment we are prepared to enter upon a new era. The splendid new building, which has been erected for national headquarters of the Red Cross by the generosity of Congress and of a few patriotic men and women, is completed, and we shall feel that its occupancy at the beginning of the new year will be an augury of what is to follow.

While we cannot foresee the amount of disaster relief which we will be called upon to undertake, past experience demonstrates beyond doubt that such work will come to us in considerable amount. Our European war-relief work must go forward, and with the experience already gained by Red Cross agents at home and abroad, and with a better knowledge of conditions, there is reason to hope that if the war must continue the helpful efforts of the Red Cross may become increasingly effective in 1917.

On the side of preparing the Red Cross to meet the very heavy responsibilities which would fall upon it in case of a war involving our own country, important expansion of plans and equipment have been well begun, and will go forward with vigor during the ensuing twelve months. A system of base hospitals has been outlined which will eventually provide the Red Cross with the complete professional personnel and physical equipment for twenty-five hospitals, each with a capacity for 500 patients. The consummation of this plan will involve the enrollment and proper organization of more than 2,000 persons, chiefly physicians and nurses, and an expenditure of approximately \$750,000. A good start has been made, and it is hoped that this large project may see its completion before December 30, 1917.

CHURCH SOCIAL WORK

Charles S. Macfarland

FEDERAL COUNCIL OF THE CHURCHES OF CHRIST
IN AMERICA

THE third quadrennial meeting of the Federal Council of the Churches of Christ in America, recently

in session at St. Louis, was marked particularly by the entrance of the churches into international relations. During the year 1917 the Council will either initiate or carry forward with renewed emphasis its nation-wide movement for the relief of suffering in Europe and Asia, the deepening of its relationships with the churches and their leaders in Europe, especially in the belligerent nations, the financial assistance of the Huguenot churches in France, and the home mission work in France and Belgium. Above all, its efforts, in association with the World Alliance for Promoting International Friendship through the Churches, will be spent in bringing to bear the influence of the Christian spirit in reshaping international diplomacy.

By enlarging the Federal Council's Commission on Relations with Japan a Commission on Relations with the Orient it is hoped that good-will and friendship between the East and the West may be deepened as they cannot be by ordinary diplomatic procedure.

In accordance with the report of the Commission on the Church and Social Service, the Council will especially seek to put into increasingly practical operation the social platform of the churches, reaffirmed in 1916, especially in the direction of unemployment, housing, recreation, commercialized vice and prison reform. In industrial communities attention will be given to such problems as overwork and the living wage, in a way which shall not simply attempt palliative measures, but seek the realization of an industrial democracy through the fullest possible cooperative control and ownership of industry and the natural resources upon which industry depends. A definite campaign for the conservation of human life has been placed under the direction of a secretary whose equipment for the task ought to insure success.

As the result of a comprehensive and intensive survey of the field of education, the Council's Commission on Christian Education is charged with finding the readjustment between so-called secular and religious education in order that the former may not be restricted, but also that the right of the child to a full religious education may not be denied.

In the realm of temperance, the Federal Council Commission will seek to supplement the legislative activities now so prominent by a more adequate educational propaganda, and especially by an attempt to organize a Temperance Fellowship in the ranks of labor.

Above all the Council will seek to bring about in cities, rural communities and home mission fields a genuine cooperation which shall be more than a mere expression of Christian good-will from one church toward another.

TRUANT CHILDREN

W. L. Kuser

NATIONAL CONFERENCE ON THE EDUCATION OF TRUANT, BACKWARD, DEPENDENT AND DELINQUENT CHILDREN

IT requires little prophetic genius to look into the coming year and see crowding and pressing forward an array of grim, stern and uncompromising problems of national, state and community concern.

The children's conference as an organization may not be able to leave any great impress upon affairs, but inasmuch as we are devoting our time and effort to caring for and training the nation's greatest asset, perhaps we may be able to render a service to our fellow men. We are primarily interested in the development of those classes of children who need attention from municipal or state authorities.

So frequent are criticisms of institutions for delinquent children that one full session at the Pittsburgh meeting of the conference next June will be devoted to the discussion of An Institution Program for Delinquents.

Even more important than the training given by the school or the institution home is the after-care of the institution child. The necessity for ample, intelligent and sympathetic after-care for unfortunate children is recognized by all, yet much is to be done in many states before this element of our human reclamation project can be praised. This subject will be given attention under the head After the Institution, What?

Many believe that the place the public schools occupy in the social order might be of more real worth in fitting boys and girls for their life work. Why does an army of children drop out of school each year? What is at the bottom of the "hooky" habit? Truancy and all that it leads to is a most vexing and serious question, which will be given attention at one session of the next conference.

At another joint session held with the National Probation Association it will be shown how much is being accomplished by probation and how the stigma attaching to a term in the workhouse, reformatory or prison is being avoided by suspending sentence and parole.

Small towns and rural communities are all but omitted in considering the question of juvenile delinquency. Under the topic, Delinquency in Country Districts, evidence will be given to shatter the common belief that big cities alone present difficult social problems.

In dealing intelligently with children who find their way into charitable or eleemosynary institutions a complete and accurate pre-institutional history of the children and their antecedents is a very great help.

There are other questions of vital con-

cern—the breeding of mental deficient; sensational and vicious moving pictures; pernicious literature; vocational and industrial education; community civics; medical attention, including care of eyes and teeth.

Too long have we been noting symptoms. We must get back to causes.

SOCIAL HYGIENE

James H. Foster

AMERICAN SOCIAL HYGIENE ASSOCIATION

WHEN the problems that collectively are recognized under the name of social hygiene came to be talked about on a common-sense basis and began to be accorded the same privileges of discussion and publicity as other questions of health, morals, education and economics, the progress of the social hygiene movement was assured.

As a public health movement, social hygiene is directed especially to the reduction of venereal diseases, through provision for the care and treatment of the infected, the protection of the uninfected public, and the removal of environmental and other factors tending to the spread of these diseases. Nineteen hundred and seventeen should see all state departments of health providing laboratory facilities for the diagnosis of syphilis and gonococcus infections, a service which many states already furnish. It should see progress toward the provision of adequate dispensary and hospital facilities for the treatment of venereal diseases. Social service follow-up work is an essential part of this program.

Repression of prostitution is one of the most important measures for the reduction of venereal disease as well as for the upbuilding of moral standards. To substitute repression for regulation in the few cities which still cling to that discredited policy is an important part of the 1917 campaign. One of the most effective means of repression is the so-called injunction and abatement law now in force in twenty-six jurisdictions. The results of the law have so placed it outside the field of controversy that effective campaigns for its adoption in the remaining states ought easily to be organized.

A more reasonable view of sex education has largely taken the place of the exaggerations of a few years ago, and in 1917 there should be an efficient and widespread propaganda for proper instruction in matters of sex through the home, the church, and the medical and nursing professions, with the assistance and cooperation of the school and other agencies.

It should not be forgotten that "every step in the improvement of government—local, state and national; in decreasing the consumption of alcohol; in improving popular education; in bettering home

conditions; in rationalizing industry; in providing larger facilities for innocent and normal amusements; in improving our methods of dealing with the recreant and the delinquent" is a step for the advancement of social hygiene.

SETTLEMENTS

Robert A. Woods

SOUTH END HOUSE, BOSTON

A HIGHER technical standard for all work done without loss of that freedom of approach which belongs to the amateur and the volunteer; the further exaltation of the neighborhood as the network of relations in which the best results of public-health service, education and the organization of recreation can be secured and made effective; closer touch with the out-of-school problems of boys and girls in the local neighborhood, through the series of studies now being carried out by the National Federation of Settlements; greater emphasis upon eliciting all forms of neighborhood initiative, individual and collective; increased effort toward the systematic federation of the work of settlements and similar agencies through the whole extent of each city; application of settlement knowledge and experience toward the relief of the congestion of population and in general toward securing the human results of city planning; better relations with working-class leaders, on the one hand, and with forward-looking employers, on the other, whether or not they accept trade-unionism; surer training of the workmen of the future, both technically and cooperatively, so that they may be capable of bringing in a more productive and more cooperative type of industry; increasing participation in the rising national tendency for the curbing of demoralizing indulgence, whether of the rich or the poor, emphasizing settlement example and precepts in the direction of narrowing the extreme conditions of life; and finally a revival of that democracy of the spirit which was the atmosphere of the settlement in the early days—these are the hopes of the settlement work of the future.

EXHIBITS BY MAIL

Charles F. Powlison

NATIONAL CHILD WELFARE EXHIBIT ASSOCIATION

BECAUSE the cost of constructing and holding an exhibit was, for many communities, almost prohibitive; because at the close of the exhibit, the bulky material had either to be wastefully destroyed or stored away—often at considerable expense; and because the bulkiness of the exhibit panels unfitted them for use in small quarters, or widely scattered communities, the National Child Welfare Exhibit Association, in order to overcome these handicaps.

evolved the Parcel Post Exhibit idea. This puts into compact form a composite of the best exhibit ideas on a given subject.

The association therefore has begun, in a systematic way, to construct a series of panels covering the various aspects of child development. The first subject treated is child hygiene in its various phases. It is so arranged as to define clearly the respective responsibilities of the home and the community. Starting with prenatal care, it portrays the hygienic measures necessary to the health of the infant, the school-child and the adolescent. It shows how the home and school must cooperate, and depicts the modern methods of conserving community health.

The size adopted—the largest size compatible with the parcel post regulations—makes it available wherever Uncle Sam will deliver a letter. Thus there is opened to this form of education a vast and needy territory hitherto almost untouched. From the walls of country churches, post-offices, and district schools the message of child welfare may be proclaimed. The panels are illustrated with photogravures in color, and are so attractive that if they are shown at county fairs the care of children will arouse as much interest as blue-ribbon cattle and prize pumpkins. The state and local boards of health will find their task of educating their communities vastly easier with the aid of this exhibit.

In the city the Parcel Post Exhibit can exert an enormous influence through the public and parochial schools, traveling from one to another, and serving as a basis for class-room instruction and for study by the Parent-Teachers' Association. In this way it should touch the life of every teacher, every child, and every parent. In the hands of the extension divisions of the state universities, boards of education, the churches, women's clubs, district nursing associations, settlements, friendly visitors, for special use in baby week campaigns and health weeks, and all other social agencies, the exhibit is invaluable.

The prime object of the association for 1917 is thus to furnish an effective weapon for social advance by gathering, digesting, and correlating the facts of child life and child development, and by picturing these facts in an arresting and vital way.

FAMILY PLANNING

Francis H. McLean

AMERICAN ASSOCIATION OF SOCIETIES FOR ORGANIZING CHARITY

AS I go about among those societies, Associated Charities, Social Welfare Leagues, and what not, I see a greater and greater realization coming of the value of intensive family planning, a grow-

ing devotion to the ideal that no healthy social progress can be had without it. I see a larger attention to the actual treatment of subnormal mentalities in the home, when institutional care is not possible; at the same time, a larger participation of our societies in stronger movements for the state care of the feebleminded, larger achievements in the way of legislation, made with their help.

There are societies which are taking up the "home as a social center," in individual family groups, endeavoring to increase the attracting powers of the home in its recreational, its occupational, its educational, its child training, its home-keeping aspects. As subsidiary to this, I believe there will evolve during the next year one or more exhibits of the Home as a Social Center and loan game departments through which different sorts of home recreations, including music boxes, shall be intelligently used in connection with individual plans for recreation for individual families.

A closer attention will be given to the educational development of the children; an increasing watchfulness to make sure that the child loses not a day at school unnecessarily, working in closer and closer understanding with efficient school departments, fighting to strengthen those which are inefficient.

In 1917 will be seen, perhaps, some growth in the direction of organizing the forces of rural counties for social work. We shall work on in close companionship with public health agencies in this field. The one needs the other, and the counties need both.

And these few things take no note of the diversified plans of our agencies in the legislative, administrative, community planning and family planning problems which confront them all over our broad land.

PROBATION

Charles L. Chute

NATIONAL PROBATION ASSOCIATION

THE greatest needs in probation work are improved administration, coordination with other social-service work, and extension through the employment of an adequate number of personally qualified, properly salaried probation officers in all courts dealing with offenders.

Probation, which is the application of modern ideas of social investigation and social service to the administration of justice, is provided for by law in some of the courts of forty-six states and two territories. At least 1,000 publicly salaried probation officers are at work today in the nation, and a conservative estimate places the persons of all ages on probation during the past year at more than 160,000.

On the other hand, it is doubtless true

that the majority of smaller communities have not yet heard of the advantages of probation, and almost nowhere outside the largest cities is there a well-equipped, well-coordinated probation service in any court. Even in the large courts an insufficient number of probation officers is provided, for securing good case work. Standards of work and of training and ability for probation officers have only begun to be formulated and cannot be generally applied without greater public support.

Probation as an integral part of court work,—its investigating and follow-up service,—is public work, hence the public must be educated to appreciate its merits and its needs.

Those states which have established separate state probation commissions (New York, Massachusetts and Vermont) have secured such marked results in better standards, uniformity and extension of probation that it should not be long before other states establish departments or bureaus of the same character. Such departments can effect a supervision and extension of probation which is greatly needed.

The federal courts, strange to say, have lagged behind state courts in a number of things. For one, they have no probation law. The Supreme Court of the United States has recently decided that the federal courts have no power to suspend sentence under present statutes. A probation law for the United States district courts is urgently needed. A bill modeled after the best state laws on probation has been pending in Congress for several years. It is known as the Owen-Hayden bill. This is being actively pressed at the present session of Congress by the National Probation Association and other organizations.

With the passage of this measure the federal courts will set an example to the backward states which should act as a strong impetus for the development of a well coordinated probation system throughout the entire country.

BOOKS FOR THE PUBLIC

George B. Utley

AMERICAN LIBRARY ASSOCIATION

THE American Library Association is now in its forty-first year of organized life, and during these four decades the marvelous progress of libraries—tax-supported municipal libraries, school and college libraries—has almost made this the library age. The public library has, in this period, been transformed from a collecting and preserving medium into an agency which selects carefully its material from the ocean of print and then spends its greatest effort at making known and distributing books and other printed matter throughout the community which supports it.

The European war has had its effect

on libraries as on everything else. In Belgium a small group is working for a system of traveling and community libraries, free to all the people, in an effort to bring the influence of good books to practically a non-reading population. France is anxious to install after the war a nation-wide system of free tax-supported libraries, modeled after our American public libraries. The American Library Association has recently appointed a strong committee to study the European library situation and report to the association ways and means by which the libraries of this country can aid European library development after the war.

The war has made importation of books and periodicals from the Central Powers exceedingly difficult, and this restriction has been a serious handicap to physicians, chemists, engineers, college professors and many other professional classes. A special committee of the association is endeavoring to secure a better recognition of rights to import educational literature for public, university and reference libraries.

"Good book week," inaugurated a couple of years ago by the Boy Scouts and heartily endorsed by the American Library Association, has been widely observed this month throughout the country, and plans are already under way for even a greater and wider observance next year. Thousands have come to know their rights in their own local library through the various local campaigns, and to make a wider use of their privileges in their business and in their leisure.

In the coming year many technical subjects will receive considerable attention which are of small interest to the public, although the conclusions reached affect the quality of service to the people very materially. These include questions of library training; legislation in various states; the study of libraries in hospitals, prisons and reformatories; collection and tabulation of library statistics so as to give boards and libraries a more accurate view of their own library in relation to others; the matter of inter-library loans, now assuming large proportions; cooperative printing of book lists; better classification, and greater publicity for library work. Libraries possess the facts and are prepared to give service profoundly influencing the work of business, professional and wage-earning men and women, but they are having a hard time getting this condition generally known. Too many still think of the "library" as merely a repository for novels, poetry, children's books and other cultural and recreational reading. If these could only be made to think of it as a laboratory for business, and as the twentieth-century man's *vade mecum* of up-to-the-minute information!

OUTLOOK OF Y. M. C. A.

R. C. Morse

YOUNG MEN'S CHRISTIAN ASSOCIATION

THE Young Men's Christian Association of North America enters the year 1917 with greater resources in men and money, workers and equipment than ever before, yet the program of work announced taxes and overtaxes these unprecedented resources.

The call from Europe for the cooperation of the International Committee through its general secretary, John R. Mott, has been so urgent that during 1916 more resources in men and money have been expended among the millions in prison and hospital, in camp and in the trenches and upon our own soldiers on the Mexican border than upon all the rest of the committee's work at home and on other continents than Europe. Enlargement of this soldier work in 1917 is imperative.

On the home field in North America the 75,000 student members in over 700 universities, colleges and preparatory schools are raising \$150,000 in aid of fellow students under arms in Europe.

In the labor field the Association is entering upon a service apparently unlimited. Among railroad workers during ten days of November 38,000 men were added to a membership of 85,000 at 250 terminal points. The whole railroad industry is only an open door into similar association work among lumbermen, miners, mill hands, factory operators, shopmen and industrial workers of every class.

From among the 8,000,000 boys in North America of "teen" age, the age of storm and stress, a greater number than in any previous year became Association members in 1916. Many more are coming in 1917 to swell their percentage of the total membership to 50, a mark leaders are expecting will soon be reached.

But the vision and service of the North American Christian brotherhood are extending more and more to the young men of the non-Christian world of Asia and other continents. The Cleveland Convention of 1916, with enthusiasm, instructed its International Committee to increase its present foreign staff and the annual expenditure for 1916 of half a million dollars.

IMMIGRATION

Joseph Lee

IMMIGRATION RESTRICTION LEAGUE

THE Immigration Restriction League believes in the enactment into law of the bill including the illiteracy test which has again passed House and Senate, not because this test is perfect any more than any other piece of legislation existing or probable, but because it is the best that has ever been

suggested and is the only effective test that has the slightest chance of being adopted.

The measure advocated by those who oppose the illiteracy test is proportional restriction, that is to say, keeping the immigration from each country down to a certain fraction of the numbers from that country already here. This, of course, is not a test, and no way has ever been suggested for selecting the ones to be excluded. They might be the very best that offered from each country. Such an act might be, however, worth considering after the illiteracy test has been passed.

The case for restriction in general is first, that it is the only possible way of appreciably raising wages in this country. By restricting immigration we could so greatly increase wages that various methods of outdoor relief, such as health insurance and old-age pensions, would not be needed. People who do not want to restrict immigration do not want wages to rise, or to have the slightest possibility of rising. They may have a pious hope in that direction, but they are averse to the only measure by which such hope can by any possibility be realized.

The other reason for restriction is that upon the whole the illiterate members of the less progressive races—who would constitute the element excluded—are not such good material for citizenship as the average of what we have here now. It is very generous and very modest of Americans to say that the less desirable Sicilians are better folks than we are, but why have they never shown it in Sicily?

The majorities in both the Senate and House have been so large and so increasing of late years that there seems a good hope the measure will become law.

HOME AND SCHOOL

Helen T. Birney

NATIONAL CONGRESS OF MOTHERS AND PARENT-TEACHER ASSOCIATIONS

THE most potent influences for child welfare rest in the home. Therefore, to help every home to give care and guidance which shall develop the possibilities of health, of mental strength and high ideals of life is the continued policy of the National Congress of Mothers and Parent-Teacher Associations. By systematized cooperative plans the Congress will strive in 1917 to double the number of homes to which educational help shall be given.

It will teach the care of babies, and hopes to reduce infant mortality 70 per cent. It will encourage the development of moral habits. As parents have eight times the educational work that teachers have, the Congress has opened the way for all parents to have practical suggestions in all phases of their work, that they may gain better

insight into methods that bring out each child's individuality, and may thereby be enabled to conduct home education with sympathy and intelligence.

But with the schools, also, the Congress will cooperate, encouraging habits of thrift and thoroughness in work, and wider use of the reading courses for parents, boys and girls, prepared by the Home Education Division, Bureau of Education, as well as the bulletin on 1000 Good Books for Children (which has proved one of the government's six best sellers), prepared by the National Congress of Mothers and Parent-Teacher Associations and published by the Bureau of Education.

The Congress will continue to promote the organization of parent-teacher associations, mothers' circles, child-welfare circles and parents' associations in churches throughout the country, doing all in its power to make them more effective, through emphasis of its great objects: (1) Study of child nurture and home-making; (2) Study and promotion of child welfare outside of home and school; (3) Cooperation with teachers.

In order to enable immigrant mothers to participate in all advantages every effort is to be made to teach them English. The better understanding and treatment of wayward children and truants, which has engaged the study and work of the Congress for twenty years; the extension to every state of legislation for the establishment of kindergartens on the California plan; the extension of mothers' pension laws, one of the most valuable agencies in the promotion of child welfare; the improvement of probation systems; improved administration of juvenile courts; the establishment of child hygiene departments in every board of health, are among the important measures which the Congress will continue to promote. The cooperation with government departments which has been so valuable will be continued in larger measure.

THE EIGHT-HOURS DAY

Agnes Nestor

NATIONAL WOMEN'S TRADE-UNION LEAGUE

WE want the eight-hours day. That will be our slogan. With forty state legislatures and Congress in session during the next year we will carry on campaigns to make the eight-hours day universal for women throughout the country.

When we go before the state legislatures and to Congress with our eight-hours bill we will not be presenting a new or radical measure. We will be asking only for what has been enacted into law by California, Washington, Colorado, Arizona and Wyoming and by Congress for the District of Columbia. These laws have been in effect a suffi-

cient time to see them fairly tried out, and industries, laundries, stores, hotels and restaurants have been regulated to an eight-hours day.

This same legislation has been pending before legislatures in many of our states for several years. Our legislators are acquainted with the measure, and in many districts it has been made an issue during the campaigns, particularly this last year. It was a sufficient issue in Illinois to have the state Democratic convention insert in its platform the plank declaring for an eight-hours day for both men and women. The state Republican party declared for a reduction of hours for women, and we expect them to interpret this as an eight-hours day.

The National Women's Trade Union League is ready for this campaign, both through its national and its local leagues. Inter-state conferences on the eight-hours day have been held in the New England states, eastern and middle western states, under the auspices of the league in these sections of the country and with the cooperation of the National Consumers' League.

When we consider that forty years ago Massachusetts passed the ten-hours law as a health measure we realize how slowly legislation has progressed. With all the specialization in the trades, the introduction of machinery in the place of hand work, the speeding up of machinery, the extension of the piece-work system, all of which means a greater strain on the workers, there has been no comparative reduction in hours. Under our industrial system of today the eight-hours day would not bring the relief to the workers that the ten-hours day did in Massachusetts forty years ago.

The question of how the shorter work-day would affect the employers' business has always been the question raised by legislators. The question of the injurious effect of long hours upon the health of the working women and the future race is unasked.

Another measure of benefit to working women that we are interested in is the Casey Bill to establish a woman's division in the Department of Labor. We look for the passage of this early next year by Congress. Since 1909 the Woman's Trade Union League has advocated this bill, and it was endorsed in that same year by the American Federation of Labor convention.

PLAY AND RECREATION

Abbie Condit

PLAYGROUND AND RECREATION ASSOCIATION OF AMERICA

WHERE previously cities were establishing a few summer playgrounds, they are now planning for systems of neighborhood centers which shall

be open throughout the year for adults as well as children. Such a development involves the seeking out and training of men and women qualified to fill the positions of responsibility as directors of year-round systems which are constantly being created. Nothing can be more important to the progress of the recreation movement than the development of a corps of leaders and workers of the highest caliber.

As a means of raising the standard of physical efficiency, more and more cities throughout the country are giving the badge tests for boys and girls which were worked out by a committee of experts of the Playground and Recreation Association of America. Because boys and girls want to attain the minimum standard of physical efficiency laid down in these tests, they are training themselves rigorously to attain a splendid physical development.

Thousands who have the interest of the country at heart have been startled to learn that out of 11,012 men who applied recently at a single station to enlist in the United States Marine Corps, only 316 were able to pass the required examination—only 29 out of every 1,000, one out of every 35. The officer in charge has made the statement that the largest percentage of rejections was because of physical shortcomings.

It is significant, moreover, that the surgeon-general of the navy reports that 69.82 per cent of the men applying to enlist in the navy and marine corps in 1915 were rejected because of physical defects.

The state-wide plan for conducting athletic meets which has been followed in Maryland during the past year has met with so much favorable comment that it is likely that other cities will try carrying out a similar program so that all the boys and girls in the rural districts as well as in the cities shall have the character development which comes in training for these special tests between counties and districts. The whole subject of recreation for rural districts is assuming such importance that there will undoubtedly be important developments along this line in 1917.

School superintendents throughout America are considering how play can be used as a means for education in the school system. The influence of the demonstration play school conducted at the University of California by Prof. Clark W. Hetherington and Mrs. Hetherington will be felt more and more as the years go on. The adaptations of the University of California plan and the Gary plan which are being tried out in an increasing number of communities show that there will be constant attempts this year to apply the play principle in preparing boys and girls for life through our school systems.

THE FIRST JOB

Benjamin C. Gruenberg

N. Y. VOCATIONAL GUIDANCE ASSOCIATION

NEARLY all of us have learned to think of vocational guidance dynamically—that is, in terms of growing children emerging into a changing social and economic environment.

The many surveys that have been made, and those now in course, need to be converted into machinery for giving continuous information about children and about industry, and about the changes taking place. We need to know week by week (and we shall know when we realize the need) the number of children—say, up to eighteen years—who go to work, and the nature of the work; and the number of juveniles discharged from work, and for what reasons. And we need to know what becomes of those who remain at work.

The most favorable point for the establishment of such machinery seems to be in connection with the compulsory school attendance laws, or with the juvenile labor laws. In Ohio, Wisconsin, Rhode Island, Connecticut, Indiana, Pennsylvania and some other states it is possible to make the issuance of work-permits a means for the automatic and continuous registration of most significant facts, not only in the regulation of juvenile labor, but in the guidance of educational policies. Pennsylvania last year gave her administrative officers a splendid opportunity; we are waiting for some power to give them the vision to use it.

Juvenile placement service should be more directly joined to the schools, on the principle that a child should be under official surveillance until he is safely on his feet; and to the agencies that are cognizant of changing economic conditions, on the principle that the public must guard its children against exploitation.

The more fundamental needs are those that the school has to meet. First of all, it is necessary to reorganize our curricula and our administration into a more flexible system, to the end that the teachers may be able to utilize the conduct and the performance of the pupil day by day, whether in the class-room, laboratory, shop, studio, gymnasium or extra-curricular activities, as indications of the pupil's further needs in the way of opportunity for instruction, or training or self-expression. More and more schools are introducing special activities calculated to develop vocational ideals and vocational purposes. Normal schools and teachers' colleges must prepare teachers with the information and the viewpoint and the ideals required for the successful modification of instruction.

Vocational guidance means directed educational evolution of living organ-

isms; it therefore requires the services of men and women who have the experimental intellect, the technique, social vision and sympathies.

REMEDIAL LOANS

Arthur H. Ham

DIVISION OF REMEDIAL LOANS, RUSSELL SAGE FOUNDATION

WITH the formation of a national organization of commercial loan companies pledged to "uplifting and dignifying the small loan business and assisting state organizations in securing legislation, fixing terms fair to the borrower and rates that will yield a fair return to the lender," a new element has entered into the movement for improving small-loan conditions—an internal reform which promises greater results than any which have been or might be achieved by external forces.

The National Federation of Remedial Loan Associations, made up as it is of semi-philanthropic institutions, could never hope to take over the small-loan business. It is a fair field for profit-making institutions, and consequently legislation has been sought which recognizes the necessity for a somewhat higher charge than is required by the remedial loan societies whose return upon capital is definitely limited.

These laws have in the past met with the bitter opposition of money-lenders, large and small, who have objected to supervision and regulation by state authority and have contended that the rates permitted would preclude a fair return upon their investment. Many such now realize that the laws sought by the National Federation have raised the plane of the business, decreased losses and expenses, permitted a fair return on capital invested and made the business cleaner and more attractive. Consequently they now desire an extension of this principle.

It is planned this winter to introduce a uniform small-loan law containing practically all the safeguards which are considered essential, in Illinois, California, Indiana and several states whose laws are at present inadequate.

During the past year the importance of the credit union as a competitor of the loan shark has become widely recognized. Formed on the basis of mutual acquaintance, it recognizes personal character as a form of security for loans and puts a premium upon thrift and saving, thus producing constructive results denied to other money-lending agencies in the field. It also provides the machinery for cooperative purchasing of food, clothing and other necessities. There are now sixty credit unions operating in Massachusetts and thirty in New York. During 1917 an effort will be made to bring about a substantial increase in the number.

CITY AND PARK

Richard B. Watrous

AMERICAN CIVIC ASSOCIATION

OUR belief is that the coming year will bring a greater realization on the part of large employers of labor of the responsibility that rests upon them for providing adequate living conditions for their employees; not housing which very properly in the past has dealt with restrictive regulations as to the character of individual structures, but that which comprehends the rise and growth of industrial communities. And it will not be a philanthropy. It will include good houses with proper sanitation and schooling not only in the "Three R's," but schooling that embraces the playground and other specialized instruction.

But men and women living in the country are saying, "Why city planning only," when still half of the population is rural. All signs point to an awakened rural community spirit. To the already creditable number of counties that have established County Planning Commissions we look for the addition of scores of new commissions. Rural highways and roadways that heretofore have been regarded as merely economic agencies for the carrying of produce from the farm to the city will be regarded, we hope, as pleasure-ways also, and they will be adorned with roadside planting just as are the cities with glorious avenues of trees and street parking. The rural swamp will become the rural pleasure pond. A hill and a ravine here and there will be saved for recreational purposes and recognized as having a value for those purposes as well as for farming. And out of the recognition of the chance to beautify even Nature's stamping-grounds will come the recognition of the value of the countryside, as against the fascinations of the city life.

It is a source of wonder and amazement to all familiar with our American scenic possessions that outside of the family of seventeen national parks stands one which many regard as the greatest scenic wonder of the world, the Grand Canyon. The American Civic Association having initiated and, with the splendid cooperation of other voluntary and governmental agencies, carried to success the creation of the National Park Service, now turns its energy with the same aid to this one specific national park undertaking—the creation of the Grand Canyon National Park.

BUFFALO CHARITIES

Frederic Almy

BUFFALO CHARITY ORGANIZATION SOCIETY

IN Buffalo our chief effort is in the direction of free health. Last year less than 1 per cent of our poverty was

due to lack of work, and more than 78 per cent to sickness, or rather, more than 78 per cent of our money relief went to families in which there had been sickness during the year.

No one now questions free compulsory education. Free compulsory health will follow, for disease is both more dangerous and more contagious than ignorance. In time the private doctors, like the private schools, will be left to the few who prefer them and can afford them. Universal education has greatly increased the number of both private and public teachers, and in the same way with universal health both private doctors and public doctors will increase, and the whole profession of medicine will leap forward. Health first is safety first. We need free health.

Our present work in Buffalo for free health is a plan to have ten municipal health centers identical in boundary with our ten Charity Organization Society districts and with our district committees in charge of the social work. We already have four of these health centers, and a fifth is near. This makes health more accessible to the poor.

Hardly less important as regards health is the establishment in Buffalo of an inebriety board, with provision for hospital treatment and an industrial farm colony. Under the old plan we have a record of one man who has been in court for drunkenness 160 times. In place of this perpetual round, which involves stigma and non-support for the family, the new law allows one arrest a year for drunkenness without even court appearance, which will greatly relieve the courts; but the second arrest within a year means commitment to the inebriety board for a year or more, though parole may follow in a day. The new plan aims at cure rather than punishment. It applies to drug intoxication as well as to liquor intoxication.

Health insurance is a state, not a city question. Under health insurance we shall have health first as we now have safety first.

To me, free health, health insurance, recreational and vocational education, a minimum day and a maximum wage, are more important than the more protective measures, such as housing, sanitation, or even individual religion of the Billy Sunday type. We need to let out the good that is in all of us more than to hold in the bad. As President Eliot has said, the cure for democracy is more democracy, and I want to see all weights removed from the lowest of mankind until he can rise to the full stature of which he is capable.

RECREATION FOR GIRLS

Jean Hamilton

NATIONAL LEAGUE OF WOMEN WORKERS

WHEN the National League of Women Workers formed its first working-girls' clubs through private en-

terprise thirty odd years ago only a few cared what youth did with its leisure. Even those few thought "girls had better stay home evenings." Today the acknowledged need of offering all young people wholesome opportunities for recreation comes only second to the community's responsibility for education.

As a federation of non-sectarian, self-governing women workers' clubs, organized for education, recreation and social activities, the League has always been founded on principles and spirit rather than on housing and equipment. We have experimented in having the community centers of most big eastern cities house the clubs of our League, but have seldom met with success. Aside from the entire inadequacy of our older school buildings for any social uses, this failure has resulted from two conditions:

First, because the overhead management disregarded or failed really to understand the sacred principles of self-government to such an extent that no self-governing club could live under the arbitrary conditions and interference imposed. And second, because a club struggling for that degree of self-support without which self-government is unjust, could not compete successfully with free activities offered in the same building.

So far as girls are concerned, we have an accumulation of thirty years' experience in the very thing the community center is now groping in the dark to find—that is, how to begin with the people and develop the machinery instead of beginning with the machinery and working down to the people. Organized girls' work is lagging far behind boys' work. In many centers in New York city over 75 per cent of the attendance is boys and men, and in one place we were told that 90 per cent of the attendance is male. Yet girls are equally social.

In this stage of development girls need special opportunities for growth in group cohesion and initiative. This they will not get unless organized separately from the men, sending equally accredited representatives to the council of both men and women responsible for the center's general policy as well as for the enterprises of the mixed groups.

The tax-supported community center is the logical development of the democratic, non-sectarian club, which has never begged and has accepted gifts charily lest its independence be limited. But our ideals of self-control cannot be abandoned and thus far the community center has been more autocratic than private individuals.

In this new year of 1917, what has the National League of Women Workers to contribute to the community center movement, and how can we adjust the machinery of our organization so as to contribute most effectively what we have to offer?

NEGRO WELFARE

Eugene Kinckle Jones

NATIONAL LEAGUE ON URBAN CONDITIONS
AMONG NEGROES

DURING 1917 Negro leaders should study social programs and learn to apply those most appropriate to reduce the number of social maladjustments among their people. Special efforts should be made in those directions in which the Negro record compares unfavorably with the same among the whites—for example: (1) The death rate, with special reference to infant mortality and death due to pulmonary causes; (2) Delinquency among adults, with special reference to the need of such preventive measures as may be thrown around the adolescent youth—wholesome amusements, employment opportunities, vocational guidance.

In this connection the National League on Urban Conditions among Negroes is planning to extend its work to an increased number of cities. The almost unprecedented northward migration of Negroes to the large industrial centers has made this extension increasingly necessary. Already twenty cities feel the influence of the league's activities. Additional colored social workers will be trained, so that the work proposed can be prosecuted not only by sympathetic persons that know intimately the aspirations of the race, but can be handled with intelligence and confidence.

Social problems know no race lines, but racial prejudices may accentuate these problems. In the case of the relationship of Negroes with the white people in American cities, this is particularly true. In New York city, where the league's work in the various colored districts is the model for the activities in other cities, it is hoped that during the year 1916-17 the Brooklyn committee will become independent and assume entire responsibility for the work in Brooklyn; that a definite movement to reduce the high infant mortality among Negro babies in New York will be inaugurated; a home for colored women discharged or paroled from the Night Court, Work House or other penal institutions will be established; in cooperation with the Babies' Welfare Association, the Association of Day Nurseries and other organizations, a day nursery will be established in the Columbus Hill section; in cooperation with the Association for the Prevention and Relief of Heart Disease and the Burke Foundation, a cardiac class or clinic may be established in the Harlem section, where 60,000 Negroes live; a school for domestic employees will be established; those organizations wishing to conduct boys' or girls' club work may combine and jointly employ a worker with boys and a worker with girls to conduct their respective clubs; and some form of voca-

tional guidance will be instituted for the colored school children of New York, thereby directing the children to opportunities for occupational training and enlarging the field of employment now open to colored children.

KINDERGARTENS

Bessie Locke

NATIONAL KINDERGARTEN ASSOCIATION

ALTHOUGH Froebel's philosophy has been one of the greatest influences in modern educational effort for child welfare, the kindergarten is only to a small extent regularly adopted as a part of our public school system. Less than an eighth of the children in this country between four and six years of age are receiving this extra educational advantage, while the number not yet provided for mounts up to nearly four million. In the belief that what the kindergarten needs at the present stage of its development is more a creation of public sentiment in its favor than a demonstration of the idea alone, the Nation-

al Kindergarten Association, in cooperation with the United States Bureau of Education, has taken upon itself the task of spreading a popular knowledge concerning the value of this training and of arousing a general demand for kindergarten classes.

In California kindergartens are growing rapidly from attacking the problem in this new way. Three years ago the clubwomen and kindergartners of the state secured a law authorizing the establishing of classes on petition, and since its enactment, by arousing parents to take advantage of the privilege opened up by the law, the number of kindergartens in California has been nearly trebled. They have 401 classes at the present time.

What has been done in California with the help of the women can be done in other states also, and securing a petition law, and stimulating petitioning are so definitely marked out as the most successful methods of extending the kindergarten that every effort has been made to interest large organizations of

women to take up one or the other of these lines of work. At least a dozen state organizations of educators or branches of the General Federation of Women's Clubs and the National Congress of Mothers are planning to try for improved legal provision for kindergartens at the coming session of their legislatures. A number of others have started state-wide campaigns to interest parents to petition for them.

At the present stage of our work we are impressed with the need of going back to Froebel himself for the inspiration and understanding with which to arouse interest in his educational idea, and we are convinced that the mother is the chief channel for promoting the work in this way. An understanding on the part of mothers of the fundamental principles of the kindergarten idea would give them an invaluable insight into child nature, and would, in addition, provide the sound practical basis upon which must rest any attempt to arouse a popular demand for kindergartens.

An Open Letter to President Wilson

SIR:—You have an opportunity of performing a signal service to mankind, surpassing even the service of Abraham Lincoln, great as that was. It is in your power to bring the war to an end by a just peace, which shall do all that could possibly be done to allay the fear of new wars in the near future. It is not yet too late to save European civilization from destruction; but it may be too late if the war is allowed to continue for the further two or three years with which our militarists threaten us.

The military situation has now developed to the point where the ultimate issue is clear, in its broad outlines, to all who are capable of thought. It must be obvious to the authorities in all the belligerent countries that no victory for either side is possible. In Europe, the Germans have the advantage; outside Europe and at sea, the Allies have the advantage. Neither side is able to win with such a crushing victory as to compel the other side to sue for peace. The war inflicts untold injuries upon the nations, but not such injuries as to make a continuance of fighting impossible. It is evident that, however the war may be prolonged, negotiations will ultimately have to take place on the basis of what will be substantially the present balance of gains and losses, and will result in terms not very different from those which might be obtained now. The German government has recognized this fact, and has expressed its willingness for peace on terms which ought to be regarded at least as affording a basis for

FROM Bertrand Russell, the English mathematician and philosopher, who was recently called to Harvard University because of his independence in discussing government policy during the war. Mr. Russell has been deprived of his fellowship at Trinity College, Cambridge University, and was recently prohibited from coming to the United States. In this letter he bears ardent witness to the existence of a sentiment for peace struggling for expression throughout the rank and file of the people, in England, in France, and in Germany.

The letter was brought through the censors by a young American girl, and put in the hands of the American Neutral Conference Committee for transmission to the press and to the President.

discussion since they concede the points which involve the honor of the Allies. The allied governments have not had the courage to acknowledge publicly what they cannot deny in private, that the hope of a sweeping victory is one which can now be scarcely entertained. For want of this courage they are prepared to involve Europe in the horrors of a continuance of the war, possibly for another two or three years. This situation is intolerable to every humane man. You, Sir, can put an end to it. Your

power constitutes an opportunity and a responsibility; and from your previous actions I feel confident that you will use your power with a degree of wisdom and humanity rarely to be found among statesmen.

The harm which has already been done in this war is immeasurable. Not only have millions of valuable lives been lost, not only have an even greater number of men been maimed or shattered in health, but the whole standard of civilization has been lowered. Fear has invaded men's inmost being, and with fear has come the ferocity that always attends it. Hatred has become the rule of life, and injury to others is more desired than benefit to ourselves. The hopes of peaceful progress in which our earlier years were passed are dead, and can never be revived. Terror and savagery have become the very air we breathe. The liberties which our ancestors won by centuries of struggle were sacrificed in a day, and all the nations are regimented to the one ghastly end of mutual destruction.

But all this is as nothing in comparison with what the future has in store for us if the war continues as long as the pronouncements of some of our leading men would make us expect. As the stress increases, and weariness of the war makes average men more restive, the severity of repression has to be continually augmented. In all the belligerent countries soldiers who are wounded or home on leave express an utter loathing of the trenches, a despair

of ever achieving a military decision, and a terrible longing for peace. Our militarists have successfully opposed the granting of votes to soldiers; yet in all the countries an attempt is made to persuade the civilian population that war-weariness is confined to the soldiers of the enemy. The daily toll of young lives destroyed becomes a horror almost too terrible to be borne; yet everywhere advocacy of peace is rebuked as treachery toward the soldiers, though they above all men desire peace. Everywhere friends of peace are met with the diabolical argument that the brave men who have died must not have shed their blood in vain. And so every impulse of mercy toward the soldiers who are still living is dried up and withered by a false and barren loyalty to those who are past our help. Even the men hitherto retained for making munitions, for dock labor, and for other purposes essential to the prosecution of the war, are gradually being drafted into the armies and replaced by women, with the sinister threat of colored labor in the background. There is a very real danger that, if nothing is done to check the fury of national passion, European civilization as we have known it will perish as completely as it perished when Rome fell before the Barbarians.

It may be thought strange that public opinion should appear to support all that is being done by the authorities for the prosecution of the war. But this appearance is very largely deceptive. The continuance of the war is actively advocated by influential persons, and by the press, which is everywhere under the control of the governments. In other sections of society feeling is quite different from that expressed by the newspapers, but public opinion remains silent and uninformed, since those who might give guidance are subject to such

severe penalties that few dare to protest openly, and those few cannot obtain a wide publicity. From considerable personal experience, reinforced by all that I can learn from others, I believe that the desire for peace is almost universal, not only among the soldiers, but throughout the wage-earning classes and especially in industrial districts, in spite of high wages and steady employment. If a plebiscite of the nation were taken on the question whether negotiations should be initiated, I am confident that an overwhelming majority would be in favor of this course, and that the same is true of France, Germany and Austria-Hungary.

Such acquiescence as there is in continued hostilities is due entirely to fear. Every nation believes that its enemies were the aggressors, and may make war again in a few years unless they are utterly defeated. The United States Government has the power, not only to compel the European governments to make peace, but also to reassure the populations by making itself the guarantor of the peace. Such action, even if it were resented by the governments, would be hailed with joy by the populations. If the German government, as now seems likely, would not only restore conquered territory, but also give its adherence to the League to Enforce Peace or some similar method of settling disputes without war, fear would be allayed, and it is almost certain that an offer of mediation from you would give rise to an irresistible movement in favor of negotiations. But the deadlock is such that no near end to the war is likely except through the mediation of an outside Power; and such mediation can come only from you.

Some may ask by what right I address you. I have no formal title; I am not any part of the machinery of

the government. I speak only because I must; because others, who should have remembered civilization and human brotherhood, have allowed themselves to be swept away by national passion; because I am compelled by their apathy to speak in the name of reason and mercy, lest it should be thought that no one in Europe remembers the work which Europe has done and ought still to do for mankind. It is to the European races, in Europe and out of it, that the world owes most of what it possesses in thought, in science, in art, in ideals of government, in hope for the future. If they are allowed to destroy each other in futile carnage, something will be lost which is more precious than diplomatic prestige, incomparably more valuable than a sterile victory which leaves the victors themselves perishing. Like the rest of my countrymen, I have desired ardently the victory of the Allies; like them, I have suffered when victory has been delayed. But I remember always that Europe has common tasks to fulfil, that a war among European nations is in essence a civil war; that the ill which we think of our enemies they equally think of us; and that it is difficult in time of war for a belligerent to see facts truly. Above all, I see that none of the issues in the war are as important as peace; the harm done by a peace which does not concede all that we desire is as nothing in comparison to the harm done by the continuance of the fighting. While all who have power in Europe speak for what they falsely believe to be in the interests of their separate nations, I am compelled by profound conviction to speak for all the nations in the name of Europe. In the name of Europe I appeal to you to bring us peace.

BERTRAND RUSSELL.

December 4, 1916.

OPEN WINDOW WEEK

Margaret Franklin in New York Tribune

Open up the windows,
Send the death-rate down;
Let the winter breezes
Travel through the town.
Drafts are only bogies,
Steam heat is a sin;

Air will wash your colds away and make the red blood spin!

Get your coats and sweaters,
Get your scarfs and tams;
Race the slow old subway,
Race the creeping trams;
First among the doctors
Is the shining sun,

So out into the sunny streets and run, run, run!

COMMON WELFARE

THE EIGHT-HOUR DAY IN RAILROAD YARDS

AN award granting the eight-hour day (as the unit of reckoning), but withholding punitive overtime, was handed down December 23 by the arbitrators in the case of the railway switchmen who are affiliated with the American Federation of Labor. An increase of pay of five cents an hour was granted, but the principle of the Adamson law of making ten hours' pay for eight hours' work the minimum day's pay, was not established.

The switchmen in the railway yards are divided in their allegiance. Some of them belong to the Brotherhood of Railway Trainmen, others to the Switchmen's Union of North America, which is affiliated with the American Federation of Labor. The latter made a demand for an eight-hour day with time and a half for overtime at the same time that the brotherhoods were making similar demands.

Unlike the brotherhoods, the switchmen consented to submit the matter to arbitration. A board of six members was appointed under the terms of the Newlands law, with Judge Charles B. Howry of the United States Court of Claims, and Prof. Jeremiah W. Jenks, as the neutral members. Testimony was taken during November and December in New York city.

The two union members of the board dissented from every clause in the award, and the railroad members dissented from the eight-hour clause. It is evident therefore that the award is chiefly the work of the two neutral members. The basis of the dissatisfaction on the part of the union men appears to be that the award does not establish the eight-hour day. Their contention is that there can be no eight-hour day without punitive overtime—which, in labor parlance, means the payment of 50 or 100 per cent extra per hour for the ninth, tenth, eleventh, etc., hours.

It is conceded by the neutral arbitrators that the award does not guarantee the eight-hour day. Under present conditions and even under conditions of

much lighter traffic it will not be possible, they state, "to make the actual working eight-hour day effective in the case of more than a small percentage of the switching crews; not more than 10 per cent during the first year. While, therefore, it is urged that the eight-hour day be established, its introduction must be gradual. The percentage, therefore, of the switching crews that will be directly affected during the period of this award must necessarily be small. Most crews will work ten hours or more."

This gradual introduction of the eight-hour day will make it possible, the neutral arbitrators believe, to determine how badly the men want an eight-hour day. The men oldest in the service have the right to choose their jobs. "If the older men in service," say Messrs. Howry and Jenks, "should all prefer the added daily wage coming from the long hours, the eight-hour shifts must be taken by the younger and less experienced men. But, with so large an element of choice and so small a number of positions to be filled, the award will enable employers, employes and the public to determine the extent to which the

switchmen desire the shorter hours."

This statement of the choice open to the train crews is not entirely consistent with the terms of the award. An experienced man will have to choose between a shorter work day and "an added daily wage," but if he chooses putting in a shorter work day he will bring home less money on pay day than he does now. He will earn five cents an hour more than formerly, or forty cents more in his first eight hours, but that will not by any means make up for the loss of from two to four hours' earnings if he works the new work day and stops there.

A MEMORIAL FOUNDATION FOR JUDGE BAKER

SOON after the death of Judge Harvey H. Baker, judge of the Boston Juvenile Court, in 1915, a group of his friends conceived the idea of establishing a fund that might be used for the promotion of intelligent juvenile court work in Boston. Various plans were considered to use the money that was collected to the best advantage. The project has recently developed into the organization (now nearly assured) of what will be known as the Judge Baker Foundation.

The foundation is intended as an adequate continuing memorial to the work begun by Judge Baker. The foundation is to maintain a specially trained doctor and an assistant psychologist with office and field force to make intensive examinations of difficult boys and girls coming before the Boston Juvenile Court. A primary purpose is to ascertain with greater certainty those elements and factors in the boy or girl which admit of desirable development and ways and means which best develop them.

Dr. William Healy, author of *The Individual Delinquent*, for many years past the head of such a medical clinic for the Chicago Juvenile Court, is being considered for this work. The maintenance of the proposed medical and psychological clinic will cost approximately \$12,000 a year. It is gratifying to know that considerably more than half of the

Cesare in New York Evening Post

EUROPE

necessary money for the clinic's maintenance for ten years has already been subscribed.

CLEVELAND TAKES STOCK OF LEISURE

A STUDY of recreational problems and the agencies working at them—"the most complete and thoroughgoing of any ever attempted in the larger cities of the country"—is the task just set for itself by the Cleveland Foundation Survey.

The new recreation survey will begin at once, with a preliminary budget of \$20,000. The Foundation was asked to take it up as the next subject for its field work by the Welfare Council, the Chamber of Commerce, the Federation of Labor, the Federated Churches, the Settlement Union and the Juvenile Court. Cooperation has been promised by the city Department of Public Service, including the Division of Parks and Recreation; and of the public schools, including the Division of Physical Education and the Division of Community Centers.

"There are three occasions for a recreation survey," says the committee, "(1) the rapid spread of the shorter hour movement, (2) the increasing governmental regulation or suppression of common uses of spare time, such as theaters, game rooms, saloons; and (3) the frequent complaints by police that most of their troubles come from those who have no wholesome occupations for out-of-work hours.

"Both employers and employes would urge shorter hours more vigorously and adopt them more widely if Americans generally had wholesome habits and resources for the use of leisure. The average American has little ability to amuse himself and so seeks to be amused by whatever means his financial resources can afford. It is largely chance whether his money buys him drinks, a suggestive show, a place at the gambling table, a wholesome photoplay or a seat in a bleacher. So long as spending money is the essential of a good time America runs the same risk as Rome did with its everlasting demand for spectacles. The need is to have people so full of desires and habits of doing things to amuse themselves, like reading, hiking, acting, skating, that damaging occupations will be crowded out. To create these desires and habits is the imperative sequel of the shorter working day.

"Twenty-five states gone dry sounds the knell of the saloon. The gambling joint and the brothel are largely wiped out. The suggestive play or movie will soon follow suit. But suppression of these agencies will only make for a worse use of spare time unless wholesome recreations are substituted. It is the bounden duty of those so active in

these reform campaigns to find substitutes. A devil if only driven out leaves but a place for seven other devils to enter.

"Chief Rowe was recently quoted as saying: 'City social conditions are turning out criminals faster than the police department can learn their names. Every day the police blotters are filled with names of boys, 18, 19, and 20. They are living lives of idleness. The pool-room is their classroom. While these boys should be compelled to work or attend school, as the chief suggests, neither could take care of all a boy's time. How are the spare hours to be filled with such activities as prevent delinquency?'"

The survey will be divided into two

THE "MIGHTY ECHO" FROM THE ALPS

"The most meritorious personal initiative of President Wilson will find a mighty echo in Switzerland. True to the obligations arising from observing the strictest neutrality, united by the same friendship with the states of both warring groups of Powers, situated like an island amidst the seething waves of the terrible world war, with its ideal and material interests most sensibly jeopardized and violated, our country is filled with a deep longing for peace and ready to assist by its small means to stop the endless sufferings caused by the war and brought before its eyes by daily contact with the interned, the severely wounded and those expelled, and to establish the foundations for a beneficial coöperation of the peoples.

"The Swiss Federal Council is, therefore, glad to seize the opportunity to support the efforts of the President of the United States. It would consider itself happy if it could act in any, no matter how modest, a way, for the rapprochement of the peoples now engaged in the struggle, and for reaching a lasting peace."

main parts. First will be a study of the uses of spare time which make for wholesome development; of uses of spare time which waste not only time but also talents and training, and of recreation habits which destroy character. Juvenile delinquency and adult crime is traceable to a number of causes.

The second part of the survey will cover recreation agencies, commercial, private and public.

The recreation survey will be conducted by Rowland Haynes, directing consultant, under the general supervision of Allen T. Burns, director of the Cleveland Foundation Survey. Mr. Haynes is secretary of recreation for the New York Board of Estimate and Apportionment, and lecturer on recreation in Columbia University. He has been field secretary of the Recreation Association of America and professor of psy-

chology in the University of Minnesota. He has made recreation surveys in seven other cities, including Detroit, Milwaukee and Kansas City.

A HEALTHY INTEREST IN HEALTH INSURANCE

"I AM in favor of health insurance, if——" said one after another of the fifty or more witnesses who appeared before the California State Insurance Commission during the hearings just held in San Francisco. But the many "ifs" were a sign of a very healthy interest in principle and details of the plans proposed for California. The witnesses in San Francisco were professors of economics, several charity workers and social workers, physicians, employers, representatives of organized labor, members of the State Board of Health, officers of fraternal societies and public-spirited men and women in general constituted the majority of the fifty witnesses. Included among them were even a few cases of applicants for charity who had a sad story to tell.

Perhaps the most emphatic objections were made by A. R. Maloney, president of the California Insurance Federation, who was opposed to this further extension of state activity in the insurance business, but was willing to waive his objections if a guarantee were given that private insurance companies would be permitted to compete for the business.

A representative of the fraternal orders objected to social health insurance on the ground that it was not necessary, since everybody had the opportunity of insuring with a fraternal order. Under cross-examination he admitted, however, the narrow limitations of the benefits given by fraternal orders, and created quite a laugh when he answered the question as to the proportion of wage-working women able to get their protection through fraternal orders, by saying that women had no business to be in industrial life, anyway, and that he would prefer a compulsory marriage law to a compulsory health insurance.

James W. Mullen, editor of the *Labor Clarion*, objected to compulsory insurance not so much in this field, but because of the possible extension of the compulsory system in other fields of legislation, especially to arbitration. Furthermore, Mr. Mullen objected to compulsion because it was limited to the wage workers; he would be in favor of a compulsory health insurance law if applied to everybody without distinction. But the effect of this testimony was largely neutralized by the support given compulsory health insurance by Theodore Johnson, attorney for several labor organizations; W. W. Harris, president of the state Federation of Labor, and others.

One of the most common criticisms

had to do with the point that health insurance is only a partial application of the social insurance principle to problems of poverty. Chronic cases of illness may be left without protection, it was repeatedly said; and unemployment is a graver problem than sickness. In other words, health insurance proposals were objected to because they did not include invalidity or unemployment.

Criticisms were made, too, of any suggestion to limit the benefits to those earning not over \$1,200. It was emphatically argued even with a wage of \$2,000 or \$3,000 sickness might become a very serious problem.

A constructive criticism made by many witnesses was directed against any possible provision in the law which would force a man to lose his insurance at the time he lost his employment. This problem is perhaps more acute in California because of a greater irregularity of employment in several industries than can be discovered in any other state. It was pointed out that in this respect health insurance differed materially from compensation, specially since an almost unanimous consensus of opinion demands the inclusion of the family in the medical benefit. With discontinuance of employment the chance of industrial accident vanishes, but the danger of disease to the workman or his family obviously does not; and any system which would deprive the wage worker of his health insurance at the same time he lost his employment would probably be unanimously rejected in California.

An interesting feature of the hearings was the attitude of the audience. The statement that hearings are to be public is taken literally in California, and the audience refused to assume that they were there in the capacity of tolerated on-lookers only. The examination of witnesses was conducted by Dr. I. M. Rubinow, expert adviser of the commission; by the chairman, secretary and members of the commission; yet questions were repeatedly asked from the floor. Every effort to limit at least some questions which were apparently irrelevant created a storm of indignation. Not only were questions asked of the witnesses, but the witnesses insisted upon the right of having their questions answered by the commission. Finally, in compliance with the numerous demands, Dr. Rubinow took the stand to answer any questions that were shot at him from the audience. The result was a cross section of public opinion that would have been impossible in any carefully staged so-called "public hearing."

One of the most useful results of this democratic spirit was the amazing amount of publicity the hearings achieved, not only in the press of San Francisco, but throughout the state.

All the social workers testifying and all of the physicians with the exception

of one, went on record as in favor of compulsory health insurance.

The California Social Insurance Commission consists of Paul Herriot, member of the State Board of Control, the financial or budgetary part of the state administration, chairman, representing the state; Katherine Felton, a well-known social worker of San Francisco; George H. Dunlap, ex-mayor of Hollywood, a retired business man, well known in Los Angeles for his interest and activity in all civic matters; Mrs. Frances Noel, closely identified with the labor movement in Los Angeles for many years, and Dr. Flora W. Smith, representing the medical profession.

Shortly before the hearings were held, Governor Johnson added to the committee an advisory board of three, consisting of Daniel C. Murphy, president of the California State Federation of Labor; Ansley Salz, a manufacturer of San Francisco, chairman of the social insurance section of the Commonwealth Club, who has devoted many months to the study of social insurance, and Chester H. Rowell of the *Fresno Republican*.

Though its official report has not yet been made, the commission has announced that it favors the principle of compulsory health insurance. Nevertheless, no legislative program will be recommended beyond the adoption, through a constitutional amendment, of an enabling clause at the coming session of the legislature. Such a constitutional amendment will require submission to the vote of the people in the fall of 1918. The approval by popular vote will probably lead to the introduction of a health insurance bill in 1919.

California had the distinction of being the first state to create a State Social Insurance Commission in 1915. Whether it will be the first state to adopt a health insurance law it is impossible to foretell; but correspondence from California and the Pacific Coast indicates that there is no doubt about the reality of the health insurance movement there at the present time.

STRIKING FOR THE FORTY-EIGHT-HOUR WEEK

BETWEEN 50,000 and 60,000 members of the Amalgamated Clothing Workers of America—the workers on men's and boys' clothing—in New York city went on strike December 13 for an advance of \$2 a week in their pay and a reduction in working hours from 50 a week to 48. Later they announced their willingness to compromise on the wage question and many settlements have been made on the basis of an increase of \$1 and a forty-eight-hour week. Such an agreement has been made with an association of boys' clothing manufacturers who employ 15,000 workers. It was estimated by the secretary of the union, after two weeks of strike, that

25,000 workers had returned to the shops under these conditions.

The American Clothing Manufacturers, an association employing over 30,000 workers, tried at the beginning to break the power of the Amalgamated by proposing to negotiate an agreement with the United Garment Workers—the older organization from which the members of the Amalgamated seceded two years ago. It developed, however, that the United Garment Workers have less than 1,000 members in Greater New York and consequently had little influence. At headquarters of the strikers it is reported that agreements have been signed with some of the members of the American Clothing Manufacturers' Association and that negotiations are in progress with others.

Before the strike was called an offer was made by independent manufacturers to compromise on the basis of forty-nine hours a week. This the union refused to consider. They have secured the forty-eight-hour week in Chicago and Rochester, two of the other leading centers for the manufacture of men's clothing, and have just concluded such an agreement with the Sonnenborn Company of Baltimore, employing 3,000 workers, the second largest manufacturer of men's clothing in the United States.

BUILDING UP FAMILIES WITH XMAS SEALS

CHRISTMAS seals of 1915 meant better health, better food, happier homes to a group of youngsters in Jersey City. The Woman's Club used the proceeds of last year's sale to provide a visiting dietitian for the Hudson County Tuberculosis Clinic, and at a recent meeting heard the results of nearly a year's experiment from Emma A. Allen, of the Tuberculosis Clinic, and Laura H. Woodruff, R. N., the home economist of the clinic.

"Most of our people are border-line cases," said Miss Woodruff. "They manage fairly well until an emergency arises. Then the first thing they do is to economize in food. And so the health of the whole family suffers."

This was the situation in the B family. Though the father was a printer and had a fair income, the mother was young, inexperienced and a poor manager. Most of the food came from the delicatessen store and even the children depended on tea. Much needed dental care was postponed because they "couldn't afford it." Evidently the only need was for a little friendly advice about expenditures. This Mrs. B gladly welcomed, reorganized her household expenses, spent \$4 a month more on food, \$8 a month for dentistry, paying \$2 a week, and yet she has actually saved \$9 of the income. The children have gained in weight—and they no longer drink tea.

The President of the United States To the Belligerent Nations

[December 18, 1916]

THE President suggests that an early occasion be sought to call out from all the nations now at war such an avowal of their respective views as to the terms upon which the war might be concluded and the arrangements which would be deemed satisfactory as a guaranty against its renewal or the kindling of any similar conflict in the future as would make it possible frankly to compare them. He is indifferent as to the means taken to accomplish this. He would be happy himself to serve, or even to take the initiative in its accomplishment, in any way that might prove acceptable, but he has no desire to determine the method or the instrumentality. One way will be as acceptable to him as another, if only the great object he has in mind be attained.

He takes the liberty of calling attention to the fact that the objects which the statesmen of the belligerents on both sides have in mind in this war are virtually the same, as stated in general terms to their own people and to the world. Each side desires to make the rights and privileges of weak peoples and small states as secure against aggression or denial in the future as the rights and privileges of the great and powerful states now at war. Each wishes itself to be made secure in the future, along with all other nations and peoples, against the recurrence of wars like this and against aggression or selfish interference of any kind. Each would be jealous of the formation of any more rival leagues to preserve an uncertain balance of power amid multiplying suspicions; but each is ready to consider the formation of a league of nations to insure peace and justice throughout the world. Before that final step can be taken, however, each deems it necessary first to settle the issues of the present war upon terms which will certainly safeguard the independence, the territorial integrity and the political and commercial freedom of the nations involved.

In the measures to be taken to secure the future peace of the world the people and Government of the United States are as vitally and as directly interested as the governments now at war. Their interest, moreover, in the means to be adopted to relieve the smaller and weaker peoples of the world of the peril of wrong and violence is as quick and ardent as that of any other people or government. They stand ready, and even eager, to cooperate in the accomplishment of these ends, when the war is over, with every influence and resource at their command. But the war must first be concluded. The terms upon which it is to be concluded they are not at liberty to suggest; but the President does feel that it is his right and his duty to point out their intimate interest in its conclusion, lest it should presently be too late to accomplish the greater things, which lie beyond its conclusion, lest the situation of neutral nations, now exceedingly hard to endure, be rendered altogether intolerable, and lest,

more than all, an injury be done civilization itself which can never be atoned for or repaired.

The President therefore feels altogether justified in suggesting an immediate opportunity for a comparison of views as to the terms which must precede those ultimate arrangements for the peace of the world which all desire and in which the neutral nations as well as those at war are ready to play their full responsible part. If the contest must continue to proceed toward undefined ends by slow attrition until the one group of belligerents or the other is exhausted; if million after million of human lives must continue to be offered up until on the one side or the other there are no more to offer; if resentments must be kindled that can never cool and despairs engendered from which there can be no recovery, hopes of peace and of the willing concert of free peoples will be rendered vain and idle.

The life of the entire world has been profoundly affected. Every part of the great family of mankind has felt the burden and terror of this unprecedented contest of arms. No nation in the civilized world can be said in truth to stand outside its influence or to be safe against its disturbing effects. And yet the concrete objects for which it is being waged have never been definitively stated.

The leaders of the several belligerents have, as has been said, stated those objects in general terms. But, stated in general terms, they seem the same on both sides. Never yet have the authoritative spokesmen of either side avowed the precise objects which would, if attained, satisfy them and their people that the war had been fought out. The world has been left to conjecture what definitive results, what actual exchange of guarantees, what political or territorial changes or readjustments, what stage of military success, even, would bring the war to an end.

It may be that peace is nearer than we know; that the terms which the belligerents on the one side and on the other would deem it necessary to insist upon are not so irreconcilable as some have feared; that an interchange of views would clear the way at least for conference and make the permanent concord of the nations a hope of the immediate future, a concert of nations immediately practicable.

The President is not proposing peace; he is not even offering mediation. He is merely proposing that soundings be taken in order that we may learn, the neutral nations with the belligerent, how near the haven of peace may be for which all mankind longs with an intense and increasing longing. He believes that the spirit in which he speaks and the objects which he seeks will be understood by all concerned, and he confidently hopes for a response which will bring a new light into the affairs of the world.

SITUATIONS WANTED

A NEW YORK GENTLEMAN, FORTY YEARS OF AGE, PROGRESSIVE, EFFICIENT AND EXPERIENCED AS SUPERINTENDENT OF ORPHANAGE DESIRES A SIMILAR POSITION, WHERE AGGRESSIVE RELIGIOUS AND INDUSTRIAL TRAINING IS DESIRED. ADDRESS 2417 SURVEY.

SOCIAL WORKER desires position as Matron, as Assistant to Settlement Headworker, or as Recreation Supervisor. Good references. Address 2435, SURVEY.

HOUSE-MOTHER desires position child-caring institution. Address 2436, SURVEY.

POSITION with civic or social organization. University graduate. Five years' experience in large city in various kinds of social work, including vocational guidance. Mature woman. Good references. Address "V" SURVEY, 2559 Michigan Avenue, Chicago.

PART TIME WORK wanted in or near Boston by woman graduate of Boston School for Social Workers. Is also a college graduate. Address 2349, SURVEY.

HELP WANTED

MAN Assistant Physical Director. College man with experience and all around athlete preferred. Make application in writing, stating education, experience and minimum salary, to Mr. Philip L. Seman, Supt. CHICAGO HEBREW INSTITUTE, 1258 W. Taylor St., Chicago.

SUPERVISOR of boys. State experience, age, salary expected, etc. Apply HEBREW ORPHANS' HOME, 12th Street and Green Lane, Philadelphia, Pa.

SOCIAL WORKER (woman) experienced in Court Work for Church Organization. Must be an Episcopalian. Salary \$1000. Address "P.," 155 East 22nd Street, N. Y. City.

TRAINED NURSE with social training and experience. Must speak Yiddish. Address 2437, SURVEY.

A SOCIAL SETTLEMENT in the city desires the services of Jewish club-worker for boys and men, after school hours. Must understand athletics. 2438, SURVEY.

WANTED—By Council of Jewish Women, 242 East Broadway, an educated young Hebrew woman speaking Yiddish for immigrant port work. Credentials required.

NOW IS YOUR OPPORTUNITY

Owing to the advance in the cost of every material used in book making we are obliged to announce that there is to be an increase in the price of

EVERYMAN'S ENCYCLOPAEDIA

To everyone who does any reading, writing or thinking an encyclopædia
IS A NECESSITY

This work is a complete, reliable, and accurate reference encyclopædia containing the fullest and latest information. It supplies exactly what is required by a person who needs and wants an encyclopædia. The twelve volumes of the set are printed in clear type on good paper, and are well illustrated. The books are flat opening, and their convenient size makes them astonishingly easy to handle, consult, or even carry about.

The writer, the student, the business or professional man or woman, the

parent and all people who want to have quick access to information should take this opportunity to secure Everyman's Encyclopædia at the present prices. Don't wait until after the first of the year to pay the increased prices. If you already have a set get one at the present price for a gift for some relation or friend that they may enjoy this remarkable reference work.

Women as Munition Makers

A Study of Conditions in Bridgeport

By Amy Hewes

AS the Merchants' Limited from Boston crashes through Bridgeport on its way to New York about nine o'clock every evening, passengers invariably glance up in curiosity at the great blocks of lighted factory windows which suddenly loom up out of the night. "Those are the munition factories," some well-traveled person remarks, as one after another the great buildings slip by.

Behind those lighted windows men and women are working all night long making cartridges to be shipped abroad by the Remington Arms-Union Metallic Cartridge Company, and half a mile away, in a still larger factory adjoining the first and under the same management, thousands more are fashioning rifles for the battlefields of Europe.

New workers, recruited in part from nearby towns, from industrial cities in New Jersey and Pennsylvania, from Canadian farms, but mainly from the city of Bridgeport itself, many of them untrained and inexperienced in this occupation, have gathered in the great munition factories to share in the war work and in the war prosperity. By the summer of 1916 nearly 4,000 women and many more men, were employed.

To find out what war orders mean to working girls in this country, the testimony of the girls themselves was sought by representatives of the Russell Sage Foundation who went to Bridgeport last summer. The girls who were interviewed were employed in the largest munitions plant in Bridgeport at the very center of the munitions industry in Connecticut. The workers were chosen not because the conditions in this factory were believed to be worse or better than those of similar establishments elsewhere, but because the facts were significant by reason of the importance of this center in the munitions industry.¹

¹ At the time of the publication of War Boom Towns, Bridgeport, by Zenas L. Potter, in the SURVEY, December 4, 1915, a representative of the Remington Arms-Union Metallic Cartridge Company had asked the Russell Sage Foundation to confer with him regarding the housing of the women workers who were expected to come in an army of 4,000 from outside of Bridgeport, and it was these conferences which led the Division of Industrial Studies of the Foundation several months later to undertake a brief inquiry. Amy Hewes, professor of Economics of Mount Holyoke College, and former secretary of the Massachusetts Minimum Wage Commission, was in charge of the investigation. The knowledge gained from the women workers concerning their home conditions, their work,

Exactly one hundred of the women were living with their own families, and in these cases they added information about the family income and the family expenditures, particularly the item of rent. They also gave the essential facts about forty-six other women in their families who were employed in the munitions industry. Eighteen other women interviewed were away from home, boarding or living in furnished rooms, so that specific information was obtained for one hundred and sixty-four workers in all.

Alert and ambitious, interested and willing to talk of their work and its advantages and handicaps, they were prepossessing representatives of American working women. Among them were natives of ten foreign countries, but the large majority were girls born in the United States, educated in American schools, and settled in Bridgeport before the war boom. They represented all the important tasks for women in the industry. Many of them had worked in this occupation for years; nearly half, five years or longer. About one-fourth were past thirty years old; only one in twenty was less than eighteen. The majority, however, were not yet twenty-four. Compared with some other manufacturing industries, the proportion of single women was smaller than usual, for 80 per cent were single, and as large a proportion as 20 per cent married or widowed.

A sudden boom has never made a utopia out of a modern industrial city. Prosperity and expansion inevitably bring their pressing dilemmas. High wages have been offered by munition factories in order to obtain a sufficient labor supply. The consequences of good pay are seldom questioned, especially by the people who receive it; but in the case of the women munition workers of Bridgeport three serious issues have come up along with the high rates of wages.

their hours and their wages reflected in miniature the problems which loom large in the city's life today. After the field work was in progress the company was asked to cooperate, but declined, later taking the ground that such an investigation on the part of a private agency was without legal or ethical right.

After this article was in first draft, conferences were held between the investigators and representatives of the firm and certain misapprehensions were cleared up; but the company refused detailed information on various points under discussion, and refused permission for a plant investigation to supplement the inquiries carried on in the girls' homes.

NOON HOUR AT THE REMINGTON ARMS-UNION METALLIC CARTRIDGE COMPANY

Some workers patronize the lunch-cart; some have food brought by relatives and friends to the factory fence; others rush home for "a bite"

In the first place, in order to satisfy the urgent need of speed and a large output from the factories, women have been induced to work long hours and at night. Second, they are put to work near or with explosives in ways which sometimes mean accident, industrial poisoning or other illness. In the third place, the high price of labor has been paralleled by an exceptionally high cost of living, and the increase in the number of laborers attracted by the high wages has caused a phenomenal rise in rents. So the question is, "Does the boom pay?" What standards should the community enforce to protect itself not only from hard times, but from emergent prosperity—from the anti-social results of abnormally rapid expansion in an industry?

Night Work

NIGHT work was a conspicuous fact in the neighborhood of the big Bridgeport cartridge factories last summer, when the field work of this investigation was in process. About seven in the evening a crowd of men and children began to line up outside the factory fence, carrying packages of food. Many of them were the husbands and children of the women who worked on the earliest of the night shifts in the factory, from three in the afternoon until eleven at night. In the fifteen minutes' rest period which came at seven o'clock they hurried down to the fence to get their lunches. Again, an hour before midnight, the women came out of the factory with the crowds of men, and their places were taken by others who worked until seven o'clock in the morning. The day workers began at seven o'clock and stopped at three. In this way the twenty-four hours were divided into three eight-hour shifts. In some of the departments which operated on a different schedule women stayed all night long, working from half-past six at night until five in the morning. A scant fifteen-minute meal period was allowed on each of the eight-hour shifts, while only half an hour was given on the 6:30 p. m. to 5 a. m. shift. A small bonus was usually paid for the night work.

With few exceptions night work is unpopular with the young working girls of Bridgeport. Their natural desire for recreation, for the society of young people of their own kind, finds no outlet while they have to work or sleep in the evening hours when most of their friends are free. In fact, night work is not in great favor at any age. One woman said that she liked to work at night better than in the daytime in summer because it was cooler in the factory; but in the opinion of most of the others coolness does not compensate for the disadvantages and discomforts. Sufficient sleep is hard to get. Noises in the street and the ordinary household happenings make it doubly difficult to become accustomed to the unusual hours. Women in some departments were changed back and forth from a night shift to a day shift every two weeks, and under these conditions it is even harder to acquire the habit of sleeping by day. The unusual meal times often mean loss of appetite and indigestion. To timid women, who go to and from their work in the late hours of the night and in the early morning, the dark and lonely streets seem a perpetual menace.

The only ones to whom the night shifts seemed a bonanza were married women who wanted to take advantage of the chance to earn good pay in "the shops," as the cartridge factories were usually called, but who had homes and families which needed their care in the daytime. Often the household duties are neglected, for several of the hours of the day must necessarily go toward an effort to sleep. Sometimes older children have to bear the brunt of the work at home and take care of the younger children besides. One little girl of eleven whose mother worked on an all-night shift swept the rooms, washed the dishes and took charge of three younger children, including a baby of two years, while the mother slept. In spite of the industry of the young caretaker, the house was dirty and the children sickly-looking and peevish.

Occasionally more unusual domestic arrangements were evolved. In one case, that of a large family consisting of a man and his wife, their four children, his widowed sister-in-

VARIOUS TYPES OF COMPANY HOUSES

To provide for its increased labor force the Remington company has erected houses for families. Dormitories for girls have been begun but not completed

law, the latter's three-year-old son, and a man lodger, the care of the house was divided between the two women. The wife worked in the factory from three in the afternoon until eleven at night, and the sister-in-law's factory hours were from seven in the morning until three. This arrangement left one or the other of them at home all of the time to get the meals and take care of the children, and they could meet at the factory at three o'clock and talk over family plans for a few hurried minutes. Such a routine is possible only in a family in which some kind of communal domestic arrangements are in force, and illustrates the abnormal character of night work for women.

The foreign-born women, like the wives with home responsibilities, usually had fewer occupational openings than single wage-earners of native birth and had to take their work when they could get it. Consequently many of them became night workers.

In its official position toward night work the United States may have a lesson to learn from England. In the early days

men's chief concern was the supreme need of increased output.

In its report the committee went on record as opposing night work on the following grounds: (1) that it is uneconomical, because of the higher wages and lower output; (2) that supervision at night is often unsatisfactory; (3) that adequate lighting is difficult to arrange; (4) that workers cannot secure the necessary amount of sleep; and (5) that workers' digestion is deranged by unwonted meal hours.³ The committee pointed out that if the increasing stress of the progress of the war should make night work unavoidable, adequate rest periods must be provided—one of an hour and one of a half-hour on the long shift, and a minimum of half an hour on the short or eight-hour shift.

In the United States, the workshop in which vast amounts of war materials are being manufactured for the same conflict, though without the patriotic motive, no governmental review has been made of the new industrial conditions, except that a study of occupational diseases connected with the munitions industry is now in progress by the federal Bureau of

GIRLS IN A CANADIAN MUNITIONS FACTORY

These Canadian workers are protected against industrial poison by caps and aprons. No such precaution is observed in the Bridgeport factories

of the war England set aside the labor laws in order to expedite the production of munitions of war. Excessive hours of labor, night work and Sunday work became common in the English factories. In spite of the patriotic fervor with which English women entered the workshops and undertook the manufacture of munitions, fatigue, accumulated with the long hour and hard work and dissatisfaction, fermented. For these and other reasons the output was unsatisfactory in quantity. At last the government officials, facing the fact that the probable end of the war was becoming further and further removed, and realizing that England's working force at home must be conserved for a long period of time, took up the problem from another angle. In September, 1915, a committee was appointed under the Ministry of Munitions "to consider and advise on questions of industrial fatigue, hours of labor and other matters affecting the physical health and physical efficiency of workers in munition factories and workshops."² Throughout the ensuing investigation the govern-

² Health of Munition Workers Committee, Memorandum No. 1. Sunday Labour, p. 3. London, 1915.

Labor Statistics. This does not, however, include wages and hours.

For purposes of profit, manufacturers here are producing with feverish haste by methods which have been declared wasteful by the English investigators. Employers here are arguing that the work of women as well as men at night is the only way to reduce the cost of maintaining the plants themselves so as to yield maximum profit. For the same reason the tendency in the Bridgeport munitions plant seems to be to lengthen the daily hours.

At the beginning of the war it was supposed that Connecticut legislation prohibited night work for women. The labor law, however, merely forbade work for women after 10 p. m., and fixed no hour in the morning before which they might not be employed. Consequently, when the rush of war orders made work in the munitions factories continuous, women on the night shift were employed until ten, kept idle from ten until midnight, and then set to work again. A test

³ Health of Munition Workers Committee. Memorandum No. 5. Hours of work, p. 8. London, 1916.

of the law in a prosecution brought by the factory inspector resulted in a decision⁴ to the effect that, owing to its loose phraseology, the law did not apply to manufacturing, but only to mercantile establishments. At the present time, therefore, there is no legal bar to the employment of women in manufacturing establishments at night. Following this decision continuous night shifts without the two hours' break were adopted by some Connecticut factories, the Bridgeport plants dealt with by this investigation among them.

According to representatives of the company, last summer was a transitional period in the management of the works. As they express it, the change was from a "military" to a "civil" régime; the explanation being that a former army officer was succeeded by a civilian executive as manager. Under the new administration, it is explained, new schedules of hours have been gradually introduced in different departments. One of the changes thus reported by the company is that the shift for women from three in the afternoon until eleven at night has been abandoned.

At the present time, according to a statement made by the company, on December 5 last, women are employed in the works in but two shifts. The day shift works the first five days in the week from 7 a. m. to 4:36 p. m., with one hour off at noon, and on Saturday from 7 a. m. to 12 m., a total of eight hours and thirty-six minutes on each day from Monday to Friday, with a working week of forty-eight hours in all. Overtime may prolong the day until 6 p. m. five days in the week, making a total working week of fifty-five hours, the limit allowed by the Connecticut labor law.

The night shift works from 6:30 p. m. to 4:36 a. m., with a half-hour recess, nine hours and thirty-six minutes each night from Monday to Friday, inclusive. The overtime schedule is until 5 a. m., making ten hours a night and fifty hours a week. Thus, although the hours have been changed, night work for women continues, and both by day and by night women not infrequently work as long as ten hours. Moreover, the changes have resulted in lengthening rather than shortening the hours.

Thus the general impression, that since the outbreak of the war Bridgeport is an "eight-hour town" has gradually ceased to be true in the munitions industry. "We are still considered an eight-hour department," said one worker, "but considering don't make the day seem any shorter when they keep us till six o'clock, as they did every day last week."

It was after a series of strikes in the summer of 1915 that the munition industry in Bridgeport, like several other local industries, was generally organized on the basis of an eight-hour day. In trades in which the unions were strong, as with the machinists, the short day has persisted; but for the women workers, many of the schedules have been modified, first by frequent overtime and later by the regularly longer day.

The women were reluctant to go back to the longer hours. "If the girls had only stuck together we could have kept the eight-hour day," said one, "but you can't do anything with those foreign girls." The money earned in the time over eight hours was often referred to as a "bonus," but in fact the work was usually paid for at exactly the same rate as in the previous eight hours. As a usual thing the girls would gladly have sacrificed the additional pay in exchange for two hours' more free time.

The Work of Women and Its Hazards

A SECOND problem growing out of the manufacture of munitions, that of industrial accident and disease, was less con-

spicuous, although not less important than the night work of women. In Connecticut, as in other states in which munition factories have recently sprung up, little attention has been paid by the community to the means of protecting the workers from the dangers incident to the use of explosives and to the operation of the machinery in the factories.

Although Bridgeport manufactures a variety of munitions, nearly all of the thousands of women employed in connection with them are at work upon one single product, cartridges. Several of the early processes on the cartridge cases are performed on dial machines, before which the women operators are seated. The women receive the material in the form of the small brass cups from which the cartridge cases are to be formed. The worker slips the cups into hollow dies set in the revolving dial, and these pass under punches which draw out the cups into longer and thinner cylinders.

Stories of hands maimed by breaking punches and fingers crushed in the presses were frequently told to the investigators by the girls who had seen the accidents happen or who had experienced them. One worker showed two crooked fingers, permanently stiff, which had been injured by an unguarded machine a year and a half before. The punch broke, flew out and penetrated the two fingers; blood poisoning set in, and the girl suffered severely for two months. "I often used to complain about that machine," she said, "but they didn't put guards on it until after I was hurt."

The Process of Cartridge Making

AFTER the cartridge case has been shaped, the "head" is fitted with a small percussion cap called the primer, a process which is also performed on a dial machine. The primer has already been loaded with fulminate of mercury, one of the most powerful explosives used, and the girls say that they are always afraid the primers will explode in the machine if they are in any way defective.

Unless the cartridge conforms precisely to specified dimensions and structure it is a worthless product. To avoid premature explosion, failure to explode at all, or failure to fit the rifle for which it is made, its parts must be carefully inspected again and again throughout the process of manufacture. Large numbers of girls work as inspectors, an occupation which requires good eyesight, but for which youth and inexperience are not obstacles.

"We are running a kindergarten in our department this summer," said a woman who was in charge of a number of fourteen and fifteen-year-old girls who were working as inspectors in the summer, but were planning to go back to school in the autumn. One of the most important inspections takes place just before loading. The girls watch for any imperfections and especially for "high" primers, or primers that are not fitted closely down into the heads of the shells. Another important inspection occurs just after charging. The girls make sure that the proper amount of powder is in the shells, that none have been left half-empty, and that no powder is spilled.

Formerly women had actually loaded both primers and shells, but by the summer of 1916 the girls said that this part of the work was usually done by men. Working at the machine which inserts the charge of powder in the open end of the empty cartridge case, or "shell," is a group which usually consists of two men and four or more girls. The girls say that they fill plates with primer shells and the men place them in the machines which put into each shell the proper amount of powder. According to the company officials, smokeless powder is used for war goods, and is much less dangerous than black powder.

⁴ State vs. William B. Fitz. The decision was handed down October 31, 1914, in the Town Court of Killingly, Conn., by Judge H. E. Back.

Work with the loaded primers and shells, as the girls described it, is never free from danger. They told stories of serious and even fatal accidents. One worker described her experience some years before when a girl beside her in the loading room was killed, another seriously injured, and she herself was struck by a piece of machinery. She added: "We always run, but you never really have time to get away. It's all over before you know what's happened. It's just as if a big wind came and blew you across the room."

Representatives of the company make the gratifying statement that while there have been a few fatal accidents among the men, there have been no fatal accidents for women workers for several years. They also declare that a committee on accidents exists, and that thousands of dollars have been spent on safety appliances; but as further information was denied the investigators, the methods of the committee cannot be described here or its efficiency gauged.

Fear of the danger and rumors of accidents are rife among the employes, however, and indicate the need for such a frank policy of publicity as to accident prevention as has been adopted by progressive employers elsewhere.

Even small explosions make the new girls very nervous, but familiarity with danger soon permits experienced workers to pay little attention to it. A kind of fatalism possesses some of them. "We have only once to die," said a worker who had seen men seriously injured and had herself been prostrated by the force of an explosion, "and it might as well be in the shops as anywhere else."

In Former Days

WORKERS remembered when the charging machines were "put in cages," as one of the girls explained, "so if there's an explosion they won't fly all over the room." The general testimony given by the girls was that since the passage of the Connecticut Workmen's Compensation Act in 1913 the machines have been better guarded. But not yet has accident prevention gone far enough to rid work in the loading rooms of serious dangers.

Furthermore, after injuries are received a general ignorance of the terms of the law or a kind of inertia about taking the necessary legal steps often prevents the workers from getting the assistance provided by the terms of the act. "One of the firemen told me I could get compensation from the company," said a woman whose eye had been hurt, "but I've never bothered about it," thus expressing in one casual sentence the attitude of many of the employes toward accidents happening in the course of their work.

For the six months from May 25 to November 25, 1916, five hundred and seventy-four accidents to munition workers in the fourth district, resulting in incapacity for a day or longer, were reported to the state compensation commissioner's office. All the plants which manufacture munitions in this district are located in Bridgeport. In the only two plants which employ women, thirty-three accidents to women occurred. During the same period, in one of the largest plants of the district, eighty-three claims for compensation were made by munition workers, of which twenty-five were made by women. Something more than trivial injury is implied in these cases, since, by the terms of the law, compensation cannot be claimed unless disability has lasted for more than ten days. Another characteristic of the Connecticut law should be noted in this connection. The percentage of wages to be paid during disability is, of course, a measure of the incentive for prevention. The Connecticut law requires only 50 per cent of wages in contrast with more advanced legislation in other states, such as New York, Massachusetts and Ohio, which allow two-thirds of wages.

In common with other American states, excepting only Massachusetts and California, Connecticut also makes no provision for compensation for occupational disease. Processes involving the use of fulminate of mercury contain a double risk. Not only is there need of constant caution on account of possible explosions, but also the risk of poisoning. Fulminate of mercury is irritating to the skin and to mucous membranes. The British recognize fulminate dermatitis⁵ and conjunctivitis as one of the industrial intoxications caused by work in munitions plants.

Many of the women working on the priming machines and in the loading room in the Bridgeport factories were aware of the danger and attributed eruptions of the skin, inflamed eyes and abscesses to this cause. Several of the girls showed little scars on their hands and arms where the eruptions had "dried up." There is a great difference in the susceptibility of individuals to this irritant, and many men and women can handle it with impunity, while others develop inflammation of the skin so severe as to necessitate their giving up the work.

In the Bridgeport plant, according to the company's statement, as many as 1,500 men and women are exposed to the danger from fulminate. Agents of the company admit that they have recognized the danger and say that about every two months their own physician makes medical examinations of the workers who handle fulminate. Moreover, it is the policy to transfer to other departments workers found suffering from fulminate poisoning.

Dr. Alice Hamilton, who is making special investigations of occupational poisons for the United States Bureau of Labor Statistics, writes concerning fulminate poisoning:

"Scrupulous personal cleanliness is the only preventive of this form of poisoning, and this would really involve frequent hand washing, for it is almost impossible, especially in hot weather, to avoid touching the face or neck or arms with the fingers. For those who are very susceptible to fulminate poisoning, there is nothing to do but to give up the work. Otherwise they run the risk of a very distressing eruption which may spread over the whole body."

Although the company states that it has spent large sums of money in installing sanitary apparatus and that as the plants have been enlarged and rebuilt the sanitary arrangements have been greatly improved, one worker employed in a process in which she handled fulminate reported that employes in her department were forbidden to wash their hands until after the factory whistle blew for dismissal, and that the only washing facilities were long troughs with a number of spigots. She also said that no towels were provided.

The common trough certainly increases the danger of conveying infection. Frequent washing in individual basins should be possible in order to get rid of such a poisonous powder and to prevent infection. Protective clothing, such as aprons and caps, is another precaution which is not observed in the Bridgeport factory.

The Boom in the Cost of Living

THESE conditions, night work, industrial accidents and occupational diseases experienced by working girls in Bridgeport should come within the scope of legal control. A third question which has forced itself conspicuously upon the city and has made life difficult for the wage-earners, that of the rapidly advancing cost of living, is more elusive and far harder for society to deal with. The workers first felt the pressure of higher costs in rising rents when the rush to Bridgeport came in response to the great demand for labor.

The resources of the city were not equal to the demand for houses and rooms which ensued. The first comers had quickly

⁵ Health of Munition Workers Committee. Memorandum No. 8. Special Industrial Diseases, p. 6. London, 1916.

A BRIDGEPORT HOME

This is the common type of family dwelling

snatched up the few vacant "rents," as a rented house or tenement is usually termed in Bridgeport. Real-estate agents ceased to have houses to offer, and rents jumped almost instantaneously. As a result families which could not pay the increases were evicted. Many of them were at first unable to find vacant tenements for the amounts which they could afford. Some of these became, for the first time, dependent upon charity, while others, with incidental hardships, were able to readjust their family budgets and give a higher proportion for rents than formerly. "Our rent has been raised \$8.00 since last summer, and another raise will take the roof right off our heads," said a munition worker recently. Others told of increases in their monthly rates which ran as high as \$9.00 and \$10.00.

The hardship of rising costs did not stop with small economies. Sometimes it even meant the breaking up of families. "I couldn't keep all the children after the rent went up," said a night worker, a widow who was trying to support her four children and keep the home together. She had to put three of the children in an orphan asylum and go to board with a relative, taking the youngest child with her. Overcrowding was inevitable. A Hungarian family of eleven persons, five of them children under fourteen, occupied four rooms in a flimsy "three-decker" in the rear of a dirty court. Another Hungarian family crowded its fourteen members into four rooms in a three-decker.

Some families solved the problem, temporarily at least, by living at the nearby beaches. In the fall of 1915, when the people who had been staying at the shore for the hot months

prepared to come back to the city, they found it hard to get rooms, and many of them decided not to try to come back. They put up extra stoves in the lightly constructed cottages and shacks and prepared to spend the winter months at the shore. The long street-car ride, the frequent snow, ice and slush and the lack of proper sanitary and heating arrangements proved to be not the only drawbacks to healthful home life at the beaches. The usual cheap amusement places abounded and exercised influences which were distinctly undesirable.

The munition companies saw that the lack of housing facilities was a serious hindrance to the free response of labor to their demand. Unless houses at reasonable rates were provided, workers could not be induced to come to Bridgeport. Accordingly the Remington company bought up large tracts of land, in 1915 and 1916, and began the construction of one-, two-, four- and six-family houses.

The houses, many of which were completed by the summer of 1916, are well built and attractive, but they are rented at figures too high for many of the families to pay. To accommodate the increasing number of girls in the munition plants large buildings of the dormitory type were started. The plans provided for excellent construction, but in housing large groups together they are socially similar to the dormitories prevalent in the early days of New England mill towns. The buildings have a commanding site overlooking the city, and are of imposing appearance, but construction has been greatly delayed and they are not yet ready for occupancy. At the present time, although plans,⁶ public and private, are under way, nothing has yet been actually accomplished which has checked or reduced the abnormally high rents.

Each month it becomes less possible to pare down other items in order to pay the high rents, since all of the necessities of life are becoming more expensive. Less meat, less bread, less milk are to be had for a dollar than formerly. "New York has nothing on us for high prices," said a woman who kept an account of her daily expenses and had just compared it with her brother's in the larger city. "The prices here in Bridgeport are something fierce," was the comment of a loader who had only himself and his young wife to provide for. "Only four days ago I brought home twenty dollars. We haven't bought any extras. Now there's only two dollars and ten cents left."

Wages and High Prices

To some extent the problems of the Bridgeport munition workers are matters of general information. Yet the public, relying upon current rumors, often comments: "But they get such high wages in the Bridgeport munition factories!" This comment needs qualification.

It is true that munition factories have offered high rates of pay in order to attract a sufficient labor supply. But are the increases over the general rates formerly prevailing comparable with the increased cost of living? In the exhaustive report of the special Commission to Investigate the Conditions of Wage-Earning Women and Minors in the State, published early in 1913, the median wage for women in the cotton industry is given as \$9.57, in silk \$7.65, in corsets \$7.87, in metal \$7.43, and in rubber \$7.56.⁷

The median wage of the munition workers studied by the Russell Sage Foundation in the summer of 1916 was \$10.97. That is, the median wage for munition workers in 1916 was about 15 per cent above the median for cotton workers more than three years before, and, roughly, 40 per cent higher

⁶ See Bridgeport on the Rebound, by Amy Hewes, in the SURVEY for October 14, 1916.

⁷ State of Connecticut, Report of the Special Commission to Investigate the Conditions of Wage-Earning Women and Minors in the State, 1913, p. 36.

than that in the other industries. Meanwhile, in the course of one year only, rents had so increased that the median rent paid in families of women munition workers was 22 per cent more than the median rent a year before.

Moreover, as far as the earnings of women are concerned, during the summer of 1916, the management appeared to be engaged in the process of reducing rates of pay. Thus the workers affected were caught between the millstones of increasing prices and decreasing incomes.

"We used to get twelve and a half cents a thousand," said an inspector, "and that certainly did make slick pay for a girl. But now they only give us nine cents for the same work." Even where piece rates were not reduced the tremendous speed at which the machines were driven, according to the testimony of many of the girls, in certain cases so injured the machinery that they could not turn out as much as they used to. The continual stoppages for repairs made big inroads on the workers' earning time.

What Must Be Done

TO MEET the problems of unstandardized working conditions and rising costs Bridgeport's efforts alone are not sufficient. The city has undertaken a vigorous campaign to provide housing facilities, to improve the general health, to organize playgrounds and to regulate traffic, but the situation calls for more than local effort. Even the two short years' experience seems to prove decisively that the protection of the workers cannot be left entirely in the hands of the organizations which employ them. The public also has a responsibility to perform through state action.

The whole situation transcends the interests of any one plant or any one community. The experience illustrated in this establishment affects many plants in many communities. England, pressed by great issues which have forced her attention upon fundamentals, has found it necessary to lay particular stress upon the health of her munition workers, and has gone painstakingly to work to gather accurate and authentic material concerning the industrial situation. The United States Department of Labor should no longer delay in getting information about the extent of night work for women in the munitions industry, its effects, the length of the working day, the provision for rest periods, safeguards against accidents and industrial poisoning, wages, and the purchasing power in communities affected by sudden expansion of industries.

Complicating the whole situation and rendering it more imperative is the ever-recurring question: "What will happen to our industries when the war is over?" England, again looking forward, has extended the Unemployment Insurance Act to cover workers in munition factories and allied industries, as a means of relieving the possible distress following the close of the war.

The Legislature of 1915 in Connecticut failed to pass an act prohibiting night work for women in factories. Officers of the American Association for Labor Legislation have long been residents of Connecticut, and the Consumers' League is actively at work in this state. Labor unions are thoroughly established in the state and are fortified by national affiliations. Yet these organizations have so far not succeeded in arousing the public and the lawmakers to the extent of prohibiting night work for women in factories.

Another Legislature convenes this month. If we can judge by experience of the most progressive industrial states, practical measures can be adopted without delay, some by the state and some by the city, to safeguard not only the munition workers, but employes in other industries which in times of

prosperity and excessive demand for labor tend to place undue burdens upon women and girls.

Night work should be prohibited by effective legislation already tested in such an important manufacturing state as New York, where a rest period in factories is definitely assured for all women between 10 p. m. and 6 a. m.

The daily hours of work should be reduced from the present legal limit of ten hours to eight, to conform with the most advanced laws already in operation in four states.

Employment of women in factories should be limited to six days in the week, to make the other provisions restricting hours really effective.

The law should specify the minimum time to be allowed for lunch, preferably one hour.

A campaign of education in accident prevention and in the actual provisions of the workmen's compensation law should be undertaken by the state department of labor, and as a measure of prevention accidents should be made to cost more by providing a higher rate of compensation and a shorter waiting period.

As part of the health program of Bridgeport, clinical treatment should be provided for workers suffering from industrial diseases and the facts thus ascertained should be made the basis for better regulation, both through state labor laws and local health ordinances. The state law should provide for compensation for injuries due to occupational diseases as it now provides for injuries due to accidents.

The Legislative Drafting and Reference Bureaus

By Joseph P. Chamberlain

COLUMBIA UNIVERSITY

SO MUCH of the social reform, now being demanded, must come by way of legislation that the movement to improve the drafting of statute law and to adequately inform legislators upon the subjects of legislation is peculiarly worthy of the attention of readers of the *SURVEY*. Twenty-one states,¹ the United States and the Philippine Islands have bureaus to collect and classify information for the use of legislators or to aid in bill-drafting, or to do both. Another, Louisiana, at the last session, created a commission to report on the advisability of establishing a legislative reference bureau.

Most frequently, the bureau is a part of the government library; sometimes, as in the bureau at Washington, without power to draft bills; sometimes, as in Wisconsin, the mother of effective legislative reference work in America, and in the newest bureau in the Philippines, equipped for drafting as well as for legislative reference. In four states—Connecticut, Massachusetts, New York and Vermont—offices for drafting only are attached to the legislatures for the sessions, and in one, New Jersey, there is a draftsman under the control of the attorney-general.

The functions of a legislative reference service are to collect and make available information as to all matters becoming or likely to become the subject of legislation. The draftsman's duty is to assist the legislature or the executive in the formulation of bills or statutes exactly expressing and effectually carrying out the policy decided upon. His work precedes that of the legislative reference service in that he must inform the latter of the points on which information is needed, and follows it in that he takes the material gathered, and out of it and the policies decided upon by the law-making or law-proposing agency, fashions a bill. His duty is not the assembling and arrangement of material to determine the economic need; his concern is not primarily with policy—that is for the legislature. It is, however, for him to point out questions of policy in details, so often overlooked, to those for whom he is working, to advise as to the best means for carrying out

the policy adopted, and to put into definite, clear language the final decisions of the lawmakers.

The recent trend has been to unite the two services into one bureau, making this independent of the state library. In California and Illinois it is under the control of a committee composed of the governor and representatives of the legislature. In Indiana, the governor, state librarian, the presidents of the two universities and one member appointed by the governor, form the committee. In Nebraska, Pennsylvania and Virginia the governor appoints the head of the bureau as an independent official.

This recent trend is undoubtedly in the right direction. If the drafting and reference work are separated, as in New York, experience has shown that the reference division will not be used by the draftsman, and is in danger of losing touch with the legislators and thus failing in practical value. Where there is no drafting service a reference library may become invaluable to members in gathering information; but if there is a drafting service to which they can go for finished bills and trained legal advice, there is danger that the reference work, if separate, will fail of its purpose. A principal object of the reference division is, besides, the gathering of material to respond to the needs of the draftsman, as a reform idea is being developed into a legislative idea and put into the shape of a bill, so the association between the two divisions should be close. Even if the reference librarian is appointed by, and officially subordinate to, the state librarian, the office should be so organized that it is not in the power of a jealous or timid state librarian to limit its cooperation with the draftsman, or its independence.

Much more important is it that the draftsman be not subject to the librarian. His work is in no sense library work. It requires a very different training and aptitude. Draftsmen should be familiar with the law, both common and statute, especially with constitutional limitations and administrative law (Pennsylvania, Indiana and California). They are frequently asked to draft new bills to remedy evils which are already provided for; they are constantly interfering with the complicated machinery of legislation and of government. They

¹ Alabama, Connecticut, Iowa, Kansas, Massachusetts, New Jersey, New York, North Dakota, Rhode Island, California, New Hampshire, Pennsylvania, Texas, Virginia, Indiana, Michigan, Nebraska, Ohio, South Dakota, Vermont, Wisconsin.

should, therefore, know how to adjust new devices to the old machine, so that it will turn out the product of reform which is desired. And the only way in which they can do the preliminary work of learning the machine, so as to make the proper adjustments, is to work on it.

Work done as active draftsmen during a session is not sufficient. To develop competent draftsmen and legislative counsel, men must be kept busy between sessions as revisers of laws (Pennsylvania), or as advisers of departments of the state government in the preparation of regulations to carry out the laws on which they have worked, or as legislative counsel for legislative commissions or committees which are making investigations with a view to the introduction of bills. By using all of their time, furthermore, the state can afford to pay its draftsmen better salaries, and will secure public servants whose whole lives will be given up to the improvement of the statute law in the interest of the public. Information and experience gained in one study or upon one bill will not be lost to the legislature for the future, and the draftsman will gain that wide view of the organization and operation of the different branches of the government as well as the experience in the proper use of legislative expedient and language which his office requires.

The draftsman, it must not be forgotten, occupies a peculiarly confidential relation to the committees of the legislature or heads of departments who make use of him. They must feel that he is wholly their servant so far as he is working with them, a relation which is not compatible with his being subject to the orders of an administrative chief holding over him the power of the purse if not of dismissal. Bills drafted by the administration are becoming more and more important in American experience, however; but if it is the legislature which controls the bureau, it is unlikely that the administration will make use of it.

The chief draftsman should be independent and non-partisan. He should be appointed for a long term, preferably indefinitely, subject to removal after a hearing and for cause. Who should have the power of appointment is a question which must be answered in each state. Normally it would be the head of the government, the governor or president; but there is a strong tendency on the part of the legislatures to insist on a voice in the matter, and if the tenure is made secure during good service, the arrangement already in force in Illinois and California is possible. It is of the highest importance that both the executive and the legislature should feel entire confidence in the draftsman who, if his work is to be effective, must understand the policy or object of the officers or committees whose will he is putting into effective legal language. In the case of committee bills, he should attend important hearings before the committee, both public and executive; he should advise as to the effect of amendments offered, often by the opposition, where the bill is under discussion; he should be trusted by both sides to harmonize all amendments adopted with the provisions of the original bill, so that the final intent of the legislature be clearly expressed.

In the preparation of administration bills the draftsman must be trusted with a frank statement of the exact object to be accomplished by the legislation and must be given full opportunity for discussion with the various officers of the government whose departments will be affected. He should do much better drafting work than attorneys for a department, both because of his knowledge of the effect on other departments of the proposed bill, because of his general experience in drafting work, and also because he will approach the subject from a purely non-partisan, scientific standpoint. The drafting defects of many administration bills introduced into

Congress and into the state legislatures testify eloquently to the need of a professional draftsman (see report of the American Bar Association, 1914, pp. 637-9). The draftsman should also prepare bills for individual members when time permits; but this part of his work is by far the least important, though it is that which most legislative reference bureaus, as at present organized, can best do.

The need for improvement in the form of legislation and the methods which have been adopted to assist in the preparation of legislative enactments have been made the subject of two important reports to the American Bar Association by its special committee on legislative drafting (reports of the American Bar Association, 1913, p. 622, and 1914, p. 629). The committee strongly recommended the organization of an official legislative drafting and reference service and recognized the importance of the service to government departments and commissions of the legislature. The committee says:

"In nearly every state the more important bills enacted into law fall under one of the following heads: administration bills, that is, bills dealing with matters referred to in the governor's message and probably prepared under his direction; commission bills, that is, bills prepared by special commissions appointed for the purpose; committee bills, that is, bills prepared by some special or joint committee of one or both houses; and department bills, or bills which have been prepared under the direction of one of the executive departments. . . .

". . . A drafting service, whose operations are prac-

tically confined to the preparation of members' bills, is, therefore, a service confined to preparing bills not likely to become law, or pertaining to matters of comparatively slight significance. Such a service can never have an important influence on actual legislation and will never receive either from the legislature or the public that attention and consequent support which is essential to efficient work. The tendency to have legislation on important subjects prepared for submission to the legislature by persons especially designated for that purpose is, on the whole, producing excellent results.

"A commission charged with the preparation of a bill on a particular subject is usually composed, in part at least, of experts on the subject, and it is customary for them to secure as secretary or special draftsman someone learned in the law. But the average lawyer of experience is very far from being a trained draftsman, and bills prepared by commissions, while usually a great improvement on bills introduced by members on their own initiative, are by no means free from faults of form and graver faults of confusion and obscurity of expression, all of which could have been easily avoided, if, in addition to special expert service, the body responsible for the bill had at their disposal the services of a trained draftsman and had availed themselves of such services" (pp. 627-8, 1913 report).

Probably the best drafting work done in any law-making body is that of the parliamentary counsel for the Treasury for the British Parliament, or, more properly, for the committee of the House of Commons, which is the government. These men are permanent officials. They are lawyers trained in the common law, but more especially versed in statute and administrative law and in legislative expedients through their relations with public officials and as revisers of the statute book as well as their active work as draftsmen and legislative counsel. The establishment of so many legislative reference bureaus in our states and the new trend towards making them strong and independent gives good ground for hope that American legislators generally will come to recognize the need for official drafting bureaus manned by well-paid trained lawyers, all of whose time, between as well as during sessions, will be taken up with work on revising statutes, on the preparation for and drafting of bills and administrative regulations. Such men would become true experts in legislation, ready to supply that skilled aid in drafting so much needed by democratic legislatures whose time should be taken up with questions of policy and finance, not with the technical difficulties of law-making.

The Shorter Work Day

By Dorothy Kirchwey Brown

"ARMS PLANT CUTS HOURS.

Berlin Factory Puts 4,000 Women Workers on 8-Hour Day.
The Hague, July 10 (via London).—The Berlin Arms Manufactory has reduced the work of its 4,000 women employes to eight hours daily. The *Vorwaerts* urges that all similar establishments follow its example, as long hours, combined with underfeeding, are proving most injurious to the women."

SO runs a note in the *New York Times* of last July. Even under the pressure of war a German arms factory reduces the hours of its workers to eight a day. The tendency of the time is too potent to be altogether checked. And it is safe to assume that when hours are shortened in a munitions factory of a belligerent country, it is not mere sentimentalism that is at work.

To what extent is the United States showing this same tendency—this conviction that shorter hours are good policy? In April of this year a report was made in the *SURVEY* showing the progress that had been made toward shorter working hours in the United States in 1915. This article concludes by stating that "in the last ten months nearly 100,000 men and women have won the eight-hour day." The following pages will show how the promise of the year 1915 has been carried out in 1916.

Information has been obtained from state bureaus of labor, from chambers of commerce, from trade unions, from individual firms, and the net result is a realization of the nationwide sweep of the movement to shorten working hours and to penalize long hours by treating them as overtime. This movement is shown in cases where unions are powerful and have forced concessions from employers; it is shown in partly organized trades where employers have granted shorter hours to forestall demands already imminent; it is shown quite as markedly in the numerous cases where the employes, though not organized at all, have been given shorter hours through the entirely voluntary action of their employers. Comprehen-

sive statistics are not obtainable on this subject; records are kept of current events by only a few of the state statistical bureaus; trade union memberships vary from day to day, so that it is almost impossible to report definitely how many men were affected by the shorter hours.

The best figures we have, however, come from the annual report of the executive council of the American Federation of Labor, issued November 13, 1916, and dealing with the twelve months from September, 1915, to September, 1916.¹ Thirty-five of the national and international unions directly affiliated with the American Federation of Labor report a reduction in hours for part or all of their members. Many others report that organized members of their trades work shorter hours than unorganized ones, and report also a large increase in membership, which of course implies shorter hours for the new members. A careful study of the figures in the reports of these national and international unions shows that approximately 400,000 of their members had their hours of work reduced during the year. This does not include the potential reduction of hours of the four great railroad brotherhoods by the Adamson Law, but does include the 150,000 anthracite coal miners whose hours were shortened April 1, 1916, by the agreement between the coal operators and the United Mine Workers of America. Aside from the miners, a conservative estimate gives us some 200,000 of the most highly organized workers in this country whose hours have been reduced in the past year—to say nothing of those who are not organized or whose unions are not affiliated with the American Federation of Labor, who would greatly increase the total. The amount of the decrease ranged from the one hour a week gained by some 80,000 members of the Ladies' Garment Workers' Union, whose weekly hours were reduced from

¹ Report of the Executive Council of the American Federation of Labor to the Thirty-sixth Annual Convention, pp. 16-33.

fifty to forty-nine, to the twenty-four hours a week of the 880 Stationary Firemen whose working day was changed from twelve to eight hours.

The workers who benefited most from reduced hours were the teamsters with an increase in membership of nearly 7,000; the garment workers and tailors; the textile workers, 70,000 of whom secured the fifty-hour week; the paper-makers and the pulp, sulphite and paper mill workers, whose hours were reduced from twelve to eight and the electrical workers, lathers, metal polishers and machinists. Forty thousand of the last named now enjoy the eight-hour day; 10,000 have gained it since January 1, 1916.

Benefits for Other Union Men

AMONG the other national and international unions which report shortened hours are the bakers, boot and shoe workers, railway carmen, carriage and wagon workers, wood carvers, railway clerks, diamond workers, cloth hat and cap makers, laundry workers, lithographers, pattern makers, powder and high explosive workers and tobacco workers.

Our figures have so far not taken into account the twenty-odd local unions directly affiliated with the American Federation of Labor (not affiliated through a national or international union), which report shortened hours. These include workers in trades of all sorts, and in all parts of the United States, from an Agricultural Workers' Union in Cabo-Rojo, Porto Rico, to a Union of Janitors in Minneapolis.²

Correspondence with union officials and supplementary items from the Federationist show that about 60,000 additional workers in many scattered unions have secured reductions ranging from four to one hour per week.³

So much for information from trade unions. Much that is useful has also come from state officials. Perhaps the most interesting case reported to us is that of the *Mill Workers of Denver v. the Mill Owners of Denver, et al.*, a decision on which was made by the Colorado Industrial Commission in November, 1916. The mill workers had applied for an eight-hour day and for an increase in wages, on the ground that the price of living had increased while wages had remained stationary, that the mill workers of Denver were paid "far below any other city in this state or any of the states," and that the wood-working mills of Denver were all making a profit and were able to pay higher wages. The mill owners categorically denied these claims, with the exception of the statement as to the increased cost of living. The commission disallowed the wage increase, but rendered an unusually valuable opinion on the eight-hour day. The commission says:

"The mill workers are now working under a nine-hour day and have asked for an eight-hour day, with time and a half for overtime. This demand has not been seriously contested by the mill owners, and we believe, cannot be. They have suggested that it will be impossible for a worker to do as much in eight hours as in nine hours, and while as a matter of physical exertion and of mathematics, this may be true, under certain circumstances, we believe it is not permanently true. We believe that the eight-hour day could and should be granted to the men under the following conditions: For the first six months, beginning with the promulgation of this opinion, the workers in the mills of Denver be granted an eight-and-one-half-hour day, with the same pay that they now receive for a nine-hour day, and at the end of that time they be granted an eight-hour day with the same pay they now receive for a nine-hour day. We believe that with a gradual approach in this manner the quantity of the product which the mills of Denver produce will not be lessened very materially, and that it is even possible that it may be increased. This would amount to an increase of wages of 12½ per cent over the present scale, which would be a substantial increase in wages to the mill workers of this city. The Commission has heretofore declared for an eight-hour day, and so holds in this case. We base this upon the tendency of the times, upon the experience which we have observed in those places where an eight-hour day has been heretofore granted. It has been shown in the evidence and to our satisfaction in the experience of many plants that

"(1) The improved machinery which is such a marked characteristic of our age in all lines of mechanics is an additional reason why men should be given a shorter work day. . . .

"(2) There is a natural tendency to slow up under a ten-hour system, and a natural tendency to speed up under an eight-hour system.

"(3) That a long work day lowers the vitality and increases the fatigue of the worker and gradually slows up his work and diminishes the amount of his product. . . .

"(5) The experience which the Industrial Commission has had and the observations which it has made in those shops where a reduction has been made from a nine to an eight-hour day, has not, in any case, shown a decrease in the amount of product turned out.

"It is, therefore, the opinion of the Industrial Commission that it is altogether possible and practicable for the eight-hour system to be worked out successfully in this industry, amounting to an increase in wages of 12½ per cent. . . ."

Scope of the Inquiry

TO FIND out in greater detail what the motives have been which have brought about the shortening of hours by employers where there have been no strikes and where as far as we know there has been no great union pressure brought to bear, letters of inquiry were sent to practically every firm which was reported to us as having shortened its hours in the past year. A large number of courteous and useful answers were received. Most of them fall roughly into one of these groups: paper and pulp mills, oil refineries, metal and mechanical establishments and leather and shoe factories, with one or two from textile mills.

The paper mills of the United States have this year introduced an eight-hour shift literally "from Maine to California." This has been due to the fact that in this trade, mills are operated continuously twenty-four hours a day for six days in the week, and that the growing influence of trade unions in the industry, as well as the more enlightened opinion among manufacturers has been turned against the two shifts of twelve hours each or the eleven and thirteen-hour shifts which formerly were the rule. A large group of paper mills in Wisconsin, and others in Hamilton, Ohio, and Michigan,

² Others included are flour and cereal mill workers in Illinois and Wisconsin; last makers in Salem, Mass.; tin, steel, iron and granite ware workers in Illinois; cooks and waiters in Tampa, Florida, and others as diverse in kind and location.

have recently introduced the change to eight hours. Oil refineries all over the United States have reduced hours to eight within the past year.⁴ Various factories making one variety or another of metal goods, have recently shortened their hours. In the last two months three large shoe and leather factories, two in New England and one in New York, have established the eight-hour day.

Attitude of Employers

OF THE employers some have merely yielded to the inevitable, apparently considering, as one of them said, that "the eight-hour day has arrived." But certainly with many the change has expressed the real conviction that shorter hours mean increased efficiency and a wiser business policy.

Of those who yielded to the movement, though unconvinced of its complete wisdom, a prominent company of Kalamazoo, employing twelve hundred people, writes:

"We would frankly state that, while the system is not entirely satisfactory as far as the efficiency of our plant is concerned, it seems to be in keeping with the times and age."

Similarly the American Steam Pump Company of Battle Creek, Mich., said: "We do not believe in the eight-hour day with ten hours' pay," but with a nine-hour day, they report, "Our experience in this matter has been quite satisfactory."

The Timken-Detroit Axle Company, while expressing doubts of the "straight eight-hour day," has successfully introduced the fifty-four-hour week, affecting four thousand men. And the big Chicago plant of the International Harvester Company reduced its hours from fifty-five to fifty a week, thus shortening the work-day for the largest number of employes (15,000) in any one firm reported on.

A more radical change in hours introduced with a stronger conviction of its benefit to both employers and employes, was reported by the Northwestern Steel Company of Portland, Oregon, whose president wrote: "Our reasons were simply that the time has come for the eight-hour day, and it is long enough for anyone to work." Other firms expressing a similar belief in the justice of the eight-hour day were a Wisconsin paper manufacturer and the Dale Lighting Fixture Company of New York city.

"As to our opinion as to results," writes the former, "we cannot see that we have obtained any better service, but are satisfied that it is better for the men, and we believe that where factories are in operation twenty-four hours continually it is no more than right that the men should have the eight-hour shift."

"We adopted the eight-hour day," said John H. Dale, "because we believe it is the right thing to do by our men. We expect those two hours a day to benefit our people greatly and to pay us good dividends in increased good will and efficiency. Those who oppose the new spirit that is springing up between employers and employes will soon find the results of their futile opposition recorded on the wrong side of their ledger."

More important still, the Standard Oil Company of California, following the previous action of the Standard Oil Companies of Indiana and New Jersey (10,000 men affected), announced that all their refinery, pipe line and producing department employes were to be put on an eight-hour day, and wrote of this change benefiting between 7000 and 8000 men:

"The action of the directors of our company relative to the eight-hour day was taken for the reason that they believed it the right thing to do for the men in our employ, and was

acted upon without any request or suggestions having been made by any of our employes."

Efficiency as well as justice was prominent among the motives leading employers to adopt shorter hours. The Ford Motor Company, with its 30,000 employes, bears telling testimony to the effect of the eight-hour day in practice:

"The improvements noticed among our men in the way of increased efficiency, increased production, better habits of citizenship and thrift, may be jointly attributed to the reduction of nine to eight hours per day and also the profit-sharing plan and other minor welfare features, and cannot be attributed to any one of them in particular. We do, however, feel that the eight hours per day has particularly predominated the increased production, degree of efficiency and the reduction in labor turn-over. It is our candid opinion that working year in and year out a man can do more in eight hours per day than in a larger number."

Among shoe manufacturers a large and well-known New England firm—the W. H. McElwain Co.—introduced the eight-hour day in December, 1916, affecting between 6000 and 7000 employes, with the brief comment: "It was felt by the directors to be wise business policy."

Practically all these changes took place without reduction of wages.

No more striking example of the employers' new attitude toward the eight-hour day can be found than a letter from George F. Johnson of Endicott, Johnson & Co., of Endicott, New York, the largest makers of leather shoes in the world. Twelve thousand employes affected by this reduction to eight hours on November 1, 1916, held a great eight-hour parade in celebration.

A Shoe Manufacturer's Testimony

MR. JOHNSON writes: "Our purpose in establishing the eight-hour day was to make proper recognition of the fact that, in a prosperous business like ours, the more people participating in the prosperity, the greater the benefit of same. As our business has grown and prospered, we have recognized this principle: All of the workers should share in the prosperity.

"We have no theories about the eight-hour day. Never have had. We think the eight-hour day has 'arrived.' We think it is a mistake for employers of labor to dispute it. We agree with the President, 'Society has set its seal of approval upon the eight-hour day.' The sooner it is recognized, universally (so far as possible) the better for all concerned, and the sooner the proper adjustment can be made.

"So far as we are concerned, it was the greatest pleasure in our lives to grant the eight-hour day voluntarily, without reduction in wage, and we sincerely hope that it may be made possible for us to still further improve, constantly, the working conditions, and the wage of all our working partners.

"Finally, to sum up, it was simply our honest desire to improve conditions and increase the wage of the people in our employ, just as fast as we feel safe in doing it. Meaning, of course, that we must meet competitive conditions, and safeguard the business always. What it is possible for a concern to do, who are non-competitive, may not be possible for us to do; but we shall, as above stated, keep constantly before us the wish and the fervent hope that we may improve conditions for all, with a proper regard for the rights of the consumer."

There indeed is the new spirit in industry. It sums up a feeling of which one catches glimpses in many industries and many states from the Atlantic to the Pacific. It gives in more detail the general principle already quoted from the letter of the Northwestern Steel Company of Portland, Oregon, "The time has come for the eight-hour day, and it is long enough for anyone to work."

⁴For example, in Texas, the Texas, the Gulf and Magnolia companies, employing about 6,000 men.

The American Bugbear

By *Henry Raymond Mussey*

COLUMBIA UNIVERSITY

FOR half a century, but more especially since the Russian war, our myth-makers have been prodigiously busy with Japan, creating for us a people as different as possible from the hard-working but not overworked, poor but not poverty-stricken, cheerful but not hilarious inhabitants of the island empire beyond the Pacific.

Our first myth dealt with a race of cunning little yellow-skinned artistic geniuses. They sat forever in the moonlight under a flowering cherry branch and gazed on the ghostly but entrancing outline of Fujiyama. Mostly they spent their time writing poems to hang on their cherry tree, but in brief intervals they created, for the pure love of it, bewitching works of art that we afterward acquired for a song.

The Russian war shattered this myth in fragments, and we straightway created a new one. In this marvelous work of imagination the Japanese no longer mooned under a wistaria. Instead, every man, woman and child of them spent all his time in soldiering and politics. The Japanese began annexing China before breakfast, seizing the Philippines as a forenoon diversion, bombarding a Chinified San Francisco in the afternoon, and signing a peace treaty in Denver or Chicago in time to catch the night train back to Tokyo. They had but one feeling, we were told—loyalty to the emperor; but one desire—to commit suicide in order that the imperial power might be strengthened. In pursuit of this desire and in accordance with their topsy-turvy morals, so our myth-makers assured us, all Japanese preferred, no matter at what cost, to lie rather than tell the truth. And this myth is a cardinal article of faith, apparently, with a vast number of Americans today.

An occasional traveler with leisure discovers, not the people of the myth, but a people on the whole remarkably like ourselves. He finds most of them busily engaged making a living, and hating taxes and foreign politics. In Tokyo he finds men having every shade of political opinion, from the Little Japanner, who regards the Russian war as a mistake and Korea as an expensive blunder, to the blatant imperialist who sees the flag of the rising sun floating over all eastern Asia. In all the cities he finds public administrators, physicians, reformers of various sorts wrestling with problems of finance, sanitation, street cleaning, tuberculosis, infant mortality, alcoholism.

Our leisurely traveler looks about him, he talks with everybody he can. English carries him far even without an interpreter in Japan today. He reads the addresses of public men, he follows newspaper discussion, and he finds himself hunting rather vainly for the Japanese of the myth in their native lair.

In short, he finds the same process of economic development and socialization going on that is occurring in the West. He sees the same forces and motives at work as in the West. In Japan these forces work under conditions of difficulty, owing to the density of population, the natural poverty of the country, the survival of old habits of life and thought—but they work.

It must not be forgotten that in Japan proper we have a group of mountainous islands only three times as big as New York state. But one-sixth of that land is arable, so a popu-

lation six times as great as that of New York city and state combined must be fed from an area only half as great as New York's. The empire has no remarkable mineral resources, though there is some fairly good coal, considerable copper, some zinc, gold and silver, no iron. There is also considerable water power in small units. But Japan is by nature a poor country, and her fifty-five million inhabitants have for centuries had to make a frugal living by the exercise of an industry and economy almost unknown in the West.

Fifty years ago the West knocked at Japan's closed door. Her rulers suddenly awakened to the significance of western science and material achievement, western military and political systems, western economic and social organization. They determined to realize for themselves and their people the new possibilities of wealth and welfare that the West had to offer. They set themselves to appropriate and assimilate all that the West could teach them, and for half a century they have been diligent students.

Moreover, they were wise enough to take the whole nation to school with them. In every remote village of the empire, the biggest building is the public school. Every child must attend school from the time he is six years old, and Japan's percentage of illiteracy has sunk almost to the vanishing point. All school children must study English, and the whole curriculum is essentially western.

Agricultural Progress.

EDUCATIONAL progress is matched by the attempted advance in other lines. Government and people alike are working, for example, to improve agriculture, which employs 60 per cent of the whole population. The government is trying to enlarge the small and irregular fields in use. It has established agricultural banks and is loaning at low interest to cooperative agricultural societies. It has created four experiment stations and two sericultural training schools. It is encouraging the formation of local agricultural societies, fighting plant diseases and noxious insects, making much-needed efforts to improve the breed of stock, and trying in dozens of other ways to increase the effectiveness of this fundamental industry.

Japanese city life shows no less striking advances. Towns and cities centuries old, with all the inherited difficulties of an ancient past, are being made over as fast as finances allow. The broadening and straightening and paving of streets, lighting, sanitation, policing, provision of hospital facilities and public health service, the war on tuberculosis and venereal diseases and alcoholism, the improvement of prisons and the wiser treatment of criminals—all give evidence of the vigorous social life of the new Japan. The rapid rise of the Japanese standard of living in response to better conditions is often forgotten by those who fear the "swamping" of our western coast by Japanese immigration.

The industrial revolution going on before one's eyes reminds one of the England of 1685. As an enthusiastic Kyoto professor put it, "Osaka is a beautiful city—it is so smoky." But Japan, with western experience to profit by, does not have to blunder along for half a century without protective legislation, as England almost unavoidably did. After many post-

ponements, due, just as in the West, to the opposition of manufacturers, Japan's first factory act went into effect at the beginning of September. It is by no means an advanced act, yet some of our southern states might rejoice had they one as good.

All these new movements have accompanied a vigorous reaching out for more wealth; for the Japanese, without doubt, are alive to the main chance. Poor in resources, they looked hungrily at those of their neighbors, and a vigorous and not too nice expansionist movement arose, just as in western countries similarly situated. Formosa and Korea and South Manchuria are its fruits. In China the Japanese saw the Europeans seizing territory, mapping out spheres of influence, exacting concessions for mines and railways—by threat of force, if necessary. Again Japan proved an apt pupil, and, so far as an outsider can judge, her diplomacy in China has been of a piece with that of Europe.

Entering a fraternity of armed burglars, Japan apparently did the "practical" thing, determining to play the game with the accepted weapons according to the accepted rules. She did not make the rules, but was quite ready to accept them, if one may judge by her acts. Responsible Japanese statesmen concluded that the only way for Japan to get her share of the loot was by building an army and navy strong enough to command the "respect" of the other looters. The Russian war and the consequent exaggerated estimate of Japanese military prowess testify how well the task was done. Given Japanese economic and political conditions, in the face of the situation Europe had created in China, it is hard to see how Japan, even from a purely defensive viewpoint, could have avoided the military development of the past thirty years. Now, however, the issue is in a fair way to be joined between militarist expansionists and the advocates of peaceful development and social reform, with the militarists for the time being in a position of advantage, but by no means altogether having their own way.

Suspicion of America

WHAT part is the United States playing in this Japanese development, fraught with consequences so big for the whole future of civilization? From the day when Commodore Perry anchored in Mississippi Bay down to the end of the Russian war, the Japanese looked gratefully on Uncle Sam as their great and good friend, just as China does today. Following the triumph of the Japanese arms there came a change in the previously friendly tone of the American press. Admiration and liking seemed to change to distrust and fear. The San Francisco school discrimination, western anti-alien land legislation, and the whole California anti-Japanese agitation were interpreted in Japan as meaning that we were a nation of boors. The Japanese, not understanding the western laborer's point of view, could not see why a Japanese laborer, physically, intellectually and morally the equal of one from Europe, should not be treated as well. But that, of course, was only Japanese topsyturvydom. Japanese newspapers, if anything more yellow than our own, began to spread exaggerated reports of the exaggerated and untrue statements concerning Japan that passed current among us for truth. Some of our newspapers meanwhile breathed out threatenings and slaughter against the little brown men. It is small wonder that they were puzzled—and angry. Then came Secretary Knox's proposal for the neutralization of the Manchurian railways, which the Japanese did not at all understand, which they regarded as a distinctly unfriendly move, and which they suspected of being an occasion of picking a quarrel with them. Along with all these dark doings of America—for they think

of us in terms of the nation, just as we do of them—the Japanese saw the American navy growing, and heard fervid patriots here constantly comparing it with Japan's fleet. They saw American naval power creeping nearer, with Hawaii, Guam and the Philippines as points of support, and the American navy parading around the world just to show what it could do at need.

Our suspicious acts have continued down to the present day, as we may see at once by a glance at the figures. In the eight years from 1908 to 1915 Japan spent on an average \$98,000,000 a year on her army and navy; the United States, \$291,000,000. Japan's military and naval expenses fell from 36 per cent of her budget in 1908 to 31 per cent in 1915, while ours rose from 35 to 41 per cent. In 1917 it will be 52 per cent, and in 1918, 59 per cent. This, too, despite the pinching of Japan's economic and social budget by her poverty and the swelling of her military expense by the complications of European intrigue in China, and despite our unexampled national wealth and our expenditures on the Panama Canal, which cut down our percentage of military expense.

And what about that Panama Canal, which the United States built, and fortified, with such unctuous assurances of altruistic desire to benefit the world's trade? Could not intelligent Japanese see that the king of swashbucklers himself took the land we wanted for this unselfish enterprise; could they not read what our naval strategists set down in black and white, that the canal would double our fleet's effectiveness by making the Atlantic unit available against Japan? In the face of such evident facts, what availed our assurances that we harbored no hostile designs against their empire? Would sensible Japanese believe such deceitful claptrap? Would they not trust the plain evidence of their own eyes and ears as against the siren song of a hypocritical and treacherous foe? Was there ever a clearer case for newspaper strategists and politicians hungry for big naval appropriations?

Then came our preparedness hysteria of the past year. The Japanese did not hear a great deal about it; yet the press did bring word to Japan of sober American citizens marching by tens of thousands to demand a greater army and navy. News crossed the ocean that our president, after taking a manly stand against greater military preparation, had finally backed down, yielding to a general public clamor, and that our two great parties were seeking popular favor by trying to outbid each other in promising a big army and navy. Finally, amid a torrent of patriotic fervor, our Congress passed a bill appropriating for military—and notably naval—purposes a sum \$200,000,000 greater than was ever before voted by any nation in peace time for such objects. Is it any wonder that some sensational newspapers issued warnings to their countrymen, and that some Japanese were nervous as to our intentions? If they had been as timorous as we, they would have started out next morning on an American spy hunt. Who was there to tell them that we were just a lot of frightened children getting ready on general principles to repel an imminent invasion from Germany or from Japan—or from Mars, an equally likely source of armed incursion, in their view?

Sober, informed Japanese students of American affairs, needless to say, did not see an American fleet of new super-dreadnoughts sailing into Yokohama harbor on twenty-four hours' notice. But such students are no less scarce in Japan than are corresponding students of Japanese affairs here. In view of our overt acts during the past ten years, vastly more threatening to Japan than hers to us, in view of our vastly greater wealth and strength, in view of our immunity from

danger, is it any wonder that some of Japan's irresponsible newspapers have published and some, if not many, of her people have believed preposterous tales of our aggressive designs toward her? And is it strange if such tales make it easier to get appropriations for Japan's army and harder to get them for her schools?

Rather I find it strange that during three months and a half of the past spring and summer, while this anti-Japanese campaign was going on here, an ordinary American traveler, wandering all over Japan, visiting all sorts of places from Tokyo to the most remote rural hamlets, talking with people of every station from prime minister to coolie, was everywhere received with perfect friendliness, exquisite courtesy, apparently with entire openness. Superheated congressmen in Washington at the time were belching forth denunciations of Japanese duplicity and were revealing Japanese designs against our life and liberty. Patriotic newspapers, seconding their efforts, were spreading Japanese scares and cultivating anti-Japanese feeling throughout America.

And I, a plain American, was strolling through the busy streets of Kyoto, sitting under the marvelous cryptomerias of Nikko, wandering along the lanes of Kyushu, bordered with their masses of wild roses—and everywhere talking, in sign language, in my phrase-book Japanese, in English where that was understood, with dozens and hundreds of friendly and kindly men and women whose only thought seemed to be that I was a stranger whom they could serve. Perhaps the Japa-

nese appreciate the value of making a good impression on the foreigner; yet their courtesy disarms criticism.

Dread of the ultimate, if not the immediate, possibilities of American militarism is not wholly confined to the ill-informed in Japan, however. I shall never forget the private statement I heard of the views of a certain Japanese scholar of international reputation, a man whose broad and sympathetic first-hand knowledge of American life goes back not over years but over decades, a man intensely patriotic, yet intelligently international, a lover of justice and an indefatigable worker for social improvement. He looks forward to the day when the United States, already in his view on the way, and China alike will have become militarist states. Between Russia and China on the west and United States on the east he sees his beloved Japan caught in the jaws of a military vise and crushed out of existence as an independent people.

Shall we justify the fears of this lover of humanity, this admirer and friend of the America that has been? Or shall we dash away the poison cup that is even now being held to our lips? Shall we reassert our ancient faith in liberty, fair dealing and straightforwardness as the basis of individual and international relations alike? Shall we throw the weight of our example to aid the Japanese liberalism struggling against heavy odds for a Japan free from the grip of her militarists? Shall our torch of idealism still burn for the hundreds of millions in the east struggling toward the light? Japan, China, India, the whole world await our answer.

Reconstruction in England

By Herbert W. Horwill

HERE is no parallel in American history to the situation that will confront the British nation on the declaration of peace. The period of "reconstruction" in England, as it has come to be popularly called, will show little resemblance to the period after the Civil War to which the same name is given. In Great Britain there will be no problems analogous to those of restoring the prosperity of the devastated southern states and reorganizing their government. At the same time, the disbandment of the Union army created no such industrial and social difficulties as are expected to follow the demobilization of the British forces. For one thing, recruitment in America had not affected so closely the everyday life of the country, and, for another, the needs of the opening west offered almost automatically opportunities for ex-soldiers and others in search of employment.

"Nothing will be the same after the war" is today the one prediction on which everyone seems agreed. In the first place, the political machinery of the British Empire as a whole will be thrown into the melting-pot. As early as possible, the overseas dominions, largely as a reward for their services in the war, are to receive a share in the control of imperial policy.

To effect this momentous constitutional change without serious friction will tax the resources of both home and colonial statesmanship. The peculiar status of India will demand special consideration. Such readjustments must have profound effects upon trade developments in distant parts of the globe—Australia, for instance, will have something to say about relations with Japan, and therefore upon the conditions of British labor.

In domestic politics changes are expected almost immediately that will produce speedy reactions upon industrial life. The existing electoral roll has been made obsolete by the disturbance the war has caused, and its revision is likely to be drastic. A demand for the extension of the franchise not only to women, but to all adult males has suddenly acquired unprecedented strength.

It has even been seriously urged in the *Times*, of all papers, that the existing system of representation should be completely scrapped, and that members of Parliament should no longer be elected by districts, but by industries or occupations. The reference to localities, it is argued, is in these days an anachronism, the real community of interest being not between neighbors, but between persons who follow the same trade. Now the basis of election to the Parliament that will have to undertake the work of reconstruction will make a great difference to the quality of the resulting social changes. Whether, for instance, the land laws will be revolutionized or only tinkered with will depend upon the more or less democratic character of the new House.

Any such reconstruction of the machinery of government will be the more far-reaching in its effects in view of the stimulus the war has given to the extension of governmental activity. When peace comes, the citizen will already have become habituated to forms of state regulation which were scouted as undesirable and impracticable before the war. For more than two years the railways have been a state department. Other industries—coal, shipping, agriculture—have been brought to a greater degree than ever before under the control of the state, either as purchaser or lessee, or as regulator of prices. In certain areas the liquor traffic is now a

government monopoly, and everywhere it has been made subject to new restrictions. These emergency measures have done much to prepare the public mind for collectivist experiments on a larger scale. A more ready hearing is nowadays being given to pleas for the permanent and complete nationalization not only of the railways, but also of the canals, the coal supply, shipping, life insurance, and land.

Free Trade or Protection?

AN ALLIED problem will be the relation of the state to new trades that have been built up during the war to supply commodities formerly procured from Germany. There will be a struggle between those who want these "infant industries" protected by a tariff, and those who propose that they shall be taken over and worked by the state, as being concerns of national importance.

The question that has hitherto aroused most discussion is that of "demobilization." "Today," says Sidney Webb, "at least seven millions of our wage-earners (probably not far short of half the total wage-earning population) are engaged on war work, either in the army and navy and their innumerable subsidiary services, or in the 4,000 factories making munitions, or in the countless other establishments working on government orders of every kind. These millions, together with their managers and officers, and the shareholders and other capitalists who are living on their labors, are being fed from the five million pounds per day that the treasury is disbursing. From the very moment that peace is assured, the treasury will do its utmost to stop that expenditure. . . . No such economic convulsion has ever threatened the inhabitants of these islands. . . . What is approaching in all the belligerent countries, so far as the mass of the people are concerned, is more like an Indian famine than like any ordinary depression of trade."

In forecasts of what will happen at that moment, there are several doubtful factors. First of all, the proportion of soldiers released from service with the colors and of munition workers dismissed from the factories will depend upon the nature of the terms of peace. If these are such as to make likely a renewal of the struggle at no distant date, neither the army nor the navy will be reduced to its normal peacetime establishment, nor will the provision of war material go back to the scale of ordinary times. If military conscription is made a permanent British institution, that in itself will largely diminish the anticipated surplus of labor.

There are some further questions that no one can positively answer. Will the discharged soldiers wish to go back to their old jobs? What proportion of them will prefer to start a new career in some colony or foreign country? If they want to emigrate, will the government permit them to leave, or will the present restrictions on the movements of men of military age be continued after the war? Will the women who have taken their places in office or store or factory want to stay in their new occupation? How far will the number of industrial openings available be affected by the increased use of labor-saving appliances that has been brought about by the recent shortage of labor in almost every occupation?

At the beginning of the war the general anticipation of a period of widespread unemployment came to naught mainly because the extent of England's military contribution to the operations of the Allies turned out to be so immensely beyond the maximum calculation of the part she would play in a European war. It may be that, when the war ends, some unexpected event will once more upset all the forecasts of the economists. This possibility must impair the value of

any schemes prepared beforehand. The various committees and sub-committees now considering the problem of demobilization must inevitably do a good deal of their thinking in the dark.

There is one industry, however, that will without doubt need a radical reconstruction in conditions of employment, whether the surplus of labor is large or small. Agriculture, everyone admits, cannot go back to what it was before the war. It will be faced at the same time with a demand for greatly increased production in the national interest, and with an inability to secure labor—whether of discharged soldiers or of other persons—on the old conditions. Before the war the status of the agricultural laborer, not only with regard to wages, but with regard to housing also, was a national scandal, and the farmers of the country will have to contrive some means of running their farms that will enable them to offer a decent livelihood to the men they employ. The expedient they will themselves suggest will probably be a tax on the nation's food, but under a more democratic franchise the demand pressed upon Parliament will rather be for the liberation of the land itself from the fetters that have so long restricted its use. Whether the land laws are radically reformed or not, the needs of the treasury will almost certainly compel the imposition of a high rate of tax upon big incomes, and this of itself will bring many large estates into the market. This is apart from the proposed tax upon the capital value of land with the object of persuading its owners to employ it for the most productive purposes. Single-taxers are looking forward to a great opportunity for their propaganda when money has to be raised for the payment of the interest on war debts.

A further problem of employment will arise from the tremendous slump in small businesses. Already thousands of shops run by one man or by two or three men have been closed. The rise in the price of meat, for instance, forced hundreds of small butchers to put up their shutters. The process has lately been accelerated by the drafting of men into the army under conscription. This will incidentally affect commercial conditions in all parts of the country, as it will increase the tendency—already marked before the war—for both the manufacturing and the distributing business to find its way into the hands of large corporations.

Menace to Unionism

ONE of the most serious of the industrial tasks impending will be the restitution of the rights surrendered temporarily by the trade unions in response to the appeal for national unity. There is reason to fear that this will not be accomplished without a struggle. The most definite pledges were made by the government that the departures from trade-union rules and customs that were agreed to—in relation, for instance, to piecework and the employment of unskilled and female labor—should last for the duration of the war only. But employers are reported to be openly boasting that the trade unions are already half destroyed, and that it will be easy to finish them off after the war.

Strong pressure will be brought to bear to induce the union leaders to drop or modify their demands for the restoration of the previous code of restrictions. While lip service is being paid to the principle that all pledges to labor should be redeemed, suggestions are being made—usually in the form of an offer of something else "just as good"—that would be practically equivalent to a refusal. What many authorities on the labor question are afraid of is the proposal by the government of some specious alternative, privately suggested by the employers, to which some of the union leaders

may be induced to agree in despair of getting anything better, but which will not satisfy the rank and file. The trade unions are really eager to get much more than a restitution of the *status quo*. They are anxious for the establishment of a ministry of labor, with new guarantees for the health of the workers and other industrial improvements, but, according to present indications, they will find all their work cut out to get back to the conditions that prevailed before the war.

A good deal has been heard of proposals for a general educational reconstruction when peace returns. Here, again, there will be an appalling amount of leeway to make up before any plans for improvement can be undertaken. There are the thousands of boys and girls who have been excused from school attendance in order that they might work in field or factory. There is the general shortage of teachers, compelling the grouping of the children into larger classes. There has been the closing of many training colleges, thus cutting off the supply of teachers for the future. There has been the wholesale enlistment of undergraduates and younger tutors at the universities, reducing these institutions to mere shadows of their former selves and threatening the continuance of the traditions that have contributed so much to their special character.

The mere work of building up again what has been broken down will be no easy matter, but, as though this in itself would not make heavy demands upon the national resources, demands are being heard from all quarters for important additions to almost everything that was in operation in peace-time. Continuation schools are to be set up, to carry on the teaching of pupils beyond the normal age for leaving school. There is to be a closer co-ordination between elementary and secondary education. The curriculum is to be drastically revised, greater attention being paid to science and modern languages. Every education method that has ministered to the commercial and industrial strength of Germany is to be introduced into England, but the acclimatization is to be effected in such a way as to secure all the advantages of the German system without its defects. And this expensive programme is to be paid for by a state that will be compelled to lay unprecedentedly heavy burdens upon the taxpayer in order to keep even the ordinary functions of government going.

There are other departments of the national life in which considerable readjustments will be necessary in order to repair the wastage of the war. How is the shortage of doctors to be made up? There are suggestions that the state shall

take the matter in hand, and make the whole medical profession a branch of the civil service. There may be far-reaching changes in the ecclesiastical life of the country also, beginning in the federation or union of churches that find it no longer possible to keep up a separate and more or less competitive existence under the new economic strain. It is, indeed, impossible to compile at present anything like an exhaustive list of the changes that will be necessitated by the new order. There will be surprises of peace as there have been surprises of war.

In any speculation as to the course events are likely to take in the near future, there are certain considerations to be kept carefully in mind. One is that the nation that will be confronted with these problems will be a nation of exhausted men and women. The daily wear and tear of the war upon body and nerves in the belligerent countries has not yet been generally realized, but wide-awake observers may detect many signs of its severity. It is not only upon the men in the trenches that the tension of war-time will leave a permanent mark. The notion that the present high standard of production can be maintained when the pressure of the struggle is relieved and the enthusiasm of the conflict has passed away is the wildest of delusions. One may reasonably expect that the general "tired feeling" will bring with it an irritability that will not tend to make the process of readjustment any smoother. And irritation is by no means a strong enough word to describe the mood that has already been created among a considerable section of the laboring classes by the actual working of such legislation as the Munitions Act and the Military Service Acts. There has been little or no open disaffection—other war-time enactments effectually prevent that—but the resentment that is now rapidly spreading is taking the form of a distrust in official pledges and even of an antagonism to all constituted authority.

This new spirit will make a very real difference to the prospect of an amicable settlement between divergent interests. A further point is that the temporary prosperity of the war trades has raised the standard of comfort in many working-class homes.

In the munition areas, at least, tens of thousands of families are now better clad and better fed and are living in better furnished houses than ever before. People who have thus shared in these standards of living will not accept privation with the contentment that prevented a revolutionary outbreak during the hard times that followed the Napoleonic wars.

Sympathy

By *Flora Shufelt Rivola*

ONCE when the night grew dark and long
 Despair came by and clutched me;
 Once when grim Trouble stalked the earth
 His stark, gaunt hand swift touched me:
 And since, no pain comes moaning by
 But my heart echoes to its cry.

Once when my garden was stripped bare
 And love had from me flown
 I knew the poignant ache of grief
 That sits at night alone:
 Since, never sorrow grieves in dark
 But that I find my heart a-hark.

A SMIRCH ON CLEAN CLOTHES

Although laundry work is very unhealthy, many states have not even a sixteen-year-age limit for the employes in these establishments. Washing and ironing often mean twelve hours a day continuous standing in an overheated room, and in some cases, tending unguarded machinery.

A CHIP OFF THE OLD BLOCK

Dangling from a rope and other stunts are every-day affairs for this five-year-old acrobat in a Philadelphia theater. A fellow artist, aged three, is in the team.

"WEXTRY, JUST OUT!"

Horse-cars and newsgirls are street sights gradually giving way to a new order.

TENDING STORE

The thirteen-year-old grocery boy may become a merchant prince. But the chances are he'll be an underpaid clerk all his life—worn out at forty.

Beyond the

The new federal child labor law will catch little
But one and a half million child laborers may and

"WELL, what harm does it do for a boy to work a few hours a day in a drug store?"

asks the benevolent person who does not wish to see a future captain of industry cut off in his childhood from ways of thrift and diligence. "It's all right to pass a law forbidding them to employ children in cotton mills, and coal mines. But surely—in a store!"

Surely, in a store! It was in a store that a fourteen-year-old boy worked eighty-five hours a week in Springfield, Illinois, last year. It was in a store, too, another drug store in the same town, that a fifteen-year-old learner worked seventy hours a week regularly. And this in a state that forbids the employment of a child under sixteen more than eight hours a day, or at night!

Because, probably, of the popular misconception of children's work in stores, there are twenty-eight states that allow children under sixteen to work more than eight hours a day in stores and local establishments, nineteen that allow them to work at night, and sixteen that have no fourteen-year limit for such employment.

All this is but one phase of child labor. The child in the store has been discussed not because he is our most important problem, but be-

cause he is a good example of the thousands of child workers our state laws neglect and our federal law cannot reach.

The most remarkable thing about these children is that we know so little about them. Most of us know a great deal about the southern cotton-mill child and the Pennsylvania breaker-boy; but we are ignorant about the cashgirl, the grocer's delivery-boy, the newsie, or the messenger. Any attempt to regulate their labor is always met by a chorus of, "Why, what harm does it do? Children ought to be able to do some kind of work!"

The problem of the 1,850,000 child workers in industries outside federal jurisdiction is not a negligible one. The great thing for us to realize just now is that the federal child-labor law has not solved the child-labor problem in the United States. As Julia Lathrop put it, "It marks not the end of work, but a fresh start. A standard is set which will never be lowered. We must push forward, freeing other children from other types of untimely labor and gradually securing for all children their fair chance in this fair world whose youth they must renew in beauty and justice."

HELEN C. DWIGHT.

THE CAREER OF THE WAGON BOY

Along with boxes this youngster is piling up shiftlessness and ignorance. He "should worry" about school, since school doesn't worry about him. Even the National Child Labor Committee believes in work for minors—but work with a future ahead, and always work with classroom education.

CHECK, WAITER!

His grown-up togs may be cute, but his grown-up work is hard and exhausting.

NOT THE SURVEY TYPE

This twelve-year-old printer would probably be studying geography in England, where an eighteen-year age limit and medical examination are recommended for this trade.

PASTORAL SCENES

The weekly pay envelope of this dairy driver in Kentucky contains \$3.25. He drives a dairy wagon from 7 a. m. till noon, then does chores till sundown.

Begging Bread for Poland

Five Months of Fruitless Effort to Obtain War Relief

Ernest P. Bicknell

DIRECTOR OF CIVILIAN RELIEF, AMERICAN RED CROSS

IMMEDIATELY upon the return of the Rockefeller Foundation War Relief Commission from Poland to Berlin (see the SURVEY, December 2, 1916), negotiations were begun with German and Austrian authorities and with the American ambassador, to formulate plans for an International Commission for Relief in Poland.

Delays which seemed almost interminable followed. We were engaged in endless conferences. Our plans were passed from one official to another, first by the German government and later by the Austro-Hungarian government. We even waited a long time for the approval of the trustees of the Rockefeller Foundation. But one by one the varying wishes of all parties to the agreement were reconciled. At last the important document was completed and signed by Dr. Theodor Lewald, for the Imperial German government; James W. Gerard, the American ambassador, for the International Commission for Relief in Poland; and Ernest P. Bicknell, for the Rockefeller Foundation War Relief Commission.

The agreement provided for a three-part organization, based on the appointment of a German committee, whose function would be the collection of money with which to purchase relief supplies. This committee, with the authority and backing of the government, pledged a minimum of two million marks (about \$500,000) per month, to be advanced through a bank, in order to assure a steady income. The bank in turn was to be reimbursed by the German committee. The Rockefeller Foundation agreed to contribute \$10,000 per month to defray necessary administrative expenses, in order that the contributions by the German committee might be applied entirely to the purchase of supplies.

The next step in the plan was the creation of an administrative organization, to be known as the International Commission for Relief in Poland. Money contributed through the German relief committee was to be paid over to the International Commission and by it expended in the purchase of relief supplies in neutral countries. The commission was to be neutral in character and personnel. The American ambassador at Berlin was made chairman and Eliot Wadsworth, of Boston, who had recently come to Germany as a member of the War Relief Commission, was appointed director-general in complete charge of all undertakings, subject to appeal to the American ambassador. The Dresdner bank, of Berlin, the bank which had agreed to advance money for the relief work, was made treasurer of the commission. Headquarters were established in Berlin.

Finally, the scheme of organization called for the creation of local relief committees in many cities, villages and districts of Poland to receive the supplies shipped into the country and to have the responsibility, under the direction of the International Commission, for actual distribution among the needy population.

Supplementary agreements were of much importance. The German and Austrian governments, for example, pledged themselves to give free railway transportation for all relief supplies into Poland, the German admiralty promised safe conduct to neutral ships carrying such supplies into German harbors, and, further, proper harbor and dockage facilities;

German and Austrian military officers volunteered to expedite the shipping and distribution of materials.

The spirit of cooperation in connection with this effort may be illustrated by the following paragraphs, quoted from the agreement to which the governments committed themselves:

I. The German and Austro-Hungarian governments will engage to requisition no food in that part of Poland which their forces occupy.

II. The Imperial Government will further engage to refrain from levying money requisitions upon any part of occupied Russian Poland comprised within the boundaries heretofore set forth . . . unless a military fine is levied for an offense for which the whole population is both jointly and severally responsible.

III. It is also understood that the chairman of the International Commission for Relief in Poland may send agents through any of the territory already occupied by Austria-Hungary or Germany. These agents will be furnished with requisite passes by the military authorities and their names must be furnished to the general headquarters of the military authorities at the time the application for the pass is made. . . . Said governments will also furnish passes and facilities to the members and employees of the International Commission for Relief in Poland, in order that they may supervise and direct the transportation and distribution of supplies . . . and these governments will agree to provide benzine, oil and tires for automobiles, and will also agree not to requisition any automobiles or other supplies that may be imported or otherwise obtained for the use of the commission in its work. . . .

When the completed document containing the entire plan of relief organization had been approved by all parties and had received the official signatures which brought it into life and made it effective, we felt that the weeks which had been devoted to the matter had been well spent, and we rejoiced that at last we were ready to set the wheels into motion.

But at this point began a series of crushing disappointments. Our agreement with Germany and Austria-Hungary provided that relief supplies should be purchased in neutral countries and imported into Poland. The blockade maintained by the Entente Allies had made it impossible for the Central Powers to import food supplies for their own population, and they accordingly took the position that they could not spare from their own depleted stocks the food necessary for Poland's millions.

In Search of Supplies

FROM such information as we possessed, we believed that our best opportunity for purchasing relief supplies was to be found in Rumania, reported to have had large grain crops in the preceding year. Therefore, we went first to Rumania, hoping to make large purchases of wheat. Although the American minister in Rumania, Mr. Vopicka, gave us cordial assistance in laying our mission before the proper governmental authorities, our hopes were soon dashed.

The Rumanian government at that time occupied a difficult position in relation to the belligerent countries. While endeavoring to maintain a neutral position, its policies apparently vacillated as the representatives of England or of Germany and

Austria exerted in turn dominating influence. A Berlin banker is my authority for the following statement:

Germany, in the latter part of 1914, purchased wheat in Rumania of a value of \$60,000,000. Upon Rumania's demand, the purchase price was paid in advance. The wheat, however, was not delivered at the Hungarian border en route to Germany in accordance with the agreement. After a great deal of negotiating, it appeared that Rumania had not been able to live up to her bargain because of a lack of railway cars in which to ship the wheat which she had sold. Germany thereupon sent cars into Rumania, but the cars never came back, and the German losses in investment in Rumanian wheat were increased by the value of a large number of railway cars, at a period when Germany particularly needed all such equipment.

A Waste of Wheat

WHATEVER the truth of the story, when we went into Rumania to purchase supplies for Poland we saw enormous quantities of rotten wheat in huge mounds on the ground beside the railways. Upon inquiry we were told that this wheat had been sold to Germany and had been delivered at the railway stations by the individual sellers, but that railway facilities had not been sufficient to transport the wheat out of the country. As the sellers had completed their part of the contract and had received payment in advance, their interest ceased when they had piled up the bags of wheat on the ground alongside the tracks. Here the wheat had remained during the fall and winter of 1914-15. When we reached Rumania in February, 1915, even the bags in which the wheat had been delivered at the stations had rotted and fallen to pieces. Millions of bushels of grain had been wasted, while the unhappy people of Poland, less than 500 miles distant, were dying of starvation.

The real explanation of this state of affairs was to be found, apparently, in the rise of English influence in Rumania soon after the Germans and Austrians had made their large wheat purchases. Naturally, the English were strongly opposed to permitting the entrance of food supplies into the back door of Germany and Austria at the same time that the Entente Allies were exerting every effort to starve out the Central Powers by blockading their front doors.

Possibly the same influence which resulted in this great loss to the Central Powers accounted for Rumania's declination to sell us wheat for shipment into Poland. We were not frankly informed, however, that our failure was the result of political pressure. Rather, it was stated to us that Rumania's reserve of wheat was small, that her crops of the preceding year had been very poor, that she had no more grain than was needed for the support of her own population. Through unofficial channels we were assured that the country contained a large reserve of wheat, and it was further stated that at that time Rumania was bartering wheat with the Central Powers in exchange for munitions of war.

Disappointed over our fruitless errand to Rumania, we applied to other neutral countries for grain. Our agents visited Holland, but the Dutch authorities, while assuring us of their sympathy and their desire to assist the Polish people, were permitted by England to import their own necessary food supplies only on condition that none of these supplies should be permitted to go into the territory of the Central Powers. In Denmark, also, our efforts were met with identically the same reply. Inquiries in Switzerland brought the same answer, and for the same reason.

The Swedish foreign minister, Mr. Wallenberg, stated that England had placed so strong a restrictive hand upon Sweden's imports of the necessaries of life that the Swedish people were

undergoing privation, and were meeting much difficulty in obtaining such food as they were obliged to buy abroad. He said that a national purchasing committee had been created by the government with sole authority to import food supplies.

As our attempts to bring help to Poland successively failed, we thought of asking Russia whether, in view of the fact that the Polish people whom we wished to aid were Russian subjects, and that in Russia vast quantities of wheat were in store, she would sell us grain and permit its transfer through German territory into Poland. We knew it would be impossible to take wheat directly across the German and Russian fighting lines, but we had a theory that wheat in Russia might be shipped to a port on the Baltic sea, there put on board ship and transported to a German Baltic port from which it could be taken quickly by rail into Poland. This plan we suggested to the German authorities, and while they expressed great skepticism as to Russia's attitude toward such a proposal, they placed no obstacle in our way. In fact, the German admiralty stood ready to give safe conduct to ships which might come from a Russian Baltic port to a German Baltic port with our purchases, the only condition attached being that such ships should sail under a neutral flag.

Accordingly, we first visited Sweden to inquire whether it would be possible for us to obtain Swedish ships for the service which we had in mind. The Swedish foreign minister, without any hesitation, gave us the promise of the Swedish government that it would supply all ships necessary for the transport of Polish relief supplies from Russia to Germany.

Furthermore, the Swedish minister declared that he regarded such an attempt as we were making of peculiar value because, in his opinion, it contained possibilities of even more far-reaching importance than feeding the Polish people. He believed that a neutral humanitarian effort which established a certain community interest between two belligerent countries and opened an unofficial and informal channel of communication might prove to be the first step toward peace.

The Journey to Petrograd

FROM Stockholm we made the long, circuitous journey to Petrograd. All communication by water between Sweden and Russia had been suspended because of the danger from mines. The only method of reaching Russia was to travel by rail around the northernmost tip of the Gulf of Bothnia, which at that point almost touches the Arctic Circle, and thence to the south and southeast through Lapland and Finland to the Russian capital. A single line of Swedish railway extends northward through this vast and sparsely inhabited region.

It is a country of rocky hills covered with forests of pine or other dark evergreen growth, and dotted with small lakes, all solidly frozen in winter. Wood-choppers drag their logs to the steep, snow-covered slopes of the hills and then shoot them down like arrows to the ice of the lakes or rivers below. When the ice goes out the logs are floated to the mills or to the railroad.

The pines are not large, but slender, straight and beautifully graceful, as they stand in uncrowded, unarranged groupings over and among the gray rocks, their lighter trunks gleaming stiffly through the dark masses of their feathery foliage. For hundreds of miles we passed through these forests, with their scattered population, through small farms in the flat valleys and through widely separated villages with wooden houses usually painted red or white, the red predominating.

The trains do not carry dining cars, but stop about a half-hour for meals three times a day. In each railway restaurant

is a very large table piled with food, hot and cold. Nearby are heaps of plates, cups, saucers, cutlery and spoons. Passengers stream into the restaurant and swarm about this huge table, helping themselves; with heaping plates they sit down at small tables around the room. There is no limit whatever to the amount or variety of their selection, and they may refill their plates and cups as often as they please. The leisurely train waits until all have had ample time to satisfy their appetites. The price is the same for all, no matter whether much or little has been eaten. One could not help thinking that such a system would shock the deepest feelings of a German at this moment, and one also thought of the starving Poles just across the narrow Baltic Sea from Sweden.

A New Kind of Ferry

THE Swedish and Russian railway systems do not connect, the termini of the two being on opposite shores of the wide river which forms the boundary between the countries. When we reached the end of the Swedish railway, at a crowded little wooden town bearing the name of Karungi, we were informed that we would be taken across the river on sledges. These sledges were small, boat-shaped structures on low runners. Each conveyance was drawn by a spirited pony, invariably driven at a swift trot, no matter how rough and uneven the roadway.

With our baggage, we were piled into a sledge in a half-reclining position, buried under blankets, and at the signal went bounding and bumping over the frozen ground. The shaggy pony, with head high and mane and tail wildly flying, seemed to tear along out of pure joy of living.

Presently we came to the edge of a wide stream of water, free of ice, and flowing with a swift current. We held our breath as we approached, but the horse plunged in with a splash. The water rose about us, but our sledge was lined with a sort of oilcloth, so that, although we could distinctly feel the rush of the stream beneath us, we escaped the icy bath which seemed so imminent. Leaving a wake at our stern like that caused by a swift boat, we fairly flew through the water, and soon came out to a slushy shore of ice on the other side. We afterward learned that the ice went out of the river at that point on the following day.

Along the high bank on the Russian territory we found ourselves in a scene of confusion which afforded a vivid illustration of the congestion of traffic caused by the war and the inadequate railway facilities. A level space of ground, perhaps a half-mile long and one-eighth of a mile broad, was densely covered with supplies, which had been brought over by the sledge route and were awaiting transportation into the interior by the single line of railway connecting this remote point with the city of Petrograd, almost a thousand miles to the southeast.

The contents of many cases, packages and bales were scattered about the ground, where they had been trampled under foot or destroyed by the weather. The waste of material, which had been purchased at vast expense in America and other countries, was almost unbelievable. A great part of the freight stacked up in the open area had obviously been lying there untouched for weeks or months.

One does not wonder that Russia was handicapped at the beginning of the war by a shortage of munitions and other necessary supplies, when it is realized that for half the year two single-track lines of railway must bring in all of the nation's imports. The war has afforded an impressive illustration of the importance to Russia of a free outlet through the Dardanelles.

In Petrograd we immediately set about the business which

had taken us into Russia. Several days passed while we waited impatiently for an appointment at the foreign office, but for first one reason and then another we were delayed.

After a number of days without prospect of an audience at the foreign office we decided to see what we could do in the way of an unofficial short-cut. During our stay in Stockholm we had become very pleasantly acquainted with the Russian minister to Sweden, who had expressed sympathy for our mission into his country and had given us a personal letter of introduction to one of the under-secretaries in the foreign office at Petrograd. Accordingly we decided to make use of our letter of introduction. The secretary to whom the note was addressed promptly had us brought into his office, was most cordial, and assured us that he would gladly do everything within his power to expedite our mission. The next day, at his invitation, we called again, when he went with us to the office of Mr. Neratoff, the secretary next in rank to the foreign minister himself.

Mr. Neratoff was equally cordial and helpful, and assured us that he was in sympathy with our desire to purchase wheat in Russia to be shipped into Poland. He said he was sure that the Russian government would be glad to do what it could to enable us to carry our plan into execution. He made an appointment for us with the minister of agriculture, in whose jurisdiction lay all questions relative to the sale and exportation of grain. The minister of agriculture in turn assured us that the government was in sympathy with our purpose, and that we would be given authority to purchase such supplies as we desired. We were feeling much encouraged, and hoped that our long search for food for the Polish people was soon to end in success.

But our hopes were short-lived. We discovered that the only wheat which we could purchase was in the great wheat region of the Volga River, perhaps a thousand miles from the nearest Baltic port; that the canals and rivers were still ice-bound, and that the one method of moving the grain from the Volga to the sea was by rail. The minister of railways said that the demand for engines and cars for the movement of troops and army supplies was so great that he thought it would be impossible to allow us the necessary engines and rolling stock to transport the wheat, even if we purchased it. He suggested that the Grand Duke Nicholas, who at that time was in command of all the Russian armies, alone had authority to grant us the use of railway facilities such as our mission required.

Abandonment of Hope

BACK we went to the foreign office and explained our difficulties. The foreign office thereupon officially took up the matter with the Grand Duke, at his military headquarters, and, after a day or two of waiting, received a message in reply stating that it was wholly impossible to provide us with engines and cars for our purpose.

Before leaving Russia, however, we decided to visit Poland, in order to ascertain conditions among the Polish people on the Russian side of the fighting line. On May 7, 1915, we left Petrograd for Warsaw. Within two hours we began to see signs of spring. Little yellow wild flowers starred the slope alongside the track. The willows were cloudy with soft, unfolding, tiny leaves, like swarms of delicate green insects. It seemed that Petrograd had been held prisoner by the ice-bound Neva river, while the country a little outside its influence was free and spreading its young wings in joy.

All passenger trains except one a day had been taken off the road between Petrograd and Warsaw. This solitary train was densely crowded, and at each station a clamoring throng

struggled to get on board. Many were left begging and protesting, often weeping. A soldier with a bayonet stood at each end of each car of the train to keep the people from forcing their way on board.

In the dining car of our train the conductor neither understood nor spoke a word of English, and his Russian meant nothing to us. Our French likewise conveyed nothing to him. Then one of us tried German. After a moment the man replied in the same language, in a half-whisper. We were last to leave the car, and the conductor told us in German that that language is forbidden, at the same time making a dramatic and significant gesture, which consisted in lifting his chin and drawing his hand across his throat.

En route we met many hospital trains, equipped with primitive bunks and crowded with wounded soldiers. The tops of these cars were painted with huge red crosses upon a white ground, as a mute request for mercy from enemy aeroplanes and zeppelins. Some of the soldiers inside lay motionless upon their backs, their drawn, white faces still and expressionless. Others turned their heads to see the crowds at the stations. Red Cross nurses could be seen busily at work among their patients. As a rule the nurses seemed surprisingly young. Many, apparently, were girls under twenty.

At each station on the way to Warsaw, close alongside the platform, is a large brick furnace containing vats in which water was constantly kept hot. As soon as a troop train stopped scores of men with tin pails scrambled off and rushed for the hot water, which they carried back on board. Small food stands were also convenient at the stations, and the soldiers swarmed about them, purchasing bread, bacon, crackers and canned goods.

Barbed Wire and Barbarism

IN THE afternoon of the second day of our journey we passed through the city of Grodno and other strongly fortified places. Here we began to observe vast stretches of defenses consisting of barbed-wire entanglements. This is a new element in warfare, and a formidable and terrible thing it is. A barbed-wire entanglement is always placed where it is easily commanded by machine guns, of a fort or from the trenches. While the attacking troops are struggling in its horrible embrace, the guns mow them down. Little could the Iowa inventor of barbed wire have imagined the use to which his invention would be applied.

Warsaw, with its million inhabitants, is one of the most beautiful and attractive of European cities. At the time of our visit to Warsaw the fighting-line lay about twenty-five miles west of the city. Both sides were strongly "dug in," and had scarcely moved either backward or forward for five or six months. At night the booming of cannon at the front could be distinctly heard upon the streets of Warsaw, but this condition had continued long enough to allow the population of the city to become indifferent to the ever-present threat of destruction.

Life went on in the city very much as in normal times. The streets were thronged with people. Shops carried on a rushing business. Theatres were crowded; and the sidewalk tea rooms, such as are so popular in Paris, were overflowing with customers during the afternoons. Gaiety and an atmosphere of freedom from care and anxiety were apparent. A visitor might very easily have spent days in Warsaw and have taken his departure without discovering that it had any sordid or tragic aspect.

During our first afternoon in the city we took a long walk through the section set apart for the Jews, which normally contains more than one-third of the total population, but to

which had then been added about eighty thousand Jewish refugees from the interior towns and villages of Poland. In some sections of the Jewish quarter the crowds which filled the sidewalks were comfortably dressed and the streets and houses reasonably clean and well kept.

Poverty of the Jews

IN MOST of the streets in this quarter, however, poverty, squalor and filth were in overwhelming evidence. The city blocks are very long, and at short intervals passages lead from the streets into interior courts, where live swarming thousands, whose miserable condition was only too obvious. Shops which line these streets were mere cubby-holes, dark and noisome, their average floor space not more than one hundred square feet. The rags and dirt, the inferior and often repulsive quality of the wares for sale in shops or by the hawkers, and the offensive odors, all spoke of deep and hopeless poverty.

Among the thousands of brightly dressed people in the Saski Garden, listening to the music in the afternoons and drinking tea at little tables under the trees, not one of the sorrowful denizens of the Jewish quarter was to be seen. Parks and the attractive public places were not for them. They were buried in their crowded courts and squalid tenements and roaring streets. They were a city of wretchedness in the midst of a city of wealth and beauty.

Fully one hundred thousand non-Jewish refugees had also fled from the interior to Warsaw for safety. These had been gathered together in certain large buildings, so far as possible, where they were lodged and fed through the charity of relief committees. One great committee, known as the Central Citizens Committee, gave especial attention to the refugees, while another committee looked particularly after the welfare of the resident population, which was suffering from the privations brought on by the war. A powerful Jewish committee devoted its attention to Jewish refugees as well as destitute Jewish residents. Extensive provision had been made by these committees for the care of their charges.

Kindergartens had been established for the younger children, and workshops were maintained in which employment was given to many men and women. Contracts had been made with the army for the manufacture of harness, shoes and clothing. The money received for these manufactured goods was then employed in the purchase of additional raw materials, the payment of wages and other expenses. Nowhere else in Poland did we see so systematic and well-organized relief as in Warsaw.

During our stay in this part of Poland we had an excellent opportunity of observing the manner in which farm lands had been damaged by the digging of trenches. Several parallel rows of wide, deep trenches, a few hundred yards apart would go zigzagging across the country for miles. From each trench heaps of yellow clay had been thrown out, covering the fertile soil. Years will be required to restore the farms which have been damaged in this way to a normal state of productiveness.

An illustration of the effect of war even where actual destruction of property does not occur we found in the city of Girardow, named from a Frenchman, Girard, who was the first manufacturer of linen. The mill which he established at this point employed at the outbreak of the war fifteen thousand persons, and was the sole support of the entire population of the place. Girardow, when we visited it, was but two or three miles from the firing-line. The mills were closed, their great rooms converted into hospitals and eating places, and the population, completely idle, was wholly dependent upon charity.

The Russian government was contributing extensively to the relief of refugees and resident dependents in Warsaw in the spring of 1915. Strong private organizations also were collecting funds for expenditure in Warsaw and in other Polish communities still in Russian control. For these reasons the condition of the Polish people living east of the firing-line was much superior to that of those living west of the line. It did not seem necessary at that time to supplement the relief distribution already in effect, in part because of the amount of assistance immediately available, and in part because back in the interior of Russia were great stores of food supplies, which presumably could be drawn upon.

After the Russian Retreat

A FEW months after our departure from Warsaw, however, the German armies swept eastward in overwhelming force, captured Warsaw and overran all the remainder of Poland together with many thousand square miles of Western Russia. When this drive occurred, the Russian armies in retreat destroyed everything which they thought might be helpful to the enemy. Through stretches of country east, northeast and southeast of Warsaw every house was burned, all live stock killed or driven off and all food supplies carried away or destroyed. The hapless Polish and Russian people who occupied this devastated land were left without food or shelter, and hundreds of thousands of them perished miserably from exposure, disease and starvation.

It has been estimated that along the great highway extending from Warsaw toward Moscow, within a distance of 250 miles, 400,000 of the resident population died within a period of six weeks. When this story is fully told it will reveal one of the most pathetic and terrible tragedies of the entire European war.

Leaving Warsaw, we traveled to the south and east, through numerous Polish cities and towns, and coming to the Russian city of Kief, paused for a day to visit a large hospital in charge of a group of American Red Cross doctors and nurses. Kief at that time was about four hours by rail from that part of Galicia in which the Russian armies were being defeated and driven back with tremendous losses. Trainload after trainload of wounded men was rolling into Kief day and night. Many hospitals had been established in that city, with a total capacity of thirty thousand patients. All were filled to their limit, but as rapidly as men could be moved farther into the interior they were taken out of the hospitals to make room for the fresh cases coming in. Open street-cars had been equipped with slides which exactly fitted the ordinary litter upon which wounded men are carried. Each street-car thus became a huge ambulance, for twenty or more patients. During the day which we spent in Kief we were informed that eight thousand wounded men arrived from the front. By means of this arrangement a wounded man was transferred from the field hospital immediately behind the fighting-line all the way to the hospital at Kief without the pain and danger which would have been caused by lifting him repeatedly from one litter or cot to another.

As we traveled about Russia we heard much concerning the effect produced by the proclamation of the czar prohibiting the manufacture and sale of alcoholic drinks. It was feared disorders would result from the discontent of the population and that one of the largest items of revenue for the support of the government would be cut off.

Beneficial results from the enforcement of the prohibition edict became apparent at once, however. Thousands of men who had been accustomed to spend every Sunday in drunkenness and every Monday in sobering up soon became dependable

workmen six days in the week instead of five. During the first six months after the prohibition edict became effective the savings bank deposits amounted to about 750,000,000 roubles, as compared to 266,000,000 in the corresponding six months of the preceding year, and this in the face of the fact that this huge increase occurred while the country was involved in war.

We left Russia by the southern route, as we wished to make one more effort in Rumania to obtain food for Poland. Arriving again in Bucharest, we renewed our plea for help. The Rumanian government still maintained its former position in declining to sell wheat, but informed us that corn might be had in large quantity. This information again filled us with optimism. Knowing the wholesomeness and the nutritious qualities of corn bread, corn meal mush and other kinds of food having corn as a basis, we saw large possibilities opening before us. We therefore telegraphed to the German relief committee in Berlin, giving information of our success and asking that a substantial credit be opened for us in Bucharest immediately, in order that we might begin purchases.

Again our plans were balked, for we received a prompt reply from Berlin stating that the Polish people could not eat corn products, and that people who ate corn became the victims of serious diseases.

Thus ended our effort to provide food for the people of Poland. The greater part of five months had been expended in investigating conditions, in working out a comprehensive and practical plan for relief distribution and in endeavoring to find a source from which to draw the necessary supplies. Since that time similar attempts have been made, but none have been successful. In the meantime, disease, starvation and exposure have done their deadly work. The children and the aged have perished by hundreds of thousands, while millions who survive have been weakened by lack of sufficient nourishment and are ready to fall victims to typhus, cholera, tuberculosis and other epidemic diseases.

Distrust of Promises

BOTH Germany and Russia have promised Poland a semi-independent government of her own, with her own monarch and legislative body. Although for more than a century Poland has vainly pleaded for the opportunity which is now promised her by each of her two great neighbors, the world must not expect her to evince any great amount of enthusiasm. Polish leaders know that neither Russia nor Germany has made this promise out of disinterested friendship. The Poles have too long suffered from the oppressions of both the Germans and Russians to accept the present proposals without skepticism. Both Russia and Germany realize the value of Poland as a buffer state between them, serving as an obstacle to attack from either side.

The more immediate purpose of the great nations, however, is to obtain the military support of Poland. It has been stated that Poland could enroll an army of three-quarters of a million soldiers, and both Germany and Russia would very much like to have this large addition to their fighting force. Germany's offer of self-government to Poland is, without doubt, conditioned upon Poland's willingness to form an army to fight with the forces of the Central Powers, while the unselfishness of Russia's immediate purposes is no less to be doubted. It is to be feared that if Poland accepts either proposal she may become the object of hatred and heavy penalty from the country whose offer she rejects. If, on the other hand, she accepts neither proposal, she may become an object of hatred from both sides and at the close of the war the victim of oppressive measures from the victor.

The Medical Renaissance in China

By *Wu Lien Teh, M.D.*

DIRECTOR, MANCHURIAN PLAGUE PREVENTION SERVICE, MEDICAL ADVISER, FOREIGN OFFICE, PEKING

THEORIES of health and of sickness in China, based on an incomplete knowledge of anatomy and physiology, might be compared to those of the early Greeks. The comparative backwardness of scientific medicine in China of the present day is largely due to belief in these theories held by both the educated and uneducated classes for over three thousand years. The ancient Chinese, however, were far ahead of their times. For instance, inoculation for smallpox was practised first in their country, even before Lady Mary Wortley Montagu introduced it into England.

Medical statistics were published by the government during the Chou Dynasty, six hundred years before Hippocrates. Medical men were required to pass a state examination before they were allowed to practice, and even isolation of cases of infectious disease was generally known. The notorious usurper, Tsao Tsao, had as his medical attendant Hua To (221-264 A. D.), the great surgeon who was supposed to have performed several cases of intracranial surgery, and who in a famous painting was actually depicted in the act of operating upon the distinguished general, Kuan Ti, for necrosis of the elbow.

The National Pharmacopeia, handed down for nearly twenty centuries, is still very extensive and includes not only important drugs known in the West, such as mercury, arsenic, iron, sulphur, camphor, aconite, castor oil, digitalis, etc., but other inert or repulsive substances, like insects, snakes' skins, tigers' claws, deer horns. The Chinese have a strong belief in all kinds of drugs, spells and charms. They also spend a considerable portion of their income on medicine.

Organotherapy, that is, treatment of diseases with substances derived from organs similar to those diseased, has existed for a long time in China.

To the man in the street the word "hygiene" is synonymous with "sanitation," which again is synonymous with "drains"; and, since drains are apparently non-existent in China, he draws the obvious conclusion that hygiene is not practiced there. The science of hygiene has, however, for hundreds of years before Christ been known to the Chinese, and although sanitation as we understand it nowadays is rarely seen in Chinese cities, the people have from time immemorial practiced, and are still practicing, a certain system of hygiene.

YOUNG CHINA LOOKING FORWARD
Announcement of the new medical school at Changsha aroused much interest

Su Wen Ling Ch'u, a book written about 2,600 years ago, defines hygiene as health preservation in order that life may be lived to an old age. It holds that true hygiene is in conformity with nature's laws:

"Everyone who attends to them can reach a hundred years. In order to reach long age you must live moderately, and there are two comprehensive laws of health which you must obey in order to attain this, namely: Restraint in all the appetites; and cleanliness in house and person."

The term corresponding to hygiene in Chinese is *Wei Sheng*, which, so far as I have been able to discover, first appeared in the writing of the sage, Chuang Tzu, of the third century B. C., who annotated the famous sayings of the

philosopher, Lao Tzu. But regulations for the proper preservation of health had long before that time been mentioned, as witness the following extract from Chou Li, or collection of works written by Chou Kung (1105 B. C.), brother and adviser to the first emperor of the great Chou Dynasty:

"In every country there are sick as well as healthy people. When treating the former, they should be separated into those suffering from internal and those suffering from external complaints (i. e., medical and surgical cases), and careful notes kept. At the end of the year these notes should be rearranged and the records tabulated. From information thus obtained, rules regarding treatment and dieting may be revised, and, wherever possible, adopted. If, after this, future statistics show that out of ten cases treated all get well, every satisfaction may be felt. If, however, only one out of ten dies, the results may be regarded as good; if two out of ten die, the results are only fair; if three out of ten die, they are poor; if four out of ten, they are bad."

Courtesy Harvard Medical School of China

TREATMENT OF EYES AND THROATS

A New York dispensary is little better equipped than this out-patient clinic of the Eye and Throat Department of the Harvard Medical School at Shanghai

Also, health and dietetics were by no means unrelated subjects in those days. Food was rarely eaten uncooked. Another chapter of Chou Li says:

"In spring, eat more sour stuff; in summer, try more bitter things; in autumn, cook more hot dishes, and in winter, consume more salt food. Beef should be eaten with rice, mutton with grant millet, pork with panicked millet, dog's flesh with kaoliang, wild goose with barley, fish with sea-grain and so on."

That the ancient Chinese also knew something of drainage is proved by the following memorandum on military defense:

"The officer of defense looked after the defensive efficiency of the inner and outer walls, the moats and ditches, and planted trees along the drains. They dug moats and utilized the earth to build the inner walls around the city. They dug trenches and utilized the earth to build the outer walls surrounding the suburb, and had drains as outlets for the water."

Truly the duties of a medical officer of health were well defined 3,100 years ago! This is the more striking as Hippocrates, the father of medicine in the West, about whom so much has been written, was born in 460 B. C., less than 2,400 years ago. It may also be mentioned in passing that during

the Chou Dynasty, when these rules were laid down for the guidance of medical officers, a proper state examination in medicine was held for those qualifying for doctors.

But in spite of some excellent methods of treatment and useful drugs handed down from the ancients, until more lately nothing has been done to improve that knowledge or to keep abreast of the times. The result has been deplorable. The majority of native-trained physicians are completely ignorant of the true causes of most diseases, especially epidemic diseases, their methods of diagnosis and modes of prevention. Certain maladies, like cataract of the eye or malarial fever, are still regarded as incurable. Syphilis is terribly rampant; tuberculosis is common. The simplest measures of prevention are not practiced even among the educated classes. Cases when diagnosed are not treated properly, and, as a result, numbers of the most promising young men are sacrificed to an early grave.

Every civilized government now enforces vaccination, so that smallpox has almost disappeared from those countries. But in China thousands of children are either killed outright or become blind and incapacitated forever. In Peking, one out of every three native-born women show old pock-marks. Pestilences like typhus or cholera still claim numerous victims every year, spreading more rapidly with the spread of railroads and other means of rapid transportation. Yet often only the most primitive methods are adopted to cope with these evils.

There are indeed early vague records of contact with western medicine. During the Mongol invasion, for instance, when on the staff of the conquerors were several Persian *savants*, one of these, Fuh-lin, established a charitable hospital in Peking in 1272. Likewise the Manchu Emperor K'ang Hsi—patron of art and soldier-statesman—encouraged the Jesuit Fathers to promote education throughout the country, and an authorized translation of human anatomy from western textbooks was actually begun by Perennin. The plan was soon frustrated by native physicians.

The actual beginning of modern ways, however, dates from the establishment of the East India Company's offices at Canton and the introduction by Dr. Arthur Pearson of

vaccination instead of inoculation to prevent smallpox. This was in 1805.

In 1820, Robert Morrison, the first protestant missionary to China, opened a dispensary in connection with his work in Canton. The first purely medical missionary was Dr. Peter Parker, an American, who established an ophthalmic hospital to treat the numerous cases of eye disease in that city. Dr. Parker was in 1852 appointed United States Minister to China. Dr. William Lockhart of the London Missionary Society, in 1838, began his work at Macao, extending it eventually to Peking, where, in 1861, he founded the hospital that became the nucleus of the present Union Medical College. The list of foreign medical missionaries in China grew throughout the century to include over 400 names of men and women.

The progress, which throughout the nineteenth century was slow though steady, has in the twentieth century been remarkably accelerated. The first event of unusual importance in modern Chinese medical history was the great pneumonic plague of 1910-11, which killed more than 50,000 persons in the course of five months.

This epidemic started from an endemic center in Siberia (not from the Mongolian marmot, as so many imagined), infected Chinese coolies stationed at the border town of Manchouli in northwestern Manchuria, and spread with extraordinary rapidity along railway lines and trade routes. Almost every city of note was visited in the three provinces of Manchuria. Peking and Tientsin were attacked, and the pest extended even as far as Chefoo. No authentic report of recovery was known, and the greatest anxiety prevailed throughout the country. Fortunately, the government placed unusual powers in the hands of the western-trained physicians with Dr. Wu Lien Teh, a Cambridge graduate, at their head, and the course of the plague was stopped in March, 1911.

In the following April an international conference of medical men from eleven countries was held at Mukden at the instigation of the Chinese Central Government to study this virulent form of plague and to make recommendations. Although the revolution occurred soon afterwards, the new Republican government decided to carry out many of the recommendations, and established the Manchurian Plague Prevention Service with headquarters at Harbin, erected isolation camps at the main railway stations in the north, and encouraged sanitary reform in general.

The effective work of the Manchurian Plague Prevention Service since its inauguration in 1912, with its staff of English and American trained as well as home-trained medical officers, is well known. Not only does this service prevent plague, but it promotes public health by means of illustrated lectures, lantern demonstrations and popular pamphlets. It treats ordinary hospital patients at its many hospitals. Its reports are published annually.

An interesting break with the past was the promulgation of a presidential mandate in November, 1913, authorizing the performance of dissections on dead bodies. This, together with the imperial sanction for the cremation of cadavers from plague in 1911, has undoubtedly removed a great deal of the superstition connected with ancestor worship, which has made China one of the most backward countries as far as medical science is concerned.

An equally important presidential mandate was issued on September 30, 1915, when western medical science was officially recognized by the central government. In this mandate three out of twenty-three branches of learning relate to the profession of medicine; namely, medicine proper, pharmacy and veterinary science. The subjects which candidates are

A HUMAN AMBULANCE

Some poor Chinese carry their sick "rig-a-back" for miles to the hospital. The "ambulance" seems cheerful despite his burden

required to pass are the same as those insisted upon by all progressive countries.

One of the most interesting events of the past year was the formal opening of the first isolation hospital of Peking. The capital of China has been notoriously backward in matters sanitary, and cases of infectious diseases like smallpox, scarlet fever and diphtheria have been allowed to pass unnoticed. The present hospital has accommodation for sixty patients. It is satisfactory to note that six months after its opening the community is already clamoring for more room in order to accommodate the increased number of cases. The success of

this institution shows how quickly the Chinese appreciate modern methods of medical treatment, and augurs well for the future of preventive medicine.

It is significant to note, too, the evolution of the medical school from a one-man concern to an institution having at least six professors giving their entire time to medical work; a graded course of four full years in medicine; and a high standard of preliminary training. A large number of practitioners have graduated from these colleges and have contributed much toward spreading modern medical knowledge among the people. In this connection it may be said that the record of those who have obtained their qualifications in Europe and America has been a very satisfactory one. Such men have graduated from Cambridge, Edinburgh, London, Glasgow, Paris, Berlin, Yale, Harvard, Chicago, California and other American universities.

The first Chinese to obtain a foreign medical degree was Dr. Wang Fun, of Canton, who graduated from Edinburgh in 1857 and was a favorite pupil of Sir James Simpson, the discoverer of chloroform as an anesthetic. After him came successively Dr. Ho Kai, Edinburgh, who also obtained a law degree; Dr. Lim Boon Keng, Edinburgh; Dr. Wu Lien Teh, Cambridge and Paris; Dr. Shu Su Jen, Glasgow and London; Yen Fu Ching, Yale; H. J. Liu, Harvard; Philip Sze, Johns Hopkins, and several others.

A MISSION HOSPITAL IN SOUTH CHINA
The bedding looks sanitary, if not comfortable

Many distinguished women doctors have also taken their degrees abroad, such as Drs. Hu Kim Eng, Foochow; Ida Kahn, Nanchang; Mary Stone, Kiukiang; Li Yuen Tsao, Nanking, and Amy Wong, Shanghai.

Owing to the close proximity of Japan to China, and to cheaper educational facilities in that country, quite a number of Chinese graduates have returned from Japan and are holding important posts under the government. For instance, Dr. Fang Chin, chief of the medical department of the Board of War; Dr. Tang Erh Ho, the dean of the Peking Medical College established under the auspices of the Board of Education. To the above should be added the senior graduates of the missionary, Dr. Mackenzie (founder of the Government Medical College at Tientsin), who have done considerable work in forwarding medical science within recent years. These include Dr. W. T. Watt (formerly director of the Sanitary Department, Tientsin, and physician to the late President Yuan) and Dr. Hsu Hua Ching (inspector-general of the Army Medical Service) and first director of the Army Medical College.

In 1913, Charles W. Eliot, president emeritus of Harvard University, visited China on behalf of the Carnegie Peace Foundation, and in his report dealt adversely with the unsatisfactory sanitary conditions that he found there. In 1914, the Rockefeller Foundation deputed a China Medical Com-

A TEMPLE FAIR
China's "quack" doctors frequent these places

mission to visit China and inquire into the condition of medical education, hospitals and public health in that country. This commission, which arrived in China in April, visited seventeen medical schools and ninety-seven hospitals in China and Manila.

As a result of their recommendations, another commission arrived in China in September, 1915, and stayed four months in the country to investigate further the specific enterprises suggested by the former commission, and to familiarize themselves on the field with the general features of the situation. The following are some of the more important of their recommendations which have been put into effect:

1. The Union Medical College of Peking, established by the mission bodies, has been taken over for the sum of £40,000. It is intended to make this a strong English-teaching college, for which purpose additional teachers from America will be employed.

2. The two senior classes of the above college will stay on to complete their studies in the Mandarin language, but the students of the three lower classes will be transferred to the Union Medical College at Tsinanfu (Shantung). Towards

UNION MEDICAL COLLEGE, PEKING

American teachers will be employed to make this a strong English-speaking institution

this end the China Medical Board has appropriated \$150,000 gold to be expended in five years for additional buildings and increased maintenance.

3. A strong medical school will be established in Shanghai, the teaching to be in English.

4. An annual appropriation of \$16,000 gold for five years is made to the Hunan-Yale Medical College at Changsha for the maintenance of additional members of the staff.

5. Grants have been made to several missionary societies for additional doctors and nurses for certain of their hospitals in China.

6. Six fellowships for Chinese graduates in medicine, five scholarships for nurses, and three for pharmacists have been awarded to enable them to improve their knowledge in America.

7. Roger S. Greene is appointed resident director with offices in Peking.

The two principal medical colleges established by the Chinese government are the Peiyang Medical and Army Medical College, both situated in Tientsin. The former was founded in 1893 by the late Li Hung Chang, and has graduated about 150 doctors. The latter was founded in 1903 by the late Yuan Shih Kai, to train medical officers for the newly

organized modern army, and has graduated nearly 450 doctors. The Peking Medical College, established by the Board of Education, was founded four years ago and has about 120 students on its list.

A most promising landmark in the annals of Chinese medicine was the foundation of the National Medical Association in 1914, consisting of medical practitioners who have graduated in Europe, America, Japan and home colleges. The membership is now considerably over 400. The first annual conference of this association took place in Shanghai in February of this year and was attended by members from all parts of China. Dr. Yen Fu Ching, M. D. (Yale), D. T. M. (Liverpool), dean of the Hunan-Yale Medical School, Changsha, presided. The conference lasted for one week, there being daily sessions devoted to such subjects as preventive medicine, medical education, medical textbooks and patent medicines. In addition public lectures were delivered each day for one hour by the better-known medical men of China. On the last day the following resolutions were unanimously passed by the full conference:

Courtesy Harvard Medical School of China

GATEWAY OF PROGRESS

The entrance leads into the Harvard Medical School of China

That this conference petition the central government to take proper steps for the registration of practitioners of western medicine and of drug shops selling foreign medicine. That the government be requested to establish a central medical board in Peking, consisting of representatives from the government and principal medical institutions with powers to fix the medical curriculum, grant licenses for medical practice and supervise examinations throughout the country.

That this conference draw the attention of the central and provincial governments to the need of combating tuberculosis and venereal diseases.

That the government be urged to establish without delay a public health service throughout the country.

That the board of education and Wai Chiao Pu (foreign office) be asked to make an annual grant of ten scholarships to medical students from the indemnity fund.

Of the first ten honorary members elected by the association eight were foreign physicians who had done special work in China, and the other two were the minister of finance and minister of interior, who had both encouraged medical science, the former by subscribing \$100,000 to the Central Hospital and the latter by introducing municipal reforms into Peking.

"OUT OF CHINA, CROSS THE BAY"

In the distant town of Taheiho the Chinese government has established a large, up-to-date hospital

In many respects, the establishment of the Central Hospital in Peking, which is now in course of construction, is the best proof that modern scientific medicine has taken firm root in this ancient land. Unlike most undertakings of this nature, the funds required for this hospital have been raised partly from the government and partly from private sources, and the whole management is in the hands of a board of trustees. When erected it will have accommodation for fifty first- and second-class patients and one hundred third-class patients. Thus rich and poor may obtain the best treatment under the same roof. All the latest appliances known to medical science will be installed. Every attempt has been made to meet local conditions, and if no untoward accident occurs it will be the most up-to-date hospital in China when completed.

In the planning of this hospital the promoters have considered the urgent need of establishing an institution in the capital, where all the highest officials constantly meet, and may, in their turn, introduce the blessings of the latest medical science into any province to which they may be sent.

In the awakening, so to say, of modern sanitary science and progressive medicine throughout China, American doctors and scientists have played and are playing a most important part. From its geographical position and greater facility of access, southern China has made greater strides, and in Changsha, the capital city of Hunan Province, American and Chinese graduates of American colleges are working side by side for the advancement of science and the alleviation of suffering among the poor. Even in cold northern Manchuria, there is now an American veterinary surgeon employed by the Chinese government to study and prevent cattle disease. In the Plague Prevention Service, a young American bacteriologist, who has worked under Professor Zinsser, of Columbia, is giving most valuable assistance to his Chinese chief, a graduate of Cambridge, England, in the elucidation of plague problems.

Truly, it may be said that the government of the United States showed a remarkable foresight seven years ago when it decided to return its portion of the Boxer indemnity for the education of Chinese students in America.

A Child

By Hortense Flexner

The little maid next door is fair
As the white, wild-plum in May,
She runs with a leap and flying hair;
But tears are in her play—

She holds my hand when we go to walk,
Or ride in the crowded car,
Yet her round eyes shine through her baby talk
As sad as the fairest star.

I tell her tales of elf and fern,
Wee, happy folk that fly;
She hears—but O where did she learn
To smile and then, to sigh?

Wilfred Wilson Gibson

Poet of Tenement and Trench

By Rev. John Haynes Holmes

Pond Lecture Bureau

ARIDE on a London bus to the far East End, a walk down a dirty slum street a-swarm with children, a three-flight climb up the stairs of a dingy tenement, entrance into a small back room, crowded with books, flooded with sunshine, adorned with a typical English tea-table, and picturesquely overlooking a wilderness of roofs and yards—it was thus on an August afternoon, 1913, in company with my friend, Rabbi Wise, that I found Wilfred Wilson Gibson, whose forthcoming visit to this country is an event not only for lovers of literature, but for social workers as well. Since this happy day of visitation to the little garret, which was once, at least, made radiant by the presence “like sudden April” of Rupert Brooke,¹ the poet has been beguiled from “the lonely road”² of bachelorhood. A loved wife has taken him from the tenement “to the little old house by the crossways”³; and there “in a gold glow of happiness,” he dreams “diviner dreams the years shall yet fulfill.”⁴ But I know that he is the same quiet, gentle, almost timid man that I saw within his haunt that afternoon; and his verses show that today he is a greater singer than before.

It was *Daily Bread*, published in 1912, which first made Gibson's name familiar. An unpretentious collection of seventeen dramatic sketches, all brief, all written in the simplest poetic style, this book yet constitutes one of the most impressive works in the field of social literature which has appeared in recent years. What elevates the plays to an almost unique position of power and appeal is not so much their poetry, characterization, or dramatic action, as their marvelous depiction of the conditions of working-class life in modern England. What Charles Booth did in volumes of statistics for London, Gibson does in a few lines of simple verse for city and rural slums. And he presents not merely outward material facts, but inward spiritual reactions upon these facts. For Gibson is a man who sees reality, and adds to this the magic art of making others see.

Here in his little dramas are miners, fishers, steel-workers, firemen, tenement-dwellers, factory girls, slum waifs, rural laborers, fathers, mothers, children. Here are people whose lives from morning until night, year in and year out, are concerned with the bitter problem of getting enough bread to hold body and soul together. Here are people who have become so used to hunger, cold, nakedness, weariness, disease, death, that they have lost the habit of complaint, or revolt, or even inquiry, and accept their misery as passively as the flower takes the gust of the hurricane or the chill of the autumn rains. And here are people who, amid a thousand ills of fortune, preserve unimpaired their love for one another, their fidelity to duty, their faith in God.

Nothing can describe the power, beauty, pathos, of the revelations embodied in these little sketches of “how the other lives”—and dies! The very simplicity of the style, not unlike the rhythmic cadences of prayer, the very commonplaceness of the characters and the situations, the very obviousness of the stories which center about the most ordinary relations of

WILFRED WILSON GIBSON

father, mother, child and toiler, the very triteness of the themes, which are only those of unemployment, sickness, industrial accident, daily work for daily bread, the very monotony of the episodes of life and death, are what constitute the book's peculiar power. Go into a factory village, and here, in *The Betrothed*, *The First Born* and *The Family's Pride* is what you would be most likely to see. Go into a mining town, and here, in *The Nightshift* and *Mates*, is what you would encounter. Knock at any tenement door and open, and here, in a half-dozen or more of these sketches is the picture which you would behold. Speak to the first person whom you chanced to meet on some country lane or in some city square, and here is the story which you would hear.

Wonderful is the skill with which, through selection of incident, character and speech, the poet has revealed the truth about the dull routine of life in the home, and labor in the mine and mill. And not merely the truth, but the beauty also! For behind the commonplace is shown the heroic and sublime. In all he makes us see, is the light of poetry; in all he makes us hear, the call of prophecy. We have known these things be-

¹ See *Battle and Other Poems*, page 45.

² See *Borderlands and Thoroughfares*, page 76.

³ See *Borderlands and Thoroughfares*, page 7.

⁴ See *Battle and Other Poems*, page 76.

fore in an unheeding way, from figures of economists, reports of investigators, treatises of scholars. There is nothing new in situation or emotion. But here is a poet who turns the cold and lifeless facts into quivering flesh and flowing blood and tears. He lifts his chant:

"All life moving to one measure—
Daily bread, daily bread—
Bread of life, and bread of labor,
Bread of bitterness and sorrow,
Hand-to-mouth, and no tomorrow,
Dearth for housemate, death for neighbor . . .
Yet, when all the babes are fed,
Love, are there not crumbs to treasure?"

For the first time we see, we feel, we know. For the first time we really understand. Well did Canon Cheyne cry, on the appearance of this book, "A new poet of the people has risen up among us. The story of the soul is written as plainly in *Daily Bread* as in *The Divine Comedy* and in *Paradise Lost*."

Since *Daily Bread* other books have appeared—*Fires*, in 1912, *Womankind*, in 1913 and *Borderlands and Thoroughfares*, in 1914. In each there has been the same penetrating insight into the psychology of social misery, the same prophetic understanding of the wants and woes of submerged men, the same august revelation of the secrets of the heart that is robbed of its heritage of love. With this has come as well, in these later books, a personal note of infinite tenderness and charm, which has inevitably served to deepen the poet's appeal. And there still endures that chaste simplicity of style, marking the soul which sees things elemental and brings them to our gaze.

How such a man would react upon the great war might well have been foreseen. Even those who knew him best and loved him most, however, could hardly have anticipated the awesome verse which Gibson put forth some months ago in the volume entitled *Battle and Other Poems*. Here is war as seen not by the medieval bard, who still flourishes so abundantly, but by the poet of the new social era. No heroics, no dithyrambic eloquence, no trumpets and drums, no flags and banners, no martial lilt and thrilling song, no appeals to patriotism, no flamboyant adjurations to Britannia, no pious prayers to tribal gods. All this is gone! And in its place appear the dirt of the trenches, the ugliness of the bombardment and the charge, the deep-down emotions of the common man as, torn from his native soil and thrust down into the flaming ploughshares of "battle," he communes with his stark and starving soul. Nothing like these poems for grim humor, sardonic horror, tenderest pathos and "the human touch" has ever been written. Nothing comparable to this poet's sympathy with the trivialities and the sublimities that together make up the content of human living at its climactic moments have I, for one, ever discovered. In their almost uncanny simplicity and directness, these battle-pieces cut like sabre-blades, thrust like bayonets, shock and stun like bullets. Listen to this:

"I do not fear to die
'Neath the open sky,
To meet death in the fight
Face to face, upright.

But when at last we creep
In a hole to sleep,
I tremble, cold with dread,
Lest I wake up dead."

Or this:

"That was his sort,
It didn't matter
What we were at,
But he must chatter
Of this and that
His little son
Had said and done:
Till, as he told
The fiftieth time
Without a change
How three-year-old
Prattled a rhyme,
They got the range
And cut him short."

Or this:

"This bloody steel
Has killed a man,
I heard him squeal
As on I ran.

He watched me come
With wagging head.
I pressed it home,
And he was dead.

Though clean and clear
I've wiped the steel,
I still can hear
That dying squeal."

And finally this:

"I cannot quite remember . . . There were five
Dropt dead beside me in the trench—and three
Whispered their dying messages to me . . .'
Back from the trenches, more dead than alive,
Stone-deaf and dazed, and with a broken knee,
He hobbled slowly, muttering vacantly—

'I cannot quite remember . . . There were five
Dropt dead beside me in the trench—and three
Whispered their dying messages to me.

'Their friends are waiting, wondering how they thrive,
Waiting a word in silence patiently . . .
But what they said, or who their friends may be

'I cannot quite remember . . . There were five
Dropt dead beside me in the trench—and three
Whispered their dying messages to me . . .'"

This is a new note, making cheap the "sounding brass and tinkling cymbals" of Rudyard Kipling, and even strangely unreal the dignity and pathos of John Masefield. This, I venture to say, is the war poetry of the future. Wilfred Wilson Gibson has in this last book opened a new page of literature. Alone of the poets this day, he has seen to the heart of things in "battle." Under the impact of the greatest crisis in history, he has been not stunned to silence or babbling song, but awakened to understanding and sober speech, and thereby has proved his genius.

The arrival in and tour through this country of such a man as Mr. Gibson is an occasion of great moment. Lovers of literature will be quick to do him honor. But let not these outdo the leaders of social change and the seekers after an end to war, for whom this man is at once seer and prophet.

COMMON WELFARE

CHRISTMAS ON THE ISLAND OF CULION

ON the island of Culion, some two days' trip by water south of Manila and the Philippine Islands, live thirty-seven hundred lepers. Last year they had a Christmas. The Woman's Club of Manila formed its committee, sent out appeals for aid, and gifts were sent to the whole colony, with some special articles asked for in pathetic notes from the lepers.

Two years ago this same club sent a delegation of women, ten Americans and one Filipino, to Culion to look over the situation and report. "One does not rub shoulders with living death in its most heart-rending form for nothing," writes Bessie Dwyer to the SURVEY.

The woman's club has many other activities. Miss Dwyer, herself a member, writes that one of the first reforms undertaken which she, as chairman of the penology committee, brought to pass and which was suggested to her through an article in the SURVEY, was the appointment of three police matrons.

Each year a new day nursery has been established by the club in Manila. "Good houses were secured, a trained American superintendent placed in charge, graduate Filipino nurses supplied and a campaign of publicity and popularity unceasingly waged."

In the center of Manila the women have set up a flower market, which today controls the retail flower trade and is operated entirely by Filipinos. Miss Dwyer tells of further things which the women have done:

"A woman's free legal aid has been established, under club auspices, by two young Filipino women lawyers, who graduated brilliantly from the University of the Philippines and passed the bar examination. Their names—and they should go down to fame—are Paz A. Legaspi and Natavadiid Almeda. Many cases of poor and abused women have already been adjusted by these wonderful girls.

"A woman's free employment agency is also promised the club for next year

by the government authorities, with a woman of special abilities in charge, and a plan has been devised and worked out by which the civil service bureau and the bureau of labor will, in future, cooperate and further the interest of the eligibles on the list of the former, by forwarding the names of those who do not object (and not otherwise) to the bureau of labor, who will maintain them for call by the business and mercantile firms. It is thought that this plan, if properly handled, will greatly aid the men and women hitherto entirely depending upon their civil service qualifications to find employment, and at the same time aid the business men to get better-equipped material for their specific needs.

"Some twenty women's clubs, based on the constitution and by-laws of the Woman's Club of Manila, and fostered by literature, in English and Spanish, specially prepared and sent broadcast throughout the islands, have this year been formed. They are coming into fashion, and it is hoped that a federation of them may later be formed. The power for good in this Oriental country, wielded by its women, is enormous. They are foremost in all good work, and the best 'business men' in the islands—that is, they match wits with the Chino and other foreigners in the retail and wealth-producing factors and seldom come out second best. Good mothers, warm-hearted friends, charitable and extremely quick in perception are the Filipino women."

THE END OF THE MESABA RANGE STRIKE

FOR the shooting and killing of Deputy Sheriff James Myron out on the Mesaba Range last summer, three strikers were sentenced on December 15 last to terms in the state prison not to exceed twenty years. The three men are miners, and it was in the house of one, Philip Masonovitch, the affray took place. [See the SURVEY, August 26.] His wife, who was among the eight indicted and imprisoned in connection

with the affair, had been previously released on bail.

The cases against the three Industrial Workers of the World, Sam Scarlet, Joe Schmidt and Carlo Tresca, the latter known to have been far from the scene of shooting, all arrested as "accessories after the fact," were continued indefinitely. According to Margaret Culkin Banning, director of the social center department of the city of Duluth, "It is so extremely improbable as to be almost certain that their cases will never come to trial."

Mrs. Banning writes further to the SURVEY:

"This action came as a complete surprise to nearly everyone interested in these cases. The trials had been scheduled to begin about December 20 in Virginia, Minnesota, and from all appearances a spectacular series of trials was about to take place. A defense fund committee had been created and appeals for contributions had been widely circulated on the plea that the Industrial Workers of the World organizers were preparing an elaborate legal defense. Unions all over the country responded with small donations in the most generous spirit. . . .

"Almost immediately after the trial the Industrial Workers of the World organizers and all of the leaders, including members of the defense fund committee, left the range. They have promised that a detailed report of the defense fund will be sent to every contributor, permanently disposing of the charges that the funds have been misused. They leave behind them an Industrial Workers of the World organization of disputed strength, with which Elizabeth Gurley Flynn expects to work in the spring when she and other organizers will return to the Mesaba Range.

"On November 22, 1916, the United States Steel Corporation announced a raise of 10 per cent to all employes, which was followed shortly afterwards by similar announcements by various independent mining companies. Official word of this had not come to Duluth at

RING IN THE NEW—IN PRISONS

that time, but it is undoubtedly a fact that wages will be increased here as elsewhere in the branches of the steel corporation. This, of course, affects one of the miners' demands—that for better wages. It is not conceded in the form of a minimum wage as requested, and the officers of the Oliver Iron Mining Company, which is the local branch of the steel corporation, declared that it has no bearing on the recent strike. The Industrial Workers of the World insist that it comes as a necessary concession because of the cost of the strike to the steel corporation. The contract labor system has not been abolished. The strike leaders believe, however, that because of the agitation, less corruption exists under it than formerly. There is no change in hours of labor as demanded, nor in regard to the form of payment.

"Lastly, and most important, there is no change of attitude on the part of the mining companies toward organized labor. They will neither recognize it nor deal with it.

"Statistics of the number of miners who left the range are difficult to get. Undoubtedly several thousands did go.

"What appears rather drearily on the surface, in spite of the assurances of the Industrial Workers of the World that an advance has been made, is that the advance is pitifully small. They have established a permanent organization, but none of their demands has been granted. It is impossible to prove that this rise in wages which took effect all over the country was actuated by the Mesaba strike. It is quite probable that general labor discontent and the good wages prevailing in other industries were contributory causes.

"If all the slight advances on the Range are going to cost as much as this in human suffering, in hunger, in violence, in loss of life and liberty, the distance to go before relations are satisfactory between employed and employer seems unbearably long."

Jersey jail*

A NEW JERSEY COUNTY JAIL DELIVERY

BY erecting on its county farm a small bungalow at a cost of \$2,500, Morris County, New Jersey, has this year accomplished something definite in the evolution of its colonial jail in a colonial court house into a temporary place of detention for persons awaiting court action. How this came about is of interest to persons everywhere who are perplexed to know how to attack a jail situation in rural and semi-rural counties.

The colonial court house at Morristown is often mentioned in the history of Revolutionary times. It had in its basement four dungeon cells with stone walls of unusual thickness. One small semi-circular peep-hole admitted light into each of these dungeons from the dimly lighted basement. Handmade lattice iron doors were hung within the oak doors. From such jails as this Dorothea Lynde Dix rescued insane men and women in her campaigns for better care of the insane from 1845 to the beginning of the Civil War.

But it was long after the Civil War that Morris county abandoned this dungeon jail. When the New Jersey State Charities Aid Association was formed in 1886, the Morris County jail was found to be overcrowded and unsanitary. In spite of agitation, year after year went by with slight effect. Two years ago,

after repeated presentments by grand juries, inspections by the State Board of Health and public reports by civic agencies, officials came to believe that the people of the county would like to have a better jail if a way could be found without adding to the tax rate.

A simple plan was made. It was found that if the jail prisoners could be employed in the work, the old dungeon cells in the basement could be broken down and the space utilized to other advantage. As a result, the basement now contains a large, well-lighted dormitory room for drunk and disorderly persons, a shower-bath with a dressing room for change of clothing, a fumigation closet and a congregate dining room. Food is no longer pushed through jail bars to prisoners in their cells.

This being accomplished late last year, the next step was comparatively easy, and a new set of officials who came into office in January were persuaded to attempt the experiment of sending prisoners out to the county farm back of Morris Plains. The same fear of expense appeared, and a plan was prepared for a bungalow to cost \$2,300. There was enough public sentiment in the county to win official approval, and a contract was signed.

The sheriff and the jail committee of the county board had by this time become strongly interested and gave much time and study to the development

of the project. A jitney bus was secured and jail prisoners were transported daily to the farm, carrying with them a few sandwiches for a mid-day lunch, and actual work began. Throughout the growing season there have been from eight to sixteen men at work upon the county property, without any trouble other than one incipient threat of a strike because of the frugal mid-day meal, which was readily settled by giving the men enough to eat.

They built and repaired fences, re-surfaced and repaired the roadways about the place, trenched and laid a water pipe to a spring on a hillside so that water is now supplied by gravity to the county buildings instead of being pumped by steam at considerable annual expense for coal and labor; they excavated for the bungalow, extended the sewer system of the county Tuberculosis Hospital on the farm, cultivated garden and field crops, and in general accomplished so much that by October the prisoners were considered to have demonstrated that this method of keeping them has great advantages over congested jail quarters and total idleness.

The first group of prisoners moved into the bungalow in October. They occupied a dormitory room lighted on three sides, with cot beds and blankets, with a cement floor to insure sanitary conditions, a shower bath and a closet

for lavatory purposes hard by. There is a dining room, a kitchen with a new range, a food closet and a furnace in the basement. Here the men will live this coming winter with a wholesome program of work in the open air ahead.

To the farmers and officials of Morris county the demonstration has meant that men serving terms for disorderly conduct because they could not pay a fine are willing to work for the county if suitable conditions are made in the way of decent housing, decent food and decent treatment. The physical and mental improvement resulting from this form of jail treatment will, it is hoped, become clear also. It has been no unusual thing for the men to say to their sole guard and foreman, "You have treated me square and I have no kick coming." Then, with a formal shaking of hands and expression of determination never to return, the discharged man re-enters civil life in much better condition to meet his responsibilities than when he left his congested jail quarters at the court house after weeks and months of dreary idleness.

SALOON AND SCHOOL IN BOSTON POLITICS

AT the municipal election in Boston, held on December 19, two questions of general interest were voted

upon. One related to the school system, and the other to the licensing of saloons.

Massachusetts has a law which provides that every year its cities and towns shall vote on the question of licensing its saloons. This year, with Billy Sunday holding a series of widely attended meetings in Boston, many believed that No-License might carry in that city. A spirited fight was waged and the brewers, saloon-keepers, and certain real-estate interests spent large sums of money in circularizing the voters and in advertising in the newspapers. They were effectively supported by a large part of the trade unions and by men aligned with the political machines, Republican as well as Democratic. Although the no-license forces, led by the Massachusetts Anti-Saloon League, put up a spirited fight, the majority in favor of license was increased from 14,000 last year to over 23,000 this year.

The influence of the Sunday campaign was problematical. Those favoring the saloon made skilful use of the sectarian issue, and the campaign for no-license in many quarters was construed as a Protestant movement; this, in spite of the fact that some of the most prominent supporters of no-license were of other religious beliefs. Of unusual interest is the fact that the Associated Charities came out officially for no-license, and that many leaders in social

THE LICENSE QUESTION

We, the undersigned, believe that the policy of license is the best in every way for the City of Boston, and hereby recommend to its citizens a continuance of that policy so that the business shall be properly regulated and not get into the conditions that prevail under no-license.

BOSTON DRY CAMPAIGN COMMITTEE OF THE MASS. ANTI-SALOON LEAGUE, 314 Tremont Building, Boston, Mass., ARTHUR J. DAVIS, Supt.

PRE-ELECTION ADVERTISEMENTS IN BOSTON PAPERS

The "vote-yes ad" appeared on the front page of all papers at a cost of about \$3,500. About half the signers are selfishly interested as attorneys of saloons or brewers. The rest are citizens of excellent standing. A. Shuman and Co., a big retail store, later retracted their signature

work in Boston signed a petition printed on the first page of the leading papers in favor of no-license. This list included such prominent social workers as Robert A. Woods, Joseph Lee, Dr. Richard C. Cabot, and Jeffrey R. Brackett; influential business men such as Henry L. Higginson and John F. Moors; widely known clergymen, such as Bishop William Lawrence and the Rev. Paul Revere Frothingham; and educators, including ex-President Charles W. Eliot, of Harvard University, and Lemuel H. Murlin, president of Boston University. But though license carried Boston, no-license made smashing gains throughout the state. Six license cities this time voted no-license,—Fall River, Taunton, Haverhill, Leominster, North Adams, and Fitchburg.

The two candidates elected to the school committee were Judge Michael H. Sullivan, who had the endorsement of the Public School Association, and Henry Abrahams, a broad-gauge man active in the ranks of organized labor, who ran as an independent candidate.

The Boston Finance Commission recently had an exhaustive investigation made of the Boston school system. As a result it was recommended that executive authority be centralized in the superintendent of schools, that assistant superintendents be nominated by him, and that the board of superintendents be abolished. Considerable executive authority had hitherto been centralized in the board of superintendents, composed of the assistant superintendents.

There was a vigorous difference of opinion between the members of the Boston school committee as to what should be done with the report rendered. The progressives, headed by Joseph Lee and Frances G. Curtis, urged that the recommendation of centralizing authority in the superintendent of schools be adopted. This was opposed by Michael H. Corcoran and other members of the committee. At the recent election the Public School Association, a non-partisan organization interested in conserving the best interests of the schools in Boston, refused to give Mr. Corcoran its support and he was defeated. Undoubtedly, one result of the election will be that greater consideration will be given to the Van Sickle survey than would have been the case had Mr. Corcoran been re-elected a member of the school committee.

"PASSING THE BUCK" TO THE SUPREME COURT

IN the face of the refusal last week of the railroads to put the eight-hour day into effect January 1, the chiefs of the four brotherhoods have put the whole matter once more up to the membership. What future move this may indicate is unknown, but that act itself, on December 29, removed all likelihood

of a strike being called on January 1, the date when the Adamson law nominally went into effect.

It is the failure of the law to take actual effect on that day that has gone so far toward bringing on a new crisis in railroading. By an agreement with the attorney-general of the United States no attempt is to be made to enforce the law until the Supreme Court has passed upon its constitutionality. A test case now before the court will be argued January 8, and it is hoped by railroad men that a decision may be handed down by the first of February. The feelings of the learned justices, being pressed to pass in jig time upon legislation which was passed by Congress pell mell, may well be imagined, especially as the legislation raises issues which are fundamental, demanding deliberation both as to the principle involved and its adequate expression in the statute.

The railroads have agreed with the attorney-general to keep a careful account of hours and mileage and are to make such adjustments of back pay as the interpretation of the law by the court may require. This arrangement is not satisfactory to the brotherhoods. The rank and file believe that Congress had the power and meant to give them a basic eight-hour day with ten hours pay to go into effect January 1, and they want it, court or no court.

A few weeks ago in a speech before the business men's group of the New York Ethical Culture Society, Warren S. Stone, president of the Brotherhood of Locomotive Engineers, said: "I know what the President intended us to have. I know what Congress intended. That we mean to get regardless of court decisions." He said further that Congressman Adamson had told him that if the interpretation of the court were such as to withdraw from the law some of the effect that had been intended, he would draft another law that would insure an eight-hour day on the basis of the former ten hours pay.

A conference was held in New York, December 28, between representatives of the railroads and the men in an effort to arrive at some working agreement on January 1. When the railroads refused to consider any other arrangement than the one they had made with the attorney-general, the conference came to an end.

Next day the four brotherhood chiefs issued a statement which calls attention to their acceptance of the President's proposition in August that time and one-half be waived and that the eight-hour day be instituted with pro rata payment for overtime.

Continuing, the statement reads:

"Our men believed in so doing they would secure the eight-hour basic day at once, but the enactment of the Adamson eight-hour law, effective January 1,

1917, made it necessary for them to wait patiently until that time, to find later that the railroad companies instituted injunction proceedings against the government's enforcement of the eight-hour law, and at this time the entire matter is in litigation, such litigation making it impossible for the Special-Committee appointed by the President, as provided for in the law, to proceed with their investigation as of January 1, and the probability of additional litigation being commenced by the railroads, even though the law is declared constitutional by the Supreme Court, will seriously affect such investigation, in fact can and likely will delay the investigation until the commission cannot make its investigation as the law contemplates, thereby defeating the intent of the law and at the same time postponing the benefits promised by the law, which will unquestionably meet with general dissatisfaction among the membership of the railroad organizations.

"The entire situation is to be placed before the membership by special circular."

In the meantime, the Senate Committee on Interstate Commerce has begun to hold hearings on a tentative draft of a bill to prohibit strikes or lockouts on railways pending the publication of a report on the controversy. The investigation must be completed and the report made within three months, but the men are not to be allowed to strike for a month after that. Heavy penalties are prescribed not only for employers and employes who violate the law, but for "any person inciting, encouraging or in any manner aiding any employer or employe" to violate its provisions.

COOPERATIVE UNITY OF PROTESTANT CHURCHES

THE cooperative unity of the Protestant churches seems to be an accomplished fact at last. That for the third time between 400 and 500 delegates representing 30 or more denominations, aggregating 18,000,000 members, met in the quadrennial session of their Federal Council at St. Louis last month, signifies the passing of the movement out of its critical experimental stage. From having been at first an association of the most interested individuals in some of the denominations, it has become both in organization and in the participation in its work an interdenominational federation, constituted of delegates appointed by the highest courts of all the churches.

Long before the organization of this council, of course, there was an alliance of most of these churches, but it was chiefly a platform on which interdenominational amenities were exchanged and from which such platform declarations as they could unite upon were sent across denominational boundaries. For the most part, what was

thus crystallized went into solution between these meetings, to be precipitated again when the alliance reconvened. It led, however, to a much larger and more permanent cooperation of some of these churches on their foreign missionary fields.

The Federal Council was initiated eight years ago in the hope of a far closer, more continuous and more actively practical cooperation, despite the many differences in doctrine, ritual and polity, and in their very conception of the functions of the church, which had so long made any union of the denominations seem hopeless.

The practicability of their cooperation was self-demonstrated in an effort to maintain federal headquarters, with continuous administrative functions under one general secretary. Its annual budget now amounts to \$100,000 a year. This headquarters development may be attributed to the pressure of the Christian social spirit and the demand for social service within each denomination. Most of the strong church fellowships were organizing social service commissions of their own. Their secretaries began to confer and cooperate. And when the Federal Council established its Social Service Commission, these denominational executives became its associate secretaries. Thus gradually but rapidly the social service work of the council was self-developed and self-led. Even now, however, has it a claim upon only the part-time service of the field secretary, the well-known Rev. Charles Stelzle, recently appointed to that office to be available for the administration of this growing department of the council's work.

The federation's bold declaration of its advanced social standards for the churches and their members has scarcely been challenged during these years. One denomination after another has either formally adopted or tacitly accepted this new creed of the church's social, economic and industrial faith. The report of the Social Service Commission at St. Louis took advanced ground on the right to work, the equality of industrial opportunity for women and men, a shorter working day and one day's rest in seven, a living wage and the demand for industrial democracy in collective bargaining, with larger control over working conditions by the workers. Yet it failed to meet with any opposition and was adopted without dissent, and with the outspoken approval of several representative employers present.

Equally advanced positions were taken on housing, recreation, commercialized vice, prison reform and the educational training of the ministry and membership for social service. The Commission on the Family recommended the requirement of uniform marriage licenses, with an interval of

Best and Cheapest Service in the World

Here are some comparisons of telephone conditions in Europe and the United States just before the war.

Here we have:

Continuous service in practically all exchanges, so that the telephone is available day and night.

A telephone to one person in ten.

3,000,000 miles of interurban or long-distance wires.

Prompt connections, the speed of answer in principal cities averaging about 3½ seconds.

Lines provided to give immediate toll and long-distance service.

In Europe:

Nine-tenths of the exchanges are closed at night, and in many cases, at mealtime.

Not one person in a hundred has a telephone.

Not one-eighth as many miles in proportion to population and territory.

In the principal cities, it takes more than twice as long for the operator to answer.

No such provision made. Telephone users are expected to await their turn.

As to cost, long-distance service such as we have here was not to be had in Europe, even before the war, at any price. And exchange service in Europe, despite its inferior quality, cost more in actual money than here.

Bell Service is the criterion for all the world, and the Bell organization is the most economical as well as the most efficient servant of the people.

Peabody, Houghteling & Co.

(ESTABLISHED 1865)

10 South La Salle Street, Chicago

several days between the issuance of the license and the performance of the ceremony, the delay of the trial of divorce suits, the raising of the age of consent, the exaction of evidences of normality and physical fitness as a condition of marriage, sex instruction by parents and in the advanced grades of the public schools, and legislation to encourage marriages and births by making provision for nursing mothers who are indigent or dependent upon self-support.

The council went on record in favor of national prohibition, but advocated substitutes for the saloon in meeting social needs.

Local inter-church federations employing executive secretaries in fifteen of the larger cities are helping to avoid duplication and competition and are aiding in securing administrative efficiency in city government, higher standards in the distribution of public charities, more cooperation with the courts and police in dealing with juvenile delinquents, and the repression of the drink and vice evils.

THE AMERICAN RED CROSS AND ITS PLANS

THE annual meeting of the American Red Cross, held last month in Washington, was one of altogether unusual interest, not only because of the extensive activities of the Red Cross in connection with the European war, but because of the steadily developing efficiency of the Red Cross itself, not only for war relief, but for any demands which may be made upon it. Since the reincorporation of the American Red Cross in 1905 there have been almost annual changes more or less radical in the organization, but none of them have been revolutionary in character or

brought about as a result of external pressure. All have been made by the authorities of the Red Cross itself as a result of experience and from a persistent determination to make the Red Cross fit to serve its purpose in peace or in war.

Three competent executives, all devoting their entire energies to the work, have now been put in general charge—Elliot Wadsworth, vice-chairman of the executive committee; Ernest P. Bicknell, director-general of civilian relief, and Colonel James R. Kean, director-general of military relief. "From the reports which these executives and their associates in charge of particular departments of work gave of their stewardship and from the plans which were outlined for the future," writes an active Red Cross volunteer, "it is evident that, as never before in its history, the Red Cross is now in position to meet any obligations which the financial resources at its disposal and the demands made upon it may create. Financial resources and demands must, of course, be considered together. If one considered only the needs, the responsibility created by the European situation alone would be well-nigh staggering. But the opportunity for usefulness is limited by financial resources, which means, in the case of the American Red Cross, by voluntary contribution.

The gratifying increase in membership during the past year argues well for the future. A membership of nearly three hundred thousand means just so many possible centers of interest and propaganda. If the Red Cross is to meet such appealing needs as those simply but dramatically presented by Frederick Walcott as a result of his

visit to Poland, the response must be immediate and far more generous than any which has yet been made since the war began."

In response to a resolution introduced by Jerome D. Greene, of the Rockefeller Foundation, and unanimously adopted, Vice-President de Forest appointed a strong committee to consider by what means the Red Cross could bring more effectively to the American public such situations arising out of the war as that in Poland which Mr. Walcott described.

Special attention was given in the course of the meeting to the activities of local chapters; the institutional membership; the nursing service, the three branches of which have been reorganized under a single committee; and the creation of base hospital units. The meeting left upon those who attended it "the impression of a live, expanding, and well-conducted enterprise, one with which President Woodrow Wilson, who is president of the Red Cross; ex-President Taft, who is chairman of its executive committee; Mabel Boardman, who has done the lion's share of its work for over ten years, and their associates in the Central Committee, may all be proud to be associated."

DRYING UP THE DOMINION OF CANADA

THE Dominion of Canada is today practically "dry territory" from coast to coast. For many years liquor has been under the ban in New Brunswick and Prince Edward Island. Nova Scotia, except the city of Halifax, has been dry for a considerable time. Four-fifths of the French-Canadian province of Quebec has been under local option for years. On July 1, 1915, Saskatchewan closed 450 barrooms (all she had) and substituted a government-owned and controlled dispensary system comprising twenty-three stores located in the cities and larger towns. By vote of the people three of these were closed in December, 1915, and on the second Monday of December, 1916, the people of the province, by an eight to one majority, decided that the remaining stores should be closed forever. The government immediately issued an order in council closing its "boozoriums." By a vote of the people, Alberta passed under prohibition rule on July 1, 1915. British Columbia followed Alberta a few months later. Manitoba has been under prohibition since July 1, 1916. Old Ontario followed the lead of the western provinces by "drying up" in September last. Now comes the announcement that Quebec contemplates closing its saloons at an early date and substituting the German system of liquor selling, and that a movement is on foot to secure a federal prohibition act from the Dominion Government.

WITH little law and no machinery for law-enforcement, international relations are much like industrial relations; war is a tremendous strike. J. E. Williams, one of the most widely experienced of industrial arbitrators, applies his knowledge of negotiating peace in garment trades and mining, to war-torn Europe.

The Survey Next Week

The GIST of IT

"SWEARING OFF" is apt to be a flimsy resolution if saloon lights beckon at every street corner. Elizabeth Tilton, originator of the Massachusetts poster campaign against Alcohol, started out with the idea that beer is the best antidote for alcohol. Now she believes absolute prohibition the only cure for the drink habit, as well as a large part of crime, disease and poverty. She has had long experience as a social worker and has lots of statistics to prove her case. Page 417.

JOHN H. FINLEY, president of the University of the State of New York, disagrees with the boy in New Rochelle who dropped out of school because he refused to take the military training prescribed by recent act of the New York legislature. Mr. Finley thinks the law will not only improve health, but arouse a new sense of service. Page 424.

A PENNY saved will be a penny earned at the expense of childhood if New York city persists in its present management of the school system. Eleanor Hope Johnson knows the situation from A to Z. Page 425.

A BINET test is a strange court exhibit in a murder trial. But out in Laramie, Wyo., a man was saved from hanging because psychological examination before judge and jury proved the mental age of the defendant that of a child between six and seven years. Page 427.

CRIPPLED limbs and blindness are not the only backwash of the war in France. Tuberculosis has so increased that the Rockefeller Foundation has sent an expert from America to study ways of checking the scourge. Page 436.

THE Mutual Welfare League at Sing Sing has lost another friend by the resignation of Deputy Warden Calvin Derrick. Page 429.

CABBAGES and onions take the place of daffodil and aster in English gardens during wartime. Page 432.

"THE real enemy is established inside every country," says a British member of Parliament. Page 430.

YOU might have bought leprosy with an oriental rug in New Jersey not long ago. Beside this leper salesman, 5,000 others suffering from this dreaded disease are without hospital protection in the United States. Page 436.

CHAIRMAN Adamson announces he will push through the House a bill prohibiting railroad strikes. Bills to the advantage of labor will probably collect dust until another session of Congress. Page 430.

ARE we efficient? If not, why not? Should the state make us efficient? What d'ye mean, efficiency? It was a few questions like these that, according to Prof. John R. Commons, disturbed the eminent bodies who met in Columbus last December. Page 422.

LAZINESS used to be a luxury of being ill, but work is now an anti-toxin prescribed for some diseases. Page 431.

BY a unanimous vote, the Smith-Hughes bill, which appropriates large sums of federal money to aid the states in establishing vocational education, passed the House of Representatives on Tuesday. It passed the Senate last July.

Turning Off the Spigot¹

I. What Makes Men Stop Drinking?

By Elizabeth Tilton

"The alcoholism of the white race must be overcome or that vice with the licentiousness that it provokes will overcome the race."—*Charles W. Eliot.*

IN a recent article on the liquor problem, that well-known social worker, Robert A. Woods, speaks of the "almost total lack on the part of social workers of any intelligent approach to the liquor problem, which occupies so great a space in the middle of their stage." It is true. Where alcohol-prevention is concerned, social workers seem to suffer a paralysis of mind. It is the more amazing when one realizes the great cumulative costs of alcohol in social work—for, roughly speaking, the sum adds up somewhat thus:

Alcohol is the immediate cause of about 10 per cent of our insanity; is an operating factor (at least in wet territory) in about 24 per cent of the families reporting to organized charity; the Court of Domestic Relations in Chicago finds that over 40 per cent of their broken homes connect with alcohol; the Committee of Fifty found 45 per cent of children annually deserted or neglected have intemperate parents or guardians; drink is a first cause in 31 per cent of crimes, an indirect cause in 50 per cent.

Evidence of the connection between crime and intemperance is furnished by Mr. Fanshawe in his book on *Liquor Legislation in the United States and Canada.*

INDICTABLE OFFENSES IN CANADA

Nature of Offense	Percentage of Causes 1885-88	1889-91
Offenses against the person

Teetotalers	9.00	10.46
Offenses against property and violence		
Moderate drinkers	50.00	46.37
Immoderate drinkers	35.00	41.63
Teetotalers	15.90	12.00
Offenses against property without violence		
Moderate drinkers	50.84	47.90
Immoderate drinkers	31.56	39.70
Teetotalers	17.60	12.40
Forgery and offenses against the currency		
Moderate drinkers	62.22	56.10
Immoderate drinkers	26.67	34.10
Teetotalers	11.11	9.80

¹ I want to thank Miss Stoddard, Mrs. Trauseau, Prof. Irving Fisher, Dr. Eugene Lyman Fisk, Prof. James Ford, Ernest Gordon and others for the valuable help that they have given me. In spite of their kind offices, I know I shall be found, in turning over such amounts of statistics and foreign matter, to have made some mistakes, and I shall welcome all corrections, as it is the truth that I am after.—THE AUTHOR.

An investigation made by Carroll D. Wright for the Massachusetts Bureau of Labor, 1879-80, showed that in Massachusetts during a period of twenty years (1860-1879), out of a total of 578,458 sentences, 340,814, or 60 per cent, were sentences for "rum offenses." Another investigation, 1894, showed that out of 26,672 convictions, 94 per cent of the offenders were addicted to the use of liquor.

And to this count must be added all the disease furthered by the lowered vitality that alcohol brings, all the licentiousness provoked by it, all the degeneracy that follows in its wake. So careful a writer as Dr. Scharffenberg of Norway says: "A striking connection can be shown between the arrests for drunkenness and doctors' reports of new cases of venereal disease in Christiania. The fight against venereal disease cannot be effectively carried on if the fight against alcohol is neglected; alcohol acts as a pimp and spreader of infection."²

Only the other day I heard a leading social worker declare that he believed that mothers' pensions would turn out to be a great bill paid for intemperance either directly or through ill-health fostered by alcohol. At every turn the alcohol problem knocks at the social worker's door, but read the subjects brought up for discussion at state conferences and you see that the answer to these ubiquitous knockings is, "No admittance."

Indeed, social workers always seem to have a sort of snob-bishness about alcohol-prevention work—as of a cause "not in their set." It is all wrong, I am sure. But I should not be harsh, for so recently this same attitude was mine.

Everything that could be done with the alcoholic I think I have done: tried cures which usually did not cure; got him countless new jobs which his bad nerves seldom allowed him to keep; taken him to a farm colony (I hope that your state has one), or transplanted him to the soil where, in my opinion, the alcoholic lasts the longest, partly because liquor is less accessible, partly because such outdoor work builds up nervous resistance. And all this time my furthest dream was to get a permanent home for chronics, get them away from their families. A great need, surely!

Silhouettes by Charles B. Wheeler, judge of the Supreme Court

FRANCE

The greatest drinker of them all—first in wine, first in distilled liquors.

UNITED STATES

Of sixteen drinking countries, fifth in beer, eighth in distilled liquors.

FINLAND

The most temperate of the drinkers—1.54 liters per capita of pure alcohol.

Then something happened. Perhaps I can best describe it by saying that the auto-hypnosis about alcohol suddenly retired. I began to think on the subject. I saw all of us friendly visitors behaving like insane people; baling water out of a tub with the tap turned on; letting the drink custom and the liquor traffic run full blast while we limply stood around and picked up the wreckage. I suppose the thinking process had been long gathering, but I remember the day, the hour, the very sidewalk in Charlestown, Mass., where thinking on the alcohol problem finally set in.

Peter Q. brought me to it. He was the best of men—when sober, and I had had him sober so long out on the soil that I had even gone so far as to take his wife to see a little farmhouse near him, thinking to transplant the entire family. She did not take the house because it had *stairs!* She told me that poor as she was, and her mother before her, they had always been able to take the tenement on the lower floor. But it was fortunate as things turned out, because a few days later Peter "broke back" to the city. I found him lying dead drunk on his kitchen floor and over him stood his small daughter and his three little sons.

"It's father," said the little girl, just as if that were what a father was in Charlestown.

Well, we got poor Peter off the floor and I went out of that house saying: "It is father, but it shall not be brother if I can help it."

And then I remember standing there on that slushy sidewalk, five brightly lighted, beckoning saloons in sight, and feeling hot indignation with the American people who allowed such things to be. How were those little boys to be saved under the supposedly advanced conditions offered by the city of Boston?

"Nowhere to go but the saloon," as a poor fellow said to me. "Nothing to do at the saloon but drink."

Here was the eternal social instinct, the desire to hobnob, rising every night over the city like a great steam and we, the

people, allowed the liquor dealer to harness this natural instinct to alcohol and exploit it for gain. It seemed like unintelligence rampant, for I believe that the boy who craves alcohol is rare, that the social instinct and the drink custom make the mass of young drinkers in our congested districts.

Standing there that afternoon with five saloons in sight, I saw that I stood in a world in which the idea that man must drink was writ large—the tradition glowed on every side. The custom was so strong around me that it possessed me, too. I said, "Evidently man must drink, but he need not drink distilled liquors and we need not have private profit in the thing, forcing sales on every adventurous boy."

I saw a scheme something like this: Let distilled liquors be abolished by law; let beer and light wines be kept; let the state take over the business and allow a disinterested company to manage it, not for gain, but for public welfare; let light beer be served in free and easy clubs sprinkled throughout the city and owned either by state or city.

It is an excellent scheme—on paper. It has a quality of non-fanaticism very pleasing to the novice. But to obtain such legislation there would have to be beforehand a deal of education. Massachusetts is an alcohol-backward state. So

after a time there came to be the Poster Campaign against Alcohol of the Boston Associated Charities. We got out posters, forty-two by twenty-nine inches, posters that could be read at a distance and at a glance. We chose posters because they gave a fresh handle to a time-worn subject, encouraged organizations to adopt them, and—most important—made news for the press. From that day to this those posters have never stopped going. Their continuous sale shows what a vast tide of sentiment is rising in this country and Canada against alcohol.

I saw this sentiment rising, and yet so peculiar is the Tory mentality where I live that I refused even a bowing acquaintance with prohibition. Then I went to Chicago to show our posters at the biennial of the

MR. KANSAS

"Prohibition does prohibit."

MR. WORLDLY WISE

"License for me. Everybody drinks. Prohibition doesn't prohibit."

MR. EVERY MAN

"Beer is the cure for drunkenness. Ask Germany."

THE PROFESSOR

"Take away the profits—the Gothenburg system's the thing."

General Federation of Women's Clubs. And as I spoke to those 7,000 women, I knew by their response that such a fire against alcohol was already kindled in this nation as should never again be put out, and though I personally was not yet for prohibition I knew that the bulk of my audience was.

What those 7,000 women heard from me I do not know, but I know what I heard from them: "A saloonless nation by 1920." And on the way home, as the train carried me through state after state, it came over me, with potent shame, that I had condemned prohibition from tradition, but not from personal knowledge. I had no first-hand knowledge of any prohibition state but Maine, no knowledge of the old prohibition wave in my own state, no facts about southern prohibition or Kansas.

It was really the figures coming in to me at this time that made me a prohibitionist. I had to bend to them—to the healing in their wings, thus:

MURDERS IN BIRMINGHAM, ALABAMA

1909—dry	130
1910—dry	138
1911—dry	88
1912—wet	306

Tradition had said, "Prohibition doesn't prohibit." But figures and much reading said, "Prohibition helps more than anything else, wherever it has behind it a good total abstinence sentiment," total abstinence going ahead and prohibition following after. Indeed, this is the way in which all old customs have been killed—not by compromising with them, but by giving them no quarter, treating them in the Covenanter way, like Isaiah, Luther, Cromwell, Lincoln. These men did not kill old evils by countenancing them in the home and legalizing them on the street. Rather they demanded total abstinence from and prohibition of the evil—and the evils retired. That is the treatment that virile nations give to the uneconomic, and it grew clear to me that as we were virile so should we give this treatment to the liquor problem and thus gradually force it into the limbo of the past. Prohibition would never do it alone, but a full-fledged understanding of the economic value of total abstinence plus prohibition. To disprove my first theory, the beer-Gothenburg idea, and to

prove my last theory, total-abstinence-prohibition, will be the objects of the articles that are to follow.

II. What the Nations Drink

Any doctor who wants to open his eyes can see the degenerative effect of alcohol on bodily tissue and population. I merely add that in Norway and Sweden, which in the first half of the nineteenth century were the most alcoholized and degenerate, the energetic anti-alcohol movement which began about fifty years ago has brought about not only a standstill in mental disease, but has considerably raised the number of recruits for military service. In central Europe opposite conditions have caused opposite results.³

I want to put briefly before my readers what the various nations are drinking and what nations are "sobering up." In short, I want to introduce you to Dr. Gabriellson's tables, the value of these tables being that they expose snapshot judgments,—such a conversational tidbit, for example, as that the Germans do it right, beer is the cure for the drink evil; or that if we only did it as France does it—a little wine with our meals—all would be well. These tables show that Germany not only drinks more beer than we do, but also more distilled liquor. They show that while France drinks much more wine than we, she, too, drinks much more distilled liquor. Again, the table on page 420 shows that we are a beer-drinking country, our per capita consumption being 90.6 per cent beer, 6.5 per cent distilled liquor and 2.8 per cent wine.⁴

The table on page 420 also shows that the low alcohol-consumptions are in the northern lands. Finland leads, then Norway, European Russia, Canada, Sweden. The nations that get the most alcohol into their systems are the wine-drinking countries. France is the greatest drinker. Not only has she the largest wine consumption, but her distilled liquor consumption is the second highest of the nations given in the table. Denmark has the highest distilled liquor consumption—while Austria comes third, Germany fourth. France will also be

MISS W. C. T. U.

"I'm for total abstinence."

³ Forel. Deutsche Monatsschrift, Vol. IV, 1903, p. 276.

⁴ Consommation des Boissons Alcooliques dans les Différents Pays. Dr. Johannes Gabriellson, Librairie Felix Alcan, Paris, 1915. Figures probably as accurate as can be had.

found to have a rapidly rising beer consumption. France really has let herself go before alcohol; hence the great reaction now rising.

WHAT THE NATIONS DRINK

Average Yearly Per Capita Consumption of Alcoholic Beverages, 1906-10
Measure Used Liters—(A Full Quart)

	Distilled Liquors at 50%		Wine		Beer		Total Consumption in Pure Alcohol
Finland	2.31	0.61	7.25	1.54			
Norway	2.87	1.16	18.43	2.37			
Canada	4.23	0.42	22.61	3.31			
European Russia	6.09	0.86	6.52	3.41			
Sweden	6.87	0.54	21.64	4.33			
Holland	7.16	1.55	27.28	5.01			
Denmark	10.44	1.50	36.16	6.82			
United States	5.51	2.37	76.25	6.89			
Germany	7.29	4.76	104.98	7.47			
Austria	7.40	19.72	52.20	7.78			
Great Britain	4.17	1.23	123.06	9.67			
Belgium	5.47	5.16	220.82	10.58			
Switzerland	3.82	55.63	69.01	13.71			
Spain	3.24	69.50	84.05	14.02			
Italy	1.02	128.58	1.63	17.29			
France ⁵	8.8	144.00	71.66 ⁵	22.93			

The great beer drinkers come in the middle as regards total consumption of pure alcohol. Belgium leads, then Great Britain, which has comparatively a low whiskey consumption. Germany is third in beer, while of the countries given the United States is the fifth largest beer drinker and the eighth largest drinker of distilled liquors. In short, the table above, What the Nations Drink, thoroughly riddles the theory that we should be better off if we "did it like Germany or France."

The Nations That Are "Sobering Up"

I COME now to tables showing some nations that have made headway over a long period against John Barleycorn, Finland, Norway, Sweden. All three were very drunken at the beginning of the nineteenth century. Now they have developed to an extraordinary degree preventive measures looking toward general race hygiene, and in the forefront of the battle for health they place the battle against alcohol. In all these countries the bulk of the population, from 70 to 80 per cent, have lived for many years under forms of prohibition; the remainder more or less under the Gothenburg system, and behind and above all, there have been fiery campaigns for total abstinence. The abstainers in Sweden and Norway form large and powerful political groups.

Finland has the lowest alcohol consumption, 1.54 liters per capita (terms pure alcohol). Here is her story: Since the eighties of the nineteenth century, Finland has had a strong total abstinence movement, with prohibition for its legislative goal. Indeed, the bulk of the people has been now for many years under a dry régime, the Gothenburg system having been used only in certain cities.

The Finnish parliament twice passed national prohibition (before Russia allowed the partial prohibition now existing), but always behind these legislative movements is the abstinence sentiment. No labor union allows the use of alcohol in its rooms. Restaurants in the Parliament House, the National Theater and the Students' Union allow no alcohol to be served, nor is any served at any of the parliamentary banquets. Most Finnish newspapers accept no liquor advertisements and 75 per cent of the pupils in the high schools are members of total abstinence societies. In short, it seems fairly clear that total abstinence plus prohibition is the main factor in giving Finland the lowest consumption of the alcohol-drinking peoples.

⁵ 34.45 l. of this is cider.

TWO OTHER COUNTRIES MAKING HEADWAY Progress of Drink Consumption by Year and Per Capita (In Terms of Pure Alcohol—Measure, Liters)

	1851-60	1861-70	1871-80	1881-90	1891-95	'96-1900	1901-05	1906-10
<i>Norway—</i>								
Distilled liquor	2.70	2.30	2.64	1.62	1.77	1.35	1.57	1.43
Wine.....	0.15	0.15	0.20	0.43	0.27	0.20
Beer.....	0.48	0.73	0.64	0.80	0.98	0.84	0.74
Total.....	3.52	2.41	2.77	2.76	2.68	2.37

Total.....	3.52	2.41	2.77	2.76	2.68	2.37

The next tables show us some of the countries that are beginning to "sober up"—Germany, Great Britain, Switzerland, Belgium, Austria, Australia. It is very noticeable that these countries had rising consumptions until recently, then they apparently heard a new message and responded to it. They heard the voice of science coming to them from the laboratories of Europe, telling them that alcohol is not what they thought, a "life-giver," but a "life-destroyer." These countries, then, are sobering up, but we are not with them; our group up to 1906-10 is another one—the one with still rising consumptions.

SOME COUNTRIES BEGINNING TO "SOBER UP" (Liters Pure Alcohol)

	1851-60	1861-70	1871-80	1881-90	1891-95	'96-1900	1901-05	1906-10

The tables on page 421 give some of the countries whose consumption up to 1906-10 was still rising. Dr. Gabriëlsson, however, says that had several of the countries with rising consumptions been carried on to 1914 they, too, would have begun to bend to the command of modern science.

This is true of the United States. Our per capita consumption has not risen since 1907, when the new prohibition wave began. Then it reached its highest point, but since then has hung about stationary, very slightly declining. Dr. Gabriëlsson calls attention to our marked decline in distilled liquor consumption between 1850-70; it never rose to its former height again. But beer has carried our consumption almost steadily upward. It is odd that the average man should think us primarily a great whiskey-drinking country.

If you will take the trouble to study the above tables of the United States, Canada, Germany, Sweden, Belgium, Austria, Switzerland, Great Britain, Norway, you will see a marked liquor event of the nineteenth century—the invasion of beer.

In the old days men got drunk on beer, ales, wine and mead. Then about the fifteenth century distilled liquors appeared, supposed to have come from the Arabs. Gradually these heavier drinks somewhat drove out the lighter drinks. So it was with us, and many other countries. Lecky in his *England in the Eighteenth Century* describes the gin epidemic as the most momentous fact, considering all its consequences, in the century. In 1825 England lowered the duty on distilled liquor, and drinking and crime rose to alarming heights.⁶

Fighting Hard Liquor with Beer

THOROUGHLY frightened, England called upon men to drink beer. Said Lord Brougham: "Under the circumstances beer is a moral species of beverage." Gradually, in that early temperance wave, the idea spread that beer was the way out of the drink evil, and you can see it spread in some of the tables above. Distilled liquor consumption retires somewhat, and beer consumption takes its place.

This idea was very prevalent in the United States in the seventies. The Massachusetts Board of Health issued a pamphlet, which was widely copied, saying that drinking was cosmic. It was cosmic to drink wine in southern lands and beer in the United States. "The trouble with these great thinkers is," said John Bright, "that they so often think wrong." The tables show that the great befriending of beer in the nineteenth century was not the way out of the drink evil.

To sum up, then, the above tables as they concern ourselves: We have a lower consumption than many of our sister countries, but our consumption has not responded so quickly to the modern scientific movement against alcohol as has theirs. I think the explanation partly this: Our lower per capita

⁶ Dorchester, Liquor Problem in All Ages.

consumption (in terms of pure alcohol) is due in a measure to our forebears who, between 1825-60, carried on an active fight for total abstinence plus prohibition. By this fight they presented us with what few foreign nations have, a large class that tends totally to abstain—a great health asset.

After the Civil War we relaxed our strenuous anti-alcohol crusade, so far as the bulk of influential men were concerned, but the women did their best and the Women's Christian Temperance Union and other faithful workers did enough to retain for us our dry middle class. But they could not keep consumption from rising against two forces, the incoming foreign immigration, people with the drink custom born and bred in them, and the bad influence exerted by the more academic classes who often stood for moderation and open saloons.

When the Kaiser Snubbed John Barleycorn

GERMANY has not begun to have the anti-alcohol education and agitation that our country has had, but hers has told faster on recent consumption. First, because she has a more stationary population to educate; second, because her education has come from the top down, from the trained scientist, the physician, from the Kaiser himself. When you are trying to kill a custom one snub from the natural leaders, business men, physicians, is worth years of snubbing from good women or from the working classes. Our natural leaders have been so reluctant to "cut" John Barleycorn.⁷ Professor Forel on a visit to this country said: "There appears very plainly animosity against the kind of procedure of the religious women who direct the movement and especially the fear of compromising one's scientific position with such elements. The fear of compromising one's scientific position by siding against alcohol is unscientific. It is also disgraceful human weakness."

That great English statesman, Gladstone, said that in the many years of his public life, the titled and cultivated classes had been on the wrong side of every movement. It always seems to me somewhat thus. Great movements usually come out of what men call "the smell for truth" of the great mass of mankind, come out of mass common sense. The rich or the trained sometimes tend to lose this vision without which the people perish. First, because comfort makes men slow to change anything; second, because trained thinkers are reluctant to move until they have scientific evidence proved to the last analysis.

But luckily in this alcohol question laboratory evidence is now joining hands with the common sense instinct of the middle class and swelling the call for total abstinence. The scientific man who now stays outside this world-movement is really harkening to the things he despises—tradition, prejudice. The tables above show that abroad scientific evidence is beginning to oust tradition, and if we are to bring our country abreast of our sister lands, by leaders and not laggards, we must educate not only the immigrant, but the influential.

This should be the task of social workers, for there is no one tangible thing that would remove such cumulative costs as would the elimination of alcohol.

⁷ When the Alcohol Committee of the Boston Associated Charities wrote to the Massachusetts State Conference of Charities and Corrections to ask if they might hang their alcohol education posters in the hall of the conference, the answer was that "every crazy scheme" was pestering the conference for admittance, but the answer to such requests must be "no." You cannot promote by such attitudes what the Scandinavians call the greatest of race-hygiene battles, the battle against alcohol.

[*What Grandfather and Father Thought About Drink, the next article in Mrs. Tilton's series, will be published in the SURVEY for January 27.*]

When Wise Men Disagree

Joint Meetings of the American Economic Association, the American Sociological Society, the American Statistical Association, the American Association for Labor Legislation

By *John R. Commons*

UNIVERSITY OF WISCONSIN

WHEN I asked an eminent economist what he considered the most significant thing in the meetings of the "learned societies" this year, he said, "the talk about coercion; they used to discuss the voluntary phenomena of society." And a Columbus woman who had been attending the meetings thought these were all associations organized to deal with legislation. So I counted the topics on the joint program of the four societies and found twenty that seemed to deal with governmental action and twenty-two that seemed to deal with voluntary action.

Just then, however, the man who was announced to speak on *The Place Which Accounting Should Occupy in Any Scheme of National Preparedness*, arose. I soon found that instead of talking about voluntary accounting where I had listed him, he was going beyond the limit of coercion. He was an accountant, and not an economist, and he proposed to have the Federal Trade Commission prescribe and enforce systems of accounts for about every business man, partnership and joint stock company in the country. His argument was good but naïve. The nation would then be in a position to show business men of the country how terribly inefficient they really are, he said, and by compelling them to know what their costs actually were, would induce them, without further coercion, to become efficient. So the accountant becomes the all-pervasive functionary of a supposedly efficient government.

At this point my eminent economist friend threw up his hands and went down under the tidal wave of coercion, while I revised my count of topics and found that twenty-one of them dealt with government action and twenty-one with voluntary action.

This question of efficiency bobbed up everywhere. Father Ryan, of the Catholic University at Washington, told how a prominent business man, now member of the Federal Trade Commission, had come to that commission with a feeling of opposition to the Sherman anti-trust law. When, however, as a member of the commission, he discovered how inefficient business men are, he changed his position. He saw that, without that law, business men would cover up their inefficiency and throw the cost of it onto the public by resorting to monopolies, agreements to stop competition and other forms of what is now rather facetiously called cooperation.

As a kind of finishing touch to this indictment of business efficiency, Professor Doten, chairman of a minimum wage board in Massachusetts, showed how the action of that board in raising the minimum wage of women workers some \$2 or \$2.50 a week, had coerced, as it were, the business men of that line of industry into a thorough study of their own incompetence. It was up to them to quit taking their inefficiency out on the living wage of women and girls.

So, our naïve accountant was not so far off the track, after all. Only he started at the back end. Instead of compelling the business man to keep governmental accounts the minimum wage law compels him to pay a living wage, and then he

voluntarily keeps his own scientific accounts that he may find out his costs and locate the inefficient spots.

This efficiency proposition took another direction in the hands of Professor Taylor of the University of Wisconsin, under the head of *Two Dimensions of Economic Productivity*. He had induced some fifty farmers in a certain neighborhood to keep accounts for a year or so. He had worked out standard units of measurement so that the relative efficiency not only of farmers, but also of cows and acres of land was apparent.

But, on the whole, there was impatience with the papers that tried to play up and work out these precise measurements. The discussions from the floor broke away from the topic and went after the questions, *What is the use of being efficient? What do you mean by efficiency?* The old discussions of economic theory regarding the "production" of wealth and its antithesis to the "consumption" of wealth, have now taken this new form—the antithesis between efficiency and liberty. *Why be efficient and produce more wealth if you have to do it the way somebody else tells you is the only way? Maybe you would like to be an efficient consumer of wealth.*

This issue was precipitated at the very start of the joint sessions of the four associations by the presidential address of Professor Carver, of Harvard University. He seemed to get back to the idea that *The National Point of View in Economics* is solely the standpoint of the greatest net production of wealth. Hence consumption of wealth and the happiness of individuals are relegated. Likewise ethics, fair distribution of wealth, such terms as "ought" and "rights" and "duties" have no place, from the national standpoint. The nation must survive in the struggle of nations. Survival, efficiency, production, *not* justice, liberty, happiness, are the national points of view.

By these conclusions Carver stirred up the whole menagerie. Evidently "efficiency" needed definition. Apparently the associations were wrestling with several kinds of efficiency—for example, the coercive efficiency of government and the voluntary efficiency of people.

This swing toward government action would have been even more pronounced than it was had not the Political Science Association this year gone off by itself and held its meetings in Cincinnati. The Economic Association tries to be non-committal and academic on these questions. It is a forum, not a hustings. For this reason propagandist associations have been splitting off from it. One of these has definitely committed itself to the promotion of governmental action. This is the Association for Labor Legislation. Its president, Irving Fisher, of Yale University, under the heading, *The Need for Health Insurance*, gave what will doubtless prove to be the most telling brief summary of the case for use in propaganda. After his well-known fifteen years of study of the preventability of sickness, he is convinced, he says, that the great virtue of universal compulsory health

insurance, "for decades, perhaps for centuries to come, will lie in the prevention of illness." Then he showed how "the immediate financial motive to reduce illness" will operate upon localities, upon trades, upon employers and upon employes. Incidentally did he bring out the point that, by the elimination of casualty companies and the substitution of the mutual associations provided in the "model" bill of the association, the cost of collection, the cost of advertising, and other costs of securing business, as well as lapses and the necessity for accumulating a large actuarial reserve, would be entirely eliminated.

The main contribution to an understanding of the proposed legislation was made by Dr. Alexander Lambert, chairman of the Social Insurance Committee of the American Medical Association. While it is the profession of the accountant that is raised into social significance in the case of minimum wage legislation, it is the physician who becomes a social functionary in the case of health insurance. The whole problem resolves itself into how to get, keep and organize the doctors for cure and prevention of illness. The issue was brought out quite clearly by Dr. Lambert, and his own position and that of the association was unmistakable. Instead of making the physician a government official, subject to all that we know under the head of "politics," the physician is to be employed either by the individuals or by the mutual associations of individuals who actually pay their own money into the funds. The compulsory activity of the state is not to be used to build up a new "machine" of government doctors, but is to be used to induce individuals and associations to choose freely their own doctors. The doctor shall then not only treat illness, but also act as referee to decide whether the sick man shall go "on the fund" and when he shall go back to work. Here is, of course, a crucial point in the health insurance program, and Dr. Lambert's explanation of the bill covers the ground in all its details.

A new line of labor legislation was brought to the front at this meeting. It was introduced by William B. Dickson, of the Midvale Steel and Ordnance Company. Mr. Dickson stated forcibly his views of the hardship, monotony and brutalizing effect of the twelve-hour, seven-day system in the

steel industry, in which he has been a prominent executive both in the United States Steel Corporation and in the company of which he is now vice-president and treasurer. The only remedy that he could see, after several years of unsuccessful effort toward bringing his colleagues in the industry to a voluntary agreement, was that of a federal law limiting the hours of labor in the continuous industries to three shifts of eight hours each, instead of two shifts of twelve hours. Mr. Dickson's presentation of the need for such a law was practically conclusive. The details of the proposed bill were submitted and discussed by the writer of this report. John A. Fitch, of the SURVEY magazine, who is the leading investigator on the subject, and who represented the American section at the international conference on continuous industries at London in 1912, showed the origin and progress of the one-day-rest-in-seven movement.

The extensive interest of the associations in the field of agricultural economics and sociology was shown by the many topics discussed under this head. The matter was thrown open by President George E. Vincent, of the Sociological Society. Either a nation of small farmers doing their own work, absentee farmers leaving the work to tenants, or large farmers with hired laborers, are the alternatives in this country for future agricultural development. Professor Ely, of Wisconsin, shattered some of the traditional economic theory of land and rent. He proposed a classification of land and cooperative studying of the actual facts, preparatory to programs of legislation. So prominent was this subject of rural economics and sociology, and so numerous have become the students of the subject, that the association resolved to provide an organization for the investigation of land colonization in all its aspects.

But the most striking event of the sessions was the proposal of Professor Sprague, of Harvard University, that modern nations finance their wars by immense income taxes; by taxes on luxuries instead of loans and huge debt-burdens on future generations. Supported by his thorough economic analysis and by the evident justice of commandeering wealth when we proceed to conscript labor, Sprague's proposal won very general assent.

The Schoolmaster

Dedicated to Walter B. Gunnison, principal of Erasmus High School, Brooklyn. Died December 19, 1916

By Florence Ripley Mastin

W H o ever love thee see thee stand
 At every shadowy turning of the Hall,
 Smiling as a thousand footsteps fall
 Upon thy ear. No king of any land
 Has held such court as thine. Thy gracious hand
 Has brought Truth's benediction. At thy call
 The feet of youth have scaled the shining wall
 Of dreams. Flaming they went at thy command.

There is a wind among the stately trees.
 Along the quad the music breaks and dies.
 Another year is drawing to its close—
 Yet, as the sunset deepens into rose,
 The night comes down with starry memories,
 And in the purple east thy sun will rise.

In the Service of the State

By John H. Finley

PRESIDENT OF THE UNIVERSITY OF THE STATE OF NEW YORK

WHEN I came to take the headship of a school in New York city I employed a physical training teacher to spend several hours with me every week in helping me to get, in the minimum time, the exercise I needed for doing my work. Before long I became aware that the boys in the school—two thousand or more in number—had themselves no instruction or training whatever as to health or the care of their bodies, nor even five minutes a day of systematic exercise in the school. This made me so uncomfortable that I arranged to have my teacher give to the boys as much time as he was accustomed to give to me. A few pieces of apparatus were gathered, the free use of an abandoned armory was had, and as many boys as could be cared for were given some training.

In that institution—the College of the City of New York, maintained wholly at municipal expense—there is now a most efficiently organized department of physical training and hygiene, and every student is required before graduating not only to undergo frequent medical examination, but also to take courses intended to promote health and bodily as well as moral discipline.

This splendid provision did not grow out of the meager exercises of my own initiative, but it followed closely after them and illustrates what has been recently done by the city for thousands of its boys, not only in its college, but in scores of elementary and high schools. I refer to this particular provision because since coming into the commissionership of education for the state I have said again and again that I wished something like this in kind could be done for all the boys and girls in the state, both in the country and city, and especially in the country, where it is erroneously assumed there is no need for such systematic instruction or training.

And now, that which was my first desire for all the boys and girls—the desire for their health and happiness as they undergo the mental and moral training which the state deems essential to its life—has with unexpected quickness been put into the general law of the state. By an almost unanimous vote of both branches of the legislature and upon the recommendation and approval of the governor, the state, in an act requiring just such provision, has given expression to its concern for the physical well-being of every child within its borders, native-born or alien. It remains only to give that desire and purpose, now expressed in law, its full and universal effect. The boy of sore eyes and face whom I found one winter morning in the snows of a mountain valley may have at least as much attention as the alien boy or girl in a congested block in New York city.

It is necessary here to make clear the purpose and scope of two acts, passed by the New York legislature in 1915, which are generally confounded.

(1) There is, first of all, this act requiring the *physical* training of all boys and girls eight years of age or older in all the schools of the state, public and private. It is mandatory upon the districts of whatever size, villages and cities, to make provision for this training; the state undertakes to contribute half the amount of the salaries of the special teachers or supervisors required for such tuition. The courses of train-

ing are to be prescribed by the Board of Regents, and to be given under the supervision of the above authorities.

(2) A second act provides for such *military* training as the Military Training Commission may prescribe (not to exceed 3 hours per week) for all boys between the ages of 16 and 19 who are "not lawfully and regularly at work." This training is to be given under the supervision of the Military Training Commission and not under that of school authorities or within school hours. Summer training camps are to be established for boys of these ages, attendance upon which is voluntary.

There is one, and only one, bond of connection between the two acts. That bond is the Military Training Commission, created by the second act, but required also to make recommendations to the Regents of the State University as to courses in physical training to be prescribed under the first-named act. The regents may or may not accept these recommendations. On the other hand, the Military Training Commission has authority to appoint a physical training inspector, with assistants, who may inspect such training in the schools and report upon it to the commission. The fact that such a service has been required of such a commission intimates a concern that the child shall be prepared, both in body and in social attitude, for whatever obligation one may be called upon to meet as a citizen.

The Military Training Commission consists of three members. The ex-officio head, Major-general John F. O'Ryan, has been in command of the New York state troops on the Mexican border most of the time since the creation of the commission. The other members are George J. Fisher, the well known and capable secretary of the International Committee, Young Men's Christian Association, and myself.

Of the program which the commission is to prescribe for military training, as provided in the second of the two acts, I am unable at present to speak, for the reason that it is still under consideration by the commission of which I am a member. This only I may say: that I accepted a place in the commission in the hope, first of having a part in determining the physical-training program, and second of reaching a program of training beyond, which would give every boy a specific activity for the expression of his "state-mindedness."

The commission has given its attention, first of all, to the physical-training program, which it prepared with the assistance of Dr. Storey, Dr. Crampton and others. This program was submitted to school superintendents throughout the state, and to men and women of highest authority in physical education, and, after modification in details to meet varying conditions in the state, was adopted and a syllabus was, upon like advice, prepared to give it practical application in the schools.

This program, when fully in force, should give such basic health education as no other state, or country perhaps, has ever sought through law and public agency to provide. It is a program for strengthening the physical foundations in which our higher intellectual and spiritual curriculums are to find support.

What it comprehends is set forth in the following statement, made at the time of its submission to the Board of

Regents: It covers medical inspection, talks and recitations in hygiene, and all forms of healthful physical exercise, such as setting-up drills, gymnastic exercises, supervised recreation, organized play, athletics, and a great variety of individual recreational activities. Under it health habits will be emphasized; natural play will be fostered; refreshing, invigorating and healthful exercise will neutralize the degenerative effects of prolonged sedentary curriculum requirements; the educational values of interesting play will be recognized and used; games and play will serve as attractive sources of educational development, promoting happiness, interest, sharper wits, obedience, correct posture and bearing, alert response, respect for rules, orderly conduct, courtesy, self-restraint, love of fair play and a habit of playing fair, loyalty, honesty, a sense of justice and duty, and a spirit of cooperation under leadership.

A feature of the program which is most promising in its possibilities is one which must in large measure be postponed to another year: that of supervised recreation for which home and club activities may be exchanged. Not only will the opportunity come in the highest degree, through this supervised recreation, for developing those qualities which are most desirable in American men and women, but through it will come also the opportunity of encouraging health activities in the home and other centers of social life, and of bringing home and school closer together.

I think of all this not as something added to our elementary and secondary programs—though it will mean ultimately a longer school day, because it will include some of the play-day—but as something on which all their disciplines must rest and in which they must be enveloped.

I think of the series of prescribed exercises not chiefly as a means of physical development, important as that is, but as a medium through which the fundamental purpose and ideal of the school is to be most simply and effectively and universally expressed and practically illustrated, namely, the purpose of helping the individual to a realization of his obligation to the society in which he lives and to readiness of spirit and body to meet that obligation in his daily life. On the state both the community and the nation depend in large measure for this early tuition, and it is gratifying that the state has taken the lead in this national educational service.

I find myself wishing that there were songs or civic and

patriotic rhythms, instead of numbers, to which these daily exercises could be performed—that the boys and girls could be made conscious that it is not for themselves alone that they go through these motions, but for themselves as happier, healthier, more efficient members of what the philosopher William James has called a “collectivity” (whether it be community, city, state or country) superior in some respects to their individual selves.

This is to be the supreme value of this program if it is rightly used—a program which is worth while as a health program, lengthening the lives of these millions of children as men and women, the state’s most precious asset; but it is to be worth more as a program of moral discipline and of social and patriotic service.

Speaking of this program, Prof. Irving Fisher, of Yale University, said in a public address a few weeks ago: “Above all, I look forward to higher health ideals, out of which all improvement in human vitality must henceforth proceed. These ideals will link health with patriotism. Our boys and girls will, I hope, feel that in developing their manhood and womanhood they are dedicating themselves to their country and to that broad humanity for which their country stands.”

In an article which I wrote a few months ago, telling how, when the great war came on in Europe, men with whom I traveled went to certain places to find their uniforms in which they were to serve their country in its time of peril, I suggested that every man, every woman, should have an invisible uniform always ready in home, office, factory or public locker, to put on when he or she was called to perform a public service of any kind, great or small; and I added that the weaving of this uniform should be begun in childhood—that is, the preparation for such service should begin in the school days. I prepared this article for grown people, but in the midst of writing this preface a letter came telling how a group of children had translated its suggestion into their own language and in their summer camp play had shown this “magic uniform,” as it was called, in use in the home, in business, in society. If this idea can be translated into the every-day work and play of the boys and girls of this entire state, through the help of this program, it will give a civic asset even more valuable than the physical vigor and lengthened life of its children in manhood and womanhood.

Children vs. a Great Machine

The Need of Reorganization in the New York City Public Schools

By Eleanor Hope Johnson

WHEN the New York city Board of Aldermen recently struck from the municipal budget an item appropriating \$10,000 for the salary of a business manager for the public schools, and reduced from \$10,000 to \$5,000 the salary to be paid Supt. William Wirt, of Gary, who is adapting a number of New York schools to the Gary plan, it again called attention to the increasing difficulties that have attended the administering of New York city’s public schools. These difficulties are only too typical of educational administration throughout the country.

Mayor Mitchel vetoed the action of the aldermen and the original appropriations stand. Meanwhile the situation calls for clear discussion and the formulating, if possible, of a school policy that will lead New York city out of chaos.

For some time public education in New York has been beset on all sides by criticism, advice and exhortation. Opposite opinions are held by those who from theory or practice are supposed to understand public school matters, while an effective method of administering business affairs has not been discovered and a plan of reorganization satisfactory alike to schoolman and layman seems difficult either to adopt or to install. To add to the confusion, there are many who feel that no plan of reorganization is necessary.

There are two ways in which the public schools of a great city may be considered. One view of them is of an aggregate of immature human beings starting out on the road to potentially useful citizenship, and guided by adult individuals who have been appointed to help them toward that end. The other

view is of a great machine consisting partly of real estate, partly of salaried groups of persons, by means of which necessary education is given out to children.

Both these views are important. Both are wrong when one is held to the exclusion of the other. A very confusing situation results when the persons who hold only the first view try to work with those who hold only the second. Worse than confusion ensues when, added to these two groups, are people connected with the administration of the schools in any capacity who think of them in neither of these accepted ways, but regard service in them as a means to personal prestige and aggrandizement.

A Semi-Independent Body

WHEN we look back for the beginnings of the present difficulties the causes stand out with reasonable clearness. A few years ago a new era dawned in the city's government. Ability to administer municipal affairs became a reason for election to municipal office. The new Board of Estimate and Apportionment, elected on a non-partisan and efficiency basis, attacked one abuse after another in the various city departments; men of whom the citizens could well be proud were gradually appointed to help in the municipal housecleaning and interest in the work of reconstruction grew steadily.

It was soon found that the waste of city money had been constant and enormous, so that budget-making took a place of unusual importance. More strict accounting was essential, and volunteer agencies gladly offered the services of financial experts to the board and the departments under its control, and these services were as gladly accepted.

One department, thought by many to be the most important of all, the Department of Education, spending perhaps the largest amount of money of any city department, was alone not wholly under the control of the Board of Estimate. It held power from the state to demand a certain fixed payment from the city and to spend this as it deemed fit. Power also rested with the state to make rulings with regard to this department which might easily be at variance with the will of those at its head, as well as of leading city officials. This department had suffered as had the others from wasteful, ignorant or dishonest city administrations, and now that the realization of a need for better things had come and housecleaning was attempted here. Note the difficulties in the way.

Besides holding this power from the state, which often only added to the confusion, the Department of Education was not headed, as were the other departments, by one man appointed by the mayor and responsible to him for the proper performance of his duties. It was headed by forty-six unsalaried men and women, chosen by successive mayors for all sorts of reasons—geographical arrangement, religious preferences, friendly feeling, sometimes long association with the schools in a volunteer capacity with or without a record of accomplishment. Presumably they were appointed on the theory that as interested citizens they would in deliberative assembly determine the policies of the schools, leaving it to paid experts, elected by them, to determine methods and carry out these policies effectively. But where we should expect to find a pedagogical expert to attend to pedagogical requirements and a business expert to attend to financial adjustments, was a board of nine, called the Board of Superintendents, with a chairman at its head. Some special powers were delegated to this chairman (the city superintendent of schools), but his authority was in most questions shared by his associates, men appointed for no special acquaintance with any one division of the subject, but because of a general knowledge and a more or less varied experience in school work.

To add to this complexity, the board of forty-six had found it could not deliberate successfully, partly because of numbers and partly because few of its members had been chosen with any reference to their wisdom and ability in council. It therefore had divided itself into a large number of committees on all sorts of school subjects and was deciding, or at least discussing, questions of minute detail regarding textbooks, buildings, teachers, janitors and many other such subjects. At the same time, members of the group of paid experts were assigned to various similar subjects, not in the least because they were specialists along those lines; and a third group of persons was employed to head various bureaus and departments dealing with many of the subjects which were already being considered by committees of the unpaid officials and by single members of the supervisory staff.

We cannot be surprised, therefore, that under these conditions budget-making, to mention only one phase of school administration, was an unemployed science, nor that distrust and dislike of each other grew apace in the minds of the Department of Education and the Board of Estimate. The friction that developed was pleasant to no one and soon became a source of positive harm to the schools. Added to this came the activities of financial experts quite unable to take any but the "machine" view of the schools, and of a few persons whose aim was mainly one of personal gain.

In these ways, then, the present situation arose. The Board of Estimate in its righteous zeal for better business management regards the school system as the educational machine of the city—as indeed it is—and wishes to mold it to that end, to all intents and purposes disregarding the more human aspects. The Department of Education thinks of numbers of children and numbers of teachers, as indeed it should; disregarding, however, the more businesslike view or being temperamentally unable to take it. The self-seekers, though comparatively few in number, have been high in office and much in the public eye, and personal relations and reactions have most influenced them. And now the public, a bit slow it would seem, is at last aroused but does not in the least know where it stands.

Poor Accounting and Worse Economies

AT THE hearing on the first educational budget under the present administration, city officials warned the school authorities that retrenchments must be made and a stricter accounting rendered. A year rolled by and the time to discuss the next budget came. Nothing had been done. The Board of Education demanded a larger sum than the year before on the plea of sure disaster to the schools if it were not granted. The Board of Estimate refused, on the ground that its just and reasonable requirements had not been complied with, but promised further appropriations if plans of reorganization approved by its own experts were adopted—never a conciliatory procedure, no matter how justified.

Further recriminations ensued, with pleas from both teachers and parents to city officials not to destroy the schools. Instead of rendering wasteful departments more efficient, or efforts to curtail certain activities, desirable in prosperity but not necessary to the fundamental work of the schools, a mad frenzy of saving seized the whole department. With an apparent unanimity, amazing to interested outsiders, they began to lop off wherever any development toward a juster adaptation of the system to the weakest among its pupils stood out from the general uniformity, and, worst of all, they appeared to be tampering with the foundations rather than taking from the top. Kindergartens, classes for backward children and for the untutored immigrant, vacation schools and the proper assign-

ment and number of teachers in the lower grades were the first activities to suffer.

If the public-school system does not provide all the children of the city who are able to learn, even the weakest and slowest of these, with a full elementary school education, no other agency will. If the public school does not accomplish this effectively for pupils of elementary school age, much of the work it attempts to do for them later in their course will be wasted. It would be a great satisfaction to see a budget made out along these lines in times of necessary retrenchment. No guiding principle such as that, or any other, was apparent, however, in the work of the Board of Education on its own budget; as with budget-making, so with plans for school reorganization along various lines. Power to change old policies and adopt new ones has been sadly lacking.

During the last two years the personnel of the Board of Education has slowly changed and it has adopted a more progressive attitude. It cannot wholly control the situation, however, because of its complexities and the reactionary element within the department. Business efficiency, too, is seemingly impossible. The suggestion has therefore been made by the Board of Estimate that a new office be created—that of business manager or executive officer of the Department of Education—and the suggestion has commended itself to the majority of the board itself. It is difficult to understand the objections to this. The Department of Education conducts an enormous business. Such an officer would save his salary many times over by preventing duplication, doing away with extravagant delays and finding out and eliminating waste. No one who knows the

school system can deny for a moment that all these evils exist.

In past controversies the sympathy of the citizens has been with the schools, which need it sadly. But as a rule the Board of Estimate is blamed for cutting down appropriations. Different groups have different admonitions to give and advice to offer, and confusion has reigned in their councils. In the present situation the public, because it is ignorant of the necessity for such a position, feels that the expenditure of \$10,000 for a business manager may not be justified. Undoubtedly reorganization is the greatest need, but a business manager is certainly essential to efficiency under present conditions. In the last analysis, are not the citizens of New York themselves to blame for the whole confused situation in that they have permitted an important department of their city government to become and to continue so unwieldy that by reason of its topheavy nature it is quite unable to perform its task in any proper fashion? And is not the fundamental difficulty that of a faulty organization of the whole department rather than financial inefficiency or the lack of a progressive attitude toward education?

Better working conditions certainly exist at present between those groups of officials whose views of the schools naturally differ. A more progressive attitude is in the ascendancy. But no matter how wise and able some people in the service of the schools may be, it is hard to believe that a real improvement can come about without a radical change in the machine itself, and a more permanent readjustment of the powers of the educational and financial authorities of the city instead of one which appears to depend for any measure of success upon a fortunate personnel.

A Mental Examination in Open Court

How the Binet Tests, Given by a Psychologist in Presence of Judge and Jury, Saved a Man from Hanging in Wyoming

By June E. Downey

PSYCHOLOGIST AT THE WYOMING STATE UNIVERSITY, LARAMIE, WYO.

LAST April a brutal murder occurred in Rawlins, Wyo. The jailer of the county jail was killed by a young fellow, James Howell by name, confined in the jail for a misdemeanor. The murder was committed under suggestion from two fellow prisoners who had practically hypnotized Howell into submission to their wills. They had instructed Howell to seize the jailer's keys and open the way to freedom. Howell, however, proved inadequate in the crisis. The act of striking the jailer blotted from his mind, apparently, the reason for the act. He was found after the crime running animal-like over the top of the cage in his cell.

Howell had neither friend nor relative interested in him, so the court appointed an attorney to take charge of the case. From the first this attorney was baffled by the boy's seeming indifference and apparent inability to comprehend his situation. He would give little information about himself, less and less as time went on. Mostly he answered a question with "I dunno," or "First one thing, then another." He was either feigning loss of memory, or had actually forgotten all the circumstances of the murder, even those that might have been utilized in his own defense. Interviews became more and more unsatisfactory until finally his attorney was convinced

of Howell's mental unsoundness and had two examinations conducted, one by a physician, a general practitioner specializing in nervous diseases, the second by the psychologist at the state university, the writer of this report.

Physician and psychologist agreed that the case was one of insanity, the particular form being dementia precox, a disease characterized by disorientation, loss of memory and mental deterioration, so that at certain stages it simulates the condition of imbecility.

Up to this point the case had been conducted on orthodox lines. It is fortunately no new thing for the psychologist to be called as an expert witness concerning the mental status of the principal in a court case. Still more fortunately is it true that in our most progressive states the testing of court cases by physician and psychologist is fast becoming recognized as the standard method of procedure, and that in many instances the recommendation of psychologist and physician is final. Obviously, the examination should be a part of the regular procedure rather than instigated by the county attorney or the attorney for the defense.

In the present instance, however, an interesting variation was introduced in that Howell's attorney, Will McMurray,

of Laramie, conceived the notion of having a psychological examination conducted in the very presence of judge and jury. Mr. McMurray had been present at the cell examination. Up to that time he had wanted the psychologist's opinion as that of an expert; after that, he wanted the examination itself to form part of the evidence. His plea was successful—first, that there be a sanity inquisition without complication by other factors, and second, that the examination be made in the presence of the jury. At every point Judge V. J. Tidball cooperated with him in the interest of a scientific procedure.

For the first time, therefore (so far as the writer's knowledge goes), a psychological examination according to the standardized methods of the laboratory was conducted in open court. Here was an opportunity that any psychologist would welcome with extended hands—the opportunity to open the eyes of the public in a dramatic way to the contribution psychology may make to the intimate understanding of a fellow creature.

Making the Jury Understand

THE case required careful presentation if the jurymen were to catch the points at issue. Howell, it will be recalled, was suffering from a form of disease that induced a lethargic condition and a general passivity of attention. These made it impossible for him to comprehend a long question. To overcome his apathy it was necessary to attract his interest through voice, manner and personal encouragement; to get him to answer in return it was necessary to remember that he could hold in mind only eight or ten words, and that the long polysyllabic phrases, thundered at him by the lawyers, passed completely over his head and left him dazed. He could comprehend only as a child comprehends.

Essential to success, also, was the need of getting him in some way to respond to the examination, since the opposition would urge that sheer negativity and silence could be explained as wilful obstinacy or skilful shamming.

So definite was Howell's mental deterioration that it was possible by use of the now famous Binet tests to exhibit definitely the symptoms of a mind diseased, living in a confusion of time and space that no brutal insistence of the opposition could pierce. It was indeed fortunate that the nature of the disease was such as to permit the employment of the Binet tests, which, although designed for determining the mental level of the normal child and of the feeble-minded of all ages, have also proved valuable in locating specific mental defects in certain forms of insanity. Where a fall in the mental level is an outcome of the disease they are especially valuable. Record blanks for scoring Howell's answers were supplied to judge and jury and throughout the questioning Judge Tidball kept his score with accuracy and interest.

Imagine the attentiveness of jury and spectators as the questioning began with the tests for the three-year-old child. I realized that this beginning might make the whole affair seem absurd, since the normal adult, and even the child of eight or nine, finds these questions ludicrously simple; but Howell answered with the naïveté of a very small child. He pointed with perfect solemnity to his eyes, nose and mouth, and repeated after me, "It rains, I am hungry."

One question asked the four-year-old is whether he is a little boy or girl. For Howell I varied the question a trifle, asking whether he was a man or a woman. To my surprise the answer came hesitatingly, "I dunno; I ain't thought much about it," at which a ripple of excitement passed over the courtroom. Later I put the question in the usual form and Howell answered, "Boy."

The child of seven or eight years is able to repeat five digits,

but Howell was unable to give more than three, the digit-span of the four-year-old child. Again and again he tried to retain four digits; he would name them on his fingers as a little child might have done, but always in reproducing them he found that when he reached the fourth finger his bird had flown.

One of the Binet tests exhibits the capacity of a child to comprehend what should be done in a given situation. Asked what he ought to do if he were going somewhere and had missed his train, Howell said, "I'd run," and he insisted that he could run any distance. He would also run if he had broken something that didn't belong to him, or if someone should ask him his opinion of a person whom he knew only a little. Another test involves seeing an absurdity in a statement. For example, you ask the eleven-year-old child to point out what's wrong in the statement: "I have three brothers—Paul, Ernest and myself." The average child retorts, "He says he's his own brother!" In the cell examination Howell answered, "He didn't say how many sisters he had"; in the court examination he answered, "That's all right!"

It was the same throughout the examination. Shown a picture of a man presumably in prison and looking wistfully out of the window, Howell manifested not a flicker of emotional interest. He merely enumerated a few objects that he saw and, because the foreground was light, spoke of "Heaps snow," with no consciousness of the fact that the scene was indoors.

The effect of the examination was to demonstrate conclusively that Howell's mental age was that of a child between six and seven years of age. Only an expert psychologist could have "faked" answers so consistently characteristic of a given mental level. Fortunately, as one factor making court examination possible, Howell's narrowed attention gave little access to distraction by the presence of spectators.

The verdict was "insanity," first ballot, and to this the psychological examination undoubtedly contributed. This verdict was achieved in spite of the strongest prejudice in the community, and the accepted notion that the man was shamming, an opinion supported by the testimony of the physicians who had been called by the opposition. So completely had these physicians been obsessed by the notion of "shamming" that they had contented themselves with superficial examinations, which could not withstand the searching cross-questioning of Howell's attorney. It is a popular notion that mania is the one and only form of insanity. Howell was suffering from a disease very different; and it was curious to find physicians succumbing to the popular notion and labeling the boy sane because of the absence of signs of acute mania.

Criminal Acts—Not Criminals

APART from the intrinsic interest in the case itself, and one's sense of justice that revolts at any brutality of method that might lead to hanging a brain-sick man, the case is worthy of remark for two other reasons. In the first place, we must welcome every innovation in the direction of bringing into court not the expert witness only, but the scientific evidence upon which he bases a positive opinion. Secondly, any enlightenment of the public as to the need of intimate investigation of the life and mind of the so-called criminal should be welcomed. More and more we realize that there are criminal acts but no criminals, and that society, if properly alive to the problem, could protect itself and the unfortunate man who may become a so-called criminal, by discovering him before he commits a crime and saving him, not from the consequences of his acts, but from his own inherent limitations in adjusting himself to a world growing daily more complex.

COMMON WELFARE

SING SING LOSES A FRIEND OF SELF-GOVERNMENT

THE resignation of Calvin M. Derrick, deputy warden of Sing Sing, which took effect December 31, is again causing friends of the self-government program inaugurated by Thomas Mott Osborne to wonder what is to be the future of that reform under the new warden and the new state superintendent of prisons.

Mr. Derrick went to Sing Sing last August to take charge of the self-governing activities of the inmates. He had successfully demonstrated this method of conducting a penal institution during his four years as head of the State Reformatory for Boys at Ione, Cal. He was given a year's leave of absence from that institution and went to New York at the request of Mr. Osborne, who turned over to Mr. Derrick his own salary as warden. When Mr. Osborne resigned in October, Mr. Derrick became acting warden and drew the warden's salary from the state. The appointment of William H. Moyer as warden early in December created a new situation with respect to the status of Mr. Derrick.

The reason for his resignation, as given out by both the state Department of Prisons and the warden's office at Sing Sing and as published by the newspapers, was that Mr. Derrick had accepted another position. This is denied by Mr. Derrick, who said to THE SURVEY:

"I was given to understand by my superiors that the only relation in which I could continue my work at Sing Sing under Warden Moyer was that of 'confidential clerk' at a salary of \$1,500. The law does not establish the position of deputy warden. I did not feel that I could afford to remain at Sing Sing as confidential clerk, unless the salary of that position were augmented, as was proposed, from outside sources. Since there was some question concerning the legality of such an arrangement, I asked for an opinion from the attorney-general. My superiors informed me that the attorney-general would not render an opinion on this point. At the same time I was urged to remain as confi-

dential clerk and was assured that an adequate income would be in some way provided. It was suggested to me that I need not concern myself with the sources of this income, provided only that I got the money. In view of the doubtful legality of such an arrangement and the lack of any opinion thereon from the attorney-general, I felt that this was an impossible position in which to place myself, and therefore resigned."

Mr. Derrick had been promised a free hand in working out the principles and methods of self-government at Sing Sing. His departure leaves no one at the prison who has had experience with those principles elsewhere and removes the last avowed advocate of self-government from the prison administration. His place has been taken by John J. Mollo, formerly assistant confidential clerk. Meanwhile Mr. Derrick has been engaged by the Department of Corrections of New York city as a consulting expert on some of the problems facing the wardens of city reformatories. He is still on leave of absence from Ione.

The gravity of Mr. Derrick's departure is being interpreted by friends of the self-government program in the light of several paragraphs from Governor Whitman's annual message to the legislature, transmitted January 3. Drawing upon his speech before the American Prison Congress last October, quoted in the SURVEY for December 16, 1916, Mr. Whitman said:

"In swinging away from the brutal, it is not necessary to swing into the maudlin. It is possible to think of the rights of the prisoner without forgetting the rights of society. The essential feature of any sound system of prison reform is iron discipline.

"This kind of prison reform is necessary, not only because it is right, but because it is better business. Common sense and decency dictate it. Rightly conceived and properly administered, prison reform is social insurance. Not the least drawback to intelligent progress has been the revulsion against well-meaning theorists who have tried to proceed through sentiment instead of through system."

BOOM FOR SOCIAL INSURANCE IN MASSACHUSETTS

"I ASK you to consider carefully certain forms of social insurance. I am strongly of the opinion that there is no form of social insurance that is more humane, sounder in principle, and that would confer a greater benefit upon large groups of our population and upon the commonwealth as a whole than health insurance."

With these words, uttered on January 4 at almost the very opening of his inaugural address to the Massachusetts legislature, Governor Samuel W. McCall issues a recommendation with which the old Bay State is now ringing. Reviewing the grave burden of sickness, the heavy loss to employers, the misery to employes and their families, he points to the benefits in relief and prevention of disease secured in most European countries through compulsory health insurance and recommends that the legislature "establish a compulsory system with a reasonable benefit during the period of sickness, and that the system be made to include members of the family, as is done in many of the German funds."

But Governor McCall does not stop here. An even more extended discussion of old-age pensions immediately follows. Modern industrial conditions require provision against invalidity and old age which most individual workers are unable to make. The so-called "industrial insurance," under the management of private companies, is "loaded with an enormous charge for administration. This charge could be very largely done away with under a system of compulsory state insurance, and any profits of the business would be entirely saved to the insured." In industrial insurance premiums (mostly as burial insurance) \$12,251,000 was paid by the people of Massachusetts in 1915, says the governor, and only \$4,094,000 came back to them in benefits.

After comparing the contributory old-age pension systems of Great Britain and her colonies with the contributory system of Germany, Governor McCall

expresses himself as in favor of a pension of about \$65 per year, to be paid by the state and its subordinate governments without contribution, to its deserving citizens seventy or more years of age who do not have children able to support them nor an income of more than \$200 a year, and who have been residents of the commonwealth at least ten years.

An active newspaper discussion has followed on the heels of the governor's inaugural. The two great subjects of health insurance and old-age pensions are now officially before the people of Massachusetts.

UNCERTAIN STATUS OF THE LABOR BILLS

DESPITE the fact that hearings are going on at Washington before the Senate Committee on Interstate Commerce on the proposal of President Wilson to enact a law that would prohibit strikes on railroads pending investigation, Chairman Adamson of the House Committee introduced a bill of his own last week which is practically identical with the Senate bill. It has an added feature of importance, however. It provides that no railroad shall either require or permit its men to work over eight hours a day unless permitted to do so by an order of the Interstate Commerce Commission.

Incomplete polls among members of Congress indicate that no measure forbidding railway employes to quit work will secure a majority in either branch. From the White House come intimations that a measure merely requiring investigation of railroad industrial disputes, and publication of the findings, will be acceptable as a last resort in the President's attempt to prevent a walkout.

Spokesmen for the railroad brotherhoods at Washington have suggested no substitute for the Adamson eight-hour law, in the event of that measure's being declared unconstitutional by the Supreme Court. They anticipate another affirmative strike vote by the brotherhoods and rely upon this as their best weapon in dealing with the railroad companies if the law is found invalid.

Government ownership and operation of the railroads, now said to be steadily gaining adherents in both Senate and House, is looked upon by the operatives with suspicion. They do not believe that Congress will give them a real voice in the management of industrial conditions in the industry such as they now consider is theirs through the power of their organizations.

Labor legislation reported during the past year by the House Committee on Labor will not come before the House during this session, except through the unlikely chance of suspension of the rules. To suspend the rules in order to bring forward a bill requires a two-thirds vote.

Measures thus apparently sidetracked for the remainder of the sixty-fourth Congress include the Nolan bill granting a minimum wage of \$3 a day to government employes; the Casey bill appropriating \$42,000 for the establishment of an independent women's division in the Department of Labor, and the London resolution providing for an investigation and report on the subject of social insurance.

Chairman David J. Lewis of the House Committee had expected to secure a vote on several measures. But the call of committees, taking place unexpectedly and when he was absent from the chamber, gave the floor to other committee chairmen who will retain it until March.

While the women's division bill is thus held up indefinitely in the House, it has been reported in seriously crippled form in the Senate. As brought from the Senate Committee on Education and Labor by Senator Kenyon it allows only \$24,900 in place of \$42,000 for the first year.

TO PROVIDE A HOSPITAL FOR LEPERS

A FEW days ago, a seller of oriental rugs in New Jersey was proven to have leprosy. The man has been in this country but two and a half years. So, detained in a "quiet room" of the hospital, he awaits deportation.

The conviction forming in the minds of those acquainted with the facts, that leprosy is increasing slowly but steadily, 2,000,000 lepers are to be found in the Far East, according to recent studies by Frederick L. Hoffman, of the Prudential Life Insurance Company. At least 5,000 cases are believed to exist in countries under control of the United States. The disease has been found in eighteen states of the Union.

In only three or four states is there adequate provision for the segregation and care of lepers. Their interstate travel is not yet supervised by federal authorities, and they are hurriedly passed on from one state to another and avoided at every town.

A bill (S. 4086) providing for a national leprosarium was passed by the House at the last session of Congress. To avert the danger that in the rush of work at the present short session the bill may be overlooked in the Senate, efforts are being made to get unanimous consent for its consideration. The bill would transfer to the federal Public Health Service for a leper hospital any suitable military, naval or other reservation not in use, and would give the provision of equipment and care of patients to the service, whose officers assigned to duty at a leper post would receive additional payment. Apprehension and detention of lepers is already provided for under various federal quarantine acts.

The scientific as well as humanitarian value of such an institution as this has been frequently emphasized during the past two years since the agitation for a leprosarium was begun.

A relatively small amount of money is needed to carry out this plan. Generosity may be stimulated by the example of a group of Siamese lepers, whose income is forty cents a week. Hearing that lepers in Persia were in worse plight than themselves, they sent first \$8, then \$10 and finally a special gift of \$12 for relief. Perhaps their next donation will be to the American leprosarium!

THE DOVE OF PEACE AS A CARRIER PIGEON

THE sly dove of peace has now for the third time escaped the British censor's cage, and flown to America with messages of English longing for the end of the war. Bertrand Russell and Charles P. Trevelyan have already smuggled in word [see the SURVEY for December 9, 1916, and December 30, 1916]. And recently Arthur Ponsonby, M. P., member of the Union of Democratic Control, and Charles Boden Buxton, brother of Noel Buxton, M. P., and known as an English diplomat, have sent similar appeals for early peace to the American Neutral Conference Committee.

Both letters hint that some secret diplomacy is unreasonably extending the war.

"The government is not aiming at a reasonable peace," says Mr. Buxton. "I do not profess to know the exact objects which they have in view. What I do know is that they must have other and further objects in view than those which the people of this country took up arms to secure. One of them, indeed, they have openly announced. They have 'approved' the resolutions of the Paris Economic Conference, which involve the establishment of a commercial boycott against the Central Powers. To add this to our objects means to prolong the war long after it might otherwise have been ended. Beyond this we are kept in the dark.

"The issue is now clearly raised between the original, legitimate, defensive objects of the war, whose realization might lead to permanent peace, and the new, aggressive and partially concealed objects, which would lead to the perpetuation of war in the Europe of the future.

"It is no longer for Belgium, France or Serbia that our sons and brothers are being called upon to fight. Belgium, France and Serbia might be freed tomorrow. It is for commercial boycott or territorial aggrandizement or a mere knock-out."

Mr. Ponsonby asks: "Are you sure

the war is not going on because of secret agreements we have made with Russia, with Italy and with France? What are these agreements? Ought we to go on fighting without knowing what we are fighting for?

"The only Powers that can stop this war are Great Britain and Germany. The Allies depend on us. Our financial strength gives us a predominant position. Would it be a weakness on our part deliberately to take the lead and bring Europe back to Peace? It is a far greater weakness to go drifting on just for the sake of what is called 'winning the war,' not knowing what winning means, not knowing what winning may cost us, only knowing how little permanent gain ever comes from the mere triumph of force.

"Force and violence cannot bring any government to reason but only to temporary submission. Force and violence cannot bring contentment to any people. Force and violence cannot create a peaceful Europe. Surely it is better for Great Britain to come forward as the champion of civilization than to continue to be a participant in the most hideous barbarism the world has seen.

"Liberty and justice are not the gift of any existing government. Militarism and oppression are characteristic in varying degrees of them all.

"What has been the effect of our attempting to crush German militarism by force of arms?

"We have established militarism at home. We have deprived men of their liberty, punished men for their consciences, censored opinion and suppressed free speech. Militarism can only be crushed by the people themselves in a country where a free democracy exists. We cannot free the German people by warfare, but we can enslave our own.

"The war for liberty and justice has yet to come. It will be the war of united democracy against the stale traditions of discredited governments—not a war of people against peoples. It will be a war against bad conditions, against poverty, misery and ignorance. The real enemy is established inside every country. It is the spirit of tyranny, greed, materialism, intolerance and militarism. It is the unfair distribution of wealth, the neglect of education, the idolization of riches. The victims of that enemy are to be found in slums, in workhouses, in asylums and in prisons. Why not make ready to fight that enemy instead of wasting life and treasure in the slaughtering of men who are as anxious as you are to turn their attention to the real evils that surround them?

"The longer you continue this European conflict, the outcome of diplomatic intrigue and the product of the reckless ambition of governments, the longer will the real war be delayed."

CRIPPLED MEN MAKING RAFFIA BASKETS AT CITY HOSPITAL

SOMETHING TO DO—THE NEW MEDICINE

"THE most important addition to health-making in the past ten years has been the work cure," said Dr. Frederic Brush, of the Burke Foundation, New York, recently. The therapeutic value of work for the majority of chronic and convalescent patients is becoming widely recognized. Earliest among the experiments was that by Dr. Philip King Brown at Arequipa Sanatorium [see the SURVEY for December 7, 1912]. Recently extensive work has been begun in Massachusetts, where twelve of the training schools for nurses now offer courses in manual training.

And recently, into the public hospitals and City Homes of the New York Department of Public Charities, an experimental plan has been introduced by a

committee on occupations, appointed by Commissioner John A. Kingsbury. This committee is undertaking to provide teachers of handicrafts in order to give a new chance for self-support and a return of self-respect and hope to the sick and infirm. Of this committee's work, Marion R. Taber, secretary, writes as follows:

"Most of those who come to port at the City Homes regard it as a disgrace. They have fought to maintain themselves and have failed. Many look backward or else 'just sit' until someone can take them out. This is not necessary. One old woman who always sat by some geraniums at the end of a corridor said to me:

"I had lots of flowers, too, when my husband was a tobacconist on Broadway."

"Do you tend these now?" I asked. "Oh, no; I might slop the water. An attendant does it."

"In the hospitals," continues Miss Taber, "worry over the future or over some permanent physical defect may retard convalescence. There is a moment when a teacher is needed. This depression was voiced by a little boy who had lost his right arm when he said to me, 'I can't do anything, lady—I just can't.'

"As far back as 1872 the visitors' reports of the State Charities Aid Association record this same dreary idleness. To be sure, some work was always done by dependents, but these were hangers-on, and January 1, 1916, saw the last of such unpaid help. Eight years ago the New York City Visiting Committee sent a teacher of handicrafts to our City Homes, and her efforts were so successful that the city now has three paid instructors. But these instructors alone cannot meet the need of the patients and

THE TOYMAKER

inmates of the Department of Public Charities, nearly 6,000 of whom are probably capable of occupation."

In 1913, Henry C. Wright, chairman of the committee appointed by the Board of Estimate to inquire into conditions in the charities and corrections departments, sent an investigator to visit large almshouses all over the United States. At no place was there a pretense of employing most of the almshouse inmates. They would employ the more vigorous, but fully 40 or 50 per cent were not occupied. A medical examination was then made of 500 inmates at the City Home on Blackwell's Island, and 58.59 per cent were found able to work; 41.41 per cent were sick or infirm—*i. e.*, bedridden. Many of these would, of course, be glad of something to do and should really be classed with the 60 per cent who would contribute to their own support. At Blackwell's Island, at Flatbush and also at the Farm Colony on Staten Island, much of the work is done by inmates; but it is not within the power of the superintendents at present to give work to all, nor to ascertain the strength and aptitude of the persons under their charge.

Finally, last January, under the leadership of Mr. Wright, certain members of the New York City Visiting Committee who had been interested in improving prison-made goods, called a meeting for action. The flood of testimony in behalf of occupational therapy was enough to float any new craft.

Striking emphasis was given the new plan by a letter read at the meeting, written from abroad by a former professor. He says: "You preachers of the need of the re-education of dependents are wasting your time in America, where you have to spend a whole day in the endeavor to get the president of a college to admit a premise which is self-evident to every shopkeeper in Europe. No one here can look out of his window without seeing a dozen maimed men; he knows that his sons, his nephews and his brothers are in the same condition, that he must help them, and that at any moment his own house may fall.

"He throws his arms up to heaven and cries in anguish, 'My God! I am willing, but how can I support them all?' That there is little use in 'getting a man well,' if he is to starve to death in a year or two, is perforce already generally admitted. And that the sick man can, to his own therapeutic advantage, do far more than the medical profession has heretofore contended is undeniably proved."

It was said that "there are more dependents in the United States by several millions than there are today in Belgium."

Generous gifts from several donors have secured two teachers and one director. These teachers will give their

first attention to the neurological patients. Three classes have been formed among the nurses at Kings County Hospital, Cumberland Street Hospital and the City Hospital. A course is being given at Teachers' College on occupation for invalids. Volunteers from Pratt Institute and Teachers' College, besides many private individuals, have offered their services. The attempt, if successfully carried through, will mean, it is believed, not only important preventive work, but an economic gain to the city.

ENGLISH GARDENING IN WAR TIME

"TAKE my own case," writes an English clerk. "I don't have meat more than three or four times a week now, whereas formerly I used to have it twice a day. Some men are certainly getting very high wages in many cases. But I should say that on the whole the standard of life of the workers has lowered considerably." He then states a number of reasons which are well known and proceeds:

"You will know much more about the influence of allotments and gardens than I do. But I can say from experience that they have been a greater boon to workers since the higher prices rule than ever before. From my own garden, which does not take up more than an hour or so of my time each week, I never have to buy any vegetables except potatoes. I was speaking only a few days ago to a railway worker who has two of these lots. (They are about a fourteenth of an acre each.) He candidly said that he would have been in the workhouse had it not been for the food he was able to grow himself. I have been on the lookout for an allotment for a worker for some months but have not been able to get one. Even where men have been called up for service, either a friend or wife has kept the allotment on for him, and there is no likelihood of any becoming vacant."

"It is surprising," a German garden expert (A. Steffen, editor of the *Praktische Ratgeber*) wrote a few years ago after a trip to England, "that English workpeople grow hardly anything but flowers. In our little gardens and backyards people mostly grow fruit and vegetables. I have been greatly interested in the social significance of these gardens. . . . Even in Blackley, a suburb of Manchester, climbing plants and flowers relieve the depressing uniformity of the rows of small houses."

As a reason for this difference between the practical German gardener and the flower-growing Englishman, Mr. Steffen discovered that the latter was tackling all his outdoor pursuits, including gardening, in a sporting spirit. By specializing he succeeds in growing for exhibition sweet peas, roses, asters,

daffodils, of which any professional gardener might be proud.

But the visitor commonly notices only the little front gardens in an English suburb, which are devoted to flower growing. In addition, most cities have considerable areas cultivated by industrial workers in what our correspondent describes as "allotments" which, owned by the city and sometimes devoted permanently to this purpose, are rather more than "vacant lot" gardens. They are not rented anew each spring, but tenancy is continuous so long as the weekly or monthly rent is paid. Since in England gardening is possible most of the year, and even during the winter it is possible to leave cabbages, celery and sprouts in the ground to cut as needed, tenants are willing to pay rent all the year round and, in some cases, to vest comparatively large sums in manures and frames.

These allotments at all times, and more especially during the present time of high prices, are of real economic benefit to small wage earners. They are so greatly appreciated that in the larger cities where land values are high it is impossible for the city government to provide enough of them. Even where the municipal effort is amplified by philanthropic provision of vacant lots, there are normally many times more applicants than available lots.

There is not, as a rule, an organized effort to teach the best gardening methods, though one or two agricultural colleges—notably Leeds—render such services in neighboring cities. But there is much friendly mutual help, and those who have never handled a spade learn in a surprisingly short time to grow enough vegetables for their own table. In a typical instance, the average yield over a period of three years, valued at the lowest retail prices current, averaged 20 cents a week per allotment of one-fourteenth of an acre. But in individual instances the returns are higher. The value to the family of vegetables freshly gathered from the ground is more than their retail price. In the case of men normally engaged in factories, warehouses and offices, the recreational value of the open-air occupation of gardening is also an economic asset.

Since the outbreak of the war, many of the gardens attached to small houses have been dug over and planted with potatoes and vegetables. Prize-winning flower roots and bulbs have been ruthlessly sacrificed to make room for food. In rural and suburban communities school gardening has been taken up with added vigor. Even in the absence of men, yields often have been increased and, what is equally important, have been gathered and stored more economically than before.

The provision of garden allotments both for rural and urban workpeople

was an important item in Lloyd George's ante-war land program. The new president of the Board of Agriculture, Mr. Prothero, once a fierce opponent of radical land reform, agrees with the prime minister on this part of his program. We shall, therefore, expect to hear shortly of legislation in Great Britain extending the financial provision of state and cities for the purchase of land to be devoted to allotments.

OLD AGE INSURANCE FROM THE BOTTOM SIDE

THE members of the Home Workers Union of the Hudson Guild, New York city, had listened attentively to the exposition of a contributory old-age insurance scheme. At the end of the address a discussion was called for.

Mrs. Haley was the first to respond. She rose with difficulty. Spending the greater part of every day on one's knees scrubbing is not conducive to agility.

"I don't suppose there's one of us here," Mrs. Haley said, "but what's had spells of wondering what's going to happen to us when we get too old to work any more. Now this insurance plan, so far as I can make it out, seems to be a mighty good thing for most men and a mighty poor one for most women. Men that's working steady won't have any trouble, as their part of the insurance will be paid regularly by their employer out of their wages. And some women will be fixed the same way. But how about women that goes out by the day and has maybe four or five different employers every week? How about us? This insurance don't seem to give any plan for getting us a share. Don't we get old too? And won't we need the money as bad as the others?"

"Anyhow we're after makin' something as long as we can keep goin'," put in Mrs. Murphy, "and there'll maybe be some way for us that's earnin' to get in on the insurance even if our employment ain't regular. But what's to become of the woman that stays at home and takes care of the house and raises the children? It seems to me she's the worst off of all of us. Maybe her husband will get some insurance if he lives long enough, but like as not it won't be enough for both of them, and why isn't her work as deservin' of a reward as his? Goodness knows it ain't any easier."

"Folks with families has their children to depend on," suggested Mary Mulligan.

"I've had ten children," said Mrs. Harrigan, "and I've got them all pretty well raised. There ain't one of them that would refuse me a home when I get too old to do for myself, but some of them has families of their own already and all of them will probably have about as much as they can do to look out for themselves and their children. I've always felt so far that I was earnin' my

way even if I wasn't getting paid for it and I don't like the idea of getting to be a burden to anyone."

"It's straight old-age pensions like army men gets and not insurance that we're needin' in my opinion," said Mrs. Mulligan.

"And I can tell you, ladies," added Mrs. Murphy impressively, "that we won't be after gettin' any of it until we have the vote."

MERGING SOCIAL AGENCIES IN PHILADELPHIA

THE beginning of 1917 sees the adoption of several new and interesting amalgamations of the many kinds of social work now carried on in the special interest of children in Philadelphia. Formerly there was a Child Labor Association, a Public Education Association and a Child Federation. The titles of the first two sufficiently describe their work. The third interested itself primarily in public health work with children, and while the reduction of the infant mortality rate was its chief concern, it did not confine its activities exclusively to baby-saving.

Of these three societies, the first two effected a coalition a few years ago under the name of Public Education and Child Labor Association. In 1917 this association is to experiment with a consolidation with the Child Federation. It is definitely understood that the arrangement is tentative, the effective agreement to be renewed at the end of the year if it proves mutually satisfactory. Meanwhile the more inclusive name of Child Federation will serve for both. Each organization retains its own executive head, Albert Cross for the Child Federation and B. M. Watson for the Public Education and Child Labor Association, and each organization has definite and approxi-

mately equal representation on the executive committee and the staff of officers.

The immediate aim of this consolidation is the reduction of overhead charges. It is estimated that a direct saving of \$3,000 a year will result at once and that there will be other savings. It is expected that a closer coordination of the work of these associations will bring forth proportionately larger results.

The Municipal Court of Philadelphia is also consolidating certain of its hitherto separate departments. It began three years ago with five courts, as follows: one criminal, two civil, one domestic relations and one juvenile. Since then it has added a court for misdemeanants. Social investigation and probation work has been done with all but the civil cases. Of the personnel of the court—some 270 in number—a hundred are probation officers. These had been divided into two groups: those working in the domestic relations, criminal and misdemeanor courts were under a "supervisor of probation officers," those working in the juvenile court were under a "chief probation officer." Both officers were directly responsible to the president judge of the court. The supervisor received a salary of \$2,500, the chief probation officer \$3,000. On the resignation of the latter, Thomas G. Parris, the former, Jane Deeter Rippin, was promoted by President Judge Charles L. Brown to the new position of chief probation officer at \$5,000, and the two groups of probation officers came under one head.

While no detailed plan of reorganization has been announced, it is understood that the Juvenile Court will thus be brought into closer relation with the other branches, and a "family court" will be evolved in the course of time.

URBAN LAND RECLAMATION FOR ST. LOUIS

CITIZENS of St. Louis have become restless of late because other industrial centers on the Mississippi have grown more rapidly. St. Louis, expanding like most cities without plan and order, has reached the inevitable phase in urban development when it no longer competes successfully with smaller communities in the offer of attractive, cheap and accessible sites for factories and homes.

Yet, with a special effort, directed by intelligent planning, it is possible to overcome any temporary handicaps. Nor is the effort required so very great. This is clearly shown in a report issued by the City Plan Commission on the valley of the Des Peres, a small tributary of the Mississippi. Here, within the city limits, is an area of nearly a thousand acres, now rendered useless by occasional floods and by repulsive odors from sewage which this stream carries and at times distributes over the adjacent lands. Such an area is not only a dead loss to the city, so far as taxable value is concerned, but it depreciates the advantages of the city as a whole. The economic loss from leaving this acreage unused and a nuisance must, capitalized, amount to a huge sum. To reclaim it by building a storm-water channel, closed sewers, and other works, according to the commission's report, will cost less than \$6,000,000.

But mere reclamation in a modern city is not enough to make land available for the greatest utility of which it is capable. There must be a careful plan of transit connections to give access to every part of it, and there must be provided amenities for industrial and domestic life. The fact which distinguishes the River Des Peres plan from many other city plans for land reclamation is its clear realization of the complex needs of modern urban development. At an added expenditure of a little over \$2,000,000, the commission proposes to construct a double-tracked industrial railroad, a semi-circular driveway connecting the main arteries—and incidentally offering a view of interesting scenery—and a viaduct giving direct access from the area to the largest park on that side of the city.

Equally important are those parts of the plan which cost nothing but foresight and the services of a city planning staff, namely, the careful subdivision of the area into residential and manufacturing zones, the drafting of regulations which will preserve the character of both, and a preliminary planning of the main streets on lines which will make them satisfactory traffic-bearers and distributors when the area is completely developed. The saving in subsequent street widenings and re-planning alone which will result from the adoption now of a

street plan calculated to meet future needs will represent an economy, judging from the experience of nearly all great cities, which will pay several times over for the actual cost involved in the immediate project.

The commission, in the report, lays emphasis on the fact that "the establishment of residential and industrial districts will cost nothing; the extension of the major streets will be consummated gradually, but should be planned now, the cost of such street construction to be borne partly by the abutters and partly by the city in the customary manner."

It is only within recent years that American cities have tackled a job of this character in so far-seeing a manner.

PORTO RICAN WORKERS RE- TAIN THEIR BALLOT

AGREEMENT by the official Porto Rican commission, sent to Washington to urge the early enactment of the Jones bill providing for civil government in the island, that there shall be no property qualification for membership in the legislature, and no restriction of the franchise of those who are now entitled to vote, is hailed by Washington labor leaders as a victory for the labor movement in Porto Rico and a setback for the sugar, tobacco and coffee companies that have been potent in the administration of the island.

Governor Yager, who sponsored the proviso in the House bill limiting the suffrage to the literate or to those paying taxes of \$3 annually, testified that the illiterate mass of the workers in Porto Rico had been used by certain employers for the corruption of politics.

Santiago Iglesias, president of the Free Federation of Workers of Porto Rico and organizer for the American Federation of Labor, retorted that the governor's own reports showed that there had been no apprehension on this score until after the workers had become organized and had engaged in two great strikes, involving the sugar plantations, in which the government's activities were all on the side of the employers. In his report for 1915 Governor Yager had praised the manner in which the Porto Rican elections were conducted—this despite the fact that 75 per cent of the voters are illiterate and without property.

So sharp has become the division between the proponents and opponents of disfranchisement that F. C. Roberts, labor commissioner of the island, has within the past week resigned his office. He had come to Washington to support Iglesias' pleas to the Senate committee when he was summoned back to Porto Rico by the Governor, on the ground that the public unrest over the "high cost of living" required Roberts' presence at his post. Roberts refused to go, and gave up his office.

Action on the Porto Rican bill in the

Senate will be sought by the Senate committee early in January. The election which should have been held last November, and was suspended by special act of Congress, is set by the pending bill for next July.

THE FAILURE OF COUNTY JAILS

FETID cells, ill-smelling and without light; dungeons where vermin and disease abound; crowded, unwashed bodies, vying with their own excreta in giving off bad odors; damp floors and walls, untouched by direct rays of light; children and minors huddled in cages with men; idleness for days at a time for large numbers of men and women; these are conditions existing today in the county jails of Illinois and described in a pamphlet just issued by the Juvenile Protective Association of Chicago.

Another pamphlet, issued by the California State Board of Charities and Corrections, gives a companion picture with respect to that state.

Together the reports constitute one of the severest indictments against the county jail system in this country that has been made in decades. The reports agree that this system must give way to state control of all minor prisons and that county jails, after being made fit places in which to live, must be used only for temporary detention of persons awaiting trial, while industrial farm colonies take their places for convicted misdemeanants.

The Illinois report, which was written by Edith Abbott, chairman of the Committee on Crime of the State Conference of Charities, wastes no time in discussing half-way measures of reform. It opens by saying: "The only way to solve the county jail problem is to abolish the county jails."

The report recalls an effort made in 1870 by the then newly-created State Board of Charities to improve conditions in the jails. As a result a "new jail law" was passed, requiring that jails be kept sanitary and clean and that different classes of prisoners be separated. These provisions, however, have never been enforced. According to Miss Abbott there are precisely one hundred and one different local authorities that must be brought up to an adequate understanding of the county jail problem before any reforms under the present law can be attempted. More than that, in two years a new set of officials will be elected, and the work must begin all over again.

Miss Abbott gives some interesting information on what are called "jail improvements" in Illinois. "The inspector for the state board," she says, "reported that the records of county expenditures showed that large sums were expended last year on what were called

'jail improvements.' But these improvements were 'not new plumbing, or fresh paint, or new bedding, or a few windows,' . . . but 'almost invariably a new porch for the sheriff, a new garage for the sheriff, a new bathroom for the sheriff, or a new hardwood floor for the sheriff. With the exception of the appropriations for new jails, not \$5,000 was expended in the last year in the state of Illinois on improvements on the jail proper.'

The California document views the situation from the standpoint of prisoners rather than of conditions in jails. It emphasizes the weaknesses of the state's whole system of handling petty offenders.

Of more than 31,000 prisoners received in California jails in 1914, 35 per cent had been in the county where arrested not more than one week before landing in jail. Of those charged with vagrancy only 30 per cent received jail sentences, and in four counties only 5 per cent were even convicted.

These men constitute a floating population of misdemeanants passed on from one county to another. They are sent to jail for five days or ninety days, according to whether a judge is lenient or severe. Recidivism is so frequent that many a prisoner, according to the report, boasts that he has been "in half the jails of the state." No attempt is made to cure or reform a man. In the words of the report: "He comes out of jail sometimes better and sometimes worse physically, but usually with less ambition, less self-respect, more knowledge of vice and crime, more bitterness. In a few weeks at most he will be back again. If he is defective from birth, he is bound to fail. If he is normal, but has formed habits of recklessness, irresponsibility, intemperance and vice, the jail sentence cannot replace these habits; more likely it will accentuate them. Suppose the man is not sent to jail, but is discharged with orders to leave town in an hour. How much better off is he? Granted that he has violated some law, what assurance has the community that he will not repeat the offense? He has simply gone on to the next county unknown and unwelcome. An already overdeveloped 'wanderlust' has been gratified; hatred of organized society is increased. Instead of an upward lift, we have given the man a downward push."

From such a premise the report goes on to show how the jail can never be more than for temporary detention and now institutions of a new type are needed for the permanent care of misdemeanants—lodging houses and labor exchanges for the unemployed, incidental offenders; institutions of the farm-colony type where the mentally defective can be committed for life; places of a similar nature, with more provision for

medical care, for the indefinite commitment of inebriates and drug habitués. "For the normal but rebellious," the report points to the need of "an indeterminate sentence to institutions industrial and agricultural in character where discipline and training are emphasized."

Farm colonies for misdemeanants in Indiana, Virginia, Ontario and Kansas City are recorded by the reports as showing the possibilities of this type of treatment. Indiana's experience in starting such a farm was described in the SURVEY for January 1.

Reasons for a state system of the character of this and the others mentioned are given as follows by the California report: state laws have been violated in most cases; migratory men should be cared for by the state rather than by the county; the "floater custom" is merely "passing the buck"; uniformity of treatment is lacking; short sentences do little good; recidivism would be reduced; sanitary conditions could be economically introduced; enforced idleness would be displaced by useful labor; discipline would be improved.

\$40,000 A DAY IN TRADE ACCIDENTS

THE total number of industrial accidents in New York state for the calendar year of 1916 will probably reach 60,000. This was the statement of Commissioner James M. Lynch of the Industrial Commission at the first State Industrial Congress, held December 11 to 14, at Syracuse.

"On the basis of past experience in this state and elsewhere," went on Commissioner Lynch, "it is estimated that these 60,000 cases will include 1,500 deaths, 120 permanent total disabilities, 6,180 permanent partial disabilities, and 52,200 temporary disabilities with loss of time of more than two weeks. The amount of compensation under the law (exclusive of medical benefits) for these 60,000 accidents will be in round numbers \$11,500,000, including nearly \$5,000,000 for deaths, nearly \$4,500,000 for permanent injuries, and over \$2,000,000 for temporary injuries. Or, translating again into figures per working day, compensation for accidents is being paid this year in New York state at the rate of nearly \$40,000 per day."

Enormous as these sums are, it was pointed out that they do not represent the total economic loss from accidents in New York state. To the \$11,500,000 would have to be added several other items, including the cost of medical benefits, of administering the compensation law, of administering insurance, and the wage and medical losses of injured employes which are not covered by compensation.

Quoting from an estimate prepared by the chief statistician of the commission,

Commissioner Lynch stated: "It appears that the total direct cost represented by wage loss, medical expenses and cost of paying compensation for accidents covered by the compensation law, reaches in this state \$30,000,000 per year at present. Reduced to a working-day basis, this means losses at the rate of \$100,000 every day."

A suggestive comparison was made between the economic saving which a very moderate reduction in accidents by safety work would mean and the cost of administering the department of labor. The total appropriations for the New York State Industrial Commission for the current year amount to \$1,139,784. If, therefore, as a result of the safety movement, the economic loss from accidents were to be reduced only 4 per cent, that would be a saving to the people of the state equal to the entire present cost of the commission, many of whose activities have to do with other matters than accidents. Or, again, if the number of accidents were reduced by 10 per cent, the saving in amount of compensation alone would equal the present appropriation for the entire department.

That a reduction of 10 per cent is quite within the range of possibility was clearly indicated by a review of the results accomplished by nine plants in as many different industries, which have been making vigorous efforts to prevent accidents. Of these nine industries, five firms had in two years reduced their accidents 40 per cent, and two had made a 50 per cent reduction. Another firm with longer experience had reduced its rate by 75 per cent in four years.

This congress, the first to be called in this state to discuss industrial safety, is expected to be the precursor of many similar meetings having as their object the elimination of the accident hazard.

FORTY-EIGHT-HOUR STANDARD ESTABLISHED

THROUGH the efforts of William T. Thompson, a member of the Arbitration Board under the Hart, Schaffner and Marx agreement in Chicago, and Judge Julian W. Mack, chairman of the Arbitration Board in the Dress and Waist Industry in New York, the strike of men's clothing workers in New York [see the SURVEY of December 30, 1916] was settled last week.

A conference was arranged between the American Clothing Manufacturers' Association, employing 30,000 men, and officers of the Amalgamated Clothing Workers. As a result of the conference the forty-eight-hour week was established and an advance in wages amounting to about 12 per cent was granted. These were the points for which the union was contending. The agreement makes the forty-eight-hour week the standard for the men's clothing industry of the United States. It has been

established in every important center for the manufacture of men's clothing, excepting Philadelphia, where a movement is now on foot to secure an agreement embodying a similar schedule of hours.

In New York agreements have not yet been reached with all of the independent manufacturers, but it is expected that there will be no delay now that the American Clothing Manufacturers' Association has signed up.

AMERICAN TUBERCULOSIS EXPERT TO FRANCE

TO apply to conditions in France the principles of the sanitary survey and administrative control of tuberculosis which he has so greatly furthered in this country, Dr. Herman M. Biggs, commissioner of health of New York state, sailed on the Kroonland, January 9. Dr. Biggs goes on leave of absence, the department work meantime being in charge of the deputy commissioner, Dr. Linsly R. Williams.

Initiative in this important survey has been taken by the Rockefeller Foundation, members of whose war relief commission in France saw urgent need for measures to relieve the situation there. Besides reports from their own agents, there have come to this country pleas from private voluntary organizations, and from a committee of French citizens in cooperation with their government. France has regularly a very high rate of tuberculosis, but as yet has no work comparable to the tuberculosis campaign in this country for education or prevention. The past two years have brought an aggravation through the exposure of hundreds of soldiers in trenches and through the crowded conditions of camps, that must promptly be reckoned with. To care for the soldiers sent home from prison camps or returned from the front demands a large and prolonged expenditure under expert supervision.

That Dr. Herman M. Biggs has been appointed to study conditions and to recommend measures is a tribute to his work in New York, both city and state—facts which you learn not from himself but occasionally from reports or conversations with those who have been for years associated with him. Dr. Biggs' work began just when the new bacteriological theory had reached this country and was being applied first to sanitary conditions and then more widely to methods of the control of public health. The first report made in this country on the sanitary condition of water supplies appeared in Massachusetts in 1870, at the request of the newly organized State Board of Health.

During the "wonderful decade" between 1885 and 1895, bacteriology as a science won its recognition in this country. Its possibilities for public health

were quickly recognized first perhaps by the founding in 1887, of the experiment station at Lawrence, Mass., where, authorized by the state legislature, the State Board of Health began its studies of purification of sewage and water. Michigan opened an experiment station the same winter at Ann Arbor; Providence, R. I., followed the next year with what is believed to be the first municipal laboratory of public health in the country. All these laboratories were devoted, however, to the sanitary rather than to the medical aspects of the science.

Then in 1892 cholera broke out abroad. A number of ships from Hamburg were detained at the port of New York. It was Dr. Biggs who then suggested examining the waiting immigrants by the new methods of bacteriology to detect the cholera cases or carriers among them. This led to the opening of a "division of bacteriology and disinfection" in the Department of Health in New York city, later renamed, with the modification of scientific method, the bureau of laboratories.

This was the first municipal laboratory devoted primarily to diagnostic work. Quickly examinations for diphtheria were introduced and also those for tuberculosis. Now a staff of over 200 in this one laboratory examines over 75,000 diphtheria cultures annually, in addition to the hundreds of other tests for tuberculosis and practically every other communicable disease.

In administrative control also Dr. Biggs has been a leader. In 1894, tuberculosis was not even a reportable disease. Steadily the influence of his scientific information and practical experience has been felt until legislation, municipal and state, not only exists but is enforced. And active means of controlling this disease are studied from the angle of every division in the health department and advanced by all the resources under their control.

A BICYCLE SWEEP

THIS velocipede street-cleaner was snapped on the Place de l'Opera, a thoroughfare as thronged as Fifth avenue. The "white wings" of Paris fly along on up-to-date bicycles, with a revolving brush attached in the rear.

SURVEYING THE HEALTH OF HOOSIER FARMERS

WITHIN the last few years health authorities, previously preoccupied with municipal sanitation and federal quarantine and regulation, have awakened to the fact that rural districts present their own peculiar sanitary problems. New York city's death-rate, after a long decline, finally dropped below that of the rest of the state. Such facts as this gave rise to the questions, Is there something the matter with the country districts? What should state health departments do about it?

While the comparison of vital statistics for city and country is a hazardous undertaking, even a superficial examination showed that people were dying of preventable diseases in the country and that an opportunity for preventive work existed.

A number of state departments of health have sent inspectors through the country to observe conditions on the farms. The inspectors are furnished with score-cards and the results expressed as sanitary surveys. In the nature of the case, very imperfect statements must be taken as to the health of the family and the standards for measuring other conditions are likely to be relative rather than absolute. Still, such pioneer work visualizes conditions as they exist on the farms and brings to light certain insanitary conditions.

An example is the rural sanitary survey of four Indiana counties, made by the Indiana State Board of Health during the summer and fall of 1915. Every house in the rural part of the counties was visited and the results were entered under ten subjects on a score-card: site, sanitary conditions, house, cellar, ventilation, water-supply, sewage disposal; barn, barnyard, pig-pens, coops; disposal of manure, health of family. Each subject was scored on a scale of ten, the maximum total score thus being 100. The criteria used in scoring were chiefly cleanliness, neatness, decency and comfort. A farm scoring less than 75 per cent was considered insanitary. On this basis, of 1,374 farm houses inspected, 84 per cent were insanitary. The average score was 53.

Perhaps the most important results were those having to do with water supply, sewage disposal and disposal of manure, the scores usually being in each particular deplorably low.

Altogether the survey of these counties, which are stated to be typical of the rural districts of Indiana, points out sanitary weaknesses in many rural homes and shows ways in which farm life may be made more healthy and attractive. That the farm needs to be made more attractive is emphasized by the fact that during the last ten years the population decreased in three of the four counties.

Book Reviews

SEX-EDUCATION

By Maurice A. Bigelow, M. D. The Macmillan Company. 251 pp. Price \$1.25; by mail of the SURVEY, \$1.35.

Boy
and
Girl

This is a book on education by an educator. Professor Bigelow is a trained biologist with a distinctly judicial mind and with the ability of a scientist to recognize the importance of proven facts as compared with mere assertion. He

has been associated with Morrow, Balliet, Eliot and Keyes in the development of sex education, and has been in a position to obtain the views of trained women in close contact with the problem. Clearly, his equipment is unusual.

The book will be discouraging to those who are opposed to sex-education on grounds of ignorance or mere prejudice. There is here shown great familiarity with all the objections; the validity of some is admitted, the irrelevance of others is proved; it is well balanced, never extravagant.

In the chapter on The Meaning, Need and Scope of Sex-Education, Professor Bigelow takes a broad view. He realizes that sound teaching in the home, though eminently desirable, is to a considerable extent impossible. He points out that teaching in the schools must be begun with caution, always with the cooperation of parents, and that it must continue from childhood to maturity.

In discussing the Problems for Sex-Education he realizes that it is first essential that parents should know the reasons for the need of instruction. He has more confidence in the results attainable by legislation than experience of others has proved sound.

The discussion of illegitimacy and the extent to which the whole problem is influenced and clouded by ignorance is particularly interesting. It is most encouraging to find here a caution in regard to the excessive stressing of immorality as a part of teaching. There is clear appreciation of the fact that teaching does not consist in simply imparting knowledge.

His chapter on the Educational Attack on these problems shows careful work. No claim is made that education is likely to work miracles or prove a cure for all social ills, but it is advocated as an advance certain to produce benefit. He points out that one of the most im-

portant aims of sex-education should be to develop a serious, scientific and respectful attitude toward the problems of human life. Further, that it should give a sufficient personal knowledge of the mechanism of the sexual apparatus to serve as a basis for a healthful and efficient living. The development of personal responsibility in regard to social, ethical and eugenic aspects of sex is interestingly brought out; and finally, that an elementary knowledge of the destructive character of venereal disease should be taught as a part of the general knowledge of the protection of the community against infectious disease. On this latter topic it is properly pointed out that only the essentials of knowledge are here necessary and that details are not only undesirable but may be harmful.

As might be expected, his views in regard to the characteristics essential to a teacher of sex knowledge are extremely valuable. Undoubtedly this has been a considerable stumbling block, not only in the minds of those who tended to disbelieve in sex-education, but also in the practice of those who were entirely cordial to such teaching. Unless competent teachers can be supplied no instruction should be undertaken. Children may be properly taught, and best taught, by women. At the adolescent period the teacher should be, with rare exceptions, of the same sex as the pupil, and it is properly insisted that men, even though qualified physicians, should not undertake the instruction of girls or young women.

Some difference of opinion may properly arise over his view that unmarried women are likely to prove satisfactory teachers for adolescent girls and young women. Certainly, unless teachers can discuss the subject quite without embarrassment, unless they are known to be unusually normal people, they should probably be discarded. Great balance is clearly an essential not to be found in the average man or woman.

Four chapters are devoted to the discussion of the teaching essential for the different groups. In the pre-adolescent years an important effect of such education is in the protection which it gives against faulty information and bad teaching. Professor Bigelow's discussion of education of boys and men in regard to manners with the intent of developing chivalry, with regard to the relation of dancing to sexual excitement and along somewhat the same line in regard to women's dress, is interesting but not entirely convincing. He is more hopeful

than some of us of the results to be obtained, and one might differ from his view that modern fashions in women's dress, though obviously intended to create sexual disturbances, is a problem which should be met by educating boys to resist it rather than by developing public opinion to discountenance it. He lays too much stress upon the responsibility of the male and too little upon the responsibility of the female. I should entirely agree with his view that the unprotected girl is entitled to almost as much knowledge of the snares and pitfalls of the world she lives in as is her brother. Though the nature of her temptation is different, protection, if it comes at all, will only come through knowledge of the facts and strengthening of moral fiber to meet it. More stress might have been laid upon the importance of teaching young women in regard to their responsibility toward the opposite sex. There is altogether too much assumption that all the sexual evils of the world arise from the uncontrolled wickedness of man and too little appreciation of the fact that the strain more or less intentionally put upon young men by women, not always young, is quite beyond anything which normal mankind can be expected to withstand. Blame in this regard should be more fairly apportioned if we are to avoid the sex antagonisms, of the existence of which Professor Bigelow is fully aware. His final confession of faith in regard to sex education shows the breadth of his grasp of the subject.

In retrospect, we may properly say that this book fairly represents the soundest attitude of the teacher of sex problems. Its logic is unanswerable except either by a denial of the necessity for such instruction or by a denial of the possibility that any education addressed directly to the subject can be of benefit.

HUGH CABOT, M. D.

EDUCATION AND SOCIAL PROGRESS

By Alexander Morgan. Longmans, Green and Company. 252 pp. Price \$1.20; by mail of the SURVEY \$1.28.

Reforms
for
Schools

The relation of education to preventive philanthropic work is the peg upon which Mr. Morgan hangs a loosely connected series of chapters on education. He sets forth with a brief analysis of the pathological conditions

of poverty, vice and crime, and the exploitation of the weak by the strong. For these conditions, defective heredity, defective environment and defective education are responsible. The chief remedial agent is educational reform.

In this setting, education is discussed primarily from the vocational stand-

point. The importance of a practical education, an education that shall turn out productive workmen, seems to be uppermost in the author's mind. This treatment results in a much narrower exposition than the title would indicate, or than is set forth in the author's preface. The rôle of education in preparing for the use of leisure time, or for the general opportunities of citizenship is but lightly touched.

In view of the recent output of books on education, this is one that will hardly appeal to the American who has more than an incipient interest in the problem. It may well happen, however, that Mr. Morgan, who is principal of the Provincial Training College, in Edinburgh, will find a group of readers in communities where educational experiment is not active or where orthodox educational theories have not been sharply challenged.

EMILIE J. HUTCHINSON.

THE LIFE AND TIMES OF BOOKER T. WASHINGTON

By B. F. Riley. Fleming H. Revell & Company. 301 pp. Price \$1.50; by mail of the SURVEY \$1.62.

BOOKER T. WASHINGTON—BUILDER OF A CIVILIZATION

By Emmett J. Scott and Lyman Beecher Stowe. Doubleday, Page and Company. 330 pp. Price \$2; by mail of the SURVEY \$2.12.

We have often been told that we do not know the real George Washington, the first great American; that his admirers made him into a myth, obscuring his personality. The same thing is likely to happen to the second

great Washington, save that he has left us, in *Up From Slavery*, a vivid account of his childhood and youth. The two biographies that have appeared since his recent death, November 14, 1915, contribute little new to our knowledge of the man and his work.

The first to appear is by a southern white man, B. F. Riley, who is in sympathy with the aspiration of the Negro for fuller self-expression in the South. It furnishes some new data regarding Washington's early privations. Its style is prolix.

The official life by Emmett J. Scott and Lyman Beecher Stowe starts where Washington's own book, *Up From Slavery*, ends. It tells of his founding of the Negro Business League; of his exhausting efforts to raise funds for his school—a task that occupied two-thirds of his time; and of his intimate relations, both with distinguished white men and with simple colored folk. The chapters descriptive of Tuskegee are pleasantly

written, but contain little that cannot be found in Washington's own writings. Two chapters attempt, not very convincingly, to show that while Washington was always diplomatic and kept on friendly terms with the white South, he was as radical in his utterances as his colored critics among the talented tenth. Some delightful anecdotes brighten up a book that on the whole impresses one as hastily put together, and that fails as a work of reference since it contains no index.

The authors, however, tell us in their preface that this is not a biography in the ordinary sense, and that the exhaustive *Life and Letters of Booker T. Washington* remains still to be compiled. We fear, however, that the promised work will also show us, not the true Washington, but the demigod, a figure set up for worship, and one that, like the figure of the first Washington, will soon become a myth.

What a story it would make could we see this great African-American as he really was! Intensely practical; worshipping success; impatient of all education that did not immediately relate itself to the life of the recipient; filled with a humor that overflowed in his speech and gave us a wealth of good stories surpassed only by Lincoln's; giving himself so unstintingly to the service of the Negro race that he died worn out at fifty-nine; tenderly affectionate to old people and little children; a dictator, desiring not co-workers but subordinates; ambitious; above all, human. We shall never know this "father of his people," but his work will increasingly be recognized and honored with the years as that of one of the foremost educators of the world who brought life-giving, practical knowledge to the poorest and the most despised.

MARY WHITE OVINGTON.

JEWISH DISABILITIES IN THE BALKAN STATES

By Max J. Kohler and Simon Wolf, American Jewish Historical Society. 169 pp. Price \$1.50; by mail of the SURVEY \$1.61.

Though primarily intended as a contribution to the literature on Jewish history and not written in a form which will attract the general reader, the present volume is likely to help in formulating the policy of this country concerning European reconstruction after the present war. Its scholarship and authority give it unusual weight as a brief for American intervention on behalf of the oppressed Jews in Rumania and other Balkan states.

The authors are able to show, from a wealth of historical documents, that

the United States government, the Monroe doctrine notwithstanding, has for over seventy years—in fact, since the action taken on behalf of the Jews at Damascus in 1840—consistently used its influence for the benefit of the Jewish race wherever it was suffering from persecution, whether American interests were involved or not.

It is hardly necessary here to refer at length to the dangers which threaten the citizenship and religious liberty of Jews at the end of the present war. These dangers must be averted, humanitarian considerations quite apart, to prevent an unmanageable flow of migration to this country which is bound to occur unless the United States and the liberal powers of Europe succeed in securing for the Jews security in the territories which they now occupy.

In Rumania especially, in spite of the express agreement of the powers at the Berlin Conference of 1878, reaffirmed from time to time, the Jews are not recognized as citizens; yet, not being subject to any other sovereignty, the state compels them to render military service. The plight of the Jews in Russia is universally known and pitied.

Another problem is the possible further reduction of Turkish territory in which Jews form a considerable part of the population. While there is much testimony that under Turkish rule the Jews enjoy practically complete immunity from persecution, history shows that as soon as a state dominated by the Greek church obtains sovereignty over such territory, their security and freedom are menaced.

The guarantees of the past, especially the articles of the treaty of Berlin, for the protection of the religious and other liberties of minorities in the Balkan states have been useless because their enforcement remained subject to diplomatic relationships which covered a much wider field of statecraft. Thus, Emperor William I. assured Prince Karl Anton of Hohenzollern-Sigmaringen, father of the first king of Rumania, that he had no intention of holding him to the commitment concerning the Jews of Rumania forced upon him at the Berlin conference by his own chancellor, Prince Bismarck, among others. Nor have any of the other signatories been in a position—though some of them have tried—to bring the non-enforcement of that agreement to an issue. Similarly, lukewarm interventions on behalf of distressed Judaism in Greece and other Balkan states have never led to aggressive international action, because each nation had so many other interests at stake that it could take no risks on behalf of a purely humanitarian cause.

It seems that in the international conferences for European organization, after peace has been concluded, it will rest with the United States to throw the

whole weight of her influence on the side of the religious and racial minorities which will not be directly represented. And this influence, to be of permanent value, will have to be exerted in the direction of securing a permanent machinery, independent of the political constellation at any one time as regards alliances and rivalries, for enforcing the international decrees.

BRUNO LASKER.

CULTURE AND WAR

By Simon N. Patten. B. W. Huebsch. 62 pp. Price \$6.00; by mail of the SURVEY \$6.50.

Germans, pro-Germans and neutrals who wish to remain on good terms with the German cause, should read and master Culture and War. It is much the most convincing and seductive interpretation of Kultur that

has appeared in English. If other propagandists had presented the German conception as well, they would have made more converts and fewer enemies.

In this little book of sixty pages Dr. Patten is thoroughly himself—the economist of The Dynamic Economics and the social economist of The New Basis of Civilization. Germany and her Kultur furnish the text for reiteration, in a new and attractive form, of his philosophy of social progress.

Dr. Patten does not believe that a long peace is the worst of evils; that prosperity softens the race; that nations have their inevitable period of youth and decay; that the unfit breed more rapidly than the fit; that we are in serious danger of race-suicide; that we must seek a moral equivalent for war in economic hardships, struggle and disagreeable toil. He does believe in activity, in health-culture, in social changes which will insure a certain minimum of income, much larger than the day laborer now receives. He believes that the increase of productive power already permits the attainment of this minimum, that a new social level is now possible. Character is a result of longevity, health, income and knowledge, not of particular biologic traits.

Culture and War, however, does more than reassert these fundamental ideas of Dr. Patten's earlier writings. Along with its sympathetic interpretation of the new German philosophy there is an analysis of German thought—what the author himself calls "correcting and completing" it—which sharply differentiates the elements which may become a world philosophy from the national, accidental and obnoxious elements. War and struggle are foreign to corrected German

thought. Service, conformity to natural law, and growth are the basic ideas of this true civilization for which the world will perhaps one day acknowledge indebtedness to Germany as freely as to the Jew for religion, to the Greek for intellectual culture, and to the French for democracy. In each case national elements have had to be eliminated. In this instance, culture and war, Kultur and Krieg, must be completely divorced.

Dr. Patten is as strongly opposed to "end moralities" as any pragmatist; as enthusiastic for the "world pulse" as any Bergsonian. Yet he is distinctly himself, a vigorous, original, thought-provoking, modern American thinker. No German would say just the things that Dr. Patten, with his British and American inheritance, says; but any German of the wiser sort might wish that he had.

Americans of British stock and others who sympathize with the cause of the Allies, if they do not mind receiving a gentle shock from a battery in which there is not so much as a chemical trace of malice or bigotry, will find reading Culture and War a pleasant and refreshing occupation.

E. T. D.

THEIR TRUE FAITH AND ALLEGIANCE

By Gustav Ohlinger. Macmillan Company. 124 pp. Price \$5.00; by mail of the SURVEY \$5.50.

In decorated boards of red, white and blue, the Macmillan Company produces a series of fifty-cent volumes dealing with our national problems. One of them, by Gustav Ohlinger, is called Their True Faith and Allegiance. Owen Wister (who is himself the author of another volume of the same series, entitled, The Pentecost of Calamity) writes a preface exhorting "all Americans who believe in union, in Lincoln and in liberty" to read Their True Faith and Allegiance not once but two or three times; and Theodore Roosevelt in a public address tells people to read both Mr. Ohlinger's book and Mr. Wister's. Both pieces of advice are good.

The possessive pronoun "their" seems to refer to disloyal hyphenated German and Irish-Americans. Neither Mr. Ohlinger nor Mr. Wister has any patience with them, and both gentlemen are in such deadly earnest that they see no necessity for mincing words or sparing the feelings of those whom they attack. Mr. Ohlinger is especially severe on the *Fatherland*, the National German Alliance, its bulletin, and the German press in general, and the campaign for compulsory teaching of German in the schools. His little book is chiefly valu-

able, however, for its brief historical sketch of the persistent attempt at the Germanizing of the United States during the past century.

It is an anti-German campaign pamphlet rather than an impartial review, but it is not less interesting and hardly less profitable reading on that account. Much of the German propaganda in this country has been such as to invite just such rebuke.

E. T. D.

THE CHURCH ENCHAINED

By Rev. William A. R. Goodwin. E. P. Dutton and Company. 372 pp. Price \$1.25 net; by mail of the SURVEY \$1.40

The spectacle of war-ridden humanity is deepening the Christian consciousness and quickening the Christian conscience within the divided churches of Christendom. Challenged by the supreme obligation and opportunity to serve

the distracted peoples, the church finds itself, according to this author, "enchained" by its divisiveness, and therefore incapable of meeting the supreme emergency of her whole history. The links of the chain which fetters her freedom to serve are defined to be the logic of her formulas, which restrains the liberty of her life; the enjoined conformity to her orders of ministry and observance of sacraments which circumscribe her real catholicity; the exclusiveness of her emphasis upon the individual, which obscures and weakens her corporate consciousness and power.

The emergency created by this war, therefore, calls upon this loyal son and clergyman of the Protestant Episcopal church to plead for the "church of the reconstruction," and to urge his own church to become such by being comprehensive enough at least to confer and cooperate with other Christian bodies. However one may sympathize with his plea and respect the dignity and devotion with which he urges it, it seems almost pitiful to the average reader that the author is constrained to turn about from facing needs as wide as the world and deep as humanity to argue with his brethren who fear for the validity of their orders in case their church should cooperate with others.

In the face of a world at war it seems strangely incongruous that such an impassioned summons upon the church to meet the greatest emergency of modern civilization should be halted to plead for official permission to free this church to cooperate with others. But he magnifies his plea for the freedom of his own and all other churches at least to confer and cooperate with each other by showing how far the effect of this united ef-

fort would transcend the groundless and belittling fears of invalidating distinctive tenets. This conference and cooperation he suggests might begin in the Episcopal church by having its missionary and educational boards join in the councils of other religious bodies to provide the medical and educational service of the church on their foreign mission fields. It has already proved practicable for the Anglican and Baptist missions of Great Britain to cooperate in China with the American Congregational and Presbyterian missions in the educational work and equipment of the Shantung Christian University. While each of these communions is reported to be carrying its full dogmatic system into this university, the result is said to be "not discord but large and catholic concord."

To obviate the objections of those who are not willing to recognize, even to this extent, the parity of other ministering orders, the author urges the Episcopal church to be comprehensive enough to permit and regulate this larger cooperation of those within it by providing a conference and cooperative commission to supervise and promote the affiliation of such churchmen as desire to join in federated efforts. While regarding such federations as the Federal Council of Churches to be more temporary expedients than permanent adjustments, he considers these, nevertheless, as more promotive than preventive of that organic unity of the church which is the further quest of many in the Episcopal church.

Not since William R. Huntington published his volumes, *The Church Idea* and *A National Church*, has such a frank and fearless plea been made for cooperative federation as is urged from every angle in this earnest and able volume. If a divided Christendom made this world war more possible, not the least of the few good things to be rescued from the war's evils may be a more reunited church, federated for cooperation, if not as yet combined organically.

HOME RULE

To the Editor: A friend calls my attention to the possibility of misconstruction of a sentence in my article on Home Rule published in the SURVEY of December 2. What I said was that "the civil war settled adversely the question of independence for the southern Confederacy against the all but unanimous desire of its people." I should have said "of its electorate," and even this is perhaps too sweeping. I have no desire to overlook or minimize the union sentiment of Kentucky, North Carolina and other states, and still less to seem to deny the right of southern Negroes to be included among the southern "people." I meant only that the cause of the confederacy was the popular cause in the South and that, nevertheless, the overthrow of the confederacy did not mean permanently an end of home rule in the South.

E. T. D.

UNCENSORED

To the Editor: I have noticed lately in many towns that the moving-picture shows are cutting out the censored films and throwing upon the screens arguments against any censorship. As a result I have observed that the public is being regaled with a series of pictures of a more insidious and demoralizing type than existed even before there was any censorship. In two important towns recently I have seen detailed portrayals of rape whose obscenity beggars description. In one picture a "distinguished American sculptor" is represented as committing rape on his model and a second attempt on another model. Aside from the obscenity of this exhibition it teaches a falsehood, since my acquaintance with American sculptors has convinced me that their standards of morals are as

high as those of any other profession, and I have never heard of an attempted criminal assault by one of them.

I hope you will reopen at once the question of control of picture shows, and without delay give the public some information in regard to the film companies that specialize in obscenity.

Norman, Okla.

RUSSIAN PRISONERS

To the Editor: I have seldom read a brief article, evidently well intended, that contains probably a larger amount of misinformation than the one entitled *Hungry Russians in Germany* [the SURVEY for December 23]. First of all the Russians so much interested in reading, is entirely a misrepresentation of a Russian prison camp where 80 per cent of the prisoners do not know how to read at all. The only way the Germans could improve the physical condition of the Russians was by putting them through all sorts of drills which gave their mind and body something to do.

I was in a great many prison camps a year ago last summer and know what I am talking about. At that time they were better fitted physically than they had ever been at home. I never saw men more physically fit than the Russian prisoners. They were also receiving food from Russia, dried bread that had been three months on the way and not half as good as they could get in their own camps.

The story regarding the garbage cans and crumbs reminds me of the fact that if they had been a day or two on the march and although good food might be waiting them in an hour or two, they would rustle the garbage cans for food.

I think that is about all there is to that story. Of course, I presume the food program is more acute in Germany today than it was a year and a half ago. But I went to Germany expecting to find everybody hungry, and there has been so much misrepresentation along this line that I am skeptical as to anything they say concerning hunger now.

L. M. POWERS.

Gloucester, Mass.

THE WOMAN'S BUREAU

To the Editor: In the article on The Solid Front of Labor, December 2, 1916, I notice that you make reference to the resolution to create a woman's bureau in the United States Department of Labor. This resolution was introduced by Delegate Fitchie, of the Illinois State Federation of Labor. This resolution was sponsored by Elizabeth Christman, of the Glove Workers' Union, and Mary Anderson, fraternal delegate of the National Women's Trade Union League. Miss Christman and myself were watching this resolution very closely, but there were members on the Education Committee, to whom this resolution was referred, who worked against us very successfully. We asked repeatedly for an opportunity to be heard before this committee, but were told that the committee had not yet reached this resolution.

We heard afterwards that meanwhile Mr. Ferguson, secretary of the committee, under instruction of the Education Committee, conferred with Grant Hamilton to find out about this bill. Mr. Hamilton said it was a bad bill and was aimed to create a job for some woman other than a trade unionist.

The resolution was taken up in the committee late on Thursday evening after eleven o'clock, and, without giving us a chance to be heard, was reported to the committee as follows: "Resolutions Nos. 38 and 79 were considered by this committee, both relative to the same subject—the establishment of a woman's bureau in the federal Department of Labor. Your committee has been informed that the machinery now exists in the Department of Labor for the establishment of this bureau and therefore it makes non-concurrence in both resolutions." The report of the committee was adopted. The committee reported it in such a way that it went unnoticed by us. When it was discovered that it had passed we protested vigorously. The committee had a rehearing Friday night, and again we were not told about the hearing. Mr. Gompers appeared to be heard in favor of the resolution. We were told by the secretary of the education committee that Mr. Gompers, in his remarks, said that the committee's action in turning down the resolution was a slap at Secretary of Labor Wilson.

The first thing next morning Andrew

Furuseth made a motion to reconsider the report of the committee and refer the whole matter to the executive council of the American Federation of Labor. The motion was lost, and that was the end of it in the convention. Mr. Valentine, chairman of the committee, was very much disturbed when he understood how serious it all was and assured us that just as soon as the executive council meets he is going to take the matter up with them.

MARY ANDERSON.

[Organizer, National Women's Trade Union League]
Chicago.

MR. RUSSELL'S OPEN LETTER

To the Editor: Bertrand Russell, Englishman, virtually recognizes the requirement involved, and by the Allies declared, demanded by Germany's attack upon civilization. He believes the destruction of Prussianism impossible and therefore urges [the SURVEY for December 30] a patched-up peace by some treaty with the unconquered Hun, while in the words of Kant, "No treaty of peace is worthy of its name, if contained therein are the hidden germs of future war," and of Guicciardini, "The making of peace is to be desired and regarded as a blessing, when it can insure us against the suspicious designs of our neighbors, when it creates no new danger and brings the promise of future tranquillity. But if the making of peace is to produce the opposite of all this, then for all its deceptive title it is no better than the continuation of a ruinous war."

President Wilson chooses to ignore the Allies' requirement, declared at the first irruption of Germany, that Prussianism must be crushed and that if the Kaiser continues the war until he has "no more" subjects willing to be sacrificed, while it may be a dreadful continuation, it is not to be avoided if the end is only thus to be attained. Such slaughter of our own sons and brothers we witnessed and the outside world witnessed, through the war between the states, when the destruction of slavery required it, as now the overthrow of militarism seems to demand a similar tremendous sacrifice.

ERVING WINSLOW.

[Secretary, the Anti-Imperialist League]
Boston.

To the Editor: The letter of Bertrand Russell is fittingly answered by the recent reply of the Allies to Germany's so-called peace proposal. Why, as of old, do people cry Peace! Peace! when there is no peace? We all lament the terrible disaster that has overtaken Europe, for which in part we are also to blame. Let us put our house in order lest we, too, come to grief by our lack of preparation.

WILLIAM P. WHITE.

Lowell, Mass.

MORE'S UTOPIA

To the Editor: There is no reason why the SURVEY need exact scholarship and historical sense from its contributors where the matter in hand requires neither the one nor the other quality. But, even in the SURVEY, even in these days of a lack of scholarship, a lack of historical knowledge and a lack of general perspective together with an amazing complacency in these *lacunae*, it is distasteful to read [the SURVEY for December 2] of the opening of the sixteenth century in Europe that "religion offered scholars a theology of mummified sayings by church fathers, a Bible mutilated and overshadowed by ancient commentaries. It offered the common people the privilege of kissing the relics of the saints and of buying pardon for their sins."

This sort of thing did very well in England—and in New England—before the days of Gairdner and Gasquet, and in Germany before the days of Janssen, Denifle and Grinar, but, making all allowance for the slowness of percolation of facts, I really think that before anyone comments on More's Utopia, they ought to know a little more about his time than the fair author of your article seems to know, if I may judge by the remarks I have quoted. Don't you think so yourself?

THOMAS F. WOODLOCK.

Mt. Vernon, N. Y.

To the Editor: In reply to the above letter, I offer the following statements:

First, writing as briefly as I have done of the religious situation in Europe at the beginning of the sixteenth century, it was impossible to give any modifying exceptions to the generalization in the main true. Of those modifying exceptions I am quite aware, especially of the exceptions in some parts of Germany.

Second, I find nothing to contradict my interpretation of the known facts of this period of history, either in the secondary works referred to by Mr. Woodlock (I wonder if he has really read with care Gairdner's last important tome, Lollardy and the Reformation), or in the contemporary material from which I try to get my "historic sense." May I suggest a reading of The Letters of Obscure Men (German), the letters of Erasmus, Colet and More, a study of the effect of Colet's lectures at Oxford on the students, as throwing light on what religion had been giving scholars, and a careful pondering over the effect of the too-hastily pushed Reformation in England during Edward VI's reign to understand what religion had been giving to the common people.

Third, it might be interesting to Mr. Woodlock to read the remarkable chapter in Professor Allen's (University of London) book, The Place of History in Education which embodies three different ways of writing on the Reformation

using substantially the same facts. These facts, passed through three minds with very different intellectual and emotional preassumptions, bring forth three quite different interpretations. The same point might be illustrated from a comparison of Mr. Gairdner's earlier and later historical writings.

MARY BREESE FULLER.

Fredonia, N. Y.

HEALTH INSURANCE

To the Editor: The *Ohio State Medical Journal*, in its December issue, quotes about two pages, which, it states, are taken from a report by Dr. Alice Hamilton in the *SURVEY* for November 11. This *SURVEY* article purports to cover certain papers and discussions concerning health insurance at one of the meetings of the American Public Health Association in Cincinnati. The last paragraph of the quoted article refers to what I was presumed to have said, but is, indeed, a considerable distortion and a surprise to me, the last sentence especially being obnoxious. I quote it direct:

"Dr. E. R. Hayhurst, of the Ohio State Board of Health, was also in favor of placing the medical service connected with health insurance in the hands of salaried men who ought to work in close connection with the institutions now existing, the hospitals and dispensaries. If this was not done, we might end in providing the wage-earner with poorer medical service than he now obtains, for we should be taking him away from the modern dispensary with its specialists and its diagnostic laboratories and throwing him back into the hands of the mediocre practitioner."

I certainly never made any such statement as this. May I, therefore, be allowed to restate in your columns what, in essence, was the theme of my remarks at that time (unfortunately, no stenographic notes were taken covering this discussion). I was called upon by the chair (Dr. Hamilton) to say something upon the subject under discussion, and spoke about as follows:

"I do not wish to be taken as qualifying as an insurance expert and I have come to no definite conclusions concerning any phase of this question of health insurance, and wish to limit my remarks solely to the single feature of the proposed conduct of the medical service. I am of the opinion that one way to handle this would be through dispensaries and hospitals similar to the organization plan of free dispensaries and hospitals which now exist. The ambulatory case should go to the dispensary and the bed case should be taken care of in the hospital. A great increase in such dispensaries and hospitals would, of course, be necessary and groups for that purpose would have to be formed. In place of the free dispensary would be the pay dis-

pensary, since everything is to be paid for. Physicians might be employed by these dispensaries and hospitals upon a salaried basis. By such means adequate services could be gotten to the workers covered in the insurance plan, but it must not be forgotten that a definite incentive must be given to the physician to do good work."

I may say, *a propos*, that I am very much more in favor of the panel system proposed than any salaried service, except for medical supervisors, and district physicians or those who work for dispensaries or hospital units.

I regard the statement above, which seems to have first appeared in the *SURVEY*, as due to the occasional mental trait of reporting incidents negatively instead of positively and without any ill intentions whatever; but since not all persons who are hit may so construe such instances, and the same therefore gives readers the wrong impression of me, I respectfully request that you give my communication space and perhaps comment in your columns in a very early issue.

Knowing that we all have at heart the best interests of the sick, those who are to treat them, and the best means to accomplish this, I beg to remain, Yours very respectfully,

EMERY R. HAYHURST

[Department of Public Health and Sanitation, Ohio State University]

Columbus.

[The best interests of the sick, as Dr. Hayhurst says, and the prevention of sickness are the motives not only of the discussions at the Cincinnati meetings and of the *SURVEY*'s report of them, but of the whole vital matter of health insurance. We welcome this statement of his position and the opportunity to print it.—EDITOR.]

ANOTHER GOAL

To the Editor: Instead of using scarlet danger-signals I have dropped a mourning veil over the use of words ending in *tion* by our beloved runners toward New Year goals [the *SURVEY* for December 30.] Precisely because so many of these words are unavoidable—e. g. *probation, protection, inspection*—in our semi-technical columns, surely the utmost patient ingenuity ought to be applied to finding, and using, substitutes for them wherever this can be done. *Education, instruction* are ugly words. Why do we never substitute for them *teaching* used as a noun?

Why in Heaven's name does the Catholic University say "utilization" for "use"? I found I could not get on without three, *notion, corporation, protection*, but in future I shall refrain from "extending protection"!

I think one lonely contributor "handed" his problem instead of solving it, and I cannot put my finger on that act

of clumsiness at this moment. And please do tell, in the next issue, what are "resident states"?

In general it is a good, sound, positive, helpful program collectively considered. And it will be carried out far more easily as its advocates gradually come to write English. Yours hopefully,

FLORENCE KELLEY.

[Secretary National Consumers' League] New York.

JOTTINGS

NEVADA has been added to the states which face a dry campaign. A petition bearing 7,821 signatures—more than twice the necessary number—has been filed, attached to a prohibition initiative, which goes first before the legislature, and then, with any amendments or substitutes added, to the people of the state. The petition has been worked up quietly by a committee acting on the suggestion of Bishop Hunting.

RAY PERLMAN has been appointed executive secretary of the girls' branch of the Jewish Protectors and Aid Society, with offices in the Children's Court Building, New York city. Miss Perlman was formerly supervisor for the Bronx and Harlem districts of the United Hebrew Charities, prior to which she spent some years as field agent for the New York section for the Council of Jewish Women.

IN FIFTEEN weeks following its organization the New York Committee on After Care of Infantile Paralysis Cases reports that "5,773 children have been referred to the committee by the Department of Health, and 5,504 are now under treatment or otherwise satisfactorily accounted for; 51 have died since they were discharged from quarantine, 30 have left the city, and the nurses have not been able to locate 152; leaving 269 not yet under treatment."

THE old-time experience meetings, described in the quaint language of the day as "assemblies of religious persons who meet for the purpose of relating their experience to each other," have been adopted by the Committee of Home Economics of the National Special Aid Society, New York city. An experience meeting, at which all who attend will have "opportunity to ask the best-known experts any question concerning the problems of the home," will be held at the Hotel Astor January 23. The chairman is Annie Nathan Meyer, 259 Fifth avenue.

A MAGAZINE which aims to be "educational but not soporific," called the *World Court*, A Magazine of International Progress, is now being edited by Frank Chapin Bray and published by the World's Court League, Inc., Equitable Building, New York city. The magazine will report all active peace organizations and movements, and will try to suggest opportunities for effective concentration of effort. In the December number William H. Taft writes upon "What the League to Enforce Peace Proposes," and William Jennings Bryan responds with four objections to these proposals.

STANLEY H. HOWE, for a year and a half secretary of the Department of Public Charities of New York city, has been advanced to the position of third deputy com-

missioner. Mr. Howe is twenty-six years old and the youngest officer of this grade in the city's service. Mr. Howe assisted in organizing the Public Charities Association of Pennsylvania and later organized a committee of this association for western Pennsylvania. His first experience in social work was gained in the service of the New York Association for Improving the Condition of the Poor.

THE New York State Department of Health has issued a small pamphlet on Amusements for Convalescent Children, prepared by William Byron Forbush, of the American Institute of Child Life. The manual aims to relieve overtaxed mothers and nurses who better understand physical care than play devices, and at the same time to employ the play interest of children during convalescence. The plays are selected with full regard for the limitations of a sick child, and aim to avoid undue excitement and activity, though fully providing for the interest of the little invalid.

WHILE the government clerks and the American Federation of Labor have joined in an effort to secure the passage of the Nolan bill, granting a minimum wage of \$3 a day to federal government employes, another means of dealing with the high cost of living is suggested by Senator Gallinger. He has introduced and secured the adoption of resolutions in the Senate instructing the secretaries of war and of the navy to report on the feasibility of extending to other government employes the privilege now enjoyed by army and navy officers and employes of buying food supplies from government depots.

DECLARATION of a boycott against the Associated Charities of the city of Washington by the Piney Branch Citizens' Association, because members of the District of Columbia Board of Charities favored the building of a modern municipal hospital on a site purchased by Congress for that purpose sixteen years ago, has again drawn attention to the lack of a great hospital and clinic in the national capital. The relatively obscure citizens' association which made this attempt at retaliation upon the advocates of early construction of the hospital plant exemplifies the fears and bitterness shown in most American cities when hospital locations are proposed.

CHENEY C. JONES, for three years general agent of the Cleveland Humane Society, has resigned to become superintendent of the Associated Charities of Detroit. During his incumbency the Humane Society greatly increased its staff and service, added a Home Finding and Child Placing Department, which acts as clearing-house for Catholic, Protestant and Jewish orphanage children, and occupied larger and better quarters. Mr. Jones will be succeeded in Cleveland by James E. Ewers, assistant counsel of the Massachusetts Society for the Prevention of Cruelty to Children in Boston for the last eight years. Mr. Ewers is a graduate of Yale College and Yale Law School.

THOUGH early returns from the election in Missouri showed that all three constitutional amendments had been defeated, the official compilation now shows that the amendment to authorize pensions to the blind was carried by a large majority. The amendment permits the legislature to adopt any form of pension system it chooses. This is the second time the proposition has been submitted to the people. It is estimated that there are about 500 blind who will be provided for. Already Missouri had created a state Commission for the Blind, which, with a fund of \$25,000, half of which was raised

by private subscription, is providing employment and rendering other aid to the needy blind.

EDUCATORS and religious leaders will get together to consider the religious significance of the present world struggle in the fourteenth convention of the Religious Education Association, which meets at Boston, February 27 to March 1, 1917. The program is planned to face the question: "How should youth be trained and prepared to meet the needs and demands of the great changes that are sure to follow the world war?" It is therefore a convention on preparedness not by armament but by education. Since the association is an international organization with members in all the warring countries, it is expected that the attendance will represent many nations. Altogether there will be about thirty-two meetings open to the public. Programs will be sent on request, as they are issued by The Religious Education Association, 332 South Michigan avenue, Chicago.

WHEN first I saw you in the curious street,
Like some platoon of soldier ghosts in gray,
My mad impulse was all to smite and slay,
To spit upon you—tread you 'neath my feet.
But when I saw how each sad soul did greet
My gaze with no sign of defiant frown,
How from tired eyes looked spirits broken
down,
How each face showed the pale flag of
defeat,
And doubt, despair and disillusionment,
And how were grievous wounds on many a
head,
And on your garb red-faced was other re'
And how you stooped as men whose strength
was spent,
I knew that we had suffered each as other,
And could have grasped your hand and
cried, "My brother!"

—Joseph Lee, in the *London Spectator*.

STRIKES have broken out in the lumber camps in northern Minnesota under the auspices of the Industrial Workers of the World, Margaret Banning writes to the SURVEY from Duluth. The Industrial Workers of the World implicated in the mining strike on the Mesaba Range, which is now ended (see the SURVEY, January 6), have left the range, she says, but other workers remain to begin work among the lumberjacks. The *Public* feels that by the decision of the court, which practically frees Tresca, arrested as "accessory after the fact" in the killing of a deputy sheriff, "a great danger is removed from all organized labor." Henceforth, "evidence establishing some physical complicity in the deed will have to be introduced before a speaker or organizer can be held for crimes committed by other persons."

THREATENED with death by the aldermen of New York city, and saved by the Mayor, the Public Employment Bureau will continue its work. It was two years old last November. All its previous records for successfully filling jobs and placing people in employment were broken in the second anniversary month. In November, 1916, 2,546 persons were placed in positions. In November, 1915, there were 749, while in two weeks of November, 1914, 36 jobs were found. Last November's record of applicants exceeded the best previous month by 10 per cent. The number of applicants for work (2,269) fell off 10 per cent from October, but was up to the nine months' average. The number of jobs offered by employers, 3,166, was 5 per cent less than in

October, but was the second highest record. In contrast with these results the Massachusetts and New York State Bureaus report a falling off in places filled as well as in demand during the month of November.

ALLISON G. CATHERTON, lawyer and legislator, has been persuaded to become probation officer of the Superior Court of Suffolk County, a new position created by the judges to supervise the entire work of Suffolk County, which includes Boston, Charlestown and Chelsea, and to direct the other seven probation officers in this most important district. Mr. Catherton is known to readers of the SURVEY for his articles upon social legislation. During his very first year in the legislature, 1913, he was one of the prominent members of the Committee on Social Welfare, which secured the enactment of the uniform child-labor law, the mothers' aid law and much other important social legislation. For the last three years he has been house chairman of the Social Welfare Committee and one of the leaders of the legislature. This year he withdrew from the legislature for the sake of becoming a candidate for the mayoralty of Beverly. At the beginning of his campaign he was picked for the new position by Probation Commissioner Herbert C. Parsons and withdrew as a candidate for mayor.

ANNOUNCEMENT was made on January 5 of the appointment by President Wilson of the members of the commission which is to administer the new workmen's compensation law for federal employes. The appointees are Frances C. Axtell of Bellingham, Wash., the Rev. R. M. Little of Philadelphia and John J. Keegan of Indianapolis. Mrs. Axtell has been a member of the Washington legislature and was interested in the passage of a minimum wage law for working women. Dr. Little has been for nearly four years secretary of the Society for Organizing Charity in Philadelphia. Labor will be represented on the commission by Mr. Keegan, who was for five years an organizer for the International Association of Machinists. During the past year he has been employed by the United States Department of Labor as mediator in labor disputes. The new workmen's compensation law went into effect on the day of its passage, September 7, 1916. A good many cases have accumulated that require adjustment. There is therefore work for the commission to do as soon as it can be organized.

THE officers of the Central Relief Committee, one of the three agencies responsible for raising of several million dollars for the aid of Jews suffering in the war zone, announces the collection throughout the country of \$1,515,359.38. This announcement is made on the eve of what bids fair to be a very strenuous and interesting campaign to raise for the year 1917 \$10,000,000. The little more than a million and a half dollars raised by the committee came from as many as 28,693 sources, and is the individual and collected contributions of men and women to whom a dollar represents hard toil and real sacrifice. The feeling is that there is more need now than ever before for funds, since the misery and suffering abroad has taken on such tremendous proportions. To the already existing misery, there is added the hunger and want of another people—the Roumanian Jew. Keeping these facts in mind the committee is bent upon tripling its efforts of the last two years and thus collecting for 1917 at least three times the amount collected in the past. To accomplish this end, it is necessary to obtain the entire cooperation, material as well as sympathetic, of the entire country. Harry Fischel, 63 Park Row, New York city, is already in

Have You Made a Will?

Do you realize that if you do not dispose of your property *by will* your estate may be disposed of very differently from the way you would wish? Unless a will is made, the law can take no account of the special personal needs of any heir.

When you make your will, why not insure efficient and economical management by appointing the Bankers Trust Company as executor and trustee?

This Company will scrupulously guard the interests of your heirs, and will give your estate the benefit of experience gained in the management of many estates, of large and of only moderate size.

Our officers will be glad to correspond with you regarding any trust or banking business.

receipt of pledges and checks for the new campaign from all over the country.

"WHAT is killing the army today is lack of appreciation on the part of the public," said General Leonard Wood, before the Senate and House Committees on Military Affairs. This was his answer to the argument of former Secretary of the Interior Walter L. Fisher that the trouble with the army is low pay; that wages of \$30 a month would solve the recruiting problem. General Wood asserts it is the anti-militarist agitation in recent years which has impaired the respect of the people for the uniform. He told the Senate Committee that the country today "is absolutely and totally unprepared" for defense against an armed invader, and only by universal training and service can the situation be met. Such service, in his view, would be "democratic." Announcement by Major-General Hugh L. Scott, chief of staff of the army, that the general staff is now drafting a bill providing a detailed scheme of universal military training for the United States, and that the measure will be ready for introduction in Congress within a month, has been hailed by some of the more militaristic agitators in Washington as "the beginning of the big drive." Experienced Washington observers, however, state that there is little likelihood of any army reorganization going through at this session, although there are indications that the war department, the preparedness group in Congress and the various propaganda organizations in cooperation with them are endeavoring to pave the way for legislation next winter by a combined assault on public opinion at this session. The American Union Against Militarism and kindred organizations are meeting the situation by marshalling expert witnesses in opposition.

THERE is satisfaction all around in the decision of the United States Supreme Court on Tuesday sustaining the Webb-Kenyon law, which gives force to the state laws prohibiting the shipment in interstate commerce of liquor consigned to persons in dry states. Prohibitionists, at whose instance Congress passed the law, find it a tower of strength for prohibition states. Opponents of national prohibition welcome it for the same reason, but on the ground that it will tend to head off the proposed dry amendment to the federal constitution. On the same day the Senate passed the Sheppard bill which, if the House concurs, will make the District of Columbia dry after November 1.

CONFERENCES

THE AMERICAN Civic Association held its twelfth annual convention at Washington, December 13-15. Margaret Wilson presided the first afternoon. Percy Mackaye brilliantly visualized the community drama, and John H. Gundlach, of St. Louis, made practical his pictures by describing the organizing and conducting of the wonderful St. Louis pageant of a few years ago. A strong committee of the association will be organized to develop the pageant idea in the United States as it relates to civic education. For the first time in any convention in this country on city planning, the relation of the aeroplane traffic to the subject of city planning was introduced as an extra feature by Henry Woodhouse, secretary of the Aero Club of America. The officers of the ensuing year are: President, J. Horace McFarland, Harrisburg, Pa., and first vice-president, John Nolen, Cambridge, Mass.

Classified Advertisements

Advertising rates are: Hotels and Resorts, Apartments, Tours and Travel, Real Estate, twenty cents per line.

"Want" advertisements under the various headings "Situations Wanted," "Help Wanted," etc., five cents each word or initial, including the address, for each insertion. Address Advertising Department, The Survey, 112 East 19 St., New York City.

SITUATIONS WANTED

A NEW YORK GENTLEMAN, FORTY YEARS OF AGE, PROGRESSIVE, EFFICIENT AND EXPERIENCED AS SUPERINTENDENT OF ORPHANAGE DESIRES A SIMILAR POSITION, WHERE AGGRESSIVE RELIGIOUS AND INDUSTRIAL TRAINING IS DESIRED. ADDRESS 2417 SURVEY.

POSITION as Playground Supervisor by experienced man for July and August. Address 2442, SURVEY.

JEWISH WOMAN, nine years as cottage mother and settlement and day nursery worker, is open to position where experience will count. High-grade references. Address 2443, SURVEY.

DAY NURSERY position wanted by one of experience, also Graduate Nurse. Address 2445, SURVEY.

COLLEGE WOMAN, stenographer, secretary in New York, desires evening work and room, preferably in settlement house. Address 2446, SURVEY.

COLLEGE WOMAN, School of Philanthropy training, one year's experience charity organization, desires position. Good references. Address 2447, SURVEY.

HELP WANTED

SUPERVISOR of boys. State experience, age, salary expected, etc. Apply HEBREW ORPHANS' HOME, 12th Street and Green Lane, Philadelphia, Pa.

WANTED—Young woman as assistant headworker in small settlement in Jewish neighborhood. Please state full particulars. Address 2441, SURVEY.

WANTED—Executive Secretary for Social Service Federation in city of western Pennsylvania. Man, trained in social work and with executive experience. Address 2444 SURVEY.

NURSE WANTED, registered, Protestant, to take charge of baby house and training school for nursery maids. Troy ORPHAN ASYLUM, Spring Avenue, Troy, N. Y.

MATRON with experience wanted for Texas State Training School for Girls. Address Box 452, Gainesville, Texas.

WANTED: Position open. The Good-year Tire and Rubber Company, Akron, Ohio, is anxious to start military, drill and setting up exercises as a form of physical exercises in connection with the present preparedness campaign. The idea of eventually forming a Battery is also in mind. At present we require a man of military training, able to handle factory hands and mould them into a military organization. Address D. R. STEVENS.

SOUTH of the Rio Grande, where we have a moving-picture notion of a land red with blood from dagger wounds, sits a calm group of business men, ranchmen, school-teachers, lawyers and workingmen, revising the laws of Mexico. Bernard Gallant has been for some time associated with the Mexican revolutionists and with pictures and descriptions has but recently returned to New York city from this congress called by Carranza. Page 449.

DAVID stood up before Goliath and the giant fell. So perhaps the timid mediator might help to end the war. J. E. Williams, practiced in settling industrial disputes, cautiously approaches the monster abroad, and his ideas may serve to lay him low. Page 447.

SING a song of sixpence or of any old thing—only sing, says W. Gladstone Fuller. And though there may be rhyme, and rhymes are scarce, in the song, Izzy, Get Busy, there is a sweeter melody in Blow Away the Morning Dew. Page 454.

LAND of promise has too long been the immigrants' conception of America. Why not turn our country into a land of fulfillment, suggests Arthur J. Todd, professor of sociology in the University of Minnesota, by assuring every alien of a good job at fair wages? A scheme for restricting immigration that hurts nobody's feelings and gives everybody a chance to earn a living. Page 452.

DEAD flies or pure water—which is more necessary to safeguard the public health? Given a department of health with a limited appropriation, Dr. Alice Hamilton and Gertrude Seymour indicate a program of health work discriminating between activities that will actually conserve human life and "aesthetics," such as swat-the-fly campaigns, white-washing dairy barns or smoke-abatement measures. Page 456.

WHILE a crowd of strong Englishmen practice marching with guns over their shoulders, women shovel coal, clean cars and do other handy housewifely work. Their hours are lengthened to make up for their lack of strength and skill. This seems to be the effect of military control in industry. Page 465.

WHETHER or not the schoolboy shall be compelled to spend some of his time learning the gentle art of shooting foreigners is a question postponed until the next session of Congress by the Committee on Military Affairs of the House of Representatives. Page 460.

IF THE Mexican revolutionists had arranged to fight their battles during "recess" the little Mexican boy and girl might have had an education uninterrupted. Now with free public schools proposed for all of Mexico, a chance will be given for these sober scholars to pour oil upon the waters. Page 460.

A BLOODTHIRSTY mob tried to lynch a Negro in Kentucky. Governor Stanley heard of the trouble, hopped a train, entered the mob and calmed them. If Georgia's governor did this occasionally, her lynchings might be fewer. Page 461.

INDUSTRIAL revolutions may not usher in utopia, but sometimes they let the light into prison cells. Page 461.

THE Chicago cop is going to reform. No more bribes, no more staying up late Sunday night, no more dissipation. Page 462.

PERHAPS if children knew how tired one gets just oiling spools, hookey would lose its charms, and nobody would care about going to work at fourteen. Page 463.

L INCOLN'S TOWN,—a typical small city, with many homes and some slums, good schools but old-fashioned schooling, prosperous business but low industrial standards, lots of health and a good deal of sickness—this town knows more about itself than any other American community. A study of the methods and of the astonishing results of the Springfield Survey in

The Survey Next Week

The Chances for Negotiated Peace

As an Industrial Mediator Sees It

By J. E. Williams

CHAIRMAN BOARD OF ARBITRATION, HART, SCHAFFNER AND MARX TRADE AGREEMENT

USUALLY time and stress of conflict work changes in the psychological state of combatants. After sufficient grief has been endured proposals that before were intolerable have been found to be worthy of consideration, and sometimes of acceptance. And this has not always been due to recognition of superior force on the other side, but by an actual change in mental reaction caused by the slackened tension of the mind after enduring a long strain, and by the hard thinking forced on it during the period of struggle.

This change, when it comes, is the opportunity of the mediator. He must be one who has the absolute confidence of both parties. He must be entirely free from adverse prepossessions or interests of his own in order to deserve this confidence. He must have good will toward both combatants, an intelligence keen enough to discover and understand the real causes of difference, and a genius for creating affirmative constructions in which the differences may be resolved. He will interpret the parties to each other, try to make them see each other in a more favorable light. Coming as a friend his words will not be deflected by the armor of antagonism but will penetrate unhindered to the judgment of the combatant where they will leave their just impression.

He will have an important function as a medium for the transmission of terms. It often happens that belligerents are willing to settle for less than they are publicly demanding, but dare not say so for fear their opponents will

construe it as a sign of weakness. In such a case both sides can confide their minimum terms to a trusted mediator without danger of publicity. He may find they are not so far apart but that a happy suggestion may bring them together.

These offices may be useful in repairing a transient breach, but the work of the mediator will not be permanent unless he can find an adequate ground of common interest between the combatants, and so interpret it to them that they shall be convinced of its soundness and sufficiency. It need not be one hundred per cent perfect; it is enough that it be distinctly better than war; but it must genuinely meet the real factors in the problem and not be satisfied with a cheap reconciliation that ignores the vital causes of controversy. The synthesis when made must not only include the essential causes of difference, but must also provide for any new or unforeseen factor that may arise in the future. In addition to this the peace agreement, when made, must provide a tribunal to adjudicate differences of interpretation of terms, which shall have sufficient power to enforce its decisions.

I have sketched in a large and, I fear, rather a vague way, the lines that impress me as being somewhat parallel in the industrial and international situations. But as I write I am impressed with the magnitude of the differences between them, and I fear I have oversimplified. Even in industrial disputes, mediation and arbitration are not simple. Some cases are, confessedly, not arbitrable at all; and hardly any of them are susceptible of pacific or rational treat-

ECONOMIC cleavages are newer by many centuries than national ones. We have only begun to build up civil government in the industrial field. For this very reason the men who are contributing to the slow formulation of practice in industrial negotiation, arbitration and settlement, have broken with many of the old legal and political precedents. Men like Brandeis and Neill, Knapp and Williams, are not interested in putting out decisions like a judge. The very fact that there is no enforcing authority has lifted the process to a new level.

Industrial relations, therefore, afford an interesting analogy in considering international relations where likewise there is today no enforcing authority; and where, whether a settlement is reached by a smashing victory or by a negotiated peace in a military stalemate, its permanence depends after all on its "rightness."

Mr. Williams is chairman of the board of arbitration under the Hart, Schaffner & Marx trade agreement. He was vice-chairman of the Cherry Commission, a member of the Illinois Mining Investigating Commission, and chairman of the advisory board of the Illinois Free Employment Agencies. He has acted as arbitrator in the coal industry and in garment trades, east and west.

This article is based on the essential core of his experience which is that "an adequate solution cannot be obtained unless it reconciles the essential interests of the parties in dispute."—EDITOR.

ment until the fighting spirit has been eliminated or greatly modified. The naked will to conquer is not infrequently a more stubborn obstacle to peace than the economic factors which are the ostensible causes of conflict.

In the foregoing I have assumed that a permanent settlement presupposes the discovery and demonstration of an adequate ground of common interest, and the question that oppresses me in regard to the international situation is this:

Is there an adequate ground of common interest? If there is, can we demonstrate it to the combatants in a convincing manner?

The question oppresses me, because the answer to it seems to be taken for granted by some of the combatants. Their national interest is bound up with territorial expansion, and this idea seems to me to create an interest that is impossible to reconcile with other interests, to raise an obstacle against world peace which is insurmountable. A nation can only extend its boundaries by taking the territory of some other nation. The dispossessed nation can only submit by being willing to commit suicide, and, unless it is willing, it may logically enough argue that it is better to die fighting than to accept extinction without striking a blow. Clearly, therefore, territorial expansion is irreconcilable with other factors in the problem and, unless it can be eliminated, presents a permanent barrier to the establishment of an adequate ground of common interest. But is territorial expansion, in fact, a real national interest? Is a nation greater because it is bigger? Is extension in itself desirable and, if so, to whom?

If the American conception of government is right we can answer these questions emphatically in the negative. If the well-being of the individuals composing the nation is the criterion of success in government then we may be sure it has no necessary relation to bigness. Bigness may be, in fact, distinctly disadvantageous to good government. Mere magnitude may add to the complexity and difficulty of government without in the least adding to the elements that make for efficiency. If you want proof look at our big cities. Or ask yourself whether you would prefer to live in a small country like Holland or Switzerland or in a big one like Russia. If you are an American consider whether it would help you personally if our government were to make itself bigger by taking on the burden of Mexico. Or if a German workman ask yourself whether it would add to your wages, earning power, or comfort in life, if your government were to extend itself over, say, the Balkan states.

These questions answer themselves. It is scarcely conceivable that an individual can gain anything that counts in

the practical values of life by merely extending the boundaries of his government; unless, indeed, it be increased security against predatory neighbors. And against these it is part of our present problem to provide insurance. The case against mere bigness as a national end was summed up by Froude in these words: "It is not progress for two people to starve to death where one formerly lived in plenty."

Who then profits by an expanding empire? No one, unless it be the ruler or the ruling class. These may experience an inflation of personality, a greater sense of power, of glory, of fame; and in so far as they think they own the country, they may feel themselves richer in their increased possessions much as a farmer does who adds another quarter section to his farm. The humble citizen may be made to feel a little of the reflected glory, but hardly enough to make him want to shed his blood for it, or to have it stand in the way of peace.

But the humble citizen is shedding his blood, because he does not know. He is misled. He is the victim of a patriotic fallacy. He identifies his country's greatness with might of arms, and, too, often, with territorial aggrandizement. He has inherited a state of mind, and in it is imbedded this false idea. To change this state of mind is the crux of the whole problem. Without it an adequate ground of common interest cannot be established, and the problem of world peace will remain insoluble.

There are able publicists who claim that this state of mind cannot be changed without a decisive and complete military victory, that only by a crushing of the opposing nation can the desired psychological point of view be induced. These are hardly likely to heed the voice of the peaceful mediator. I would not dogmatize on this point, not being an authority on the psychology of nations, but I have my serious doubts about a fallacy being killed by a bullet. If for a time crushed, a false idea, like a true one, will tend to rise again reinvigorated by its temporary suppression.

I confess my art as a mediator fails me in proposing a remedy for a national state of mind. I am certain, however, that it is in this direction that the world's peace must be sought. I am certain, too, that it cannot be fought out; it must be thought out; and that friendly measures are more likely to be successful than hostile ones. And finally, I think it possible that the strain of struggle may have modified the psychology of the nations at war so that the rigid thought forms of the past may have become so far softened that even now they may be ready to listen to the voice of sanity, of truth, and of peace. If so, they are ready for mediation, perhaps even for arbitration. If not, no peace can be more than a truce.

"THE FINAL ANSWER?"

Making Laws for Mexico

The New Spirit Revealed in Mexico's Constituent Congress

By Bernard Gallant

ARRIVAL OF GENERAL CARRANZA AT THE CONGRESS

FROM every nook and corner of the land beyond the Rio Grande, two hundred and forty-two delegates have gathered at Queretaro, Mexico, to the first Constituent Congress summoned since the days of 1857. At elections held in the month of September revolutionary Mexico was given its first opportunity to exercise its newly acquired freedom from domination by the sword. For the first time in its history political parties were formed, each one opposing the other, but guided by the spirit and ideals of the Constitutionalist party. Among those who sent members to the congress are the National Workingmen's party, the National Democratic party, the National Liberal party and many other little groups which have sprung up with the rising sun of Mexico's liberty.

For more than a century Queretaro has been the stormy center of revolutionary upheavals. There the plans for national independence were formulated and fought. There the Archduke Maximilian with his small army of European adventurers who battled for a dream of foreign empire was shot down. The place of his execution is but a few blocks from the Teatro Iturbide, the meeting hall of the present congress. And from its windows can be seen the little garden where he dreamed of conquest. While Queretaro is only 167 miles north of Mexico City, it is entirely different in spirit and tradition from the capital of the republic, which has been and still is the seat of the reactionaries and its famed "cientificos." Mexico City has never warmed up to the Constitutionalist government, never taken kindly to the reform laws and the spirit of revolution. For these reasons Carranza chose Queretaro as the provisional capital of the new government and the meeting place of the first congress.

The preliminary sessions of the congress started on the twentieth of November. General Carranza, who was coming on horseback with his staff and an escort of 800 troops, could not reach the city in time for the opening, and wired asking that the day be postponed. The answer of the delegates to his request was very laconic. "It is against the law," they wired back, thus, for the first time since the revolution began, placing consideration of the law above the authority of a leader.

When, however, General Carranza reached Queretaro six days later, the whole city turned out to see him. It was a people's holiday. There was no manufactured enthusiasm and

prearranged display. The audience was not glittering or well dressed, but it smacked of honesty and sincerity. Those Indians and peons knew that their first chief was in town, and they came to bid him welcome. It was not the kind of gathering that would have greeted Diaz or Huerta.

Every part of Mexico responded to General Carranza's call to convention. Such a gathering was an unheard-of thing before in the country. Besides, the idea of discussing law and order carried an appeal, for, in truth, Mexicans are utterly weary of their bitter internal strife. Among the delegates to the Constituent Congress are members from the rebellious states of Chihuahua, far-off Lower California, aristocratic Yucatan, and the recently conquered Zapata stronghold, the state of Morelos.

Perhaps the most hopeful thing about the congress is the fact that it is not controlled by the military element. Of all the 242 delegates, no more than a dozen are members of the army or in any way connected with it. Even those who do belong to the army do not possess the powerful influence or national popularity of men like General Obregon, General Pablo Gonzales or even Alvarado. They are men of small rank and no following, the majority drawn into the army by force of circumstance, for whom military life is neither a goal nor an irresistible temptation.

This freedom from militarism is a significant fact which must not be overlooked. Upon it depends, to a very large measure, the successful outcome of the entire gathering. The Mexicans have not forgotten the Aguascalientes Congress two years ago, which "Pancho" Villa packed with his generals and officers and which precipitated the tragic break between himself and Carranza. Villa at that time surrounded the congress hall with ten thousand troops and, practically at the point of a gun, forced the gathering to act according to his desires. At the Constituent Congress the few members who belong to the army have been forbidden to appear at the sessions in military garb, and not a single one of them has attempted to violate the regulation.

The greater part of the delegates are typical of present-day, strife-torn Mexico. Among them are many small business men, ranchmen, school teachers, lawyers, journalists and workmen. It is not the kind of crowd that would have been found discussing laws during earlier days. Its members are

DEPUTATION OF INDIAN WOMEN

Their plea for better labor conditions was a feature of the congress

not aristocrats or men of wealth; they are drawn from the middle class of society to which Mexican revolution has given birth. It is a sincere and earnest element which will cement all the forces of that unfortunate land and bring order out of chaos.

To be sure, these men are not polished parliamentarians or shrewd manipulators of the law. But to declare that the entire gathering lacks such men would be doing a great injustice. Among them will be found profound students of the law, who were famous even in the days of Diaz, but who, nevertheless, joined the banner of Carranza.

Such a man is Señor Manuel Rojas, the president of the congress. It was he who accused Henry Lane Wilson of being implicated in the tragic death of Francisco I. Madero, hurling against our former ambassador twenty-four charges, which caused his recall. Last summer, when the Carrizal incident nearly precipitated war between United States and Mexico, Señor Rojas was chosen as the chairman of the Informal Peace Conference, which was called by the Anti-Militarist League. The fact that this incident was advanced as an argument for appointing him president of the congress is indicative of the pacific tendency of the constituent convention.

At the very beginning of the sessions two distinct tendencies were visible among the members. The main and strongest tendency was that of the older, more experienced leaders who realize the necessity of moving cautiously. These men of practical ideas are not blinded by the sweep and sway of the revolution. They know that Mexico is passing through a dangerous period and are not carried away by high-sounding phrases. The opposition is from a younger set of men, imbued with lofty dreams and great ambitions, but without the practicality which can only be acquired with age.

The first group is known as Bloc Roja (The Red Block) and the second as Bloc Blanco (The White Block). The Reds, deemed conservatives, are headed by Señor Felix F. Palavicini, a man of dynamic force, who formerly held the portfolio of Minister of Public Education in Carranza's cabinet. He is famous as an educator, is a brilliant politician, an excellent orator and had a great deal of experience in political strife in the days of Diaz, Madero and Huerta. He worked his way through school, became a school teacher, later

became famous as a pedagogue and today is the publisher of a well-known daily, with Associated Press service, *El Universal*. Around him rally such men as Manuel Rojas, José N. Macías, a famous international lawyer, Alfonso Cravioto, and others of the same calibre. The Whites, who are considered the radicals of the congress, are headed by Manuel Agirre Berlanga, a famous lawyer and Sub-Secretary of the Interior.

Soon after the opening, the struggle for supremacy assumed such proportions that Candido Aguilar, a member of the congress and the holder of the portfolio of Minister of Foreign Affairs, in an eloquent appeal pleaded for the cessation of hostilities. He pointed out that Mexico was still in danger from many of its reactionary elements and begged the two sides to compromise. He termed their deeds a waste of energy which might be utilized for the good and mutual welfare of the fatherland. But the Whites stopped at nothing. They hurled the accusation against the Reds that they were supporters of Huerta, a serious charge in Mexico now, and made serious attempts to reject their credentials. Finally they carried their charge to General Carranza himself, but he refused to act, claiming that he had no authority over the congress.

The preliminary sessions ended with a considerable victory for the Reds. By the first of December, when General Carranza appeared before the congress to urge his reforms, embodied in the Mexican Magna Charta, the Whites had given up the struggle and the delegates, reunited, were hard at their task.

The Constituent Congress of Mexico is not actually a political body. It is a scientific congress, whose object is to revise the old constitution of 1857, make a thorough study of it and introduce the many necessary reform measures for which the present revolution has been waged. It is an attempt to bring Mexico's laws up to date and to place the nation in the line of march with the rest of the world.

However, the congress and its attainments mean more than that to Mexico. Upon the success or failure of these civilian law-makers depends the entire future of the country. Upon the strength and the durability of this congress depends whether Mexico will remain in chaos or turn to peace and reconstruction. General Carranza more than any other man realizes the tremendous importance of the outcome.

WORKINGMEN ON PARADE

Mexicans realize that the congress represents the common people

"The Constituent Congress," said he in addressing the body "will determine the successful completion of the revolution against the various reactionary forces and the resumption of law and order. With the beginning of this congress Mexico is taking its place among the family of nations of the world. We are now laying aside the rifle and the bullet and are taking up international laws, our constitution and the many necessary reforms for which we have fought so bitterly. From now on the many frictions which have arisen between us and our neighbors will be possible no longer, for we have ceased to be a nation in upheaval.

"While the revolution has been dominated and led by military men, the Constituent Congress is guided and directed by civilians. The military have accomplished their task. Now benefits are being introduced for all the people, those who never fired a shot, as well as for those who actively participated in the struggle. It is a people's congress, and that is the main difference from apparently similar gatherings in our history."

The congress is empowered to call the elections of the president of the republic, of senators, judges, governors and various other representatives of the nation. This gigantic attempt alone is for a nation like Mexico, which has been for the past six years in a state of constant turmoil, a tremendous step forward.

Perhaps the most dramatic moment of the entire congress has been not the stately appearance of General Carranza, nor the clashes between the radical labor leaders and the conservative older element, but the appearance of a delegation of women workers to plead their cause with the law-makers. Outside of Queretaro are located the famous Hercules Cotton Mills. Owned by French capitalists, they give employment to several thousand Indian women. On the morning of the first session those women came marching into town, headed by a band and flying numerous banners and proceeded to the congress. They were not the attractive shop girls of our own factories. Life had not been kind to them, and they came to demand that their lives and the conditions of their labor be improved. In no uncertain terms did they express these demands, for it was for them and theirs that the revolution had been fought, and now, when Mexico was remodeling her laws, they refused to be forgotten. The recep-

FIRST SESSION OF THE CONGRESS
By raising their right hands the delegates took the oath of office

tion which the congress gave them spoke eloquently the fact that the people's day had arrived.

The clearest indication of the popular victory in Mexico is the program of reforms outlined by General Carranza as necessary for the country if she wishes to make her place in the world as a center of commerce and industry. The most important of the measures advocated are:

A divorce law to place the family relationship on a basis of love, and a law defining the nationality of the children born in Mexico. The divorce laws were shaped after a careful study of those of the United States.

Labor laws to fix minimum wages and maximum hours of labor, and calculated to abolish the hideous state of peonage which has existed in many different parts of the republic. Also measures to prevent strife between labor and capital.

Abolishment of the vice-presidency as an office breeding trouble. In case of temporary or permanent absence of the president, a successor is to be chosen by the congress.

Abolishment of the office of Ministry of Education. In the future each state will direct its own schools and will be guided by a commission appointed by the central government.

Laws prohibiting men who are actively connected with the army from participating in the politics of the country or holding any political office.

Home rule for all cities and municipalities.

Laws granting the vote to women who are self-supporting and not married.

The absolute independence of the judiciary.

The strict adherence to the constitution of 1857.

Among foreigners, and particularly among Americans, there is a feeling that the laws passed by the congress will be too extreme, too radical.

But if one is to judge the results of the Mexican upheaval by the reconstructive measures already adopted by the congress and the sentiments of its leaders, Mexico is not drifting towards socialism or even single tax. It becomes evident now that the entire revolt was nothing more than an evolutionary period. Mexico has thrown off the last vestiges of her feudal system and is awakening into a great industrial democracy, an impossible development without a strongly conscious middle class. This class the revolution has created. It is the moving spirit of the Constituent Congress.

GREETINGS TO THE FIRST CHIEF
Carranza was welcomed by the Minister of Foreign Affairs

A Job for Every Alien

Plans for Fitting Immigration to the Labor Market

By Arthur J. Todd

PROFESSOR OF SOCIOLOGY, UNIVERSITY OF MINNESOTA

SOME of us are still hypnotized by shrill cries of race peril, of impending racial bankruptcy through intermixture with alien blood, and all the other familiar phrases in the litany of race prejudice. Others fall before the pious phrases of our forefathers, phrases once more or less true, but now largely sentimental survivals, phrases about America the haven of the oppressed, the refuge of the victims of religious and political persecution, America the land of promise. More clap-trap appears in vague words about welcoming the alien large-heartedly that our business may expand, implying that every immigrant admitted adds by just so much to the nation's capital; or, more concretely, that our railroads may be stretched, our mines and subways dug, our steel rolled, our small clothes stitched up cheaply.

Most of such talk is obviously to cover up the fact that certain interests—generally large employers of unskilled labor, transportation companies and employment agencies—prefer absolutely unrestricted immigration for their own particular purposes, regardless of the general well-being of the country at large. Both consciously and unconsciously these interests insist on shifting the real issue from the plane of cold business to the planes of religion, or political freedom, or escape from militarism, or esthetics or natural rights or whatnot.

Recent discussions of the perennial restriction bill before Congress have renewed that impression of shiftiness. Apparently some form of restriction is coming. But in the interests of clarity and candor it would seem desirable to keep well in the focus of discussion a few suggestive principles which might be woven into a really substantial and workable policy dealing with the immigrant. Such suggestions as I have to offer are neither new nor highly original; but, apparently, only ceaseless reiteration can ever secure them the attention I believe they merit.

We must recognize that modern immigration is overwhelmingly an economic problem, and keep our restrictive measures aimed at that target. The principle of marginal value and the law of diminishing returns applies to immigration as an industrial asset. Since we know clearly the economic wastes through unemployment, we must sooner or later face the proposition of wiping out the present law against admitting contract labor. Labor organizations have pretty uniformly stood solid for this type of restriction, and for good historic reasons.

A Right-About-Face on Contract Labor

BUT there is at least one possible way of securing their right-about-face. Why not admit that an immigrant with an order in his pocket for a definite job is better than an immigrant chasing a mythical job for weeks, prey to all the perils that lie in wait for the friendless and derelict? Why not let any employer contract for as many foreign workmen as he claims to need, if we make him definitely liable for their support, and deportation charges, should they become in any ordinary sense public burdens? In other words, why could such laborers not be imported *in bond*?

The importer could be required to file a properly secured bond covering his contract to pay a certain wage for a cer-

tain specified time, or to maintain a minimum standard of wages, hours and other conditions of employment prescribed by competent authorities, just as now an importer of merchandise or the relatives of dubious aliens are required to do. In addition he could be required to assume the cost of unemployment insurance.

The result of such a scheme would probably result in the automatic checking of any abuses of contract labor, if not in its absolute desuetude. The margin of risk would be so large as to cut away all profits. Moreover, it would eliminate all masked importation of contract labor, and at the same time could not be charged with discrimination or absolute embargo.

Eventually the whole matter of admitting alien laborers would revert to the Department of Labor. Hence the first business of that department would normally be to determine the true demand for labor, through periodical unemployment surveys and a fully developed system of labor exchanges under federal encouragement, if not definite federal control.

Admissions According to Need for Men

BUT notice that the true demand for labor is not merely the numerical excess of calls for workmen over demands for jobs; it must take into account the social and economic background of the ostensible jobs—such things as the nature of the work offered, hours, working conditions and, most important of all, the prevailing level of wages as well as the specific wage offered. The figures representing the true demand for labor could then be used by the Department of Labor for adjusting a sliding scale of admission to immigrant workers.

This is no radical innovation. Most recent immigration bills have already consecrated the principle. For example, the Burnett bill included this clause: "That skilled labor, if otherwise admissible, may be imported if labor of like kind unemployed can not be found in this country, and the question of the necessity of importing such skilled labor in any particular instance may be determined by the Secretary of Labor."

This provision needs but a little expansion to provide a really workable test for prospective immigrants, and would necessitate absolutely no new governmental machinery. It would meet most, if not all, the objections on the score of discrimination now levelled at the literacy test. It would meet the issue on frankly economic grounds, where, in the long run, it must inevitably be met.

Under this system immigration policy would reduce itself to two simple problems, namely, the determination of real economic demand at home and the technique of selecting candidates from abroad for admission. The latter problem need give us no special concern, for it would involve no new untried machinery. Our consular service is or could be organized for that purpose, as was long ago proposed by American consuls themselves. In addition to viséing certificates from police, poor-relief and health authorities for the purpose of weeding out positive undesirables, consular offices might be authorized to receive from prospective immigrants their formal declarations of intention to migrate. Such declarations might or might not be accompanied by validations from the local administrative authorities.

In all probability, with the huge tasks of reconstruction now facing European governments, they would cooperate heartily in the work of scrutinizing the papers of emigrants. The central point to the plan would be the filing of these declarations at American consulates. Suppose this done. When notice comes from the United States Department of Labor that an authentic demand exists for a certain number of laborers and that so many may be admitted from this or that locality, the consular authority to whom the notice is directed merely takes up the declarations in the order of their filing and certifies the proper number for admission. The immigration authorities at this end would be relieved of an enormous responsibility, which at best they can fulfil in only superficial fashion.

The hitch in the scheme lies, of course, in how to work out a just method of apportioning admissions from the various countries. Here we must have recourse to the general principle that admission of aliens is not yet a fundamental right as between nations. It is at best a phase of international comity, and must at all times be viewed from the standpoint of strict national integrity and well being. Hence domestic considerations must dictate the terms upon which admissions of immigrants should be apportioned among the nations. The apportionment of a given country would normally be calculated upon the basis of its population, upon the nature of the employment offered, and of the assumed fitness of the immigrant for that particular kind of work; also upon the general desirability of the immigrant himself, his assimilability, his willingness to become naturalized, to adopt the English language and the so-called American standard of living.

Such a sliding scale, however, would be based primarily upon the principle of economic utilization and less upon general questions of assimilation or naturalization; and for the

reason that the economic test is simple, obvious and easily applied, while the test of assimilation is vague, complex and indecisive. The economic test should be the final determinant, with the assimilation test as a guide in apportionment. For this reason, while in general accepting Gulick's notion of the sliding scale, I believe it necessary to apply it on economic rather than, as he proposes, on racial grounds. Incidentally, we avoid any morass of implied discriminations against this or that race as race. The advantages of such a test of economic utility over any makeshift literacy test are obvious enough. The chief difficulty of the literacy test is that it is manifestly a makeshift, born of an attempt to evade the real issue or of an inability to see it.

Now that we apparently have made up our minds that a form of restriction is desirable and even inevitable, since at last the federal government has begun to take seriously the problem of unemployment, it would seem almost as though the time were ripe to consider our immigration plans with some show of constructive imagination.

Why should we go on dallying with makeshifts? Why not face frankly the problem as Carver and other economists are facing it and admit that one of our first moves toward solving the problem of poverty is to make the laborer precious, to multiply his productive intelligence and to give him at least the protection of scarcity value?

I am convinced that some such scheme as I have outlined and have been teaching for several years would not only improve the social status of the immigrant and eliminate much needless shame and suffering on his part, but would likewise tend to stabilize our domestic labor market and enhance the worker's economic position without in the slightest degree hampering or crippling legitimate productive business.

TEN young women from as many countries drove the first nails in the "international" platform which was erected in Washington Square, New York city, for the great peace demonstration of the American Neutral Conference Committee on New Year's Eve. At midnight on the first of January the crowd, gathered in the square, recited a litany of peace which had been written for the occasion, and heard from all over the world messages of hope for an early peace.

Bells Are Ringing, Sailors Singing

By *W. Gladstone Fuller*

HOW would it be, if, when an ocean liner bound for Europe or South America swings out into the harbor, all the longshoremen should gather together and sing a rollicking goodbye to the ship and their comrades on board, the sailors on the departing vessel joining in an answering chorus of farewell? And when a ship comes home from her long voyage, suppose she were greeted with songs and cheers from shore. Would not such gay events mark worthily the going and coming of the ships of all nations, hearten and lighten the day's work afloat and ashore, and make our harbors the singing harbors of the world?

Again, let us suppose that every night, their day's work done, the porters in the Grand Central Station should assemble under the great blue arch and sing a song together before going home. So might the bellboys sing together once a day in all the big hotels, and the chambermaids also. And at the stores as many of the employes as cared to stay after closing time might assemble for a few minutes in some central place in each store to try over a song and chorus together (it is not unlikely that Mr. Wanamaker and Messrs. Lord and Taylor themselves would want to join in occasionally).

At first sight these suppositions may seem to be merely fanciful, even absurd. But nevertheless such things might very well come to pass. It isn't only the reasonable and sensible things that happen to us; there's the war in Europe for example, and the other day 75,000 people assembled in the Yale Bowl for the purpose of watching a game of football. It is perhaps hard to imagine the overworked and underpaid workers in modern industry singing happily together in these hard times, singing in the morning as they go to their machines, singing during the day as they tend their machines, and singing in the evening when they leave their machines, to rest and sleep for a few hours. But if they cannot find it in their hearts to sing a happy song, they might comfort themselves with sad songs and laments, or fire their hearts and imaginations with fine fighting songs of courage and hope.

Such thoughts as these were provoked by a visit to Cooper Union one Sunday evening recently when Dorothy, Rosalind and Cynthia Fuller were singing some old English folk songs to an audience that crowded that vast hall. The audience consisted of workers, men and women who should have been singing with the singers, so eagerly were they listening, so sympathetically, to those old songs of the past.

All ye that love to hear
Music performed in air
Pray listen and give ear,
 To what we shall perpend.
Concerning music, who'd—
If rightly understood—
Not find 'twould do him good
 To hearken and attend.

Thus sang those young girls. Their singing carried the conviction that in an ideal state of society people in general would be able to sing as they do, clearly, naturally, intelligently. For that desirable state of affairs we may have to wait awhile, yet it gives at once an ideal and a kind of test for our civilization.

Perhaps singing is largely a question of social manners and customs, like taking snuff or getting drunk. Maybe we shall all be singing together again some day—not as we do now, feebly, respectably, apologetically and only in churches, but heartily, self-forgetfully, boldly, in the street, in the subway and in the home.

But what shall we sing? Most of the so-called popular songs are dreary, weak and stupid both as to words and music. A glance at a catalogue of "popular" songs at a cheap music store gives one these titles: *Come On and Baby Me*, *Keep Your Eye on the Girlie You Love*, *Izzy Get Busy*, *You May Hold a Million Girlies in Your Arms*. Compare these with the names of some old English folk songs: *Blow Away the Morning Dew*, *As I Walked Through the Meadows*, *O Love Is Hot and Love Is Cold*, *Fine Flowers in the Valley*, *She Moved Through the Fair*.

An Art Forgotten

BUT in these hard times—the true stone age, when men's hearts, not their tools, are of stone—who is able and willing to sing save a few professional singers, drunken men and gramophones? In times past people of all ranks sang together as a matter of course. Sailors sang at their work and at their play—peasants of the lowlands and the highlands, men and women, shepherds and ploughboys, smiths and carpenters—all had their appropriate and favorite songs, and there were the mothers with their lullabies, and the children with their singing games. As Andrew Lang says, "the pastimes and the labors of the husbandman and the shepherd were long ago a kind of natural opera. Each task had its own song, ploughing, seed-time, harvest, marriage, burial, all had their appropriate ballads or dirges. The whole soul of the peasant class breathes in their burdens as the great sea resounds in the shells cast up on the shore."

But in these days there is a terrible silence of humanity. Machinery makes all the noise. Ingenious for our own destruction, we have created machinery to destroy us body and soul. True it is that "God made man upright, but he has sought out many inventions."

The silent thousands going home every night in the New York subway if they were happier, freer and more natural men and women would sing aloud and drown the rattle and the roar of the trains as they dash through the tunnels. In the moving picture house where people most do congregate there is a gloomy silence so far as the human voice is concerned, a silence of actors and of audience—an audience that hears nothing. Even in the churches the most devout are content to praise the Lord vicariously through a thousand-dollar tenor or soprano.

As for the lovers in our midst. What are they to do for songs? If they cannot sing to each other, they must satisfy themselves by buying records of somebody else's love songs and listening to them as the machine winds them off; or they must go to a formal concert or to a vaudeville show and make the best they can of the vocal gymnastics of an unintelligible professional singer or of a blatant individual tearing the air with some nonsense about "Come On and Baby Me." And yet all

the time there exists for them, unknown, a simple, heavenly melody to carry such words as:

How gloriously the sun does shine!
How pleasant is the air!
I'd rather rest on my true love's breast
Than any other where.

But it may be said that this old music—these old songs—are out of date, out of harmony with modern conditions and modern ideas. Such a statement can be met with a flat denial. There is a whole world of strong and living music for all time in the great folk songs of our forebears—English, Scottish, Irish, German, French and Russian.

Take the subject of war as treated in English folk song. Where is there to be found a more vigorous condemnation of war, a more faithful expression of the common people's viewpoint than in the old song "High Germanie," which dates back more than two hundred years, to the time when the English and German armies were fighting against French armies:

O curséd are the cruel wars
That ever they should rise,
And out of merry England
Take man and boy likewise.
They took my Harry from me,
Likewise my brothers three,
And sent them to the cruel wars
In High Germanie.

Or again, where shall we find a more searching indictment of the whole bitter consequence of war than in the old Scottish song, *The Flowers of the Forest*, a song of the women of Scotland after the battle of Flodden:

I've heard them singing at our ewe-milking,
Lassies a-singing before the break of day.
But now they are moaning, on every green lonely,
The flowers of the forest have all passed away.

At e'en in the gloaming no youngsters are roaming
Round about stacks with the lassies to play.

But every maid sits dreary, lamenting for her dearie,
The flowers of the forest have all passed away.

There'll be no more singing at our ewe-milking,
Women and bairnies are heartless and sad.
But sighing and moaning on every green lonely,
The flowers of the forest have all passed away.

So might the women of England, France and Germany be singing today after the battle of the Somme.

But the outlook is not without hope. Arthur Farwell and his colleagues are building up a great community chorus in New York, as a result of which thousands are singing songs instead of listening to them. Every year now in many big cities the community Christmas Tree is evoking the popular singing of Christmas carols. Cecil Sharp, the foremost authority on English folk song and folk dance, is now working in this country collecting old songs from the dwellers in the southern mountains. Lorraine Wyman has also been working in this field and is now giving public recitals of these "lonesome tunes," as the mountain people call them. And that supreme artist, Madame Yvette Guilbert, is rejoicing us with her demonstration of the vitality of the people's songs of old France.

These great artists, like the Fuller sisters, are making the old songs live again. They are bringing our hearts back to an old, forgotten, far-off happiness. We must not neglect the opportunity which the presence of these teachers gives us—with their aid we may recreate the *Singing Man* of Josephine Preston Peabody's poem:

He sang above the vineyards of the world.
And after him the vines with woven hands
Clambered and clung, and everywhere unfurled
Triumphing green above the barren lands;
Till high as gardens grow, he climbed, he stood,
Sun crowned with life and strength, and singing toil,
And looked upon his work; and it was good:
The corn, the wine, the oil.

When the people are free they will sing, and when they
sing they will be free.

Let us sing.

Dorothy Fuller, Her Work.

AN ILLUSTRATION FOR AN OLD ENGLISH FOLK SONG
*There were three gypsies a-come to my door,
And down-stairs ran this a-lady, O!
One sang high and the other sang low,
And the other sang bonny, bonny, Biscay, O!*

The New Public Health

II. The Program of a State Board of Health¹

By *Alice Hamilton, M. D., and Gertrude Seymour*

OUT of the various activities possible to a state health administration, the health officer must make his selection. His appropriation is perhaps never large enough to accomplish all that needs to be done. He must spend his money where it will do the most good. A good health officer, it has been said, is he who can raise the most money and spend it to the best advantage. The dictum contains a practical element that should not be ignored in a country where only one state approximates the modest standard of 2 per cent of its revenue for health work.

Here is a place where the trained officer shows his value. An untrained man cannot initiate, cannot lead. He will follow and copy. He is likely to be forced by well-meaning people outside the department to give undue prominence to things not at all of first importance—to “swat-the-fly” campaigns, fights on food adulteration and white-washing dairy barns, instead of attending to such unexciting features as birth registration, sewage disposal and a pure-water supply.

To spend the resources of the department on other peoples' pet projects, on things which, even though desirable, are not in given circumstances essential, is to tithe mint, anise and cummin and neglect the weightier matters of the law. These weightier matters are the activities which experience has shown to be fruitful of real results. They follow paths clearly marked, toward a definite goal—the health of the state.

It may be queried, how are the results estimated? Upon what basis are these results evaluated? The question is not only legitimate but desirable. “The merchant looks to his accounting,” said Dr. C. V. Chapin in 1913, “to show him his best lines; so the health officer must study which line of expense gives the best results.”

Health and Æsthetics

HUMAN life is not priceless (witness war and automobiles), save in the individual case and the stanzas of the poet. An attentive layman does not find himself convinced by declarations of “enormous returns to the city of ——— in lives saved, epidemics avoided and increase of vital efficiency through the comparatively small investment” necessary for some specific task. A work that is worth any investment whatever deserves more exact measurement than such large generalization. History of the place for several years preceding, of its outbreaks of illness, of conditions by and large and particular, should be charted parallel with this new record. Then an analysis of values may begin.

Pioneer studies in such analysis are those by Dr. C. V. Chapin, 1913; Dr. G. C. Whipple, professor of sanitary engineering, Harvard, 1914; and that recently completed by Franz Schneider, Jr., of the Russell Sage Foundation. One test offered in these studies is the discrimination between health

and comfort—between sanitary science and æsthetics. There is need of both; but only one is a legitimate expenditure for the health department. Odors and smoke and most “nuisances” are, in Dr. Chapin's opinion, within the bailiwick of the police department. Terminal disinfection creates an impression of “something doing,” but with advancing scientific knowledge, it is falling more and more into disuse, save for tuberculosis, and is being replaced by concurrent disinfection (that is, of all discharges while the patient is in an infective state). Food inspection, Dr. Chapin considers, has not yet proved its worth to public health; “milk inspection is worth every penny that it costs.” Bearing in mind that conservation of life is more important than comfort or æsthetics, the expenditures of a state should be apportioned accordingly.

The First Task

WITHOUT doubt the work which has proved of highest importance in public health is the control of communicable diseases. This is the object for which boards were originally created, as phrased by the Massachusetts act of 1699: “An act to prevent the spread of infectious sickness.” And the prevention and control of infection must still be the most extensive and important of a board's activities, its methods changing as more is learned about the conveyance of infection.

Fifteen years ago a state department of health could not be charged with neglect of duty if it did nothing to check the spread of hookworm disease. No one knew what to do. Probably ten years hence infantile paralysis will be combated with methods far simpler than those employed this past year.

But today, at the present stage of scientific information, under conditions now prevailing all over the country, what diseases call for most immediate attention? Which should come first on this section of a health officer's program?

To a certain extent, regional conditions answer this question. At least ten southern states have had a problem in hookworm disease that Washington or Minnesota health officers have not had to face. In California hookworm is apparently limited to the deep gold mines; but the possibility of its importation from the East has just been suggested by William C. Billings, M. D., of the United States Public Service, chief medical officer of Immigration Service at Angel Island. Dr. Billings urges that search for hookworm ova be made a part of routine examination, certainly in all doubtful cases. The yellow fever organism stays by its host, and therefore that disease is limited to the habitat of the *Stegomyia (Aedes)* mosquito, and its transmission is in general controlled by quarantine methods. Intercommunication with the Orient and South America makes bubonic plague an active issue in California, part of Washington and in Louisiana. Rocky Mountain fever is relatively local, as its name implies; while rabies, leprosy and typhus constitute occasional perils which every state must be forever prepared to recognize.

In addition to the diseases endemic in certain parts of the country, there occur economic changes which modify the necessary emphasis in health work. Responsibility for occupational

¹ Acknowledgment for material in this article is due to publications of the United States Public Health Service, especially to Bulletin 62 and the sanitary surveys in many states; to writings of Dr. C. V. Chapin, Dr. G. C. Whipple, Franz Schneider, Jr., and Dr. C.-E. A. Winslow. Several secretaries of state boards of health have written at length and have furnished photographs for use in the series. The American Medical Association gave opportunity to examine the survey of state boards made by Dr. Chapin, a limited edition of which was circulated.—THE AUTHORS.

diseases, hardly to be considered in agricultural states, has been specially recognized, for example, in Ohio—where a special appropriation made possible a thorough investigation by the State Board of Health; and in Massachusetts, where the board reported on lighting conditions in factories. According to records of 1915, only thirteen states require notification of industrial diseases, a condition which health insurance may be expected to improve. Arizona faces a special difficulty due to the presence of Mexican labor, for smallpox is always endemic in Mexico. So, practically, is typhus, and outbreaks of this fever in labor camps have been traced in California directly to Mexican immigrants, who, however, it is said, are by no means averse to learning more hygienic ways. Labor camps give New York state also a special problem in water pollution.

So far as we know, the best example of the influence of an economic situation upon public health work is that from California which began with the new commercial enterprise, rice-growing. In the four years since rice was first grown for commercial purposes in the state, the returns have been very great, and the acreage has increased fully 100 per cent. Rice-growing makes possible the cultivation of land otherwise useless, with a profit of millions of dollars to the state. Obviously, here is an industry that has come to stay. But unfortunately, the conditions ideal for the cultivation of rice—land flushed with standing or gently moving water—are ideal also for the growth of mosquitoes. Of the myriads of mosquitoes found during the long summer season in rice areas, 70 per cent were of the *Anopheles*, or malaria-bearing variety. These sections of the state were malarial enough before the rice-growing began; of late the increase of the disease has been so marked as to constitute a menace and to require definite measures for abatement in individual districts.

Another problem in health economics is, of course, the immigration of tuberculous individuals into Colorado and all the Southwest. That this is considered a question of federal dimensions the Kent bill illustrates.

Special situations are created by floods, like that in Dayton a few years ago and like that reported last August from West Virginia. With the relief work resulting from such occurrences the department of health is, of course, closely affiliated. That epidemics also call for special activities goes without saying. The brilliant investigations begun by Vermont two years ago, when infantile paralysis broke out in the state, and continued this year by Massachusetts and New York, deserve a fuller chronicling than space allows at this time.

Too Familiar Facts

BUT, special conditions and epidemics aside, there remains for recognition the fact that a very large number of infective organisms are thoroughly cosmopolitan. Throughout 1916, poliomyelitis was found in thirty-five states. Few climates and no social grades are uncongenial to the tubercle bacillus. Syphilis and gonorrhoea are terribly ubiquitous. So are measles and whooping-cough. Malaria still haunts the southeastern section of the country with endemic foci in almost every northern state, and in spite of its economic importance, it is too little known. Dr. J. W. Trask, of the federal Public Health Service, in a recent address on malaria as a public health problem, said: "In a population heavily affected with malaria, a few cases of smallpox cause immediate measures for control, while the malaria is entirely ignored, although usually of far greater import."

A too familiar disease is typhoid, the indifference to which, in this country, until very recently, has been remarkable in view of the extent of the disease and the economic loss. Says Rosenau: "A wholesome fear of typhoid fever would materi-

ally assist the health authorities in combating what may be considered one of the major sanitary problems of the age." Although it attacks all races, at all ages, of both sexes, its age incident coincides with that of the greatest value of the individual to the community, namely, that of early middle age. In spite of sanitary improvement in many parts of this country, according to figures for 1910, the average death-rate per one hundred thousand in the United States was 25.0; in thirty-three principal European cities, 6.5.

Against which of all these shall the state board direct its energies? On which shall it spend its money?

New Valuations

IN THE study referred to, Mr. Schneider indicates the basis of a logical selection. First, the amount of damage done. Tuberculosis ranks high as a death-dealing disease, especially during the most productive years of life; malaria and hook-worm cause serious economic loss through chronic ill-health. Clearly, these matters deserve investment.

A second consideration is, Mr. Schneider says, preventability. Given the cause, the means of transmission, and a cure for any disease, all that remains is to overcome human ignorance, inertia and prejudice. Witness—malaria, typhoid or smallpox.

Third, the cost of prevention. Ten thousand dollars spent in a fly campaign is largely a contribution to comfort and æsthetics. This amount paid out for the services of public health nurses is invested for returns not only of fly-destruction, but of supervision and teaching, both of children and of mothers; and for a term of years, not for one season only. The choice seems not difficult to make.

Finally, diseases that tend to become readily epidemic call for first consideration. Translated into the phrasing of Dr. H. W. Hill (see the SURVEY, November 18, 1916), communicability means, having the largest number of routes over which infection can pass. "If we guard only water supplies against infection," says Dr. Hill, "we eliminate water-borne intestinal infections. (This, so far as typhoid is concerned, would be perhaps one-third of the total typhoid in America.) We leave untouched intestinal infections carried by food, flies, milk and contact. Also we leave untouched all other infectious diseases . . . If we eliminate flies also . . . milk and contact typhoid remain." The task of protecting the "public routes of infection"—water, food, flies, milk, is the task of the community. One person's best efforts toward hygiene may be neutralized by the carelessness of his neighbors.

However the methods of blocking these public routes of infection may differ in different instances and conditions, there are two agencies without which there can be no effective control of communicable diseases. These are the diagnostic laboratory and the epidemiologist. Epidemics of typhoid fever arise in communities where the water supply is unimpeachable, and only through laboratory tests can they be traced to their true source—a human carrier engaged in handling food. Diagnosis of tuberculosis and diphtheria by laboratory test is becoming rapidly universal; diagnosis of venereal disease is offered in one-half of the state laboratories, though the Wasserman test is as yet available only in some of the larger laboratories. It is the verdict of the test-tube which, under many sanitary codes, raises quarantine in cases such as diphtheria, typhoid and other ills.

Chemical and bacteriological examination of milk is less extensively carried on. Frequently the standard of the milk supply is a responsibility of some other state department than that of health.

Perhaps the greatest services are those of detecting car-

riers who are themselves in good health; and of demonstrating that mild atypical cases are more common than the pronounced typical cases, in communicable disease, but, of course, are quite as dangerous.

Diagnostic laboratories are at least provided for in all states but two, according to latest available reports. In order to meet the needs of all parts of a state without delay, many states have opened branch or cooperating laboratories. Florida reports five such branches; Michigan opened a second station in the peninsula recently. A New York map of 1916 shows seventeen stations.

It is a logical and economical plan to have the state department of health distribute serums and vaccines.

But the laboratory is too large a theme to be crowded into small space. Its value is only indicated at this point. Distinguished alike from exclusively research institutions and from the costly private or the commercial laboratories, under expert direction, it is one of the most reliable and essential means of protecting the public health.

The other essential factor is the epidemiologist, whose importance was first proved in Minnesota. Detailed supervision over a large number of cases during an outbreak; thorough investigation into epidemics whose origin is not known—these important measures cannot be fulfilled by the attending physician, for he has not time, and does not always attend all patients in the outbreak; nor will the local health officer suffice, for cases may develop outside his territory.

Three People, a Storm and an Epidemic

AN INTERESTING piece of epidemiological work is reported from Virginia. Briefly, here is the account: Three days after moving from a northern town of Virginia, the members of a certain family developed typhoid. The time between the family's arrival in its new surroundings and the onset of the disease was too short to make infection at the new home seem possible. A few cases of unknown origin existed in the rural district near by, and contact with these cases had infected others until a definite though small epidemic was traceable in the region. The water supply was apparently above suspicion. Although laboratory examination showed it clean, yet, to allay anxiety, the water company installed a hypochlorite plant and began operations. The epidemiology of all cases showed this outbreak to be of the contact variety. The country custom of visiting the sick was the rule, and since the identity of the disease was, in some cases, not perceived for some time, the spread of typhoid was inevitable until stricter measures were introduced.

But later in the season a second series of cases began, and an even more searching investigation followed. This time the cases were directly traced to the town water-supply. Yet there was the clean record taken earlier in the season, and there also was the newly installed hypochlorite plant. Finally, very close questioning revealed the fact that for a few days the hypochlorite plant had been out of repair and its service interrupted. Just at that time, by ill-fortune, a heavy rain had fallen, and the creek supplying the town had overflowed into the lowlands along its banks, and a hole had been found in one of the feeding pipes through which water from the overflowing creek had entered.

Another interesting bit of epidemiology was reported in Pennsylvania. A number of cases were traced to a certain milk supply, the sale from this producer not having been checked at first because of misrepresentation to the inspecting officer. A victim of the outbreak was a man whose house was supplied by this particular producer, but who said he never drank milk, never used it in tea or coffee, and had not had it

with desserts either in his home or in the hotel in which he worked and ate. The man's wife, however, on being closely questioned, acknowledged that a supply of milk had accumulated in her refrigerator about two weeks before the members of her family had been taken sick. To save this from being wasted she had made it into ice-cream. When the ice-cream was recalled to his mind, the husband distinctly remembered the occasion and acknowledged that he had partaken of the milk in this form.

Before leaving the fascinating subject of epidemiology, reference must be made to a special feature of the work in the Massachusetts division of communicable diseases.

According to Dr. E. R. Kelly, chief of the division, administrative control of communicable diseases is based on a "satisfactory standard by which to judge their variation"—that is, to know whether the individual disease is increasing or not in a given region, or whether the number of cases in any town is above the "normal experience" of that place. The record affording such information is a very simple piece of bookkeeping, and is called the endemic index—that is to say, the index of the number of cases which are constantly present in any locality. Briefly, the method is this: An average is found of the number of cases in a region for each month for five years, epidemics not included. So long as the number of cases during a current month (indicated by international symbols) keeps below the endemic index, conditions are considered normal; if the number of cases reaches or surpasses the index, evidently it is time to inquire of the district inspector.

The endemic index is of interest also as one form of vital statistics—health bookkeeping. For it illustrates to what valuable ends records, which are too often merely "placed on file," may be interpreted by the expert. It can never be demonstrated by figures that the collection of statistics of birth, death and illness has *per se* actually saved human lives; yet there is hardly a subject in the field of health work that is being viewed from more angles. The physician's responsibility to his patient; parents' obligations to their children; the social duty of citizen to community; the legal importance of certificates for identification—all these considerations are involved in the value assigned to vital statistics; plus, too, any intelligent progress of public health work. It is impossible to take proper and economical measures for protecting a community unless the whereabouts is known of those who are spreading disease. The epidemiologist knows where the dangerous cases are today; where they were yesterday is the statistician's record.

The Efficiency Man in Health Work

DR. H. W. HILL compares the vital-statistics man to the efficiency expert in the business world:

"Public health requires exactly the kind of man who has changed the face of business in the last fifteen years, a man who understands all parts of it, but does none himself; a man who knows costs in each department in proportion to production, and where to cut cost, increase production, save time, unnecessary work and waste in general. . . ."

"It is the vital statistician who must do this: collect the facts and set them forth inexorably, with mathematical precision. When it is done, our health department will no longer use up \$30,000 for garbage, with the probability that not a single life will be saved thereby, while spending \$12,000 on all other health department efforts combined."

In tragi-comic contrast to the honest study and effort of many health officers, physicians and citizens, stand out such records as these quoted from one state bulletin by another:

"Of the hundreds of death certificates . . . many, filled

out by local physicians, contain unusual comment as to the cause of death. . . . 'Went to bed feeling well, but woke up dead.' 'Do not know cause of death, but patient fully recovered from last illness.' 'Died suddenly. Nothing serious.'"

The head of one division of vital statistics is actually said to have refused to furnish data to another division. His records were to be filed, not to be used. What was up? Were they trying to catch him in some blunder?

Evidently one of the immediate needs in health work is thorough enlightenment as to the significance of this routine of reporting, and of the invaluable data in an accumulation of accurate records. Cooperation of citizen, physician and health board, with proper legal backing, are necessary to make vital statistics *vital*, a "fundamental social service" in this country which enjoys at present the doubtful honor of being the only civilized country without a complete record of its births and deaths.

For the Children's Sake

SEVERAL other highly important parts of state board of health work must be more briefly indicated than they deserve. Fortunately they are activities toward which public attention is already directed more fixedly than the less obvious lines of work discussed in this article. For instance, the value of work for child hygiene is not denied in many regions, even where it is not zealously prosecuted. The prevention of infant mortality is one of the most fruitful lines of health work. Though it is largely the local boards of health who must carry the main responsibility, there are none the less many ways in which a state bureau may stimulate and assist the local officers. Only four states have definitely organized divisions of child hygiene in the state departments of health—New York, Ohio, Kansas and New Jersey. Several other states, as Massachusetts and Pennsylvania, carry a certain amount of infant welfare work without creating a special division. Wisconsin is said to be planning to establish a bureau of child hygiene. Thirteen state boards of health and two of the Canadian provincial boards used this past year the parcel post exhibit of the National Child Welfare Association. The federal Children's Bureau has just published a report on work of this kind (Infant Mortality Series, 5), carried on by public and private agencies throughout the United States. A brief summary of state activities for the prevention of blindness through "babies' sore eyes" is published by the National Committee for the Prevention of Blindness.

The health of school children is another line of work largely dependent upon local officials for actual performance, yet, in supervision, logically within the purview of the state health department. In some cases the department of education has a division of medical inspection. Occasionally a district that refuses school medical inspection welcomes a sanitary survey. The Pennsylvania State Board of Health, in an effort to extend medical inspection into rural districts of the state, examined upon its own initiative in 1910 over 14,000 children in 572 school buildings in eighty-three districts of the fourth class (i. e., of less than 5,000 population). The following year the school code was revised to include medical and sanitary inspection of schools throughout the state, though allowing option in third and fourth-class districts. The latest report of this work showed that 469,000 pupils in 11,000 school buildings had been examined. The department reports a steady growth of sentiment in favor of inspection—certainly a decrease of the fear of it.

Methods of such health supervision vary greatly. Sometimes only a questionnaire goes to schools from the department of health; the county health officer may be responsible; a special lecturer may be employed. There is also great variation in

frequency of inspection—from the constant attendance of school nurses and daily office hours of physician, to the monthly, quarterly or annual visitation of the state official.

The chief need in this line of work is apparently its extension into rural sections of the country—a need emphasized by investigations of the Public Health Service in many states; and training teachers what to teach about health. A number of teachers are working perforce independently, developing as part of their course in civics some of the fundamentals of sanitary science. Minnesota published not long ago a syllabus of health studies for teachers. New York compiled an excellent bibliography primarily for librarians, but of value to all students of health. Texas has not only a course of study outlined, but a number of wall pictures to accompany it. Kentucky conducts school classes in public health. Many states pay tribute in their bulletins to the teacher's influence, and doubtless intend their bulletins to be of immediate and practical assistance in the sanitary management of classrooms. The importance of aiding teachers to watch and instruct their classes not only in such special crises as the epidemic of the past summer, but constantly, in the fundamentals of health and sanitation is surely evident when one recalls that "less than 1 per cent of the population reach the university, only 10 per cent reach the high schools. The great mass of the mothers of the coming generation, of the whole race, the mothers of more than their average of children, are receiving grade-school education only."

The People "Want to Know"

FINALLY, among the essentials of a state health department's work is the education not only of teachers but of public. The man on the street, that complex and elusive entity, must be caught and taught. A few years ago the public was not taken into the scientific confidence on matters of sanitation and disease-prevention, except in a grave crisis. Now things are at the other extreme. There is a deluge of "health pamphlets"; there are "health columns" in the papers; some newspapers have "health editors"—not, perhaps, always full-time officials; headlines proclaim as pronouncements of distinguished speakers statements which people of fair intelligence who were in the audience cannot recall as part of the address; magazine articles herald the latest discoveries; mere hint of coming events is clutched by the publicist with avidity. And "misinformation is piled upon none," and the path of the interviewer is rendered hard—even though his paper be not as other papers.

A fuller discussion of latest methods of public health education belongs to a later paper in this series, but at this point it should be said that two facts stand out clearly in the whole situation. One is, that the people are entitled to the truth about prevention of disease; the other, that they desire to know it. Prof. C.-E. A. Winslow tells of the editor of a country newspaper who one week omitted from his paper the weekly health hint from the state department. Promptly came a letter from one of his subscribers inquiring the reason for this omission. Never had such a thing occurred before in his editorial experience.

Facts, then, regarding the improvement of homes, families, city and state are increasingly demanded. The truth can be had more surely and more economically from the department of health than from any other source. To supply the facts needed by each individual state is logically within the state department's responsibility.

There is a little more to say presently concerning the things as yet left undone in public health work; concerning responsibilities and other large matters pertaining not to the department alone. But all this will be in another article.

COMMON WELFARE

COMPULSORY SERVICE TO GO OVER A SESSION

ANNOUNCEMENT by the Committee on Military Affairs of the House of Representatives, on January 12, that no measure designed to provide universal military training will be considered during the remainder of this session, gave a breathing space to the opponents of militarism in Congress. Of the twenty-one members of this committee an overwhelming majority are said to favor giving the National Guard a chance to prove its case.

The agitation in favor of universal compulsory training, however, has made great gains in Congress since December. It appears that the committee members are swayed in their present direction by National Guard influences at home. They seem to have been only slightly impressed by the public outcry against establishing a vast permanent military organization.

What will be the majority view in the new House, in which 349 out of 435 members will be survivors of the present House, is a matter of conjecture. With neither Democrats nor Republicans holding a partisan majority, the White House will be unable to direct its policy so readily as now, and public opinion will have greater influence upon the House.

Senator Chamberlain of Oregon, chairman of the Senate Committee on Military Affairs, is gradually gaining support among Senate Democrats for his universal compulsory training bill. He has conducted hearings at which most of the prominent strategists of the army and numerous militarists from civil life have supported his plan. Efforts to get President Wilson and Secretary of War Baker to commit themselves in favor of the bill have been unsuccessful. The general staff of the army has been permitted, on the other hand, to throw its whole weight into the scale on the side of the Chamberlain measure, giving it semi-official status.

To combat this growing influence of militarism at the capitol, the American Union Against Militarism arranged a series of six hearings, January 13-16, before the Senate committee. Six groups

of witnesses were presented—medical men and physical training experts; college boys “of the age to be conscripted;” educators, parents opposed to compulsory military training; foreign-born American citizens who have had compulsory military training, and former enlisted men of the American Army and National Guard.

Speaking on behalf of the medical men opposed to conscription of the 18-year-old boys of the country, Dr. James P. Warbasse, of Brooklyn, pointed out that adequate physical training need have no connection whatever with military tactics or drill, and that the reasons for the presence of weak and thin-chested young men everywhere in our cities could not be charged to the fact that they had not come under military control. Fundamental causes for the occurrence of so large a number of the physically unfit, said Dr. Warbasse, were the condition of underfeeding of children, of inadequate wages upon which to maintain families in comfort, and conditions which brought two million American women of child-bearing age into the field of industry.

Conscription of the boy of the working-class family at 18 years of age, he declared, was a blow at the income of the poorer families, and indirectly at the health of the younger children. He cited the fact that 90 per cent of the school children in America quit school before completing the elementary grades, and almost invariably, he held, because their services as bread-winners are required. He argued that conscription extended to the soul as well as the body, since the boys would be compelled to serve irrespective of their refusal to endorse the objects for which military ventures might be undertaken. Mexico and Central America were now, he said, places where American troops are unjustly stationed, and where unjust wars may be precipitated.

Senator Chamberlain conceded, on the announcement of adverse action by the House committee, that no report on any compulsory training bill could be secured from the Senate committee during the present session.

FREE, SECULAR SCHOOLS FOR MEXICO

THE report, published last week, of a recent study of educational conditions in Mexico, conducted under the direction of a committee of well-known men headed by President Charles William Dabney of the University of Cincinnati, states at the outset that the only solution of the Mexican problem must come through universal public education of the masses. Its summing up of the political situation is worth quoting:

“There has never been a middle class in Mexico to supply leaders for the people in their struggles with the feudal lords. Organized public opinion is the only basis for democratic government, and that has never existed in Mexico. The only newspapers are controlled by the government, by the landlords or by the big corporations. There are no real political parties. The only politics are wholly personal and the only political organizations are gangs formed to advance the interests of leaders whose names they bear. There are no political campaigns to educate the voters, but only processions and rallies intended to impress them. There is, in fact, no free political discussion of any kind. Elections in Mexico, consequently, are either farces or frauds. Organized public opinion and the free discussion of political affairs so necessary to a free government cannot exist where the masses of the people are ignorant.”

The report traces in considerable detail the development of public education, from the schools, established shortly after the conquest, under the direction of the Catholic religious organizations, through the short-lived systems initiated by the numerous revolutionary governments which followed each other in rapid succession after the war of independence. Up to the revolution in the later fifties, led by Juarez, public education was held to be the exclusive function of the church. At this time the principle of complete separation of church and state was incorporated in the celebrated *Leyes de Reforma* (reform laws), and the rule that the public schools must be free from the interfer-

ence of religious influences has been maintained in the face of powerful opposition up to the present time.

Nevertheless, the efforts of the earlier revolutionary governments toward the establishment of a system of free schools appear to have been made up chiefly of good intentions and impractical theories. As a rule the plans were worked out on a basis of sound educational philosophy and were irreproachable in form. But they failed to work because there was no effective administrative machinery for securing the two prime essentials for an effective school system—funds and teachers. In the main the job of carrying them out was left to the local municipal authorities, who were unable to make much headway against the organized opposition of the church and the obstructive tactics of the large proprietors who believed that education would only make their laborers lazy and discontented.

Although considerable progress was made during the Diaz régime, the amount of illiteracy shown by the census of 1910 was approximately 75 per cent.

The report recommends the establishment in Mexico of an endowed college independent of both church and state control, similar to the Robert College in Constantinople. While its authors believe that such an institution would be of the greatest value in training the future leaders of the country, they recognize that the great need is elementary education for the masses. To realize the dream of Juarez and his fellow revolutionists, a system of universal education *obligatoria, gratuita y laica*—compulsory, free and secular—will be for many years the most important work in the regeneration of Mexico.

A PRACTICAL WAY TO CUT DOWN LYNCHINGS

HARDLY had the newspapers told the country the total number of lynchings last year, when Governor A. O. Stanley of Kentucky risked his life to disperse a fast-growing mob in that state and thereby in all probability cut down the 1917 total of lynchings by one and possibly three. A crowd in Murray, Ky., angered at the postponement of the trial of a Negro charged with murdering a white man, was threatening to kill not only the prisoner but the judge and commonwealth attorney, who had agreed to the postponement. Governor Stanley, hearing of the trouble, chartered a special train and started for the scene with the words, "I'll give the mob a chance to lynch the governor of Kentucky first." Arrived at the town, without bodyguard and unarmed, the executive made a speech in which he said:

"A little more than a year ago, I put my right hand upon a Bible and called God to witness that as chief magistrate of Kentucky and supporter of the law

I would maintain its integrity. I have come here to plead with you to allow the law to take its orderly course, and to declare that I am here to uphold the law and to protect this court with my own body if necessary."

The governor achieved his object and the lynchings were prevented. The speech moved a brother of the murdered man to endorse the executive appeal openly.

Last year, according to the figures of Tuskegee Institute, which keeps annual tab on mob violence, there were fifty-four

THE DYING JEWISH SOLDIER

IN spite of the fact that over 300,000 Jews are fighting in the Russian army, and that the Jewish population penned up in the western provinces of Russia (Poland and the Pale) has borne the brunt of the eastern campaign, the Russian government has not abated its anti-semitic policy. Acts of Jewish heroism are alleged to be suppressed by Russian censorship, crippled Jewish soldiers are refused leave to stay for treatment outside the Pale, or to look for employment. Accusations of espionage, according to a pamphlet issued by the National Workmen's Committee on Jewish Rights, have been systematically fabricated both against Jewish soldiers and Jewish civilians, although no court of record has brought out a single conviction. Using the charge of traitor as an excuse, it is said that military authorities have ordered wholesale expulsion of Jews from the provinces of Lomzha, Radom, Lublin and Warsaw. The pamphlet reports that hundreds of thousands of people with only a few hours' notice were herded into cattle cars and for weeks hounded from place to place, debarred from cities without the Ghetto and increasing fourfold the relief problem in other cities. Neither the old, the sick, children of the families of reservists were spared, even wounded soldiers were thus treated as enemies by the Russian government.

lynchings in the United States. This was thirteen fewer than in 1915. Fifty of the lynched were Negroes and four were white.

Three of the whites were put to death for murder; the other (a Mexican) being suspected of cutting a woman. The Negroes were charged as follows: Attempted rape, 9; killing officers of the law, 10; murder, 7; hog stealing and assisting another person to escape, 6; wounding officers of the law, 4; rape, 3; insult, 2; for each of the following offenses one person was put to death: slapping boy; robbing store; brushing against girl on street; assisting his son, accused of rape, to escape; entering a house for robbery or some other purpose; defending her son, who, in defense of mother, killed man; fatally wounding a man with whom he had quarreled; speaking against mob in act of putting a man to death; attacking a man and wife with club.

Georgia led in the number of lynchings, with fourteen. Other states lynched as follows: Alabama 1, Arkansas 4, Florida 8, Kansas 1, Kentucky 2, Louisiana 2, Mississippi 1, Missouri 1, North Carolina 2, Oklahoma 4, South Carolina 2, Tennessee 3, Texas 9.

THE I. W. W. AS PRISON REFORMERS

IT looks as if the New Jersey state prison at Trenton would be the next of the penitentiaries in this country run under a system of repression and brutality, to answer for its evils to a rapidly awakening public conscience on the treatment of prisoners. On Friday last week the *New York Evening Post* began a series of articles exposing in detail the bad conditions there, and simultaneously the *New Republic* published a similar indictment.

For these exposures the New Jersey penitentiary and the public are indebted to an unusual type of prisoner. Conditions at Trenton were first brought to the attention of the *Evening Post*, declares that newspaper, by Frederick Boyd, a sympathizer of the Industrial Workers of the World, who served a term in the prison for his part in the silk strike at Paterson. "Mr. Boyd's statement," continues the first article, "led to an investigation by the *Evening Post*, and these stories are a result. They will be followed by Mr. Boyd's own views of the prison and prison life." The *New Republic* article is by Patrick Quinlan, a member of the I. W. W., who served a term for a cause similar to that of Mr. Boyd.

Trenton prison is declared by the *Post's* opening article, written by Harold A. Littledale, to be "bad in its structure, bad in its influence and bad in its management," and "among the worst in the country." That men have been chained to walls in underground dungeons; that two, three and even four

men are confined in the same cell in violation of the law; that women convicts are confined with men, and that a particular cell is used for this purpose; that there is no dining hall and that men are fed in their cells or in the corridor; that the male prisoners have only half an hour's recreation a week; that consumptives mingle with the well and the first offender with the habitual criminal; that more than 100 men are employed on contract labor in violation of the law; that for ten months of the year each prisoner receives one bucket of hot water a week in which to bathe, and after bathing to wash his clothes and cell floor; and that the cries of convicts protesting against their food have been heard by persons in the streets outside, are among the counts in the *Evening Post's* indictment.

Mr. Quinlan tells of a prisoner, Mangani by name, who, for stabbing a keeper that had compelled him to give up graft, was forced to wear a ball and chain riveted to his leg for four and a half years. The leg became so badly festered that the fetters were removed to allow it to heal, but were placed meanwhile on the other leg. For six years Mangani was kept in solitary confinement, denied speech, not permitted to see a friend, and prevented even from attending mass in the prison chapel. He became insane from this treatment and a few months ago was removed to the state asylum.

Bad as the prison is, the present principal keeper (the title of the warden), Richard P. Hughes, is declared by the *Evening Post* to have "made it much better than it was." New Jersey inaugurated a new governor this week, Walter E. Edge, of Atlantic City, and on him responsibility for improving conditions is declared to rest. As governor-elect, Mr. Edge is quoted as having said: "I intend to hear all sides freely and fairly, for I mean to end the prison problem in this state for all time."

PROBATION DENIED TO FEDERAL OFFENDERS

A SPECIAL and unexpected weapon has been put into the hands of those who are urging upon Congress the passage of the Owen-Hayden bill, which would for the first time give statutory power to judges in United States district courts to suspend sentence in criminal cases and to place offenders on probation. The United States Supreme Court last month decided that such power, frequently exercised by federal judges in the past, especially with respect to youthful and first offenders, does not exist unless specifically granted by Congress.

The case at issue was brought to compel United States District Judge Killits, of Ohio, to impose sentence on an offender whose sentence he had suspended. The opinion delivered by Chief Justice White entirely overthrows the practice

of many federal judges to exercise discretion in imposing and withholding sentences. Indeed, it has been commonly contended that the right to suspend sentence is inherent in all criminal courts. This contention, so far as it relates to state courts, has been upheld by judicial decisions many times—in New Jersey, Pennsylvania, Illinois, Ohio, New York and Massachusetts—while legislation has established it in other states where the power was held not to be inherent.

"The present decision," writes Charles L. Chute, secretary of the New York State Probation Commission, which presented a brief to the court in behalf of the good effects of probation and suspended sentence, "means that after every conviction in a United States court, no matter what the circumstances of the offense or the age of the offender, the penalty prescribed by law must be enforced. In most cases this is imprisonment in a federal prison. Heretofore federal judges have frequently suspended sentence, especially in cases of youthful and first offenders, and placed the offender under such supervision as they could command.

"In Massachusetts alone, where the use of the suspended sentence is said to have been the unquestioned practice for sixty years, it is reported that upward of 200 men and boys convicted of federal offenses are now out on good behavior, many of them under the supervision of state probation officers. The practice has been commonly used in New York and elsewhere. Federal courts are now without discretion to exercise clemency, except in the degree of punishment.

"The probation system has established a new and effective method for dealing with offenders capable of reform, whether young or old, without imprisonment. . .

"Few persons realize the magnitude of the criminal work of the United States district courts. In 1915 they obtained no fewer than 13,477 convictions. A great number of boys convicted of offenses under the postal laws, in connection with interstate commerce, under the white slave act and other crimes, come within federal jurisdiction. Of the 2,755 prisoners sent to federal prisons in 1915, 247 were under twenty years of age, and 1,432—more than half—were under thirty.

"Fortunately, the present intolerable situation need be only temporary. The chief justice made this clear in his decision when he said: 'So far as the future is concerned . . . recourse must be had to Congress, whose legislative power on the subject is in the very nature of things adequately complete.'"

The Owen-Hayden bill, which was drawn by the National Probation Association, has been before Congress for three years. At the last session it was favorably reported by the sub-committee of the Senate Judiciary Committee, but

got no further. It has now been reported favorably by the Judiciary Committee itself and is upon the Senate calendar. In addition to providing that federal judges may suspend sentence and place on probation in all except the most serious felonies, it permits one probation officer to be appointed in each court on a per diem basis.

TURNING CHICAGO'S POLICE CRISIS

CHICAGO'S police administration took a sharp turn for the worse and immediately an unexpectedly good turn for the better within a fortnight. The state's attorney's detectives arrested a lieutenant of police while he was alleged to have been in the act of receiving the graft levied upon disorderly resorts and saloons by three noted crooks, who were also taken into custody. One proved to be the self-confessed collector of the graft, who is alleged to have had a controlling influence in the appointments and transfers of police officers in the most disorderly districts of the city. The other two men have long been notorious in protecting law-breaking saloons and vicious resorts.

Evidence discovered in the possession of these men and afterwards corroborated by their confessions was made the basis for the arrest of the chief of police and for his indictment on the charge of receiving bribes both from violators of the law and from police officers seeking promotion. Four subordinate officers were charged with the same offenses and many others are supposed to have been caught in the state's attorney's dragnet.

Meanwhile, after a previous indictment, the resignation of the chief of police had been reluctantly requested and accepted by the mayor, to take effect only a day or two after the state's attorney's trap was sprung, to the surprise of all involved. While the cry of "politics" was raised in defense, public confidence in the truth of the charges has been strengthened by the statement of Shelby M. Singleton, the long and well-attested secretary of the Citizens' Association. Being familiar with much of the evidence which he helped the state's attorney to secure, Mr. Singleton states it to be "convincing" and believes "each one of those blistering charges is true," upon which the nine indictments are based. He refers to the situation disclosed as "almost unbelievably rotten, in which police officials were conniving with crooked politicians of both political parties." His statement concludes with these ringing sentences:

"A whole Police Department long steeped in corruption, cannot be freed from the shackles of graft and extortion and the life and the property of citizens made safe without the cooperation of a conscientious, courageous and truly patriotic mayor. The forces of corruption

"OUT TO WIN"

The Massachusetts Child Labor Committee appeals to boys to stay in school. The captions under these pictures from its latest pamphlet are: "Tom, a factory boy, learning to forge tools at an industrial school so that he could earn more wages;" "In the mill George oils all the spindles in the spinning room. When he has finished he oils all the spindles again."

have held Chicago in their grasp for a long time. When the guardians of the law themselves become enmeshed in corruption, and when the police department becomes the tool of crooks and criminals it is the duty of every citizen to rally to the support of every influence that aims to divorce them."

The situation thus squarely put up to the mayor of Chicago, not only by this statement but by the expression of public sentiment through the press, resulted in an unexpectedly good exercise of appointive power by the mayor. He named as chief of police Herman F. Schuettler, who through thirty-four years of continuous and varied service in the department, had worked his way up from a patrolman to the position of first deputy superintendent of police. Under varying and trying changes in the administration of the city and of the Police Department, he has kept close to the police duties assigned him and fulfilled them to the extent which his superior officer or the mayors of Chicago permitted. Occasionally he has discomfited his chief by disclosing and suppressing certain forms of lawlessness, the existence of which had been denied by his superior officer.

In his letter making the appointment, Mayor Thompson gave the new chief a free hand such as neither this mayor nor any other has ever given to any superintendent of police, at least within the last twenty-five years in Chicago. These explicit terms are so direct and unequivocal that it would seem impossible to evade them or reclaim any reservations possibly implied in them. Here is at least the promise of freedom to fulfil the law new to the police of Chicago:

"Your authority over the department is absolute and complete and there are no curbs, limitations or restrictions, except as imposed by law, upon your power or purpose to administer impartially the police system of this city to the best of your ability and for the lawful protection of the people. No person is authorized to come to you, as representing me, to ask for any prestige or favor from the police department, nor shall I grant any myself. No influence need guide you except the sacred influence of duty. If it does, you alone will be to blame.

"Clean out immediately the corruption in all ranks of the department. You are hereby ordered and directed strictly to enforce all the laws of the state and ordinances of the city, which it is the duty of the police department to enforce."

The mayor specifies that his order to enforce the law closing saloons on Sunday shall be rigidly complied with and that the obedience of every other officer to this order shall be compelled.

Hitherto this very order of the mayor has all along been charged, and now again by the state's attorney, with having been used as a club to drive saloonkeepers either to support or not to oppose the political interests of the mayor.

Chief Schuettler gives evidence of having taken his commission at its face value by appointing as first deputy superintendent of police, Wesley H. Westbrook, a young captain, never involved in any police intrigues, and conspicuous for the high standards of his personal character, his administration of his precincts and his training of new officers in the police school, of which he had charge for several years.

MAKING A BOY WANT TO GO TO SCHOOL

MASSACHUSETTS has a law compelling its children to go to school until they are fourteen years old. So have a number of other states. In most of these states believers in more education for children work hard trying to convince the legislature that the compulsory age limit ought to be raised. The legislature may be convinced, but if the child remains an unwilling attendant the benefits of legislation are doubtful.

The Massachusetts Child Labor Committee has therefore decided to supplement this traditional form of activity by going to the children themselves and appealing to them to stay in school longer. It has begun by publishing this month a primer entitled *Out to Win*. This primer contains stories in picture and text of boys and girls who work—some who work at oiling spools and oiling spools until the whole world becomes a spool and the youthful operator feels like crawling into the hole in the center of the spool and sleeping for a year; and others who have continued their education until they can carve in wood or forge tools or do mechanical drawing, or in some other way find an outlet for the creative impulses that knock at the door of expression.

The book, which tells its stories in clear pictures, simple words and large type, is intended to be read by the 30,000 young workers in Massachusetts between fourteen and sixteen years of age. At the bottom of each page is a line telling where more training may be had—at school, settlement, club, Y. M. C. A.

and other places. Along with the advantages of more education, it tells also of the necessity for play and occasional medical examination to learn whether the physical machine is in good trim.

MILWAUKEE'S SICK LOSE THREE MILLION DOLLARS

SOME of the outstanding conclusions drawn from the health census conducted recently by the social workers of Milwaukee under the auspices of the City Club [see the SURVEY for November 11, 1916], are just made public. On the day of the census, 10 per cent of the people in the city were sick; at this rate, sickness must cause a wage loss of \$3,000,000 annually in this city. Fewer than half of the persons sick were under a doctor's care; fewer than one-fourth of the sick had prompt medical attention. Investigation proved that the poor are seriously sick three times as frequently as the well-to-do.

More complete and prompt medical care, and some means of protecting workers against wage loss through sickness, are urgently needed, in the opinion of the City Club committee.

The above estimate is extremely conservative, in the opinion of those who tabulated the results. Many cases of tuberculosis, venereal disease and other complaints were not reported, so that the above total is undoubtedly far too low.

The diseases reported may be divided roughly into three classes: infectious, degenerative and miscellaneous. Of 14,500 cases of infectious diseases, 11,500 were infections of the respiratory system. Of degenerative diseases, 5,130 were reported, of which over half were mental disorders. Other degenerative diseases noted were kidney, liver and heart troubles, and cancer.

Colds were the complaint most frequently reported, 7,250 cases being found. Next comes rheumatism, with 5,100 cases. Other prominent complaints were bronchitis, tuberculosis, coughs, asthma, etc., 3,110; indigestion, 2,450 cases; cripples, 1,620; and nervous disorders, 1,700.

The amount of mental and nervous disease is one of the striking facts revealed by the census. Four hundred insane persons were indicated by the returns. Although feeble-mindedness is usually concealed, 435 cases were reported in the census, and 215 epileptics. One thousand seven hundred persons were found suffering from nervous disorders. These cases were three times as frequent among non-wage-earners as among wage-earners. Housewives were by far the greatest sufferers, and women and girls were much more frequently affected than men and boys.

The connection between poverty and sickness is forcibly emphasized by a study of the relative seriousness of the diseases found among the poor as compared with

those found among the rich. The most serious of the diseases frequently reported were heart trouble, insanity, diphtheria, pneumonia, tuberculosis, kidney trouble, female trouble, and coughs, bronchitis, asthma, etc. In well-to-do sections, 7.7 persons per thousand were afflicted with these diseases; in poor sections 22.2 persons per thousand were so afflicted. These serious diseases were, therefore, three times as prevalent in the poor districts as in the well-to-do sections.

The difference was much less marked in the less severe complaints, such as colds, rheumatism, or indigestion, so that in the total of all diseases, the poor districts suffered only about 80 per cent more per thousand than the well-to-do districts.

Of the 40,000 sick persons, the census indicates that 13,600 were wage-earners. Of these wage-earners, 5,090 were at home from work. Since 187,000 wage-earners were reported for the entire city on that day, 2.7 per cent of the total wage-earners were sick at home. If the day of the census is representative for the entire year, this means that the average worker loses 9.9 days per year from his work through sickness. Estimates for the country at large indicate 9 days as the time lost per year on the average by wage-earners.

On this basis, assuming \$600 a year as the average wage earned by these workers, the daily loss of wages through sickness in Milwaukee amounts to \$10,000, or over \$3,000,000 per year.

Fewer than half of the persons reported to be sick were under a doctor's care. Whether medical care was given was not reported for about one-fifth of the cases noted. The great majority of the unreported cases were probably not receiving medical attention. Less than 40 per cent of the cases recorded actually reported a physician's attendance.

Naturally, the least serious and the more chronic cases were usually those where a physician was not in attendance. Yet in 25 per cent of the illnesses of wage-earners where no doctor had been called, the patient was so sick as to be absent from his work. Even the apparently mild unattended cases, where the patient was well enough to be about, assume a sinister aspect when it is remembered that many of the dangerous maladies get their start in apparently insignificant ailments.

Wage-earners who were sick had medical care in a larger proportion of cases than non-wage-earners. Of the former, 48.7 per cent were reported as under a doctor's care, while of the latter only 32.6 per cent were recorded as having a physician. This seems to be due to the need of protecting the family's income. Illnesses which receive medical care when they endanger wage-earners are neglected when they attack a child or the wife.

Promptness of medical care is another important factor. In the cases furnishing data on this subject, 11 per cent of the patients who had a doctor had been sick more than six months before the doctor was called; 18 per cent had been sick more than two months; 21 per cent had been sick more than one month; 27 per cent had been sick more than two weeks; 33 per cent more than one week, and 53 per cent more than one day.

Since less than half of the cases had a physician's care at all, and only 47 per cent of these called a doctor promptly, it is clear that less than one-fourth of the sick had immediate medical attention.

These are only a few of the conclusions to be drawn from the health census. The data collected forms a mine of information which will be studied and analyzed by the City Club with a view to issuing further reports. The success of the census is due to the co-operation of Mayor Hoan and Archbishop Messmer, who gave letters of introduction; to the club's public-health committee; to many social workers; to sanitary inspectors from the Department of Health; to child-welfare and tuberculosis nurses, and to the Associated Charities and Juvenile Protective Association.

THE HAND OF MILITARISM IN INDUSTRY

H. G. WELLS, in a recent article on the newer developments in war machines, comments on the inability of the British military authorities to grasp the needs of industry. They still go on the principle that in war-time the proper place for every able-bodied adult male is at the front, quite oblivious of the fact that, from the point of view of military utility alone, there are thousands of men whose services to the country would be infinitely greater if applied to the industry in which they are skilled. Many plants, he complains, the increase of whose output is vital to the success of the Allied powers, are starved for expert help, while the men who could render it idle away their days in useless military manœuvring.

Be this as it may, there is much evidence of the danger run by a nation if it allows the military authorities to have a hand in industrial organization. For instance, the British War Office, in September last, issued a manual on Women's War Work, compiled for the use of recruiting officers, military representatives and tribunals, which is intended to prove that there is hardly an industrial occupation in which women cannot and do not take the place of men.

The volume does not contain a single qualification. So little discrimination has gone into its composition that the recommendation to substitute women's for men's work can only be regarded as

FROM "WOMEN'S WAR WORK," THE WAR OFFICE, LONDON

Left, pushing a hand-car filled with refuse—a gang of six women on the single car. Right, trucking bags of flour. Before the war, men preferred almost any other kind of employment to that in the typical old-fashioned English flour mill.

wholesale. The aim of this manual is in the most direct opposition to the efforts now put forward by several government departments and inter-departmental committees to induce employers to apply scientific and humane principles to the allocation of workers and to the management of labor in war and civil employments.

The accompanying illustrations from the manual of the War Office show women engaged in occupations which it is recommended shall henceforth be considered women's work throughout the country. Some of these occupations are obviously unsuitable and dangerous to the health of women. That physical fitness is a necessary consideration in selecting workers for any given job does not seem to have occurred to the War Office. It recommends, for instance, as a matter for general application, that wives, sisters and daughters shall be induced to take up the work of the male members of the household to set them free for military duty—an effort, apparently, to cut the ground from under any cause which may be shown before a tribunal why a male worker of military age is indispensable to the conduct of the

Pork butcher's wife and daughter, with girl assistants, keep the business going while he is at the front. All of them together manage to dress from six to eight pigs a week. If they are paid a living wage, pork must be high.

business of which he is a regular part.

"We have always been among those who have held that there is no physical barrier in the way of a great extension of women's work," says the *London Nation* (November 4, 1916). "But we confess that this publication takes our breath away. . . . There are photographs of a woman stoker working at the furnaces of a large factory in South London, and others of women loading, unloading and stacking pit props and coal, which seem to us cases for immediate investigation by Home Office inspectors. Surely, the War Office does not give its official commendation to the employment of women on such jobs as these."

Since the beginning of the war, almost a million women have been added to the wage earners in industrial, commercial, professional occupations, agriculture, transport, civil service, etc. "Many of these women," says the Board of Trade (*Labour Gazette*, October, 1916), "are not, strictly speaking, replacing the men, but they are doing what was before the war generally regarded as men's work." The estimated number of women reported by employers as directly replacing men was 766,000

THE ONLY MEN IN SIGHT ARE LOOKERS-ON

Left, lifting heavy steel bars in shipyards. Right, women porters in railroad goods (freight) yard loading trucks. Note the heavy barrels, bags and cases in the background.

in July, 1916, and has grown since. Both the Home Office and the Board of Trade have issued series of pamphlets in which the substitution of women for men is made the object of a careful consideration of suitability and conditions, based largely upon the judgment of the factory inspectors and other qualified investigators. But the War Office, in this pamphlet, takes no notice of them; and employers and the women themselves in many cases take no heed of the warning given them by the responsible civil government departments.

Thus women are directly replacing men even in building, mining and quarrying. Considerable numbers are engaged in the metal industries in processes involving excessive physical strain. The number of women and girls employed in grain milling increased from 2,000 to 6,000 between July, 1914, and July, 1916; in sugar refining from 1,000 to 2,000; in brewing from 8,000 to 18,000. One of the principal increases has been in railway work, including not only carriage and locomotive cleaners but also hundreds of porters and laborers in workshops. Municipalities employ women in power stations, on sewage farms, in gas works, in parks, and in road cleaning and scavenging.

In certain occupations it has been found that women lose more time than men in starting machines. But instead of concluding from this that a lesser total daily output must be expected from them in these operations, it is asserted by employers that the proper thing to do is to reduce the number of pauses in the work and to work longer shifts. Only time can tell what the result will be of so widespread a disregard of elementary principles of health. "The health safeguards enforced by law in normal times are now to a large extent broken down," says R. A. Bray, chairman of the London Juvenile Advisory Committee (*Pall Mall Gazette*, September 28). "In many of the cases where girls have replaced boys, they are called on to perform duties for which they are physically unfitted." The same, of course, is true of adult women. It is among the women who have come forward and relieved male labor to so appreciable an extent, says the *Lancet* (November 4), that "the first effects of drastic recruiting will be seen."

SANITATION IN CINCINNATI KITCHENS

THE Consumers' League of Cincinnati has recently investigated 118 of that city's restaurants and has in consequence put 59 on its white list. Fourteen of the kitchens visited were located in basements and 124 had dark, unventilated storerooms. In 55 kitchens there was no stove hood, which meant intense heat and fetid odors. In 80 kitchens no provision was made for

rinsing dishes; in 12 the dishwater and in 21 the dishtowels were dirty.

The law of one day rest in seven for employes was enforced in no restaurant open on Sunday. The women reported weekly wages of from \$4 to \$6; the men from \$10 to \$12, except the chefs of the large establishments. Supposedly the women are protected by the 54-hour law, although 11 restaurants are known to be disregarding this.

In 20 places there was no dressing-room for employes and in 11 the street clothes hung in the kitchen or the adjoining pantry. In 14 restaurants the toilets either opened into the kitchen or were right next to them.

According to the report, shortly after this investigation by the Consumers' League, the Board of Health entered the low-grade eating houses and "marked improvement was noticed in four of the places; two of these have since been added to the white list. Several of the undesirable places have gone out of business. A number are striving to come up to requirements of the Board of Health."

GOVERNOR LOWDEN'S PROGRAM FOR ILLINOIS

NO one of the specific policies announced by Governor Frank O. Lowden of Illinois in his inaugural is more important to the citizens of that state, and of every other, than the appeal for personal attention to public business with which he concluded his address.

"Our public business is the most important of all our business," he said. "We too often say that our private affairs will not permit us to interest ourselves in public affairs. We seem to forget that if government were suspended for a single day our private affairs would be of no moment—that ruin would rule all about us. But government is not automatic. Perpetual motion is an idle dream in government as in mechanics."

The most outstanding policy of the new state administration is the consolidation of the functions now scattered among over a hundred state offices and agencies into nine departments—finance, agriculture, labor, mines and minerals, public works, charities and correction, health, corporate control and education. The basis and argument for this consolidation were solidly laid by the voluminous report of a legislative commission on economy and efficiency in state administration rendered a year or so ago.

Among the policies urged as corollary to this main proposition are a budget system to include all expenditures, the strengthening and extension of the civil service, a short ballot and reduction of the number of elections, home rule for the control of public utilities in large cities and a constitutional convention as the surest and shortest way of securing the long and badly needed new constitu-

tion for the state, which the governor declares should include full and equal suffrage for women.

A shorter working day for women, ample compensation for injury in industry as a factor in the cost of production, soil conservation, reforestation and cooperative farming, good roads, state supervision of private banks, and laboratories and clinics as vital to any scheme for handling defectives, are the progressive measures to which the governor commits his administration. Against all the pressure of the incoming party influences to reward the faithful with jobs, Governor Lowden insists that he will hold in abeyance practically all appointments until his legislative policies are carried through the legislature.

PROPORTIONAL REPRESENTATION FOR CALGARY

BY a vote of 2,840 to 1,374 the voters of Calgary, Alberta, recently passed judgment in favor of applying the proportional system to the election of their city council. As the change had already been sanctioned by the provincial Parliament, the popular vote settled the question finally and made Calgary the first community in Canada to secure the new method of election. Ottawa voted in favor of it a year ago, but the Ontario Parliament has not yet authorized its adoption there.

The system of proportional representation to be used in Calgary is the same, in general principle, as that adopted by Ashabula, Ohio, in 1915. It is called the "Hare system." The election is at large. Each voter has only one vote, but he may express on his ballot any number of alternative preferences so that his one vote will be sure to count for the candidate he likes best among those who, considering how all the other voters have voted, can be helped to election.

The system works out in the election of every candidate who is desired by enough voters to deserve a representative, and of no candidate who is not desired by that number of voters. For example, if there are seven seats in the council, a seventh of the voters (approximately) who want the same candidate are sure of electing him; and, on the other hand, no party or group of voters can possibly elect more members than they have sevenths (approximately) of the total vote.

In the opinion of its advocates, among whom are included some of the leading men of the country, this system of election will bring into the legislative body persons truly representative of the real interests and aspirations of the community and will break the old parties' corner on the seats in city councils; for they hold there is no question but that with the Hare ballot voters can vote absolutely as they please without risk of "throwing their votes away."

Book Reviews

DISEASES OF OCCUPATION AND VOCATIONAL HYGIENE

By Kober and Hanson. P. Blakiston Sons & Co. 918 pp. Price \$8; by mail of the SURVEY \$8.30.

Sir Victor Horsley, consulting surgeon to the British army in the East, said while lecturing in India recently that the time had come for doctors to study sociology and for people in general to study physiology.

That the dictum has favor and followers in this hemisphere also, is evident from certain recent publications. The avowed aim of these books is to make certain basic facts of disease and its prevention available to the general reader, who is becoming interested, and to give the physician a view of his "case" from the sociological angle. Foremost among them must be mentioned Diseases of Occupation and Vocational Hygiene, a collection of studies each by an expert in the particular subject, edited by Dr. George W. Kober, of Washington, and Dr. William H. Hanson, formerly of the Massachusetts State Board of Health.

The essays are in three main groups. Part one discusses specific and systemic diseases of occupation; part two discusses first the cause and means of preventing occupational diseases, then the various occupations in which exposure to injurious conditions is involved. In part three there is a description of the unique Milan clinic for occupational diseases; then a discussion of statistics, their uses and their fallacies; and last, chapters that contain the latest study of legislation for the prevention of occupational disease; on the *rationale* of making such diseases notifiable and including them in the records of vital statistics; on women's and children's work; and on administrative power and methods.

Concerning these subjects, basic data are presented with a simplicity, clearness, fulness and interest that at first conceal the magnitude of the completed task. The editors have appreciated the value of mechanical aids, such as heavy-faced type for headings, numbered divisions, paragraphs of moderate length and a good index.

The book announces its appeal as "to physicians, to employers, to employes, efficiency experts, public-health officials and legislators." And no member of

any of these groups can fail to find this volume of limitless value for information and for reference.

Ideals of civilization demand such a knowledge of the gravity and variety of occupational diseases as that offered in this book. Action for their prevention may be intelligent, and that one great social group may be given clearer understanding of some of the difficulties that face another great social group. Such an understanding is that expressed in the words upon the cornerstone of the Milan clinic: "*In aliis vivimus, movemur, et sumus.*"

G. S.

COMMUNITY HYGIENE

By Woods Hutchinson, M.D. Houghton-Mifflin Company. 310 pp. Price \$.60; by mail of the SURVEY \$.70.

The title of this book does not give any idea of its intent, but in the preface we find an argument, the reasoning of which is sound, for presenting teaching of this sort to children, though of just what age these children should be no intimation is given.

Dr. Hutchinson has been before the public as a popular writer on medical subjects for a number of years, and has gained a large following. The present book considers a great many subjects in a popular and readable style. The subtitles of the paragraphs in the chapters are particularly apt, and many of them carry lessons in themselves, for example: "The complexion that won't come off," "Cave dwellings of today," "Second-hand air," "Why drafts are healthful," "Milk and the crops it grows," etc.

The author makes his statements in a dogmatic manner which at times cannot be defended. He speaks of shutters as being "a particularly stupid and unhygienic survival of the Dark Ages," and does not mention the Venetian shutter which throughout the southern part of our country is a necessity. It shuts out the sunshine, and allows ventilation at all times, even during storms, as the ordinary window and shade which he recommends do not.

There is some repetition. A good chapter entitled "our insect enemies" is followed by one called "the spread of disease," in which he again devotes a good deal of attention to insects.

The etiology of infantile paralysis is

more than questionable. He states positively that it has been proven the stable fly carries infantile paralysis, and he suggests also that infantile paralysis is carried from calves, colts, dogs, or chickens! His etiology of pellagra is also open to criticism. If children are to be taught about such things they should be told only what we positively know.

Dr. Hutchinson says, "As a carrier of infections the cat has few superiors." That cats occasionally carry infection seems to have been proved; that it is a common thing, is very far from having been proved. Children should be taught kindness to animals and a love of pets. The good far overbalances the very slight danger which comes from a house pet properly cared for.

The book is a useful one and can be safely recommended. It is very difficult to treat some of the subjects taken up in such a way that they are made plain to children without misleading them, but the author has succeeded for the most part in stating things correctly and in a fashion understandable to his child readers.

MAZYCK P. RAVENEL, M. D.

STANDARDS OF HEALTH INSURANCE

By I. M. Rubinow, M.D. Henry Holt and Company. 322 pp. Price \$1.50; by mail of the SURVEY \$1.59.

Timely in an unusual sense is this little volume by Dr. Rubinow. In the midst of the propaganda that is rapidly preparing the country for health insurance legislation we get a discussion not primarily of the need for the reform,

but of the basic principles on which health-insurance systems must be built and of the methods of practical administration to insure their successful operation. Seldom, in our campaigns for social legislation, has anybody thought it worth while to make such fundamental and technical inquiries. Had we paid more attention to these deeper questions a few years ago, when agitating for workmen's compensation, perhaps we would not now have "such preposterously inadequate laws as, e. g., those of New Jersey, Colorado or Pennsylvania"; and we might not have to do the work all over again, as with the federal compensation act.

Contenting himself with a summary of the arguments in support of the general policy of health insurance, the author proceeds at once to consider the principle of compulsion. Shall the plan be voluntary or compulsory? On the answer to this crucial question all other provisions must depend. Dr. Rubinow decides unequivocally in favor of com-

pulsion. "The lesson of history is . . . strongly in favor of the compulsory principle in this branch of social insurance," he concludes, after a review of the European systems. And the reasons for it are the demonstrated inability to bring the neediest strata of the working class into the system by any measures short of compulsion; at least a partial responsibility for illness must be placed on industry and on society; also, it is important that the services rendered by the insurance institutions be effective and capable of meeting the problems which call for health insurance.

Having determined upon a definite system of health insurance, two further questions present themselves. To whom shall we make it applicable, and what kinds of sickness shall be covered by insurance? Then come the character of the medical benefits and the amount of money benefits to be paid. Shall maternity and funeral benefits be included in the system of health insurance, and how shall they be connected in administration with the general scheme? These and the question of optional or additional voluntary benefits are discussed in brief but thorough-going fashion. Answers are given to each of the questions to enable those who would frame legislation to see the exact nature of the work that will have to be done as well as the machinery they must create.

In working out the detailed parts that must go into the building of a complete and successful system of health insurance, Dr. Rubinow does not venture much to draw on his "constructive imagination." His searching studies of European systems and his own experience as a medical practitioner enable him to see vividly the social needs, as well as the pitfalls the legislators who attempt to meet them are likely to tumble into.

The burden of cost of the insurance he would place upon the employer, the government and the wage-earner, in the proportions of 40, 40 and 20—this, to stimulate each to active preventive measures and to avoid malingering. He recognizes, however, that the lowest paid workers will be unable to bear their share and would, therefore, distribute the burden in such a way as to have employers, the state and the better-paid workers each pay part of the others' share.

Perhaps the most helpful part of Dr. Rubinow's work for the legislator will be the several chapters describing the administrative organization necessary to get the results contemplated by the laws that may be enacted. Rarely do our lawmakers get from advocates of social legislation such clear-cut and practical details of how to make the laws work as are contained in the chapters on financial organization and the organization of medical aid.

The value of this little book to the

cause of social reform can hardly be over-estimated. It points the way not only to those interested in health insurance, but to all who wish to see the state take a hand in ameliorating social conditions.

WILLIAM M. LEISERSON.

PREVENTIVE MEDICINE AND HYGIENE

By Milton J. Rosenau. D. Appleton and Company. 1,286 pp. Price \$6; by mail of the SURVEY \$6.40.

Books there are, and also volumes, and also publications; but there is an entity in the world of pages and covers not adequately described by these words. Size and dignity; weight, intellectual and physical; significance as a thing to come back to again and again, to be pondered over and realized—all these are connoted by that good word, *tome*. Dr. Rosenau's book is a *tome*. Apart it stands from the mile-a-minute handbooks. It takes the necessary time and space to explain as well as to state. Its appeal is to the increasing number of people, in addition to those officially responsible for public health, who want careful, authoritative details of this relatively new science of preventive medicine.

That Dr. Rosenau is eminently fitted to give such a statement is evident from his position in Harvard University and the Harvard Technology School for Health officers, as well as his experience in quarantine work, in epidemic campaigns, in epidemiological investigations, and in the federal Hygienic Laboratory. He has faced the disease-prevention problem at home, on the continent, and in the tropics.

The book deals with hygiene—that is, the personal aspect of public health; and with sanitation—that is, the environmental aspect. It discusses fully the prevention of communicable diseases, venereal prophylaxis, heredity, immunity, eugenics and similar subjects. It gives both principles and detail concerning food, air, water, waste disposal, vital statistics, diseases of occupation, and much else involved in the relation of environment to public health. This relation is found to be increasingly one affecting the community, since in all such matters the best efforts of the individual may be neutralized by the carelessness of his next-door neighbor. A curious oversight is undoubtedly responsible for the statement that New York is the only quarantine station not under federal control. Since the spring of 1916 Baltimore has enjoyed this undesirable eminence.

In the library of every organization even remotely connected with health work, in the library of every individual

who can economize somewhere else in order to spend on this book, Rosenau's Preventive Medicine and Hygiene will hold an honored place.

GERTRUDE SEYMOUR.

CITIES IN EVOLUTION

By Patrick Geddes. Williams and Norgate, Covent Garden, London. 409 pp. Price \$1.85; by mail of the SURVEY \$2.05.

CITY PLANNING

Edited by John Nolen. D. Appleton and Company. 447 pp. Price \$2; by mail of the SURVEY, \$2.13.

Scholarly study of cause and effect, patient investigations as to the reasons for changes during the long centuries of a city's development, make Professor Geddes a stimulating companion. Unfortunately he has not the intimate acquaintance with American cities that would permit him to do more than generalize regarding them. But the light he sheds upon the cities of Europe illumines a little our darkness. His book is not easy reading. He has a fondness for unusual words and long sentences, a proneness to allusions with which few of his readers are likely to be familiar. His book is the chat of a scholar who is constantly reminded of stray bits of information picked out of an ancient or medieval or modern literary setting, or even from yesterday's newspaper, to serve as texts for philosophizings. He delights in tracing the steps by which the well-made kitchen furniture, of the days when the best people lived in the kitchen, has been moved and transformed into dining-room and drawing-room furniture, often losing its meaning in the process and becoming mere ornament. The kitchen then was neglected, furnished with the cheapest and the ugliest utensils, and finally banished to the basement or cellar that in simpler days had been considered good enough only for storage.

In similar fashion he gives us a picture of the transformation of our cities. Like John Ball, he has a vision of them as they were in a cleaner age, before coal and machinery and railroads had brought the grime and squalor and crowding of the present. And in his vision of the present he sees the second stage of our era already begun, ushered in by the use of the white fuel, water-power, and by electricity in place of smoke-belching furnaces; where the order and beauty of town planning and garden cities take the place of the blindness and chaos and ugliness of Victorian city buildings.

Professor Geddes' picture of the present as a mere step between past and future, his long perspectives into the history of a changing but always aspiring

world, beget a confidence that, when Manchester will have become a sort of Greenwich village in "Lancaston," when New York, Philadelphia and Boston will be but sections of one city stretching for five hundred miles along the Atlantic seaboard, we shall have ability to meet adequately this future.

The eighteen papers on city planning edited by John Nolen discuss as many phases of their most complex subject as is possible in a volume of manageable size. Their authors bring to the discussion a knowledge gained by practical experience that gives weight to their arguments. Most of the eighteen writers were engineers or real estate dealers or architects before they were city planners. They have seen the value of the broader vision, of the coordination of many developments. Consequently theory is here united to practice in unusual degree and principles are illustrated by concrete examples. Perhaps one of the most valuable features of the book is this demonstration that we have progressed so far beyond the domain of pure theory in American city planning that we can illustrate the effects of proposals by existing American examples.

JOHN IHLDER.

WAR BREAD

By Edward Eyre Hunt. Henry Holt and Company. 374 pp. Price \$2; by mail of the SURVEY, \$2.15.

No American can read War Bread without a thrill of pride and satisfaction! It tells the story of a great achievement — the saving of a nation from starvation by the volunteer work of a host of individuals who had no mo-

tive of self-interest, no racial ties of kinship, no prospect of future recompense—nothing but their great sympathy to guide them, and the inspiration which the bravery, the self-sacrifice, and the sublime patriotism of the Belgians has given to all who value freedom and independence.

Mr. Hunt has told the story of the work of Belgian relief with rare restraint and great modesty, but it is a story which teems with human interest and winsome artfulness. It is not merely an ephemeral "war book," but a book which will live in English literature, both because of its historical value, and its gripping interest.

The Belgian Relief Commission is fortunate in being chronicled by a man who writes so well, thinks so vividly, sees so clearly, and who has kept his sanity and his sense of humor under the most trying circumstances. Mr. Hunt has done his work with great fidelity and perfect taste, both in what he says, and

in what he omits. No fair-minded man can be offended by it, and no one who has any of the milk of human kindness can fail to be exalted by it.

One's natural impulse after reading this remarkable story is to shout aloud—"Hurrah for Hoover!" "Hurrah for Hunt!" "Hurrah for all the Volunteers of the Belgian Relief Commission!" But the author sounds a note of warning in the closing chapter—Belgians, he says, have a marvelous vision of America, which they "believe in as they believe in God." It is a vision "of a new Atlantis, rich, kind, secure from the dangers of war; a land where there is no oppression, a land of toleration and understanding, where every man, woman and child is a democrat, where there are no classes and no masses, where there is no conflict between parties, or between church and state, where every one is a friend to those who are suffering in this war from no fault of their own; a mighty land which can afford to be generous to its neighbors, near and far; a land where there is one language, one spirit, and one flag."

"Of course the picture is overdrawn. Of course we are not much different from Belgians, or any other people in this tired world. . . . But it seems to me this golden legend might be made in part a fact if America were to understand, humbly and humanly to understand, and to support in every way—with money, and service, and national pride in a great achievement—the work of the Commission for Relief in Belgium and of Herbert Clark Hoover.

"That is one reason," says Mr. Hunt, "why this book is written."

HUGH F. FOX.

WAR, PEACE AND THE FUTURE

By Ellen Key. G. P. Putnam's Sons. 271 pp. Price \$1.50; by mail of the SURVEY \$1.60.

The subject-matter of this book falls into two more or less distinguishable parts; one devoted to a discussion of the feminist attitude toward war; the other an attempt at interpreting a new the concepts of nationalism and inter-

nationalism, patriotism and humanity. It is the latter part which contains Ellen Key's more important contribution to present-day thought on the war's effect upon international relationships. Even the statement of commonplaces may be stimulating if presented by an original thinker and versatile writer such as this famous author. But in addition to much material which is not new, she throws out suggestions which raise controversial issues to the highest plane of political discussion. Such, for instance, is the

clean distinction which she makes between nationalism and patriotism. These, according to the author, "are built on diverging views of the aim and reason for a people's growth." "Whereas nationalism seeks power, honor, and glory through means that endanger other countries, patriotism knows that a country's strength and honor can only be permanently safeguarded through concourse with other countries."

We are not sure whether such a re-definition of these two ethical ideas is justified. It serves in this book to defend the patriotism of pacifists and to throw opprobrium on nationalists of the "my-country-right-or-wrong" school of thought. The patriotism which is not nationalistic, Miss Key says, explains why pacifists in each belligerent country have rallied to the defense of the mother land when its existence seemed imperiled. But is not the conversion of so many pacifists to the militarist creed which the world has recently witnessed really a sign that the humanitarian enthusiasm of these men and women has become submerged under an overwhelming nationalist mass enthusiasm against which they were not fortified by a sufficiently strong intellectual justification of their previous faith? We have not found in this book nearly so illuminating an exposition of the inherent conflict of loyalties in the heart and mind of modern man as has been given us, for instance, by the late Professor Royce.

Human society, today, requires more than mutual tolerance of peoples limited by exclusive preferences, pre-occupations and viewpoints, just as the community requires more than the mutual tolerance of persons limited by selfish individual aims. It is only as in all countries there arise large bodies of opinion truly universal in outlook, without the fetters of the more restricted loyalties, that international solidarity can become established upon a safe and permanent foundation. As the modern community needs citizens preoccupied with questions of public rather than personal welfare, so the world today needs men and women of vision who think in terms of humanity, not of nationality or race. It is this world society, at present small and with little influence upon the current of events, which must be firmly established before the peace of mankind can be assured.

There are curious parallels also in the relapses of emotional tides, which have every now and again carried mankind one phase further towards civilization. For the masses, says Ellen Key, "not even the victory of their country will be able to keep the flames from becoming ashes. The mean souls will again become mean, the wicked ones wicked, and the stupid ones stupid. It is only during a time of national psychosis that they can rise above themselves." But it does

not follow that an intense love of country will not remain among some at the close of the war, as the tide of patriotism subsides. In the same way, there may now be witnessed an ebb of international feeling which leaves exposed a long and dull beach of national and racial separatism, strewn with the wreckage of high ideals of human brotherhood. But the tide will return. The glittering sea of our hopes has receded, but not dried up.

any institution has ever objected to this. If the private institution be an ecclesiastical one and have as its primary purpose to supply what it deems the gross defect of state-conducted schools, asylums, and the like, viz., the lack of religious instruction, the state has the right and duty to see that in performing that purpose it does not neglect the physical well-being of its wards nor deprive them of the opportunity to be grounded in the elements of secular instruction corresponding to the standard accepted by the community at large. Further than this it cannot go without inviting the charge of paganization, as Father Blakely puts it, or as I should prefer to say with M. Boutroux, without incurring the reproach of persecuting the religious conscience—in other words, throttling that very liberty claimed by every radical as the cornerstone of his ideal.

New York.

THE INITIATIVE FOR PEACE

TO THE EDITOR: When two angered men are fighting, he who acts for the good of each by interposing and separating them, is apt to receive at the time from one or the other, or both, the same kind of hasty, ill-tempered criticism as is now being shown by some of the radical pro-Allies and pro-Germans toward President Wilson.

The Lord Cecils, Hall Caines, Chestertons, Baron de Constants, Westminster Dean Ryles and other war-to-the-end advocates in Europe, like the Becks, Perkins, Wickershams and their sympathizers in this country will no doubt continue to disfavor his peace-note policy, and advocate that the slaughter and destruction go on to the possible limit of Germany's annihilation.

But when such men as Andrew D. White and the leaders of thought, including alike the President's friends and political opponents in and out of Congress, laud his action, and the press of this and the foreign countries at this critical juncture favor his course, can there be any question but that his impartial appeal to the belligerent nations was timely, and now demanded by the broader interests of humanity and by the imperative needs of the warring nations? Does not Lord Trevelyan's recent statement and the Russell letter to the President and many other evidences correctly reflect the hope and prayer for peace now prevailing with the mass of people and the soldiers in England; and similar conditions in all the war-stricken countries?

There may be three underlying reasons why Germany has taken the initiative for peace:

1. As a progressive nation, being first in war, she may now have the determination to be first in peace; for from the day England declared war and became one of the Allies, the statesmen of Ger-

Communications

NEW YEAR GOALS

TO THE EDITOR: I am very much surprised to note that in your issue of December 30, which mentions all current reforms, you ignore taxation and everything which from my standpoint is fundamental. Should not the land question have a permanent place in the program of reform, irrespective of current spectacular showings of progress? Does not your editorial staff appreciate that all these other reforms are dependent for even measurable success on some solution of the conditions under which the source of all wealth is administered? Do you think it pays to devote all our efforts to palliatives and give no attention to engineering work which goes to the root of evil?

C. H. INGERSOLL.

New York.

CHARITY, EDUCATION AND THE STATE

TO THE EDITOR: In an article on the reconstruction of the liberty of conscience in France after the war, Emile Boutroux, the eminent philosopher and academician, has this to say: "At three points, in particular, contact between the state and the churches remains inevitable: charity, education, the recruiting of the religious personnel. It is certain that the religious conscience is oppressed if it is forbidden to manifest itself in these three domains."

And again: "Among the manifestations of social activity charity and education, in particular, cannot be the objects of a monopoly. The first rests on human fraternity and is as much a matter of heart and devotion as it is of intelligence and organization. Education,

too, is a commerce of souls as well as an intellectual relation (*rapport*). Xenophon, disciple of Socrates, was fond of saying that only at the cost of making himself beloved was a master capable of really instructing his pupils. Science, literature, art, morality cannot be confiscated by anybody—they are the common good of every member of a human society."

The present writer is not a Catholic, and holds no brief for the parochial school; he fails to see, however, how that institution can be objected to on democratic grounds, provided it meets this test, on the practical side, of equipping its scholars for such examinations as may be exacted by the state as a qualification for employment or diploma.

When it comes to charity, he ventures to doubt whether modern sociology has discovered a method so universally applicable as to justify the state in proclaiming that in this way and no other shall the bread and water (or wine, if you will) of benevolence be dispensed.

On the contrary, with respect both to charity and education, it would seem that the world still stood to gain from a variety of inspiration, finding expression in fruitful experiment rather than by the opposite method of absorption into this state of all individual initiative in these particular fields of human endeavor.

This is not to say that abuses have not crept into the administration of private and ecclesiastical institutions as they have at all times into those of the state. The right remedy for this is the inspection of state institutions by volunteer visitors and of private ones by officially appointed inspectors of the state. It does not appear that, in theory at least,

many must have realized the futility of an indefinite struggle, which at best could hardly result other than in a drawn battle between the great powers.

2. Germany's conduct of the war, from the rape of Belgium to the Armenian and Polish atrocities and submarine operations, has turned the moral sentiment of the world so firmly against these manifestations of Prussian militarism as to now make some effectual appeal to the world to regain this lost moral sentiment, an urgent necessity.

3. The rapidly growing popular sentiment toward democratic governmental methods throughout the Central Powers as evidenced by the growth of socialism, is gnawing at the vitals of the monarchies, and as the hardships of war multiply in geometric ratio as the slaughter of men, the privation, suffering and loss continue, the thrones totter and a cry for peace and the sacrifices to secure an enduring peace may offer the only solution, now that death and destruction have seemingly run their full course.

All the bluster and cost of Germany's excessive "preparedness" and reliance upon military force to insure peace, and for further territorial or trade expansion in following England's example, as heretofore practiced on weaker or defenseless peoples, has borne its natural fruit, and Germany now becomes the first power to raise her voice that the cataclysm end and the nations for the future be put on a basis of coordinate action to forever prevent a recurrence of any such holocaust hereafter.

President Wilson and Congress, the people of this country, the League to Enforce Peace and the American Neutral Conference Committee with allied organizations, have now an opportunity for humanitarianism and economic accomplishments, rarely open to any body of men in any generation.

FREDERICK W. KELSEY.

New York.

NATIONAL PROHIBITION

TO THE EDITOR: In the article by Robert A. Woods, published in the issue of your journal for December 30, the statement is made that "not far from 60,000,000 Americans now live in dry territory." Had Mr. Woods said "nominally dry" he would be correct, but as a matter of fact there are no "dry" states. The mere enactment of a prohibitory law does not eliminate a desire for the relaxation or stimulation derived from alcoholic beverages, and the people who drank before the law was passed continue to drink. The only difference is that they either import liquor from wet territory, or obtain it from illicit dealers or manufacturers, commonly known as "boot-leggers" or "moonshiners."

The general public, and the news-

papers have been deceived by reports from various alleged "dry" states as to the strictness with which the law is enforced. The records of liquor shipments by freight and express into those states show that the consumption of liquor is not materially diminished by so-called prohibition.

An Associated Press dispatch from Baltimore, Md., dated December 23, states that the "rivers of rum" flowing southward into Virginia, West Virginia and the Carolinas had swamped the express companies, two of which stated that they had been handling from 35,000 to 40,000 packages per day. Nearly all the prohibition states permit the importation and use of liquor; seven of them in unlimited quantities, while in ten of the other states that limit the quantity that can be imported at one time, the amount that can be annually imported by each citizen is from four to six times greater than the average per capita consumption for the entire country.

The New York *Times* called attention recently to the hypocrisy of laws ostensibly intended to prevent the use of liquor, permitting the importation of liquor into dry territory for personal use. Since it is to the "use," and not to the manufacture or sale, of liquor that the ills resulting from excessive drinking by a small minority of weak-willed persons is due, it would seem that its use should be prohibited. The fact that no prohibition state has ever enacted a law forbidding the use of liquor is evidence of the insincerity of those who pretend that repressive legislation promotes temperance.

H. J. KALTENBACH.

[President New York State Wholesale
Liquor Dealers Association.]

New York.

TO THE EDITOR: It will be noticed that when Mr. Kaltenbach gives the full figures in support of his claims as to the increase in the use of liquor, this increase represents a period of years and covers the whole country. As a matter of fact, the national rate of increase has steadily declined and has recently passed the vanishing point.

If it is true that more liquor than ever is consumed in prohibition territory, and under particularly objectionable conditions, Mr. Kaltenbach might explain why arrests for drunkenness are invariably reduced from 40 to 75 per cent.

It may safely be taken for granted that the liquor interests will from now on make one of those sudden shifts away from this argument which are characteristic of their mode of defense. In fact, such procedure is already foreshadowed by their attitude toward the Supreme Court decision on the Webb-Kenyon law which closely restricts, and may even prohibit, interstate sales. Their claim has always been that pro-

hibition does not and cannot prohibit. Now—with the probability in addition that they will not be allowed the use of the mails in promoting their business in prohibition territory—they are apparently beginning to urge that the reason why prohibition is to be considered a failure and a fraud is precisely because it does prohibit.

The suggestion on the part of the liquor interests that as soon as prohibition begins to prohibit toward the vanishing point, the prohibition wave will begin to recede, represents in itself a fair challenge; but as the supporters of prohibition have labored unceasingly to bring about this situation, they are quite unconcerned as to any such danger. The overwhelming momentum of the established and ascertained results that will come in from twenty-three de-alcoholized states, including a dozen large cities, will abundantly provide for the reaction of the small number of persons with whom Mr. Kaltenbach and his colleagues are in touch that vote prohibition for others while still insistent upon a supply of liquor for themselves.

For a whole generation the liquor-sellers' propaganda has been successful in riveting it into the minds of a great number of sensible men that state prohibition was not worth consideration because it meant merely an objectionable change in the mode of distribution. A steadily growing proportion of such men in license states are today leaning toward national prohibition as a project essentially different on account of the relative certainty that it would be really effectual. If now they are to be assured by leading representatives of the liquor trade that even individual states can make a success of prohibition, these particular sensible men and many others like them will feel that the defense has thrown up its case—and that the abolition of the liquor business throughout the country, allowing two or three generations for the disappearance of all the after-effects of alcohol, will bring about a condition like what would have been if intoxicating liquor had never been discovered.

have pleasure in announcing themselves as publishers
of a new edition of

William Allen White's

The Old Order Changeth:

A View of American Democracy

in which the distinguished Author has added a *New Preface*, connecting the body of the book with the movements that have transpired since it was first published, and bringing it down to the present day.

Mr. White's book in its original form, first published in 1910, has already run through three editions bearing the imprint of The Macmillan Company and has been a large factor in stimulating that advance toward a larger Democracy which has been made in these years. Now, in this new Preface, he has brought his book up to the present time and given a new value to it.

Every Social Thinker, every Public Library, every Transient Reader of Thoughtful Literature, should obtain this work in its present New Edition.

Cloth, 12mo, 50 cts. Postage about 10 cts.

ence of sociology to join a once-a-month lecture course for the nominal fee of one dollar. The director is Emily Palmer Cape, who studied under Lester F. Ward and collaborated in Dr. Ward's last great work, *Glimpses of the Cosmos*. Meetings of the club are held the third Monday in each month from November through March. Further information may be obtained from Mrs. E. P. Cape, 56 West 45 street, New York city.

THE New York *Medical Times* points to the experiment being made on a large scale in Germany on the influence of diet on cancer. It has long been held by laymen and is still held by some medical authorities that a meat diet favors the development of cancer; a vegetarian diet inhibits it. If this is true, the regulation of diet practiced during the war by Germany, with its reduction in the meat consumed, should show some effect on the incidence of cancer. Germany's excellent system of vital statistics will make it possible to demonstrate these results of her great dietetic experiment with entire clearness.

THREE ancient tales of magic made up the opening bill, Christmas week, of the Community Players, a band of forty children organized by the settlement houses of Boston's North End. The performance was held to give ample justification to the belief that the community may provide its own entertainment through self-expression. The actors were children. Children furnished the music. And children, for the most part, made up the audience.

THE recent change in the Russell Sage Foundation, by which the Committee on Women's Work becomes the Division of Industrial Studies, is evidence of a significant development in the work of that department. For a long time it has been making industrial studies quite independently of whether the industries in question employed women or men, and the change in name gives official recognition to that fact. Mary Van Kleeck, who was secretary of the old committee, becomes director of the new division.

AS the European war makes it impossible to send a deputation to Europe to a World Conference on Faith and Order, a step proposed by the Christian churches, a North American Preparation Committee has been formed to collect material for the conference at the end of the war. The committee, consisting of about 175 men from all parts of the United States and Canada, and including members of fifteen communions, will hold its first meeting at Garden City, Long Island, N. Y., January 23-24.

AS PART of its effort to enlist on Child Labor Day—January 28—the cooperation of all interested in the promotion of the child labor program, the National Child Labor Committee has published two pamphlets. One, *More Education Pays*, contains material for linking the child labor problem with modern industrial processes for the history class, with the waste of human resources for the physiology class, with social and political responsibility for the civic class, and with the products of the states for the geography class. The other, *Child Labor in Your State*, is an outline for a study of local child labor conditions with a memorandum of the weak spots that need strengthening in each state law. The pamphlets may be secured from the committee, 105 East 22 street, New York city.

THE Boy Scouts of America, which will celebrate its seventh anniversary on February 8, has just organized an Education Department, which it calls the "most significant development since the organization of

the movement." The purpose of the new department will be to conduct conferences for scoutmasters, to promote training courses in scout leadership either in connection with established educational institutions or with local councils, to develop correspondence courses for scout leaders, and to spread the merits of the scout program among educational and religious groups. The director, Lorne W. Barclay, was scout executive, Manhattan-Bronx schools, New York city, in 1915-16, and prior to that was director of the Social Center Department of the People's Institute, New York city.

NO SOCIAL worker on leaving Chicago has ever had quite such a send-off as was given Sherman C. Kingsley on the eve of his departure for Cleveland. It took the form of a complimentary dinner attended by over 300 of his fellow workers and friends, at which representatives of many social and civic interests undertook a "confidential" expression of their judgment as to Mr. Kingsley's qualifications to superintend the Cleveland Welfare Federation, in response to supposititious inquiries from that city. Former employers, fellow workers and friends vied with each other in earnest and witty expressions of the public appreciation for Mr. Kingsley's initiative, ability to bring things to pass and capacity to lead and promote effective cooperation. Some of the ringing notes he struck in rallying united effort, such as "on the trail of the little white hearse," and "being a baby the most dangerous occupation," reechoed in the speeches. A clock with chimes was the parting token of the occasion.

THE Mann white slave law applies not only to commercialized vice, but to personal "escapades" as well, according to the decision of the United States Supreme Court handed down on Monday. The opinion was based on the power of Congress to regulate interstate commerce and it upholds the literal meaning of the act—"transporting, causing to be transported and aiding and abetting the transportation or obtaining transportation of women from one state to another for immoral purposes." The decision confirms the penitentiary terms and fines imposed by lower courts on F. Drew Caminetti and Maury I. Diggs of California and L. T. Hay of Oklahoma.

Common Sense for Indigestion

Why treat your insides as though they were an enemy? Why "blast them out?" It's dangerous. And—unnecessary. A little common sense will secure the same effect—you will be a lot more comfortable and—*results will be lasting*. You will be rid of indigestion, constipation, and more serious ills to which they lead, for all time. Not difficult but easy. No drugs. No tiresome routine. Just plain common sense about food you eat—a little exercise—and proper rest and sleep. Simple—sensible—natural—effective. You will find full and complete instructions for this effective method in a new book called "Colon Hygiene," written by the greatest living authority on foods, feeding and digestion. Over 400 pages. Only \$2. Write for it today. You take absolutely no risk. For—if you are not entirely satisfied with this book—if you do not find "Colon Hygiene" one of the most sensible, practical, useful and valuable books you have ever read—return it at once and we will at once refund every penny sent us. Is this fair? Then order "Colon Hygiene" NOW. Be rid of constipation, indigestion and all their discomforts and dangers.

Use the Coupon Or—Ask at Any High Class Bookshop.

Good Health Publishing Co.,
2601 Main St., Battle Creek, Mich.
For attached \$2., send me "Colon Hygiene," with privilege of return in five days.
(Write your name and address in the margin.)

WITH Congress, state legislatures, governors' messages, the federal Supreme Court making news daily of the anti-alcohol movement, there's particular interest in Mrs. Tilton's illuminating contrast of the prohibition ideal of our grandfathers and the temperance ideal of our fathers—and the contrasting results—in

Washington St., Chicago.

Recreation

RECREATION—The following pamphlet, which have just been issued are full of practical suggestions and information: Preparation—For Peace or War. A Rational Scheme, by George W. Ehler, Price 30 cents; Notes on the Construction and Administration of Swimming Pools, by Joseph E. Rayercroft, Price 20 cents; A Municipal Neighborhood Recreation Center, by Harold O. Berg, Price 15 cents. The pamphlets may be secured from Playground and Recreation Association of America, 1 Madison Avenue, New York City.

Everett's Bloody Sunday

A Free Speech Fight That Led to a Murder Trial

By *Anna Louise Strong*

EXECUTIVE SECRETARY SEATTLE COUNCIL OF SOCIAL AGENCIES

THE biggest "labor trial" in the history of the country is now on in Everett, Wash. Seventy-four men are accused of first-degree murder—seventy-four workers who participated in a conflict in which five workers and two deputies were killed. The side which lost the most men is also the side charged with murder. "Might makes right—legally," explains the I. W. W.

Everett's "bloody Sunday" is already a familiar word, almost a byword, throughout the labor press. Yet the occurrences in Everett are little noticed by daily papers or magazines of general circulation, much less the causes that led up to it.

Everett is a small city to the north of Seattle. Its main business is lumber. The big mill-owners control its Commercial Club. Eighteen months ago wages were reduced in the shingle mills of Everett, this in the face of the increasing cost of living. The promise was made that when the market improved wages would be raised again. Early last year shingle prices rose, but wages did not follow, and on May 1 the shingle-weavers went out on strike. The usual complications resulted: a group of employers refusing to meet the officers of the union; a picket line; imported strike-breakers, better known for their fighting ability than for their working skill; minor altercations in which the power of the law was used practically invariably against the workers. Such was the background of the I. W. W. free speech fight.

During all this time the I. W. W. organization had maintained a small headquarters in Everett, but had made little headway. It had no connection with the shingle-weavers, and had made little impression upon them. But the I. W. W. started a street-speaking campaign and leaped into public notice as soon as the police and special deputies began dragging them from their soap-boxes to jail. It is stated that the first arrest made was of a man who was reading from the United States Industrial Relations Commission report. "That sort of stuff don't go here," said the outraged policeman, overhearing the terrific indictment of working-class conditions in America. Arrested men were beaten and severely

handled; they were made to run the gauntlet between rows of deputized citizens, and the old, old, always unsuccessful policy of suppression of speech by violence was attempted.

That happened which always happens in war. Each side stirred itself to bitterness and enthusiasm, and grew stronger in numbers and in determination. Several hundred men were appointed as deputy sheriffs, all of them first approved by the Commercial Club, which had appointed itself arbiter of the city's affairs. The I. W. W. sent out a call for cheerful martyrs and the supply never failed. An ordinance was passed against street-speaking in the business district, violated without comment by political campaigners, but used against every I. W. W. orator. Before long no man in overalls entering Everett was secure against questioning and search. The spirit of lawless "law-enforcement" grew.

On the night of October 30, forty-one members of the I. W. W. organization were taken from a boat as they were entering the city from Seattle. Before they had violated any ordinance whatever they were carried in automobiles to the outskirts of town, and there, near an interurban station known as Beverly Park, were made to run a gauntlet between men armed with clubs, saps, and pick-handles. The records of the Seattle city hospital show the condition in which these I. W. W.'s were left. Prominent Seattle citizens who saw them board the interurban car that night received the impression that there had been a train-wreck on some logging road. The men, they said, seemed "serious, self-contained, and in very bad shape."

Promptly the I. W. W. organization in Seattle took up the challenge. Circulars were distributed in Everett announcing a big street-meeting the following Sunday afternoon, and inviting citizens to "come and help defend your rights and ours." A call went out to foot-loose rebels to join in and show Everett by their numbers that they could not be interfered with. The feeling seemed to have been universal in the I. W. W. that in the broad daylight of Sunday afternoon and of the publicity created by their circulars, the tactics of preceding evenings would be impossible.

The answer of the Everett authorities was to rope off the entrance to the dock, so that ordinary citizens could not go out on to the boat which bore another load of the industrial workers from Seattle. The dock-warehouses were filled with ambushed deputies.

As the boat neared the wharf, it was seen to be lined with men waving their hats and singing: "Hold the fort for we are coming, Union men, be strong." From this point on there are many versions of what happened. It is definitely established that Sheriff McRae notified them that they could not land. Scarcely had he finished speaking when shots rang out, and the shooting quickly became general. Before the boat drew away two were dead on the wharf and five on the boat, and it is asserted that several fell into the water from the boat and were shot down while swimming. The *Verona* returned to Seattle, warning on its way another boat, the *Calista*, not to go to Everett, as there was shooting at the wharf.

Congress Might Get the Facts

THE men on board were arrested as they landed at Seattle. Seventy-four of them are now on trial for murder in the first degree before the same county authorities with whom they were engaged in battle. It is for this reason that to impartial persons both in Everett and Seattle a congressional investigation seems the only hope of discovering and publishing the facts.

Whether the first shots came from the boat or from the dock is a matter hotly disputed. Persons who visit the dock at Everett have, however, no difficulty in observing certain facts. The two warehouses on the dock are punctured in the sides and ceiling with numerous bullet-holes made by bullets passing out, not in, as shown by the position of the splinters. Evidences of wild shooting on the part of deputies are many; at least a dozen bullet-marks leading directly from one group of deputies to their own men instead of to the boat are plainly discernible on the planking. This fact, taken in connection with the three-cornered fire directed at the boat, makes it exceedingly difficult to assert that any of the wounds received by deputies were the result of shots from the boat. Yet the I. W. W., who lost five men while attempting to assert their right to free speech in defiance of a town ordinance, are in jail for murder, and the Everett deputies, who lost two men in attempting to deny passengers the right to land from a boat, are their accusers.

The boys in jail are a cheerful lot. The "tanks" which contain them are the tanks of the usual county jail, much overcrowded now by the unusual number. Bunks crowded above each other, in full sight through the bars; a few feet of space in which they may walk back and forth for a dozen steps or more; all the processes of life open to the casual beholder. But they sit in groups playing cards or dominoes; they listen to tunes played on a mouth-organ; most of all they sing. They sing whenever visitors come, and smile through the bars in cheerful welcome. Theirs is the spirit of the crusader of all ages, and all causes, won or lost, sane or insane. Theirs is the irresponsibility and audacious valor of youth. When they disliked their food, says a conservative newspaper, they went on strike and "sang all night." Sang all night! What sane adults in our drab, business-as-usual world would think of doing that? Who, in fact, could think of doing it but college boys or Industrial Workers of the World, cheerfully defying authority?

Yet, in spite of their cheerfulness, they are in a serious situation. They are being tried for first-degree murder in a county where all the machinery of law is in the hands of their opponents, and where, although a numerical majority is probably with them, all power and influence is against them. The men who control the press, the men who arrange jury-lists, the men who own mortgages on the homes of possible jurors, the men, in short, who, through one channel or another, can reach and affect for good or evil almost any citizen in Everett—these will spend their thousands to "clean out the nest of I. W. W.'s"; in other words, to hang as many as possible of the accused.

But it is not even acquittal that the prisoners and their counsel seem most to desire. It is publicity—publicity for the methods that have been used against them, publicity for the conditions in Everett, publicity for the right of free speech. This publicity the daily press denies them; and this publicity the labor press is giving them in full measure. Here we have again a characteristic of war. Each of the two groups of persons, engaged in conflict, receives news censored, arranged and interpreted by its own side of the struggle, and so the two are driven farther and farther away from mutual understanding.

The community spirit that formerly prevailed in Everett, famous for its civic pride and industrial activity, is gone. Suspicion and fear and bitterness take its place. Mill-owners guard their homes; workingmen attempt by subterfuges to secure halls for "forbidden speakers."

Even the lawyers for the defense have been unable to secure offices in Everett. After learning who they were the owner of one building told them he had been warned by threats against renting.

And yet Everett is no sinner above other cities. It would seem that the right to free speech must be fought out anew in city after city and by cause after cause. We in Seattle had our own testing-time a few years ago with the Industrial Workers of the World and bloodshed seemed imminent. But we had a mayor to whom occurred the brilliant expedient of "letting them speak." It was simple; and it worked. We hear that it has worked in other places also.

Does Might Make Right—Legally?

BUT suppression of speech was only one factor in the Everett situation; the lawlessness of law-enforcers was another. As Mayor Gill of Seattle pointed out, "McRae and his deputies had no legal right to tell the I. W. W. they could not land. When the sheriff put his hand on the butt of his gun and told them they could not land, he fired the first shot in the eyes of the law, and the I. W. W. can claim they shot in self-defense. Everett has been reduced to anarchy by their method of dealing with the situation." In this also Everett is no sinner above all other cities. Shall we be forced at last to admit the contention of the industrial workers that "might makes right—legally"?

The labor conflict will be intense enough even if the right to free speech and fair play before the law is assured. But there are still some of us who hope that in that case it may be an evolution, not a war. Our industrial unionist friends say that this is mere softness, mere sentimental evasion of facts. They say there is no fairness of press, or speech, or law; that there is only Power, which the worker has not, and must take. And they say that the workers are tired of waiting—very tired.

Involuntary Servitude and the Right to Strike

By *John A. Fitch*

OF THE SURVEY STAFF

THE Committees on Interstate Commerce of both Houses of Congress have been sitting for a month considering a bill to restrain railroad men from going on strike whenever they please. Representatives of chambers of commerce, employers' associations and the conservative public have appeared before the committee to urge that such a bill ought to pass. Labor men have offered strenuous opposition, insisting that such a law would be in violation of the thirteenth amendment to the constitution of the United States, which reads in part, "Neither slavery nor involuntary servitude, except as a punishment for crime . . . shall exist within the United States or any place subject to their jurisdiction."

The scene takes you back to the exciting days at the end of last August, when the President of the United States sent a message to Congress in which after discussing the railway strike order, then pending, he proposed that "in case the methods of accommodation now provided for should fail, a full public investigation of the merits of every such dispute shall be instituted and completed before a strike or lockout may lawfully be attempted." At that time no attention was paid to this suggestion. Congress passed the Adamson law to avert the strike, and went home. The beginning of the present session, on December 4, 1916, was the occasion for renewing the recommendation, and this time the leaders of Congress have given heed.

Senator Newlands, chairman of the Senate Committee on Interstate Commerce, has drafted a bill, the terms of which are, in brief, as follows: Whenever a controversy between a railroad and its train employes arises, both sides must immediately notify the Federal Board of Mediation and Conciliation, which shall attempt to mediate between the parties, and if unsuccessful, shall propose arbitration. If the controversy can be settled by neither method the board must so advise the President, and he is thereupon required to appoint a commission of three members to investigate the nature and causes of the controversy. The commission is to report its findings and make recommendations concerning a just settlement as soon as possible and within three months at the outside. The report is to be made public. It is to be unlawful for either a strike or a lockout to be declared from the time notice of the controversy has been filed until thirty days after the commission of inquiry has made its report. Heavy penalties are provided for either employer or employe violating the act, or for "any person inciting, encouraging, or in any manner aiding" in a violation. A similar bill has been introduced in the House by Representative Adamson.

Under the terms of this bill, should it become a law, four months would be the longest period during which a strike would be unlawful, provided a board of inquiry were appointed as soon as the controversy arose. But the bill provides for an attempt at mediation by the Board of Mediation and Conciliation before the matter is referred to the President. That will take some time. Then it is quite possible

that there may be some delay in the appointment of a board of inquiry. Consequently the proscribed period would be, in all probability, not less than five months.

In the hearings before Senator Newlands' committee and elsewhere—in the papers, in union convention halls, in public assemblages—there has been in the last few months a great outpouring of opinion on the merits of the proposal. Employers, employes and "that great third party, the public," have expressed themselves with vigor.

There is reason for the discussion. The question is one that admits of more than one opinion. Nothing could indicate that more clearly than the fact that both capital and labor have at different times occupied a position diametrically opposed to the position each occupies today. Both in the United States and in New Zealand, labor has favored compulsory arbitration at a time when employers opposed it. In his recent book, *Organized Labor in America*, George Gorham Groat tells how the Knights of Labor in New York, in 1888, having found that employers would not use the machinery for voluntary arbitration provided by law, adopted a resolution demanding amendments that would "compel the submittal of all existing trouble to the said Board of Arbitration when deemed necessary." In 1893 they renewed their demand for compulsory arbitration. The first compulsory arbitration act in New Zealand was passed in 1894, with the support of labor representatives and over the opposition of the employers. It came after several disastrous strikes in which the employers had refused to arbitrate.

The present discussion reveals a line-up of the different parties at interest that is fairly clear cut. It is quite evident that capital, in general, is going to lend its support to the President's plan. Indeed, to the casual observer, it might appear that opinion among employers is unanimously favorable. James A. Emery, counsel for the National Association of Manufacturers, has appeared before Senator Newlands' committee and endorsed the plan. Representatives of the Boston Chamber of Commerce, of a national association of leather manufacturers and of other employers' associations have done likewise. From spoken utterances and from editorials in trade and other papers, it is apparent that the manufacturers and employers of labor generally, all over the country, are in favor of the proposed legislation.

Recorded capitalistic opinion has so far come, however, from consumers of raw material and shippers of finished products rather than from employers of labor as such. They want the trains to run, as Mr. Emery told the Senate committee, so that their plants may not be forced into idleness. Their attitude may be affected, to be sure, by the notion that it would be pleasant to have the railway unions put in check, but it is clear that they are influenced, in the main, by motives that are practically indistinguishable from those of the "public."

The railroads themselves are the only interests directly affected as employers of labor. For some reason they have been very reticent about expressing themselves, but it is safe to say that they are not opposed. In an address before the

Economic Club of New York, on December 11, 1916, Elisha Lee, chairman of the Conference Committee of Railway Managers, said of the proposed law: "It is plain that the finding of such a public tribunal could not well be rejected by either party without alienating public sympathy; and without the support of the public no body of men, whether employers or employes, can hope to wage industrial warfare regardless of the public interest. . . . Has not the nation the right to say to the railroad workers, as suggested by the President, 'You must not interrupt the national life without consulting us'?"

Organized labor, on the other hand, is unanimously with the opposition. Chiefs of the railway brotherhoods and leaders of unions affiliated with the American Federation of Labor have alike denounced the measure as a denial of the fundamental rights of the workers and as contrary to the spirit of American institutions. This attitude will be discussed, somewhat in detail further on.

The Public Wants the Trains to Run

THE general public appears to be in a mood favorable almost to any plan to prevent any interruption in the running of trains. Accustomed to the settlement of railway disputes by voluntary arbitration, a sense of security had grown up that was rudely shattered by the narrow escape, last fall, from a nation-wide tie-up of the railroads. As a result there arose a sudden clamor that such a thing must be made impossible. Not only was the plan for the postponement of a strike pending the results of a compulsory investigation extremely acceptable, but there was a willingness in many quarters to go much further. It is altogether probable that if President Wilson had come forward with a plan for compulsory arbitration and making strikes of transportation employes altogether illegal, it would have been received with a good deal of favor.

What are we to think of these divergent views? The issues before us are of such tremendous importance that a sudden or careless decision is hardly safe, though it is to be feared that not a few have made their decisions both suddenly and carelessly. On the one hand is the danger, neither theoretical nor remote, as we now understand, that railway traffic may be suspended whenever the management and the brotherhoods have a difference of opinion. With this suspension would go calamities of unknown extent, against which the great body of the people are powerless to make adequate preparation. On the other hand is offered a radical break with American thought and practice, carrying with it possibilities beyond our power to estimate or accurately to gauge in advance.

To make clear the exact nature of labor's opposition it is necessary to take note of the fact that the plan involves two important propositions: First, that there shall be compulsory government investigation of railway controversies that cannot be settled by the ordinary peaceable means; second, that it shall be illegal to call a strike while such an investigation is going on.

To the first proposition, so far as any recent action would indicate, labor is not opposed. Both the American Federation of Labor and the brotherhoods opposed a bill providing for compulsory investigation on railroads in 1904, but there are laws in nineteen states, unopposed by the unions, giving the commissioner of labor or other administrative officer power to make compulsory investigations. In New York labor has often petitioned for the exercise of this power. Neither, in any recent discussion of the Wilson program, has organized

labor shown any hostility to the idea of compulsory investigation *per se*.

The thing to which the men of organized labor are strenuously opposed is the limitation of their right to strike at any time they see fit. Success often depends upon immediate action, without previous warning. The labor men say that if they are compelled after deciding to strike to wait either a definite or an indefinite length of time while an investigation is being made, the interval will be used by the employer to get ready to fight the strike. He can employ strikebreakers and bring them to the scene of action, ready to go to work. The investigation, whatever it may reveal, carries with it no power to secure improved conditions for the workers. The employer may, therefore, at the end of the period of investigation, put into effect or continue the very policies against which protest was made. The workers have no power of effective protest other than the one that they were estopped from using when the investigation began—the strike. This power is restored to them at the end of the period of investigation, but this time the employer is alert and prepared. The strategic time for striking has gone by.

It is apparent that this is a handicap that might be almost insuperable for unskilled workers engaged in a local strike, but one of less importance where the strike area is large and the strikers men of highest skill and hard to replace. But this latter is exactly the case with the railroad train crews, and it is to them alone that the proposed restriction is to apply. They are highly skilled, and they have now entered upon the policy of bargaining, not for a single locality or for a single railway system, but for the whole country. If a hundred men should go on strike on a branch line somewhere, it is quite likely that the railroad could get men to take their places. The case would be different if 400,000 men decided to strike. Even if there should be a waiting time of six months it is difficult to see what preparations could be made by the railroad executives in the way of hiring new men that would seriously affect the relative positions of employers and employes.

There is another fact of even greater significance that should be considered at this point. The brotherhoods are in the habit, voluntarily, of giving all the notice of their intent to strike—of providing voluntarily all the waiting time that is contemplated in the proposed law. No one who looks back over the history of the controversy that led to the crisis of last fall can fail to be impressed with the long period devoted to negotiation and the still longer period during which the public and the railroads were fully informed of the impending controversy. More than eight months elapsed between the beginning of the movement and the date set for the strike. The formal decision to press the demands was known six months in advance, and it was also known at that time that the railroads would reject them. Conferences began three months before the final break, and the result of the strike vote was known more than thirty days before the day finally decided upon for the walkout.

In the other railway disputes during the last decade a similar policy of negotiation and waiting has been followed. The point may reasonably be made that if the brotherhoods' interests are not affected injuriously by this voluntary policy, they will not be if the same policy is provided for by law.

Permanent Prohibition of Strikes Feared

WHY, then, have the brotherhoods been so concerned in raising the issue that such a law would be contrary to the thirteenth amendment? The answer may lie in some premoni-

tion that arguments supporting the constitutionality of laws to inhibit temporarily the right of railroad men to strike can with equal logic apply to a permanent prohibition.

Such a foreboding, whether or not it is an explanation of the attitude of the union leaders, appears to be not without its justification, in view of some recent comment by careful students of constitutional law. In an address before the New York Academy of Political Science last November, Thomas I. Parkinson, of the Legislative Drafting Research Fund of Columbia University, reviewed a number of Supreme Court cases in which the thirteenth amendment has been involved. He showed that the peonage cases, in which the United States Supreme Court has held that a man cannot be compelled under threat of fine or imprisonment to continue at labor for another, involved simply the right of an individual to quit work. The question of striking was in no way affected by the decisions. Mr. Parkinson cited other cases where the courts have recognized certain limitations to the operation of the thirteenth amendment, as where work on public roads has been required. He pointed out, very significantly, that while in express terms there are no limits to the application of the amendment, yet compulsory labor is enforced in the army, and deserters are arrested and punished. From this he drew the inference that for reasons of public policy the right freely to quit work may sometimes be restricted.

Mr. Parkinson showed clearly that striking is different from the individual quitting of work. It is not an abandonment of the job. He drew a distinction between a strike in strictly private employment and one in public or quasi-public enterprises. The essence of his contention was that in such undertakings, where a cessation of work will cause serious injury to the public, a prohibition of the right to strike, or at least a temporary prohibition, would be a valid and constitutional law. A plain case involving such a point has never come before the Supreme Court, but Mr. Parkinson was able to quote a cautious passage from a Supreme Court decision that seems to add weight to his argument. In the *Adair* case (208 U. S. 161) involving the discharge of a man for membership in a union, Justice Harlan, who delivered the opinion of the court, said: "And it may be—but upon that point we express no opinion—that, in the case of a labor contract between an employer engaged in interstate commerce and his employe, Congress could make it a crime for either party, without sufficient excuse or notice, to disregard the terms of such contract or to refuse to perform it."

This idea has come prominently to the fore in the hearings before the Senate committee. Senator Cummins, in questioning one of the witnesses, remarked, "I never have heard, in our country, of a temporary injunction that could not ripen into a permanent injunction." Everett P. Wheeler, of New York, testifying before the committee, stated that in his opinion, there is no difference from the standpoint of the constitution between a temporary prohibition of strikes and a permanent prohibition. He held either to be valid.

Application to Other Trades

It is apparent, therefore, that the railroad men may reasonably look upon the Newlands bill as an entering wedge for legislation of a more drastic sort, designed to take away altogether their right to strike. As such they may reasonably fear it, since no adequate machinery for the determining of just standards is offered to take the place of the appeal to force.

In the same way and for similar reasons, other classes of labor have reason to fear the proposal. If such a law is constitutional as to public service employment, no one knows to

what other industries it may be made to apply. There are no fixed and determined limits to the field of public service. Enterprises "charged with a public interest," they have been called. What industry is not conceivably charged with a public interest? At the present time the term must be held to include coal mines. Manufactories of food and clothing can easily be brought within such a classification, steel mills surely belong, and since we cannot live without shelter, planing mills and lumber camps come readily into the same category. It is impossible to say where the line between public service and strictly private industry can be drawn. Every argument, therefore, that strengthens the conviction that a temporary prohibition of any sort of strike is permitted by the constitution is a stronger reason for the opposition of labor.

The Right to Strike Curtailed by the Courts

THE reasons lie, furthermore, deep-rooted in the history of industrial struggles. Workmen have not been free so very long to make demands for improved conditions or to enforce such demands. One hundred years ago a concerted movement for higher wages constituted an illegal conspiracy and was punishable as such. In America the application of the common law of conspiracy to the activities of labor unions was slowly weakened by the decisions of courts. In England the modification was accomplished by statute. In this respect the English workers are better off, for, dependent as the American workers are upon the decisions of courts, they are controlled by liberal and reactionary decisions alike. Strange as it may seem there is developing a tendency here and there on the part of the courts toward a more illiberal attitude with respect to the activity of unions. A man was freer to strike in Massachusetts fifty years ago than he is today, and the only difference is in the attitude of the courts. In West Virginia a few years ago a court held the miners' union to be an illegal conspiracy. In Arkansas within a year a court has held that a union in striking was illegally interfering with interstate commerce.

The West Virginia case was reversed by a higher court, and both that and the Arkansas case have been appealed to the United States Supreme Court. No one knows what the decision of that court will be. But in the light of these decisions it is evident that labor must be more interested in a statute guaranteeing to them the liberties that the courts gave them fifty years ago than in a proposal to restrict union activities. That is what labor tried to get in securing an amendment to the Clayton act. It is not yet known, because the courts have not passed upon it, just how much the Clayton act means in the way of insuring freedom of action. In the meantime is it a cause for wonder that labor is opposing a law designed to limit their rights still further?

The right to strike is the only final defense of the worker against oppression. It is the only weapon readily available, the use of which he thoroughly understands. The right is often more powerful than its exercise would be. Knowledge of the power of the workers to act, effectively, if a substantial measure of justice is not done them, is often the only influence felt by a mean employer. In competitive industry the mean employer drags down the standards for the whole trade. If such an employer knew that there was no effective power back of a demand, or if he knew that that power must be held in abeyance for a definite period, he would take every advantage afforded by that knowledge.

To be sure, proponents of compulsory arbitration insist that the worker is fully protected by the machinery it provides for the determination of standards and the settlement of dis-

putes. The answer of the workers is that they have no assurance that their contentions will receive the consideration due them from a board of arbitration sitting as a court under a compulsory law. They do not know who will sit on such a board, what preconceived notions of justice may be brought to bear on the situation, or what influences, political or financial, may be invoked to sway its judgment. It may be pointed out that neither is an appeal to the strike a sure method, as distinguished from compulsory arbitration, for securing their ends. But at least a strike is their own affair. If it fails they can make plans for preventing its failure another time. If compulsory arbitration fails to secure improved conditions they have no remedy at hand.

Suppose we grant the validity of these objections. Shall we then leave the situation where it was last fall, when the calamity of a nation-wide strike was just a few days off? We may well be concerned about the rights of labor, but what about the rights of labor plus those of everyone else—the one hundred millions of people of all sorts who would suffer in a railway strike? That is a question that the brotherhoods must face, and it is neither to their credit nor particularly to their advantage that the leaders seem quite disinclined, just now, to consider it at all.

Who Is "the Third Great Party"—the Public?

BEYOND all cavil, it must be admitted that the interest of the public in this matter is greater than that of the railway corporations or the brotherhoods. There is danger, of course, in talking of the public as the "great third party" to industrial controversy. Sometimes it is hard to tell who the public is. There are in the neighborhood of 30,000,000 wage-earners in this country. They have certain common interests. There is a bond of sympathy that, more or less loosely, unites them. But they are a part, and one of the very largest parts, of what we are talking about when we speak of "the public." And it is they who would suffer most keenly if a railway strike took place.

It is conceivable, of course, that at some momentous time a strike might be called on the railroads over a point of vital concern not to railway men alone, but to the whole working class. In such a case the railway workers would be fighting the battle of all labor. But, normally, railway controversies are limited to a conflict between managers and men. The public that would be seriously injured by a transportation strike is composed of capitalists and laborers, employers and employes, consumers, shippers, union and non-union labor, the families of the 400,000 men engaged in railway service and the 400,000 men themselves. Not a single one of our 100,000,000 people could escape. The 400,000 brotherhood members and their families, despite their suffering, would stand to win something; but they would be the only ones. Temporarily, at least, everyone else would lose.

The popular concern over the strike prospect—complete stoppage of traffic—differs more in degree than in kind from the long expressed concern over inadequate service, high tariffs and fares, and other lesser hindrances to travel, to shipment, to communication. To many it seems illogical that there should be public control over railway managers and not over the workers. Consequently, we find men like President Van Hise and Oscar S. Straus, men long identified with the movement for regulation of public utilities, who have had experience in the arbitration of labor disputes on such utilities, advocating the extension of regulation from public service corporations to public service unions.

But the significant thing in the extension of governmental control over the carriers has been that this constructive pro-

gram has been based on a careful study of facts. This was true of the early movement in Wisconsin under La Follette. It is true of each step in the work of the Interstate Commerce Commission. Evidence of it appears in the huge investigation under way of the physical valuation of railway properties as the basis of further federal legislation. When we turn from the question of public information and public policy as to interstate shipper and carrier to that of public information and public policy as to interstate operator and trainman, the situation is different.

The country suddenly awakened to the need of information on the subject of the relations of employer and employe a few years ago when the dynamite conspiracy in the structural iron trade came to light. Out of that revelation grew a demand for the creation of a commission on industrial relations to examine the whole subject of industrial unrest and to discover some better method of dealing with it.

In the first appeal of a body of citizens to the President and Congress for the creation of such a commission there was a plea for a study of the Canadian industrial disputes act. In his message to Congress, on February 2, 1912, recommending the passage of a law that would permit the appointment of the commission, President Taft said "at the moment when the discomforts and dangers incident to industrial strife are actually felt by the public there is usually an outcry for the establishment of some tribunal for the immediate settlement of the particular dispute. But what is needed is some system, devised by patient and deliberate study in advance, that will meet these constantly occurring and clearly foreseeable emergencies—not a makeshift to tide over an existing crisis. Not during the rainstorm but in fair weather should the leaking roof be examined and repaired."

The commission, when appointed, included a representative of the railroads and a brotherhood president; each, as a matter of fact, named by the interest he represented.

Strangely enough, despite the make-up of the commission and the emphasis that had been laid on the subject, little attention was paid to the settlement of disputes. A general hearing was given on the subject of mediation and arbitration, which did not include any consideration of railroad controversies. A study of the subject, conducted for the commission by Prof. George E. Barnett, of Johns Hopkins University, never was published. This study has recently been brought out by a well-known publisher as a book.

It is interesting to note that in the final report of the commission there was no suggestion anywhere of compulsory arbitration. Compulsory investigation without any limitation on the right to strike was favored by the employers on the commission but rejected by the other six commissioners. The proposals of the Manly and Commons reports were quite similar so far as compulsion was concerned. Both favored machinery for mediation. Both favored investigation, but only if the consent of both parties could be secured. Prof. John R. Commons, after reviewing the Canadian and Australasian laws, said: "It is believed that any of these compulsory methods are unsuited to American conditions, and that the foregoing recommendation for a voluntary board of investigation, adapted from the Canadian act, but without its compulsory features, will prove a valuable addition to the Newlands act."

Where the Industrial Relations Commission Split

IT WAS on the very question of mediation and arbitration that Chairman Frank P. Walsh and the labor commissioners dissented from the Manly report. The grounds of their dissent were not sufficiently explicit, however, to indicate their

position on the subject of investigation. They were opposed to setting up new machinery, as proposed by Mr. Manly, but they had no other definite proposals to make in the way of improving existing machinery.

The report signed by Commissioners Aishton, Ballard and Weinstock, representing employers, expressed dissent from the Commons report on the subject of voluntary investigation.

"We further dissent," their report reads, "from said report in its limitation of public inquiry in labor disputes only to cases where both sides invite such inquiry. We believe that in the public interest there are times when compulsion in labor disputes is thoroughly justified. We feel, with organized labor, that there should be no restriction put upon the right to strike, realizing as we do, that the strike is the only weapon which, in the interest of labor, can be effectively and legally used to aid in bettering its conditions. We feel, also, that there should be no restriction placed upon the employer in his right to declare a lockout in order better to protect what he regards as his interest, and we therefore would not favor any plan that would inflict penalties upon the worker or upon the employer for declaring a strike or lockout. . . ."

"Where strikes and lockouts take place on a large scale, and more especially in connection with public utilities, the public inevitably becomes a third party to the issue, in that it has more at stake than both parties to the dispute combined. . . . The public, therefore, as the third party to the issue, is justified in demanding that an investigation take place, and that the facts be ascertained and presented in an impartial spirit to the general public, so that ways and means may be found of adjudicating the dispute or of throwing the influence of a properly informed public opinion on the side which has the right in its favor."

These quotations are interesting, in view of the proposals now before Congress, but they throw no new light on the subject.

The Industrial Relations Commission failed to give the public any adequate basis of facts on the question of handling industrial disputes. Neither has any other agency of the government made any recent and adequate study of either the compulsory arbitration laws of Australasia or of the Canadian industrial disputes act, which is the model on which the legislation now proposed is based. The most recent government report dealing with the subject is a compilation and partial analysis of the laws of the leading countries of the world, relating to mediation, arbitration or other action in respect to labor controversies on railroads, put out by the United States Board of Conciliation and Mediation. Although given to the public at a time when interest is centered on the Canadian disputes act the information is inadequate for the forming of an intelligent opinion as to its operation.

Conflicting Testimony on the Canadian Act

INDEED, just the contrary is the fact, as can be shown by a reference to a bit of testimony before Senator Newlands' committee. A representative of the Boston Chamber of Commerce stated that in the two years prior to the passage of the Canadian act there were 200 strikes, and in the two years following its enactment but two. Such an inference as to the effect of the passage of the law is surely to be drawn from a table published in the report of the United States Bureau of Mediation and Conciliation. It shows the number of applications for boards of investigation, by years, the number of boards appointed and the number of cases in which strikes were "not averted or ended." According to the table, there was only one such case in 1907 and one in 1908. *Ergo*, only two strikes in 1907 and 1908! But elsewhere in a more extended table giving a certain amount of detailed information

careful search reveals the fact that there were in 1907 alone at least eight strikes and one lockout in the industries covered by the act; and the lockout and at least five of the strikes were in violation of its provisions.

The report is limited to data published by the Canadian government, and it gives no information on strikes illegally called without any application for boards of investigation. Where a strike began illegally, and later a board was asked for, the summary table gives no light. Such cases come under the category of strikes "averted or ended." The report is equally silent on the question of enforcement.

There is no reference in this report and no governmental study has been made of the working of laws already on the statute books of various states providing for compulsory investigation, but not interfering with the right to strike. These laws have often been effective in bringing about the speedy settlement of industrial disputes. It would seem to be the part of wisdom to consider them carefully before enacting new legislation. It is hard to see how anyone, even a violent partisan of one side or the other in the railway dispute, can desire to have sweeping legislation enacted until such a study has been made. Yet the curious fact seems to be that those who were the fiercest in their denunciation of the Adamson law, because no one knew how it would work, are exactly the ones who are most enthusiastically in favor of passing a law absolutely without investigation, which will change the theory and practice of a hundred years in the handling of industrial disputes.

Points Congress Ought to Settle This Session

THE absence of complete information does not, however, render all constructive action utterly impossible. Something can and ought to be done at this session of Congress, which will turn the public emotion of last summer into action. We should not leave things at loose ends till another such emergency overtakes us and again pass hasty legislation, only to have it thrown into the courts and thus neutralized, perhaps at the very moment when it is most needed.

The questions now pressing for solution are, first, the specific one of how to cut down the hours of labor in railway employment, and, second, the general one, growing for the most part out of wage disputes, of how to make the public a more effective factor in safeguarding itself against strikes and lockouts in interstate commerce. Something can and ought to be done about them both, at once.

The first matter cannot be settled by any arbitrary enactment of an eight-hour law. The present "basic" work day is ten hours long. There is an enormous amount of work in excess of that limit. The legal maximum is now sixteen hours. According to the reports of the Interstate Commerce Commission, there have been, within the last four years, over 500,000 cases of work that went beyond the sixteen-hour limit. How many cases there were that just fell short of sixteen hours, or that ran for fifteen, fourteen, or thirteen hours no one knows. There is no record. But one can conjecture, when in four years there were a half million cases that passed the legal maximum.

With schedules arranged on such a basis as that a sudden change to an eight-hour day would play havoc. Such changes must be made slowly in order to allow time for orderly readjustment. The brotherhoods conceded that when they demanded an eight-hour basic day, instead of a maximum of eight hours. Congress has recognized it by the extreme conservatism with which it has dealt with the question. Prior to 1907 the maximum legal working day on the railroads was a full twenty-four hours, and there were allowances for over-

time in cases of emergency! That year Congress cut off eight hours, and made the limit sixteen hours.

It does not seem unreasonable to say that it is time that another change should be made. Railroad managers and employes alike agree that a rigid eight-hour day is out of the question. The railroads conceded long ago that a ten-hour day is fair by making agreements with its employes on that basis. With the whole trend of public opinion in favor of a shorter work day the railroads could not reasonably complain if Congress were to place a new limit at the end of twelve hours. Nor is there any reason why this should be considered the final step in regulation. After the readjustments that that would entail had been completed it might be justifiable to make the limit still lower. At present, however, and in view of the exceptional conditions that prevail in the operation of railroads, it seems to me that such a regulation would be reasonable.

The prevention of strikes is not an easy matter. In the long run they cannot be absolutely prevented, as Australian experience shows. But why attempt to prohibit what has so rarely occurred? Only three times in its history has the country been threatened with anything approaching a general railway tie-up. Only twice has such a strike actually taken place. The first was in 1877, before the railway brotherhoods had become very strong. The second was the Debs

strike of 1894, for which the brotherhoods were not responsible. There have been no sectional strikes other than these, and strikes on individual railway systems have been few. Is it reasonable to suppose that compulsory restraint could have made a better record than this?

It will not avail for Congress to decree that there shall be no strikes. What Congress can do, however, and, in my opinion, should do, is to provide for immediate investigation of every controversy and a publication of the facts in the case. Such a bill has been introduced and is before the committee. This is as long a step as the facts now in hand will justify. I believe that the knowledge of the reasons for the controversy that would thus be made available would create such a public opinion as would result in fair dealing on both sides, and with a sane regard for the rights of the public.

If such investigations were needed in any single strike, then surely, with the issue of all strikes potentially at stake, there is need for a thoroughgoing investigation of the laws of Canada, New Zealand and Australia, Europe and the American states. The facts should be laid before Congress. If they indicate clearly that the laws in any of those countries or states are working well, and that they are adapted to Federal regulation of interstate commerce, Congress would then be justified in considering whether it should enact similar laws. But until it has these facts it has no such justification.

Turning Off The Spigot¹

III. What Grandfather and Father Thought About Drink

By Elizabeth Tilton

"What the temperance men demand is not the regulation of the traffic, but its destruction. . . . We believe in cutting the liquor dog's tail off right behind the ears."—*Horace Greeley*.

"Of our political revolution of '76 we are justly proud. . . . Turn now to the temperance revolution. In it we shall find a stronger bondage broken, a viler slavery manumitted . . . more of want supplied, more disease healed, more sorrow assuaged."—*Abraham Lincoln*.

IN my previous article [the SURVEY for January 13] I tried to show how first I was the typical social worker, meekly carrying the wreckage of drink and never lifting one finger to prevent it. Then I came out of that auto-hypnosis, to use Robert A. Woods' phrase, into preventive work. My first idea was to abolish distilled liquors, but to keep beer, to be managed by a disinterested company of men, like the Gothenburg system. Lastly, I gave up this beer-Gothenburg scheme and struck straight out for total abstinence, supplemented by prohibition, as the only means of really effecting any marked headway against the drink custom and its handmaid, the drink traffic.

I came to this last idea simply by studying history. I found that beer experiments had been tried and had not helped very much. I found that while schemes of disinterested management had sometimes helped, measures that made liquor much harder to get, such as the abolition of home distilling, or withdrawal of the rights to sell, no-license, county and state prohibition, and so on, had helped more. (No-license is prohibition in miniature.) I will now go over with you the Drink History of the United States, showing you how it

brings out the point that total abstinence, supplemented by prohibition, is the method that makes marked headway.

In colonial days men drank as they ate, daily, as a matter of course. Says Governor Winthrop, March 3, 1630: "We observed it a common fault with our grown people that they gave themselves up to drink *hot waters* very immoderately." And we read a little later of a minister who would appear drunk at the communion table. His parishioners, finally deciding that this was too much, tried to remove him. But the ministers of his community rallied to him and nothing could be done.

Just before the Revolution; however, there were signs of a temperance agitation. In the main it was directed against distilled liquors only. It was led by such men as John Adams and Israel Putnam and found expression in a resolution passed by the Continental Congress in 1774 "recommending to the various legislatures immediately to pass laws the most effectual for putting a stop to the pernicious practice of distilling grain."

But contrary to the present war, both the Revolutionary and the Civil War quashed real temperance movements in our country, by diverting all energy to themselves,² for the old movements were not built on scientific data proving that even moderate drinking lessens efficiency; rather they were common-sense movements against the waste of drunkenness—if you gave up moderate drinking it was not for your own sake, but to protect your brother from heavy drinking. The attitude comes out plainly after the Revolution is over and

¹ Parts I and II of Mrs. Tilton's series, *What Makes Men Stop Drinking?* and *What the Nations Drink*, were published in the SURVEY for January 13.

² For this time read Daniel Dorchester's *Liquor Problem in All Ages*.

when, after a period of riotous drinking, the country took up the broken threads of the pre-Revolutionary agitation.³

"We are now reduced to one point," said Justin Edwards. "Shall temperate men continue the temperate use of strong drink and thus keep open the door to intemperance, idleness, dissipation, drunkenness, poverty, wretchedness and death?"

Here began a remarkable anti-alcohol movement that before the end was to pass to Europe and start the world campaign against drink, a movement, by the way, only a little over a hundred years old. At first the campaign called for moderation in drink; but, not making headway, it began to call for total abstinence from distilled liquors. Then came the call for the "teetotal whole."

The annual report of the American Society for the Promotion of Temperance in 1835 was devoted chiefly to the nature of alcohol, which was shown to be produced by vinous fermentation and consequently to exist in fermented as well as distilled liquor. It was reasoned that if 53 per cent of alcohol was injurious, the use of 17 per cent in Madeira wine, 13 per cent in champagne and from 5 to 9 in ale, cider, etc., must be at least questionable (Dorchester, p. 263). Questionnaires, we are told, were sent to "many highly respectable gentlemen" who were practicing total abstinence, asking them to state the effect of abstinence on their health, cheerfulness, continued effort and so on. The answers came back "full and favorable to abstinence." The "teetotal whole" came to be the ideal.

It would be amazing to us now if we could get the number of influential men who became abstainers, the number of households that banished liquor from the sideboard. A picture of the spread of temperance can be imagined by reading a letter written by Justin Edwards to the king of Prussia, who had sent across for information. "The number of temperance societies formed in this country (1836)," he writes, "is more than 7,000, and the number of persons uniting with them is 1,250,000. . . . More than 10,000 persons who a few years ago were drunkards now use no intoxicating liquors." Our country generated at that time a great total abstinence movement.

But it was not enough to educate mankind. The virile would respond; the weak and pleasure-loving needed the removal of the ever-ready opportunity. There began to run through the country a prohibition movement that took the form of wide withdrawals of licenses to sell liquor. I have read that Camden, S. C., started the movement, but cannot vouch for the statement. Legislatures were besieged with petitions asking for the repeal of the license laws. For example, in the state of New York great efforts were made to give the question of license or no-license to the people; the bill was stayed in the Senate unless the city of New York could be exempted. Over 25,000 citizens remonstrated, and the state of New York voted by a large majority for a no-license law.

³The conditions in the early part of the nineteenth century may be gathered from the following: At the General Methodist Episcopal Conference, 1812, the Rev. James Axley was unable to obtain the passage of the following resolution, namely, that "no stationed or licensed preacher shall retail spirituous or malt liquors without forfeiting his ministerial character among us." In 1916, this same conference appropriated \$100,000 for prohibition.

And so it went through the country. In 1851, 13 out of the 14 counties of Massachusetts were granting no licenses (Alcohol and the State, pp. 287-8), thus giving us an ever-widening dry area, and if the old figures given by Daniel Dorchester (page 315) are correct, our per capita consumption in alcoholic beverages (ales, wines, liquors) fell thus: 1810, 8.50 gallons; 1850, 4.10 gallons. Taken in terms of pure alcohol, per capita consumption continued to fall up to the decade beginning 1870 (see article II), but the internal revenue tax placed on alcohol July 1, 1862, influences this decline.

The Rev. John Marsh describes for us this marvelous reform, this rush from John Barleycorn honored in 1810 to John Barleycorn a pariah in 1850. "From the day," he says, "when no man would be considered respectable who did not offer wine to his guests, when no man had the liberty of refusing it, when no laborer could be found who for any price would work without strong drink, when ministers were abundantly supplied by their people! Such times I knew. I have seen all the changes." And these changes were due to live education for total abstinence led by the influential men and supplemented by prohibition, that is, an ever-widening dry area.

Grandfather did this for us, and, by so doing, presented this country with a great health asset, never lost, a large class of people that tends totally to abstain. The money and the well-being saved by this gift from Grandfather cannot be over-estimated. I will now pass on to the story of father and how he undid (not entirely, but materially) his father's splendid contribution to the health and economy of our nation.

IV. The Early Prohibition Wave

There are many people in the northeastern states whose teeth are set together against prohibition. Ask them why and you are told, "Self-control is the way," or "Father said that prohibition did not prohibit." Was father right? Did that old-time prohibition (1851-1875) prohibit as well as any other law? Did it work for betterment?

We note at once that though the campaign against drink had been very strong in the South, from 1850 on it collapsed because the question of the extension of slavery became all-absorbing. No southern state went dry. But there was yet a little time in the North before the slavery question claimed all energy. Between 1851-1860, several states tried to establish prohibition; some succeeded, some did not. For example: Illinois' law was passed but vetoed by the people; Indiana's law was soon declared unconstitutional; New York's law went into effect July 5, 1855, and was pronounced unconstitutional March 29, 1856; Ohio's law was weak. (*Scientific Temperance Journal*, June, 1916.) But in some states, like Massachusetts, Maine and Connecticut, real prohibitory laws were enacted and carried out.

My own state of Massachusetts was under prohibition off and on from 1852 to 1875—a bad time to try a great, new

UNCLE SAM'S GROWING THIRST
In 1870, following Grandfather's ideal of prohibition, the per capita consumption of drink was 7.70 gallons per capita. In 1907, after Father's ideal of moderation—use but not abuse—had had its trial, the per capita consumption was 22.79 gallons.

experiment. The law was weak, as any lawyer will note, in penalties.⁴

Reporting on the law in 1853, Thomas Wentworth Higginson says, "We blush for Boston, but for the state as a whole we do not need to blush." Town after town, he declares, shows diminution of arrests for drunkenness. The Lowell city marshal writes: "The amount of drunkenness for the month ending October 22 is 67 per cent less than during the same time last year." Springfield reports a diminution of 30 per cent in commitments to the House of Correction and of more than 70 per cent in arrests for drunkenness, and so on through the state. But Boston, with a thoroughly corrupt city government, defied the law.

The largest city of Maine made a better showing. Cumberland county, where Portland is, gave the following figures:

To	COMMITMENTS (Excluding Violations of Liquor Law)	
	Nine months before prohibition	Nine months following prohibition
County jails.....	279	63
Watch-house	431	180
Almshouse	252	146

The mayor of Bangor reported that the cost of drunkenness to the city was reduced 72 per cent; the cost of paupers in the poorhouse 97 per cent (Prohibition, E. J. Wheeler, p. 115).

I wish to interpolate here that the fathers of Massachusetts had so thoroughly inoculated me with their horror of prohibition that I had supposed the moment this pernicious law went through, drunkenness increased enormously. I was surprised, then, to find no increase, but, on the whole, decrease. A law that decreased cases of tuberculosis as much as that prohibition law decreased cases of drunkenness, we should welcome.

But from 1856 on one hears little except the call to the temperance people to let the agitation lapse until the slavery question might be out of the way. It was for years quiescent in the chaos that war brings. In 1867, however, state officers were appointed to enforce the prohibitory law in Massachusetts.

Immigrants from Drinking Countries

Now note what has happened during the war. As a war measure a tax had been levied on alcohol; revenue was coming from it. Horace Greeley fought this measure on the ground that it would hurt the temperance movement by giving liquor standing in the community. Again, this measure made the liquor interests organize as never before. Small dealers had to retire. Still again, through the years of this agitation, there had come pouring into the country scores of drinkers, among them masses of Irish, and Germans wanting their beer. The foreign-born population of the North actually trebled between 1850-1880 (Dorchester: The Liquor Problem, pp. 400-401). The beer invasion began. Noted physicians called for its introduction on the ground that it would decrease the use of distilled liquors. Added to all this was the general moral and mental relaxation that follows war; crime statistics rose and the strenuous belief in total abstinence (the father of declining consumption) proved too much for our tired-out post-bellum fathers. They sat down to rest—on temperance: the use of alcohol, but not the abuse.

Amazing is the changed attitude that followed the Civil War. The very sons of the men who had fought that great race-hygiene battle of the forties for total abstinence declared

⁴ Massachusetts passed a "Maine law," 1852, that is, one prohibiting the manufacture and sale of intoxicating liquor except by specially appointed or permitted agents who may sell for excepted purposes only, with provision for search, seizure and forfeiture of liquors kept for illegal sale. The penalties were \$10 fine and the giving a bond in \$1,000 not to unlawfully sell within a year; \$20 and the same bond for the second offense; \$20 and 3 to 6 months' imprisonment for the third. Cyclopedia of Temperance and Prohibition, p. 306-311.

that our forebears had been fanatics, that alcohol in moderation was a blessing. These ideas, which went into encyclopedias and thus colored for years our attitude towards alcohol, may be found at length and at large in the Liquor Law Report of Massachusetts, 1867, and also in the conservative mind of the northeastern states left over from that day. The report tells of the trial of John Barleycorn held at the Boston State House that year, with former Governor Andrew, the beloved war governor, as counsel for the anti-prohibitionists.

One expects to hear at this trial careful statistics showing that license did better than prohibition. But statistics for and against are strangely few. Governor Andrew summed up the case somewhat thus: that alcohol in itself is not essentially poisonous; only excess is harmful as is excess of anything—a duck once died of too much butter, yet butter is not harmful in itself; of course, prohibit a poison, but why prohibit a good thing? And we must always remember that Jesus drank. Did He not come "eating and drinking"?

To support his theory Governor Andrew summoned to his side Boston's best doctors and noted Harvard professors. They regarded it apparently as a close second to beef tea.

The Professor at the Tavern Bar

PROF. HENRY BIGELOW declared that wine was not what our fathers thought it, injurious. Dr. Oliver Wendell Holmes was sure that it acted as food and as medicine. Dr. Charles Jackson, a chemist, declared that moderate doses, far from doing harm, served to sustain endurance, while Dr. J. C. White, professor of chemistry at the Harvard Medical School, declared that under some circumstances alcohol acted in precisely the same way and its results were entirely the same as beef tea. Prof. Francis Bowen of Harvard College stabbed his forebears of the forties by declaring that drinking was a thing between a man and his God. Professor Horsford and others agreed that God made alcohol.

As a result of all this pro-alcoholism, Massachusetts went for license in 1868. A comparison of the two years, 1867 (dry), 1868 (wet), may be found in the report of the Canadian Commissioners to Inquire Into the Workings of the Prohibitory Liquor Law, Ottawa, 1875. Extracts are given below, but for hurried people I give the gist in the following poster used by members of the Boston Associated Charities in its recent (1916) espousal of no-license. The conservative press had affirmed that old-time prohibition did not prohibit, but made Boston wetter than ever.

<p>BOSTON DRY! Total Arrests 1867, 1,530 BOSTON WET! Total Arrests 1868, 5,596 RECORD OF THE LAST QUARTER OF EACH YEAR</p>
--

Fuller extracts are given below:

From report of Chaplain of Massachusetts State Prison, 1868: "The chaplain regrets that he is compelled to say that the prison has never been so full as it is at the present time, or rather, so full through the year, and he feels that there is no hope of any diminution of members while rum shops are found at every corner."

From report of inspectors of Massachusetts State Prison for 1868: "We . . . call attention to the fact of the increased number of commitments made during eight months of the present year when the sale of spirituous liquors has been almost wholly unrestrained,—over those of the same time in the previous year when the public sale was prohibited and to a great extent stopped."

Grandfather believed in—and practiced—total abstinence plus prohibition. He cut the national drink consumption in half and gave the United States a unique health asset in a middle class of total abstainers.

Commitments in 1867	Commitments in 1868
Feb.-Sept. 65	136

Report of chief constable of the commonwealth, January, 1869: "Drunkenness is on the increase to a melancholy extent. The official report of the chief of the Boston police shows the following results for a period of only three months, ending October 1, viz.:

	1867	1868
"For the quarter ending Oct. 1. Prohibition		License
"Cases of drunkenness arrested by police	1,728	1,918
Common drunkards	148	134
Disorderly conduct	300	658
Disturbing the peace	257	397
Assaults	433	547
Intoxicated helped home	497	485
Total	3,345	4,139

"Increase in 1868 for one quarter, 794."

The Boston Chief of Police also reported: For the last quarter of 1867 (dry), total arrests and lodgers, 4,147; for the last quarter of 1868 (wet), total arrests and lodgers, 13,213.

Report of the State Board of Charities, 1868, part 1, page 350: "During the past year, it appears that while crime has increased about 10 per cent, drunkenness has increased more than twice as much, or 24 per cent. . . . As compared with 1867 it will be seen that crimes against the person have increased about 13.7 per cent; crimes against property about 8.7 per cent; crimes against public order and decency have increased about 10.2 per cent, and crimes of all kinds about 10 per cent."

From the reports of the city marshal of New Bedford for the years 1867 and 1868:

	Prohibition	License
	1867	1868
Whole number of arrests	397	493
Drunkenness	140	278

Police inspector of Beverly, Mass., 1868: "Under three years of prohibition, '64-'66, committed or helped home for drunkenness, average per year was 38 1-3, or 1 in 155, of the population. Under one year of license, 175, or 1 in 34."

In 1869 Massachusetts again established a prohibition law, but in 1870 the law was amended to allow ales, porter and beer. This beer experiment I shall give later (Is Beer the Cure for the Drink Evil?). Again in 1874, Massachusetts

was under prohibition. Of course, this wavering policy was not conducive to popular enforcement. Yet, even in 1874, Mr. Schade, the special agent of the Brewers' Congress, said: "Had our friends in Massachusetts been free to carry on their business and had not the state authorities constantly interfered, there is no doubt that instead of showing a decrease of 116,585 barrels in one year they would have increased at the same rate as they did the preceding year."⁵

In 1875, the prohibition law was repealed for good.

Why did Massachusetts abandon the prohibition policy? The records show that it worked better than license. Immigration, desire for revenue, almost total lack of education during the war period, the incoming foreign viewpoint, the loss of the old-timers who had seen the havoc wrought by license in the former days and the general relaxation that followed war—all these produced a reversion to the old ideal, moderation.

Prohibitive legislation reflects the state of mind that gives liquor no quarter. Temperance gives liquor quarter, and its legislative expression is a liquor traffic and open saloons. Our fathers fell between two stools: they had lost the commonsensible virility of grandfather in the forties, that cried, as does the West today, "Anything that injures man or child must go." And they had not yet acquired the modern scientific data that show alcohol to be no twin to beef tea, but a life-destroyer, something from which the wise of the race will in the end totally abstain.

So they sat down to rest on temperance, the use of a good thing, but not the abuse. All through the East this became the ideal, and wherever it went it took the life out of prohibition. Maine is a case in point. She kept her prohibition law, a good deal from pride and a good deal because it had become a Republican issue. That party "voted for it," as one of my Maine cousins told me, "but seldom worked for it." But temperance became the ideal, and its child, the open saloon, appeared unmolested in the streets of Maine. "In 1897," said Mr. Owen, of the Civic League, "only one county was enforcing the law, but now, 1916, the bulk of the counties have enforcement, but the counties where the cities are nullify." Bangor, Portland, Lewiston all have saloons, or did have up to December, 1916. What changes may come before this article is in print I cannot know.

⁵ Under the Beer Law, Cycl., page 528.

The real recipe is: first catch your total abstinence—your strong belief that liquor is unhygienic and uneconomic; then add prohibition, and you get the thing you are after—a marked decrease in a nation's drink consumption which the "temperance" ideal did not give. Please note the action of our consumption under father's moderation theory. Not till 1907 did our per capita consumption stop rising for any length of time. Since 1907 it has hung about stationary, except for a decline in 1914.

UNITED STATES PER CAPITA CONSUMPTION, ALL ALCOHOLIC BEVERAGES

(From Statistical Abstract of U. S., 1915)

1870	7.70	gallons
1871-80 (average for the period)	8.79	gallons
1881-90 (average for the period)	13.21	gallons
1891-95 (average for the period)	17.12	gallons
1900	17.76	gallons
1905	19.85	gallons
1906	21.55	gallons
1907	22.79	gallons
1908	22.22	gallons
1909	21.06	gallons
1910	22.19	gallons
1911	22.79	gallons
1912	21.98	gallons
1913	22.68	gallons
1914	22.50	gallons
1915	19.80	gallons

They say of Gladstone that he could make statistics sing. There is not much of a song to be found in the table above; it is the tale of a tired-out people taking to the "moderation" ideal and with that ideal plunging (up to 1907) ever deeper into mires, unhygienic and uneconomic.

May I make it plain here that the theory that the ideal moderation, seldom if ever makes real headway against drink has weighty scientific support. For example, a manifesto

signed by German and Swiss physicians (among them Drs. Von Bunge, Forel Speyer, Delbrück, Möbius) says, "This, the Custom of Moderate Drinking, is the real cause of alcoholism, and the hope of greatly diminishing consumption by preaching moderation is, therefore, utopian. History confirms this view. . . . Efforts for moderation have nowhere effectively dammed the alcohol flood, but the results of the Abstaining Movement are already brilliant." In short, moderation in this insidious narcotic, though even that is undesirable, is, while possible for certain individuals, impossible for the race.

I believe that the day cannot be far distant when social workers and social leaders will come to realize that you cannot stem the tide of drink by countenancing the custom in the home and voting for the traffic in the street. So powerful is the whole thing—the appetite, the tradition, the fashion, the traffic—that it must be given no quarter. If social leaders today would form total abstinence societies you would see a great falling off in drink consumption. If this measure were followed by an ever-widening dry area, you would see a still greater decrease.

You social workers who so often are social leaders, the cumulative costs of alcohol in poverty, crime, immorality, death and disease are beyond computing. Virile nations, once they recognize the uneconomic, ostracize it until it fades at last into the limbo of the past. As we are virile so shall we ostracize the drink custom and outlaw the drink traffic. The slogan of every patriot should be, "No quarter to John Barleycorn!"

The Belgian Deportations

By Bruno Lasker

OF THE SURVEY STAFF

IN spite of the protests of neutral governments [see the SURVEY, December 23, 1916] the deportation of Belgian men by the German military authorities still continues. The total number deported so far probably approximates 150,000. From Ghent and the surrounding district alone more than 15,000 men seem to have been taken in the two months of October and November. The German authorities are said to have admitted that they aim at a gradual deportation of about 300,000 in all.

The German government, last Sunday, issued another memorial concerning the employment of Belgian workmen in Germany in which the purpose of these deportations is explained in detail. Further explanations are contained also in an article of the *Norddeutsche Allgemeine Zeitung* of December 3, 1916, which has just come to hand. But neither document gives a satisfactory answer to the protests made by the neutral governments and by the neutral peoples. Placed alongside the appeal of the Belgian workers of November 19, 1916, to American labor, and of the moving sermon of Cardinal Mercier at St. Gudule (November 26), they fail to convince. The reason for this is threefold: First, assuming the description given of economic and social conditions to be accurate, there is strong proof that idleness, voluntary or involuntary, however prevalent, has not been made the sole test in selecting men for deportation, but that many have been taken out of employments in which they were engaged, and a not negligible number are students, professional men, and persons of means. Second, these measures remain in flagrant contradiction of international law and of the explicit undertaking given

in October, 1914, by the governor of Antwerp. Third, even if every other argument advanced by the German government were sound, there is no reason why the problem of idleness could not have been met without recourse to a necessarily cruel form of punishment.

These accusations must not be taken as granting that all the accounts of the deportations received in this country by way of Holland and of the allied countries may be accepted as reliable. Some of them show internal evidence of exaggeration. The charge of cruelty made above does not relate itself primarily to the treatment meted out to individuals. If men have been transported in cattle trucks, they have probably fared no worse than the troops of any of the belligerent countries. Their food rations, though unpalatable and unsuitable for all but healthy constitutions, appear on the whole to have been sufficient to support men engaged in little or no muscular exertion; they are not, apparently, worse than those given to prisoners of war and to civilians in concentration camps. (The "decoction from acorns," by the way, of which Belgians complain, is a wholesome surrogate for cocoa which for many years has been popular in Germany.) Inconvenience, exposure, lack of cleanliness and of means to keep clean are inseparable from large movements of population at a time of stress.

The point is not that these hardships are exceptional considering the circumstances, but that they could have been entirely avoided. If the compulsory employment of the workshy was the only object of the measures taken, the governor was empowered, even obliged, under section 43 of the fourth

report of the second Hague Conference, to apply the laws existing in the occupied territory for maintaining public order. The Belgian statute book gives ample power for the commitment of incorrigible shirkers to labor colonies. These men could and should have been set to work in their own country upon tasks of benefit to their own country.

But the chief indictment is not on account of these things; it is on account of the utter disregard for the mental state of the country, the general nervousness and tense emotional strain among all classes of the population. It was inevitable with this mental predisposition that a deportation order must create unspeakable anxiety and suffering. After two years of separation from the rest of the world, not knowing from day to day the fate of their country, under the complete surveillance of a severe, not to say oppressive, conqueror, these people receive an order to assemble on the following morning for the selection of men to be sent out of the country. The torments of the men who are taken, they know not whither or when to return, the anguish of leavetaking, the bereavement of those left behind, the indignity, the sense of injustice in a democratic, freedom-loving country, these are things which the German military authorities—or the militarists of any country—are unable to foresee or to appreciate.

Says the German government: "Their temporary transplantation to another country does not frighten them; Belgian laborers are accustomed to travel from place to place, and in time of peace they were wont to hire themselves out, frequently for many months, to employers in the southern industrial districts of their own country or in those of northern France for a smaller increase in wage than is offered them today." Men who are capable of such reasoning, who are incapable of appreciating the difference between seasonal migration at times of peace to follow the most lucrative opportunities of employment and forcible deportation to a hostile country at times of general profound anxiety—such men, psychologically speaking, are capable of any tyranny and cruelty.

If there were evidence, other than their own declaration, that the military authorities were guided in this action by considerations for the welfare of the Belgian people, the arguments advanced for some form of compulsion would, on the face, be plausible. Though obviously neither the Belgian government nor any of the agencies in allied and neutral countries which are devoting themselves to the relief of Belgian war-sufferers would care to admit it, it is a matter of common knowledge that many have already become pauperized by the ease with which they are enabled to live without exertion. "Owing to the relief granted them, the workers are tempted into continued idleness, with the result that today Belgian employers are with difficulty able to obtain workmen necessary to keep their concerns going." Though this statement may be an exaggeration in such general terms, the danger undoubtedly exists.

But it must be remembered that as an argument for wholesale deportation this plea—which, indeed, has never failed to appear in justification of oppression and slavery—is altogether unsound so long as it can be shown that there are other possible means of meeting the evil. It is insincere in this instance because practically nothing has been done by the German authorities to foster or maintain an active industrial life in the occupied country which would enable the population to follow its accustomed pursuits with the loyalty and tenacity which is the reputation of Belgians the world over.

"If it is now decided to employ Belgian laborers in German plants because they have been unemployed for two years and live by public charity, this has nothing to do with the question

of imprisonment and deportation of the whole of the male population which was under discussion in the fall of 1914. The measure is not connected, as was that discussed at that time, with the conduct of the war, but rests on social grounds." But is it likely that the men of Antwerp who had fled to Holland in the early days of the war could have been induced to return if this distinction had been made clear to them, if the verbal promises of Governor von Huene and General-Governor von der Goltz had been so circumscribed?

Moreover, nearly every week brings new facts to show that men are deported who by no stretch of the imagination can be described as "unemployed for two years." A case which has come to our personal knowledge on good authority concerns the adopted son of a lawyer in comfortable circumstances, eighteen years of age. In the neighborhood of Charleroi, students of the technical college have been seized. In Namur students and self-employed master artisans, as well as a number of skilled workmen employed at good wages, were imprisoned and deported. From a number of communes complaints have arrived—mentioning names and generally bearing the stamp of veracity—that employes of relief organizations have been deported, including in some instances men of experience whom it is difficult to replace.

There is no general evidence that in the methods of assembling traveling units and of transporting them to various destinations in Germany more brutality has been inflicted than is part and parcel of the military "system."

The fact which emerges, after a careful study of the data and of the arguments put forward by the German government in the defense of its action, is that "military necessity," after all, can alone provide an adequate explanation for it. Since the German government levies a heavy tax upon the country and contributes nothing to its public charities, it is not likely that relief problems have been foremost in shaping its policy concerning the labor situation. Nor is it probable that it was concern for the industrial efficiency of the Belgian workingmen when the war is over. But, however transparent are the reasons which have been given, it would be unfair to charge the German government with hypocrisy. What other government, under like circumstances, would state the true motive of its action: preparation for a possible offensive by the enemy. From the detailed descriptions received, it appears that men are selected for deportation with an eye to their military fitness—though this is done very roughly—at least as much as to their social status or industrial competency. They have been taken almost exclusively from industrial regions where clandestine organization and uprisings would be more likely to occur than in the rural districts. In the case of a successful allied offensive, the great majority of the civilians now sent to Germany, if remaining at home, would have been conscripted into the Belgian army.

As in the case of the invasion of the country in the early days of the war, so in this new precautionary measure, "military necessity" has been allowed to outweigh every other consideration, including the good will of neutral nations and established international law. (We wish it were possible to confirm the rumor that the civilian departments of the German government in Belgium strongly advised against this step.) There is no justification for accusing Germany of exceptional brutality in interpreting this "necessity"—one need only to point to the Russian deportations of civilians from eastern Prussia in 1915. But to all who care for the maintenance of real standards of civilization it becomes a duty to join in the protest against a militarist philosophy which, when adopted by a great and powerful nation, brings about such an outrage to ordinary human sensibility.

"Peace Among the Nations"

The President's Address to the Senate on January 22

GENTLEMEN OF THE SENATE: On the eighteenth of December last I addressed an identic note to the governments of the nations now at war requesting them to state, more definitely than they had yet been stated by either group of belligerents, the terms upon which they would deem it possible to make peace. I spoke on behalf of humanity and of the rights of all neutral nations like our own, many of whose most vital interests the war puts in constant jeopardy.

The Central Powers united in a reply which stated merely that they were ready to meet their antagonists in conference to discuss terms of peace.

The Entente Powers have replied much more definitely, and have stated, in general terms, indeed, but with sufficient definiteness to imply details, the arrangements, guarantees, and acts of reparation which they deem to be the indispensable conditions of a satisfactory settlement.

We are that much nearer a definite discussion of the peace which shall end the present war. We are that much nearer the discussion of the international concert which must thereafter hold the world at peace. In every discussion of the peace that must end this war it is taken for granted that that peace must be followed by some definite concert of power, which will make it virtually impossible that any such catastrophe should ever overwhelm us again. Every lover of mankind, every sane and thoughtful man, must take that for granted.

I have sought this opportunity to address you because I thought that I owed it to you, as the council associated with me in the final determination of our international obligations, to disclose to you without reserve the thought and purpose that have been taking form in my mind in regard to the duty of our government in those days to come when it will be necessary to lay afresh and upon a new plan the foundations of peace among the nations.

It is inconceivable that the people of the United States should play no part in that great enterprise. To take part in such a service will be the opportunity for which they have sought to prepare themselves by the very principles and purposes of their polity and the approved practices of their government, ever since the days when they set up a new nation in the high and honorable hope that it might in all that it was and did show mankind the way to liberty. They cannot, in honor, withhold the service to which they are now about to be challenged. They do not wish to withhold it. But they owe it to themselves and to the other nations of the world to state the conditions under which they will feel free to render it.

That service is nothing less than this—to add their authority and their power to the authority and force of other nations to guarantee peace and justice throughout the world. Such a settlement cannot now be long postponed. It is right that before it comes this government should frankly formulate the conditions upon which it would feel justified in asking our people to approve its formal and solemn adherence to a league for peace. I am here to attempt to state those conditions.

The present war must first be ended, but we owe it to candor and to a just regard

for the opinion of mankind to say that, so far as our participation in guarantees of future peace is concerned, it makes a great deal of difference in what way and upon what terms it is ended. The treaties and agreements which bring it to an end must embody terms which will create a peace that is worth guaranteeing and preserving, a peace that will win the approval of mankind, not merely a peace that will serve the several interests and immediate aims of the nations engaged.

We shall have no voice in determining what those terms shall be, but we shall, I feel sure, have a voice in determining whether they shall be made lasting or not by the guarantees of a universal covenant, and our judgment upon what is fundamental and essential as a condition precedent to permanency should be spoken now, not afterward, when it may be too late.

No covenant of cooperative peace that does not include the peoples of the new world can suffice to keep the future safe against war, and yet there is only one sort of peace that the peoples of America could join in guaranteeing.

THE elements of that peace must be elements that engage the confidence and satisfy the principles of the American governments, elements consistent with their political faith and the practical conviction when the peoples of America have once for all embraced and undertaken to defend.

I do not mean to say that any American government would throw any obstacle in the way of any terms of peace the governments now at war might agree upon, or seek to upset them when made, whatever they might be. I only take it for granted that mere terms of peace between the belligerents will not satisfy even the belligerents themselves. Mere agreements may not make peace secure. It will be absolutely necessary that a force be created as a guarantor of the permanency of the settlement so much greater than the force of any nation now engaged or any alliance hitherto formed or projected, that no nation, no probable combination of nations, could face or withstand it. If the peace presently to be made is to endure, it must be a peace made secure by the organized major force of mankind.

The terms of the immediate peace agreed upon will determine whether it is a peace for which such a guarantee can be secured. The question upon which the whole future peace and policy of the world depends is this:

Is the present war a struggle for a just and secure peace or only for a new balance of power? If it be only a struggle for a new balance of power, who will guarantee, who can guarantee, the stable equilibrium of the new arrangement? Only a tranquil Europe can be a stable Europe. There must be not only a balance of power, but a community of power; not organized rivalries, but an organized common peace.

Fortunately, we have received very explicit assurances on this point. The statesmen of both of the groups of nations, now arrayed against one another, have said, in terms that could not be misinterpreted, that it was no part of the purpose they had in mind to crush their antagonists. But the implications

of these assurances may not be equally clear to all, may not be the same on both sides of the water. I think it will be serviceable if I attempt to set forth what we understand them to be.

They imply first of all that it must be a peace without victory. It is not pleasant to say this. I beg that I may be permitted to put my own interpretation upon it and that it may be understood that no other interpretation was in my thought. I am seeking only to face realities and to face them without soft concealments. Victory would mean peace forced upon the loser, a victor's terms imposed upon the vanquished. It would be accepted in humiliation, under duress, at an intolerable sacrifice, and would leave a sting, a resentment, a bitter memory, upon which terms of peace would rest, not permanently, but only as upon quicksand.

Only a peace between equals can last; only a peace the very principle of which is equality and a common participation in a common benefit. The right state of mind, the right feeling between nations, is as necessary for a lasting peace as is the just settlement of vexed questions of territory or of racial and national allegiance.

The equality of nations upon which peace must be founded, if it is to last, must be an equality of rights; the guarantees exchanged must neither recognize nor imply a difference between big nations and small, between those that are powerful and those that are weak. Right must be based upon the common strength, not upon the individual strength, depend.

Equality of territory, of resources, there, of course, cannot be; nor any other sort of equality not gained in the ordinary peaceful and legitimate development of the peoples themselves. But no one asks or expects anything more than an equality of rights. Mankind is looking now for freedom of life, not for equipoises of power.

And there is a deeper thing involved than even equality of rights among organized nations. No peace can last, or ought to last, which does not recognize and accept the principle that governments derive all their just powers from the consent of the governed, and that no right anywhere exists to hand peoples about from sovereignty to sovereignty as if they were property.

I TAKE it for granted, for instance, if I may venture upon a single example, that statesmen everywhere are agreed that there should be a united, independent, and autonomous Poland, and that henceforth inviolable security of life, of worship, and of industrial and social development should be guaranteed to all peoples who have lived hitherto under the power of governments devoted to a faith and purpose hostile to their own.

I speak of this not because of any desire to exalt an abstract political principle which has always been held very dear by those who have sought to build up liberty in America, but for the same reason that I have spoken of the other conditions of peace, which seem to me clearly indispensable—because I wish frankly to uncover realities. Any peace which does not recognize and accept this principle will inevitably be upset. It will not rest upon the affections or the

convictions of mankind. The ferment of spirit of whole populations will fight subtly and constantly against it, and all the world will sympathize. The world can be at peace only if its life is stable, and there can be no stability where the will is in rebellion, where there is not tranquility of spirit and a sense of justice, of freedom, and of right.

So far as practicable, moreover, every great people now struggling toward a full development of its resources and of its powers should be assured a direct outlet to the great highways of the sea. Where this cannot be done by the cession of territory it can no doubt be done by the neutralization of direct rights of way under the general guarantee which will assure the peace itself. With a right comity of arrangement no nation need be shut away from free access to the open paths of the world's commerce.

And the paths of the sea must alike in law and in fact be free. The freedom of the seas is the *sine qua non* of peace, equality, and cooperation. No doubt a somewhat radical reconsideration of many of the rules of international practice hitherto sought to be established may be necessary in order to make the seas indeed free and common in practically all circumstances for the use of mankind, but the motive for such changes is convincing and compelling. There can be no trust or intimacy between the peoples of the world without them.

The free, constant, unthreatened intercourse of nations is an essential part of the process of peace and of development. It need not be difficult to define or to secure the freedom of the seas if the governments of the world sincerely desire to come to an agreement concerning it.

It is a problem closely connected with the limitation of naval armaments and the cooperation of the navies of the world in keeping the seas at once free and safe.

And the question of limiting naval armaments opens the wider and perhaps more

difficult question of the limitation of armies and of all programs of military preparation. Difficult and delicate as these questions are, they must be faced with the utmost candor and decided in a spirit of real accommodation if peace is to come with healing in its wings and come to stay.

PEACE cannot be had without concession and sacrifice. There can be no sense of safety and equality among the nations if great preponderating armies are henceforth to continue here and there to be built up and maintained. The statesmen of the world must plan for peace and nations must adjust and accommodate their policy to it as they have planned for war and made ready for pitiless contest and rivalry. The question of armaments, whether on land or sea, is the most immediately and intensely practical question connected with the future fortune of nations and of mankind.

I have spoken upon these great matters without reserve, and with the utmost explicitness because it has seemed to me to be necessary if the world's yearning desire for peace was anywhere to find free voice and utterance. Perhaps I am the only person in high authority among all the peoples of the world who is at liberty to speak and hold nothing back. I am speaking as an individual, and yet I am speaking also, of course, as the responsible head of a great government, and I feel confident that I have said what the people of the United States would wish me to say.

May I not add that I hope and believe that I am, in effect, speaking for liberals and friends of humanity in every nation and of every program of liberty? I would fain believe that I am speaking for the silent mass of mankind everywhere who have as yet had no place or opportunity to speak their real hearts out concerning the death and ruin they see to have come already upon the persons and the homes they hold most dear.

And in holding out the expectation that the

people and the government of the United States will join the other civilized nations of the world in guaranteeing the permanence of peace upon such terms as I have named, I speak with the greater boldness and confidence because it is clear to every man who can think that there is in this promise no breach in either our traditions or our policy as a nation, but a fulfillment rather of all that we have professed or striven for.

I am proposing, as it were, that the nations should with one accord adopt the doctrine of President Monroe as the doctrine of the world: That no nation should seek to extend its policy over any other nation or people, but that every people should be left free to determine its own policy, its own way of development, unhindered, unthreatened, unafraid, the little among the great and powerful.

I am proposing that all nations henceforth avoid entangling alliances which would draw them into competition of power, catch them in a net of intrigue and selfish rivalry, and disturb their own affairs with influences intruded from without. There is no entangling alliance in a concert of power. When all unite to act in the same sense and with the same purpose, all act in the common interest and are free to live their own lives under a common protection.

I am proposing government by the consent of the governed; that freedom of the seas which in international conference after conference representatives of the United States have urged with the eloquence of those who are the convinced disciples of liberty; and that moderation of armaments which makes of armies and navies a power for order merely, not an instrument of aggression or of selfish violence.

These are American principles, American policies. We can stand for no others. And they are also the principles and policies of forward-looking men and women everywhere, of every modern nation, of every enlightened community. They are the principles of mankind and must prevail.

The Singer

Mary Carolyn Davies

SHE sang a song of beauty, while I spoke
 Of wrongs to be righted;
 She lit a lamp of hoping while I told
 Of lamps to be lighted.
 She took the hardened hands of those who read
 Her little book of loveliness and led
 The hopeless to where hope and beauty live.
 She made men quite forget to hate or to forgive.
 I only talked of beauty to be sought,
 Of rights to be wrested;
 I sang of wars that must be found and fought,
 And shrill I protested.
 She led men past all struggling and all strife,
 Beyond the darkness, into freer life.
 Freedom is bought by blows, I said. But she
 Knew unarmed beauty was enough to make men free.

COMMON WELFARE

FAMINE IN BELGIUM BRINGS HOOVER HOME

HERBERT C. HOOVER, chairman of the American Commission for Relief in Belgium, whose magnificent achievement in organizing the supply and distribution of the American gifts to Belgium and of the contributions made to that country by the allied governments has been described in the SURVEY by Ernest P. Bicknell [September 2, 1916], returned last Sunday to New York to start a new campaign for raising funds.

"This has been made necessary by the fact," he says, "that the economic situation in Belgium and in the North of France is now much worse than it has been since the beginning of the war. Large classes of the population which were self-supporting when we started operations have since fallen into dire distress through the gradual exhaustion of their resources. The industries of the country have practically come to a standstill. Savings are used up. Returns from every form of investment have diminished or ceased altogether."

The immediate need is for an adequate fund to provide additional food for children of school age. One and a quarter million children now require extra nourishment. This the commission has started to give in the form of school luncheons consisting of hash and bread or cocoa and biscuits. Mr. Hoover, seen the day after his arrival, kindly offered to present the SURVEY at an early date with a fuller statement of the need which must be met immediately by American contributions if thousands of children are not to fall into permanent ill-health and disability.

In the meantime he protested against the assertion which has been made that extensive physical deterioration of Belgian children has resulted from the past acceptance by the commission of an inadequate standard of nutrition. The children on whose behalf it now appeals have not, as these critics assume, been under the care of relief agencies for two years. The great majority of them have not hitherto been in need of help additional to the general food allowance which was sufficient for mainte-

nance in health. But a restricted choice of diet and, finally, outright poverty have to an alarming degree increased to afflict families which, but two years ago, were considered relatively well off.

General conditions have grown so much worse—the number of persons for whom Mr. Hoover is now appealing approximates three and a half million in Belgium and two million in the occupied portions of France—that the commission has been obliged to direct its special attention to one section of the population after another as starvation became imminent. Physiologists have long told us that the under-nourishment in an industrial community resulting from low or irregular earnings does not necessarily make itself felt in the form of painful hunger. Serious malnutrition may go together even with satiety. But it inevitably tells on health and physical efficiency and, if unchecked, also on moral fiber.

There is some misunderstanding also in this country concerning the contribution of Americans to the relief work in Belgium. First, with regard to distribution, this is organized almost entirely by the Belgians themselves—with an efficiency and devotion which could not be surpassed. It is a great mistake to assume that the Belgian "intellectuals" and those able to help in any capacity are sitting by idly while Mr. Hoover and his staff do all the work. Such a task, obviously, would be impossible for any outside body.

Then with regard to the sources of relief. The total amount so far subscribed in this country is about eight million dollars. This is no more than a comparatively small supplement to the monthly contributions of four and five millions respectively by the French and British governments and half a million raised monthly by voluntary subscriptions in Great Britain and other European countries. Mr. Hoover estimates that it will cost between 150 and 200 million dollars to take care of the destitute this year. Assuming the main European contributions to continue unchanged, this would seem to involve the necessity of raising somewhere an additional 35 to 85 million.

TESTING OUT THE SCHOOL OF THE FUTURE

THE General Education Board, one of the philanthropic bodies established by John D. Rockefeller, announced last week that it would provide Teachers College of Columbia University, New York city, with the funds necessary "to establish and conduct a school for the purpose of constructive work in the reorganization of elementary and secondary education." This school will, according to the announcement, be "better adapted to the needs of modern life," will "frankly discard that theory of education known as 'formal discipline,'" and will drop the teaching of Latin and Greek in favor of greater prominence for science, industry and the domestic arts.

The director of the experimental school will be Prof. Otis W. Caldwell, now head of the Department of Natural Sciences in the School of Education of the University of Chicago. It is expected that some of the classes will open next fall.

The board declares that it was convinced of the importance of such a school by the "keen and extended discussion of President Eliot's paper on Changes Needed in Secondary Education and Abraham Flexner's paper on The Modern School." Both of these are publications of the board, and both writers are members of the board, Mr. Flexner being also an assistant secretary.

The amount of money behind the school was declared by a board member to be "whatever it costs." On June 30, 1916, the board's "principal funds, including reserve," were announced to be over \$34,000,000.

The board's statement says:

"In the curriculum modern languages will be stressed and experiments will be made with a view to determining what methods of teaching English, French, and German give the most substantial practical results. New methods of teaching literature, history, and civics will be tried, and in this connection efforts will be made to ascertain whether the important ancient classics cannot be effectively used in translations. Latin and Greek as languages will not be

taught in the school. Science, industry, and the domestic arts will be prominent throughout the school, and increased attention will be given to music, drawing, and art. The subject of mathematics will receive special consideration in the hope of working out a rational course of study which connects the study of mathematics with its use, and which also makes adequate provision for those who have special ability or desire for this subject.

"Organized recreation, play, and games will be provided for. Constant efforts will be made by means of individuals, class, and school excursions, by means of pictures, lantern slides, charts, maps, shop and laboratory, special reading matter, and discussions to give the pupils sufficient contact with their natural, industrial, social, economic, vocational and domestic environment so as to derive the basis for their school work from real situations, and thus make school work constantly real to them. The school will frankly discard that theory of education known as 'formal discipline' and will undertake to secure training through the careful and thorough study of subjects which are in themselves valuable. It is believed that a much more effective discipline can be thus secured."

In his paper, *The Modern School*, Mr. Flexner said:

"The modern school will not go through the form of teaching children useless historical facts, just because previous generations of children have learned and forgotten them; neither will it go through the form of reading obsolete and uncongenial classics simply because tradition has made this sort of acquaintance a kind of good form. . . .

"A school trying to produce a resourceful modern type of educated man and woman would provide practical training in one or more modern languages. A realistic treatment of literature would take hold of the child's normal and actual interests in romance, adventure, fact, or what not, and endeavor to develop them into as effective habits of reading as may be. Translations, adaptations, and originals in the vernacular—old and new—are equally available. They ought to be used unconventionally and resourcefully, in order that his real interest in books may be carried as far and as high as is for him possible, and in this effort the methods pursued should be calculated to develop his interest and his taste, not to 'train his mind,' or to make of him a make-believe literary scholar.

"Let us imagine a modern school located in New York city; consider for a moment its assets for educational purposes; the harbor, the Metropolitan Museum, the Public Library, the Natural History Museum, the Zoological Gardens, the city government, the Weather Bureau, the transportation systems, lec-

tures, concerts, plays and so on. Other communities may have less, but all have much."

Both boys and girls from 6 years of age up will be admitted to the school, though they will not necessarily be in the same classes in all subjects. It is expected that the tuition fees will be moderate and that there will be a number of free and partial scholarships. Subject to the authority of Columbia University and Teachers College, the general management of the school will be vested in an administrative committee composed of James E. Russell, dean of Teachers College, chairman, and the following additional members: Otis W. Caldwell, V. Everit Macy, Mrs. Willard Straight,

THE GOVERNMENT INVESTIGATOR: AN EXPERIENCE WITH PITY

HOW many children? You mean them as died and all?

My God, lady, I don't know as I rightly remember, and it's dreary to be counting them. Seven, living. Three died on me last winter, of anonia. Maybe you heard of the funerals? It's a hard, bitter thing to lose children—after the trouble to have 'em and keep 'em alive and all. But thank the good Lord, I had burial insurance for Mary and Jaek; and the other funeral was real nice, too, but we're still debted for it.

And the year before that I lost one. He fell out a window, while I was out washing. And he was the smartest of the lot, and the prettiest.

Then I had twins—lived just long enough to be baptized. And—you tired hearing my troubles? You look sympathetic-like. Well, there's Aloysius there. I'm praying to keep him, but he's terrible puny. I'm afraid of this hot spell, and the New York—paralysis, and all. I'm burning a candle, there under that picture.

How many rooms? Oh, just two, here. Our other house was fine. We had four rooms, all fixed up. But he broke the pledge again, and got to drinking hard, and we were evieted. You see, the debt from the funerals—

Now what was I saying? Oh, yes—you'll excuse the mess here. You know how it is when you take in washing—three this week—it's too hot to fuss much over your own work. Ninety-eight in the shade; and it's only six weeks since that baby was born. You know how it is. You can't keep cleaned up.

Excuse me, you married? No? And here I go talking. Not married. Now that's too bad. And you're a nice-lookin' woman, too, though you are skinny. My God, you ARE skinny. I s'pose that's the reason—

And you have to go round asking folks questions? In all this heat, every day? You poor thing! No wonder you're skinny. I certainly do pity you! Now just you sit down, as long as you want. I'm not going to tell anyone. You just rest yourself.

Say, ain't it funny? Some folks'll do anything for a living!

VIOLA I. PARADISE.

Felix M. Warburg, Arthur Turnbull, appointed by Teachers College, and George E. Vincent, Wickliffe Rose, Charles P. Howland, and Abraham Flexner, appointed by the chairman of the General Education Board.

Professor Caldwell has been for years, says the board's announcement, "one of the most active and effective workers in adapting science subjects to elementary and secondary school uses."

PEACE MESSAGES TO CHURCHES OF EUROPE

WIRELESS correspondence between the United States and Europe is kept at a lively pace by the Federal Council of the Churches of Christ in America.

A few weeks ago the Rev. Charles S. MacFarland, general secretary of the council, addressed wireless inquiries regarding the attitude of the German people toward a proposed league of nations after the war to Dr. Adolph Deissman, of the University of Berlin. Scarcely was Dr. Deissman's reply received, stating that the idea of arbitration is constantly gaining ground in Germany, than a new set of Marconi and cablegrams was sent out by the council.

This time the messages are addressed to members of the principal Protestant ecclesiastical bodies of Europe. Besides embodying resolutions of sympathy for the peoples of Europe, they call upon Christians throughout the world to cooperate in an effort to establish "a peace that shall be lasting, because based upon justice and good will."

Another evidence of the increasingly active part which the federal council is taking in questions relating to peace and war is a plan being perfected by the council for a unified, national campaign for war relief, in cooperation with more than a dozen of the leading war relief organizations.

This new scheme does not mean that present organizations would go out of existence. Neither does it cast any reflection upon existing work. But it is believed that a strong central agency, remaining in existence so long as war relief may be needed or making a great financial "drive" through a comparatively brief period, will be able to secure more money. A national campaign, effectually prosecuted, ought to produce, according to the reckoning of the council, one hundred million dollars.

THE CONSTITUTION AND A PEACE LEAGUE

IS the United States able to "deliver the goods" in carrying out the program of the League to Enforce Peace? Can Congress and the President surrender to an international tribunal the powers of making war and concluding peace?

Senator Shafroth, of Colorado, and Col. Oscar T. Crosby, U.S.A., retired, argued before a sub-committee of the

Senate Judiciary Committee, last week, that a constitutional amendment would be necessary to enable this nation to take part in the world alliance for peace.

Colonel Crosby spoke in advocacy of the Shafroth proposal (S. J. Res. 131), of a constitutional amendment providing as follows:

"The President is authorized to negotiate and, after ratification by two-thirds of both Houses of Congress, to sign a treaty or treaties with all or a part of the other sovereign nations of the world, engaging the United States to submit for final determination all its international disputes threatening war to an international tribunal or tribunals, and also engaging the United States to assist in supplying funds for the support of said tribunal or tribunals and of any international civil and military establishment, to be controlled by an international authority, that may be required by the treaty or treaties as a sanction for the execution of the decrees and the fulfillment of the demands of the said international organisms when such decrees or demands are made in conformity with the agreements instituting said organisms, and engaging the United States to recognize the authority of said international organisms (or one or more of them) to make final interpretation of the powers conferred upon them."

Colonel Crosby and Senator Shafroth argued that the constitutional power to declare war and make peace is so definitely fixed that it cannot be surrendered to an extra-national body without amendment of the constitution itself. In this he disagreed with former President Taft and other lawyers who have contended that Congress and the President can, under their treaty-making power, commit the country to the support of an international tribunal and an international police force, to be controlled by the international body.

Until the constitution shall be amended, they declared, the European diplomats will look askance upon pledges from America of aid in establishing and maintaining the world court. Colonel Crosby stated that a Washington correspondent of two of the powerful London papers had notified his chief that except by constitutional provision the President and Congress could give Europe nothing better than a "gold brick" in the exchange of pledges.

THE CONSTITUTION ON CONSTITUTIONALITY

DECLARING that the constitution of the United States gives no authority to the courts to declare laws of Congress unconstitutional, Senator Owen of Oklahoma has introduced a joint resolution, the intent of which is to forbid such action on the part of any federal judge on penalty of forfeiture of office.

The preamble to the resolution denies the right of the courts to declare unconstitutional any act which, by the very fact of passage and approval, "has been declared constitutional by a majority of the members of the United States Senate and the House of Representatives and by the President of the United States," and it characterizes any declaration to the contrary by a federal court as an "usurpation of power." It also states in the preamble that a motion was made three times in the Constitutional Convention to give to the Supreme Court the right to declare acts of Congress unconstitutional, and that each time the motion was "overwhelmingly rejected." It is pointed out, further, that the Supreme Court is "subject to no review and to no control by the people of the United States."

It will be remembered that the Manly report of the United States Commission on Industrial Relations, signed by Chairman Walsh and the labor representatives, contained a recommendation that a law be passed "specifically prohibiting the courts from declaring legislative acts unconstitutional."

It was pointed out at the time that a proposal so sweeping in character would practically destroy the federal government. The Owen resolution is much more restricted. It would withdraw from the Supreme Court the right to declare unconstitutional laws enacted by Congress, but it would leave it in full possession of its present power, whether "usurped" or not, to pass on the constitutionality of laws enacted by state legislatures.

SWISS AND RUSSIAN VIEWS OF COMPULSORY SERVICE

THE first public testimony given in America as to the Swiss military system in its relation to the condition of the Swiss workers was that of Philip Schaefer, a former soldier of the Zurich battalion, before the Chamberlain subcommittee of the Senate Committee on Military Affairs, on January 16. Schaefer, who is president of a lodge of the Machinists' Union in Chicago, was one of the witnesses brought by the American Union Against Militarism to discuss the value of universal compulsory military training.

As related by this ex-soldier, with great particularity of detail as to dates, places and persons, the army of the Helvetic republic has found a heavy financial burden upon the government, a still more serious burden upon the families of the working-class recruits, and a force powerful to suppress strikes while valueless against the great military machines of the surrounding European powers.

As a child of twelve years he was forced to begin military training in the schools, he said. His father, earning but sixty-three cents a day and having six

children to feed, could furnish him with only a second-hand and tattered military coat which stamped his poverty upon him as he took his place in the line with the finely-uniformed boys from well-to-do families. Later on, these boys were enabled to take the training necessary for holding officers' rank; the boy of a wage-earner's family could not afford the training. When he served in the adult training force, he found that the officers of his command were all representatives of the ruling class of the country.

"My lieutenant's family were the largest hardware dealers in the district," he said in substance; "my captain represented the ownership of a mill employing 3,000 persons; my regimental commander was the son of the owner of a silk mill employing 5,000 people, and his superior officer in turn was the son of the richest family in the whole of Switzerland."

"Men from the ranks may become officers, if they take the training, but they are expected to follow the customs of officers, which include dining at public restaurants at a cost which is beyond the purse of a working man. As the payment to a recruit is about ten cents a day in the one period and sixteen cents a day in the other, it is clear that no working man can afford to be an officer. He finds it bad enough to pay for underclothing, shoes, socks and laundry out of his wages, and his family may have nothing from his earnings for their own support. Switzerland makes no provision for the maintenance of the destitute family of the soldier, except the ordinary recourse of charity.

"So the working class fills the ranks, and the ruling class has the control of the army in 'democratic' Switzerland. Cavalry regiments, which are used in case of strikes to put down the workers, are made up of those men who can afford to keep a horse for this purpose throughout the year. Last September a peaceful parade of the Young People's Socialist League was ridden down by such a force—men, women and children trampled upon as though they were dogs.

"When a mill strike was called, the troops from the farming district nearby were called out by their officer, who managed the mill, and the town wage-workers' attempt to better their condition was brutally suppressed. The army of Switzerland has never been of any other use than that—the use by the rich to crush the labor movement. Swiss soldiers have no more democratic treatment at the hands of these middle-class and upper-class officers than have Prussian soldiers. If you protest at ill-treatment you go to the dungeon for three days. In 1902 a soldier committed suicide as the result of this punishment."

Divorces in regions where field maneuvers have been held are regularly

found to increase 50 to 75 per cent following maneuvers, Schaefer declared, due to drunkenness and vice accompanying this disturbance of home life. When he was a recruit at twenty he did not drink, but was forced to begin because the army service bottle contained wine. Milk and coffee were refused him by his officers.

As to the defensive value of the Swiss army, the witness said that since the northern part of the country is an open valley, without fortifications, a German force from near-by fortresses could "walk through" before the Swiss could even mobilize. He added the opinion that even if they resisted from their natural fortresses in the Alps, the Swiss could be surrounded and starved out by an invading force "in a week." Switzerland, he said, owed her safety to the fact that no power cared to disturb her independence as guaranteed by the Congress of Vienna.

At the same hearing A. L. Trachtenberg, of New York city, who enlisted as a volunteer in the Russian army and served throughout the Russo-Japanese war, told of the effects of conscription and compulsory service upon the Russian peasant and upon the middle-class Russian who becomes an officer. The peasant soldier's tendency, he said, is to yield to the demoralizing conditions which surround his service, so that upon his discharge from the army he is generally lazy and hopeless. The middle-class youth placed in the responsible position of an officer as a rule quickly loses his humane traits, yields to the temptations of his environment, and becomes brutalized to its standard.

As a result of his observations he urged upon the Senate sub-committee that no further military preparation be voted, but that all efforts be concentrated upon world-wide disarmament.

ST. LOUIS SELF-SURVEY OF SOCIAL SERVICE

THE most comprehensive survey of public and private social agencies yet made in any metropolitan city was recently completed by the St. Louis Central Council of Social Agencies. Francis H. McLean, general-secretary of the American Association of Societies for Organizing Charity, conducted the survey with local assistants, remaining in St. Louis three months. An exhaustive study of family treatment was made in a number of the leading agencies.

The St. Louis Central Council and the Business Men's League raised \$1,200 to finance the work. The survey, condensed from over 100,000 words to a small pamphlet, will be published in March.

Mr. McLean states that St. Louis now has a better working knowledge of its public and private social agencies than any other large city, and that the means

for cooperative effort are fully developed. Not only does the report include a full statement with recommendations on the work of each agency, but a three-year plan of development is outlined for the entire field of social work.

Wholesome criticism and suggestion are frequent in the report. The central council has already set to work to remedy conditions and to discuss the criticisms and suggestions. Reports of progress are being made at regular intervals, and a plan developed for making the survey continuous. It is significant that the survey was made by the agencies themselves, rather than by an endorsement body or foundation. The new standards established will be used as a basis for a yearly accounting.

TRAINED SERVICE BEFORE RELIEF

"WE have been astonished to discover that many of our most flagrant cases of need require very little money relief, but demand personal and sympathetic service over a long period. For these reasons we urge the employment of more trained nurses and welfare workers, because one hundred dollars in alms alone are far less effective than one dollar accompanied by wise and friendly guidance."

Thus writes George M. Jones, director-member of the Committee on Charity Endorsement and Advice of the Reading, Pa., Chamber of Commerce. His report forms the leading feature of the January 12 issue of the *Working*

"I want somebody to talk to

and there isn't anyone I know well enough."

It's the old story of the impersonality of New York. Lonely men and women are coming daily to pour their troubles into the sympathetic ear of a member of our staff who can give them the simple, kindly, common-sense, human advice they need. Not all the work of the Charity Organization Society is with poor people. Last year ten thousand persons called to talk over "their affairs" and to ask advice. They needed not alms but a friend.

An Adventure in Philanthropy, a short-story so interesting and significant that a pastor of one of the largest New York churches preached a sermon upon it, illustrates the Society's methods. You can obtain a free copy of this story by writing or telephoning the Charity Organization Society, Room 306, 105 East 22 Street. Telephone, Gramercy 4066.

ADVERTISING FOR FRIENDS

The advertisement shown above brought 100 replies from a single insertion in the New York "Times." The purpose of both the ad and the booklet it offers is educational—to reach new groups of people that the real work of the Charity Organization Society is to help people to help themselves rather than to raise money.

Optimist, published by the chamber; and it is brought home to business men by a caption in their own familiar language—Explanation of Large Overhead in Charitable Work.

The committee has spent a year in studying Reading charities as a basis for making up its report on charity endorsement. The outcome is a cordial endorsement of personal service before relief giving. Mr. Jones says:

"Good charity work is good community work, and the only way to have a better city is to have better citizens; and the only way to have better citizens is to improve their opportunities. We find that trained nursing, legal assistance, healthful employment, medical aid, education, religious instruction and friendly visiting are the only remedies for chronic begging, vice, cruelty, crime, contagion and mental deficiency. Such services can be rendered only by the generous and thoughtful cooperation of pastor, nurse, teacher, public official, lawyer, physician, landlord, employer and friendly visitor.

"We believe that our gifts to charity should be applied first to the employment of those who are competent to bring about this needed cooperation. Only trained experience and sympathy can accomplish this end. Your committee, therefore, is pleased to recommend as most worthy of your support only such social agencies as render the personal service necessary to supply complete relief and supplement such service by the material relief of food and clothing whenever necessary."

KANSAS OFF ON ANOTHER CRUSADE

KANSAS, from her state university to her clubs of young boys, is apparently gathering herself together to fight the cigarette. Kansas calls the cigarette the "little white slaver," the "blight on health and character," the "chief enemy of the boy," the "burning issue," and "the infamous cigarette." She is going to bully, cozen, intimidate, placard and educate the cigarette out of existence. The most remarkable thing about her campaign is the character and variety of those who have agreed to help in it.

The leadership seems to be in the hands of the Department of Child Welfare of the state university, which was formed three years ago to bring about, among other things, the closer cooperation of home, school, church and community in their service of the young. William A. McKeever, head of this department, and formerly professor of philosophy, is lining up the forces opposed to the cigarette.

Governor Capper has refused to advertise the cigarette in any of his publications. Attorney-General S. W. Brewster has asked all county attorneys to enforce

the anti-cigarette law. Dr. S. C. Crumbine, secretary of the State Board of Health, is giving helpful advice. The State Teachers' Association, 6,000 strong, have pledged their support "to help drive the cigarette out of Kansas," and Professor McKeever parenthetically informs us that "practically none of the men teachers in the public schools use tobacco in any form."

The State Federation of Women's Clubs has organized a department to fight the cigarette, and has asked for a law prohibiting its advertisement. The state W. C. T. U. is distributing literature, while parent-teacher associations are "dealing with the problem locally." The state Sunday School Association has authorized its field workers to aid in the attack.

The chancellor of the state university, Frank Strong, recently appeared before the Anti-Cigarette League and commended their efforts. The president of the State Agricultural College has urged all male students of that institution "to assert their will power by cutting out all tobacco." The presidents of the three normal colleges are heartily committed to the cause.

Meanwhile, the State Association of School Board Members, representing 150 bodies of their kind, has passed a resolution declaring its intention to have all cigarette advertising clipped from newspapers and magazines coming into their school libraries. These clippings are to be sent back to the publisher with a protest.

Finally, the boy clubs of Kansas are declared to be "out gunning for their chief enemy," and there is "an open season the year round." Two thousand boy members of anti-cigarette clubs in Kansas City made a bonfire recently of papers and magazines carrying cigarette advertisements, and in this bonfire they heaped a vast quantity of "the makin's."

"So the strange new campaign goes on in sunny Kansas," says Professor McKeever, "and out of it will grow another form of prohibition which the country at large will reluctantly but surely accept as its own."

TUBERCULOSIS IN MICHIGAN JAILS

THE tuberculosis survey being made by the Michigan State Board of Health has already brought to light some serious conditions in county jails. Of 152 persons examined in 10 jails, 18 were found to have tuberculosis so decidedly as to be listed as "positive cases," 24 were "suspicious," 9 "arrested." The prisoners were examined just as they came, regardless of whether they obviously needed such an examination or not.

This is, according to report from the state health surveyors, 27.6 per cent of the jail population. The percentage of tuberculosis found in clinics for the gen-

eral public was 44, but since those visiting the clinics were, of course, but a small part of the total population the percentage in jails is relatively much larger.

It was found that in not a single instance had the cases of tuberculosis found in jails been reported to the State Board of Health; not one of the individuals knew he had the disease.

The marked contrast to conditions in the county jails were those of the three state penitentiaries. Here, thanks to improved methods of management and medical inspection, a very small amount of tuberculosis was found—only 67 active cases among 1,971 men examined, or .034 per cent.

Among the conclusions obvious from such findings are the necessity of prompt action to prevent the spread of tuberculosis infection throughout the county jails and the necessity for stricter enforcement of the law requiring reports of all cases of communicable disease.

Further, says the Michigan report, "A more general but no less important conclusion to be drawn is that it is high time for the people of the state, in mere self-protection, to take active measures against tuberculosis among all classes of people, the loose and drifting as well as the hard-working and stable. For only by reaching out to all classes can we hope to curb the disease effectively. It should not be forgotten that these vagrants and transients that populate the county jails this month will be out among us next month. And they are just the kind who are not likely to take pains to protect others against themselves. Whoever heard of a 'vag' going to much trouble to use a sputum cup so that others might not contract the disease he is afflicted with? It is a case of self-protection for the rest of us to leave no stone unturned to reach this class of persons, as well as the workingman and everybody else."

HEALTH WHEN THE HOME IS AN IGLOO

A SURVEY of an Alaskan Eskimo village made recently by H. Clay Michie, captain of the Medical Corps, United States Army, and published in a New York medical journal, tells of one of the cleanest Eskimo villages in Alaska. The picture presented of windowless huts, shut tight against the air, crowded with people dressed in skins poorly tanned and partly decayed, refuse of all kinds piled high about the hut and turning the place into a mass of liquid filth when a thaw comes, leads to wonder as to what the dirtiest village could be like.

The causes of this filth are obvious. Fuel is scanty and hard to get; so ventilation, with its waste of heat, would be fatally extravagant. Food is gathered in summer and stored for winter; so some of it is decayed when it comes out

from weeks of storage. Crowding is unavoidable, and crowding means filth and infection. Water is scanty, so cleanliness is impossible.

All these conditions lead to the prevalence of tuberculosis, and it was this disease which formed the chief part of Dr. Michie's survey. He chose school children as the most available subjects for examination, and as a result of his study he found that no less than 61.5 per cent of these children were tuberculous. Unless their entire system of living is changed tuberculosis will inevitably increase among these people, for everything in their present mode of life leads to it. He believes that this is one of the greatest fields for medical missionary work, but it must be supplemented by governmental measures.

It is always mystery to the ordinary citizen the way in which the respected federal government apportions its tasks. That the Public Health Service should be a branch of the Treasury Department is curious enough; but who can explain why, given a Public Health Service, the health of Alaskan Eskimos should be entrusted to the Bureau of Education? That seems to be the case, and apparently the appropriation given this department is far too small to enable it to do thorough work even if it were equipped to. For instance, this village of Dr. Michie's is not visited by its agents at all and the nearest physician is about a seven days' journey away.

Dr. Michie wants a more liberal provision of medical care and legal measures to protect the natives from exploitation at the hands of unscrupulous fur traders.

SACRAMENTO'S LONG-RANGE CITY PLANNING

THE adoption of a city plan does not end the need for public vigilance over the physical development of the city. This is shown by a recent report of the California State Capital Planning Commission, which, after the adoption by Sacramento of John Nolen's city plan [see the SURVEY for March 25, 1916], has taken the place of the Chamber of Commerce Committee of One Hundred and Fifty.

This commission of four works without an appropriation and has no paid secretary. The members themselves pay its current expenses. They primarily represent a moral force in the community for the purpose of safeguarding the wider interests of the state in the gradual application of the principles already accepted by the city authority to the planning of the capital. They also look ahead and suggest for public discussion new problems as they arise and new projects before they take definite shape in the program of the city authority.

"City planning," say the commissioners, "should be considered as a very elas-

tic movement. It can anticipate only to a certain extent the needs of the future. . . . Many conditions must arise which are totally unforeseen."

For instance, while the city commission is busy commencing work on the Greater Capitol Park and campaigning for the acquisition of a large park area recommended by Mr. Nolen in the populous Oak Park section, the state commission is studying the possibilities of a much greater and vastly more important project, the construction of a deep-sea canal which would totally change the city's industrial development, possibly converting it into a harbor of as much importance as Manchester, Seville or even Amsterdam, all of which are connected with the traffic of the ocean by artificial waterways.

The state commission, further, is working for the coordination of the planning activities of the municipal authority with the afforestation and roadside planting work of the adjoining county and of the State Forestry Department. It is cooperating with the city government in solving the playground problem incidental to the city planning scheme, bringing to bear upon it the knowledge and enthusiasm of one of its members, C. M. Goethe, well known to SURVEY readers. Among other things, the commission has under consideration the possibility of using the plans for a civic center of learning—comprising the buildings of the municipal university—for the creation of a combined botanical garden, zoo and museum. It is drawing attention to the exceptional climatic advantages of the state capital to house one of the world's most varied collections of flora.

While not oblivious to the financial questions involved, and realizing that the accomplishment of so much to which the city is already committed must take time, the state commission is in a position to look beyond the immediate task of safeguarding the growth of the city and to study the relation of the city plan to more distant yet no less imperative social, industrial and esthetic needs of the capital.

CAPITAL AND LABOR ON EACH OTHER'S NECKS

THE lion and the lamb have lain down together. It happened this week in New York city—of all places—and, to be exact, in the Rose Room of the Hotel Astor.

At least, that is what appeared to be taking place when Samuel Gompers, president of the American Federation of Labor; A. Parker Nevin, counsel for the National Association of Manufacturers; Warren S. Stone, chief of the Brotherhood of Locomotive Engineers; Magnus W. Alexander, secretary of the National Industrial Conference Board—the new eight billion dollar organization

to fight labor—Hugh Frayne, general organizer of the American Federation of Labor, and numerous other representatives of labor and capital appeared at the meeting of the National Civic Federation last Monday afternoon to register their united protest against compulsory health insurance.

Before the meeting was over it seemed as if the first judgment were in error. There were no lions in the meeting after all—only lambs. And the suggestion was made that they should join forces against the ravening wolves without who would destroy the liberties of the people by fastening upon them a scheme of compulsory health insurance.

L. E. Sheppard, acting president of the Order of Railway Conductors, presided over the meeting and presented the various speakers. A paper written by Samuel Gompers, who was unable to be present, was read by Warren S. Stone. Mr. Gompers declared that the health insurance movement comes from those who want to do something for labor, whereas labor wants to get things done for itself. He denounced the compulsory features of the bill. Mr. Stone then made an address "on his own" in which he asked a series of questions regarding the efficacy of health insurance and answered them to his own satisfaction. All the answers were unfavorable to the plan.

Then came A. Parker Nevin, of the National Association of Manufacturers, whom Mr. Sheppard, of the Conductors Union, said he was "very glad to introduce." Mr. Nevin was shocked at the idea that anyone should propose insurance for those receiving wages of less than \$1,200 a year. "It's creating classes in America," he asserted. "Don't you see that this will create classes?" Apparently it didn't occur to anyone that it is the payment of the wage—not calling attention to it that creates the class. Anyway, nobody mentioned it.

Peter Brady, secretary of the Allied Printing Trades Council, saw the matter eye to eye with Mr. Nevin. "This proposition is nothing but class legislation," he declared, and the thought was abhorrent to him. Mr. Brady saw such danger in compulsory health insurance that he proposed then and there the formation of an alliance between the unions and the employers to fight their common foe—the "social workers."

Then came John Franklin Crowell, of the New York Chamber of Commerce, which has brought out a plan to prevent strikes by requiring employes to sign individual agreements, thus destroying the unions. After him came Magnus W. Alexander, against whose organization Samuel Gompers hurled a defiance and a warning at the recent convention of the American Federation of Labor, and then came Hugh Frayne, Mr. Gompers' representative in New

York. All feared the creation of classes and were opposed to "compulsion."

Mr. Frayne said he had positive information that the very people who are active in health insurance propaganda have applications now on file for the positions that such legislation will create. He did not say who these persons are or where their applications are filed. He charged also that there will be a conspiracy to prevent labor men from getting the jobs by requiring civil service examinations and fixing high standards.

An interesting witness was Frederick L. Hoffman, who is statistician for the Prudential Insurance Company but who was listed in the program as "Former President American Statistical Association." Mr. Hoffman was a member of the Social Insurance Committee of the American Association for Labor Legislation from its organization three years ago until last December, when he resigned. He told the National Civic Federation audience that he had been compelled to take that action by the "lies" that have been "persistently disseminated" by the Association for Labor Legislation. Then he made a bitter attack upon the bill which the association put out more than a year before Mr. Hoffman found it necessary to withdraw from the committee. Like the others, Mr. Hoffman was opposed to "compulsion," a thing which, in common with Attorney Nevin and the labor men, he regarded as incompatible with democracy.

Toward the end of the meeting, which was quite lengthy, someone in the audience arose and said: "Mr. Chairman, is this meeting going to adjourn after hearing from only one side?" The chairman replied that it would be necessary to adhere strictly to the printed program. The meeting closed therefore without an opportunity to speak being given to anyone who favored the principle of compulsory health insurance.

An effort was made to learn when the convention will be called to perfect the new protective organization of masters and men proposed by Mr. Brady. Nothing could be learned of a definite nature, but it is suspected that Mr. Brady is to be president, Mr. Nevin vice-president, Mr. Alexander secretary and James A. Emery walking delegate.

OSCAR STRAUS' PLAN TO PREVENT STRIKES

WHILE a bill to prevent strikes on railways is pending in Washington, public officials in New York city are concerning themselves with a plan to prevent strikes on local street car systems. The Public Service Commission of the First District,—New York city—was necessarily involved in the street car strike last fall, and like the Washington authorities, it set out to

find a way to prevent interruption of traffic.

Oscar S. Straus, chairman of the commission, has accordingly made public a tentative draft of a bill to provide machinery for the adjustment of disputes and to prevent strikes on street railways, and has invited the public to make constructive suggestions. Public hearings are soon to be held.

The bill provides for the creation of a wage board or boards, to assist in fixing the terms of employment. It provides that where direct negotiation between employer and employes has failed to effect a settlement the matter shall be referred to the wage board, to consist of an equal number of representatives of employer and employes. Its members are to be nominated by the respective interests they represent and require confirmation by the Public Service Commission.

The wage board must report its findings to the commission, which will then "make a determination that shall be binding on all parties concerned." If the wage board fails to agree, the commission "shall make its determination upon its own findings." The bill provides that "pending negotiation, investigation and determination" there shall be neither strike nor lockout, and "no action shall be taken in group or concert or by agreement tending to interrupt the service."

While this is the bare outline of the machinery for determining the conditions of employment the bill has other provisions which are a vital part of the whole scheme. The first section requires street railroads to pay such wages and salaries and to maintain such working conditions as are "fair and reasonable." The determination of what is fair and reasonable devolves upon the machinery described above. The second requires the employment of an adequate number of employes and the establishment of pensions and benefit funds.

Any ten or more employes are permitted to join a union and to be affiliated with an international organization. They are then to have the right to representation in negotiation with employers and in hearings before the commission if they will file with the commission certain information and sign an agreement to abide by its rules and orders.

Grievances are to be adjusted by appeal first to the wage board and then to the commission. No employe is to be hired for an indefinite period or "at will," but contracts must fix a definite period of service. If no other period is named one year will be assumed.

At a meeting at the Free Synagogue last Sunday the plan was criticized and opposed by John Mitchell, former president of the United Mine Workers of America.

DAILY BREAD AS A POET'S THEME

"ONE day I sat down to write a lament for Helen," said Wilfred Wilson Gibson, the English poet, to a representative of the SURVEY, "and the next day I found myself writing tragedies about the struggle for daily bread."

This whim of chance which changed Mr. Gibson from a writer for academicians to a poet beloved by SURVEY readers, because of his understanding of simple, homely, coarse, lovable people, is not to be explained by Mr. Gibson himself. The change came subconsciously, in a wave that seemed to strike John Masefield, Robert Frost, and Edgar Lee Masters at the same time. Possibly it was a desire to broaden the subject matter of poetry, to get away from the old classical school; possibly it was a feeling that the miner and the light-house keeper were too far from the general understanding of men.

Mr. Gibson lived in the slums of London, and his friends were among the people there. He does not believe, as Mr. Masefield believes, that in order to write about the sailor or the laborer, you must have done the work yourself. Friendship and sympathy are to him enough.

He confesses with a smile that he was young when he wrote "Daily Bread." That is the reason he was so moved by tragedy in the lives of the poor. "But in my last book, 'Livelihood,' I meant to show the lighter side of their daily living," Mr. Gibson said. "Then the war came with such suddenness that few of the poems which I had planned were written."

Both Mr. Masefield, who previously visited America {see the SURVEY for April 1, 1916}, and Mr. Gibson seem dazed by the war. Both men are patriots. Mr. Masefield, it is reported, though rejected three times as physically unfit, has now enlisted in the artillery, and Mr. Gibson would enlist if he were found fit for service.

In Mr. Gibson's war poems something of the old seriousness is gone, the treatment seems a little more heartless, pathetic rather than tragic, and in a lighter vein than his former poems of the work-a-day world. To him, it is the only way to approach the war. Talks with wounded soldiers from whom came his ideas for the battle poems, gave him the feeling that the excitement in trench life makes many men assume this attitude of mind.

Though love of the so-called common people is the inspiration of his poetry, Mr. Gibson denies that he views them as a class or that he is a propagandist. He was a member at one time of the Independent Labor Party, but his interests are obviously not in politics, but in the writing of poetry. That is the way he earns his daily bread.

Book Reviews

PSYCHOLOGY OF THE UNCONSCIOUS

By C. G. Jung, M.D. Moffat, Yard & Co.
566 pp. Price \$4; by mail of the SURVEY
\$4.25.

The mental reasons for the amazing popular vogue of psychoanalysis are not the least interesting phase of this boundlessly interesting subject. The appeal of Sigmund Freud's doctrine to sexual curiosity is itself a respectable reason enough, from the psychoanalytic point of view. No doubt Freud's extension of sexual nomenclature to cover nearly every mental fact does have the effect of bringing the Freudian doctrine closer home to average people. The identical circumstance has called forth an emotional resistance to psychoanalysis which for intensity of expression and the intellectual respectability of the opponents has only two modern parallels. The first of these parallels is the announcement by Copernicus and Galileo as to the position of the earth as a round body in space; the second is the Darwinian announcement as to the origin of man from animals. The merits of his theory aside, Freud is in good company.

But a review of Carl Jung's two books, recently published in English, gives occasion for pointing out another reason for the popular vogue of psychoanalysis and for the opposition to it among those in lofty places. For psychology is in Freud's hands implicitly, in Jung's hands explicitly, an actual study and manipulation of soul as soul. The appeal is from mental cause to mental effect, which in turn is cause, and not merely an appeal from bodily cause to mental epiphenomenon.

But the facts are more radical still. Psychoanalysis treats men as self-shaping and ethical beings. Behold, personality is again enthroned! But this personality is not just the metaphysical self of the scholastics or the narrow and rather priggish conscious self of introspective psychology described in the textbooks before William James. It is a personal self which the common man encounters and knows as his own; a self of passions and hopes and shames, an empirical self study.

Even this is not the end. There is no life so lowly that it does not dream; and Freud has shown that dreams are the master-key of the soul. Jung goes far-

ther. Dreams are the race-soul, brooding in the personal brain. Dreams are the master-key of religious and literary history, not only the master-key of the present-day personal soul. Dreams are prophetic—they are the seed-bed of future values, the guide-posts toward evolution, personal and racial, which is making toward morrows not undreamed by the deeper soul, but unguessed by the conventional conscious mind.

After all, psychology ought to be everybody's subject. Here is a psychology at once rich with the sap of common sense and of spontaneous experience, and romantic to a degree. It is a sizable, personal psychology in which, to use William James's words, thoughts are things. Yet it has Dante-esque gulfs in it and has acquired, in Carl Jung's hands, the altitudes of vast cloud-ranges, if not of starry heights. From slips of the tongue, from day-dreams and night-dreams, from obsessive fears and poetic moods, experiences of children and men and women the world over, this psychology leads immediately into depths unplumbed as yet. But they are rich with creations and understandings already achieved. And they are not "the abysmal depths of personality" alone, but racial depths, the beginnings of peoples, the beginnings of the psychic life of man.

This psychology is animistic, spiritualistic, ethical; it deals with personal causes and with solemn or bizarre psychic factors which, without any clearly explicable basis in body or brain, have swayed conscious intellect and deflected the course of material events over a thousand generations of time. What wonder such a psychology should in Prof. Jacques Loeb excite the kind of scientific rage that Huxley felt over spirit-messages and table-rapping, and should, by the leading French psycho-neurologist, be called a *mauvaise plaisanterie*, an ugly jest? And what wonder that plain men, now as ever animistic and naively empirical in their ways of thinking about themselves, and craving mystery and vastness as they do, should find in this new psychology a new spice of life and a new vista into existence?

This brief review is no discussion of psychoanalysis. It aims merely to call attention to the acute and world-wide interest which the subject is evoking among scientific and unscientific men alike, and to characterize in a few words the books of Jung. Jung is in nearly every technical essential a disciple of Freud; but this technical apparatus has been used by

him with creative results in new directions, pointing toward ultimate theories of mind which in their practical bearing may prove to be utterly divergent from the theories of Freud.

The Psychology of the Unconscious has for its sub-title A Study of the Transformations and Symbolisms of the Libido: a Contribution to the History of the Evolution of Thought. The translation by Beatrice M. Hinkle is admirable in every respect, and Dr. Hinkle has contributed an introduction which by itself is a good introduction to this whole romantic and practical subject.

JOHN COLLIER.

THE INSTITUTIONAL CARE OF THE INSANE IN THE UNITED STATES AND CANADA, VOLUME III
By Henry M. Hurd. Johns Hopkins Press.
880 pp. Price \$2.50; by mail of the SURVEY, \$2.80.

This third volume of the history of institutions for the insane in the United States and Canada maintains the high standard of the preceding volumes. It gives the history of over a hundred and fifty institutions in twenty-six states, in alphabetical order from Montana to Wyoming. There is also a section on the care of the insane of Alaska, Hawaii, the Philippines and Porto Rico.

These chapters contain accounts of some of the oldest and historically most important asylums in the United States. Among those which are discussed with most detail are the Bloomingdale Hospital in New York; the Butler Hospital in Providence, R. I.; the Manhattan State Hospital of New York; the New Jersey State Hospital of Trenton; the Pennsylvania State Hospital of Philadelphia, and those hospitals in Wisconsin where new systems of arrangement were so well tried out. The magnetic figure of Dorothea Dix appears in the account of several of the chapters on these earlier hospitals. Especially encouraging is the exposure of evil conditions that formerly existed at the Manhattan State Hospital, and the present development of this same institution. The chapter on the Central State Hospital in Virginia, for the colored insane, is of special interest, and scattered all through these volumes is a vast quantity of matter dealing with the insanity of the Negro, which ought to be collected in a more available form for the students of the Negro.

As this is the final volume of the series, a word of general criticism seems called for. I might take as my text the private who, when a charge was ordered, said to his sergeant, "We will soon be miking 'istory," and was answered, "We

ayn't to mike 'istory; we're 'ere to mike geography."

I believe that the sergeant and the private would have been a little more efficient if they had widened their horizon. Certainly this series of volumes should have paid the tribute to geography of at least one map showing the location of the various institutions. It is also unfortunate that the chapters on the early care of the insane are so scanty. In the chapter on the care of the insane in New Hampshire, for example, a little more research might have disclosed this fact concerning the discoverer of the White Mountains that on October 1, 1651, the General Court required Strawberry Bank to contribute toward the "imprisonment of Darbey Field & keeping him who was distracts of his wits," as well as other cases of insanity in the same district prior to 1675. Of course, it would be difficult to find room for a more detailed treatment, but the account of many private sanitariums with no really distinctive features of treatment might well have been omitted.

JOSEPH F. GOULD.

NEW IDEALS IN BUSINESS

By Ida M. Tarbell. The Macmillan Company. 232 pp. Price \$1.75; by mail of the SURVEY, \$1.89.

Those who had the privilege of hearing the late Frederick Taylor expound his system of scientific management were invariably impressed with the revolutionary and prophetic spirit in which he talked.

The zeal and fervor of the inventor not uncommonly leads him to see a changed world resulting from his invention, and Mr. Taylor saw, as a consequence of the application of science to management, employers and employes changed in their attitude toward each other, working in harmony and friendship, producing enough wealth for both and ceasing their age-long struggle over division of product.

Miss Tarbell's new book shows something of the same spirit, and goes a long way toward proving some of Mr. Taylor's contentions. She describes "our new workshops," in the building of which light, ventilation, cleanliness and comfort of the workers were the prime considerations. She shows us how the social life of operatives is stimulated and organized by the employer.

As if no subject were too sacred—or too dangerous—for the employer's new, prying spirit, we find him asking the question which in the ordinary fitness of things properly belong to the I. W. W. "Are our employes, individually or collectively, receiving all the results of their labor to which they may be prop-

erly entitled?" "A man's hire," no less than his hours, his work, his home and his health, are made the subject of scientific inquiry, and the day is coming when "tables will be worked out fixing the relative value of the service each renders to the world" and "unrequited toil" will be wiped out.

What shall we say of these new ideals in business, these new industrial leaders and the things they are doing? No careful observer of recent industrial progress can doubt the existence of a new spirit in industry. Miss Tarbell's picture may be a little roseate, but the essential truthfulness of her subject cannot be questioned.

Writing in the midst of a bitter telephone strike that was precipitated by arbitrary dismissal of operators actively engaged in forming a union, the reviewer is perhaps not in a position to judge the work of the new industrial management. But after all, isn't it in just such a human situation as this that the structure being erected must be tested? The plan may look well on paper, but if it cannot stand the strain of forces that twist and bend industrial systems to human ends, can we accept it? Miss Tarbell admits that "the questions that gather about unionism, its aims and pretensions [are] questions that now are pretty generally ignored"; but she "cannot but believe that . . . Unionism as one of the laborer's rights will be freely considered" in the future.

Perhaps so. But she gives us no proof of it; and although her references to this crucial question show little of the naïveté which characterized Frederick Taylor's consideration of the conflicts between labor and capital, she seems to fall into his error of assuming that these things will work themselves out once the employer treats his workers with kindness and his management increases the comforts and wages of the employes.

We may well question whether the new industrial leaders sense the democratic movement that leavens the working masses and erupts into the most bitter labor conflicts particularly in times of prosperity and among the more prosperous workers. Certainly nothing in Miss Tarbell's book shows that the managers have even the faintest inkling of the striving for control of industry that is back of labor's revolts.

Can a sound industrial policy be built on kindness and comfort and the consequent gratitude that is expected of the employe toward the employer? No better answer is needed than the violent revolts of the employes of the N. O. Nelson Co. and the National Cash Register Co., whose "experiments in justice" Miss Tarbell describes so eloquently. Never have we heard such bitter attacks on labor organizations as those made by the arch-radical among employ-

ers, N. O. Nelson, at the time of the strike in his establishment.

Do kindness, safe and comfortable work-places, shorter hours, and even higher wages not pay? Are loyalty and gratitude not human feelings to be counted upon? They certainly are. And here may be the danger in the new industrial management. Several instances may be found, in the book under review, of profit-sharing and other benefits granted to the skilled workers and salaried employes, but leaving the mass of unskilled laborers outside the favored circle. A bond unites the non-commissioned officers of industry to the employer and separates them from their less fortunate comrades, creating a class spirit which may be even more dangerous to industrial democracy than the domination of the captains of industry.

Are we justified in assuming, as the author does, that the movement must culminate in industrial peace, cooperation and justice? One notes an air of self-satisfaction in the employer telling of his accomplishments, as recounted by Miss Tarbell. Yet unionism may be ignored and with it all the other democratic movements of the day. May not this attitude of the employer be more ominous to industrial peace and well-being than the opposition of organized labor to scientific management, or even the employer's former attitude of neglect?

The "new ideals in business" are based on the employers' ability to make them pay. But suppose the worker doesn't stop at an eight-hour day, which seems to have increased output in the industries studied by Miss Tarbell? Suppose the reduced hours bring no such result in some occupations? Is the worker to rest content because business can not make it pay? The mine workers are already discussing seven hours, and will they or any other workers be convinced that they must not ask for seven hours or even less simply because it isn't profitable to the employer?

Already there is a demand for minimum wage laws based on the worker's needs and regardless of the balance on the employer's books. The best paid of the railroad employes force an increase that may be at the expense both of the capital invested and the unskilled labor employed in the industry, and as a result precipitate a crisis that threatens the entire economic life of the country. How is the new industrial leader and the new management prepared to meet the insistent encroachment of a disciplined and awakened labor on the profits of capital? This is the question that the new ideals in business must reckon with. And it is just this question that is ignored.

Far from allaying industrial unrest, or solving our labor problems, therefore, the new ideals in business may be ex-

pected to intensify labor conflicts because they create better fed, better clothed, better housed, stronger, healthier and more intelligent workers—better matched, consequently, to carry on the struggle for more of the employer's profits and for a controlling voice in determining the rules and policies of the work-places in which they spend so much of their lives.

WILLIAM M. LEISERSON.

A POLITICAL AND SOCIAL HISTORY OF MODERN EUROPE (Vol. I, 1500-1815)

By Carlton J. H. Hayes. The Macmillan Company. 597 pp. Price \$2; by mail of the SURVEY \$2.22.

A POLITICAL AND SOCIAL HISTORY OF MODERN EUROPE (Vol. II, 1815-1915)

By Carlton J. H. Hayes. The Macmillan Company. 767 pp. Price \$2.25; by mail of the SURVEY \$2.49.

Though intended primarily as a college manual, Professor Hayes' history fills a place hitherto left vacant in many a small library. Within the shortest compass in which such information can be given, the book enables the

general reader to obtain rapidly, yet in an easily readable form, the historical origins of vastly important present-day conditions and movements. We were a little disappointed in turning to the index for references to historical facts which would indicate how the present nationalistic movements among some of the dependent European peoples had originated and to what extent their dependency brought oppression.

Concerning the Czechs in Bohemia we found material which, though somewhat incomplete, makes it possible to form an opinion. A mention of the Slovaks we failed to find altogether. Of the Lithuanians we learned little more than that even at the time of the annexation of their country by the Empress Catherine in the eighteenth century, they were only a minority of the population of the grand-duchy of Lithuania. The recent history of Finland and the tribulations of the Jews in Russia, Poland and the Balkans are given in more detail.

The difficult task, however, of bringing this history to the outbreak of the war of the nations and of interpreting the social and imperial movements of recent years within each of the great European countries in a spirit of detached scientific inquiry has been fulfilled by this author in a wholly admirable manner and makes his work of the greatest possible value to the student of current events.

The two volumes are illustrated by thirty-eight telling maps. Bibliographies and a chronological table of rulers of the chief European states from the begin-

ning of the sixteenth century are appended. B. LASKER.

AGRICULTURAL ECONOMICS

By Edwin G. Nourse. University of Chicago Press. 896 pp. Price \$2.75; by mail of the SURVEY, \$3.00.

One is at once impressed by the great variety of selections brought together in this book, and the wide distribution of the sources from which they are gleaned. The entire field of "literature" from Genesis to the Yearbook of the United States Brewers' Association, from the works of Marcus Terentius Varro to a modern advertising poster, has been ransacked for material. Some of the selections are academic disquisitions; some are short, snappy paragraphs or pungent sentences. The result is an interesting and instructive, though somewhat kaleidoscopic, volume.

Recent publications of collected materials, or selected readings, handbooks, etc., show two distinct methods of selection. One method collects a relatively small number of rather formidable essays dealing systematically with various aspects of the subject. The other method, of which the volume before us is an example, collects a large number of brief selections not only from widely separated sources, but also of variegated, piebald and ringstreaked quality. The reader must take his choice. There is probably room for books of both kinds.

The needs of the systematic student are not necessarily the same as those of the casual reader.

The editor has shown an amazing acquaintance with what has been written, especially in out-of-the-way places, on the general subject of agricultural economics. Moreover, he has arranged his material under a well-thought-out scheme of classification, and he has supplied connective tissue to bind the various selections together. His own writing constitutes an appreciable and not the least valuable part of the volume.

THE UNITY OF THE AMERICAS. By Robert E. Speer. Missionary Education Movement. 115 pp. Price \$25; by mail of the SURVEY, \$30.

Communications

ILLINOIS VICE LAW

Duncan C. Milner, of Chicago, sends a communication referring to the note in the SURVEY for November 18, 1916, on Illinois Abatement Law Held Constitutional, which he concludes as follows:

"The Committee of Fifteen are entitled to great credit for the work that they have done, but when you in your article gave them entire credit for the passage of the bill, and did not give credit to the Chicago Law and Order League for the injunction in 1912, you were not writing a true history. As the years go by experience will show what a valuable law the injunction and abatement law is. The SURVEY, we believe, will be very glad to make corrections in these two matters regarding the great victory under the common law in 1912, which resulted in the smashing of the

segregated district of Chicago, and the great victory of 1915 in obtaining the passage by the state of Illinois of the injunction and abatement law."

While the SURVEY cannot find space for the many details with which Dr. Milner substantiates these two statements of fact, it is glad to quote the credit amply given by the Committee of Fifteen through its superintendent, S. P. Thrasher, who in a letter to Arthur Burrage Farwell, president of the Chicago Law and Order League, wrote: "The directors authorize me to express their sincere appreciation of your effective work at the two preceding sessions of the legislature and of your educational campaign, which have made it possible to secure its passage. Our committee is pleased to have had a hand in the final round-up, but recognizes and appreciates

the efforts of all who have had a hand in this important piece of legislation, and to none is more credit due than to you self."

The SURVEY's reference dealt with testing the constitutionality of the law and its enforcement, with which the Committee of Fifteen has had most to do. We did not get into the history of the legislation and are glad to give credit for the enactment to the Chicago Law and Order League, the Hyde Park Protective Association and the Illinois Vigilance Association as well as the Committee of Fifteen.

DRY SILHOUETTES

TO THE EDITOR: It will interest readers of the SURVEY to know that the remarkable silhouettes which accompany Mrs. Tilton's article on the liquor problem in the SURVEY for January 13 were cut by Judge Wheeler with a pair of scissors without any preliminary drawing, and without use of a pen or pencil. It seems incredible, but it is true! I have seen him do some of them. The artist is Charles B. Wheeler, of Buffalo, a justice of the Supreme Court of New York state.

FREDERIC ALMY.

Buffalo.

LEGISLATIVE BUREAUS

TO THE EDITOR: In comparing the list printed in the SURVEY for January 6, in my article on Legislative Drafting and Reference Bureaus, with our office list of legislative reference bureaus, I find that I omitted the following:

Arizona, Colorado, Georgia, Illinois, Kentucky, Maine, Maryland, Minnesota, Mississippi, Missouri, Montana, North Carolina, Oregon, Washington, and West Virginia.

J. P. CHAMBERLAIN.

[Legislative Drafting Research Fund, Columbia University]
New York.

A BASIS FOR PEACE

TO THE EDITOR: As a basis for a peace proposal, let us assume that nations are but pawns in the hands of fate, forced to act as higher forces compel them to act. Let us assume that this war has been caused by commercial practices which are known and described as the economic cause of war. These commercial practices originate with the human will and are in control of the human will. They can be continued or discontinued, as man wills it. If he wills to continue them, he must accept the inevitable consequence, which is militarism and war. If he wills to discontinue them, there will be peace on earth, good will to men.

It is inconsistent to cling to commercial practices which make militarism a necessity and result in war, and decry militarism and plead for peace. It is

consistent to desire war to continue until man is willing to remove the causes. War is an extreme method to attract attention to existing abuses which man can but does not remedy.

A common basis for peace negotiations which all nations can accept without loss of national honor and sovereignty is needed. Such a basis is at hand in an agreement by all nations, belligerent and neutral, to discontinue and prevent the commercial practices which provoke war.

The acceptance of this basis would lead to an early happy conclusion to the negotiations, for it will open the seas to all nations, destroy militarism, and leave no good reason why sovereignty should not be restored to conquered nations—the main objects desired by the belligerents.

MOSES FRANKLIN.

Detroit.

PRISON OR SURGERY

TO THE EDITOR: Alice Henry has sent me your article in the SURVEY of October 28, entitled Sentenced to Prison or Sterilization. This article will, I am afraid, mislead some people. Many do not know what this operation is, and how performed. They think that it would deter a man from further attacks upon little girls. Now, as a matter of fact, vasectomy, the operation done in this case, does not destroy sexual power or the ability or the desire for sex congress; it only takes away the power of paternity. Even castration at that late date does not especially reduce carnal desire.

Is it fair to turn such a criminal loose, and merely assure his little victims that they are not going to become mothers, no matter how grossly abused. I wonder if the SURVEY really understands the attitude that it seems to have taken.

ANNA E. BLOUNT.
[Chairman Eugenic Education Society]
Chicago.

PETTY FINES

TO THE EDITOR: In reading through your most interesting Goals in Social Work for 1917 [the SURVEY for December 30, 1916] I was particularly struck with the forceful statements of needs in the field of corrections by Joseph P. Byers. Yet Mr. Byers has omitted two of the most important needs of all, the first of which has been too much neglected by all associations that have urged reform in the correctional field. The big fact that has been overlooked is that 70 per cent of all offenders coming before our lower courts are disposed of by petty fines.

The present aim of correctional work is to protect society by putting offenders on their feet as lawabiding citizens. Surely the time to begin this process is not when an offender has committed such

a serious offense as to require a sentence, but when first he gets into the clutches of the law. Today almost universally over the country we turn two-thirds or three-fourths of our police-court offenders loose with petty fines, usually not exceeding \$10.

A few of the offenses so disposed of are purely technical violations of the law where a fine will suffice to secure future compliance, but the great majority are of such a nature as to indicate an undermining of moral stamina that is likely, unless effective counter-forces are put into action, to get the offender into court again and again on more serious charges.

Right here at the entrance to a criminal career is the time to set in motion reformatory influences. How great, then, is the folly of our petty fining system that sets no such forces into action, but sends the offender back to the environment where he got into trouble with no new influence in his life!

We should develop effective probation work. The man just entering upon a life of crime should be placed under the supervision of a probation officer, who will study his habits and environment, find him work if necessary, get him away from bad associates and encourage him in every possible way to law obedience. How much more effective this than the petty fining system! Surely the appointment of an adequate number of probation officers for all minor courts should be set up as a milestone to be passed in 1917.

Finally, when offenders have had to be sent to a correctional institution, and after an indeterminate sentence are released for a trial at liberty, surely there should be a capable parole officer to receive them, supervise them and help them get re-established.

I am certain that as old and able a correctional worker as Mr. Byers must have omitted these important needs from his Goals for 1917 through oversight, not through intention.

Let all social workers include these among their goals for 1917.

Z. L. POTTER.

[National Cash Register Co.]
Dayton, O.

[Mr. Byers wrote a goal on Crime and Prisons. Probation and suspended sentence were separately treated by Charles L. Chute of the National Probation Association. But neither covered specifically the system of petty fines in minor courts.—EDITOR.]

SAVE-A-LIFE LEAGUE

TO THE EDITOR: The readers of the SURVEY will be interested in a brief account of the recent organization of The Save-a-Life League, whose aim and object is to save those who, if otherwise unaided, would be unable to save themselves from self-destruction. The work of the league has been carried on for some

years, in a quiet way, and many useful lives have been saved to the community. Suicide is much more common in this country than is generally known. It is conservatively estimated that from sixteen to twenty thousand lives are annually sacrificed, largely because of the absence of well-considered methods of timely aid to those in serious mental and moral distress. In the city of Greater New York during 1915 there were nearly a thousand suicides and possibly an equal number of, fortunately, unsuccessful attempts at self-destruction.

The effort to reach those contemplating suicide, or of ministering to the spiritual and other needs of unsuccessful suicides, originated with the Rev. H. M. Warren, who is the president of the league, of which R. W. Poor, president of the Garfield National Bank, New York city, is the treasurer. Dr. Warren, at his home, 108 West 77 street, receives all callers and gives his personal attention to numerous letters of inquiry from those most urgently in need of qualified advice.

Applicants in need of medical assistance are referred to Dr. Gregory. To anyone familiar with the lamentable facts of self-destruction, there can be no question of doubt but that many a valuable life may be saved by timely assistance and advice. Many of those who commit suicide are persons of unsound mind, or the feebly inhibited, who by proper direction may be reclaimed for useful social and economic purposes.

Dr. Warren personally visits many of those who after an attempt at suicide are brought to the public hospitals and by first ministering to their spiritual and other immediate needs, leads them gradually to a point of successful rehabilitation. Families of suicides are visited and occasionally dependent survivors in such families are taken care of, particularly when they are small children, who would otherwise become a public charge. Occasionally lodging, food and clothing are furnished to despondent applicants on the verge of suicide, but to whom a knowledge of the league proves indeed a means of saving life.

There are no salaried workers, but the expenses of the league are not inconsiderable. All contributions are expended under the supervision of a carefully selected board of directors. More adequate financial support would very materially increase the public usefulness of the league. All inquiries with reference thereto should be addressed to the Rev. H. M. Warren, 108 West 77 street, New York city.

FREDERICK L. HOFFMAN.

[Statistician of the Prudential Life Insurance Company] Newark, N. J.

"SELF-CONTROL"

To the Editor: Mrs. W. H. Hopkins' letter on "Self-Control" as opposed

to "birth control" has my attention.

In comment on the same, may I have a few lines of your valued space to ask Mrs. Hopkins if she knows or can recommend any honest-to-goodness, sure-fire recipe for "self-control," the same to be accompanied by suitable testimonials of efficiency from genuine, red-blooded human beings of the present stage of social development who have tried the recipe and found it all it was advertised?

JAMES WALDO FAWCETT
New York city.

AT LEAST DAMP

TO THE EDITOR: In your issue of January 6 you publish a short article entitled *Drying Up the Dominion of Canada*, in which you make the assertion that "the Dominion of Canada is today practically 'dry territory' from coast to coast." You enforce this statement with statements of the action taken by the several provinces which have adopted prohibition.

While there are few statements in this article that are open to direct question, the effect of it is so misleading that I feel certain you will permit me to offer a few suggestions. In the first place, the province of Quebec, the second largest in the Dominion and containing about a third of the population of the whole country, has not adopted prohibition. Though four-fifths of her area may, as you say, be under local option, the large cities have the license system, and the fact that the province, as you indicate, is discussing the establishment of a café on the German or continental plan in lieu of the present form of drinking-place, would seem to show that radical prohibition had not made much headway therein.

Again, the Canadian brand of prohibition is distinctly different from that which obtains in the United States. Here in this country the government internal revenue standard which prescribes a tax on all beverages containing more than one-half of 1 per cent of alcohol by volume, and which, by the way, was settled upon for purely fiscal reasons, has been adopted as the basis of prohibition legislation, which defines as intoxicating liquor anything having a greater percentage of alcohol. Indeed, some states have gone so far as to prohibit even malt beverages which contain no alcohol whatsoever. In Canada most of the so-called prohibition provinces have adopted a standard of 2½ per cent proof spirits, which is equivalent to about 1.43 per cent alcohol by volume. Beverages containing not more than this proportion of alcohol can be manufactured and sold anywhere without even the payment of special or local license fees.

The manufacture of all kinds of liquor from the lightest to the strongest is not interfered with, but it cannot be sold in the province. There is no ban

laid upon importation, however, and thus many concerns in the province of Ontario, for instance, are manufacturing their products and shipping them to some place in Quebec, from whence they are re-shipped to the individual consumer.

Further, special exemptions are granted by most of the provinces. Ontario, for instance, permits the wine growers to do business as usual, and to sell in quantities of not less than five gallons at a time, though their product has a very high alcoholic content, ranging from 20 to perhaps 25 per cent. It will be observed that the Canadian prohibitory system would permit the manufacture and sale of a light beer without restriction, and in fact this is being done in many sections. A movement to raise the standard so that a beer containing something like 3 per cent of alcohol, a proportion which would enable it to be shipped and kept with safety, is said to have met with considerable favor in some provinces.

Notices direct persons seeking employment to apply to the station agent, who will direct applicants to the nearest foreman who may have vacancies. If there are no vacancies, the application will be forwarded to the clearing-house.

ACCORDING to the *Social Servant*, the organ of the Associated Charities of Columbus, Ohio, intemperance was one of the operating factors in bringing about need for charitable aid in 202 of the 947 white families and in 40 of the 202 colored families, or approximately 20 per cent of the families dealt with by the Associated Charities in the year 1915-16. While about half of Columbus territory has been made dry by petition, there are still almost 400 saloons in the city. There are about 6,200 in Ohio. In other words, almost one in every fifteen saloons in the state are in Columbus, a city with a population of 211,021, according to recent United States census estimates.

THE abandonment of county jails as places of detention for sentenced prisoners is strongly urged in a forthcoming bulletin of the Philadelphia Yearly Meeting of Friends, whose sub-committee on prison reform has made a study of Pennsylvania jails. The county is declared to be too small a unit for prison administration, and idleness among prisoners is inevitable when each county has a separate institution containing too few prisoners to make an effective industrial system practicable. Pennsylvania is urged to acquire a state industrial farm for misdemeanants, like those in Indiana, New York and elsewhere.

VOLUME I, No. 1 of the *Catholic Charities Review* was published last week by the National Conference of Catholic Charities (\$1 a year). The offices are at the Catholic University of America, Washington, D. C., and the Rev. John A. Ryan, of the university faculty, is editor. The *St. Vincent de Paul Quarterly* has been given up to clear the field for the new monthly, which "will always keep in mind that the church is the oldest charity organization in the world. . . . At the same time full recognition will be given to the fact that new conditions bring new problems." Among the articles is

a review of the New York charities controversy.

SIOUX CITY, Iowa, has a new Organized Charities, formed by the Visiting Nurses' Association, Day Nursery Association, Anti-Tuberculosis Association, Safety League and Associated Charities with a budget of \$10,000 raised in advance. The new society was promoted by the Commercial Club, which secured expert advice and a survey of local needs from the Extension Division of the State University of Iowa. A similar study in Charles City has resulted in the employment of a "community social secretary," who has secured the cooperation of all the social agencies. And in Mason City, the city itself employs a "social welfare worker," who is under the direction of the chief of police.

A LIVELY contest for the control of St. Louis' leading business organization, the new Chamber of Commerce (until recently the Business Men's League) has just been finished with the election of J. Lionberger Davis as president. Mr. Davis' election was bitterly opposed by a large group of business men because of his long record of activity in civic and social movements. Although he is a lawyer, vice-president of a large trust company and president of a real estate corporation, his business record was overshadowed in the minds of many business men by his vigorous leadership in the campaign against commercialized vice, and his independent stand on matters relating to public utilities, political reform and labor issues. Mr. Davis' election insures a complete reorganization of the Chamber of Commerce along democratic lines.

WHILE people are beginning to recognize the duty and the pleasure of early Christmas shopping, they have not yet acquired the habit of early Christmas mailing. Although a vigorous crusade for the latter was waged, Postmaster-General Burleson reports that the bulk of approximately 125,000,000 Christmas parcels, weighing about two pounds apiece, was not mailed until the last five or six days before the holiday. As these figures take no account of the many millions of letters and post cards and of the record-breaking volume of second-class mail, they serve merely to indicate the gigantic nature of Uncle Sam's task this Christmas. Facts are in hand that warrant a prediction that this December's stamp sales, which reflect the volume of Christmas mail, will exceed last year's by nearly 15 per cent. However, in spite of the enormous traffic, weather conditions which seriously delayed rail transportation, and the tardiness of Christmas givers, the United States postal service delivered 99 per cent of the avalanche of all classes of mail on or before Christmas day.

We Believe—

- THAT home-making should be regarded as a profession.
THAT right living should be the fourth "R" in education.
THAT health is the business of the individual, illness of the physician.
THAT the spending of money is as important as the earning of the money.
THAT the upbringing of children demands more study than the raising of chickens.
THAT the home-maker should be as alert to make progress in her life work as the business or professional man.

—American School of Home Economics.

If you agree, send for the two-page illustrated handbook, "The Profession of Home-Making," giving details of home-study, domestic science courses, etc. It's FREE. Address postal or note.—A. S. H. E., 59 West 69th Street, Chicago, Ill.

Essential to Health and Comfort

Mattress Protectors are necessary for cleanliness of the Mattress.

No good housekeeper considers her bed rightly equipped without Mattress Protectors.

A sheet in itself cannot properly protect the Mattress.

During sleeping hours the body in complete repose throws off waste tissues and gases, much of which penetrate the sheet and are absorbed by the Mattress if not properly protected.

Our Quilted Mattress Protectors are made from pure white wadding incased in bleached white muslin easily washed whenever necessary.

Dry out light and fluffy as new.

They protect your Mattress from all impurities and lengthen its life.

A single trial will convince.

"None genuine without
Trade Mark"

Insist on seeing our trade mark and name—Excelsior Quilted Mattress Protector—on each Protector.

Excelsior Quilted Mattress Co.

SURVEY ASSOCIATES, INC., is an adventure in cooperative journalism, incorporated under the laws of the state of New York, November, 1912, as a membership organization without shares or stockholders. Membership is open to readers who become contributors of \$10 or more a year. It is this widespread, convinced backing and personal interest which has made THE SURVEY a living thing.

THE SURVEY is a weekly journal of constructive philanthropy, founded in the 90's by the Charity Organization Society of the City of New York. The first weekly issue of each month appears as an enlarged magazine number.

From the start, the magazine and its related activities have been broadly conceived as an educational enterprise, to be employed and developed beyond the limits of advertising and commercial receipts.

PRICE

Single copies of this issue, 25 cents. Cooperating subscriptions \$10 a year. Regular subscriptions weekly edition \$3 a year. Foreign postage \$1.50 extra. Canadian 75 cents. Regular subscription once-a-month edition \$2 a year. Foreign postage 60 cents extra. Canadian 35 cents. Changes of address should be mailed to us ten days in advance. In accordance with a growing practice, when payment is by check a receipt will be sent only upon request. Copyright, 1917, by SURVEY ASSOCIATES, INC. Entered as second-class matter March 25, 1909, at the post office at New York, N. Y., under the act of March 3, 1879.

PROOF of the pudding is in the eating. The value of the Children's Bureau is proved by the record and rewarded by an increase in appropriation. Page 528.

ARMIES of Russians enter Lithuania from the west, the Prussians from the east. The men of that little country have been deported or conscripted and the old men, women and children, in panic since the outbreak of the war, are suffering from the ruthlessness of military conquerors, from disease, starvation and separation from their families. Page 531.

ABRAHAM LINCOLN was born in Springfield, Ill., and yet, when he became great he said: "All that I am or hope to be, I owe to my angel mother." He owed nothing to Springfield, it seems. Probably the town was worse then than it is now. But even today the Russell Sage Foundation, after two years' investigation, finds the environment ordinary, neither very good nor yet very bad, certainly not so stimulating as to produce a Lincoln. Shelby M. Harrison, director of the Springfield survey, was a member of the staff of the Pittsburgh Survey, and has been a member of the editorial staff of the SURVEY. Page 503.

OLD and austere men, ministers and members of Parliament from England have been heard in this country speaking against the war. But not until now has a word of protest come from the young boys who are doing the fighting for the older men. Page 514.

DO GERMS lurk in a lean pay envelope? An ex-senator from Oregon told the Supreme Court, the other day, that wages may make people wealthy, but not healthy or wise. A lawyer from Massachusetts refuted with a grist of arguments, showing how low wages prey upon health, efficiency, morality, public welfare. The learned judges listened patiently. And out in Oregon, Elmira Simpson is waiting to hear whether she will get \$8.64 a week for her job in the paper-box factory. Page 517.

A LONG, hard road lies before the mother whose child has been stricken with infantile paralysis. The wife of a Princeton professor, Alice B. Munro, has sacrificed much that her own boy might become normal and sturdy. Page 515.

ACTUAL study of brothel inmates shows an unexpectedly small amount of tuberculosis. Page 516.

BECAUSE a member of Parliament didn't know that glycerine was made out of lard, Herbert Brantson Gray, an English educator of repute, has come to America to study our educational system. Page 527.

MAKING powder out of the education budget has been systematically carried on in England during two years of war. Winthrop D. Lane, of the SURVEY staff, who made a study of England's educational economy, reports that staffs have been reduced, buildings transformed into camps and hospitals, special classes dispensed with and compulsory-attendance laws relaxed. In Lincoln's Home Town

How the Springfield Survey Went About Getting Results

By Shelby M. Harrison

DIRECTOR OF DEPARTMENT OF SURVEYS AND EXHIBITS, RUSSELL SAGE FOUNDATION

DOES the social survey really lead to constructive action? This is a fair question.

It was put something over two years ago by a knot of Springfield people who took to heart the human prosperity of that capital city, set in the Illinois prairies, where Abraham Lincoln lived and voted; practiced law and legislated; above all, made common cause with his neighbors, and discussed with them the how and wherefore of town affairs, state affairs, national affairs, until the most deep-seated social problem of his time became the subject of his scrutiny and his resolve.

These Illinois men and women, his fellow townsmen, are perhaps better placed today to give answer to their own question than anyone else in the country. They have helped answer it, for in the intervening two years Springfield has had its survey—in some respects the most comprehensive yet attempted—building on the experience of Pittsburgh, Birmingham, Syracuse, Newburgh and Topeka. A series of nine reports has been issued; an exhibit has been held; public and private agencies have set changes afoot.

Moreover, the Springfield survey can be discussed with some freedom, even by an outsider who has been identified with it from its inception, because it was no one organization's job. It has been a cooperative undertaking by many organizations and individuals. It began with the group of Springfield citizens referred to, who had been giving some thought to social conditions in their city, had become dissatisfied with them, and had decided that the time had arrived to get out of their maze of conflicting opinions and beliefs and, if possible, onto a basis of certitude in working for community advance.

There were some citizens, for example, who believed Springfield's public schools the equal of any in the state; others believed they needed to be readjusted to the changed conditions under which the oncoming generation must live and work. Some boasted of the city as the "healthiest place in Illinois"; others believed the number of deaths from preventable causes was too high, and public health appropriations too meager.

Some believed that local strikes were due to union agitators who wanted to kick up a fuss; others, that they indicated something wrong with wages, employment opportunities, and general working conditions. There were those who believed law-breakers got what they deserved, but others were of opinion that ill-treatment of offenders provoked crime. And so on: the opinions and beliefs were as conflicting and various as they are in every live, growing American city.

Fortunately, the few interested citizens thought it important to give them the test of fact. They had been convinced of the value of applying scientific method to social problems by the usefulness of a survey of certain phases of housing and sanitary conditions made several years before by Dr. George Thomas Palmer in connection with his duties as health officer of the city. The activities of a survey committee of the Illinois State Conference of Charities and Correction also furthered this feeling and gave this Springfield group a sense that more than the improvement of local conditions might hang on their enterprise.

Springfield a Representative City

FOR SPRINGFIELD has other characteristics besides its social problems which make it typical of scores, if not hundreds, of American communities. Its economic life is of quadrivial structure, to go far afield for a word. It is built where four main currents quick with energy and possibilities for community building come together—manufacturing, mining, agriculture and commerce. Indeed, Springfield might count on a fifth main current—the business of public service. The offices of state, county and city governments bring in a thousand and more workers.

Springfield's manufacturers are about the average for places of

DESIGN AND CONSTRUCTION

COPIES of the nine reports, the first edition bound in paper, may be obtained from the Russell Sage Foundation, 130 East 22 street, New York city, and the Springfield Survey Committee, Springfield, Ill. Price, 25 cents per copy, except for the Housing and Mental Hygiene sections, which are 15 cents per copy. Had time and funds allowed, other subjects would have been added, such as city planning; home conditions, as such; taxation, in greater detail; commercialized vice; and the religious forces of the city. All of these, however, were dealt with in some degree as parts of the nine main divisions. The nine reports and a general summary by the director are to be published in three illustrated volumes, cloth, by the Russell Sage Foundation.

her size. They are diverse, ranging from agricultural implements to watches, building brick to shoes, gristmill products to asphalt paving, and so through a long list. A bed of soft coal, averaging over five feet in thickness, underlies the city and surrounding territory and furnishes power for its factories. Several mine tipples stand near, and 2,500 Springfield working-men are employed in the coal pits. The surface of Sangamon and adjacent counties is covered by a stratum of the same fertile soil found in other parts of the corn belt. This soil extends over low hills and is well adapted to farming. And with no large centers nearer than thirty miles, Springfield is the collecting and shipping market for the farm products from a large area, as well as for its own manufactures and fuel. It is also an important distributing point to the surrounding district. This four-ply structure, not to include the fifth, makes for representativeness.

Springfield, moreover, is a city not of many extremes but of many averages. Located about midway between the northern and southern states and near the center of population of the country, it has shared in the cross currents of political, social and economic forces of the east and the west, the north and the south. It is not congested. Its increase in population has been at a comparatively regular yearly rate. Like most other American cities, it has grown without the guidance of a city plan, and the usual rectangular block prevails. Commission government was adopted at about the time it was adopted in many other places.

In addition, Springfield is a city of, roughly, 60,000 people; out of the 228 incorporated places in the United States which in 1910 had 25,000 or more inhabitants, 196, or 86 per cent, ranged from 25,000 to 150,000; cities within these population limits are likely to have many common civic and social problems. More, Springfield is one of forty-eight state capitals in the United States.

These are some of the reasons why various outside organizations joined with the forward-looking Springfield men and women in carrying out the survey. A survey committee of twenty-four was organized. The chairman was a state senator, and among the other members were a former lieutenant-governor of Illinois, a state commissioner, the city superintendent of schools, other public officials, business men, labor leaders, clergymen, doctors, women's clubs leaders, editors, teachers and social workers.

Planning and direction were put into the hands of the Department of Surveys and Exhibits of the Russell Sage Foundation, which enlisted six other departments of the Foundation, and five other national organizations, to cooperate with the five Illinois state organizations, the local social agencies and the six hundred volunteer workers who took part in the nine main divisions of the field investigations or the exhibit which followed.

The findings themselves give us a new and ampler definition of Springfield, in terms of concrete conditions; give us a cross section, if you will, of present-day community life in the Middle West.

Schools

FROM the time the charter of the Northwest Territory set aside one square mile in every township for schools, the Great Lake region has been progressive in the development of its public school system—in carrying it up through the high-school grades, through the state normal school, and to the state university at the top, and down to the kindergartens at the bottom, and in compelling school attendance.

Organized education is our biggest public interest. Nearly one-fifth of all the human beings in Springfield in 1914 were

in school. And roughly another two-fifths were parents and guardians, making the schooling possible.

Nevertheless, in the course of time, recognition of this great social need and effort has in many places gone lame, and in one city and state after another movements to rekindle the old enthusiasm and give it new content are under way. Compulsory schooling—the great slogan—had long since lost its edge in Springfield, and attendance in 1914 had become only mildly compulsory. This in spite of the fact that the city had a greater proportion of illiteracy in its native white population than any other city of over 30,000 population in Illinois, and that the proportion was increasing. The chief reason for failure to enforce the law seemed to be a general indifference on the part of the entire community—a slipping back from the early ideal of universal education as the cornerstone of democracy.

But another factor in the slack attendance was the character of much of the school work done. The survey asked a number of leading citizens to pass an examination on material used in spelling, arithmetic, geography and history classes. They failed miserably. The material was of a kind seldom or never used in the offices, stores or shops, homes or churches of present-day Springfield. No wonder much of the work, as in many another city, lacked vitality and failed to grip the interest of the young people or their parents. The result was that both boys and girls dropped out in large numbers, and the boys were the first to go. While some handiwork had been introduced into the curriculum, such as sewing, cooking, carpentry and machine-shop processes, the strictly vocational courses were very limited; and a large part of the handwork was formal, inelastic and far removed from the problems of real life.

This was largely true of the quality of the classroom instruction also. There was too much lesson getting and lesson reciting, and too little real study and development of thinking; and back of that too little contact by the teachers with the every-day life about them.

The school board was found to be transacting a great amount of detailed educational and administrative work that could better have been delegated to its executives. Meanwhile, even the newest buildings were a quarter of a century behind the times in design—which meant waste of space, inadequate lighting, blackboards not well located, stairways dangerous in case of fire and other defects.

Thus, though taxing themselves freely for the education of the growing generation, adult Springfield had been getting many school buildings, but not the right school buildings, nor the full use of them out of school hours. It had a broad course of study, but one ill-adapted to an era of electricity and machinery. It had a large corps of teachers, but too many trained at home and not in step with more improved methods. It got self-sacrificing service from its school board, but service concerned with the details of an old system, rather than with re-applying in modern ways the vision of those hardy first settlers who set up their district schools at the crossways.

Recreation

IN Lincoln's day recreation was a thing which largely took care of itself. But the survey was quick to find that the old-time games, such as prisoner's base, run sheep run, duck on the rock, leap frog, bull in the ring had nearly died out. The only diversions reported by over a fifth of the boys were motion-picture shows, baseball, reading and kite-flying.

Springfield is fortunate in that its people, for the most part, live in detached houses with yards, giving opportunity

CAPITOL
OR
CAPITAL:
WHICH?

*Does your state
capital lead the cities
of your state? If not,
why not?*

FOR a hundred years state pride has expressed itself in big round domes and fluted pillars. Springfield and the Springfield survey raise a new question—Why not put the imagination and resources of the commonwealth into making the capital city of each state its standard municipality, in health, housing, education, charity, corrections, governmental efficiency? The meetings of the legislature, the annual state fairs, encampments of the militia, civil, trade and professional conventions, are so many opportunities for extending such leadership.

for home recreations ranging all the way from children's indoor and outdoor games to home social functions. Yet in three-fifths of the boys' homes and in nearly half of the girls' homes parties for young people were not held. Nor did social agencies outside the home fill the need. During a three months' period only eleven out of the twenty public schools had evening entertainments, lectures or social gatherings. On an average, only once out of every nine or ten weeks did the schoolhouse play a part in the recreational life of its neighborhood. The Young Women's Christian Association was doing excellent community work; not so the Young Men's; the churches as a whole (and as compared with those of many other cities) had not in any large way taken the lead in providing social life. The parks were beautiful, but their social use meager, their play leadership lacking.

Meanwhile, commercial amusements were found at every young elbow. There was a large amount of unsupervised and uncontrolled dancing, much of it carried on in hotels and elsewhere under conditions which might be abused. Billiard and pool halls were left to go their own course; and private clubs found a way around the state law against prize fights.

While only two out of five of the young people in the high school went to dances, four out of five of them attended the theaters. Practically all the high-school students went to the

movies. The boys averaged once a week; the girls nearly as often; the majority going without older members of the family. Most of the motion-picture theaters were found to maintain fairly satisfactory conditions as to ventilation and cleanliness, but the city ordinances were defective in not providing for regular inspection to see that the moral and sanitary standards required before licensing were maintained afterwards. The programs were neither specially good nor shockingly bad. Of the four regular theaters in Springfield only one made a pretense at offering anything more serious than vaudeville, and one was putting on a program and conducting a business which surrounded its patrons with the most

the police and sheriff's office, through the jails and other detention places, courts and magistrates' offices, and so on to the prisons and penitentiaries.

Delinquency and Corrections

IN 1913, the year studied, about 5,000 adults were arrested in Springfield charged with some specific offense. But little over one-fourth were convicted of crime, and the prevailing methods of dealing with them were not of a sort to check the stream.

Fines, the most used method, were often employed where in the very nature of the case they would not act as a deter-

FIRST comes investigation. Fact-gathering is the A-B-C of surveys. The survey is an attempt in the field of civic and social reform to do what the civil engineer does before he starts to lay out a railroad; what the sanitarian does before he starts a campaign against malaria; what the scientific physician does before he treats a case; what the modern financier does before he develops a mine. It is, in short, an attempt to substitute tested information for supposition, belief or conjecture.

Unconfirmed belief has sometimes been a very unreliable and socially expensive guide to action. It was once believed, for example (and not so long ago), that fumigation was a main reliance in preventing the spread of contagious disease; now a fuller understanding of the manner in which disease spreads puts the emphasis on far more important preventive measures. Again, it was once believed that work accidents were either unavoidable or due to carelessness on the part of employes; but now we have the data to show that a progressive management may prevent a large proportion of them.

On the other hand, many such beliefs have been justified by study of the facts, and others have been found to contain half truths, such as the notion that malaria is due to swamps and stagnant water. It was J. A. Froude who once said: "Depend upon it, in all long-established practices or spiritual formulas there has been some living truth." But even these beliefs and half truths, although they at times have served good purposes, really support our point, since they leap into great practical usefulness upon being proved. At best, untested belief, *a priori* theory, or conjecture are uncertain foundations upon which to build, whether in social work, industry, commerce or government.

Six Characteristics of How Designed to Get Action Why Results Should Follow

SECOND comes analysis and interpretation. Once facts are in hand, what do they mean? Do they show satisfactory conditions or conditions calling for change? If it is found, for example, that 25 per cent of the elementary school pupils of a city are over age; that is, two or more years behind the grade in which children of their ages would ordinarily be found; does it mean that they are badly taught, or that the city has a defective educational system? Or should other facts be related to this one before any conclusion can be drawn with safety? Unfavorable home and family conditions, ill health, ill-adapted courses of study, foreign birth and recent immigration, or badly enforced school attendance enter into the backwardness of this over-age group.

And before condemning a city, should an examination be made of the per cent of over-age pupils in the schools of other comparable cities?

Obviously, the facts gathered in a survey, if they are to be of real use, must be organized and basic principles and general truths drawn from them. More than that, they should be interpreted in the light of as wide an acquaintance as possible with the factors entering into social problems.

THIRD come recommendations for improvement. The survey aims at results. It is diagnosis to the end that prescription may be written. Where conditions are notoriously bad results may follow by merely turning the light on them. But in general the process is not so simple. Conclusions as to what the facts mean should be accompanied by recommendations as to first and later steps to be taken.

The soundness of the recommendations depends in some measure upon the familiarity of the surveyor with methods demonstrated by other communities and, in new situations, upon his ability to invent practical methods and procedures.

The survey having gone deeply into the city's problems, the community will expect and want its best judgment as to their solution, but the community will also, and should, reserve the right to accept or reject the measures suggested, according as the majority of its people are impressed and convinced of their necessity and effectiveness. If the majority cannot ultimately be convinced, there is grave doubt whether the findings should be accepted, for democracy is built upon respect for the principle that what the majority decides is right—particularly if the essential facts have been given full publicity.

But that word *ultimately* predicates a fourth feature of the survey, to follow findings, conclusions and recommendations.

unblushing temptations to excessive drinking and immorality.

In fine, recreational opportunities has changed in a generation. The limitations of city life had tended to substitute more passive diversions for the old-time vigorous play. The development of commercial amusements, moreover, were taking children away from home, and otherwise keeping the family from playing together. Leadership that saw physical, intellectual and moral values in play was an outstanding need. For we have come to see that play is a great educator—as well as a great re-creator. What one does by choice—and that goes far to make it play—presses deep in its moulding influence. But even play as a safety valve for the venturesome spirit of youth, play stripped of the moral snares so often set around it—even these negative sides of play had been neglected in Springfield.

This neglect, common in American towns, had not a little to do with the constant stream of offenders coming up through

rent. (In offenses like drunkenness, what is needed is something to strengthen will power.) Another method, giving transients a limited number of hours to leave town, got nowhere so long as other cities did the same thing. Suspension of sentence "pending good behavior" was used in Springfield without the probationary supervision needed to make it mean anything other than to be "let off" from going to jail.

Sentenced to the city prison and county jail, young offenders passed their time in idleness under conditions that were insanitary, over-crowded, poorly lighted and ventilated and generally unwholesome. The short term for which most prisoners were committed made impossible any reformatory treatment, and no help was given released prisoners to re-establish themselves in the community.

On the other hand, because free bed and board were provided without work, these jails were not unpopular with old offenders. One "repeater," for example, was arrested thirteen

times in 1913, was returned to jail on a new charge on the heels of each release, and in all spent 209 of the 365 days of the year behind the bars. So much repeating went on among those arrested, those fined, those given suspended sentences, and those who had served terms in jail, that, unlike the old mill wheel, the correctional system seemed grinding with the human flow that had passed.

City and state relied on old-time institutions. (The first state institution in Illinois was, in fact, the penitentiary built in 1827.) Many of them had been established when moral lapses were regarded wholly as individual matters, and fear of retribution was held to be the great stabilizer. More, condi-

It was fifty years after the first penitentiary before the Illinois state board of health was established. That was in 1877, and public health work was largely a matter of quarantining the sick. Preventive medicine has made its greatest strides since then, but how far performance has lagged behind discovery in a typical American community is shown by the waste of life and health going on in Springfield.

Public Health

IN THE six years before the survey, over 1,200 residents died from the more common communicable diseases and several thousand more were made ill. At least a fourth of the deaths from all causes could be laid to preventable causes,

the Community Survey

FOURTH comes the convincing of the public. Above all, the survey is an educational measure, spreading its information in the untechnical phrases of the street. It is a means to better democracy by informing the community upon community matters by providing a basis for intelligent public opinion.

If the information it has obtained is to become part of the common experience of the community, moreover, it must recognize that whoever would speak to the millions nowadays has great competition. With the motion picture showing African jungles, Indian durbars and scenes that formerly only the very rich could see; with the newspaper brought down to one cent a copy, and at the same time made more pictorial and attractive and going into practically every urban home with the telegraphic news of all the world; with the spread of popular magazines, and with other inroads and drafts upon the individual's leisure and attention, the social surveyor must put his message in a way that is interesting and quick and easy to understand. These publicity mediums—daily press, graphic exhibit, illustrated periodical, public address and entertainment, motion-picture screen, as well as printed pamphlet and book report—should be utilized, and utilized, moreover, with as great a command as possible of this technique. This is merely to say that it is just as important to be efficient in the teaching use made of survey findings as it is to conform to high standards of accuracy in gathering and interpreting the facts.

FIFTH, the survey is distinctly a community enterprise. It describes conditions in a definite geographical area, and it requires the cooperation of all interested in that area. The complexity and the wide ramifications of the social problems before it have made the survey different from single social investigations, such as the study of the vital statistics of a city, the finances of its health department, or its milk-inspection work. The social survey is a group of such investigations, a scrutiny of such individual and related subjects as knot themselves into the community problems.

To attack municipal problems in their larger aspects and their various bearings the community must *work together*. And cooperation is growing easier. The telephone, cheap and better transportation, the daily press, the typewriter and the multi-graphing machine are releasing even the larger and more densely populated city areas from their earlier difficulties of distance and slow communication. It is possible for men and women to get together in larger units—and to work more effectively.

The survey and its exhibit, by dealing with many subjects, affords a rallying center, as well as the so-called psychological moment, for arousing the whole community to organize cooperative and, therefore, more forceful action—often along the very lines where intermittent or unrelated efforts have been without result. Thus the survey, through the inter-relation and authenticity of its facts, promotes community action. For we have as yet touched only the remote fringes of the latent power of the people, when aroused, to think and act in terms of the whole.

FINALLY, the survey, to get the fullest results, should be "followed up." After the first general awakening of interest the public needs to be systematically reacquainted with the conditions found and the next steps to be taken. Findings should not be allowed to grow dim or out-of-date, nor effort to grow stale. Follow-up work, therefore, must further drive home what information is already in hand and, by more or less continuous investigation, reveal new developments and changing needs.

SIX CHARACTERISTICS OF THE COMMUNITY SURVEY

1. INVESTIGATION.
2. ANALYSIS AND INTERPRETATION.
3. RECOMMENDATION.
4. CONVINCING THE PUBLIC.
5. COMMUNITY ACTION.
6. FOLLOW-UP WORK.

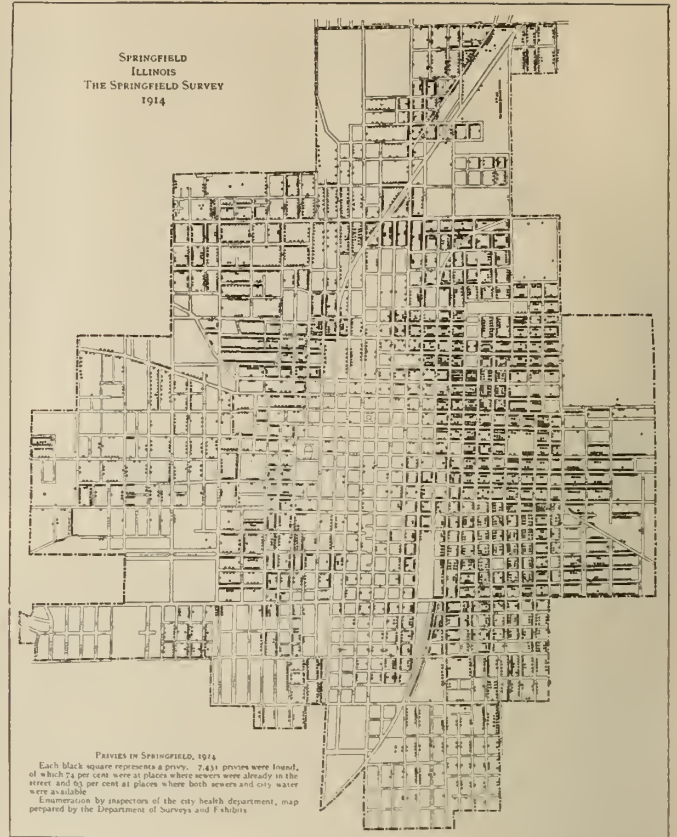

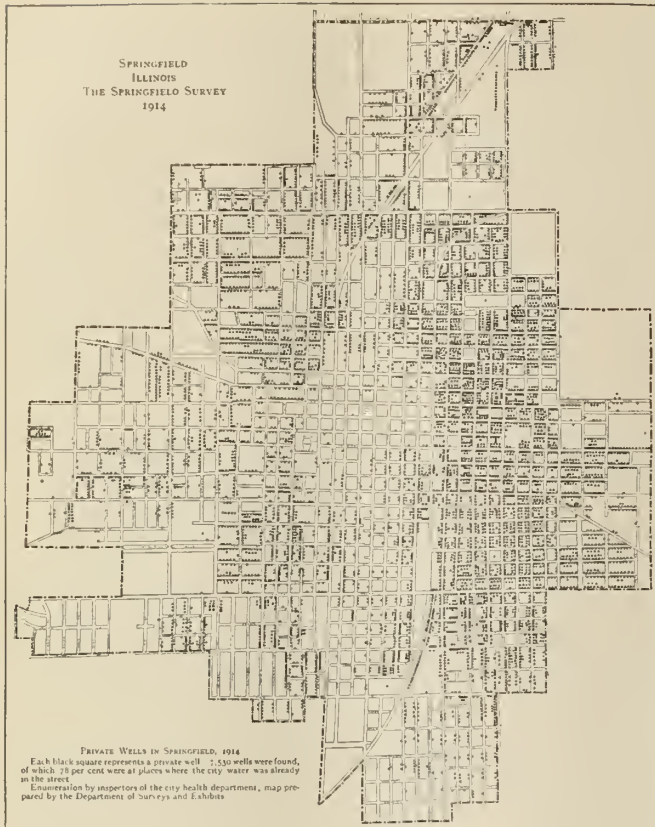

tions were permitted in the jails which, if anything, weakened and corrupted prisoners and sent them out the worse for the experience. The blindness and folly of this unending process would be inexcusable in any community were it not the tradition of centuries, and still the prevailing method throughout the country.

The police department is a comparatively new development, but the old ideas have carried over into it, and a study of the organization, administration and policy of the Springfield force showed the need for more care in fitting policemen for their work: for an honor system, a more adequate system of records and a new compilation of city ordinances; for the vigorous enforcement of laws governing the sale of liquor, and the adoption of a policy restricting the number of saloon licenses issued; the discontinuance of the policy of segregating vice; and the substitution of a policy of suppressing it through vigorous enforcement of the state law.

such as the contagions of children, typhoid fever and venereal diseases.

The greatest single agent was tuberculosis, responsible for 490 deaths in the six years and for 11 per cent of all the deaths in 1913, the year studied in detail. Over 700 infants under one year of age had died in the six years. Nearly half of these infant deaths resulted from the ordinary preventable causes, such as diarrhea and enteritis, pneumonia and acute infections.

The toll was found to be much heavier in the east wards, where negroes, foreign-born whites and illiterates live. They also had the highest birth rates and the highest proportions of children and people of working age; and they were the districts which had called for the largest amounts of poor relief. The city's public health problem centered here, and here was where the health department needed to concentrate its work. The plain fact was that there people were dying

SURVIVALS OF PIONEER DAYS

Each dot in the map of Springfield on the left represents a private well; each on the right, a privy. There were approximately 7,500 of each and at least three-fourths of them were unnecessary, being along the city water or sewer lines.

because they were ignorant; because they were poor; because they were surrounded by bad sanitary conditions; and because the city did not give them a proper health service.

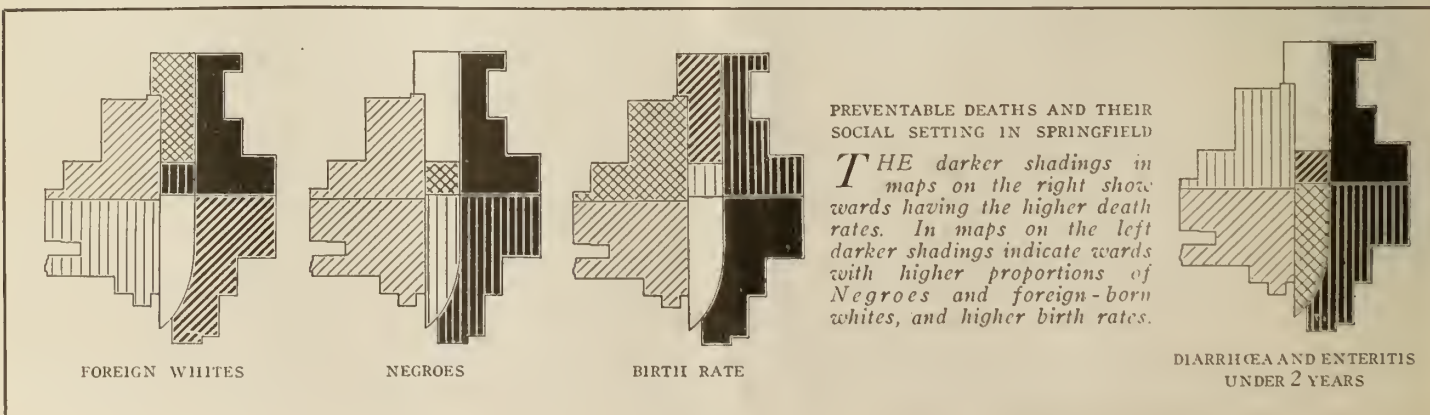

Except for these east wards, the city was fairly well covered by public water mains and sewers. Yet, within Springfield's eight and a half square miles were to be found 7,500 privies and 7,500 wells. Most of them were unnecessary, three-fourths being along the city water or sewer lines. The two east wards, which in 1910 contained 36 per cent of the population, contained over half of the wells and privies in the city and approximately a half of those that were absolutely unnecessary. The southeast ward and its 11,500-odd inhabitants were depending almost entirely on wells and privies, a situation which put that section of the capital city of Illinois in a class with those small villages of the state which still depend upon the insanitary makeshifts of pioneer days.

In brief, it was found that the city health department

had done creditable work with the resources at its command. It was very meagerly financed and, probably as a consequence, ignored its two greatest opportunities for life-saving—doing nothing to stop the heavy inroads upon infant life or to restrict the ravages of tuberculosis. Measured in appropriations, Springfield rated the service it had created particularly for the protection of life and health at less than one-sixth as important as its police force, and less than one-tenth as important as its fire department.

Mental Hygiene

WITH the flesh and blood public so slow to comprehend the thief of health, lack of sanitation, as compared with the property owners' ripe concern against burglary and fire, it is perhaps natural that our American communities have not yet awakened to the fact that in reaching for fulness of life they cannot afford to fall behind in mental health also. If the mind is sick, but little counts. But happily, as in other sick-

ness, mental health once lost can often be restored. A new field, indeed a new world, has been opened up by the analysis and diagnosis of mental processes and disturbances.

Although the number of atypical children in the local public schools was so large as to require special classes for them, practically nothing had been done in the way of special training for such children in the schools, nor diagnosis among the seventy children brought before the juvenile court annually, a group in which mental deficiency usually runs high.

Illinois has its state hospital system, but many insane persons were being held in the county jail annex from time to time—a procedure which was not “treatment” in any proper sense of the word. Such persons often have delusions of unworthiness and self-condemnation, and this sort of custody only confirms their false ideas. As long ago as 1845, in Pennsylvania, Dorothea Dix declared that almshouses were “unfit places for the insane” and that “they never could be made suitable places.” Nevertheless, in 1914, Pennsylvania and Illinois were among the states still to care for many of them that way, and insane persons were still being held for longer or shorter periods in the Sangamon county almshouse.

The large number of “drunks” arrested each year in Springfield included many who developed delirium tremens. These, too, were held in the county jail annex, although needing treatment that was not, and could not be, provided there.

Charities

WE HAVE noted the forward current of youth welling up through the schools in Springfield, the back-set currents towards crime and ill-health, and the slowly gathering public conviction that these last could be controlled and prevented. The same holds true of another back-set stream—that which tends toward poverty and destitution. Here we find another group of institutions in our middle-western cities: the oldest centering around the almshouse; private philanthropies dating back a generation ago, such as hospitals and orphanages; and the newer city-wide organizations. The usual center for coordinating work for families is the associated charities, but the Springfield society knew only a few more than 200 of the total of over 1,750 families which in 1913 had not been able to function normally and had received some kind of service from one or more of the social agencies of the city.

In over 80 per cent of these cases the family was known to but one social agency, a fact which seemed to show lack of cooperation.

Among the factors which entered into these family problems were widowhood, tuberculosis, sickness other than tuberculosis, desertion, mental deficiency, intemperance, unemployment, irregular school attendance, crippled conditions, blindness and non-support. In much the largest proportion of

families only one of these disabilities appeared on the records, a fact which, in turn, seemed to show that back of the lack of such cooperation as would bring the resources of several agencies to bear in helping a family, lay lack of diagnosis. For experience elsewhere reveals that modern family disabilities, like the misfortunes of Shakespeare’s time, do not come singly, and that comprehensive and intelligent treatment depends on a broad basis of information.

In general, the facts recorded by the local organizations responsible for family care were very incomplete; their investigation of conditions in needy homes was not thoroughly and systematically made; in consequence what was accomplished in actual rehabilitation, that is, toward the restoration of families to independence and normal living, was largely fragmentary. Moreover, the charitable societies had not been active in broad community movements aimed at the removal, or improvement at least, of conditions which disorganize family life.

The same was true of institutions providing care for children. While much sympathetic service was rendered, their work was chiefly custodial and in the nature of material relief. The practice of holding poor children in the county detention home (for delinquents) was condemned, and the need of two new institutions was pointed out—a city dispensary under the health department and a city and county tuberculosis hospital.

Housing

SPRINGFIELD’S growth, unlike that of Pittsburgh, St. Louis, Chicago or New York, has not been halted or slowed down by hills, rivers, lakes or ocean barriers. The flat Illinois countryside spreads far in every direction. Nor have European traditions, as in some of the older eastern cities, tended to cramp housing. The scant sprinkling of cabins that hark back to the time when they gave shelter against Indians and wild beasts, the thousands of story-and-a-half cottages and the hundreds of modern residences, all are the single-family type.

But of late the multiple dwelling had begun to appear, and more frequently in the last year or so. One danger that usually accompanies it is the overcrowding of the lot and the consequent under-provision for light and ventilation.

Housing conditions in the Negro district, moreover, were very serious, the houses being more dilapidated, the water supply and toilets more inadequate, and everything in a more rundown, shabby condition than in other parts of the city. Local legislation in the interest of good housing was not abreast of the times, and the need of a thorough-going housing code was clear.

City and County Administration

MANY of the gaps and weaknesses in public service in the fields already touched upon go back to insufficient financial

ABRAHAM LINCOLN'S HOMESTEAD IN SPRINGFIELD

In the smaller cities of the middle west the single-family house is still the rule for wage-earner as well as lawyer. This is threatened by the incoming of the new multiple dwellings.

support by city and county, and to outworn administrative methods in the public offices.

Moreover, as in the case of taxation, these may be a source of injustice. The Springfield assessors are required to value each piece of land only once in four years. Taxes are variable quantities; valuations are also variable quantities. But if assessments remain constant quantities for considerable periods disproportions are sure to arise, for the property rising in value fastest will escape some of its just burdens.

An additional weakness of the local system is the assessment of realty very far below its market value. In Springfield and Sangamon county assessments ranged only 20 to 33 per cent of actual value. It is proverbial that the small property-owner carries the heavy end of assessed valuations, and the lack of publicity in Springfield had no other result than to aggravate this condition. Very little was done beyond keeping the assessor's books open to public inspection. It should be said, however, that Springfield in adopting a fixed and mathematical basis for computing land and building values several years ago took a forward step, but one which did not overcome this fault.

The assessment of personal property in Springfield, as in many other places, has not been just or successful. It favors the perjurer at the expense of the conscientious, tends to make false swearing an accepted custom, and comes down heaviest on small investors with a narrow range of opportunities for placing their funds.

Better results at less expense would be had if township assessment should give place to one assessing office and township collection give place to collection by the county treasurer.

Twenty-five per cent of the city's income comes from the license return on the retail liquor business, thus injecting (to the harm of clear thinking) a revenue issue into the wet and dry question.

The accounting system of the city and the work of the city comptroller were good, as well as the practice by the city of an annual audit. The city budget, barring a few minor features, was satisfactory, but numerous budget fixing and taxing boards—among them the city, the county, the school board and library board—made the community's work-program extremely complicated.

The city's monthly reports on finance told the layman but little; its auditor's reports were not published, and but few city department reports were published. This was a serious

failure, for popular government cannot work well unless the people keep informed. Moreover, the citizen has a right to know; the public work is his enterprise; it uses his money, and it is designed to serve his purposes and needs.

Industrial and Work Conditions

JUST as the quality of much of the public service depends upon adequate municipal financing, so the standard of life of the individual has its roots in how he earns his living. "What are you doing, and how are you getting on?" are two of the most interesting and important questions in a community. They affect everybody, and the general well-being depends in large measure upon them. To get some indication of the answer in Springfield, a study of 100 wage-earners' families, chosen for their representative character, was made.

There were 378 persons fourteen years of age or over in these families, and seven out of every ten of them were contributing to the family income. Only nineteen families were living on the earnings of one person each. Practically all who were able were obliged to help in order to secure moderately good conditions of life.

The proportion of wage-earning children was very large. Of the fifty-seven between fourteen and sixteen years old, forty-one—or 72 per cent—were gainfully employed; and a number under fourteen brought in a little money now and then. When employed, ten out of the seventy fathers whose wage rates were reported received less than \$12 per week; thirty-two received from \$12 to \$20; twenty-eight received \$20 or more. Of all the other males employed for whom information was available, one-third earned less than \$7.00 a week, one-half less than \$10. Among the women of sixteen years and over, more than one-fourth earned less than \$6.00, and almost 70 per cent less than \$8.00 per week.

Wage rates, however, mean little unless linked with regularity of employment. Of the bread-winners in these families two out of every five reported irregular employment for the previous year—and irregular employment meant the loss of from several weeks to six months.

Of fifty-seven families supplying information on rent, over half lived in houses which rented for less than \$12 a month. They were mostly four- or five-room houses without city water, gas, electricity or inside toilets. The insanitary surface well was the water supply. Some of these houses were crowded because of the necessity of taking in lodgers. Thirteen of the 100 families had boarders, lodgers or both. One family of seven living in three rooms took in lodgers.

BITUMINOUS MINING AS THE OUTSIDER SEES IT
Roughly, 2,500 wage-earners are employed in the pits in and around Springfield.

Of fifty-six persons discovered in the investigation who had left school before sixteen years of age, twenty-five, or nearly half, had left because their parents had not felt able to continue them in school. There was reason to believe that a considerable number of Springfield children—running close to 100 per year—were dropping out of school because the family needed what they could earn. Most of the occupations they went into were “blind alley” jobs, which did not offer training or possibilities of advancement.

Thirty-nine of the families were saving in the form of payments on a home. A few more had bank savings; and five out of every six carried insurance, the amounts usually being only enough to cover burial costs. Nine of the 100 families had been forced to ask for either public or private charitable assistance. Over one-fourth of the mothers in the 100 families were earning money to augment the family income; and in some cases this meant neglect of children. One woman had done washing for twenty-six years until all her children were of legal age to work.

Springfield has the general ear-marks of a fairly prosperous western city. Eighty-seven per cent of its people are American-born. Yet this quick scrutiny, a little below the surface of things, showed working conditions far from satisfactory. Among other things they showed clearly, as they have in investigations elsewhere, how low wages and irregular employment play into bad housing, child labor, destitution, neglected childhood, and the predisposition of families to physical and often moral breakdowns. No solution of these problems will be effective that does not eliminate the great economic waste of unemployment and correct the evil of low wages.

In General

JUST as in this corn belt, the yellow ear is the thing, and the stalk, the husk and the tassel but incidental, so the institutions and social activities of this city set in the midst of prosperous farming, mining, manufacturing and commerce—if we pull off the husk of things—are only incidental. The man is the thing. Society moves forward or backward with him. What is happening in his case? Is he wringing less or more out of life than the generation that preceded him? Therein is the test of the community.

The Springfield survey found a two-edged answer in terms of this typical American city. It found that new dangers to the citizen's health had not been fully guarded against; his new educational needs had not been met. The old venture-some spirit of childhood seemed more likely to whirl him into the criminal machinery than when he lived more apart from others. The absence of the old personal relationship between him and his employer had lost him much in his workaday life

that had not yet been regained. The cost of providing the new public services had not been distributed equitably.

On the other hand, the survey disclosed also a reassuring side. The shortcomings were largely faults in adjustment. The same fine democratic spirit of service that has threaded through human lives on these prairies for nearly a century weaves on in this generation, and science is giving it new warp and woof in the methods of hygiene, education, penology, and the rest—in holding out prospect of more leisure and culture for the average man, more of the social surplus and the fruits of mechanical invention.

Telling the Public

SUCH a summary of findings is perforce inadequate.

Enough has been said to guard against any assumption that the writer has wilfully ignored noteworthy evidences of local progress and civic service. What has been attempted has been to bring out rather the common tendencies in the Springfield situation which may be self-revealing to other cities. For obviously, in a few hundred words, findings cannot be put in perspective which it took months to interpret to Springfield people themselves. All of the reports were fully summarized in the local Springfield press, the newspapers handling from twelve to thirty-two full column stories on each.

At the conclusion of the field work an exhibition of survey findings was held in the state armory—which was open for ten days and which attracted thousands of visitors, including many from distant parts of the state.

For two months preceding, a special campaign of publicity and promotion was carried on which kept the survey before people. Old hands at publicity work will recognize the value of such things as the invitations sent out by a hospitality committee to mayors throughout the state; exhibit models and devices displayed from time to time in public places; unexplained cartoons posted in the windows at exhibition headquarters; the street railway company's offer to transport school children free to the exhibition; prizes offered for the five best grammar school essays on “What I Saw at the Springfield Survey Exhibition”; special days assigned to societies and organizations; a daily department in one of the newspapers under “The Survey Question Box”; a proclamation by the mayor making the last day of the exhibition Springfield Exhibition Day and urging “all loyal citizens of Springfield to take this last opportunity to inspect and study the many interesting and instructing things there to be found.”

A large part of the work of preparing exhibits and conducting the publicity campaign was done through local volunteer committees—including an advising committee, a general executive committee under the chairmanship of R. C. Lanphier, committees on automobiles, decoration, drayage, lettering, lighting, photographs, printed matter, speakers, special days, ushers, and many others. As the campaign grew, more and

DEMOCRACY SPREAD OUT TOO THIN

The long ballot and decentralization persist in Sangamon county; the short ballot and a city commission give self-government a better chance in Springfield.

BITUMINOUS MINING AS THE INSIDER KNOWS IT
The year before the survey, Sangamon county miners had work only three-fifths of the year.

Developments in Springfield Following The Survey

In the Public Schools

1. Committees of the Board of Education reduced to three: (a) Education, (b) Finance and Supplies, and (c) School Property.
2. Junior high school system adopted; four junior high schools organized.
3. New high school principal elected; organization and course of study changed. Better system of supervised study and discipline introduced without friction.
4. Modern high school building erected to accommodate about 1,500 pupils.
5. Lighting, ventilation and general sanitation of all schools improved. Fire-exit locks on all outside doors and fire-escapes on the high school.
6. Higher standards set for lighting, heating, ventilation and sanitation in new building construction.
7. Special supervisor of buildings employed.
8. Patrons' clubs organized in every district of the city; nearly every schoolhouse used as a social center for neighborhood meetings; public meetings and political discussions held in the auditoriums of several schools; about one-third of the voting places of the city now located in school buildings.
9. Teachers doubled in number in manual training and household arts; pre-vocational training and guidance promoted.
10. School census revised to secure more valuable information.
11. New salary schedule for teachers and janitors, with rates based on efficiency; required qualifications of principals and teachers raised.
12. Seven branch libraries established in schools and five in other centers.
13. Courses of study for the elementary, junior high and senior high schools revised and modernized.

Recreation

1. Director of hygiene employed by Board of Education for playgrounds, athletics and social centers.
2. Athletic organization extended among elementary school-children; athletic contests and a play festival held.
3. Park board's plans for equipment of park play sections extended.
4. Free public golf courses established in two parks.
5. Bathing beaches constructed in two.
6. Burlesque theater cleaned up.

Delinquency and Corrections

1. Sheriff pledged to turn into the county treasury approximately \$7,500 per year profits from feeding prisoners in the county jail. (First returns have already been made. This money previously had gone into the sheriff's pockets as a matter of course. For his four-

year term the total will approximate \$30,000, an amount alone that exceeds the cost of the survey.)

2. Large and flourishing redlight district closed. (It had existed as a recognized community institution for fifty years.)
3. Woman of energy and ability appointed as deputy sheriff.
4. Two additional probation officers appointed.
5. Juvenile detention home improved.
6. City jail prisoners put at work in farming and gardening on farm land owned by the city.

Health

1. Child-welfare station to promote infant hygiene work established by city Board of Health and Women's Improvement League.
2. Movement on foot for new contagious-disease-hospital facilities.
3. Educational work emphasized by Tuberculosis Association; its nursing service increased and dispensary for children established.
4. One-hundred-and-twenty-acre farm purchased by St. John's Hospital for a sanatorium for the tuberculous.
5. Free dispensary established by St. John's Hospital.

Mental Hygiene

1. Methods improved in handling cases of insane and feeble-minded before the County Court.
2. Some improvement in handling cases requiring mental examination before Juvenile Court.

Charities

1. New Associated Charities secretary secured, and work completely reorganized.
2. Better cooperation between public and private agencies.
3. Placing out work initiated by Home for the Friendless; trained nurse added to its staff, and physical condition of the children improved.
4. Trained nurse employed to care for tuberculous patients at the County Poor Farm; food and rooms improved.
5. Attendance department of the public schools reorganized with a view to closer cooperation with Associated Charities and other social agencies.
6. Central Council of Social Agencies organized; city conference on social work held.

City and County Administration

1. More equitable rule for assessing corner lots adopted.
2. Cost-accounting system installed by City Water Department; detailed monthly reports now published.
3. Movement to secure two 24-inch water mains between the pumping station and the city, both as a sanitary and fire measure.
4. Garbage-collection started in small way.

more people lent their help until more than 600 were at work, not only because their committee leaders were energetic and enthusiastic and the spirit of the campaign contagious, but because the things they had to do were interesting. They made models and mechanical devices, tried their hands at art work, wrote special stories for the newspapers, handled office matter, snapped photographs, and made public addresses before churches, lodges, labor unions, school clubs and other organizations and societies. They helped stage and take part in the short plays written to bring out some of the important lessons of the survey.

Survey Results

TO FOLLOW up investigation and the publication of findings, the Springfield Committee organized itself into sub-committees which were charged with carrying out the recommendations in each of the main fields covered. These have already some accomplishments to their credit. In addition, a Council of Social Agencies, formed as a result of the charities survey, has afforded an opportunity for discussion and conference; and existing social agencies have modified their activities in many

cases to conform to them. In this connection, much credit is due to Margaret Bergen, the new secretary of the associated charities; to H. S. Magill, superintendent of the public schools; to Sheriff J. A. Wheeler, and to ministers in some of the churches who cooperated in making the survey mean as much as possible to Springfield. A still later development was the decision of the Survey Committee in December to appoint a committee to consider the form of organization which could best carry forward the general purposes of the survey. Under the chairmanship of Francis P. Ide this committee has made a report recommending the organization of a city club to carry forward the survey and promote other civic enterprises.

A survey shows conditions and needs and furnishes a program of improvements; but after all, the program must be carried out very largely by other agencies than that making the investigation, and they should come in for a good deal, if not for most, of the credit for results. Recently we tried to list developments which pretty clearly had their beginning in survey recommendations—or at any rate, the advances made in the community since the survey, which had been specifically recommended by the survey, no matter what other agencies

had also helped. The list is shown on page 512. In compiling it, no special effort was made to gather inclusive data.

But, aside from these specific developments, there is something more to be said on results. A. L. Bowen, secretary of the State Charities Commission, said in a recent address:

"A new community conscience, or, perhaps more truthfully, an *aroused and stimulated* community conscience, is the most noteworthy effect of the survey. Our attitude of a community toward all questions affecting its well-being has radically changed. We see new meanings in them and react to them in a different manner. Our sense of duty in many cases where it formerly would have been dormant now asserts itself and prompts us to action. There is a new spirit in our work."

On a recent visit to Springfield I was told by one citizen that there is a great deal of feeling abroad that "the only way to get anything in Springfield now is to go to the people for it. In the old days there were other ways." If this be an accurate judgment, it means a most significant and democratic stride ahead, and the survey, by "going to the people," helped carry the new conviction.

So much for local developments. But it seems to me this is not quite the place to stop. May I, indeed, reverse the usual order and announce my text at the end. It is what I think we ought to call the golden text of our political Holy Writ, and was spoken by a citizen of this same Springfield, Sangamon county, Illinois, some fifty-odd years ago in a memorable appeal. It ran: "that we here highly resolve that the nation shall, under God, have a *new birth of freedom*; and that the government of the people, by the people, and for the people shall not perish from the earth." These words were pronounced when the states were at grips over a national social question. The appeal was for a rehallowing of government to the task of serving the men and women who are the government.

Democracy is subject—sometimes profitably, sometimes not—to the dominating forces of any period whether political, ecclesiastical, economic, or other. Its forces ebb and flow with them, and must be refreshed whenever substantial rights have been invaded, or, indeed, whenever there are new gains to the common weal to be won. That is why, is it not, that each oncoming thirty years or so has had its job to do and a farther peg to scale to?

Something, it seems to me at least, that is fundamental in the fabric of our public affairs has been inweaving in the last dozen years or more—something that also bears the marks of high resolve and carries the infection of life and youth and renaissance. It is a process of *peaceful civic renewal*, through

the scrutinizing of conditions surrounding our daily living, with a view not only to correcting those that are unwholesome, but to quickening any that show promise.

Back of this scrutinizing and this resolve is the recognition that times have changed; that new circumstances to the harm of some folks have arisen; that simultaneously new forces have been gathering to cope with just such difficulties, and that these forces, in the form of new knowledge and experience and more effective methods, must be made to count at once.

So has come the insistence that changed conditions shall not leave people with less independence, less opportunity, and less comfort than before; rather that more shall be wrung out of life for them.

The successful working of this leaven of civic renewal depends upon the correcting power of facts, which must be gathered carefully and faithfully as the truth-loving scientist in any field gathers them—plus such a telling of the facts as will make them common knowledge. American experience is piling up the conviction that communities will act upon facts when they have them.

One of the forms of this new type of social exploration and reporting has been the community survey. Since 1907 in Pittsburgh the survey idea has spread enormously. Distinctive and vital as its formula is in itself, it is essentially synthetic and has drawn method and momentum from the collateral movements and agencies, national, state, city, public and private, which make ascertained fact the rock bottom on which to base social policies and proposals.

In conclusion be it said that the chief function of Springfield's workshops, mine pits, farm and trade resources is to serve the interests of Springfield herself. They should furnish the groundwork for a structure of social well-being, the output of which should mount far above factory output, coal tonnage, farm products and trade values. Even without special economic advantages, a city's responsibility must be acknowledged, but with these advantages the responsibility is much increased. The Springfield Survey means just this, that a group of Springfield men and women, most of them already builders of this superstructure, were ready for fresh efforts. What they have done may seem but a modest contribution to the welfare of cities other than their own; but, large or small, they pray that their endeavor may be of some worth in spreading orderly, disinterested, thorough scrutiny as a basis for constructive state and municipal resolve—in the name of the well-being of the plain folks whose numbers are legion, and for whom the fellow-townsmen and precursor of this Springfield committee spoke so forcefully two generations ago.

THE SURVEY EXHIBITION WAS A "ONE-WAY" SHOW. EVERY VISITOR PASSED THE INFORMATION BOOTH ON THE WAY IN.

From the Four Winds to Fourteenth Street

An Interview With Some Fighters Against War

By *Mary Chamberlain*

FOURTEENTH STREET, New York city, with its garish department stores and cheap lodging houses is a queer place to run into moral scruple and convictions held dearer than life. The basement front chamber of a stodgy furnished-room house is a strange spot to find conscientious objections to war.

Twenty young men sprawled about the bare room of the city boarding house. Some were slender chaps with uncalled hands; others were big, hulking fellows toughened by hard labor. One boy slept heavily on the bed; a red-haired, milk-skinned youth stirred himself some coffee on a gas stove and presently sat down to his evening meal; several stood in groups smoking vile-smelling tobacco, swapping jokes, and talking together in the lopped-off, ludicrous dialect of the Cockney.

A short time ago most of these men were total strangers to each other. In Glasgow, in Leeds, in London, they were running machines, doing clerical work, tending customers in shops, all going their separate sober ways in various parts of the British Isles. Now in a strange land they are lending each other money, finding each other jobs, providing one another with meals and beds—fugitives from England and stowaways of the sea. By refusing to join the British army and escaping overseas seventy-five lads are banded together here in New York in the Four Winds Fellowship, to welcome any man, German, French, or English, who defies a government's command to fight.

The members of the Four Winds Fellowship, as they put it simply, don't believe in national wars. They cannot conscientiously arm themselves against their fellow-workers in Germany and Austria. Nor are they eleventh-hour pacifists after the defense of the realm act was passed in England. They are nearly all Socialists of many years standing who, in the Independent Labour Party and in their trade unions, have for a long time stood for the international solidarity of labor. They have endured hardship and scorn, they have risked their citizenship, and their employment, for a belief that nations must stop wasting manhood and spend their energy and resources on homes, schools and factories. Generally speaking, however, these boys are not the martyr type. They are too young and eager to pay the penalties of prison which many thousand conscientious objectors of the non-resistant group are enduring. They represent the fighting pacifists, refusing to sacrifice one drop of liberty. To run away with life and strength, and to agitate the overthrow of war have more value to their minds than the example of suffering in prison for a military system they despise.

As for the clauses in the defense of the realm act exempting conscientious objectors from military service, these look pretty good from a distance, say the four winds rebels, but at home it's chiefly "pull" or luck that saves one from a khaki suit or hard labor if one sticks to one's principles. If you live in a district swarming with conscientious objectors (and they avow there's more than one such place) you can't get a "Bobby" to notice you because there would be a near riot if the police marched off half the residents to jail. Or, it is

their feeling that if you possess a well-known name, a friend in Parliament or, possibly, a slick tongue, you stand some chance of preaching and practicing non-resistance unmolested.

It's the thousands who have no pull or luck who are cramming the British prisons "fuller than the Suffragettes ever done." The tribunals who judge conscientious objectors "'ave a fy'vrit question," according to George Scott, "wot you goin' to do if the Germans knock down yer wife? If a poor beggar 'esitates to think of the hanswer, put 'im at 'ard labor, they says, says they, till 'e knows 'is mind."

Many of the fellows in the Four Winds Fellowship did not take the trouble to go before the tribunals because they believe such an act an acknowledgment of the government's right of military surveillance. They refused to register as required by the act, and as a householder is liable to fine or imprisonment for sheltering such outlaws, they knocked about from place to place. They became criminals for "sleepin' on a country they won't defend."

Some took refuge in the Socialist clubhouses scattered throughout England, stopping a few days at each and incidentally picking up news of the Fourteenth street boarding house. James Snap, for instance, climbed out of the back windows of a clubhouse while a policeman was entering the front door. After a cross country run of two miles, he dodged the Bobby, and fell in with a man who told him about "these 'ere inexpensive sea trips to America." "Hactually," insists James, "it was the London Bobby wot gi' me the chawnce to get 'ere."

Other lads went up into the hills for a bit of a vacation, but this was not a very safe resting place, since "campin'-out parties ain't allowed these days without the King's permission."

Still others did not try to escape and were dragged before the authorities to explain their presence on the streets without military exemption papers. William Jones was a "clark," an energetic nimble-minded office worker who had filled his post most satisfactorily for years. But one night when William went out for a stroll, he never returned to his lodgings. Instead he was assisted by three strapping soldiers (William is a thin scrap of a lad) to Wormwood Scrubs and held as a military prisoner. After the doctor had examined William, he was offered home defense work—building roads, working on munitions, harvesting, anything to keep him quiet and contented and useful to his country. But William was difficult to please and, much to the doctor's surprise, he did not jump at the chance to exchange the trenches for a peaceful hayfield. It was all "'elpin' the war" to William.

"They was gentle enough to me," says William, "but one fellow who was taken in by force and wouldn't take a bath—I don't know what conscientious objection 'e 'ad to water—was pummelled and rubbed with a sharp brush till the blood run down 'is back." William apparently believed more in vocal than in physical resistance, for every night for three weeks as the sergeant made his rounds and called "Any complaints." William yelled back amidst a chorus of no's, "Yes, sir. Why am I kept here against my will?"

The upshot of it all was that William, with advance pay in

his pocket to placate him and his soldier escort to keep an eye on him, was sent to a concentration camp at Peebles, Scotland, a safe distance from friends. There he was dressed up in a khaki suit and a "Scotch bonnet wi' ribbons" and left to roam at will, for a man in a khaki suit beyond the three-mile limit at Peebles without a pass is spotted as quickly as a man in stripes three miles outside of Sing Sing.

While learning to shoulder a rifle at Peebles, William took the time to deliver lectures on peace to the recruits. And, in his opinion, he did not have an unsympathetic audience. "It's not them who does the fightin'," he comments, "but the gray-beards, the Boer war veterans, and officials that want to keep the war goin'. The people don't want war, but it's like this—if the government says to them, 'Eat beefsteak pie,' they eats it."

In a couple of weeks, William got the opportunity he was seeking. Some soldiers applied for passes to go to Edinburgh and, says William, "When they was givin' 'em out, I reached up me hand with the rest." While Tommy Atkins was making merry at Edinburgh, William slipped away from his pals, pawned or buried his natty uniform and bonnet, and took a train for a seaport town, the goal of the young conscientious objector.

For by sailors' homes, to the wharves and the swaying ships at harbor lies a way of escape for those who will not yield to the decree to kill or aid in killing comrades in foreign lands.

At Liverpool, at Glasgow, at Plymouth, each member of the Four Winds' Fellowship was metamorphosed. Arrayed in a cap and middy, armed with a paid-up membership card of the Seaman's Union (never mind where he got it), and with honorable discharge papers from a bona fide boat (never mind where he got *that*), each man took his turn in line waiting to ship as an able-bodied seaman on some vessel bound for America. The scarcity of British labor helped to give them the chance they sought.

It is not easy to locate the starboard side and the crow's nest when one has been running a lift at Peter Robinson's

department store. Stuffing endless coal into the mouth of a greedy furnace is fatiguing after adding figures in a ledger. The boys in the Four Winds' Fellowship found life before the mast full of hard knocks, sorry blunders, cruel pain, and now that they're on dry land—some laughter.

Even C. Percival Smith can laugh. C. Percival, the secretary of the fellowship, declares he was next thing to a "sylor," he was a "sylesman." But even such a close kinship did not save him from disgrace. Instead of donning oilskins over his sailor suit, Percival took his first watch on the lookout attired in a "nice gray Piccadilly top coat!"

Somehow or other all lived through their apprenticeship. "The best game," they explain, "was to say if you was put at the fires as 'ow you was ony familiar wi' work outside, and if you was put on deck to say you was a stranger to the work above." In some cases, perhaps, the game really worked and they were detected as merely greenhorns; in some cases perhaps a kindly eye winked at their disguise. Anyway they reached port at last, worn out and sick, with days of worry, excitement, hardship. Eagerly they found their way to New York, to the unknown friends who had preceded them.

But even in Fourteenth street a conscientious objector has his troubles. None of the men will take employment in munitions plants and as a goodly number of them are mechanics they are hampered in seeking work. Twenty-five and thirty-dollar-a-week men are doing odd jobs for ten and twelve dollars. Others have discovered a strong pro-ally sentiment in America that has no sympathy or help for their efforts. C. Percival Smith lost employment in two large wholesale woolen houses because in each case the head of the firm was aligned with British interests. Smith has at last "landed on his feet," but many of the others are suffering his experience.

The Four Winds' Fellowship is not discouraged. It likes America; it believes in the ways of democracy. But its members need work and friends. "We've done our bit in England," they say, "now perhaps there are anti-militarists in this country who will do a bit for us."

To Mothers Who Must be Educated

By Alice B. Munro

ANOTED physician, speaking of the after-care of infantile paralysis cases, said: "The main thing to be undertaken now is the education of the mothers." Only a few words, but as I read them I wondered whether you mothers, starting out upon what in many cases means years of work, would like to have me tell you a few of the things lying before you.

The children of the very poor will have every advantage; free clinics, massage and electricity, surgical appliances of all kinds, hospitals and nurses will be at their disposal. But my message is to you of the well-to-do class who expect to pay for all these things; who must necessarily do in the home what the very poor will have done for them at every turn.

Let us suppose that your child has passed through the necessary period of massage and electricity and is under the care of a skilful orthopedic specialist. Following out directions will seem almost futile, as you look at the inert limbs of your child, as you meet his remonstrances at every turn, as you find him willing, perhaps, to settle down in a wheel chair. It is so much easier to take the line of least resistance, to spare both yourself and your child scenes of bitter suffering, and

to resign yourself to having a "little invalid" in your home.

But don't do it. First of all, take stock of your resources and decide upon a definite plan of action. You may not realize it, but your education is just beginning. You must regulate your life to include an entirely new activity. If you are wise, you will eliminate every engrossing activity outside of your family life. No person can carry on two absorbing occupations equally well, and your child must be your first interest.

Let us hope that you are physically strong. If you are not, you must become so. It is so imperative a call that it is like a tonic to the languid, like a draft of life-blood to the anemic. Guard your health and strength in every possible way.

Try to have a hobby. You will often need to retire to a "Hinterland" of art, music or literature. How many hours have I spent with my friends of the seventeenth century, gardening with Mme. de Sévigné at Les Rochers; at Versailles and at St. Cyr with Mme. de Maintenon; in the "Faubourg" with Mme. de Lafayette! They are all old and tried friends.

Give up all formal and engrossing social life. A few intimate friends will always be ready to spend a quiet afternoon

reading, talking or sewing. They will learn soon that it is the truest kindness to ignore your ever-present care, and you will leave them better able to take up your work. From luncheons and receptions you must turn aside. Those well-meaning people who insist upon discussing infantile paralysis with you, who tell you of the child of a friend, "who had such a terrible case, who was helped by such a wonderful doctor, etc."—these people you will learn to avoid.

Let us suppose that you have under your care a boy of eight or nine, with a useless arm or leg. Your physician will probably arrange for him a long list of exercises, including work with Whiteley exercisers, dumb-bells, hand ball or pedal work, to be done every day, perhaps twice a day, for a period of several months. Not one of these things will your child do unless you make it your business to see that he does it. Have regular hours of work with him, let nothing interfere with them, and, above all, try as hard as you can to make it as pleasant as possible. You cannot but have some stormy scenes. There will be days when the very old Nick himself will get into your child or into you; when you finish your task feeling as if life were too hard to endure, when you wonder if it can be worth while to force this helpless being to do such a distasteful task day after day, and year after year, when he might be made a happy, comfortable invalid.

But don't give up. Remember that your child is not diseased. He is not nearly as badly off as if he had a weak lung or a diseased kidney. Don't let him feel for an instant that he is ill. Make him realize that you are helping him to get his inert muscles into shape so that he can do things for himself. Read aloud to him while he is doing some exercises, play for him while he is doing others, play hand-ball, ping-pong, anything that he is able to do, and keep before his mind constantly that all this leads to more strength and activity.

My own boy wore a heavy iron brace for four years. I was the only person who believed that he could ever bear his weight on his leg without the brace. The doctor said it could be done, and I kept on day after day and year after year, until

now it is off permanently. For two years he was unable to lift his arms above his head. I had to begin by lifting and drawing them down so many times every day. In a very short time he was able to lift them himself, and soon he was joyfully raising and dropping them while I read aloud Rob Roy. Today he has full use of his arms, although it took years to accomplish it.

But this is only half your work. You must steadfastly set your face against spoiling your child because of his limitations. Cover up your sensibilities fathoms deep. Don't allow anyone to pity him or you, and don't pity him yourself. Your effort must be to keep him a normal child. The best thing that ever happened to me was a severe scolding administered by a physician, when I took my boy to him after two years' illness. I was simply a slave to the child's slightest wish, with the tears very near the surface. The doctor took me aside and said:

"You mothers are the ruination of these children. You spoil them from the very beginning. If I had my way, I would take every one away from their mothers and have them properly brought up. There is no excuse for treating them as if they were not normal. Keep before your mind that you want him to become normal, and treat him accordingly."

This was a turning point with me. Naturally I backslid many times, and again and again had to be brought to my senses when sympathy led me too far. But six years after I was rewarded by my physician's saying that he considered my son a perfectly healthy boy, and that his affliction had only strengthened the most necessary manly elements.

So many women mourn the lack of some engrossing occupation, some creative work which will relieve their mind of household routine. Here is a great creative work which has come without your seeking it. If you take it in the right spirit it will lift you above the ordinary cares and annoyances of daily life. At the end of every one of these tiresome days you will consecrate yourself anew. Every day will see you more confident and serene, better able to attend to your great work and your education.

Prostitutes and Tuberculosis

By Alice Hamilton, M. D.

I NTERESTING, though possibly disconcerting, facts are disclosed in a study of tuberculosis among prostitutes recently published by two physicians of the federal Public Health Service. The study forms part of an investigation of tuberculosis in Cincinnati undertaken by these physicians at the joint request of the Board of Health of Cincinnati and the Anti-Tuberculosis League.

When it comes to the question of popular propaganda, two opinions on the part of reformers always prevail. There are those who would keep back as long as possible any evidence which tends to weaken the appeal to the public for certain measures of reform, holding that though we may suspect that the arguments we have been using are no longer in accord with our knowledge, yet we should do more harm than good by telling the public that doubt has been cast upon them. Some years ago we saw that attitude taken by the advocates of prohibition when Atwater's experiments were published showing that alcohol is, strictly speaking, a food. We have even had intimations of it in regard to the announcement made recently by experts as to the improbability of tuberculous infection being contracted at any period of life

except in infancy and childhood. Those who had been working for prevention of tuberculosis felt that their efforts would be blocked if any such idea should gain the popular ear.

Perhaps the greatest opposition of all is encountered when anything is said that throws doubt on the usual terrible picture of the physical consequences which follow sexual immorality. Yet the other class of reformers, represented most conspicuously by Dr. Richard C. Cabot, would argue that no permanent gain can follow an appeal which is not founded on the truth; that, for instance, to say to the young that health and morals go hand in hand, when actually health and morals do not go hand in hand, is to cheat them perhaps for a while but in the end to lose their confidence in everything else we tell them.

This article on tuberculosis among Cincinnati prostitutes does not furnish material for the ardent advocate of social purity whom we have all heard assuring his awestruck audience that the life of the prostitute was measured by five or at the most seven years, that inevitably venereal infection or consumption would carry her to an early grave. Often we wondered where he got his figures, but never could we dis-

cover their real source, and now we shall accept them with even greater scepticism; for these women in Cincinnati did not die at the end of even seven years, and when examined the majority of them were in good, even robust health. If there is no way of deterring a girl from a life of shame save by terrifying her with the prospect of an early death, then we must give up trying to deter her.

The public health physicians examined two hundred and seventy-five white inmates of houses of prostitution, which are under police supervision, for Cincinnati has the Continental system of vice "regulation." They found nineteen with evidence of tuberculosis, though only one was an open case (in a communicable stage of the disease); the rest were incipient cases. This, though not a startling proportion of tuberculosis, is large—no less than 6.9 per cent of the whole. Compared with the findings of examinations made by these same observers on women employed in factory work the number is decidedly in excess, as this list shows:

Boot and shoe workers.	1.46 per cent	(1.48 per cent more showed health below the average.)
Clothing Workers.	1.61 per cent	(2.28 per cent more showed health below the average.)
Tin and sheet iron.	1.7 per cent	
Piano mfg.	2.0 per cent	(3.0 per cent more showed health below the average.)
Soap mfg.	2.16 per cent	
Laundry	2.7 per cent	
Feather workers	3.7 per cent	
Cotton belts and ropes.	5.7 per cent	
Prostitutes	6.9 per cent	

Certain considerations, however, make the difference less great than appears from these figures. The women in these industries in Cincinnati average younger than the prostitutes. More than half of the former, 58 per cent, are under twenty-five years of age; only 39 per cent of the latter are so young. Moreover, the industries here listed are none of them notoriously bad, none has a decidedly high tuberculosis rate. Had the comparison been made in the textile towns of Massachusetts, where Dr. Perry found the death-rate from tuberculosis among women mill-hands to be from two and a quarter to five times as great as among women not in the mills, the result would have been quite different.

Another fact revealed in this inquiry has a bearing on the question of life in the brothel as favoring tuberculosis. Five of these 275 white prostitutes showed evidence of having had

tuberculosis and recovered, and their histories showed that the disease had entered on its favorable stage during their life of prostitution. To quote:

"Most of these cases were girls from very humble stations in life where their previous hygienic surroundings had probably been worse than those prevailing in their present dwelling places. Good and plentiful food was the universal rule in all the houses in which these prostitutes lived and the stringent police regulations kept alcoholic dissipation within reasonable bounds."

Regarding the number of years each girl had passed in prostitution, the largest group is that between five and ten years—126. Next comes a group of 115 who had been prostitutes less than five years. Forty-five had led this life for ten to fifteen years, seventeen for fifteen to twenty years, and twelve for twenty years or more, the highest on the list having forty years to her credit. This list includes forty colored women, making 315 in all.

Classed according to their general appearance, 147, or almost half, were described as "robust," eighty more as "good," and thirty-eight as "fair." Perhaps the most surprising statement of all is that concerning the health of those who entered the life at the earliest ages. There were fourteen who began this life under the age of sixteen and had lived in the "tenderloin" from five to twenty-nine years, with an average of fourteen and a half. Only one was found to be tuberculous, and only three were in anything approaching a poor physical condition, the others being of robust appearance.

Science every now and then surprises us by confirming some idea deeply rooted in the minds of the ignorant and vainly combatted for years by the learned. Girls of the factories and workshops have listened with a polite and silent scepticism to the descriptions given them by their religious instructors and by lecturers on social purity, of the dangers of a prostitute's life. They knew girls who had left the factory with its poor pay and hard work for the ease and abundant food of the brothel and they had seen them flourish instead of fading away. The motive that kept them from following the same path was not fear of a loathsome death, but something much higher and finer. Fortunately we do not need the appeal to fear when we speak to the young; we have far stronger and more moving chords to play upon. We need not be afraid that any harm will follow the publication of facts concerning the life of the prostitute.

Do Wages Buy Health?

The Oregon Minimum Wage Case Re-Argued

By Mary D. Hopkins

NATIONAL CONSUMERS' LEAGUE

IT is the nineteenth day of January, and a casual visitor might wonder if any case of unusual interest were before the Supreme Court of the United States. Something more than amiable curiosity stirs the audience. Faces are intent, even anxious. And well they may be if they are those of friends of social legislation, for today the Oregon minimum-wage cases, undecided for more than two years, are again before the court for reargument. (See the SURVEY, December 26, 1914.)

Those who have business with the Honorable Court are Edwin V. O'Hara for the Industrial Commission of the State of Oregon, Frank C. Stettler, a paper-box manufacturer of

Portland, and Elmira Simpson, his employe, who allege against the Industrial Commission that they are deprived of constitutional liberty without due process of law in being forced by the minimum-wage law of Oregon to pay and receive a living wage—namely, \$8.64 weekly—for services rendered by one to the other.

For the plaintiffs, ex-Senator Fulton, of Oregon, and Rome G. Brown, of Minnesota, accredited guardians of the established order, sit solidly in their places. For the defense, Felix Frankfurter, of the Harvard Law School,¹ is quite

¹ Prof. Frankfurter argued the Oregon ten-hour law before the Supreme Court April 18, 1916. (See the SURVEY, May 27, 1916.)

alone. Attorney-General Brown, of Oregon, taken by surprise at the court's sudden advancement of these cases, has not been able to reach Washington. From the judge's bench Mr. Justice Brandeis is missing, since his former participation in the case as attorney for the defense bars him from sitting in judgment. (See the SURVEY, February 6, 1915.)

It is the second day of the hearing and the defense has not yet had its innings. For upwards of an hour Senator Fulton yesterday had thundered against the law uninterrupted, painting a lurid picture of the perils and dangers of the minimum wage; a picture that might well give one pause if it were not subject to the check of facts.

"If your honors shall hold this statute constitutional, you will be tearing down the last barrier between government and the freedom of the individual. . . . The state may, indeed, regulate hours," the senator granted, "for hours bear a definite relation to the public health, and so come within the police power. But *wages* have no connection with health."

In some equally obscure way wages are detached also from occupation and the cost of living. The very bulwark of the opposition lay in the query: "Why should Stettler pay Simpson's bill? Why, any more than John D. Rockefeller? Stettler does not create the needs of the body, and what concern has he with Simpson's cost of living?"

No one can complain that the Supreme Court is not interested in the minimum-wage cases. As counsel for the defense rose to reply to Senator Fulton, all the objections to the minimum-wage system seemed thrown into the arena at once: Mr. Justice Pitney's question of the lazy and inefficient, Chief Justice White's concern over possible displacement and unemployment of women, Mr. Justice McReynolds' fear of a decrease in men's wages through women's competition, the pin-money theory, introduced again by Mr. Justice Pitney, which assumes that since the earnings of women in industry are for the most part supplementary, women have no need of a living wage.

Steady and cool under fire, with the ready debater's swiftness in his retort of fact and experience to each hypothetical objection, Mr. Frankfurter yet had need of all his skill to meet the court's attack; no chance was given him of consecutive argument.

The dialogue reached a sudden climax when at counsel's, "But, your Honor, those are not the facts," Mr. Justice McReynolds interrupted sharply, "I want to hear the law, not the facts."

Mr. Frankfurter paused a moment and spoke very distinctly: "We cannot discuss the law apart from the facts that illuminate it. This court has said again and again that it cannot consider such questions *in vacuo*. We have a right, your Honors"—and his voice rose to a challenge—"to oppose the judgment of speculation by the judgment of experience!"

Well, today, if it please the court, we shall have both the facts and the law. And today the court is listening, alert and silent. In the 800-page brief filed with the court by Mr. Frankfurter and Josephine Goldmark, of the National Consumers' League, there is, besides legal argument, the whole documented history of minimum-wage legislation throughout the world, answering doubts by the myriad voices of recorded fact. Such facts as these gave impact to Mr. Frankfurter's brilliant argument.

"This Oregon statute of February 17, 1913, was not drawn in the closet," argued Felix Frankfurter. "It was built on the solid basis of the experience of the state of Oregon. And the deferred decision of the court gives us a peculiar advantage in dealing with the case, the advantage that we can speak

from experience after the event instead of speculation before the event.

"It was drawn to meet certain definite ascertained public evils against which it was the state's responsibility to furnish safeguards. A large proportion of women in industry were found to be getting a wage below the living level. This was not merely the concern of some underpaid Susie or Lizzie, but the concern of the state, which must in the end pay the deficit between wages and cost of living. The grave consequences to the public health, the general lowering of standards, the resultant drain on the taxing resources of the government gave indubitable grounds for state action. Senator Fulton has said that there is no relation between wages and health. Let General Gorgas, one of the foremost health authorities of this nation, answer that. General Gorgas says 'that he never could have achieved his sweeping reforms in health and sanitation without the raised wages that made better standards of living possible.' Official reports from state after state, from leading health experts throughout the country, make the inevitable connection between conditions of bad health and the wages of women.

"This situation is an indictment of our whole economic system. A woman, my opponent argues, gets what she is worth and is worth what she gets. Ah, your honors, life is not so simple as that. On examination, the theory that wages are governed by an inexorable law of supply and demand yields to a recognition of the chaotic lack of wage standards in industry. Establishments paying high wages flourish side by side in the same industry with establishments that sweat and underpay their workers. Lower wages may indicate lack of standardization quite as often as lower value.

"Faced with the grave public evils arising from the underpayment of women in industry, Oregon might have done any one of several things: She might have taken the attitude of lazy fatalism; she might have said, as is constantly said by the opponents of minimum-wage legislation, these ills are the inevitable accompaniments of industry; she might have frankly adopted a state subsidy for industry; she might have relied on the slow but sure forces of education; or she might have followed the lead of Massachusetts, which looks for the enforcement of the minimum wage to public opinion and not to statute.

"But Oregon looked about the world and chose a different way. She saw the system of wage boards introduced in Victoria in 1896 renewed year after year and extending its success throughout the Australian commonwealth. She looked to England and saw her first somewhat tentative introduction of the system spreading throughout some of the greatest industries of the nation. Here was Oregon's approach to her trial of the minimum wage, not theory or speculation. She took advantage of the slow march of experiment in industrial communities. Oregon was entitled to build, as she did build, on the experience of the world.

"And in Oregon the results of the earlier experiments were verified. Did the minimum wage operate to bring about the displacement of women in industry? Did it operate to pay the minimum to the lazy and inefficient? The answer is that it has not. From all over the world testimony is given of the heightening of efficiency brought about by the minimum wage. It is given in the Australian answers to the queries of the New York State Factory Investigating Commission; in the careful English studies of economists and manufacturers such as Tawney and Rowntree. 'Mankind is as lazy as it dares to be.' The minimum wage operates as a stimulus to efficiency on the part of both employers and employes which is nothing short of inspiring. On the side of the employers it stimulates invention, management, a diminution of waste, a take-up of slack that makes directly for wealth. On the employes' side the raised wage, toning up physical and social conditions as no other means can do, results in greater personal efficiency and hence in increased output.

"If the means then taken by the state of Oregon are 'appro-

private' to insure her legitimate end, we now come to the final question: Are these means prohibited, and do they consist with the letter and spirit of the constitution? The due process clause of the fourteenth amendment is the only obstruction alleged by opposing counsel to the police power exercised by the state of Oregon. Has Oregon deprived Stettler or Simpson of life, liberty, or property without due process of law?

"It must not be forgotten, your honors, that the due process clause consists of two questions: the question, first, of deprivation, and second, of justification. You have only gone half way if you have proved that a deprivation existed. The question is: was there justification? What is due process? In declining to define it, I do not believe that this court enunciated a rule of timidity, but of necessity. You cannot put due process into a formula any more than you can put the future into the formula. Two ideas, however, seemed to dominate the court's conception; the deprivation must not be arbitrary or wanton, and it must not be spoliative. The question of its limits has been wrongly raised; it should be not *where* are you going to draw the line, but *how* are you going to draw the line? What are the standards, what the approaches we must make before saying to the state, yes, you may go thus far?

"What is the liberty of which Stettler and Simpson claim they are deprived? Did Oregon say that no one could work for less than \$8.64? No. She enacts this only for the experienced worker of ordinary ability. Oregon says in effect: 'You must pay the cost of your employe's labor or you must get license from the commission to pay her less.' The *liberty* they complain they are deprived of is the liberty to refuse to go before the commission, in case Simpson is outside the \$8.64 class, to get permission to employ her at \$8. What *property* deprivation does Stettler complain of? He says he will lose his business if required to pay \$8.64 to his working force. For all we know, and in the absence of any proof to the contrary, Stettler during these three years may be making more money instead of less under the minimum wage. There may have been actual increase of wealth through its stimulation of efficiency and management. Stettler, in short, is asking the court to guess at a result which may be wholly falsified by the present fact.

"But let us make a generous assumption. Let us assume, in the absence of evidence, that Stettler cannot employ this very girl at \$8. What is the state in effect saying to him? You shall not use all her working energy unless you pay her the cost of producing that energy. You shall not employ Simpson unless you pay the price of food and lodging to keep her going. It ultimately comes down to that. That is why Stettler and not John D. Rockefeller should pay, because Stettler has the use of all her working power and John D. Rockefeller has not. Someone must pay the cost of her labor, and self-evidently it must be the man who profits by it.

"Why is the state poking its nose in? Because if there is a deficit the state must in the end pay the bill. Recent reports of local government boards in Great Britain show with almost startling clearness the connection between low wages and public expenditures in the remarkable fall in poor rates during the war through increase of wages and decrease of unemployment. And the interest of the state is involved not only in

direct public expenditures, but in the deterioration of its human stock. The cost of the deficit between \$8.64 and \$8 is taken out of the health and stamina of the workers, who, in the aggregate, make up the state.

"Again it is the state's interest to secure fair and prevent unfair competition? Where bargaining power is weak the market price of labor may represent, as Balfour said in the House of Commons, 'a forced sale of value,' and not any true competitive value. 'Interference,' said the Bishop of Southwark, speaking of the same class of sweated workers—'interference is their only hope of freedom.' And by fixing Simpson's wage the state moreover acts in the interest of the fair employer. The great testimony to the success of the system is the gradual but sure support of manufacturers in states and countries where it has been tried. Oregon employers say that it throws the weight of the state's authority behind their own best standards in industry.

"There is a shallow current opinion, your Honors, to the effect that the constitution prohibits any touching by law of the wage relation. This is absolutely without foundation. Four times at least this court has in its decision touched the wage relation because of the public interest the cases involved. In the truck acts as to medium of payment; in the McLean case regarding method; in *Mutual Loan v. Martell*, regarding assignments of wages; and in the New York Erie case as to time of payments, this court allowed the state's interference in the wage relation. In all these cases there was real diminution of liberty, but the court held the public interest paramount. The wage relation is not in itself included in, nor is it immune from government action. It is protected only by the broad, permanent principles of the due process clause. This field of governmental action must, like others, be justified by public ends, and the question must be considered in each specific case.

"The minimum wage is not a panacea. Oregon may be wrong. Massachusetts and Minnesota and Arkansas and Nebraska and California and Colorado and Washington and Wisconsin and Utah may all be wrong. Yet they built on experience; they used their best wisdom to meet grave public evils. The right to trial in error is one of the deep rights on which our dual system of government is based. Oregon is entitled to see how far the means she has taken may remedy the evils before her. All we ask this court to say is that Oregon may be right."

Mr. Frankfurter's persuasive reasonableness makes it a bit difficult to do justice to the oratory of Rome G. Brown, who follows him and closes the plaintiffs' case. His attack on the minimum wage as a thinly disguised socialism, his view of Oregon as the snake in our industrial paradise whose defiance of constitutional rights has precipitated "this new and revolutionary labor legislation, this theory that strikes at the basis of our government" seems a little fanciful.

Father Ryan, whose well-known book on *The Living Wage* Mr. Brown paused to attack, made after all the final instinctive comment: "Very interesting, Brown, very interesting," he said cordially, meeting his opponent after the hearing, "but all wrong, of course!"

The Children's Bit in the War¹

By Winthrop D. Lane

OF THE SURVEY STAFF

IT is the pride of nearly every man and woman in England today that he is doing his "bit" in the Great War. The sense and reality of patriotic service are not left alone to those who face danger at the front. The worker in a munitions factory, the member of a volunteer training corps, the woman who gives her days that one man more may be released, the head of a small business on which the comfort of households depends, the last support of a family already shaken by the loss of men—these are a few who regard their work as no less vital to the national defense than the more spectacular grappling with the enemy away from home.

Lesser services, too, bring their praise and satisfaction. Confiding savings to the government is one of these, economy another. To forego accustomed holidays is regarded as a gift to the nation, and evening dress is an extravagance not always deemed in good taste. Families and gentlefolk are becoming less dependent upon hire for getting things done. Even the maid in the house I occupied during the owner's absence accepted the burden of preparing my breakfasts throughout her promised vacation with a half-expressed sense of contributing something to the national effort, as if she were strengthening the friendship between her own country and the great neutral nation to the west.

To this empire of sacrifice the children of England are contributing their part. It is a forced and melancholy part. Unlike many of their elders, the children have not been allowed to choose the form their "bit" shall take, nor have they the satisfaction of knowing the relation between their loss and the nation's need. That many of them, like children everywhere, do not regard their sacrifice with regret renders it none the less costly to them.

Education in England is at a standstill. Like every peaceful activity of government, it has been thrown into the crucible of war economy, and more than others it has come forth a scorched and shrunken thing. Thousands of children are marking time, other thousands have been turned prematurely from the school door. In some localities three-fourths of the total war savings in public funds have been effected in education alone. "A large portion of our elementary school system," said Sir James Yoxall in Parliament, "is in ruins—I will not say as desolate as the ruins of Louvain, but there is to some extent a likeness."

British Distrust of Education

PROMISES have been plenty that everything taken away shall be restored when war is over. Not all Englishmen, however, are hopeful that this will or can be done. When teaching staffs crumble away, when buildings are no longer repaired and new building is stopped, when schools are turned into military camps and hospitals, when classes are enlarged, school feeding stopped and medical attention suspended, when children of twelve and thirteen are sent into the fields to work, friends of education see a menace to the future of youth that may not be removed as simply as it came. England, in a way of which her economists speak little, is already "making the

next generation pay." The irony is that she is doing this at a time when the early training of youth is seen to have a special value, and when she herself is caught in a vague and violent passion for something better educationally than she has ever known before. She seems not to realize that once this man-killing war is over, she, like others of the nations of Europe, will have to go forward on the feet of little children, and that it ill behooves her now to make the way rough and the travelers ill-equipped.

Her attitude is made easy, of course, by her own chronic distrust of formal intellectual training. "The disposition to consider intelligence a peril," says John Erskine, "is an old Anglo-Saxon inheritance," and he quotes Kingsley's line:

"Be good, sweet maid, and let who will be clever"

as presenting the "startling alternative which to the English, alone among great nations, has been not startling but a matter of course."

Schools Still a Dull Subject

PRESENT-DAY evidence of this same philosophy is not lacking. Only a few months ago a leading English newspaper, contrasting German and English educational methods, declared in favor of the English on the ground that "the true aim of education is the beauty and perfection of the soul, and not merely the production of the mechanism of efficiency."

When our forefathers were busily constructing a system of state-supported and compulsory schools for the children of all people, England was still embroiled with the religious issue in education, from which she is not by any means free today. It was not until 1870 that elementary training, except in private schools, ceased to be supplied mainly by religious organizations. Prior to that the only local government agency having to do with education was the poor-law authority. Not till ten years later did the country have, as a result of one of those prodigious parliamentary acts that have caused the English educational system to be a thing that only courts and lawyers can understand, a truly national system of schools based on adequate facilities and universal attendance. And only twenty-six years ago, in 1891, did public elementary schools cease charging fees and provide free education to all.

Meanwhile there has continued a persistent belief that education is a dull subject and that too much mental training, especially for children of the working classes, is not wholly desirable. The educational debates in Parliament early in the present war were a sure means of emptying the house. The presidency of the Board of Education, the highest government school office, has been notoriously filled by men with no special qualifications for the place and has had six incumbents in the past ten years.² When the coalition cabinet was formed in June, 1915, a man already acting as labor adviser to the Ministry of Munitions was assigned to the education post, though he continued to spend most of his time adjusting difficulties among working folk. His resignation last August was followed by the appointment of another overworked member of the cabinet, Lord Crewe, who was acknowledged to be a mere stop-gap selection.

¹ This article is based on observations made in England in August and September, 1916. It remains an accurate statement of England's war policy toward education.

² The latest appointment by Lloyd George makes seven. The present incumbent is, however, an educator. See page 527.

This is the attitude that has made possible the great war economies of the past two years. It is difficult to believe some of the things that have been said in justification of these economies. A resident of Birmingham wrote to the *Daily Mail* shortly after the war started: "Only a few weeks ago I saw several men engaged in repainting the outside of a council school in this city. Surely such work as this could be left until the war is over! There is no reason, too, why teachers could not devote half of their time in making munitions of war, and the schools be closed at midday until the war is over."

One cannot feel sure that this is an extreme view. We find the editor of an influential school weekly roundly declaring that "the bedrock truth is that the people of London have no real belief in the efficiency or usefulness of education," and charging that "up to the present the London County Council have paid for the war out of education." Not only people identified with teaching, but those interested in social and industrial problems as well, seem to accept this statement as literal truth.

In England, as in this country, education is regarded mainly as a matter of local development and control. The "local education authority" is at once the hope and the curse of the English school system. This body, usually the county or borough council, is required by statute to appoint an education committee, which does most of the work. The country has not yet awakened to the enormous powers that recent acts have conferred upon the 319 local education authorities in England and Wales. In effect these authorities have daily under the eyes of their officers the whole child population of the nation. They are required to provide and maintain enough elementary schools for all children of school age within their districts. They must enforce the attendance of these children. They must provide periodic medical inspection of all children, and in particular they must deal suitably with those who are mentally defective and with all blind and deaf children up to the age of sixteen.

They have large optional powers in addition. Indeed, they are at liberty to provide anything that can be included within the term education, without restriction of age, sex, kind, grade, topic or amount. They may establish and maintain day-feeding schools, vacation schools, open-air schools, schools for delinquent and truant children and for children suffering from serious parental neglect. They may give meals for necessitous children in all their day schools, even on Sundays and holidays. They may conduct school clinics, and may appoint not only teachers, but doctors and nurses and any other officers necessary to the work. They are, in short, the local community agents for nearly everything that concerns the child of school age. For all these tasks they impose their own school taxes, called rates, and may even borrow money. There is no limit to their expenditure in the aggregate (though there is on some items), and it rests only with the members of the council to put the law in force.

First Effect of the War

OVER the obligatory parts of this multifarious activity the Board of Education exercises supervision and inspection. This board is the highest educational authority in the country. Its president sits in the cabinet. The board's powers of compulsion over local authorities are, however, few. Its main duty is the disbursement of subsidies, or grants-in-aid, from the national treasury to the local authorities. Before paying these grants, however, the board must insist that schools conform to its stipulated requirements, and its own inspectors see that

this is done. These grants from the board meet little less than 50 per cent of the total cost of elementary education in England and Wales.

One of the first effects of the war upon education was to withdraw able-bodied male teachers from the schools. Whether a schoolmaster would be likely to perform more effective public service by staying at his school than by joining the forces of the crown was a question that seemed to trouble few people. If it was raised at all, it was quickly answered. Teaching staffs were hastily rearranged and the whole service adapted to the end of setting free an ever increasing number of men for military service. The president of the Board of Education wrote to all engaged in the public service under him, emphasizing the need for further sacrifices to increase the army. The teachers themselves accepted this view of the nation's necessity and asked for one special consideration only, namely, that such of their number as should be found unfit for service might be allowed to return to teaching instead of being put at other duties more directly concerned with war.

Inroads on Staff

THE desired result was promptly achieved. Twelve thousand teachers enlisted before the war was six months old. When conscription was adopted the number had risen to 20,000. It is now about 22,000. This is half the total number of men teachers in England and Wales, and is generally admitted to constitute all that are eligible for service.

For the sake, therefore, of putting a force of this size into the field, England has stripped her elementary schools of nearly all her male teachers in the prime of vigor. This is more serious in England than it would be here, for there the ratio of men to women teachers is larger than here, being about two to three.

Against this loss many persons are claiming there will be a special gain. It is argued that the heightened repute and status enjoyed by the profession as a result of its ready reply to the nation's call will be an asset to the whole education service in the future. Unquestionably the country has been agreeably surprised by the response of its schoolmasters. Whether that gain will be sufficient to justify the loss of so vital a part of the teaching staff at a time when the most effective child-training possible needs to be done, is a question that cannot be answered today.

But the departure of teachers for the front is not the only inroad made upon the school force. There has been deliberate cutting of staff. Since economy is easiest when done by formula, some authorities have drawn a sharp rule and in all schools where there are eight or more teachers the number has arbitrarily been reduced, the burden of extra classroom work being thrown upon the head-master. The Board of Education itself has definitely advised local authorities "to reduce the staffs as much as possible while still keeping up to its [the board's] code requirements."

A number of local authorities have so far followed the letter of this suggestion as to refrain from employing permanent teachers, who are paid according to a rising scale of salaries, and to hire instead "supply" teachers, who are paid by the day. The advantage of these is that not only is their wage less, but they do not have to be paid for holidays—a saving that looms large to those who can see little difference between one teacher and another.

The places of the soldier-teachers and others who have left are taken for the most part by two classes of substitutes: married women who had taught before marrying, and men and women who had reached the age of sixty-five and retired on

pensions. Neither of these classes is, of course, as a whole, abreast of current educational thought and methods. Still less so are the great numbers of supply teachers already mentioned, who are for the most part well-educated themselves, but with no experience in teaching. The result of all these changes is not merely a shift in the personnel of teachers—it is a direct impoverishment of education.

These inroads have been made chiefly for the sake of a larger army. Even more provocative of complaint have been those made for the sake of economy. England had scarcely entered the war before the watchword of governmental activity became "retrenchment." Everyone saw an immediate necessity for saving money. Government departments that ordinarily urge upon local officials the virtues of open-handedness and progress now overwhelmed them with arguments for stinting. In the educational field the reduction of the school rates became of transcendent importance; from the offices of the board there issued circular after circular calling attention to the opportunities for service in this direction. To make the matter still more impressive a treasury committee on retrenchment was appointed in July, 1915, the purpose of which was still further to press down the lid of public frugality.

Government for Economy

IN THIS general cry for economy it would have been easy to say: "It is true that we are at war. It is true that the first consideration of both public and private effort should be to win the battle. For this purpose money is necessary, and some of it must be saved from other work. But since we do not intend to give up all domestic service carried on in time of peace, we shall do well to select the fields for retrenchment carefully. Some service is more dispensable than others. Some bears a relation to the comfort of the moment, some is indissolubly bound up with the future of the nation. Then, too, history shows that activities once foregone are slow to be resumed. Let us save first, therefore, on the least important things. Let us touch last those services that will become most vital when the tasks of reconstruction press upon us for solution. Education is one of these. If we can win the war only by closing every school door in England, let us close them. But let us economize heavily in other directions first. Let us say: 'The schools shall be privileged. They shall be among the last to know that England is in need.'"

Individuals, indeed, did take this view. In one of the last speeches before he died, Keir Hardie said in the House of Commons: "Gentlemen are able to look at this question from an abstract point of view. They may have sympathy for the children, but they do not consider education from quite the same standpoint as those of us who have had only the most limited education, while some of us have never spent a day in school in our lives." Arnold Bennett also came to the rescue of the schools when he warmly attacked the London County Council for "specializing in educational economy" and "even making a parade" of it. Education, he said, "is the very last thing that we ought to economize in."

Government, however, took a different view. England is said to have been won to conscription largely by the argument of "fairness," the notion that it is only just that burdens willingly borne by some should be imposed upon others. Similar reasoning seems to have prevailed with regard to the conscription of finance. No reasoning that education should not bear the burdens of economy equally with other public services seemed to carry weight.

One of the first economies was the complete stopping of all new building and improvement. Normally local government

authorities borrow about £3,000,000 (\$15,000,000) a year for the erection of new school buildings and the alterations of old. Since England has developed no duplicate school plan like the Gary system, this new building has been necessary to keep pace with the growth of the school population. Yet not even this has sufficed. Overcrowding has been an increasing menace for years, and the size of classes has become alarming even to the public. In London the estimated number of children requiring school places when the war began was 768,000, the existing accommodation 721,000. Outside of London classes average fifty pupils; in some places even sixty. A demand to reduce classes and eliminate overcrowding had gained promising headway before the war; indeed, a definite program in London for the reduction of all classes in upper schools to forty and in infants' schools to forty-eight had been presented to the education authority and had been agreed upon as desirable.

All of this has been stopped with the stopping of new buildings. Instead, classes have increased and overcrowding continued, aided by the reductions in staff. When it is remembered that many classes are in the hands of inexperienced teachers, the harm to effective education can easily be seen. Even the Board of Education unwillingly admits that the situation is likely to become serious. "We have . . . found it necessary," it declares, "in certain cases to acquiesce temporarily in the continuance of unsatisfactory conditions which in normal times would call for speedy removal."

In still another way the accommodation for children has suffered. Most school buildings are excellent places for billeting troops. Light, airy, well-ventilated and equipped with adequate sanitary facilities, they are pre-eminently adapted for housing many people over long stretches of time; often only a little modification is necessary to make them into first-class military hospitals.

The military authorities were quick to realize this. In the early days of the war schools were seized with little or no warning and the children thus displaced were either abandoned temporarily to forced vacations, were accommodated in other buildings, public and private, or were sent to knock at the doors of schools already filled. Sometimes even munition workers, outrunning the housing accommodations of their neighborhood, were allowed to occupy schools until other residence could be provided. The government's own reports declare that during the first thirteen months of the war one school building out of every twenty in England and Wales was in use for a time for military purposes. In out-of-the-way areas this use was likely to be small, but not a few urban and central districts found themselves deprived for weeks and even months of accommodation for more than half of their school populations.

Use of Schools by the Military

THIS is frankly admitted by the government itself. The report of the Board of Education for 1914-15 mentions three such instances: one area in which seven large schools, with an average attendance of 9,000 out of 26,000, were taken for the use of troops; another in which 17,000 children out of 41,000 were displaced; and a third in which thirteen schools were taken in whole or in part and 11,200 children, "more than half the total average attendance of the borough," were left without accommodation. This occupation by the military was not merely temporary, though it is one of the results of the war that the board is not gathering statistics and so it is impossible to say how prevalent the occupation still is. But one frequently hears of localities where one or more schools

have been permanently converted into hospitals, or are still used for housing troops.

Among the expedients devised for meeting this emergency were part-time systems and open-air classes. A "double shift" arrangement was instituted, whereby one set of children not ousted by the military shared their building with another set who were ousted, the two groups alternating in attendance and each meeting twice in one day. Another arrangement was the "single shift," which provided for one meeting each day. Both of these mean, of course, a loss in the total number of school hours. How many children have been subjected to part time it is impossible to say, but the number has been so large that the relative merits of the "double" and "single" shift systems have become a hotly debated topic among teachers.

Open-air classes have increased also as a result of this occupation of school buildings by the military. These, of course, may be highly desirable, but the trouble is that they are too likely to be organized half-heartedly, as a choice among evils rather than as things good in themselves. In Nottingham, for example, the regulations provide that classes shall be held in the "various open spaces in the town, in fields adjoining the schools, and in the school playgrounds, especially where awnings have been provided."

"These spaces," says the report of the Nottingham Education Committee, "are utilized as far as possible by schools in their neighborhood, some schools going for full half-day sessions, and others only for 'class' periods. Teachers of schools quite near the open spaces are encouraged to take out infant chairs, whilst those further away arrange for the children to bring out disused modeling or drawing boards, their cloaks, folded newspapers, etc., to serve as seats. The Education Committee have also purchased several large waterproof ground sheets, each capable of seating six to eight children, and these sheets have been distributed to the various spaces for the use of classes meeting there, and some simple canvas deck chairs have been provided for the medical department's delicate children class. Where there are bandstands or other covered erections the Park Committee has allowed them to be used by the children, subject to the teachers concerned holding themselves responsible for their proper care."

Adversity is sometimes the mother of improvement, however. One instance of this is the "school journeys" that have been widely resorted to to fill in the time that cannot be spent in classrooms. A teacher in Manchester, who was forced by the military occupation of his building to find some other means of utilizing his pupils' time, took them on trips about the city, explaining to them the functions of different government departments, and other matters of civic interest, with the result that in six months his class was so much more alert and interested in its work than it had been before that he begged to be allowed to continue his journeys even after the school had been restored to its educational use.

Further Economies

ANOTHER item in the retrenchment program has been educational supplies. Six million children attend the elementary schools of England and Wales. For each of these the government normally buys text-books, necessary apparatus for science and other courses, and stationery. Many local authorities have not bought a single new book for the past twelve months. In some schools boys and girls segregated in separate departments are being compelled to use the same science apparatus. London, one of the chief exponents of this economy, has cut its expenditure on supplies from seventy-eight to forty-two cents per pupil.

Furniture is another item now bought sparingly, while many buildings are going unpainted and uncleaned. London is actually saving £71,590 of her original estimate of £75,950 for painting and cleaning in 1916-17; in repairs, also, she is cutting down her expenditure about one-third. A coat of paint is, of course, sometimes the best economy, and an exasperated educator has declared that what is really being saved by all these retrenchments is merely "the ha'porth of tar that preserves the ship."

Meanwhile the ship itself is being put through the scuttling process. Many important functions of the school have been abandoned or curtailed. Of most of these the exact extent of the scuttling is at present unknown; local authorities do pretty much as they wish and are not held to as prompt reporting of their acts as is expected in normal times.

Medical inspection and school clinics have almost disappeared in places. School dentistry has come under the knife and the supply of free eyeglasses has been reduced. School kitchens and cookery centers have been largely done away with and school laundries have been curtailed. Meals for necessitous children, provided to 420,000 in 1914, have been very largely eliminated, though this is declared to be due partly to the rise in wages and decrease in the number of families asking for such relief.

Economy and the Children

SPECIAL classes and instruction in particular branches have been cut down. Domestic economy and industrial arts have suffered. Evening schools nearly everywhere have been reduced. This again is explained to some extent by the decrease in pupils and teachers, many of whom have joined the army, but the argument of economy accounts for much of it. Almost every kind of special education has been skimmed on. The result, of course, is a great unevenness in what different communities provide for their children. Many of these services were initiated only after years of persuasion and effort. Now that they are lost, the effort to regain them may be as arduous as that to secure them in the first place.

But not only teachers, plant and service have felt the retrenchment axe. The children themselves have been directly touched. Their numbers have been thinned and the years of training of many of them cut short. Here we see in all its starkness the English apathy toward education.

For a notable pronouncement on the relation of education to finance, the world is indebted to England's treasury committee on retrenchment, already mentioned. This committee, appointed to recommend economies in all government branches, gave particular heed to education; no other service received half as much discussion in its final report. The committee made a careful search for points at which economy could be practiced with least disastrous effects, and its search was rewarded with a startling discovery. It learned that money spent on schools bears a direct relation to the number of pupils in those schools. "Fewer pupils," it declares, "mean in the long run fewer teachers and smaller expenditure on buildings, furniture, stationery, and all maintenance charges," and its conclusion is: "After careful consideration we have arrived at the conclusion that a really substantial permanent decrease in this expenditure [on elementary education] can only be secured, without a loss of efficiency, by altering the present school ages *so as to reduce the number of children in the schools.*" (Italics mine.)

The only remaining question was whom to exclude. The committee decided that it would be "contrary to the public interest to lower the leaving age," that is, to lop from above.

So it recommended lopping from below. School attendance is compulsory in England from five to fourteen, but children between three and five are in most places allowed to attend. There were 316,000 such children in attendance in England and Wales at the outbreak of war.

These children the committee recommended to exclude. "There can be little doubt," it said, "that money spent on younger children must in the main be wasted so far as education is concerned," and it was a more willing convert to the exclusion of these children because it "understood" that the Board of Education itself would not regard "the aggregate loss of intellectual training" involved "as a serious matter."

The recommendation was adopted and England thus gave up, at the behest of war economy, a large branch of educational service that she had thought well of in times of peace. Not all the "under-fives," as they have come to be called, were excluded. "Very poor town areas," where their exclusion and loss of a few hours' care each day away from their own miserable homes and environment would have been "prejudicial to their health and welfare," were exempted from the new ruling. Since *all* grants from the board in aid of the education of these children were stopped, however, the local authorities in even such localities have had a strong reason for closing the door to the under-fives.

The Most Insidious Attack

THE educational loss suffered by their exclusion may be problematical. They came for the most part from poor homes and received at school medical examination and treatment, in addition to food and a certain amount of kindergarten training. These things were thought important enough before the war to be encouraged and developed. It is not likely that the arguments for their abandonment during war were of much educational value, and it is true, of course, that they were abandoned at a time when mothers are away from home more than normally. Moreover, it remains a question whether they will be restored for years after peace has come.

There is still to be considered what is perhaps the most insidious attack that the war has caused upon education in England—insidious because of the quietness with which it has been and is being accomplished, and its probable enduring effect upon ideals. This is the relaxation of school attendance laws, the cutting short of the period of education for thousands of children, and the increase in child labor.

If you will take a map of England and draw a line from the mouth of the Humber to the mouth of the Severn, following the course of the rivers Trent and Avon, you will roughly set off to the south and southeast the chief agricultural counties of England. It is here that the large increase in child labor has taken place, though the increase is not limited solely to this area. Thousands of children thirteen, twelve, and even eleven years of age have been withdrawn from school to work upon the farms, either in place of adult agricultural laborers who have gone to war or into other employment, or to satisfy the ill-concealed desire of farmers for cheap labor.

Many of these children have been taken from school legally. The attendance laws of England and Wales are a curious and complicated patchwork; only a lawyer, it is said, can understand them. The governing regulation is an act of Parliament declaring that attendance shall be compulsory between the ages of five and fourteen, but local authorities can alter this rule; by passing by-laws, they can exempt children who have not reached fourteen. These authorities are required to exempt children over twelve years of age who have passed a prescribed standard of grade, though the authorities themselves

may fix the grade. Some have fixed it at the fifth, some the sixth, some the seventh (there are eight grades in an elementary school). About half of the local authorities exempt also children who reach thirteen and make a certain percentage of attendances, provided these children are "beneficially employed."

These are total exemptions. Most authorities permit, also, partial exemption from school attendance. The usual rule is that children must have reached twelve, must have made a certain percentage of attendance, and must be beneficially employed. When partially exempted a child may either attend school half-time, or remain away altogether for specified months of the year.

A special provision for partial exemption is contained in Robson's act, by virtue of which authorities may exempt children *between eleven and thirteen* if they are employed in agriculture and have passed a prescribed grade. This act was passed in 1899 and has been taken advantage of by most of the rural counties of England. Another special provision allows exemption to exceptionally bright pupils, and still another to exceptionally dull ones. The latter is known as the "dunce's certificate" and is frequently sought by parents who have lost patience with their children's efforts to gain an education.

All of these by-laws have the force of statutes. They make it possible for parents, children and the education authorities themselves to evade the whole spirit of the school-attendance law. The acts governing employment add materially to the confusion and bring the employer into the circle of those who are interested in getting around the requirements.

One formula for evading the law is known as the plea of "reasonable excuse." Any local authority who is satisfied that a child staying away from school has a reasonable excuse for so doing may refrain from prosecuting the parents. The "excuse" may be the family's need, or alleged need, of the child's wages; it may be anything the local authority regards as "reasonable." Though the legality of this practice has been called into question, its use is widespread and it has proved especially fruitful since the war gave a bad odor to many niceties of interpretation.

Not long after the war began a dearth was felt in the ranks of employes in many trades. Immediately a cry was raised for a relaxation of the school-attendance laws. Factory managers wanted boys to take the places of men who had gone to the front or into munition plants. Farmers wanted boys to help with the milking, to tend sheep, to feed stock, to scare crows from the spring wheat, to do innumerable odd jobs. Employers with deliveries to make wanted boys as messengers and drivers. Butchers joined with hairdressers in the cry for more juvenile labor. Firms engaged in government contracts represented the urgency of their work as reasons for employing boys, while the Amalgamated Association of Operative Cotton Spinners, always upholders of part-time labor for children under fourteen, increased their demand that both full-time and part-time leaving ages be lowered "during the continuance of the war."

The Demand of the Farmers

THE farmers' demand was the most insistent. Now, the English farmer is doubtless a maligned individual. We may doubt, for example, whether it be fully true that he finds, as one member of Parliament phrased it, a boy's chief usefulness to be that "he is handy and can be kicked." Nevertheless, a high degree of conservatism, especially in regard to new farm methods and machinery, seems to be one of his admitted char-

acteristics. He has always entertained, too, a low opinion of those meddling acts of government that have made it harder and harder for him to employ youthful assistance.

"A boy," said a farmer at an agricultural meeting at Lewes, East Sussex, shortly after the war began, "ought to learn all he wants to by the time he is twelve years old, and during the next two years he will learn more under a farmer than he will under a schoolmaster."

At another meeting a "well-known Westerdale farmer" declared that "boys were being over-educated and showed a disinclination for farm work." "To prohibit the employment of scholars on the land," he said, "was taking away from farmers the supply of labor at its source." Remarks of this tenor could be multiplied by the score.

To all of these demands the government might have turned a deaf ear. Unfortunately, it did nothing of the sort. The local education authority, to whom one would naturally look for a championing of its own by-laws, was comprised in many rural districts of a large representation of farmers or of those who sympathized with the farmer's viewpoint. Committees so composed were ready enough to let down the bars in the matter of school attendance. Their only concern was the attitude that might be taken by the Board of Education. It would be unfortunate if that body should disapprove and manifest its disapproval by withholding funds.

Impotence of the Board

BUT the board soon set the local authorities at rest. To all inquiries it gave them the very clew they wanted. To the County Council of Cambridgeshire it wrote: "A local education authority is under no obligation to take proceedings in respect of the non-attendance of a child at school if they are satisfied that there is a reasonable excuse for non-attendance." To the Leicestershire Education Committee it wrote: "The board have no doubt that in the present emergency local education authorities will exercise a reasonable discretion in any case where it is really essential to utilize the services of children of school age in agricultural operations." And so on. The board merely told the local authorities that the whole matter was up to them. This, of course, was literally true, but the board need not have said it. It could have made a strong plea from the first against any relaxation of school-attendance laws and could have urged upon local authorities the increased importance of a well-educated citizenship for the future. Had it done so, the subsequent flocking of children into industry would never have taken place. Instead the board only emphasized its own impotence.

But the board was not the only government power that gave a clew to the farmers. Less than a month after the opening of the war, Mr. Bathurst, representative for Wilton, asked Prime Minister Asquith if the government would not suspend "such provisions of the education acts as would enable boys over eleven years of age in purely agricultural districts to furnish assistance."

"The matter," said Mr. Asquith, "is well within the discretion of the local authorities, who have already had their attention called to it by the Board of Education."

"Are we to understand," persisted Mr. Bathurst, "that if the local authorities took such action they would not meet with the disapproval of the Board of Education?"

"Yes," said the prime minister.

What, then, has been the extent of this exodus from school? We can only arrive at an estimate. The government count includes only the relatively small number of children formally exempted and does not include a much larger number who

have just as certainly stayed away but who, by virtue of the device of "reasonable excuse" already mentioned, have avoided the inconvenience of formal exemption.

On May 31, 1916, the date of the latest government report, the number formally exempted was 15,753. These, under the law, were normally bound to attend school but had been excused to enter agricultural employment. Estimates of the number not formally exempted but nonetheless remaining away vary considerably. Such different observers as Mrs. Sidney Webb and Sir James Yoxell, the latter an educator in Parliament, agree that the total is not below 50,000 or 60,000. Others have placed it as high as 200,000. These figures refer to the summer of 1916, when that year's harvesting season had scarcely begun. Making allowance, therefore, for the probable increase since that time, and including both those formally exempted and those who merely stay away, a conservative estimate of the number of children prematurely excused from school for farm work would be no fewer than 100,000.

The greater number of these are boys. Of the 15,753 formally excused, 14,441 were boys. If the same ratio holds good for the whole 100,000, only about 8,000 were girls. More than half of those formally excused were between twelve and thirteen years of age. If the same percentage again holds good, there are over 50,000 boys and girls of that age working on English farms because of the war, and between 3,000 and 4,000 eleven years old.

This policy of exemptions has not lacked, of course, strong defenders. One member of the House of Commons put the argument dramatically when he said: "The question is how we are to produce the food so absolutely necessary in this war period." The dearth of agricultural laborers is declared to be a real menace; England, it is argued, must depend upon her farms for all they are capable of producing; the only available labor supply is that of the children; the need is but temporary and exemptions will cease when the war is over; and, finally, the country faces a crisis and it is poor patriotism that will not subordinate every other issue to that.

The answer made by the opponents of the policy takes the position, first, that no crisis has yet overtaken England that makes the resort to child labor necessary on so large a scale, or as a first and sole measure of relief; there are other expedients that ought to have been tried first. One is increasing the wages of adult agricultural laborers. Farm help, it is contended, is notoriously underpaid. Yet where wages are highest, as in Scotland and the north of England, the least use of child labor has occurred. This shows, declare the opponents of exemption, that a close relation exists between adult wages and the cry for child labor and that no case for the employment of children can be made out until adequate efforts have been made to attract adult labor. Moreover, it is pointed out that in Norfolk, where under a recent agreement overtime by adult laborers has to be paid at the rate of 6d an hour, almost no overtime has been worked since the war began. Yet more children have been employed by the farmers of Norfolk than of any other county in England except one. Is it not better, it is asked, that able-bodied men should work a little overtime at 6d an hour than that children of twelve and thirteen should have their education stopped?

Other Expedients

ANOTHER expedient suggested by the friends of children is that other sources of emergency labor be tapped first. One of these is the Belgian refugees. Another is the adult women

of England, who have gone into almost every employment. Cannot able-bodied women, it is asked, be of as much service to farmers as boys of twelve and thirteen? Again, there are the labor exchanges, which farmers have always neglected in the past and which they should now be made to use. Unless these various methods of meeting the shortage of agricultural labor are fully tried, say the opponents of child labor, not only does no ground exist for resorting to the use of children, but the farmers of the country cannot escape the charge that their real reason for wanting boys is the boys' cheapness.

If a need for child labor actually exists, say the opponents of the policy, if England must be saved from a threatening shortage of food by her children of twelve and thirteen, why place the burden exclusively upon the boys of the elementary school? These are the schools of the poor; they constitute the only opportunity most of the children of this class will ever have for securing formal training. Why not take boys from the secondary schools also, boys of better stock, better able to stand hard work? These boys, older for the most part than those now being taken, will be of more service to the farmers and will stand a better chance of resuming their education when the need for their services is gone. Why not let there be equality of sacrifice, if sacrifice there must be? Why not apply the argument of "fairness" here, too?

Finally, it is pointed out that no assurance exists that the use of child labor will cease when the war is over. Farmers and other employers will once again have tasted the sweets of cheap juvenile help. Local authorities will have found the ease with which by-laws can be changed to meet desired ends. Then, too, the shortage of adult labor may not cease at once when the fighting stops; many of the returning soldiers will, in all probability, have lost their desire to live a rural life. Whatever method has been taken of meeting the need will, therefore, in all likelihood be continued. These are further reasons adduced for finding other means of keeping up the farms than the use of children.

How many children have been withdrawn for other than farm work it is again impossible to say. The numbers are smaller and no count has been kept by the government. The London education authority, we know, has turned a firm back on all demands for exemption. But complaints that other urban areas have been less resolute are frequent, and munition factories are said to have been a prolific cause of exemptions. For accurate information we shall probably have to wait until the end of the war.

What the Saving Has Meant

Such is the story of what the first two years of the war have meant to the schools and school children of England. When the full history of England's domestic policies during this time of stress comes to be written, an important chapter will deal with the military advantages achieved by such economies as these. The future historian may be in a position to tell how much money the nation actually added to her war chest by retrenchments in education. Today such a computation is impossible. Over three hundred local authorities have saved how and where they saw fit, and no one is gathering the reports.

Had England saved her entire educational budget she would have been in a position to prolong the war, at the rate it was costing her at the outset, nine days. At the rate it is costing her now, she could prolong it six. In reality she saved, of course, a very small fraction of the budget. London, after paying the salaries of teachers who joined the army, succeeded in saving one-fifteenth of her normal expenditure. If this fraction holds good for the nation, educational economy may be regarded as having added fifteen hours to the fighting life of England's armies.

But we have not exhausted the ill effects of England's war-time educational policy. It is pertinent to ask what effect these departures from normal standards are likely to produce upon the ideals and character of children, quite apart from the impoverishment they bring to formal training. Would it be strange if the children of England, seeing this economy on every hand, seeing deterioration in the very rooms they occupy and the tools they use, as well as a lower standard among teachers and a relaxed attendance law, concluded that a lower estimate was placed upon their education than they had been led to suppose? Would it be strange, too, if after they had formed that conclusion their own standards of accomplishment were to suffer?

The Effect on Conduct

STRIKING evidence is not lacking that something of the sort has actually occurred. Seventeen of the largest towns in England have made a war-time study of "juvenile depravity." By comparing the records for the three months from December to February, 1914-15, with the same three months for 1915-16, these towns found a total increase of 34 per cent in "the number of offenses by children and young persons." The increase was marked in each of the seventeen localities. Larceny was the offense most noted, though there were increases also in assaults, cases of malicious damage, gaming and "offenses against the education acts."

This matter was regarded as of sufficient importance by the home office to cause a warning to be sent to local justices throughout the country. "It is reported," says the letter of the home office, "that in some places boys are running wild owing to the work of boys' clubs being crippled by want of staff. Many of the men who usually give time to these clubs are now serving with the forces, or engaged in munition work. The loss of the influence on the boys of the club and its interests is very great, and the secretary of state thinks that if the justices could induce suitable people to engage in this work, and so keep available places to which boys can with advantage resort in the evening, the benefit to the boys and to the public would be very great."

The general unsettlement of life in war time, the weakening of parental control caused by the absence of many fathers and preoccupation of mothers, and even the growing influence of the "cinemas," have been assigned as other reasons for this "wildness." One cannot escape the suspicion, however, that if the matter were looked into more closely the occupation of schools by the military, the reduction of school hours for thousands of children, and the other respects in which the whole process of education has been cheapened might also be found to account for not a little of it.

COMMON WELFARE

HELP FOR ENGLISH SCHOOLS FROM AMERICA

WHATEVER England may have been willing to do to her schools and to those who fill them, as a measure of war economy [see *The Children's Bit in the War*, page 520], some idea of her present state of mind with regard to her educational methods may be had from the phenomenal reception accorded *Eclipse or Empire*, a recent book picturing the startling decline of British invention, industry and commerce in the past forty years, as compared with those of the United States and Germany.

From almost every field of trade and industry this book brings together facts showing that most of the inventions, new ideas and developments that have been given to the world during this period have come from other nations, and that their value has been more quickly appreciated and put to practical use in foreign lands. Formerly, it is declared, the fact was otherwise; the "inventive genius" of the British race once surpassed that of all other peoples.

The reason for this decline is declared to be faulty education, or rather "the absence of a scientific education among the young in all grades and conditions in this country." From this the book goes on to suggest drastic changes that will have to be made in England's educational system.

Eclipse or Empire reached a sale of 73,000 copies in six weeks, said to be the largest sale ever attained by an educational book in England. Its authors are a prominent educator with a radical point of view and a manufacturer from the north of England.

The educator, Herbert Branston Gray, is now in this country to spend several months in finding out what the United States can teach his countrymen in their present educational crisis. He was here in 1903 as a member of the Mosely Educational Commission. While holding no positive commission from his government, Mr. Gray comes with a tacit understanding with the British Board of Education that if that body approve his recommendations, it will

adopt them and will print them as an official blue book.

For the first time in its history this board has as president a man with a technical educational training and experience. When Lloyd George took Herbert A. L. Fisher from the vice-chancellorship of the University of Sheffield and made him president of the highest educational body in England, with a seat in the cabinet, some people began to ask if a new day was dawning in the English government's attitude toward education. Mr. Fisher is less a classicist than a modernist in education and is credited with being an imperialist in politics.

"Throughout England," said Mr. Gray to a representative of the *SURVEY*, "men's hearts are melting in regard to all the old facts of life. Even of educa-

tion is this true. The two old universities of Cambridge and Oxford, with their emphasis on Latin and Greek, have 'set the clock' for our secondary schools for generations, and these in turn have done the same for the elementary schools. When I attended Winchester forty years ago, twenty-six hours a week out of thirty-two were devoted to Latin and Greek. The remaining six hours were bestowed upon the rest of the field of human knowledge. Of course it is not as bad as that now, but we are still too much dominated by the classical ideal.

"Education ought to be a struggle, but it ought not to be a hopeless struggle. That is what the classical ideal makes it for many boys. We have utterly forgotten, if we ever knew, the biological principle that the higher the type of the organism, the slower is the process toward maturity. We have based our education upon a competitive-scholarship system that aims to select for advanced training the most precocious boys of twelve to fourteen years of age. Now biologists know that precocity at that age may be evidence of a lower rather than a higher type of organism. Any attempt to hasten the process of growth during pubescence is likely to result in permanent injury. Our system, moreover, has made necessary serious mental overstrain between eight and twelve. A money prize forming the bait of our so-called public schools, and being a direct temptation to indigent parents, is nothing less than a dangerous gamble with immature life—a plucking of the fruit before it is ripe.

"It is small wonder that we hear of a certain proportion of candidates, successful at twelve to fourteen, beginning to drop off at fifteen, eighteen, twenty-one and twenty-four, according to the comparative strength of their physical constitutions and, after the age of thirty, being no more seen in the ranks of strenuous men.

"But now we are caught in a most hopeful educational unrest. The war has greatly hastened the realization of many Englishmen that we must, in some measure, supplant a classical with a sci-

WARNING TO CITY CLUBS

PHILADELPHIA has a new City Club building with a big lounge, a bright and hospitable lunching hall and comfortable rooms for visiting guests. After their probationary period on the top floor of an office building, members and house staff are correspondingly proud of their new Broad street home, with its easy-chairs and fireplaces, its housekeeping appurtenances and all the things that are theirs.

Recently a representative of a national social agency in New York was a guest at the club. Shortly after, the Philadelphia social worker who put him up received a notice that his guest "must have inadvertently mixed up with his clothing, etc., a whisk and a Turkish towel." The *New Yorker* could only make an unsatisfactory reply: "Tell the City Club people," he wrote, "that I have looked through my handkerchief case and quite fail to find a Turkish towel folded into it inadvertently; but that the whiskbroom got snarled up in my heavy head of hair [he's fairly bald], where the Pullman porter recovered it when he was brushing me off at the Pennsylvania terminal here. He thought it was one he lost on the trip up; but as I didn't take his number, I don't know how to suggest they should go about getting it back."

Other city clubs take warning!

entific education. May I say that in this aspect of our reforms we, as well as you, may be able to learn a great deal from the experiment with a 'modern school' that the General Education Board is to finance at Teachers' College [see the SURVEY for January 27, page 490], one aim of which is to reduce the teaching of Latin and Greek?

"Months ago the prime minister appointed two committees, one to inquire into the position of science and the other into the position of modern languages, in our system of education. Each committee is to consider particularly what measures are necessary to promote the study of these subjects. Recently, too, the Committee of the Privy Council for Scientific and Industrial Research, established since the war began, approved recommendations granting aid to twenty scientific investigations of industrial importance.

"Great discussion has been provoked also by a pamphlet called *The Neglect of Science*, which is the report of a meeting called by Sir Ray Lankester. This pamphlet, among other things, pokes fun at a member of the government for making the unchallenged statement that his colleagues should be excused for not having prevented the exportation of lard to Germany, since it had only recently been discovered that glycerine (used in the manufacture of explosives) could be obtained from lard. The fact is that the chemistry of soap-making and the accompanying production of glycerine is ancient history.

"England is cursed, too, with a chronic apathy toward education that must be uprooted. We, or at least large masses of us, really do not believe in the value of an education for the boy and girl of the lower classes. It has been calculated that at present 1,500,000 children from fourteen to seventeen are receiving no education of any kind. The compulsory continuation school is an essential item in our program for the future. I am hopeful that our representatives of labor, in Parliament and out, will increasingly demand a science education for all boys.

"One of the things that will, I hope, help to break down our low opinion of education is the fraternalizing that has gone on between all classes in the trenches. The university graduate has rubbed shoulders with the boy whose education stopped at fourteen or earlier. He has discovered that that boy is an intelligent and interesting member of society. Perhaps he will listen in a friendly spirit hereafter to a program that aims to give that boy a longer and better training.

"I expect to visit every part of this country in search for experience that will help us. I want to find out how it is that you carry the education of so many young people to so late an age. Whence

comes the propelling force in this country in educational matters—from the authorities of city and state, or from the people themselves?

"I want to study your continuation school methods, such as those in Fitchburg and Cincinnati. I want also to study your experience with the minimum wage, with strikes and with unemployment.

"England needs all of this experience if her boasted empire is not to suffer eclipse."

SAVING THE CHILDREN FROM THE SENATE

"OF the babies with fathers earning less than \$450 a year, about one in four died before it was twelve months old. The great majority of the babies had fathers in the wage group from \$450 to \$849, and of these about one in six died. Of the babies whose fathers earned \$850 but less than \$1,050, one in eight failed to survive. Where the fathers earned \$1,050 or more, one baby in sixteen died in the first year."

The relation between poverty and the infant mortality in this testimony from Manchester, N. H., a textile town, reported by the Children's Bureau after a study made there last summer, was used with such effect by Senator LaFollette and others during the three days' struggle over the appropriation for the work of the bureau in the Senate, ending on January 22, as to assure the future of the bureau before the national legislature. It epitomized the character of the work which the Children's Bureau is doing, and the conditions which call for its attention. Not even the careful analysis made by Senator Lane, a physician of standing, as to the difference in the fields covered by the Children's Bureau and the Public Health Service, brought so sharply to the attention of the Senate the meaning of the campaign waged by influential senators against any extension of Miss Lathrop's field of activities.

Miss Lathrop had asked of the House an increase of \$187,520 in the appropriation for the work of the bureau for the coming fiscal year. As reported to both the House and Senate from committee, all of this increase was cut off the appropriation; permission to extend the work was denied. The House by an overwhelming vote, and now the Senate by a rollcall vote of seventeen to thirty-one, has increased the old appropriation by \$109,120. The bureau is still \$78,400 short of the funds required to carry out its original plan for the year, but it has fought its way to a victory which will be completed, beyond question, next year.

In her estimates for the coming year Miss Lathrop proposed the continuance of the infant-mortality study; the development of the rural studies in ma-

ternal and child welfare; the development of child-labor studies, especially with reference to occupational strain and its measure by accident records, and the studies rendered desirable by the federal law; the continuation and development of the studies of dependent, defective and delinquent children, not including the suggested special study of needy children; the establishment of the library service upon a proper footing; the equipment of the statistical service to meet the requirements of the bureau; the development of the exhibit material to meet the legitimate demand; the organization of an office clerical force adequate to meet the needs of the work in progress and of such other work as may develop during the year.

Senators who voted against any increase whatever from the old appropriation were Bankhead of Alabama, Bryan and Fletcher of Florida, Gallinger of New Hampshire, Hitchcock of Nebraska, Overman of North Carolina, Ransdell of Louisiana, Robinson of Arkansas, Smith of Georgia, Smith and Tillman of South Carolina, Smoot of Utah, Stone of Missouri, Thomas of Colorado, Warren of Wyoming, Williams of Mississippi and Works of California.

The fight against the increased appropriation in the House was led by Fitzgerald of New York, Byrns of Tennessee, Sisson of Mississippi and Stafford of Wisconsin. The vote in the House was 316 against twenty-eight to grant the \$109,120 increase.

OPENING CITY COLLEGE TO ALL THE PEOPLE

THE College of the City of New York—the top rung of New York's school system—has announced two extensions of service that are not only of particular interest to social workers, but will in all probability stand out as landmarks in the history of college education in this country. One is the addition of a third general course of study, to be called the social science course, which will be coordinate with the existing arts course and the science course. The other throws open the evening courses to city employes and the whole adult population of Greater New York.

Like the older courses, the social science course will confer a baccalaureate degree, the title of which has not yet been chosen, and like them it is designed to give students "an opportunity to follow a well-defined group of subjects leading toward a definitely chosen life work." The course is open for the first time to students entering the college this month.

The prescribed work in the social science course includes a modern language (French, German or Spanish), English, chemistry, history, mathematics, natural history, philosophy, hygiene, physics, po-

litical science and public speaking. This work is to be taken for the most part in the first two years. After that the student is asked to decide whether he desires to pursue his major work in history, philosophy or political science.

Statistics gathered from the students indicate that about 27 per cent expect after graduation to pursue work for which the courses in the division of social science especially prepare them. In recommending the establishment of this degree, a faculty committee declared that it would not constitute "a novel experiment" because work emphasizing public and civic service has for some years been a growing feature of higher education in this country.

The other change, the enlargement of the division of vocational subjects and civic administration, comes through an addition to the charter made last year by the legislature, by which the college is now enabled not only to offer evening courses of instruction to city employes with a view to increasing their efficiency in the public service, which it has been doing for several years past, but also to open its doors to every mature resident of the city who wishes to take advantage of the theoretical and practical instruction offered. Such residents are not obliged to meet entrance requirements. They register as non-matriculated students and pay nominal fees.

Already the college has been swamped with persons wishing to take advantage of the new opportunity. Last year attendance in the division of vocational subjects and civic administration was 400. This year it leaped to 1,800. Classes overflowed the college buildings and some have had to be held in the Municipal building. Abandoned buildings belonging to the city are being put into condition to house future increases.

Mayor Mitchel has appointed a committee of nine men prominent in engineering and business and in city administration to assist the college in formulating courses that may be most helpful to city employes, and that will, it is expected, receive definite recognition, if not credit, by the Municipal Civil Service Commission. This committee has given great attention to the details of these courses.

PRISON AFFAIRS IN THREE EASTERN STATES

THE following item under a Boston date line appeared obscurely in many newspapers on January 24:

"Jesse Pomeroy, who has been for forty-one years in solitary confinement in the state prison at Charlestown, hereafter will have equal privileges with other prisoners by order of the executive council. Convicted of murder at 13, Pomeroy two years later was locked in a cell lighted from a window in the ceiling so that he might not gaze on his

A Bee-Line to Everyone

Straight as the bee flies and quick as though caught by lightning the voice in the telephone carries near and far over this Nation.

This marvelous instrument is the pre-eminent vehicle of speed and speech. Railroads cover the country, but your traveler often must alight with bag and baggage and change trains to get to a given point. Railroads reach cities, towns and villages. The telephone reaches the individual.

The telephone offers continuous passage for the voice and unbroken connections to the uttermost places because it is a united System co-ordinated

to the single idea of serving the entire people of this country.

It has been a powerful factor, along with the transportation systems, in the magnificent achievements of the United States—helping to prepare the way where latent possibilities of mines, forests and farms were to be developed.

The continued growth of our national prosperity depends in a great measure upon the maintenance and continued growth of the utilities which furnish the means of intercourse and interchange. They are the indispensable servants of the individual, the community and the entire nation.

fellow men. He took exercise apart from other prisoners and was barred as far as possible from human companionship. Such a record of punishment is rare in the prison annals of this country.

"Now, at the age of fifty-seven years, Pomeroy will move into a cell where he can see passersby, will be permitted to exercise with other prisoners, sit with them at the church services and at the prison entertainments, and will have such light work in the prison shops as his somewhat enfeebled health will permit.

Governor McCall announced tonight that he approved the communication.

"Pomeroy was convicted of the murder of two children, following a series of degenerate acts which had terrorized the South Boston and Dorchester districts of this city. He was sentenced to be hanged, but because of his youth the sentence was commuted to solitary imprisonment for life. On September 7, 1876, he was placed in his solitary cell."

Doubtless Jesse Pomeroy's release caused many people to remember shud-

"A Train Load of Books" What Clarkson is Doing for the Book Buyer

IN several hundred thousand libraries in the homes of people in every walk of life—from the day laborer to the college professor and high government official, from the persons who buy a few books of popular fiction, to the persons who pride themselves on having the complete works of all the standard authors in De Luxe Sets artistically printed and bound—almost every book was bought from me. WHY? Because I have no agents and sell you just the books you want—all new—many at a saving of from 50 to 90 per cent. You examine the books in your own home for five days before paying for them. If not satisfied, return at my expense—and owe me nothing.

Sample Prices:

When a Man's a Man. Publisher's price, \$1.35. My price, 90c.
Eyes of the World. 89c.
Famous Pictures. \$8.00; \$1.45.

Here are De Luxe Sets, Morocco bound, complete works, many of them at less than 25c on the dollar. Hugo, Kipling, Poe, Elliot, Dickens, Thackeray, Stevenson, and scores of others.

Get My Big, New Catalogue

My new catalogue, sent free for the asking, tells you how to save 50 to 90 per cent on thousands of books. It is a course in literature, giving nationalities, date of birth and death of authors, the author's life and standing in literature, etc. Hundreds of sets and thousands of single volumes listed.

I sell more books direct to the booklover—the individual reader—the rich man who insists upon his dollar's worth—the man who watches his pennies—and sell them for less money—than any other man in America. Every book new and fresh, and guaranteed to please you—you to be the judge. I do not quibble, and would rather have a book or set of books returned at my expense than to have a dissatisfied customer.

DAVID B. CLARKSON, The Book Broker
286 Clarkson Building, Chicago, Illinois

deringly the terrible confinement in the Bastille of Dickens' maker of shoes. In what way, they may have asked, was the fate of Alexander Manette in the Tale of Two Cities worse than that of this boy? Manette, of course, was a man of intelligence and distinction when confined; Pomeroy presumably a moral imbecile. But it may be doubted whether Jesse Pomeroy, at the age of thirteen, had yet proved that he was more immune than others to the horrors of solitary confinement. And Manette was imprisoned eighteen years, Pomeroy forty-one.

At any rate, his release now serves as a reminder of the advance penology has made since 1876. It is altogether questionable whether any court or jury in this country today would do to a thirteen-year-old boy what was done to Jesse Pomeroy, no matter what his crime. Questions of his mental responsibility, of the needless inhumanity of solitary cells and of the brutalizing effect of unusual punishment upon those who are in any way concerned in its infliction—which includes all who know about it—would nowadays be a part of the public discussion of such a case.

CHARLES F. RATTIGAN, who was warden of Auburn Prison, New York, when Thomas Mott Osborne served his voluntary incarceration three years ago and who helped to establish the Mutual Welfare League there, has been removed by Superintendent of State Prisons James M. Carter. His place has been given to Edgar S. Jennings, colonel of the third infantry of the National Guard of New York. It has been rumored for some time that Rattigan, a Democratic appointee, would be removed. The appointment of Colonel Jennings, a Republican, whose experience has been military rather than penological, seems to be another step in the Whitman-Carter policy of picking strict disciplinarians for wardens. Jennings was formerly police commissioner of Auburn and, according to state authorities, "Manufacturers and merchants, together with representatives of the various professions, endorsed him for the wardenship, not forgetting the most conspicuous figures in the National Guard, who urged his selection as the successor of Warden Rattigan."

Last week Burdette G. Lewis, commissioner of corrections of New York city, dismissed John J. Murtha, warden of the city penitentiary on Blackwell's Island, charging him with having interfered with the discipline of the prison while on a leave of absence for illness, with having transferred inmates without authority, threatened the acting warden with physical violence, and having failed to make an adequate investigation of a stabbing affray in the prison. Several days earlier Commissioner Lewis dismissed the head keeper, keeper and a

clerk at the city reformatory on Hart's Island.

Following exposures by the New York *Evening Post* of alleged conditions in the neighboring state prison at Trenton, N. J., as reported in the SURVEY for January 20, the legislature of that state has created a commission of five members to investigate the prison. The commission has power to summon witnesses and examine them under oath. Governor Edge has appointed the following men: William B. Dickson, of Montclair, a vice-president of the Midvale Steel & Ordnance Co.; Dwight W. Morrow, of J. P. Morgan & Co.; Seymour L. Cromwell, president of the New Jersey State Charities Aid and Prison Reform Association; John P. Murray, member of the state Board of Education; and Henry F. Hilfers, secretary of the New Jersey State Federation of Labor.

Without waiting for the commission to begin work, the governor has removed Warden Richard P. Hughes and appointed in his place James P. Mulheron, Republican county chairman for Mercer county, in which Trenton prison is located.

AN URGENT APPEAL FROM LITHUANIA

THE Lithuanian Section of the American Red Cross on January 27 received a cable from Switzerland announcing that delegates had just returned from Lithuania and reported a desperate situation. Typhus and starvation are devastating the once flourishing country and immediate relief is needed.

In December the German government announced that it was preparing a proclamation granting self-government to these provinces. It is rumored that this will take the form of a new kingdom of Lithuania, which would be part of the German empire, with Prince Eitel Friedrich, second son of the German emperor, for its ruler. This kingdom would be made up exclusively, as in the case of Poland, of conquered territory and conditional upon the creation of a Lithuanian army to fight against Russia.

It is obvious that the allies will not and, therefore, neutral countries cannot, recognize an autonomy so partial in territory and sovereignty. But there is likelihood that the end of the war will see the realization of the dream of ancient Lithuania, the formation of a really independent state, made up of both the Russian and the Prussian provinces which are inhabited by Lithuanians. For, ethnographically, the peoples on both sides of the frontier are the same. They speak the same language and frequently intermarry, though the Lithuanians on the Prussian side are nearly all Lutherans while the majority of those in the former Russian territory adhere to the Roman Catholic faith.

The present distress has been brought

INVESTMENT SECURITIES

The Survey accepts only the advertisements of reliable banking firms, brokers, trust companies, savings banks and other financial institutions.

Corn Belt Farm Loans

offered and recommended by The Merchants Loan and Trust Company—the Oldest Bank in Chicago.

These loans are all secured by First Mortgages on improved farms of established value in the Corn Belt—the safest farm loan section in the United States. They are made only after thorough and exhaustive personal investigation and never for more than one-half the value of the land alone.

No investor purchasing these mortgages has ever failed to receive principal and interest when due.

These loans are sold to net from 4½% to 5%.

A detailed list and description of loans aggregating any amount you state, will be sent upon request.

Our service includes the examination and approval of title by the Bank's own attorneys, an inspection of the property by our own salaried examiner, the certification that all taxes are paid as they mature, the collection and remittance of interest and principal, and the facilities for renewal or substitution of mortgages at current rates, all without charge to the investor.

New York since 1848

about by war conditions which are similar to those in the western zone. The Russian invasion of East Prussia was followed by the occupation of all the northwestern part of ancient Lithuania by Germany. Some 400,000 Lithuanians from the provinces of Suvalkai, Kaunas and Vilnius were forced to leave their homes and property to seek shelter in the inner parts of Russia, where they formed big colonies at Moscow, Petrograd, Voronez, Saratov, Kazan, Kostroma and other towns and cities. Many have not settled at all, but are driven from one town and village to another.

On both sides there is much indignation about the cruelties inflicted upon a defenceless farming population by invading troops. It is practically impossible now to get at the truth of these allegations. But from such evidence as is available—including two volumes of descriptions of their own experiences by some thirty rural pastors in East Prussia (*Kriegserlebnisse ostpreussischer Pfarrer*, Edwin Runge, Berlin, 1915), it would appear that the East Prussians themselves often admitted that the portrait of the Cossack had been painted blacker than it deserved. The stories of deliberate and officially sanctioned atrocities usually rest on hearsay.

Of course, an army in occupation of hostile territory, under the best of circumstances, is brutal, given to excess and regardless of fair dealing.

Later on, during the brief Russian occupation of East Prussia, thousands have been deported, some as far as Siberia—where, by the way, owing to larger opportunities of making a livelihood, conditions are better than in many parts of European Russia.

Previous mobilization had depleted both the Prussian and the Russian provinces of their manhood, and the handling of a population of old men, women and children is apt to be pretty ruthless at best. The provision made for their transportation and maintenance was inadequate, and, in many cases, communication between different members of the same family has not yet been reestablished.

Even more thoroughgoing have been the deportations from Russian Lithuania since the German occupancy of that region. Perhaps just because their system was more perfect than that of the Russians, it appears that the German commanders enforced their measures with complete disregard to suffering and even to life. Deported, sometimes as far as the Rhine provinces, these poor peasant folk are forcibly employed at allotted tasks, whereas in Russia deported civilians are permitted vocational freedom—though too frequently they are exploited by farmers and their wages withheld.

The Russian government, since the beginning of the war, has subsidized the

Lithuanian Refuge and Relief Committee to the extent of four million rubles, but has recently reduced its contribution in view of the fact that many of the refugees are able to earn. According to the relief committee, however, these earnings on the part of women, children and old people are far too small to keep them in health. Money sent them often disappeared on the way or was delayed for months. Mortality from practically every contagious disease is high among these refugees, partly owing to bad climate—as in the Astrachan district—and partly owing to insanitary housing conditions, but mostly owing to malnutrition. A letter from Moscow states:

"I visited all the quarters of the Lithuanian refugees at Moscow, and I saw with my own eyes the conditions in which the refugees are living. The old men are very miserable. They long for their homes and loved ones left behind, and are looking forward anxiously to the day when they shall be able to return to their native homes. The children die in great numbers because of the lack of milk, food and clothing. The women who arrived with five and six children now have one, two or three. In general, the refugees are getting insufficient food and therefore are suffering heavily from the cold Russian climate. These conditions have left their traces in the looks of the school children, for they are very pale and thin looking, and the only thing which they all enjoy is the hope that there will soon be peace."

SENTENCED TO PRISON FOR A LOCKED DOOR

THE first conviction in New York for manslaughter because of non-compliance with the labor laws relating to fire protection was obtained in the Brooklyn Supreme Court in the case against Samuel Barkin, a proprietor of the Essex Waist Company. Barkin was sentenced to from two and a half to five and a half years in Sing Sing, after evidence had been produced that a trap door locked in the ceiling of the waist company's loft was a chief cause in the deaths of eight girls and four men in the fire occurring in his factory, November 6, 1915 [see the SURVEY, November 13, 1915].

Barkin's partner, who locked the door, and Mrs. Edward S. Diamond, owner of the factory, will probably face trial next month. Meanwhile the state Department of Labor which, after the fire, was charged by the coroner's jury with inefficiency and delay in administering the law, has suffered but little. Although Jeremiah J. Flood, chief inspector, was removed from office, it is reported that Supervising Inspector Ash and the field inspector of the district, who were suspended after the jury findings, have been replaced (the former promoted) and their back pay refunded.

Dress Linens and Cottons for Season 1917

Reg. Trade Mark

NOTWITHSTANDING the conditions in the European markets we have secured a most remarkable assortment of French, English and Swiss Novelties, and in addition we will show the choicest products of American manufacture, some of which compare favorably with the foreign-made fabrics.

What Is Nervousness?

Very few people realize that nervousness is "a symptom" *not a disease*. Your nervousness may be due to one or more of several causes. The way to find out is to read what Dr. Kellogg tells you in his new book "Neurasthenia." This book tells all about nervousness and its causes—just what nervousness comes from. It is the result of more than forty years' experience, during which Dr. Kellogg has observed and prescribed for thousands of cases of nervousness—some of them very serious. By reading his book, you can learn how to get rid of the causes of nervousness by natural means. Dr. Kellogg tells you just what to do. No drugs. Some restrictions of diet but nothing burdensome. A little exercise but no tiresome regime. Careful division of hours for work, rest and sleep. These subjects are carefully covered in Dr. Kellogg's book which is of invaluable service to any nervous sufferer. Order it today. You take no risk. For— if you are not entirely satisfied, after five days' examination of the book, you may return it and we will promptly refund every penny of your money. Thus, we take all the risk. Order today and rid yourself forever of nervous suffering. You can do it if you follow the teachings in Dr. Kellogg's book "Neurasthenia."

The Metropolitan Life Insurance Company

has just closed its most prosperous year. By this is meant the most prosperous year, not alone for the corporation, but for the policy-holders, who have owned it since it became a mutual company.

Notable progress was made in the reduction of the expense of Industrial insurance. The ratio of Industrial insurance expenses to premium income is far lower than has ever been shown by any American or English industrial insurance company, and its lapse ratio is the lowest in its history.

Some very interesting facts have been developed in its summary of the business.

It paid a policy claim every 41 seconds of each business day of eight hours, during the year.

Its average payments were \$266.05 a minute of each business day of eight hours.

It paid 701 claims per day on an average the year through.

It issued or revived 8,304 policies a day on the average, amounting to \$1,969,823 of insurance.

Every day it paid to policy holders, or set aside as reserve, \$376,827.40.

Its assets increased on an average every day \$220,509.26.

On December 31, 1916, its whole number of policies outstanding was 16,952,769 for the great total of \$3,482,431,996.

"New Jersey, New Jersey, the land where the fritters,
Fall into the syrup right off of the trees!"

WITH this song on their tongues thousands of Negroes have migrated from Dixieland to Newark and surrounding cities. A charity organization secretary, familiar with both North and South, describes how fritters and syrup have turned out to be squalid tenements and disease.

THE SURVEY for February 17.

WAR is at the very threshold of the United States. Shall we forfeit our right to travel freely on the seas? Shall we ally ourselves unequivocally with the aims and claims of the Entente Powers? Carlton J. H. Hayes, associate professor of history at Columbia University and student of international law, pleads for a third course, the organization of an Armed Neutrality to champion real neutral rights against belligerent pretensions. Page 535.

WHEN Louis P. Lochner, secretary of the Ford Peace Commission, left Liverpool in January, the world seemed to him weary of war and ready to talk of terms of settlement. A week later he landed in New York and found America at the point of joining the European conflict. His analysis of the German policy which caused the change. Page 538.

THE American Red Cross, under its new organization, is ready for military as well as civilian relief. Page 549.

"AWAY, away with rum and gum,—Here we come, here we come!"—prohibition sweeps triumphantly across country. The water wagon used to be a lonely prairie schooner on the plains of Kansas with Carrie Nation the sole passenger; now with many aboard and modern improvements it kicks up the dust on its way toward the East. Elizabeth Tilton publishes her third article against alcohol. Page 541.

SUNSHINE and cool air and a high mountain top must be free to tubercular patients. Robert J. Newton, executive secretary of the Texas Public Health Association, believes contrary to Gertrude Vaile, that the Kent bill will grant the consumptive more help from society than he gets now. Page 546.

IF the highroad of American aid is cut off, neutral friends still remain to administer relief in Belgium, Poland and Serbia. But there would be a great calamity, according to war relief agencies, if American pennies were hoarded for strictly American exigencies. Page 549.

WHILE the country at large lies quietly awaiting news from the high seas, two office buildings hum with preparation,—one, the army and navy building in Washington, the other, 70 Fifth avenue, New York city, where pacifists intend to withstand the god of war until the last hope fades. Page 550.

TOM BROWN is doing time with lawless Jack Tars in a prison naval ship at Portsmouth, New Hampshire. Page 552.

TRIAL and tribulations are the lot of birth control advocates. Although the district attorney told the Court of Special Sessions that the use of the articles found in Margaret Sanger's birth control clinic "was a matter of common knowledge," the judges sent Mrs. Sanger and Ethel Byrne to jail for letting such knowledge get around. Page 555.

Which? War without a Purpose? Or Armed Neutrality with a Purpose?

By Carlton J. H. Hayes

ASSOCIATE PROFESSOR OF HISTORY, COLUMBIA UNIVERSITY

WITH the immediate causes of the present European war and with many, if not all, of its immediate results as between European powers, the United States, I take it, is not concerned. Individually Americans may dislike and denounce the subjection of Belgium to Germany or of Serbia to Austria-Hungary; individually they may likewise dislike and condemn the annexation of Constantinople by Russia or the failure of Great Britain to grant autonomy to Ireland. They may even feel that there is little to choose between entrusting Poland to the "tender mercies" of a Hohenzollern or a Hapsburg and putting it under the sceptre of a "benevolent" Tsar. The European war was not of American making; it is not now being waged directly and purposely either for or against American interests; and the best interests of the United States will not be served by a complete crushing of either group of belligerents.

How, then, is the United States involved in the present war? Only in the general way in which we have been involved in every great struggle that has depended for its issue upon maritime supremacy. Ever since our country declared its independence, Great Britain has asserted and maintained a naval preponderance among all the powers, and on every occasion on which her naval preponderance has been assailed we have willingly or unwillingly been involved. During our own War of Independence, France and Spain went to war with England, and so vexatious became the belligerents' (especially the English) restrictions on neutral trade and commerce by means of the seizure of merchant vessels and the proclamation of paper blockades—so intolerable became the lot of neutrals—that Russia, Denmark, Sweden, Prussia, Austria and Portugal formed an Armed Neutrality, demanding

(1) free passages of neutral ships from port to port and along the coasts of combatant nations,

(2) inviolability of an enemy's goods in neutral ships with the exception of such goods as were contraband of war, and

(3) exact definition of a blockaded port, a merely nominal

(paper) blockade, that is, one not enforced by a sufficient number of ships of war in the vicinity of the specified harbor, being declared inadmissible.

The Armed Neutrality League did what it could to enforce its demands by convoying merchantmen and by protesting vehemently and unitedly against violations of its principles. Although it did not have sufficient naval strength to give full force to its decrees in each and every case, it succeeded, nevertheless, in winning recognition of its principles from one group of belligerents (France, Spain, Holland and the United States) and in securing considerable abatement of English pretensions.

Again, during the wars of the French Revolution and of the Napoleonic era, neutrals were confronted with much the same situation. In the earlier stages of this prolonged conflict, the United States, in defense of its neutral commerce, almost came to blows with France. In the later stages of the same general struggle, the United States actually did come to blows with Great Britain. And in the midst of the Franco-British conflict (1800), the Baltic powers revived their Armed Neutrality. This second Armed Neutrality was not large enough or strong enough to resist British attacks upon it, and within a few months it was broken up. Its achievements, like those of America in the War of 1812, were not at the time considered great or decisive.

Yet the Armed Neutrality Leagues of 1780 and 1800 were not without important subsequent results. They served to crystallize neutral sentiment and to force upon the attention of the greatest maritime power demands for a revision of the rules of naval warfare which would have been permanently ignored had they come from any single member of either armed neutrality group. As the event proved, even Great Britain gave adherence in the Paris declaration of 1856 and in the London declaration of 1909 to the principles of the Armed Neutralities.

Now there is another tremendous European war, and neutral interests are again jeopardized, this time mainly by the

nature of the naval warfare between Great Britain and Germany. With this phase of the contemporaneous war the United States, as the largest and most influential neutral power, is directly concerned. What exactly have we at stake? And how may we most effectively safeguard our legitimate interests?

What we most clearly have at stake is the freedom of the seas—the recognized and respected right to use the high seas, the arteries of international intercourse, for passenger and non-contraband-goods traffic, and to trade freely and fully without let or hindrance with fellow neutrals and, in so far as non-contraband goods are concerned, with belligerents. In the way of the freedom of the seas stand at the present time both Germany and Great Britain. Both of these powers, together with their respective allies, deny us our “rights.”

Rights Denied

FROM the very beginning of the present war Great Britain has sought to check neutral trade with Germany. As early as December 26, 1914, the American government addressed a note to Great Britain, protesting against the detentions and seizures of cargoes and pointing out that British policy was directly responsible for the depression in many American industries. On March 1, 1915, Mr. Asquith stated in the House of Commons that Great Britain and France, in retaliation upon Germany for her declaration of the war zone around the British Isles, would confiscate all goods of “presumed enemy destination, ownership, or origin.”

In an extended communication addressed to the British government by Secretary Bryan on March 30, 1915, attention was called to the unusual character of the proposed British blockade and the interference with legitimate neutral commerce which might readily result. The United States government was willing to concede that the changed conditions of naval warfare, especially the operations of submarines, might justify some modification of the old form of “close” blockade, but it was unwilling to concede the right of belligerents to blockade neutral ports. It was further pointed out that alleged illegal acts of Germany could not be offered as an excuse for unlawful acts on the part of Great Britain.

To this protest the British foreign secretary replied politely but evasively. Meanwhile, the closure of Germany to legitimate American trade and even to ordinary American postal correspondence became more and more effective. On October 21, 1915, another note from the United States, couched in much more vigorous language, was addressed to London. It stated that the so-called blockade instituted by the Allies was “ineffective, illegal, and indefensible”; that the “American government cannot submit to the curtailment of its neutral rights”; and that the United States “must insist that the relations between it and His Majesty’s government be governed, not by a policy of expediency, but by those established rules of international conduct to which Great Britain in the past has held the United States to account.” No real redress of American grievances was forthcoming. On the contrary, the British minister of blockade announced to the Commons on June 28, 1916, that Great Britain had decided to discontinue even “partial enforcement” of the Declaration of London.

But however irksome to neutrals have been the British violations of international law, German violations have been more outrageous because they have been attended by destruction of neutral lives as well as by injury to neutral commerce. Early in the war, Germany’s planting of floating mines was a menace to neutral as well as to belligerent traffic. On February 4, 1915, Germany declared the waters around the British Isles a war zone after February 18 and proclaimed

her intention of sinking every enemy merchant vessel found in the zone, even if it were impossible to save the crew and passengers. She also stated that neutral ships entering the war zone were in danger. Then, in reply to the American protest, the German government on February 18, 1915, explained that, in view of the illegal methods used by Great Britain in preventing commerce between Germany and neutral countries, even in articles which are not contraband of war, the Imperial government felt justified in using all means within its power to retaliate upon England. The chief means at the disposal of the Germans was the submarine, and it was used with the frightful results we all know. After the sinking of the *Lusitania*, there could be no question of the hideous character of unrestricted German submarine warfare.

In all these infractions of the rights of neutrals, it cannot be allowed for a moment that either Germany or Great Britain has been actuated by hatred of any neutral. It is absurd to suppose that Great Britain is deliberately violating the commercial rights of neutrals for the mere sake of doing so. It is equally absurd to imagine that Germany is wilfully destroying the lives of non-combatants for the sheer pleasure of it. The fact of the matter is that Germany and Great Britain are in a death-grapple *with each other* and that each is using the most available weapon for starving out the other.

Common Cause of the Neutrals

IN THE great crisis now confronting the United States, another fact must not be lost sight of. The United States is not the only neutral power. Spain, Holland and the Scandinavian countries have suffered relatively more than we from the infraction of neutral rights; and the Latin-American republics are by no means negligible. Whatever is done by the United States in defense of neutral rights should be done in cooperation with other neutrals.

Neutral rights—those of other countries as well as of the United States—have been flagrantly violated (1) by Great Britain, in that neutral trade with Scandinavian ports and with Holland has been interfered with by the British policy of intercepting all goods of German origin or ultimately destined for Germany, even when the goods have been carried by neutral ships between neutral ports; and (2) by Germany, in that numerous neutral merchantmen have been sunk by German submarines either without warning or without opportunity for safeguarding the lives of passengers, some of whom have been citizens of neutral powers.

It is obvious to any friend of humanity that violations of neutral right which involve loss of life are far more serious at the moment than violations which involve only loss of trade. It is natural, therefore, that Americans should now be moved more against Germany than against Great Britain. It is but natural that the receipt of news of the intention of the German government to resume unrestricted submarine warfare on and after February 1, 1917, should be followed immediately by the exertion of tremendous pressure upon the President of the United States to plunge us into war with Germany. Having in mind the position taken by President Wilson in his earlier notes to Berlin, it can occasion no surprise that he broke off diplomatic relations with Germany.

Breaking off diplomatic relations means little of itself. Unless it is accompanied by positive constructive action, it is merely negative and futile. To me it seems that there are now two main highways, along either of which we may proceed.

On the one hand, we may strive to avenge ourselves upon Germany by allying ourselves with the Entente Powers, a step

which will almost inevitably mean accepting their views of the freedom of the seas; joining our naval units to those of Great Britain, France, and Italy; sending an expeditionary force—and later a conscripted army—to the trenches of Flanders and the Somme; and agreeing to make peace only in concert with our allies.

But what purpose will be served thereby? We shall be supplying additional targets for German torpedoes; we shall be sacrificing thousands of American lives to “avenge” hundreds; we shall be committed to the support of the extreme peace terms of Russia and Japan as well as those of France and Great Britain; we shall be assisting in the upbuilding of states whose future claims to world domination may well be as dangerous to world peace as the present claims of the most extreme German spokesman. And, above all, we shall be losing our opportunity to champion real *neutral* rights against *belligerent* pretensions.

Positive Constructive Action

ON THE other hand, we may follow up the rupture of German diplomatic relations with an immediate and earnest attempt to organize an Armed Neutrality. This, if successful, would mean an agreement among the United States, the Latin-American republics, Spain, Holland, and the Scandinavian kingdoms, on a common platform of principles governing commercial intercourse in time of war, and common action in convoying merchantmen and in defending, by force if necessary, neutral rights.

At the outset, such an Armed Neutrality would devote most of its energies to safeguarding human life against unlawful submarine attacks; subsequently it might ameliorate, if not completely remove, the abuses of blockade, of visit and search, and of arbitrary extension of lists of contraband. If the Armed Neutralities of 1780 and 1800 are any guide to an Armed Neutrality of 1917, the latter might prove successful in bringing Germany to terms and in convincing the Entente Powers of the advantages of a modification of their maritime policy. Best of all, a consensus of neutral opinion and a community of neutral interest would be established in the face of all belligerents.

The purpose which the United States has in view right now is to make Germany abandon her unrestricted submarine warfare. If we make war on Germany and throw in our lot with the Entente Powers, we shall not achieve our purpose; we shall merely help Great Britain, France, Russia, Italy and Japan to achieve their purposes. If, however, we succeed in organizing an Armed Neutrality, we *may* achieve our immediate purpose, and we shall certainly be in an infinitely better position both during and after the war to champion neutral rights on land and on sea against any power or any combination of powers which unjustly undertakes to abridge those rights.

Suppose, now, that we elect to organize an Armed Neutrality rather than to declare war against Germany. Some difficulty may be experienced in prevailing upon all neutral powers to participate. Holland, for example, on account of her geographical position, might be very chary about antagonizing her belligerent neighbors. But granting that a majority of neutrals join the United States in forming an Armed Neutrality, what will be the procedure of such a league?

First of all, a declaration of principles must be agreed upon. For a manifesto of this sort there is already abundant precedent in international law and usage. Without attempting to forecast the details of neutral agreement, it may be observed that the declaration should cover at least four points:

(1) contraband; (2) blockade; (3) convoy; and (4) submarine warfare. The first three, it might be found, have already been defined quite acceptably to neutrals in the London declaration of 1909. The provisions of the London Declaration were the result of long study on the part of experts in international law; they represent the result of a careful weighing of the interest of belligerents on the one side and of neutrals on the other side during an earlier prevalence of maritime war; and, though never formally ratified by the powers, they were signed at the time by the representatives of the United States, Great Britain, France, Russia, Japan, Austria-Hungary, Italy, Spain and Holland.

The fourth point to be covered by the declaration of the proposed Armed Neutrality—that concerning submarine warfare—would probably involve new applications of old principles, such as the immunity of unarmed merchantmen from attack unless they resisted search or attempted to run away; the inviolability of non-contraband goods on neutral merchantmen; and the safeguarding of the lives of non-combatants. It is obvious that the rigorous enforcement of these doctrines would operate to restrict submarine warfare to attacks on enemy warships and military transports, and to visit and search of merchantmen with a view only to casting overboard recognized contraband of war.

Joint Enforcement

HAVING agreed upon a declaration of principles, the next thing for the Armed Neutrality to do would be to enforce it as far as possible. Here the chief means would be the naval convoy. For example, an American merchant vessel, or a fleet of American merchant vessels, would depart from the port of New York accompanied by an American warship. The United States government, if it were to take advantage of the principle of convoy as laid down by the Declaration of London, would have to be able to vouch that the ships so convoyed carried nothing contraband—contraband, however, in the sense held by the league of neutrals, not according to the decrees of Germany or Great Britain. If on the way to Liverpool or Southampton, whether within or without the so-called war zone, a German submarine should appear and order the crews and passengers of the merchantmen to take to the life-boats, then the commander of the naval convoy should protest against the patent infringement of international law; and if the submarine attempted to torpedo any ship of the fleet, the American vessels should forthwith retaliate by attempting to destroy the submarine.

If a German submarine should attack any neutral merchantman without warning or without complying with other regulations adopted by the league, thenceforth the very presence of a German submarine in the vicinity of neutral shipping, whether it had attempted to attack or not, could be considered as *prima facie* evidence of an *intent* to attack and all German submarines might be sunk as soon as they were detected. The United States, on account of its relatively large navy, would be expected to perform a larger service than its fellow-neutrals in “potting” submarines; and the Armed Neutrality as a whole might eventually accomplish much towards removing or minimizing the menace of submarine warfare.

Less effective, no doubt, would be the campaign of the Armed Neutrality for the enforcement of its principles in respect of contraband and blockade against the pretensions of the Entente Powers. But some headway might be made. If Great Britain were relieved of the worst menace of submarine warfare and if the neutral powers presented a united front, she, despite her overwhelming naval preponderance, might permit cargoes of non-contraband character to proceed freely under convoy from New York to Rotterdam or Copenhagen

or even to such German ports as were not undergoing an effective close-range blockade. The very fact that the cargoes were under convoy would be an official guarantee that they contained no contraband; and the British government would hesitate to order its warships to open fire on an American man-of-war.

But what if the Armed Neutrality, in taking necessary steps to enforce its principles, is met by a German declaration of war? Will not this mean *war* just as much as though the United States should now declare war on Germany? It is my belief that there is a fundamental difference between the two kinds of war. If we declare war against Germany now, we are far more likely to be drawn into an alliance with the Entente Powers than we would be were we later to receive a declaration of war from Germany as an incident to our policy of enforcing our rights and the rights of all neutrals. In the latter case we would certainly be no worse off, and we would have performed a noble service to humanity—quite as noble as dying in continental trenches.

It is conceivable that we might be in an actual state of war with Germany without any declaration of war on our part. There is plenty of precedent for such a situation. The

Armed Neutralities of 1780 and 1800 are cases in point. Not even British declarations of war swerved the league of 1780 from its purpose. And even more pertinent to America is the instance in 1798 when the United States, to protect its rights at sea, broke off diplomatic relations with France and Congress authorized American frigates to capture French vessels guilty of depredations on American commerce. Actual naval engagements were fought, but no formal declaration of war was made; and within a year France backed down.

It is idle in this hour of national crisis to say merely that the United States should keep out of war. The hour demands well-considered constructive action. By declaring war immediately we shall be taking action, but action that is at once ill-considered and destructive of future world organization and world peace. The United States, in this case, will be last and least on the long list of belligerents. On the other hand, by giving hearty and vigorous support to an Armed Neutrality we shall be taking action which has ample precedent and which promises much that is hopeful for the future. In this case, the United States will be first and foremost among all neutral powers. And a league of neutrals is a better harbinger of future world solidarity than a league of belligerents.

Before the Break

By Louis P. Lochner

SECRETARY OF THE FORD PEACE COMMISSION

WHEN I left Liverpool early in January, it seemed that America's great opportunity had at last come. All calculations are upset by the events of the last few days. Nevertheless, it may help to an understanding of the present crisis if I review briefly the European situation as it presented itself to me when I decided to return to America.

I brought with me to present to President Wilson the conclusions of my colleagues and co-workers in the Ford Peace Commission (formerly the Neutral Conference) after a year of intensive work in five European neutral countries, and after repeated visits to the foreign offices of the belligerents.

The outstanding impression was the general tiredness over the whole business. This was true of the peoples of the Entente as well as of the Central Empires; it was true, more than ever before, of the small neutral nations of Europe.

Just a few illustrations to drive home this point. On passing through Cologne en route to Switzerland, I was struck by the fact that a military band was playing gay airs at the railway station. I asked the hotel porter (perhaps I should say, the portress, for the male porter is a thing of the past in many hostelries) whether a new victory was being celebrated.

"Oh, no," she replied, "they simply must play gay music to dispel the gloom. Cologne is an assembly point from which the troops are sent off to the western front. There is no more enthusiasm for war—so the band must manufacture it. For my part," she added, "*ich finde es abscheulich*" (I find it disgusting).

Another incident: I was discussing the international situation with one of the most prominent Belgian Socialists when the news came to us of Trepov's speech in the Russian Duma, to the effect that Russia had been promised Constantinople. "This gives us Socialists a good reason for pressing on our

government to enter into peace negotiations," was his instantaneous comment. "There certainly is no Belgian who wants to shed his blood to get Constantinople for Russia."

And so on. I need but refer to Lloyd George's frequent trips to France and Italy, prompted by the necessity of holding the Allies together; to the numerous informal discussions that took place in Copenhagen and Stockholm between Russians and Germans in the hope of patching up a separate peace; to the stormy sessions over anti-war speeches in the French Chamber of Deputies; to the vigorous campaigns of the conscientious objectors, the Labor Party, and the Union of Democratic Control in England; to the constant turmoil in the Austrian cabinet; to the exciting scenes in the Russian Duma—and need but refer to all these incidents to emphasize further that the high-sounding phrases in the notes of both Teutons and Allies, proclaiming victory and the unfailing determination of the peoples for war to the finish, are not to be taken too seriously.

I may go farther than that. It would be a violation of confidence to give the sources for the information which follows. But I am certain that even in the foreign offices the thought uppermost has been, "How shall we get out of this muddle?" Coupled with this question was that other, "How shall we preserve our prestige, both before our own peoples and before the world?"

Of equal importance with this world weariness of war is the great change that has come over Germany. The chancellor, who in all his earlier utterances had shown concern merely for the future security of the central empires, in November brought hope to all friends of internationalism by indicating Germany's readiness to join a league of nations. As a British diplomat put it to me, "This is indeed highly significant, and does much to clarify the situation." I may add that I learned

later from a high German source in Washington that President Wilson had been given definite assurances of Germany's readiness to fall in with his plan.

Further symptoms of this change—the Germans themselves speak constantly of the *Neu-Orientierung*—are not hard to find. Many publicists who formerly scoffed at The Hague Conferences have reversed their positions. I have in my office at The Hague a striking collection of utterances before and since this war from German writers who have completely swung around in their outlook. From memory I will cite the case of Helmuth von Gerlach, writer of the leading editorial in *Die Welt am Montag*. This publicist saw the light long before the chancellor and recently said that one of Germany's chief failings has been her opposition to obligatory arbitration of international disputes. Yet this is the same man who wrote most sneering accounts of the Second Hague Conference!

Furthermore we have been struck by the tremendous amount of sane peace discussion going on in the German, Austrian and Hungarian press. At The Hague the Ford commission receives every day scores of newspapers, in addition to every worth-while clipping service in Europe. It has been taking practically all my evenings to glance through only the most important editorials concerning peace and world organization—a decided change from experiences of a year ago, when a peace editorial in any European paper was such a *rara avis* that the publicity bureau excitedly had it multigraphed and sent to our entire mailing list. It is only fair to say that at least one-half of this peace discussion came to me from the papers of the Central Powers. And it was not mere peace-at-any-price or peace-based-upon-German-victory discussion. For the most part it was reasonable, sane and intelligent.

Granted, then, the longing for peace cropping out on all sides, and the evident *Neu-Orientierung* in Germany, what are the obstacles to peace? This is the question to which my colleagues and I have addressed ourselves.

First we attempted to learn the actual terms from both sides. It should be remembered that the terms put out in notes and diplomatic documents are intended mainly for home consumption and for a bluff to the enemy. For example, one of our representatives on his first meeting with a certain diplomat was given all the familiar yarn about fighting for the right, being victorious, etc. "But, Your Excellency," he broke in, "would it not be better if we remembered that we are speaking strictly under four eyes?" This broke the ice and the real facts in the situation began to come out.

Terms No Hindrance

THE conclusion we came to, at the end of protracted informal negotiations, was that the actual terms of settlement are not the real hindrance to peace negotiations. I am not permitted to publish the terms which we found both sides ready to give. Suffice it to say that both belligerents were far nearer to an understanding than the world knows, and than they themselves probably realized. I assert with every ounce of conviction within me that I have no doubt but that, once the plenipotentiaries of both sides were assembled around the green table, such matters as actual territorial readjustments could have been disposed of without insurmountable difficulties.

The real obstacle, as we apprehended it, is the question of guaranties for the future. Both sides desire that this shall be the last war. They want to see a league of nations formed at the conclusion of this war. There is, however, distrust of each other since Germany violated the neutrality of Belgium. The allied peoples and governments are unwilling to accept Germany's pledge without some outside guaranty. Similarly the German people, believing that the Allies, too,

break treaties when military exigencies demand it, for example, in regard to Greece, want assurance from the outside that the proposed league shall guarantee their security from attack.

Obviously, the only power on earth that could guarantee peace and be acceptable to both sides is the United States. The European neutrals, one and all, appear to be willing to act as co-guarantors with the United States. But in themselves they are not strong enough.

Now, ever since his address of May 28, 1916, before the League to Enforce Peace, it has been well known in Europe that President Wilson favors the idea of a league of nations. Indeed, in his first peace note he declared his position in an official document. In Berlin apparently the President's word was taken as a sufficient evidence that the American people were ready to join the proposed league. But, said London, with all due respect to President Wilson, he is after all a man, and one who four years from now will leave the White House. Unless he can prove that the American nation is behind him and will actually back him up, we are not yet ready to consider the future secure, or to meet the Central Powers around the council table.

When, therefore, I arrived in America on January 14 and with a friend was given the privilege of discussing the situation with the President, our main point was to emphasize the necessity of a definite pledge from the American people to shoulder their share of responsibility for the future security of the world. That the President's mind had been moving in the same direction appears from the fact that three and a half days later he made his historic speech in the Senate and challenged the people of the United States to support him.

Then something terrible happened—the German submarine blockade order which, as one of the highest officials in our government expressed it, may "change the whole history of the world."

The German Psychology

How shall we explain this astounding move of the Central Powers? If in the following I try to reflect what to me seem the psychological processes by which the Imperial government arrived at this drastic development of her submarine policy, please let the reader remember that I am not speaking as a German propagandist, or as one who countenances this German move. Indeed, many Americans of German descent with whom I have spoken share my shock at the new trend of German policy. Like myself, they view it as a tragic mistake and are heartbroken that the ancient friendship between Germany and the United States should be disrupted.

I am not one of those who believe that the German Liberals have been overthrown and the war party enthroned in their stead. Quite the contrary: the Chancellor, the Foreign Secretary, the Reichstag—all appear to be united with the military on the wisdom of the new policy. Late in December a member of the Ford Peace Commission had a long talk with Dr. Zimmermann about the probable effect of the victories in Rumania upon the political position of the war party. Dr. Zimmermann assured our representative earnestly that even these victories would not have the slightest effect upon the determination of the present government to offer the most reasonable terms imaginable, and to make peace at the earliest moment possible. He added that the power of the military party was broken once for all.

No, the German Liberals have not *succumbed* to the war party—they have of their own accord *joined hands with it*.

The following, I believe, were the determining factors: First, Germany is face to face with a growing scarcity of food. She is fighting for her very existence. An empty stomach does

not make for the strictest observance of international law.

Second, Germany had counted on the acceptance, by the Entente, if not of her own peace overtures, then at least of that of President Wilson. Personally I have reason to believe that the Entente reply was intended for home consumption, and that, had Germany been willing to state her terms, such as unofficially we had been given to believe she would subscribe to, President Wilson could have found a basis for bringing the belligerents together. Indeed, in his speech to the Senate the President gave the German government a new opportunity to disclose its terms. But the Germans saw only the refusal of the Allies. They failed to see from the very extremeness of the Allied terms that their chance for winning sympathy in the neutral world lay in the publication of moderate terms. They were in despair at the Entente refusal—and when people are despondent they are not able to think and act normally.

Third, a great weakness of those in Germany who are charged with the conduct of foreign relations is their inability to gauge neutral opinion. Said the foreign correspondent of one of our large dailies to me, "When the Entente infringes upon the rights of neutrals, she somehow gets away with it; when Germany does it, she is bound to get her foot in it." Instead of realizing that President Wilson, in his Senate speech, showed himself a true friend of all Europe, they did the one thing that made the President say to the Imperial government that he desired not longer to be on speaking terms with it.

I believe the move will prove suicidal to Germany—but I also insist that those who, outside of the military clique, are responsible for the submarine policy, agreed to it not because they favor ruthlessness *per se*, nor because the militarists clamored for it, but because they thought it would hasten the coming of peace.

RETURNING FROM THE MINES BY CONSTANTIN MEUNIER

The Miners

By Charles Nicholls Webb

THEY come from caverns, intricate and black,
 Save where the candles throw their scanty light;
 With pick at side or hammer bowing back,
 And weariness half-clouding each man's sight,
 Up from the regions of eternal night
 Into the glare and clamor of the day;
 Dulled for the higher sources of delight,
 Fit but to sleep the leisure hours away,
 Or join the brawlers at their tavern-play.

Turning Off the Spigot

V. The Prohibition Wave—Better for Business and Better for Boys

By Elizabeth Tilton

"All labor expended in producing strong drink is utterly unproductive. It adds nothing to the wealth of the community."—ADAM SMITH, *Wealth of Nations*.

MULTITUDES believe in prohibition and these multitudes are daily being augmented. Note the magnitude of this world movement. Russia is largely dry. Finland is under partial prohibition. Most of the rural districts in Norway and Sweden are dry. Norway has some dry cities and the Liberals in both countries are calling for measures that will bring national prohibition. Iceland, Greenland and the Faroe Islands are dry. In Denmark there is a strong abstinence movement working for national prohibition. Town after town is going dry and a commission has been appointed to investigate the liquor question with special reference to introducing prohibition. Germany has a rising educational campaign, directed especially against beer, but, so far as I know, no concerted prohibition movement. In the Netherlands, the prohibition of the importation, manufacture and sale of absinthe was adopted in 1909. France, as we all know, has prohibited absinthe, and there are small movements calling for total prohibition, but the wealth that lies in the vineyards of France will make this latter fight a hard one. Switzerland nationally prohibited absinthe in 1908. Rumania, as a war measure, has prohibited the sale of all intoxicants. England has a strong national prohibition movement, though this is, of course, given its special force by the war. Canada is largely dry. In the United States, twenty-three states have passed a prohibition law. In 1907 there were only three such states—that means that in less than ten years twenty states have come in. In the United States this is in no way a war measure.¹

The new prohibition wave in this country began about 1907, although it was gathering force as far back as 1881 when Kansas went dry. The Kansas law forbade manufacture and sale of alcohol, except for medicinal, mechanical and sacramental purposes. But it allowed unlimited importation for private use. It was really only a first step; it aimed especially to eliminate the extra accessibility of liquor that comes through the saloon and legalized traffic. Several states, like Washington, Georgia and South Carolina, now limit importation for private use, and Arizona, Oregon and Idaho have passed "bone dry" laws—that is, they forbid importation

for private beverage use. The law tends, then, to annex a total abstinence crusade to its anti-saloon crusade.

Now how much does modern state prohibition reduce the wreckage incident to drink? The soundest statistics are those from police records which show arrests for drunkenness in the same town before and after closing saloons. I will give examples from our recent prohibition territory, thus:

PORTLAND, ORE.		1915—Saloons open		1916—Saloons closed	
		Jan.-June		Jan.-June	
Total arrests	10,040		5,856	
Arrests for drunkenness	3,047		716	

SEATTLE, WASH.		
Total arrests (1915) wet	19,127
Total arrests (1916) dry	11,847
Arrests for drunkenness (1915) wet	4,741
Arrests for drunkenness (1916) dry	3,315

But note that in 1915 arrests for drunkenness were made only when accompanied by disorderly conduct; in 1916 arrests were made on the slightest indication of intoxication. (Conger, secretary Anti-saloon League, Seattle.)

From Denver, Colorado, Department of Safety, Bureau of Police, I have the following, signed by the chief of police, H. Armstrong:

Total arrests, 1915 (wet)	13,769
Total arrests, 1916 (dry)	10,045
Total drunks, 1915 (wet)	3,227
Total drunks, 1916 (dry)	1,605

The chief of police adds: During the year 1915 drunks were not tried, being released the next morning. In 1916 all drunks were tried in the police court and minimum fine of \$10.00, total \$12.00, given to them. (This last in answer to my question, Had there been any change in methods?) I have to compliment Denver here and now on the good answers she sends to people asking information.

The following comes from Walter C. Evans, district attorney, Portland, Ore. (*Morning Tribune*, Los Angeles, September 25, 1916): "From tabulated report made by my deputy at the police court: September, 1914-August, 1915 (wet), total felonies, misdemeanors and juvenile court cases, 4,723; September, 1915-August, 1916 (dry), total felonies, misdemeanors and juvenile court cases, 1,809."

Mr. Evans says: "I know of no contributing factor towards this startling change with the exception of the abolition of the saloon. With the passing of the saloon it is known that large numbers of prostitutes . . . have left the city. Physicians connected with the State Board of Health reported

¹ I am using the term dry loosely to express various forms of the prohibition of liquor traffic. Legislation varies as to alcoholic strength and amounts allowed for private use. Also some laws allow manufacture to continue.

a remarkable decline in the amount of venereal disease now existing as against the amount known to exist a year ago."

H. C. Gill, mayor of Seattle, says: "As for the actual effect of the law here, from my own observation (and I voted wet), it has been splendidly beneficial. . . . Almost without exception the former saloon locations are now occupied by people in other lines of trade." (*Los Angeles Tribune*, September 25, 1916). Seattle has also a lowered tax-rate for 1917.

From District Attorney, Second Judicial District, 703 Continental building, Denver, I have the following, January 2, 1917: "All crime, especially crimes of violence, drunkenness, vagrancy, have largely decreased. The number of inmates of our jails and penitentiary is rapidly diminishing. The demands upon charity are very much less. The betterment of conditions among the laboring classes is very marked. The proposition submitted to statewide vote at the November election to allow the manufacture of beer only was overwhelmingly defeated. In my judgment this state is permanently in the prohibition column." (Signed) John A. Rush.)

Murder.....	10	7
Vagrancy.....	3,713	1,148

The average daily number of prisoners housed in the Denver county jail in 1915 was 150. The average in 1916 was 93. There were 19,978 new savings accounts opened in the banks and trust companies of Denver since January 1, 1916. This is the largest number of new accounts opened in any similar period in any year in Denver's history (population about 225,000). (*The Rocky Mountain News*, January 1, 1917.)

Gertrude Vaile, secretary of the Denver Bureau of Charities and Correction, gives an interesting picture of conditions under prohibition:

"And prohibition has not created an unemployment problem as some people anticipated. Now men are using their wages more for their families, and among all of us here in the office we can think of only two cases since January 1 in which women have complained that their husbands did not bring home their money. Last year this was a frequent and bitter complaint. The difference in what men spend their wages for now is interestingly shown by some figures furnished by certain dairies and grocery stores.

"One large dairy tells us of an increase of business over the corresponding months of last year amounting to about \$4,000 for January; \$5,000 for February; \$6,700 for March and \$5,400 for April—a total increase of \$21,100 for four months under prohibition.

"These dairies and grocery firms feel that the difference is due primarily to prohibition and cite the districts from which the increase comes. One milk route around the stockyards has an increased business of \$5 per day; one in the lower section of a downtown district an increased business of \$6 per day. This company had a retail milk route in the business section in which there had been forty-seven saloons. The driver concluded that they might just as well take that wagon off as most of his trade was with the saloons. But with the closing of the saloons and the opening of more lunch counters the business of that single route has increased \$15 per day since January 1."

The report further states:

"The reports from the grocery stores are almost as interesting. It is the custom of this office to give the grocery or-

ders on any store preferred by the family assisted. We have found that the people get the best service in this way. This has made us deal with the neighborhood groceries. They tell us, without exception, that they are better able to make collections, and that the people are buying more and a better quality of food than they did when we had saloons.

"One grocer commented that it was worth a great deal to see the increased self-respect with which the women do their buying since they can afford better things.

"So we are convinced that however much or little actual drunkenness may have had to do with the poverty we meet, at any rate, since the closing of the saloons the people are being better fed and that will go a long way to reduce some other causes of poverty. And they are doing better about meeting their just obligations, which goes far toward raising their self-respect and general standard of living." (See Colorado, On the Map, Arthur Finch, Anti-Saloon League, Denver, Col., June, 1916.)

But you will say, "These are western cities where we have sent our sternest and most enterprising. Perhaps in the older states it will not be like this." Let us see. West Virginia gives the following: "Arrests for drunkenness last wet year, 9,432; first dry year, 3,375. (Fifty-seven Municipalities' Report, Commissioner Blue.)

WHEELING, W. VA.

1909 (dry).....	130
1910 (dry).....	138
1911 (dry).....	88
1912 (wet).....	306

I have at least a dozen more cases of reduced wreckage under prohibition but the story grows monotonous. Prohibition does have marked effects. The following significant episodes show how fully many communities recognize this.

The wets in the states of Arkansas, Colorado, Oregon and Washington made attempts to cripple or repeal the dry laws in 1916. These attempts in every case were snowed under by popular vote. In Washington, one liquor measure was defeated by a majority of 124,846; the other by 189,213. (Conger, Anti-saloon League.) But the striking thing is this. In 1914 Seattle voted against the amendment for state prohibition by 14,625 majority. In 1916, when against her own vote Seattle had been dry for nearly a year, the city voted by 18,400 majority against re-introduction of beer, and by 43,900 majority against allowing liquor to be re-introduced into hotels. Spokane and Denver also showed the same turn-about for prohibition. This is epoch making. It means that whereas in the nineties prohibition was enforced usually only in rural districts, now the anti-alcohol sentiment commands enforcement of prohibition even in cities made to go dry against their wills.

This goes far to dispose of one of the serious arguments against prohibition.

An interesting bit to me was the reduction under prohibition of cases coming to organized charity for relief, although prosperity undoubtedly entered in here also. The Committee of Fifty found drink an operating factor in about 25 per cent of the cases coming to organized charity for relief. The Boston Associated Charities found the number of such cases about 24 per cent; Newport, R. I. (1914), found it 29 per cent, while in a great manufacturing center, New Bedford (1915), it was 31 per cent. On my arrival in Des Moines (a very civic up-to-date city) I was interested to note that an investigation made in 1913 by the Associated Charities showed drink a factor in 26 per cent of the cases. In a distributing center like Des Moines it ran close to the figure of the metropolis and the manufacturing city.

Charity Cases from Drink

IN 1916, after the saloons in Des Moines had been closed a little over a year, the per cent for that year had fallen from 26 to 9.6. In Denver cases reporting to the Denver Department of Social Welfare fell off at the rate of a little over 100 a month in the first four months of prohibition, over the corresponding months of the previous year. In Spokane, charity cases before the Social Service Bureau the first four months of 1915 (wet) were 1,070; the first four months of 1916 (dry) 700. (Henry Rising.)

In Topeka, Kan., where prohibition has had some real enforcement for years, I found this remarkable showing: Total cases (1915), 481; cases in which drink was a factor, 17. Two of these 17 were bootleggers (men who sell liquor on the sly). Thus we see drink playing a part in less than 4 per cent of the cases. Most of the social workers there had come from wet states. All were convinced that the liquor problem was marvelously reduced in Topeka.

In all the places recently gone dry bank clearings are rushing madly ahead; but because times are so prosperous it does not seem honest to lay this to prohibition, though prohibition probably adds its quota, as it adds its quota also to the enormous increase of savings bank deposits in Denver.

The most careful survey of this subject was made by the *Manufacturers' Record*, of Baltimore, through a questionnaire. The *Manufacturers' Record* says:

"Taking Alabama and West Virginia combined, two states about which there has been most active discussion as to the effect of prohibition, and from which we publish detailed bank reports in this issue, we have 206 banks which have replied to the question as to the effect of prohibition. Of this number, 165, or 80 per cent, are in favor of the beneficial effect of prohibition, while 22, or 10 per cent, report that they have seen no benefit from prohibition, and 19 are non-committal.

"This, we think," says the *Record*, "is one of the most remarkable endorsements of prohibition, from the business point of view, which has ever been published. No other class of business men are in closer touch with the business interests of a community than bankers. Their views on this subject are, therefore, entitled to very great weight."

Quite as impressive as statistics are the opinions of the thoughtful people in prohibition states. I did not meet one social worker who was against prohibition. While it may not be cure they seem to believe it is in the way of prevention and betterment.

"I have no figures to give you," said Joseph C. Logan, of the Associated Charities in Atlanta, "but loose as prohibition has been with us, we are convinced that it has reduced the magnitude of our problem." Impressive are the opinions of

editors whose papers fought prohibition. Thus Henry Rising, editor of the *Spokane Chronicle*, says: "The *Chronicle* did not fight for prohibition in 1914. It is ready at ten seconds' notice today to fight its best against any serious effort to repeal or cripple the prohibition law." Major C. B. Blethen, editor of the *Seattle Times*, said: "My paper fought its damndest against prohibition. We fought it on economic grounds alone. We believed that in a great seaport city with a population of upwards 350,000, prohibition would be destructive. . . . Well, we've had it six months. None of the dire things prophesied have occurred. On the contrary, Seattle has prospered wonderfully. We already know that it is a great benefit morally and from an economic standpoint."

The *Denver Post* was the most persistent in its declaration that prohibition would ruin Colorado. After six months, the editor, H. H. Tamm, says: "The terrible things that I predicted did not come to pass. It is doing wonders out here." The *Mining Review and Oil Journal*, June 1, 1916, says, "Prohibition is proving a blessing in disguise in the mining camps of Idaho, Arizona, Colorado, Oregon and Washington."

This, social workers of the East, is the way that prohibition looks to the West and to much of the South. Hence we get twenty new dry states in less than ten years. Many of these states are sparsely populated, agricultural, with no cities of the first magnitude and with a homogeneous population. Michigan, however, is an eastern state just gone dry. It will be interesting to watch prohibition in industrial cities like Detroit, Flint and Grand Rapids.

But perhaps it will be said, that since prohibition is new in these states, the new broom will sweep clean. So now I wish to tell of Kansas, which had been dry thirty-six years when I was there. It really is not only the statistics that impress one in Kansas, but Kansas itself, clean and forward-marching. "You will find yourself tonight," said the first young man we met, "in a state where it is not unpopular to be righteous. Every political party here is for prohibition and you will have to go over this state with a fine tooth comb to find men against it."

Scarcity of Saloons

"YES," said the little mother with whom we stayed, "my boy never saw a saloon till he went up to Nebraska to see a ball game. When he came home he told me he'd seen a saloon. I said, 'Boy, I declare I most wish you hadn't of gone.'"

"Yes," said another old-timer, "my boy has been appointed a professor at Yale. He wrote home: 'Mother, they have saloons here *with signs!* The people seem refined enough, but I declare it goes against my grain to bring my boys up under such conditions.'"

Prohibition is a state of mind—and they've got it! Even the motormen have it, for the driver who took my husband from wet Kansas City, Mo., to dry Kansas City, Kan., said: "We are now entering the City of Good Horse Sense where the workingman's wages buy 'shoes not booze, drygoods not rye goods.'"

"What we have accomplished," said Prof. F. W. Blackmar, dean of the graduate department of the University of Kansas, "is that the thoughtful people, the best people are against the drink custom. To serve wine at dinner in Lawrence would be 'bad form'—bad citizenship. And the other thing is that saloons have been gone so long that the workingman's wages are going into the home and not into drink. We have not eliminated drinking by any means, but

Early settlers of Kansas sent by the New England Emigrant Aid Society, were pledged to two causes, Abolition and Prohibition

we are retiring the drink custom and our wages are being spent in productive industries."

Said Judge Emery, of the Police Court in Topeka: "If we should get saloons back here in Topeka, we should need less than the usual number for a town of our size because the workman has lost the habit of spending wages in booze."

Governor Arthur I. Capper said: "Kansas is out of debt and splendidly prosperous. We do believe that prohibition influences this showing. The fact that here in Kansas wages are going into 'shoes not booze' must help our prosperity and our low prison population. In 1915, Kansas had forty counties out of a total of 105 which did not send a prisoner to the state penitentiary. In Logan county the jail had been empty five years when in 1915 the authorities permitted its use as a corncrib—certainly a better purpose than filling it with the wrecks distilled corn juice can make. . . . A survey of bankers here showed 165 in favor of prohibition, while only six expressed doubts as to its wisdom."

Thus Governor Capper and thus Kansas. Everywhere you go it is the same—a high wind of prosperity and prohibition. Of course, they all recognize that prohibition is only a factor, but a factor they do believe it to be.

Kansas has one of the lowest death rates in the United States. When the government wrote to ask the state registrar, W. J. V. Deacon, how he accounted for this he answered, in effect (special number, Second Biennial Report, 1914-1915), "Kansas is homogeneous and almost wholly an agricultural state . . . 70.8 of the population resides outside the town. Kansas is also rich, also intelligent (illiteracy rate 2.2)—these make for strong physical resistance to disease and that psychological poise that directly affects bodily health." Mr. Deacon then adds that Kansas is a prohibition state, and in Kansas prohibition really prohibits. "I do not mean by this that there is no alcohol consumed in the state, but the absence of the saloon means much to the growing young men and boys. . . . There is an absence of opportunity to poison the body with the toxins of alcohol which will be sure to show in those organic diseases that are affected by alcohol. Another and more important effect is that the wage of the laborer is not dissipated but goes to supply those necessities of food, clothing and housing most essential to the well-being of his family."

I do not want to press figures too hard, but since some statistical comparisons are desirable I have made the following from the Statistical Abstract of the United States, though how much prohibition influences these figures it is impossible to say. I have taken Massachusetts and New York, urban states with good-sized foreign populations, to indicate the evil effects of such conditions. Three banner prohibition states, where they have the prohibition state of mind—Kansas, North Da-

kota and North Carolina—have been placed beside sister states resembling them, save that they were wet states when these figures were taken in 1910. Virginia and Nebraska have since gone dry.

COMPARISON BY STATES

	Per cent living in cities	Per cent native born	Insane admitted per 100,000 pop.	Prisoners Admitted per 100,000	Paupers Admitted almshouses per 100,000
Massachusetts	92	68	125	931	282
New York	78	69	93	502	139
Kansas	29	92	53	200	24
North Dakota	11	72	38	163	19
North Carolina	14	99	41	122	33
Nebraska	26	85	34	482	92
Missouri	42	93	84	481	34
Virginia	23	98	59	602	116

It is interesting to note how phenomenally low is the prison population in the three banner prohibition states. The single place in the table in which statistics of Kansas do not behave as expected in a prohibition state is the insanity rate. It is higher than that of its sister wet state of Nebraska.

According to H. C. Bowman, of the State Board of Control, this higher insanity rate comes because Kansas carries care of her insane to an extreme. The law not only requires every person adjudged insane to enter a hospital, but should room be lacking the county must pay so much per week for the care of all those not admitted. This, of course, causes all defectives who are dependent upon the county's money to be sent to the insane hospitals; some of those sent being properly only almshouse charges. This results in a high registration of insane for Kansas. The percentage of alcoholic insane is, however, low—being (1915) 1.7 per cent as against an average rate for the country of about 10 per cent; for Ohio, 10.7; for New York, 7.4; Nebraska, 4.2 (considered too low by those knowing conditions).²

Statistics of insanity can be touched but lightly for they are not yet perfected. Opinions, however, are of some value. Dr. Newcomb, of the State Hospital, Kansas, says: "The paucity [of alcoholic insane in Kansas hospitals] is, in the writer's opinion, directly due to the existence and

² The Census Bureau incorrectly states that in 1910 the insanity of seventy patients admitted to the Kansas state hospitals was caused by alcohol, and that the insanity of twenty of the patients admitted to the Nebraska state hospitals was caused by alcohol. We are at a loss to know how the government report got the figures seventy. The correct figures are twenty-four. The government also missed something very important in compiling the figures. The Kansas figures of twenty-four include the inebriates who are sent to the state insane hospitals as insane, while in Nebraska inebriates are committed under a different law and are not included in the census report of the population of the Nebraska state insane hospitals. The inebriates go to the same institution as the insane and are mixed and mingled in the same wards, whether admitted as insane or as inebriates. On page 115 of the biennial report of 1912 of the Lincoln, Neb., state hospital for the insane, the superintendent states that from July 8, 1905, to November 30, 1912, 1,172 men and fifty-two women were committed as inebriates. This would be an average of almost 174 a year, in addition to the twenty insane with alcoholic psychosis.

³ "The number of persons committed to state insane hospitals in the prohibition states and the near-prohibition states is very much less than the number committed in the license states. According to the tables of the Kansas State Temperance Union, based upon the federal census of 1910, the number of persons committed to state insane hospitals averaged 118 in the prohibition states, 150 in the near-prohibition states, and 275 in the license states per 100,000."—H. C. Bowman.

generally rigid enforcement of the prohibition law." (Alcoholic Insanity, 43d annual session, National Conference Charities and Corrections, p. 142.)

One prominent person in Kansas was heartily opposed to prohibition. Mr. Billard, a popular grain merchant of Topeka, ran for governor in 1914 on a platform to resubmit the prohibition question, and received about 10 per cent of the vote: "I am a Frenchman," he said. "I came over here to drink deep of personal liberty. Prohibition is tyranny and a farce. You should see the whiskey bottles in our back alleys mornings."

"You think the saloon would make less drinking?"

"Oh," exclaimed Mr. Billard, "of course, I did not want to see the open bar back. But I did want shops where men could sell bottled goods, and I wanted the people to have the right to express themselves on the subject. A whole new generation has grown up since the law became effective."

About 90 per cent did express themselves in favor of the law.

Reduction of Per Capita Drinking

Is KANSAS justified in voting for prohibition on the ground that it is reducing per capita drink consumption? A state survey of prohibition in Kansas recently made under the auspices of Dean Blackmar and now in the hands of the printer shows that in 1914 the legal per capita consumption of the United States as a whole was 22.6 gallons, while that of Kansas was only about 3 gallons per capita.

This figure is obtained from reports made to county clerks throughout the entire state under the Mahin law which requires all common carriers to register each shipment of liquor. The liquor interests say that county clerks are unwilling to show these records. Below, however, I give Professor Blackmar's own account of the whole proceeding. The records do not give boot-legging sales; what those are no man can tell. But the legal consumption of Kansas, the bulk of which was beer, is compared with the legal consumption of the United States. Professor Blackmar says:

"As assistant attorney-general, I made a survey of every county and every town in the state of Kansas to determine the amount of liquor consumed in the state in a single year. No one ever refused information or tried to hide it from me. The records in the county clerk's office of shipments showed the annual consumption of liquor in the year 1914 to be 4,498,258 gallons. According to the federal estimate of the population of Kansas for that year of 1,807,845, the per capita annual consumption would be 2.4 gallons. According to the state census of the same year of 1,678,916, the annual per capita consumption would be 2.67 gallons.

"We know that considerable liquor is carried over the border from Missouri and Nebraska, and I have made liberal allowances for this after a careful study of the border. I have stated that the per capita consumption of beer and liquor in that year was less than 3 gallons per capita. Suppose we estimate it at 3 gallons per capita, and we will have an excess of we follow the federal census of 925,277 gallons, or 538,490 according to the state census, which might have been carried over the border without record. So that when I say that the per capita consumption of liquor was less than 3 gallons in the year 1914, I have as good a reason for my statement as any statement sent out by the federal government, or by the hired statisticians of the Brewers' Association.

"You are permitted to publish this wherever you wish and you can rely upon it that the annual per capita consumption of liquor in Kansas in the year 1914 did not exceed 3 gallons, and in years since then there has been a decrease."

But let no man think that this retiring of the drink custom

and its handmaid, the saloon, has come by itself in Kansas. Education in the schools, law enforcement societies and personal risk have slowly brought it about. In the nineties (Sessional Papers, Vol. 16, session 1894, Canada) enforcement ran low. Slowly, however, the rural districts began to oust the saloon and the "joint." "Wherever there was enforcement," said the chief justice to me, "prohibition helped. People saw this and inch by inch we pushed it through the state. And I can truly say that with us the law is as easily enforced as any law." In short, Kansas first got her law by a small majority, and then educated her people up to it.

Cities for the most part have enforced prohibition only in the last sixteen years—the result, in part, so they all said, of a crusade of one lone woman, Mrs. Carrie Nation, who, on the night that Queen Victoria died, alighted from her buggy in front of the Peerless Princess Saloon at Wichita and transferred the rocks in her apron to the plate-glass mirror.

In Kansas they honor Mrs. Nation; they call her the "John Brown of prohibition."

Kansas City did not close its saloons until 1906. One day Assistant Attorney-general Trickett padlocked the saloons. The business men were not with him and a mob formed and threatened his life. He went on padlocking, however. Two years later when the state was going to send Mr. Trickett elsewhere the business men of the city sent to the governor saying: "For Heaven's sake, don't remove Trickett or we'll get those saloons back and it is worth \$1,000,000 a year to us to have those saloons gone."

"I told them," said Mr. Trickett, "that prohibition was better for business and better for boys." As proof that it was better for boys, Mr. Trickett told us that Kansas City (Wyandotte county) in the ten years before the saloons closed had sent an average of twenty boys a year to the state reformatory, in the year following the closing of the saloons it sent only two boys in all.

In 1909, Kansas passed a law forbidding drug-stores to sell alcoholic beverages. All prohibition states must come to this sooner or later. Whether or not the present drug-stores carry on a trade in patent medicines containing alcohol I do not know. The Board of Health had no information to give me on this point nor did I anywhere meet talk of the danger. Kansas is allowed unlimited importation for private use and the need of getting alcohol through patent medicines does not appear on the surface, at least. In bone-dry states, like Arizona, Idaho and Oregon, the patent-medicine end should be carefully watched and guarded.

Illicit distilling appears negligible in Kansas. There are seldom any confiscations of stills. Other ways of getting liquor are easier, apparently—to those who will have it.

Illicit Sale by Boot-Leggers

SUMMING up the situation as I saw it, I should say state prohibition is not a cure—even in Kansas. But it is betterment. Kansas has its liquor problem. Its police records show repeaters, and no farm colony to put them in! Thirty-three per cent of arrests in Topeka in 1914 were for drunkenness. But we must remember that while Kansas' police have orders to arrest "all drunks," usually in large cities they arrest only men so drunk as to be dangerous to themselves or others. Again, you will come on spots, like Davenport, Iowa, where the influential people are not alive to the great cumulative costs of alcohol, and consequently enforcement runs low and results seem obscure. And, of course, there is boot-legging. In Lawrence, Kansas, 1915, there were forty convictions for boot-legging—"usually," said Judge Amück, "Mexicans or Negroes who are sick or who do not know how to work

and so bring a bag of stuff up from Kansas City, Mo., and peddle it around. What I need is a farm colony where I can cure these poor chaps."

Concerning the difficulty of getting indictments (which have been hard to obtain in Maine) the chief justice and all the judges that I saw said: "The people want the boot-legger indicted. Public opinion is against him." Judge Amück said: "I am the son of a German. Many Germans here want their beer at home (not in saloons). But I am a Kansan, and I know that the way out of the drink problem is

total abstinence plus national prohibition. But until we get that we ought to have farm colonies for boot-leggers and repeaters," and Kansas ought! But, of course, the amount sold by a boot-legger is negligible when compared with the great, organized flow from the saloon.

Summary.—Hard to enforce as state prohibition must always be, it has today in the West and the South a public opinion behind it that usually brings enforcement. In short, prohibition is showing results today even in large cities. It is as the West says: "Better for business and better for boys."

On the Other Hand

An Affirmative Answer to the Question: "Will the Kent Bill Help?"

By Robert J. Newton

I SHOULD like to discuss Gertrude Vaile's article on Federal Aid for Consumptives, published in your issue of December 30, and to answer her question, "Will the Kent bill help?" I have not had anything like Miss Vaile's experience in charity work, but I have been a student of the problem of the indigent consumptive in the health-resort region for more than six years. I took an active part in the organization of the Southwestern Conference on Tuberculosis, the first sectional tuberculosis conference, at St. Louis in 1910, and have been the secretary of the conference ever since. Among other things, the conference was called to consider the "restriction of the immigration of the consumptive poor of other states into our states and territories." Study of the subject during the next two years convinced us that this was impracticable. In 1912 Governor O. B. Colquitt, of Texas, called the second meeting of the conference at Waco. This session adopted a resolution declaring "that the care of consumptives in the Southwest is an interstate problem and that it is the duty of the federal government to take action to provide hospital care for citizens suffering from consumption who have left their native states and are residing in the Southwest seeking health, and who are unable to pay for hospital care."

At the request of the Waco conference, Governor Colquitt organized a committee of ninety-nine, including the governors of other southwestern states, members of Congress and prominent citizens, to secure the passage by Congress of a bill for the establishment of federal hospitals. This effort failed. The California State Board of Health then took up the matter and interested Congressman William Kent. The bill introduced by him [see the SURVEY for February 12, March 18, May 27, July 29, and December 30, 1916], after numerous conferences with California health workers, government officials, and members of the House and Senate, represents what we may be able to get in the way of federal aid, and not entirely what we want. It is a legislative "half loaf." No other measure providing for federal assistance in the fight against tuberculosis has progressed as far as the Kent bill. In addition to the favorable committee reports in the House and Senate, it has been endorsed by the Democratic National Convention and has the approval of the President, the Secretary of the Treasury, the Public Health Service, many state boards of health, health and charity organizations, commercial clubs and individual social workers too numerous to mention.

Miss Vaile has made a gallant fight against the bill and to her must go the credit if it fails of passage. I respect her

ability to make an interesting and enjoyable "scrap," if I cannot endorse her judgment. She has been of real assistance to the proponents of the bill in keeping them on their mettle and hard at work. Were it not for her opposition we might have lost the battle through over-confidence in our cause.

Miss Vaile believes in the principle of federal aid. She says, "It (the tuberculosis problem) is so immense and far-reaching that the federal government itself must take cognizance of it and do something to help and control it." She does not believe that the Kent bill will secure the right kind of government activity, because she fears that the bill will increase the migration of indigents to the West. "After all," she writes, "the crux of the question is, would the proposed legislation increase such migration?" I do not think that this is the crux of the question. But I believe that she has stated it later in her article, and to this I will call attention further on.

The Colorado State Board of Health evidently does not fear an increase of migration as a result of federal aid to consumptives, for S. R. McKelvey, M. D., secretary, stated in a letter to W. A. Sawyer, M. D., of the California State Board, on April 4, 1916: "Also any feasible plan of the government to establish in this city or elsewhere an institution for the care and treatment of tuberculosis patients will be heartily approved by this board." If the board does not fear increase of migration because of the location of a special hospital for consumptives supported by the government, have we much to fear by reason of government aid to a limited number of county or city institutions?

I believe, on the contrary, that the operation of the Kent bill will tend to diminish migration. The return of patients by the government to the states from which they have been sent will direct the attention of state, county and city authorities to the need for hospitals for the care of their people, and such returned patients will deter others in their communities from starting to the West. I assume that, wherever possible, patients will be returned home instead of supported indefinitely by the government and local authorities. And we know that in most cases that is the best disposition to make of such cases, because of their advanced condition. While this may not be done by force, it can be done in many cases by persuasion. I believe also that the Public Health Service will be able to secure a larger measure of cooperation by state, county and city authorities in getting publicity designed to discourage migration.

Opposed to Miss Vaile's opinion that an increase of migration will result, we have the approval for the Kent bill of

many commercial organizations in the West, some from Colorado. Business men would be slow to advocate any measure which would increase taxes for the care of non-residents.

This brings up the question, why do people migrate? Is it because they think they can secure hospital care in the West, or is it because of their belief in the benefit of climate, without regard to hospital treatment? I believe that many consumptives come from the states which have state and county institutions for consumptives, for the records show that the bulk of the migration comes from states in the Mississippi valley. Some of the migrants have been inmates of hospitals, others have been denied admission because of lack of room, or because too far advanced.

Last Hope for Health

THEN the patient turns to the West as his last hope, for the belief in climate has been bred in the race for centuries. The Psalmist said, "I will look unto the hills from whence cometh my strength." Scientists of the pre-Christian era advocated a dry climate for tuberculosis. Texas records mention the coming of men to the state one hundred years ago on the advice of physicians. And to this day the doctors are sending them. The tuberculosis societies say, "Don't go West unless you have money for your support," but what is more natural than for the poor man to deduce that they approve a change of climate for the man of means? If it is good for the man with money, surely it is good for the poor man. Therefore, he takes the chance of securing a livelihood and goes West.

Can we change the popular belief in the virtue of climatic treatment? We might by a tremendous educational campaign costing much time and money, but I doubt it. We have been trying to discourage migration, but the Public Health Service reports show that it is increasing. Mr. Jacobs said, in the SURVEY of December 30, that we need 200,000 hospital beds for consumptives and that we have 40,000, or one-fifth of that number. When we have the full number needed, then the migration will be much smaller and will consist largely of discharged sanatorium patients seeking a climate and occupations which will safeguard them against relapse. And no one can deny to them, or to our present migrants, the right to a change of residence if it is to their advantage.

Will the hospital subsidy bring more patients? That will depend somewhat upon the newspaper publicity given the matter. The fact that the Kent bill has passed Congress will receive small mention in the newspapers. It will not be read by many and will be forgotten by most of those who read it. There will be no additional publicity at a later date, for no reason for such publicity will exist. It will cease to be news. No state, county or city, nor any private hospital, will advertise the fact that they will care for indigent consumptives free of charge. There will be no effort on the part of the Public Health Service to encourage consumptives to go West to secure hospital care, and surely the charity and tuberculosis societies will not send them. The consumptive will be just where he is now. If he determines to go West he will go, blindly, as most of them do, without any knowledge of any particular place where he may receive care, and not so much with the intent to secure hospital treatment as for the climate.

Will the Kent bill be burdensome to the West, financially?

The hospital has the option of contracting with the government to care for patients. It has the right to accept or reject applicants for admission. If it accepts patients it may then receive a subsidy for the time the patient remains. The federal appropriation will necessarily be limited and the Health Service must administer it economically. The first question

to be determined will be the advisability of treating the patient or returning him home. His physical condition, together with his resources at home and the possibility of hospital care in the home state, will determine the action to be taken. I believe that a larger number of patients will be sent home than will be taken care of in western hospitals.

If Miss Vaile is speaking for the state of Colorado, or for the city of Denver, and really believes in the theory of increase of migration, why does she not cease her opposition to the Kent bill and, if it is enacted, use her influence, which is considerable, to discourage any hospital entering into a contract with the federal government for the care of patients? Then, if they go West for hospital care, they will not go to Colorado, but to states anxious to secure the benefits of the Kent bill. Colorado should not deny relief to other western states.

Miss Vaile also points out the danger of persons receiving treatment under the Kent bill remaining in the resort region long enough to lose their residence in the home state. The hospital will not keep these patients for any period of time unless they can be benefited by hospital care. The government will send them home, if possible. If the patient's disease can be arrested by hospital care it will be better for him to lose his residence in the home state, if need be, rather than to lose his life by returning home. But to protect itself against the loss of the federal subsidy by reason of extended treatment of certain cases, the hospital may require the patient to state that it is not his intention to relinquish his residence in his home state. Citizenship is largely a question of intention. Hundreds of government clerks reside in Washington for years and even acquire property there, and yet retain their residence in their home states for political reasons. About the only thing that will actually deprive a man of citizenship in his home state is for him to exercise the right of suffrage in another state. Consumptives may return to their homes after an absence of years and, if indigent, still receive assistance. For communities will deny assistance to worthy cases, actually resident, on the ground of loss of citizenship.

Americans Without a Country

THIS brings me to what I consider the real crux of the question as stated in Miss Vaile's own words: "This idea that a good American can be a man without a country in time of distress is barbarous." It is barbarous. And yet that is now the fact. It is the situation which the Kent bill is designed to correct. And the Kent bill is the only remedy which it seems possible to obtain for this condition at this time. Miss Vaile testifies that home states and counties and cities will not aid their expatriated consumptive citizens *now*. She shows the inability of the communities to which they go to care for them. Technically and legally they have lost their citizenship in any state, county or city. But they are still American citizens. The place where the infection was acquired is morally responsible for their care; legally it is impossible to enforce the claim. The place to which they go may become legally responsible for their care simply by reason of six months or a year's residence, during which time they may have been a charge upon public or private charity. Morally tuberculars have no claim upon their adopted place of residence. Miss Vaile agrees that the assistance of the federal government is needed.

I wish that the government reports of conditions in the Southwest might be given greater publicity. We should hang our heads in shame that such conditions exist in our country and that there is so little effort to remedy them. We give millions to the relief of Belgium, and should do so, but we do nothing for our own Belgians of the Southwest. They

have been driven from their home and friends by fear of the white plague and by their desire to live a little longer. And unlike the Belgians of Europe, they have no sustaining sympathy and no help in their hour of need. No homes are open to them. And they cannot look forward with hope to the day when they may return to home and friends.

As an alternative to the Kent bill, Miss Vaile suggests investigation, education and active experimentation. But what further do we need to know? The Public Health Service has investigated conditions in the Southwest. Its reports confirm everything that has been stated by individuals and associations. American citizens are dying for lack of care and thousands have died and thousands more will die. Some might have been saved. Some may be saved. Is it not worth while to make the effort now, rather than to investigate further? If we will not act on our present knowledge there is small hope that voluminous reports by government commissions, read by an infinitesimal percentage of the people, will cause any action to be taken. What nutriment is there in such reports for the consumptive in the West, suffering from a lack of proper food? What consolation for widows and orphans and what maintenance for them? Investigate further if you will, but do not further procrastinate in relieving these poor people.

And we must continue the work of popular education for several generations, until we bring about a reformation of our habits of living and reconstruction of our cities. The tuberculosis problem will require a hundred years of educational work if it is to be solved in that way. But again I say, do not substitute education for the care and treatment of the patient.

And as to active experimentation, we all honor the Metropolitan Life Insurance Company for their princely gift and Lee K. Frankel for inspiring it. But the community experiment for the entire elimination of tuberculosis will benefit the coming generation more than this generation. Let us not halt our efforts for relief and prevention until that and similar work is done. The government will await the result of this experiment before embarking upon any such work in other parts of the country.

Miss Vaile further suggests that we "reverse" the Kent bill and give the subsidy to every state, county and city for the care of resident consumptives, thus making it necessary for them to stay at home to secure hospital care. I should be glad to see this done and believe it may be done some day if the Kent bill is passed and establishes a precedent. I doubt the possibility of securing such action now or for some time to come. The National Association would have to take up such a plan and make a national campaign for it. It would be necessary to maintain a lobby at Washington continuously during three to five sessions of Congress, and for from six to ten years. It would cost much money, but it could be done.

Difficulties of Reversing Kent Bill

MR. JACOBS says we have 40,000 beds for consumptives in this country. A government subsidy of fifty cents a day for each bed would total \$7,300,000 annually, not a large sum, but an appropriation difficult to secure now.

If Miss Vaile thinks this new plan will prevent migration, surely she is mistaken; for what is to prevent the consumptive going to the West and acquiring citizenship after one year's residence? Then he may become a charge upon the western city or county indefinitely.

Mr. Hillard, of Colorado, has introduced a bill embodying Miss Vaile's ideas. Section 3 of the bill reads as follows: "That an indigent person shall be considered, for the purpose of this act, a resident of the state where he last had legal

settlement." Settlement can be acquired by a year's residence in any western state. In the case of a man, and in suffrage states both men and women, can acquire citizenship by exercising the right of suffrage. It is true, settlement laws may be enacted denying citizenship to persons becoming indigent from three to five years after arrival; but that will not deter them from coming to the West, nor will it prevent their becoming indigent, or objects of charity, after arrival.

Miss Vaile's bill makes no provision for returning patients to the home states. Would she leave that burden entirely upon private charity? The Kent bill carries a provision for such return of patients and this section alone should enlist the support of all the charity societies of the West.

Half-Informed Critics

MISS VAILE has quoted the resolution adopted by the American Association for Organizing Charities, against the Kent bill. Few of the delegates at that meeting were from the West or know anything of this problem. They took her word for it. She also quotes Mr. Magruder, of Baltimore, and Mr. Persons, of New York. Will these gentlemen tell us how much time they have spent in the West studying this problem? An offhand opinion that the Kent bill will increase migration is valueless unless one knows about present conditions.

Miss Vaile also quotes Mr. Bruno, formerly of the Colorado Springs Associated Charities, saying "he cannot see how anyone living in a western state could doubt that it would increase migration." Wood F. Worcester, who was secretary of the Associated Charities of Colorado Springs for four years, in a letter discussing this, says: "I was greatly surprised in reading Miss Vaile's articles to find that she quoted Frank J. Bruno, my predecessor in Colorado Springs (who left in 1911), as being opposed to the Kent bill, and that she made no reference to the attitude of the organization at the present time, which both she and I know is favorable to the bill. Indeed, Mr. Bruno's opinion would never at any time have been in accordance with the sentiment of the community or of the directors of the Associated Charities. Too large a number of Colorado Springs' business men, of her teachers, her clergy, her working people, have themselves fled to the West in search of health and life to regard the migration of the tuberculous as an unmitigated evil."

And I should like to quote a telegram, dated December 13, 1916, to the Hon. Chas. B. Timberlake, member of Congress from Colorado, as follows: "Had a conference yesterday between Miss Vaile and others from Denver and the local committee which met with you. Miss Vaile presented a substitute bill (to the Kent bill), the provisions of which it was felt would defeat its passage. The local committee are in favor of the passage of the Kent bill as it stands and urge you to use your influence to that end." This message was signed by the Associated Charities of Colorado Springs. The conference referred to was attended by people representing various charitable activities of Colorado Springs.

In legislative work we strive for what we can get, not for what we want. We believe we can get the Kent bill. We do not claim that it is a "cure-all"; that it is a complete and final solution of the tuberculosis problem in the Southwest. We believe that it is first aid; that it will be of great assistance to the people of the West; that it will bring comfort and care to thousands; that it will save life; that it will prevent the spread of disease. But, most important of all, it is the beginning of federal activity in the national fight against tuberculosis, and who may predict the far-reaching effects and the beneficent results of such a beginning?

COMMON WELFARE

THE AMERICAN RED CROSS IN WAR TIME

FOLLOWING the severance of diplomatic relations with Germany, the Central Committee of the American Red Cross issued instructions from Washington to its 264 local chapters throughout the country to make immediate and adequate preparations "to carry out the work for which the Red Cross is chartered by Congress."

No sooner was this announcement made than individuals began to volunteer their services to the various local headquarters. The instructions called for the appointment, if not already in existence, of the following committees: Finance, hospital garments and surgical supplies, comfort bags, packing and shipping, publicity and information, motor service and cooperation with outside organizations. Persons volunteering to render service are to be assigned to these committees. Women wishing to serve as nurses are to be referred to the Bureau of Nursing Service at Washington, and men are urged to take first-aid courses.

The Red Cross is in its origin a supplement to the medical service of the army. Its charter declares that its purposes are "to furnish volunteer aid to the sick and wounded of armies in time of war," and to act "as a medium of communication" between the people and their army and navy. Relief following disasters, such as flood, famine, earthquake and other great calamities, which has come to be so large a part of the work of the Red Cross, is specifically declared to be among its duties only "in time of peace."

It is therefore possible that if the United States should enter the European war, the entire resources of the Red Cross would be put at the disposal of the army and navy, if events justified this step. Since the country was last engaged in war the Red Cross has grown from a very small organization, equipped only to supply meager medical aid to the army, to a highly complex service not unlike a department of the government itself. The whole range of

disaster relief activities has sprung up since the days of the Spanish war. So, also, has the ramified work of the Bureau of Nursing Service, and the separate Town and Country Nursing Service. In addition to the hundreds of local chapters, state boards have been organized in many states, and a score of "institutional members" enlisted for aid in emergencies.

These institutional members are for the most part charity organization societies in large cities. They are the executive agents of the Red Cross in their respective localities when disaster comes. Their service and responsibility, unlike that of chapters, is for civilian relief only, and they would not be subject to a call for military relief.

The recent division of the Red Cross, for administrative purposes, into a department of military relief and a department of civilian relief, does not affect the charter provision already quoted. Both of these departments are under the Central Committee, which is the governing body of the Red Cross.

At present none of the peace activities of the Red Cross has been suspended, and the relief to European belligerents is continuing.

THE LITERACY TEST ADOPTED

By an overwhelming majority both houses of Congress have passed the immigration bill over President Wilson's veto. The literacy test will thus be established on May 1, following a fight which began twenty years ago and in spite of two presidential vetoes by Mr. Wilson and one each by Mr. Cleveland and Mr. Taft. The literacy test of the act excludes all aliens over sixteen years of age who cannot read or write some language or dialect. Exceptions are made for those who are fleeing from religious persecution and for the father, grandfather, wife, mother, grandmother or daughter of a citizen of the United States. Asiatic limitation is secured by drawing geographical lines. Japan, however, is left to the operation of the agreement between the two governments as to admission of laborers.

NEW HANDICAPS TO WAR RELIEF

THE breaking off of diplomatic relations with Germany may throw out of gear the intricate machinery through which American relief—medical, material, financial—has been raised, transported and distributed to the stricken populations of Europe.

A canvass of ten of the principal war relief agencies, on February 5, showed that the main apprehension of their executives is not connected with difficulties of navigation or international friction, but with the possibility that the response of the American public to the international claims upon it may be overshadowed by duties arising nearer home.

This danger does not bear equally on all foreign war-relief funds. The contributors to the Red Cross European war relief, for instance, largely belong to the more internationally minded of American citizens, and it is believed that the greater number of them will not turn their generosity entirely into national channels. On the other hand, the American Relief Committee for Widows and Orphans of the War in Germany has already issued an announcement that "in view of the present international situation, the activities of this committee have been temporarily suspended. Should there be war, which we all hope may be avoided, the committee will, of course, be immediately dissolved."

The same tendency, to a lesser extent, may be experienced with some of the funds collected on behalf of the allied countries. Yet the need of Europe for American help, as the war drags on, becomes daily more insistent. It was, for instance, pointed out in the SURVEY for January 27 that the dependence of Belgium and northern France on foreign aid is continually growing as, one after another, different classes of the population, formerly self-supporting and even affluent, sink into abject poverty.

Members of the Belgian Relief Commission are certain that in spite of the break with Germany and whatever may follow, its operations can and must continue. "As to the bearing of the present

diplomatic position on our affairs," says W. L. Honnold, director of the commission in America, "our attitude is that regardless of the break in diplomatic relations, and even in the event of our country being forced into hostilities, the work we have established must continue. The position today is that our men have been instructed to remain in Belgium, and although our status in the existing diplomatic situation is somewhat vague, we think it probable that, barring our country's active participation in the war, a way will be found for continuing the work as at present. But, in any event, we feel quite sure that the sentiment of the world and the interests of those concerned will call for the continuance of the service, and that, if Americans have to get out of Belgium, representatives of some other nation, probably Holland, will take their place. In that case, our country would be under fully as great obligation to support the work as in the past. In other words, America's relation to it would then be the same as of England and France heretofore."

In further explanation of this comment, George Barr Baker, another member of the commission, told the SURVEY that a number of Hollanders and Spaniards were already actively associated with the work in Belgium and knew the details of the complex administrative machinery.

There is no reason to believe, it is held, that Germany would change her attitude to the organization if the directing functions now exercised by American citizens were taken up by those of some other neutral nation. The greater part of the activities—there are ten provincial, 126 regional and 2,553 communal relief committees in addition to about 100 others for special purposes—is run entirely by Belgians.

The plans of the Rockefeller Foundation for the relief of Poland, engineered entirely through the foundation's own office in Berne, Switzerland, are so far unchanged.

The War Relief Clearing House for France and her allies, recognized by the French government as an official representative in France of the distribution of American charity, sends all its supplies on French liners and is continuing that practice. A German central relief fund, on the other hand, the German Relief Commission, was abandoned about a year ago because it was felt that its appeals cut across the specialized claims upon the generosity of German-Americans.

The German Red Cross is a clearing house which receives and transmits gifts both of material and of money. The new situation created by last week's developments has not affected its ability to ship supplies; for, owing to inability of the belligerents to come to a workable

agreement concerning the shipment of these goods—in spite of influential support on the part of the American Red Cross—its material, since January, 1916, is lying on a Brooklyn pier.

The truly international character of the Red Cross may be illustrated by the fact that during the whole progress of the war the German organization has cooperated not only with the American and with the International Red Cross in Geneva, but was also directly represented in at least one of the enemy countries. A naturalized German in London has been allowed officially to work for this organization among the 50,000 German war prisoners in England. Delegations of German Red Cross nurses in Russia and of Russian Red Cross nurses in Germany, each accompanied by an equal number of Danish nurses to emphasize the neutral character of their mission, have traveled for months through hostile country.

The American Red Cross has not yet formulated new plans for the adaptation of its European work to the changed situation. The amounts actually disbursed by it in hospital supplies—from September, 1914, to January, 1, 1917—shipped to or bought in Europe, are \$1,222,000 for the allied powers, \$360,700 for the central powers, and \$288,250 for other countries affected by the war, notably Poland, Armenia, Mesopotamia and Syria.

These sums do not, of course, include the large sums spent on the equipment of the sanitary commission which was sent to wipe out typhoid fever in Serbia or the sending of doctors and nurses to various European countries. The need abroad for American medical services is expected to increase rather than decline; it would probably be impossible to maintain them should this country go to war, so that, in this respect, a very serious situation would be created.

The American Commission for Armenian and Syrian Relief, finding insufficient the ship room which the Red Cross could give it, sent a ship with food, clothes and medical goods to reach Beirut in time for the eastern Christmas, January 18. It is probable that this token of American good will has safely arrived; but it is doubtful whether under the new circumstances the organization will be in a position to send another relief ship, for which it is collecting funds, or even to obtain sufficient financial support.

The Serbian Relief Committee ships its supplies on American boats through the Mediterranean and has not yet had time to find out whether that method will be possible in future. The Lithuanian Relief Committee finds its greatest difficulty in the objection of the Russian government to have the needs of the Lithuanians widely advertised.

HOW PACIFISTS MOBILIZED AGAINST WAR

ANNOUNCEMENT of the new U-boat terrorism and the subsequent break with Germany found anything but a solid front among American peace organizations. They had been aligned on altogether different issues—on promoting a settlement of the European war by negotiation, on preventing militarism, on the foundation of a league of nations—on anything but the sharp issue of staying off war from this country. Some of the older organizations seemed a week ago in a fair way to splitting up; others apparently decided to stick to their lasts; while the experience and acquaintance built up in the last two years among the more militant peace groups enabled them to set going with surprising alacrity a counter-agitation to the war feeling and take steps to organize along emergent lines.

The general tendency was to uphold President Wilson in breaking off diplomatic relations with Germany, to applaud his patience, and back up his proposals for peace through negotiation and a league of nations. But when it was seen that the issue might become no longer one of diplomacy, but of declaring war, the newer peace groups began to urge Congress (in whose hands such decision rests) to show the same patience, to deliberate upon alternatives, and to "go to the people" before going to war.

One of the first effects of the situation was to bring William Jennings Bryan into active relations with the national peace organizations. Hitherto he had been doing free-lance agitation as a lecturer without association with them. Before the crisis, he had been billed for an address in New York by the Neutral Conference Committee, and on Friday night spoke to six thousand people in Madison Square Garden at a meeting in which his stand that war should never be declared without a referendum of the people was wildly applauded, and where resolutions were passed urging the President to call a conference of neutral nations for joint action.

Saturday night Mr. Bryan gave out an address to the people of the United States, urging them to wire their congressmen and senators to give consideration to six alternatives to entrance of this country into war: postpone until the war is over settlement of all disputes which cannot now be settled by peaceful means; keep Americans off belligerent ships; refuse clearance to ships of the United States and other neutral countries carrying contraband and passengers on the same ship; withdraw protection from American citizens who are willing to jeopardize peace by traveling as seamen with contraband on American or neutral vessels; keep American vessels out of the danger zone; hold a referendum of the people of the United States

before entering upon war. Senator La Follette introduced a bill providing for such a referendum last June (Senate 5796).

As an example, the American Union Against Militarism announced that it would conduct an informal referendum, submitting two questions: Should we enter the war in order to assert a legal right to go into the war zone? Do you think that Congress should declare war in any event short of invasion without consulting the people by a national referendum? It will mail return postcards to thousands of people just as in the Mexican crisis an informal commission instigated by the union preceded the official commission.

The same organization has urged by telegram its constituency to bring pressure to bear on the President and members of Congress to call a conference of neutral nations previous to any declaration of hostility by the United States government.

The Woman's Peace Party has telephoned its members directions with regard to wiring Congress, urging the refusal of passports for American travelers and immediate concerted action by neutrals.

The Neutral Conference Committee, of which Rebecca Shelly has been secretary, has temporarily suspended activity; and partly from this organization, partly from other and representative sources, an emergency peace federation has been formed with active groups in Washington and New York; George W. Kirckwey president and George Foster Peabody treasurer. Their program is to carry out an agitation to postpone until the war is over the settlement of any dispute which cannot now be settled by peaceful means; to keep Americans out of the danger zone; and to push the La Follette referendum bill.

A clearing house, with Margaret Lane as director, has been formed at 70 Fifth avenue, New York city, where the executive offices of the majority of the peace societies are housed. Its purpose is to prevent duplication of work among the societies themselves and to discover new opportunities for action. Twenty-five groups of pacifists outside of New York have been informed of this new committee.

The note to "go slow" has come not alone from the pacifist groups. The great sheaves of telegrams from all parts of the country piling up at the White House are summarized thus by David Lawrence, Washington correspondent of the *New York Evening Post*: "We are behind you, Mr. President, in every eventuality. We have confidence in you. Remember, we elected you to keep us out of war. Do it if you possibly can. Strive with all your energy to keep us from the terrible conflict abroad, but we are behind you if you need us."

FRIENDS OF LINCOLN

"MARTIAL MISFITS" FROM NERVES

UNDER the term "Martial Misfits," British psychiatrists discuss a class of men who evidently have proved a hard problem for examining physicians at the recruiting stations and who present a tragic picture as their stories are told in British medical journals. Tests for military fitness are generally thought of as consisting in measurements of height and weight, examination of heart, lungs, teeth and special senses; but experience with men actually enlisted is showing British physicians that these are not tests which will eliminate all of the pronouncedly unfit from the ranks.

Sir George Savage, writing in the *Journal of Mental Science*, describes the effect of service at the front or of life in the training camp or even the call to the colors on certain men of nervous instability, who perhaps have already suffered a mental breakdown but who under ordinary surroundings can lead fairly normal and happy lives. The summons to join the army may bring back all the old symptoms, the miserable sense of inadequacy for what may be demanded, the struggle to make a decision, the sleeplessness, the reawakening of old delusions and hallucinations. Sir George has seen men in whom the mental conflict over what was their duty in regard to enlistment was great enough to produce various forms of insanity.

He describes a class of men well known to every alienist, men who through wise guidance and in a carefully planned environment are able to

fill a useful place in their world, doing work which needs no initiative and is devoid of personal responsibility. Such men could perhaps work in munitions factories or elsewhere in the home field, but when they are accepted by the military physicians on the theory that camp life may be good for them, they will almost inevitably break down in the training camp itself or else later on in the trenches, and be fit only for asylum care.

Yet Sir George has himself taken the risk and accepted for service men he knew to be unfit because he felt there was an even greater risk in keeping them at home among people who did not know the reason for their exemption and who despised them as slackers. If they remained at home they would very likely develop fixed ideas of inferiority, or of persecution, yet the experiment of sending them to the front is fraught with great danger. Other men who before the war were suspicious almost to the point of madness become under the strain of army life definite paranoiacs. One remembers in this connection the officer who ordered the shooting of Sheehy Skeffington and whom a court-martial later found insane.

Sir George believes there are a few forms of mental disability that may be actually helped by army life. He has seen men who were hopeless hypochondriacs turn into useful soldiers under the stimulus of a complete change of life. Men devoid of moral sense, incorrigible liars and pilferers, may, he thinks, become quite efficient fighters. But except for these few unusual cases,

he believes that for their own safety and for that of others, all men with any form of mental instability should be carefully weeded out from the army.

This same tragic class of misfits is spoken of by E. Farquhar Buzzard in an address on Warfare on the Brain, in which he deals with what is usually called shell shock. This is, he says, a much overused term, made to cover not only the true shock of shell explosion but also the effect of sheer exhaustion in a neurotic man. A normal man who has felt the shock of explosion near at hand develops symptoms like those following a blow on the head. This is real shell shock. But many cases are included under the term which are really instances of inherited nervous and psychic abnormality excited into activity by pure exhaustion and over-strain; others are "martial misfits," men who passed as normal in civil life but broke down under the demands of military life, the shock of the explosion being simply the last straw. These so-called shell shock cases present the greatest variety of symptoms, from epilepsy to motor paralysis, from mutism to the inability to cross an open square.

Evidently from the many articles on this subject in British medical journals, proper provision for the large numbers of cases of this kind is becoming a difficult problem for the government.

PHYSICAL TRAINING WITHOUT A GUN

PRESIDENT WILSON'S recent statement to interviewers that "physical training is needed but can be had without compulsory military service," has already produced results that may be far-reaching. A committee of leading educators has been formed to press for the adoption, in the various states, of a "model" bill providing for physical training, without military features, in the public schools, and the bill was actually introduced last week into the legislatures of California, Massachusetts and Indiana. Dr. Dudley A. Sargent, director of the Hemenway Gymnasium, Harvard University, is the drafter of the measure.

The committee, which bears the name of "The Committee for Promoting Physical Education in the Public Schools of the United States," has opened headquarters in the Munsey building, Washington, D. C. It consists of John Dewey, of Columbia University; J. Y. Joyner, state superintendent of public instruction, North Carolina; Ella Flagg Young, former superintendent of schools in Chicago; President David B. Johnson of the Winthrop Normal and Educational College of Rock Hill, South Carolina; Carroll G. Pearse, president of the Milwaukee State Normal School; Mary C. C. Bradford, state superintendent

of public instruction of Colorado; Francis G. Blair, state superintendent of public instruction in Illinois; Josephine Preston, state superintendent of public instruction in Washington, and Dr. Sargent. Harriet P. Thomas is secretary.

The bill, which consists of only twenty-two lines, is reproduced in an adjoining column. Its proponents are careful to assert that they are not proposing to impose an "elaborate and expensive machinery" upon any state, but merely to indicate the way to begin in the belief that public opinion has now been educated to the point where it will support physical training in the schools, especially when that training is shorn of military features.

NAVAL PRISONS VISITED BY A VOLUNTARY PRISONER

THE voluntary incarceration of Thomas Mott Osborne aboard the naval prison ship *Southery*, at Portsmouth, N. H., under an arrangement

A BILL

To Upbuild National Vitality through the Establishment of Physical Education and Training in the Public Schools of the State

Be it enacted by the Senate and House of Representatives of the State of in Legislature assembled, That physical education and training and the proper care of the health of pupils of both sexes shall be provided in all the grades of the public elementary and secondary schools of this State.

SEC. 2. *Within three months after the passage of this act, and for the purpose of carrying out the provisions of this act, the (State Board of Education) or (the State Department of Education) or (the State Superintendent of Public Instruction) is hereby authorized to employ a State supervisor of physical education at a salary of \$..... for a term of years and to employ such assistants as may be necessary and to fix their salaries, and said Board of Education (Department of Education, or Superintendent of Public Instruction) is hereby authorized and empowered to make such rules and regulations as may be necessary for the effective administration of this act.*

SEC. 3. *For the payment of the salaries of the State supervisor of physical education and his assistants and other necessary expenses for the proper execution of this act there is hereby appropriated out of the treasury of the State the sum of \$..... annually.*

SEC. 4. *All laws and parts of laws in conflict with this act are hereby repealed.*

SEC. 5. *This act shall be in effect from and after.....*

PRESIDENT WILSON'S RECENT STATEMENT ABOUT PHYSICAL TRAINING HAS ALREADY LED TO THE INTRODUCTION OF THIS "MODEL" BILL INTO THREE STATE LEGISLATURES AND THE CREATION OF A COMMITTEE TO PUSH IT IN OTHERS.

with Secretary Daniels to study conditions, has caused a new interest among penologists in recent reforms in punishment within the navy.

The Secretary of the Navy, in his report for 1916, though declaring that we cannot yet hope for the day when prisons will no longer be needed in the navy and discipline maintained without them, points out that within three years the number of prisoners has decreased from 1,835 to 620. The enlisted strength of the navy has increased in this same period more than 6,000. With this steady diminution of prisoners there has been, declares Mr. Daniels, "a steady improvement in discipline and a marked improvement in efficiency."

The principles of probation and of suspended and indeterminate sentences largely account for this decrease. These principles were introduced two years ago, being borrowed, of course, from civil life. At the outset considerable doubt was expressed among naval officers as to their efficacy. Now, says the secretary, the results have been more gratifying, in both humane and economic features, as well as in the beneficial effect upon discipline, "than was even anticipated." The present system differs from the old in that instead of incarcerating a man guilty of a purely military offense, without pay for a long period, to be dishonorably discharged at the expiration of his sentence, a first offender whose record warrants it is placed on probation, usually for one year, at his regular station of duty, and the adjudged sentence of the court is held in abeyance. The probationer is permitted to draw one-half of his pay, the other half being withheld to be paid him at the expiration of his enlistment, if his conduct and general efficiency have been excellent.

The beneficial effect of this reform, says Secretary Daniels, is confirmed by the almost unanimous opinion of commanding officers and by the satisfaction of the enlisted personnel. It has already led to the permanent discontinuance of the disciplinary barracks at Port Royal and of the prison on the U. S. S. Philadelphia. Moreover, there has been a decrease of 1,251, or approximately 20 per cent, in the number of men discharged in other than an honorable status. This has occurred, too, "during a year in which the demand for labor and the corresponding inducements for men to leave the service and secure employment in civil life have been abnormal."

Incidentally the new penology has effected a considerable saving in money. The entire prison system of the navy cost, in 1913, \$1,190,514; in 1914, \$822,923; in 1915, \$643,461. Since the discontinuance of barracks and prison above mentioned, it has cost at the rate of \$350,000 a year.

Idle Prisoners in Crowded Jail Playing Cards and Swapping Stories of Crime

Why Not Stop Making Criminals in Jail and Put Prisoners to Work?

"The last census gives average daily jail population of approximately 1,200 and between 13,000 and 15,000 commitments per year, which cost the counties for board about one-quarter million dollars per year (not including the improvements and buildings and not considering the loss of labor.)

"In most of the county jails there are crowded conditions, lack of employment, no facilities for classification, no effective system of probation, an unjust fee system, unsuitable buildings."

J. L. WAGNER, in "Report on County Jails."

What the County Department of Public Welfare Will Do to Cure and Prevent Crime

Give each prisoner a thorough physical and mental examination and learn his history

Adapt the treatment to the needs of the individual prisoner

Study the delinquent arrested to discover why he went wrong, and whether the cause is removable.

Make the jail conditions healthful, with plenty of work and good training for the prisoners.

Classify the prisoners, and prevent the hardened criminal from corrupting the first offender.

Help the discharged & paroled prisoners to get a new start.

POSTERS PREPARED BY THE MISSOURI CHILDREN'S CODE COMMISSION

Five posters were prepared by L. A. Halbert, superintendent of the Kansas City Board of Public Welfare, and illustrated by a prisoner at the Kansas City Municipal Farm

It is in the hope of still further improving this branch of the service that Secretary Daniels has asked Mr. Osborne to "visit naval prisons, study the methods in operation in the navy, and to make suggestions which may lead to further reforms."

CONGRESS ASKED TO LOOK INTO "BLOODY SUNDAY"

CONGRESSIONAL investigation of the facts surrounding the "bloody Sunday" killings at Everett, Wash., last November [see the SURVEY for January 27], may be urged by Senator Poindexter, of Washington. He will base his resolution, if it be submitted, upon Anna Louise Strong's article in the SURVEY and upon information which has been forwarded to President Wilson and referred by him to Senator Poindexter. President Wilson has indicated his interest in the charges made against the deputies and the representatives of the Everett Commercial Club in the petitions and publicity matter which he has received. It is understood to be his desire that either the Department of Labor or a special committee of Congress establish the truth about the causes leading up to the killing of five members of the I. W. W. and two deputies at Everett.

Senator Poindexter is waiting for the Department of Labor to indicate clearly whether it considers its own powers, as administered by the Division of Conciliation and Arbitration, sufficient to deal with the affair. It has no mandatory powers—cannot compel the mill owners or the shingle-weavers to submit their cases to it, nor can it compel testimony as to the shooting. A committee of Congress, on the other hand, would be equipped with all necessary powers.

Testimony unfavorable to the deputies and the "vigilantes" of the Commercial Club faction comes from various sources, including the Seattle Central Labor Council, the mass meeting held in Dreamland Rink, Seattle, on November 20, and from numerous trade unions and Socialist party locals in the state.

Congressman Hadley, who represents in the House the district of which Everett is a part, declined this week to take any step in the premises. He said that he had the utmost confidence in the courts of Snohomish county, where the trial of the seventy-four I. W. W. members, indicted for murder as the outcome of the shooting, is to take place in March. Congressman Dill, Democrat, of Spokane, has received appeals for a congressional inquiry, but has referred his petitioners to Mr. Hadley.

SOCIAL LEGISLATION URGED IN MISSOURI

AN active state-wide campaign for the adoption of the forty-two principal bills in the Missouri children's code is being waged by the members of the commission which drafted it. In the legislature special committees of both House and Senate have the bills in hand.

The commission is especially urging the passage of the bills creating county boards of welfare and juvenile courts in every county of the state. Both are meeting some opposition, the county board bill because of differences of opinion as to how the board should be composed, and the juvenile court bill on constitutional grounds. Opposition is also being encountered to the bills relating to the protection of illegitimate children, the abolition of common-law marriages, and the licensing of child-caring institutions.

The campaign is being conducted by weekly articles in the city and county papers and the wholesale distribution of illustrated folders.

The commission has published an exhaustive 160-page report embodying all its recommendations, with a supplement of legal references to all statutes and constitutional provisions in the state relating to children. It is the first complete

code prepared in response to the new movement for revision of the laws relating to children in all the states. The legislative campaign is in charge of Mrs. Maurice Lowenstein, of St. Louis, executive secretary.

In addition to this organized fight for the adoption of the children's code Missouri agencies interested in social legislation have combined to put through a general program of bills in the present legislature, as they have done in five legislatures past. The State Committee for Social Legislation, representing almost a dozen agencies, is backing particularly the women's eight-hour bill, creation of minimum wage boards, supervision of private charities by the state, a new constitution, and an injunction and abatement act to suppress houses of prostitution.

There is a well-organized "welfare lobby" at the legislature, and the committee's legislative representative, Louis F. Budenz, is working in close cooperation with the legislative agent of the Children's Code Commission and representatives of the State Federation of Labor.

The fate of social legislation in Missouri depends very largely, as in other recent years, upon the wet and dry issue. The legislature is under reactionary control in both Houses, but the leaders have indicated that they are willing to let at least some of the program go through. Public opinion is being brought to bear in the hope that the more important measures can be forced to a vote.

NEW LAWS PROPOSED FOR COLORADO

THE Women's General Legislative Committee of Colorado has formulated a program of eighteen bills concerning women and children. With Josephine Roche, formerly woman police officer in Denver, as secretary, the committee is working energetically to have these measures adopted at the present session of the legislature.

One of the most important bills is an amendment to the child labor law prohibiting children under fourteen from working in the sugar-beet fields. The submission of this amendment is largely due to the investigation and agitation of the National Child Labor Committee [see the SURVEY for November 25, 1916]. A bill of a different character, but also aimed to protect children, is one which would legally entitle illegitimate children to their father's name and inheritance, or if the mother prefers, to her name.

Other bills framed in the interest of childhood would create a child welfare commission under the State Department of Education; raise the age of juvenile dependency and delinquency to eighteen years; provide for wider use of the school plant; restore the status of the

juvenile court so that it shall have exclusive jurisdiction in all children's cases and coordinate jurisdiction against adults where children are involved; establish a psychopathic clinic for the examination of adults as well as children in criminal and juvenile courts; permit parents to redeem a dependent child; and change adoption laws in regard to inheritance by foster child and foster parent.

Of the acts affecting women the most important is that establishing a minimum wage commission for women and minors. Others would supply aid to expectant mothers, provide a tax levy of a fraction of a mill to raise revenue from general taxation to carry out the provisions of this maternity bill and the mother's compensation law; permit women to sit on juries; appoint an assistant woman judge in counties of over 25,000 population; and give girls the same protection in regard to property rights until twenty-one years as is now given boys.

TRACING THE RELATION OF WAGES TO POVERTY

THE Association of Neighborhood Workers of New York city has requested the Department of Public Charities "to make an investigation of wages obtaining in New York city and publish the result of the investigation with the purpose of enlightening the public as to those industries which fail to support their employes, thereby forcing public and private agencies to furnish supplementary payment in the form of relief."

Assuming that the department will not be able to conduct such an investigation with its present funds and staff, the association has offered to cooperate with Commissioner John A. Kingsbury in urging the Board of Estimate and Apportionment to make a special appropriation to the Department of Public Charities for the purpose.

This action was taken at the instance of Mary K. Simkhovitch, head worker of Greenwich House, and is in line with an idea that she advanced at the meeting of the National Municipal League in Springfield last fall. As reported in the SURVEY for December 9, 1916, Mrs. Simkhovitch would enlarge the functions of municipal charities departments, drawing an analogy from health departments which try not only to stamp out epidemics, but to prevent disease altogether. In the same way she held that a charities department should fight poverty, not merely relieve its victims; she would have the charities departments study industrial questions and make reports which would include statements of wages paid in the industries of the community.

This view has been criticized on the ground that there is no more reason for the charities department to investigate wages than for the health department to

do so, since inadequate income and consequent poor housing and insufficient food may be a cause of disease; or the police department, since poverty is a factor in vice and crime. The reply of those who take the same position as Mrs. Simkhovitch is to agree with the objectors. There are, indeed, strong reasons why all city departments should be interested in the rate of wages paid in local industries; the charities department deals with the question more directly than the others, and is therefore put forward in the neighborhood workers' resolution.

LEPERS ARE TO HAVE THEIR HOSPITAL

THE bill to provide a national leprosarium in the United States and to prevent the further spread of the disease, as passed by the House recently, was unanimously passed by the Senate on January 25. As indicated in the SURVEY of January 13, selection of a site and the erection of buildings will be in charge of the federal Public Health Service, which is now authorized to act.

The Senate Committee on Public Health and National Quarantine made a special investigation and held a hearing last March. Experts were brought to Washington and their testimony on the care of leprosy has been published in a volume of 200 pages giving definite information concerning conditions and needs of lepers in our country. One of the most telling statements at the hearing was in a letter from John Early, the Washington leper, who appealed to Senator Ransdell to "remember we are outcasts of society, but we still have human tastes and feelings."

DIPLOMAS BEFORE WORK CERTIFICATES

FEBRUARY 1, 1917, was a red letter day for thousands of school children in the state of New York. A change in the child labor law is the reason. Hereafter children under fifteen years of age who desire to enter industry must be graduates of an elementary school. All undergraduates of these ages must stay in school until their fifteenth birthday, and even until their sixteenth birthday if they have not completed the first six years' work of the elementary school course.

This change in the New York child labor law is the most important since the general rewriting of the statute in 1903. With the exception of Ohio, in no other state are children fourteen years of age forbidden without exception or exemption to work in factories or stores without first obtaining a graduation diploma as a prerequisite for an employment certificate.

The enactment of this progressive amendment, in the opinion of the New York Child Labor Committee, which

drafted the bill, is more than justified by the large increase in the number of children going to work during 1916. In the entire state approximately 61,000 recruits—an increase of 27 per cent over 1915—were added to the child labor army. The new Wellington law, it is estimated, will cut down this number by fifteen or twenty thousand children. Moreover, it will give boys and girls the benefit of more schooling, which, provided the courses of study are modified to meet adequately the children's needs, will result in better preparation mentally, physically and economically.

TRIALS OF BIRTH CONTROL ADVOCATES

The birth control movement has shoved its way into the front pages of New York newspapers the last fortnight.

A large share of publicity is due to the hunger strike in the workhouse of Ethel Byrne, convicted on January 22 for selling contraceptives and disseminating birth control information in violation of section 1142 of the New York penal code.

Last October Mrs. Byrne and her sister, Margaret Sanger, established a birth control clinic in a thickly populated district of Brooklyn. Both women are trained nurses and they proposed, at a nominal charge of ten cents for registration, to give the Jewish mothers in the neighborhood scientific knowledge of methods of contraception. They maintain that no devices were sold on the premises with the exception of that sold to the woman detective recognized by Mrs. Byrne and offered the contraceptive in open defiance of the law. After the visit of the detective, the clinic was short lived. The place was raided; Mrs. Byrne, Mrs. Sanger and the registration clerk, Fania Mindell, were all arrested.

When Mrs. Byrne, who was the first of the trio to face trial, was sentenced to thirty days imprisonment, she immediately refused to take food or water as a protest against a law she holds unjust and unconstitutional. At the end of three days she was forcibly fed and at the end of nine days, through a petition of women to the governor, she was pardoned by Governor Whitman on the understanding she would no longer disobey the law.

It was established that Miss Mindell sold a book, entitled *What Every Girl Should Know*. She was fined \$50.

It was not proved that Margaret Sanger herself either sold contraceptives or literature on birth control. Moreover, Judge Freschi raised the question whether the articles displayed at the clinic were used to prevent conception. But although Mrs. Sanger's attorney asked for a dismissal of the case on the grounds that the law was unconstitu-

Carnegie Hall Mass Meeting Pledges Support in Her Birth-Control Fight.

WOMEN CHEER HER SPEECH

Dr. Mary Hunt Attacks "Fifth Ave. Doctors" for Service to Rich Which She Says Is Denied the Poor.

Three thousand persons in mass meeting at Carnegie Hall last night started a concerted movement for the repeal of the law forbidding the dissemination of birth control knowledge.

Mrs. Margaret Sanger, in whose trial for conducting a birth control clinic decision was reserved in Brooklyn yesterday, made a speech in which she threw all caution aside and removed all doubts as to her purpose when she declared, while the crowd cheered her wildly, that she had devoted her life to the cause of voluntary motherhood, and would continue to fight for birth control, courts or no courts, workhouse or no workhouse. Mrs. Sanger is a sister of Mrs. Ethel Byrne, who is on a hunger strike in the Blackwell's Island workhouse, serving a

find it out and arrest us, and we could do no more of the good we now do."

Miss Todd read a set of resolutions which said in part:

Resolved: That we unqualifiedly condemn the action of the District Attorney and Special officers of Kings County in detouring Mrs. Sanger her right to trial by jury and to Mrs. Byrne a day of sentence pending her appeal to a higher court, and also refusing to hear medical and scientific testimony so that these cases might be tried in the courts of the vital issues involved and not on legal technicalities.

Resolved: That we extend our deepest sympathy to that brave champion of the American womanhood, Ethel Byrne, in her martyrdom for birth control, and protest vigorously against the cruel and arbitrary action of the Commissioner of Correction, Burdette H. Lewis, in denying to her friends and relative access to her bedside.

Resolved: That we pledge to Margaret Sanger our unflinching moral and financial support in her campaign to establish the principle of voluntary motherhood in this country.

Relative to the subject matter of the resolutions it may be said that Mrs. Sanger has been indicted by a Grand Jury, and will have a trial by jury, in addition to the Special Sessions hearing, and Judge Justice Freschi did not receive any testimony, which was not in evidence from either side.

JUSTICES IN DOUBT IN SANGER CASE

Birth Control Advocate Expects Court to Overturn Decision.

tional, that the case was outside the jurisdiction of the Court of Special Sessions and that evidence of guilt was insufficient, she was adjudged guilty and sentenced to thirty days in the workhouse.

BANNING THE NUDE IN THE MOVIES

HAVING decided some weeks ago not to pass any motion-picture film concerned wholly with the commercialized theme of "white slavery" or so advertised as to give that impression, the National Board of Review of Motion Pictures has just announced its intention not to pass any pictures in which the female nude is displayed. The wording of the announcement appears to put the ban on every possible representation of the female nude, but it is understood that the board intends to prohibit only the living nude, and that reproductions of works of art are not included.

The board bases its decision upon what it believes to be the attitude of public opinion. In the past year a number of so-called white slave films, and perhaps as many others showing the nude in artistic and unsuggestive poses, have been exhibited. The former were put forth by their makers as propaganda, the latter as pictures warranted by their artistic value. Some of the white slave films and one or two of the others have, says the board, raised acutely in a number of states the question of the desirability of legalized censorship. The board inquired of exhibitors in all parts of the United States and finding, it declares, that neither they nor their patrons wanted white slave pictures, it announced its decision not to pass any film dealing with that theme.

THE NEW YORK TIMES, TU

slonger Lewis quoted the doctors as saying: "Then I would not be true to myself," Mrs. Byrne replied: "Nobody else might know about it; but I would, and I would not be following out the course I have laid down."

Then Mrs. Byrne appears to be conscientious in her hunger strike? "The Commissioner was asked: "Yes," he said, "she appears to be a very conscientious woman."

"For the enlightenment of those who continue to complain that Mrs. Byrne is fed by force," continued the Commissioner, "I say that she is being fed by force only in the sense that she is being fed by force to continue to live. She will continue to live one day until it becomes necessary to feed her three times a day."

\$10 A WEEK TO SUPPORT 13.

Court Holds Man to Blame for Family's Size and Must Pay for It.

Sheffield, Conn., Feb. 9.—A court today held that Mrs. May E. Bessman, who became ill through her efforts to support her family of eleven children on her husband's income of \$10 a week, was entitled to a separation. He ordered her husband to pay for the care of the children and to pay Mrs. Bessman \$4 a week.

Joseph Bessman, the husband, is a hotel entertainer at cafes on the West side, and has never been able to pay, according to his testimony, which his wife could not dispute, more than \$10 a week, while he usually averaged between \$30 and \$40 a month. The couple have been married thirteen years, and have had in that time eleven children, the last two being twins. Testimony was introduced to show that Mrs. Bessman had been suffering from a weak heart, brought on by her household duties, and had been

Through its 700 local review committees and correspondents throughout the country, it believes it has been able to secure an approximate idea of the attitude of public opinion.

The board's decision to pass no pictures showing the living nude has been acquiesced in, it says, by all producing companies that are members of the National Association of the Motion-Picture Industry. These companies have agreed not to permit the production of any photoplays using such a figure, and have issued instructions to that effect to motion-picture directors and scenario writers. The decision dates from January, 1917.

Discussions of sex problems belong to a distinctly different category, says the board, and "deserve dramatic treatment on the screen as well as on the stage. The motion picture aims to present dramatically and seriously life even in its dangerous relationships. It must be permitted to portray life as it is lived in various strata of society. It must, therefore, not be condemned when it shows the bad in order to emphasize the good."

Some months ago the board formed and affiliated with itself the National Committee on Films for Young People. The purpose of this committee is to promote throughout the country not only films suitable for children but also those appealing to both adults and young people, that there may be more motion pictures suited to the whole family group. This committee has in turn organized the Affiliated Committees for Better Films, the purpose of which is to inform local groups in the details of the motion-picture business, and in methods that have been found successful in securing better film entertainments elsewhere.

Book Reviews

FUNDAMENTALS OF SOCIOLOGY

By Edwin A. Kirkpatrick. Houghton, Mifflin Company. 291 pp. Price \$1.25; by mail of the SURVEY, \$1.35.

This book is best suited to students in normal schools. With very little theory, there is an abundance of running comment on a wide range of interesting social phenomena, written in the concrete terms of every-day life.

About one-third of the book is concerned with certain social needs, one-third with the educational situation, and one-third considers the community survey.

The author seems to have been little affected by the heritage from Spencer, Comte, Gumpłowicz and Ward. His classification is not according to their formulæ; nor does he use their terminology, and the book thereby greatly gains in readableness and practicability. Mr. Kirkpatrick approaches sociology as a modern observer, and his discussions are related to the life that we see around us every day. But the great mass of material now discussed under the title of sociology, he has apparently not assimilated. The various topics are strung together more or less loosely. A greater reliance upon earlier writers would have helped, perhaps, in basing classifications more fundamentally.

There is also a certain failure to discriminate between big problems and little problems; nor is there much attempt to assign phenomena their relative places in the chain of causes. For instance, there is little to show that the author appreciates the industrial revolution, the economic causes of social problems, or the great conflict of selfish interests in society.

An illustration of his method is the chapter called *The Family as a Social Group and as an Institution*. He begins by calling attention to the biological nature of the family and the instincts upon which it is based, and indicates that out of these foundations the family has become an institution. Then follows socializing influences—primitive customs, the usual polygamy, polyandry and monogamy, the state regulation of marriages, increasing number of divorces with few remarks as to causes, and a closing paragraph on modern conditions. All this is accomplished in thirteen pages. This, of course, necessitates

the briefest running comment. But it seems to the reviewer that there is not enough consideration of the functions of the family, particularly the economic functions, nor is their sufficient emphasis on what the use of steam has done, and almost no lessons drawn from the variations of the family functions in historic times or among primitive peoples and in earlier times.

The same criticism holds true regarding the chapters on the community survey. Long lists of data which should be collected are set forth; but there is little attempt to evaluate them. In the survey of the economic conditions there are suggestions for collecting data on natural resources, but little attempt, for instance, to show the importance of nearness to coal and iron.

On the other hand, a good deal can be said for the book as one for the new student. It touches many modern social phenomena. There is no elaborate theoretical approach; the reader, in a way, falls easily into the discussions. Too great insistence on classification and causes might make the presentation a little formal for the beginner.

WILLIAM F. OGBURN.

RUSSIAN SOCIOLOGY

By Julius F. Hecker. Columbia University—Longmans Green & Co., Agents. 309 pp. Price \$2.50; by mail of the SURVEY, \$2.60.

From its beginnings in the latter half of the eighteenth century this volume traces the development of social thinking in Russia down to the present day, presenting as a background a review of the social and political conditions out of which social theory has developed.

No less than sixty-five racial and linguistic groups live within the boundaries of the Russian empire; but the bulk of the population is Slavic, a people characterized as having "a certain apathy, plasticity and pacific quality." Among such a people autocracy is readily seen to be a foreign importation, a "peculiar synthesis of Teuton militancy, Tartar despotism and Byzantine sanctimoniousness."

Following a historical discussion is the presentation of the chief concepts of the different schools of thought:

The Westernists are they who break away from narrowing Russian tradition, adopt the positivistic science of western Europe, borrow liberally from French, German and English thinkers for their philosophical presuppositions, and adapt their sociological concepts to the peculiar needs and tendencies of Russia. As a group the Westernists tend toward individualism, and believe that Russia should develop non-capitalistically on the basis of the land commune.

The Subjectivist school starts from a sense of disappointment in the failure of the populists to arouse the masses, and from a realization that progress must be achieved through the initiative of an "unselfish, critical-intellectual class." The "subjective" method is based on the positivism of Comte, and appears to be a kind of sociological pragmatism, in that it recognizes that some social laws, at least, are not eternal and unalterable, but are progressive, and are perceived only in the particular epochs in which they operate in the process of social evolution. Furthermore, history is interpreted only through a selective process by which we evaluate facts as fulfilling or not fulfilling an ideal good in the mind of the historian. Much is made by this school of the "critically minded individual," as a social force.

Criticism of the Subjectivists was developed in the orthodox Marxists, who are termed Objectivists. These men rejected the notion of a non-capitalistic development of Russia, a conclusion in which history appears to bear them out. They also spurned the doctrine of the exceptional individual as a factor of progress. To them the genius is simply one who earlier than his fellows perceives new generating social relations; equally with all others he is a product of his environment. Economic determinism is the sole factor in social evolution. Society is an aggregation of tool-making and tool-using individuals; and progress is simply the growth of productive forces. The goal lies in man's complete control over tools.

In the anarchist Kropotkin, we return to an appreciation of the commune as the "necessary nucleus of federal anarchist society." Kropotkin's doctrine of mutual aid, which is the causal factor of all evolution, is a real contribution to social thinking. To him decentralized federation is the goal of progress.

The Historical-Genetic group are represented by Korkunov and Kovalevsky; and the treatise closes with a chapter on the Franco-Russian sociologists, DeRoberty and Novicov.

The author is somewhat skeptical concerning the ultimate contribution of Russian thinkers to social theory. In Russia it has been developed too largely by tractarians under the galling pressure of autocracy. Only when this pressure is lifted can students strike out inde-

pends of their social and political environment, and attain to conclusions of universal acceptance through the modern method of statistics and investigation.

The volume should be of interest to readers of the SURVEY, because through its pages one is from time to time reminded of the prisons of Siberia and of the sufferings of the Russian martyrs. In their baptism of fire the Russian thinkers may not have freed themselves from provincialism. It is no disparagement to them that much in their writings which is really Russian is not sociology, and what is sociology is not Russian. One is reminded as one lays down the book that in times of persecution speculation flourishes.

ARTHUR EVANS WOOD.

SOCIOLOGY

By John M. Gillette. A. C. McClurg Company. 159 pp. Price \$.50; by mail of the SURVEY, \$.56.

This book contains the gist of the subject matter found in the usual treatises in sociology, in twelve chapters of twelve pages each, written in a style suitable for the general reader. The book is small enough to be carried in the pocket

and the chapters are short enough to be read without sustained attention. There seems to be a need for a book on sociology planned in this way. In an age when there is so much to be read, the pressure for brevity is terrific. The difficulty is that the book tends to become little more than an elaborated outline or table of contents.

Professor Gillette has not altogether escaped this danger. For instance, the chapter on the origin of races and institutions treats the nature of institutions, the origin of races, language, the state, religion, the industrial order, the family and education in twenty-four rather small pages. The escape from this compactness might be well-chosen and well-timed illustrations, but the author has practically no illustrations. The orderliness of his classifications, however, is good.

One of the results of more recent research is the theory that different racial abilities have played a comparatively little part in the development of culture, and that the abilities of races do not differ as widely as their cultures would seem to indicate, and this recent research of anthropology the author recognizes.

But he thinks of evolution as a process from simplicity to complexity. This is often the case, but by no means always so. The development of language runs almost counter to the process described.

Something like this also seems to be true of marriage. Marriage in primitive society is exceedingly complex as compared with ours. The author is not more guilty in citing his conclusions and his generalization than is the average writer on a subject like sociology, which covers many, many fields of research. Indeed, Professor Gillette has done the difficult task very well.

WILLIAM F. OGBURN.

PUBLIC HEALTH NURSING

By Mary S. Gardner. The Macmillan Company. 372 pp. Price \$1.75; by mail of the SURVEY, \$1.87.

The true significance of the quiet work carried on throughout the country in the interests of "public health" by a large and steadily increasing body of trained women is still only partly realized. Few can read this em-

inent readable book without an entirely new vision of the amazing growth and increasing scope of that branch of public service which a very few years ago was vaguely in the minds of most of us as "district nursing." We have for the first time an adequate presentation of this new national movement. Miss Nutting says that the development and status of this subject emerges as a matter of vital public interest, and that in placing this information at our disposal Miss Gardner has performed an important public service.

The chapters on the organization of visiting nurse associations, their methods of administration and the duties of boards of managers show an intimate knowledge of conditions, and an appreciation of the functions and importance of these essential bodies not always professionally realized. In the discussion of the fundamental principles governing all regulated and "standardized" visiting nursing work, it is interesting to note the development of the principle of remuneration as applied to those who receive the nursing service.

The whole attitude of the public, both lay and professional, has gradually evolved until now Miss Gardner shows us that although the purely charitable work must always be included in any scheme for public health nursing, emphasis is being placed more and more on the encouragement of the self-supporting element. Stress is also laid on the necessity for efficient business organization in all departments and details, and we are clearly shown that only by the workers receiving adequate professional and social training can the full measure of their responsibilities be rightly undertaken.

Throughout the book, one point is kept in evidence, the necessity for full use of that modern idea "intelligent cooperation." District nursing, or any of the forms of public health nursing, whether under municipal control or administered by private organizations can never attain full usefulness and remain an isolated work. Miss Gardner constantly emphasizes public health nursing is but a part of the whole scheme for community betterment, and without due realization of its dependence on the other component parts, much of its usefulness would be stultified.

The keynote of the book is the stress laid on public health nurses maintaining unbroken the spirit of healing and of sympathetic service, their remembering that their work must never become mechanical, that they have to deal with the delicate mechanism of human bodies and human souls, and first and last their essential duty to the individual patient is to keep in evidence the maintenance of the divine command, faith, hope and charity.

A. M. C.

EPIDEMICS RESULTING FROM WARS

By Dr. Friedrich Prinzing. Oxford University Press. 340 pp. Price \$2.50; by mail of the SURVEY \$2.70.

Dr. Prinzing's book has many values. One of them is a totally new approach to the more or less familiar subjects of geography and history. It may be news to many a reader that certain medieval invasions from northern Europe were checked rather by cholera than by strategy; that pestilence won nearly as many victories as bullets did; that, for instance, typhus raised the siege of Metz, and took its name, "Hungarian disease," from its ravages during the sixteenth-century wars against Turkey.

Dr. Prinzing traces, usually from original sources, the story of all known epidemics, from "the plague of Athens" to the cholera that followed along the Tchatalja; from the wars of the Peloponnesus to that of the Balkan states. In addition to the interest of the vividly told story of all these outbreaks, Dr. Prinzing's book is a remarkable *apologia* for modern sanitation and laboratory research. For since the sources and modes of infection have been known, an increasing degree of control has become possible. And the great diseases that faithfully followed armies and camps in a deadly neutrality, through the Middle Ages, have not occurred in the present great conflict, with one exception—the typhus outbreak in Serbia. The sporadic outbreaks in many places are undoubtedly more than newspaper reports, al-

though not until the medical history of the great war is written can full tribute be paid to the achievement of sanitation.

As a preliminary to such a history Dr. Prinzing's book is of high value and interest. It is a publication of the Carnegie Endowment for International Peace.

GERTRUDE SEYMOUR.

 HOUSEHOLD ARTS AND SCHOOL LUNCHES. By Alice C. Boughton. Survey Committee of the Cleveland Foundation. 170 pp. Price, postpaid, \$.25.

tute an impressive aggregate. The commissioner of internal revenue has complained that the local officials have shown little interest in the apprehension of illicit liquor manufacturers or dealers. It is evident from the circumstances I have instanced that national prohibition will be no more effective than state prohibition in cutting off the production of liquor, and thus the chief argument in its favor falls to the ground. It would be interesting to have Mr. Woods tell us how he supposes the national government, upon which undoubtedly would be placed the great burden of the newly created police problem, would proceed in order to dry up these springs of spirits which are tolerated, if not encouraged, in that South which so enthusiastically seeks to inflict its "peculiar institution" upon the North.

WILSON J. VANCE.

New York.

TO THE EDITOR: Mr. Vance's letter compels me to be personal. My appointment to the Boston Licensing Board was opposed by the liquor interests through every sort of aboveground and underground method because, as they stated, I was a prohibitionist. This statement was constantly repeated by them in order to thwart my efforts while a member of the board to reduce, even by a little, the sale of liquor to thousands of men already drunk, and to prevent liquor licenses from making their places markets for prostitution. My reappointment was prevented through the same representation, accompanied by influences emanating from the liquor interests which reached the governor through his chief political lieutenant, as was publicly shown by evidence upon which no doubt has been cast.

In the light of the actual situation in Massachusetts, my practical efforts for many years have been in the direction of the gradual elimination, step by step, of some of the most serious evils connected with the liquor trade. I am still ready to support every such effort. But I am satisfied that, while there are a few liquor men who will tacitly approve of this policy, the dominant forces in the trade will stupidly oppose it to the last.

I have never made any secret of the fact that I was opposed to the sale and use of intoxicating liquor. Three or four years ago I became convinced of the feasibility and practicability of national prohibition. I have not supported state prohibition, though the facts from the western states are profoundly altering the face of this question.

The facts adduced by Mr. Vance show that the great power of the United States government, under national prohibition, will not be unequal to the problem of the sporadic illicit stills that will be in existence after the organized manufacture and sale of intoxicating drinks

Communications

NATIONAL PROHIBITION

TO THE EDITOR: Robert A. Woods discusses the prospects of national prohibition in an article entitled *Winning the Other Half*, published by the SURVEY recently [December 30]. It is evident that Mr. Woods favors national prohibition, a cause which he did not apparently espouse until he failed of reappointment at the hands of the governor of Massachusetts, to the Boston board of excise.

His article contains some positive errors, as, for instance, when he figures that the assent of thirty-five of the states of the union would give us national prohibition, whereas action by thirty-six is necessary. In other ways the article is open to criticism, because its implications are calculated to mislead the reader.

Mr. Woods points out that the South and West are attempting to force prohibition upon the North and East, and quotes with approval a southerner who sees poetic justice in the prospect that the North, which forced abolition upon the South, will get an unwelcome dose of prohibition from that section. He fails to show, however, that the South makes little pretense of living up to the requirements of the system which it is so anxious to "put over" on the reluctant North. He might, with profit, have discussed the enormous growth of illicit distilling which has assumed the proportions of an organized business, and which is confined almost wholly to those southern states which make a boast of their aridity.

According to the reports of the United State commissioner of internal revenue, the enormous number of 19,349 illicit distilleries were seized and destroyed in

the fiscal years beginning July 1, 1909, and ending June 30, 1916. One-fourth of the number, or to be exact, 4,513, were taken in the state of Georgia alone during this period. In North Carolina, 3,125 were seized; in Alabama, 2,221; in South Carolina, 1,330; in Virginia, 1,272, and in Tennessee, 966. Almost every year has seen an increase in the number of stills actually discovered by the federal officers, and every indication is that "moonshining" has passed out of the romantic stage and has become a systematized, prosperous, commercial proposition with many ramifications, its growth having a rather definite relation to the cutting off of supplies from manufacturers of and dealers in alcoholic beverages, legally engaged in business.

This is not the only indication of the lack of good faith in the South with respect to prohibition. Bootlegging and other forms of illicit sales have assumed large proportions. In the little town of Girard, Ala., during the past summer, it was discovered that almost every house was a cache for liquor, which was stored in cellars and sub-cellars, in secret closets and concealed wall passages. The retail value of the stock seized was estimated at \$1,250,000, or some such figure. About one hundred indictments were returned. It does not seem likely that this place of about 5,000 was the only important depot for illicit liquor in the state, but I have not heard of any spectacular raids in any other municipality.

Of course, the amount of liquor illicitly distilled and illicitly peddled without detection is beyond calculation, but with the rather generous amounts allowed to individuals in most of the southern prohibition states, must consti-

is eliminated; especially as the fateful political power of the organized and respectable liquor interests, in the large and in detail, will then be wholly ended. And when, as will from now on be the case, the states can prevent these same organized interests from sending liquor across their borders, they will be enabled to focus their attention upon such internal liquor problems as remain.

The fatal lack of straight thinking on the part of the liquor interests is clearly shown in their sensitiveness to the existence of moonshiners with their little knots of purchasers which have always been in existence here and there in odd corners throughout the rural states of the South, when they are not at all concerned in terms of action about that ghastly total of the violations of law involved in drunkenness and all the ramifications of immorality, brutality, misery and crime so associated with it, which is the disgrace of our cities.

ROBERT A. WOODS.

[South End House]
Boston.

HOUSING REFORM IN 1869

To the Editor: Perhaps no city needs attention to its housing problem more than does Cincinnati; one-third the population lives in one-twentieth the area of the city. Following the cholera epidemic of 1866 came the organization of the Board of Health, which promptly called attention to the serious effect of bad housing upon the health and morals of the people. Cincinnati was the most congested city in the United States. In 1869 the Board of Health caused to be introduced in the legislature a bill for tenement-house regulation. But so radical a measure was so unpopular with the learned law-makers (and the influential tenement owner) that the legislature took no action upon it.

As in many of our other social forward steps, the Board of Health was the first to move. Even without housing laws, it had "two dilapidated old shanties" torn down, and forty-eight repaired and reroofed in 1869. The first and only complete tenement house survey made in Cincinnati, and perhaps the first in the United States, was conducted by the board in this same year 1869, but two years after the board began its operations.

This survey disclosed the fact that there were 1,410 tenements in the city. In these were 16,197 rooms, in which lived 9,894 families of 38,721 people. Of the families, 4,218, or almost one-half, had but one room in which to live, and 3,571 of these rooms had but one window. There were 4,469 families living in two rooms. There was an average of about seven families to each tenement house, an average of five people to every two rooms.

The report of this survey called at-

tention to the fact that many tenements of from two to six stories had but one stairway—and this was before the day of fire-escapes. The survey was made, and the figures published to demonstrate the need of law to regulate the construction of dwelling houses and uses to which they might be put.

It is only recently that we have paid much attention to the housing question; it is but yesterday that we realized that bad housing conditions affect the entire city, yet the report of this survey said, "It is in such crowded tenement houses where diseases of every name and character are most prevalent and fatal, and these are the force from which pestilential and contagious diseases spread *over the whole city.*"

After the housing survey made in 1869, a registry of tenements was kept by the Board of Health for at least ten years, and within that period we find the number of tenements increased from 1,410 to 5,616. The first suggestion of the need of a tenement-house inspector seems to have been made by the health officer in 1877, but it was only after a lapse of about thirty-five years that tenement inspection was regularly begun, at first by the Associated Charities, then under the supervision of an expert whose salary was paid by one of our philanthropic citizens, and finally by the city, now under the direction of the commissioner of buildings.

Perhaps the interest in good housing was never so live as today. Never before was there such a concerted effort to secure better housing conditions, both through effective municipal inspection and regulation; and the activities of civic organizations and interested citizens. And in this matter, as in so many other present functions of our municipal government, we find the dreams of our far-sighted public officials of the late sixties fulfilled after a lapse of more than fifty years.

C. R. HEBBLE.

[Chamber of Commerce.]
Cincinnati.

[Cincinnati, if not the first city in the country to make a tenement-house survey, seems to have been a close second. Dr. John H. Griscom, city inspector to the New York Board of Health, wrote a report in 1842 in which he declared that 7,196 persons were living in 1,459 cellars and that 6,618 families were living in courts and rear buildings. In 1853, Robert M. Hartley, secretary of the Association for Improving the Condition of the Poor, reported that in 1850 there had been 18,456 persons living in 3,742 cellars. In 1856 a committee of the state legislature made an investigation and reported in favor of remedial legislation. It may be that none of these investigations was as thorough as that to which Mr. Hebble refers. New York did, however, secure its first tenement

house legislation in 1867. It is stated that there were at that time 15,000 tenement houses in the city. Boston took no positive action until 1872, when, after a conflagration, it enacted a building code. In 1885 it secured a law dealing with "the preservation of health in buildings in the city of Boston." Perhaps the first serious study of its housing was made in 1888. In 1891 the State Bureau of Statistics of Labor made a more exhaustive study. Other cities seem to have been considerably later than Cincinnati in awakening. The report of the City Homes Association on Tenement Conditions in Chicago was not made until 1901.—Editor.]

A HEARING FOR THE UNDER-DOG

TO THE EDITOR: As a constant reader of your paper, I have noticed one thing, namely, that you never give the underdog a hearing. Everything written and thought for the consummation of your readers is thought and written by upperdogs, which I think does not give justice to the name of your paper collection, SURVEY.

As an underdog, I have read that whenever reference is made to the workers, those workers are referred to as "labor." This is significant; it shows that the upperdogs are not willing to concede to the workers of the world the right to be called human beings. It is continuously pointed out that "labor" is something to be kept in its proper place. We are reading that the upperdogs are looking for managers and officials who can handle "labor" efficiently. And the experts of the upperdogs are constantly figuring out how much each worker needs for his keep while he is working; but never is one thought given to periods of idleness. "Labor" is to be fed only when it is working for an upperdog; and when the upperdog has no work for the underdog, the underdog is supposed to go in cold storage until an upperdog demands its services again.

I presume that you are well aware of the fact that a worker is not supposed to make a living; and furthermore I presume that our colleges are teaching a few fragments of history once in a while. Every professor knows that our present system of property laws is handed down to us from the ancient shepherd kings. Ancient society believed that God was the owner of the earth, and the kings were the direct descendants of God, who could parcel out the earth the way they liked it best.

The kings, as the descendants of God, had the duty to herd their subjects, punish and reward them; and the kings permitted everybody to amass as much as he could of the goods of this earth, so long as the king's share was untouched. And the inhabitants of the ancient kingdoms were continuously fighting among

themselves over the possession of a small parcel of land, on which they wanted to make a living. The friends of the kings, the upperdogs, of course got the best of everything, and the whole secret of statecraft at all times has been to keep the people divided.

Our colleges and universities are teaching one thing only, and this is: Keep the people divided. As our Lord and Saviour was visiting our earth, He taught one thing. He taught: GET TOGETHER!

Now I am asking, where does the SURVEY stand? Does the SURVEY stand for "getting together," or does the SURVEY stand for the law of the upperdog, which says: Keep the people divided!

Let us get together! Why should one man have to wait until an upperdog has a vacancy in a factory, when God gave the earth to all the people in common? Why should one underdog be forced to do all the hard, dirty work and others, the favorites of the upperdogs, have all the light work? Why should one underdog work hard all day, and not receiving sufficient nourishment and clothing for a family during times of employment, let alone times of unemployment, which are as regular and extended as the seasons? Why should young girls be forced to sell their bodies for a pittance, while young men, who would be only too glad to marry them, cannot do so because the upperdogs do not permit it?

The trained liars of the upperdogs are saying: "No two men are alike, and therefore there must be drudges to do the hard work and favorites to do the clean, easy work. A manager is worth more than a common worker and, besides, not everybody can do any kind of work."

As a matter of fact, most workers are not permitted to choose their vocation; and every underdog has to do the work he can get and not the work for which he is fitted best by God. As a matter of common knowledge, most managers and so-called owners of the industries can be replaced by underdogs to great advantage. Upperdogs have possession of the earth, not as a reward of intelligence, but as a reward of brutality and ungodliness.

Hoping you will give the underdog a hearing, I remain, Yours,

LEWIS G. ESCH.

Cleveland.

FIE ON US

TO THE EDITOR: My congratulations, Mr. Editor, upon the returning sanity of the SURVEY. In your issue of January 20 you show, in your disapproving review of the employment of women throughout industry in England in war time that, when the fear of the feminine furies does not control editorial expression, you are compelled,

like the author of *The Four Ages of Woman*, by the plain evidence of the effects upon woman's health and maternal powers, to denounce the fictitious freedom which sets her to work in mining, quarrying, metal working, grain milling and like arduous tasks.

England has fulfilled the ideal of Olive Schreiner and other applauded feminist priestesses and has made "all labor woman's province." Recognizing woman's absolute equality with man, the war rulers, in conformity with the feminist program, have declared that woman shall "be free, free in all human ways" (as Mary Johnston phrases it), free to earn the livelihood for herself and her family wherever she chooses.

Yet you are not satisfied. This glorious enfranchisement of women, their successful ousting of men from tens of thousands of jobs in sugar refining, in breweries, in railway machine shops, in coal pits and stone quarries, on delivery wagons and motor busses, gives you qualms of fear, fear alike for the welfare of the liberated women themselves and for the children who should be born to them. Fie on you, Mr. Editor, for a recreant. You who bowed to the dust before the furious women when they scratched and bit at me for pointing out the inevitable results of making "all labor woman's province," you should surely rejoice at England's brilliant demonstration of woman's capacity for accomplishing man's work.

If you continue recreant you will find yourself unexpectedly endorsing the program of *The Four Ages of Woman* by proposing that, in place of women being put to every sort of work until the disastrous results compel a slow and grudging restriction, we had better require that the fitness of the work to woman's physical powers and maternal obligations shall first be proven and all occupations proven unfit shall be barred against her self-sacrifice.

I rejoice that you have already forgotten, what your women friends so vociferously announced, that wholesale restriction of women's employments means a return to the age of the stagecoach. How dare you approve of putting on women limitations not put on men? If you don't take care you will be speaking with approval some fine day of that pet aversion of your lady allies, "that roseate nebulosity, the home."

JOHN MARTIN.

Staten Island, N. Y.

[How it took a world war to break down certain ingrained conservatisms of English people and throw open a new range of economic opportunity hitherto closed to their women is another story, some fragments of which have been told in the SURVEY from time to time—notably by Mary Chamberlain in *War on the Backs of the Work-*

ers (see the SURVEY for July 24, 1915). How the situation has been abused, and sweating for both men and women resorted to in the munition factories, she brought out with equal clearness. How the Home Office and the board of trade have studied the processes and the workers and come forward with recommendations to conserve youth and health was told by Dr. Hamilton (see the SURVEY for September 30, 1916). How the War Office, apparently without scientific or medical information, and in entire disregard of what these other and more enlightened agencies of the government have brought out, has thrown the weight of its influence (amounting in some cases probably to compulsion) upon women to take over heavy tasks in order to free the male members of their families for military duty—was the subject of the paragraphs in the SURVEY of January 20.

If our critic will turn back to the SURVEY for April 15, 1916, he will find that the editorial to which he refers did not oppose the regulation of industrial occupations for either men or women. Our factory laws are a compromise between the principle of liberty and the principle of human conservation. We opposed the wholesale restriction of women's employment on the basis of sex; and opposed the vesting of judgment and decision as to its scientific health regulation in the one sex to the exclusion of the one most concerned. In this British instance wholesale license is as bad as wholesale restriction; and the War Office the acme of self-constituted male authority.

We believe in safeguarding men as well as women at their work; but (to stretch a point) we wouldn't leave it to the suffragists to install safety devices on Mr. Martin's exposed epidermis or leave it to the men to vote finger-guards and muzzles for his fair assailants.—EDITOR.]

PERSONALS

ANNA LOUISE STRONG, executive secretary of the Seattle Council of Social Agencies, has been elected a member of the Seattle school board—the first woman to hold such a post in Seattle.

JOHN P. SANDERSON, secretary of the Children's Aid Society of Buffalo for the last two years, has accepted the position of executive secretary of the Connecticut Children's Aid Society, with headquarters at Hartford.

ANNA GOODRICH, the newly appointed director of the nursing service of Henry Street Settlement, New York city, has held, at one time or another, most of the important nursing posts in New York state. She re-

tains her assistant professorship at Teachers' College, for which the settlement furnishes field work in the post-graduate nurses' course. Rebecca Schatz, long identified with the house, remains associate director of nurses.

E. A. MOREE has resigned as director of the Atlantic Division of the American Red Cross to become manager of the Press Service Company, New York city, which will specialize in publicity for social service organizations. He is succeeded by Albert W. Staub, who has been in charge of the Red Cross war relief shipments at the Bush Terminal, Brooklyn.

JAMES L. FIESER, who since 1912 has been superintendent of the Associated Charities of Indianapolis, has joined the staff of the Ohio Institute for Public Efficiency as associate director of the Social Service Department. He will devote particular attention to promoting efficiency and cooperation among social agencies in Columbus and other communities of Ohio. His services have been engaged by the Columbus Chamber of Commerce to plan and direct the work of its new Department of Social Service.

WINIFRED STUART GIBBS, who was for ten years supervisor of home economics in the Association for Improving the Condition of the Poor, has resigned. In addition to her lectures in household arts at Teachers' College, Miss Gibbs is doing independent work as consultant in home economics. She was recently elected president of the New York branch of the American Home Economics Association.

MORRIS D. WALDMAN, for nine years executive director of the United Hebrew Charities of New York city, has resigned to assume leadership of the Federated Jewish Charities of Boston, a new organization which will supervise different Jewish philanthropic agencies. Mr. Waldman is succeeded by Abraham Oseroff, of the Bureau of Philanthropic Research.

JOTTINGS

POLIOMYELITIS is reported from West Virginia, where eighty-nine cases have occurred since early December. During December, twenty-one cases were reported from California, thirty-six from Massachusetts and a smaller number from Wisconsin, Maryland, and earlier, Indiana and Virginia. These are all of interest as having opportunity for special study of any distinct characteristics of the winter type of poliomyelitis.

THE Feeble-minded: A Community Problem was the subject of a symposium recently held by the City Federation of Women's Clubs of Rochester, N. Y., and as a result a committee was formed to aid in educating the community concerning feeble-mindedness. A petition has just been presented to the mayor asking for a psychopathic clinic (and an appropriation of \$5,200) to be conducted as a department of the board of health.

THE first number of what is to be an illustrated quarterly bulletin has just been issued by the Department of Public Charities of New York city. The Bulletin will appear in January, April, July and October. The first number contains 114 pages and has papers under the headings of pathology, medicine, surgery, neurology, gynecology, orthopedics, obstetrics, nose and throat, and eye. Its pur-

pose, as stated in the foreword, is to give "the medical profession the benefit of the scientific work which is being done at the various hospitals of the department."

A COMMITTEE from the Federal Council of the Churches of Christ in America called upon President Wilson on January 24 to ask for the creation of a federal commission to make a study of American relations with Japan and China. Bishop Earl Cranston, of Washington, D. C., introduced the delegation. The suggestion made was that the two Asiatic countries should be asked to appoint similar commissions to confer with the American commission. The President was also asked to support or initiate further legislation needed to protect aliens in this country.

THE *American Review of Tuberculosis*, to be published by the National Association for the Study and Prevention of Tuberculosis (105 East 22 street, New York city, \$2 a year), is described as a "monthly scientific publication for physicians and research workers in tuberculosis." In it will be merged the transactions of the association and the abstracts and notes heretofore appearing in the association's *Bulletin*. The *Review* will supplement, not supplant, the *Journal of Outdoor Life*. Dr. Allen K. Krause, formerly of Saranac Lake, will be managing editor.

A PAMPHLET recently issued by Charles B. Towns, of New York, recommends the appointment of a special federal commission to investigate drugs and the drug traffic. Mr. Towns believes that the entire traffic in drugs should be in the hands of the federal government, and only an agreement between nations will, he considers, prevent such abuse of commerce as the import into this country by firms (whose payment of \$10 entitles them to trade as "wholesale druggists") of large quantities of drugs which are to be shipped on into Mexico. The pamphlet covers ground familiar through Mr. Towns' articles in the *SURVEY* of October 14 and 28, and November 18, 1916.

MENTAL HYGIENE, to be published by the National Committee for Mental Hygiene, 50 Union Square, New York city, at \$2 a year, will present as untechnically as possible popular articles on mental factors in delinquency, crime, inebriety, etc. "The widespread determination," says Dr. Thomas W. Salmon, editor, "to control feeble-mindedness raises questions of economics, law, and medicine which demand the most thoughtful consideration." The magazine aims to interest physicians, lawyers, educators, public officials and all students of social problems.

PRIZES in the Hart, Schaffner & Marx economic essay contest for 1916 have been awarded as follows: Class A, first prize, \$1,000, to Duncan A. MacGibbon, McMaster University, on Railway Rates and the Canadian Railway Commission; second prize, \$500, to J. Noble Stockett, Johns Hopkins University, on The Arbitral Determination of Railway Wages; Class B, first prize, \$300, to Victor E. Gutwillig, under-graduate in University of Chicago, on The Manufacture and Marketing of Men's Ready-to-Wear Clothing; second prize, \$200, to Herbert Feis, under-graduate in Harvard University, on Economics of the Minimum Wage, with reference to American Wage Conditions.

FOUR LIGHTS, "an adventure in internationalism," has just made its appearance as a small four-page magazine, published by the Woman's Peace Party, 70 Fifth avenue, New York city (price, 5 cents). It will attempt to "voice the young, uncompromising woman's peace movement in America, whose aims are daring and immediate—to stop the

war in Europe, to federate the nations for organized peace at the close of the war, and meanwhile to guard democracy from the subtle dangers of militarism." The name of the magazine is taken from a quotation from The First Voyage 'Round the World by Magellan: "Then he showed four lights when he wished them to set full sail and follow in his wake."

THE Ford Motor Works, of Detroit, continues to be something of a Pandora's box of social and industrial surprises. The latest is the fact that no less than thirty-seven full-blooded American Indians are getting \$5 a day from Mr. Ford for carrying their share of this "white man's burden." Students of Indian affairs have long been baffled by the question whether it is good policy to encourage the oncoming generation of Indians to go into industry. The reservation system is recognized as no solution for the future. The question is, however, will we merely be writing another chapter of exploitation by turning them into factory hands? Of the Indian's mechanical ability, there is less doubt. He is credited with a genius for it; and one of the Ford Indians recently broke all the plant records in setting up a motor car.

SEVEN final volumes of the Cleveland school survey, just from the press, complete the series of twenty-five monographs that have "made school facts town topics" [see the *SURVEY* for July 8, 1916] in Cleveland, and that have been published periodically the past twelve months. The final volumes deal with school organization and administration, wage earning and education, the public library and the public schools, dressmaking and millinery, the garment trades, and household arts and school lunches. There is a summary volume by Leonard P. Ayres, director of the survey for the Cleveland Foundation. These reports can be secured from the Survey Committee of the Cleveland Foundation, Cleveland, Ohio, or from the Division of Education, Russell Sage Foundation, 130 East 22 street, New York city.

PAMPHLETS

COMMERCIALIZED PROSTITUTION IN NEW YORK CITY. A comparison between 1912, 1915 and 1916. Bureau of Social Hygiene, 61 Broadway, New York city.

1. PENCIL AND BRUSH; ART IN THE MINNEAPOLIS SCHOOLS. 2. IN A MAJOR KEY; MUSIC IN THE MINNEAPOLIS SCHOOLS. Price, single copies, 25 cents; ten or more copies to one address, 10 per cent discount, postage paid. One hundred or more copies to one address at 25 per cent discount, transportation to be paid by the purchaser. Secretary to the Superintendent of Schools, 305 City Hall, Minneapolis, Minn.

PUBLIC TREATMENT OF DRUNKENNESS IN ST. LOUIS. By George B. Mangold. Washington Univer-

THE PROBLEM OF THE UNMARRIED MOTHER

How to Help Her

The Society for Helping Destitute Mothers and Infants offers leaflets and Reports giving the substance of what they have learned in more than forty years of successful work for mothers and infants, including many unmarried mothers. For these address Miss L. Freeman Clarke, 5 Brimmer Street, Boston, Mass. (Secretary of The Society for Helping Destitute Mothers and Infants.)

Some of REBMAN'S New Books

DIABETES—

Fasting and Undernutrition in the Treatment of Diabetes.—By HEINRICH STERN, M.D., LL.D., New York.

This little book is based entirely upon personal observations and experiences. It will be found that it differs, in certain essentials and in a number of details, from the rules and regulations laid down by others in articles dealing with the same theme.

It is intended for direct perusal by the diabetic patient.

Cloth—Price \$2.00

FEEDING BABIES—

The Science of Feeding Babies and Normal Care of the Growing Child.—By H. ELIZABETH GOULD.

The author offers so many valuable hints and practical suggestions for almost every phase of a baby's career that her work is bound to meet with great approval.

It is written for young mothers and nurses having charge of babies.

Cloth—Price \$1.50

TEETH—

Care of the Mouth and Teeth. A Primer of Oral Hygiene.—By JOSEPH HERBERT KAUFFMANN, D.D.S., New York.

This brief volume aims at nothing else than the grasping of the fundamental idea of the value of oral hygiene.

To parents, teachers, social workers, and all those who have charge of children, this book should prove invaluable.

Cloth—Price 60 cents

OBSTETRICAL QUIZ FOR NURSES—

A Monograph on Obstetrics for the Graduate and the Undergraduate Nurse in the Lying-in-room.—By HILDA ELIZABETH CARLSON.

The essential feature of this work consists in a description for improvising everything required on an emergency case. It is eminently practical.

Cloth—Price \$1.75

WHAT SHALL I EAT—

A Manual of Rational Feeding.—By F. X. GOURAUD, M.D., formerly Chief of the Laboratory of the Medical Faculty of Paris, France. (Translation by F. J. REBMAN.) With a Glossary containing definitions of the Principal Technical Terms, and an Index of Diseases referred to in the text.

An Analysis of each Article of Food and its Calories are given. Also the actions on the digestive functions, in assimilation, secretion and elimination. Likewise the reasons are given why a food should be employed or rejected, according to the normal or pathological conditions of each individual case. Indications and contra-indications are given in every instance. This makes the choice of food adapted to each case easy.

Cloth—Price \$2.00

HOSPITALS AND THE LAW—

By EDWIN VALENTINE MITCHELL, LL.B. This is a short analysis of the general propositions of law relating to health institutions, and to make it readily comprehensible to those who are professionally or otherwise interested in such establishments.

Cloth—Price \$1.75

The Headache Book

Headache suffering irritates. It is exhausting. But—this is of less consequence than the causes of headaches. For—after all, headaches are *only symptoms*. It is the serious conditions indicated by headaches which you should fear. Yet—both causes and headaches may be done away with, if the irregularities from which they arise are discovered and removed. And—this is easy, if you know how to go about it. You will find the necessary knowledge in a new book—"Headaches—and Their Prevention"—the work of Dr. W. H. Riley, a physician of recognized standing, Neurologist at the Battle Creek Sanitarium. Dr. Riley's practice has included thousands of cases in which headaches have been prominent symptoms. Therefore, he knows what he is talking about. He speaks from experience—gives you facts, not theories. In his book, he tells you exactly what to do to rid yourself permanently of headaches. No drugs. Just natural means applied in your own home. Careful attention to diet—a little exercise—rest, sleep and proper division of working hours. These Nature aids dispel headaches. Dr. Riley tells you how. Send for his book to-day. Price only \$1.25. And—you take no risk for, if you are not entirely satisfied, you may return the book in 5 days and we will promptly refund your money. We let you judge the value of this book. It is *worth its weight in gold* to the headache sufferer who follows its instructions. Order through your regular book dealer, or send money direct to

“The Stones Will Cry Out”

A Sermon Preached on February 4

By John Howard Melish

CHURCH OF THE HOLY TRINITY, BROOKLYN

IN the last paragraph of his address to Congress yesterday the President of the United States said: “We do not desire any hostile conflict with the Imperial German government. We are the sincere friends of the German people, and earnestly desire to remain at peace with the government which speaks for them. We shall not believe that they are hostile to us unless and until we are obliged to believe it; and we purpose nothing more than the reasonable defense of the undoubted rights of our people. We wish to serve no selfish ends. We seek merely to stand true alike in thought and in action to the immemorial principles of our people which I have sought to express in my address to the Senate only two weeks ago—seek merely to vindicate our right to liberty and an unmolested life. These are the bases of peace, not war. God grant that we may not be challenged to defend them by acts of wilful injustice on the part of the government of Germany!”

I hope that you and I can say as the sincere expression of our hearts, Amen.

“I tell you if these shall hold their peace, the stones will cry out.”—St. Luke 19:40.

Jesus said this word of faith in the ultimate triumph of His cause as He entered Jerusalem for the last time. His entrance itself was a symbolic act. Warriors were wont, after a victory, to have a triumphal entry into their capitals. So Jesus, prince of peace and saviour, would have a triumphal entry. In place of a war horse He chose an ass, beast of burden and symbol of peace; in place of fighting men armed to the teeth He chose children, women and men, waving branches of palms; in place of pæons and songs of hate He chose the angelic chorus, “Peace in heaven and glory in the highest.” Against all this the Pharisees, who claimed to be the patriotic party, uttered a protest. Teacher, they exclaimed to Jesus, rebuke thy disciples. And Jesus answered and said, “I tell you that if these shall hold their peace, the stones will cry out.”

It was, I say, an expression on the part of our Master of absolute and sublime confidence in the ultimate triumph of His cause. Rather than that God’s righteousness and love should fail, the rocks would speak. An Old Testament poet, in the enthusiasm and flush of a national triumph, exclaimed, “The stars in their courses fought against Sisera.” He saw

the universe on the side of God and His righteousness. This great poetic spirit of the New Testament sees nature, the very rocks, working in harmony with God’s love and ready, should men fail to respond to that love, to become themselves lips and brain and heart. I tell you, if these shall hold their peace, the stones will cry out.

I.

We live in a world in which brute forces play a tremendous part. So strong are those forces that many persuade themselves that they are the dominating and controlling things in life. The philosophy of materialism is the philosophy of the man in the street. He thinks that he alone is dealing with the facts; all others are “high-brows,” idealists, visionaries. In the museum of natural history is the skeleton of a huge creature called a dinosaur. That gigantic reptile and the hairy mammoth and the saber-toothed tiger once overran large portions of this continent. They are classified now as extinct beasts. What gave to the human animal the earth and took it from the reptile and the anthropoid ape? Certainly not brute force. Anthropologists say it was because man developed a mind, not a muscle, that made him the inheritor of the earth. And in human history, the materialists notwithstanding, the thought of others has existed alongside of the thought of self from the very beginning, as Henry Drummond so clearly proved in his *Ascent of Man*. The man in the street does not know the process by which the present came to be.

Now Jesus not only saw that other powers than brute forces were at work in the world but He committed Himself to them; He trusted them and confidently awaited the issue. So far as He individually was concerned He was overcome by the brute forces. He was crucified. But He died in the thought that the brute forces had in reality been overcome. And in that faith we know now He was justified. You speak of Cæsar and Hannibal and Napoleon, said the great prisoner of St. Helena, but not one of them has built anything that is durable. But Jesus Christ—multitudes of men are ready to die for Him. Christ is the supreme symbol of trust in the ultimate triumph over the brute, of God’s truth and righteousness and love.

We say that we are followers of Christ and each of us is pledged to follow His example and try to become like Him. Are we willing to trust the moral and spiritual force of the work, to take our stand there and having done all to stand? Many of us, I fear, accept Christ's principles with many reservations. We are willing to guide our course by His star until this or that contingency shall arise, and then we trust to the brute forces of the world. We are willing to follow Him until certain circumstances arise where His principles no longer seem practicable, and then we resort to other principles. We even persuade ourselves that we are the instruments of divine justice, and are needed by God to put the brute powers in their place, and we take the sword in Christ's name in order to bring to triumph His peace. And this in face of His refusal to resort to the sword and His superb and glorious decision to trust to the forces that make for the triumph of God's truth, righteousness and love. Jesus was no moral coward, nor did He advise weak and shrinking submission to wrongdoing. His courage was sublime. And He lost his life by withstanding church and state. But He repudiated violence and He made use of the forces of truth, righteousness and love whereby to overcome the brute. Shall we do less in His name?

II.

It is the feeling of some that at the juncture of affairs when the brute powers seem about to triumph God should step in and thwart the adversaries of His righteousness and love and truth. Why did God let this war take place in Europe, pious souls have asked. Why did God permit the church and state to triumph even temporarily over His Beloved Son, men have asked for ages. And in their personal misfortunes and sufferings the same searching question has been frequently put.

It is a child's conception of the universe. When we were children our thought of God was on a level with our thought of man. As children the best man we thought was he who gave us exactly what we wanted and when we wanted it. So we thought of God as one who was all powerful, and therefore at an instant could and would give us what we wanted.

But when we grew older, when we became parents ourselves, we put away childish things—save sometimes in religion. We know now that the strong, true man is not the man whose action is determined by every request we may make to him, but rather whose action is decided by high principles of honor and justice and wisdom. These virtues do not exclude love—they are the foundation of love—without them the action would not be loving. Therefore our thought of God, if it be a grown, mature thought, must rise from this truer thought of man, and we must think of Him as guided by the most perfect justice and wisdom, in order that He may be perfect love. When you as a father or mother want to give to children the highest joy, the most lasting value, do you not think of laws of health, laws of unselfishness, laws of fairness, and obey these laws absolutely?

"God treats us as sons." His knowledge of the real worth of life is far deeper and truer than ours, as much greater than ours as ours is greater than our children's "and of very faithfulness He may cause us to be troubled." The real joys of life are not to be judged by the joy a baby gets out of a rattle. To have had a chance to cultivate faith and patience, and purity and love and truthfulness, and humility and courage and steadfastness and obedience, is proof enough of the love of God who gives the chance to us, and who shows us ways in which these really great things can be won, not by overriding law, but by obeying law, not by thinking of Him as a law breaker, but rather by thinking of Him as one who is unfailingly and eternally all that our consciences tell us we ought to be.

There are times when Christ's thought and life and principle enter generations as Jesus entered Jerusalem, surrounded only by children and women and a few men. They seem weak and impotent and destined to perish. The blare of trumpets, the neighing of chargers, the strength of arms belong to those who are opposed to Him. There are times when in the conflict between these opposing ideas victory is to the strong and the swift and the ruthless. But appearances are only appearances and the verdict of God reverses the verdict of men. Let us then in the supreme confidence of the ultimate triumph of God's love and truth and righteousness, still say, if these keep silent the stones shall cry out.

The Case for War for Democracy

By David Lloyd George

A LINCOLN DAY MESSAGE CABLED TO THE NEW YORK "TIMES"

I AM very glad to respond to your request for a message for publication on Lincoln Day. I am glad because to my mind Abraham Lincoln has always been one of the very first of the world's statesmen, because I believe that the battle which we have been fighting is at bottom the same battle which your countrymen fought under Lincoln's leadership more than fifty years ago, and most of all, perhaps, because I desire to say how much I welcome the proof which the last few days have afforded that the American people are coming to realize this, too.

Lincoln's life was devoted to the cause of human freedom. From the day when he first recognized what slavery meant he bent all his energies to its eradication from American soil. Yet after years of patient effort he was driven to realize that it was not a mere question of abolishing slavery in the south-

ern states, but that bound up with it was a larger issue: That unless the Union abolished slavery, slavery would break up the Union.

Faced by this alternative, he did not shrink, after every other method had failed, from vindicating both union and freedom by the terrible instrument of war. Nor after the die for war had been cast did he hesitate to call upon his countrymen to make sacrifice upon sacrifice, to submit to limitation upon limitation of their personal freedom, until, in his own words, there was a new birth of freedom in your land.

Is there not a strange similarity between this battle, which we are fighting here in Europe, and that which Lincoln fought? Has there not grown up in this continent a new form of slavery, a militarist slavery, which has not only been crushing out the freedom of the people under its control, but

which in recent years has also been moving toward crushing out freedom and fraternity in all Europe as well?

Is it not true that it is to the militarist system of government which centers in Berlin that every open-minded man who is familiar with past history would point as being the ultimate source of all the expansion of armaments, of all the international unrest, and of the failure of all movements toward cooperation and harmony among nations during the last twenty years?

We were reluctant, and many of us refused to believe that any sane rulers would deliberately drench Europe in its own blood, so we did not face the facts until it was almost too late. It was not until August, 1914, that it became clear to us, as it became clear to Lincoln in 1861, that the issue was not to be settled by pacific means, and that either the machine which controlled the destinies of Germany would destroy the liberty of Europe or the people of Europe must defeat its purpose and its prestige by the supreme sacrifice of war. It was the ultimatum to Serbia and the ruthless attack upon Belgium and France which followed because the nations of Europe would not tolerate the obliteration of the independence of a free people without conference and by the sword, which revealed to us all the implacable nature of the struggle which lay before us.

It has been difficult for a nation separated from Europe by 3,000 miles of sea and without political connections with its peoples, to appreciate fully what was at stake in the war. In your civil war many of our ancestors were blind. Lord Russell hinted at an early peace. Even Gladstone declared "we have no faith in the propagation of free institutions at the point of the sword." It was left for John Bright, that man of all others who most loved peace and hated war, to testify that when our statesmen "were hostile or coldly neutral the British people clung to freedom with an unflinching trust." But I think that America now sees that it is human unity and freedom which are again being fought for in this war.

The American people under Lincoln fought not a war of conquest, but a war of liberation. We today are fighting not a war of conquest, but a war of liberation—a liberation not of ourselves alone, but of all the world, from that body of barbarous doctrine and inhuman practice, which has estranged nations, has held back the unity and progress of the world, and which has stood revealed in all its deadly iniquity in the course of this war.

In such wars for liberty there can be no compromise. They

are either won or lost. In your case it was freedom and unity or slavery and separation, in our case military power, tyrannously used, will have succeeded in tearing up treaties and trampling on the rights of others, or liberty and public right will have prevailed. Therefore, we believe that the war must be fought out to a finish, for on such an issue there can be no such thing as a drawn war.

In holding this conviction, we have been inspired and strengthened beyond measure by the example and the words of your great President. Once the conflict had been joined, he did not shrink from bloodshed. I have often been struck at the growth of both tenderness and stern determination in the face of Lincoln, as shown in his photographs, as the war went on.

Despite his abhorrence of all that war entailed, he persisted in it because he knew that he was sparing life by losing it, that if he agreed to compromise, the blood that had been shed on a hundred fields would have been shed in vain, that the task of creating a united nation of free men would only have to be undertaken at even greater cost at some later day. It would, indeed, be impossible to state our faith more clearly than Lincoln stated it himself at the end of 1864.

"On careful consideration," he said, "of all the evidence it seems to me that no attempt at negotiation with the insurgent leader could result in any good. He would accept nothing short of severance of the Union, precisely what we will not and cannot give. His declarations to this effect are explicit and oft repeated. He does not deceive us. He affords us no excuse to deceive ourselves; . . . between him and us the issue is distinct, simple and inflexible. It is an issue which can only be tried by war and decided by victory."

That was the judgment of the greatest statesman of the nineteenth century during the last great war for human liberty. It is the judgment of this nation and of its fellow-nations overseas today.

"Our armies," said Lincoln, "are ministers of good, not evil." So we do believe. And through all the carnage and suffering and conflicting motives of the civil war, Lincoln held steadfastly to the belief that it was the freedom of the people to govern themselves which was the fundamental issue at stake. So do we today. For when the people of central Europe accept the peace which is offered them by the Allies, not only will the allied peoples be free, as they have never been free before, but the German people, too, will find that in losing their dream of an empire over others, they have found self-government for themselves.

In the Balance

By *Emily Greene Balch*

AUTHOR OF OUR SLAVIC FELLOW CITIZENS

IT IS EASIER to get into a war than to get out again. Events have a coercive logic of their own. War, too, makes strange bedfellows. As in a strike, combatants find themselves fighting for issues for which they would not have entered the struggle. They find themselves allied with forces they do not desire to strengthen.

What would our lot be in case of success in an anti-German adventure and where might we find ourselves landed?

Doubtless most responsible Americans, as well as the mass of the plain people, do not want to join the Allies as full

partners. They conceive of our taking part in such a way as to advance the cause of democracy without underwriting all their war aims.

It is possible that we might go to war debonairly, fight a few naval engagements and be in for a speedy settlement. Even so we forfeit our chance to speak for the "silent mass of mankind," as a joint trustee for civilization and the future, and not as a belligerent partisan.

Moreover, we run the risk of our own jingo crowd following the old war morality, and urging that having spent blood

and treasure we should get something in return. The effort to free Cuba, in large part due to liberal and disinterested motives, led to the acquisition of the Philippines and our undemocratic tenure of unwilling oversea peoples.

War once begun the voices for moderation, wholesome self-criticism and all disinterested thinking are shouted down, if not actually and deliberately suppressed. The country is then exposed to extreme pressure from "ginger" parties and all the forces of our reactionary imperialism.

The other possible contingency is infinitely more serious. It is quite on the cards that once in a state of war we should find ourselves involved not in a reserved and partial way, but with unlimited liability, as an equal participator in the struggle.

But, regardless of how fully we join our fortunes with these of the Allies, how is our coming in likely to affect the situation?

This situation is an extremely complicated one. The factors involved are necessarily the more real to me from the fact that I have been a good deal in Europe during the war and in touch with at least certain aspects of Dutch, Scandinavian and Swiss opinion as represented by international lawyers, members of parliament, Socialists and plain folk.

It must be remembered that an alliance is not necessarily a permanent indivisible whole and it is an open secret that each side endeavors to seduce the partners from the opposing group and to make a separate peace with one or another.

From the liberal or democratic point of view the most dangerous possibility hinges on Russia's internal conflicts and the direction given to her policy. The high Tory party in Germany, the junkers, the militarists, have been seeking ever since the war began to bring Russia over and to negotiate a separate peace which would leave the reactionary or conservative element in Russia and Germany in control within their respective countries and externally in alliance for imperialistic purposes.

It is of the most sinister significance that since the assassination of Rasputin the pro-German and reactionary group in Russia have regained political control. In Germany the corresponding change seems not to have taken place. Apparently the personalities who want to liberalize and democratize Germany and who look forward to future cooperation with the western powers are, in spite of the reversion to extended submarine warfare, now in the lead.

The present condition is thus a very unstable one. A tap on the glass and the shock may precipitate overcharged solution. The entry of this country might easily prove just that shock.

If the United States enters the war, the hands of the German reactionaries are strengthened with the cry of national defense against the world. The position of those in the German party who have opposed annexation, who have opposed unlimited submarine warfare, who desire a peace on which a society of nations can be built, is then undermined. Germany's hope of rescue from a most ominous war situation as well as her hope of future world power will then seem to be to the East. Germany will be driven into the arms of Russia.

Not only the democracy now rapidly growing within the German empire, but the Russian elements that have so long

and so heroically been striving to liberalize their country, are then turned over with their arms tied behind their backs to their domestic opponents.

For it must be remembered that England is not in a position to give to Russia the coveted prize of control of Constantinople and the straits. Germany has it in her power to do so. During the war I have talked with M. Milyoukoff, leader of the chief liberal party, the Cadets, a number of times both in Petrograd and in Stockholm, and I know what immense stress he and his party lay on the prize of Constantinople and all which that implies. The pro-German bureaucratic element in Russia have thus a tempting bait with which to seduce the imperialistic liberals from their allegiance to the alliance led by England and to the cause of democracy.

The natural third in an alliance of imperial Germany with imperial Russia is Japan, which, if it came into such a league, would presumably expect a generous share of whatever extensions of influence in China and the Pacific the three powers might then pursue.

In any case, once at war with Germany, influence in Mexico at once becomes a pawn in the game. Real, or even imaginary, German or Japanese attempts to use Mexico would kindle the fuel even now ready, of fear, racial prejudice and carefully nursed jealousies. To enter a European war is ourselves to throw away the Monroe doctrine. If we enter European politics on the lowest level of competing alliances struggling to control the balance of power, then European politics enter the American sphere whether we will or no. This is the reverse of the President's policy of making the Monroe doctrine universal, avoiding entanglement as in the balance of power system by superseding that system by an organized concert, in which we should bear our part.

This is often a through-the-looking-glass world in which it is wholesome to remember that to walk toward a goal may take one further from it.

In seeking to strengthen the great liberal powers, England and France, we might do the exact contrary.

For ourselves we should then be involved for indefinite historical epochs in the struggle for balance of power and the old game of competing armaments and competing alliances. To throw humanity, civilized and uncivilized alike, into such a competition means not merely the arrest of the normal evolution by which we are in process of developing a true social and economic democracy, but an indefinite reversion to the old days of violence and privilege based on violence.

When one contemplates such nightmare vistas one feels like the old Scotch woman returned from a sermon on hell. "It can nae be so bad as that, naebody could endure it." Alas! one's power of belief in what men, women and children can be called on to endure has been greatly increased by the experience of the last years and the knowledge that at this moment hundreds of thousands of people are starving, inaccessible to help because of war conditions. The Belgian, Lithuanian, Syrian and Armenian horrors give a new measure of the intensity and extent of the woes that mankind can bring on itself.

Samson dragged the temple down on himself and the entire crowd within. In the case we are fronting, what if *all* the people are within the rocking structure?

Union Park, Boston, with South End House near the center of the row on the left, is a region of lodging-houses. It bears a striking resemblance to parts of London.

Twenty-five Years of South End House

By George Hodges

PRESIDENT OF THE HOUSE; DEAN OF THE EPISCOPAL THEOLOGICAL SCHOOL AT CAMBRIDGE

THE South End House, in Boston, began in 1892 as a social experiment, without traditions, or experience, and with little help from example. Dr. Stanton Coit's Neighborhood Guild in New York and Miss Addams' Hull House in Chicago were begun about the same time. They were all as yet in the stage of large ideals and good intentions, but with only the vaguest programs.

Robert Archey Woods, who started the South End House, and has ever since been head of it, got his inspiration in the Andover Theological Seminary, from Professor Tucker, afterwards president of Dartmouth College. Dr. Tucker encouraged his desire for social service, helped in many invaluable ways the establishment of the house—then, and for three years after, called the Andover House—and served as president of the Andover House Association. The only pattern which Dr. Tucker and Mr. Woods had before them was Toynbee Hall. To London, accordingly, went Mr. Woods, and spent six months studying the methods of Toynbee Hall, under the direction of Canon Barnett. The results of this study he put into a book entitled *English Social Movements*, and in the light of this experience the Andover House was opened in the South End of Boston.

Canon Barnett's undertaking had at the heart of it two determining ideas. He desired to make the privileged of service to the unprivileged; to gather about him in the East End of London a group of men who should come from Oxford or Cambridge, as Arnold Toynbee had come, and share the rich happiness of their intellectual and social life with those from whom much of this joy had been barred by arbitrary and accidental environment.

He desired also that this should be done in the spirit of the Christian religion, in the fraternal spirit of Jesus Christ.

That was before the time of parish-houses; but Toynbee Hall stood beside St. Jude's Church, where Mr. Barnett ministered, as the parish-house stands beside many a church today. It had no formal connection with the church. It was understood to be an opportunity for the energies of some who, for various reasons, could not work under the conditions of the usual parochial societies. But the spirit of the founder—like the spirit of Kingsley and Ruskin behind him—was distinctively Christian. Miss Addams described it long ago as "a bent to express in social service and in terms of action the spirit of Christ." These two ruling ideas Mr. Woods had already in his mind when he went to London, and he came away confirmed in them. They have governed the house from the beginning.

The first workers who assisted Mr. Woods to establish and maintain the house were college men, graduates of Harvard, Yale, Williams, Amherst, Bowdoin, Dartmouth. Presently, it became possible to found South End House fellowships at Harvard and at Amherst, the holders supplementing and illustrating and proving their studies by investigations and practical work as residents of the house. After the opening of a women's residence, a similar fellowship was established to which graduates of different women's colleges have from time to time been appointed.

The relation of settlements to religion used to be much debated. It has long since been decided by the conditions of city life. The Congregationalists, for example, might minister in a Congregational settlement to members of their own denomination, and to some unchurched persons beside. They could not, under such auspices, minister to Jews or Roman Catholics. But Mr. Woods and his associates found that their neighbors were mostly Roman Catholics or Jews. They,

therefore, ceased to call their society the Andover House, and gave it a name which simply identified it with the locality. They did not intend by this change to indicate any departure from religion; they did intend, however, to free themselves from all ecclesiastical limitations to their usefulness. They held that to proclaim themselves as Congregational social workers would be similar to a professional man announcing on his sign a Presbyterian doctor, or a Methodist lawyer. Such a man would have only Methodist or Presbyterian clients or patients, and mighty few of them. They felt that a group of religious people doing social work, saying their own prayers, worshipping at altars of their own choosing, and evidencing their religion in the faithfulness with which they followed the example of the Master of us all, was the need of the neighborhood. Thus the South End House began and has consistently continued for a quarter of a century.

Miss Addams quotes from Tolstoy the phrase, "the snare of preparation." Tolstoy referred to the blunder of delaying action until all plans should be made, and all contingencies foreseen and provided for. He reprobated completing the program before beginning the work. He had in mind societies which spend time and energy in making their by-laws, never doing anything else; like the man in Irving's Knickerbocker who, intending to jump over a hill, took a running start of five miles, and then, at the foot of the hill, sat down to rest.

Mr. Woods never fell into the snare of preparation. He met needs as they came, adapted his program to the changing situation, and freely followed opportunity wherever it led. He believed that the house was for the community, not the community for the house. He would have approved the sentence which R. J. Campbell says was the only "doctrinal clause" of the trust deed of the church in Brighton in which he began his ministry, "This church was erected for the good of the parish of Brighton."

At the same time a diligent study of the situation has always accompanied the work, or preceded it. Mr. Woods and his associates have done for their part of Boston what Charles Booth did for London. They have examined it carefully, with a wise and effective intermingling of science and sympathy. They have published *The City Wilderness*,

ROBERT A. WOODS

Head of the house, an active participant in civic movements not only in Boston but throughout the nation.

A Study of the South End (1898); *Americans in Process, A Study of the North and West Ends (1902)*, and they have in preparation *The Zone of Emergence, A Study of Charlestown, East Boston, South Boston, Lower Roxbury, Cambridgeport and East Cambridge*. Holders of fellowships, residing in the house and doing research work under the direction of Mr. Woods, have published *South End Factory Employes*, *The Lodging House Problem in Boston*, *Part-Time Day and Evening Schools*, and *In Freedom's Birthplace*, a study of the Negro in Boston. Other residents have published in pamphlets the results of their investigations in *The Public Charitable Institutions of Boston*, *Public Baths in Boston*, *Some Slums in Boston*, *Ethnic Factors in the Population of Boston*, *The Unemployed in Boston*, *Boston Evening Schools*, *Beggars and Their Lodgings*, *Steam Laundries in Boston*, *Italian Immigration in Boston*. This output of reports in books and pamphlets goes on year by year, for the suggestion and guidance of social workers.

In the larger social field, Mr. Woods and Mr. Kennedy have edited for the National Federation of Settlements a book on *Young Working Girls*, a summary of evidence from 2,000 workers; and under the Russell Sage Foundation *A Handbook of Settlements in the United States*. They are preparing for the same Foundation *The Settlement Horizon: A National Estimate*. The titles indicate how far these studies go beyond the range of facts and figures. They are meant to provide not only knowledge, but working knowledge, and they represent the studious spirit in which the life of the house proceeds.

Mr. Woods has always kept himself—by continual miracle, his friends think—from being overwhelmed by details. Details are multifarious and importunate. They extend from the distribution of modified milk to classes in citizenship. They include instruction in nursing, housekeeping, cooking, play-acting, sloyd, basketry, millinery, dressmaking, lacemaking, carpentry, printing; clubs of all names and sizes for boys and girls, and other clubs for the same boys and girls as they grow up into men and women; collection of stamp savings, probation work in the juvenile court, a room registry of approved houses, a music school, close cooperation with a district conference of the Associated Charities, an association of

SOUTH BAY UNION

On Harrison avenue, Boston's longest tenement street. Through this and other separate buildings, South End House has reached out into its neighborhood rather than build up a large single institutional house.

caddies gathered from the neighborhood and sent every summer, under direction, to the hotels in the neighborhood of the White Mountains; and the taking of mothers and children into the country. Over all of this the head of the house presides, with every part of it he is personally acquainted, every detail he watches with an eye to its improvement toward better efficiency—adding, subtracting, multiplying, inspiring and directing. But this proceeds without haste or impatience, without anxiety. Mr. Woods seems convinced that there is plenty of time, and that in case of a shortage of supply he can always draw upon eternity. That is perhaps the secret of his work. He has found leisure to take part in other kinds of social service. He has engaged vigorously in local politics. He aided the bar and bottle bill in its way through the Massachusetts legislature. He served as a member of the Boston Licensing Board. He has been an instructor in social ethics in the Episcopal Theological School.

When Mr. Woods came to Boston twenty-five years ago he was unknown. His only acquaintances were those to whom he had gone with letters from Dr. Tucker. He has built the South End House from the ground. The plant consists of the headquarters and men's residence, the women's residence, the South Bay Union, the registry house, the nurses' house, the House of Childhood; and, out of town, the Winning Farm at Lexington, which is loaned by its board of trustees, the Wayside Cottage at West Falmouth, and the Week-end Cottage at Marblehead. The money with

which to buy, build and maintain the holdings of the house has been gathered either by the personal work of Mr. Woods, or by reason of confidence in him. Until the effort now in progress to add \$125,000 to the funds, the house has only once received a larger single sum than \$5,000. The money has come, and still comes, from a considerable company of small givers.

The South End House, after these twenty-five years, practices the democracy which it preaches. It makes no architectural appeal, except, in a modest way, in the South Bay Union, which is a community center for the neighborhood. The other buildings are such houses as were found already built in strategic places, and were made over inside. The plan has been to have a number of such places at a remove from one another, each a center of friendly service, rather than any one imposing structure. The atmosphere of the work has continued from the beginning domestic rather than institutional. The workers have never forgotten that a settlement is essentially a family whose initial mission is to live simply and hospitably with the neighbors. One great advantage of having lived in the same neighborhood for twenty-five years is that there are now many young men and women, leaders in the industries, politics and social activities of the place, who can say, "The South End House? It has been here ever since I can remember. It has been related to my work and play, to my ideals and aspirations, to my joys and sorrows, to my whole life, since I was a child."

Cotton Pickers in Northern Cities

By Helen B. Pendleton

SUPERVISOR DISTRICT WORK, NEWARK, N. J., BUREAU OF CHARITIES; FORMER GENERAL SECRETARY, SAVANNAH, GA., ASSOCIATED CHARITIES

EARLY last spring, when a marked shortage of labor was felt, northern industries turned to the South and began to import Negroes by the thousand. Railroads and industrial plants furnished transportation and offered undreamed-of wages to the simple farm hands from the cotton fields of Georgia and Alabama.

Estimates of the number of Negroes that have come north vary anywhere from two hundred and fifty thousand to half a million. So far there seem to be no trustworthy figures. Newark, it is said, has absorbed about ten thousand. How many are living in the adjoining boroughs no one knows.

At first the railroad and other companies furnished the transportation, sending agents all through the South, who painted in glowing terms—who knows how highly colored?—the high wages and advantages of the North. But apparently that was not long necessary. The news spread like wildfire; it was like the gold fever in '49. The Negroes sold their simple belongings, and, in some instances, valuable land and property, and flocked to the northern cities, even though they had no objective work in sight. And they are still coming. Enough money has been saved from their unprecedented wages to send for wives and children. Almost every day one may see in the Pennsylvania station groups of Negro women sitting patiently, surrounded by bundles and babies and shivering in cotton garments, waiting for night to come, which will bring the men to meet them.

While getting ready to crowd up here, the Negroes composed a chant down in Dixie which ran like this:

"New Jersey, New Jersey, the land where the fritters
Fall into the syrup right off of the trees!"

"But I ain't seen the fritters nor the syrup!" exclaimed one of these dusky Southerners the other day.

The high cost of living has soared far beyond the reported rise of 18 per cent in wages. The corner grocery, with its bewildering bright-colored canned goods, and other dazzling shops offer unusual opportunities for getting rid of money. The instalment houses, too, are reaping a harvest. The stores of "hog and hominy," corn meal, syrup and sweet potatoes which the migrants in many instances clubbed together and brought on with them in freight cars are gone by this time. The process of learning to use hard coal, which they must buy in small quantities, is wasteful. And the saloons welcome them heartily. No one draws the color line there! Negro ministers and social workers who are among them report with sorrow and amazement the amount of whiskey (no beer) that these people have already formed the habit of buying. Evil tentacles, too, have grasped young southern Negro girls, who have disappeared into houses of ill fame.

A number of undesirable, helpless folk, including widows and deserted wives, have "come along in the excitement," as one old cripple remarked. These the Associated Charities workers are trying to send back to the sunny South. One old man, totally blind, is easily recognized as belonging to the type of itinerant beggars familiar on the streets in southern towns, where they sit, making a cheerful noise on some screeching instrument. He says Newark is a wicked city, because the accustomed nickels and pennies do not fall readily into his hand, and is therefore quite willing to return to his native land.

Many of the older men did not intend to engage in hard

THE SMILES THAT WON'T COME OFF
Despite the rigors of a northern winter these Negro
workmen still look cheerful.

labor, because they had a number of strong young sons in the family group. But illness has overtaken some of these young people, and the older ones have been obliged to take heavy work, with the result that they too have fallen ill. The native Negro residents of the city and suburban towns have been kind and generous in helping the southern strangers. They have collected money to send numbers back home, and, when the bitter cold weather began, they collected and distributed thousands of garments. Resident colored people have also taken hundreds of newcomers into their own homes until rooms could be found for them.

But while different churches and kind-hearted people have been most active in helping individually, there was no concerted movement to bring all these forces together until recently, when the Negro Welfare League of New Jersey was organized.

On the other hand, there are unscrupulous Negroes who have not hesitated to take advantage of the trust the strangers have reposed in them.

On January 6, a voluble, well-dressed Negro, representing himself as a house-agent, got \$80 in first payments for rooms and then disappeared. White sharpers, too, have been active. A favorite method of getting money is to pretend to be a secret-society agent and secure membership fees from the unwary.

Almost all newcomers are from southwest Georgia and the adjoining counties. It seems impossible that a Negro is left in Dothan, Alabama. In fact, a white farmer writes from near there: "There has been lots of darkies left here and nearly all the good ones is gone."

They are country folk by every implication of their being, with the slow southern speech that to the northern ear is at first unintelligible. Already they are the despair of housewives, who eagerly welcomed much-needed houseworkers, innocently supposing that these people, whose chief labor had heretofore been picking cotton, would readily adapt themselves to city homes. In the factories and freight-yards the men and boys, when overheated, throw off their outer clothing, just as they would in the mild South, only to be laid up as a consequence with grip and pneumonia. With swollen feet from the unaccustomed roads and pavements and long hours of toil, they are obliged to lose many days' work. The Municipal

Employment Bureau reports that they are now only applying for indoor work, as they have begun to realize the hardships of outdoor labor in a northern winter. To the outdoor worker the snow, too, is a disagreeable hindrance. "All this stuff flyin' 'round in the air confuses me!" they say. When we read in trade journals of the difficulty of inducing these laborers to stick to their jobs, we are not entirely convinced that it is altogether "because they cannot stand prosperity," as one journal puts it.

Moreover, the fumes in the munition factories have made many of them temporarily ill, and they have therefore sought other places and accepted lower wages. The recent destruction of several ammunition plants has thrown a number out of work and frightened away more, so that the difficulties and real hardships attached to their new jobs, added to the strangeness of their surroundings, have been the chief cause of the irregularity of their labor. We know of many families that have been obliged to move again and again in order to find a home, while the breadwinner has had to accept lower wages for that reason.

The industries of New Jersey went after these laborers because they needed them in their business. But, although the Negro is warmly welcomed as a laborer, it is increasingly apparent that as a Negro he is unwelcome. In a suburb of Newark there are forty Negro families who are better housed than the average and who thus have a chance to develop proper home life. When the white ministers of the place were asked to invite the colored children to their Sunday schools, they demurred, saying it "would not work." So a separate building was hired by the Negroes themselves and they are carrying on their own Sunday school.

Soon after the migration began to be noticeable, suddenly, mysteriously, almost in a night, the signs To Let and For Rent in the part of the city where small houses and flats were available were changed to "For Sale," and a recent advertisement for rooms, inserted by Negroes, brought only two replies, neither of them from Newark. These humble newcomers, therefore, have been forced into finding lodgings in basements and in the worst parts of our city.

Several generations ago, when the Negro was a human chattel, the master was considered a bad business man who did not properly house his slaves. He lost money by it and the community did not prosper. But industries of New Jersey, have utterly failed to provide the housing which would enable their Negro help to live decently and in enough comfort so that, while growing accustomed to their unusual work, they might be stimulated to become useful and efficient.

In the last two weeks the Negro Welfare Committee, with the help of trained investigators from the Associated Charities, has visited 120 self-supporting families, all of whom were found in the worst sections of the city. A close study of fifty-three of these families reveals that 166 adults—only twenty of whom are over forty years of age—and 134 children, a total of 300 souls, are all crowded into unsanitary, dark quarters, averaging four and two-sevenths persons to a room. These fifty-three families pay a total rent per month of \$415.50, an average of \$7.86. The average wage of these people is \$2.60 a day. In not one of the 120 families was there a wage-earner making the maximum wage of \$3 and \$4 a day. Here are some of the notes brought back by visitors who recently made these studies:

"Wife and three children living over a stable. Husband earning \$11 a week." "Three families in four rooms." "A little house, not fit for a chicken-coop." "A sorry-looking house for so much money—\$15 a month; doors off the hinges;

water in the cellar; two families in five rooms." "Indescribable; so dark they must keep the light burning all day." "This family lives in three rooms on the second floor of a rickety frame house, built on the side of a hill, so that the back rooms are just above the ground. The entrance is in a muddy, disorderly yard and is through a tunnel in the house. The rooms are hard to heat because of cracks. A boy of eighteen was in bed breathing heavily; very ill with pneumonia; delirious at times."

And so the list goes on, describing difficulties and tragedies that would be sure to overtake numbers of unsophisticated country people recently arrived from a part of Georgia and Alabama not far from the Gulf of Mexico. Unused to city life, crowded into dark rooms, their clothing and household utensils unsuitable, the stoves they have bought being all too small to heat even the tiny rooms they have procured (the instalment houses are charging from \$20 to \$30 for these stoves), shivering with the cold from which they do not know how to protect themselves, it is small wonder that illness has overtaken large numbers.

The health department's report for December states that excessive labor and bronchial pneumonia were responsible for more than one-third of the 975 cases of diseases reported last month. There were 287 more cases of sickness reported than in the preceding month. The deaths from the malady numbered ninety-four.

Health Officer Craster said the cause of pneumonia increase must be laid to the severe weather in December and to the increasing number of colored laborers from the South who are employed in large industrial plants of the city. He continued: "It is unfortunate that these people have been allowed to come here without any advice as to how to live and keep themselves in health in this climate. The colored man has a natural predisposition to chest diseases, such as tuberculosis and pneumonia, and to the latter he falls an easy victim."

Dr. Craster said also that old, dilapidated buildings, long closed as undesirable for habitation, have been opened and rented to them. "These houses," he said, "are rented out as housekeeping apartments irrespective of the fact that there are no facilities for such purposes. Kitchen ranges, lavatories, baths and toilets are either altogether absent or inadequate. There is no heat in a majority of these places, with the consequence that whole families are found crowded around a small kerosene or coal stove in stuffy rooms, with no ventilation, where all the housekeeping is done and where frequently the whole family sleep together to keep warm."

The health inspectors report that wherever these conditions were discovered they directed the inhabitants to get better quarters and notified the owners of the premises, by written notice, that the rooms were not again to be rented. They further recommended that a campaign of education be instituted by the health department for better homes. "They (the Negroes) seem to be a simple, easy-going, honest sort of people, who know no better."

It is all very well to tell them that they must not live in such abominable buildings, but, ignorant as these people are and much as they need instruction as to how to live in this climate and in a strange city, they are with few exceptions anxious and willing to move into decent homes and neighborhoods. *There are no decent houses for them to rent.*

Many have burned their ships behind them, others had no ships to burn, and many came north because of a desire to get away from parts of the South where race troubles are acute. All are dazzled by the lure of city life. They are here to stay. It is reported that thousands more are preparing to come in the spring.

There are nearly one million Negro farm operators in the South and it is estimated that the total wealth of the Negroes of the United States is about one billion dollars. They own twenty-one million acres of land, or more than thirty-two thousand square miles—an area greater than that of the state of South Carolina. The pall of illiteracy is slowly being removed from the South and higher and secondary education are becoming increasingly obtainable for the Negro. A Negro farmer at Albany, Georgia, is the owner of 10,000 acres of land. Ninety families reside on his plantations. A fourteen-year-old Negro boy won the first prize for cotton at the Oklahoma State Fair. The champion corn grower of Missouri is the principal of the Bartlett Farm and School for Negroes at Dalton, Mo.

But while Negro farmers are 29 per cent of the total farmers in the South, Negro farm owners are still only 7 per cent of the total owners.

The South is more prosperous today than she has ever been before, with diversified agriculture making rapid progress, railroad expansion inevitable and factories fully employed. But there is also a shortage of labor there, and the South can ill afford to lose a half million farm laborers who are adapted to the southern climate. The Negro has made his best progress down South. The southern people should strive to keep him there, not by laws and lock-ups, but by better wages and by more and better opportunities of profit sharing, and above all by the cultivation of the spirit that will make it more and more possible for the Negro to accumulate property and to live in peace with his neighbors, especially his white neighbors. To that end it is hoped that the citizens of southern states will search for and put into office such public officials as the present governor of Kentucky.

On the other hand, there is no doubt that the Negro laborer from the South between the ages of twenty and forty will be able to compete successfully with the northern laborer if he becomes properly acclimated. But one cannot fail to see that the overcrowded, unhealthful and often evil surroundings in which the little children of these people are already placed are sure to result disastrously for them, and that no large increase of wages or other advantages of city life can compensate. It is not entirely a Negro problem. The Slav and Italian and Russian Jew face the same difficulty. The influx of a number of people who happen to be Negroes merely augments it.

This migration from the South will be a blessing in disguise if it will show the people of this community the absolute necessity of getting together not only to improve living conditions among these strangers, but to begin to solve the whole problem of providing proper housing for the great mass of the people whose labor is the chief asset of the city. Meanwhile there is trouble brewing for the municipalities that have invited southern Negroes to become residents of the most crowded parts of the United States, without any other preparation than a pay envelope.

The Fighting Issues

A Statement by the Editor of the Survey

By Paul U. Kellogg

I.

THESE were eleven of us around the plain table and we sat there for two hours and a half. There were two lawyers, and two economists, a settlement worker, two magazine editors and a newspaper man, an industrial investigator, a rabbi and a minister. We had, as citizens, found common cause since the outbreak of the war; had done what we could to counter the surge toward militarism; had promoted movements for peace through negotiations; had, in two crises, thrown our weight against war with Mexico.

One of us had come to the meeting to let the rest know that the events of the last fortnight had brought him face to face with a choice between war and "Prussianism."¹ After threshing it out alone for a week, he had all but reached a point where he was ready to cast his lot with war as the only way to throttle what to him was the greater evil. He put democratic fire into what he said as the insurgent of the group. There was the Garrisonian who, in reply, begged him not to break with the principles of a lifetime. There was the Spanish War volunteer, no non-resistant he, who urged that war and force would not throttle Prussianism; that Prussianism, as he saw it, was not an army but an idea; and we can only fight idea with idea. There was the Quaker who pleaded in the name of his co-religionists who are on the rack for their conscience's sake in England, that he stand out against that spread of Prussianism to the New World, which would follow, as night the day, our entrance into the European struggle. There was the peace envoy who protested that for America to plunge into the war would put the liberal forces of Central Europe into new bondage to the junkers, to Russia and the East, and threaten western civilization and democracy for a hundred years. There was the social worker who urged the opportunity and obligation on all of us—on the one hand, to support alternatives to war as a means for maintaining American rights, and, on the other hand, to arouse Americans—German-born and native-born alike—to a life-long enlistment in the overthrow of Prussianism, its overthrow through moral fire and organized agitation here and abroad, rather than through its own familiar weapons.

So it went around the board, sometimes not ten but eleven of us on the same side. The experience threw us all, spiritually, back on ourselves, and made each lay bare the elemental things he stood for. I have never seen or heard or felt anything that gripped me so, in theater, or church, or shop.

So it is going on all about us—this close-up, trench struggle in men's minds, round the issues that are rending Europe—going on in our hearts, in the groups that have crystallized around the earlier war issues, in the older movements that were carrying on American social work and reform before war came to create new and unfamiliar alignments of feeling and conviction.

II.

Whether or not America enters the war, people are more and more going to feel deeply and unflinchingly and, feeling this way, they are bound to show friction, division, intolerance on one side or another, in all the old associations we know. Had the crisis come at the outbreak of the war, I should have feared lest the SURVEY might not have withstood the tension. But we have had two years and a half in which the temper of this adventure of ours in cooperative journalism has been tried; in which mutual understanding, accommodation and other reasonable factors have had play. And while perhaps, here and there, feeling may be so tense that readers will not put up with a journal which gives hearing to a point of view not their own, or which encourages freedom of action as citizens among all those connected with it, I believe that the good sense and confidence of the great body of SURVEY well-wishers will stand.

The formula which the SURVEY has applied throughout these months of war is not a new one. It is the one we have wrought out through a slow process of experience, in which the SURVEY has had to deal with hard and controversial situations in industry and in social legislation, in prison administration and municipal life. It calls for even-handed chronicle of events, for interpretation of conditions, for staff investigation of major situations, for signed articles (whatever their approach) which are real contributions of experience, testimony, proposal or thought; for an independent editorial page and an open communications department. We have carried out this formula without lending the SURVEY or its press service to propaganda for or against such questions as "preparedness." The magazine and those that built it up had come together on other ground. But we have applied our formula to this and other war developments and have dealt with their social aspects as news and as subject matter for article and editorial. In doing so we have been quickened, if anything, by the consciousness that, in common with most American social agencies, we had, prior to August, 1914, ignored the threat of war, ignored the movements to prevent it and ignored the human consequences bound up in both.

Military operations and international politics are not, as such, subject matter for the SURVEY. Neither are meteorology and hydraulics. But when a flood comes down a great valley, sweeping over everything in its course, the rushing waters take on human content; and the relief work, the organization of social action, the prevention of future disasters through forestation and flood control, become our concern. So with war. The European struggle has affected every phase of life and labor, every social movement in America. This we have interpreted. On constricted income, we have done our best to exhibit normal social activities which have been overshadowed by the war and at the same time to interpret the humanitarian projects set going to allay its wholesale miseries; the reactions of the war on human relations and on health, education, labor and other spheres of administration; the movements for civil as against military solutions and schemes of life; the proposals to prevent war and establish an enduring peace as basic to social well-being.

¹ There is, of course, much cant, injustice and brutal generalization in the coinage and circulation of such terms as "Prussianism." I have used it as it is employed in the American press and public discussion at the present time—as meaning that militarism which is personified in the frightfulness faction in the Imperial German Government. But I do not mean by that the German people or the Prussian people.

We have done this not without protest. A fortnight ago an Austrian consul in a mid-western city, a cooperating subscriber, denounced us for reviewing in a staff article the Belgian deportations which have wrenched thousands of wage-earners from their homes and work. He could not distinguish rigorous judgment on the anti-social consequences of a military policy from a general unfriendliness to the German people. The week before an old Canadian reader broke with us on the ground that any hospitality to peace overtures was to give aid and comfort to the enemies of Anglo-Saxon civilization. Nor have Americans been lacking who have felt as strongly and have acted on their convictions. But, as in domestic controversies, we have not tried to be neutral by striking a balance when the truth may not be in the middle. We have tried to assemble evidence and judgments on the things discussed—and to do this without giving over the SURVEY to arguments as to the conflict between the belligerents.

III.

The ruthless extension of the U-boat campaign and the break with Germany have changed this situation. The question is no longer one of diplomacy or of personal espousal; the question (not of our choosing) is the supreme legislative act of or for one hundred million people, as to whether or not we shall throw ourselves into the European war on the side of the Allies. The terms they are fighting for, and the social significance of those terms, we must weigh as never before; weigh the ends we seek, and the relation of those ends to the means we take; weigh the social consequences of our course at home, and weigh the relation of that course to our opportunity as a nation for social service to the future and the world at large. While the question is pending no citizen can escape his share of responsibility for that decision, aye or nay, nor can any social agency affecting Congress through public opinion.

These issues, and the swift events which give them emergency, are ones to which the SURVEY under my editorship will apply the same formula which has served us so well through periods of stress in the past. In doing so, it is well for SURVEY readers to know how I approach them, so that they may take this bias into account from week to week. The SURVEY is a cooperative undertaking made possible by the gifts of time, money and service from many free-thinking people. I am loath, in so grave an emergency, without opportunity for adequate conference, even to seem to commit any of those closely bound up in its fortunes, to positions other than what, in all honesty and sincerity, they individually hold. Therefore, I must ask everyone who reads this to regard it as a personal statement of the editor. Of my own responsibility to speak out, I am altogether clear.

IV

I should want the United States to go into the war, if, as ardent friends of the Entente hold, it were a clear case of struggle between democracy and Prussianism. I should urge this for social reasons, because physical and economic comfort without democracy would be an empty husk, foreign to our robust American conception of the common welfare. At the root of Prussianism, as I understand it, is an isolated nationalism which holds that force is the only method for maintaining a nation's rights, its security and development; that each nation is to be sole judge of its own cause and of its own applications of force. I find this true not alone of Germany. I find it true of our own psychology in this national crisis.

From this conception, it is only a step to that other, which, as Lowes Dickinson has pointed out, is at the bottom of the European war system: the belief that the growth of other na-

tions can come only at the expense of one's own nation, and that contrariwise, one nation can achieve only by circumventing or crushing others. And from this belief, that one nation can go up only as others go down, it is only another step to the belief that whatever a nation can achieve by force, carries its own sanction, and as a sequence, the greater its military strength, the greater its righteousness. In this sense, Prussianism is only a superdreadnought development in Germany of the common evil—an extreme, due in part to the exposed position of Germany as a new continental power. Even so, such an exaggerated development of militarism becomes a threat to every other people, and we have such radicals as Lloyd George conceiving the struggle with Germany as one between self-government and a "militarist slavery."

But such simple separation of whites and blacks disregards the social composition of the battling nations. Under the cry of self-defense, and acting through the thousand-armed coercions of its army system, the Prussian war party was able to muster the German people behind it and since then, blood and treasure, courage and sacrifice without limit, have been rendered unto it in the belief that Germany is fighting for her very existence.

On the other hand, the struggle has built up, in each of the Allied countries, a new Prussianism, so that even England, the home of civil liberties and the refuge of idealists of all Europe, has slipped back and back.

The imperialistic and commercial interests which have played a causal part on all sides and the territorial ambitions of the different powers, have rendered the struggle more complex and would have done much to take the edge from the clean-cut issue with which English-speaking folk have invested it, had it not been for the crude excesses of their enemies which have outraged the moral sense of mankind.

But, assume, if you wish, that the German government is guilty of the worst its enemies charge it with; assume that the primary cause of the Allies is as humanly precious as they conceive it; assume that we would help bring about an overwhelming victory, will we help after all to crush Prussianism, will we free civilization from the social evils we mean by Prussianism, should we go into the war with the Entente?

The German people were not without their great protestants in Reformation times, and they have not been without their protestants in this war—protestants against conquest and annexation, against ruthlessness, and against the whole war system. Are we sure we should not be putting these elements, in the bitterness and insecurity of defeat, into permanent bondage to their junker caste, as Miss Balch points out (page 565), and into an alliance towards the East that will split Europe for a century, and create only a newer, greater threat against the democratic West? With the Prussian leadership suffering spiritual defeat before mankind long since, with its huge scheme of military dominance balked at the Somme and shattered at Verdun, are we sure that the German people themselves could not, in a peace without crushing military victory for either side, be counted upon to render final judgment against the war-makers? Are we sure that the overthrow of Prussian militarism is not their particular job? Are we sure that we can count most for democracy, as an unwilling ally in the empire parcellings of a military settlement in which the civil forces of France and England might be submerged, than we can count as friend to those hopeful forces in a negotiated peace, devoted not to the gains of conquest but to the framing of an enduring structure of internationalism? On another page we reprint Lloyd George's Lincoln day statement to Americans, to my mind the best case yet made for those who in the name of democracy, morality and social

progress propose that we go into the war. But for my part I am not for going into the war to throttle Prussianism, because I cannot bring myself to believe it can be done that way.

V

I should want the United States to go into the war if, as some of the advocates of the League to Enforce Peace seem to believe, that were the way to lay the ghost of war. I should urge this for social reasons, because only so can civilization and social progress have a free field for the next century, against the overwhelming burdens of war debts and wastage.

But there is sobering truth in Mr. Bryan's question: Can we come to the people of Europe, who have borne the brunt of the great conflict, whose very existence as nations may hang by a thread, who are torn by the hates and heart burnings of thirty months of war, and who have lost six million of their kith and kin in the struggle—can we come to them and ask them to heal their strife, settle their great quarrel, and agree to adjust the grievances that will flow from it, if when the war touches us deeply but by comparison trivially we resort short-shrift to the old method that has wrecked all Europe? Nor can I bring myself to believe that a settlement resting on conquest and exhaustion and maintained by force can last.

VI

But the issue as it practically confronts the American people is different from either of these questions. It has to do with the defence of American rights—of American lives and American ships—on the high seas. Here we need to think closely and think hard—harder and clearer and quicker than we have ever thought in labor struggle or political campaign.

Recently I saw a letter from a conservative American war correspondent who specifically asked that he be not written down as "anti-war." He is for war if the people who must bear the brunt of it want to have it; otherwise not. For on one war front after another, he has made a point of asking officers and men whether, had the soldiers now in the ranks had the decision at the outset, this war would have been fought. The answer in many tongues was the same. It was no. We all remember the tense days of 1914 when the issue hung in the balance and when we hoped that, whatever the tugging of armament rings and imperialistic bureaucrats, the great body of public opinion would assert itself in all countries and demand another way out. We felt that democracy, and religion and labor and humanity had all in some inextricable way failed us.

With Austrian troops threatening Serbia, Russian troops mobilizing on the East front, German troops massing against Belgium and France, good sense and reason snapped under the rush for self-preservation. Out of the baffling experience of those days in England, charged with untold human weight, emerged the Union for Democratic Control, which as one of its chief tenets proposes that hereafter the decision as between peace and war shall not be in the hands of a few men, that it is too great a power to rest in any small group, but shall rest in the people. If in Europe, with its close contacts between nation and nation, its exposed boundaries and coasts, its racial hates and imperialistic ambitions, serious thinkers can come forward with such a conserving plan for cool, deliberative, universal action, surely, at our remove from the great struggle, with our less hazard in delay, we can give that plan consideration and, if possible, fair trial. Such a demonstration of one of the most hopeful deterrents to war might prove our largest contribution to that more reasonable ordering of international relations which we all pray for as one great compensation for the present duress. No nation is so favorably

placed to try such an experiment; no opportunity is so prescient as this.

So it is that I have endorsed wholeheartedly the movements to call for a national referendum before going into the European war in the present crisis; or, if that is unconstitutional, to call for an advisory referendum before Congress acts, and in the meantime to spread by postcard and advertisement unofficial, informal questionnaires as a revelation of public opinion for its consideration and guidance. The stake of all the people for all time, in the measure and burden and meaning of life, is too real and engrossing for anything less.

There are other challenging lessons which we can take to heart in the experience of England and France and Germany in August of 1914. We are told that this is to be a war of defense, a war against war, a war to end war. But we have only to turn back to the old newspapers to see that these were the same changes that were rung by people in Western Europe in 1914, only to be drowned out when the behavior of their enemies created new issues, and the ambitions of their allies, new ends of conquest or partition to which they became committed. We can recall that social observers in all the countries engaged, brought out the fact that this was an old men's war—men stirred by the forebodings and watchwords of the nineteenth century and untouched by that spread of a practical internationalism, which in science, and commerce, engineering and social progress, had been weaving not only a new fabric of civilization but was giving to youth a new vision of life; in which the common welfare of mankind is something worth struggling for. We can pause and ask whether the voices raised for war in our universities are those of the older faculty members, or those of younger men who will be molding thought ten years from now and should be heard today. We can consider the personnel of our own chief spokesmen for war—whether they are the young men with vision of 1917, or the young men of the Spanish War epoch—of the days when we had our fling at imperialism abroad, and were not yet aroused to the invasions of political democracy at home.

We can take a leaf out of the history of our domestic movements for social and industrial justice, and ask ourselves whether the most active groups here in America who are espousing the war in the name of liberalism in Europe are those from which we expect leadership when democracy and privilege lock horns in municipality, state capital or Congress.

But to recognize these conflicting and baffling elements in the situation is not to appraise that great latent bulk of public sentiment, which, with some other man at the White House, might have found us in the *melée* long since, and which, in the event of some desperate sea catastrophe, tomorrow or the day after, would bank up solidly behind a policy of aggressive war. Here we are close to certain of our ingrained characteristics as a people. The gross symbolisms with which the cartoonists pictured the "Trusts" in the days of their organization are faint things compared with those indelible personifications of tyranny with which we grew up. We are for the under dog—whether Boer or Belgian, Serbian or Irishman. That heavy-handed stupidity of the German military caste which riled us in the Zabern incident has, since the war began, struck us on the raw a hundred times. We have the tradition of two great wars, which have all the sanctions of patriotic feeling and high principle. We cherish our independence and our fighting spirit. And patriotic service under the colors is the oldest, most instinctive form of service to the state, beside which probation work, or factory inspection, or friendly visiting are nothing but half-sanctioned innovations.

As a channel for these motive forces, we share in common

with the whole world the popular belief that war is the one recourse for outraged national rights. We do not feel that way about the grievance of one town against another town, one county against another county, one state against another state, but we feel that way about the grievance of one nation against another nation. Only slowly has there been any spread of the notion that there are other ways, and that there should be more. War, to the average man, is the one and great redress.

Yet we are at this time met with the counter-phenomena of that other inarticulate body of public opinion which burst loose in grateful applause at the Democratic national convention, when the delegates caught the notion that "peace under provocation" had elements of the heroic about it, and which rolled up the Wilson vote last fall under the cry, "He kept us out of war."

VII

With these two great modes of feeling, either one of which may gain mastery; with those to whom we naturally turn for leadership in social action honestly, sincerely, deeply at variance in their counsels, each one of us is more than ever charged with responsibility to think through the issues raised by the new U-boat terrorism.

We are told that we should go to war to redress our rights at sea and defend American lives and shipping. But with war reaching and rending every community relationship in America, every settlement neighborhood and tenement, every industrial town and crossroads, every phase of education and livelihood, every promise of youth and social advance, we may well pause and ask as social workers and thinkers whether war for us will accomplish these ends, and if not, what will.

To the first question, we are not given satisfactory answers. We are not told how our navy, linked with the powerful English fleet, will accomplish in this war the ends we seek against either the submarines or the land forces of the Central Empires. But back of that, we are given no assurance whatever that our going in will permanently establish the rights we espouse. Submarines and wireless were unknown when our present sea law was formulated. The law of the future, if it tolerates submarines at all, as mines are tolerated now, will have to reconsider the application of rules framed to fit battleships. As a Harvard correspondent writes:

"The whole fabric will be changed beyond recognition at the conferences after this war. Surely such an ephemeral object is not worth the whole nation's sacrifices. . . ."

Beyond that, my impression is that there has never been a war between important maritime powers when the freedom of the seas has been preserved. It is futile to talk about preserving it for the future by anything we do in this war. You may have all the conventions you please; they will go by the board unless we have something stronger or saner than precedent to hold them. We may go in and knock out Germany, but that in itself would be no assurance for American lives and shipping in a war twenty years from now between England and Japan.

What then? Are we to lie down before this new bludgeon, the periscope? My feeling is that we should preserve what we can, and we can preserve as much by other means as by war, and more than appears at first sight.

It is difficult for a layman to extricate himself from the mazes of all the sea rights involved in the positions taken by the American state department in the negotiations with

Germany. The simplest and clearest case is the right of American passenger-carrying ships, without contraband according to our definition, to go where they please in Germany's new war zone, without being blown up without warning or provision for the saving of life. We are next concerned with the rights of American ships carrying contraband according to our definition; with the rights of American merchant vessels with and without contraband as Germany defines it; with the rights of American passengers on all four classes of American vessels; with the rights of Americans traveling or working on ships of all four classes belonging to other neutrals; with their rights on ships of all four classes belonging to belligerents, and finally, with their rights on belligerent ships of all classes armed with deck guns. The extreme case is the American traveler on a British or French ship, loaded with shrapnel and armed with a deck gun with which she proposes to pot the submarine if she sees it first.

The Germans maintained that under the principle of military necessity, the entrance of the submarine, which exposes itself in giving warning, which cannot take its prizes to port, and which cannot care for passengers or crew, called for modification of sea law, just as in other war changes have come in on the basis of changes in ships and weapons. President Wilson countered with the principle of humanity, and while he waived the question of the contraband-carrying ship, he held rigorously to the preservation of life, and insisted that turning passengers loose in open boats in heavy seas or distant from succor was not enough. We are told that authorities on international law among the other neutrals believe that in the future his course will be recognized as one of the great services to the laws between nations.

In doing so he made no distinction between the various classes cited above, covering them all in his diplomatic victory in the Sussex case; and while the German government left an opening as big as a barn door in its assurances at that time, in case it wished to resume "ruthless" submarine warfare, his single achievement meant safety for Americans on the seas for all the months succeeding. It also meant easier munitions and foodstuffs for the Allies. With the peace overtures failing, with the terms of peace announced by the Entente interpreted by German publicists as nothing less than the crushing of the nation, with economic exhaustion and food shortage at home, with the Allies girding themselves for a new spring "push" under new and aggressive leadership, with the war party in Germany claiming for the submarine what they had failed to deliver with the zeppelin—with whatever causes at work, but with one thing sure, the caving in of the opposition which had held the underseas boats in leash, we had the announcement of the war zone to go into effect on February 1.

I unreservedly subscribe to President Wilson's course in breaking diplomatic relations with Germany. With the positions taken in the Sussex case, he could not have done otherwise in consistency. With the sweeping form the U-boat pronouncement took, applying to all American as well as all foreign vessels, he could not have done otherwise as the trustee of American rights and lives at sea. With the German government cutting loose from the elementary canons of what we tragically call civilized warfare, he could not have done otherwise as the champion of the principle of humanity.

His act was a moral condemnation in the courts of mankind of the lengths to which German sea-policy was going, and in that condemnation he has the country with him. I subscribe, further, to his refusal to reopen negotiations until Germany rescind her sweeping declaration.

VIII

The questions now come before us on a different footing. Hitherto they have been a charge upon diplomacy (the Mc-Lemore resolution was in that sense an attempted interference with the state department) and the President has gone the full limit of diplomatic patience, resource and rebuke. The next step may come before Congress as the war-making body; and we should look to Congress for the same patience and the same deliberation which have characterized the President's handling of our foreign relations throughout the war. It is for Congress to weigh the various courses open to it, or suggested by the Executive. And it is significant here to note that in the Sussex exchanges the President did not threaten war, but said we should do what we deemed necessary to maintain American rights and safety at sea. Different things necessitate different steps. Congress and all of us must think and differentiate.

The first distinction to make is that between invasion of our legal rights and the methods employed by the belligerents in invading them. As Professor Hayes pointed out in last week's SURVEY:

"Neutral rights have been flagrantly violated by Great Britain, in that neutral trade with Scandinavian ports and with Holland has been interfered with by the British policy of intercepting all goods of German origin or ultimate destination for Germany, even when the goods have been carried by neutral ships between neutral points; and by Germany, in that numerous neutral merchantmen have been sunk by German submarines either without warning or without opportunity for safeguarding the lives of passengers, some of whom have been citizens of neutral powers."

It is only when we turn from the breaking of the law to the way it is broken that the stark contrast stands out. The neutral merchant ship which undertook to run the English blockade would be called upon to halt; if it kept on, it would be fired on and possibly sunk. The neutral merchant ship which attempts to traverse the German war zone is threatened with being sunk without warning and without chance for rescue of passengers and crew. Here we have the hideous character of unrestricted submarine warfare—the concealment and physical destructiveness of the mine, coupled with a ruthless directing human intelligence.

But, none the less, we should keep it clear that the "Germans have not set out to murder us, resist as we may. They have set out to keep us from carrying goods to England."

So far as enforcing her blockade goes, the means England has at her command are such as enable her to do it without loss of life; not so Germany. We do not know what England would do if she felt her back were against the wall, and her very existence at stake. We do not know what the United States would do. We only know that the German government, over the protest of all the neutrals, over the protest of enlightened groups in Germany, has done this thing. It outrages the deepest feelings we have—as they would be outraged if the German war office should announce that bombs of poisoned gases would be dropped on passenger vessels crossing a certain line of longitude.

If it is because of the excesses of German "frightfulness" that we go into the war, then we should not wait till an American liner goes down. We should have entered it when the *California* was sunk last week—a British boat, but with non-combatants aboard. We should have entered it when zeppelins killed women and children in their raids—and when the defenseless English coast towns were bombarded by German cruisers. We should have entered it long since at the Belgian atrocities and the Armenian massacres.

But if we are going into the war on the basis of American rights and safety at sea, we should keep these things clearly before us; keep them clear of both the excesses and the purposes of the European war.

President Wilson grounded our case on bed rock when he differentiated offenses against property and offenses against life; and when he set off the principle of humanity against the principle of military necessity. But in the application of these broad principles to the actualities of the war, the Sussex case left the question of the safety of American lives badly entangled in the question of traffic in war material and in foreign ships. With this confusion of rights and safety, of commerce and life, the chances are the average American would be for our going to war in the case of another great sea catastrophe involving Americans, regardless of whether the ship were an American vessel or a foreign one. But as a deliberate judgment on the course we should pursue, unaffected by such a crisis, my belief is that he would distinguish, and distinguish strongly, between the two extremes in which our rights are involved, as set down on page 575; between the right of Americans on American ships, carrying non-contraband, to enter the war zone, without danger of being sunk without warning and provision for saving life; and the right of Americans to risk their own lives on a foreign ship, carrying munitions and armed with a naval gun on deck. I believe that is the way we should make our choice, each one of us—deliberately and not under the stampeding of a catastrophe; and I believe that choice is the one we ought to make even in the case of catastrophe. For I believe that, all the intricacies of international law aside—of blockade and visit and search and contraband—the average man would be close to a fundamental discrimination which in this unprecedented war is true and valid—the judgment which would set off people at peace, on ships of peace, carrying cargoes of peace—from commerce involved in the war.

In making this distinction, it seems to me we can sensibly make another. As the executive arm of the government, it was the President's responsibility to bend every effort to maintain American rights at sea. He has done that, and our record is clear. We have protested against their invasion by both groups of belligerents, and have broken relations with that belligerent whose violation was complete and outrageous. But the question is now not one of administration but of legislation, as it now may come before Congress. It is up to the United States to observe every right of foreign citizens guaranteed by us; but it is a matter for us to choose whether we attempt to compel observance of certain of our own rights, limit or amend those rights or temporarily waive them.

For a year and more the federal authorities have cut down on the issuing of passports to American citizens wishing to travel at will abroad as in times of peace. They have done this on the reasonable ground that the European continent is in an abnormal condition in which such travel becomes not only a danger to the individual, but a possible source of entanglement to the United States.

Without in the least abating our protest against the infringement of neutral rights, we can adopt the same course on the same grounds with respect to travel or employment on belligerent ships, and adjust ourselves and our rights of travel to it in the same way that we have adjusted ourselves to the overhauling of our mails, and the constriction of our commerce with continental ports—leaving in the competent hands of the Allies the protection of their own bottoms and of war contraband as defined by the London agreement of 1909.

But here, I would be for this policy of recession, which has

been going on since the war began, to stop. Rather, I would be for a forward movement to protect our rights as neutrals to travel on neutral ships carrying neutral cargoes.

IX.

In taking such a course, we have the choice of acting individually or inviting concerted action by the other neutrals, whose rights and grievance are identical with ours. As Professor Hayes suggests [see SURVEY for February 10], a league of armed neutrals would be a better harbinger of future world solidarity than a league of belligerents—or than individual action by this government. He points out that this is the third great maritime war in modern history, and that such leagues were formed in the two earlier ones, when invasion of neutral rights at sea became intolerable; that this did not involve the neutrals in those wars, even though neutral naval convoys engaged attacking vessels in defense of the merchantmen; that it did not entangle them in the war even though a belligerent declared war on the neutrals (they simply ignored this); and that this joint action for defense laid the basis for those neutral rights which are our present concern.

Such joint action would not involve delay. In instituting the first league, Catherine the Great invited others to join with Russia, but went it alone the first six months. It would not necessarily call for a formal break with Germany by any of the neutrals subscribing to its principles. Unlike earlier proposals for conferences of neutral nations, this would not entangle us in timid cooperation in mediating the European war, but would organize concerted action in a definite field. Concensus of neutral opinion and a community of neutral interests might be brought about by cable, pending conference; and the program would not be halted by the failure of any neutral, or group of neutrals, to come in. By announcing a framework for joint conference and action, we could lift the course at the outset to the plane of organized maintenance of common rights. The plan would not put us at war with a country whose offenses, however outrageous, are not due to enmity of us and ours, and we should not irremediably lose our opportunity to champion real neutral rights against belligerent intentions.

In a sense, such a league of neutrals would be extending the Monroe Doctrine to the sea and conceivably the first to associate themselves would be the South American powers, which, because of their food supplies, are taken more seriously in Europe than heretofore.

Public opinion would sanction such concerted protection in an extreme crisis and a league of neutrals thus might very naturally and convincingly pave the way for America's taking part in such a league of the nations as Mr. Wilson laid before the Senate in his notable address.

The principles of the President's address are ones which the lesser neutrals, especially those of the Americas, take to heart. And these principles could conceivably be reenunciated by the United States at the outset, as things which other neutrals could be asked jointly to stand for in the councils of the world, along with those principles of international rights for which they would be asked jointly to act on the high seas.

X.

Nor would such a course interfere with our girding ourselves for the real struggle with "Prussianism"—the struggle of moral force against a moral wrong. Rather, it would free us for it, first of all, at home. For if the English and French experience is anything to go by, if the outcroppings for censorship and censorship last week are any indication, the day war is declared, that day we are invaded—our liberties, our reason, our power to choose for ourselves.

Such a program would free us for the real struggle against Prussianism abroad. Not only have countless lives been snuffed out, whole regions devastated, villages and cities shattered, but the wreckage has taken in human relations and ideas. I should like to see the organization among us of a League for German Democracy—with young German-Americans as a chief fighting unit in it.

Such a program would free us for our larger task. Lloyd George, in his Lincoln Day address to the American people, draws some challenging comparisons. But he is wrong if he assumes that Lincoln in that election of 1860 had a mandate for war. Lincoln took up its heavy load when it came. He is wrong if he assumes that he had a mandate to wipe out slavery. Lincoln believed emancipation should come as a civil process. What Lincoln was charged with was the preservation of the Union. And in a way that is the same charge upon Mr. Wilson, who in his patience, his refusal to be stampeded, in his grasp of what the people want, has shown many of the qualities of his great predecessor.

The election of 1916 gave no mandate for war, and no mandate for crushing Prussian militarism by going to war. It was a charge to preserve the Union—in peace. We are told that our people have grown rich and materialistic out of the war, and so do not want us to go in and fight. But I have apprehended no reluctance among the steel-makers, or the powder-mixers, or the munition manufacturers, or the other groups who have profited so immensely. The conserving force has come from the plain people who are suffering from the high cost of living—and especially from the West, where democracy is strongest. And it has seemed to me that they have stood for peace because they believed, as Lincoln did at Gettysburg, that it means something to the whole world that the union of these states should be preserved, as a great example of that other scheme of life from war and Prussianism—half a continent, if you will, demonstrating what states without enmity or fortified boundaries, what self-government without over-lordship, may mean in life and the fulness thereof.

Moreover, unlike war, such a course of uncompromised and constructive peace would not forfeit our supreme vantage ground as the one strong neutral from whom conceivably great mediatory steps can be looked for in bringing in peace without victory. It would not destroy our great moral example in maintaining peace under provocation, as a presage of settling international disputes by methods other than those which have wrecked Europe. It would not throw one hundred million more people into the world war, and so wipe out the last great civilized area unswept by hatred, which is the world's only great reservoir of good will and resource for the generous purposes of reconstruction.

XI.

So I state my faith and the things I stand for—in the hope that it may be of some help to others who have been wrestling with the same issues, and who, like the editor of the SURVEY, are not wise in international law, but can make simple choices and urge their government to do its uttermost in the direction of those choices. I do not think going to war is the way to maintain American rights at sea, or to crush Prussianism. I believe there are other ways. And with war, boding miseries beside which our campaigns against tuberculosis and child labor and poverty are addressing themselves to minor evils, with the opportunity for national services to mankind held open till now by the resourcefulness and patience of the President, I subscribe myself to the course which Miss Addams has so rarely attributed to the whole social movement for the conservation and fulfillment of life—a mobilization in the "opposite direction from war."

COMMON WELFARE

THE RED CROSS MILITARY UNITS

ONE of the chief efforts of the department of military relief of the Red Cross is now to hasten the organization and equipment of its base hospitals for the care of sick and wounded soldiers. The base hospital is the keystone of the military relief that the Red Cross is called upon to furnish, yet a year ago not a single such hospital was organized or being organized in the United States. The European war revealed to observers in this country the inadequacy of Red Cross preparations in this respect, and the Department of Military Relief was created in December, 1915, with Col. Jefferson R. Kean, of the Medical Corps of the army, as director-general, to bring this and other military relief features of Red Cross service to a higher efficiency.

Today, if the United States should go to war, the Red Cross could turn over to the medical service of the army five completely equipped and staffed base hospitals, each capable of caring for 500 wounded soldiers. Eighteen other such hospitals are in process of organization, some nearly complete, and could be turned over in a short time. The equipment of twenty-five is the program that the Red Cross holds before itself.

The base hospital is in the second zone of military relief for the wounded. In the first zone—the front—relief consists of first-aid, temporary shelter and transportation of the wounded to the rear. This is carried on by trained sanitary soldiers of the army; Red Cross units and personnel are not admitted to the first zone.

The second zone is the zone of the base, and there relief consists of transport trains for the sick and wounded, and base hospitals. Service is largely manned by a personnel from civil life. The base hospitals here are the first true hospitals encountered by the wounded soldier in his journey to the rear. There for the first time he finds a good bed with a mattress instead of a cot, trained nurses instead of sanitary soldiers, and specialized practitioners from civil life.

The third zone, that of the home country, receives the overflow and the convalescents from the base hospitals near the theater of war.

The twenty-three base hospitals now organized or partly organized are separate and distinct units, capable of quick mobilization the moment war is declared. To secure the staff for each the Red Cross has gone to a large civil hospital and created from the physicians and nurses of that hospital a group in which the individuals know each other and are accustomed to work together. "A chance aggregation of doctors and nurses," says Colonel Kean, "can no more claim at first to be an efficient hospital than a thousand armed men collected from the streets can be regarded as an effective regiment." On the other hand, a group that is already used to working together can be expected to do efficient team work from the start.

Skilled members of the physicians' and nurses' staffs of each of these twenty-three civil hospitals have already "mustered in," that is, have definitely agreed to respond immediately to call when war is declared. Each base hospital has a personnel of twenty-three medical officers, fifty nurses, twenty-five nurses' aids, two dentists, one chaplain, fifty members of the male administrative force, and ten civilian employes. The administrative force and other unskilled members of the unit will be filled up to standard strength after the unit is called into service. The entire unit would be turned over to the sanitary forces of the army if war were declared, and be transported at the expense of the government to the place where it would be located for duty. The director and the chiefs of the surgical and medical departments would be given the grade of army major.

WHERE THE HOSPITAL UNITS COME FROM

THIS personnel has been completely organized in all of the twenty-three hospitals. These are Bellevue, Presbyterian, Mt. Sinai, Post-Graduate, German, Lincoln and New York hospitals, New York city; Lakeside Hospital,

Cleveland; Harvard University, Massachusetts General and Boston City hospitals, Boston; Pennsylvania and University of Pennsylvania hospitals, Philadelphia; Mercy and Wesley Hospitals, St. Joseph, St. Mary and Augustana Hospital, Presbyterian and County Hospital, and St. Luke's and Michael Reese Hospitals, Chicago; Harper Hospital, Detroit; Rochester General Hospital, Rochester, N. Y.; Barnes Hospital, Washington University, St. Louis; Minnesota State University Hospital, Rochester, Minn.; Cincinnati General Hospital; Johns Hopkins Hospital, Baltimore.

In addition to these base hospitals for the army, base hospitals for the navy are being organized in Brooklyn Hospital, Brooklyn, N. Y.; Jefferson Hospital, Philadelphia; and the San Francisco and Los Angeles hospitals in those cities.

The personnel is but half the hospital; without equipment it can do nothing. To buy, store and have ready for instant transportation everything necessary for the surgical, medical and nursing care of 500 sick and wounded soldiers—from the beds they lie on to every kind of bandage and operating instrument—is an essential part of the equipping of these base hospitals. It has been completed for the five first named above. Money for thirteen others is pledged.

The non-perishable equipment of a single base hospital, which does not include surgical dressings and hospital garments, costs \$25,000 and occupies seven carloads of space in moving. Two of the five sets of equipment already assembled are now stored at Fort Schuyler, N. Y., and three at the Bush terminals, Brooklyn. This equipment is supplied in each case by the friends and contributors of the civil hospital concerned.

Surgical dressings and hospital garments, which are either more perishable or lend themselves more readily to individual donation, are being secured through committees of the women's auxiliaries of these civil hospitals. The committee for each undertakes to raise \$8,000 and to spend it on supplies that are standardized for this purpose.

Base hospitals are only one of the preparations for military relief that have been pressed forward by the Red Cross during the past year. Sixteen hundred trained nurses have been enrolled, making the total enrollment 7,600. Navy detachments of nurses, consisting of twenty nurses each, are being organized by thirty-one civil hospitals. Classes in nursing service are being conducted, and already Red Cross certificates in elementary hygiene and home care of the sick have been issued to 4,450 women, with 2,100 others under instruction.

On first call for military service Jane A. Delano, chairman of the National Committee on Red Cross Nursing Service, believes that she could mobilize 2,970 nurses and 1,630 nurses' aids, or a sufficient nursing personnel to take care of an army of 900,000. This is based on what is said to be the usual experience that in the early stages of a war 5 per cent of the soldiers become sick or wounded.

In addition to these preparations, the Red Cross is conducting classes in first aid, is giving sanitary training, is organizing ambulance companies in a number of colleges and universities, and is in other ways trying to be ready to fulfill its charter obligation "to furnish volunteer aid to the sick and wounded of armies in time of war."

THE RED CROSS CIVILIAN PLANS

"ONE million dollars a month," said Eliot Wadsworth, acting chairman of the Red Cross, last week, "may be needed for the care of dependent families alone in the face of a serious crisis."

Whether or not we have war, the mere fact of mobilization creates large problems of relief for the families of guardsmen and volunteers. Last summer, for instance, while not a shot was fired on the Mexican border, Congress appropriated and the War Department distributed two million dollars in relief for families of national guardsmen, in addition to a substantial amount contributed by relief societies and individuals throughout the country before the congressional appropriation became available.

So it is that the civilian department of the American Red Cross is taking extra steps to prepare for any emergencies. At its request W. Frank Persons has been granted a leave of absence by the Charity Organization Society of New York, of which he is general director, to become associated with Ernest P. Bicknell, director-general of civilian relief of the Red Cross, for the next few months in Washington. Mr. Persons will help in making plans for the care of non-combatants and of the dependents of soldiers who may be called to the colors.

As a result of the intensive member-

ship campaign conducted by the Red Cross since the outbreak of the European war, its membership has grown from 28,000 to nearly 300,000. The number of chapters has grown rapidly also being now 267. Part of the task in which Mr. Persons will help will be to correlate these members and the new and old chapters into a working body that will be ready to furnish supplies and other necessary assistance to civilians who may suffer from a war in which this country is engaged. He will also help to increase the number of institutional members, of which there are eighteen at present. These are charity organization societies associated with the Red Cross in the administration of local disaster and civilian relief.

WOMEN ORGANIZED FOR WAR SERVICE

WHILE members of woman suffrage parties and many other women's organizations were last week offering their services, or having those services offered for them, to state and nation, "in the event of a serious crisis," a national organization having the ambitious object of enlisting the service of all women for aid in war time was getting under way at its headquarters in New York city.

Its name is the National League for Woman's Service. Germany's U-boat order hastened its preparations. A plan of development requiring six months to carry out had just been adopted when the U-boat order was announced. Fearing an early rupture, the league hastily prepared an "emergency" program that could be put into effect at once.

One of the league's purposes is to devise and standardize ways in which women's work in war time may be made both prompt and efficient. England's experience in utilizing women in the present war has been studied as a guide. The league hopes to organize the women of the United States so thoroughly that they may be prepared beforehand to do as much and more than the women of England have learned to do during two years and a half of fighting.

The emergency program calls for the immediate appointment of temporary state and local chairmen throughout the country and the enrollment of volunteers and local detachments consisting of from ten to thirty women. Twenty state chairmen have already been appointed. The detachments are expected to prepare at once to perform certain specified services. When military training camps are established, for example, the detachments are expected to know what recreational and social facilities the community affords for the free time of the men in the camps, and if none exists to provide them. Where munitions plants or other large industries are located, the detachments are expected to

cooperate in providing improved housing conditions, proper canteens and welfare work. They are expected to cooperate with the Red Cross and other agencies in caring for the families of militiamen, and to provide facilities for the care of babies and school children while mothers are at work.

They are to be prepared to purchase supplies and to act as cooks in canteens, to drive motor cars when telephone and telegraphic communication is interrupted, and to supply such general service as stenography, making hospital supplies, and serving hot luncheons in workrooms.

The league was formed at the Congress for Constructive Patriotism in Washington, D. C., on January 27.

Among the things the league expects to work for are a "registry of the woman power of America," and a woman's bureau under the federal government "to deal with women's work and women's welfare." The National Patriotic Relief Association has merged with it and several other organizations, such as the Vacation Association, are cooperating with it. The officers are: Maude Wetmore, of New York, chairman; Anne Morgan, treasurer; and Grace Parker, formerly secretary of the Camp Fire Girls, national commandant. The organization committee comprises these three and fifteen other women from fourteen states.

Offers of suffrage help in New York state came from the executive committees of the New York state and city woman suffrage parties. Following the offers were protests from various individuals and groups within the parties, who contended that the executive committees had no authority to pledge the members to any work but that of suffrage. Alice Paul, national chairman of the Congressional Union for Woman Suffrage, issued a statement declaring that until a convention of the union changed its policy the union was "dedicated only to the enfranchisement of women."

THE VOICE OF THE PEOPLE FOR PEACE

"LET the people decide." These words were flashed on the screens of five moving picture houses by the manager of a Chicago syndicate. And at the door of each movie show were ballot boxes where for three days several thousand people in the audiences did decide, five to one, that the United States should keep out of the European war.

This appeal for "no war without a referendum" has, according to peace organizations, received tremendous response during the last week.

At the Clearing House for all peace societies, 70 Fifth avenue, New York city, the secretary reported that branches of the Woman's Peace Party throughout the country were cooperating in urging Congress to gauge popular sentiment

towards war. Jane Addams, chairman of the National Woman's Peace Party, is quoted as saying: "I am most heartily in favor of the referendum on war. It seems to be our best hope."

The Emergency Peace Federation is attempting to bring pressure for such a referendum, arguing that since the people elected President Wilson because he kept us out of war, it is just that the people be consulted before declaring war.

The board of management of the Labor Forum, New York city, comprising delegates elected from the Central Federated Union, the Brooklyn Central Labor Union and the United Hebrew Trades, has sent a proclamation to every congressman, declaring that "the working people of America do not want war" and calling upon Congress "to use every means of learning the will of the great masses whose humble station in life gives so little chance in proportion to their number for expression through the newspapers."

The American Union Against Militarism, which has been conducting an informal referendum of 100,000 people reports that congressmen have been deluged with replies. [See the SURVEY for February 10.]

In addition to the agitation for a referendum, telegrams are sent every night by the Clearing House to some 100 peace organizations in different parts of the country advising the best step for the next day's work. College students are arousing anti-war feeling and, as at Columbia University, attempting to send messages of cordiality to fellow students in Germany. Each of the 100,000 members of the Socialist Party has been instructed to telegraph the President to keep the country out of war; each of the 6,000 Socialist locals has arranged one to five peace meetings a week; each of the thirty-six Socialist legislators has brought a resolution into his respective legislature, entering a "solemn protest against this wanton attempt to draw us into the European conflict."

A novel anti-war demonstration was the pilgrimage to Washington arranged by the Emergency Peace Federation on Lincoln's birthday. About three hundred people from New York, Chicago, Philadelphia, and other cities, gathered at the national capitol, where they approached congressmen with appeals for peace, conducted a hearing before the foreign relations committee, marched to the White House bearing a memorial for President Wilson, and held a public rally.

"Everywhere," according to the SURVEY's Washington correspondent, "the representative character of the delegates, their intense earnestness, and their disposition to hold public officials accountable for a refusal to refer to the nation the decision for or against war, commanded a sober hearing." At the

business meeting it was decided that local and state branches of the Emergency Peace Federation should be organized at once and that a legislative office should be established in Washington.

Two federal bills that are engaging the attention of the American Union Against Militarism are the universal training bill, making compulsory six months service in the field at nineteen and nine years in the reserve army thereafter, which was reported favorably to the Senate on February 11, and the press censorship bill, drafted by the Army War College, but not yet introduced into Congress. It is generally believed that the former bill will not be acted upon this session. As for the press censorship bill, the American union advises a strict watch over it. If passed it would forbid the publication in newspapers, periodicals or pamphlets of any discussion of war except by special permission of the censor.

While pacifists are thus strenuously at work in America, word comes that the Ford Peace Commission at Stockholm will be dissolved March 1.

SOCIAL SERVICE THE WORLD ROUND

THE American Institute of Social Service, New York, founded by the late Josiah Strong, has reorganized its work into four bureaus under the direction of specialists.

The Bureau of Research and Information will centralize the work of the Institute under the direction of Prof. Edward J. Bemis, expert and writer on municipal affairs, assisted by Margaret L. Stecker of Mt. Holyoke College. As a beginning it will list all social agencies, will gather facts and interpret and disseminate them for general use.

Robert A. Woods of South End House, Boston, with Albert J. Kennedy, also of South End House, and lecturer in Simmons College, as his assistant, has assumed the directorship of the Bureau of Social Progress in the United States. This bureau will function as a distributor of information, but includes in its plan actual accomplishment through field work. The comprehensiveness of its program is expressed by ten proposed departments: on morals and social hygiene, charities, health, labor, recreation and amusements, education, child welfare, civics, penology, business and commerce. It will keep in contact with research work of all social agencies and will estimate the effectiveness of various existing combinations and federations, in an attempt to discover what parts of the social field are not yet covered. Moreover, it will hold itself ready to enter into social emergencies when the public needs enlightenment concerning the true issues involved. A study of the early approaches to social legislation on the one hand, and on the other, of the need for follow-up work, in order to prevent fragmentary or bad results from social legislation, are integral parts of the plan. This bureau expects to carry on publicity of social facts among colleges, churches, clubs of all sorts, civic, business and professional organizations, with the help of an advisory committee of specialists.

The Bureau of Social Progress in Foreign Countries will, when sufficient funds are on hand, be directed by Dr. Jesse F. Steiner, teacher of missions and sociology in the University of Chicago and McCormick Theological Seminary, and assistant superintendent of the Stockyards District of the Chicago United Charities. Its chief aim will be the creation of high social standards leading to good will and positive friendship with foreign social forces, not only in times of peace, but in times of crisis.

The Bureau of Social Service in Business Abroad, under the direction of Harry E. Bard, now secretary of the Pan-American Society, will consist of four divisions—Latin-America, western Europe, the near East and the far East.

A Day of Prayer

*To the Churches of Christ in America
and to All Christian People:*

*I*N compliance with overtures from local church associations and in the belief that in such action the council expresses the mind and spirit of its thirty constituent bodies and of all Christian people, the Federal Council of the Churches of Christ in America earnestly recommends that Sunday, February 18, be observed as a national day of prayer, to make our united intercession to God, that His spirit may guide and sustain the President of the United States and direct the steps of our representatives in the Congress of the United States, in all the momentous decisions of this solemn hour in the life of the nation.

In offering our heartfelt prayers for all the peoples engaged in war, moved by their sufferings to deepened sympathy and compassion, remembering that with some of these governments grave contentions have arisen, and in continuing our petitions for peace and righteousness among the nations, we shall be fulfilling the command of our common Lord and Master.

Above all, may we search our own hearts, letting all bitterness and wrath and anger and clamor and railing be put away from us, that the fruit of the spirit may abound, which is love, peace, long-suffering, faithfulness and self-control and that as a nation we may be found speaking the truth, but ever speaking the truth in love.

*Frank Mason North,
president.*

*Charles S. Macfarland,
general secretary.
The Federal Council of the
Churches of Christ in America.*

Nathaniel M. Pratt is general secretary of the institute with headquarters at the Bible House, New York city.

COMPULSORY EDUCATION FOR ADULTS

EVERY adult illiterate in this country should be compelled to learn to read and write English; otherwise he is not a "participating American." This conviction has just been expressed by a member of the Chicago Board of Education, Max Loeb, who advocates the formation of a compulsory adult education league to convert the lawmakers and the public to his idea.

The adult who is unable to read and write, he declares, is "out of touch with our national life," is "cut off from one great unifying element in the community—the English newspaper." How, asks Mr. Loeb, if a man cannot understand English, can you reach him effectively with an American idea?

Compulsion, Mr. Loeb declares, would work no injustice. He says: "The foreigner who takes up his residence in the United States owes it to the country of his adoption to learn to read and write its language. The presence of large numbers of non-English-speaking adults constitutes a clot in the blood of the body politic of the nation. Particularly evident is this in large cities. In Chicago there are, according to the estimate of the Immigrants' Protective League, 200,000 adults who cannot read or write English; 80,000 of these cannot read and write their own language. Less than 10,000 attend evening schools.

"It is obviously impossible to reach any considerable portion of the remainder by relying upon their voluntary attendance. Attendance must be compulsory, with punishment for infraction. The employer must be compelled by law to give to the illiterate adult in his employ three or four hours a week in which to receive instruction in the elements of participating Americanism. The state could well afford to reimburse the employer for the loss of every hour of productive labor devoted by the employe to the instruction, or it could well afford to pay the employe for any loss of wages occasioned by absence from work during the hours of instruction."

The law should apply not only to the foreign-born, Mr. Loeb thinks, but to all alike. He recognizes that his suggestion will meet immediate attack as an encroachment upon individual liberty. But he answers that so did the compulsory education of the child. Moreover, "the field in which one can act altogether according to his own pleasure is being continuously narrowed." Editors of foreign newspapers, too, he says, will not be unanimous in favoring such a step; but when once they learn that "it does not mean the severance of old associa-

tions, but merely the creation of new ones and the opening of unfamiliar avenues of activities, a substantial measure of support may be expected from this source."

The adoption of such a plan by a state in which there are large industrial centers would, Mr. Loeb is sure, be "a practical measure of preparedness just as effective as increase in ships and guns and armament. It would increase the human power of the nation. Germany's cohesion, the universal sense of responsibility to the state, is one of her greatest

Neighbors

To the Settlements of the United States:

EVERY settlement is a little outpost of world federation.

Founded in the interests of humanity, expressing in a practical, realistic way the belief that every man has something to learn from every other, no matter what his birthplace, religion or economic circumstances may be, believing that we all have more in common than we have in difference, the settlements have always interpreted patriotism to mean primarily service.

That country is the greatest that serves the world best. Those citizens are most patriotic who serve their country with the aim in view of a united humanity.

And now that this crisis has arisen, let us hold fast to this faith, and let our hearts be free from a real hostility, even though we engage in war. Not only this—but let us do all in our power to keep the communities in which we have any leadership, free from hatred, looking forward to the time when war shall end and the reconstruction of the world begin again.

The President has made his decision as a sorrowful necessity. Let the country follow his example by keeping on the humane plane of genuine international friendship, even if it be in the midst of war.

Ours is the task to mobilize goodwill in all the communities where we are situated. Will you write me just what you plan to do to promote this important national service in your neighborhood?

It is especially our duty to protect from inconsiderateness or insult Americans of German or Austrian descent. Let us courteously take it for granted that they are loyal Americans till the contrary is proved. And to belligerents living in this country, let us be fair and generous, and see that they are accorded the treatment we should hope for if our positions were reversed.

It may be, though we pray that this is not the case, that we shall witness the spectacle of hostility, suspicion and hatred in the districts where we live. Let us do our best at this crisis to be true to the humanism we profess. Now is the very time to love our neighbors as ourselves.

Mary K. Simkhovitch, president, National Federation of Settlements, 26 Jones street, New York city.

sources of strength. We lack it here in the United States. Compulsory adult education will bring it closer."

REFORMATORY FOR WOMEN IN CONNECTICUT

A FOUR years' campaign for a women's reformatory in Connecticut has come to a head at the present session of the legislature in two bills designed to establish such an institution. The first, framed by Senator Hemenway, editor of the *Hartford Post*, is patterned after the measure that established the Cheshire reformatory for young men. The second, introduced by Senator Lyman of Middlefield, is quite different, calling for an institution on the farm-colony plan and stipulating that three members of the board of seven managers, as well as the superintendent, shall be women.

This has been characterized by Katherine Bement Davis, head of the Parole Commission of New York city, as the best women's reformatory bill ever advanced in this country. The bill appropriates, however, only \$50,000, while Senator Hemenway's measure appropriates \$400,000. Senator Hemenway is said to be desirous to secure a progressive institution and to be willing to support such provisions as have been found best in other states.

An intensive campaign of education in favor of a reformatory for women has been conducted by several interested organizations and by a special Committee on Delinquent Women of the Connecticut Prison Association. This committee has advocated a farm colony for women, to consist of not less than 200 acres, with buildings on the cottage plan. It recommends thorough medical examinations, mental tests and facilities for the treatment of venereal disease, as well as complete classification and separation of groups, vocational training and farm work, and the teaching of some means of livelihood to all women. It suggests further that sentence should not be determined by the court, but that the board of managers should decide when a woman may be allowed to return to the community.

More than 150 audiences have been reached by speakers in the campaign within the past two years. A digest of laws relating to reformatories for women in other states, said to be the first of the kind, has been compiled. The proposal has been endorsed by such bodies as the Connecticut Congress of Mothers, the State Federation of Women's Clubs, the State Council of the Daughters of the American Revolution, the Federation of Churches, the Federation of Labor, the Connecticut Woman Suffrage Association and the Girls' Friendly Society.

Of the present unsatisfactory methods

Cesare in the New York Evening Post

"SOME PATRIOTS FLOCKING"

of caring for delinquent girls and women in Connecticut, Valeria H. Parker, M.D., field secretary of the Connecticut Society of Social Hygiene and an active advocate of the reformatory, writes:

"Girls between eight and sixteen years of age may be sentenced to the Industrial School for Girls at Middletown. This has a private endowment. There girls receive schooling and training in sewing and cooking. Both delinquent and dependent girls are brought into contact, and there is no proper system of medical examination.

"For delinquent girls between sixteen and twenty-one there is no state institution other than the county jail or the state prison. A girl of this age is frequently fined and sent back into the community, commonly earning the money for her fine by committing the identical offense for which she was arrested. There are two private institutions to which such girls may be committed. The state pays their board, but it cannot control the institutions' policies, and no matter how generous public support may be, it is felt that the institutions cannot meet the needs of the entire state.

"For women over twenty-one there are no institutions, public or private, except the jails and state prison. In the jails first offenders, feebleminded women, hardened criminals, witnesses, pregnant women and young children with their mothers are frequently herded together. Two women were recently found in the same jail, one serving her one hundred and twelfth sentence and the other her one hundred and twenty-first.

"The present lack of provision for delinquent women is largely responsible for the fact that Connecticut stands high in the list of states in per capita expenditure for paupers, insane and delinquents, and that it has the fourth highest death rate."

MUTUAL WELFARE PLAN FOR MISSOURI PRISON

DISGRACEFUL conditions in the Missouri penitentiary, the largest state prison in the country, bid fair to be definitely ended with the appointment of a new warden by the incoming governor and the presentation to the legislature of a sweeping reorganization of all Missouri penal institutions, and though ap-

pointed for only a few months, or until the reorganization takes place, the new warden, former Lieutenant-Governor William R. Painter, has let light into dark places by admitting newspaper men for the first time in three years, and has started an organization of prisoners following closely the Mutual Welfare League at Sing Sing.

The new governor, F. D. Gardner, made the penitentiary his chief concern immediately upon his election. Public hearings were held in St. Louis to determine the best methods of administering all the state institutions. As a result, administration bills have been prepared providing for two salaried commissions, one to take charge of penal institutions and the other of state hospitals and other institutions.

Meanwhile, the contract labor system, though abolished some time ago by a statute that became effective December 31 last, continues under an executive order until the present legislature appropriates money for a satisfactory substitute.

PSYCHOPATHIC SERVICES IN THE COURTS

IN taking Dr. William Healy from the psychopathic service of the Chicago Juvenile Court for similar service in connection with the Judge Baker Foundation, Boston beats Chicago at its own game in achieving more effective cooperation between voluntary and official agencies. It is all the more a summons to Chicago to brace up at this point of advantage which she has hitherto had, since Dr. Healy's service was secured to Chicago by generosity of one of its women citizens. Mrs. William F. Dummer established and for five years maintained the Psychopathic Institute which gave Dr. Healy the opportunity to study and interpret juvenile delinquency. His volunteer help to the Juvenile Court was soon recognized to be indispensable and all its facilities were placed at his disposal in order to secure his advice in dealing with the most perplexing cases among the multitude of delinquents. After the public value of this service was thus privately demonstrated, the county commissioners took over its support and control and the first provision of psychopathic service as a regular part of the equipment of the court in dealing with delinquency was thereby established. From the Juvenile Court it was extended to the Municipal Court and the House of Correction and promises to be adopted by the Criminal Court.

Notwithstanding this achievement, funds were not forthcoming fully or speedily enough for the satisfactory development of the rapidly growing work, and Dr. Healy accepted Boston's better opportunity to promote the cause which he had served for eight years in Chicago.

The farewell dinner tendered to Dr.

and Mrs. Healy by the Chicago Ethical Society at the City Club called forth appreciative attestations of the function of psychopathic service in the courts as indispensable to public welfare. Dean John H. Wigmore, of Northwestern University Law School, credited Dr. Healy with two marked achievements in giving individual application to scientific principles attained by penological research and in demonstrating that it is feasible to give psychopathic science, thus attested, its clearly defined part in the administration of criminal law. Dr. Herman M. Adler, of the National Committee for Mental Hygiene, who is surveying the psychopathic agencies in Chicago and who has been engaged to succeed Dr. Healy as consultant of the Juvenile Court, added his appreciation for the application of scientific knowledge with sympathy and emphasized the necessity to plan ahead to realize the possibilities of developing this service of the community through the courts. Judge Victor P. Arnold, of the Juvenile Court, bore witness out of his experience to a judge's absolute dependence upon advice based upon scientific insight in order to attain any intelligent understanding of or dealing with many classes of delinquents.

Among other measures, the state conference favored a court of domestic relations established in connection with juvenile courts; a single standard of morality for husband and wife, so either wife or husband may enter complaint against the other for adultery within one year from the offense; the shortest possible work and business day, with "eight hours maximum" during a twenty-four-hour period; a six-day week for all labor, with Saturday half-holiday wherever possible, or in lieu thereof a mid-week half-holiday for all workers; state provision for the best sanitary housing conditions in industrial and other establishments by means of rigid inspection and supervision by the state Board of Health.

The conference was also opposed to compulsory military training in high schools as improper physical training for boys of high school age; also as involving the turning of a branch of public education over to military authorities.

WHERE TROLLEY COMPANIES AND MEN AGREE

HEARINGS last week before the New York Public Service Commission for the New York city district

revealed the fact that both the street car executives and the unions will oppose the new plan for the prevention of strikes [see the SURVEY for January 27] drawn up tentatively by Oscar S. Straus, chairman of the commission, and Julius Henry Cohen, special counsel. Labor was represented by Samuel Gompers, president of the American Federation of Labor, and Hugh Frayne, general organizer for the federation in New York city. Both expressed their opposition to any plan for limiting in the slightest degree the right to strike.

Mr. Gompers said he would concede freely the right of the employer to discharge a workman, and he demanded as a corresponding right for the employes the right to strike "for any reason or for no reason." He told the commission that if this proposal or any similar one were enacted into law the workers would violate it. The struggle upward from slavery to freedom has been so long and so hard, said Mr. Gompers, that any tendency to return to the old days of "unfreedom" will be resisted to the end. Mr. Frayne argued in similar vein. He feared also that the bill would enable the employers to force the men into the

PREPARING SOCIAL LAWS FOR THE LEGISLATURE

IN anticipation of the sixty-days biennial session of the state legislature, opening January 8, the Washington State Conference for Social Welfare promoted the holding of several conferences on social legislation throughout the state, with a round-up in a state conference, January 16-17, at Olympia, the capital city.

As early as October and November conferences were held by social workers and students in Spokane, Pullman, Tacoma, Centralia, Bellingham and Seattle, when there was an earnest effort made to agree on and to formulate the social legislation that the state needed.

Above fifty suggestions for needed social legislation were handed to one or another of the seven or eight committees, who reported back to the general conference. The conference on organization was divided into seven groups: public health, juveniles and home, morals, industrial, education and recreation, prisoners, and defectives and insane.

After a two days' session the conference took action—never with less than a three-fourths vote, in nearly every case unanimously—on thirty different propositions. The suggestions of the conference were then printed in compact form, accompanied with a note stating that they were the result of the best thought and experience of representative groups of social workers and students, and are now in the hands of every senator and representative in the legislature.

Cesare in the New York Evening Post

"SINKING"

"brotherhoods" fostered and controlled by them.

The opposition of the employers was as vigorous as that of the employes, but the grounds for their opposition were quite different. E. A. Maher, president of the Third Avenue Railway Company, shared Mr. Frayne's fear, but he thought it might be the Amalgamated Association of Street Car Employes that the law would enable the men to join. Col. T. S. Williams, president of the Brooklyn Rapid Transit Company, wrote a letter to the commission declaring the plan to be "too radical and objectionable to warrant consideration." It was opposed also by T. P. Shonts of the Interborough Rapid Transit Company, and by John Beaver, receiver for the Second avenue line.

Last week's hearing was opened by Albert Shaw, editor of the *Review of Reviews*, who made a general statement favoring the plan. Delos F. Wilcox, an expert in the public utility field, suggested some changes that he thought should be made, and Prof. Samuel McCune Lindsey of Columbia University spoke in favor of the principle involved.

ELBOW ROOM AND SUN FOR MINNEAPOLIS

A HOUSING code for Minneapolis based on Lawrence Veiller's model code, will be presented at the next session of the Minnesota legislature. Instead of opposition from the Real Estate Board, the code is endorsed by them, and by the Trades and Labor Assembly, the Minneapolis Chapter of Architects and the Builders' Exchange.

The plan limits dwelling houses to the width of the street on which they abut, but they are not, in any case, to exceed seventy-five feet or seven stories and a basement. A side yard is required on either side of the building proportionate to the height, which is an outgrowth, possibly, of a local custom under the present building ordinance. The building of rear houses is prohibited. Basement rooms in all new buildings shall be occupied by no one except the janitor. To eliminate fire hazard, no frame building housing more than two families on a floor, nor more than two and one-half stories in height, may be built, and all dwellings over three stories must be fireproof. All new buildings must have toilet and water supply for each family, and all old buildings must have toilet for each two families.

The Housing Committee of the Civic and Commerce Association of Minneapolis after four years' work on the problem, is chiefly responsible for the present result. The holding of the National Housing Conference in Minneapolis in 1915 gave the strongest impetus to the movement. Otto W. Davis, secretary of the Civic and Commerce Association, helped draft the building code of Colum-

bus, Ohio, several years ago, and has applied his former experience to the present situation.

IF MILWAUKEE HAD HEALTH INSURANCE

THAT health insurance would have aided, greatly in meeting the needs of the thousands of people who were found sick during the recent health census [the *SURVEY*, November 11, 1916; January 20, 1917] is a further conclusion of the City Club of Milwaukee.

Of the 40,000 persons who were estimated from the census returns as being sick, 25,700, or 64.7 per cent, would have been entitled to medical care under health insurance if a bill like those in New York and Massachusetts had been passed providing such care for employes receiving less than \$1,200 a year, and their families. Of these persons who would have been entitled to medical treatment, less than 11,000 were under a doctor's care at the time the census was taken. In other words, assuming that all of these sick persons should have had medical care, health insurance would have more than doubled the number of persons under treatment.

Out of this number approximately 800 were already receiving cash sick benefit from some source, chiefly in the form of wages paid by the employer or from an employes' benefit association; others from unions, lodges and insurance companies. On the basis of these estimates there were in Milwaukee at the time of the health census approximately 15,000 sick persons not receiving medical care, who would have been entitled to medical benefits if the proposed health insurance law had been in effect.

UNEMPLOYMENT'S AFTER- MATH FACED BY CHARITY

MOST communities are strangely oblivious to the after effects of the plague of unemployment, as they are to the results of no other recurrent plague. The United Charities of Chicago, however, does not intend to leave its constituents or the community in this situation. The report of its last year's work centers on the conditions which resulted from the preceding year's widespread unemployment.

In 1914-15 the society dealt with 22,105 families, representing over 100,000 human beings, "a volume of want greater than had come to any other single charity of its kind in the United States in a single year." This was said to be due to the fact that there were estimated to have been over 100,000 men, idle during that winter, who lost about \$17,000,000 in wages. While in 1915-16 the number of families relieved dropped to 14,670, a decrease of over 33 per cent, including 65,015 individuals, yet 3,391 cases of unemployment were found among them.

But the aftermath of this scourge of unemployment was met this past year in an increase of acute and chronic illness, of which there were 6,816 cases, or 46 per cent of the whole number of cases needing relief as against 33 per cent of the larger total of cases the preceding year. The United Charities workers were thus to call upon doctors, nurses, hospitals and other medical agencies 10,843 times, or in 2,653 instances more than the preceding year.

On the other hand, with more work there were fewer deserted families, 1,146 of them among the 14,000 families relieved the past year as compared with 2,733 desertions among the 13,000 families in the year 1912-13. Fewer pronounced cases of intemperance—857 were discovered last year—than were found in any one of the preceding four years of scarcity of work, "due to the fact that men were busy earning their living rather than idling."

Upon these and other findings of last year's experience Supt. Eugene T. Lies bases two conclusions: First, "that striking warrant is given for the assertion that the average family passionately desires to be independent of charitable assistance and to paddle its own household canoe, that the average man is not a slacker, but will grasp opportunity to work when the gates of opportunity open to him;" second, "that as the evil of unemployment is one that recurs annually in a measure, and every eight or nine years in severer form, now during a period of prosperity is the time of all times for government, captains of industry, unemployment commissions and all social forces to plan preventive measures, economic shock-absorbers."

RIGHT TO LIMIT BILLBOARDS AFFIRMED

THE decision of the United States Supreme Court affirming the validity of Chicago's billboard ordinance not only promises to rid all residence sections of those disfigurements where a majority of adjacent property-owners object to them, but also may set a precedent for further restrictions protecting the stability and orderly growth of towns and cities. Communities seem by the decision to be authorized to define and abolish as nuisances whatever individual property-owners may do that makes conditions unfavorable to residential purposes. The decision encourages the hope of establishing zones within which only such use of property may be permitted as is consistent with the main purpose to which each specified area is devoted.

The City Club committee, which has been actively interested in carrying up the case which secured this decision, is cooperating with the city authorities in instituting a city-wide campaign to eliminate billboards from districts where they are not wanted.

Book Reviews

COST OF LIVING

By Fabian Franklin. Doubleday, Page and Company. 162 pp. Price \$1; by mail of the SURVEY, \$1.07.

THE COST OF LIVING

By Walter E. Clark. A. C. McClurg and Company. 168 pp. Price \$.50; by mail of the SURVEY, \$.55.

SOME PROBLEMS IN MARKET DISTRIBUTION

By A. W. Shaw. Harvard University Press. 119 pp. Price \$1; by mail of the SURVEY, \$1.06.

MARKETING PERISHABLE FARM PRODUCTS

By Arthur B. Adams. Columbia University. 180 pp. Price \$1.50; by mail of the SURVEY, \$1.58.

These books respectively discuss the cost of living from four different angles: the first as a point of departure from a discussion of general economic doctrines and public policies; the second as a general study of the rise and fall

of prices with causes therefor; the third as a study of a specific problem in industrial reorganization; the fourth is a concrete study of the machinery and cost for marketing perishable products.

Dr. Franklin, who is associate editor of the New York *Evening Post*, confines himself to "setting forth the principal elements that enter into the question" without suggesting any solution of the problems. He finds that "as a rule wages have probably risen distinctly less than has the general level of the prices of those things which the working people have to buy with their wages," and hence the wage-earners are most seriously affected by high prices. But they "are in possession, through the machinery of their organizations, of the means of bringing pressure to bear to hasten the process of readjustment. By means of strikes, or threats of strikes, they can secure, in a fairly reasonable time, such changes in their rates of pay as are justly called for when a general rise of the price-level has become an established and acknowledged fact."

The most valuable chapters in the books are those devoted to low prices and discontent, and high prices and discontent, showing the different groups affected in low and high price eras.

Professor Clark discusses prices along traditional economic lines under such captions as Demand Causes, Supply Causes and Fluctuations in Money Values. He finds that "a prolonged ris-

ing-price period energizes the business world generally, operates to the advantage of debtors and of owning producers and to the disadvantage of creditors generally, of wage-earners, of salaried persons, and of receivers of fixed incomes; causes interest rates to rise, lessens the severity of crises and the duration of depressions and stimulates social reconstruction, both in fact and in philosophy."

In view of the fact that the wage-earning group are those who "tend to be losers in a rising-price period," the author advises that "public bureaus of statistics in democracies should be especially alert in such periods and should keep the public informed as fully as possible as to the changing wholesale and retail prices and the course of wages. The general public should bear in mind these returns. If wages are seen to be lagging but little behind prices as they rise, then the rising-price era is substantially beneficial altogether." About the only conclusion that can be drawn from the volume, therefore, is that publicity will help wage-earners to get higher wages during periods of rising prices, there being no other important cost-of-living problem.

Mr. Shaw, who is the editor of *System*, makes a distinct contribution to problems in market distribution because he analyzes the recent tendencies in this field. By market distribution he includes not only agricultural products, but the distribution of the products of the factory and the mine.

He finds the characteristic of present-day distribution methods to be direct marketing made possible through advertising and sales by description. There are three available agencies for selling: the middlemen; the producers' own salesmen; and advertising, direct and general. The first is the traditional method, the second is being used increasingly, and the third is the characteristic feature of twentieth-century distribution.

Mr. Shaw finds a tendency to decrease the number of middlemen and believes that this tendency will grow greater in the future "if present economic conditions substantially continue." "The attempts of associations of retailers to check the growth of direct selling have thus far not been successful." Advertising builds up three general classes of demand: express conscious demand; unexpressed conscious demand; and subconscious demand. Its potentialities are indicated in the last two classes.

Professor Adams has availed himself of the various source studies that have been made in the last few years as to the costs and prices in marketing perishable products and has evidently read much of the great volume of literature that has recently appeared in this field. He has not done any, or but very little, investigating work himself. He describes the present system of marketing perishable products and finds the weaknesses of the present system to lie in varying supply and in changing demand together with losses from deterioration and a want of care with the commodities before and after they enter the market, the inaccuracy of market information and the fact that the complicated marketing machinery seems to be too expensively run.

He does not believe that the middleman system will be eliminated; he points out the limitations of cooperative sales and the limitations of direct marketing because of the difficulty of finding consumers and transferring goods to consumers. He expects the reduction of the burdens of marketing to change the nature of the goods and the area of production.

He believes that the cost of performing the marketing process may be reduced through government market bureaus, through the standardization of grades and packages, through the elimination of unfair business practices, through the organizing of market information, through the regulation of transportation, refrigeration and terminal facilities, through educational and investigating work, through more efficient market departments, through cooperative associations and through reducing costs by means of competition between wholesalers, shippers and retailers.

CLYDE LYNDON KING.

THRIFT

By Bolton Hall. B. W. Huebsch. 247 pp. Price \$1; by mail of the SURVEY \$1.07

Bolton Hall has the faculty possessed by so few ardent propagandists of joking about the axioms dearest to his heart and of pounding away at his antagonists without malice. His book, *Thrift*, is made up of all Mr. Hall's

favorite recipes for an ideal commonwealth—a menu by no means to be despised. Single tax and land reclamation, simple life, truck gardening, individualism in industry, all the ingredients are there. *Thrift*, as interpreted by Mr. Hall, is not a niggardly hoarding of savings which should never have been made, but the sum total of efficiency, industry, economy, prudence and frugal-

ity, including saving in temper as well as in time and treasure. His advocacy of this virtue runs through the book.

How to become prosperous without petrifying in the process really is Mr. Hall's theme; and, though we may not agree with him in every detail of his plan, no one can read this little book without getting benefit from his warm human counsel—if only to the extent of learning that to spend a dime's worth of time to undo a one-cent parcel string is not economy. B. L.

THE PREVENTION OF DISEASE

By Dr. Kenelm Winslow. W. S. Saunders Company. 348 pp. Price \$1.75; by mail of the SURVEY \$1.85.

Dr. Kenelm Winslow describes his book in a subtitle as "a popular treatise." This phrase places the book in that increasingly large company of handbooks for the layman, many of which are of high value, all of which should be used with reservation. To the present volume, tribute is paid in a foreword by Charles H. Mayo, M.D., of Rochester, who describes the book as "a concise and simple description of most of the facts known to modern preventive medicine." These facts, continues Dr. Mayo, are offered to those who desire them, not that they may become physicians by reading the matter, but that by their wider knowledge of science they may be better citizens. With this distinction in mind, Dr. Winslow's book is welcomed to the ranks.

The volume is clear and interesting in its presentation of many facts of hygiene, germ diseases, mental and nervous diseases, troubles of digestion, etc., facts that should be part of the general knowledge. Its danger is that of the type it belongs to—lest in some particular case the printed page be relied upon in place of personal examination and the verdict of a physician. G. S.

TUBERCULOSIS DISPENSARY METHOD AND PROCEDURE

By Elizabeth F. Crowell. National Association for the Study and Prevention of Tuberculosis. 119 pp. Price \$.25; by mail of the SURVEY \$.29.

Anti-tuberculosis work is the pioneer modern public health movement. It was the first to enter the field in a militant way, not taking what came to it, but going out after the business—the business of finding tuberculosis cases, curing them if possible, and preventing them

from spreading the disease. The tuberculosis dispensary has been one of the chief agents in this campaign. Twelve years ago there were barely twenty such dispensaries in the country; today there are over five hundred and the number is growing apace. Miss Crowell's book reviews the technique of their administration—medical and administrative—studies the tuberculosis nurse and her medical social work, and touches lightly, a little too lightly, on some of the broader questions of policy which are involved in the relation of tuberculosis work to other forms of public health service.

It is significant that, while so much volunteer private effort during the past ten years has gone into the thirteen hundred voluntary tuberculosis societies in the United States, the time has already been reached when in an authoritative publication such as this the maintenance of an anti-tuberculosis dispensary is regarded as a function of the community rather than of a private organization. The voluntary anti-tuberculosis society should no longer run a dispensary, or should run it only until it can get the local community to pay for it out of public funds. The private society, however, has yet before it large fields of endeavor, as is brought out in Miss Crowell's booklet.

MICHAEL M. DAVIS, JR.

THE SOCIAL PRINCIPLES OF JESUS

By Walter Rauschenbusch. Association Press. 198 pp. Price \$.50; by mail of the SURVEY \$.55.

THE CHRISTIAN ACCORDING TO PAUL

By John T. Faris. Association Press. 129 pp. Price \$.50; by mail of the SURVEY \$.54.

Professor Rauschenbusch has rendered a distinct service, additional to that of his larger volumes, by preparing this little manual of The Social Principles of Jesus for college voluntary study courses. Based upon concrete sayings and incidents skilfully selected from the Gospels for daily reading and thought, the principles underlying and exemplified by these excerpts are grouped and gripped in the Study of the Week concluding each short chapter. Incisive questions probe for the individual reactions of the student, and far-reaching implications compel a wider vision and a further forecast for the better time coming. It is one of those big little books which lead on and out to further study and progress.

Dr. Faris has given a promising initial volume in the Every Day Life Series, which is aimed to spiritualize the personal life by meditation upon scripture passages selected from the writings of Paul, and directly brought to bear upon

individual traits of character and conduct, relationship and action.

GRAHAM TAYLOR.

THE SYRIAN CHRIST

By Abraham Mitrie Rihbany. Houghton, Mifflin Co. 426 pp. Price \$1.50; by mail of the SURVEY \$1.64.

CHRISTIANOPOLIS

By Felix Emil Held. Oxford University Press. N. Y. 287 pp. Price \$1.25; by mail of the SURVEY \$1.35.

While this latest and most realistic portrayal of Christ in his native setting, by Mr. Rihbany, lies outside the SURVEY's reviewing scope, its many touches of oriental social life are to be noted, and most of all the fact that the volume is the product of a Syrian immigrant, who, though poor and friendless on his arrival in America a score or more years ago, is now the well-known preacher in one of Boston's most commanding pulpits and an author welcomed to the pages of the *Atlantic Monthly*. The return which he thus makes to America for all that America has done for him expresses one of the greatest reciprocities ever witnessed. All nations are meeting, mingling and exchanging values here in the new world.

Christianopolis, a translation from the Latin of Johann Valentin Andreae, portraying "an ideal state of the seventeenth century," is an important addition to utopian literature in the English language. Professor Held's valuable introduction connects Christianopolis with the other utopias—Plato's, More's, Campanella's City of the Sun, Francis Bacon's New Atlantis, Samuel Gott's Solyma—and with seventeenth century educational reforms. The text ranges quaintly over many of the rough realities and the fine ideals with which every people is still struggling. G. T.

THE SOUTH TODAY

By John M. Moore. Missionary Education Movement of the United States and Canada. N. Y. 247 pp. Price \$.60; by mail of the SURVEY \$.70.

SOUTH AMERICAN NEIGHBORS

By Homer C. Stuntz. Same publishers. 211 pp. Price \$.60; by mail of the SURVEY \$.70.

It is indicative of the comprehensive scope of missionary education as promoted by the Missionary Education Movement of the United States and Canada to find in these volumes emphasis laid upon the material and industrial development of the people in di-

rect connection with the urgency placed upon their social, educational and religious needs. Mr. Moore's compact yet readable volume may well serve as a hand-book of facts and forces practical and valuable to the southern farmer, business man, citizen and churchman alike.

While appealing more to the missionary zeal of Protestantism in following up the recent Panama Congress, Mr. Stuntz includes many economic and social factors of the South American peoples with his sketch of their history and his forecast of "the continent of tomorrow." G. T.

Hammar has been sending me yearly reports since then of the progress of his campaign, and this year he is able to present a record of victory, for there has not been a case of lead poisoning in the plant during the last twelvemonth. This is surely cause for congratulation, and I should like to transmit mine to him through the SURVEY. I suppose there is no one industry in this country that has undergone such radical changes of a hygienic character as has the making of white lead during the last five years. Mr. Hammar's factory is not the only brilliant instance of this reform from within the industry itself.

Alice Hamilton.

[Hull House.]
Chicago.

ANTI-ALCOHOL ADVERTISING

TO THE EDITOR: I note in your issue of January 6, an article on Boston politics and reprints of two of the political advertisements in Boston papers. I do not know who furnished you with the material for this, but whoever it was evidently forgot that the most striking feature of that campaign was a half-page advertisement that we prepared and inserted all day in every Boston paper. This advertisement, we are informed, was the largest advertisement of a political nature ever inserted in every paper in any city.

We did this advertising at the request and expense of Hon. E. N. Foss, ex-governor of Massachusetts, and I believe that it is worth noting, not only because of its size and somewhat unusual character, but also because it was a personal contribution of a gentleman whom we all appreciate, and who is greatly interested in the success of the prohibition movement. I am sending you under another cover, a copy of this advertisement, which I am sure you will be interested to see.

Franklin P. Shumway.
[Franklin P. Shumway Company.]
Boston.

NATIONAL STATE OF MIND

TO THE EDITOR: May I be permitted space to express my deep appreciation of the admirable article by Mr. Williams which appears in the opening pages of the SURVEY of January 20? Why is it that there is such a dearth of discussion on this particular phase of the peace problem?

Mr. Williams probes to the very core of the whole matter. Schemes for armament limitation and leagues for enforcing peace will provide immediate relief and a solution up to a certain point, but we could well afford to give larger concern to those fundamental causes which are eternally producing these unfortunate conditions in the world. It is refreshing to have pointed out for us the

Communications

FOR A COUNTRY TOWN

TO THE EDITOR: Some interested citizens of this small rural community of about 400 persons are making plans for a community social center hall. There are three large fruit-packing houses here which bring in a number of people, mostly foreign, in the fruit season rush work. The only recreation for these people is found in a dirty, unsanitary pool-hall and an outdoor playground that is kept up by our church. We need good wholesome recreation for every night of the week in the summer season.

I have been a subscriber to your paper and thought that I might get some information from you or your readers in regard to the plans and dimensions for a social center hall, its uses, and its management.

Warren T. Powell.
[First Methodist Episcopal Church]
Armona, Cal.

TURNING OFF THE SPIGOT

TO THE EDITOR: May I congratulate you on the splendid contribution to the magazine in Mrs. Tilton's articles. The first one seems already to have created quite a sensation of enthusiasm. I look forward with great pleasure to the rest of the series.

Josephine F. Bumstead.
Cambridge, Mass.

TO THE EDITOR: Let me congratulate you heartily on the first article of

Mrs. Tilton's series. I believe it is right in its insistence on the modern point of view for social workers. We can no longer dodge this great issue, and the arsenal of facts which she places at our disposal will be invaluable. I am keenly anticipating the articles that are to come.

Edgar S. Wiers.

[Unity Church.]
Montclair, N. J.

A CLEAN RECORD

TO THE EDITOR: In 1911 when I was making a survey of the white lead industry in this country for the federal Bureau of Labor, I found a really shocking amount of lead poisoning in our factories as compared with those I had visited in England. At that time I wrote: "In one English factory employing ninety men there was not one case of lead poisoning in five successive years. In an American factory employing eighty-five men, the doctor's records for six months showed thirty-five men leaded. Another English factory with 182 men did not have a case last year, but an American factory with 170 men had sixty cases." The difference seemed to be largely due to the surprising ignorance of the American manufacturer as to the danger of lead poisoning and the possibility of preventing it. In the course of these travels I came upon the Hammar Brothers' white lead plant in East St. Louis, and found that here was a place where this danger was recognized and intelligently combated. F. V.

need of a radical change in the national state of mind, which now measures national success in terms of territorial expansion, and to have the final criterion of governmental success defined as "the well-being of the individuals composing the nations." Why is it that mankind has been so loath to realize that the practical values of life are the only ones which can ever bring to men any ultimate personal satisfaction?

Regarding the settlement of the present world eruption the author of the article very modestly disclaims any ability to propound a remedy. But in pointing out the root of the trouble he has gone a long way toward putting us on the right track in our attempts to destroy future wars. A national state of mind cannot be changed in a day, nor perhaps in a generation, but the significance of the author's viewpoint in relation to education is obvious and unmistakable.
Sheffield, Mass. S. C.

SAID OF THE SURVEY

TO THE EDITOR: Every number of the SURVEY seems to me more valuable. The individual articles are most timely and full of facts. Your printing, too, of the President's message and such popular documents as easily get by one in the newspapers,—which are often thrown away before one can cut out what one wants—is a great help. It is an aid to have important proclamations in hand.

PERCY S. GRANT.

[Church of the Ascension]
New York.

TO THE EDITOR: Allow me to express my very deep appreciation of your stand on the peace question, both now and in the past. You are the only weekly courageous enough to keep your ethical humanitarian stand in the wave of emotionalism that is sweeping our land. Your article by Carlton J. H. Hayes, in the issue for February 10, is very splendid. I am writing to you hastily so that you may know at once how greatly I value your sanity, your intelligence, your feeling for democracy.

CORNELIA L. SWINNERTON.

New York.

TO THE EDITOR: I personally feel now a real member of the elect family of the SURVEY, having taken it these five years. I only wish that we had the wherewithal to rise to the high station of Co-ops. Please take the will for the deed. The SURVEY is to me a constant inspiration and thought provoker, away out here in the jungle cut off as we are from the inspiration of fellow social workers.

EDWARD W. FELT.

Vadala, via Vambori, India.

JOTTINGS

THE SURVEY has a flood of missives from Big South Fork of Nolin Creek, Kentucky, protesting against the Gist-of-It statement that Lincoln was born in Springfield, Ill. Springfield papers please copy.

THROUGH an oversight the SURVEY failed to acknowledge the courtesy of the Labor Forum for the loan of the engraving of Lincoln's bust published on the cover of the issue of February 10.

MEASURES affecting the social welfare are being introduced in such numbers in the Pennsylvania legislature that the Public Charities Association, Empire building, Philadelphia, has begun publication of a series of leaflets under the title, *Legislative News*, which will describe these bills and follow their legislative course. Copies will be mailed free on request.

REGISTERED nurses are among those in the professional group to whom the restrictive clauses of the new immigration law are not to apply. This means that health work will not again be handicapped, as in the instances reported in the SURVEY for December 18, 1915, or as last summer when nurses who would have helped New York during the poliomyelitis epidemic were detained at the Canadian border under the contract labor clause of the present law.

"WHO will put 'rest in restaurants'?" asks the Consumers' League of New York city, as it begins its campaign of publicity and lobbying to get shorter hours by law for the tired waitress, "old at twenty-one." Restaurant employes are the largest group of working women without legal protection from the long work day. A bill based on an intensive study made by the Consumers' League of women waitresses [see the SURVEY, November 18, 1916] was introduced into the New York legislature on February 8 and is an extension of the mercantile law which limits women's hours of labor in the factory. New York state is behind all its neighbors—Massachusetts, Ohio, Pennsylvania and New Jersey—in not restricting the hours of women employed in restaurants.

THE National Single Tax League has been launched to coordinate the work of single-tax organizations throughout the United States, to carry on educational campaigns, especially in states where there is a chance of success, and to take over the administration of the Joseph Fels Fund, vested until December 31 in a foundation. In addition to this fund, there is an assured membership of about 2,000, and the total guaranteed income for the first year is \$35,000. The chairman of the provisional committee is Daniel Kiefer, Cincinnati; the advisory committee contains the names of many prominent land reformers, including Prof. Earl Barnes, William F. Cochran, Mrs. Fels, Surg.-Gen. William C. Gorgas, Frederic C. Howe, Mrs. Louis F. Post, Lincoln Steffens and Frank P. Walsh.

THE Women's Municipal League, of Boston, has issued a Citizens' Handbook, "a collection of the laws and ordinances governing the citizens in everyday life," which is a model of what such a publication should be.

It avoids the hazy conception often given by pamphlets containing a transcription of laws into popular speech. Instead, the most important sections are given verbatim. Where the language is difficult, brief notes are prefaced. Clear arrangement, omission of irrelevant or too complicated clauses, and a detailed index serve the intended purpose. There is no attempt at preaching or at magnifying the excellence of the laws which govern the everyday life of Boston citizens. The need for some such compilation arose from the educational efforts of the league among the school children of Boston, some 2,500 of whom are enrolled in its "junior municipal league."

ONE of those gathered in by the Philadelphia police in a recent narcotic raid was a colored man who, in the region around Eleventh and Lombard streets, had the reputation for having the largest feet extant. His shoes occupied so much real estate that, according to the Philadelphia *Evening Ledger*, he had earned the name of "Trilby." At the end of an hour the most that the internal revenue officers and police had been able to find in the house was a small bottle in the coal bin. Disappointed, they were about to leave when an officer turned to "Trilby."

"Some feet you got there," said the cop.

"Biggest in the world," said "Trilby."

"Take off your shoes and let's measure them," commanded the bluecoat.

There was a tussle and the Negro's shoes came off. His feet weren't the biggest in the world, but the shoes he wore probably were. For they were containers for several bottles of cocaine besides his feet.

NEWBURGH, N. Y., is creating by ordinance a Commission of Public Exhibitions, consisting of five members, two of them women, "to prohibit, or prohibit in part, any exhibition or picture which it finds to be obscene, indecent, improper, licentious, or immoral, or any exhibition or picture that would have a harmful influence upon the public." The intent is to establish a municipal policy toward amusements, and it is specifically aimed at burlesque shows rather than movies.

"WILL you join us in trying to create a demand throughout the state for cleaner pictures, which will deal not so much with the seamy side of life, but with that which is purer and truer and healthier, and more wholesome and normal?" A letter containing this plea has been sent out from the Social Welfare Committee of the Chamber of Commerce in Lancaster, Pa., to chambers of commerce and welfare committees throughout Pennsylvania. It is signed also by practically every one of the local moving picture managers. This same committee has analyzed films exhibited in Lancaster and found 52 good, 20 indifferent and 31 bad. In the 31 bad are included such pictures as seemed undesirable for children.

DECLARING that in the electrocution in 1915 of two New York city Chinamen who were convicted of murder "it is beyond dispute that human life was taken upon what was concededly perjured testimony," and that its own investigations established grave doubt as to the guilt of the men, the New York Society for the Prevention of Crime urges in a report covering its work since 1909 three amendments to the law. These are: first, that arbitrary capital punishment be abolished and juries permitted to determine whether punishment shall be death or life imprisonment; second, that if capital punishment is to remain, the technical rules governing the granting of new trials be broadened and the right to appeal extended;

Live your Lectures and other Club Entertainments and insure their success by projecting photographs and other prints with a

Bausch and Lomb Balopticon THE PERFECT STEREOPTICON

The unusually satisfactory images projected by the New Combined Balopticon are due to a superior optical equipment and our new 1000-watt Mazda lamp. This gives the brilliant illumination of a 35-ampere A.C. arc lamp, with a consumption of only 9 amperes, and in addition is entirely automatic. Projects both slides and opaque objects (post-cards, photos, etc.) with instant change between both forms. Price, \$120.00. Other models: For slides only, \$25.00 up; for opaque objects, \$35.00 up.

Circulars giving full details of all models and their uses sent on request

and third, that the pardoning power be removed from the governor and vested in a board of pardons. The society also favors the passage by Congress of the Smith-Hughes bill, creating a permanent federal commission of five members to inspect and license motion picture films.

CONFERENCES

RAYMOND ROBINS writes that the Maine Community Efficiency Conference, held last month in Augusta, "was by all odds the best conference I have yet attended in this country, and more comparable to those in the western Canada provinces than any others I have attended." Not only, perhaps not chiefly, because of its exceptionally well-arranged program and able speakers was the conference preeminent, but the more so on account of the findings of its several commissions. One reported a rural program, including adequate road-building for Maine, electricity as a factor in promoting rural efficiency, a health survey as a method for determining the health efficiency of a community and the interdependence of country and city. Another handled such civic needs as reforms in present political campaign methods, the necessity for young men to enter politics in Maine, the promotion of civic righteousness through the application of the budget system to state and community finances. Still another reported a five-year program for developing Christian unity in Maine, the survey idea and its use in studying the over-churched and under-churched fields, community problems requiring united Christian effort and laymen's responsibility for the promotion of Christian unity. A pamphlet containing the findings and recommendations of these commissions may be had of A. A. Heald, Waterville, Me., executive secretary of the Laymen's Christian Federation of Maine, which, under the auspices of the state Y. M. C. A., united with representatives of the following organizations in promoting this conference: State Conference of Charities and Corrections, State Board of Trade, State Sunday School Association, Christian Civic League, State Denominational Agencies, State Grange.

AT THE recent second annual conference of the San Francisco and California Associations for the Study and Prevention of Tuberculosis the need for a municipal country sanatorium, more visiting nurses and additional open-air schools were the chief topics discussed.

The chairman of the finance committee of the Board of Supervisors publicly favored including \$50,000 in the 1917 budget for the purchase of a site and the beginning of construction of a country sanatorium. The present shacks at the San Francisco Hospital, which accommodate 250 advanced tuberculous patients now, are being replaced by a permanent steel structure which will be completed this year. The present quarters will be improved, but the capacity will remain the same. With its 900 tuberculosis deaths each year, the city sadly needs a sanatorium for early cases.

A Tuberculosis Bureau of the Board of Health has been organized, with Dr. W. R. P. Clark as director and four visiting nurses who work with the five nurses of the San Francisco association. Each nurse has her own district and works out of the two association and the Stanford University tuberculosis clinics.

An open-air school for twenty-five physically subnormal children was opened in Feb-

MODERN ECONOMIC PROBLEMS

By

Frank A. Fetter, Ph. D., LL. D.
Professor of Economics, Princeton University

Students of social problems will be interested in this book because it represents the opinions of one not only a trained economist, but for many years a member of the New York State Board of Charities.
